The new tariff framework recognizes the possibility of its revision with a limit of +0.6%. That revision will take place if differences occur in the final growth and the estimates made for 4 key parameters used in the calculation of the rate for the 2 prior years. Thus, the base 1.4% increase could be increased to 2%.

The four parameters that could cause this revision are:

- Gas prices
- Cost of the energy from the Special Regime
- Demand changes
- Changes in interest rates

- d) Recognition of the Tariff Deviation:**
The possibility of recovering the historic Tariff Deviation of 2000, 2001 and 2002 is recognised. The mechanism adopted for this consists on the following:
 - A calculation will be made of the total amount of the deviation in the three years recognised.
 - Calculation of the capitalized annual amount required for the total recovery of the deviation along the period between 2003 and 2010.
 - This annual amount will be included in the tariffs for that period, allowing the total recovery of the deviation.
 - This amount will be qualified as a regulated cost, with the same collection priority as the rest of regulated costs (i.e., distribution or transmission).

- Additionally, the companies will be allowed to anticipate the cash inflows derived from the recognition of the deviation through the transfer to third parties of the collection rights in the period 2003-2010.

e) **Inclusion of a higher cost to energy produced by CCGT plants:**

On 31 December 2004, the Government approved the R.D. on Tariffs for 2005. The highlights of this Royal Decree include:

- A 1.71% tariff increase for 2005

This increase is the result of all the following factors:

- 1.40% of the increase is relative to costs for 2005.
- The revision of the adjustments in 2003 and 2004 resulted in a drop of -0.275%.
- 0.585% was added due to changes in regulation.

- Expected growth of 6.2% in the sector's revenues

In addition, it is worth highlighting that should demand not perform as estimated (4.59% rise), the deviation clause would be applied (as already seen this year), resulting in a minimum 3.59% demand increase.

- Increase in the prices to Renewable Energies as a result of the new regulation approved in 2004

- Change in Spain's Energy Balance: Combined cycles and Renewables to cover the increase in demand

The tariff for 2005 estimates a 32% increase in energy produced both by combined cycles and plants subject to the Special Regime (Renewables and Cogeneration), whereas the rest of plants' production is expected to fall by 5.5%, mostly due to the reduction output of certain oil and coal plants. Combined Cycles and Special Regime will contribute 36% of total energy produced vs. 28% in 2004.

Combined cycles are expected to represent over 15% of total energy produced in Spain in 2005 (vs. 10% in 2004). Combined cycles production has been estimated at 38,853 GWh which means an increase of 53% over 2004 tariff. Energy from Special Regime is expected to represent more than 20% of total energy produced, driven by new wind farms installed. Tariff estimates a 19% rise in Special Regime production.

- Distribution revenues, increased by 5.3%. 80 million euros will be allocated to quality of service enhancement plans

80 million euros is included for improving the quality of service, and 10 million euros for management of demand.

2005 Electricity Tariff Calculation

2004 TARIFF INCREASE (TOTAL)	1.72%

As already mentioned, the Spanish National Reform Plan also contemplates a future review of the tariff methodology:

- "Prepare a new transparent and objective method for setting electricity prices that takes into account all recognised costs, enables the development of commercial activities and promotes efficiency in the consumption, production and supply of electricity".

Stranded Costs

As part of the move to pool-based pricing for generation, it was expected that prices would fall. To compensate the utilities for this potential loss of revenue, it was agreed that they would receive compensation payments known as Competition Transition Costs ("CTCs"). Part of the CTCs will be for indigenous coal and the rest for the so-called 'CTCs by differences'.

The rationale for this is that the previous regulatory regime assumed a Tariff Deviation for power plants on their first years of operation, to be compensated with extra revenues, at the end of their functional life span. These extra revenues could not be paid through a pool-based pricing system. These payments are common internationally and known as "stranded costs".

'CTCs by differences' can be thought of as a "residual" payment, because the payments are not guaranteed. Currently, the CTCs regime is under review. Thus, the Government has postponed until at least 1 January 2006 the final settlement of the CTCs payments corresponding to year 2004 and one of the objectives of the recently approved Spanish National Reform Plan is "to reform the mechanism for collecting competition transition charges (CTCs) in such a way that it does not distort market pricing".

Special Regime Generators

The Special Regime refers to the specific regulation that governs operators using cogeneration or renewable sources of energy with a capacity of less than 50MW. The European Commission does strongly support the development of renewable energies and cogeneration within the Member States. The main underlying reasons are the following:

- Diversify energy sources to better-off current dependence on petroleum;
- Meet environmental goals such as cutting the emission of greenhouse gases like carbon dioxide (agreed in 1998 at the Kyoto International Summit); and
- Energy efficiency

New Regulatory Framework for Renewable Energies

On March 13, 2004, the Spanish Government approved the Royal Decree defining the methodology for updating and systematizing the economic regime for the production of energy in the Special Regime.

The new Royal Decree – which replaced previous standards – improves the system governing the regulations and the remuneration of renewable energy: a) drawing up a stable, long-term economic support framework for the remuneration of such investments, and b) defining incentives designed to improve the quality of this energy relative to the market and the electricity system.

The main elements in the new framework are as follows:

- Remuneration schemes

There are two basic remuneration schemes:

- Scheme A
 - Regulated tariff (or fixed price) = % of the AET (Average Electricity Tariff) + Incentives for System's management
- Scheme B
 - Market = Pool Price + Premium (% of the AET) + Incentive for market participation (10% of the AET) + Capacity Payment + Incentives for System's management – Cost of Deviations

In both cases, this remuneration scheme is defined for the whole assets' life and will come into effect on the date on which they are brought into service. Producers may change remuneration schemes every 12 months.

- Additional Revenues

Two additional revenues are defined with a view to improving the impact of renewable energy on the management of the system:

- Reactive energy: remuneration of up to 8% of the AET subject to capacity and time. Applied for Schemes A and B.
- Voltage dips: supplement for technological requirements (5% of the AET over four years) for wind farms that adapt their technology to cope with voltage dips and as such contribute to the stability of the system. Applied to Schemes A and B.

- Future reviews

Every four years. They come into force two years after they have been validated and only apply to new installations (not plants that are already in place). First review: 2006, which will be applied only to new assets installed two years after (2008).

- Interim

An interim economic regime is defined for plants relative to RD 2818 in cases when they decide not to adopt the new RD, for which they may maintain the previous pool + premium scheme through to 2010, ensuring that their remuneration will be between 80% and 90% of AET.

- Production scheduling

As of January 1, 2006, requirement to schedule production for all installations that are not participating in the market (including plants that are covered by the interim economic regime 2818/098) and assumption of deviation costs when they exceed a certain threshold defined relative to the technology (5% in general but 20% for wind and solar).

Benefits of the new Royal Decree

The new framework offers the following advantages:

- Provides stability in the renewable sector, notably on wind farms, as it sets a remuneration scheme for the whole assets' life, and defines a system for reviews (non-retroactive) that is only applicable to new plants.
- Acts as an incentive to improve the quality of renewable energy in relation to the electricity system and the market.
- Fits within the actual tariff framework defined through to 2011.

In light of all these factors, it contributes to ensuring that these energies are economically and technologically sustainable, which is essential in order to be able to meet the objectives set in the National Energy Planning document.

Transmission and Distribution of Electricity in Spain

As a consequence of the deregulation of electricity generation and supply, qualified parties, consumers and non Spanish parties have the right to utilize the transmission and distribution networks subject to the payment of a toll, depending on the usage of the networks and differing electricity prices upon voltage.

The transmission business (facilities with rated operating voltage in excess of 220 kV) is remunerated upon operation and maintenance costs, recognized costs, investments and other costs required to properly operate the units. Royal Decree 2819/1998 provides the formula for the calculation of revenues for the operation of all transmission assets. The key elements are as follows:

- Income is based on costs recognized in respect of the facilities forming part of the transmission network;
- For facilities brought into operation before January 1998, income has been determined in 1998 terms and is adjusted by a formula to take into account the inflation and efficiency; and
- As new facilities are brought into operation, income in respect of them will be included in the related company's income in its first full year of operation.

Historically, distribution activity (facilities with rated operating voltage below 220 kV) was remunerated following the same criteria than transmission. However, under the Electricity Sector Law, the remuneration of distribution is determined by variation of electricity demand and some other parameters, which basically measures the network's efficiency.

The remuneration structure for distribution is based on a fixed revenue base allocated to the sector, which was calculated to remunerate the sector for the actual costs incurred in distribution at the end of the Marco Legal Estable. Going forward, this revenue base is subject to an annual adjustment for inflation (CPI) less a coefficient (X - which is currently set at 1%) and an additional factor to reflect demand growth (Y - currently set at 30%). The formula for the adjustment of regulated revenues is as follows:

$$\text{Regulated Revenues}_n = \text{Regulated Revenues}_{n-1} * (1 + (\text{CPI} - X)) * (1 + (\text{Demand growth} * Y)).$$

Growth opportunities will come mostly from electrification of newly developed industrial and residential areas.

As previously mentioned, the Spanish National Reform Plan also includes several measures in order to improve the distribution and transmission activities and a future review of the electricity distribution remuneration:

- "Increase independence and transparency in the management of distribution networks in order to avoid any discriminatory situations for access to these infrastructures by third parties".
- "Apply the new methodology for electricity distribution compensation developed by the CNE and agreed upon by all agents in the sector, so that each company covers the costs associated with its own network, factoring in the corresponding demand, the geographic characteristics of the distribution areas, the percentages of losses on its grids, and the quality of supplies and efficiency in the development of grids".
- "Develop information and awareness-building programmes to communicate to the general public on the need to build power lines and revise administrative procedures to facilitate their construction".

Overview of the Spanish Gas Sector

Market Outlook

The Spanish gas market shows an enormous growth potential due to significant gasification developments to be implemented throughout the territory. This, together with the increasing importance of natural gas in the generation of electricity, explains the growth rates for natural gas demand and supply in Spain in the last years.

In the next graph we show the yearly variation of gas sales in Spain (TWh):

Source: Sedigas.

The Table below shows the number of natural gas customers since 1985 (in thousands):

	1985	1990	1995	2000	2001	2002	2003	2004
Residential+ Commercial	1,512	1,938	2,773	4,199	4,601	4,930	5,300	5,653
Industrial	1.0	2.2	2.9	4.4	4.6	4.8	5.2	7.7
Total	1,513	1,940	2,776	4,203	4,606	4,935	5,305	5,661

Gas Demand in Spain

Spain's natural gas market has grown since joining the EU in 1986. Annual gas consumption in Spain amounted to 319,427 GWh in 2004, making it the sixth largest gas market in Europe (after Germany, UK, Italy, France and The Netherlands).

According to Sedigas ("Asociación Técnica Española de la Industria del Gas"), the consumption of natural gas as primary energy source in Spain is still lower than in many other countries and that Spain is below the EU average. The graph below shows the increase in the use of natural gas as a primary energy source in Spain from 1994-2004:

Source: Spanish Ministry of Economy.

According to Spanish Ministry of Economy estimates gas demand in Spain will grow at a constant annual rate of 9.5% for the period 2001-2011, reaching a total amount of 44 bcm in the year 2011. In 2005 around 30% of demand will come from CCGT business, while 70% from end customers.

Supply to the Spanish Market

Spain currently imports the vast majority of its natural gas supply from foreign gas-producing countries. According to CNE information, Spain currently imports more than 99% of its natural gas resources. The Hydrocarbons Sector Law requires transportation companies introducing natural gas into the Spanish market and all wholesalers to diversify their sources of supply if, at any time, more than 60% of the total natural gas supply to Spain originates from one country.

The table below shows the exporters of gas to Spain (Source: Sedigas):

Spain's natural gas supplies (GWh)									
Origin	1997	1998	1999	2000	2001	2002	2003	2004	2004(%)
Domestic	1.913	1.200	1.592	1.695	5.867	5.831	2.529	3.713	1,2
Imports	148.827	155.644	180.232	199.485	204.545	242.929	276.240	315.514	98,8

Libya	12.980	10.561	11.201	9.293	9.228	7.341	8.768	7.288	2,3
Norway	20.045	26.719	26.773	26.856	26.833	26.433	26.640	25.748	8,1
Persian Gulf & Other	22.971	17.275	16.857	12.270	20.601	43.305	29.227	71.206	22,3
Trinidad y Tobago	--	--	8.687	9.157	6.806	5.342	977	0	0,0
Nigeria	--	--	888	21.822	28.209	18.695	49.070	55.964	17,5
TOTAL	150.740	156.844	181.824	201.180	210.411	248.760	278.769	319.227	100,0

Around 60% of the total natural gas supply to Spain arrives in liquefied form on LNG carriers at the regasification plants. There are numerous areas of the world (e.g. Africa, the Middle East and the Caribbean) that are within a reasonable distance from Spain that have the appropriate infrastructure and reserves to source LNG to the Spanish market. The remaining 40% natural gas is imported to Spain via two international connections, the Lacq- Calahorra pipeline and the Maghreb-Europe pipeline. There is currently under study and development the Medgaz pipeline, which will connect Algeria and Europe through Spain.

Spanish Natural Gas Infrastructures

In 2004, the Spanish natural gas infrastructure consists of:

- Four operating regasification plants located in Barcelona, Cartagena, Huelva and near Bilbao, and two other plants under construction in Ferrol and in Sagunto;
- 52,122 km of transport and distribution pipelines;
- Two underground storage facilities;
- Three natural gas fields;
- Four international connections: France, Morocco and two with Portugal; and
- Other ancillary installations such as compressor stations, LNG satellite plants or modulating and measurement stations.

In the last decade, the transportation and distribution pipelines network grew from 19,500 km in 1994 to 52,122 km in 2004. The table below shows the growth in the transport and distribution gas pipelines in the abovementioned period (Source: SEDIGAS):

Length of gas nets

Regulatory Framework

The natural gas market in Spain has gone through a gradual opening process starting in 1998. Since January 2003, this market has been fully liberalized. The most important regulation regarding this process is:

- 1998 Hydrocarbons Law: General Framework. Established the calendar for the deregulation of the Spanish gas market
- Royal Decree 6/2000: Anticipated market liberalization by, among other measures:
 - o Creating the System General Manager (Enagás),
 - o Requiring Gas Natural to auction off 25% of the gas that was imported via the Maher Pipeline. Six companies were awarded with the contract resulting from this auction (Iberdrola was awarded with 25% of such contract),
 - o Reducing Distribution exclusivity period until 2005.
- Royal Decree 949/2001: Regulated third party access to the gas network and established the integrated economic system on which the rules for tariff calculation are based. It established criteria for the remuneration of regulated activities and the setting of tariffs, tolls and fees. The decree also fixed the basic guidelines for settlement procedures.
- Nowadays, the Ministry of Industry is in charge of the Spanish natural gas industry, with the CNE acting in a supervisory and advisory capacity.

PRESS release

5 January 2005

The company previously informed the Portuguese Government of this decision, which raised no objection

IBERDROLA

IBERDROLA INCREASES ITS STAKE IN ENERGIAS DE PORTUGAL (EDP) TO 5.70%

- **This increase was effected within the capital increase made by EDP, in which IBERDROLA exercised its subscription rights**

IBERDROLA has raised its stake in Energias de Portugal, S.A. (EDP) from 5% to 5.70% within the capital increase made by the Portuguese company.

The company has thus exercised its subscription rights in the capital increase, strengthening its shareholding interest in EDP. IBERDROLA previously informed the Portuguese Government of its decision, which raised no objection.

On 7 October, the general meeting of shareholders of EDP resolved to make a capital increase to cover the purchase of a further 56.2% in Hidroeléctrica del Cantábrico. The other major shareholders of the Portuguese company (Brisa, Millennium Banco Comercial Português and Caixa Geral de Depósitos) also subscribed in the capital increase.

IBERDROLA's decision to participate in this operation was made on both financial and strategic grounds, aiming to secure a significant position in the principal utility in Portugal, a strategic market for IBERDROLA, which acquired its first shareholding interest in EDP in 1998, under a collaboration agreement signed with that company.

IBERDROLA

Bilbao, 23 February 2005

SUBJECT: Communication of relevant fact

Dear Sirs,

We are pleased to inform you that, on this date, the Board of Directors of IBERDROLA has agreed to call the General Shareholders' Meeting, which will be held on 17 and 18 March, at first and second call respectively, with the following Agenda:

One.- Examination and approval, where appropriate:

a).- Of the individual Annual Accounts (Balance Sheet, Profit and Loss Account and Directors' Report) of the company and the consolidated Annual Accounts of the company and its majority interests for the financial year ended on 31 December 2004.

b).- Of the Management Reports of the company and of its consolidated group, ended on 31 December 2004, including the company management during the same period.

Two.- Application of the results and share-out of dividends for the financial year ended on 31 December 2004.

Three. - Delegation to the Board of Directors, for the period of five years, of the authority to issue: a) Simple bonds or stocks and other fixed-income securities of a similar nature (different from promissory notes), as well as preferential shares, with the maximum limit of five thousand (5,000) million euros, and b) promissory notes with the maximum limit, independently of the above, of three thousand (3,000) million euros; and authorisation for the company to guarantee, within the above limits, the new issues of stocks made by the company's majority interests, leaving without effect, in the amount not used, the delegation agreed by the General Meeting of 3 April 2004.

Four.- Authorisation to the Board of Directors for the derivative acquisition of own shares by the company and/or by the company's majority interests under the terms as set out by law, leaving without effect, in the amount not used, the authorization granted by the General Meeting of 3 April 2004. Share capital reduction and subsequent amendment to Article 5 of the Articles of Incorporation.

Five.- Authorisation to the Board of Directors to request the admission and exclusion of negotiation in Spanish or foreign organised secondary markets of the shares, stocks or other securities issued or which may be issued, and to adopt the agreements that are necessary for the shares, stocks or other securities of the company in circulation to remain listed.

Six.- Authorisation to the Board of Directors for the constitution and provision of associations and foundations in accordance with current regulations, authorising the Board of Directors for their execution.

Seven.- Re-election of Accounts Auditor for the company and its consolidated group for the 2005 financial year.

Eight.- Ratification of the appointment of Director designated by cooption.

Nine.- Partial re-election of Directors.

Ten.- Authorisation to the company Board of Directors, in the broadest terms, for the full development and execution of the above agreements, expressly including the exercise of the powers of interpreting, rectifying and completing them and recording them as public, and of substituting the powers granted by the Meeting.

Similarly, the Board of Directors has agreed that the announcement of the call to meeting be published, in the coming days, in the BORME and in the press, at which time the pertinent documentation will be made available to shareholders, which will also be given to you.

All of the documentation relating to the above General Meeting will also be available to shareholders and investors on the company website (www.iberdrola.com).

Warm regards.

IBERDROLA, S.A.

The Secretary of the General Meeting and of the Board

Federico San Sebastián

COMISIÓN NACIONAL DEL MERCADO DE VALORES

To the attention of Antonio Mas Sirvent

Market Area Director

Pº Castellana, 19

28046 Madrid

Dear Sirs,

Following our correspondence of February 23, attached please find a copy of the documentation which, with occasion of the invitation to the Annual General Meeting, will be available to shareholders on February 28. The documentation will be available on the Web site and at company headquarters, under the terms to be outlined in the invitation. The Commission has already received the Corporate Governance Report.

As always, we are at your disposal and send kind regards,

Federico San Sebastián

ITEM ONE ON THE AGENDA

Examination and approval, if applicable:

- a) **Of the individual Annual Financial Statements (Balance Sheet, Profit and Loss Statement, and Notes) of the Company and of the consolidated annual financial statements of the Company and its controlled Companies, for the Fiscal Year ended on December 31, 2004.**
- b) **Of the Management Reports of the Company and its Consolidated Group, as of December 31, 2004, as well as of the corporate management for such fiscal year.**

RESOLUTIONS IN CONNECTION WITH ITEM ONE

- a) To approve the individual Financial Statements (Notes, Balance Sheet, and Profit and Loss Statement) of the Company and the consolidated Financial Statements of the Company and its controlled companies for the Fiscal Year ended on December 31, 2004, which are submitted to the shareholders at the General Shareholders' Meeting and were prepared by the Board of Directors at its February 23, 2005 meeting.
- b) To approve the Management Report of the Company and the Management Report of its Consolidated Group, which were prepared by the Board of Directors at its February 23, 2005 meeting, as well as the corporate management by the Board of Directors during the Fiscal Year ended on December 31, 2004.

The Annual Financial Statements and the Management Report of IBERDROLA, S.A. and the Annual Financial Statements and the Management Report for its Consolidated Group which are hereby approved correspond to those which were drawn up by the Board of Directors at its February 23, 2005 meeting. The former are printed on 81 pages of ordinary, single-sided paper, and those corresponding to the Consolidated Group are printed on 126 pages of ordinary, single-sided paper, all of which are signed by the Secretary of the Board of Directors, Mr. Federico San Sebastián Flechoso, the corresponding legal

ITEM TWO ON THE AGENDA

Allocation of profits/losses and distribution of dividends for the Fiscal Year ended on December 31, 2004.

RESOLUTION IN CONNECTION WITH ITEM TWO

To approve the allocation of profits/losses and the distribution of dividends prepared by the Board of Directors at its February 23, 2005 meeting in the following manner:

BASIS FOR DISTRIBUTION:

Retained earnings from prior fiscal years
1,041,429,455.40 Euros

PROFITS FROM FISCAL YEAR 2004

697,711,722.08 Euros

TOTAL

1,739,141,177.48 Euros

DISTRIBUTION

To dividends
692,389,771.01 Euros

To retained earnings
1,046,751,406.47 Euros

TOTAL

1,739,141,177.48 Euros

As a result, the ordinary shares (ISIN Code ESO 144580018) having been paid an interim gross dividend of 0.326 Euros per share on January 3, 2005, it is hereby resolved that the ordinary shares (ISIN Code ESO 144580018) be paid an interim gross dividend in the amount of 0.442 Euros per share.

The supplemental dividend shall be paid effective July 1, 2005.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

The proposed allocation of profits/losses and distribution of dividends hereby approved was prepared by the Board of Directors at its February 23, 2005 meeting and it is printed, together with the Annual Financial Statements and the Management Report of IBERDROLA, S.A., on 81 pages of ordinary, single-sided paper, all of which are signed by the Secretary of the Board of Directors, Mr. Federico San Sebastián Flechoso and on which the corresponding legal formalities also appear with the handwritten signature of the members of the Board of Directors, except for those belonging to Mr. Francisco Javier Herrero Sorriqueta, Mr. Lucas María de Oriol y López-Montenegro, Mr. Antonio María de Oriol y Díaz-Bustamante and Mr. Sebastián Battaner Arias, who were absent from the meeting due to reasons beyond their control and who gave their proxy to the Chairman of the Board of Directors and manifested their full consent to all such documentation.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

ITEM THREE ON THE AGENDA

Delegation to the Board of Directors, for a term of five years, of the power to issue a) bonds or simple debentures and other fixed-income securities of a like nature (other than notes), as well as preferred stock, up to a maximum amount of €5.0 billion, and b) notes up to a maximum amount, independently of the foregoing, of €3.0 billion; and authorization to the Company to guarantee, within the limits set forth above, new issuances of securities by controlled companies, for which purpose the delegation approved at the General Shareholders' Meeting held on April 3, 2004 is hereby deprived of effect to the extent of the unused amount.

RESOLUTION IN CONNECTION WITH ITEM THREE

To delegate to the Board of Directors, as permitted by Section 319 of the Regulations of the Commercial Registry and the general provisions governing the issuance of securities, and pursuant to Articles 15.2 and 17.1.e) of the Company's By-Laws, the power to issue negotiable securities in accordance with the following conditions:

1. Securities to be issued.- The negotiable securities contemplated in this delegation may be bonds or simple debentures, notes, and other fixed-income securities of a like nature, as well as preferred stock.
2. Period of delegation.- The issuance of the securities covered by this delegation may be effected on one or more occasions within a maximum period of five (5) years following the date of adoption of this resolution.
3. Maximum amount under this delegation.-
 - a) The aggregate maximum amount of the issuance or issuances of bonds or simple obligations and other fixed-income securities of a like nature (other than notes), as well as preferred stock, resolved to be issued under this delegation shall be €5.0 billion.
 - b) For its part, the outstanding balance of the notes issued under this delegation shall at no time exceed the sum of €3.0 billion. This limit is independent of the limit established in sub-section a) above.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

4. Scope of the delegation.- The delegation of powers to issue the securities contemplated in this resolution shall extend, as broadly as is required by Law, to the establishment of the different terms and conditions applicable to each issuance (nominal value, type of issuance, reimbursement price, domestic or foreign currency of the issuance, form of representation, interest rate, amortization, subordination clauses, guarantees supporting the issuance, place of issuance, establishment of the internal regulations of the bondholders' syndicate and appointment of the auditor, in the case of the issuance of simple bonds and debentures – if required –, admission to listing, etc.) and to the conduct of any and all formalities that may be necessary, including those provided for in the applicable securities market regulations, for the execution of the specific issuances that may be resolved to be effected under this delegation.
5. Guarantee in support of issuances of securities by controlled companies.- As permitted by Article 15.4 of the By-Laws, the Board of Directors is also authorized to guarantee, on behalf of the Company, and within the limits set forth above, new issuances of securities during the effective period of this resolution by companies that are members of its group of companies.
6. Listing of fixed-income securities.- The Company shall apply, when appropriate, for the admission to trading on secondary markets, be they official or unofficial, organized or not, domestic or foreign, of the debentures, bonds, notes, preferred stock and other securities that are issued by the Company under this delegation, the Board of Directors being hereby authorized to carry out such formalities as may be necessary for the admission to listing before the competent authorities of the various domestic or foreign securities markets.
7. Power of delegation to the Executive Committee.- The Board of Directors is hereby authorized to delegate to either of the Executive Committee or the Chief Executive Officer (under the provisions of Section 141, number 1, second paragraph, of the Companies Law) the delegated powers contemplated in this resolution.

This delegation replaces and supersedes, to the extent of the unused amount, the prior delegation approved by the shareholders at the General Shareholders' Meeting held on April 3, 2004.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

ITEM FOUR ON THE AGENDA

Authorization to the Board of Directors for the derivative acquisition of the Company's own shares by the Company itself and/or by its controlled Companies pursuant to the provisions of the Law, for which purpose the authorization granted at the General Shareholders' Meeting held on April 3, 2004 is hereby deprived of effect to the extent of the unused amount. Reduction in share capital and amendment of Article 5 of the By-Laws as a result.

RESOLUTION RELATING TO ITEM FOUR

To expressly authorize the Board of Directors, which will in turn be entitled to delegate this authority to the Executive Committee, pursuant to Section 75 of the current Consolidated Text of the Companies Law, to carry out the derivative acquisition of shares in IBERDROLA, S.A. subject to the following conditions:

- a) The acquisitions may be made directly by IBERDROLA, S.A. or indirectly through its controlled companies.
- b) The acquisitions shall be made by means of purchase and sale transactions, swap arrangements or any other transaction whatsoever permitted by Law.
- c) The acquisitions may be made, at any time, up to the maximum sum permitted by Law.
- d) The acquisitions may not be made at a higher price than that quoted on the Stock Exchange.
- e) This authorization is granted for a period not exceeding 18 months.

In addition, for the purposes provided for in the second paragraph of Section 75.1 of the Companies Law, expressly authorize the acquisition of shares in the Company by any of its controlled companies subject to the same terms of this resolution.

It is expressly put on record that the shares acquired under this authorization may be sold, redeemed or applied to the compensation systems contemplated in the third paragraph of Section 75.1 of the Companies Law.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

This authorization replaces and supersedes, to the extent of the unused amount, the authorization granted at the General Shareholders' Meeting held on April 3, 2004.

To reduce the share capital in order to redeem any of IBERDROLA's own shares that IBERDROLA may hold on its balance sheet or that of its controlled companies, against profits or unappropriated reserves, by such amount as may be deemed necessary or appropriate from time to time, provided, however, that the amount of the capital reductions made under this authorization shall not exceed, during the period of effectiveness of this authorization, the maximum amount authorized for the derivative acquisition of shares of IBERDROLA, S.A.

To delegate to the Board of Directors the power to carry out the above-mentioned resolution regarding capital reduction, which the Board may effect on one or more occasions and within a period not exceeding eighteen months from the date of the holding of this General Shareholders' Meeting, by doing any act or thing that may be required by Law and, in particular, so that the Board may, within the aforesaid period and subject to the aforesaid limits:

- 1°. Decide, on the basis of professional criteria, on the date and/or dates of the specific reduction and/or reductions of capital, taking into account prevailing market conditions, market price, economic and financial position of the Company, its cash balances, reserves and any other aspect whatsoever that may affect the decision.
- 2°. Decide on the date or dates of the redemption and/or redemptions of shares.
- 3°. Set the capital reduction at the value of the shares redeemed in each case.
- 4°. Decide on the allocation of the amount of the reduction in each case, either to a restricted reserve or to unappropriated reserves, respecting in the latter case the rules and guarantees established in respect thereof.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

- 5°. Amend, in each case, Article 5 of the By-Laws, indicating the value of the share capital.
- 6°. Apply for the delisting of the securities redeemed in accordance with the applicable rules and regulations.
- 7°. Draw up and publish, where necessary, the announcements contemplated in Section 165 of the Companies Law.
- 8°. Should any creditors having a right to opposition exercise such right, comply, if applicable, with the requirements established in Section 166.3 of the Companies Law.
- 9°. In general, adopt whatever resolutions and do whatever acts may be required to reduce the capital and redeem the shares, with the express power to amend or supplement the foregoing resolutions in light of the oral or written qualification that may be made by the Commercial Registrar, execute the corresponding notarized instrument(s), and appoint the person(s) to be in charge of the formalization thereof.

This resolution replaces and supersedes, to the extent of the unused amount, the resolution adopted at the General Shareholders' Meeting held on April 3, 2004.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

ITEM FIVE ON THE AGENDA

Authorization to the Board of Directors to apply for the listing on or delisting from Spanish or foreign organized secondary markets of the shares, debentures or other securities issued or to be issued, and to adopt such resolutions as may be necessary to ensure the continued listing of the shares, debentures or other securities of the Company that may then be outstanding.

RESOLUTION RELATING TO ITEM FIVE

To authorize the Board of Directors:

- 1°.- To request, if appropriate, the admission to trading on organized secondary markets, be they Spanish or foreign, of shares, bonds, debentures or any other securities issued or to be issued by the Company, subject to applicable rules and regulations, especially those governing dealing, the maintenance of and the exclusion from trading.
- 2°.- To request, if appropriate, the exclusion from trading of the securities mentioned in the foregoing paragraph, which shall be carried out with the same formalities and in strict compliance with the applicable Securities Market regulations.
- 3°.- To adopt all such resolutions as it deems necessary or appropriate in order to amortize or convert into book-entry securities the securities evidencing the debentures or bonds issued by the Company, when so required for such securities to be admitted to trading and, once admitted, to remain admitted to trading on organized secondary markets, executing any and all public or private instruments that may be required for such purpose.
- 4°.- To delegate to either of the Executive Committee or the Chief Executive Officer all or part of the powers contemplated in this resolution.

This authorization replaces and supersedes the authorization previously approved at the General Shareholders' Meeting held on April 3, 2004.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

ITEM SIX ON THE AGENDA

Authorization to the Board of Directors to create and fund Associations and Foundations pursuant to the applicable legal provisions in effect, with the Board of Directors being empowered to carry out such resolution.

RESOLUTION RELATING TO ITEM SIX

The Board of Directors is authorized, on behalf of the Company, to participate in a founding capacity, by itself or together with other individuals or legal entities, be they domestic or foreign, in the creation of one or more Spanish private-law associations and foundations which pursue general interest objectives (social welfare, civic, educational, cultural, scientific, sporting, health, cooperation for development, defense of the environment, promotion of the economy or of research, promotion of volunteerism, or any other objectives allowed by law), with the stipulations, clauses, conditions, statements and agreements that it deems appropriate, and to contribute as initial funding, either once or partially or successively, cash or any other assets or rights that are deemed appropriate for each of them, as well as contribute cash or any other assets or rights that are deemed appropriate to those foundations in which the Company is a member of the board, up to the total amount, for both items, of TEN (10) MILLION Euros annually or the equivalent thereof in other currency for all such foundations and associations during the period of effectiveness of this authorization. For such purpose, the Board of Directors is expressly authorized to execute deeds of incorporation and to draw up and approve By-Laws for each of such associations and foundations, and may accept positions on behalf of the Company and, in general, make any decisions as are necessary or appropriate to develop and carry out this resolution.

This authorization is granted for a maximum period to end on the day of the holding of the Ordinary General Shareholders' Meeting in the year 2006. Such authorization may be expressly extended by subsequent resolutions adopted by the shareholders at the General Shareholders' Meeting. The maximum period of this authorization is without prejudice to possible successive fundings that, pursuant to applicable legislation, have been committed to during such period and are pending contribution by the Company upon the expiration thereof.

In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

The shareholders shall be informed of the manner in which the authorization approved under this resolution has been used at the next General Shareholders' Meeting to be held thereafter.

The Board of Directors may in turn delegate to the Executive Committee whatsoever powers are granted to it by this authorization.

This authorization replaces and supersedes, to the extent of the unused amount, the prior authorization granted at the General Shareholders' Meeting held on April 3, 2004.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. ITEM SEVEN ON THE AGENDA

Re-election of the Auditor of the Company and its Consolidated Group for Fiscal Year 2005.

RESOLUTION RELATING TO ITEM SEVEN

To re-elect the company "DELOITTE & TOUCHE ESPAÑA, S.L." as the Auditor of the Company and its consolidated Group, which Auditor shall perform the auditing for fiscal year 2005, the Board of Directors being granted the power, which it may delegate to the Executive Committee for such purpose, to execute the corresponding contract for the provision of services, subject to such terms and conditions as it deems appropriate, and also being empowered to make any pertinent amendments thereto pursuant to legislation applicable at any time.

This resolution is adopted at the proposal of the Board of Directors, after a favorable report from the Audit and Compliance Committee issued in accordance with the provisions of the Eighteenth Additional Provision of the Securities Market Law and Article 44.2.b) of the By-Laws.

It is noted for the record that "DELOITTE & TOUCHE ESPAÑA, S.L." has its registered address in Madrid, at calle Raimundo Fernández Villaverde nº 65, having Tax I.D. No. B-79104469. It is registered with the Commercial Registry of Madrid at Volume 13,650, Folio 197, Section 8, Page M-54414, Entry 101, and with the Official Registry of Auditors (*Registro Oficial de Auditores de Cuentas*) (ROAC) under number S0692.

In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

ITEM EIGHT ON THE AGENDA

Ratification of the appointment of Director designated by interim appointment to fill a vacancy

RESOLUTION RELATING TO ITEM EIGHT

Pursuant to the provisions of Section 138 of the Consolidated Text of the Companies Law and Article 48.3 of the By-Laws, to ratify the appointment of Mr. Sebastián Battaner Arias as a Director designated by interim appointment by the Board of Directors at its May 26, 2004 meeting, which appointment was made by means of the resolution that literally states as follows and the contents of which the shareholders acting at the General Shareholders' Meeting ratify in full:

“For purposes of the provisions of Section 139 of the Regulations of the Commercial Registry, to declare that the only vacancy on the Board of Directors is the one occurring on April 28, 2004 due to the resignation of Mr. RAMÓN DE ROTAECHE Y VELASCO, who had been re-elected for a term of five years at the General Shareholders' Meeting held on June 16, 2001.

Pursuant to the provisions of Section 138 of the Consolidated Text of the Companies Law and Article 48.3 of the By-Laws, to appoint as a Member of the Board of Directors, on an interim basis, at the proposal of the Cajas de Ahorros (Savings Bank) shareholders of “Iberdrola, S.A.” grouped together in the Federación de Cajas de Ahorros de Castilla León (Savings Bank Federation of Castilla León), and contingent upon the approval or ratification thereof by the shareholders at the next General Shareholders' Meeting to be held, the individual shareholder Mr. SEBASTIÁN BATTANER ARIAS, a Spanish citizen, of legal age, married, with an address for these purposes in Salamanca, at calle Arco nº 7 and with Tax I.D. No. _____, in order to fill the vacancy left on the Board by Mr. RAMÓN DE ROTAECHE Y VELASCO. The new Member of the Board shall be classified as external proprietary and shall hold the position until June 16, 2006, as such position was to be held by the prior Member Mr. RAMÓN DE ROTAECHE Y VELASCO, whom he replaces.

To instruct the Secretary of the Board of Directors, Mr. Federico San Sebastián Flechoso, to notify Mr. SEBASTIÁN BATTANER ARIAS of the appointment hereby approved, for purposes of the provisions of Section 142 of the Regulations of the Commercial Registry, and also to notify him, pursuant to

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

the provisions of Article 49 of the By-Laws, of the obligation to evidence the deposit of ten thousand (10,000) shares of the Company as a bond for any liability he might incur in the performance of his duties and to make available to him a copy of the By-Laws and the Regulations in effect in the Company.”

It is noted for the record that Mr. Sebastián Battaner Arias expressly accepted his appointment as Director of Iberdrola, S.A by means of a letter dated June 1, 2004.

As a result of the foregoing, after ratification of the appointment of the above-mentioned Director by the shareholders acting at the General Shareholders' Meeting, the composition of the Board is as follows:

Board of Directors

Chairman

Mr. IÑIGO DE ORIOL E YBARRA, a Spanish citizen, of legal age, married, with an address for these purposes in Bilbao, at calle Cardenal Gardoqui nº 8, and having Tax I.D. No.

Vice Chairman & Chief Executive Officer

Mr. JOSÉ IGNACIO SÁNCHEZ GALÁN, a Spanish citizen, of legal age, married, with an address for these purposes in Madrid, at calle Tomás Redondo nº 1, and having Tax I.D. No.

Vice Chairmen:

Mr. JOSÉ ANTONIO GARRIDO MARTÍNEZ, a Spanish citizen, of legal age, married, with an address for these purposes in Bilbao, at calle Cardenal Gardoqui nº 8, and having Tax I.D. No.

Mr. FRANCISCO JAVIER HERRERO SORRIQUETA, a Spanish citizen, of legal age, married, with an address for these purposes in Madrid, at calle Tomás Redondo nº 1, and having Tax I.D. No.

ITEM NINE ON THE AGENDA

Partial re-election of Directors.

RESOLUTIONS RELATING TO ITEM NINE

The shareholders acting at the General Shareholders' Meeting, at the proposal of the Board of Directors and after a favorable report from the Nominating and Compensation Committee, pursuant to the provisions of Article 45 of the By-Laws and Article 15 of the Regulations of such Committee, hereby adopt the following resolutions:

- a) To re-elect, for the maximum legal and by-law period of five years, as provided in Section 126 of the Companies Law and Article 48.1 of the By-Laws, the Vice Chairman & CEO Mr. JOSÉ IGNACIO SÁNCHEZ GALÁN, of legal age, married, a Spanish citizen, with an address for these purposes in Madrid, at calle Tomás Redondo nº 1, and having Tax I.D. No.

- b) To re-elect, for the maximum legal and by-law period of five years, as provided in Section 126 of the Companies Law and Article 48.1 of the By-Laws, the Director Mr. VÍCTOR DE URRUTIA VALLEJO, of legal age, married, a Spanish citizen, with an address for these purposes in Bilbao, at calle Cardenal Gardoqui nº 8, and having Tax I.D. No.

- c) To re-elect, for the maximum legal and by-law period of five years, as provided in Section 126 of the Companies Law and Article 48.1 of the By-Laws, the Director Mr. RICARDO ÁLVAREZ ISASI, of legal age, married, a Spanish citizen, with an address for these purposes in Bilbao, at calle Cardenal Gardoqui nº 8, and having Tax I.D. No.

- d) To re-elect, for the maximum legal and by-law period of five years, as provided in Section 126 of the Companies Law and Article 48.1 of the By-Laws, the Director Mr. JOSÉ IGNACIO BERROETA ECHEVARRÍA, of legal age, married, a Spanish citizen, with an address for these purposes in Bilbao, at calle Cardenal Gardoqui nº 8, and having Tax I.D. No.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

e) To re-elect, for the maximum legal and by-law period of five years, as provided in Section 126 of the Companies Law and Article 48.1 of the By-Laws, the Director Mr. JUAN LUIS ARREGUI CIÁRSOLO, of legal age, married, a Spanish citizen, with an address for these purposes in Bilbao, at calle Cardenal Gardoqui n° 8, and having Tax I.D. No.

f) To re-elect, for the maximum legal and by-law period of five years, as provided in Section 126 of the Companies Law and Article 48.1 of the By-Laws, the Director Mr. JULIO DE MIGUEL AYNAT, of legal age, married, a Spanish citizen, with an address for these purposes in Madrid, at calle Tomás Redondo n° 1, and having Tax I.D. No.

g) To re-elect, for the maximum legal and by-law period of five years, as provided in Section 126 of the Companies Law and Article 48.1 of the By-Laws, the Director Mr. SEBASTIÁN BATTANER ARIAS, of legal age, married, a Spanish citizen, with an address for these purposes in Salamanca, at calle Arco n° 7, and having Tax I.D. No.

The re-elected Directors being present at the meeting, they all expressly accept their appointment, and state that they are not under any situation of legal incompatibility to perform their duties, pursuant to applicable regulations.

It is expressly noted for the record, pursuant to Section 146 of the Regulations of the Commercial Registry and Article 38.3 of the Company's By-Laws, that upon being re-elected as Directors, they will continue to hold the positions that they previously held within the Board of Directors.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

ITEM TEN ON THE AGENDA

Authorization to the Board of Directors of the Company, to the fullest possible extent, for the full development and execution of the foregoing resolutions, expressly including the power to interpret, remedy and complete such resolutions and have them evidenced in the form of public instruments, as well as the right to delegate the powers granted by the shareholders at the General Shareholders' Meeting.

RESOLUTION RELATING TO ITEM TEN

To empower the Board of Directors, which may delegate the powers hereby granted to any of the Executive Committee, the Chairman Mr. Iñigo de Oriol e Ybarra, the Vice Chairman & Chief Executive Officer Mr. José Ignacio Sánchez Galán, or the Secretary Mr. Federico San Sebastián Flechoso, to the fullest extent that may be required under applicable law, to supplement, carry out and develop, by making technical modifications, if appropriate, all of the foregoing resolutions, as well as to remedy any errors or omissions therein, and to interpret such resolutions, with Mr. Iñigo de Oriol e Ybarra, Mr. José Ignacio Sánchez Galán and Mr. Federico San Sebastián Flechoso severally being granted the power to execute the appropriate notarized instruments containing the approved resolutions, with the broadest possible powers to perform whatsoever acts may be necessary and to execute such documents as may be required to register the foregoing resolutions with the Commercial Registry, and in particular to:

- a) To correct, clarify or complete the resolutions adopted at this General Shareholders' Meeting or which are adopted in any notarized instruments and documents executed in order to carry out such resolutions and, in particular, any omissions, defects or errors in form or in substance which may hinder registration of these resolutions and the consequences therefrom with the Commercial Registry, the Property Registry, the Industrial Property Registry or any others.
- b) To perform any and all legal acts or transactions that are necessary or appropriate to carry out the resolutions adopted at this General Shareholders' Meeting, executing such public or private instruments as may be deemed required or appropriate for the full effectiveness of these resolutions.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

- c) To delegate to one or more of its members, whether jointly or severally, all or any of the powers that it deems appropriate among those belonging to the Board of Directors, and any or all of the powers expressly granted by the shareholders at this General Shareholders' Meeting.

- d) To finally determine all other circumstances that may be required, adopting and carrying out such resolutions as may be necessary, publishing such notices and giving such guarantees as may be pertinent for the purposes set forth in the Law, as well as executing any required documents and complying with any appropriate formalities, and fulfilling any requirements under the Law for the full performance of the resolutions approved at the General Shareholders' Meeting.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

REPORT SUBMITTED BY THE BOARD OF DIRECTORS OF IBERDROLA, S.A. ON FEBRUARY 23, 2005 IN CONNECTION WITH THE PROPOSED RESOLUTION TO DELEGATE TO THE BOARD OF DIRECTORS THE POWER TO ISSUE BONDS OR SIMPLE DEBENTURES, NOTES AND OTHER FIXED-INCOME SECURITIES, AS WELL AS PREFERRED STOCK, AS SET FORTH IN ITEM THREE ON THE AGENDA FOR THE GENERAL SHAREHOLDERS' MEETING OF IBERDROLA, S.A. TO BE HELD IN BILBAO, AT 11:30 AM ON MARCH 17, UPON FIRST CALL, AND ON MARCH 18, AT THE SAME PLACE AND TIME, UPON SECOND CALL.

1. Purpose of this report.-

This report has been drawn up to support the proposal – which will be submitted for approval by the shareholders at the General Shareholders' Meeting – relating to the delegation of powers to the Board of Directors of Iberdrola, S.A. (hereinafter, the "Company"), including the express power of delegation by the Board of Directors to the Executive Committee, to issue simple bonds or debentures, notes and other fixed-income securities of a like nature, as well as preferred stock, and the authorization granted for the same period so that the Company may guarantee all kinds of obligations that may be incurred by its subsidiaries as a result of the issuances of securities effected by them.

2. Rationale for the proposal.-

The Board of Directors regards it as highly desirable to have the delegated powers allowed by current legislation in order to be at all times in a position to raise, on the primary securities markets, the funds that are necessary for appropriate management of the corporate interests. The purpose of this delegation is to provide the management decision-making body of the Company with the maneuverability and responsiveness required by the competitive environment in which it operates, in which the success of a strategic initiative or a financial transaction frequently depends on the possibility of dealing with it quickly, without incurring the delays and costs that inevitably ensue from the call to and holding of a General Shareholders' Meeting.

To this end, as permitted by the provisions of Section 319 of the Regulations of the Commercial Registry and pursuant to Articles Thirteen

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

(first paragraph), Fifteen (second paragraph) and Seventeen (first paragraph, letter e) of the By-Laws – which authorize the shareholders acting at the General Shareholders' Meeting to delegate to the Board of Directors the power to issue the negotiable securities contemplated in the proposal –, the proposed resolution set forth under Item Three on the Agenda is submitted for consideration by the shareholders at the General Shareholders' Meeting.

The proposal contemplates the authorization to the Board of Directors to issue bonds or simple debentures, notes and other fixed-income securities of a like nature, as well as preferred stock. The maximum limit on the bonds, debentures and preferred stock that may be issued under this delegation comes to the sum of €5.0 billion. Such limit shall not apply to the issuance of notes. An independent limit is established for these latter instruments, in the amount of €3.0 billion, which sum does not refer to the amount of the issuance but to the outstanding balance of the outstanding securities.

As is known, Law 62/2003 on Tax, Administration, Labor and Social Security Measures, of December 30, provides that the limit on the issuance of debentures established in Section 282 of the consolidated text of the Companies Law does not apply to listed corporations. In addition, the Company has been carrying out, on an annual basis, both direct and indirect issuances through its controlled companies, which the Company has disclosed in its financial statements and in the report prepared by the Board of Directors on the borrowing policy of the Company and its Group. Therefore, the Board of Directors considers it appropriate that the limit of the authorization requested from the shareholders at the General Shareholders' Meeting be broad enough to permit the required fundraising in the capital market and the development of the borrowing policy of the Company and its Group.

Also, in certain cases it may be advisable, for tax, legal or other reasons, to carry out the issuances of securities under this proposal by means of issuances effected by a subsidiary, supported by the guarantee of the parent company, which circumstance is also contemplated in the By-Laws of IBERDROLA, S.A. In consequence, as permitted by Article Fifteen (paragraph four) of the By-Laws, it is considered desirable that the Board of Directors be authorized to guarantee, on behalf of the Company, and within the limits set forth above, new issuances of securities by subsidiaries during the effective period of this resolution, in order that the Board of Directors may be granted the utmost degree of flexibility in

structuring the issuances of securities in such manner as may be most appropriate in the circumstances.

Finally, it is contemplated that the securities to be issued by virtue of this delegation be admitted to trading on any secondary market, be it organized or not, official or unofficial, domestic or foreign.

The full text of the proposed resolution to delegate the power to issue bonds or simple debentures and other fixed-income securities reads as follows:

“ITEM THREE ON THE AGENDA

Delegation to the Board of Directors, for a term of five years, of the power to issue a) bonds or simple debentures and other fixed-income securities of a like nature (other than notes), as well as preferred stock, up to a maximum amount of €5.0 billion, and b) notes up to a maximum amount, independently of the foregoing, of €3.0 billion; and authorization to the Company to guarantee, within the limits set forth above, new issuances of securities by controlled companies, for which purpose the delegation approved at the General Shareholders’ Meeting held on April 3, 2004 is hereby deprived of effect to the extent of the unused amount.

RESOLUTION IN CONNECTION WITH ITEM THREE

To delegate to the Board of Directors, as permitted by Section 319 of the Regulations of the Commercial Registry and the general provisions governing the issuance of securities, and pursuant to Articles 15.2 and 17.1.e) of the Company’s By-Laws, the power to issue negotiable securities in accordance with the following conditions:

1. Securities to be issued.- The negotiable securities contemplated in this delegation may be bonds or simple debentures, notes, and other fixed-income securities of a like nature, as well as preferred stock.
2. Period of delegation.- The issuance of the securities covered by this

delegation may be effected on one or more occasions within a maximum period of five (5) years following the date of adoption of this resolution.

3. Maximum amount under this delegation.-
 - a) The aggregate maximum amount of the issuance or issuances of bonds or simple obligations and other fixed-income securities of a like nature (other than notes), as well as preferred stock, resolved to be issued under this delegation shall be €5.0 billion.
 - b) For its part, the outstanding balance of the notes issued under this delegation shall at no time exceed the sum of €3.0 billion. This limit is independent of the limit established in sub-section a) above.
4. Scope of the delegation.- The delegation of powers to issue the securities contemplated in this resolution shall extend, as broadly as is required by Law, to the establishment of the different terms and conditions applicable to each issuance (nominal value, type of issuance, reimbursement price, domestic or foreign currency of the issuance, form of representation, interest rate, amortization, subordination clauses, guarantees supporting the issuance, place of issuance, establishment of the internal regulations of the bondholders' syndicate and appointment of the auditor, in the case of the issuance of simple bonds and debentures – if required –, admission to listing, etc.) and to the conduct of any and all formalities that may be necessary, including those provided for in the applicable securities market regulations, for the execution of the specific issuances that may be resolved to be effected under this delegation.
5. Guarantee in support of issuances of securities by controlled companies.- As permitted by Article 15.4 of the By-Laws, the Board of Directors is also authorized to guarantee, on behalf of the Company, and within the limits set forth above, new issuances of securities during the effective period of this resolution by companies that are members of its group of companies.
6. Listing of fixed-income securities.- The Company shall apply, when appropriate, for the admission to trading on secondary markets, be

they official or unofficial, organized or not, domestic or foreign, of the debentures, bonds, notes, preferred stock and other securities that are issued by the Company under this delegation, the Board of Directors being hereby authorized to carry out such formalities as may be necessary for the admission to listing before the competent authorities of the various domestic or foreign securities markets.

7. Power of delegation to the Executive Committee.- The Board of Directors is hereby authorized to delegate to either of the Executive Committee or the Chief Executive Officer (under the provisions of Section 141, number 1, second paragraph, of the Companies Law) the delegated powers contemplated in this resolution.

This delegation replaces and supersedes, to the extent of the unused amount, the prior delegation approved by the shareholders at the General Shareholders' Meeting held on April 3, 2004.”

In Bilbao, February 23, 2005

REPORT SUBMITTED BY THE BOARD OF DIRECTORS OF IBERDROLA, S.A. ON FEBRUARY 23, 2005 FOR THE PURPOSES OF SECTION 164 OF THE COMPANIES LAW WITH REGARD TO THE PROPOSED RESOLUTION REGARDING A REDUCTION IN SHARE CAPITAL AS SET FORTH UNDER ITEM FOUR ON THE AGENDA FOR THE ORDINARY GENERAL SHAREHOLDERS' MEETING TO BE HELD IN BILBAO, AT 11:30 AM ON MARCH 17, 2005, UPON FIRST CALL, AND ON MARCH 18, 2005, AT THE SAME PLACE AND TIME, UPON SECOND CALL.

1. Purpose of this report

As provided in Section 164 of the Companies Law, a reduction in Share Capital must be approved by the shareholders at the General Shareholders' Meeting in compliance with the requirements established with respect to the amendment of the By-Laws. In addition, Section 144 of such Law provides, among other requirements for the valid adoption of a resolution amending the By-Laws, that the Directors must prepare a written report setting forth the rationale for the proposed amendment.

The report must be made available to the shareholders in such manner as provided in the above-mentioned Section, together with the full text of the proposed amendment.

This report has been drawn up with the aim of complying with the above-mentioned legal requirement.

2. Rationale for the proposal

- a. Sections 75 et seq. of the Companies Law currently in effect (consolidated text approved by Royal Legislative Decree 1564/1989, of 22 December, and amended by the Second Additional Provision of Law 2/1995, of March 23, on Limited Liability Companies) govern the derivative acquisition of the

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

controlling company's own stock or of shares issued by the controlling company.

Pursuant to the above-mentioned provisions, the acquisition must be authorized by the shareholders at the General Shareholders' Meeting by means of a resolution that shall have such content as is set forth in paragraph 1 of Section 75, and the authorization may under no circumstances be granted for a period greater than eighteen months.

In addition, the above-cited provision states that the nominal value of the shares acquired, added to that of those already owned by the acquiring company and its subsidiaries, may not exceed ten percent of the Share Capital or, as is the case with IBERDROLA, S.A., whose shares are admitted to trading on an official secondary market, five percent of the Share Capital, as set out in Additional Provision One, paragraph 2, of the aforementioned Companies Law.

As a result of this system, every year since the entry into effect of the above-mentioned Law, the shareholders acting at the General Shareholders' Meeting have granted the authorization for the acquisition of the Company's own shares referred to above. The Agenda for the General Shareholders' Meeting now being called also includes the proposal for the adoption of the aforementioned resolution.

- b. Pursuant to the above-mentioned Law, once the derivative acquisition of the Company's own shares has been effected, it may be advisable, in furtherance of the corporate interest, to redeem such shares rather than use other alternatives contemplated in the Law, which may not be advisable under certain market conditions.

Such redemption of shares carries with it a reduction in Share Capital. As provided by Section 164 of the Companies Law, the resolution to reduce the Share Capital must be adopted by the shareholders at the General Shareholders' Meeting, and therefore,

in addition to the authorization for the acquisition of the Company's own shares, the authorization to reduce the Share Capital and to amend the relevant Article of the By-Laws as a result thereof, is proposed to the shareholders at the General Shareholders' Meeting under the same Item on the Agenda. This resolution must be carried out on one or more occasions, taking into account the desirability and timeliness of the decision in light of changing circumstances resulting from general economic reasons which impact the securities market and the financial situation of the Company itself. For this reason, since not all the aspects to be taken into account for effecting a reduction in Share Capital can be determined at present, a number of powers are delegated to the Board of Directors for this purpose pursuant to Articles 12, 17 and 34 of the By-Laws.

The full text of the proposed resolution regarding the derivative acquisition of the Company's own shares, the reduction in Share Capital, and the amendment of Article 5 of the By-Laws as a result reads as follows:

ITEM FOUR ON THE AGENDA

Authorization to the Board of Directors for the derivative acquisition of the Company's own shares by the Company itself and/or by its controlled Companies pursuant to the provisions of the Law, for which purpose the authorization granted at the General Shareholders' Meeting held on April 3, 2004 is hereby deprived of effect to the extent of the unused amount. Reduction in share capital and amendment of Article 5 of the By-Laws as a result.

RESOLUTION RELATING TO ITEM FOUR

To expressly authorize the Board of Directors, which will in turn be entitled to delegate this authority to the Executive Committee, pursuant to Section 75 of the current Consolidated Text of the Companies Law, to carry out the derivative acquisition of shares in IBERDROLA, S.A. subject to the following conditions:

- a) The acquisitions may be made directly by IBERDROLA, S.A. or indirectly through its controlled companies.
- b) The acquisitions shall be made by means of purchase and sale transactions, swap arrangements or any other transaction whatsoever permitted by Law.
- c) The acquisitions may be made, at any time, up to the maximum sum permitted by Law.
- d) The acquisitions may not be made at a higher price than that quoted on the Stock Exchange.
- e) This authorization is granted for a period not exceeding 18 months.

In addition, for the purposes provided for in the second paragraph of Section 75.1 of the Companies Law, expressly authorize the acquisition of shares in the Company by any of its controlled companies subject to the same terms of this resolution.

It is expressly put on record that the shares acquired under this authorization may be sold, redeemed or applied to the compensation systems contemplated in the third paragraph of Section 75.1 of the Companies Law.

This authorization replaces and supersedes, to the extent of the unused amount, the authorization granted at the General Shareholders' Meeting held on April 3, 2004.

To reduce the share capital in order to redeem any of IBERDROLA's own shares that IBERDROLA may hold on its balance sheet or that of its controlled companies, against profits or unappropriated reserves, by such amount as may be deemed necessary or appropriate from time to time, provided, however, that the amount of the capital reductions made under this authorization shall not exceed, during the period of effectiveness of this authorization, the maximum amount authorized for the derivative acquisition of shares of IBERDROLA, S.A.

To delegate to the Board of Directors the power to carry out the above-mentioned resolution regarding capital reduction, which the Board may effect on one or more occasions and within a period not exceeding eighteen months from the date of the holding of this General Shareholders' Meeting, by doing

any act or thing that may be required by Law and, in particular, so that the Board may, within the aforesaid period and subject to the aforesaid limits:

- 1°. Decide, on the basis of professional criteria, on the date and/or dates of the specific reduction and/or reductions of capital, taking into account prevailing market conditions, market price, economic and financial position of the Company, its cash balances, reserves and any other aspect whatsoever that may affect the decision.
- 2°. Decide on the date or dates of the redemption and/or redemptions of shares.
- 3°. Set the capital reduction at the value of the shares redeemed in each case.
- 4°. Decide on the allocation of the amount of the reduction in each case, either to a restricted reserve or to unappropriated reserves, respecting in the latter case the rules and guarantees established in respect thereof.
- 5°. Amend, in each case, Article 5 of the By-Laws, indicating the value of the share capital.
- 6°. Apply for the delisting of the securities redeemed in accordance with the applicable rules and regulations.
- 7°. Draw up and publish, where necessary, the announcements contemplated in Section 165 of the Companies Law.
- 8°. Should any creditors having a right to opposition exercise such right, comply, if applicable, with the requirements established in Section 166.3 of the Companies Law.
- 9°. In general, adopt whatever resolutions and do whatever acts may be required to reduce the capital and redeem the shares, with the express power to amend or supplement the foregoing resolutions in light of the oral or written qualification that may be made by the Commercial Registrar, execute the corresponding notarized

instrument(s), and appoint the person(s) to be in charge of the formalization thereof.

This resolution replaces and supersedes, to the extent of the unused amount, the resolution adopted at the General Shareholders' Meeting held on April 3, 2004.

In Bilbao, February 23, 2005

REPORT ON THE BORROWING POLICY OF IBERDROLA, S.A. AND ITS GROUP OF COMPANIES, ISSUED BY THE BOARD OF DIRECTORS OF IBERDROLA, S.A. ON FEBRUARY 23, 2005 FOR SUBMISSION THEREOF AT THE GENERAL SHAREHOLDERS' MEETING TO BE HELD IN BILBAO AT 11:30 AM ON MARCH 17, 2005, UPON FIRST CALL, AND ON MARCH 18, AT THE SAME PLACE AND TIME, UPON SECOND CALL.

This report was drawn up by the Board of Directors in order to help increase transparency in the information supplied to shareholders and markets, in compliance with the commitment to transparency that constitutes one of the mainstays of the good practices of Corporate Governance at IBERDROLA.

Over the next 12 months, the Iberdrola Group will obtain funds primarily from the capital market, as long as the conditions in such market continue to be similar to those at present. Thus, a direct appeal to investors will be carried out using various types of bonds, debentures and promissory notes. Bank financing will supplement the foregoing financing method.

The most significant medium- and short-term fundraising for the Iberdrola Group will now be carried out through the Spanish subsidiary Iberdrola Finanzas, S.A.U., primarily in the Euromarket, by means of the issuance of notes under its Euro Medium-Term Notes Program ("EMTN"), supported by the unconditional and irrevocable guarantee of Iberdrola, S.A. For its part, the Dutch subsidiary Iberdrola International B.V. will make private placements in international markets.

The medium- and long-term funds which are expected to be raised through Iberdrola Finanzas, S.A.U. and Iberdrola International B.V. will be transferred by means of an inter-company loan or deposited by such subsidiaries at their parent companies.

Short-term fundraising in the capital markets is planned to be carried out both internationally – by means of the issuance of promissory notes by Iberdrola International B.V. under its Commercial Paper Program ("ECP"), supported by the unconditional and irrevocable guarantee of Iberdrola, S.A. – and through the latter company in the domestic market, by means of its Annual Corporate Notes Issuance Program.

Resolution of the Board of Directors Adopted at the Meeting Held on February 23, 2005 in Order to Elaborate on the Provisions Governing the Right to Receive Information Prior to the Meeting and Proxy-granting and Distance Voting

The Board of Directors, in the exercise of the powers conferred upon it by Articles 23 and 28 of the By-Laws and Articles 9, 11 and 32 of the Regulations for the General Shareholders' Meeting, has unanimously resolved to elaborate on the provisions governing the right to receive information prior to the General Meeting, proxy-granting and distance voting, pursuant to the rules, means and procedures set forth below:

Section One
Proxy Representation Granted by Postal Correspondence

Article 1.- Without prejudice to the right of combination contemplated in Article 22 of the By-Laws and in Article 10 of the Regulations for the General Shareholders' Meeting, shareholders who have the right to attend the Meeting may grant a proxy to another shareholder by means of postal correspondence addressed to the Company, at Post Office Box [*Apartado de Correos*] number 1.113, 48080 Bilbao.

In any event, the proxy must be given to a shareholder or to a member of the Board of Directors in his or her capacity as shareholder.

Article 2.- The grant of the proxy must be completed and signed by the shareholder, who shall sign the corresponding attendance and proxy-granting card for such purpose.

Article 3.- Shareholders who grant a proxy by postal correspondence must notify the shareholder appointed as representative of the representative capacity that the representative is vested with.

Article 4.- The shareholder appointed to act as representative shall be required to accept the proxy, for which purpose such shareholder shall also sign the attendance and proxy-granting card, and a copy thereof shall be kept for submission and delivery at the shareholders' admittance desks at the place and on the date set forth for the holding of the General Shareholders' Meeting and starting one hour before the time set for the beginning of the meeting.

Article 5.- The shareholder may expressly authorize the representative to appoint a third shareholder to act as representative in the event that the appointed representative becomes subject to a conflict of interest when voting on any of the items submitted to the shareholders at the General Shareholders' Meeting.

Article 6.- Proxy representation to attend the General Shareholders' Meeting may be granted by using the following formula, if applicable: "*I hereby grant my proxy*

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

*for this General Shareholders' Meeting to shareholder
.....or, absent express appointment, to the Chairman of the
Board of Directors of the Company, who shall vote in favor of the proposals included
in the Agenda and such others as may validly be submitted, in the same manner as
proposed by the Board of Directors, unless voting instructions are indicated in the
table below.- In the event that the representative is subject to a conflict of interest
when voting on any of the items to be submitted to the shareholders at the General
Shareholders' Meeting, I hereby authorize such representative to appoint a third
shareholder to act as representative."*

Article 7.- Shareholders to whom proxy representation is granted by postal communication shall exercise the proxy by personally attending the General Shareholders' Meeting.

Article 8.- In order to be valid, a proxy granted by postal communication must be received before midnight on the day immediately prior to the date provided for the holding upon first call of the General Shareholders' Meeting. After the aforementioned deadline, only proxies granted in writing by means of attendance cards or validation certificates submitted at the shareholders' admittance desks, at the place and on the date set forth for the holding of the General Shareholders' Meeting and starting one hour before the time set for the beginning of the meeting, shall be allowed.

Section Two
Proxy Representation Granted by Electronic Communication or by Electronic Correspondence

Article 9.- All shareholders who have the right to attend the meeting may grant proxy representation to another shareholder by means of electronic correspondence issued with their recognized electronic signature – based upon an electronic certificate recognized and issued by the Royal Spanish Mint [*"Fábrica Nacional de Moneda y Timbre"*] and in respect of which no revocation has been recorded – by means of a communication addressed to the Company through its website (www.iberdrola.com), in which there shall be set forth the identity of both the shareholder holding the proxy and the shareholder granting the proxy, the number of shares held by the latter, the securities account in which the shares are deposited, and such other details as are specified on the above-mentioned website, as well as the voting instructions that the shareholder may wish to give to the representative, if applicable.

Article 10.- Shareholders who grant a proxy by electronic correspondence must notify the appointed representative of the representative capacity that they are vested with.

In any event, a proxy must be granted to a shareholder or to a member of the Board of Directors in his or her capacity as shareholder.

Article 11.- The shareholder may expressly authorize the representative to appoint a third shareholder to act as representative in the event that the appointed representative

becomes subject to a conflict of interest when voting on any of the items submitted to the shareholders at the General Shareholders' Meeting.

Article 12.- In the case of proxies granted by electronic correspondence to shareholders other than the members of the Board of Directors of the Company, the representative shall be required to accept the proxy, for which purpose the representative must the attendance card or the printout of the electronic document that the shareholder executes through the Company's website, and a copy of the signed document shall be kept for submission and delivery thereof at the shareholders' admittance desks at the place and on the date set forth for the holding of the General Shareholders' Meeting.

Article 13.- Shareholders to whom proxy representation is granted by electronic communication shall exercise such representation by personally attending the General Shareholders' Meeting.

Article 14.- In order to be valid, a proxy granted by electronic communication must be received by the Company before midnight on the day immediately prior to the date provided for the holding upon first call of the General Shareholders' Meeting. Otherwise, the proxy granted by electronic communication shall be deemed not to have been granted.

After the aforementioned deadline, only proxies granted in writing by means of attendance cards or validation certificates submitted at the shareholders' admittance desks, at the place and on the date set forth for the holding of the General Shareholders' Meeting, shall be allowed.

Article 15.- Proxy representation by electronic correspondence may be granted only once.

Section Three
Proxy Representation Granted to Members of the Board of Directors

Article 16.- When a proxy is granted to a member of the Board of Directors of the Company in his or her capacity as shareholder by means of postal or electronic correspondence, notification of the proxy-granting to the representative shall be deemed effected upon receipt by the Company of the postal or electronic correspondence setting forth the grant of the proxy.

All members of the Board of Directors have stated their personal decision to assume and carry out all such proxies as may individually be granted to them in their capacity as shareholders, and the Board of Directors has unanimously resolved to record in the Minutes such unanimous personal decision of the shareholders who make up the full body of the Board of Directors of the Company. Therefore, there will be no need for the members of the Board to individually record their acceptance, with their signature, on the attendance and proxy-granting cards setting forth the delegation of powers to them.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

Section Four
Votes Cast by Mail or Postal Communication

Article 17.- Shareholders who have the right to attend and vote at the meeting may cast their vote by mail, by means of postal correspondence addressed to the Company, at Post Office Box [*Apartado de Correos*] number 1.113, 48080 Bilbao.

Article 18.- In order to cast their mail vote, shareholders must execute and sign the attendance card issued in their favor by the entity or entities in charge of the book-entry registry, in which shareholders shall set forth their vote (in favor or against), their abstention, or a blank vote, by putting a cross in the corresponding box.

Article 19.- In order to be valid, votes cast by postal communication must be received before midnight on the day immediately prior to the date provided for the holding upon first call of the General Shareholders' Meeting. Otherwise, the vote shall be deemed not to have been cast.

After the aforementioned deadline, only such votes as are cast in person at the General Shareholders' Meeting by the shareholders who are present or validly represented shall be admitted.

Article 20.- Shareholders who cast their vote by mail shall be deemed to be present for purposes of the establishment of a quorum at the General Shareholders' Meeting.

Article 21.- Votes cast by postal communication shall be deprived of effect in the event of subsequent express revocation thereof, effected by the shareholder by the same means used to cast the vote and before the deadline specified above for such purpose.

Section Five
Votes Cast by Electronic Communication or by
Electronic Correspondence

Article 22.- Shareholders who have the right to attend and vote at the meeting may cast their vote by means of electronic correspondence – upon the same terms as provided for in Article 9 above with respect to proxy-granting – issued with their recognized electronic signature by means of a communication addressed to the Company through its website (www.iberdrola.com), in which, in addition to their identity, shareholders shall set forth the number of shares held by them, the securities account in which the shares are deposited, and such other details as are specified in the above-mentioned website.

Article 23.- In order to be valid, votes cast by electronic communication must be received by the Company before midnight on the day immediately prior to the date provided for the holding upon first call of the General Shareholders' Meeting. Otherwise, the vote shall be deemed not to have been cast.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

After the aforementioned deadline, only such votes as are cast in person at the General Shareholders' Meeting by the shareholder itself or by such other shareholder as validly represents it shall be admitted.

Article 24.- Before the deadline mentioned in the preceding numeral, shareholders may, by logging onto the website and using their recognized electronic signature, amend, view or cancel the electronic vote previously cast, by following the instructions that will be specified in the website for such purpose.

Article 25.- Shareholders who cast their votes by electronic communication shall be deemed to be present for purposes of the establishment of a quorum at the General Shareholders' Meeting.

Article 26.- Votes cast by electronic communication shall be deprived of effect in the event of subsequent express revocation thereof, effected by the shareholder by the same means used to cast the vote and before the deadline specified above for such purpose.

Section Six
Provisions Common to Proxy-granting and Distance Voting

Article 27.- The Board of Directors, in the exercise of the power conferred upon it by Articles 23 and 28 of the By-Laws and Articles 9, 11 and 32 of the Regulations for the General Shareholders' Meeting, has resolved that the electronic document to be executed by shareholders through the Company's website and authorized with their recognized electronic signature shall be deemed, for purposes of compliance with the provisions of Articles 11.2.b) and 32.1 of the Regulations for the General Shareholders' Meeting regarding proxy-granting and the casting of votes by electronic communication, as an unalterable electronic copy of the attendance and proxy-granting card.

Article 28.- The validity of the proxy granted and of the vote issued by electronic communication is subject to verification of the shareholder's status as holder of 100 or more shares per the card file provided by *Sociedad de Gestión de los Sistemas de Registro, Compensación y Liquidación de Valores, S.A.* (IBERCLEAR). In the event of a discrepancy between the number of shares disclosed by the shareholder granting a proxy or casting a vote by electronic communication and the number of shares recorded in the book-entry registries and communicated by IBERCLEAR, the number of shares reported by such entity shall be deemed valid for purposes of the establishment of a quorum and the vote.

Article 29.- Shareholders who grant a proxy by mail or by means of electronic communication and fail to mark any or all of the boxes intended to give voting instructions regarding the items on the Agenda shall be deemed to have voted in favor of the respective proposals made by the Board of Directors.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

Likewise, shareholders who cast their vote by mail or by means of electronic communication and fail to mark any or all of the boxes intended to indicate the vote regarding the items on the Agenda shall be deemed to have voted in favor of the respective proposals made by the Board of Directors.

Article 30.- Proxy representation granted by postal or electronic correspondence may be deprived of effect by express subsequent revocation by the shareholder, effected by the same means used to grant the proxy and before the deadline specified to grant such proxy, or by the shareholder's attendance in person at the General Shareholders' Meeting.

Votes cast from a distance, both by mail and by means of electronic communication, shall be deprived of effect in the event of express subsequent revocation by the shareholder, effected by the same means used to cast the vote and before the deadline specified to cast such vote, or in the event of personal attendance at the General Shareholders' Meeting by the shareholder that voted from a distance, or in the event of attendance by its representative.

Article 31.- The following rules of priority among proxy-granting, distance voting and personal attendance at the Meeting are hereby established:

- Personal attendance at the General Shareholders' Meeting by the shareholder granting the proxy shall have the effect of revoking the proxy, whatever the manner in which such proxy has been granted, or the vote cast from a distance.
- In addition, personal attendance at the Meeting by the representative, whatever the manner in which the proxy has been granted, shall render ineffective the vote cast from a distance by postal correspondence or electronic communication.
- In the event that a shareholder validly grants a proxy by electronic communication and, in addition, also grants it by means of a printed attendance card issued by the entity or entities in charge of the book-entry registry, the latter shall prevail vis-à-vis the proxy granted by electronic communication, regardless of the respective dates of issuance thereof.
- Likewise, in the event that a shareholder validly casts a vote by electronic communication and, in addition, also casts a vote by postal correspondence, the latter shall prevail vis-à-vis the vote cast by electronic communication, regardless of the respective dates of issuance thereof.

Article 32.- Shareholders shall be solely responsible for the custody of their electronic signatures.

The Company reserves the right to alter, suspend, terminate or restrict the mechanisms for electronic voting and proxy-granting when so required upon technical or security grounds.

The Company shall not be liable for any damage that shareholders may sustain as a result of failures, overloads, downtime, failed connections or any other event of the same or a similar nature, beyond the Company's control, which prevent the use of the mechanisms for electronic voting and proxy-granting.

Shareholders not residing in Spain may contact the Investor Relations Division at telephone number (34) 91 784.28.04 and fax number (34) 91 784.20.64, which may adopt, if appropriate, such measures as may be required to adjust the mechanisms for distance voting and proxy-granting to the special circumstances of such shareholders.

Section Seven
Right to Receive Information Prior to the General Shareholders' Meeting

Article 33.- From the publication of the call to the General Shareholders' Meeting through and including the seventh day prior to the date provided for the first call to meeting, the shareholders may request in writing such reports or clarifications that they deem are required, or ask written questions that they deem pertinent, regarding the matters contained in the Agenda. In addition, upon the same prior notice and in the same manner, the shareholders may request reports or clarifications or ask written questions regarding information accessible to the public which has been provided by the Company or the National Securities Market Commission since the holding of the last General Shareholders' Meeting.

Article 34.- The written requests for information shall include the first and last names of the requesting shareholder, who shall attach thereto the appropriate document – a copy of the attendance card or validation certificate – evidencing its shareholder status, in order for such information to be checked against the information provided by Sociedad de Gestión de los Sistemas de Registro, Compensación y Liquidación de Valores, S.A. (IBERCLEAR).

Article 35.- Requests for information – addressed in writing to the attention of the Investor Relations Division – may be made by delivering the request at the Company's registered office or by sending it to the Company by postal correspondence addressed to Post Office Box [*Apartado de Correos*] number 1.113, 48080 Bilbao.

Article 36.- Requests for information may also be made by electronic correspondence issued by the shareholder with its recognized electronic signature, upon the same terms as provided for in Article 9 above with respect to proxy-granting, addressed to the Company through its website (www.iberdrola.com), setting forth the first and last names of the requesting shareholder, the number of shares held by it, the securities account in which the shares are deposited and such other details as are specified in the Company's website, in order for such information to be checked against the information provided by Sociedad de Gestión de los Sistemas de Registro, Compensación y Liquidación de Valores, S.A. (IBERCLEAR). The provisions of Article 32 above shall also apply to requests for information made by means of electronic correspondence.

PROFILE OF THE DIRECTOR NAMED BY INTERIM
APPOINTMENT, FOR WHOM RATIFICATION IS PROPOSED

MR. SEBASTIÁN BATTANER ARIAS

Salamanca, 1941

Degree in Business Sciences from the Universidad Comercial de Deusto and Degree in Law from the Universidad de Valladolid. He began his professional career at Aceros de Llodio, S.A. and Tubos Especiales Olarra, S.A., and went on to hold management positions at financial institutions such as Unicaja and Caja de Ahorros de Salamanca y Soria.

NATIONAL STOCK MARKET COMMISSION
For the attention of: Antonio Mas Sirvent, Director of Madrid Market Area

SUBJECT: Other Communications

Dear Sirs,

Please be advised that, in execution of the corresponding resolution adopted by its Board of Directors, Iberdrola S.A. will deliver shares in the company to its employees next week as part of their variable remuneration.

This delivery of shares to employees forms part of the company's general pay policy, under which employees may receive Iberdrola shares as part of their annual variable remuneration. The maximum limit on remuneration receivable in the form of shares is 12,000 euro per employee.

The stock delivery plan is open to all Iberdrola employees, who may opt to receive part of their variable remuneration in cash or in company shares. This facilitates the objective of increasing the participation by employees and executives in the company's capital.

Under the afore-mentioned plan, Iberdrola estimates that it will deliver around 300,000 shares to employees, representing 0.03% of its capital. The total number of shares that will finally be delivered will depend on the closing price of the Iberdrola S.A share on the stock exchange on the date of payment of the variable remuneration.

We are at your disposal for anything yourself or the National Commission may require.

Yours faithfully,

Federico San Sebastián

Subject: Approval of the Agreements by the General Meeting

Dear Sirs,

We are very pleased to inform you that the General Ordinary Shareholders' Meeting held on 18 March approved, with a vote in favour of over two-thirds of the capital present and represented at the meeting, each and every agreement on the Agenda, of which you were informed on 23 February of this year, and the documentation of which – made available to the Shareholders – was sent to you on 25 February.

Best regards,

IBERDROLA, S.A.
The Secretary of the Board of Directors

1 April 2005

IBERDROLA

The aim is to boost growth in our country

IBERDROLA IS TO INVEST 2.5 BILLION EURO EN 2005, 84% IN SPAIN

- **The company will start up 1,200 MW in combined-cycle facilities and 500 MW in renewable energies in Spain this year, which will help to meet the sharp increase in demand**

IBERDROLA is to invest €2.5 billion euro this year to boost its growth on the Spanish energy market, the company's priority strategic area.

In particular, the company will assign 84% of the total investment (€2.1 billion) to its core business in Spain. Some €1.25 billion will be spent on Generation, mainly to increase the installed capacity with an additional 1,700 MW, of which 1,200 MW will correspond to combined-cycle plants and 500 MW to renewable energies.

IBERDROLA will start up the gas combined cycle facilities Aceca (Toledo), 400 MW, and Arcos B (Cadiz), 800 MW. It will also continue to pursue its plans in renewable energies -a sector in which the company is in the lead worldwide- putting into operation almost 40 wind farms, including the ones at Sierra Dueña (Salamanca), Virgen de Belén I (Albacete), the enlargement of Serra do Burgo (Orense) and Capiruzza (Albacete).

By the end of this year it will have 8,500 MW installed capacity in Spain using these two technologies (4,800 MW managed combined cycle plants and more than 3,700 MW in renewables) and will have a total capacity of over 25,000 MW, the largest in Spain.

This major growth in capacity planned for 2005 is essential to be able to guarantee power supplies in Spain in the face of the huge increases in demand this year. 44% of the installed capacity in new combined cycle facilities since 2001 has been built by IBERDROLA.

Another of IBERDROLA's basic objectives for 2005 is to continue improving its quality of service. It plans to invest some €500 million in improving the record levels achieved last year, when its annual average outage time (TIEPI) was brought down to below two hours for the first time, to 1.87 hours.

IBERDROLA will also step up its firm commitment to customers, one of the mainstays of its strategy, in an effort to maintain its leadership on the deregulated electricity market.

The company will invest €400 million in the International area in 2005, to be concentrated on consolidating its presence both in the countries in which it has been operating for years (Mexico, Brazil), and in others, in which it has started operating over the past year (Greece, Portugal).

In Mexico, the company plans to strengthen its position as leading private electricity generator, with the recent start-up of its combined cycle plant La Laguna II (500 MW), which raises its total capacity in the country to 2,700 MW. In Brazil, IBERDROLA will benefit from the anticipated rise in tariffs, which will have a positive effect on its distributors Coelba, Cosern and Celpe.

Cumulative investments

Over the period 2001-2004, IBERDROLA has invested a total of €10.3 billion euro (76% in Spain), which have enabled the company to get ahead of its main growth targets, raising the value of these investments by €6 billion, from the €12 billion contemplated when it embarked on its Plan to the €18,193 million invested up to yesterday.

By the end of 2004, IBERDROLA had accumulated investments of €5 billion in Generation in Spain, increasing its installed capacity to 22,547 MW, confirming it as the largest electric utility on the Iberian Peninsula in terms of capacity. The Group's generation park grew by 52% over the period, to 25,237 MW, enabling a 63% growth in output.

The positive evolution of the company's Strategic Plan led it in 2004 to post a record net profit of €1,210.7 million, 14.2% more than in the previous year, and the intended growth continues.

RE: Filing to National Securities Market Commission

Dear Sirs:

We are pleased to inform you of changes in the main areas of IBERDROLA's consolidated earnings and balance sheet as of the end of 2004, resulting from the application of International Financial Reporting Standards (IFRS).

(Figures in millions of euros)	IFRS	GAAP	Spanish Change	Change %
Net sales	8,573	10,314	-1,742	-16.9%
Gross margin	4,386	4,168	218	5.2%
EBITDA	2,892	2,858	34	1.2%
EBIT	2,002	2,019	-17	-0.8%
Net profit	1,211.3	1,210.7	0.6	0.0%
Net debt	10,685	10,568	116	1.1%
Financial debt	11,105	10,800	305	2.8%
Cash and short-term financial investments	420	232	188	81.3%
Shareholders' equity	8,628	8,717	-89	-1.0%

As always, we remain at the disposition of the National Securities Market Commission.

Regards,

Federico San Sebastián

Balance Sheet - Assets

	NOTE	Spanish GAAP	Abs Change	IFRS
Tangible & Intangible Fixed Assets	A	18,961.1	+324.3	19,285.4
Financial Fixed Assets	B	1,989.7	-88.5	1,901.2
Long Term Taxes Receivable	C	767.2	+447.3	1,214.5
Consolidation Goodwill	D	323.9	-323.9	--
Deferred Charges	E	175.3	-175.3	--
Current Assets- Inventories	F	1,142.4	-112.1	1,030.3
Current Assets- Rest & Other	G	2,838.2	-63.0	2,775.2
Total Assets		26,197.8	+8.8	26,206.6

Balance Sheet - Assets

Tangible and Intangible Fixed Assets: Increase due to changes in scope of consolidation (379 MM), the provision for plants decommissioning (74 MM), the restatement of nuclear fuel from Inventories to Fixed Assets (240 MM), & other (47 MM).

A
Decrease due to the write-off of Start-Up Expenses (-52 MM), and the reallocation of merger differences (-363 MM).

B
Financial Fixed Assets: Decrease due to changes in the scope of consolidation (-238 MM) and increase as a result of the valuation of Long-Term Financial Derivatives (81 MM) and other (69 MM).

C
Long Term Taxes Receivable: Increase due to the fiscal effects associated to the provisions for decommissioning (74 MM), the valuation of derivatives (109 MM), merger differences (127 MM), changes in the scope of consolidation (81 MM) and other (56 MM).

Consolidation Goodwill disappears, being allocated to:

- **Intangible Fixed Assets:** companies fully or proportionally consolidated (-24 MM).
- **Financial Investments:** companies consolidated through the equity method (-118 MM).
- **Changes in the scope of consolidation** due to EDP, which is valued at market (-183 MM).

D

Balance Sheet - Assets

E Deferred Charges: Reclassified to debt (-175 MM)

F Current Assets – Inventories: Reclassification of nuclear fuel, now accounted for as a Fixed Asset (-240 MM), the effect of the recognition of revenues due to developments sold in Apex (80 MM), changes in the scope of consolidation (45 MM) and other (2 MM)

G Current Assets – Other: Changes in consolidation: Net effect of the increase due to the proportional consolidation of subsidiaries (58 MM), and the decrease due to the recognition of revenues due to developments sold in Apex (-100 MM) and other (-21 MM)

Balance Sheet - Equity & Liabilities

	NOTE	Spanish GAAP	Abs Change	IFRS
Equity and Minority Interests	K	8,794.2	-166.6	8,627.6
Merger Differences	L	236.4	-236.4	--
Deferred Revenues	M	484.3	-10.6	473.7
Provisions	N	1,034.8	+236.1	1,270.9
Financial Debt	O	10,800.3	+304.6	11,104.9
Long-Term Taxes Payable	P	488.5	+109.1	597.6
Other Long Term Payables	Q	309.4	+13.1	322.5
Other Short Term Payables	R	4,049.9	-240.5	3,809.4
Total Equity and Liabilities		26,197.8	+8.8	26,206.6

Balance Sheet – Equity & Liabilities

K
Equity: Adjustments against reserves due to the valuation of EDP (-46 MM), REE (23 MM), GALP (8 MM) and Other (8 MM), valuation of derivatives (-93 MM), update of the provision for plants decommissioning (-59 MM), write-off of Intangible Assets (-34 MM) and increases in Minority Interest and other (25 MM).

L
Merger Differences: Eliminated against lower value of the tangible fixed assets associated (-236 MM)

M
Deferred Revenues: Positive exchange gains are included in P/L; Elimination of capital subsidies linked to R+D expenses written off in Assets

N
Provisions: Increase as a result of provision for plants decommissioning (202 MM), change in the scope of consolidation (54 MM) and other (-20 MM)

Balance Sheet – Equity & Liabilities

Financial Debt increases due to:

- Changes in the scope of consolidation (192 MM)
- Valuation of hedging derivatives (224 MM)

Decrease due to restatement of debt expenses (-49 MM) and leasing (-63 MM)

O

Long Term Taxes Payable: increase due to the fiscal effect of valuation of derivatives (109 MM)

P

Other Long Term Payables: Changes in the scope of consolidation (integration of liabilities of consolidated companies) (13 MM)

Q

Other Short Term Payables: Changes in the scope of consolidation (elimination of payables to equity accounted subsidiaries) (-240 MM)

R

Profit & Loss Account

Profit & Loss Account

Net Sales: Reduction of energy sales in distribution (-2,328 MM), changes in the scope of consolidation (619 MM). Apex: recognition of revenues for developments sold (-45 MM), reclassification of extraordinary results (12 MM).

1

Procurements: Reduction of energy sales in distribution (-2.328 MM), changes in the scope of consolidation (398 MM). Apex: recognition of costs for developments sold (-27 MM) and other (-3 MM).

2

Net Operating Expenses: Changes in the scope of consolidation (155 MM). Reclassification of extraordinary results (35 MM) and major maintenance costs and other (-21MM)

3

**Taxes: Reclassification of extraordinary results (13 MM) and other (2 MM)
Amortization & provisions: Changes in the scope of consolidation (67 MM), lower intangible assets amortization (-28 MM) and other (12 MM)**

5

Financial Result: Changes in the scope of consolidation (-10 MM), derivatives valuation (34 MM) and other (-19 MM)

6

Profit & Loss Account

- 7** Results of Companies Accounted for by the Equity Method: changes in the scope of consolidation. No goodwill amortization (-16 MM).....
- 8 & 9** Extraordinary Results: They disappear under IFRS and are reclassified under the account Earnings from Discontinued Operations (89 MM) and Other (-30 MM).....
- 10** Corporate Tax & Minorities: Changes in the scope of consolidation.....

Other issues

1. Change in scope:

- Global or proportional consolidation of Corporación IBV, Energy Works, Mediapark, Neosky, Iberdrola Energía Chile, Enerbrasil.
- Exit of EDP & REE (mark to market valuation).

2. Non Energy Businesses:

Change in the accounting of APEX developments. Under Spanish GAAP, the whole Profit for developments sold could be accounted for upon 80% of completion, while under IFRS no accounting of profit is done until the development is not fully finished and delivered

3. Quarterly evolution of leverage: IFRS vs. Spanish GAAP

Spanish GAAP	Q1 2004	Q2 2004	Q3 2004	Q4 2004
	54.7%	54.7%	54.7%	54.8%
IFRS	55.14%	55.03%	55.00%	55.32%

Legal Note

The financial information presented in this document has been prepared on the basis of all International Financial Reporting Standards (IFRSs) and their interpretation done by the Standing Interpretations Committee (SIC) and International Financial Reporting Interpretations Committee (IFRIC-IASB), effective for the year ended 31 December 2005.

In this respect, all of the following should be noted:

- The financial information has been internally prepared by the Company and has not been audited.
- This information has been prepared on the assumption that current IFRSs will all be in the future endorsed by the European Commission (EC), therefore providing them with full legal value. If the EC fails to endorse some of these standards and interpretations in time for the publication of the Group's Financial Statements for 2005, the information presented in this document might be changed.
- Standards currently in issue and adopted by the European Union are subject to interpretations issued from time to time by the IFRIC. Also, further standards might be issued by the IASB that may be applicable for financial years beginning on or after 1 January 2005.
- Up to now, IFRSs have undergone a significant revision process and are currently being applied in the European Union and in a large number of countries simultaneously for the first time. Accordingly, there is not yet a significant body of well established practice and detailed regulation on which to base the resolution of certain technical issues occasionally arising during the application of these standards to patterns not specifically addressed by IFRSs.
- Changes arising from any of the above listed items or from the evolution of industry practice might also impact certain decisions and interpretations currently adopted by the IBERDROLA Group for the preparation of the information contained in this document.
- As a result of all of the above, it is possible that further changes might be required to this information before it is published as comparative financial information in the 2005 Annual Report of the IBERDROLA Group.

43

Conclusion

Q1 2005: Net Profit up 12.3% to Eur 346.6 MM

Stable Group's production with 56% lower hydro...

...due to increase in capacity: 2,881 MW since Q1 2004

Increasing efficiency: Net Operating Expenses fall 1.4%

Rising EBITDA (+8.8%)
driven by International and Renewables

Maintaining financial strength: Leverage at 55.5%
70 bp decrease in like-for-like terms

44

Outlook for 2005: Iberdrola

2005, a year of
challenging conditions...

- High Demand Growth
- Very low hydro factor
- High fuel costs
- CO₂ allowances market in place
- Regulatory update under way

...Iberdrola
continues
to increase results

- New investments to provide growth:
 - Combined Cycles (+1,200 MW)
 - Renewables (+500 MW)
- Efficiency improvements

Towards the fulfillment of 2006 targets

IBERDROLA

UNICAJA RAISES ITS STAKE IN IBERDROLA TO 1%

RECEIVED
2005-04-22 10:53
UNIVERSITY OF CALIFORNIA
LIBRARY OF FINANCE

Friday, April 22, 2005

Unicaja has increased its stake in Iberdrola to 1%, following several purchases of shares in the stock market this year.

The financial institution first took a stake in the power company a year ago, with the purchase of 0.5% of its stock, a transaction that was carried out in line with Iberdrola's commitment to the Autonomous Community of Andalusia and which allowed Unicaja, as Andalusia's largest financial institution, to become in this way the financial institution of reference for Iberdrola in Andalusia. In this regard, and together with its strictly financial dimension, this transaction represented for Unicaja the objective of contributing to the energy and industrial development of Andalusia at a time, such as the present, of strong regional economic growth, construction and strengthening of new economic infrastructures and the configuration of a new competitive framework.

IBERDROLA S.A. CORPORATE FINANCE

Bilbao, May 13, 2005

Subject: Notification of significant event

Dear Sirs:

It is our pleasure to inform you that Iberdrola S.A. has signed a syndicated seven-year loan for the sum of 1,200 million euros with 16 top level financial institutions.

The operation is divided into two parts, both with the same date of maturity: one for 500 million euros, which will be carried out using the format of a syndicated loan and which renegotiates an operation taken out in May 2004, and the other for 700 million euros as a line of credit.

The aim of this operation is to take advantage of the excellent conditions offered at present in the banking market in order to finance IBERDROLA's general corporate requirements, as well as to refinance the loan signed by the Company in May 2004 under a Club Deal for the sum of 500 million euros at five years.

With kind regards,

Federico San Sebastian

Madrid, June 10, 2005

2005 JUN 10 10:43 AM
IBERDROLA

Subject: Notification of significant event

Dear Sirs:

It is our pleasure to inform you that Iberdrola S.A. closed this week a 10-year notes issue for 500 million euros on the euro bond market with a 3.50% coupon (equivalent to mid swaps plus 32 basis points), the lowest in the history of such deals among Spanish companies.

This transaction will allow the company to refinance its debt in very favourable conditions and to increase its average maturity, following a principle of financial prudence. At the same time, it will allow the company to finance investments forecast in its Strategic Plan, which are targeted at 16.2 billion euros for the period 2001-2008.

The financial institutions that have participated in the transaction are Barclays Capital, BBVA, Calyon and Citibank as Joint Bookrunners; SCH as Senior Co-Lead Manager; and Banesto, ING and West LB as Co-Managers. The bonds have been allocated to around 50 European investors, mainly mutual funds, insurance companies, pension funds and banks.

The issue is regarded as a complete success by the market, especially considering the volatility seen in recent months. The transaction confirms, once more, the financial standing and low risk profile of Iberdrola, reflected in the company's full access to the different financing markets.

This issue marks the company's return to the euro bond and it has become a new reference for the market, replacing another 5-year bond that matured last May.

Despite the strong investment effort of recent years, Iberdrola has kept its financial debt within the range set in its Strategic Plan. Thus, the net debt at March 2005 totalled 10,797 million euros while the leverage ratio was 55.5%.

Furthermore, the average cost of debt was 4.57% as of March 31st, 2005, 60 basis points lower than in March 2004. The average maturity of debt remained unchanged at 4.3 years in relation to the end of 2004.

With kind regards,
Federico San Sebastian

Madrid, 22 June 2005

NATIONAL SECURITIES MARKET COMMISSION

For the attention of Mr. Antonio Mas Sirvent
Markets Area Manager
Paseo de la Castellana, 19
28045 MADRID

Subject: Notification of significant event

Dear Sirs,

Please be advised that this company will pay the "FINAL DIVIDEND AGAINST 2004 " as of 1 July 2005, in accordance with the resolution adopted at the Annual General Meeting of Shareholders held on 18 March and the legal provisions on the treatment of economic rights of own shares.

We enclose a copy of the relevant notice.

We are, as ever, at your disposal.

Yours faithfully,

IBERDROLA, S.A.

FINAL DIVIDEND AGAINST 2004

This company will pay its **final dividend** against the 2004 profits as of **1 July 2005**, with the following details:

Euro per share		
Gross Amount	15% withholding against personal or corporate income tax	Net Amount
0.44208279	0.06631242	0.37577037

The aforesaid sums have been determined in consideration of the Application of Profits approved at the Annual General Meeting on 18 March 2005 and the legislation on the treatment of economic rights of own shares.

This dividend will be paid through **Banco Bilbao Vizcaya Argentaria, Banco Santander Central Hispano and Banco Bilbao Bizkaia Kutxa** following the procedures established by Sociedad de Gestión de los Sistemas de Registro, Compensación y Liquidación de Valores, S.A. (IBERCLEAR) and the share shall be listed ex-dividend as from 1 July 2005.

and renewables up 35%**

Production mix H1 2005

Group's net production

**Total production only falls 2% despite lower
hydro (-48%), and refuelling of nuclear**

4

Group's Installed Capacity

Group's attributable capacity: 26,354 MW (+10.4%)

	<u>MW</u>	<u>vs H1 2004</u>		<u>MW</u>
Spain	23,065	+1,888	Comb. cycles	6,084
Latam	3,289	+599	Renewables	3,280
Mexico	2,694	+501	Hydro	9,127
S. America	595	+98	Nuclear	3,335
TOTAL	26,354	+2,487	Coal	1,247
			Oil	2,888
			Cogeneration	393
			TOTAL	26,354

Spain accounts for 76% of capacity increase

5

Generation in Spain

**Doubling combined cycles' capacity
up to 3,200 MW...**

Combined Cycles (MW)

Contribution of Iberdrola

...4,000 MW managed in Spain (37% of total)

*1,600 MW operating - 400 MW additional in testing period

6

Renewable Energy

Addition of 616 MW to reach 3,280 MW

Renewable Energy (MW)

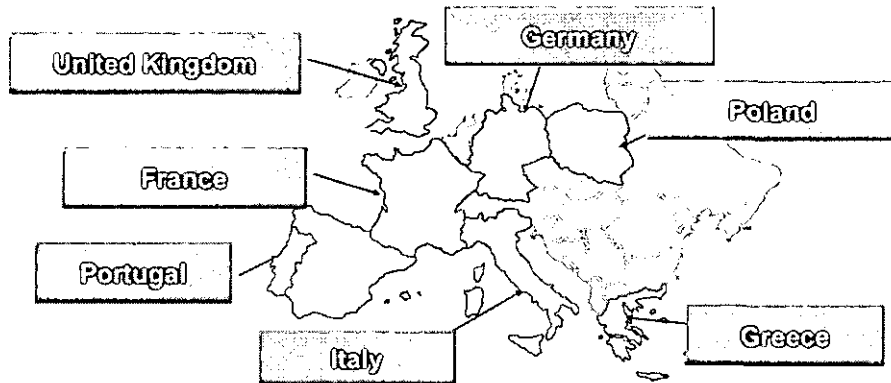

...total pipeline amounts to 14,900 MW

7

Renewable Energy

Increasing activities in Europe:
Over 2,500 MW under development

*Iberdrola's stake to reach 49%

8

Generation in Mexico

Mexico: Rising production driven by new capacity

	Inst. Capacity	Operating
Enertek	120 MW	Yes
Monterrey	1,037 MW	Yes
Altamira IV	1,036 MW	Yes
La Laguna	500 MW	Yes
Altamira V	1,121 MW	2006
Tamazunchale	1,135 MW	2007
Total	5,000 MW	2007

9

Challenging conditions continue in Q2 2005

Prices in line with other European countries

*Includes Spain, France, Germany, Netherlands, Austria & Nordic countries

10

Challenging conditions continue in Q2 2005

Price dynamics: High demand covered by the most expensive technologies

Low reserve margin
Demand growing at 7.0%
(+13.5% at peak)

...low hydro and nuclear
output and high
commodity costs...

...fuel oil plants necessary to
guarantee security of supply

CO₂ prices above expectations

11

Net Operating Expenses - Group

Net Operating Expenses -1.8% to Eur 675.6 MM₀₀₀

Eur MM

...despite internalisation of nuclear waste (Eur 9 MM)

12

15

Agenda

Highlights of the Period

Update on Regulatory Issues

Analysis of Results

Conclusion

16

Regulation

Spanish electricity sector
has structural problems...

Strong increase in demand
(+43% 1997-2004)

Insufficient tariffs
(-32% i. real terms 1996-2004)

Not enough
generation
capacity

Far away from
environmental
targets (Kyoto)

Problems in the
distribution
network

Energy waste

External
imbalances
(bal. of payments,
foreign dep.)

Recurrent tariff
deviations

... and short term problems due to 2005 extreme conditions

Draught

Fuel prices

Demand

17

Regulation

The Spanish sector needs long term solutions

Two alternatives:

More liberalisation

More Intervention

Spanish and EU legislation
have opted for liberalisation

18

Regulation

Government will listen to different points of view

Regulation

Government

White Paper

CNE

Incumbents

New entrants

Other agents

19

Regulation

Government has indicated that Electricity Law and EU Directives will be the basis

Spanish Legislation

- Electricity Law 54/97
- RD 5/2005 to foster competitiveness
- Legislation on concessions and adm. contracts
- MIBEL treaty
- Spanish Constitution

EU legislation

- Directive 2003/53 on internal market in electricity
- EC Treaty

Principles

Competition & liberalisation

No discrimination

Environmental protection

20

Regulation

IBERDROLA

1997 status quo has changed:
The electricity market is a reality in Spain

Customers

- + 35% of total energy is negotiated in the free market
- Price reduction: Over 30% since the end of the Stable Legal Framework (1997)

Agents

- More agents
- Lower shares
- New technologies
- Higher capacity

Some improvements must be made,
as stated in the Electricity Law

21

Regulation

IBERDROLA

Spain, among the three least concentrated
markets in Europe

- > Germany: No regulated TPA, which increases market power
- > Nordic Countries: includes Norway, Sweden, Finland and Denmark

22

Iberdrola's proposal

Iberdrola has a proposal based on:

Generation

- More markets (bilateral, forward...)
- Elimination of distortions
- Optimisation of capacity payment

Tariffs

- Elimination of Integral Tariff for industries (EU Directive)
- Creation of a Last Resort Supply for domestic customers, including a "Social Tariff" for essential consumption
- Additive, efficient and sufficient tariffs

23

Iberdrola's proposal

Iberdrola has a proposal based on :

Renewable Energies

- Maintain the model

Distribution

- Incentives to investments and quality

Environmental issues

- Compliance with Spain's commitments

Non-Mainland

- Remuneration as a regulated activity
- Improve transparency and efficiency

Gas Market

- Tariffs to disappear
- Improvement of gas storage

24

Analysis of current situation

The market is evolving rapidly and tends towards a greater transparency and competition

Distortions in market prices have been due to regulatory inefficiencies.
There has been no abuse of market power

ETCs have achieved the target they were created for and the "net" auction
"by differences" produces distortions

No other markets have been developed
as a result of regulatory inefficiencies

25

Analysis of current situation

Capacity payments must be coherent
with the result they intend to achieve

The evolution of the remuneration of Distribution
is not based on the main drivers of increases in costs

Tariffs not linked with energy prices compete advantageously with
suppliers and constitute a barrier to growth of retail sales

26

Market evolution

No other country presents a similar
pro-competitive evolution

	1997	2007
Evolution of interconnections and relevant market	Spain	MIBEL
Share of largest agent	46%	24%
Share of two largest agents	75%	45%
HHI (Herfindahl-Hirschman Index)	3,102	1,337
New Agents and strength	0	15*
Nr of agents with marginal capacity	4	15
Capacity competing to set price (MW)	15,000	30,000
Nr of agents and price-taker energy	Scarce	Large (Sp. Reg)

*EDF, RWE, EDP, Enel, Electrabel...

27

Market evolution

No other country presents a similar
pro-competitive evolution

	1997	2007
Transparency in the market	Nil	Total
Independent System and market operators	No	Yes (max. share by incumbents < 1%)
Market openness (eligibility)	0%	100%
Supervisory institutions		-CNE, ERSE, SDC, TDC M.Industry...

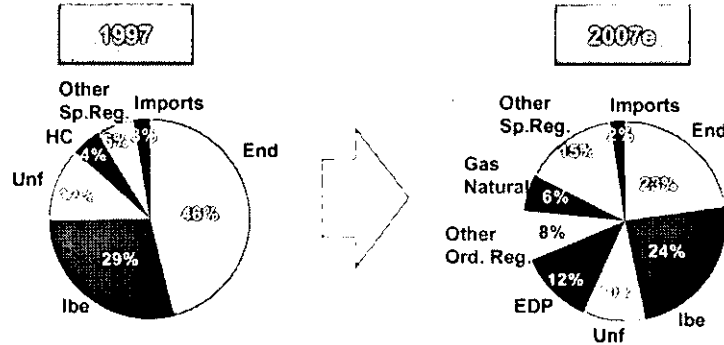

28

Market evolution

No agent will have market share above 25% by '07

Market shares in production

Over 30,000 MW and 15 players competing

Data in GW. Data for 2007 based on the forecasting presented by the Ministry on the NAP. The market shares for 2007 take into account interconnection with Portugal and consider the Iberian Peninsula as a relevant market, therefore, adding the production of EDP and Centralco and ignoring imports from Portugal. An increase in the interconnection with France has not been contemplated. The production of the Spanish Gas companies is not included.

Market evolution

Investments made by agents drive changes in market shares

	1997	2007		
	Total	Statu quo	New Invest.	Total
Endesa	48%	19%	+ 4%	= 23%
Iberdrola	23%	16%	+ 8%	= 24%
U. Fenosa	12%	6%	+ 4%	= 10%
EDP	3.5%	11%	+ 1%	= 12%
G. Natural	0%	0%	+ 6%	= 6%
Other O.R.*	0.5%	2%	+ 6%	= 8%
Other S.R	6%	3%	+ 12%	= 15%
Imports	3%	2%	+ 0%	= 2%

* Viesgo, Elicaás, BBE, Tarragona Power, ESB, Electrabel, AES, Gensa, Pego y Tanada

Improvement of wholesale market

Main measures

Eliminate regulatory distortions

- CTC remuneration system
- Restrictions (recently corrected with good results)
- Bilateral contracts (asymmetry in payment/collection of capacity payments disincentivise bilateral contracts)
- Tariffs with no reference to market price
- Minimum working hours (480) to obtain Capacity Payment
- Demand cannot set prices in the market

Foster freedom of contract: Futures, financial contracts, bilaterals...

Design a system of capacity payments compatible with security of supply and market dynamics

31

Improvement of wholesale market

It is time to trust in the market after eight years of transition period

Market price must be trusted, as there is no risk of abuse of market power

- Many agents, some of them considerably strong
- Many contracting figures
- Supply curve with 30,000 MW of similar marginal cost
- Codes of conduct required
- Market supervisory bodies (CNE, ERSE, SDC)
- Market and System operators increasingly independent
- Full transparency in the market for all agents
- If there is abuse of market power, temporary VPPs

A non-regressive proposal in line with Law and Directives avoiding to put security of supply at risk

32

Tariff System (I)

A transparent, sufficient and additive system

Transparency implies defining a procedure to calculate access tariffs and their allocation to consumers

- CNE is the right institution to define it

In 2006 there can be an additive tariff converging in a short period of time with all the system's costs

33

Tariff System (II)

A transparent, sufficient and additive system

Integral tariffs must protect only residential consumers and act as a Last Resort Supply

- A Minimum Use Supply is defined as part of the Last Resource Supply in order to:
 - Protect the lowest consumption customers
 - Apply measures of energy saving and efficiency for capacity contracted above the minimum
- Last Resort Supplier would be the Distribution company

For the rest of consumers, integral tariffs must disappear in 2007 through a plan including:

- The absorption of current structural deficit
- No excessive increases for any kind of consumption
- An access tariff in which each consumer is allocated its costs

A maximum transition period of 2 years

34

Distribution Remuneration

Current remuneration updating drivers
(CPI & demand growth) are not adequate

A system in line with SNE's proposal:

- First driver must be future investment plans
- Second driver, quality improvement
- Third driver, CPI
- Fourth driver, efficiency improvement

35

Supply

Eliminate barriers of entry

Remove a tariff system that is insufficient to recover cost.
Eliminate tariff's unfair competition

Develop forward markets for risk management

Allow all suppliers to access the market in the same conditions

Develop pending regulation to standardize processes to
access the free market and switch supplier

36

Environmental Policy

Firm commitment to fulfil Kyoto and emissions Directives (NO_x, SO₂...)

If tariff is modified: In order to cover all costs, give priority to industrial sectors in the allocation of allowances

The value of allowances will be used to incentivise clean technologies

Avoid sectors pooling as a way to limit acid emissions

37

Renewable Energies

Continue promoting renewables

Maintain a stable remuneration based on premiums beyond 2008

- Set efficiency targets for new assets

Improve management of wind energy

- To maximize production
- To meet targets of increasing the capacity

38

Gas Market

A symmetric regulation with the electricity market

A tariff proposal similar to electricity sector's

Foster the development of gas transmission
& storage infrastructures

Incentive gas infrastructures

39

Conclusion

It is possible and necessary to act on the market with no fear

Liberalisation has allowed to meet
a demand growth of 45% in 7 years

Competition parameters are evolving favourably. Improvement
of some regulatory inefficiencies is needed

Capacity payments entitle to have capacity effectively available

Distribution remuneration to incentivise new investments

Tariff must be transparent and sufficient.
Elimination of integral tariff has to be planned

Priority to industrial sectors in the allocation of allowances

40

Conclusion

64

Conclusion

H1 2005: Net Profit up 12.5% to Eur 653.0 MM

Stable Group's production with 48% lower hydro ...

...due to increase in capacity: 2,437 MW since H1 2004

Increasing efficiency: Net Operating Expenses fall 1.3%

Rising EBITDA (+0.3%)
driven by International and Renewables

Maintaining financial strength: Leverage at 65.0%
110 bp decrease in like-for-like terms

65

Outlook for 2005: Iberdrola

Increasing results thanks to new investments

Challenging conditions...

- High Demand Growth
- Very low hydro factor
- High fuel costs
- High CO₂ prices

**...Iberdrola
investing in
security of supply**

- More Production in H2
 - More capacity
 - Combined cycles
Aceca and La Laguna: + 1,000 MW
 - Arcos (year end): +800 MW
 - Renewables: +500 MW
 - Higher availability in Generation
(refuelling finished)
- Efficiency improvements

Agreement with Gas Natural for the acquisition of assets

September 2005

IBERDROLA

Agenda

IBERDROLA

Description of the transaction

Description of the assets

Transaction rationale

Impact on Iberdrola

Conclusion

Description of the transaction

Gas Natural has launched a tender offer on Endesa subject to obtaining a 75% acceptance

Iberdrola has agreed with Gas Natural the acquisition of certain assets of the resulting Group, subject to the obtaining of all the necessary authorizations

The agreement includes:

Assets to be sold:	<ul style="list-style-type: none"> • Electricity System of the Balearic Islands (electricity generation and distribution) • Electricity generation assets • Gas distribution in certain mainland areas with presence of Iberdrola and the Balearic Islands
Assets to be kept:	<ul style="list-style-type: none"> • Operating generation assets and wind assets under development • Stake in SNET in France
Assets to be left: Asset Co.	<ul style="list-style-type: none"> • Interest in assets to be defined in areas where Iberdrola has operating presence

Estimated transaction timetable

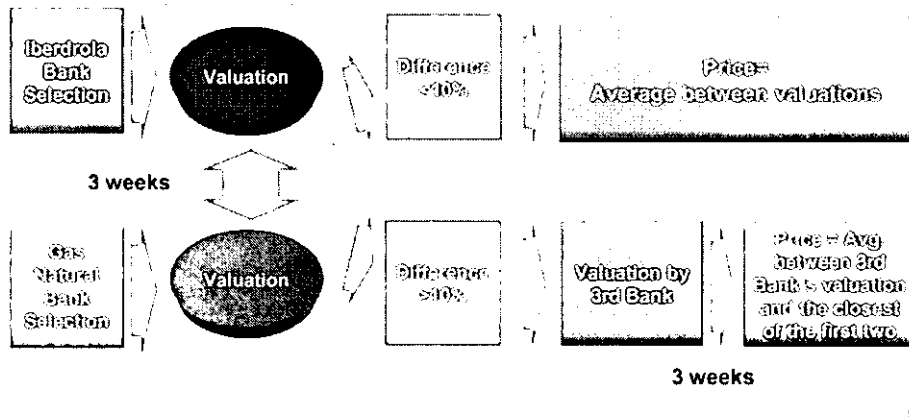

Once the takeover is settled and closed, at least 2-3 additional months to close acquisition of assets

Transaction Valuation

A valuation mechanism that ensures a fair price

Transaction Conditions

- The acquisition by Iberdrola of the assets from the Group resulting from the takeover is subject to:
 - Required authorizations from competent authorities:
 - CNMV
 - CNE
 - Competition authorities,as well as the conditions set by those authorities
 - Necessary consent from third parties

Description of the assets

Transaction rationale

Impact on Iberdrola

Conclusion

7

Description of the assets

**Spain: 4,900 MW of Generation
and y 1.85 MM of Electricity and Gas points of supply**

**Electricity
System of
Balearic
Islands**

Generation:
1,800 MW

- 2 CCGT plants (450 MW)
- 1 imported coal plant (500 MW)
- 6 fuel-oil plants (850 MW in total)

Distribution:
0.6 MM points of
supply

- Electricity distribution network
- Annual demand up to 5,000 GWh

**Mainland
Generation
assets**

Installed
capacity:
3,100 MW

- As Pontes plant, under conversion to imported coal (1,500 MW)
- Teruel coal plant (1,100 MW)
- Foix fuel-oil plant (Barcelona, 525 MW), with licence for 800 MW of CCGTs

**Gas
Distribution
assets**

1.25 MM
points of supply

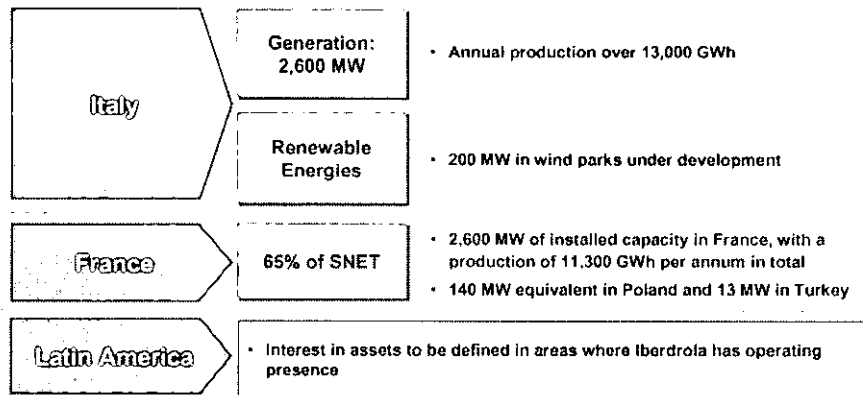

- In "Iberdrola's" geographic areas: Madrid, Valencia, Murcia and Balearic Islands

8

Q3

Increase in Production: Drivers

Combined cycles: 400 MW in Spain and 500 MW in Mexico

Renewables: 527 MW additional y-o-y

End of refuelling of nuclear plants

9M Group's production up +0.6% from -2.3% in H1

Pricing environment - Spain

Prices affected by different factors

High demand growth: +5.4%

Internalization of CO₂ at high prices: Eur 17/ton on average

Rising prices of commodities

Temporary non-availability of nuclear plants in H1

Low hydro production

Net Operating Expenses - Group

Increases in efficiency
Basic Margin growing 310 bp above Net. Op. Exp.

* Includes the net effect of emission allowances

EBITDA - Group

EBITDA increases by 10.7% to Eur 2,393.2 MM

New investments offset Traditional Generation in Spain

Net Profit

Net Profit up 12.6% to Eur 984.0 MM
in line with Operating Profit

Installed Capacity: Spain

**Strategic Plan's target for C. Cycles in Spain achieved,
4,000 MW operational**

C. Cycles: Capacity increases

Cogeneration (MW)

...and almost 400 MW in cogeneration

Renewable Energy: New National Renewables Plan

Reinforcing Iberdrola's position:
Potential increase in target after 2008

Wind Energy targets (MW)

Enhancing value of existing pipeline as first mover

Renewable Energy

Addition of 527 MW to reach 3,304 MW

Renewable Energy (MW)

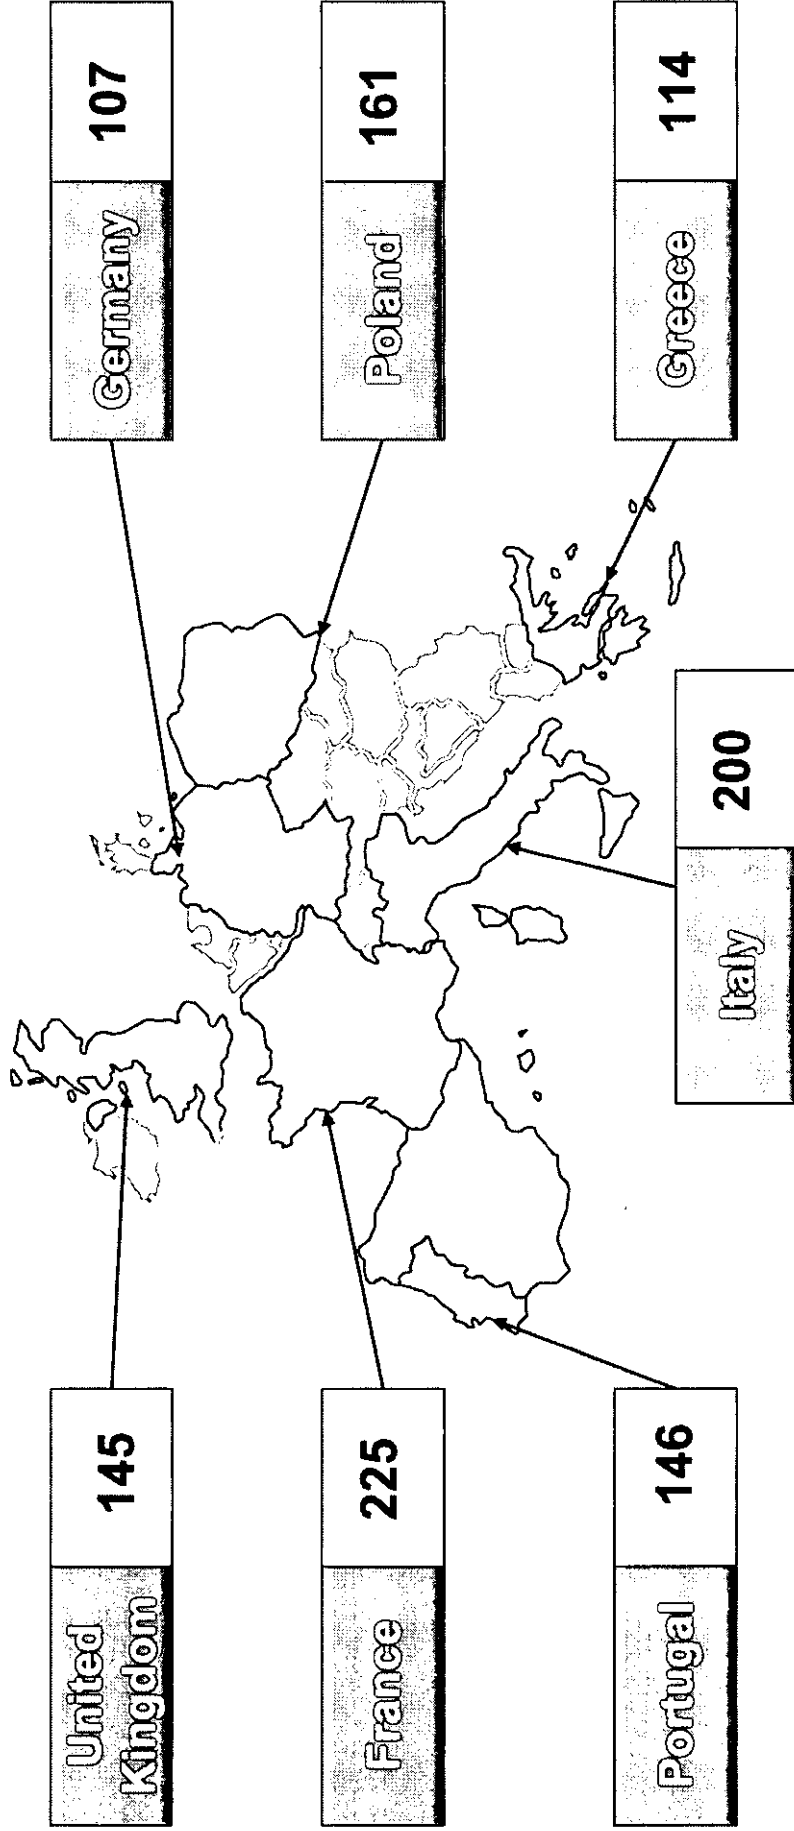

...total pipeline amounts to 14,900 MW

Renewable Energy

**Increasing activities in Europe:
1,100 MW under advanced development**

National Reforms Program

IBERDROLA

Promoting competition and incentivising efficiency

Energy sector

- “Guarantee energy supply and the implementation of new investments”
- “Promote a higher degree of competition”
- “Price formation based on market mechanisms”
- “Internalization of environmental costs”
- “Eliminate distortions that hinder market functioning”
- “Strategy of sustainable development (...) that will allow to comply with the commitments of the Kyoto Protocol”

A transparent
regulatory
framework

National Reforms Program

Promoting competition and incentivising efficiency

Electricity sector

Reform of the
wholesale
generation
market

- “Improve conditions for effective competition”
- “And guarantee a price formation based on competitive mechanisms”
- “New, objective and transparent”
- “That takes in to account all the costs recognized”
- “Allows the development of commercialisation activities”
- “And incentivises efficiency (...) in electricity commercialisation”

Tariff
methodology

- “The perception by each company of all the costs associated to its own networks, taking into account:

Remuneration
of Distribution
based on...

- The demand it serves;
- The percentage of losses in its networks;
- Quality of supply and efficiency.”

**Agreement with Gas Natural for the acquisition
of assets, subject to certain approvals**

Coherent with strategic principles

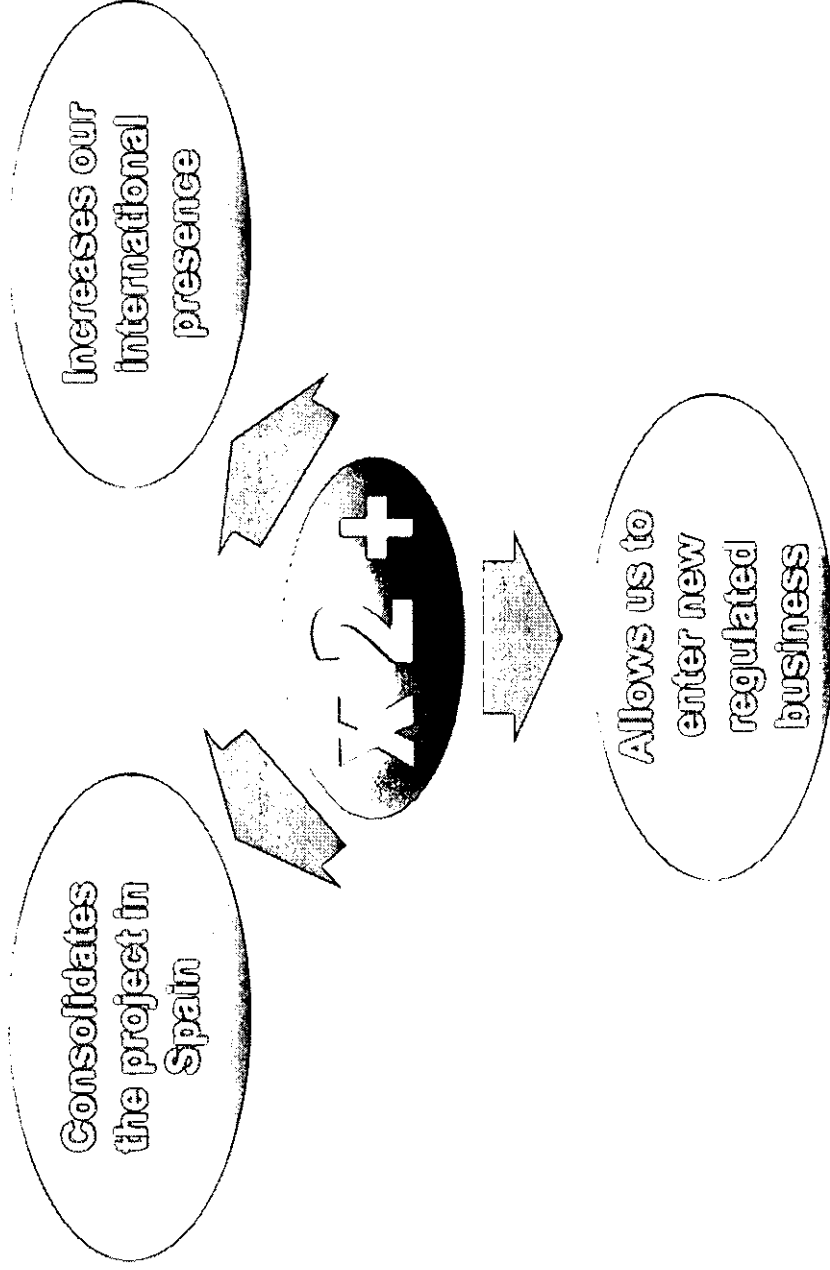

A good transaction for Iberdrola's stakeholders

Improving competition and transparency
for the benefit of the consumers

Optimizes balance between public & private interests

Complies with regulatory requirements

Strategic Rationale of Agreement with Gas Natural

**A decided commitment to the market,
coherent with the Strategy of the Company**

Agenda

Highlights of the Period

Tariff deviation

IBERDROLA

Sector's tariff deviation up to Eur 2,493 MM*

Iberdrola follows same criteria than in 2002 based on...

- Electricity Sector Law 54/1997
- The recognition of the total tariff deviation corresponding to years 2000, 2001 and 2002 (Law 53/2002, Art 94.2).
- Legal opinions from Allen & Overy, Clifford Chance, Uria y Menéndez and others
- Supreme Court decisions recognising the principle of tariff sufficiency (2-dec-2002, 2-oct-2003, 12-nov-2003 and 15-feb-2004)
- IAS 18

Iberdrola finances 35% of total deviation (Euro 873 MM)

- As an account receivable in Balance sheet

* Iberdrola estimate

Tariff deviation

Electricity Sector Law 54/97

“Tariffs shall include (...):

- a) The cost of generation.
- b) The relevant rates for the transmission and distribution (...).
- c) The retailing (supply sales) costs.
- d) The permanent costs of the system.
- e) The costs of supply diversification and security.”
(Art. 17.1)

“Generation activities shall (...) be remunerated in line with the marginal price corresponding to the offer made by the last generation unit.” (Art. 16.1)

Analysis of Results

**Agreement with Gas Natural
for the acquisition of assets,
subject to certain approvals**

Conclusion

Agreement with Gas Natural

- 1 Analysis of the Acquisitions**
- 2 Regulatory requirements**

Transaction Conditions

The acquisition by Iberdrola of assets from the Group resulting from the takeover is subject to...

1

Successful completion of the takeover by Gas Natural

2

Required authorizations from competent authorities as well as the conditions set by those authorities

3

Necessary consents from third parties

Scope of Assets: Spain

Spain: 4,900 MW of Generation & 1.85 MM Electricity and Gas points of supply

- **Electricity System of the Balearic Islands:**
 - **Generation: 1,800 MW**
 - **Distribution: 0.6 MM points of supply**
- **Gas Distribution: 1.25 MM points of supply**
 - **In certain mainland areas with presence of Iberdrola and the Balearic Islands**

Regulated

Non Regulated

- **Mainland generation assets: 3,100 MW**

Scope of Assets: Europe and Latam

Generation in Europe: Italy and France

- Italy:
 - Generation: 2,600 MW
 - Renewables: 200 MW in wind parks under development
- 65% stake in SNET in France

Europe

- Interest in assets to be defined in areas where Iberdrola has operating presence

Latam

Regulated Assets in Spain: Balearic Islands

Business Model

- Generation: price-setting mechanism according to approved costs
- Electricity Distribution: a natural monopoly that provides regulated access to third parties

Advantages

- Entrance of new agent in non-mainland territories will provide transparency and benchmark for the Regulator to settle the specific conditions for remuneration
- Iberdrola commits to Investment Plan

Regulated Assets in Spain: Gas Distribution

IBERDROLA

Business
Model

- A natural monopoly that provides regulated access to third parties

Advantages

- Iberdrola, new entrant in the business
- Joint management of gas and electricity networks common in European countries (Portugal, Germany, Italy), and even in Spain (Asturias, Aragon and Extremadura)
- Synergies will translate into better service
- Investments will be accelerated due to joint management of networks

Purchase of regulated assets does not alter its natural monopoly status

Non-Regulated Assets in Spain

Business Model

- Companies compete in pool according to cost structure and competitiveness of each plant

Advantages

- Both new Gas Natural Group and Iberdrola will have lower share in ordinary electricity production in mainland Spain than current largest generator
- More balanced generation mix guarantees more security and stability of supply:

Iberdrola's Production Mix

Pre-transaction

Post-transaction

Non-Regulated Assets in Spain

- Purchase of coal plants by Iberdrola will improve competition in price setting with this technology:

Coal-fired Generation

Pre-transaction

Post-transaction

The acquisition of generation assets will increase competition

Divestment Method: Direct Sale

Model

- Buyer presents together with the transaction a number of "remedies"
- If "remedies" include divestments, it presents an up-front buyer of assets

Advantages

- Assets identified from the beginning
- Iberdrola, the most adequate buyer and only current agent that environmentally has room to add coal plants
- Iberdrola's financial strength guarantees:
 - Investment plans
 - Security of supply
 - Quality of service
- Transaction executed rapidly

Divestment Method: Direct Sale

- The agreement fits with the legal rules and precedents in Europe and Spain
- Neither European nor Spanish competition law requires divestments to be implemented through a specific process
- Principle of "minimum interference" applies

Divestment Method: common practice in EU's energy sector concentrations

Year	Concentration	Asset disposals
1998	Neste/Ivo	Gasum
1999	PNEM-MEGA/Edon	Stake in Epon and generation assets
2000	RWE/VEW	Stakes in generation and gas DISCOs
2000	Veba/Viag	Stakes in various companies
2002	Statkraft/Agder Energy	Generation assets
2002	CEZ/Several parties	34% of CEPS and a distribution company
2002	E-ON/Ruhrgas	Stakes in regional gas distribution companies
2003	RWE/Stadtwerke Wuppertal	Several local distribution utilities
2003	Electrabel/IVEKA	Generation assets
2004	Elsam/Nesa	Generation assets

The agreement is in line with commonly used processes in Europe for asset disposals (market-driven)

Valuation of the Assets: a transparent proposal

The fair market value will be determined by international banks as part of an objective and transparent process

Advantages of the Acquisitions by Iberdrola

The Acquisitions by Iberdrola...

...do not alter the natural monopoly status of regulated assets

... increase competition in electricity generation

... remove uncertainties

... guarantee

- investments
- security of supply
- quality of service

... ensure a fair market value

Agreement with Gas Natural

- 1 Analysis of the Acquisitions**
- 2 Regulatory requirements**

Decision-making process

14th Function

Function 14th Procedure (Hydrocarbons Law 34/1998) specifies that the regulatory body is competent to **"AUTHORISE the stakes taken by companies with activities that are regarded as regulated activities in any entity carrying out business activities. The authorisations may only be turned down when significant risks exist or if they may have a direct or indirect negative impact on the activities regulated under this Act. Authorisations may be given for these reasons that set out the conditions under which the aforementioned operations may be carried out."**

15th Function

Function 15th Procedure (Hydrocarbons Law 34/1998) specifies that the regulatory body is competent to **"Furnish a mandatory REPORT on company concentration operations or the take-over of one or more energy companies by another company that also carries out energy activities whenever these have to be submitted to the Government for it to take a decision in accordance with the competition legislation in force."**

Competition Authorities and Government

Comisión Nacional del Mercado de Valores

Shareholders

Shareholders to make the final decision

Agenda

Highlights of the Period

Analysis of Results

**Agreement with Gas Natural
for the acquisition of assets,
subject to certain approvals**

Conclusion

Outlook for 2005: Iberdrola

Increasing results due to new investments

Challenging conditions...

High Demand Growth

Very low hydro factor

High fuel costs

High CO2 prices

...increasing investments & results

Increase in production

- **More operating capacity** **Aceca & Arcos** **+1,200 MW**
 La Laguna **+500 MW**
 Renewables: **+600 MW**

- **Higher availability in Generation (refuelling finished)**

Efficiency improvements

Outlook for 2005: Iberdrola

Strategic Plan's targets: One year ahead

	Target	Current situation
C. Cycles' Capacity (Spain)	4,000 MW by 2006	Achieved one year ahead
Renewables' Capacity	3,800 MW by 2006	Achieved one year ahead
Workforce*	9,000 by 2006	Achieved more than one year ahead

* Traditional Energy Business Spain

Conclusion: Agreement with Gas Natural

A good transaction that will...

...provide new opportunities for progress
toward energy liberalization in Spain

...improve electricity service and accelerate the construction of new
gas distribution networks

...increase competition in energy generation

...result in benefits for the
consumer and the national economy

... it is coherent with the Strategic Plan principles
and improves Iberdrola's financial position

Conclusion: Agreement with Gas Natural

Once the Strategic Plan's targets have almost been reached...

Enhances value

Maintains profitability and dividend

Increases size

Maintains solidity

...This will be the Plan's +

URAGUA, S.A.	Corporate	IBERDROLA AND BBK BOTH HOLD INDIRECT INTERESTS IN THIS COMPANY (ORGANIZED UNDER THE LAWS OF URUGUAY), WITH STAKES OF 41% AND 23%, RESPECTIVELY.
OPERADOR DEL MERCADO IBÉRICO DE ENERGÍA-POLO ESPAÑOL, S.A. (OMEL)	Corporate	IBERDROLA, BBVA AND BBK HOLD INTERESTS IN THIS COMPANY, WITH STAKES OF 5.143%, 4.50% AND 2.70%, RESPECTIVELY.
IBERDROLA SERVICIOS FINANCIEROS, S.A.	Corporate	IBERDROLA, BBVA (INDIRECTLY) AND BBK HOLD INTERESTS IN THIS COMPANY, WITH STAKES OF 1%, 84% AND 15%, RESPECTIVELY.

A.6. Indicate any paracorporate (shareholders') agreements that have been reported to the company:

Parties to the paracorporate agreement	% of share capital affected	Brief description of the agreement
--	-----------------------------	------------------------------------

Indicate any concerted actions among company shareholders of which your company is aware:

Parties to the concerted action	% of share capital affected	Brief description of the concerted action
---------------------------------	-----------------------------	---

Expressly indicate whether any of such arrangements or concerted actions have been terminated or modified during the year.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

A.7. Indicate whether there is any individual or legal entity that exercises or may exercise control over the Company pursuant to Section 4 of the Securities Market Law:

Name

Comments

THE COMPANY IS NOT AWARE OF ANY INDIVIDUAL OR LEGAL ENTITY THAT EXERCISES OR MAY EXERCISE CONTROL OVER IT PURSUANT TO SECTION 4 OF THE SECURITIES MARKET LAW.

A.8. Complete the following tables about the Company's treasury stock:

As of year end:

Number of direct shares	Number of indirect shares (*)	Total % of share capital
217,378	0	0.024

(*) Through:

Name of direct shareholder

Number of direct shares

Total:

Describe any significant changes, pursuant to the provisions of Royal Decree 377/1991, that have occurred during the year:

Date	Number of direct shares	Number of indirect shares	Total percentage of share capital
02-05-2004	4,284,298	0	0.475
09-22-2004	8,933,602	0	0.991

Gain (loss) on treasury stock transactions (in thousands of Euros)	6,154
---	-------

A.9. Describe the term(s) and condition(s) of the authorization(s) given by the shareholders acting at the General Shareholders' Meetings to the Board of Directors in order to acquire or transfer the Company's own stock described in A.8.

The treasury stock transactions conducted in FY 2004 were made under the authority granted by the shareholders acting at the General Shareholders' Meetings held on May 10, 2003 and April 3, 2004, according to the following terms and conditions:

"The Board of Directors is expressly authorized to make a derivative acquisition of IBERDROLA's own stock, with the power to delegate this authority to the Executive Committee pursuant to Section 75 of the current Consolidated Text of the Companies Law, subject to the following terms and conditions:

- Purchases may be made directly by IBERDROLA, S.A. or indirectly through any of its controlled companies.
- Purchases shall be made by means of a purchase and sale agreement, a swap arrangement or any other transaction whatsoever permitted by law.
- Purchases may be made at any time, up to the maximum sum permitted by law.
- Purchases may not be made at a higher price than that quoted on the Stock Exchange.

e) The authorization is granted for a period not exceeding 18 months.

In addition, for the purposes provided for in the second paragraph of Section 75.1 of the Companies Law, the shareholders acting at the General Shareholders' Meeting expressly authorize the purchase of shares in the Company by any of its controlled companies subject to the same terms of the resolution described above.

It is expressly put on record that the shares purchased under this authorization may be sold, retired or applied to the compensation systems contemplated in the third paragraph of Section 75.1 of the Companies Law."

A.10. Indicate any legal or by-law restrictions on the exercise of voting rights, and any legal restrictions on the acquisition or transfer of interests in share capital:

1. RESTRICTIONS ON THE EXERCISE OF VOTING RIGHTS:

1.1 BY-LAW RESTRICTIONS:

Article 29.3: "No shareholder may cast a number of votes greater than those corresponding to shares representing ten (10%) percent of share capital, even if the number of shares held exceeds such percentage of capital. This limitation does not affect votes corresponding to shares with respect to which a shareholder is holding a proxy as a result of the provisions of Article Twenty-Three of these By-Laws, although, with respect to the number of votes corresponding to the shares of each shareholder represented by proxy, the limitation set forth above shall apply."

Article 29.4: "The limitation set forth in the foregoing paragraph shall also apply to the maximum number of votes that may be collectively or individually cast by two or more shareholders which are entities or companies belonging to the same group. Such limitation shall also apply to the number of votes that may be cast collectively or individually by an individual and the shareholder entity, entities or companies controlled by such individual. A group shall be deemed to exist under the circumstances set forth in Section Four of the Securities Market Law, and an individual shall be deemed to control one or more entities or companies, under the circumstances of control set forth in such Section Four."

Article 30.1: "Shareholders participating in a merger or split-off with the company or who are called to subscribe to an increase in capital with the exclusion of preemptive rights or to acquire by overall assignment all of the Company's assets, may not exercise their voting rights for the approval of such resolutions by the shareholders."

Article 30.2: "The provisions of the foregoing paragraph shall also be applicable when the resolutions affect, (i) in the case of an individual shareholder, the entities or companies controlled by such individual, and (ii) in the case of shareholders which are legal entities, the entities or companies belonging to its group (in the sense indicated in paragraph four of Article Twenty-Nine), even when these latter companies or entities are not shareholders."

Article 54: "The limitation on the maximum number of votes that may be cast by a single shareholder contained in Article Twenty-Nine (paragraphs three to five) and the voting prohibition of Article Thirty which is imposed upon shareholders

affected by conflicts of interests, shall have no effect upon the occurrence of the following circumstances:

(a) when the Company is the target of a public tender offer aimed at the share capital as a whole; and

(b) when, as a result of the public tender offer, an individual or a legal entity, or several of them acting jointly, acquire an interest equal to two-thirds of the voting capital of the Company; provided the full consideration thereof consists only of cash; or, alternatively,

(c) when, as a result of the public tender offer, an individual or a legal person, or several of them acting jointly, acquire an interest equal to three-quarters of the voting capital of the Company, provided that the consideration thereof consists, in whole or in part, of securities, without giving the recipient an alternative right to receive such consideration wholly in cash."

1.2 LEGAL RESTRICTIONS:

Royal Decree-Law 6/2000, of June 23, on Urgent Measures to Intensify Competition in the Goods and Services Markets, provides that individuals or legal entities that have a direct or indirect interest in the share capital or voting rights of two or more companies that qualify as a Principal Operator in the same market or industry (electricity, oil & gas, telephony), may not exercise the voting rights corresponding to the excess with respect to such percentage in more than one entity.

Additional Provision No. 13 of Law 14/2000, of December 29, on Tax, Administrative and Social Order Measures provides that no individual or legal entity that qualifies as a Principal Operator in the electricity, oil & gas, or telephony market may exercise voting rights corresponding to an interest in excess of 3% of another company having the same status in the same market or industry.

Along these lines, it should be noted that the Official Gazette (*Boletín Oficial del Estado*) of February 18, 2005 has published the Resolution of the National Energy Commission, pursuant to which the lists of Principal Operators in the Energy Industries is established and made public for purposes of the provisions of Section 34 of Royal Decree-Law 6/2000, of June 23. Identified therein as Principal Operators in the Electricity Industry are: Grupo Endesa, Grupo Iberdrola, Grupo Unión Fenosa, Grupo Hidrocantábrico and Grupo Red Eléctrica. With respect to the Gaseous Hydrocarbon Industry, the Principal Operators are identified as: Grupo Repsol-Gas Natural, Grupo Enagas, Grupo Hidrocantábrico, Grupo Iberdrola and Grupo BP.

In addition, pursuant to Additional Provision No. 27 of Law 55/1999, of December 29, on Tax, Administrative and Social Order Measures (as amended by Law 62/2003, of December 30, on Tax, Administrative and Social Order Measures), "Public-sector entities or persons and entities of any nature which are controlled or in which a majority interest is held by public-sector entities or Agencies, regardless of the corporate structure adopted, that directly or indirectly acquire the control of or significant interests in government companies that engage in activities in the energy markets shall notify the *Secretaría de Estado de Energía, Desarrollo Industrial y PYMES* (Department of Energy, Industrial Development and SMEs) of any takeover or acquisition made," thus triggering an administrative

proceeding for the purpose of determining whether or not to recognize the exercise of the related voting rights or to impose certain conditions on the exercise thereof.

In any event, "from the date of takeover or acquisition of significant interests in public-sector companies that engage in business in the power markets, and so long as the Council of Ministers has not stated its decision by means of an express resolution or tacitly by lapse of time, the entities or persons referred to under number 1 in this provision may not exercise the voting rights corresponding to the equity interests therein indicated."

2. LEGAL OR BY-LAW RESTRICTIONS ON THE ACQUISITION OR TRANSFER OF INTERESTS IN SHARE CAPITAL:

There are no limitations, whether legal or arising from the By-laws, on the free transferability of interests in the company's share capital.

B STRUCTURE OF THE COMPANY'S MANAGEMENT

EXECUTIVE COMMITTEE

Reasons for which they cannot be considered independent or proprietary directors:

The Other External Directors do not represent or have not been nominated by the holders of significant stable interests in the share capital of the Company and, in addition, they have performed executive duties at the Company.

In that respect, as set forth in Article 37.1(b) of the By-laws, External Proprietary Directors are "those non-executive Directors who own, or represent owners, of stable interests in the share capital of the Company."

In addition, Article 37.1(c) of the By-laws sets forth that External Independent Directors are "those non-executive Directors not representing a major shareholder who are appointed based on their personal and professional prestige and their experience and knowledge for the performance of their duties. Such Directors shall have no substantial direct or indirect connection to the Company."

Moreover, Article 10.2 of the Regulations of the Board of Directors establishes "The following persons may not be appointed as independent Directors if such persons are, or have been during the last two (2) years:

- a) Managers of the Company or of any of the companies that are members of the IBERDROLA Group.
- b) Directors of any of the companies that are members of the IBERDROLA Group, except if they have acted as independent directors thereof.
- c) Recipients of any kind of remuneration or compensation payable by the Company or by any of the companies that are members of the IBERDROLA Group other than such as they may be entitled to collect for serving office as Directors.
- d) Significant shareholders or managers of companies to which the Company or any of the companies that are members of the IBERDROLA Group has paid, or from which the Company or any of the companies that are members of the IBERDROLA Group has received, substantial payments."

Indicate the changes, if any, in the type of director during the period:

Name of director	Date of change	Former type	Current type
------------------	----------------	-------------	--------------

B.1.4. Indicate whether the classification of directors made in the item

	DIRECTOR OF HUMAN RESOURCES AND SERVICES
Mr. JOSÉ LUIS DEL VALLE DOBLADO	DIRECTOR OF STRATEGY AND DEVELOPMENT
Mr. LUIS JAVIER ARANAZ ZUZA	DIRECTOR OF INTERNAL AUDIT
Mr. FRANCISCO MARTÍNEZ CÓRCOLES	DIRECTOR OF POWER GENERATION
Mr. JAVIER VILLALBA SÁNCHEZ	DIRECTOR OF DISTRIBUTION
Mr. SALVADOR FONT ESTRANY	MARKETING DIRECTOR
Mr. PEDRO BARRIUSO OTAOLA	DIRECTOR OF RENEWABLE ENERGIES
Mr. GONZALO PÉREZ FERNÁNDEZ	DIRECTOR FOR LATIN AMERICA
Mr. JOAQUÍN PINA MOURA	DIRECTOR FOR PORTUGAL

Total senior management compensation (in thousands of Euros)	8,453
--	-------

B.1.10. Identify, on an aggregate basis, if there are indemnity or "golden parachute" provisions for the benefit of senior management, including executive directors, of the Company or its Group in the event of dismissals or changes of control. Indicate whether such agreements must be reported to and/or approved by the decision-making bodies of the Company or its Group:

	Number of beneficiaries	15	
		Board of Directors	Shareholders (at the General Shareholders' Meeting)
Body approving the clauses		X	
		YES	NO
Is information about these clauses provided to the shareholders at the General Shareholders' Meeting?			X

B.1.11. Describe the process to set the compensation of the members of the Board of Directors and the relevant provisions of the By-laws with regard thereto.

As governed by the provisions of Article 50 of the By-laws, the Board of Directors sets the compensation of its members, which shall not exceed two (2) percent of consolidated group profits, after a report from the Nominating and Compensation Committee.

Article 34.2(d) of the By-Laws provides that one of the powers of the Board of Directors is to "set the compensation of the members of the Board of Directors, after a report from the Nominating and Compensation Committee."

In turn, Article 45.2 of the By-laws provides that the Nominating and Compensation Committee has, among other powers, the power to:

"d) Propose to the Board of Directors the system and amount of annual Director compensation."

"f) Report to the Board of Directors regarding the compensation of the Chairman, Chief Executive Officer and senior-level managers, the latter at the proposal of the Chief Executive Officer, if any."

Finally, Article 50 of the By-laws governs the compensation of Directors in the following terms:

"1. The Company shall allocate as an expense an amount equal to up to two (2) percent of consolidated group profits obtained during the fiscal year for the following purposes:

a) To compensate the members of the Board of Directors based on the offices held, and dedication to and attendance of meetings of the corporate decision-making bodies.

b) To endow a fund to meet the obligations of the Company regarding pensions or the payment of Life Insurance premiums in favor of current and former members of the Board of Directors.

The allocation of the maximum limit of two percent shall only occur if profits for the fiscal year are sufficient to cover legal and other mandatory reserves and the issuance to the shareholders of a dividend of at least four percent.

2. Independently of the provisions of the foregoing paragraph, and subject always to the approval of the shareholders, the compensation of the members of the Board of Directors may also consist of the delivery of shares or options thereto, as well as a payment which takes as its reference the value of the Company's shares.

3. All rights and duties arising from membership on the Board of Directors shall be compatible with all other rights, duties and indemnification to which the Director may be entitled by reason of other employment or professional relationships, if any, that such Director may have with the Company."

B.1.12. Indicate the identity of the members of the Board of Directors, if any, who are also members of the board of directors or managers of companies that hold a significant interest in the listed company and/or in companies within its Group:

Name of director	Name of significant shareholder	Position
Mr. JOSÉ ANTONIO FERNÁNDEZ RIVERO	BANCO BILBAO VIZCAYA ARGENTARIA, S.A. (BBVA)	DIRECTOR

Describe any significant relationships other than the ones contemplated in the prior item, of the members of the Board of Directors linking them to significant shareholders and/or in companies within its Group:

Name of director	Name of the significant shareholder	Description of relationship
Mr. JAVIER ARESTI Y VICTORIA DE LECEA	BANCO BILBAO VIZCAYA ARGENTARIA, S.A. (BBVA)	PROPRIETARY DIRECTOR APPOINTED FOLLOWING A

Mr. SEBASTIÁN BATTANER ARIAS	CAJA DE AHORROS Y MONTE DE PIEDAD DE SEGOVIA	PROPRIETARY DIRECTOR APPOINTED FOLLOWING A PROPOSAL OF THE SAVINGS ASSOCIATIONS ASSOCIATED IN FEDERACIÓN DE CAJAS DE AHORRO DE CASTILLA Y LEÓN.
Mr. SEBASTIÁN BATTANER ARIAS	CAJA DE AHORROS Y MONTE DE PIEDAD DEL CIRCULO CATOLICO DE OBREROS DE BURGOS	PROPRIETARY DIRECTOR APPOINTED FOLLOWING A PROPOSAL OF THE SAVINGS ASSOCIATIONS ASSOCIATED IN FEDERACIÓN DE CAJAS DE AHORRO DE CASTILLA Y LEÓN.
Mr. SEBASTIÁN BATTANER ARIAS	CAJA DE AHORROS Y MONTE DE PIEDAD DE AVILA	PROPRIETARY DIRECTOR APPOINTED FOLLOWING A PROPOSAL OF THE SAVINGS ASSOCIATIONS ASSOCIATED IN FEDERACIÓN DE CAJAS DE AHORRO DE CASTILLA Y LEÓN.

B.1.13. Indicate the amendments made during the fiscal year to the Regulations of the Board of Directors, if any.

The Regulations of the Board of Directors were approved by the Board of Directors at the meeting held on February 25, 2004, and no amendments have been made since the date of approval thereof.

B.1.14. Indicate the procedures for the appointment, re-election, evaluation and removal of Directors. List the competent bodies, the procedures to be followed and the criteria applied in each of such procedures.

1. APPOINTMENT AND REMOVAL OF DIRECTORS

Pursuant to the By-Laws, the shareholders at the General Shareholders' Meeting will decide the appointment and removal of Directors (Article 17.1.a).

Vacancies which occur may, in turn, be filled by the Board of Directors on a interim basis until the next General Shareholders' Meeting, whereat the shareholders shall confirm the appointments or elect the persons who should replace Directors which are not ratified, or it shall withdraw the vacant positions (Article 48.3 of the By-Laws).

Finally the Nominating and Compensation Committee shall bring Director designation proposals to the Board of Directors for the appointment thereof and subsequent submission to a decision by the shareholders at the General Shareholders' Meeting, at the request of the Chairman or any other member of the Board of Directors (Article 3.2 of the Regulations of the Nominating and Compensation Committee).

The Board of Directors (and the Nominating and Compensation Committee within its area of authority) shall endeavor to ensure that candidates proposed to the shareholders at the General Shareholders' Meeting for their appointment as directors, and the directors directly appointed by the Board to fill vacancies in the exercise of its power to make interim appointments, will be persons widely recognized for their expertise, competence and experience, and will be particularly rigorous in connection with the selection of those persons who are to hold office as independent Directors (Article 13 of the Rules for the General Shareholders' Meeting).

The Nominating and Compensation Committee, at the request of the Board of Directors, will select possible candidates who might be appointed as Directors of the Company, and will present their proposals to the Board of Directors through the Chairman of such Board of Directors, in accordance with the procedure set forth in Article 14 of the Regulations of such Committee:

- The Committee must verify that all candidates for Director of the Company meet the general requirements provided for by statute, the By-Laws and in the Regulations of the Board of Directors of the Company.
- In the case of candidates for the position of independent Director, the Committee must verify compliance with the specific requirements for this class of Director provided for in the By-Laws and in the Regulations of the Board of Directors, and gather adequate information regarding the personal qualities, experience, knowledge, and effective availability of the candidates.
- The Committee must submit to the Board of Directors a duly-

substantiated report containing its proposal for the appointment of Directors for designation thereof by the shareholders at the General Shareholders' Meeting or, if applicable, by the Board of Directors itself in the exercise of its powers to fill vacancies by interim appointment.

The proposals that the Committee submits to the Board of Directors must contain an assessment of the qualities of the various candidates and assign them to one of the four categories of directors contemplated by the By-Laws of the Company.

2. RE-ELECTION OF DIRECTORS

Pursuant to Article 16.1 of the Regulations of the Board of Directors, the proposals for re-election of Directors that the Board of Directors resolve to submit to the decision of the shareholders at the General Shareholders' Meeting will be subject to a formal process of elaboration, which shall include a report issued by the Nominating and Compensation Committee.

Article 15 of the Regulations of the Nominating and Compensation Committee provides that, prior to the end of the term for which a Director has been appointed, the Committee must examine the advisability of their re-election, as well as the continuance, if applicable, on the Committee of the Board of Directors of which such Director is a member.

For the foregoing purposes, the Committee must verify that the Director to be elected continues to comply with the requirements referred to above, as well as evaluate the quality of work and dedication to office of the Director in question.

Once the procedure described above has been completed, the Committee must present a well-reasoned report to the Board of Directors with its proposal regarding the re-election of Directors.

3. EVALUATION OF DIRECTORS

Pursuant to Article 27.1 of the Regulations of the Board of Directors, the Board of Directors will evaluate, on an annual basis, its operation and the quality of its work;

Pursuant to the above article, the Board of Directors has conducted a self-evaluation and the following substantial issues were analyzed:

1. Corporate governance and transparency: In FY 2004, the Board of Directors amended its entire rules and regulations to adapt them to the amendments to the By-Laws adopted by the Company to comply with the new corporate governance rules and regulations. Thus, pursuant to Section 115 of Law 24/1988, dated July 28, on the Securities Market, the Board of Directors approved a set of Regulations that allow it to ensure better management of the company. The text of the Regulations has not been amended in any way since the date of their approval.

In addition, in FY 2004 new Regulations of the Audit and Compliance Committee and of the Nominating and Compensation Committee were approved.

2. Periodic Meetings: The Board of Directors has held periodic meetings at the minimum intervals set forth in Article 27.1 of the Regulations of the Board of Directors. It has held 13 meetings. Notwithstanding some unjustified absences, a large majority of Directors was present at such Board of Directors' meetings. It should be pointed out that no meeting was held without the presence of the Chairman, the Vice Chairman & CEO or the Secretary of the Board of Directors.

The Executive Committee, the Audit and Compliance Committee, and the Nominating and Compensation Committee have held regular meetings to discuss their business, as set forth in this report under B.1.23.

3. Relations between the Board of Directors and the Committees: The three committees periodically report to the Board of Directors regarding their activities, the matters dealt with and the resolutions adopted by them at their meetings, as set forth in Article 24.5 of the Regulations of the Board of Directors (with respect to the Executive Committee), Article 20 of the Regulations of the Audit and Compliance Committee and Article 19.1 of the Nominating and Compensation Committee.

4. Information available to the Directors: All meetings of the Board and meetings of the Committees have been called sufficiently in advance and had their respective Agenda. All Directors have timely received full information of the business transacted and the resolutions adopted at the various meetings.

5. Strategy: Within the scope of the duties of general supervision entrusted to the Board of Directors, the Strategic Plan has been continuously monitored in each of the meetings.

In sum, the Board of Directors believes that, in FY 2004, it has performed its duties in accordance with the Law, the By-Laws and its internal Regulations, achieving transparency and efficiency in its operations.

B.1.15. Indicate the circumstances under which the resignation' of Directors is mandatory.

Pursuant to Article 48.1 of the By-laws, the Directors will serve in their positions for a term of five (5) years, so long as the shareholders at the General Shareholders' Meeting do not resolve to remove or dismiss them and they do not resign from their position

In particular, the Directors should submit their resignation from the position and formalize their withdrawal upon the occurrence of any of the instances of incompatibility or prohibition against performing the duties of director provided by Law, as well as the events in which the Regulations of the Board of Directors so provide.

In this sense, Article 17.2 of the Regulations of the Board of Directors sets forth that the Directors will tender their resignation to the Board of

Directors and formally resign from their position in the following cases:

- a) When they reach the age of seventy (70).
- b) When they are involved in any circumstance of incompatibility or prohibition governed by provisions of a general nature or set forth in Article Twelve of the Regulations of the Board of Directors (*).
- c) When as a result of acts attributable to the Director in his capacity as such, serious damage is caused to the value of the Company or the Director ceases to deserve the commercial and professional respect required to hold the position of Director of the Company.
- d) When they are seriously reprimanded by the Board of Directors because they have breached their duties as Directors and such reprimand is approved by a two-thirds majority of the members of the Board at the proposal of the Audit and Compliance Committee.
- e) When their continuance in office on the Board may jeopardizes the interests of the Company or when the reasons why the Director was appointed cease to exist and, in any case, when a Proprietary Director transfers his shareholding in the Company and when an independent Director is affected, at any time following his appointment as such, by any of the prohibitions on holding office provided for in section two of Article Ten of the Regulations of the Board of Directors.

(*) Article 12 of the Regulations of the Board of Directors:

The following may not be appointed Directors:

- a) Domestic or foreign companies competing with the Company in the energy industry, or the directors or senior managers thereof.
- b) Persons holding the position of director in more than four (4) companies with shares trading on domestic or foreign securities exchanges.
- c) Persons who, during the two (2) years prior to their appointment, have occupied high-level positions in the government which are incompatible with the simultaneous performance of the duties of a director of a listed company under national or autonomous community legislation, or positions of responsibility with entities regulating the energy industry, the securities markets or other industries in which the Company operates.
- d) Persons who are subject to any other circumstance of incompatibility or prohibition governed by provisions of a general nature.

B.1.16. Explain whether the powers of the top executive are vested in the Chairman of the Board. If so, indicate the measures that have been taken to mitigate the risks of accumulation of powers in a single person:

YES X NO

Measures to mitigate risks

The Vice Chairman & CEO, as an Individual Decision-Making Unit, has been delegated the powers to manage the Company and its subsidiaries and affiliated companies at the highest level.

The main measures adopted to mitigate the risks of accumulation of powers are:

- The duties attributed to the Executive Committee (Article 43 of the By-laws and the delegation resolution adopted by

the Directors acting the Board of Directors meeting held on July 3, 1991).

- The duties attributed to the Audit and Compliance Committee and to the Nominating and Compensation Committee (Articles 44 and 45 of the By-laws).

- The general risk policy and the risk management systems described in items D.1 and D.2 of this Report, developed on the basis of the general duty of supervision attributed to the Board of Directors, which is required to identify the main risks to which the Company is exposed and to organize adequate internal control and information systems [Article 7.5(c) of the Regulations of the Board of Directors].

- The activities of cooperation and support entrusted to the Management Committees within the framework of the general risk policy, as set forth in item D.4 of this Report.

B.1.17. Are qualified majorities, different from the statutory majorities, required to adopt any type of decision?

YES NO

Describe the method used by Directors to adopt resolutions, including at least the minimum quorum required to hold a valid meeting and the kind of majorities required to adopt resolutions:

Adoption of resolutions

Description of resolution	Quorum	Type of majority
Amendment to the Regulations of the Board of Directors (Article 29.4.b of the Regulations of the Board of Directors).	One half plus one of the Directors.	Two thirds of the Board members present in person or represented by proxy.

B.1.18. Explain whether there are specific requirements, other than the requirements relating to Directors, to be appointed Chairman.

YES NO

Description of requirements

B.1.19. Does the Chairman have a tie-breaking vote?

YES NO

Business to which the tie-breaking vote applies

B.1.20. Indicate whether the By-laws or the Regulations of the Board of Directors set forth any age limit for directors:

YES NO

Age limit for the Chairman	70
Age limit for the CEO	65
Age limit for directors	70

B.1.21. Indicate whether the By-laws or the Regulations of the Board of Directors establish any limit on the term of office for independent directors:

YES NO X

Maximum term of office 0

B.1.22. Indicate whether there are formal procedures for proxy voting at meetings of the Board of Directors. If so, briefly describe them.

Pursuant to Articles 40.2 of the By-laws and 29.2 and 33.2.(b) of the Regulations of the Board of Directors, Directors will use their best efforts to attend the meetings of the Board and, when unable to attend in person, they will attempt to give a proxy to another Director, to whom they will give any appropriate instructions.

The proxy will be a special proxy for the Board meeting in question, and may be communicated by any of the means to call a meeting of the Board, i.e. letter, fax, telegram, e-mail or any other means.

B.1.23. Indicate the number of meetings that the Board of Directors has held during the fiscal year. In addition, specify the number of meetings, if any, at which the Chairman was not in attendance:

Number of meetings of the Board	13
Number of meetings of the Board at which the Chairman was not in attendance	0

Indicate the number of meetings held by the different committees of the Board of Directors during the year:

Number of meetings of the Executive Committee	24
Number of meetings of the Audit Committee	13
Number of meetings of the Nominating and Compensation Committee	8
Number of meetings of the Strategy and Investment Committee	0
Number of meetings of the Committee	0

B.1.24. Indicate whether the annual individual financial statements and the annual consolidated financial statements that are submitted to the Board of Directors for approval have been previously certified:

YES X NO

Identify, if applicable, the person/persons that has/have certified the annual individual and consolidated financial statements of the Company for their preparation by the Board:

Name	Position
Mr. JOSÉ IGNACIO SÁNCHEZ GALÁN	VICE CHAIRMAN & CEO

B.1.25. Explain the mechanisms, if any, adopted by the Board of Directors to avoid any qualifications in the audit report on the annual individual and consolidated financial statements submitted to the General Shareholders' Meeting and prepared by the Board of Directors.

Pursuant to Article 44.2 of the By-laws, the Audit and Compliance Committee is vested, among others, with the following powers:

- Know the process for gathering financial information and associated internal systems for monitoring risks relevant to the Company.
- Receive information from the Auditors regarding matters that might risk the independence thereof which are related to the auditing procedure and generally regarding any other information provided for in legislation regarding the auditing of financial statements and in the technical auditing regulations in effect at any time.

In addition, Article 47.5 of the Regulations of the Board of Directors sets forth that "the Board of Directors shall use its best efforts to definitively prepare the financial statements such that there is no room for comments by the auditor. However, when the Board believes that its opinion must prevail, it shall provide a public explanation of the content and scope of the discrepancy."

In addition, Article 5.c) of the Regulations of the Audit and Compliance Committee contemplates, among the main duties of such Committee, related to the audit of the accounts the power to "review the contents of the Auditors' Reports, prior to the issuance thereof, in order to avoid qualified reports, and act as a liaison between the Board of Directors and the Auditors."

In practice, this duty is performed by such Committee continuously over the year by means of the reports it submits to the Board of Directors on the interim financial information of the Company presented on a quarterly basis to the National Securities Market Commission.

The reports of the Audit and Compliance Committee, presented by its Chairman to the Board of Directors before the approval of the information, are mainly intended to disclose such aspects that may give rise to qualifications in the Audit Report of Iberdrola and its consolidated group, making the appropriate recommendations to avoid such qualifications.

Consequently, in FY 2004 the Audit and Compliance Committee has submitted the following reports to the Board of Directors related to the financial information of the Company:

- Report dated April 27, 2004, on the financial information related to Q1 2004.
- Report dated July 19, 2004, on the financial information related to H1

2004.

- Report dated October 19, 2004, on the financial information related to Q3 2004.

These reports have been supplemented by the presentation to the Board of Directors of the Committee's report on the annual financial statements for FY 2004, which has ratified that there are no qualifications in the audit reports on the financial statements of Iberdrola, S.A. (individual) and the Company and its Consolidated Group.

As disclosed in the information about Iberdrola, S.A. included in the web page of the National Securities Market Commission, the audit reports on the annual financial statements prepared by the Board of Directors have been issued without qualifications.

B.1.26. Describe the measures adopted so that the information released to the securities markets is transmitted in an equitable and symmetric way.

Article 46.1 of the Regulations of the Board of Directors provides that the Board will "immediately inform the public regarding:

a) All relevant facts that might materially influence the stock exchange prices of securities issued by the Company.

b) All changes in the Company's ownership structure, such as fluctuations in significant direct or indirect interests, voting trusts and other forms of coalition of which the Board has had notice.

c) All substantial amendments to the Company's governance rules and regulations.

d) The policies, if any, in the area of treasury stock that the Company intends to pursue on the basis of any approvals granted by the shareholders at the General Shareholders' Meeting.

e) All changes to the composition and to the rules of organization and operation of the Board and the Committees thereof, or to the duties and positions of each Director in the Company, as well as any other modification relevant to the corporate governance system."

In addition, Article 46.2 of the Regulations of the Board of Directors provides that "The Board of Directors shall adopt appropriate measures to ensure that the semiannual, quarterly and any other financial information that it may be prudent to make available to the Securities Markets is prepared in accordance with the same principles, standards and professional practices used to prepare the annual financial statements and is as reliable as such financial statements. For this latter purpose, such information shall be reviewed by the Audit and Compliance Committee."

In this respect, the most significant events related to the Company and all the relevant information (which might have an effect on the listing) which is released is first communicated to the National Securities Market

Commission as a significant event. Once the information has been submitted to the National Securities Market Commission through the appropriate channels, it is released to the media, international, national and regional news agencies and to analysts, and it is published on our web page (www.iberdrola.com). For such purposes, all the information given to the media, agencies, analysts and investors is released at the same time.

B.1.27. Is the secretary of the Board of Directors a Director?

YES NO X

B.1.28. Indicate the mechanisms, if any, used by the Company to preserve the independence of the auditors, the financial analysts, the investment banks and the rating agencies.

External Auditor

Article 44.2(e) of the By-laws provides that one of the powers of the Audit and Compliance Committee is to "receive information from the Auditors regarding matters that might risk the independence thereof..."

Article 5(b) of the Regulations of the Audit and Compliance Committee provides that one of the main duties of such Committee will be to "ensure the independence of the auditors..."

To comply with the duties assigned to it in its Regulations, the Committee makes an annual evaluation of the auditor whereby it assesses different aspects of its work, and specifically, the existence of any circumstance that may jeopardize its independence.

In addition, the Committee has set guidelines for the segregation of responsibilities at the time of retaining the auditors. Therefore, after the auditor has been appointed by the shareholders acting at the General Shareholders' Meeting, the audit contract is negotiated by the Procurement Division of Iberdrola, which reports to the Economy and Finance Division. This relation is independent from the relation existing during the audit process, which is under the authority of the Administration, Control and Regulation Division of the Company.

In addition, at the meeting held on March 26, 2003, based on a proposal of the Audit and Compliance Committee, the members of the Board of Directors unanimously approved the creation of a new procedure to retain auditors for non-audit work. Under this procedure, the Committee will pre-authorize such engagements following the awarding proposal made by the organization that requested the service. Such request will state:

- The nature of the engagement.
- An estimate of the fees and hours to be billed.
- The reason for which the organization recommends that the

professional services to be retained might or should be provided by the audit firm in question.

- The procedure set forth to award the contract: either a request for quotations, by default, or by direct negotiation after a showing that there is no equivalent alternative.

- An express statement that there is no circumstance or consideration that should be taken into account by the Committee to assess the independence of the auditor.

This procedure has been regularly applied since the date it was approved to retain auditors for engagements other than the audit of the annual financial statements of Iberdrola, S.A. or of any of the Companies of its Group.

Additionally, in a letter addressed to the Chairman of the Audit and Compliance Committee dated October 9, 2003, Deloitte & Touche reported that "in order to strictly comply with the recent Measures to Amend the Financial System Law and the recent response of the Accounting and Audit Institute with respect to rotation-related issues raised by the Institute of Auditors, we have agreed to rotate the engagement partners and managers of Iberdrola's audit." All the members of the Committee regarded this as a positive measure that promotes the independence of the auditor in the terms required by the "Financial Law" "to be and appear to be" independent.

Financial Analysts, Investment Banks and Rating Agencies

The principles on which the relation of the Company with financial analysts, investment banks and rating agencies are based are transparency and non-discrimination. The Economy and Finance Division coordinates the relations with them and deals with all their requests for information and with the requests submitted by institutional or retail investors (in the case of retail investors, through the Office of the Shareholder). On the other hand, the Strategy and Development Division grants, within the framework of its powers, advisory mandates from time to time to Investment Banks in coordination with the Economy and Finance Division.

The independence of financial analysts is protected by the existence of a specific representative in charge of dealing with analysts. This guarantees an objective, fair and non-discriminatory treatment of analysts.

To actualize the principles of transparency and non-discrimination, always in strict compliance with regulations regarding the Securities Market, the Company has a number of communication channels:

- Personalized assistance for Analysts and Investors.
- Publication of information regarding quarterly figures.
- E-mail through the web page and a toll-free line for shareholders.

- Presentations either in person or re-transmitted over the telephone and Internet.

- Release of announcements and news.

All this information is also available on the Company's website.

B.1.29. Indicate whether the audit firm performs other non-auditing work for the Company and/or its Group. If so, state the amount of the fees paid for such work and the percentage they represent of the aggregate fees charged to the Company and/or its Group

	YES	X	NO	
				Company Group Total
Amount of other non-audit work (thousands of Euros)				589 464 1,053
Amount of non-audit work/ Aggregate amount billed by the audit firm (%)				39.000 21.000 28.000

B.1.30. Indicate the consecutive number of years for which the current audit firm has been auditing the annual financial statements of the Company and/or its Group. In addition, please state the percentage represented by such number of years with respect to the total number of years in which the annual financial statements have been audited:

Number of consecutive years	Company 12	Group 12
Number of years audited by the current audit firm / Number of years in which the company has been audited (%)	Company 100.000	Group 100.000

B.1.31. Indicate the interests of members of the Board of Directors in the share capital of companies that engage in the same, similar or complementary activities, both with respect to the Company and its Group, and which have been reported to the Company. In addition, state the position or duties of such Directors in such companies:

Name of director	Name of company in which shares are held	% interest	Position or duties
Mr. IÑIGO DE ORIOL E YBARRA	EMPRESA DE ALUMBRADO ELÉCTRICO DE CEUTA, S.A.	2.110	ATTORNEY-AT-LAW PROVIDING LEGAL COUNSEL TO THE BOARD OF DIRECTORS

B.1.32. Indicate whether there is any procedure to for Directors to hire external advisory services and, if so, describe it:

YES X NO

Description of procedure

Procedure set forth in Article 32 of the Regulations of the Board of Directors:

1. In order to be assisted in the performance of his duties, any Director may request the hiring of legal, accounting, technical, financial, commercial or other expert advisors, whose services shall be paid for by the Company.

The assignment must deal with specific issues of certain significance and complexity arising during the performance of the Director's duties.

2. The request for an expert to be hired shall be channeled through the Chairman or the Secretary of the Board of Directors, who may subject it to the prior approval of the Board of Directors; such approval may be denied in well-founded instances, including the following circumstances:

- a) That it is not necessary for the proper performance of the duties entrusted to the Directors.
- b) That the cost thereof is not reasonable in light of the significance of the issues and the assets and income of the Company.
- c) That the technical assistance sought may be adequately provided by the Company's own experts and technical personnel.
- d) That it may entail a risk to the confidentiality of the information that must be made available to the expert.

In addition, Article 16.3 of the Regulations of the Nominating and Compensation Committee and Article 24.1 of the Regulations of the Audit and Compliance Committee provide that such Committees may obtain advice from outside professionals who will send their reports directly to the Chairman of the Committee.

B.1.33. Indicate whether there is any procedure for Directors to obtain sufficiently in advance the information required to prepare for meetings of management-level decision-making bodies and, if so, describe it:

YES X NO

Description of procedure

Article 27.4 of the Regulations of the Board of Directors, further developing the provisions of Article 39.2 of the By-laws, provides that "The call to meeting of the Board of Directors shall be carried out by letter, fax, telegram, e-mail or any other means, and shall be authorized under the signature of the Chairman, or under the signature of the Secretary or Assistant Secretary by order of the Chairman. Notice of the call shall be given in a manner such that the Directors receive it not later than the third day prior to the date of the meeting, except in the case of emergency meetings. Excepted from the foregoing provision shall be those instances in which these Regulations prescribe that greater notice be given. The call shall always include the agenda for the meeting and an attachment containing any required information."

In addition, Article 33.2(a) of the Regulations of the Board of Directors provides that the Board is specifically required to "properly prepare the meetings of the Board and, if applicable, the meetings of the Executive Committee or of the Committees of which the Director is a member, for which purposes the Director must diligently inform himself of the running of the Company."

B.1.34. Indicate whether there is any liability insurance policy for the benefit of the Company's Directors.

YES NO

B.2. Committees of the Board of Directors

B.2.1. List the management-level decision-making bodies:

Name of body	Number of members	Powers
BOARD OF DIRECTORS	21	AS A GENERAL RULE, THE BOARD OF DIRECTORS, WHICH HAS THE WIDEST POWERS AND AUTHORITY TO MANAGE, DIRECT, ADMINISTER AND REPRESENT THE COMPANY, WILL ENTRUST THE DAY-TODAY MANAGEMENT OF THE COMPANY TO THE REPRESENTATIVE MANAGEMENT DECISION-MAKING BODIES AND WILL FOCUS ITS ACTIVITY ON THE GENERAL DUTY OF SUPERVISION AND ON CONSIDERATION OF THOSE MATTERS WHICH ARE OF PARTICULAR IMPORTANCE TO THE COMPANY. (ARTICLE 34.2 OF THE BY-LAWS).
EXECUTIVE COMMITTEE	8	ALL OF THE POWERS INHERENT IN THE BOARD OF DIRECTORS, EXCEPT THOSE POWERS THAT MAY NOT BE DELEGATED PURSUANT TO LEGAL OR BY-LAWS RESTRICTIONS, TO WIT: THE RENDERING OF ACCOUNTS, THE PRESENTATION OF BALANCE SHEETS TO THE GENERAL SHAREHOLDERS' MEETING AND THOSE POWERS WHICH ARE GIVEN BY THE SHAREHOLDERS AT THE GENERAL SHAREHOLDERS' MEETING TO THE BOARD OF DIRECTORS WITHOUT THE POWER OF DELEGATION. (ARTICLES 43 OF THE BY-LAWS AND 24 OF THE REGULATIONS OF THE BOARD OF

STRATEGY AND INVESTMENT COMMITTEE

Name	Position
------	----------

B.2.3. Describe the rules of organization and operation of, and the duties allocated to, each of the Board committees.

Article 42.1 of the By-Laws sets forth that the "Board of Directors must create and maintain an Executive Committee, an Audit and Compliance Committee and a Nominating and Compensation Committee."

Executive Committee

Pursuant to Article 43 of the By-Laws, the Executive Committee will be composed of the number of members decided by the Board of Directors, with a minimum of five (5) Directors and a maximum of eight (8). In all cases, members of the Executive Committee will include the Chairman of the Board of Directors, who will preside over meetings of the Executive Committee, the Vice Chairman or Vice Chairmen and the Chief Executive Officer, if any. The Secretary of the Board of Directors or, in the absence thereof, the Assistant Secretary of the Board of Directors or, in the absence of both, the member of the Committee appointed from among the members attending the meeting in question, will act as Secretary of the Committee (Article 43.2 of the By-Laws).

The Executive Committee will meet at least two (2) times per month and as many other times as deemed appropriate by the Chairman, who may also suspend one or more of the ordinary meetings when deemed appropriate in the sole judgment of the Chairman. The Executive Committee will deal with all matters within the power of the Board of Directors which, in the sole judgment of the Committee, should be resolved without further delay, excepting only the rendering of accounts, the presentation of the balance sheets at the General Shareholders' Meeting and those powers which are given by the shareholders at the General Shareholders' Meeting to the Board of Directors without the power of delegation. Resolutions adopted by the Executive Committee will be reported to the Board of Directors at its next meeting.

The Executive Committee also performs the duties of the STRATEGY AND INVESTMENT COMMITTEE, proposing or reporting to the Board of Directors all strategic decisions, investments and disinvestments that are important for the Company or the Group, ensuring that they are in line with the budget and strategic plans and undertaking the analysis and monitoring of business risks.

The provisions of the By-Laws regarding the operation of the Board of Directors will apply to the Executive Committee, to the extent they are not incompatible with the nature thereof.

Audit and Compliance Committee

Pursuant to Article 44 of the By-Laws, the Board of Directors will create a permanent Audit and Compliance Committee, which shall be composed of a minimum of three (3) Directors and a maximum of five (5) Directors appointed by the Board of Directors from among the external Directors who are not members of the Executive Committee.

The Audit and Compliance Committee will have a Chairman and a Secretary appointed by the Board of Directors from among the members of such Committee.

The members of the Audit and Compliance Committee will carry out their duties for a maximum period of four (4) years, and may be re-elected. The position of Chairman will be held for a maximum period of (4) years, after which period such person may not be re-elected until the passage of one year from ceasing to act as such, without prejudice to such person continuing or being re-elected as a member of the Committee.

In all events, the Audit and Compliance Committee will have the power to:

- (a) Report to the General Shareholders' Meeting with respect to matters raised therein by shareholders regarding its powers.
- (b) Propose appointments of the Company's Auditors to the Board of Directors for submission to the General Shareholders' Meetings.
- (c) Supervise the management of the Internal Audit Area, which will be functionally controlled by the Chairman of the Audit and Compliance Committee.
- (d) Know the process for gathering financial information and associated internal systems for monitoring risks relevant to the Company.
- (e) Receive information from the Auditors regarding matters that might risk the independence thereof which are related to the auditing procedure and generally regarding any other information provided for in the legislation regarding the auditing of financial statements and in the technical auditing regulations in effect at any time.
- (f) Inform itself in advance of the Company's annual corporate governance report and ensure compliance with legal requirements and those of the Codes of Professional Conduct and Good Governance adopted by the Board of Directors.
- (g) Such other powers, if any, that may be assigned to it by the Board of Directors.

For purposes of the operation of the Committee, it shall meet as many times as its Chairman deems necessary for the fulfillment of its obligations, and at least four (4) times per year, or when requested by one-half of its members.

Meetings of the Committee will be validly held when one-half plus one of its members are present in person or by proxy, and will adopt resolutions by majority of the members present in person or by proxy. In the event of a tie, the Chairman will have the tie-breaking vote.

Finally, this Committee will submit for approval of the Board of Directors a Report of its activities during the fiscal year, which will thereafter be made available to shareholders and investors.

Nominating and Compensation Committee

Pursuant to Article 45 of the By-Laws, the Board of Directors will create a permanent Nominating and Compensation Committee, which will be an internal informational and consulting body without executive powers, and which will have the information, advisory and proposal-making powers within its scope of action as set forth in paragraph second of this Article.

The Nominating and Compensation Committee will be composed of a

minimum of three (3) Directors and a maximum of five (5), appointed by the Board of Directors from among the external Directors. The Board of Directors will also appoint the Chairman thereof from among the members of such Committee, as well as its Secretary, who need not be a member of the Committee.

Unless otherwise decided by the Board of Directors, the members of the Nominating and Compensation Committee will hold their positions for so long as they remain Directors of the Company. Renewal and re-election to and removal from office of the members of the Committee will be governed by resolution of the Board of Directors.

The Nominating and Compensation Committee shall have the power to supervise the procedure for selecting Directors and senior-level managers (the latter at the proposal of the Chief Executive Officer, if any) of the Company, members of its Group and those other companies in which the Company is responsible for management, as well as to assist in the Board of Directors in the determination and supervision of the compensation policy for such persons.

In particular, the Nominating and Compensation Committee will have the power to:

- (a) Report on and review the criteria that should be followed in composing the Board of Directors and in selecting candidates.
- (b) Bring Director designation proposals to the Board of Directors for the nomination thereof and subsequent submission to a decision by the shareholders at the General Shareholders' Meeting.
- (c) Propose to the Board of Directors the members who should make up each of the Committees.
- (d) Propose to the Board of Directors the system and amount of annual Director compensation.
- (e) Report to the Board of Directors regarding the appointment of senior-level managers of the Company, at the proposal of the Chief Executive Officer, if any.
- (f) Report to the Board of Directors regarding the compensation of the Chairman, Chief Executive Officer and senior-level managers, the latter at the proposal of the Chief Executive Officer, if any.
- (g) Report on incentive plans and pension supplements.
- (h) Periodically review the compensation programs, evaluating the adequacy and results thereof.
- (i) Such other powers, if any, that are assigned to it by the Board of Directors.

For the purposes of operation of the Committee, it shall meet as many times as needed, in the opinion of its Chairman, to fulfill its obligations, and at a minimum once each quarter or when so requested by one-half of its members. The Committee will validly meet when one-half plus one of its members are present in person or by proxy, and will adopt its resolutions by majority of the members present in person or by proxy. In the case of a tie, the Chairman shall have the tie-breaking vote.

B.2.4. Indicate, if applicable, the advisory and consulting powers and the powers of delegation of each of the committees:

Name of Committee	Brief Description
EXECUTIVE COMMITTEE	SEE B.2.3
AUDIT AND COMPLIANCE COMMITTEE	SEE B.2.3
NOMINATING AND COMPENSATION COMMITTEE	SEE B.2.3

B.2.5. Indicate, if applicable, the existence of regulations of the Board committees, where such regulations may be consulted and the amendments made during the year. Also indicate if any annual report of the activities performed by each committee has been voluntarily prepared.

Both the Audit and Compliance Committee and the Nominating and Compensation Committee have their own Regulations, which are available on the Company's web site: www.iberdrola.com.

On October 20, 2004 the Board of Directors of IBERDROLA, S.A. approved an amendment to both sets of Regulations, to adapt their contents to the provisions of the new By-Laws approved on April 3, 2004 and the Regulations of the Board of Directors approved on February 25, 2004.

As provided in Article 19.2 of the Regulations of the Audit and Compliance Committee, further developing the provisions of Article 44.4 of the By-laws, this Committee will "prepare an annual Report of its activities, which, once approved by the Board of Directors, shall be made available to the shareholders for purposes of the Ordinary Shareholders' Meeting." The Reports from 1999 to date prepared by this Committee are available on the Company's website.

Article 19.2 of the Regulations of the Nominating and Compensation Committee also provides that "within three (3) months following the close of the Company's fiscal year, the Committee shall deliver a report to the Board of Directors detailing its work for the fiscal period covered by the report."

B.2.6. If there is an Executive Committee, please indicate its delegation powers and its level of independence in the exercise of its duties to adopt resolutions regarding the management of the company.

Both Article 43 of the By-Laws and Article 24 of the Regulations of the Board of Directors provide that "there shall be an executive committee permanently operating as the representative of the Board of Directors, which committee shall be called the Executive Committee, and which shall have all the powers inherent to the Board of Directors, unless otherwise determined by the Board of Directors and except for those powers that may not be delegated pursuant to legal or by-law restrictions."

Article 24.4 provides that "The Executive Committee shall deal with all matters within the power of the Board which, in the sole judgment of the Committee, should be resolved without further delay, excepting only the rendering of accounts, the presentation of the balance sheets at the General Shareholders' Meeting and those powers which are given by the

In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

shareholders at the General Shareholders' Meeting to the Board without the power of delegation."

B.2.7. Indicate whether the composition of the Executive Committee reflects the participation of the different directors in the Board of Directors based on their category:

YES NO

If no, please explain the composition of your Executive Committee

B.2.8. If the Company has a Nominating Committee, indicate whether all of its members are external directors:

YES NO

C RELATED TRANSACTIONS

C.1. Describe the relevant transactions that involve a transfer of resources or obligations between the Company or entities within its Group and the Company's significant shareholders:

Name of significant shareholder	Name of the Company or entity within its Group	Nature of transaction	Type of relationship	Amount (in thousands of Euros)
---------------------------------	--	-----------------------	----------------------	--------------------------------

C.2. Describe the relevant transactions that involve a transfer of resources or obligations between the Company or entities within its Group and the directors or managers of the Company:

Name of director or manager	Name of the Company or entity within its Group	Nature of transaction	Type of relationship	Amount (in thousands of Euros)
-----------------------------	--	-----------------------	----------------------	--------------------------------

C.3. Describe the relevant transactions made by the Company with other companies belonging to the same group, provided they are not eliminated in the preparation of the consolidated financial statements and they are not part of the ordinary course of business of the Company as to their purpose and conditions:

Name of the entity within the Group	Brief description of the transaction	Amount (in thousands of Euros)
-------------------------------------	--------------------------------------	--------------------------------

C.4. Identify, if applicable, the conflict of interest situations in which directors of the company are involved, pursuant to Section 127 ter of the Companies Law.

The potential conflict of interest situations that may have arisen have been resolved in accordance with the procedures set forth in the applicable rules and

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

regulations described in C.5 of this Report.

C.5. Describe the mechanisms used to detect, determine and resolve potential conflicts of interest between the company and/or its Group, and its directors, managers or significant shareholders.

Directors

Firstly, Article 36.1 of the Regulations of the Board of Directors defines conflict of interest situations in which Directors may be involved as "A conflict of interest shall be deemed to exist in those cases in which there is a conflict, whether direct or indirect, between the interest of the Company and the personal interest of the Director."

The Article also provides that "A personal interest of the Director shall be deemed to exist when a matter affects the Director or a Related Person. For the purposes of these Regulations, the following shall be deemed Related Persons:

- a) The Director's spouse or other persons related to the Director by a like relationship of affection.
- b) The ascendants, descendants or siblings of the Director or of the Director's spouse (or another person related to the Director by a like relationship of affection).
- c) The spouses of the Director's ascendants, descendants and siblings.
- d) The companies in which the Director, acting personally or through a third party, falls within any of the cases provided for in Section 4 of Law 24/1988 of July 28 on the Securities Market."

In the event legal entities are appointed as Directors, the following "shall be deemed to be Related Persons:

- a) The shareholders who, in respect of the legal entity acting as Director, fall within any of the cases provided for in Section 4 of Law 24/1988 of July 28 on the Securities Market.
- b) The companies that form part of the same group, as such is defined in Section 4 of Law 24/1988 of July 28 on the Securities Market, and the shareholders thereof.
- c) The individual acting as a representative, the directors (in fact or in law) and the liquidators of, and the representatives holding general powers of attorney granted by, the legal entity acting as Director.
- d) Those persons who, in respect of the representatives of the legal entity acting as Director, are deemed related persons pursuant to the provisions of the preceding paragraph applicable to individuals acting as Directors."

The rules governing these conflicts of interest are described in Article 36.2 of such Regulations:

- a) Communication: the Director must give notice to the Board of Directors, in the person of the Chairman or the Secretary, of any conflict of interest in which the Director is involved.
- b) Abstention: the Director will not attend or participate in the deliberation and voting on those matters in which the Director is affected by a conflict of interest. Proprietary directors (representing a major shareholder) will abstain from voting on those matters that may entail a conflict of interest between the shareholders

who have proposed their appointment and the Company.

c) Transparency: in the Corporate Governance Report, the Company will report any cases of conflict of interest involving the Directors and of which the Company is aware by reason of notice given thereto by the Director affected by such conflict or by any other means.

These rules are supplemented by the provisions of Article 40 of the Regulations of the Board of Directors, whereby any transaction by the Company with its Directors "shall be subject to the approval of the Board of Directors, which may make it conditional upon a prior report from the Audit and Compliance Committee." In this sense, "The Board of Directors (and the Audit and Compliance Committee, when a prior report is requested from it) shall evaluate the transaction in light of market conditions."

However, "in the case of customary or recurring transactions in the ordinary course of business, it shall be sufficient to give a generic approval of the kind of transaction and of the conditions for performance thereof."

Article 7 of the Internal Regulations for Conduct in the Securities Markets provides that the members of the Board of Directors as well as any other person who, pursuant to applicable regulations, is designated by the Regulatory Compliance Unit, must refrain from taking part in or influencing decisions that represent or may represent a conflict of interest between such members' or persons' own interests and those of the Company and/or the Group. Any of these members or persons who believe that they may be subject to a conflict of interest shall consult with the Unit before taking part in or influencing any such decisions.

In this sense, the Board of Directors, at the meeting held on July 9, 2003, resolved to create the Regulatory Compliance Unit, which is presided over by the General Secretary and the Secretary of the Board and also includes the Director of Capital Management and the Chief of the Accounting Rules and Internal Control Department.

Managers

The Code of Professional Conduct, which was approved by the Board of Directors at its meeting on February 27, 2002, is applicable to all managers and employees of the Group, regardless of their rank, and dedicates a specific chapter to conflicts of interest.

In dealing with this material, the Code provides that "professional decisions must be based on the best defense of the interests of the Iberdrola Group and may not be influenced by personal or family relationships or any other private interests of the Group professionals."

The Code also includes examples of situations that could give rise to a conflict of interest:

- a) Being involved personally or through relatives in a financial transaction or operation to which the Iberdrola Group is a party.
- b) Negotiating or formalizing contracts on behalf of the Iberdrola Group with individuals or entities in which the Group professional has a relative –up to the fourth degree by blood relationship or second degree by marriage– holding a management position, whether as a significant shareholder or director.
- c) Being a significant shareholder or director of customers, suppliers, or direct or

indirect competitors of the Iberdrola Group for private purposes.
d) Using the resources of the Iberdrola Group for private purposes.

The Code of Professional Conduct also provides that "Under no circumstance may professional activities be performed within the Iberdrola Group that entail or might entail a conflict of interest, except with prior written authorization of the Human Organization and Resources Division." To that effect, "Written notice must be given to an immediate superior regarding any occurrence or possible occurrence of a conflict of interests. The superior shall notify the Human Organization and Resources Division, which shall maintain and manage a Registry covering this type of situation."

Significant shareholders

The transactions by the Company with significant shareholders are regulated by Article 40 of the Regulations of the Board of Directors, which provides that such transactions "shall be subject to the approval of the Board of Directors, which may make it conditional upon a prior report from the Audit and Compliance Committee." In this sense, "The Board of Directors (and the Audit and Compliance Committee, when a prior report is requested from it) shall evaluate the transaction in light of market conditions", and will also examine these transactions with significant shareholders "in light of the principle of equal treatment of shareholders."

As to transactions between the Company and its Directors, such Article also provides that "in the case of customary or recurring transactions in the ordinary course of business, it shall be sufficient to give a generic approval of the kind of transaction and of the conditions for the performance thereof."

Article 30 of the By-Laws expressly refers to conflicts of interest of shareholders providing that "Shareholders participating in a merger or split-off with the company or who are called to subscribe to an increase in capital with the exclusion of pre-emptive rights or to acquire by overall assignment all of the Company's assets, may not exercise their voting rights for the approval of such resolutions by the shareholders."

This Article also establishes that "The provisions of the foregoing paragraph shall also be applicable when the resolutions affect, (i) in the case of an individual shareholder, the entities or companies controlled by such individual, and (ii) in the case of shareholders which are legal entities, the entities or companies belonging to its Group (in the sense indicated in paragraph four of Article Twenty-Nine), even when these latter companies or entities are not shareholders."

It finally provides that "If the shareholder prohibited from voting as set forth above attends the General Shareholders' Meeting, such shareholders' shares shall be deducted from the shares in attendance at the General Shareholders' Meeting for purposes of determining the number of shares upon which the majority needed for approval of the resolution with respect to which there is a conflict of interest shall be calculated."

Pursuant to Article 54 of the By-Laws, this voting prohibition will have no effect "upon the occurrence of the following circumstances:

(a) when the Company is the target of a public tender offer aimed at the share capital as a whole; and

(b) when, as a result of the public tender offer, an individual or a legal entity, or several of them acting jointly, acquire an interest equal to two-thirds of the voting capital of the Company; provided the full consideration thereof consists only of cash; or, alternatively,

(c) when, as a result of the public tender offer, an individual or a legal person, or several of them acting jointly, acquire an interest equal to three-quarters of the voting capital of the Company, provided that the consideration thereof consists, in whole or in part, of securities, without giving the recipient an alternative right to receive such consideration wholly in cash."

Article 55 of the By-Laws provides that the removal of this limitation shall be effective from the date of publication of the result of the settlement of the offer in the Listing Bulletin (*Boletín de Cotización*) of the Bilbao Stock Exchange, and the Directors of the Company will have the power –and the duty– to execute the corresponding public instrument formalizing the by-law amendment and to seek registration thereof with the Commercial Registry.

D RISK CONTROL SYSTEMS

D.1. General description of the risk control policy adopted by the company and/or its group, describing and assessing the risks covered by the system and a justification for the adjustment of such system to the profile of each kind of risk.

The Iberdrola Group has been taking action in the area of risk management and control since 1997, so it has considerable experience in this field.

In FY 2004, following its policy to continuously improve and maintain its risk-management leadership, and in order to provide an adequate response to the internal, regulatory and market requirements, and in anticipation of the growing demands of external agents, the Group has progressed in this area. The Board of Directors has formally approved the General Risk Policy, which is intended to provide the maximum level of guarantees to the shareholders, to other stakeholders and the market in general, as well as to increase the creation of value through an adequate management of the risk-opportunity combination.

Through this Policy, Iberdrola commits to developing all its capabilities so that relevant risks of any kind are adequately identified, measured, managed and controlled. For these purposes, "relevant risk" is any threat that an event, action or omission might prevent the Iberdrola Group from successfully attaining its goals and executing its strategies.

This commitment has been undertaken by the Board of Directors as it has been set forth in the By-laws, specifically in Article 34.3.c, and it is extended to all the activities and business of the Company, including investee companies over which the Company exercises effective control.

To implement the commitment assumed, the Board of Directors and the Executive Committee have the cooperation of the Audit and Compliance Committee that, in its capacity as consulting body, supervises and reports on the adequacy of the internal control and evaluation system for the relevant risks, all the above taking into account the following Basic Action Principles:

- INTEGRATE the risk/opportunity vision into the management of the company

by defining the risk strategy and profile, and incorporating this variable into strategic and operating decisions.

- SEGREGATE, at operating level, the duties of the risk-taking areas and of the areas in charge of analyzing, controlling and supervising risks.

- ASSURE corporate and financial stability in the short and long-term, maintaining an appropriate balance between risk, value and benefit.

- ENSURE the correct use of financial risk hedging instruments and registration thereof as required by the applicable accounting and financial standards.

- REPORT with transparency about the Group's risks and the operation of the systems developed for control thereof to the regulators and main external agents, maintaining appropriate channels to benefit communication.

- FOSTER the development of a culture of risk/opportunity control and management within the Iberdrola Group.

- ALIGN all the specific risk policies that need to be developed with this general policy.

- COMPLY with the applicable laws and regulations related to the control, management and supervision of risks.

- ADOPT the international best practices on Transparency and "Good Governance" relating to the control, management and supervision of risk (mainly the COSO Enterprise Risk Management framework) as benchmark for continuous improvement.

To implement this policy and put these principles into effect, a Comprehensive Risk Management System is established, supported by a definition and allocation of duties and responsibilities at the operating level and by support procedures, methodologies and tools that are described in depth in D.4. and D.2., respectively.

The control systems in place at Iberdrola are, in general, universal and non-exclusive, so any kind of risk can be contemplated.

- Market/credit risks
- Business risks
- Regulatory/environmental risks
- Risks relating to new investments and other risks

Owing to its universal and dynamic nature, the systems allow for the consideration of new risks that may affect the Iberdrola Group following changes in its operating environment or revisions of objectives and strategies, as well as adjustments resulting from ongoing monitoring, verification, review and supervision activities. The above systems, which are described in D.2, are considered appropriate to control the identified risk parameters, both in terms of the tools used and of the organizations involved.

D.2. Indicate the control systems that are currently in place to assess, mitigate or reduce the main risks of the company and its group.

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

The risk control systems which are currently in place at Iberdrola as management tools assisting in decision-making are based on four basic pillars: a) controlled management parameters; b) organization and responsibilities; c) process of control, management and supervision of risks; and d) alert and simulation tools.

a) Key controlled management parameters.

Action regarding risks is taken with respect to the effects thereof on the Strategic Plan, on New Investments and on the Annual Financial Statements.

The scope indicated above permits optimization the Profit and Loss Statement, adopting balanced profitability/value/risk decisions for new investments, optimizing indebtedness and attaining the growth forecasted in the Strategic Plan with controlled volatility.

The calculation of the impact of risks, as well as the follow-up and management action corresponding to each of the action parameters mentioned above, is performed with a frequency which is appropriate for the target goal (specifically, in the case of the new investments, monthly/quarterly for purposes of controlling management and budgeting, and annually with respect to the Strategic Plan).

b) Organization and responsibilities.

The organization, which is designed on the basis of different, clearly differentiated levels of control, management and supervision, is described in depth in D.4.

c) Process of control, management and supervision of risks.

The process that supports and articulates the development of the Risk Function is formed by sequential stages that facilitate the transparency of roles and responsibilities and accord it the necessary systematic elements.

The stages involved in this process are risk identification, integral analysis, management of risks within the established limits and guidelines, measurement and control, risk reporting and verification, review and supervision of the system.

The organizations participate in each of the stages according to the responsibilities defined and the procedures in place.

d) Risk alert and simulation tools.

Due to inherent complexity in the quantification, control and management of risks, Iberdrola has a number of risk alert and simulation tools, at both the corporate integration level and the business/risk integration level. The following are worth mentioning:

- Corporate integration tools:

1. Annual profit and loss statement:

This is an integrated tool that reflects the performance of the Group's different business divisions, to which a probability analysis is applied by means of a Montecarlo simulation. The integrated risk profile of the Profit and Loss Statement is thus obtained, and so is the individual impact of each of the risks considered.

2. Strategic Plan:

The methodology used is based on the definition and analysis of alternative scenarios that permit a quantification of the effects of the main risks affecting compliance with the goals set in the Strategic Plan and in the definition of action strategies.

3. Analysis of new investments:

A probability analysis is applied to each project by performing a Montecarlo simulation, which assesses the value/yield in investment risk.

- Business/risk tools:

There are also other tools with more specific application to a given business transaction or risk (fuel, power purchase/sale transactions, financial risks, client risk, etc.), which are used to manage that particular area and are integrated with the corporate systems on an organizational and reporting level.

D.3. In the event some of the risks affecting the company and/or its group materialized, indicate the circumstances giving rise to them and whether the established control systems have worked.

Iberdrola's risk control system contemplates all risks inherent in the activities performed by the Group and in the different markets in which the Group operates, and which therefore materialize to a greater or lesser extent during the course of the year, thus justifying the existence of systems intended to control and management them.

Regarding the market risks as a whole that have had a significant impact on the Profit and Loss Statement, quite notable has been the rising prices of fossil fuel in international markets, where coal exceeded USD 82/ton and oil exceeded USD 52/barrel.

The strategic management of this risk has allowed for the mitigation of its impact on the Profit and Loss Statement and, thus, no extraordinary hedging was required for this fiscal year.

Regarding the regulatory risks that have a fundamental effect on the Strategic Plan, the effect of the Directive on the Trading of Emission Rights is notable.

The environmental commitment of the 2002-2006 Strategic Plan, based on a high investment in clean energy (combined cycle plants and wind farms), together with significant current hydroelectric and nuclear generation facilities, place Iberdrola in a position to face the challenge of incorporating environmental costs.

D.4. Indicate whether there is any committee or other decision-making body in charge of establishing and supervising these control mechanisms, and describe the duties thereof.

- The Board of Directors and the Executive Committee, in the exercise of their duties, are in charge of ensuring the adequate identification, measurement, management and control of all significant risks, of defining the Company's risk strategy and profile, and of approving internal policies and the information to be released regarding risks.

- The Audit and Compliance Committee, as a consultative body reporting to the Board of Directors, supervises compliance with risk policies, procedures and limits and reports on the adequacy of the internal system for assessing and controlling risks relevant to the Company.

To that effect, it is supported by the Internal Audit Division, which functionally reports to the Chairman of the Audit and Compliance Committee and which, as a governance function, is responsible for supervising the management and control of significant risks relevant to the Company and its Strategic Plan, pursuant to the Basic Internal Audit Regulations of November 26, 2003, approved by the Audit and Compliance Committee and by the Vice-Chairman & Chief Executive Officer of the Company, to which it directly reports.

- For appropriate performance of its duties, the Executive Committee is supported by the following committees/organizations at the operating level:

Operating Committee: manages and controls the Group's balance of risks according to established policies and limits.

Strategy and Development Division: through the Comprehensive Risk Function, it performs an integrated analysis of risks, designs risk policies, procedures and limits, and prepares risk information for the different external agents.

Control Division: controls the risks and opportunities related to the annual budget and new investment opportunities, quantifying the effect of the Group's risks at individual and consolidated level.

Business and Corporate Units: they identify and manage the risks of their business or areas of authority (financial, legal, regulatory, etc.) according to the policies, procedures and limits established at corporate level.

D.5. Identification and description of the compliance procedures included in the various regulations that affect the company and/or its group.

The Iberdrola Group is present in different countries where it is subject to compliance with different laws and regulations. In particular, the power industry in Spain, where the principal activities of the Group are carried out, is subject to strict regulations that have undergone significant changes in recent years.

Each of the Group's business divisions has specific control, legal affairs and human resources departments which are functionally subordinate to the corresponding corporate divisions and which act in coordination with the business divisions. These departments are responsible for ensuring compliance with applicable laws in each case.

This includes business divisions abroad, which receive local advice in connection with the specific laws and regulations affecting the business division and the Group in each country.

Additionally, and as established in Article 44.2.f) of the By-laws, the Audit and Compliance Committee ensures compliance with legal requirements and the requirements of the Codes of Professional Conduct and Good Governance adopted by the Board of Directors.

E GENERAL SHAREHOLDERS' MEETING

E.1. Indicate the quorum required to hold valid a general shareholders' meeting as established in the by-laws. Describe how it is different from the minimum quorum required by the Companies Law (LSA).

Pursuant to Article 21.1 of the By-Laws, "The Ordinary as well as the Extraordinary General Shareholders' Meeting shall be validly established with the minimum quorum required by applicable legislation in effect at all times, taking into account the matters appearing on the agenda."

Section 102 of the Companies Law provides that "The General Shareholders' Meeting shall be validly established at first call if shareholders representing at least 25% of the subscribed share capital with voting rights are present at the meeting in person or by proxy", while "at second call the General Shareholders' Meeting shall be validly established no matter the share capital with voting rights represented therein."

In turn, Section 103 of such Law provides that "to adopt resolutions regarding the issue of debentures, the increase or reduction in share capital, the transformation, merger or split-off of the company and in, general, any amendment of its by-laws, the general or extraordinary general shareholders' meeting shall be validly established if shareholders holding at least fifty percent of the subscribed capital with voting rights are present at the meeting either in person or by proxy." "At second call, shareholders representing twenty-five percent of the capital of the company shall suffice."

As the only exception to the rules provided by the Companies Law, Article 21.2 of the By-Laws increases the required quorum "in order to adopt resolutions regarding a change in the corporate purpose, transformation, total split-off, dissolution of the Company and amendment of this second paragraph of this Article, in which case "shareholders representing two-thirds of subscribed capital with voting rights must be in attendance at the first call of the General Shareholders' Meeting, and shareholders representing sixty (60%) percent of such capital must be in attendance at the second call."

E.2. Explain the rules governing the adoption of corporate resolutions. Describe how they are different from the rules provided by the Companies Law.

Procedures for deliberation and voting

Section 9.i) of the Companies Law provides that the by-laws will set forth "the manner for deliberating upon and adopting resolutions by the collective management decision-making bodies of the company."

With respect to the General Shareholders' Meeting, Article 27 of the By-Laws governs the manner of deliberation and adoption of resolutions upon the following terms:

"1. The Chairman shall: direct the meeting such that deliberations are carried out pursuant to the agenda; accept or reject new proposals relating to matters on the agenda; direct the deliberations, granting the floor to shareholders who so request it, and taking the floor away or refusing to grant it when the Chairman

deems that a particular matter has been sufficiently debated, is not included in the agenda or hinders the progress of the meeting; indicate the time for voting; calculate the votes, with the assistance of the Secretary to the General Shareholders' Meeting; proclaim the results thereof; temporarily suspend the General Shareholders' Meeting; close the meeting; and, in general, exercise all powers, including those of order and discipline, which are required to properly hold the General Shareholders' Meeting.

2. The Chairman, even when present at a session, may entrust management of debate to a Director the Chairman deems appropriate, or to the Secretary, who shall carry out these duties on behalf of the Chairman, and the Chairman may remove them at any time. In the event of temporary absence or unexpected disability, the appropriate person pursuant to the provisions of paragraph one of Article Twenty-Five shall assume the duties of Chairman.

3. Votes shall be cast by hand, if needed, but resolutions may be adopted by general consent of the shareholders, without prejudice to applicable provisions regarding the need to record the opposition of shareholders, if any, in the minutes."

In turn, Article 33 of the Rules for the General Shareholders' Meeting establishes the procedure for voting on proposed resolutions:

"1. Once the shareholder presentations have ended and responses have been made to requests for information pursuant to the provisions of these Regulations, the proposed resolutions regarding matters included in the agenda or which are not legally required to be set forth therein, including proposals made by the shareholders during the meeting, shall be submitted to a vote.

The adoption of resolutions shall proceed following the agenda set forth in the call to meeting. Resolutions proposed by the Board of Directors shall be first submitted to vote and then, if appropriate, resolutions proposed by others shall be voted upon following their priority in time. In any event, once a proposed resolution has been adopted, all others relating to the same matter and which are incompatible therewith shall be withdrawn and therefore need not be voted upon.

If proposals have been made regarding matters that may be approved at the General Shareholders' Meeting without having appeared in the agenda, the Chairman shall decide the order in which they shall be submitted to a vote.

It shall not be necessary for the Secretary to previously read aloud the text of the proposed resolutions which has been provided to the shareholders at the beginning of the meeting, except when deemed appropriate by the Chairman for some or all of the proposals. In any event, the attendees shall be told to which item on the agenda the proposed resolution being submitted to vote refers.

2. As a general rule, and without prejudice to the use of other alternative systems, at the election of the Chairman, voting on the proposed resolutions referred to in the preceding paragraph shall be by show of hands, if necessary, although resolutions may also be adopted upon the general consent of the shareholders. The foregoing is without prejudice to the shareholders (or their proxies) who desire to abstain, to vote in the negative or in blank or to make known their opposition to or withdrawal from the meeting prior to the voting on the proposal in question, from so stating to the Notary Public (or, in the absence thereof, to the Secretary), or assistants thereto, in order for note to be taken thereof for inclusion

in the Minutes of the General Shareholders' Meeting, after verification of their identity and the shares that they own or represent by proxy. In any event, votes validly cast from a distance and which have not been revoked shall also be taken into consideration."

Form of exercising voting rights

Section 105.4 of the Companies Law (incorporated by Law 26/2003, of July 17, on Transparency) provides that, in accordance with the provisions of the by-laws, shareholders may vote "by mail, electronic means or any other distance method of communication, provided that the identity of the voter is duly guaranteed."

To permit shareholders to cast their votes from a distance, Article 28 of the By-Laws provides that shareholders may "cast their vote regarding proposals relating to the items included in the agenda by mail or by electronic communication."

It particularly provides that "Mail votes shall be cast by sending to the Company a document in which such vote is recorded, accompanied by the attendance card issued by the entity or entities in charge of the book-entry registry", while "votes by electronic communication shall be cast using a recognized electronic signature or other type of guarantee that the Board of Directors deems best ensures the authenticity and identification of the shareholder exercising the right to vote."

Article 28.4 of the By-Laws provides that "Votes cast by any means set forth in the preceding paragraphs must be received by the Company before midnight on the day immediately prior to the date provided for the holding upon first call of the General Shareholders' Meeting. Otherwise, the vote shall be deemed not to have been cast."

Article 28.5 empowers the Board of Directors "to elaborate upon the foregoing provisions by establishing the rules, means and procedures adjusted to current techniques in order to organize the casting of votes and grant of proxies by electronic means, following the rules and regulations issued for such purpose, if applicable." It also provides that "The implementing rules adopted by the Board of Directors pursuant to the provisions of this paragraph shall be published on the Company's website."

Finally, Article 28.7 of the By-Laws allows shareholders to revoke their votes from a distance and Article 32.4 of the Rules for the General Shareholders' Meeting provides that "The distance voting referred to in this Article shall be rendered void:

- a) By subsequent express revocation made by the same means used to cast the vote and within the period established for such voting.
- b) By attendance at the meeting in person or by proxy of the shareholder casting the vote."

Restrictions on voting rights

Article 29.1 (last part) of the By-Laws provides that "Each voting share, whether cast in person or by proxy at the General Shareholders' Meeting, shall grant the holder the right to one vote."

Pursuant to the provisions of Section 105.2 of the Companies Law, a maximum limit is established on the votes that a single shareholder can cast, and the

exercise of voting rights is also prohibited for shareholders involved in certain situations of conflict of interest with the Company.

Along these lines, Article 29.3 of the By-Laws provides that "no shareholder may cast a number of votes greater than those corresponding to shares representing ten (10%) of share capital, even if the number of shares held exceeds such percentage of capital. This limitation does not affect votes corresponding to shares with respect to which a shareholder is holding a proxy as a result of the provisions of Article Twenty-Three of these By-Laws, although, with respect to the number of votes corresponding to the shares of each shareholder represented by proxy, the limitation set forth above shall apply."

Article 29.4 of the By-Laws also provides that "The limitation set forth in the foregoing paragraph shall also apply to the maximum number of votes that may be collectively or individually cast by two or more shareholders which are entities or companies belonging to the same group. Such limitation shall also apply to the number of votes that may be cast collectively or individually by an individual and a shareholder entity, entities or companies controlled by such individual. A group shall be deemed to exist under the circumstances set forth in Section Four of the Securities Market Law, and an individual shall be deemed to control one or more entities or companies, under the circumstances of control set forth in such Section Four."

Finally, Article 29.5 provides that "Shares deprived of voting rights pursuant to the application of the foregoing paragraphs shall be deducted from the shares in attendance at the General Shareholders' Meeting for purposes of determining the number of shares upon which the majorities needed for the approval of resolutions submitted to the shareholders shall be calculated."

Article 30 of the By-Laws provides that "Shareholders participating in a merger or split-off with the company or who are called to subscribe to an increase in capital with the exclusion of pre-emptive rights or to acquire by overall assignment all of the Company's assets, may not exercise their voting rights for the approval of such resolutions by the shareholders."

This provision adds that "The provisions of the foregoing paragraph shall also be applicable when the resolutions affect, (i) in the case of an individual shareholder, the entities or companies controlled by such individual, and (ii) in the case of shareholders which are legal entities, the entities or companies belonging to its group (in the sense indicated in paragraph four of Article Twenty-Nine), even when these latter companies or entities are not shareholders."

Finally it provides that "If the shareholder prohibited from voting as set forth above attends the General Shareholders' Meeting, such shareholder's shares shall be deducted from the shares in attendance at the General Shareholders' Meeting for purposes of determining the number of shares upon which the majority needed for approval of the resolution with respect to which there is a conflict shall be calculated."

Pursuant to Article 54 of the By-Laws, these restrictions shall not apply "upon the occurrence of the following circumstances:

- (a) when the Company is the target of a public tender offer aimed at the share capital as a whole; and
- (b) when, as a result of the public tender offer, an individual or a legal entity, or

several of them acting jointly, acquire an interest equal to two-thirds of the voting capital of the Company; provided the full consideration thereof consists only of cash; or, alternatively,

(c) when, as a result of the public tender offer, an individual or a legal person, or several of them acting jointly, acquire an interest equal to three-quarters of the voting capital of the Company, provided the consideration thereof consists, in whole or in part, of securities, without giving the recipient an alternative right to receive such consideration wholly in cash."

Article 55 of the By-Laws provides that the removal of such limitations will be effective from the date of publication of the result of the settlement of the offer in the Listing Bulletin (*Boletín de Cotización*) of the Bilbao Stock Exchange and that the directors of the Company will have the power –and the duty– to execute the corresponding public instrument formalizing the by-law amendment and to seek registration thereof with the Commercial Registry.

Majority required for making decisions

Article 29.1 of the By-Laws provides that "The shareholders, acting at an ordinary or extraordinary General Shareholders' Meeting, shall adopt resolutions with the majorities required by the Companies Law based on votes represented in person or by proxy."

Along these lines, Article 29.2 provides that "The majority needed to approve a resolution shall require the favorable vote of one-half plus one of the voting shares cast in person or by proxy at the General Shareholders' Meeting. The foregoing does not affect situations in which the Law or these By-Laws provide for a greater majority."

In accordance with Section 103.2 of the Companies Law, when at second call, shareholders representing less than fifty percent of the subscribed capital with voting rights, any resolution related to the issuance of debentures, the increase or reduction of capital, the transformation, merger or split-off of the Company and, in general, resolutions involving the amendment of the By-Laws, may only be adopted with the affirmative vote of two-thirds of the capital present or represented at the meeting.

Article 56 of the By-Laws provides that resolutions intended to eliminate or amend the provisions contained in Title III (related to the inapplicability of restrictions in the case of public tender offers), Articles 29.3 and 29.5 and Article 30, will require the affirmative vote of three-quarters of the share capital in attendance at the General Shareholders' Meeting.

Finally, pursuant to Article 34.3 of the Rules for the General Shareholders' Meeting, "For the purposes of determining the number of shares upon which the majority needed to adopt the various resolutions shall be calculated, all shares appearing on the list of attendees shall be deemed to be in attendance, present or represented at the meeting, less: (i) shares whose owners or representatives have left the meeting prior to the voting on the proposed resolution or resolutions in question and have recorded their withdrawal with the Notary Public or, in the absence thereof, with the Secretary or assistants thereto; and (ii) shares which, by application of the provisions of Articles Twenty-Nine and Thirty of the By-Laws, are deprived of the right to vote in general or for the particular resolution in question."

E.3. Explain the rights of the shareholders regarding general shareholders' meeting which are different from the rights provided in the Companies Law.

Right to receive information

In addition to the rights to receive information provided in the Companies Law, Article 20.4 of the By-Laws provides that "There shall be a statement in the call of the General Shareholders' Meeting that any shareholder may obtain from the Company, without charge and on immediate basis, the documents that must be submitted for approval by the shareholders at the General Shareholders' Meeting, as well as the Management Report and the Auditors' Report."

Article 20.5 of such By-Laws further provides that "When the shareholders are to deal with an amendment to the By-Laws, besides the statements required in each case by the Law, the notice of the call must make clear the right of all shareholders to examine at the Company's registered office the complete text of the proposed amendment and the report thereon and to request that such documents be delivered or sent to them without charge."

To facilitate the exercise of the right to receive information prior to the General Shareholders' Meeting, Article 9 of the Rules for the General Shareholders' Meeting provides that requests for information may be made "by delivery of the request to the Company's registered office, or by delivery to the Company via mail or other means of electronic or long-distance data communication sent to the address specified in the announcement of the meeting or, in the absence of such specification, to the Office of the Shareholder (*Oficina del Accionista*)", regulating the substance and the format of the request for information.

Shareholders may use the website of the Company to exercise such rights, as well as to view any relevant information that may be needed for the exercise of their rights at the General Shareholders' Meeting.

In connection with the exercise of the right to receive information during the General Shareholders' Meeting, Article 17 of the Rules for the General Shareholders' Meeting provides that "The Company shall set up an Office of the Shareholder in a visible place at the stated premises of the meeting, for the purpose of (i) answering questions regarding the proceedings raised by the shareholders prior to the commencement of the session, without prejudice to the shareholders' legal and by-law rights to take the floor, make proposals and vote, and (ii) assisting and informing attendees and shareholders who wish to take the floor, preparing for such purpose a list of those who previously state their desire to participate, as well as collecting the text of their statements, if such statements are available in writing."

Right to be present at the meetings and to be represented by proxy

In this area, Article 23.2 of the By-Laws provides that "Proxies may be given by postal or electronic correspondence, in which case the provisions of Article Twenty-Eight of the By-Laws for the issuance of votes shall apply to the extent not incompatible with the nature of the proxy."

In addition, Article 24.2 of the By-Laws provides that "The General Shareholders' Meeting may be attended by going to the place where the meeting is to be held or, if applicable, to other places provided by the Company and indicated in the

call to meeting, and which are connected therewith by video conference systems that allow recognition and identification of the parties attending, permanent communication among the attendees regardless of their location, and participation and voting. The principal place of the meeting must be located in the municipal area of the Company's registered office, but supplemental locations need not be so located. For all purposes relating to the General Shareholders' Meeting, attendees at any of the sites shall be deemed attendees at the same individual meeting."

Right to cast votes from a distance

Article 28 of the By-Laws provides that shareholders having the right to attend meetings and to vote thereat may "cast their vote regarding proposals relating to the items included in the agenda by mail or by electronic communication," thus further developing the provisions of Article 32 of the Rules for the General Shareholders' Meeting relating to the casting of votes from a distance.

E.4. Indicate, if applicable, the measures adopted to encourage the participation of shareholders at General Shareholders' Meetings.

In addition to the rights to receive information, to be present at meetings, to be represented by proxy and to cast votes from a distance mentioned above, the Company develops a policy encouraging the participation of shareholders at the General Shareholders' Meeting with the following measures:

- Publication of the call of the meeting in numerous media, exceeding the legal requirements and the requirements set forth in the By-laws, ensuring broad dissemination of the call.
- Dissemination in the press of the announcement that the meeting can't be held on first call, and calling the shareholders to attend the meeting on the second call.
- Practices followed to encourage the participation of shareholders, such as gifts and even the payment of attendance bonuses.
- Holding the General Shareholders' Meeting at the best possible site that facilitates the development of the meeting, with high capacity and located at the center of the locality where Company's registered office is located.
- Hiring of financial brokers or agencies for better distribution of the information about the Shareholders' Meeting among our wide base of institutional and international investors.
- Personalized assistance and guidance to shareholders who wish to participate, through the Office of the Shareholder.
- The provision to shareholders of means for translating the various presentations.
- The possibility of accessing the live transmission of the meeting through the www.iberdrola.com website.

E.5. Indicate whether the chairman of the general shareholders' meeting is also the chairman of the board of directors. Describe, if applicable, the measures adopted to ensure independence and proper operation of the

general shareholders' meeting:

YES X NO

Description of measures

- On its own initiative, the Board of Directors traditionally requires that a Notary Public attend the Shareholders' General Meeting and prepare the minutes thereof (Article 8.6 of the Rules for the General Shareholders' Meeting). Therefore, the Chairman and the Secretary of the General Shareholders' Meeting do not prepare the minutes thereof, which is delegated to a notary public, thereby guaranteeing neutrality for the shareholders.

- As to the verification of the valid holding of the meeting, the Company has the necessary means to control and electronically compute the proxies and votes from a distance (by mail or electronic communication), as well as to prepare the list of shareholders present –in person or by proxy– at the General Shareholders' Meeting, which list is electronically recorded and attached to the minutes of the meeting, and to compute the quorum to hold meetings and to adopt resolutions (Article 16.2 of the Rules for the General Shareholders' Meeting).

To that effect, the Company prepares and proposes to the entities participating in the *Sociedad de Gestión de Sistemas de Registro, Compensación y Liquidación de Valores, S.A.* (Iberclear) the format of the attendance card to be issued to the shareholders in order for the cards issued to be uniform and to include a bar code or other system which allows for the electronic reading thereof in order to facilitate the computerized calculation of attendees (Article 12.2 of the Rules for the General Shareholders' Meeting).

These computerized systems are also useful to resolve or clarify doubts or claims in connection with the list of attendees.

- From the moment they enter the site, shareholders are assisted by the staff of the Office of the Shareholder (Article 18.1 of the Rules for the General Shareholders' Meeting), which staff is permanently available to resolve any issues and to facilitate shareholders' participation in the General Shareholders' Meeting, as indicated in section E.3 of this Report.

- Regarding the powers of the Chairman with respect to the shareholder participation period at the General Shareholders' Meeting, pursuant to Article 27.3 of the Rules for the General Shareholders' Meeting, the Chairman, in the exercise of his ordering powers:

- a) may extend the time initially allocated to each shareholder, when the Chairman so deems it appropriate;
- b) may request the presenting parties to clarify issues that have not been understood or which have not been sufficiently explained during the presentation;
- c) may call the presenting shareholders to order so that they limit their presentation to business property before the General Shareholders' Meeting and refrain from making improper statements or exercising their right in an abusive or obstructionist manner;
- d) may announce to the presenting parties that the time for their presentations will soon be ending so that they may adjust their discourse and, when the time granted for their presentation has ended, or if they persist in the conduct described in the preceding paragraph, may withdraw the floor from them, and, if the Chairman believes that their presentation might alter the proper order and normal conduct of the meeting, the Chairman may adopt appropriate measures in order to comply with this provision; and
- e) may deny the floor when the Chairman believes that a particular matter has been sufficiently debated, is not included in the agenda, or hinders the progress of the meeting.

Such provision also charges the Chairman with maintaining order in the room "in order to allow the participants to make their presentations without undue interruption."

- If there are disturbances which temporarily prevent the normal progress of the meeting, Article 30.1 of the Rules for the General Shareholders' Meeting empowers the Chairman "to suspend the session for the time the Chairman deems appropriate (but not for more than two (2) hours) in order to reestablish the conditions needed for the continuation thereof."

- Article 31.1 of the Rules for the General Shareholders' Meeting provides that at the proposal of the Directors or at the request of shareholders representing at least one-fourth of the capital present at the General Shareholders' Meeting, the attendees may agree to a continuation of their sessions over one or more consecutive days.

E.6. Indicate, if applicable, the amendments made during the fiscal year to the rules for the general shareholders' meeting.

The Rules for the General Shareholders' Meeting were approved by the shareholders at the General Shareholders' Meeting held on April 3, 2004, and no

amendment has been recorded since then.

E.7. Indicate the data on attendance at the general shareholders' meetings held during the fiscal year referred to in this report:

Attendance data

Date of General Shareholders' Meeting	% of shareholders present in person	% of shareholders represented by proxy	% distance voting	Total %
04-03-2004	6.230	41.780	0.000	48

E.8. Briefly describe the resolutions adopted by the shareholders acting at the general shareholders' meetings held during the fiscal year referred to in this report and the percentage of votes by which each resolution was passed.

GENERAL SHAREHOLDERS' MEETING HELD ON APRIL 3, 2004:

One.- Consideration and approval, if applicable, of the Annual Financial Statements (Balance Sheet, Profit and Loss Statement and Notes) and Management Report of the Company and its consolidated Group for the fiscal year ending December 31, 2003, of the Company and its Consolidated Group, and approval of the corporate management during such fiscal year, the allocation of results and the distribution of dividends. (AFFIRMATIVE VOTES: 98.78% OF THE CAPITAL HELD BY SHAREHOLDERS PRESENT IN PERSON OR REPRESENTED BY PROXY)

Two.- Consideration and approval, if applicable, of new By-laws. (AFFIRMATIVE VOTES: 98.79% OF THE CAPITAL HELD BY SHAREHOLDERS PRESENT IN PERSON OR REPRESENTED BY PROXY)

Three.- Consideration and approval, if applicable, of the Rules for the General Shareholders' Meeting and information to the shareholders about the Regulations of the Board of Directors. (AFFIRMATIVE VOTES: 98.94% OF THE CAPITAL HELD BY SHAREHOLDERS PRESENT IN PERSON OR REPRESENTED BY PROXY)

Four.- Consideration and approval, if applicable, of the Merger Balance Sheet of "Iberdrola, S.A.," the Merger Plan and the merger transaction entailing the takeover by "Iberdrola, S.A." of its single-member subsidiaries "Iberdrola Gas, S.A.," and "Star 21 Networks España, S.A.," with the dissolution without liquidation of such subsidiaries merged into "Iberdrola, S.A." and a block transfer of all of their assets to "Iberdrola, S.A.," in compliance with the Merger Plan and the provisions of Section 233 et seq. and Section 250 of the Companies Law. (AFFIRMATIVE VOTES: 98.94% OF THE CAPITAL HELD BY SHAREHOLDERS PRESENT IN PERSON OR REPRESENTED BY PROXY)

Five.- Authorization to the Board of Directors for a term of five years to issue debentures or bonds convertible into and/or that may be swapped for shares in the Company and to issue warrants with respect to new shares or outstanding shares of the Company, up to EUR one (1) billion, with the power, in the case of convertible bonds and warrants on new shares, to exclude the pre-emptive right of the shareholders and holders of convertible bonds. (AFFIRMATIVE VOTES: 98.23% OF THE CAPITAL HELD BY SHAREHOLDERS PRESENT IN PERSON OR REPRESENTED BY PROXY)

Six.- Authorization to the Board of Directors for a term of five years to issue debentures or bonds convertible into and/or that may be swapped for shares in the Company and to issue warrants with respect to new shares or outstanding shares of the Company, up to EUR one (1) billion, without the power to exclude the pre-emptive right of the shareholders and holders of convertible bonds. (AFFIRMATIVE VOTES: 98.23% OF THE CAPITAL HELD BY SHAREHOLDERS PRESENT IN PERSON OR REPRESENTED BY PROXY)

Seven.- Authorization to the Board of Directors, for a term of five years, to issue simple debentures or bonds, promissory notes and other fixed-income securities of analogous nature, as well as preferred interests, up to EUR 1.2 billion, except for the issuance of promissory notes, for which a limit of EUR 1.5 billion is established. (AFFIRMATIVE VOTES: 98.45% OF THE CAPITAL HELD BY SHAREHOLDERS PRESENT IN PERSON OR REPRESENTED BY PROXY)

Eight.- Authorization to the Board with respect to the derivative acquisition of the Company's own stock by the Company and/or its controlled companies as provided in Law. Reduction of the share capital and amendment of Article 5 of the By-Laws as a result. (AFFIRMATIVE VOTES: 98.95% OF THE CAPITAL HELD BY SHAREHOLDERS PRESENT IN PERSON OR REPRESENTED BY PROXY)

Nine.- Authorization to the Board of Directors to apply for the listing on and delisting from Spanish or foreign organized secondary markets of the shares, debentures or other securities issued or to be issued, and to adopt such resolutions as may be necessary to ensure the continued listing of the shares, debentures or other securities of the Company that may then be outstanding. (AFFIRMATIVE VOTES: 98.67% OF THE CAPITAL HELD BY SHAREHOLDERS PRESENT IN PERSON OR REPRESENTED BY PROXY)

Ten.- Authorization to the Board of Directors for the creation and funding of Foundations pursuant to Law 50/2002 of December 26 on Foundations, the applicable legal provisions in effect in the autonomous regions and other applicable legislation, with the Board of Directors being empowered to carry out such resolutions. (AFFIRMATIVE VOTES: 98.48% OF THE CAPITAL HELD BY SHAREHOLDERS PRESENT IN PERSON OR REPRESENTED BY PROXY)

Eleven.- Appointment or re-election of Auditors of the Company and its Consolidated Group for fiscal year 2004. (AFFIRMATIVE VOTES: 98.89% OF THE CAPITAL HELD BY SHAREHOLDERS PRESENT IN PERSON OR REPRESENTED BY PROXY)

Twelve.- Ratification of appointment of Directors. (AFFIRMATIVE VOTES: 95.75% OF THE CAPITAL HELD BY SHAREHOLDERS PRESENT IN PERSON OR REPRESENTED BY PROXY)

Thirteen.- Authorization granted to the Board of Directors, to the fullest possible extent, for the full development and execution of the foregoing resolutions, expressly including the power to interpret, remedy and complete such resolutions and have them evidenced in the form of public instruments, as well as the right to delegate the powers granted by the shareholders at the General Shareholders' Meeting. (AFFIRMATIVE VOTES: 98.94% OF THE CAPITAL HELD BY SHAREHOLDERS PRESENT IN PERSON OR REPRESENTED BY PROXY)

E.9. Indicate, if applicable, the number of shares required to attend the General

Shareholders' Meeting and whether there is any by-law limitation in that respect.

As set forth in sections 1 and 2 of Article 22 of the By-laws:

"1. Shareholders holding one hundred (100) or more voting shares may attend the General Shareholders' Meeting and take part in deliberations thereof, with the right to be heard and to vote. Those who hold a lesser number of shares may combine and give their proxy to another shareholder who, in combination therewith, completes the requirement for one hundred (100) shares or more.

2. In order to exercise the right to attend, shareholders' must cause the shares to be registered in their name in the corresponding book-entry registry at least five (5) days prior to the day on which the General Shareholders' Meeting is held. This circumstance must be evidenced by means of the appropriate attendance card or validation certificate issued by the entity or entities in charge of book-entry registries, or in any other form allowed by applicable legislation."

E.10. Indicate and justify the policies followed by the company with respect to proxy-voting at the general shareholders' meeting.

First of all, it is a policy of the Company to encourage the attendance of shareholders at the General Shareholders' Meeting.

Regarding proxy-voting, Article 12.2 of the Rules for the General Shareholders' Meeting provides that the Company may propose to the entities participating in the *Sociedad de Gestión de Sistemas de Registro, Compensación y Liquidación de Valores, S.A. (Iberclear)* the format of the attendance card to be issued to the shareholders, "as well as the formula to be recited in such document in order to delegate proxy representation at the meeting in favor of another shareholder, which should also set forth the way in which the proxy-holder will vote on each of the resolutions proposed by the Board of Directors for each item on the agenda in the absence of specific instructions of the shareholder being represented."

The Board of Directors calls the General Shareholders' Meeting and establishes that the following formula may be used for proxy-voting at the General Shareholders' Meeting:

"I hereby grant my proxy for this General Shareholders' Meeting to Shareholder _____ or, absent express appointment, to the Chairman of the Board of Directors of the Company, who shall vote in favor of the proposals included in the Agenda and such others as may be validly submitted, in the same manner as proposed by the Board of Directors, unless voting instructions are indicated in the table below. In the event that the representative is subject to a conflict of interests when voting on any of the items to be submitted to the shareholders at the General Shareholders' Meeting, I hereby authorize such representative to appoint a third shareholder to act as representative."

As a consequence, the voting power under the proxy may be granted to the Chairman of the Board of Directors, in his capacity as shareholder, who, in light of his special knowledge of the Company's business, is in the best position to act in the common interest of all the shareholders and to take into consideration any other legitimate interest, whether public or private, that might influence the development of business activities.

In addition, the shareholders may authorize the proxy holder so that, in the event a conflict of interests affecting the proxy holder with respect to the voting of any of the items submitted for the consideration of the shareholders, he may appoint another shareholder to exercise the proxy.

Notwithstanding the possibility of drafting more detailed instructions, the space included in the attendance card for the voting instructions permits the shareholders to check the box to abstain, to vote in the affirmative, in the negative or in blank in order to facilitate the indications that the represented shareholder desires to give to the proxy holder. Therefore, the voting instructions may be recorded easily in the corresponding computerized system.

Pursuant to Article 23 of the By-laws and Article 11 of the Rules for the General Shareholders' Meeting, shareholders have the following alternatives to prove the validity of the proxy granted:

a) By submission of the attendance card or a certificate of good standing at the shareholders' registration desks at the place and on the date set for the General Shareholders' Meeting.

b) By mail addressed to the Company including the duly signed proxy and signing the corresponding attendance card for such purpose.

c) By e-mail sent with the recognized electronic signature of the shareholder, by means of a communication to the Company through the website www.iberdrola.com. The communication will state the name of the proxy holder and of the represented shareholder.

Regardless of the manner in which they are received, all proxies are recorded in a computerized application, which is also used to control and compute proxies and voting instructions, prepare the list of attendees and verify the quorum required to hold valid meetings and the majority required to adopt resolutions, pursuant to Article 16.2 of the Rules for the General Shareholders' Meeting.

E.11. Indicate whether the company is aware of any policy of institutional investors as to participating or not in the decisions of the company:

YES NO X

Describe the policy

E.12. Indicate the address and manner for accessing corporate governance content on your website.

www.iberdrola.com/information for shareholders and investors

F DEGREE OF COMPLIANCE WITH GOOD GOVERNANCE RECOMMENDATIONS

Indicate the company's degree of compliance with existing good governance recommendations or whether the company has not adopted them, if applicable.

If the company does not comply with any of such recommendations, please

NOTICE. This document is a translation of a duly approved Spanish-language document, and is provided for informational purposes only. In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

explain the recommendations, standards, practices or criteria applied by the company.

Until the single document referred to in ORDER ECO/3722/2003, of December 26, is prepared, the recommendations included in the Olivencia Report and in the Aldama report should be used as a reference in completing this section.

Size of the Board of Directors: reasonable number of members

Since 1991 the number of Directors was fallen from 40 to 21, the maximum number permitted by Article 36.1 of the By-laws.

The Company has made public its commitment to continue applying the policy to

reduce the number of Directors in accordance with good governance recommendations.

Existence of Board Committees

Regarding this issue, the Aldama Report provides that "the Committees that should be created for better corporate governance, notwithstanding any other committee that might be created by companies or by the division of the Committees mentioned below into any number of committees, are: (i) the Executive Committee, which has executive powers for the adoption of binding resolutions regarding the Company within the framework of the powers delegated to it; (ii) the Audit and Control Committee, the Nominating and Compensation Committee and, as the case may be, the Strategy and Investment Committee which only have reporting duties and the power to submit proposals to the Board, and such other powers and duties as might be attributed to them by Law, the By-laws or the Regulations of the Board of Directors."

In line with that recommendation, as provided by Article 42 of the By-laws and as described in B.2.3 of this Report, the Board of Directors of Iberdrola has decided to create and maintain the following committees:

- an Executive Committee;
- an Audit and Compliance Committee; and
- a Nominating and Compensation Committee.

In particular, the Executive Committee, which has held 24 meetings in FY 2004, also performs the role, among other duties, of a STRATEGY AND INVESTMENT COMMITTEE, to the extent that it invests most of its time in submitting proposals or information to the Board of Directors about such strategic decisions, investments and disinvestments that are relevant for the Company or the Group, assessing their conformity with the budget and the Strategic Plan and performing analysis and follow-up of the business risks.

G OTHER INFORMATION OF INTEREST

If you believe that there is any relevant principle or aspect regarding the corporate governance practices applied by your company that has not been discussed in this Report, please mention and explain it below.

In this section, you may include any other information, clarification or comment relating to the prior sections of this report to the extent that it is relevant and not repetitive.

Specifically, indicate whether the company is subject to laws other than Spanish laws regarding corporate governance and, if applicable, include such information that the company is required to release and that is different from the information released in this Report.

Comments:

Section A.1

- The shareholders acting at the April 1, 2000 General Shareholders' Meeting

authorized the Board of Directors of the Company to increase the share capital by half the amount of the then existing share capital through the issuance of new shares in consideration of cash contributions or the conversion of freely-available reserves, without consulting the General Shareholders' Meeting. This authorization was granted until April 1, 2005, and has not yet been exercised.

- The shareholders acting at the April 3, 2004 General Shareholders' Meeting authorized the Board of Directors for a term of five years to issue debentures or bonds convertible into and/or that may be swapped for shares in the Company and to issue warrants with respect to new shares or outstanding shares of the Company, up to EUR one (1) billion, with the power, in the case of convertible bonds and warrants on new shares, to exclude the pre-emptive right of the shareholders and holders of convertible bonds.

- At that shareholders' meeting, the shareholders also authorized the Board of Directors for a term of five years to issue debentures or bonds convertible into and/or that may be swapped for shares in the Company and to issue warrants with respect to new shares or outstanding shares of the Company, up to EUR one (1) billion, without the power to exclude the pre-emptive right of the shareholders and holders of convertible bonds.

Section A.2

- Given that the shares are represented by book entries, extremely accurate information about the interest of shareholders in the share capital is not available. The information provided has been taken from the annual reports of our shareholders and from different press releases.

- For purposes of this Corporate Governance Report and in conformity with Schedule I of the National Securities Market Commission Communication 1/2004, of March 17, significant shareholders are the holders of interests that reach the threshold set forth by Royal Decree 377/1991, of March 15, or that, even when they do not reach the percentage established in that Royal Decree "permit the exercise of a significant influence on the company. Unless otherwise shown, significant influence shall mean 'the possibility of appointing or removing any member of the board of directors of the company or of proposing the appointment or removal of any member of the board of directors of the company and, in general, whatever is provided in the furtherance of Section 35 of the Securities Market Law.'" As a consequence, the savings associations associated in the Federación de Cajas de Ahorro de Castilla y León are considered significant shareholders, for purposes of this Report, given that they have proposed the appointment of Mr. Sebastián Battaner Arias as Member of the Board of Directors.

- Out of the total 8.619% interest in the share capital of Iberdrola, S.A. reported by Banco Bilbao Vizcaya Argentaria, S.A. (BBVA) in its Annual Consolidated Financial statements for fiscal year 2004, 5.48% has been identified as an "interest held for the long term."

- The approximate distribution of interests in share capital by type of shareholder is as follows:

- Foreign institutions: 43%
- Domestic institutions: 27%
- Retail investors: 30%

- On September 25, 2003, Banco Santander Central Hispano, S.A. submitted to the National Securities Commission, in its condition as reporting party with respect to

Chase Nominees Ltd., a report of significant interests consisting of 86,174,636 shares in the share capital of Iberdrola, S.A., representing 9.559% of the share capital, expressly stating that Chase Nominees Ltd. is required to report its participation as nominee (Section 3.1 of Royal Decree 377/1991, of March 15) acting on behalf of its clients, none of which is, in turn, subject to report a significant interest if only the individual shareholding registered with Chase Nominees Ltd is taken into account.

- On February 2, 2005, State Street Bank and Trust Co. submitted to the National Securities Market Commission a report of significant interests, expressly stating that that it submitted such report in its capacity as nominee, reporting a total interest amounting to 53,449,557 shares, representing 5.929% of the share capital.

- Although it is not mandatory to report them *under* Royal Decree 377/1991, of March 15, some of the most significant documents in the ownership structure have been the following:

1) The acquisition of 18,032,484 shares, representing 2% of share capital, by the Savings Associations associated in the Federación de Cajas de Ahorro de Castilla y León, whose interests are broken down in A.2 in this Report.

2) The acquisition of 4,500,000 shares, representing 0.5% of share capital, by Montes de Piedad y Caja de Ahorros de Ronda, Cádiz, Almería, Málaga y Antequera (Unicaja).

3) The acquisition of 2,704,648 shares, representing 0.3% of share capital, by Caja de Ahorros Castilla La Mancha.

4) The acquisition of 1,000,000 shares, representing 0.11% of share capital, by Caja de Ahorros y Monte de Piedad de Extremadura.

5) The acquisition of 920,000 shares, representing el 0.102% of share capital, by Caja de Ahorros de Vitoria y Álava (Caja Vital).

6) The acquisition, in February 2005, of 9,015,492 shares, representing 1% of share capital, by Sociedad de Desarrollo de Navarra (SODENA).

Section A.3

- Pursuant to the provisions of Article 49 of the By-laws, each Director must show the recordation of a lien upon ten thousand (10,000) shares of the Company as a guarantee for any liabilities which may be incurred in the performance of the Director's duties.

- Adding the interests of significant shareholders and the shares owned by Directors, the percentage of shares held by the Board of Directors is 19.77%.

Section A.5

Uragua, S.A. is a Uruguayan company, and therefore, has no CIF (Tax Identification Code) but has the corresponding Uruguayan tax identification.

Section A.8

Pursuant to the authorizations granted by the shareholders to the Board of Directors at the General Shareholders' Meeting, and as mentioned in Section A.9 of this Report, during 2004 Iberdrola, S.A. has acquired 13,929,158 shares of its own stock for 233

million Euros, which stock had a nominal value of 42 million Euros. The Company has also transferred 15,545,275 shares of its own stock, for 256 million Euros.

Derivatives on treasury shares in effect as of December 31, 2004 amounted to 10,682,127 call options maturing in 2005.

Section B.1.2

Since the integration in 1991 of the companies that gave rise to Iberdrola, S.A., to date, the number of Directors has decreased from 40 to 21, in accordance with the maximum number of Directors set by Article 36 of the By-laws.

The Company has made public its commitment to continue applying the policy to reduce the number of Directors in light with good governance recommendations.

Section B.1.3

- As communicated to the National Securities Market Commission as a significant event on May 26, 2004, the Board of Directors resolved to make an interim appointment of Mr. Sebastián Battaner Arias, following the interim appointment procedure, as External Proprietary Director to represent the shareholding of the Savings Associations associated in Federación de Cajas de Ahorro de Castilla y León, which are listed below:

- Caja España de Inversiones, Caja de Ahorros y Monte de Piedad.
- Caja de Ahorros de Salamanca y Soria (Caja Duero).
- Caja de Ahorros Municipal de Burgos.
- Caja de Ahorros y Monte de Piedad de Segovia.
- Caja de Ahorros y Monte de Piedad del Círculo Católico de Obreros de Burgos.
- Caja de Ahorros y Monte de Piedad de Avila.

Section B.1.8

The information contained in section B.1.8 of this Report coincides with the information reflected in Note 25 of the Annual Financial Statements for fiscal year 2004 relating to the compensation paid to the Board of Directors, although it is classified differently due to the regulated nature of the contents of this section B.1.8 of this Report owing to the provisions of the National Securities Market Commission Communication 1/2004.

In this regard, section B.1.8 of this Report reflects the aggregate compensation of Directors on account of different compensation items that include the compensation charged to the By-law Allocation for FY 2004 and specific variable compensation charged to the By-law Allocation for FY 2003, as well as compensation booked under "Personnel expenses – salaries, wages and similar items."

On the other hand, regarding the charge to such By-law Allocation for FY 2004, reserves have been booked for commitments pending payment through the date of finalization of the service contract executed with the Chairman of the Board of Directors on November 27, 2002, which expires in June 2006, amounting to EUR 7,500,000. Likewise, a charge has been made to this By-law Allocation for external services and other undistributed items in the amount of EUR 3,161,000, which are not included in section B.1.8. of this Report because they are not compensatory in nature.

Section B.1.10

In 1990s, the Company began to include this kind of clause in contracts with its managers, although most of the contracts with indemnity or golden parachute clauses were executed in October 2000. Such contracts currently encompass 89 managers, including the 15 members of the senior management of the Company (i.e. the two Executive Directors and the 13 managers listed in Section B.1.9 of this Report).

The purpose is to attain an effective and sufficient degree of loyalty from the senior-level executives required for the management of the Company and thus avoid the loss of experience and knowledge that might jeopardize the furtherance of the strategic goals. Essentially, these clauses include severance packages for the members of the management team on the basis of length of service to the Company, with annual payments ranging from a minimum of 2 years to a maximum of 5 years.

Section B.1.27

The Secretary of the Board of Directors also provides legal counsel to the Company's management decision-making bodies, thus reinforcing his duty to assure the formal and substantive legality of the actions of such Bodies.

In addition, the Secretary is a member of the executive team, given that he is the General Secretary of the Company.

Section B.1.29

Of the EUR 1,053,000 of non-audit work performed by the audit firm, EUR 578,000 corresponds to certification engagements which are mandatory to comply with certain requirements.

Section B.1.30

The relationship with the auditor dates back to 1979. Arthur Andersen y Cia, S.Com. has been auditing Iberdrola, S.A. since 1992, although Deloitte & Touche España, S.L. (formerly Arthur Andersen y Cia, S.Com.) is the firm that has been auditing Iberdrola, S.A. since FY 2002. In this regard, it should be noted that the auditor has rotation policies affecting the lead partner and the secondary partner in charge of quality control. In addition, in compliance with the Financial Law, the audit firm has completely replaced members of the team that were on the team for more than seven years. Furthermore, the change in the audit firm entailed a change in the traditional audit procedures used in order to apply those of the new firm.

Additionally, on June 26, 2002, the Audit and Compliance Committee considered that it was appropriate for certain companies of the Group to have an auditor different from the firm auditing Iberdrola, S.A. in order to be able to properly assess its possible contribution as future auditor of the financial statements of the Company.

To that effect, it recommended the definition of a "second set" of audits that would include certain companies of the Group and that was to be awarded, following a request forbids, among internationally recognized audit firms other than the Company's auditor. The engagement was awarded to the firm "Ernst & Young."

Section B.1.31

Director Juan Luis Arregui Ciársolo has an interest of 31.25% in the capital of

Cetesalas, S.L., which, in turn, holds 91.86% of the share capital of Corporación Eólica CESA, S.A. As a consequence, such Director holds an indirect interest of 28.7% in Corporación Eólica CESA, S.A.

Director José Orbegozo Arroyo has an interest of 29.98% in the capital of Olaguibel Servicios Generales, S.L., which, in turn, holds 19.6% of the capital of Fanox Electronic, S.L. As a consequence, such Director is attributed an indirect interest of 5.88% in Fanox Electronic, S.L. which, added to its direct interest of 0.4%, results in a total interest of 6.28%.

Section B.2.2

In clarification of the information provided in this section, it should be noted that Mr. José Ignacio Sánchez Galán is the Vice Chairman & Chief Executive Officer and that Mr. José Antonio Garrido Martínez and Mr. Javier Herrero Sorriqueta are Vice Chairmen of the Board of Directors.

Section C.1

The transactions conducted with significant shareholders in FY 2004 have been carried out in the ordinary course of business and have conformed to arm's length terms. The information about such transactions is not needed to state the true financial position and results of operations of the Company. However, regarding Banco Bilbao Vizcaya Argentaria, S.A. (BBVA), the most significant transactions conducted in FY 2004 have been:

1. Bank financing transactions:

On April 1, 2004, BBVA granted a loan to Iberdrola Energía Altamira, guaranteed by Iberdrola S.A., in the amount of USD 300 million, with a final maturity in 2014 and payable in semiannual installments commencing in 2009. Bids were requested from seven prime banks, and the proposal submitted by BBVA was the most competitive.

On May 19, 2004, a loan in the amount of EUR 500 million, with a term of five years, was borrowed from seven prime financial institutions, both Spanish and foreign, including BBVA, by means of the "club deal" method.

On December 16, 2004, a syndicated loan in the amount of EUR 2.3 billion, with a term of five years was borrowed from 36 financial institutions. Twelve banks, including BBVA, act as arrangers.

2. Interest rate and exchange rate derivative instruments:

Interest rate and exchange rate hedging transactions for an amount equivalent to EUR 5.723 billion were conducted in 2004. Of such amount, EUR 1.217 billion are related to transactions with BBVA.

Derivative transactions are awarded through competitive biddings among financial institutions of proven solvency.

3. Surplus deposits and drawdowns of credit lines:

In 2004 drawdowns under current account overdraft and credit facilities amounted to a daily average amount equivalent to EUR 44 million, of which EUR 13 million (30%) correspond to BBVA.

In addition, in FY 2004 treasury surpluses for an average daily amount equivalent to EUR 108 million were deposited, and the transactions with BBVA accounted for 16% of these transactions.

These transactions are conducted daily to regulate the liquidity of the Group by requesting quotations from about 20 financial institutions.

4. Treasury stock:

Throughout 2002, different call options on the shares of Iberdrola were contracted with BBVA. The average balance of options held with BBVA was 1,300,000 call options, which represents an amount of about EUR 25 million.

Section C.3

The transactions with Group companies that have not been eliminated in the consolidation process correspond to transactions conducted in the ordinary course of business (purchase and sale of power, engineering services, financial income and expenses on centralized treasury management, etc.), conform to arm's length terms and are of minimal relevance in disclosing the financial position and results of operations of the Company.

However, it should be noted that the purchase from Corporación IBV Servicios y Tecnologías, S.A. of 6% of the share capital of Gamesa Corporación Tecnológica, S.A. has been conducted under arm's length terms and has not given rise to gains or losses in the Consolidated Financial Statements.

In addition, Iberdrola signed an agreement with Gamesa for the acquisition of the Catefica Wind Farm, near Lisbon, with an installed capacity of 18 MW, which transaction is part of the Company's bid for the Portuguese wind market. Iberdrola also acquired 469 MW of installed wind farm capacity from Gamesa - 250 MW in Portugal and 219 MW in Spain – for the amount of 566 million Euros, which makes the Company a leader in the Renewable Energy industry.

This annual corporate governance report has been approved by the Board of Directors of the company at the meeting held on February 23, 2005.

Indicate the Directors that voted against the approval or that abstained from voting in connection with the approval of this Report.

2004

Audit and Compliance
Committee
of the IBERDROLA Group

Activities report of the Audit and Compliance Committee of the IBERDROLA Group for fiscal year 2004, prepared at its meeting of January 26, 2005 and approved by the Board of Directors of IBERDROLA, S.A. on February 23, 2005, pursuant to Article 44.4 of the By-Laws of IBERDROLA, S.A.

Letter to the Board of Directors of IBERDROLA, S.A.

I am pleased to submit, for the sixth consecutive year, the Activities Report of the Audit and Compliance Committee of the Iberdrola Group.

In an effort to improve transparency, numerous new items of information have been included in this Report. Especially noteworthy is the inclusion of the profile of the Committee members, the statement of independence made by such members, qualified as such, and more information in the Shareholder's Guide.

During the thirteen meetings held in 2004, the Committee devoted a great deal of effort to the process of adjustment to the International Financial Reporting Standards and to developments in the field of Corporate Governance, such as the audits of the corporate website and the monitoring of related transactions and conflicts of interest.

In its quest for improvement, the Committee held a seminar meeting focusing on the self-assessment of its operations and adopted an Action Plan to be developed over the year to come.

I would like to end this letter by reiterating the commitment assumed by the Audit and Compliance Committee to maintain its lively pace of activity, so that special attention can be paid during 2005 to supervising the Comprehensive Risk Management System and the processes for the development of economic-financial information in the first year of its preparation based on International Accounting Standards.

Sincerely,

Ricardo Álvarez Tsasi
Chairman of the
Audit and Compliance
Committee of the
IBERDROLA Group

2004 Activities Report

Shareholder's Guide

The aim of this "Shareholder's Guide" is to give answers to the important questions that all shareholders of IBERDROLA should know in order to understand the scope and duties of the Audit and Compliance Committee.

WHAT IS THE REASON FOR THE EXISTENCE OF THE AUDIT AND COMPLIANCE COMMITTEE?

This Committee was created by the Board of Directors of IBERDROLA, S.A. in October 1998 in response to the growing demands of shareholders and markets in the area of Corporate Governance, which materialized in Spain in what is known as the "Code of Good Governance."

As a result of the entry into force of Financial System Reform Measures Law 44/2002, of November 22, it is now mandatory for Listed Companies in Spain to have Audit Committees.

Consequently, Article 44 of the By-Laws of the Company approved at the General Shareholders' Meeting held on April 3, 2004, which Article relates to the Audit and Compliance Committee, contemplates the provisions contained in the above-mentioned Law, among other provisions.

The new regulatory framework and IBERDROLA's subsequent adjustments ratify the system that the Committee, following a forward-looking approach, adopted six years ago.

WHO ARE THE COMMITTEE MEMBERS? HOW IS THEIR INDEPENDENCE GUARANTEED?

The Committee is an internal body of the Board, and as such, it is made up of Company directors, with a minimum of three members and a maximum of five. At present, there are four members on the Committee.

IBERDROLA's By-Laws and the Regulations of the Board of Directors favor the independent operation

of the Committee and provide that it shall consist of external directors who are not members of the Executive Committee.

Further, the By-Laws (Article 37) and the Regulations of the Board of Directors (Article 10) define the profile of and the requirements to be satisfied by "external independent directors".

This Report contains a public statement of independence made by the two members of the Committee -the Chairman and one other member- who are characterized as such.

HOW DO YOU ENSURE THAT COMMITTEE MEMBERS HAVE THE TECHNICAL EXPERTISE AND FINANCIAL EXPERIENCE REQUIRED TO PERFORM THEIR DUTIES?

This Activities Report contains a profile of each member of the Audit and Compliance Committee, including a description of their respective professional background, expertise and financial experience.

Most of the members of the Audit and Compliance Committee of IBERDROLA have served on it since it was created and have actively participated in the large number of activities reflected in the Activities Report that the Committee has been publishing on an annual basis.

In addition, the Committee members have broad experience on the Board of Directors of IBERDROLA and on other decision-making bodies of major Companies, and they contribute the experience they have acquired in management-level positions directly or indirectly related to the preparation of economic-financial information as well as in other fields, such as universities, foundations, research, etc. -all at both the domestic and the international level.

WHAT POWERS AND DUTIES DOES THE COMMITTEE HAVE? HOW MUCH TIME DOES IT DEVOTE TO THEM?

The By-Laws of IBERDROLA provide for the following powers and duties of the Committee:

- Report to the shareholders at the General Shareholders' Meeting with respect to matters raised therein by shareholders regarding its powers.
- Propose appointments of the Company's Auditors to the Board of Directors for submission to the General Shareholders' Meeting.
- Supervise the management of the Internal Audit Department, which will be functionally controlled by the Chairman of the Committee.
- Know the process for gathering financial information and associated systems for monitoring risks relevant to the Company.
- Receive information from the Auditors regarding matters that might risk the independence thereof which are related to the auditing procedure and generally regarding any other information provided for in legislation regarding the auditing of financial statements and in the technical auditing regulations in effect at any time.
- Inform itself in advance of the Company's Annual Corporate Governance Report and ensure compliance with legal requirements and those of the Codes of Professional Conduct and Good Governance adopted by the Board of Directors.
- Such other powers, if any, that may be assigned to it by the Board of Directors.

The members of this Committee are particularly focused on their duties, as shown by the fact that they met thirteen times during 2004. The Chairman of the Committee devotes considerably more time to his duties, dedicating around 300 hours a year exclusively to the business of the Committee.

HOW DOES THE COMMITTEE WORK?

The reports and recommendations submitted by the Committee to the Board of Directors of IBERDROLA, S.A. are the product of:

- Discussions among members at Committee meetings.
- Analyses made at the request of the Chairman of the Committee by the Internal Audit Division, which organization is directly subordinate to the Committee.
- Meetings between the Chairman of the Committee and the Vice-Chairman & Chief Executive Officer and the Company Managers, and the attendance of such Managers at the Committee sitting as a full body.

HOW MUCH DOES THIS COMMITTEE COST IBERDROLA'S SHAREHOLDERS?

The costs incurred by the Committee members for attending meetings are included within the By-Law allocation to the Board of 2% of consolidated net profits, which was approved at the General Shareholders' Meeting, so there is no additional cost to them.

The attendance fees paid to the Committee members, which are included in this By-Law allocation to the Board, totaled 97,500 euros in fiscal year 2004.

WHAT IS THE 2004 ACTIVITIES REPORT OF THE AUDIT AND COMPLIANCE COMMITTEE?

This Report sums up the activities performed by the Committee during 2004 in its different fields of action.

WHO IS THIS ACTIVITIES REPORT INTENDED FOR?

It is essentially for the shareholders of IBERDROLA, S.A., to whom it is delivered as a result of the General Shareholders' Meeting.

Shareholder's Guide

Notice of this Report is given to the National Securities Market Commission (CNMV) as a significant event, and it is also distributed in Spanish and English to investors, analysts, regulatory bodies, etc. The Report is also available on IBERDROLA's website (www.iberdrola.com) under "Information for shareholders and investors," the contents of which conform to Ministerial Order 3722/2003.

IS THE ACTIVITIES REPORT PUBLISHED IN COMPLIANCE WITH A LEGAL REQUIREMENT?

No. The publication of this Activities Report is an initiative voluntarily adopted by IBERDROLA, in its commitment to transparency and "good governance."

Subsequently, the Report of the Special Commission for the Promotion of Transparency and Safety in the Financial Markets and Listed Companies (the "Aldama Report") recommended the preparation of an Annual Report on the activities of the Audit Committee.

IBERDROLA is the first Listed Company in Spain to have published a report of this nature. The 2004 report is its sixth annual report.

WHAT DOES THIS REPORT PROVIDE TO IBERDROLA'S SHAREHOLDERS?

The annual publication of this Activities Report is an initiative undertaken within the framework of IBERDROLA's policy of maximum transparency of the rules and internal operation of its governing bodies. A careful reading of the Report gives an insight into how the IBERDROLA Group's Audit and Compliance Committee works.

The efficient operation of the Audit and Compliance Committee offers the shareholder an additional assurance that the Board of Directors supervises the significant risks of the Business with the utmost transparency, self-discipline and rigor.

By assessing the efficiency of the Internal Control System, the Committee contributes decisively to the achievement of IBERDROLA's strategic objectives. Although an efficient Internal Control System does not guarantee per se that the objectives will be met, it does ensure that the Company's management will make controlled decisions which are commensurate with the guidelines and principles established by the Board of Directors of IBERDROLA, S.A.

The Audit and Compliance Committee itself has established self-assessment and continuous improvement mechanisms. Thus, during fiscal year 2004, it devoted a seminar meeting to assess its operation, which meeting resulted in a Plan of Action including various measures of improvement to be implemented during fiscal year 2005.

The Audit and Compliance Committee

STATEMENT OF INDEPENDENCE

Mr. Ricardo Álvarez Isasi, member of the Board of Directors of IBERDROLA, S.A., in his capacity as external independent director pursuant to Article 37.1.c) of the By-Laws, and Chairman of the Audit and Compliance Committee of the IBERDROLA Group, hereby states:

1. That he satisfies the independence requirements established in Article 10.2 of the Regulations of the Board of Directors and, specifically, that:
 - He does not serve, nor has he served during the last two years, in any management-level position at the Company or at any of the Companies that are members of its Group.
 - He is not, nor has he during the last two years, been a director of any of the Companies that are members of the IBERDROLA Group.
 - He has not, during fiscal year 2004 or the last two years, been the recipient of any remuneration or compensation payable by the Company or any of the Companies that are members of the IBERDROLA Group other than such as he may be entitled to collect for serving as director.
 - He is not currently⁽¹⁾ related to any significant shareholder or to managers of companies to which the Company or any of the Companies that are members of the IBERDROLA Group has paid, or from which the Company or any of the Companies which are members of the IBERDROLA Group has received, substantial payments.
2. That there is no other kind of direct or indirect relationship with the Company or any circumstance that might condition the free exercise of his independence as a director.

In addition, he undertakes, in his capacity as external independent director, to act in good faith and with such diligence as is expected from a faithful representative of all the shareholders of IBERDROLA, and to perform the duties imposed upon a director by Law, the By-Laws and the Regulations of the Board of Directors of IBERDROLA, S.A., in furtherance of the corporate interests.

In Madrid, on January 26, 2005

Ricardo Álvarez Isasi
Chairman of the
Audit and Compliance
Committee of the
IBERDROLA Group

(1) At its meeting held on June 25, 2003, the Board of Directors resolved that "Mr. Ricardo Álvarez Isasi clearly satisfies the conditions required by the Codes of Good Governance in order to characterize an independent director as such, due to his prestige, independent judgment, and the significant shareholding represented by him."

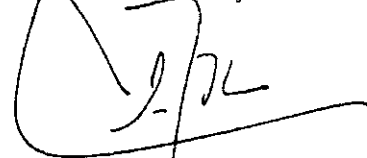

STATEMENT OF INDEPENDENCE

Mr. César de la Mora Armada, member of the Board of Directors of IBERDROLA, S.A., in his capacity as external independent director pursuant to Article 37.1.c) of the By-Laws, and member of the Audit and Compliance Committee of the IBERDROLA Group, hereby states:

1. That he satisfies the independence requirements established in Article 10.2 of the Regulations of the Board of Directors of IBERDROLA, S.A. and, specifically, that:
 - He does not serve, nor has he served during the last two years, in any management-level position at the Company or at any of the Companies that are members of its Group.
 - He has not, during fiscal year 2004 or the last two years, been the recipient of any remuneration or compensation payable by the Company or any of the Companies that are members of the IBERDROLA Group other than such as he may be entitled to collect for serving as director.
 - He is not, nor has he during the last two years, been related to any significant shareholder or to managers of companies to which the Company or any of the Companies that are members of the IBERDROLA Group has paid, or from which the Company or any of the Companies which are members of the IBERDROLA Group has received, substantial payments.
 - Currently he is a director of the company APEX Inmobiliaria, S.A., which is 100%-owned by IBERDROLA, S.A., and appointed as such by IBERDROLA's Board of Directors, in compliance with all of the foregoing requirements for independence with respect to APEX Inmobiliaria, S.A. company.
2. That there is no other kind of direct or indirect relationship with the Company or any circumstance that might condition the free exercise of his independence as a director.

In addition, he undertakes, in his capacity as external independent director, to act in good faith and with such diligence as is expected from a faithful representative of all the shareholders of IBERDROLA, and to perform the duties imposed upon a director by Law, the By-Laws and the Regulations of the Board of Directors of IBERDROLA, S.A., in furtherance of the corporate interests.

In Madrid, on January 26, 2005

César de la Mora Armada
Member of the Audit
and Compliance Committee
of the Iberdrola Group

2004 Activities Report

Activities in 2004 and Framework of Relationships of the Audit and Compliance Committee

Background: 1998-2003

Meetings held in 2004

Lines of Action in 2004 and Framework of Relationships of the Committee

1. BACKGROUND: 1998-2003

Committee created voluntarily in October 1998 as an internal body of the Board of Directors, without executive duties.

Since 1999, it has published its Annual Activities Report, a pioneer initiative favoring transparency, distributed to the shareholders at the General Shareholders' Meeting and to the markets.

Established in June 2003 as a mandatory permanent body pursuant to Financial System Reform Measures Law 44/2002, of November 22.

The Audit and Compliance Committee of the IBERDROLA Group was created by the Board of Directors of IBERDROLA, S.A. on October 28, 1998, as an internal body of the Board of Directors with an informational and consulting role, without executive functions, but with the power to provide information and advice and make proposals within its scope of action.

The Committee acted voluntarily until its adjustment to Financial System Reform Measures Law 44/2002, of November 22, holding a total of 43 meetings during the period between October 28, 1998, the date of its creation, and June 25, 2003, the date of its adjustment.

The work done by the Committee in previous years has been described in the corresponding Activities Reports for fiscal years 2003, 2002, 2001, 2000 and 1999, prepared on January 13, 2004, January 29, 2003, January 22, 2002, January 31, 2001 and December 15,

1999, respectively, and approved by the Board of Directors of IBERDROLA, S.A. for subsequent distribution to shareholders and the markets.

Since 2001, the Activities Report has been distributed to all shareholders for purposes of the General Shareholders' Meeting. The Company thus acted in advance of the legal obligation introduced by Financial System Reform Measures Law 44/2002, of November 22, to report to the shareholders at the General Shareholders' Meeting on issues raised therein by shareholders concerning issues regarding the powers of Audit Committees.

These Reports have also been provided to the National Securities Market Commission as notifications of significant events and distributed, in Spanish and English, among analysts, investors, experts on the subject and the markets in general, with a view to contributing, as a "good practice" in Corporate Governance, to the transparency and dissemination of the Committee's activities.

The creation of the new Audit and Compliance Committee as a mandatory permanent body (Law 44/2002, of November 22) on June 25, 2003 entailed:

- The appointment, following a proposal by the Nominating and Compensation Committee, of the members of the Audit and Compliance Committee.
- The consideration that the Chairman appointed to the Committee clearly satisfies the conditions required by the "Codes of Good Governance" for an independent director to be characterized as such, due to his prestige, independent judgment, and the significant shareholdings he represents.

2004 Activities Report

- Approval of new Regulations of the Committee, whereby the previous Regulations, dated February 24, 1999, were adjusted to include the new elements introduced in the process of adjustment to Law 44/2002.

All of the foregoing was timely reported to the National Securities Market Commission.

Activities in 2004 and Framework of Relationships of the Audit and Compliance Committee

2. MEETINGS HELD IN 2004

The meetings held by the Committee and the main business transacted during fiscal year 2004 are summarized in the following table:

3. LINES OF ACTION IN 2004 AND FRAMEWORK OF RELATIONSHIPS OF THE COMMITTEE

The duties assigned by the Board of Directors of IBERDROLA to the Audit and Compliance Committee are based on the following basic principles adopted by the Board itself:

- "Good Governance" of the Company.
- Maximum transparency for shareholders and markets.
- Efficient operation of the Internal Control System, focusing on the significant risks of the business.
- Compliance with Codes of Conduct and legal provisions of the Company.
- Efficiency and independence of the auditors.

The Audit and Compliance Committee has endeavored to contribute toward the fulfillment of these basic principles through the activities it has performed during fiscal year 2004, along the following lines of action:

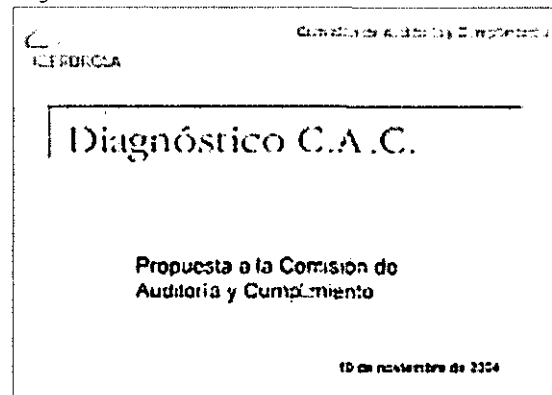

- a) The self-assessment of the Audit and Compliance Committee in adjusting to the best international practices of Good Corporate Governance.
- b) The Committee and the International Financial Reporting Standards.
- c) The Committee at the General Shareholders' Meeting.
- d) The Committee and the economic and financial information about IBERDROLA.
- e) The Committee and compliance with Legal Provisions and with Transparency and "Good Governance" Practices.
- f) The Committee and the Internal Audit Division.
- g) The Committee and the Auditor's activity.
- h) Appearances of Management before the Committee.

3.a SELF-ASSESSMENT BY THE AUDIT AND COMPLIANCE COMMITTEE

Assessment by Audit Committees is internationally recognized as a "Good Governance" practice.

After 6 years in operation, the Committee has prepared an internal diagnosis of its operation, which results in an Action Plan that includes improvement actions for 2005.

(Fig. 1)

Assessment by the Board and its Committees is internationally recognized as a "Good Governance" practice. Thus, in fiscal year 2004, the Audit and Compliance Committee considered it appropriate to prepare a first diagnosis of the operation of the Committee, in comparison with the best international practices [FIG. 1]. The opportunity to perform this diagnosis was determined by:

- The track record of the Committee, after 6 years of activity, and the commitment assumed by the Chairman of the Committee to the shareholders of IBERDROLA, S.A. in the 2003 Activities Report of the Committee.
- The international dimension of IBERDROLA, which has a high percentage of its share capital in the hands of foreign investors, is part of EUROSTOXX-50, and has international market presence.

2004 Activities Report

- The new international "Good Governance" requirements established as a result of the "2002 Sarbanes Oxley Act" and the recommendations of the European Commission.

The diagnosis was carried out and shared among the Committee members, based on the work performed by the Internal Audit Division and the Chairman of the Audit and Compliance Committee, who took the following benchmarks into account:

- Internal Rules and Regulations of IBERDROLA: By-Laws, Regulations of the Board and of the Audit and Compliance Committee.
- Legal Requirements: Domestic (Financial Law, Transparency Law, etc.) and International (Sarbanes Oxley Act 2002, SEC/NYSE regulations).
- Codes of Good Governance: Domestic (Olivencia, Aldama) and International (Winter, recommendations of the European Union and Combined Code of the UK).
- Other benchmarks: IBEX-35 Benchmark Listed Companies and other international studies and reports.

The main conclusions of the self-assessment include the following:

1. That the activities carried out by the Audit and Compliance Committee of the IBERDROLA Group in the period 1998-2004 effectively correspond to the powers and duties entrusted to it by the shareholders of IBERDROLA in the By-Laws and further developed by the Company's Board of Directors in the Regulations of the Committee.
2. That the Committee considers it timely to implement, during fiscal year 2005, the actions identified in the "Action Plan" resulting from the diagnosis, in order to respond to the growing demands of international investors and shareholders and remain one of the benchmark Audit Committees in Spain.

3.b THE COMMITTEE AND INTERNATIONAL FINANCIAL REPORTING STANDARDS

Since fiscal year 2003, the Committee has closely monitored International Accounting Standards and the process of adjustment to them.

After extensive work during the whole year, on December 15, 2004, the Committee submitted to the Board of Directors a report with its final conclusions on the process.

(Fig. 2)

In fiscal year 2003, the Audit and Compliance Committee of IBERDROLA set up measures for the permanent monitoring of the process of adjustment on January 1, 2005 to the international Financial Reporting Standards, pursuant to Regulations of the European Commission 1606/2002, of July 19, 2002.

The Activities Report of the Committee for fiscal year 2003 included a summary of the main activities carried out during such fiscal year.

During fiscal year 2004, the Committee worked even more actively on the process for conversion to the International Standards, which resulted in two appearances by the Director of Administration, Control and Regulation before the full Committee:

Activities in 2004 and Framework of Relationships of the Audit and Compliance Committee

- Presentation made at the seminar meeting of January 13, 2004 on the status of the "Project for Conversion to International Accounting Standards".
- Presentation made at the meeting of June 23, 2004 on the conversion of the 2003 annual financial statements to the International Accounting Standards and the main implications thereof.

In addition to these appearances, various meetings have been held by the Chairman of the Audit and Compliance Committee with the Administration, Control and Regulation Division, with "Deloitte & Touche" as advisor to IBERDROLA on the process, and with the Internal Audit Division.

Furthermore, the effects of the conversion to International Accounting Standards have at all times been part of the analysis of the periodic economic and financial information carried out by the Committee during fiscal year 2004.

By way of summary of the work performed during these last two years, the Committee approved, at its meeting on November 24, 2004, its "Report to the Board regarding the application of the International Financial Reporting Standards -IFRS- at the IBERDROLA Group" [FIG. 2].

This Report, submitted to the Board of Directors on December 15, 2004, included conclusions on the appropriateness of the process undertaken by the Company to adjust to the new Standards and on the conversion criteria adopted.

Further, the Committee contemplated the new risks and opportunities inherent in the application of the International Standards, and made recommendations with a view to the process of effective application thereof starting on January 1, 2005.

3.c THE COMMITTEE AT THE GENERAL SHAREHOLDERS' MEETING

The Committee reports to the shareholders on its actions through the distribution of its Annual Activities Report at the General Shareholders' Meeting. Such Activities Report reaches its sixth issue in 2004, and the Committee thus acts in advance of the legal requirement to report to the General Shareholders' Meeting, as established in the "new Financial Law".

The participation of the Committee at the General Shareholders' Meeting is also contemplated in the Regulations for the General Shareholders' Meeting approved on April 3, 2004.

Financial System Reform Measures Law 44/2002, of November 22, establishes the obligation for Audit Committees to "report to the General Shareholders' Meeting with respect to matters raised therein by shareholders regarding its powers". This obligation is set forth in the new Article 44, paragraph 4, of the By-Laws of IBERDROLA, S.A., approved at the General Shareholders' Meeting held last April 3, 2004.

In practice, IBERDROLA has moved ahead of this requirement by delivering the Annual Activities Report of the Committee at the General Shareholders' Meeting, in order to inform the shareholders of the activities performed during the fiscal year. At the General Shareholders' Meeting to be held in 2005, the sixth issue of the Annual Activities Report of the Committee will be made available to the shareholders.

Moreover, at the last General Shareholders' Meeting held on April 3, 2004, the Chairman of the Company underscored the role of the Committee in his speech, and noted that *"the extensive activity carried out is reflected in the numerous ordinary and extraordinary meetings held, on which full information is provided in the documents distributed at this General Meeting, and in particular, in the Annual Corporate Governance Report"* and added that *"the Report of the Audit and Compliance Committee was published five years ago, which merited the compliments of the National Securities Market Commission."*

In addition, the shareholders acting at the last General Shareholders' Meeting approved the "Regulations for the General Shareholders' Meeting of IBERDROLA, S.A." pursuant to the new Section 113 of the Securities Market Law, which systematizes and elaborates on the guidelines for operation of this decision-making body in order that all the shareholders may be sufficiently aware of the situation of the Company and fully exercise their rights at the General Meeting.

The Regulations provide, in Article 28.2 thereof, for the possible participation of the Chairman of the Audit and Compliance Committee in order to respond to requests for information made by the shareholders during the General Meeting.

All the documents relating to the holding of the General Shareholders' Meeting are available to all the shareholders and the public in general on the Company's website, in the section "Shareholders and Investors," the contents of which have been adapted to the requirements of Law 26/2003, of July 18, called the "Transparency Law," Ministry Order ECO 3722/2003, of December 26, and the Circular of the National Securities Market Commission 1/1004, of March 17.

3.d THE COMMITTEE AND ECONOMIC AND FINANCIAL INFORMATION ABOUT IBERDROLA

By means of its Report, the Committee provides the Board of Directors additional assurance in the process of preparation of the annual financial statements of the Company.

The prior review by the Committee of the interim information ensures the consistency thereof with the annual information, thus anticipating any risks that might be entailed by the existence of qualifications in the auditor's report on the annual financial statements of the Company.

(Fig. 3)

One of the recurring and most significant activities of the Audit and Compliance Committee is the submission to the Board of Directors and to the Executive Committee of its reports on the approval of the economic and financial information of IBERDROLA, prior to the publication thereof [FIG. 3].

The information is checked by the Committee primarily in order to:

- Highlight any changes in the accounting criteria with respect to the reporting Guidelines and valuation principles applied in the consolidated annual financial statements of IBERDROLA.

Activities in 2004 and Framework of Relationships of the Audit and Compliance Committee

- Facilitate an understanding of the most significant aspects of IBERDROLA's economic and financial statements.
- Identify any significant future risks deriving from the criteria adopted in the interim economic and financial statements and the annual financial statements for the year.
- Make recommendations regarding the preparation of the economic and financial statements.

The conclusions set out in the report are the product of:

- Conversations held with the Company's Management.
- Working meetings held with the Auditor once every quarter.
- Analyses performed by the Internal Audit Area at the request of the Chairman of the Committee.
- Comments made by the Committee sitting as a full body, which analyzes and approves the Reports to be submitted to the Board of Directors.

The following aspects, among others, were analyzed during fiscal year 2004 in the different reports submitted to the Board:

- Risks identified in the process of IBERDROLA's adjustment to the International Financial Reporting Standards.
- Evolution of prices in the supply market and the implications thereof in the economic and financial information.
- Allowance for decommissioning of conventional nuclear and thermal facilities.
- New estimate of the number of years of useful life of the Nuclear Stations.
- Criterion used for the recognition of income from investments in Mexico.
- Extraordinary profits or losses.

3.e THE COMMITTEE AND COMPLIANCE WITH LEGAL PROVISIONS AND WITH TRANSPARENCY AND "GOOD GOVERNANCE" PRACTICES

Within the framework of its duties relating to compliance, the Committee performs an annual monitoring of the number of claims by/against IBERDROLA.

In addition, any public information regarding the Corporate Governance of IBERDROLA is reviewed by the Committee prior to publication.

Claims by/against the Company.

2004 Review

On an annual basis, the Legal Affairs Division appears before the full Committee body in order to report on the number of claims by/against IBERDROLA and on the progress of the most significant claims, and to report on the main legal risks affecting the Company.

2004 Activities Report

On the basis of the foregoing, the Legal Affairs Division appeared before the full Committee on September 22, 2004 and provided a detailed description of the main significant events in this area; it also reported on the organizational and management news of this Division for the past year [FIG. 4].

(Fig. 4)

The Company's website and Annual Corporate Governance Report

Since fiscal year 2002, IBERDROLA has had a section on Corporate Governance on its website (www.iberdrola.com) and an Annual Corporate Governance Report. These initiatives were voluntarily adopted by the Board of Directors of the Company upon the proposal of the Vice Chairman & Chief Executive Officer and the Audit and Compliance Committee.

Subsequently, on December 26, 2003, Economy Ministerial Order 3722/2003 was approved, which

elaborates on the reporting obligations imposed upon listed companies by Transparency Law 26/2003, establishing the minimum contents of the Annual Corporate Governance Report and of the website.

On January 28, 2004, the Board of Directors made public, by means of a communication to the National Securities Market Commission, the adjustment to the new legal provisions, and expressly entrusted the Secretary of the Board to keep the information contained in IBERDROLA's website permanently updated, the contents of which will be audited by the Internal Audit Division for the Audit and Compliance Committee.

In compliance with this resolution of the Board, the Internal Audit Director submitted to the Committee, at its meeting of March 24, 2004, a first audit of the Corporate Governance contents of the Company's website, in order to verify the existence of the minimum contents required by Ministerial Order 3722/2003, of December 26.

Further, the results of a second internal audit on the website, "Information for shareholders and investors," was submitted to the full Committee at its meeting of July 19, 2004, once the contents thereof had been adjusted to the provisions of Circular 1/2004, issued by the National Securities Market Commission on March 17.

Finally, the Annual Corporate Governance Report for fiscal year 2003 was approved by the Board of Directors, following a report thereon by the Audit and Compliance Committee, which examined the document at its meeting held on February 24, 2004.

Supervision of the Regulatory Compliance Unit

The Internal Regulations for Conduct in the Securities Markets approved by the Board of Directors of the Company on July 9, 2003 pursuant to Financial System Reform Measures Law 44/2002, of November 22, provided, in Article 13.3 thereof, for periodic reporting by the Regulatory Compliance Unit to the Audit and Compliance Committee as a means to ensure compliance with the above-mentioned

Regulations and with the legal provisions applicable to Securities Markets.

This information materialized in the various meetings held by the Chairman of the Committee with the General Secretary and Secretary of the Board of IBERDROLA, S.A., who presides over the above-mentioned Compliance Unit [FIG. 5].

Additionally, the General Secretary and Secretary of the Board appeared at the Committee meeting held on July 19 in order to report on relevant aspects in the area of Corporate Governance and on the application of the Internal Regulations for Conduct in the Securities Markets [FIG. 6].

Finally, at the meeting held on December 15, 2004, the Committee approved its report to the Board of Directors on related transactions and conflicts of interest, prepared at the request of the Board, in the process of further development of Article 8 of the Internal Regulations for Conduct in the Securities Markets, relating to "Related transactions" and the adaptation thereof to ORDER EHA/3050/2004, of September 15, on the information regarding related transactions that must be provided by companies issuing securities admitted to trading on official secondary markets.

(Fig. 5)

(Fig. 6)

3.f THE COMMITTEE AND THE INTERNAL AUDIT DIVISION

The framework of relationships of the Internal Audit Area of IBERDROLA with the Audit and Compliance Committee, to which it is functionally subordinate, is formally set out in the Basic Internal Audit Regulations of the IBERDROLA Group, the latest version of which is dated November 2003 .

The Internal Audit Director attends all meetings and has appeared before the Committee on various occasions during fiscal year 2004.

In 2004, the Internal Audit Director of IBERDROLA was appointed Chairman of the Institute of Internal Auditors of Spain.

(Fig. 7)

Basic Internal Audit Regulations

The Internal Audit Area is functionally controlled by the Audit and Compliance Committee, and its relationship with this Committee is governed by the Basic Internal Audit Regulations, the latest version of which was approved by the Audit and Compliance Committee and the Vice Chairman & Chief Executive Officer of the Company on November 26, 2003 [FIG 7].

The purposes of these Basic Regulations are:

- To define the responsibilities of the Internal Audit Area of the IBERDROLA Group.
- To disseminate the knowledge of the Internal Audit Area as a governance function of the IBERDROLA Group.
- To establish guidelines and channels of communication between the Internal Audit Area and the rest of the Organization.
- To serve as the Quality System Manual of the Internal Audit Area.

In this context, the Regulations define the role of the Internal Audit Area, which serves a threefold purpose:

- It is an organization that monitors the efficiency of the Internal Control System through the development of its Annual Activity Plan approved by the Committee.
- It is a source of opinion and independent comparison of those matters entrusted to it by the Committee in the process of analysis and preparation of its reports.
- It is the regular channel of communication between the Committee and the rest of the organization, performing the duties of a permanent Secretary.

Reports to the Committee

In compliance with the provisions of Article 4.b. of the Regulations of the Audit and Compliance Committee, the Internal Audit Director of IBERDROLA attended the meeting held by the Committee on January 28 in order to report on the results of the Internal Audit Annual Activity Plan for fiscal year 2003, previously approved by the Committee.

The Director underscored the significant effort made in supporting the Committee in the development of its activities and cooperating with the Vice Chairman & Chief Executive Officer and with the Business Divisions. In addition, he reiterated his commitment to quality and the management development of his team.

Activities in 2004 and Framework of Relationships of the Audit and Compliance Committee

He provided a detailed description of the accomplishment of the objectives set for each of the levels or areas of activity on which he reported. Among others, especially noteworthy were:

- The high degree of fulfillment of the Activity Plan.
- The degree of effectiveness of the work performed: number of recommendations implemented.
- The customer satisfaction index.
- The expressions of external recognition obtained.

Finally, he stressed the importance of counting on a highly-qualified, motivated and committed team, which has devoted 10% of its time to training, and 70% of which holds an International Auditor Certificate.

Also, at the meeting held on December 15, 2004, the Audit Director submitted for approval by the Committee the Annual Activity Plan for fiscal year 2005, the primary objectives of which are:

- Contribution to the Corporate Governance of the Company by means of the Action Plan resulting from the Self-assessment of the Audit and Compliance Committee and the provision of support at the 11-12 meetings expected to be held.
- Focus on the significant risks affecting the Strategic Plan:
 - Supervision of the Comprehensive Risk Management System.
 - Operating Audits in Corporate Functions.
 - Actions in developing Business Divisions.
 - Diagnosis of the Internal Control System.
- Audits on processes for preparation of financial and non-financial information.

In addition, in 2005 the Internal Audit Division seeks to obtain the "International Quality Assurance Certificate" in the area of Internal Audit.

Finally, it must be noted that the Internal Audit Director attended all of the meetings held by the Committee in 2004 and holds frequent meetings with the Chairman of the Committee; he participates actively in preparatory meetings and reports on the development of the Annual Activity Plan of the Internal Audit Area, as permitted by Article 21.4 of the Regulations of the Committee.

In addition, during fiscal year 2004, he appeared twice before the full Committee in order to submit internal audits of the Company's website (see "3.e. The Committee and compliance with legal provisions and with transparency and "Good Governance" practices).

External projection

On June 17, 2004, the Internal Audit Director of IBERDROLA was appointed Chairman of the Institute of Internal Auditors of Spain, local chapter of the Institute of Internal Auditors (U.S.), whose functions include:

- Developing and promoting the Internal Audit Profession.
- Disseminating, as widely as possible, the decisive role of Internal Audit as an organization that contributes toward the accomplishment of Good Corporate Governance and that adds value to the organization and contributes to management through the supervision of the internal control system.
- Adequately training its members.

This appointment is a recognition of the development of and the work performed by the Division within and outside of the IBERDROLA Group, in order to adapt itself to the new demands in the area of Corporate Governance, monitor risk management, and finally, seek an internal control model that is forward-looking, proactive and dynamic in nature, all of which form part of the scope of action of the Audit and Compliance Committee.

For this reason, the Internal Audit Director of IBERDROLA was expressly congratulated by both the members of the Audit and Compliance Committee and the Board of Directors of the Company.

2004 Activities Report

Further, in carrying out its external projection activities, the Internal Audit Division has participated in numerous seminars and presentations, during the course of which it has disseminated different aspects of the Committee's activities. Among others, the following may be noted:

- Paper presented at the Institute of Internal Auditors of Spain on October 21, 2004: "Working for the Audit Committee. The IBERDROLA experience" [FIG. 8].
- Seminar entitled "Corporate Governance, Audit Committees and Internal Audit," held on October 28, 2004 within the framework of the Master's program in Management of Energy Companies of the Antonio de Nebrija University [FIG. 9].
- IX seminar on Internal Audit, "Adding Value from Transparency," held by the Institute of Internal Auditors of Spain on November 11-12, 2004.
- Presentation entitled "A practical experience in Internal Control related to Good Governance - the role of the Audit Committee and of the Internal Audit" at the Asociación para el Progreso de la Dirección on November 30, 2004.

At all of these meetings, the Audit Division shared with different groups its experience with the Audit and Compliance Committee of the IBERDROLA Group and laid emphasis on the extent to which IBERDROLA has moved ahead of the new environment, having in place an Audit and Compliance Committee and an Internal Audit Division which are in line with the best Corporate Governance practices.

3.g THE COMMITTEE AND THE AUDITOR'S ACTIVITY

In 2004, the Committee proposed to the Board, for subsequent submission for consideration by the shareholders at the General Shareholders' Meeting, the appointment of "Deloitte & Touche" as auditor of the annual financial statements of IBERDROLA and its Consolidated Group for fiscal year 2004.

Any contracting of the auditor's services for work other than audit work has the prior approval of the Audit and Compliance Committee.

(Fig. 10)

Proposed appointment of the Auditor for 2004

Among other powers, the Committee may propose the appointment of the auditor, by assessing its effectiveness and independence through the monitoring of its activity and the direct supervision of the hiring process.

In accordance with the foregoing, on February 24, 2004 the Committee prepared its report for the following purposes [FIG 10]:

- To propose to the Board of Directors the appointment of the Auditor of IBERDROLA, S.A. and IBERDROLA and its Consolidated Group for the 2004 annual financial statements, and
- To assess compliance with the standards approved by the Committee itself on May 26, 2003 in connection with safeguarding the independence of the auditor in the process of hiring professional services other than auditing services.

Based on this report, the Committee proposed to the Board of Directors, for submission to the General Shareholders' Meeting, the appointment of the firm "Deloitte & Touche" as auditor of the 2004 annual financial statements of IBERDROLA and its Consolidated Group, on the strength of the positive evaluation of its contribution in previous years and the fact that this Committee is not aware of any situation that might disclose the existence of a risk of lack of independence in the performance of its work.

Procedure for hiring the auditor for work other than audit work

In response to the new legal requirements and the enhanced responsibilities thereby assigned to Audit Committees, on March 26, 2003 the Board of Directors of IBERDROLA, S.A. approved, upon the proposal of the Audit and Compliance Committee, a new procedure for hiring auditors that, pursuant to the "new financial law," may reinforce the guarantee of independence of the auditor, by providing, among other requirements, for the prior approval by the Committee of any hiring of the auditor for professional services other than audit services.

During fiscal year 2004, the Committee granted its prior approval of all hirings of the auditor, and the above-mentioned procedure was thus implemented. Further, the Company's Management took into account all the suggestions and considerations made by the Committee.

2004 Activities Report

These hirings were basically related to the compliance by IBERDROLA with new legal requirements, such as the conversion to International Financial Reporting Standards or the new regulations on quality of supply in the Distribution Business Division.

Other action taken with the auditors

During fiscal year 2004, both the main auditor of IBERDROLA -Deloitte & Touche- and the firm that was awarded the "second set" of audits -Ernst & Young- appeared before the full Committee in order to submit the conclusions of their work, as well as the internal control recommendations resulting therefrom. Such appearances have been as follows:

Meeting	Appearance
3 rd 2004 meeting	Deloitte & Touche
February 9	Submission of results of the Audit of Annual Financial Statements for fiscal year 2003
	Deloitte & Touche: Submission of memorandums of recommendations for fiscal year 2003.
7 th 2003 meeting	Ernst & Young
June 23	Submission of memorandums of recommendations for fiscal year 2003.

Additionally, the Chairman of the Audit and Compliance Committee regularly holds working meetings with the auditors in connection with the preparation of particular Reports by the Committee, such as the reports to the Board regarding the economic and financial information about the IBERDROLA Group to be submitted by the Company's Management to the National Securities Market Commission or the report on the Consolidated annual financial statements.

Auditor's Fees

The following table shows a breakdown of the fees agreed with the Auditors during fiscal year 2004 and reported by them to the Audit and Compliance Committee for professional services relating to the Audit of the Annual Financial Statements and work other than audit work:

Item	Thousand Euros	
	Deloitte & Touche	Ernst & Young
Total fees for Audit work	2,462	269
Total fees for non-audit work	867	186
Total fees 2004	3,329	455

3.h APPEARANCES OF MANAGEMENT BEFORE THE COMMITTEE

The Committee has been entrusted with the monitoring of the Internal Control System associated with significant Business risks.

An important part of this task is carried out by means of the appearance of the Company's managers before the full Committee.

(Fig. 11)

In order to have direct knowledge of the issues affecting the business divisions, the Audit and Compliance Committee promotes the appearance of the Company's Managers in order that, from the highest level of responsibility, they may provide their views on the situation and the specific risks of their Business Divisions in relation to the objectives set out in the Strategic Plan 2002-2006 [FIG. 11].

As shown in table 1, there were fifteen appearances during fiscal year 2004.

The appearances of these managers entail:

- The presentation of corporate and governance functions with duties directly related to the scope of action of the Committee and which have a recurring presence before the Committee: Office of the General Secretary and Secretary of the Board, Administration, Control and Regulation Division, Legal Affairs Division, and Internal Audit Division.
- The appearance of Managers who have the greatest responsibility for the Company's strategy and for various Business lines at IBERDROLA, with the Director of Strategy and the managers in charge of the Commercial, Latin America, Generation and Distribution Business Divisions having appeared in 2004.

2004 Activities Report

Prospects for 2005

PROSPECTS FOR 2005

Fiscal year 2004 has been characterized by the consolidation of the Audit and Compliance Committee within the new regulatory framework introduced in the previous fiscal year.

Master lines of action followed by the Committee

Among the main master lines of action followed by the Committee, the following are especially noteworthy:

- Ongoing analysis of economic and financial information before approval thereof by the Board of Directors of IBERDROLA.
- Verification of compliance with the new rules of Governance, especially IBERDROLA's Code of Professional Conduct, the Code of Conduct for Securities Markets, and the Regulations for the General Shareholders' Meeting and of the Board of Directors.
- Enhanced monitoring of critical business risks, by means of the appearance of the Managers before the full Committee and the work performed by the Internal Audit Area in its 2004 Activity Plan, orientated toward these significant risks.
- Supervision of the activity of the auditor of IBERDROLA and its consolidated group, particularly with respect to the appointment and hiring process and the application of the hiring procedure to auditors in connection with professional services other than audit work.
- The promotion of transparency, by means of the incorporation of a greater amount of information and the continuous improvement and maintenance of a forward-looking approach in the area of Corporate Governance.

New challenges for 2005

Fiscal year 2005 poses significant challenges, including:

- The economic and financial information about IBERDROLA on the basis of the International Financial Reporting Standards.

The Committee, which has already been working on this issue during fiscal year 2004, believes that special attention must be paid to the preparation of the information on the new bases, the publicity thereof, and compliance with the requirements set by the National Securities Market Commission.

Further, it believes that the analysis of the guarantee for the key processes in the preparation of the information and the Internal Control monitoring is a critical issue.

- Development and implementation of the Action Plan resulting from the self-assessment of the operation of the Audit and Compliance Committee.

The Committee considers it timely to implement in 2005 the actions identified in the "Action Plan" resulting from the diagnosis performed, in order to respond to growing demands from international investors and shareholders and to continue to be one of the benchmark Audit Committees in Spain.

- Monitoring of the application of the sets of regulations governing information in the area of Corporate Governance: Corporate Governance Report, adjusted to the demands of the National Securities Market Commission, information regarding related transactions, etc.
- Analysis of the Comprehensive Risk Management System.

One of the duties of the Audit and Compliance Committee is to monitor the Internal Control Evaluation System in connection with significant risks affecting the IBERDROLA Group.

Thus, the Committee will monitor the Comprehensive Risk Model and the General Risk Policy at Iberdrola, which fall within the scope of action of the Strategy and Development Division.

Regulations of the Audit and Compliance Committee

BY-LAWS (ARTICLE 44) "AUDIT AND COMPLIANCE COMMITTEE"

1. *The Board of Directors shall create a permanent Audit and Compliance Committee, which shall be composed of a minimum of three (3) Directors and a maximum of five (5) Directors appointed by the Board of Directors from among the external Directors who are not members of the Executive Management Committee.*

The Audit and Compliance Committee shall have a Chairman and a Secretary appointed by the Board of Directors from among the members of such Committee.

The members of the Audit and Compliance Committee shall carry out their duties for a maximum of four (4) years, and may be re-elected.

The position of Chairman shall be carried out for a maximum period of (4) years, after which period such person may not be re-elected until the passage of one year from ceasing to act as such, without prejudice to such person continuing or being re-elected as a member of the Committee.

2. *In all events, the Audit and Compliance Committee shall have the power to:*

(a) Report to the General Shareholders' Meeting with respect to matters raised therein by shareholders regarding its powers.

(b) Propose appointments of the Company's Auditors to the Board of Directors for submission to the General Shareholders' Meeting.

(c) Supervise the management of the Internal Audit Area, which will be functionally controlled by the Chairman of the Audit and Compliance Committee.

(d) Know the process for gathering financial information and associated systems for monitoring risks relevant to the Company.

(e) Receive information from the Auditors regarding matters that might risk the independence thereof which are related to the auditing procedure and generally regarding any other information provided for in legislation regarding the auditing of financial statements and in the technical auditing regulations in effect at any time.

(f) Inform itself in advance of the Company's Annual Corporate Governance Report and ensure compliance with legal requirements and those of the Codes of Professional Conduct and Good Governance adopted by the Board of Directors.

(g) Such other powers, if any, that may be assigned to it by the Board of Directors.

3. *For purposes of the operation of the Committee, it shall meet as many times as its Chairman deems necessary for the fulfillment of its obligations, and at least four (4) times per year, or when requested by one-half of its members.*

Meetings of the Committee shall be validly held when one-half plus one of its members are present or represented. In the event of a tie, the Chairman shall have the tie-breaking vote.

4. *The Audit and Compliance Committee shall submit for approval of the Board of Directors a Report of its activities during the fiscal year, which shall thereafter be made available to shareholders and investors.*

5. *The foregoing rules shall be developed by the Board of Directors into corresponding Regulations of the Committee, always favoring independence in the operation of the Committee.*

CHAPTER I.- LEGAL NATURE AND PURPOSE

Article 1.- Legal Nature and Applicable Rules and Regulations.

1. Pursuant to the provisions of Article 44 of the By-Laws, the Board of Directors has established the Audit and Compliance Committee (hereinafter, the "Committee"), a permanent internal informational and consulting body without executive powers, which shall have information, advisory and proposal-making powers within its scope of action and shall be governed by the provisions set forth in these Regulations.
2. These Regulations must be approved by resolution adopted by a majority of the members of the Committee itself and endorsed by the Board of Directors of Iberdrola, S.A.
3. These Regulations may be amended at the proposal of the Chairman of the Committee or of three of its members, by resolution adopted by majority, and any and all amendments shall be submitted to the Board of Directors for endorsement unless they refer exclusively to the internal operation of the Committee.

Article 2.- Purpose of these Regulations.

The purpose of these Regulations is to define the guidelines for action and the rules of internal operation of the Committee of IBERDROLA and its Group.

CHAPTER II.- SCOPE AND DUTIES

Article 3.- Scope of Application.

The scope of action of the Committee shall in all events include the following matters:

- a) Report to the General Shareholders' Meeting with respect to matters raised therein by shareholders regarding its powers.
- b) Propose appointments of the Company's Auditors to the Board of Directors for submission to the General Shareholders' Meeting.

- c) Supervise the Management of the Internal Audit Area, which will be functionally controlled by the Chairman of the Audit and Compliance Committee.
- d) Know the process for gathering financial information and associated systems for monitoring risks relevant to the Company.
- e) Receive information from the Auditors regarding matters that might risk the independence thereof which are related to the auditing procedure and generally regarding any other information provided for in legislation regarding the auditing of financial statements and in the technical auditing regulations in effect at any time.
- f) Inform itself in advance of the Company's Annual Corporate Governance Report and ensure compliance with legal requirements and those of the Codes of Professional Conduct and Good Governance adopted by the Board of Directors.
- g) Such other powers, if any, that may be assigned to it by the Board of Directors.

Article 4.- Duties relating to the Internal Control System.

The main duties of the Committee shall be the following:

- a) Approve the orientation and plans of the Director of the Internal Audit Area, ensuring that its activity is mainly focused on the significant risks of IBERDROLA and its Group.
- b) Assess the degree of fulfillment of the plans formulated by the Internal Audit Area plans and the implementation of the recommendations made by it, supervising the appointment and substitution of the head of such Area.
- c) Ensure that the Internal Audit Area has sufficient resources and adequately qualified staff to operate efficiently.
- d) Supervisar que los riesgos relevantes de toda índole que inciden en la consecución de los objetivos corporativos de IBERDROLA y su Grupo se encuentran razonablemente identificados, medidos y controlados.

2004 Activities Report

Article 5.- Duties relating to Auditing.

The main duties of the Committee shall be the following:

- a) Provide guidance and make proposals to the Board of Directors of IBERDROLA regarding the appointment or substitution of the Auditors of IBERDROLA and its Group for approval by the shareholders at the General Shareholders' Meeting.
- b) Ensure the independence of the Auditors and the compliance with contractual terms.
- c) Review the contents of the Auditors' Reports before they are issued so that qualified reports may be avoided, and act as a liaison between the Board of Directors and the Auditors.
- d) Assess the results of each Audit and supervise the response by the management team to the recommendations made by it.

Article 6.- Duties relating to the Preparation of Economic and Financial Information.

The main duties of the Committee in this respect shall be the following:

- a) Check the relevant economic-financial and management information of IBERDROLA and its Group intended for third parties (National Securities Market Commission, shareholders, investors, regulatory authorities, etc.) and any communications or reports received from the latter.
- b) Ensure compliance with the legal requirements and the correct application of the Generally Accepted Accounting Principles in the Annual Financial Statements and the Management Report of IBERDROLA and its Group.
- c) Evaluate any proposal made by the Management regarding changes in the accounting policies and practices.

Article 7.- Duties relating to the Annual Corporate Governance Report and the compliance with legal requirements and the Codes of Good Governance.

The main duties of the Committee shall be the following:

- a) Report on the Annual Corporate Governance Report before submitting it for approval by the Board of Directors.
- b) Ensure the compliance with the laws, internal regulations and regulatory provisions governing the activities of IBERDROLA and its Group.
- c) Examine the degree of fulfillment by IBERDROLA, S.A. and, if appropriate, the companies in its Group, of the recommendations contained in the Code of Good Governance, regularly checking the results thereof and submitting to the Board of Directors such proposals for improvement as it may deem fit.
- d) Conduct such investigations as may be necessary following third-party claims against the Company or in cases of irregular or improper conduct.
- e) Report to the Board of Directors regarding those matters within its scope of action as are provided for in the Regulations of the Board, and generally regarding any other matters at the request of the Board.

CHAPTER III.- COMPOSITION

Article 8.- Composition.

1. The Committee shall consist of external Directors who are not members of the Executive Committee.
2. Apart from being a non-Executive Director, the Chairman of the Committee shall:
 - a) Not have held executive duties at IBERDROLA or its Group during a reasonable time, at the sole discretion of the Board of Directors.
 - b) Not have any contractual relations with IBERDROLA or its Group other than those inherent in his capacity as Director.
 - c) Devote more time to the Committee than the other members.

Article 9.- Number of Members.

1. The Committee shall consist of a minimum of three members and a maximum of five.

Exhibits

2. Within such limits, the Committee may submit to the Board of Directors a proposal to alter the number of its members, so that such number may contribute to a more effective operation of the Committee.

CHAPTER IV.- SUBJECT MATTER OF THE ACTIVITIES OF THE COMMITTEE

Article 10.- Subject Matter of the Activities of the Committee.

The activities of the Committee shall cover:

- a) IBERDROLA, S.A.
- b) Affiliated companies in which IBERDROLA, S.A. holds a majority interest.
- c) Other affiliated companies in which IBERDROLA has any form of effective control or responsibility for management.

CHAPTER V.- APPOINTMENT AND RETIREMENT OF MEMBERS

Article 11.- Appointment.

1. The Committee members shall be appointed by the Board of Directors of IBERDROLA, S.A. from among its Directors.
2. The Committee shall have a Chairman and a Secretary appointed by the Board of Directors from among the Committee members.

Article 12.- Retirement.

The members of the Committee shall retire from office:

- a) When they cease to be Directors of IBERDROLA, S.A.
- b) By resolution of the Board of Directors of IBERDROLA, S.A.
- c) When they cease to be external Directors or become members of the Executive Committee.

Article 13.- Term of Office.

1. The members of the Committee shall be appointed for a maximum term of four years and may be re-

elected on one or more occasions for equal maximum terms.

2. The Chairman of the Committee shall hold office for a maximum period of four years, upon the expiration of which the Director who has held office as such shall not be eligible for re-election as Chairman until one year has lapsed since he vacated office, without prejudice to his continuing to serve or being re-elected as member of the Committee.

CHAPTER VI.- MEETINGS

Article 14.- Meetings.

1. The Committee shall meet as many times as may be necessary, in the opinion of its Chairman, to fulfill the duties entrusted to it, and at least four times a year. These meetings shall be set on the corresponding calendar.
2. It shall also meet whenever it is so requested by one-half of its members.

Article 15.- Call to Meeting.

1. Notice of the meetings shall be given at least eight days in advance by the Secretary of the Committee, who shall send each of the Committee members a letter, fax, telegram or e-mail for such purpose. The call shall be authorized by the signature of the Chairman, or by that of the Secretary by order of the Chairman.
2. The agenda for the meeting shall be set out in the notice.

Article 16.- Quorum.

1. Committee meetings shall be validly held with the presence of one-half plus one of the Committee members.
2. In the absence of the Chairman, meetings shall be chaired by the Director who has the longest length of service, and in the absence of the Secretary, he shall be substituted by the newest member.

Article 17.- Resolutions

1. Resolutions shall be adopted by majority vote of the members present at the meeting in person or

2004 Activities Report

by proxy. In the event of a tie, the Chairman shall have a tie-breaking vote.

2. The Secretary of the Committee shall take minutes of each of the meetings held, to be approved at the end of the corresponding meeting or at the meeting held immediately thereafter.

Article 18.- Attendance.

1. At the request of the Committee, its meetings may be attended by the Vice-Chairman & Chief Executive Officer, any manager of the Group and any representative of IBERDROLA on the Boards of Directors of the affiliated Companies.
2. The Vice-Chairman & Chief Executive Officer may, in exceptional circumstances, request meetings with the Committee for informational purposes.
3. The Committee may require the presence of the Auditor at its meetings.

CHAPTER VII.- RELATIONSHIPS

Article 19.- Relationships with the Shareholders at the General Shareholders' Meeting.

1. The Committee shall report to the shareholders at the General Shareholders' Meeting with respect to matters raised therein by shareholders regarding its powers.
2. In furtherance of the foregoing provision, the Committee shall prepare an Annual Report of its activities, which, once approved by the Board of Directors, shall be made available to the shareholders prior to the Ordinary General Shareholders' Meeting.

Article 20.- Relationships with the Board of Directors.

The Chairman of the Committee shall regularly report to the Board of Directors on the activities of the Committee and shall provide advice and propose such measures as it may deem fit within the scope of its duties.

Article 21.- Relationships with the Internal Audit Area.

1. The Vice Chairman & Chief Executive Officer and the Chairman of the Committee shall jointly

propose to the Board of Directors, for approval by it, the appointment of the Director of the Internal Audit Area.

2. The Vice Chairman & Chief Executive Officer and the Chairman of the Committee shall approve the Basic Internal Audit Regulations.
3. The Committee shall guide and supervise the activities of the Internal Audit Area through approval of its Annual Plan and following-up on its recommendations. The Management of this Area shall continue to be functionally controlled by the Chairman of the Committee.
4. In addition to the responsibilities inherent in its function, the Internal Audit organization shall act as the normal channel of communication between the Committee and the rest of the Company's organization, and shall be responsible for preparing any information required at meetings. Such meetings shall be attended, if the Committee deems fit, by the Director of the Internal Audit Area.

Article 22.- Relationships with the Auditor.

1. The Committee shall propose to the Board of Directors, for submission to the shareholders at the General Shareholders' Meeting, the appointment of the Auditor of the Company.
2. The Committee shall follow up on all recommendations proposed by the Auditor and may require its cooperation whenever it deems it necessary.

Article 23.- Relationships with the Management of IBERDROLA and its Group.

The Committee may obtain information from and require the cooperation of any manager or employee of IBERDROLA and its Group, notice of which shall be given to the Vice Chairman & Chief Executive Officer.

CHAPTER VIII.- POWERS, ADVICE, OBLIGATIONS, AND INTERPRETATION

Article 24.- Powers and Advice.

1. The Committee may freely access such information, documents, accounting or non-accounting records,

Exhibits

contracts, etc. of whatsoever nature as it may deem necessary to perform its duties. It may also obtain advice from outside professionals for the best performance of its duties. Such professionals shall send their reports directly to the Chairman of the Committee.

2. In all events, taking into account that the Committee members are also Directors, such Committee members shall act with independence of judgment and action in respect of the rest of the organization, shall discharge their duties with the utmost diligence and professional competency and shall keep all matters absolutely confidential.

Article 25.- Compliance and Dissemination.

1. The Directors who are members of the Committee and the Managers of the IBERDROLA Group have the duty to know and comply with these Regulations. For such purposes, the Secretary of the Board of Directors of IBERDROLA shall provide them all with a copy thereof.
2. The Chairman and the members of the Committee shall also have the duty to ensure compliance with these Regulations and to adopt such measures as may be necessary for such Regulations to be widely disseminated within the rest of the Organization of IBERDROLA and its Group.

Article 26.- Interpretation and Disputes.

Any questions or disputes that may arise with respect to the interpretation of these Regulations shall be resolved by majority vote by the Committee itself, and in the absence of such resolution, by the Chairman, assisted by such persons as the Board of Directors may designate for that purpose.

RECEIVED

REPORT ON THE BORROWING POLICY OF IBERDROLA, S.A. AND ITS GROUP OF COMPANIES, ISSUED BY THE BOARD OF DIRECTORS OF IBERDROLA, S.A. ON FEBRUARY 23, 2005 FOR SUBMISSION THEREOF AT THE GENERAL SHAREHOLDERS' MEETING TO BE HELD IN BILBAO AT 11:30 AM ON MARCH 17, 2005, UPON FIRST CALL, AND ON MARCH 18, AT THE SAME PLACE AND TIME, UPON SECOND CALL.

This report was drawn up by the Board of Directors in order to help increase transparency in the information supplied to shareholders and markets, in compliance with the commitment to transparency that constitutes one of the mainstays of the good practices of Corporate Governance at IBERDROLA.

Over the next 12 months, the Iberdrola Group will obtain funds primarily from the capital market, as long as the conditions in such market continue to be similar to those at present. Thus, a direct appeal to investors will be carried out using various types of bonds, debentures and promissory notes. Bank financing will supplement the foregoing financing method.

The most significant medium- and short-term fundraising for the Iberdrola Group will now be carried out through the Spanish subsidiary Iberdrola Finanzas, S.A.U., primarily in the Euromarket, by means of the issuance of notes under its Euro Medium-Term Notes Program ("EMTN"), supported by the unconditional and irrevocable guarantee of Iberdrola, S.A. For its part, the Dutch subsidiary Iberdrola International B.V. will make private placements in international markets.

The medium- and long-term funds which are expected to be raised through Iberdrola Finanzas, S.A.U. and Iberdrola International B.V. will be transferred by means of an inter-company loan or deposited by such subsidiaries at their parent companies.

Short-term fundraising in the capital markets is planned to be carried out both internationally – by means of the issuance of promissory notes by Iberdrola International B.V. under its Commercial Paper Program ("ECP"), supported by the unconditional and irrevocable guarantee of Iberdrola, S.A. – and through the latter company in the domestic market, by means of its Annual Corporate Notes Issuance Program.

In the event of any discrepancy between the text of this translation and the text of the original Spanish-language document which this translation is intended to reflect, the text of the original Spanish-language document shall prevail.

With regard to bank financing, this will not only be used by Iberdrola, S.A., but also by other companies within its Group, when circumstances determine that a financial or strategic advantage may be obtained by it.

Bilbao, February 23, 2005

Sustainability Report

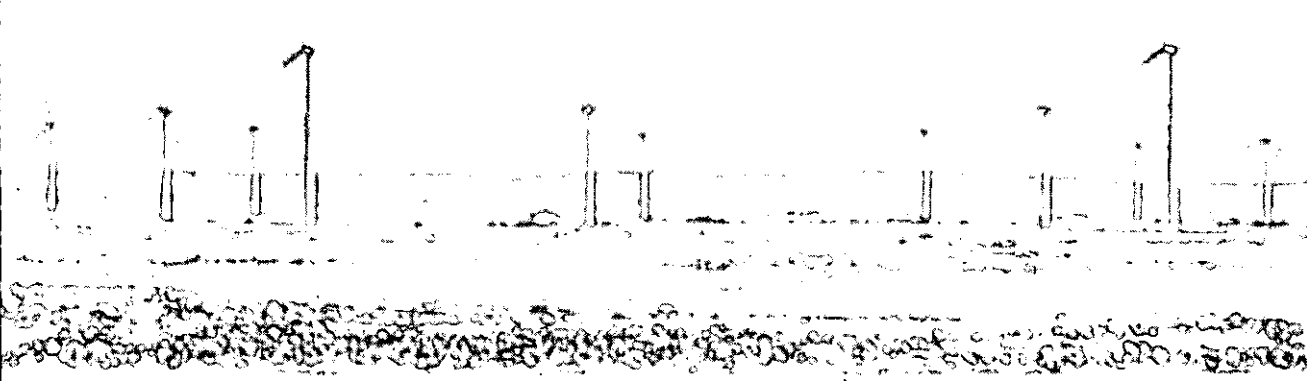

2004

IBERDROLA
ENERGIA
S.A.

IBERDROLA

With 3,206 MW of operational capacity and accumulated investments of € 2,500 million since 2001, IBERDROLA attained worldwide leadership in the renewable energy sector during 2004, thus confirming its historic commitment to the environment and to sustainable development. In 2004, the company commenced its international expansion in this industry, which is one of the basic pillars of the Strategic Plan, with transactions in Europe (Portugal, Greece, France and Italy) and in Latin America (Mexico and Brazil).

In addition, IBERDROLA's determined commitment to cleaner electric generation technologies, basically consisting of gas combined cycle power plants (with 2,800 MW already installed) and wind farms (2,891 MW), has been supported by the National Assignment Plan (NAP) approved by the Spanish Government in order to comply with Spain's commitments upon ratification of the Kyoto Protocol.

Between 2001 and 2008, IBERDROLA will make investments of € 16,200 million, 73% of which will occur in Spain, and which figure makes IBERDROLA the leading electric industry investor in our country. This allocation of funds will serve to confirm its leadership in the start-up of combined cycle plants and wind farms in order to strengthen its high quality of supply and to reaffirm its position as a first-tier operator in the deregulated electricity and gas markets.

Sustainability Report

2004

2004 Sustainability Report submitted by IBERDROLA, S.A.'s Board of Directors to the shareholders at the General Shareholders' Meeting on March 18, 2005

Sustainability Report **2004**

Iñigo de Oriol Ybarra

José Ignacio Sánchez Galán

Letter to the Shareholders

Dear shareholders,

It is a pleasure for me to address you yet another year on behalf of the Board of Directors, to present our company's Annual Report for fiscal year 2004, and to share with you our satisfaction with results that can be considered highly positive.

We are reaping the fruits of sustained efforts by the Board of Directors, the Vice-Chairman & CEO, the management team and all of the company's personnel.

Back in 2002, when the current Strategic Plan was implemented, IBERDROLA was already the biggest investor in the Spanish energy industry. In 2003, we consolidated our position as one of the top companies in the European energy industry. And in 2004, which has not exactly been an easy year, IBERDROLA, a company more than one hundred years old, has reached unprecedented levels in the basic ratios taken into account by all shareholders: highest share price, highest profits, and highest dividends.

We have outdone ourselves by applying a strategy focused on organized and profitable, sustained and sustainable growth, centering our efforts on what we know how to do best: produce and provide energy efficiently and competitively, with a renewed zeal for improving upon the services provided to our customers. It is not a coincidence that, despite extreme weather conditions during the last few months, we were able to satisfy the highest demand peaks in our history with no serious problems.

Indeed, progress in 2004 has been quite significant. As I mentioned, we have reached all-time high share prices, and will pay out the largest dividend in our history. We have developed the largest generation capacity in the Iberian Peninsula. We are a global benchmark in renewable energy, mainly wind energy. In approving the National Allocation Plan, the Spanish government confirmed IBERDROLA's wager on cleaner generation technologies: renewable and combined cycle. We have attained the highest levels of distribution quality in our history, with an average annual Installed Capacity Equivalent Interrupt Time (ICEIT) of less than two hours. The contribution of

Latin America to Group earnings has more than doubled. The group has signed its third collective bargaining agreement amid a positive labor environment.

We are thus a company undergoing continuous improvement in operating efficiency, a true image of its commitment to responsibly providing an essential service to society.

All these achievements have been attained while maintaining a sound and solid financial structure that is, without a doubt, in line with one of the lowest leverage ratios of the European electricity industry, while at the same time always keeping in mind our unwavering commitment to profitability for those who have entrusted their savings to us.

In this respect, I would like to stress the main figures for fiscal year 2004: earnings after taxes totaling € 1,211 million, up 14.2% from 2003, together with investments of € 2,713 million, and financial leverage down to 54.8%.

In light of these results and in keeping with the Board of Directors' promise to increase dividends in line with profits growth, a proposal is being made at the shareholders' meeting to distribute a gross dividend totaling € 0.768 per share, a 14.3% increase over the previous year and a cumulative increase of 43.5% over the last five years. At the same time, the company reached a market capitalization of € 16,859 million at the end of 2004.

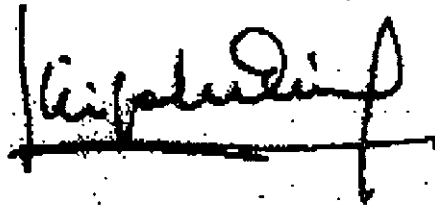

Finally, I would like to point out that this Annual Report presents a precise and transparent description of the most significant goals reached by our company. In addition, it has been prepared in accordance with Global Reporting Initiative's 2002 Sustainability Reporting Guidelines, and provides a balanced and reasonable account of the financial, environmental and social performance of our organization, while also updating information relating to our commitment to the United Nations Global Compact.

Letter to the Shareholders

Dear shareholders,

We live in a changing and globalized world that faces significant uncertainties, with important challenges that will no doubt be surmounted thanks to the unity and effort of everyone involved in IBERDROLA's performance. Together, we achieved results in 2004 that you should judge, and we are confident that with your support and trust, we will go on taking the company, with rigor and realism, toward success, growth and the future.

Thank you very, very much.

A handwritten signature in black ink, appearing to read 'Iñigo de Oriol Ybarra', with a horizontal line drawn underneath the signature.

2004 Sustainability Report

Board of Directors⁴

On May 25, 2004, the Board of Directors of the company, at the request of the Nominating and Compensation Committee, resolved to appoint the shareholder Sebastián Battaner Arlas in representation of the shareholdings owned by the savings banks in the Federación de Cajas de Ahorros de Castilla y León, as an interim member of the Board of Directors of BBVA S.A., subject to ratification by the shareholders at the next general shareholders' meeting.

The appointment fills the vacancy left by Ramón de Rotasche y Velasco, a BBVA proprietary director, who retired on April 28, 2004 after reaching the age limit set by company statutes.

In addition, on February 25, 2004, Iñigo de Ordoñez Ybarra submitted his resignation as a member of the Nominating and Compensation Committee, and was replaced as the Chairman of the committee by José Ignacio Barroeta Uchevarría.

Subsequently, at a meeting held on September 22, 2004, the Board of Directors resolved to appoint board members Juan Luis Arregui Clascote and José Antonio Fernández Rivero as members of the Nominating and Compensation Committee, thus increasing the number of members of this committee to five.

The Board of Directors wishes to expressly thank Ramón de Rotasche y Velasco in this Sustainability Report for his valuable contributions to the company during his tenure as a member of the company's decision making bodies.

⁴ Additional information in the 2004 Annual Corporate Governance Report.

HIGHLIGHTS

FIRST QUARTER

- IBERDROLA paid gross interim dividends for FY 2003 in the amount of € 0.286 per share, up 10% from the interim dividends paid for FY2002.
- IBERDROLA expressed its strongest revulsion for the brutal terrorist attacks that occurred in Madrid on March 11, which resulted in the deaths of about 200 people; 2 of them employees of the company. The company's employees met at work centers in Spain to express their rejection of the terrorist attacks and their solidarity with the victims.
- Within the framework of the energy industry reorganization, IBERDROLA reached a preliminary agreement with the Portuguese government to sell its 4% stake in Galp and to acquire 58.8% of Beiragás and 40.9% of Tagusgás capital stock. Both Beiragas and Tagusgas operate in the center of Portugal, in areas situated near the Spanish company's electricity distribution markets of in Castilla y León and Extremadura.
- IBERDROLA's board of directors approved including in its Web site the content required by Ministerial Order No. 3722/2003 regarding corporate information.
- IBERDROLA obtained the AENOR certification for all its hydroelectric production facilities, in conformity with the requirements established in the ISO 9000:2000 and ISO 14001:1996 standards.
- Apex, IBERDROLA's real estate developer, closed the most significant land lease transaction of the industrial sector in 2004, leasing of 37,876 m² space at its Alovera Logistics Center to Hays Retail Services S.A.
- IBERDROLA obtained the AENOR certification assuring that its 2003 Annual Report was prepared in accordance with the 2002 Sustainability Reporting Guidelines published by Global Reporting Initiative (GRI).
- The European Commission awarded IBERDROLA Ingeniería y Consultoría the coordination of the OPERA Project, with a budget in excess of € 20 million. IBERINCO led a consortium that won a € 25 million project to renovate the electricity distribution network of six regions in Tunisia.
- IBERDROLA implemented a new human resources service on its website, called the Canal de Empleo (Employment Channel), which represents a new milestone in the company's Strategic Plan, one of whose basic pillars is the effective management of human resources.
- IBERDROLA became a founding company of Fundación Atapuerca, consolidating the support it has provided to this ambitious project for research into the artistic and cultural heritage of the Sierra de Atapuerca in Burgos.

SECOND QUARTER

- During his presentation at the general shareholders' meeting, IBERDROLA's Chairman pointed out that "the company's market capitalization is four times higher than in 1991" and "for the first time in the company's history, net income exceeded € 1,000 million, excluding extraordinary or non-recurring items, yet we maintained maintaining, as is well known, high investment levels and reduced debt." In addition, the Vice-Chairman & CEO pointed out that IBERDROLA's strength "comes from the efforts and vision of various generations, which have made IBERDROLA a 100 year old company that is a benchmark for the industry, with promising future."
- IBERDROLA's board of directors approved the payment of the compensation plan for directors and managers approved at the general shareholders' meeting on June 16, 2001.

2004 Sustainability Report

- As approved by the general shareholders' meeting held on April 3, 2004, IBERDROLA increased FY 2003 supplemental dividends by 10.36% to the gross amount of € 0.3867 per share.
- IBERDROLA Chairman, Iñigo de Oriol, was appointed Trustee of Fundación San Millán de la Cogolla, in recognition of the interest in and efforts to protect the St. Millán monasteries, which have been declared a World Heritage Site.
- Unicaja, the largest savings bank in Andalucía, acquired a 0.5% stake in IBERDROLA, which significantly strengthens the company's shareholder base.
- IBERDROLA brought into operation the 520 MW Termopernambuco combined cycle plant, the largest electricity generating plant in the north and northeast of Brazil.
- For the second year in a row, IBERDROLA's Vice-Chairman & CEO was chosen the top executive of the European utilities industry as a result of a survey conducted by the Institutional Investor Research Group for the prestigious European Equities Market Report 2004. The company was also chosen the best European energy company by investors and the third-best European energy company by analysts.
- IBERDROLA executed an agreement with Gamesa to acquire the Catefica wind farm, near Lisbon, with an installed capacity of 18 MW, a transaction that showcases the company's interest in the Portuguese wind power market.
- IBERDROLA received its 100th delivery by vessel of liquefied natural gas (LNG) in Bilbao. This was the first delivery of the company to the Bahía de Bizkaia Gas (BBG) regasification plant, in which the Company holds a 25% stake. The LNG tanker discharged 130,000 m³ of liquefied natural gas (900 GWh).
- IBERDROLA announced that it will convert the Cortes-La Muela hydroelectric plant (Valencia) into the largest European pumping plant. The company will invest more than € 195 million to boost capacity, increasing turbine capacity to 1,260 MW and pumping capacity to 1,110 MW.
- IBERDROLA closed a private placement of bonds in the U.S. market in the amount of US\$ 450 million at 7, 10, 12 and 15 years. The transaction enables the company to refinance its debt and to extend the average life of the debt, in accordance with prudent accounting standards.
- For the second year in a row, IBERDROLA was elected the best listed company in Spain, from the point of view of investor relations, in the Thomson Extel Survey 2004. The company is also ranked the second-best listed European utility in the list of the 25 top European utility companies, after EON (Germany).
- IBERDROLA became the first company in the world to obtain a joint Environmental Management Certificate from AENOR for 40 wind farms with 1,313 MW of installed capacity.
- IBERDROLA signed a € 500 million five-year loan from a small group of foreign and domestic prime banks by means of a "club deal".
- IBERDROLA Ingeniería y Consultoría (IBERINCO) submitted a successful bid for a new contract with the Mexican governmental electricity company, Comisión Federal de Electricidad (CFE), to build electricity infrastructure in northern Mexico.
- IBERDROLA launched a new advertising campaign focused on multi-service offers, enabling the company's customers to purchase telephone, internet, home security and air-conditioning services, in addition to natural gas and electricity.

THIRD QUARTER

- Caja de Castilla-La Mancha and Caja Extremadura became shareholders of IBERDROLA by acquiring 0.45% of the company's capital in a joint transaction.
- IBERDROLA increased its weighting to 0.9493% of the Euro Stoxx 50, the benchmark stock market index consisting of the largest 50 listed companies in the euro zone with the highest weighted market capitalization measured by its "free float" (the percentage of shares that are freely traded on the stock exchange).
- IBERDROLA was awarded a contract for the development, construction, ownership, operation and maintenance of the Tamazunchale 1,135 MW combined cycle plant in Mexico, which is expected to enter into commercial operation in 2007.
- IBERDROLA's Vice-Chairman & CEO and Sonatrach's Vice-Chairman signed a long-term agreement for the annual sale of 1 bcm (1,000 million cubic meters) of natural gas, beginning in 2007. Natural gas will be supplied through the new Medgaz undersea gas pipeline connecting Algeria and Spain.
- IBERDROLA (78%) and the Portuguese companies Alberto Mezquita (11%) and Visabeira (11%) formed the company Aeolia to promote renewable energy in Portugal.
- IBERDROLA, OPT (Ocean Power Technologies), Soldercan (Sociedad para el Desarrollo de Cantabria) and IDAE (Instituto para la Diversificación y el Ahorro Energético) formed a joint venture to develop the first European wave power plant, to be located in Santoña (Cantabria). The goal is to install wave power plants totaling 100 MW along the coast of Cantabria.
- IBERDROLA continued working on its project to update equipment at 39 hydroelectric plants located along the Sil, Duero, Tajo and Mediterranean basins, which will allow for the extension of their useful lives.
- For the fifth year in a row, IBERDROLA continued to be the highest-ranking Spanish electricity company in the Dow Jones Sustainability World Index (DJSI World) and in the European DJSI Stoxx.
- IBERDROLA executed a letter of intent with Promotora Vizcaina and Bilbao Ria 2000 to build the Abandoibarra tower at the Bilbao estuary. The company will transfer its offices in this city to the new corporate building, which will be named Torre IBERDROLA.
- Through its engineering and consulting subsidiary, IBERINCO, IBERDROLA will participate in a project to optimize the operation of the Libyan distribution network, owned by government company GECOL, after the agreement reached with Red Eléctrica Internacional (REI).
- The company's management and trade union representatives signed the third IBERDROLA Group collective bargaining agreement in Bilbao, whereby the company took a significant step towards the application of mechanisms allowing for increased labor flexibility, in line with the goals of the Strategic Plan.
- IBERDROLA began to actively operate in the French electricity futures market as of its first day of operation, on which it traded a total electricity volume of 11,040 MWh.
- IBERDROLA executed an agreement with a large energy company for the supply of more than 270,000 MWh in Austria, thereby boosting and strengthening its trading activities in Europe.
- IBERDROLA Ingeniería y Consultoría (IBERINCO) finished its first project to strengthen Mexico's electricity infrastructure by building five substations, with voltage levels of 400 kV and 230 kV and a total capacity of 1,100 MVA, and 58.3 kilometers of transmission lines.

FOURTH QUARTER

- IBERDROLA's board of directors approved the payment of a gross interim dividend for FY 2004 in the amount of € 0.3260 per share, up 13.99% as compared to the interim dividend paid in FY2003.
- IBERDROLA believes that the allocation of emission rights by facility, as proposed by the government, allows for technological change in the Spanish electricity industry, and reaffirmed that the NAP is logical and balanced since it enables a reduction in CO₂ emissions in Spain and compliance with the European Directive. The company will receive average annual emission rights of 12.78 million tons between 2005 and 2007.
- IBERDROLA became a strategic partner of the largest producer of wind energy in Greece (45%), thanks to the purchase of a 49.9% stake in Rokas for about € 85 million.
- IBERDROLA acquired a 6% stake in Gamesa from Corporación IBV, a holding company in which BBVA and IBERDROLA each hold a 50% stake. The transaction amounted to € 148.3 million.
- IBERDROLA purchased from Gamesa 469 MW of installed capacity in wind farms in Portugal (250 MW) and Spain (219 MW) for € 566 million, thus becoming a world leader in the renewable energy industry.
- Within the framework of the capital increase of Energías de Portugal, S.A. (EDP), IBERDROLA exercised its preemptive rights, increasing its stake in the Portuguese company to 5.7%.
- IBERDROLA signed a five-year syndicated loan agreement for € 2,300 million with 36 prime financial institutions. The loan is intended to improve the conditions of the syndicated loan agreement signed by the Company in December 2002.
- IBERDROLA was the best performing company in the world in fueling the use of renewable energy, according to a report on 72 electricity companies in the OECD presented by WWF/Adena.
- IBERDROLA's Vice-Chairman & CEO won the award for Best Investor Relations by a CEO among Euro Stoxx 50 companies, which was given by IR Magazine based on a survey of more than 400 Eurozone analysts and investors.
- IBERDROLA agreed to sell 25% of the shares of water companies Pridesa and Ondagua to a subsidiary of RWE Thames Water for € 31.5 million. The company thus finalized its sale of these affiliates, after selling the other 75% of them in September 2002.
- IBERDROLA's board of directors approved a new general risk policy in line with good corporate governance standards, in order to offer the maximum level of assurance to its shareholders and the markets through the control and management of risks.
- The company's management and the trade unions agreed to implement a compensation policy for all IBERDROLA employees enabling them to purchase company shares at market value as part of their annual variable compensation. Employees may allocate up to € 12,000 of their annual variable compensation to purchase shares, which will be deducted from taxes provided that they hold the shares for at least 3 years (5 years in the Basque Country).
- IBERDROLA became the first electricity company to sell renewable energy in the Spanish production market, an initiative that involves seven facilities with a capacity of 108.7 MW.
- IBERDROLA agreed to develop a real estate project in Cabo Cope (Murcia) together with Caja Murcia, Bancaja and Caja Castilla-La Mancha, after selling 100% of a 328.3-hectare parcel owned by the company for € 36 million.
- IBERDROLA was awarded 86,760 MWh of generation capacity in the Netherlands for 2005 as a result of a bidding process organized by Nuon, in which 29 companies participated.

The IBERDROLA Group in 2004

- In Seville, IBERDROLA created the company's advisory board in Andalucía, which is chaired by Braulio Medel, Chairman of Unicaja, and which includes important figures from the economic, financial and social sector of this autonomous community.
- Addressing more than 2,000 employees, IBERDROLA's Vice-Chairman & CEO pointed out that the "company is willing to become a benchmark in the electric industry for its Corporate Reputation."
- IBERDROLA sponsors the Spanish yacht that will participate in the XXXII America's Cup hosted in Valencia in 2007. The project involves all the Spanish yachting sectors and is supported by institutions and governments.
- Oekom Research, the German institution researching corporate social responsibility, recommended IBERDROLA as the top leading Spanish company and the third company worldwide for responsible investment.
- IBERDROLA will launch its operations in the deregulated French gas market after winning a contract for 330,000 MWh last year in an auction organized by Gaz du Sud Ouest (GSO), a subsidiary of Totalfina-Elf, an auction that was carried out at the behest of the French energy regulator (*Commission de regulation de l'energie*).
- IBERDROLA Ingeniería y Consultoría (IBERINCO) was awarded a contract for the building of the electricity infrastructure associated with the Altamira V combined cycle plant (1,121 MW power) for US\$ 70 million in an auction carried out by the Federal Electricity Commission (CFE).
- In Valencia, IBERDROLA gave prizes for the third annual Iberdrola Supplier of the Year Award to Funtam, Incoesa, Trafodis, Dominguis Group, CCM.CG and T-Systems EYTC.
- IBERDROLA participated in the first Meeting of the Asociación Española del Pacto Mundial, an entity created to foster in Spain the principles and guidelines of the Global Compact promoted by the United Nations Organization.

2004 Sustainability Report

STRATEGIC PLAN: REAPING THE FRUITS OF INVESTMENT EFFORTS

In 2004, IBERDROLA reaped the fruits of the investment efforts made thanks to the Strategic Plan. The company has already invested € 10,300 million, which represents 85.8% of the total estimated amount and is unprecedented in its history. On its third anniversary, the Plan has had a very positive impact on the company, since objectives have been met in all areas ahead of schedule, earning market recognition.

The development of the Strategic Plan has made IBERDROLA the world leader in renewable energy, the main developer of gas combined cycle plants in Spain, a leader in the deregulated electricity market and the second-largest natural gas supplier

Since the Plan was implemented, IBERDROLA has become the world leader in renewable energy and the main developer of gas combined cycle plants in Spain, clean technologies for the generation of electricity which will contribute to compliance with the Kyoto Protocol. In addition, the company leads the deregulated electricity market, is the second-largest natural gas supplier and has excellent quality of service.

IBERDROLA's Strategic Plan seeks to double the company's size and income, to € 1,600 million in 2006. The total investments will amount to € 12,000 million and its leverage ratio will be below 50%. This is in addition to the commitment to maintaining dividend growth in line with net income.

Generation

IBERDROLA's bid to update electricity generation facilities by using cleaner technologies -mainly gas combined cycle plants and renewable energies- has brought its total installed capacity as of the end of FY 2004 to 25,237 MW throughout the world, up 11% from 2003 and up 52% from the implementation of the Strategic Plan.

Specifically, in 2004, IBERDROLA brought 2,449 MW of new capacity into service, 1,390 MW corresponding to combined increasing capacity, 949 MW to renewable energy and 110 MW to increasing capacity at various generation facilities. In Latin America, IBERDROLA already has 2,690 MW of power, up 7.6% from 2003.

The company expects to allocate € 3,800 million to the generation business in Spain over the 2004-2008 period in order to maintain its leadership in renewable energy and combined cycle plants.

The largest developer of combined cycle plants in Spain

IBERDROLA met its schedule for the construction of combined cycle plants in 2004. Thus, the company ended the year with a total operational capacity in Spain of 2,800 MW at the combined cycle plants in Castellón (800 MW); Castejón (400 MW), in Navarra; Bahía de Bizkaia de Electricidad (800 MW), in Biscay -200 MW attributable to the company; Tarragona (400 MW) - 200 MW attributable to the company; Santurce (400 MW), and to units I and II at Arcos de la Frontera (800 MW), in Cadiz. This makes the Company the largest developer in this sector in the entire Spanish electricity industry.

In 2004, IBERDROLA brought 1,200 MW into service in Spain: the Santurce plant with 400 MW and units I and II at the Arcos de la Frontera (Cadiz) 800 MW plant. By the end of 2005 IBERDROLA will bring 800 MW online at unit III at Arcos de la Frontera (Cadiz), as well as 400 MW at the Aceca plant, in Toledo. This will allow it to achieve the goals set in the Strategic Plan one year ahead of schedule. In 2006 and 2007 it will contribute 1,600 MW more to the system with the introduction of the Escombreras (Murcia), 800 MW, and the Castellón B, 800 MW, plants. Overall, IBERDROLA estimates that in 2007 it will manage more than 6,400 MW, and at least 5,600 MW will be owned by the company. (Table 1).

Combined cycle plant at Santurce. (Basque Country) Spain

World leader in renewable energy

In 2004, IBERDROLA confirmed its global leadership in renewable energy thanks to the acquisition of wind farms in Spain, Portugal and Greece and to the developments launched in France, Italy and Latin America during the year. This sector is one of the pillars of the company's Strategic Plan, which is intended to manage 5,500 MW in 2008 4,500 MW in Spain and about 1,000 MW abroad (Chart 1).

TABLE 1

Schedule for construction of combined cycle facilities

Project	Capacity (MW)	Start of operations
Castellón	800	100% operational
Castejón	400	100% operational

Strategic Plan: reaping the fruits of investment efforts

CHART 1

Schedule for renewable energy
Installed capacity (MW)

Spain: IBERDROLA, the driver of renewable energy expansion

In 2004, IBERDROLA cemented its position as the world leader in the operation of wind farms, and as a driver of renewable energy expansion in Spain, with 3,206 MW of operational power, up 42% from 2003 and more than six times the capacity at the time the Strategic Plan commenced. This broadly exceeds the goals established for this industry.

Wind farm at Sisante (Cuenca)

In this sense, IBERDROLA's Strategic Plan has become a revitalizing element for renewable energy, and the company's efforts have been a key factor in tripling the wind capacity in Spain since 2001, with capacity at 8,000 MW in 2004.

International expansion: entering the Greek and Portuguese wind power markets and wind farm developments in France, Italy and Latin America

Throughout 2004, IBERDROLA boosted its international activities in the renewable energy sector by acquiring wind farms in Greece and Portugal, and by launching developments in France, Italy and Latin America.

Wind farm at Makrirachi A. Stira, Evia (Greece)

IBERDROLA entered the Portuguese wind power market in April 2004, following the acquisition from Gamesa of the Catefica (Lisbon) 18 MW wind farm. In addition, in November the company closed another agreement with Gamesa to acquire 250 MW of wind power in Portugal, which will be brought into service before 2007. Furthermore, in September the company formed Aeolia, a company in which the Portuguese companies Alberto Mezquita and Visabeira also hold stakes, for the purpose of promoting renewable energy in Portugal.

Late in the year, IBERDROLA became the strategic partner of the largest wind energy producer in Greece, after acquiring a 49.9% interest in Rokas. This company has more than 400 MW, of which 188.5 MW are operational. The goal of this company is to reach 600 MW over the next few years.

During 2004, IBERDROLA also analyzed new business opportunities in Europe and Latin America that will enable it to maintain its leadership of the world wind power market in coming years. The company plans to install 232 MW at wind farms in Europe in the 2005-2008 period, and took its first steps in the Latin American wind market, where it plans to build two wind farms totaling 150 MW.

This increase in power using gas combined cycle plants and renewable energy, mainly wind farms, fits with IBERDROLA's desire to continue increasing the share of cleaner energies in its energy balance, and reaffirms the company's historical commitment to generating power using technologies that do not emit greenhouse gases, which is essential to compliance with the Kyoto Protocol and the European Emission Rights Trading Directive. In addition, it is in line with the guidelines of the National Allocation Plan (PNA) approved by the government in 2004.

Largest private producer of electricity in Mexico

In 2004, IBERDROLA consolidated its position as the largest private producer of electricity in Mexico, and reached the goals set in the Strategic Plan, with about 5,000 MW of contracted power.

IBERDROLA already has approximately 2,200 MW of operational capacity in Mexico, with the 1,036 MW Altamira combined cycle plant, the 1,000 MW Monterrey combined cycle plant, the 120 MW Enertek

plant in Tamaulipas, and the 37 MW Femsa-Titán plant in Monterrey. The output of the combined cycle plants in Mexico totaled 14,091 million kWh in 2004, up 87.2% from 2003.

Combined cycle plant at La Laguna II (Mexico)

In July, IBERDROLA successfully bid for a contract to build and operate the 1,135 MW Tamazunchale combined cycle plant, which will be located in the state of San Luis Potosí. In addition, the company is building other two combined cycle plants in Mexico: the 500 MW La Laguna II plant in Durango, scheduled to be in operation in 2005, and the 1,121 MW Altamira V plant in Tamaulipas, which is scheduled to be in operation in 2006 (Table 2).

TABLE 2

IBERDROLA projects in Mexico

Project	Capacity (MW)	Start of operations
Enertek	120	100% operational
Monterrey	1,000	100% operational
Altamira III and IV	1,036	100% operational
Femsa-Titan	37	100% operational
La Laguna II	500	2005
Altamira V	1,121	2006
Tamazunchale	1,135	2007
Total	5,000	

Strategic Plan: reaping the fruits of investment efforts

Distribution

Spain: record quality of service for more than 9.6 million customers

In 2004, IBERDROLA provided 92,184 million kWh to more than 9.6 million customers, an increase of 900,000 since the implementation of the Strategic Plan, that gave IBERDROLA a market share of 40% in the Spanish market. This supplied energy represented a 5.1% increase over 2003, and a 32% increase since the implementation of the Plan.

IBERDROLA's program for investment in distribution allowed it to reach a record in the quality of electricity supplied in 2004, and the company's ICEIT (Installed Capacity Equipment Interrupt Time) fell below two hours (1.87 hours) for the first time, 14% better than 2003 and 25% below the existing ICEIT at the start of the Plan (Chart 2).

CHART 2

ICEIT performance
(Hours/year)

IBERDROLA is one year ahead of schedule in meeting the targets of the network plan included in the Strategic Plan, and is focused on expanding the supply network infrastructure and maximizing supply quality.

Since the start of the Plan, the company has installed 120 substations (37 new substations and 83 major expansions), 9,800 new transformer facilities and

10,000 kilometers of new high, medium and low voltage lines. It currently has 216,100 kilometers of lines, 835 sub-stations and more than 72,000 transformer facilities.

Periodic reviews of electricity transmission and distribution lines

In order to bolster its firm commitment to its customers and to maintain its leadership position in the quality of its service in Spain, IBERDROLA plans to invest € 2,200 million in distribution from 2004 to 2008.

Supply

Electricity: A leader in the deregulated market and in the sale of green energy

Supply, one of the main pillars of IBERDROLA's Strategic Plan, improved significantly in 2004. The company increased its presence in deregulated markets, which already provide 36% of total energy sales in Spain, as compared to 64% of sales coming from the regulated market (Chart 3).

CHART 3

Energy sales in 2004 (%)

This increase enabled the company to end the year with more than 520,000 customers in the deregulated electricity market, 10 times more than at year-end 2003. This consolidates the company's leadership supply, with a 38.1% share (Chart 4) and sales of 30,000 million kWh, up 14.5% over the prior year.

CHART 4

Deregulated electricity market share in 2004 (%)

In 2004, the company also consolidated its leadership in the sale of green energy in Spain, with 52,900 contracts with domestic consumers and 1,100 with businesses and official agencies. This initiative, which is a pioneer initiative in Spain, consists of the sale of electricity obtained

from 100% renewable sources, i.e. free of CO₂ emissions and greenhouse gases.

In addition, IBERDROLA continued with its supply activities in Portugal, where it obtained a share of about 10% of the deregulated market.

Gas: second largest seller of natural gas in Spain

In 2004, IBERDROLA consolidated its position as the second largest seller of natural gas in Spain, building up a 10.8% share of the deregulated market in 2004, up 260 b.p. over the prior year. This percentage includes both gas provided to customers and gas used by the company's combined cycle plants.

All these results reflect IBERDROLA's strong focus on its customers and support the goals included in the commercial plan in the company's Strategic Plan, whose goals include extending the business to all autonomous communities and maximizing the number of customers served.

Strategic Plan: reaping the fruits of investment efforts

Operational Efficiency

Gaining Efficiency

Despite the growth of IBERDROLA's business in 2004, the company managed to contain the group's net operating expenses, which increased just 5.8% and were more than two and a half points below the growth of the gross margin.

In 2004, IBERDROLA continued to gain efficiency. The improvement in the company's efficiency, measured as a percentage of operating expenses over the gross margin, one of the cornerstones of the Strategic Plan, was reflected as of year-end in a ratio of 27.1%, down 70 basis points from 27.8% during the prior year.

This means that the company has improved its efficiency by 17% with respect to FY 2000, and fulfilled the commitment to use IBERDROLA's resources efficiently while at the same time investing for growth (Chart 5).

CHART 5

Net operating expenses/Gross margin

THE ENERGY INDUSTRY

EUROPE

Significant energy and environmental regulations were approved in the European Union during 2004. Throughout the year, directives on the promotion of cogeneration and gas supply safety were published, as well as regulations on financial assistance for trans-European networks.

In September, the European Commission presented new versions of draft directives on the safety of nuclear facilities and the treatment of waste, since the previous drafts presented in January 2003 were blocked by the Council.

It should be noted that the period for transposition into Spanish law of the directives that complete the domestic gas and electricity markets, as well as for regulations on access to electricity interconnections, expired on July 1. At the end of the year, Spain and 17 other countries had not met this requirement.

In the environmental sector, the main initiative was the launch of trading within the European Union of the right to emit greenhouse gases, which came into effect on January 1, 2005 and has significant repercussions for the energy industry.

In January, the European Commission published guidelines for the development of National Allocation Plans (NAP) and in February it made public two decisions on the monitoring and reporting of greenhouse gases. In July and December, the NAPs of 21 member States were approved, some of them subject to conditions, and in November a directive was published allowing the incorporation of clean development mechanisms and joint application to the trading of emission rights.

Another significant event was the official ratification of the Kyoto Protocol by Russia in November, which enabled compliance with the minimum requirements for its entry into force. This provides legal support for the EU's initiatives in the fight against climate change, which include community-wide trading of emission rights. Also within this framework, it is important to mention the publication in April of the directive on environmental responsibility.

The start-up of trading in greenhouse gas emission rights has had significant repercussions for the energy industry

European Parliament - Strasburg, France

SPAIN

From a regulatory standpoint, the approval of the National Allocation Plan (NAP) by the Spanish government was the most significant event in Spain. During the year, the following initiatives were launched in connection with it:

- The Spanish strategy for compliance with the Kyoto Protocol was approved in February.
- Royal Decree Law 5/2004, which transposes the directive on the trading of emission rights, and Royal Decree 1866/2004 which approves the NAP for emission rights for the 2005-2007 period, were published after the summer.
- The proposal for the allocation of emission rights by facility was presented in late November and approved by the Cabinet of Ministers on January 21, 2005, with minor adjustments.
- The NAP was finally sent to the European Commission in December, and was conditionally approved by the Commission.

Oiz wind farm (Biscay)

The NAP will contribute to attaining the goals established in the Kyoto Protocol and will enable the replacement of Spanish generation facilities with

clean technologies, mainly gas combined cycle plants and renewable energy.

Another important environmental regulation for the energy industry that became effective during the year was Royal Decree 430/2004, which transposes the directive on the limitation of polluting emissions into the air from large combustion facilities.

The National Allocation Plan will contribute to attaining the goals established in the Kyoto Protocol

During the year, the following regulations also came into effect in both the electricity and gas industries:

- In March, Royal Decree 436/2004 was published establishing a new legal and economic framework for the production of electricity under the Special System, which enhances regulatory stability for investments in renewable energy and cogeneration.
- Resolutions establishing the remuneration rate for the transmission of electricity for 2002, approving a set of procedures to perform appropriate technical management of the system, setting the final amount pending set-off due to revenue imbalances from regulated activities prior to 2003, and establishing the new system for communication, execution and control of interruptions.
- Royal Decree 1716/2004 was approved, providing for the obligation to keep minimum safety stocks of natural gas equivalent to 35 days of firm consumption or sales, and the diversification of supply. It also regulates the activities of the Corporación de Reservas Estratégicas de Productos Petrolíferos, which acquires powers to control minimum stocks and the diversification of natural gas.
- Orders ECO/31/2004, ECO/32/2004 and ECO/33/2004 updating the remuneration of regulated activities, tolls and fees linked to third-party access to gas facilities, and natural gas meter rental rates.

IBERIAN ELECTRICITY MARKET (MIBEL)

In 2004, the Spanish and Portuguese authorities continued advancing towards the creation of the Iberian Electricity Market (MIBEL) following the signing of two agreements, one in January and the other in October. The October agreement set the date for the launch of the MIBEL for June 30, 2005, establishing and defining the most important points regarding the technical and economic management of the single market.

It is expected that the Iberian Electricity Market (MIBEL) will start operations on June 30, 2005

In addition, both countries committed to coordinated development of internal regulations for the sector and to creating a number of groups, a supervisory entity and a MIBEL follow-up commission.

Work will continue in 2005 to solve pending issues affecting the introduction of the MIBEL on the planned date.

Changes in rates and the price of electricity
Royal Decree 1802/2003, of December 26, increased the average or reference rate for the sale of electricity in 2004 by 1.72%, which is below the maximum 2% increase established by Royal Decree 1432/2002.

Integral rates for the sale of electricity applied by distribution companies rose by an average of 1.54%, while transmission and distribution network access rates increased by 1.6%. This increase was lower than inflation in 2004, and the price of electricity in real terms dropped by 1.48%.

In Spain, the price of electricity in real terms fell by 1.48% in 2004

Looking at the past six years, the average price of electricity went from 7.41 c€/kWh in 1999 to 7.21 c€/kWh in 2004, a drop of 2.8% in real terms. During that period, the CPI climbed by 17.62% (Chart 6).

CHART 6
Average electricity prices and the CPI (%)

As the deregulation process advances in a number of European Union countries, comprehensive official rates begin to disappear and are replaced by free supply prices, which are usually confidential.

The energy industry

However, official data continues to indicate that Spain is among the EU countries with the lowest electricity prices.

ECONOMIC AND FINANCIAL INFORMATION AND THE STOCK MARKET

ECONOMIC AND FINANCIAL INFORMATION

Financial management

The year 2004 was marked by the recovery of the world economy, which started in Q4 2003. The world economy grew by 5% in 2004, compared to 3.9% the previous year. This momentum was reflected in significant increases in trade flows that, together with an increase in the cost of raw materials, particularly oil (+33% in average terms), caused general increases in inflation rates. The improvement was led by the United States (4.4%) and China (9%), while growth was lower in the Euro zone (less than 2%) due to the stagnation of the German and Italian economies and, to a lesser extent, the French economy.

Within this context, the US Federal Reserve increased the official interest rate to 2.25% (from an all-time low of 1%), while the European Central Bank maintained its reference rate unchanged at 2% throughout 2004.

Latin America was another growth driver in 2004, with rates approaching 5%, also favored by the increase in raw materials prices. This strong acceleration was reflected in a significant revaluation of prices on local exchanges, a reduction in country-risk premiums to all-time lows and an increase in official interest rates, mainly in Brazil.

Within this macroeconomic environment, financial management at the IBERDROLA group continued along the general guidelines established in the Strategic Plan, focused on reducing the volatility of financial expenses, maintaining a high degree of liquidity and extending the average life of debt.

IBERDROLA reduced interest costs on its debt from 4.77% in 2003 to 4.39% in 2004

In this way, the IBERDROLA group ended FY 2004 with a 58% fixed rate debt and 16% capped debt, with a maximum rate that enables the company to take advantage of low interest rates. This represents a 3% increase in fixed rate debt as compared to 2003. Despite the increase in the average life of debt to 4.3 years (from 3.7 as of year-end 2003) and the rise in official interest rates, the cost of debt was cut to 4.39% in 2004, from 4.77% in 2003.

The IBERDROLA Group's financing

Based on the excellent market conditions in 2004, the IBERDROLA group refinanced and extended the average life of its debt, substantially improving its terms and diversifying its sources of financing by resorting directly to investors through the capital markets and to bank financing.

The second method was the main instrument for raising funds in 2004. In May, IBERDROLA obtained a five-year loan in the amount of € 500 million from seven leading financial institutions in a "deal club."

It should be noted that, in order to renegotiate its 2002 loan, IBERDROLA also entered into a syndicated loan agreement in December with 36 prime financial institutions in the amount of € 2,300 million -half of the amount as a syndicated loan and the other half as a credit facility, both with five year terms- improving both financial and contractual loan terms.

In 2004, IBERDROLA entered the US capital market through a private placement of bonds in the amount of US\$ 450 million at 7, 10, 12 and 15 years. This is the first transaction of these characteristics carried out by a Spanish electricity company in that market.

The Euro Medium Term Note Program (EMTN) was limited to private placements. At year's end, the outstanding balance of the program was € 4,488 million.

The Domestic Commercial Paper Program and, above all, the Eurocommercial Paper Program (ECP), enabled IBERDROLA to raise short-term funds in a flexible manner at a cost similar to the interbank market. The total volume of notes issued during the year was € 2,056 million (€ 680 million domestic and € 1,376 million European), leaving the outstanding balance at € 866 million (€ 370 million and € 496 million, respectively).

Signing of the syndicated loan

IBERDROLA obtained a syndicated loan in the amount of € 2,300 million

On the international scene, the company took advantage of good market conditions and the reduction in country risk to renegotiate the debt of a number of its subsidiaries. In Mexico, a US\$ 300 million bilateral loan was signed for Iberdrola Energía Altamira. In Brazil, the debt of the distribution companies was refinanced, extending their repayment periods and cutting their costs. Two transactions carried out by Coelba are worth noting: a bond issue in the amount of BRR 480 million and a bank loan in the amount of US\$ 139 million, with a final maturity in 2008.

In Guatemala, EEGSA and Comegsa refinanced their entire debt through the issuance of dollar-denominated bonds in the amount of \$ 100 million (with a single maturity date in 2014) and two loans in quetzals for an amount equal to US\$ 89 million (average life, 4.5 years).

REMARKS ON THE FINANCIAL STATEMENTS

The comments below refer to the Financial Statements for 2004 and 2003 (Tables 10 and 11). The chapter entitled Additional Information (pages 225-228) contains information regarding the last five fiscal years.

Results for the period

In 2004, IBERDROLA posted net income of € 1,210.7 million, up 14.2% from € 1,060.3 million during the previous year. Table 3 shows the contributions made by each business line.

TABLE 3

Contribution to consolidated net income by business line

Business	(€ millions)	
	2004	2003
Generation	531.8	501.5
Supply	-39.0	-1.2
Distribution	331.8	218.2
Renewable	54.9	68.0
Non-energy	162.6	73.4
Corporate portfolio	51.6	120.3
International	117.0	80.1
Total	1,210.7	1,060.3

IBERDROLA's net profit grew by 14.2% to € 1,210.7 million

Analysis of result of the year

• **Sales**

IBERDROLA's sales totaled € 10,314.5 million in 2004, up 8.7% from 2003, mainly due to the 13.9% increase in the group's total production despite a lower level of rainfall during the period.

The breakdown of sales is as follows (Chart 9):

CHART 9

Sales

(%)

Domestic Energy: 62.5%

Non-energy: 4.3%

International: 33.2%

• **Gross margin**

Gross margin continued to rise in 2004, increasing 8.4% over 2003 to € 4,168.3 million, thanks to the larger contribution of the domestic business, renewable (+39.7%), supply (+42.6%) and distribution (+7%) activities, and the international (31.7%) and non-energy (+19.6%) business.

- **Domestic energy business**

Gross margin was up 5.3% to € 3,517.2 million. Highlights here were:

- The stabilization of the gross margin in generation (-2.1%), in a year in which there was a 30% drop in rainfall levels and greater combined cycle production (+92.8%).

- Sales of renewable energy grew by 39.7% to € 329.5 million as a consequence of the increase in production during the period (+38%).

- The gross margin on retail sales was up 42.6% to € 103.8 million, due to greater activity of this business line in electricity and gas.

- In distribution, the gross margin was up 7% to € 87.7 million, thanks to the increase in the compensation of the regulated business recognized in the 2004 rate and to the positive balance stemming from resettlement differentials from prior years.

- **International business**

Gross margin was up by 31.7% to € 478.2 million as a result of the good performance of the group's business lines on the international scene:

- In Mexico-Guatemala, gross margin totaled € 208.9 million (+57.4%) thanks largely to the contribution made by the Altamira plant and despite negative movements in the exchange rate during the period. The strong performance of the distribution business in Guatemala should also be noted.
- In Brazil, gross margin increased by 16.9% (€ 269.3 million) following an upturn in demand and the increase in rates approved for the distribution companies Coelba, Cosern and Celpe.

- **Non-energy business**

Non-energy businesses contributed € 172.9 million to the total gross margin, an increase of € 28.3 million, primarily due to the APEX real estate business.

Gross Operating Profit (EBITDA)

The company's EBITDA (gross operating profit) was up 9.2% to € 2,857.7 million as a result of the growth in gross margin and efficiency improvements. This increase, marked by a 13.9% rise in the group's total production due to ongoing investment efforts, translated into a controlled increase of 5.8% in net operating expenses.

Significantly, net personnel expenses were down 1.4% after the Workforce Reduction Plan went into operation. In addition, taxes rose by 11.8% to € 180.8 million, as a result of the increase of this item in the retailing business and a higher Real Estate Tax (IBI) due to new facilities in operation.

Net Operating Profit (EBIT)

The company's net operating profit (EBIT) reached € 2,018.9 million (+10.7%) as a result of the growth in gross margin, improvements in efficiency and the controlled amortization, depreciation and provisions item (+5.7%).

Company EBITDA and EBIT were up 9.2% and 10.7% to € 2,858 million and € 2,019 million respectively

Amortization and depreciation were up slightly to € 828 million (+6.2%) as a result of new investments in combined cycle plants in Spain and Mexico and in renewable plants. Provisions rose by € 4 million.

Financial result

IBERDROLA's financial result was € -389.7 million, an improvement of 13.3% over 2003. Financial expenses fell by 10.2% from January to December 2004, as a result of a reduction in the average cost of debt by 38 basis points to 4.39%, as compared to 4.77% during the previous year.

This improvement was reached despite a decline in financial profit (-3.8%), as a result of lower financial expenses from the start-up of commercial facilities and of lower dividends and interest collected for the period.

Results of companies consolidated by the equity method

Results of companies consolidated by the equity method dropped by € 30.3 million to € 69.5 million, because Repsol YPF is no longer consolidated following the company's sale of its interest in it during the second half of 2003, and because of a lower contribution from Corporación IBV which at December 2003 included € 30 million from the gains obtained from the sale of the 6% stake in Gamesa. Excluding both effects, this item improved by almost 99%.

Ordinary profit

The combination of an increase in operating profit and an improvement in financial profit allowed a considerable rise in profit from recurring operations, up 15.3% in 2004 to € 1,698.7 million, notwithstanding the lower contribution of companies consolidated by the equity method.

Net profit

As a result of the gains obtained from divestments of real estate assets, IBERDROLA's extraordinary profit totaled € 58.9 million in 2004, compared to the extraordinary loss totaling € 198.2 million in 2003. Also worth noting is the change in the corporate profit tax of € 327.5 million, with an increase in the effective rate to 30.4% from 16.2%, which resulted in higher tax expenses compared to 2003.

Results by business

Energy business in Spain

Generation:

• **Gross margin**

The change of this item in 2004 showed the greater flexibility of IBERDROLA's generation facilities and decreased exposure to the hydroelectric cycle after the investments made under the Strategic Plan. The slight drop in the gross margin of the business by 2.1% to

Economic and financial information and the stock market

€ 1,753.5 million should thus be explained within the following context:

- Change in the production mix: a jump of 92.8% in the use of gas combined cycles, a drop of 30% in hydroelectric generation and an increase of 6.6% in generation using nuclear power plants.
- A 21.8% rise in the supply costs of the business due to an increase in the share of thermal generation and the higher price of fossil fuel that was not reflected in the wholesale market prices, resulting in a decline in gross margins.
- Sales climbed 4% as a result of the 1.8% increase in production and the inclusion of € 54 million for CTCs (Costs of the Transition to Competition) due to imbalances. Both items offset the effects of the lower prices in the pool.

Gross margin by business line is shown in table 4.

• EBIT

EBIT fell 5.4% in 2004 to € 962.6 million, as a result of an increase in operating costs and the following factors:

- The controlled increase in net operating expenses by 2.1%, because although personnel expenses shrank (-3.1%), external services climbed 11%, because of the start-up of combined cycle plants.

- A slight increase of 0.6% in amortization, depreciation and provisions.

- An 11.2% rise in taxes, as a result of new facilities being brought into operation.

Renewable energy:

• Gross margin

The gross margin in renewable energy increased by (+39.7%) to € 329.5 million, in line with a rise in output and the introduction of new wind facilities, which turned this into the business with the fastest growth, together with Mexico.

Installed capacity climbed 42% (+949 MW) to 3,206 MW, which translated into a 38% increase in production, to 5,413 GWh. IBERDROLA extended the useful life of most of its wind assets from 15 to 20 years in accordance with international standards and the new regulatory environment in Spain, which guarantees the current compensation framework for their entire useful life.

• EBIT

EBIT jumped 74.6% as a result of a 38.1% rise in EBITDA, in line with the growth in gross margin, and despite an increase (+47.7%) in net operating costs due to the start-up of new facilities.

TABLE 4

Gross margin by business line

Business	(€ millions)		
	2004	2003	% Variation
Generation	1,753.5	1,791.9	-2.1
Renewable	329.5	235.9	39.7
Distribution	1,344.8	1,257.1	7.0
Supply	103.8	72.8	42.6
Total	3,531.6	3,357.7	5.2

Distribution:

• **Gross margin**

Gross margin for the distribution business gained 7% as a result of higher compensation for the regulated business, which was incorporated in rates for 2004, and of the negative resettlements carried out in 2003 (€ 49 million).

• **EBIT**

EBIT climbed 28.1% to € 539.9 million, thanks to a significant drop in net operating expenses (-5.5%), with decreases in personnel expenses (-2.8%) and external services (-9.6%).

Supply:

• **Gross margin**

Gross margin in the supply business rose by 42.6% to € 103.8 million. This significant increase occurred largely because of higher electricity and gas sales.

• **EBIT**

EBIT was affected by rising operating costs as a result of an increase in activities relating to the total deregulation of the market, as well as by the reinforcement of advertising campaigns, mainly in the second quarter of the year. EBIT was also affected by a 165.1% increase in amortization, depreciation and provisions and by a 130.1% rise in taxes due to higher volumes of energy sold.

International business

• **Gross margin**

Gross margin rose by 31.7% to € 478.2 million in 2004 as a result of the following:

- The Mexico-Guatemala gross margin grew by 57.4%, thanks to greater output at the Monterrey and Altamira plants.
- The Brazil margin gained 16.9% due to an increase in demand, rate increases for the distribution companies and a larger contribution from the Itapebí plant.

• **EBIT**

EBIT climbed 28.9% in 2004 to € 231 million because of:

- A 36% rise in EBITDA driven by higher production, growth in demand and rates, and efficiency improvements.
- A 56.5% increase in amortization, depreciation and provisions due to the effect of the operational start-up of the Monterrey IV and Altamira combined cycles in Mexico.

Non-energy business

Non-energy businesses contributed € 172.9 million (€ +28.3 million) to the gross margin, an increase largely attributable to APEX. APEX, which is IBERDROLA's real estate business, expanded its development business, which includes the Manilva-Las Pedrazas (€ 26 million), Diagonal Mar (€ 26 million), Federico Mayo (€ 11 million) and Cala Mijas (€ 9 million) transactions.

Meanwhile, it is important to highlight the contribution of Corporación IBV, whose profit soared 315.4%, not counting the capital gain booked in 2003 from the sale of a 6% stake in Gamesa (50% owned by IBERDROLA). In addition, the contribution of Gamesa rose in 2004.

BALANCE SHEET

IBERDROLA's balance sheet as of December 31, 2004, reflected total assets of € 25,934 million. IBERDROLA's financial strength stands out, even with the sizeable investments it made in the period. The following items from the summary consolidated balance sheet (Table 11) should be noted:

Fixed assets

IBERDROLA made investments of € 2,713 million in 2004. It should be pointed out that this amount includes € 587 million which were not invested in 2004 but which were included in the balance sheet for 2004. The breakdown of investments is shown in table 5:

Economic and financial information and the stock market

TABLE 5
Investments

	(€ millions)	
	Jan.-Dec. 2004	%
Spain	2,186	80.6
Generation	594

South America	49	1.8
Generation	4	
Distribution	45	
Other International	149	5.5
Total	2,713	100.0

IBERDROLA made investments of € 2,713 million in 2004, more than 80% of them in Spain

Among investments in Spain, which came to € 2,186 million, or 80.6% of total investment, those in the renewable business (€ 811 million) and in generation (€ 594 million), mainly for the construction of combined cycle plants, are noteworthy.

In Mexico, investment focused mainly on the Altamira V and VI (€ 185 million) and the Laguna II combined cycle plants, which will be operational in 2005, and in which IBERDROLA invested € 56 million. IBERDROLA also launched the construction of the Tamazunchale combined cycle (€ 42 million). In Brazil, investments were channeled into the distribution business and financed with funds generated within the country.

Financial fixed assets

Financial investments made during the period totaling € 305 million and reflecting the acquisition of the stake in the Greek company Rokas, the 3% increase in the stake in Gamesa and the subscription to the

capital increase in EDP, were the main cause of the € 343 million increase in long-term investments in 2004.

Share capital

At December 31, 2003, IBERDROLA's share capital consisted of 901,549,181 bearer shares with a par value of 3 euros per share.

On January 2, 2004, a gross interim dividend of € 0.286 per share was paid out for FY 2003, a 10% increase over the interim dividend paid out for FY 2002. In addition, on July 1, a supplemental dividend of € 0.3867 per share was distributed for FY 2003.

That brought the total dividend for FY 2003 to € 0.6727 per share, up 10.2% over the previous year.

Financial debt

At the end of December, net financial debt stood at € 10,569 million and financial leverage was 54.8%, a 100 basis point improvement from 55.8% in 2003. The average cost of debt dropped by 38 basis points to 4.39% at the end of 2004.

Financial leverage dropped 100 basis points from 55.8% in 2003 to 54.8% in 2004

The debt structure by currency and interest rate is shown in table 6:

TABLE 6
Structure of debt by currency and interest rate

Currency	(%)	
	December 2004	December 2003

Capped rate	16%	16%
Floating rate	26%	29%

2004 Sustainability Report

The debt structure by geographical area is shown in table 7:

TABLE 7

Debt structure by geographic areas

	(%)	
	December 2004	December 2003
Spain	89.4%	89.6%
Mexico	5.4%	5.9%
South America	5.2%	4.5%
Total	100%	100%

The distribution of debt by company is shown in table 8:

TABLE 8

Distribution of debt by company

	(%)	
	2004	2003
IBERDROLA, S.A.	85.0%	79.7%
Mexico	5.4%	5.9%
South America	5.2%	4.5%
Renewable	2.7%	9.0%
APEX and other	1.7%	0.9%
Total	100%	100%

Debt at the renewable energy business fell significantly after that business's corporate reorganization in 2003. The reorganization gave IBERDROLA 100% ownership of most of the wind farms.

In line with the company's policy of minimizing financial risk, currency risk was offset by financing investments in local currency (Brazilian reals, in the case of Brazil) or functional currency (US dollars, in the case of Mexico) in Latin America.

It should also be noted that at December 2004, all forecasted liquidity needs for the next 12 months had been satisfied in advance. The average life of debt also continued to increase, from 3.7 years at

December 31, 2003 to 4.3 years at December 31, 2004.

Financial leverage during 2004 is shown in table 9:

TABLE 9

Financial leverage

	(€ millions)	
	2004	2003
Shareholders' equity	8,717	8,225
Gross debt	10,800	10,728
Short-term financial investments	125	240
Treasury	106	110
Net debt	10,569	10,378
Leverage	54.8%	55.8%

Working capital

Net working capital totaled € 838 million, a € 411 million decrease from December 2003, as a result of a 305 million decrease in current assets and a € 106 million rise in current liabilities.

STOCK MARKET

The year's events

International markets

Major international stock exchanges consolidated the upward tendency that began in 2003, although two phases may be distinguished in the evolution of indices during the year.

During the first eight months, markets drifted without a defined trend due to the rise in the price of crude oil and an increase in geopolitical risk. This trend reversed during the final months of the year, and the main stock indices resumed their upward trend, driven by favorable macroeconomic data that suggested an improvement in prospects for the international economy and growth in business profits.

The IBEX-35 closed with gains for the second year in a row, climbing 17.4%, ahead of the main European indices (Chart 10).

CHART 10

IBEX-35 during 2004

(Compared with the main European stock indexes)
(%)

IBERDROLA on the Stock Exchange

IBERDROLA shares rose 19.3% in 2004, compared with 17.4% for the IBEX-35 and 6.9% for the Euro Stoxx 50. In addition, IBERDROLA shares have been the best performing securities among European electric companies since the implementation of the Strategic Plan, gaining 27.9% compared with -22.5% for the Euro Stoxx 50, 1.7% for the Euro Stoxx Utilities, 12.2% for the electricity index and 8.1% for the IBEX-35 (Chart 11).

IBERDROLA shares rose 19% in 2004, and 28% since the start of the Strategic Plan

Total shareholder return (TSR) in 2004, which includes dividends paid out, rose to 23.6% in 2004, 6.2% above the IBEX-35. Since the start of the Strategic Plan, the TSR of the company accumulated 40.7% as of year-end 2004, compared with the Euro Stoxx Utilities and the Euro Stoxx 50: 1.7% and -22.5%, respectively (Chart 12).

CHART 11

Performance of IBERDROLA* shares compared with Ibex-35, the Electricity Industry, Euro-Stoxx Utilities and Euro Stoxx 50 (Base 100: 12-30-2001)

* Strategic Plan implemented.

CHART 12

Total shareholder return since the beginning of the Strategic Plan

TSR increased 23.6% in 2004, and 40.7% since the implementation of the Strategic Plan

In 2004, IBERDROLA attained an all-time high listed price of € 18.83 per share. The company's market capitalization amounted to € 16,859 million at year's end. The average share trading price during the year was € 16.88.

The shares of the Company reached an all-time high of € 18.83

In addition, as in previous fiscal years, IBERDROLA was one of the most liquid stocks on the Spanish market, with average daily trading volume of 6.4 million shares, resulting in annual turnover of 177% (Table 14).

Dividends

The policy to compensate shareholders, established in 2003, includes a commitment to increase dividends in line with net profit growth, assuring a minimum annual increase of 5%, as set forth in the Strategic Plan approved by the board of directors in September 2001. In any event, this compensation commitment does not change planned investments or the target for reducing debt so as to keep financial leverage below 50% by the end of the plan's effective period.

The profits obtained by IBERDROLA in 2004 enabled the board of directors to submit for approval by the shareholders at the general shareholders' meeting a proposed gross dividend of € 0.768 per share (Chart 13), up 14.3% over 2003 and 43.5% since the start of the Strategic Plan.

CHART 13

Gross and net dividends (€)

(*) Pending approval by the shareholders at the General Shareholders' Meeting in accordance with the Proposed Allocation of Profits/Losses.

Economic and financial information and the stock market

The proposed dividend is € 0.768 per share, up 14.3% over 2003

IBERDROLA's dividend return is 4.3% of the listed price at the end of 2003, one of the highest among Spanish listed companies. In addition, the company's earnings per share totaled 1.34 € (Chart 14), up 13.6% on 2003 and 41% since the start of the Strategic Plan.

July 2005. The pay-out ratio (percentage of profits allocated to the payment of dividends) was 57.2%, at levels similar to prior years, a percentage that is expected to be maintained in the coming years (Table 15).

The PER, the ratio between market value and earnings, was 14 times at the end of 2004, reflecting the revaluation potential of IBERDROLA shares on the basis of the evolution of the business and profits.

CHART 14

Earnings per share (€)

In January, IBERDROLA paid a gross interim dividend of € 0.326 per share, leaving € 0.442 per share pending payment on account of additional dividend in

MANAGEMENT OF THE BUSINESS DIVISIONS

GENERATION

IBERDROLA's commitment to updating its electricity generation facilities with cleaner technologies -mainly combined cycle plants and renewable energy- allowed it to reach the end of fiscal year 2004 with a total of 25,237 MW of installed capacity worldwide (+2,449 MW of additional capacity), 11% more than 2003 and 52% more than at the start of the Strategic Plan.

The group's total installed capacity has grown to 25,237 MW, or 11% more than in 2003 and 52% more than at the start of the Strategic Plan

The company has 22,547 MW of capacity in peninsular Spain, an increase of 11.1% over 2003 and 36% over the capacity it had at the start of the Strategic Plan. Specifically, in 2004 the company brought into operation an additional 2,259 MW of capacity in Spain, of which 1,200 MW corresponded to combined cycle plants, 949 MW to renewable energy, and 110 MW to capacity expansions at several generating facilities.

In fiscal year 2004, the consolidated earnings of IBERDROLA's generation business came to € 829.8 million before tax and € 531.8 million after tax. Its contribution to the group's results was 43.9%. Total generation assets amounted to € 7,975 million.

Production equipment

IBERDROLA increased its installed capacity under the ordinary system by more than 1,300 MW to 19,046 MW in 2004, which entails a 7.3% increase over fiscal year 2003. The gain was due to the start of operation of the combined cycle plants of Santurce, with 400 MW of capacity, and Arcos de la Frontera (Cádiz), with 800 MW of capacity (units I and II), and the rest is from capacity expansions at several generators.

Depending upon the various energy sources used, the company's production structure under the ordinary regime in 2004 was as follows: 24%, hydroelectric plants; 14.5%, combined cycle plants; 45.2%, nuclear plants; 4.1%, fuel-oil plants, and 12.2%, coal-fired plants.

System operation

IBERDROLA's investments in generation in recent years have made it possible to enhance the balance and diversification of the company's production structure, which mitigates the impact on its accounts of possible decreased output through the use of some of its technologies.

In fact, the better energy balance under the ordinary system in 2004 was accomplished despite lower rainfall than in 2003, thanks to the contribution of new combined cycle plants, whose output already exceeds that of coal-fired plants.

In 2004, IBERDROLA'S gross output under the ordinary system came to 61,044 million kWh, which represents a 2.1% increase from the previous year. It accounted for a 29.5% share of the total electricity volume generated in peninsular Spain. In addition, energy demand came to 57,381 million kWh, a 2.3% increase over 2003 (Table 17).

TABLE 17

Energy balance under the ordinary system

	2004	2003	2004/2003 (%)	(Million kWh) % Mainland
Gross production	61,044	59,799	2.1	29.5
Gas combined cycle	8,811	4,569	92.8	29.8
Hydroelectric	14,626	20,860	-29.9	48.8
Nuclear	27,580	25,874	6.6	43.7
Fuel oil	2,528	2,437	3.7	32.1
Coal	7,499	6,058	23.8	9.8
Internal use for generation	2,119	1,929	9.8	24.2
Net production	58,925	57,870	1.8	29.8
Power used in pumping	1,544	1,798	-14.1	33.8
Energy demand	57,381	56,072	2.3	29.7

The six combined cycle plants managed by IBERDROLA in Spain -Castellón (800 MW), Castejón (400 MW), Bahía de Bizkaia de Electricidad (800 MW, IBERDROLA has 25%), Tarragona (400 MW, the Company has 50%), Santurce (400 MW), and Arcos de la Frontera (800 MW)- generated 8,811 million kWh, or a 92.8% increase over the previous year, and accounted for a 30% share of the total electricity volume generated under the ordinary system in peninsular Spain.

Combined cycle plant at Arcos de la Frontera (Cádiz)

IBERDROLA generated almost 49% of the hydroelectric power in mainland Spain under the ordinary system in 2004, contributing a total of 14,626 million kWh, equal to 21% of the company's generation mix in Spain. In addition, the company's hydroelectric facilities turned in an excellent performance, with 78% availability during the year.

The six combined cycle plants of IBERDROLA in Spain produced 8,811 million kWh, up 93% over 2003

Nuclear plants generated 27,580 million kWh, 6.6% more than in 2003. Once again, especially noteworthy was the high availability of the nuclear stations, which reached an average usage level of 94.1% during the year. The output of the traditional thermal power plants was 10,027 million kWh, 18% more than in the previous year.

During the course of 2004, installed capacity at cogeneration facilities in Spain in which IBERDROLA had an interest reached 423 MW, of which 295 MW were attributable to the company. These facilities generated 2,900 million kWh, of

Management of the business divisions

which 1,965 million kWh correspond to the company, 4.4% more than in 2003.

IBERDROLA's bid for more efficient and environmentally-friendly generation technologies is in tune with the company's commitment to the renewal of the Spanish generation plants, which is indispensable for compliance with the Kyoto Protocol and the EU Emissions Trading Directive and which is in line with the requirements set out in the National Allocation Plan approved by the government.

The National Allocation Plan encourages changes in the energy mix in Spain

On January 21, 2005, the Council of Ministers approved the allocation of emission rights by facility. In accordance with the government's proposal to meet the emissions goal, combined cycle plants would have to produce more than coal-fired plants as early as 2006, and the tendency would become more pronounced in 2007 (Chart 16). Thus, the allocation to combined cycles, one of the main goals under IBERDROLA's Strategic Plan, entails an average 5,250 annual operating hours between 2005 and 2007, while the allocation

to coal-fired plants equals 4,950 annual operational hours. In this way, the Company will receive an annual average 12.78 million tons of emission rights during the 2005-2007 period.

Combined cycle plant at Aceca (Toledo)

CHART 16

National Allocation Plan

*Emissions in 2002-2007 (millions of tons)

Energy Balance 2002-2007 (TWh)

(*) Emissions in 2005-2007 according to the Ministry of Industry, Tourism and Trade (Mainland Spain); IBERDROLA's estimates.

IBERDROLA in the wholesale electricity market

The main factors characterizing the operation of the wholesale electricity market in 2004 were growth in demand, which was 3.5% higher than in 2003, low rainfall (0.8 index for IBERDROLA) and the entry into operation of new combined cycle plants (the company already has 2,800 MW in operation).

Prices in the wholesale electricity market had a disparate performance. From January to June 2003, prices were low if we take into account the system costs (record prices for Brent crude oil and gas in international markets), while they recovered appreciably during the second half of the year.

In this scenario, IBERDROLA sold 57,892 million kWh at € 2,208 million, which resulted in an average price of € 38.1/MWh, which was 5.8% higher than the average market price. Thus, the company had a 28.2% share of all energy sold and 29.4% of total revenues (Table 18).

In 2004, the energy sold by IBERDROLA in the markets managed by OMEL was 57,991 million kWh, 27.9% of the total. Transactions in supplemental services markets entailed the acquisition of 99 million kWh, with compensation of € 89 million, which translates into a 34% share. These percentages, which are well above IBERDROLA's overall market share, result from utilizing the efficient generating plants and capitalizing on the opportunities offered by real-time markets.

With regard to the compensation for guaranteed capacity, IBERDROLA collected € 314 million in 2004, or 33% of the total brought in by generation plants in mainland Spain, which shows the significant role the company's hydroelectric facilities play in guaranteeing supply.

With respect to the purchase of energy in the wholesale market for IBERDROLA's customers, the company bought a total 78,806 million kWh. Of these purchases, 47,923 million kWh were allocated to customers under the rate system, 29,827 million to eligible customers, and 1,056 million kWh to exports.

TABLE 18

IBERDROLA in the 2004 Spanish wholesale electricity market

	Energy (million kWh)	IB/System (%)	Revenues (€ millions)	IB/System (%)
Markets	57,991	27.9%	1,805	28.6%
Supplemental services	-99	37%	89	34%
Production market total	57,892	28.2%	2,208	29.4%

Management of the business divisions

Energy trading in Europe

In 2004, IBERDROLA handled the purchase and sale of 10,799 million kWh of energy in France, Switzerland, Germany, Austria, Belgium, the Netherlands, Spain and Portugal, transactions worth € 283 million.

The company traded more than 10,700 million kWh as part of its activities in the purchase and sale of energy in Europe

Especially remarkable were the transactions carried out through the electrical interconnections between different countries, which accounted for 34.14% of the energy volume traded by IBERDROLA.

IBERDROLA's presence in the French market is essential to maximize the value of its generating assets in Spain. Thus, the company participated in all of EDF's capacity auctions, acquiring the right to provide up to 362 million kWh for 2004, 2005 and 2006. Also, a total 276 million kWh of electric power was supplied to RTE and to EDF GRD, the managers of the French electricity transmission and distribution network, in order to cover network losses in France.

In addition, IBERDROLA started to participate actively in the French balancing market (managed by RTE) thanks to the flexibility of its electrical power generation plants and its presence in European trading markets. It is the first Spanish company to be present in this market through the Spain-France interconnection.

En 2004, IBERDROLA continued its daily operations in Powernext, a French organized market, in which the total volume traded was 1,260 million kWh. The company is also present in the German (EEX) and Dutch (APX) electricity markets, in which it carried out continued transactions in significant volumes.

IBERDROLA became the leading electricity company in the sale of green energy in Europe

IBERDROLA played a significant part in auctions organized by the companies Nuon and Electrabel, in which it was awarded 87.6 million kWh of generating

capacity in the Netherlands for 2005 and 263 million kWh in Belgium for 2004 and 2005. Also, the company signed contracts for the supply of 317 million kWh in Germany and Austria in 2005.

At the end of 2004, IBERDROLA was the leading electricity company in the sale of green energy in Europe. It signed contracts for the sale of 1,489 million kWh, of which 1,230 million kWh comprised sales to energy companies in several European countries. It also started to sell green energy in the United Kingdom.

Start-up and improvement of generating facilities

The investments made by IBERDROLA in the energy business in Spain, primarily in cleaner generation technologies, are making possible the renewal of Spanish production plants. Thus, the company allocated € 594 million to this area, or 36.9% more than in 2003 and 27.2% of total investments in Spain in 2004.

Central dispatch office in Madrid

Particularly important were investments in gas combined cycle plants (€ 460 million) and in hydroelectric production facilities (€ 50 million), an increase of 53.3% and 25%, respectively, compared to fiscal year 2003.

The company allocated € 594 million to generation, 37% more than in 2003

In 2004, IBERDROLA brought into operation two combined cycle plants totaling 1,200 MW: the Santurce plant (400 MW), in Biscay, and the Arcos de la Frontera plant (800 MW), in Cádiz. Over the next few years, the company will continue to develop its program for the construction of combined cycles, which is the largest and most advanced program in the entire Spanish energy industry, and expects to have more than 6,400 MW of managed capacity in 2007, of which at least 5,600 MW will be owned by the company (Table 19).

Thus, in 2005, IBERDROLA will contribute another 1,200 MW of capacity to the Spanish electrical system, corresponding to the plants of Aceca, in Toledo (400 MW) and Arcos de la Frontera (Unit III) (800 MW), which will mean reaching the goals set in the Strategic Plan one year ahead of schedule. During the course of 2006 and 2007, the company expects to have 1,600 MW available: the Escombreras generators, in Cartagena, (800 MW), and Castellón B (another 800 MW).

Investments in hydroelectric facilities primarily went to the Power Plant Reconstruction Project -optimization of

940 MW, corresponding to 10 units at 10 plants- and to the expansion of new capacity at several generating plants.

Graphic simulation of the combined cycle plant at Escombreras (Murcia)

In 2004, IBERDROLA continued with its project for equipment updating at 39 hydroelectric plants, distributed among the Sil, Duero, Tajo and Mediterranean basins, which will make it possible to improve their performance (Table 20). Since the start-up of the project in 2001, the company has carried out improvements for capacity of 3,202 MW.

TABLE 19

Combined cycle facility program

Project	Capacity (MW)	Start of operations

San Martín (Lugo)			

This initiative, which allows for the extension of the plants' useful lives, will entail an investment of € 173 million (contemplated in the investment plans) and will affect plants with a combined capacity of 5,975 MW, which accounts for 68% of the company's installed hydroelectric capacity.

The modernization of the various units will be carried out on an alternating basis through 2010, on a schedule that ensures the productive capacity of the system without causing disruption to the electricity supply. Specifically, IBERDROLA will rebuild the main electro-mechanical equipment installed at the power plants by means of technology improvements and automation. In addition, it will reinforce some equipment and systems by using stronger materials, and minimize environmental impact.

As for cogeneration facilities, IBERDROLA is building waste treatment biomass plants at Fonz and Monzón (Huesca), and Fudepor (Murcia), with capacity of 7.4 MW, 14.8 MW and 14.8 MW, respectively.

Hydroelectric plant at Aldeadávila (Salamanca)

RENEWABLE ENERGY

IBERDROLA secured its position as the world leader in the renewables energy industry in 2004, reaching an operational capacity of 3,206 MW. The goal of this area, which is one of the company's main growth engines and which constitutes one of the main planks of the Strategic Plan, is to manage 5,500 MW by 2008, of which 4,500 will be in Spain and around 1,000 MW abroad.

IBERDROLA secured its position as the world leader in renewable energy, and plans to manage 5,500 MW by 2008

These goals are supported by IBERDROLA's acquisition of wind farms in Greece, Portugal and Spain, as well as by wind farm developments started in France, Italy and Latin America during the fiscal year. The company's strategy to grow in the renewable energy industry is in line with its commitment to the environment and sustainable development, and also fits with compliance with the Kyoto Protocol and the EU Emissions Trading Directive.

At year's end, IBERDROLA's renewable energy area posted gross operating income (EBITDA) of € 258.2 million (+38%) and consolidated earnings of € 86 million before taxes and of € 54.9 million

after taxes. The contribution of the renewable energy division to the results of the IBERDROLA group was 4.5%. Gross operating assets in this business division came to € 3,137 million, 44% more than in the previous fiscal year.

Spain: IBERDROLA, a driving force for the expansion of renewable energy

In 2004, IBERDROLA confirmed its leadership as a manager of wind farms and a driving force for the expansion of renewable energy in Spain, with wind-powered operational capacity of 2,891.15 MW which, together with the 314.68 MW of mini-hydroelectric plants (Chart 17), added up to a renewable capacity of 3,206 MW, 42% more than in 2003 (Chart 18) and more than six times their capacity at the beginning of the Strategic Plan.

CHART 18

Installed capacity (MW)

In this regard, the Plan has become a driving force for renewable energy, and the company's impetus has been a key factor in the tripling of Spain's wind power capacity since 2001, to 8,000 MW at the end of 2004.

IBERDROLA became the driving force for the expansion of renewable energy in Spain, with an operational capacity of 3,206 MW, 42% more than in 2003

By the end of 2004, the energy IBERDROLA generated from renewable sources came to 5,413 million kWh -4,846.4 of which were wind-powered and 566.3 of

Management of the business divisions

CHART 17

Installed capacity in renewable energy

(%)

Minihydroelectric: 10%

Wind-power: 90%

CHART 19

Production of renewable energy

(%)

Minihydroelectric: 10.5%

Wind-power: 89.5%

which were minihydro- (Chart 19), which represented a 38% increase from 2003. The figure represents 8% of the company's total output in Spain in 2004.

IBERDROLA invested 811 € million in renewable energy in Spain, accounting for 37% of total investment in Spain. As a result of those investments in Spain, the company boosted its operational capacity by 949 MW, of which 910 MW corresponded to new wind farms in Castilla-La Mancha, Castilla y León, Galicia, Aragón, Murcia and La Rioja. The other 39 MW was provided by various minihydroelectric plants placed online by the company: Santa Eulalia de Tábara (Zamora) and Fontanar I, II and III (Albacete). The annual output of these plants will be approximately 133 GWh.

The total operational capacity acquired by the company from Gamesa came to 329.5 MW in 2004. Specifically, in the first ten months of 2004 IBERDROLA bought plants at Chambón (33.15 MW), Capiroza II (42 MW) and Pena da Cruz II (10.20 MW), and brought online the wind farms of Valbonilla III (1 MW), Pedregal II (14 MW) and Capiroza I (24 MW). In addition, capacity was expanded by 1.70 MW at the El Navazo II and Valbonilla II plants.

In addition, in November 2004, the company purchased from Gamesa five wind farms with 218.9 MW of installed capacity, as part of the above-mentioned agreement. It also bought 100% of the Zaragoza company Sistemas Energéticos Fuendetodos, which was the owner of the Fuendetodos I (46 MW) and Fuendetodos II (47.6 MW) wind farms. The company acquired 100% of the company Sistemas

Wind farm at Meda (Orense)

Energéticos Entredicho, owner of the wind farm of the same name (36 MW), and 100% of the company Sistemas Energéticos Goia Peñote, a developer of a 40 MW wind farm. Finally, it bought the company Serra de Meira, which is developing a facility with 49.3 MW of capacity (34 MW in operation in 2004).

Promotion and construction of new facilities

IBERDROLA continued its activities in the development and construction of new wind power and minihydroelectric facilities. At the end of 2004, the company had 149.35 MW of capacity under construction, and development rights it considered to be firm at 585.56 MW.

Among the remarkable events in 2004 was the execution of agreements by Biovent -a company in which IBERDROLA has an 85% interest- for the promotion of wind farms in the Autonomous

Community of Castilla y León and the progress made in the construction of the minihydroelectric plant of Piarrejas (La Rioja) (1.18 MW), which will come online in the spring of 2005. In the area of thermoelectric solar energy, the company started several 50 MW projects, in which the overall investment is expected to be € 200 million.

During the course of 2004, IBERDROLA, OPT (Ocean Power Technologies), Sodercan (*Sociedad para el Desarrollo de Cantabria*) and IDAE (*Instituto para la Diversificación y el Ahorro Energético*) formed a joint venture for the development of the first European wave-energy plant, to be located in Santoña (Cantabria). The goal is to install plants with these characteristics along the Cantabrian coast, for a combined output of 100 MW.

International expansion: entry into the wind power markets of Greece and Portugal and promotions in France, Italy and Latin America
During 2004, IBERDROLA boosted its international activity in the renewable energy industry with the purchase of wind farms in Greece and Portugal and developments launched in France, Italy and Latin America.

IBERDROLA boosted its international activity with the purchase of wind farms in Greece and Portugal and with promotions in France, Italy and Latin America

IBERDROLA entered the Portuguese wind-power market in April 2004, after purchasing from Gamesa the Catefica (Lisbon) wind farm, with 18 MW of capacity. In addition, the company reached a new agreement with Gamesa in November for the acquisition of 250 MW of installed capacity in wind farms in Portugal, which will come online before 2007, and the joint development of this kind of facility within the country, which includes all the promotions carried out by both companies as well as those carried out by Aeolia, a Portuguese company formed by the company in September, together with the Portuguese companies Alberto Mezquita and Visabeira.

At the end of 2004, IBERDROLA became the strategic partner of the largest wind power producer in Greece, following an agreement for the purchase of 49.9% of the company Rokas, which has more than 400 MW of capacity, of which 188.5 MW are already in operation, and the aim is to reach 600 MW in the next few years.

Moreover, the acquisition of a stake in Rokas makes Greece one of the important markets for the development of IBERDROLA's objectives in the area of renewable energy. Greece offers great potential in this business, because it has only 409 wind-powered MW in operation, of the 2,000 MW it has established as a target for 2010. The government's willingness to foster growth of this energy through the enactment of appropriate legislation also stands out.

The company became the strategic partner of the largest wind power producer in Greece, through the acquisition of a 49.9% stake in the company Rokas

Wind farm at Patriarchis, Ropodi, Thrace (Greece)

Also, in 2004, IBERDROLA examined new business opportunities in Europe and Latin America that will enable it to maintain its position at the top of the world wind power market in coming years. In France, it signed an agreement with an international developer for the development and construction of several wind farms, of which 32 MW are scheduled to come online in 2005 and an additional 100 MW in the period 2006-2007. The agreement also foresees the development of 100 MW in Italy over the next few years.

In Latin America, the company started negotiations for its entry into the wind power market. It plans to build a 100 MW wind farm in the Mexican state of Oaxaca, and construction of the Rio do Fogo wind farm (50 MW) in the Brazilian state of Rio Grande do Norte is already being planned.

DISTRIBUTION

IBERDROLA's customer-driven efforts paid off again in 2004. It reached a historical level in quality of supply in Spain, which was less than two hours for the first time, upon recording an Installed Capacity Equivalent Interrupt Time (ICEIT) of 1.87 hours, 14% less than in 2003. It achieved these results thanks to the excellent maintenance tasks carried out by an expert and efficient team and to the investment program included in the company's Network Plan, which enabled it to bring into service new infrastructure and modernize existing sites.

IBERDROLA has reached the goals set in the Network Plan a year ahead of schedule, after it installed 120 substations and 9,800 new transformer centers and laid 10,000 kilometers of new lines

IBERDROLA has reached the goals set in the Network Plan, which focuses on the expansion of the supply network infrastructure and the maximization of supply quality, a year ahead of schedule.

Since the start of the Plan, the company has installed 120 substations (37 new and 83 major expansions) and 9,800 new transformer centers and has laid 10,000 km of new high-, medium- and low-voltage lines.

In line with its policy of commitment to customers, IBERDROLA will allocate € 2,200 million to this business line during the 2004-2008 period in order to maintain a significant position in service quality in Spain.

In fiscal year 2004, IBERDROLA's distribution business division had consolidated pre-tax earnings of € 476.9 million and after-tax earnings of € 331.8 million. This area contributed 27.4% to the IBERDROLA group's results. Total distribution assets came to € 5,281 million.

Transmission and distribution network

IBERDROLA's transmission and distribution network in Spain runs across 14 Autonomous Communities and 32 provinces, covering a surface area of 190,000 square meters and serving a population of more than 15 million people.

The network is equipped with more than 17,900 kilometers of high-voltage lines and around 198,200 kilometers of medium- and low-voltage lines. In addition, the company has 835 transformer substations and more than 72,000 transformer centers.

Supply quality

IBERDROLA improved its supply quality yet another year, by bringing its ICEIT (Installed Capacity Equivalent Interrupt Time) to 1.87 hours/year (Chart 20), a 14% improvement compared with the 2.17 hours/year the previous year, despite a 5.1% rise in demand in 2004. This figure means that availability stands at 99.98%. The company achieved general improvements in almost all Autonomous Communities, of which the following were particularly noteworthy: Extremadura (28%), Madrid (24%), Murcia (23%), Castilla y León (22%), and the Basque Country (14%).

The company reached a record level of supply quality in Spain, falling to less than two hours for the first time

Moreover, in 2004, the company handled both a sharp increase in usage and two demand peaks recorded in March (15,276 MWh) and June (14,749 MWh), with no significant disruptions.

CHART 20
Demand and service quality in 2004

Substation at Fadura, Getxo (Basque Country)

Expansion and improvement of facilities
In 2004, IBERDROLA devoted remarkable efforts to the expansion and improvement of its facilities. Thus, investments in distribution in Spain amounted to € 451 million, which accounted for 20.6% of the company's total investments in Spain.

Investments in 2004 were allocated to transformer substations, which made it possible to increase capacity at the various transformation levels up to the installation of an additional +1.000 MVA on the grid. In

addition, the company laid 2,787 kilometers of new transmission lines, and installed 2,443 new transformer centers (Table 21).

In 2004, the main expansions of capacity in substations were carried out in the Autonomous Communities of Castilla-La Mancha, La Rioja, Valencia and the Basque Country. Also, new transformer substations were installed at Castilla y León, Extremadura, Madrid, Murcia, Navarra, Valencia and the Basque Country. The installed capacity at transformer centers came to 1,625 MVA.

TABLE 21
Transmission, transformer and distribution facilities brought online in 2004

Facilities	Total
High-and very high-voltage lines (km)	49
Medium-and low-voltage lines (km)	2,738
Overhead medium-voltage	349
Underground medium-voltage	1,136
Overhead low-voltage	417
Underground low-voltage	836
Installed capacity at transformer substations (MVA)	1,123
Transformer centers (No.)	2,443
Installed capacity at transformer centers (MVA)	1,625
Installed reactive capacity (MVAR)	478

Management of the business divisions

Among these projects, especially worthy of note is the completion of the dual-line conversion program at the VHV (Very High Voltage) network in the Levante area, with work having been performed on the Teulada-Jávea and San Vicente-Jijona lines in Alicante, and Fausita-Hoya Morena in Murcia, making it possible to double their transmission capacity and to improve system reliability in the supply of power to the Costa Blanca region.

Distributed energy

At the end of 2004, IBERDROLA had more than 9.6 million customers in Spain, 900,000 more than at the beginning of the Strategic Plan, to whom it supplied 92,184 million kWh, 5.1% more than in 2003 (Chart 21). The supply represented a 32% increase since the start of the Plan.

(*) Including Eléctrica Conquense

IBERDROLA's more than 9.6 million customers consumed 92,184 million kWh, 5.1% more than in 2003

In addition, the energy supplied by the company in 2004 earned it a share of almost 40% of the total mainland market. Among especially noteworthy sectors of activity were the residential and services sectors, with an increase of 6.5% and 6.7%, respectively (Table 22). As for the Autonomous Communities, performance was best in the Basque Country, La Rioja, Castilla y León, Valencia and Madrid, with an increase of 7.1%, 5.8%, 5.1%, 4.8% and 4.8%, respectively (Table 23).

TABLE 23

Energy supplied in IBERDROLA's market, by autonomous community*

Autonomous Community	2004	2003	Million kWh % Growth
Valencia	24,635	23,522	4.73
Basque Country	18,772	17,516	7.17
Madrid	17,994	17,174	4.77

Management of the business divisions

SUPPLY

IBERDROLA in 2004 boosted its presence in deregulated markets, which account for 36% of total energy sales in Spain, as compared to 64% of sales coming from the regulated market. The increase enabled the Company to consolidate its leadership in the deregulated electricity market, with a share of more than 38%, and position itself as the second-largest seller of natural gas, with a 10.8% share of the deregulated market.

These significant results reflect IBERDROLA's strong focus on its customers and underline the goals set out in the Commercial Plan included within the company's Strategic Plan, whose targets include extending the business to all autonomous communities and maximizing the number of clients served.

Deregulated electricity and gas market

At year's end, IBERDROLA had more than 520,000 customers in the deregulated electricity market, 10 times more than in 2003, consolidating its leadership in the supply business, with a 38.1% share (Chart 22) and sales of 30,000 million kWh, up 14.5% over the previous year.

CHART 22

Share of the deregulated electricity market in 2004 (%)

Also, IBERDROLA consolidated its position as the second-largest seller of gas in Spain, building up a 10.8% share of the deregulated market in 2004, up 260 b.p. over the previous year. This percentage includes both gas provided to customers and gas used by the company's combined cycle plants.

IBERDROLA consolidated its leadership in the deregulated electricity market and confirmed its position as the second-largest seller of natural gas in Spain

In 2004, the company also consolidated its leadership in the sale of green energy in Spain, with 52,900 contracts with household consumers and 1,100 with businesses and official agencies. This initiative, which is a pioneering one in Spain, consists of the sale of electricity obtained from 100% renewable sources of energy, i.e., free of CO₂ emissions and greenhouse gases, as set out in EU Directive 2001/77/CE, of September 27, 2001. *Energía Verde Iberdrola* (Iberdrola Green Energy) has been certified by the association RECS International, which is represented in Spain by REE, and by the external entity Bureau Veritas Quality International.

The sales of electricity and gas, as well as of other energy products and services, brought IBERDROLA's sales in the deregulated market to more than € 2,500 million in 2004, up 31% over the prior year (Chart 23).

CHART 23

IBERDROLA's sales in the deregulated energy market
(€ millions)

In addition, IBERDROLA raised its presence in Portugal, where it has more than 350 supply contracts to serve 842 Portuguese industrial customers, representing annual consumption of 966 million kWh and a share of almost 10% of the deregulated market.

In 2004, as part of the process of deregulation in the French gas market, IBERDROLA was awarded 330,000 MWh at an auction organized by Gaz du Sud Ouest (GSO), a subsidiary of TotalFina Elf. The company will start to sell gas to large customers in south-western France in 2005.

Products and services

Within the framework of its strategy of total focus on customers, IBERDROLA offers them products and services tailored to their needs. In 2004, sales of non-energy products and services to household customers and businesses rose 126% compared with the previous year.

IBERDROLA kept its leading position in the sale of green energy and launched a multi-product/multi-service campaign

Especially noteworthy is the launch of the multi-product/multi-service campaign, which IBERDROLA implemented last year in order to offer all of its Spanish customers fixed telephone services, Internet services (ADSL or PLC), home security, heating, air conditioning, and payment protection plans, as well as natural gas and electricity. In this area, there was an

increase in the sale of Power Line Communications (PLC) technology, which consists of access to the Internet through the electrical grid. The Company holds a pioneering position in this market and has deployed its network in Madrid and Valencia, where coverage is already provided to more than 70,000 customers.

IBERDROLA's multi-product campaign

In addition, IBERDROLA offers to sell businesses a number of products and services, including: infrastructure installation and maintenance, voice and data transmission, advice on and management of environmental contracts or audits, among other services.

Lines of communication with customers

As part of this strategy to focus on customer care and service, IBERDROLA offers several lines of communication. The company has 60 commercial agencies and 52 customer service points, where customers can complete all sorts of commercial paperwork. In addition, the company has stores in Madrid and Bilbao, using the concept *La tienda de soluciones para tu vida* (The store with solutions for your life), which is an innovating marketing and customer-service concept in the industry.

Management of the business divisions

IBERDROLA's store "Solutions for your life" - Seville

During 2004, IBERDROLA answered more than seven million calls on the Customer Service Telephone Line (901 20 20 20). About 31% of commercial matters were handled using this service.

The company has 60 commercial agencies and 52 customer service points

The Web site, www.iberdrola.com, which provides customers with information and the opportunity to handle many matters through its virtual office, recorded more than 600,000 individual users in 2004 and a 29% increase in the number of sessions, while the Virtual Customer Office had 92,000 users.

A unique and differentiated brand

According to a poll carried out by Tracking GFK Group in 2004, IBERDROLA was the best-known electric power company among Spain's inhabitants, with a brand awareness rate of 69.1% (spontaneous + suggested).

IBERDROLA was the best-known electric power company among the Spanish population

In addition, IBERDROLA was perceived by consumers as the brand that best responds to the values of trust and accessibility, and to the attributes of leadership and dynamism. The poll also indicates that the company had the best score among electricity companies in connection with consumers' appraisal of the quality of the products it sells.

Gas supply and infrastructure

In 2004, oil and natural gas prices reached peaks in North America and Asia. However, the flexibility of IBERDROLA's gas contracts allowed it to have the required volumes for fuel consumption at the combined cycle plants and for supply to end customers at all times.

IBERDROLA confirmed its position as the second-largest Spanish company in terms of investment in large gas infrastructure projects

In July, IBERDROLA reached an agreement with the Algerian state-owned company Sonatrach for the purchase and sale of 1 bcm (1,000 million cubic meters) of natural gas per year starting in 2008 and over the long term, to be supplied through the new Medgaz underwater gas pipeline, which will directly link Algeria and Spain.

Thus, at year-end 2004, IBERDROLA had a supply base of 15.6 bcm per annum, 6.7 bcma of which cover its supply needs in Spain and 8.9 bcma of which cover its supply needs in Mexico and Brazil.

During 2004, the company received 107 shipments of liquefied natural gas (LNG). About 66% of the gas supplied to IBERDROLA came from Algeria. Qatar provided 27%; 6% came from Nigeria, and the remaining 1% came from Oman.

In 2004, IBERDROLA cemented its position as the top Spanish company (after Enagas) in investment in large gas infrastructure projects, with the aim of reinforcing the guarantee of gas supply to its customers and combined cycle plants. The investments, in varying percentages, have gone to the regasification and liquefied natural gas (LNG) storage plants at Bahía de Bizkaia Gas (Bilbao), in which the Company has a 25% interest and which have run at full capacity since the end of 2003, and at Sagunto (Valencia), in which it has a 30% interest and which will come online at the end of 2005. Added to this is the projected Algeria-Spain gas pipeline, being developed by Medgaz (12% owned by the company), as well as several gas transportation pipelines that will supply the company's combined cycle plants at various integrated sections of the National Gas Pipeline Network.

INTERNATIONAL

IBERDROLA's international division, one of its main growth engines in 2004, continued to focus on Latin America, primarily in Mexico and Brazil, although it also does business in Guatemala, Bolivia and Chile. In all, the company manages more than 30 companies, whose equity value (the shareholdings attributable to the company) is € 1,328 million, with assets amounting to € 3,362 million and revenue of € 1,357 million.

IBERDROLA's international division, one of the group's main growth engines, accounted for 11% of operating profit and 9.7% of net profit

The international division's growing contribution was especially noteworthy in 2004: 11.4% of operating profit and 9.7% of net profit. Specifically, Mexico-Guatemala consolidated its position as the region contributing the largest percentage of international sales (64.5%), thanks to the operational start-up of the Altamira III and IV combined cycle plant (1,036 MW). Also significant was the increase in sales in Brazil (35.5%), as a result of the start-up of the Termopernambuco combined cycle plant (520 MW) and the increase in demand and prices.

IBERDROLA invested € 378 million in the international division in 2004, which accounted for

14% of total group investment. In order to consolidate its Latin American growth strategy, based upon reliability, solidity and risk-control standards, the Company expects to invest a total € 2,300 million in the 2004-2008 period.

Mexico: consolidation as the leading private company in electricity generation

In 2004, IBERDROLA confirmed its position as the top private company in electricity generation in Mexico and achieved the goals set out in its Strategic Plan, with almost 5,000 MW of contracted capacity, approximately 4,293 MW of which will be used to provide electric power to the *Comisión Federal de Electricidad (CFE)*, while 657 MW will serve a number of important industrial customers in Mexico.

IBERDROLA consolidated its position as the leading private company in electricity generation in Mexico, with almost 5,000 MW of contracted capacity

IBERDROLA in July was awarded the construction and operation of the combined cycle plant at Tamazunchale (San Luis Potosí) (1,135 MW), which will involve an investment of 500 million dollars through 2007, when it is scheduled to start commercial operation.

Combined cycle plant at Monterrey (Mexico)

In Mexico, IBERDROLA has almost 2,200 MW of operational capacity, at the combined cycle plants at Monterrey (1,000 MW), Altamira III and IV (1,036 MW)

Management of the business divisions

and the cogeneration plants of Enertek (Tamaulipas) (120 MW) and Fems-Titán (Monterrey) (37 MW). The output of its combined cycle plants in this country came to 14,091 million kWh in 2004, up 87.2% over year-end 2003.

In addition, IBERDROLA is building another two combined cycle plants in Mexico: La Laguna II (Durango) (500 MW), which will come online in April 2005, and Altamira V (Tamaulipas) (1,121 MW), which will become operational in November 2006 (Table 24).

Brazil: the leading electricity supply company in the north-east of the country

IBERDROLA is the leading electricity supply company in the north-east of Brazil, thanks to the interest it holds, through Neoenergia (the new name of Consorcio Guaraniana) in the companies Coelba (Companhia de Electricidade do Estado da Bahia), Celpe (Companhia Energética de Pernambuco) and Cosern (Companhia Energética do Rio Grande do Norte).

IBERDROLA is the leader in electricity supply in northeast Brazil, with a 58% share of the regional market and a 7% share of the national market

In 2004, these companies supplied 21,654 million kWh (+8.2%) to almost seven million customers, or a 58% share of the regional market and a 7% share of the national market. The three companies had combined sales of € 462 million. They have made remarkable improvements in quality of service since they were privatized, with an average quality increase of almost 50%.

At year-end 2004, IBERDROLA had almost 400 MW of installed capacity in Brazil, corresponding to the combined cycle plant at Termopernambuco (520 MW, 190 MW of which are attributable to the Company) and the hydroelectric plant at Itapebí (450 MW, 183 MW of which are attributable to the Company).

TABLE 24

IBERDROLA's projects in Mexico

Name	Type	Capacity MW	IBERDROLA's %	Customers	Location	Status
Enertek	Cogeneration	120	100	Industrial	Tamaulipas	Operational
Monterrey	Combined cycle	1,000	100	CFE/Industrial	Nuevo León	Operational
Fems-Titán	Cogeneration	37	100	Fems-Titán	Nuevo León	Operational
Altamira III, IV	Combined cycle	1,036	100	CFE	Tamaulipas	Operational
La Laguna II	Combined cycle	500	100	CFE	Durango	Construction
Altamira V	Combined cycle	1,121	100	CFE	Tamaulipas	Construction
Tamazunchale	Combined cycle	1,135	100	CFE	San Luis Potosí	Construction

The total output attributable to the Company from both plants came to 1,424 million kWh: 969 million kWh at Itapebí and 455 million kWh at Termopernambuco.

Combined cycle plant at Termopernambuco (Brazil)

- Electricity generation
 - Brazil: Itapebí
 - Termopernambuco
 - Chile: Peuchén
 - Mampil
- Electricity supply
 - Brazil: Coelba
 - Cosern
 - Celpe
 - Bolivia: Electropaz
 - Elfeo
- Water supply
 - Chile: Essal

In the water industry, the affiliate Empresa de Servicios Sanitarios de los Lagos (Essal) increased its income by 9% in 2004 and brought eight new plants online, covering 90% of the water treated.

Other businesses in Latin America:

Guatemala

IBERDROLA operates in electricity supply through its subsidiary Empresa Eléctrica de Guatemala, S.A. (EEGSA), the leading company in this area in Guatemala. During 2004, the company sold 3,255 million kWh to more than 750,000 customers, giving it a 62% share of the market.

Bolivia

IBERDROLA is the leading company in electricity supply in Bolivia. In 2004, the group's two supply companies, Electropaz and Elfeo (of which IBERDROLA controls 56.76% and 58.85%, respectively) provided 1,194 million kWh (+5.6%) to 395,000 customers, accounting for almost 40% of the energy supplied in Bolivia.

Chile

IBERDROLA generates electricity through its subsidiary Iberoamericana de Energía (Ibener). In 2004, its two hydroelectric plants, Peuchén (75 MW) and Mampil (49 MW) generated 436 million kWh and posted sales of 15 million dollars.

Hydroelectric plant at Itapebí (Brazil)

Management of the business divisions

NON-ENERGY BUSINESSES

In 2004, the IBERDROLA Ingeniería y Consultoría subsidiary furthered the growth of its business both within and outside of the Group, and consolidated its international expansion. In line with the strategic goal of bringing the company into the international arena, IBERINCO already has offices in Mexico City, Moscow and Qatar.

IBERINCO's sales and net profit rose by 31.8% and 35.6%, respectively

Among the most significant contracts signed in 2004, especially noteworthy are the awards by Mexico's *Comisión Federal de Electricidad (CFE)* to construct electrical infrastructure in the north of the country and the Altamira V combined cycle plant, for an aggregate amount of more than 100 million dollars; the installation of a remote control system for the Peruvian company SEAL; the modernization of the electricity supply network in six regions in Tunisia, and the improvement of the electrical network at Fieri (Albania).

IBERINCO

The year 2004 was key to the growing business of IBERDROLA Ingeniería y Consultoría (IBERINCO), which recorded sales of € 332.5 million, a 31.8% increase from the previous year (Chart 24). IBERINCO, the leader in electrical facilities engineering in Spain, posted net profit of € 21.7 million, up 35.6% over year-end 2003.

Wind farm at Serro (Soria)

CHART 24

IBERINCO's sales
(€ millions)

In Spain, the most significant turnkey projects carried out by IBERINCO were: two wind farms of 89 MW at Albacete and Cuenca; the base of the hydroelectric plant at Itoiz (Navarra); the project for the modernization of the hydroelectric plant at Silvón for Viesgo Generación, and the construction of a solar facility at Navarra. IBERINCO was also in charge of the construction of 12 wind farms, the enlargement of another two, and a minihydroelectric plant for IBERDROLA's renewable energy division.

In the area of combined cycle generation, the IBERDROLA subsidiary won a contract to build Tamazunchale (1,135 MW), in Mexico, and started work at Escombreras (800 MW), in Cartagena and at Altamira V (1,121 MW), also in Mexico. The plants at Santurce (400 MW) and Arcos I and II (800 MW) came into commercial operation this year, and projects at Aceca (400 MW), Arcos III (800 MW), La Laguna (520 MW) and Altamira V (1,121 MW) (the latter two in Mexico) continued under development, all of them meeting their construction schedules.

In supply, IBERINCO brought online 1,235 MVA of transformation capacity, 11 new substations and 13 new facilities of 220 kV, and carried out 45 expansions of existing facilities. In Mexico, the La Laguna substation and others came into service for the *Comisión Federal de Electricidad (CFE)*. In addition, it started construction of the 400 kV substations for Altamira V and Tamazunchale, two combined cycle plants that IBERDROLA is building.

APEX INMOBILIARIA

APEX, the real estate division of the IBERDROLA Group, posted net income of € 93 million in 2004, which represents a 7.7% increase over the previous year and confirms the uninterrupted growth of the company in recent fiscal years (Chart 25).

Apex Inmobiliaria's net profit climbed 7.7%, to € 93 million

Headquarters of APEX Inmobiliaria (Madrid)

Pretax earnings came to € 138.4 million, up 9.6%, while the real estate division's operating profit rose by 12.6% to € 142.6 million; sales climbed 8.8% to 401.1 million.

CHART 25

Net profit of Apex
(€ millions)

Jardín de Clavero (Málaga)

Management of the business divisions

At the end of 2004, the real estate division's assets were worth € 1,481 million. With equity of € 561.8 million, following approval of the distribution of € 50 million in interim dividends, and an average pretax return on equity of 25.61%, the company has cemented its position as one of the leading real estate companies in Spain.

Approved investments in real estate made by IBERDROLA's real estate division amounted to € 476 million in 2004. In addition, APEX Inmobiliaria ended fiscal year 2004 with 21 residential developments under construction, for a total of 2,164 housing units, and 16 residential developments under management, which comprise another 1,491 housing units.

CORPORACIÓN IBV

Corporación IBV, a venture in which IBERDROLA and BBVA each hold a 50% stake, posted net earnings of € 186.88 million in 2004, an increase of 39% from a year earlier.

Corporación IBV's net profit soared by 39% in 2004 from 2003, to € 186.88 million

In December, Corporación IBV sold 6% of Gamesa's share capital to IBERDROLA at a price of € 10.16 per share. Following the sale, Corporación IBV's stake was 25.8%, while IBERDROLA owned 18.89% through IBV and 6% directly.

Wind farm at Sierra de la Oliva (Albacete)

2004 Sustainability Report

INTRODUCTION

The annual publication of the company's Environmental Report, which has been produced since 1996, is one of the symbols of IBERDROLA's commitment to environmental protection.

The following environmental information describes the evolution of management in this field during fiscal year 2004. As in the previous fiscal year, this information is part of the Sustainability Report, whose objective is to provide consistent information about the management of the economic, environmental, and social dimensions at IBERDROLA, in accordance with the best international practices.

This environmental information relates to the activities of IBERDROLA and its affiliated companies in the electricity industry⁽¹⁾ in Spain, and also to the company's international activities that are most significant in terms of their effect on the environment, including electricity distribution in Brazil (through COELBA, COSERN and CELPE) and electricity production in Mexico. It also provides information about noteworthy activities at Electropaz (Bolivia), ESSAL (Chile) y EEGSA (Guatemala).

This report has been published in order to meet the informational expectations of the various groups that have an interest in the company's environmental management.

The channels employed to connect with the expectations of these interest groups include the environmental suggestion e-box (medioambiente@iberdrola.es), which is available on IBERDROLA's extranets and intranets, the corresponding questionnaires, and the surveys aimed at various social groups. Special attention has been given to the evaluation and qualification of the company's environmental management by third parties, including those who analyze sustainable or socially responsible investment.

Informational transparency and communication with interest groups are two of the essential elements of the new environmental policy

The analysis of the perceptions and expectations of these groups is the principal element taken into consideration in the creation of the structure and content of the company's environmental publications. Accordingly, environmental information enjoys a greater presence in this report, with the inclusion of the most relevant environmental data and facts in the corresponding section of the Activities Report. This reflects the company's new Environmental Policy, as approved in June of 2004, which has expanded its coverage to include sections on climate-change and biodiversity. Last, the evolution of the principal indicators over the last several years has been collected; use of the integrated indicators has been expanded; and references to mean values for the principal indicators in the European Union and in Spain have been facilitated.

To ensure the quality and accuracy of the information provided, the design, preparation, and distribution of the Environmental Report has been certified in accordance with the Spanish UNE-EN-ISO 9001:2000 standard governing Quality Management Systems.

⁽¹⁾ IBERDROLA's presence in the gas industry focuses mainly on sales. This presence does not generate significant environmental impacts.

PRINCIPAL EFFECTS OF THE ACTIVITY

Electricity allows hospitals, schools, and businesses to function, and enables the lighting and air-conditioning of homes, workplaces, and public places. It is essential for the preservation of food and the provision of running water, and for the waste-water system. It is also necessary for the maintenance of road and highway travel, railroads, and airlines, as well as for the operation of global communication systems. From this viewpoint, it can be considered vital to the development of society as a whole, and is a fundamental tool for addressing the principal social challenges on the road toward sustainable development.

Electricity is essential for addressing the principal challenges of sustainable development

Like any other human activity, the activities necessary for generating, transmitting, and distributing electricity have certain effects on the environment. These effects are controlled and minimized through the implementation of preventive and corrective measures, as described in the following section. Furthermore, the product that is sold and provided to users is unique in that it does not generate wastes of any kind.

The most significant effects of the activities involved in the production, transmission, and distribution of electricity are described below.

Resource consumption

The most characteristic aspect of the activity is the consumption of fuel. Water is also consumed - primarily for the cooling of the thermal power plants - as is energy, most of which is consumed during the operation of the auxiliary equipment of the power plants.

Atmosphere

The combustion of coal, oil, or gas in thermal power plants generates atmospheric emissions of carbon dioxide (CO₂), sulfur dioxide (SO₂), oxides of nitrogen (NO_x), particulate matter, and other gases. Carbon-dioxide emissions contribute to the greenhouse effect, and sulfur-dioxide emissions contribute to acid rain.

Water

In addition to consuming water, thermal power plants heat part of the harnessed water, which is returned to the environment. These plants also produce certain effluents as a result of their cleaning processes.

Wastes

Wastes, especially slag and ashes, are generated during the production process in thermal power plants through the combustion of coal and the use of nuclear fuel. The production and distribution facilities also produce wastes as a result of cleaning activities, maintenance work and activities, etc.

Land use and biodiversity

Electrical facilities occupy land and affect its characteristics.

In terms of biodiversity, the effects occur during both the construction and the operation of new infrastructures. The effects of electrical power lines on natural areas, birds, and plant life are described in greater detail below.

Hydroelectric reservoirs provide reserves of water - a renewable resource - and energy for use in a regulated manner in hydroelectric power plants. Furthermore, the reservoirs, as artificial bodies of water, interact in different ways with the environment, generally as a function of their size, area, and location. The most significant

Environmental Report

modifications consist of the conversion from a flowing-water system (in the form of the original riverbed) to a system of slow or semilacustrine bodies of water, and the creation of sheets of water of varying size, similar to the natural lakes of Central Europe.

The most significant effect of hydroelectric reservoirs on biodiversity is the change in the natural flow rates of river water below the non-flowing reservoirs, through the operational adjustments of turbine activity to meet the electricity demand curve. Consequently, there are changes in the hourly, daily, and seasonal flow rates, whose effects may be positive or negative. Moreover, during floods, the reservoirs provide a lamination capacity, thereby reducing the maximum flow rates and their most negative effects.

Noise and electrical and magnetic fields

Noise is generated during the construction, operation, and maintenance of facilities for the production, distribution, and transformation of electrical power. The generation of electrical and magnetic fields is the inherent in the nature of facilities for the distribution and transformation of electricity.

In addition to these effects - which are typical of the construction, operation, and maintenance activities for electrical facilities - there is also the risk of accidents due to fires, spills, etc.

ENVIRONMENTAL MANAGEMENT

POLICY

IBERDROLA's new Environmental Policy was approved in June of 2004. This policy updates the principles of the policy that has been in force since 1992, taking into consideration the most recent major international principles and initiatives, including:

- The UNE-EN-ISO 14001:1996 standard.
- Environmental principles set forth in the OECD strategic guidelines for multinational corporations.
- Environmental guidelines contained in the UE strategy for sustainable development.
- The environmental principles of the Global Compact, which was signed by IBERDROLA in 2002.
- The guidelines contained in the 6th Community Action Framework Program for the environment, and the implementation of those guidelines.
- The EURELECTRIC 2004 environmental directives.

This policy has been disseminated internally and externally through the publication of a specific brochure that has been distributed to IBERDROLA's major interest groups.

This brochure, which is also available on the company's website, includes the following declaration and principles.

The new environmental policy is based on the most advanced international initiatives

"The environment determines the whole of human activity, and is also a factor in business competitiveness. Therefore, IBERDROLA, with its awareness of the importance of this factor for the accomplishment of its business mission, has undertaken to encourage innovation and eco-efficiency in this field; to gradually reduce the environmental impacts of its activities, facilities, products, and services; and to strive to harmonize the conduct of its activities with the legitimate right of future generations to enjoy a clean environment.

This commitment has been undertaken, and is driven, by IBERDROLA's Senior Management, so that the various organizational levels of the company can gradually integrate consideration of and respect for the environment into the planning and subsequent implementation of the company's activities. All of IBERDROLA's employees will also contribute in their daily work toward achieving the goals that have been set in this field.

To put these commitments into practice, the company's activities shall be guided by the following basic principles of conduct:

FULL INTEGRATION of the environmental dimension and respect for natural surroundings into the company's strategy.

CONTINUOUS ASSURANCE of the compatibility between economic earnings and environmental protection, through innovation and eco-efficiency.

INCORPORATION of the environmental dimension into the decision-making process for investments and into the planning and implementation of activities, with the encouragement of its consideration in cost-benefit analyses.

Environmental Report

ESTABLISHMENT of appropriate Management Systems, which will contribute to the reduction of environmental risks, and which include:

- Compliance with environmental laws, with the various international commitments that have been signed, and with the internal regulations applicable to IBERDROLA's activities, facilities, products, and services, taking into consideration the legislative trends and the most advanced international practices, and establishing procedures that will make it possible to assess and manage the fulfillment of these commitments.
- An ongoing effort to identify, evaluate, and reduce the negative environmental effects of the company's activities, facilities, products, and services.
- Information and training for employees about the effects of the implementation of the company's processes and products, in order to minimize the negative effects of their activities on their health and on the environment.
- The development of plans and programs that establish objectives and milestones; the updating of emergency plans; and the development of internal audits that make it possible to reduce risks, minimize negative environmental effects, and monitor, on a regular basis, the progress and effectiveness of the measures that are implemented, in order to encourage the ongoing improvement of the company's processes and practices.

RESPECT for nature, biodiversity, and the historic and artistic heritage of the natural surroundings in which the company's facilities are located.

PROMOTION of research and development leading to new technologies that help make it possible to face major environmental challenges with a preventive focus, enable more efficient use of natural resources, and advance toward a more sustainable energy model.

ENCOURAGEMENT of behavior that is consistent with the principles of this commitment among the company's principal interest groups, and recognition of the corresponding alignment, particularly in the selection of contractors and suppliers.

ESTABLISHMENT of a constructive dialogue with public authorities, non-governmental organizations, shareholders, customers, local communities, and other interest groups, with the goal of working together to find solutions to environmental problems and to contribute toward the implementation of public policy that is useful from the environmental viewpoint and also economically efficient.

PROVISION of transparent information about environmental outcomes and activities, with the maintenance of appropriate channels for encouraging communication with the principal interest groups."

ORGANIZATION

The environmental function is spread throughout all of the organizational and hierarchical levels of the company. Environmental responsibilities at IBERDROLA are distributed over four levels or planes of action, in which everyone from the Chairman down to individuals with local responsibility over their surroundings is represented.

In this general framework, organization for environmental management is structured around a Corporate Environmental Division, environmental coordinators in business units, technicians at production and distribution facilities, and officers with environmental responsibilities in other company organizations.

All environmental action is coordinated through the Environmental Committees, which meet on a regular basis. These committees play a major role in association, coordination, communication, and the exchange of experiences among the different levels. In addition to these committees, working groups have been formed, with members from all of these levels, to address environmental risks and opportunities involving other company organizations.

The Corporate Environmental, Innovation, and Quality Division is responsible for coordinating the various committees; for detecting and analyzing emerging and strategic aspects of IBERDROLA's environmental activities; and for encouraging the implementation of good environmental practices within the Group's various organizations.

CHART 26

Environmental organization

CONTROL AND CORRECTION MEASURES

The focus of environmental management at IBERDROLA is oriented toward minimizing the negative effects of its activities and associated risks through environmental impact studies prior to the creation of production, transformation, and distribution facilities, and through the automation of its environmental management activities (Environmental Management Systems (SGMA), in compliance with the UNE-EN-ISO 14001 standard), bearing in mind the principle of prevention.

Assessment of the Environmental Impact of the Projects

In accordance with the regulations in force in Spain, almost all projects involving the infrastructure for the production, distribution, transformation of electricity are subject to environmental impact assessment (including, for large projects, a social-assessment analysis). Only a few small low-voltage distribution systems are exempt from this overall requirement.

The environmental impact assessment has a preventive focus, in terms of minimizing the effect of the infrastructures on the natural environment.

The environmental impact procedure begins with the preparation of a study that contains a diagnosis of the natural environment affected by the project and that analyzes the effect on the natural environment of the various alternatives, taking into consideration the technology and the preventive and corrective measures that may be implemented.

The environmental impact assessment allows citizens and other groups to participate in the company's projects

Participation by affected and interested parties is one of the central elements of the environmental assessment process. Accordingly, the studies are made available for a public hearing, and these proceedings are announced in the *Diarios Oficiales* (Official Journals) of the Autonomous Communities or in the *Boletín Oficial del Estado* (Official Government Bulletin).

The process concludes with the issuance of the environmental impact statement by the competent agency of the Autonomous Community or of the National Government, which determines whether the project is environmentally feasible and, if so, the conditions for its implementation, which include corrective measures, control and monitoring plans, etc. This statement is also published in the *Diarios Oficiales* of the Autonomous Communities or in the *Boletín Oficial del Estado*.

The company's major projects that have undergone an environmental impact assessment are listed below. Any person who is interested in these or other projects has the option of requesting information via the e-mail address medioambiente@iberdrola.es, in addition to the regulatory channel of participating in the public hearings.

Environmental Management Systems

An Environmental Management System (EMS) is a structured tool for the management and control of environmental risks. This tool is an integral part of the overall management activities of an organization, which include the organizational structure, activity planning, responsibilities, practices, procedures, processes, and resources for the development, implementation, review, and continuous updating of the environmental protection commitments made by an organization through its environmental policy.

The ultimate goal of the Environmental Management System is to provide organizations with guidance regarding the factors that need to be taken into consideration in terms of environmental protection, to ensure that their activities reflect the prevention and minimization of effects on the environment.

Generally speaking, the implementation of an EMS in accordance with international standards shows that an organization meets the following requirements:

- It has a commitment to the responsibility of maintaining an environmental policy and environmental goals aimed at the continuous improvement of its activities in relation to the environment, with the ongoing planning of its activities.
- It has verified its status with regard to the environmental regulations applicable to its activities.
- It has identified, and values, the environmental aspects of its activities, services, and products, and has defined guidelines for the prevention and control of adverse effects.
- It monitors and measures the characteristics associated with the environmental effects that it may cause, and interprets and analyzes the records.
- It delegates the responsibilities and resources needed to meet its priorities.
- It provides training for its personnel with regard to Environmental Management.

⁽²⁾No CELPE projects are included, because this company did not perform any EIAs during the fiscal year. Nor were any EIAs performed by ESSAL. It should be noted that this company has received favorable Environmental Qualification opinions for the 24 waste-water treatment plants currently in operation. No information is available regarding EIAs at Electropaz.

Environmental Report

IBERDROLA is maintaining a leadership position in the area of environmental management, with the implementation throughout a large portion of the organization of Environmental Management Systems based on the UNE-EN-ISO 14000:1996 standard.

The company's processes are implemented in compliance with ISO 14001 standards

The implementation of Environmental Management Systems at the company's facilities involves compliance with the standards applicable to each facility; identification of the major environmental effects of each of them and evaluation of the risks of those effects; risk-reduction plans (which may involve the implementation of preventive or corrective measures); the existence of controls, goals, and plans for improvement; and emergency plans, etc., all managed by a trained organization that is prepared to maintain this system.

The following tables include the EMS certifications of various IBERDROLA organizations, as certified by AENOR.

TABLE 29

Generation Activity

SGMA scope	Plants included	Certificate issuance date
Production of nuclear-based electrical energy	Cofrentes nuclear power plant	11 Dec. 1996
Production of thermoelectric power	Aceca thermal power plant	23 Dec. 1997
Production of thermoelectric power	Castellón thermal power plant	23 Dec. 1997
Production of thermoelectric power	Velilla del Río Carrión thermal power plant	23 Dec. 1997
Production of thermoelectric power	Escombreras thermal power plant	10 Nov. 1998

An Environmental Management System based on the UNE-EN-ISO 14000:1996 standard for the "Maintenance, local operation, and placement in service of new facilities in substations" was also implemented in 2004. This system applies to all of the company's transformer substations (more than 900) and to the substations that are currently in the process of obtaining certification.

Mercedes Substation (Alava)

Renewable energy activity

EMS scope	Plants included	Certificate issuance date
Operation and maintenance of wind farms	41 wind farms	10 June 2004
Operation and maintenance of wind farms	28 wind farms	30 Dec. 2004

The certifications obtained in 2004 for the operation and maintenance of wind farms will affect a total of 69 facilities, providing 2,100 MW of installed power, which represents 73% of the company's total wind-power capacity. Of these facilities, 35 are located in Castilla-La Mancha (1,165 MW), 17 in Galicia (450 MW), 11 in Castilla y León (302 MW), four in Aragón (131 MW) and two in La Rioja (52 MW).

International Activity

With regard to the production facilities in Latin America, an EMS based on the UNE-EN-ISO 14001:96 standard has also been implemented for all of the generation activities in Mexico. The EMSs for combined-cycle gas plants III and IV at Dulces Nombres and Altamira have been reviewed by the Mexican Comisión Federal de Electricidad (Federal Electricity Commission), and the EMSs for the cogeneration plants at Enertek and Monterrey have been reviewed by internal specialists. The Dulces Nombres combined cycle plant has also received certification from INDUSTRIA LIMPIA, which is a volunteer environmental certification program operated by the federal government. An EMS in compliance with the same standard has also been implemented at the Termopernanbuco combined cycle plant in Brazil. As a result, all international production of thermal origin now has an EMS.

Furthermore, in 1004 COELBA initiated the implementation of an EMS, likewise based on the UNE-EN-ISO 14001:1996 standard, for the company's

activities that have a significant environmental impact, in terms of tree-pruning, the cleaning and reopening of easements and rights of way, and the construction of distribution networks. Meanwhile, the CELPE headquarters building has implemented and certified an EMS in compliance with the same standard.

Principal Actions for the Reduction of the Environmental Impact of Activities

The principal activities conducted over the course of the last few years to palliate the environmental effects of the production, transmission, and distribution of electricity, and most notable ones conducted in 2004, are listed below.

Resource Consumption

The principal activities conducted over the course of the last few years to reduce fuel consumption have been oriented toward the improved use of heat energy and residual heat, the use of more efficient fuels, and the use of renewable resources. Regarding energy consumption, programs have been implemented to reduce consumption by auxiliary equipment. With regard to water, plans have been implemented for the minimization of its consumption and for its reuse in thermal power plants.

In 2004, the Cofrentes Nuclear Power Plant implemented improvement actions proposed by the working team for the reduction in annual consumption by auxiliary equipment.

At the international level, COELBA implemented the cleaner-production principle, which involves the application of an integrated economic and environmental strategy to all processes and products, for more efficient use of raw materials, water and power. The principle also calls for avoiding the production of wastes, minimizing their production, and recycling them, in that stated order of priority. This philosophical framework includes the application of the "X" factor in energy distribution: a factor that defines the level of improvement necessary, in terms of eco-efficiency, in the production processes in order to stabilize the environmental degradation process.

COELBA was the first electrical power distribution company to calculate the improvement factor necessary for sustainable management of its activities

According to the studies that have been performed, COELBA needs to achieve an annual 2.6% reduction in the environmental impact of its activities. This company was the first electrical power distribution company in the world to calculate the X factor, identifying the path to be followed for sustainable management of its activities.

Atmosphere

Emissions of carbon dioxide (CO₂), sulfur dioxide (SO₂), oxides of nitrogen (NO_x), and particulate matter are inspected and recorded in accordance with the applicable provisions. To reduce these emissions, more environmentally-efficient fuels are being used, such as low-sulfur (BIA) fuels, which make it possible to achieve a significant reduction in the concentration of emissions of oxides of sulfur, as well as additives for the neutralization of certain acids. Improvements have been obtained in the performance of existing power plants, and new systems have been installed, including low-level NO_x burners, electrofilters, and precipitators. Monitoring and inspection equipment has been installed to optimize the combustion process within the power plants. In addition to all of these measures, the company has also invested in natural-gas combined cycles, which will enable a significant reduction in the emissions per kilowatt-hour produced by the thermal power plants.

In compliance with Royal Decree-Law No. 5/2004, of August 27, applications were filed in 2004 for permits for the emission of greenhouse gases from the thermal power plants.

Applications were also filed for permits for greenhouse-gas emission rights. The EPER (European Pollutant Emission Register) inventory was also completed, with data for the last two fiscal years.

In 2004, the ABACO project was implemented at the Velilla thermal power plant, to reduce consumption by auxiliary equipment (with resulting operational improvements), reduce unburned fuel, and improve the efficiency of the combustion process. The ABACO technology applies primarily to the optimization of NO_x generation, as an alternative or supplement to the use of low-level NO_x burners or other measures for minimizing the production of oxides of nitrogen.

Water

In recent years, the company's activities in its thermal power plants have focused on the installation of new cooling towers to reduce the thermal effect of the effluent on the receiving bodies of water. The waste-treatment facilities at the power plants have also been renovated, with a resulting improvement in their quality, and recycling systems and programs have been implemented.

In 2004, a multidisciplinary team was formed that inspected all of the conventional and combined-cycle power plants, identifying possible waste-related risks. Based on these inspections, a series of actions was defined to minimize or eliminate the detected waste-related risks. The studies for the hydrochemical and biological monitoring of the aquatic systems in the area affected by the Cofrentes nuclear power plant are continuing, as is the environmental radiological monitoring program for the Júcar and Gabriel rivers.

Wastes

In recent years, the company's efforts in this area have focused on the development of plans for the reduction of medium- and low-activity radioactive wastes; waste-minimization plans; and plans for the elimination of PCBs. The company has also implemented activities for the reuse of the slag and ashes generated by the combustion of coal in thermal power plants. These wastes are now being used in the production of cement and as filler materials in civil-engineering infrastructure projects.

The annual statements of wastes in the Autonomous Communities were also submitted in 2004, and the implementation of the plans for reuse of the slag and ashes generated by the combustion of coal was continued. The Cofrentes nuclear power plant continued its selective collection activities at the 19 installed "green points," and continued its implementation of the Hazardous Waste Minimization Plan, as presented to the Environmental Council of the Governing Authority of Valencia.

Land Use and Biodiversity

The amount of land occupied by each substation is gradually being reduced, as a result of the substation downsizing plan that the company is implementing in Spain. In Latin America, Electropaz is pioneering the use of this type of facility, with the single-phase encapsulated substation at Challapampa, whose occupation of less space enables better integration with its surroundings, the removal of overhead power lines, and a reduction in noise.

To reduce the effects of electrical power lines on birds, research studies are being conducted in collaboration with organizations and institutions interested in their protection. Corresponding actions are being developed for their preservation, especially in areas of particular environmental value. Actions have also been taken in the past to reduce the repercussions on forests and other plant life.

As a result of all of the experience that has been gained, environmental guidelines are now available that were developed for administrative procedures and for the implementation of infrastructures in the natural environment. The company is also currently implementing the MASVERDE (Greater Green) Project, which includes a variety of innovative actions oriented toward improving the management of the company's distribution activities in the natural environment, and is continuing to work toward improving the potential of the GADIS (Environmental Distribution Management Systems) program, which is interlinked with the operational geographic information system.

With regard to reservoirs and changes in flow rates, and as a corrective measure, minimum environmental flow rates (also known as "ecological flow rates") have been established for periods when the turbines are not operating, in order to preserve and maintain the aquatic ecosystem of the bodies of water below the dam.

Another measure being implemented at reservoirs is the collection of the floating debris and refuse resulting from the runoff activity that is most intense during flood periods. These accumulations are removed and managed periodically, thereby contributing significantly to the cleaning of the rivers.

The hydroelectric power plants are now receiving the ecological flow rates necessary for the preservation of the segments of the watercourses below the dams. Work has been done to remove the floating debris and refuse accumulated above the dams. Limnological monitoring studies are being conducted in the Agavanzal, San Román, and Valdecañas reservoirs, and the quality of the water in the Tormes, Tera, and Tajo rivers is being inspected.

Activities underway at the minihydroelectric plants include the cleaning of the fish ladders, channels, and load depositories throughout the facilities; maintenance of the grating cleaners in the channel and power-plant inlets; and, at the Santa Eulalia hydroelectric power plant, the installation of locks and sluices allowing fish to travel upstream. Elements for the preservation of the ecological flow rate have been installed at the Gavilanes, San Román, La Gándara, and Pesqueruela hydroelectric power plants, and the Duero Hydrographic League is conducting an analysis of the changes in the flow rates of the river water above the El Cabildo hydroelectric power plant.

The following notable actions were taken in the distribution area in 2004.

A pilot project was implemented in collaboration with SEO/Birdlife to test the hypothesis – which has been supported by individual observations – that mating pairs display a marked tendency to breed in the same area over successive years, and even in the same habitats in which they did so successfully during the previous season. In order to continue the study with proper consistency, the behavior of breeding birds and

Environmental Report

juveniles is being monitored, with the collection of field data twice a week.

Action has been taken to implement the "MASVERDE" philosophy, whose goal is to gather, characterize, analyze, and evaluate all of the activities, initiatives, incidents, or events with interrelated environmental and technical implications, so that any agent within or outside the company can communicate its experiences, observations, or plans, knowing that they will be recorded, analyzed, and, if appropriate, implemented.

It was within this context that a design project was developed for a medium-voltage crosspiece that would eliminate the incidents involving certain birds and these types of installations. The approach to this problem was based on a preventive focus - in contrast to the traditional corrective action - through the application of the knowledge gained about the behavior of the birds during the design phase of the structures.

This project involved the collaboration of the Environmental Council of the Governing Board of Extremadura, SEO/Birdlife, and the IMEDEXSA company, which has the ability to develop structures with a novel design. The project was conceived as a "natural-scale laboratory," with the use of the aviary of the Los Hornos Fauna Recovery Center in Sierra de Fuentes (Cáceres). The first actual trials were conducted with the prototypes and the results were satisfactory, despite the complexity of the problem.

As a framework for the establishment of a constructive dialogue and for collaboration in the development of initiatives of mutual interest in the area of biodiversity management, a cooperation agreement was signed with the Spanish Ornithological Society SEO/Birdlife.

The following noteworthy activities took place in Latin America.

COELBA modified the distribution network in the vicinity of a mangrove thicket in the Santa Cruz de Cabrália area, through the use of special structures to prevent the death of the birds. Work was also done on distribution facilities in the Joanes Ipitanga

and Itacare Environmental Protection Areas. Before work was begun, environmental impact studies were performed for the selection of the best route from an environmental viewpoint, and actions were taken to minimize those impacts. Regardless of the specific operating area, COELBA is following the principle of cleaner production in all of its activities, taking proactive steps and preventing the occurrence of impacts.

The company has also installed or replaced 45 km of bare wire with new, ecologically insulated networks that enable better coexistence with the environment. This type of wire is used in areas containing plentiful vegetation or plant life of significant ecological value. Substation facilities are also being modified to minimize the risk of animal electrocution.

At COSERN, activities for the installation of the 69 kV electrical power line between Açú II and Guamaré were implemented in accordance with a program for the preservation of the native flora and fauna, with the goal of minimizing the impacts of the removal of vegetation. This program also includes provisions for the planting of native species. During the fiscal year insulation was also installed on 26 km of 69 kV electrical power lines, giving the company a total of 1,780 km of insulated lines.

The distribution area served by EEGSA includes 8 major protected areas. Most of them contain no electrical power lines, and the presence of lines in the other areas is insignificant, because the criteria for their construction included running them underground, when feasible; using secondary braided cable for the overhead lines; and using pedestal-type transformers.

ESSAL is taking steps to preserve the environment, such as riverbank protection; preservation of the ecological flow rate; the preparation of protected fish-breeding areas; the reforestation of hillsides and footpaths; the planting of ground-cover vegetation; the construction of bridges and catwalks over channels, allowing land animals to cross; reforestation of surface areas, to render their appearance similar to the original appearance of the surface areas that were cleared for projects; and the creation of "green curtains," to reduce the impact on the landscape.

Noise and Electrical and Magnetic Fields

Noise Law No. 37/2003 establishes a new regulatory framework for this environmental factor, strengthening the directive governing the details relating to magnitudes, measurement methods, and noise-abatement procedures. In 2004, the Distribution division developed a plan for the measurement, recording, and representation of the electrical power substations that, because of their location, could be considered higher-risk, in

anticipation of the approval of the directive. A total of 84 operations were performed for the measurement of noise and of electrical and magnetic fields, and 72 corrective actions were implemented.

In the Generation area, noise-measurement campaigns were conducted at the Castellón, Escombreras, and Pasajes thermal power plants. Last, in the Renewable Energy area, noise measurements were taken at all of the sites covered by the Environmental Management System.

With regard to electrical and magnetic fields, the work done in 2004 was essentially in the area of Occupational Risk Prevention, preparatory to the upcoming incorporation of Directive No. 2004/10 into Spanish legislation, pursuant to its approval in April. The activities were oriented not only toward the characterization of occupational environments in which higher levels are expected, but also toward negotiations with equipment manufacturers and designers, so that future products comply more fully with safety requirements.

The directives accepted by IBERDROLA also continued to be implemented in this field, through:

- Compliance with the exposure limits established in the Recommendation issued by the Council of the European Union.
- Continued support for scientific and technological research in this area.
- Sharing of all information on this topic with the general public.
- Maintenance of open communications channels with the government and with the general public when new projects are undertaken.

Emergency Plans

To minimize the consequences of a possible accident (caused by fire, wastes, etc.), the Environmental Management Systems currently in force require the implementation of the corresponding Emergency Plans that are operational at the various facilities. At least one emergency simulation was conducted during 2004 at each of the thermal and combined-cycle power plants.

ENVIRONMENTAL PRODUCTS AND SERVICES

The above-mentioned focus on the prevention, control, and correction of the effects of the company's activities and associated risks is supplemented by a vision of the environment as a distinguishing element and as a creator of value. IBERDROLA's commitment to renewable energy sources and to natural-gas combined-cycle power plants, and to the sale of new products such as Green Energy, as well as its position on the commitments arising from the Kyoto Protocol and relating to efficiency and energy conservation, reflect the company's view of the environment as an opportunity.

IBERDROLA offers a broad range of environmental products and services

The principal activities conducted in 2004 with regard to environmental products and services in Spain are listed below.

Green Energy

In 2004 the company continued to sell electricity produced by renewable energy sources. Page 48 of this report contains information about the sale of this product.

Photovoltaic Solar Energy Installations

IBERDROLA offers integrated services for the installation of this type of energy, ranging from a feasibility analysis to installation and maintenance of the facility, including the negotiation of subsidies and financing. In 2004, photovoltaic solar panels with a power rating of 250 kWp were installed in Navarra. The projected total annual production of emission-free energy is 425,571 kWh/year.

Customer Awareness, Information, and Management of PCBs

A total of 7,749 new mailings were sent out to customers who own transformers that may be contaminated with PCB, explaining to them the environmentally harmful nature of this compound and describing the regulations pertaining to its elimination. Diagnostic tests were also conducted, and proposals for the removal and replacement of equipment were offered to interested customers. Contracts for the provision of this service were signed with eight of them.

Energy Consultation

The services offered by the company in this area are summarized in the section dedicated to energy efficiency and energy conservation.

Environmental Audit Service

The goal of this service is to make it easy for all customers to obtain information about the extent of the environmental impact of its activity or service, and includes an environmental impact analysis, a report on compliance with the regulations currently in force, and, if applicable, a proposal regarding the improvements to be made.

ENVIRONMENTAL ACTION PROGRAMS⁽³⁾

Programs for the Development of Renewable Energy Sources and for the Construction of Combined-Cycle Power Plants

The environmental advantages of the production of electricity from renewable energy sources are well known. This type of energy contributes to reduced use of fossil fuels – with the resulting benefit to the environment – and to reduced dependence on foreign energy, which are two of the principal goals of energy policy. The other fundamental goal is to guarantee the continued availability of supply. Combined-cycle power plants contribute toward the achievement of this goal, with the advantage that their emissions, wastes, and effluents are much lower than those of conventional power plants.

Information about programs for the development of renewable energy sources and the natural-gas combined-cycle power plants addressed in the Strategic Plan appears on page 44 of this report.

Program for the Development of the New Distribution Network

The investments made in the distribution network in 2004 and the investments projected for 2005 include, in particular, investments in the downsizing of substations

and the placement of very-high-voltage power lines underground.

The goal of this type of investment is to reduce the physical space occupied by the substations, which traditionally require large areas of land, with the consequent environmental and visual impact. When the downsizing is performed, the substation's feeder lines and outgoing power lines will be placed underground, so that in addition to releasing the currently occupied land, the downsizing will allow the expansion of urban centers.

The investment made in this type of activity in 2004 was in excess of 20 million euros, and this amount is expected to exceed 110 million euros in 2005. These activities are part of a multi-year investment program that calls for an investment of more than 300 million euros by 2007.

Particularly noteworthy is the downsizing of the La Olma substation in the province of Valladolid, which will allow the westward expansion of the capital city of Valladolid, which had been halted because of the amount of land occupied by the substation and its feeder lines. The plan for the downsizing of this substation was completed in 2004, with the elimination of several voltage levels and the simplification and improvement of the structure and design of the electrical power grid in the province. Other activities include the downsizing of the Gamonal substation in Burgos, and of the Lorca and San Antón substations in Murcia.

The most significant activities in this program include the downsizing of the substations and the underground placement of the very-high-voltage power lines in the city of Madrid, where work has begun on almost all of the substations, with the majority of the physical investment scheduled for 2005.

Energy efficiency and conservation

IBERDROLA is contributing toward energy efficiency during the electrical-power supply phase and also during the phase consisting of the final use of the electricity by its customers. The increase in energy efficiency during production and through the reduction of network losses contributes not only to the conservation of resources but also, and significantly, to the reduction of greenhouse gases.

⁽³⁾In addition to the activities described in this section, the projects that have been undertaken in the area of innovation, as described in the Activity Report, should also be kept in mind. A significant portion of those projects have positive environmental effects.

Accordingly, in addition to the activities described in this section, there are also other efficiency initiatives (such as most of the ones included in the "Energy Wisdom Programme"), as described in the section dedicated to Climate Change.

The company's energy-efficiency activities are reducing the consumption of resources and contributing toward compliance with the Kyoto Protocol

Energy Efficiency During the Electrical-Power Supply Phase

Increase in Energy Efficiency in Production

The company's most significant contribution in this area remains its commitment to a production structure in which renewable energy sources and natural-gas combined-cycle technology play a major role.

Accordingly, initiatives have been launched to improve the efficiency of auxiliary equipment and to reduce their consumption. One example is the ABACO project, which was implemented at the Vellilla thermal power plant to reduce consumption in auxiliary equipment (among other related environmental improvements). Steps have also been taken to reduce consumption in auxiliary equipment at the Cofrentes nuclear power plant.

Savings in Energy Distribution. Reduction of Losses in the Distribution Network

Electrical losses – due essentially to the heating of the wire – are an inevitable consequence of the circulation of power through the electrical network.

These losses involve a significant economic cost, in terms of production and also in terms of the overcapacity of the facilities, and require the generation of new energy in order to meet demand. The Distribution Loss Reduction Plan addresses several initiatives, including the following ones:

- The installation of capacitor banks that will reduce the requirements for the generation and transmission of reactive energy via the networks.
- An increase in the cross-section of power-line wires and cables.
- Changes in voltage, in order to reduce the intensity of the current circulating over the network.
- A study of possible power-line shifts, with the redirection of energy circulation for permanent loss reduction.
- Incorporation into standardized facilities of the low-loss transformers recently developed by manufacturers.
- A reduction in the range of standard wire types, and the standardization of the development of cylindrical conductors with a larger cross-section and less loss.

Within the context of these projects, capacitor banks were installed in the distribution network with a total power rating in excess of 1,200 MVA, representing an investment of more than 10 million Euros, with the dual goal of improving the voltage profile during peak hours and reducing losses in the network. Shifts to higher voltages were made on various lines, along with expansions of the network, which entailed an investment of 195 million Euros.

In Latin America, the actions implemented by COSERN allowed that company to move from losses of 12.72% at the start of the fiscal year to losses of 12.45% at year-end, with an estimated saving of 11,988 MWh over the course of the year. EEGSA implemented activities for the compensation of reactive power and will also make changes in conductors and substations, for an estimated annual energy saving of 1,610 MWh.

Energy Efficiency at the Endpoint

The following actions were taken in Spain to improve energy efficiency and the conservation of electricity by end users.

Public Lighting Projects. Where these projects were implemented, they resulted in savings on the order of 40% of the power consumed by public lighting fixtures, through a reduction in the lighting level (even with all of the lights turned on) during off-peak traffic hours and through the stabilization of the voltage at its nominal level, thereby avoiding overvoltages during periods of lower consumption. The pilot project begun in 2003 was concluded in 2004, with an analysis of the results of the pilot project and the development of a plan for the expansion of this initiative in 2005.

Encouragement of the Night-rate Structure for Users of Accumulation Heating Systems. A total of 7,607 new contracts with night rates were formalized in 2004, with the number of contracted users of this rate structure reaching 345,010 by the end of the fiscal year.

Energy Consultation. IBERDROLA offers a comprehensive energy consultation service that includes the diagnostic testing of facilities through on-site analysis, the proposal of an improvement plan, and the implementation of the proposed solutions – all aimed at saving energy, improving the use of resources, and contributing toward the improvement of the environment while reducing the cost of energy.

Energy Conservation and Efficiency Campaigns. Advice on energy conservation and efficiency was printed on the back of the bill and forwarded to the company's more than 9 million customers, and a local television campaign was conducted in November and December, with space reserved for advice on energy conservation. Five thousand copies of a compact disc containing energy conservation and efficiency advice were created and distributed in the hotel sector. Various other media, consisting of 22,000 pieces with advice on energy conservation and efficiency and on the preservation of the environment were placed in hotels, and 4,500 postcards containing advice on energy conservation and environmental awareness were sent to hotel guests, universities, museum-goers, and audiences at public events.

Environmental Report

COELBA and COSERN were active in Latin America. COELBA has an annual energy efficiency program that includes various initiatives, such as the "Agente Coelba" project, whose goal is to offer low-purchasing-power consumers guidance on rational energy use, and the "Corriente de Vida-SOS Energía" project, aimed at training public-school teachers to encourage changes in consumption patterns among students and to raise awareness of the need for rational energy use. Initiatives were also undertaken to facilitate public access to bioclimatic architectonic projects, and to provide training for municipal public officials in the efficient management of energy in their towns. Projects were also developed to replace inefficient household appliance with others that are more efficient, and to install high-energy-performance equipment in a hospital.

Meanwhile, COSERN has implemented public-lighting programs in eleven towns in the state of Rio Grande do Norte, with the replacement of 4,261 inefficient lighting fixtures with low-consumption fixtures, for a 217 kW reduction in peak-hour demand and annual savings of 951 MWh in electrical power consumption.

INDICATORS

RAW MATERIALS

This section addresses the consumption of raw materials needed for the production of electrical power, as well as the amounts of chemical products used in the generation processes, which are derived essentially from the purification of fumes and effluents and from process conditioning ⁽⁴⁾.

WATER

Consumption

SPAIN

Water consumption at IBERDROLA facilities is due predominantly to evaporation in the cooling process for its thermal plants. As indicated in the following table, 30,934,610 cubic meters of continental water were consumed in the cooling of these plants. A total of 1,854,810 cubic meters of continental water were consumed as process water and for auxiliary services.

A further 177,313 cubic meters were consumed in the buildings under management in Spain.

TABLE 44

Water consumption by plant

Plant	Water consumed as process water and for auxiliary services (m³)	Source	Losses due to evaporation (m³)	Source

2004 Sustainability Report

Effluents

The parameters considered most representative in terms of assessing the quality of the effluents of the thermal plants are pH, solids in suspension, biological oxygen demand (BOD₅), chemical oxygen demand (COD), nitrates, and phosphates. The figures obtained for the 2004 fiscal year appear in the following tables.

SPAIN

TABLE 48

Effluents – Spain

Plant	pH (Mean value)	Solids in suspensión (kgs)	BOD ₅ (kg)	COD (kg)	N _{total}	P
Castejón combined cycle	8.2	1,480	0**	2,913	981	32
Cofrentes nuclear plant	8.5	1*	< 10*	< 20*	8.7*	0.44*
Aceca thermal plant (50%)	8.0	616	0**	0**	-	-
Castellón thermal plant	8.2	3,980	1,194	2,254	4,859	259

BIODIVERSITY

In Spain, a country with no major natural lakes, reservoirs serve as an alternative to those ecosystems. The country has several significant examples of their integration into the natural environment. One example of this integration within the context of IBERDROLA's activities is the presence of reservoirs in the Arribes del Duero and Monfragüe Nature Reserves, which were designated as Nature Reserves long after the reservoirs were created in their protected areas.

The Arribes del Duero Nature Reserve

This reserve, which has been protected since 2002, is located in the provinces of Zamora and Salamanca. Its surface area of 106,105 hectares includes an 86,000-hectare Special Bird Protection Zone (ZEPA).

A significant feature of the reserve is the topography created by the deep canyon of the Duero River and its network of tributaries, which have carved ravines around the penepain where the park is located whose nearly vertical walls are several hundred meters deep. The chain consisting of the Villalcampo, Castro, Miranda, Picote, Bemposta, Aldeadávila, and Saucelle reservoirs forms the Arribes supply system. These reservoirs maintain a virtually constant water level, which contributes to the stability of their shores.

The compatibility of the reservoirs and the biodiversity of fauna and flora in this area is manifested by the richness of the plant life, which displays a great abundance of typically Mediterranean species, including varieties that are not native to these latitudes (such as olives, grapes, almonds, and fruit trees), and a wide range of animal life associated with this area – including, in particular, birds such as the black stork, various raptors that nest in the rocky defiles (including the Egyptian vulture, the golden eagle, Bonelli's eagle, and the eagle owl, among others), and the griffon vulture.

The Monfragüe Nature Reserve

Protected since 1979, this reserve in the province of Cáceres occupies a surface area of 17,852 hectares in a deep valley between the mountains on both sides of the Tajo and Tiétar rivers. This area has also been designated as a Special Bird Protection Zone (ZEPA).

The reservoirs are present throughout the park's river system (over a range of 32.5 kilometers), providing the aquatic environment for a rich variety of indigenous fish species, including the barbel, the bream, and the tench.

The nature and operation of the reservoirs differ. Thus, the Torrejón-Tajo reservoir provides, over its 24.5 km within the park, an enclosed body of water with no variations in its level, which encourages the growth of typical riverine plants such as alders and birches, ash trees, and willows. The Alcántara reservoir adjoins it, running through the park for 8 km with changes in its level, which for this body of water can be significant. Last, the Tiétar River – a tributary located on the right bank of the Tajo River – occupies approximately 9 km of the park in the Torrejón-Tiétar reservoir, with changes of 1 to 2 meters in its water level, depending on the season of the year.

The Monfragüe is notable for the more than 200 vertebrate species for which it provides a home. The most diverse and interesting species are the birds, including, in particular, the birds of prey and the colonies of griffon vultures and Eurasian black vultures.

The following table lists the IBERDROLA reservoirs (in terms of the length of the riverbed encompassed by the reservoir) in Natural Space Zones that have been designated or proposed as Special Common Interest Areas in the Nature 2000 network.

TABLE 50

IBERDROLA reservoirs in protected natural spaces

Valdeobispo Reservoir (Cáceres)

Regarding electrical power lines, IBERDROLA's presence in the natural parks in its geographic sphere of influence is represented in its Geographic Information System, using this tool to manage the various incidents that might occur. The situation with regard to occupancy of these spaces has not changed since the previous fiscal year.

Environmental Report

TABLE 51

Presence of electrical power lines in protected natural spaces

* VHV: Very high voltage

The standard indicators for environmental improvement for monitoring the management of biodiversity are listed in the following table.

TABLE 52

Principal biodiversity indicators in Spain

Activities for the protection of animals and birds	Number of pylons corrected
Correction of insulators	376
Catenary spreaders	11
Reconstructed mountings	440
Integral insulation	126
Perching dissuaders	152

In addition to these activities, new nests (12) were created, and others (158) were removed, in order to prevent the risk of electrocution. Twelve new kilometers of power lines were ballasted in order to prevent collision. It should also be noted that 48 individual live bird specimens were studied at first hand, in order to avoid risks and to learn about their behavior so that preventive measures can be implemented, all with the consent of the competent environmental agency. A total of 39 specimens were delivered to the government. And the remnants from the pruning of the lanes occupied by overhead lines

were ground up for mulch, over a surface area equivalent to 210 hectares.

With regard to the reduction of the visual impact of the distribution facilities, 3 substations were dismantled, along with various components and structures, i.e., 12 circuit-breakers, 12 panels, 49 cells and other appurtenances, and 10 units.

The most noteworthy biodiversity-related activities in Latin America are described on page 111 of this report.

ATMOSPHERIC EMISSIONS

Greenhouse Gases

Of the six greenhouse gases regulated by the Kyoto Protocol, the following are produced by IBERDROLA's facilities or equipment:

- Carbon dioxide (CO₂), which is generated by the burning of fossil fuels, and which, therefore are produced essentially by conventional thermal power plants and by natural-gas combined cycle plants.
- Nitrous oxide (N₂O), which is produced in the same facilities mentioned above, during the various combustion processes.

- Methane (CH₄), which is generated in small quantities during the various combustion processes, along with fugitive fuel emissions (which occur during transmission and supply).
- Sulfur hexafluoride (SF₆), which is generated by leaks or losses during its use as an insulator in electrical switches and automatic circuit-breakers.
- Hydrofluorocarbons (HFCs), which are used as coolants or as foaming agents in fire extinguishers.

The only greenhouse gas (GHG) that is not considered to be generated in significant quantities in IBERDROLA's facilities or equipment are perfluorocarbons (PFCs), whose emission is essentially the result of the production of aluminum and the manufacture of semiconductors.

With the foregoing considerations in mind, the activities responsible for the emission of the five GHGs generated by IBERDROLA are the following:

- Generation of electrical power: CO₂, N₂O, and CH₄, with a very small proportion of SF₆ from leaks in switches and breakers.
- Distribution of electrical power: with a major proportion derived from leaks or losses of SF₆ contained in various devices in the electrical circuitry.
- Corporate buildings: HFCs, used as coolants and as foaming agents in firefighting equipment.

SPAIN

TABLE 53

Direct carbon-dioxide emissions from natural-gas combined cycle plants

Plant	Absolute emissions (t)	Specific emissions ⁽⁸⁾ (g/kWh)
Castellón combined cycle	1,533,414	363
Castejón combined cycle	809,261	375
Total	2,342,675	

⁽⁸⁾ Specific emissions: obtained by dividing the values of the absolute emissions by the electricity generated in order to produce those emissions, i.e., the ratio of the absolute emissions, in grams, divided by the electricity produced at each combined cycle or conventional thermal plant, in kWh.

TABLE 54

Direct carbon-dioxide emissions from coal- and fuel-fired thermal plants

Plant	Absolute emissions (t)	Specific emissions (g/kWh)
Aceca thermal plant (50%)	388,026	705
Castellón thermal plant	359,261	767

Santurce thermal plant	358,077	671
Velilla thermal plant	3,212,890	905
Total	8,878,533	

More than 98% of IBERDROLA's greenhouse gases consist of direct emissions of carbon dioxide from coal-fired, fuel-oil, and natural-gas thermal plants.

of CO₂/MWh for the year 2003 in France), IBERDROLA's imports imply 53,800 tons of CO₂ in 2004.

IBERDROLA's total carbon-dioxide emissions in Spain totaled 11,221 thousand tons, a figure that corresponds to an overall average of 176 grams of CO₂/kWh and 684 grams of CO₂/kWh of thermal origin produced in the year 2004⁽⁹⁾.

Indirect Emissions Associated with Energy Imports and Exports

During 2004, IBERDROLA's imports into the Spanish electrical power system came only from France, with a total volume of 828 GWh. This energy was purchased through organized markets and bilateral contracts. Because of the current status of the energy markets, it is impossible to know which technology produced the purchased energy and, therefore, the specific CO₂ emissions.

However, assuming that the specific emission of the imported energy matches the average for the French electrical power sector, and taking as an approximation of the specific emissions the figures published for the year 2003 by the International Energy Agency (IAE) (i.e., 0.065 tons

⁽⁹⁾ These figures do not reflect the production or the emissions resulting from cogeneration plants or partial interests in combined cycle plants.

TABLE 55

Evolution of CO₂ emissions

Year	Absolute emissions (t)	Specific emissions	
		thermal mix ⁽¹⁰⁾ (g/kWh)	global mix ⁽¹¹⁾ (g/kWh)
2004	11,221,208	684	176
2003	8,817,310	712	122
2002	13,549,831	787	242
2001	8,650,390	862	140
2000	10,831,590	874	212

As a reference, the emissions of European electrical power companies (specific emissions, global mix) were on the order of 350 g/kWh.
 (Source: "Environmental Statistics of the European Electricity Industry. Trends in Environmental Performance 2000-2002", www.eurelectric.org).

GHG emissions for each kWh produced by thermal plants, follow a decreasing trend

CHART 28

Specific emissions: thermal mix (g/kWh)

⁽¹⁰⁾ Specific emissions, thermal mix: obtained by dividing the values of the absolute emissions by the electricity of thermal origin generated by the company, i.e., the ratio of absolute emissions, in grams, divided by the electricity produced at the combined cycle plants and conventional thermal plants.

⁽¹¹⁾ Specific emissions, global mix: obtained by dividing the values of the absolute emissions by all of the electricity generated by the company, i.e., the ratio of absolute emissions, in grams, divided by the electricity produced at all of the plants, in kWh. The changes in this indicator for IBERDROLA are significantly affected by the amount of rainfall.

Monterrey cogeneration	195,801	359
Total	5,711,860	

Ozone-reducing Substances (CFCs)

During the 1970s, it was discovered that certain chemical products known as chlorofluorocarbons (CFCs), which had been used for a long time as coolants and as aerosol propellants, posed a potential threat to the ozone layer. When released into the atmosphere, these chemical products, which contain chlorine, rise and are broken down by the effect of sunlight, after which the chlorine reacts with the ozone molecules and destroys them. For this reason, the use of CFCs in aerosols has been prohibited in many countries. Other chemical products, such as bromine halocarbons, and the oxides of nitrogen present in fertilizers, are also harmful to the ozone layer.

At IBERDROLA, the substances that reduce the ozone layer are located in firefighting equipment and in cooling systems, which are maintained in compliance with the provisions of applicable regulations.

During the 2004 fiscal year, 3,416.77 kilogram-equivalents of CFC-11 were recorded, of which 3,309 kg were present in firefighting equipment at the Cofrentes nuclear plant, and 107.77 kg were present in the cooling systems of the Pasajes and

Santurce thermal plants. The only atmospheric emissions from these contained products were the result of insignificant losses.

Particles, SO₂ y NO_x

In addition to greenhouse gases, the generation of electricity from fossil fuels produces essentially emissions of particles, of sulfur dioxide (SO₂), and oxides of nitrogen (NO_x).

The total emissions of particles from all of IBERDROLA's thermal plants in Spain totaled 3,855.74 tons: a figure that corresponds to an overall average of 0.06 gram of particles/kWh and 0.24 gram of particles/kWh of thermal origin produced in the year 2004 ⁽¹²⁾.

WASTE

The most typical waste produced by the combustion process at thermal plants consists of flying ash, of which 560,300 tons were produced in 2004. This waste has a high level of reuse, with 91% being used in the production of cement and as filler materials in civil-engineering infrastructure projects, and with the remaining 9% being processed for elimination. The plants also produced 61,410 tons of furnace ash and boiler slag, which were processed for elimination.

91% of the flying ash produced was reused in infrastructure projects

SPAIN

The application since 1992 of the Mid- and Low-Activity Radioactive Waste Reduction Plan at the Cofrentes nuclear plant is enabling the plant to achieve a significant reduction in the volume produced. In 2004, Cofrentes produced a total of 147.38 cubic meters of conditioned mid- and low-activity nuclear waste.

TABLE 68

Production/reuse of ash from thermal plants

Year	Ash produced (t)	Ash reused (t)	% of production reused
2004	560,300	508,770	91
2003	517,287	429,954	83
2002	717,281	430,368	60
2001	736,000	501,000	68
2000	782,290	312,916	40
1999	633,822	310,572	49

As a point of reference, the European electrical power industry produces an annual average of 40,000,000 tons of flying ash, of which approximately 50% is reused in the construction sector. (Source: the latest available report on "Environmental Statistics of the European Electricity Industry, Trends in Environmental Performance 2000-2002," - www.eurelectric.org).

Hazardous Waste

In accordance with current legislation, the company filed annual declarations of hazardous waste produced in 2004 by the various electricity generation, transmission, and distribution facilities and buildings in Spain. This information is provided below.

TABLE 69

Type of hazardous waste	Produced (t)	Delivered to authorized managers (t)	Stored temporarily (t)
PCB-contaminated dielectric oil	625.668	610.774	0.315
Used oils	1,515.028	1,554.631	5.850
Compressor washing water	0.000	16.180	0.000
Ash and slag	189.443	190.101	0.000
Emulsions	145.845	125.845	20.000
Packaging	58.556	58.612	0.540
Treatment-plant sludge	151.791	157.101	0.000
Materials containing asbestos	127.764	127.744	0.020
Contaminated materials	998.055	997.987	0.150
Hydrocarbon-contaminated materials	59.437	57.574	2.910
Others	99.822	95.118	0.000
PCBs	825.972	825.972	0.000
Batteries	35.658	31.015	0.350
Expired chemical products	7.378	7.378	0.000
Acid/alkaline solutions	1.251	1.675	0.050
Dielectric-oil transformers	0.000	0.000	0.000
Fluorescent tubes	9.370	3.960	0.349
Total	4,851.038	4,861.667	30.534

Elimination of PCBs

Polychlorobiphenyls (PCBs) are substances that are not produced by any of the company's activities, but rather are sold by the manufacturers of electrical equipment and are used essentially in transformers and capacitors, because of their excellent dielectric properties. Because of their harmful effects, they must be eliminated by their owners by the dates specified in current legislation.

The situation regarding the possession and elimination of PCBs at the company in accordance with the current legislation is summarized in the following chart ⁽¹⁵⁾.

CHART 30
PCBs pending elimination (tons)

TABLE 70
Waste recycling

Year	Paperboard (t)	Glass (t)	Scrap (t)	Packaging (t)
2004	1,463.3	10.2	896	2.4
2003	583.8	4.5	11.3	0.4
2002	392	6.3	9.5	0.2

More than 6 tons of paper and 2,231 recycled toner cartridges were also consumed.

⁽¹⁵⁾The Ministry of the Environment worked during the year toward the revision of Spanish standards regarding the elimination of PCBs, which is expected to be approved in 2005. The expected revision will increase the number of pieces of equipment to be eliminated, and therefore the company has already taken the appropriate steps.

2004 Sustainability Report

INTERNATIONAL

The volume of hazardous waste produced in 2004 by the various activities outside of Spain are indicated in the following tables.

TABLE 71

Hazardous waste produced

	Produced (t)	Delivered to managers (t)	Stored temporarily (t)
2004*	2,056.101	2,056.101	-
2003	31.597	30.99	-

*The increase in the volume of waste over the previous year is due to the placement in operation of the Altamira III and IV combined cycle plants in 2004.

TABLE 72

Types of hazardous waste produced

Type of hazardous waste	Produced (t)	Delivered to managers (t)	Stored temporarily (t)
Used oils	145.400	145.400	ND
Compressor washing water	0.000	0.000	ND
Packaging	3.521	3.521	ND
Contaminated materials	3.080	3.080	ND
Others	1,904.100	1,904.100	ND
Acid/alkaline solutions	0.000	0.000	ND
Total	2,056.101	2,056.101	ND

The following types and amounts of waste were collected and sent for recycling:

TABLE 73

Waste recycling

Year	Paperboard (t)	Glass (t)	Scrap (t)	Packaging (t)
2004	57.78	0.24	124.5	-
2003	48.48	-	-	1.37

More than 3 tons of recycled paper were also consumed.

COMPLIANCE

SPAIN

In 2004, two environment-related legal actions were initiated against IBERDROLA for the following reasons:

The Vellilla thermal power plant: An incident that occurred on May 20 in the chemical treatment area of the Group 2 cooling tower, i.e., an accidental spill of 10 cubic meters of sodium hypochlorite, which entered the Villalba reservoir. As a preventive measure, the existing facility was shut down, and a new double-walled tank with a capacity of 5 cubic meters and an alarm-equipped detection device was installed.

The Lada thermal power plant: A petition was filed for the opening of a case file with the imposition of sanctions, due to failure to comply with the upper limit on the average monthly atmospheric emission of particles in Group 3. At a meeting with governmental authorities, it was explained that the implementation of actions to eliminate sporadic episodes of violations of the limits was being sought, rather than the imposition of a sanction. IBERDROLA presented an action for this purpose.

INTERNATIONAL

In Brazil, 37 legal actions were initiated in 2004 regarding the tree pruning that was performed in order to protect electrical power lines from possible falling limbs, and another two actions were initiated claiming insufficient acoustic insulation in machine rooms.

Moreover, two legal actions were initiated in Chile against ESSAL, in connection with its water-distribution and treatment activities, for the following reasons:

- An overflow of waste water, due to an increase in the amount of rainwater in the drainage system.
- Contamination due to the presence of hydrocarbons in the potable water system. The Court of Appeals has accepted an appeal, although the company did take the necessary steps to prevent the repetition of such an incident.

ENVIRONMENTAL COSTS AND INVESTMENTS

The costs incurred in connection with the environmental activities undertaken during the 2004 fiscal year amounted to approximately 43,363,000 Euros, including the costs arising from direct and indirect activities with an environmental component, such as those pertaining to ecological fees and taxes. The overall figure also includes the costs incurred in connection with the human resources dedicated to these activities.

Direct investments during the 2004 fiscal year were 63,836,000 Euros, which sum was posted under the heading "Tangible fixed assets."

Regarding potential environmental contingencies, the Group believes that such events are sufficiently covered by the civil liability insurance policies that it has obtained, and by the corresponding reserves that it has created.

No environmental incidents were recorded in 2004 that involved the use of reserves or the exercise of existing coverage for risks and contingencies.

The figures provided below reflect the activities of IBERDROLA in Spain. The company's environmental investments in its international activities totaled 16,814,000 Euros, and the corresponding environmental costs totaled 4,101,000 Euros.

These sums relating to costs and investments earmarked in their entirety for environmental purposes were supplemented by the costs of other activities that could be characterized only partially as environmental. Therefore, the latter costs do not appear in the financial accounting system under the purely environmental headings. However, these items are very significant in terms of the overall calculations, inasmuch as they amount to approximately 60 million Euros.

TABLE 74

Environmental costs and investments

(€ thousands)

	Environmental investments	Environmental costs

Total	80,650	47,464

* Data available for Brazil and Guatemala

CLIMATE CHANGE

IBERDROLA's approach and activities involving environmental considerations are guided by the principle of caution. This standard is based on the provisions of Article 15 of the Rio Principles, which state: "To protect the environment (...) when there is danger of serious or irreversible damage, the lack of absolute scientific certainty should not be used as a reason to delay the adoption of profitable measures to prevent the degradation of the environment."

One example of this commitment to the principle of caution is the company's proactive and anticipatory policy with regard to climate change: a phenomenon that has been scientifically observed but regarding which controversy exists regarding both the relative contribution of industrial activities and the effects of those activities.

From the start, IBERDROLA has been in favor of Spain's compliance with the commitments arising from the Kyoto Protocol, for which the cost of compliance should be minimized. In order for both of these goals to be met, the following aspects must be kept in mind:

- The preservation of growth must be permitted in the industrial sectors addressed by the

Emissions Trading Directive, and therefore sufficient emissions rights must be allocated to cover their emissions once the planned reduction measures have been implemented.

- Electrical power companies that have the technical capability to reduce their emission levels should have a framework that incentivizes these reductions, ensuring primarily that the power-generating companies take into account overall cost (both operational and environmental) through the internalization of the environmental costs. ..

The position maintained by IBERDROLA would yield additional benefits, such as the following:

- It would contribute toward an increase in guaranteed supply, by incentivizing new investments.
- It is compatible with the protection of the Spanish domestic coal industry, ensuring the expected levels of production.
- It would not increase dependence on foreign power, because it would replace imported coal with gas.
- It would not require changes in the rate structure, which could absorb the cost of pollution through the use of other means (such as Competitive Transition Charges or a nuclear moratorium).
- It would not threaten the financial viability of any electrical power company.
- It has positive environmental effects on other fronts, such as a significant reduction in acid emission levels (SO₂ and NO_x).

Consequently, it would realistically and effectively protect the domestic industry, while ensuring Spain's environmental competitiveness over the medium term, inasmuch as it would facilitate the reduction of emissions and compliance with the commitments that the country has made.

National Allocation Plan

Following the approval of the European Emissions Trading Directive regarding carbon dioxide in October of 2003, on August 27 of last year Royal Decree-Law No. 5/2004 was published, which incorporates this directive into Spanish legislation.

The program implemented is based on one of the market instrument provided in the Kyoto Protocol, namely, emissions trading, which, in conjunction with the instruments based on the projected investments in clean technology in third-party countries (i.e., clean development and joint application), is one of the so-called flexibility mechanisms of the Kyoto Protocol.

On September 6, Royal Decree No. 1866/2004 was published, which approved the National Allocation Plan (NAP) for emission rights for the 2005–2007 period. This plan specifies the total number of emission rights allocated to each industry in each period, as well as the applicable procedure for their allocation, based on objective and transparent criteria.

The electrical power industry was assigned 86.4 Mt of CO₂ per year for the 2005–2007 period, including the rights for new entrants into the sector. The allocation also includes 1.6 Mt derived from the manufacture of iron and steel, which will be conveyed through electrical-power generation facilities, such that, in practice, the rights assigned to the sector will amount to 88.0 Mt. Accordingly, for the 2005–2007 period, the electrical power industry will receive 10% fewer rights than its emissions in 2002, as opposed to the 11% more for the rest of the industries addressed in the Directive.

The individual allocations for each of the facilities in the various industries were published on November 26, 2004. In the specific case of the electrical power industry, consideration was given to expected growth in the demand for electrical power and to the general distribution criteria described in Royal Decree No. 1866/2004, which was amended slightly by Royal Decree No. 60/2005, of January 21 of that year, which contained the final approval of the National Allocation Plan for emission rights for the 2005–2007 period.

According to the proposal presented by the national government, coverage of the estimated domestic demand will be satisfied in a manner that complies with the environmental objective, through the generation of electrical power using currently available technology and fuels. Therefore, the rights allocated to the power-generation facilities will represent the sum total of the actual emissions that will be produced in order to achieve this goal.

The National Allocation Plan affirmed IBERDROLA's proposal in favor of compliance with the Kyoto Protocol, and the national government recognized that the electrical power industry is the one that must make a greater effort toward reduction, through the renovation of generator plants, with the gradual replacement of coal-based power generation by more efficient technologies, such as natural-gas combined cycle plants, and the use of renewable energy sources.

This way, through the distribution of facility-based emission rights, as finally approved on January 21, 2005, technological change can be enabled in the Spanish electrical power sector in a way that allows the reduction of actual CO₂ emissions in Spain.

Climate Control Activities.

IBERDROLA's response to the problem of Climate Change, in view of compliance with the Kyoto Protocol, consists of an investment in energy that is more environmentally efficient (i.e., natural-gas combined cycle plants and the use of renewable energy sources), which in turn will mean greater security and maximal efficiency in terms of both energy and the environment, using the best technology available at minimal cost for Spain. This major investment in clean and efficient energy will lead to lower consumption of primary energy, an effective reduction in emissions, and an increase in guaranteed supply.

74% of the electricity produced by IBERDROLA during the 2004 fiscal year was free from greenhouse gases

A total of 74% of the electricity produced by IBERDROLA in 2004 was completely free from emissions of greenhouse gases. This electricity came from a group of generation plants in which non-carbon-dioxide-emitting technologies also accounted for 74% of the total installed capacity.

IBERDROLA will participate in the emissions trading that will start in Europe on January 1, 2005. Accordingly, the company will receive an annual average of 12.78 million tons of emission rights between 2005 and 2007.

Independently of IBERDROLA's participation in emissions trading, the company is in favor of the inclusion of the credits arising from the Clean Development Mechanisms in the European system for the trade in GHG emission rights, as recognized through the recent approval of the "Link Directive."

IBERDROLA's international presence, primarily in Central and South America, has made it possible for the company to analyze the feasibility of various projects undertaken by the company in various countries, as well as their emission-reduction potential.

As a result of this preliminary analysis, more than 15 projects were identified, analyzed, and classified according to their likelihood of achieving reductions in emissions. From this starting point,

work was begun on the preparation of the documentation required for negotiations with the United Nations Executive Committee regarding various projects, in order to obtain Certificates of Emission Reduction (CERs) within the framework of the Clean Development Mechanisms provided in the Kyoto Protocol.

In 2004, IBERDROLA received the highest point score among all electrical power companies in a ranking prepared by the World Wildlife Fund (WWF), which analyzed the conduct of 72 major international companies which collectively produce 65% of all of the electricity generated in the OECD (see Table 75).

The companies were classified according to their production levels, sales, and investments in renewable energy sources and in natural-gas cogeneration. IBERDROLA achieved this position because of its "comparatively high percentage of renewable energy sources (-) and its future investment goals."

TABLE 75

WWF/ADENA Global ranking of electrical power companies, December 2004

Ranking	Company	Country	Point score
1	IBERDROLA	Spain	4.3
2	FPL Group	United States	4.1
3	Scottish Power	United Kingdom	3.7
4	Hydro Quebec	Canada	3.1
5	RAQ UES of Russia	Russia	3.1
6	Essent	The Netherlands	3.0
10	Electrabel	Belgium	2.7
14	Endesa	Spain	2.1
19	EDF Group	France	1.3
20	RWE	Germany	1.3
29	Enel	Italy	0.9
35	EDP	Portugal	0.7
41	EON	Germany	0.6
51	Unión Fenosa	Spain	0.4

The sub-section on action programs in Management section contains the actions that are aimed specifically at reducing distribution losses. These actions have a direct effect on the reduction of greenhouse gas emissions, because they reduce the need for the generation of electrical power.

The Energy Wisdom Program (EWP) is a voluntary initiative launched by EURELECTRIC, through which the European electrical power industry is demonstrating its proactive position regarding sustainability in terms of climate change with regard to the production, distribution, and use of electrical power. According to the most recent report (2000–2002), twelve companies from nine different countries have participated in the EWP program, including IBERDROLA, which in 1999 was the first to subscribe to this plan and subsequently was an active participant in the reports for 1990–1999/2000 and for 2000–2002. These contributions have been reflected in the various publications issued by EURELECTRIC, most recently in February of 2004.

The minimization or total avoidance of CO2 emissions that IBERDROLA contributed to the 2000-2002 EWP report amounted to a total of 3,880,829 kt (for the year 2002), as a result of the new potential installed in 1990 and accumulated since then in the areas of wind-

energy generation, natural-gas combined cycles, the development and use of both mini-hydroelectric and large-scale hydroelectric plants, the recapacitation of nuclear plants, and cogeneration facilities. This figure represents a percentage of IBERDROLA's total emissions that is significantly greater than the figure achieved by other electrical power companies in its sector.

GLOSSARY OF TERMS

Environmental activity: Any operation whose principal purpose is to prevent, reduce, or repair damage done to the environment. (Resolution of March 25, 2002, issued by the *Instituto de Contabilidad y Auditoria de Cuentas*)

AT: High voltage (HT).

BT: Low voltage (LT).

Environmental certification: Official confirmation by an accredited environmental verifier of compliance with the requirements of a particular standard and of the reliability of the data and information included in reports and documents

Cogeneration: Process based on the use of primary sources of heat to produce electrical power, with subsequent use of the residual heat.

CO₂: Carbon dioxide.

Sustainable development: Development that satisfies the needs of present generations without compromising the capacity of future generations to satisfy their own needs (Brundtland Report, 1987).

Renewable energy: Sources of energy that are periodically made available to mankind and that mankind can use and convert into energy that is

useful for satisfying its needs. In other words, they are continuously renewed, unlike fossil fuels such as oil, coal, gas and uranium, of which only finite quantities are available. This concept includes hydroelectric, wind, solar, biomass, geothermal, sea, and wave energy. Although they are in fact consumables, urban waste and other organic materials are usually also classified as a renewable energy. (Ref.: The European Union and the Ministry of Industry and Energy)

Eurelectric: The European Electricity Industry Union.

Eutrophication: The process of enriching waters through the addition of nutritive substances, which usually lead to growth in the production of algae and other aquatic plants.

Environmental Impact Assessment: Set of studies and technical systems that make it possible to estimate the effects that the execution of a particular project, work, or activity have on the environment (Royal Decree No. 1131/1988, of September 30).

Environmental costs: The amounts arising from environmental activities that have been performed or that need to be carried out to ensure the management of the environmental effects of an organization's operations, and the amounts arising from environmental commitments. These include the costs of pollution prevention, waste and spillage treatment, decontamination, restoration, environmental management, and/or environmental audits. (Resolution of March 25, 2002, issued by the *Instituto de Contabilidad y Auditoria de Cuentas*)

GHGs: Greenhouse gases. The group of six gases that are present in the earth's atmosphere and that cause the greenhouse effect: carbon dioxide, methane, nitrous oxide, sulfur hexafluoride, perfluorocarbons (PFCs), and halofluorocarbons (HFCs).

Demand management: Actions taken by power distribution and sales companies directly related to improving the service provided to users, as well as energy efficiency and conservation.

GW: Gigawatt (10^9 watts).

kWh: Kilowatt-hour. Unit of measure of electrical power.

Limnological: Pertaining to lakes, lagoons, and, by extension, to fresh and continental waters in general.

CDM (Clean Development Mechanism) (Mecanismo de Desarrollo Limpio, or MDL). The Kyoto Protocol establishes three mechanisms for supporting the reduction of emissions in other countries, i.e., the Clean Development Mechanism, the Joint Application, and the Sale of Emission Rights. The Clean Development Mechanism allows a country listed in Annex I to the United Nations Framework Convention on Climate Change to invest in a country not included in that annex, in order to develop projects for the reduction of emissions or for the fixing of coal. The country listed in Annex I receives the reduction credits for the project, which it then uses to fulfill its own emission-reduction commitments.

Environment: The natural physical world, including the air, water, earth, flora, fauna, and non-renewable resources, such as fossil fuels and minerals. (Resolution of March 25, 2002, issued by the *Instituto de Contabilidad y Auditoria de Cuentas*)

MT: Medium voltage (MV).

MW: Megawatt. 10^6 watts.

MWh: Megawatt-hour. Unit of measure of electrical power, equivalent to 10^3 kWh.

NO_x: Generalized symbol for various different oxides of nitrogen.

Particles: Solid emissions that may accompany gaseous emissions produced through the burning of fuels.

PCB: Term that includes polychlorobiphenyls or biphenylpolychlorides, polychloroterphenyls, monomethyltetrachlorodiphenylmethane, monomethyldichlorodiphenylmethane, monomethyldibromodiphenylmethane, and any other mixture whose total content of any of these substances is greater than 0.005% by weight. It is a family of toxic, irritating, and hard-to-degrade hydrocarbons that are used in some electrical equipment, but whose use was prohibited by EU Directive 96/59/UE, which requires their total elimination in the EU by the year 2010.

Kyoto Protocol: International protocol drawn up in Kyoto in 1997, pursuant to which signatory countries agree to reduce their greenhouse gas emissions over the period from 2008 to 2012, taking as a basis the emissions for the year 1990. Spain, together with all the other EU countries, formally subscribed to the Kyoto Protocol in 2002.

Waste: Any substance or object belonging to any of the categories listed in the appendix to the Law on Wastes, which its owner discards, intends to discard, or is obligated to discard. All materials also included in the European Waste Catalogue (EWC) are considered as such. (Law No. 10/1998, of April 21).

Hazardous waste: Waste included in the list of hazardous wastes approved in Royal Decree No. 952/1997, as well as the containers or receptacles and packaging in which such materials are or were contained, in addition to all those wastes classified as hazardous by European Community standards and by standards that the Government might

Environmental Report

approve in accordance with the provisions of the European standards or of international conventions to which Spain is a party. (Law No. 10/1998, of April 21)

Environmental Management System: The system via which a company controls its activities, products and services that cause, or might cause, environmental impacts.

SO₂: Sulfur dioxide.

Terajoule: Unit of measure of electrical power, equivalent to 10¹² joules (1 kWh = 3.6 x 10⁶ joules)

UNESA: The Spanish Electricity Industry Association.

UNE-EN-ISO 14001:1996: International standard for Environmental Management Systems as revised in 1996 and updated in the UNE-EN-ISO 14001:2004 standard in November of 2004.

UNE-EN-ISO 9001:2000: International standard for Quality Management Systems, as revised in the year 2000.

2004 Sustainability Report

Social Report

A STRATEGIC AND COMPREHENSIVE FOCUS ON CORPORATE SOCIAL RESPONSIBILITY

Corporate Social Responsibility is the framework for the integration of IBERDROLA's policies and activities with its customers, shareholders, employees and other interest groups with which it interacts. This enables the company to carry out its activities within an advanced society that raises increasing demands upon and expectations of companies.

With the conviction that its primary responsibility is to achieve its business mission and goals with excellence, IBERDROLA has created an unbreakable link between and among the performance of its business activities as a leader in the energy industry, economic and environmental sustainability, and the progress of the society in which it takes part.

Thus, IBERDROLA believes that sustainable development is a strategic factor in its business activities and concentrates its management capacity and financial and technological potential on such development.

The company aims at achieving profitable growth, create value in its environment and contribute to the development of the energy infrastructure in Spain and in the other countries in which it operates, reconciling profitability with the best environmental and social practices.

IBERDROLA links its activities as a leading company with economic, environmental and social sustainability

This approach is effectively integrated into the general strategy of the company through its Strategic Plan, based on the growth in electricity generation capacity using the least polluting and most efficient environmentally-friendly technologies and on the improvement in the quality of the service it provides to its customers.

IBERDROLA carries out its business activities trying to accurately identify the demands of its interest groups and maintains close relationships with all of them, in order to incorporate their expectations into the company's strategies and policies.

To prepare the 2004 Social Report, IBERDROLA considered the following interest groups:

- Human Team
- Shareholders and Financial Community
- Regulatory entities
- Customers
- Suppliers
- The Media
- Society

Moreover, IBERDROLA prepares information relating to its natural surroundings that is contained within the Environmental Report, which is included within this document.

Each Interest Group and its relationship with IBERDROLA are described in the relevant chapter for each Group.

The company's commitments and goals are set forth explicitly in the text of IBERDROLA's Vision Statement, which reads as follows:

"We want to be a company which is preferred for our commitment to creating value, the quality of people's lives and care for the environment."

IBERDROLA's vision, which integrates the economic, social and environmental aspects of sustainability, is based on five values that represent firm commitments of the company:

Financial results: IBERDROLA's commitment to achieving the growth and profitability objectives outlined in the company's Strategic Plan is the means of ensuring business success and satisfying the demands and expectations of all those with an interest in IBERDROLA's present or future.

Respect for the environment: IBERDROLA's bet on clean energy is one of the pillars of our model for an energy company in the 21st century. We work to ensure that respect for the environment is perceived and recognized as a value which distinguishes and identifies us as a company.

Trust: IBERDROLA wants to be a company capable of creating trust among all those who participate in and are otherwise involved with the company, through the establishment of a permanent dialogue.

Corporate ethics and responsibility: IBERDROLA is committed to corporate governance best practices, business ethical principles and transparency in all the areas of its activities. Responsible behavior by all those who form a part of IBERDROLA members is a firm directive.

Sense of belonging: IBERDROLA works to establish solid and durable ties with its interest groups, so that they develop a sense of belonging to an excellent company of which they are an integral part and sense of involvement with its purpose.

IBERDROLA's commitments to the Vision and values of the company are not only a declaration of principles, but also part of its day-to-day practices and are integrated into the daily activities of the company and integrated into the daily management of the company in each area of business activity.

In September 2004, IBERDROLA created a **Corporate Reputation Committee**. Among its main duties, the Committee will approve and develop a reputation management model based on the balanced satisfaction of demands and expectations of the company's main interest groups.

IBERDROLA created a Corporate Reputation Committee in 2004

The following chapters set forth IBERDROLA's business principles and policies and its most relevant actions during FY 2004.

This follows a line of public reporting commenced in prior years that is highly valued by various social agents. The following table includes three evaluations of the information provided in FY 2003.

External evaluations of information on Corporate Social Responsibility (2003) by the IBERDROLA Group

- **Ranking from Actualidad Económica. July 2004**
IBERDROLA and Telefónica were ranked first in a global evaluation of IBEX 35 companies.
- **Survey by Fundación Empresa y Sociedad. October 2004**
Following an analysis of 40 large Spanish companies, IBERDROLA was ranked first for environmental information and second for economic/financial information.
- **Analysis by OEKOM Research. November 2004**
Following an analysis of 37 international energy companies, addressed to entities interested in socially responsible investments, IBERDROLA was ranked third in the general ranking.

Note: all the evaluations made and published in 2004 regarding public information on corporate social responsibility have been taken into account and considered on a global basis. There may be other evaluations about partial issues that have not been included in this table

This positive evaluation of IBERDROLA's actions encourages all of the Group executives and professionals to get deeper in the subject of *Corporate Social Responsibility* (CSR) in order to integrate them into the culture of the company. The following table includes IBERDROLA's most significant initiatives in this area, highlighting the company's social commitment over the last decade.

Most significant initiatives adopted by the IBERDROLA Group aimed at developing Corporate Social Responsibility

- 1992: Adherence to the UNPEDE Statement of Environmental Policy and Code of Conduct.
- 1995: Adoption of a Code of Conduct for the Securities Markets
- 1998: Adoption of the Code of Good Governance applicable to Listed Companies.

- 2000: Inclusion in the Dow Jones Sustainability Index of the New York Stock Exchange.
- 2001: Inclusion in the European Sustainability Index DJSI STOXX.
- 2002: Adherence to the UN Global Compact.
- 2002: Participation as a Founding Member in the Sustainability Excellence Club.
- 2003: Inclusion in the Corporate Reputation Forum.
- 2004: At the General Shareholders' Meeting for the previous year, shareholders decide to include IBERDROLA's CSR information in the Group's Annual Report.
- 2004: IBERDROLA participates in the constituent meeting of the Spanish Global Compact Association.

A number of activities take place both internally and externally for these purposes.

IBERDROLA participates in a presentation by the UN Global Compact in the Basque Country

Internally, IBERDROLA has evaluated its position with respect to the most up-to-date CSR practices. As this evaluation has been carried out by an independent firm, it has provided valuable information about the company's current practices and the elements that should be improved.

On the basis of the above, IBERDROLA has prepared a **Corporate Social Responsibility Plan**. The programs included in such plan will enable the company to perform the actions needed to consolidate its reputation as a socially responsible company.

IBERDROLA is preparing a Corporate Social Responsibility Plan

Externally, IBERDROLA actively participates in associations, forums and focus groups relating to the analysis and dissemination of Corporate Social Responsibility, collaborates with universities in summer and graduate courses, and participates in workshops and conferences of various kinds, communicating the company's practices and promoting CSR among its peers, customers and suppliers.

IBERDROLA's participation in various CSR conferences and workshops during 2004

Sponsorship of summer and graduate courses that deal with CSR:

- Universidad del País Vasco
- Universidad Autónoma de Madrid
- Universidad Nebrija

Participation in CSR forums:

- Feria Saluslaboris
- Meeting organized by Fundación AVINA
- Conference on Excellence and Quality
- National Conference on the Environment
- Fall courses by the Universidad Complutense and the Municipality of Madrid
- Sessions organized by Fundación Largo Caballero

These activities supplement the activities carried out by the company as part of its daily operating activities in its capacity as a member and participant in a number of associations (the most relevant memberships and participations are described on the following page.)

The IBERDROLA Group 2004 Social Report includes the activities of the following companies:

- IBERDROLA, S.A. and its wholly-owned electricity and gas utilities in Spain.
- COELBA, COSERN and CELPE (Brazil), ELECTROPAZ, ELFEO, CADEB, EDESER (Bolivia), ESSAL (Chile), affiliated companies in Mexico and Corporación EEGSA (Guatemala).

No material changes in the size, structure or ownership of IBERDROLA, or in the products and services sold, have taken place with respect to the 2003 Social Report, nor has there been a change in the bases, preparation criteria or calculation methods.

IBERDROLA has followed the recommendations of the "Global Reporting Initiative." Thus, the information published for FY 2004 incorporates the contents of the current GRI Guidelines.

Social Report

IBERDROLA and its affiliates and managed companies are members of more than 270 associations and organizations relating to their business activities. Below is a list of the most relevant domestic and international entities:

International	EURELECTRIC European Energy Forum Electric Power Research Institute World Energy Council Conference Board Confederation of European Industries and Entrepreneurs
Spain	Confederación Española de Organizaciones Empresariales (CEOE) UNESA Círculo de Empresarios Club Español de la Energía Asociación Española del Pacto Mundial de las Naciones Unidas Asociación para el Progreso de la Dirección Patronato Casa de América Consejo Superior de Cámaras
Bolivia	Cámara Boliviana de Electricidad Cámara de Industria y Comercio de Bolivia Cámara Española de Comercio
Brazil	Associação Brasileira de Distribuidores de Energia Elétrica (ABRADEE) Associação Nacional de Qualidade Total Câmara de Comercio Americana Instituto Ethos
Chile	Asociación Nacional de Empresas de Servicios Sanitarios Asociación Gremial (ANDESS A.G.) Cámara Española de Comercio
Guatemala	Cámara de Industria de Guatemala (CIG) Cámara de Comercio de Guatemala Cámara Española de Comercio Asociación de Gerentes de Guatemala (AGG)
México	Asociación Mexicana de Energía Eléctrica (AMME) Asociación de Industriales del Sur de Tamaulipas, A.C. (AISTAC) Asociación Mexicana en Dirección de Recursos Humanos, A.C. (AMEDIRH) Cámara Española de Comercio Confederación Patronal de la República Mexicana

Acknowledgements:

The practices of Corporate Social Responsibility form an integral part of the culture of the IBERDROLA Group's affiliated companies. In 2004, they obtained the following awards:

COELBA	'Top Social 2004' Award for its project 'Agente Coelba', and 'Destaque no Marketing 2004' Award for its initiative of sending electricity bills written in Braille to its visually-impaired customers.
CELPE	' <i>Empresa amiga da criança</i> ' Award for its extensive social work with children and adolescents.
COSEERN	SESI (Industry Social Service) ' <i>Qualidade no Trabalho 2004</i> ' Second Prize for the implementation of social responsibility policies and measures in employment relationships.

HUMAN TEAM

The Code of Professional Conduct of the IBERDROLA Group (available at www.iberdrola.com) was approved by the Board of Directors on February 27, 2002 and distributed to all employees. This code establishes the criteria for guiding the conduct of professionals and the principles and values of the Group: the person, the customers, competitiveness, results, ability, honesty, loyalty and team spirit.

The application of the Code of Professional Conduct reinforces the company's ethical commitment to complying with the human resources and labor principles included in the UN Global Compact, the principles declared by the International Labor Organization and the OECD's recommendations included in its Guidelines for Multinational Enterprises.

To ensure compliance with these regulations, the Internal Audit Division evaluates and prepares an annual report on the degree of compliance with such rules of professional conduct. To date, assessments have been made in 2003 and 2004, and the results were remitted, as provided in the Code, to the Audit and Compliance Committee, the Vice-Chairman & CEO, the Personnel Division and the Management Committee.

IBERDROLA complies with domestic laws protecting human rights, especially where labor is concerned. Therefore, no claims have ever been made against the company in this area.

Thus, the company reaffirms its decision to promote and comply with the principles of non-discrimination, equal opportunity, freedom of association, collective bargaining, protection of ethnic minorities, and the rejection of child and forced labor.

WORKFORCE

At the end of FY 2004, 8,546 employees worked at IBERDROLA's centers in Spain; 1,871 worked at IBERDROLA's wholly owned subsidiaries in Spain and 3,133 equivalent employees worked at IBERDROLA's affiliated companies in Latin America.

Guatemala	300	168	167
Total	3,133	2,923	2,743

(*) Workforce based on IBERDROLA's stake, which can be seen in the chapter "Additional Information". The total number of employees of the companies equaled 7,146 in 2004.

In an industry characterized by a historically low female presence, the female employment rate is gradually increasing at Group companies, especially with respect to positions requiring high qualifications.

TABLE 79

Distribution by sex (%)	IBERDROLA Group

Mexico	84.3%	15.7%
Guatemala	81.9%	18.1%

It should be noted that almost all employment agreements are permanent contracts (99.37%) for full-time positions (99.9%). The average age of employees is 45.8 years, while the average length of service is 20.2 years.

Each company of the IBERDROLA Group prepares and adopts its own management systems based on the characteristics of the industry where it operates. The policies and systems applied by the parent company are described below, even though, in certain cases, they are common to various companies.

Organizational Model

IBERDROLA's organizational model is based on professional levels and is intended to make the organization more flexible, recognize the people's real contribution to their positions and facilitate an integral management of human resources.

Job Creation

IBERDROLA creates stable and high-quality jobs. In 2004, in accordance with the Labor Plan, which was launched in 2003 to ensure generational renewal and replacement of the company's professionals, 323 new employees were incorporated, with a workforce turnover rate of 5.25%.

TABLE 82

The principles of the Recruiting and Screening Policy (available at www.iberdrola.com) are inspired by the Code of Professional Conduct:

- Principle of nondiscrimination and equal opportunity.
- Principle of universal recruitment.
- Principle of selection based on candidates' merits and abilities.

In 2004, IBERDROLA implemented the *Canal de Empleo* (Employment Channel) (available at www.iberdrola.com), a tool that allows the company to post job offers and receive job applications from other countries.

IBERDROLA works with universities and academic centers, through Educational Cooperation Agreements, offering knowledge and experience to students to facilitate their incorporation into the labor market. In 2004, 465 students participated in IBERDROLA's apprenticeship programs (Spain).

The Brazilian companies implemented the *Estágio Curricular* Program for undergraduate students. For example, 98 students participated in COELBA's apprenticeship program during 2004. COELBA also continued with the *Aprendendo a Trabalhar* Program, focused on promoting personal and professional development of minors from low-income families.

In 2004, 126 adolescents participated in this program. In 2003 COELBA's Program was awarded the TOP RH 2003 prize awarded by ABRH and ADVB.

Compensation Model

IBERDROLA's compensation model is linked to business profits, and its purpose is:

- To share the company's success and risks with its professionals.
- To provide equitable and competitive compensation according to the market where IBERDROLA operates.
- To recognize efforts, commitment and the creation of value.
- To value experience, energy, enthusiasm, diversity, versatility and flexibility, as well as international experiences.
- To fairly and systematically assess the results obtained.
- To provide performance-based compensation.

IBERDROLA's compensation model bases the compensation package on the following criteria:

- Flexible labor framework.
- Fixed gross salary and variable compensation based on professional levels and on evaluations of performance and goals (financial and non-financial).
- Compensation in kind and other social benefits.

In 2004, all IBERDROLA's employees participated in the variable compensation program based on an individual evaluation process.

Aware of the importance of human resources as the company's most valuable asset, IBERDROLA offers other benefits, including:

Social benefits

- Pension plans.
- Group life and accident insurance.
- Special electricity rates.
- Health assistance.
- Food assistance.

Social assistance

- Length-of-service bonuses to employees with 25 and 40 years of service. In 2004, 642 employees received this benefit.
- Special aid to employees with handicapped children or spouses. In 2004, 65 employees received this benefit.
- Scholarships to employees' children. In 2004, the company granted 389 scholarships.
- Special benefits for work-related death.
- Special advances. In 2004 the company made 193 special advances.
- Holiday apartments at seaside areas - 89% fully-booked.
- The Three Wise Men Celebration. In 2004, the company gave toys to 3,955 children of employees aged 0 to 10.

Executive Management Program

Aware of the importance of stimulating its professionals, in 2004 IBERDROLA launched a new executive management program, becoming a benchmark company in the management of Human Resources for its management team.

This program is divided into three sections: program guidelines, compensation optimization plan and professional development plan.

The program balances the nature and duties of the executive team and enables a successful development of the professional skills of such executive team.

The company organized informational sessions in order to effectively communicate the contents of such program, which sessions were attended by the entire management team.

Social benefits and assistance in Latin America

Latin American companies provide specific benefits and assistance to their employees, depending on the country and the company. However, these benefits and assistance exceed the requirements established by local legislation.

Health and life insurance and food and travel assistance are the most common benefits. These benefits also include nursery school and kindergarten aids, aids for handicapped children student grants by the Brazilian companies to stimulate the education of employees, and childbirth assistance provided by Corporación EEGSA (Guatemala).

LABOR RELATIONSHIPS

Collective bargaining and trade union representation

IBERDROLA respects employees' rights to be represented by trade unions or any other lawful representatives and to participate in negotiations to execute collective bargaining and other labor agreements.

In Spain, all employees, except executives, are covered by collective bargaining agreements (95.8%). In accordance with the commitment to social dialogue assumed by the parties, IBERDROLA's employees are represented by trade unions in various aspects of the organization and management of the company. Membership in trade unions totals 60%.

CHART 32

Trade union representation – IBERDROLA Group

CHART 34

Trade union representation - Iberdrola Ingeniería y Consultoría, S.A.

CHART 33

Trade union representation - Iberdrola Operación y Mantenimiento, S.A.

CHART 35

Trade union representation - Iberdrola Energías Renovables, S.A.

A parity committee (*comisión paritaria*) was created to resolve any issues or disputes that might arise from the interpretation of the Agreement and four joint subcommittees to resolve any doubt or dispute that may arise from the interpretation of the applicable regulations.

The Iberdrola Group's III Collective Bargaining Agreement was executed on July 5, 2004, is effective through December 31, 2006, and includes the following chapters:

Labor policy: focused on harmonizing the company's goal of having a structure tailored to the needs of a changing and competitive market and the employees' goal of preserving their jobs and working conditions.

Family life: To supplement the rights granted by Spanish law, the Collective Bargaining Agreement improves the current leave system, increases paid leaves, includes cohabitants, increases the breastfeeding period and the right to have reduced working hours to comply with a guardian's duties to two years. The child-care extended leave without pay was extended to 3 years, including adoption cases.

Right to information: the III Collective Bargaining Agreement increases information provided to labor representatives and has added a section relating to business transparency in labor-related issues.

Trade union elections have been held at Iberdrola Energías Renovables, Iberdrola Operación y Mantenimiento and Iberdrola Ingeniería y Consultoría. Iberdrola Energías Renovables and Iberdrola Operación y Mantenimiento's corporate relationships are subject to their specific labor frameworks, which were converted into Collective Bargaining Agreements in February 2005.

In Latin America, employees also participate in negotiations of labor-related issues with the companies through trade unions. The companies have also created the channels to communicate the plans, strategies and results to employees and to receive their inquiries and suggestions.

Workforce Reduction Plan

In July 2003, the Office of Employment and Social Issues (*Dirección General de Trabajo y Asuntos Sociales*) approved a Workforce Reduction Plan applicable to Spanish companies within the framework of the IBERDROLA Group's III Collective Bargaining Agreement.

The adoption and implementation of this universal, voluntary and non-discriminatory plan is being accomplished with the continuous cooperation and contribution of trade unions and governmental authorities.

During its period of effectiveness (through December 31, 2006), a maximum of 3,168 employees will be affected. In all cases, there is a formal notice to the interested parties, and the specific circumstances of each professional are taken into account.

IBERDROLA simultaneously implemented a Labor Plan for the generational replacement and renewal of the workforce, offering opportunities to 680 new professionals.

Social Report

Disciplinary Sanctions

The collective bargaining agreement in effect in Spain regulates failures to comply with employment duties at different levels and their corresponding sanctions, as well as the disciplinary proceedings applicable in each case.

Freedom of Expression

IBERDROLA respects the principle of freedom of expression. All employees are free to express any issues that may affect their individual labor relationships and their relationships with third parties, both within and without the organization. A suggestion mailbox is available to employees to deposit their initiatives, complaints and concerns.

Employees may also submit questions, in a confidential and anonymous form, with respect to the commitments of IBERDROLA as well as the professionals themselves, under the Code of Professional Conduct.

Moreover, IBERDROLA has implemented initiatives such as the *Comparte* (Sharing) Program and meetings of employees with the Vice-Chairman & CEO, in order for management to hear employees' concerns about the company's business.

In Latin America, Corporación EEGSA (Guatemala) created a suggestion e-box where employees can direct their suggestions, concerns or inquiries. The Participatory Management model adopted by COSERN (Brazil), and COELBA's (Brazil) initiatives such as *Fale Francamente* (Speak Frankly) or *Reuniões Itinerantes da superintendencia* (Roving Management Meetings) should also be noted.

2004 Labor Environment Survey

Based on the premise that human resources are one of the most valuable assets of the company, the company is constantly concerned with its labor environment. To that effect, the company carries out regular labor environment surveys to know the professional satisfaction level of its employees and to identify areas of improvement to work on in order to increase the efficiency of the organization and the satisfaction of its employees.

A labor environment survey performed in July 2004 revealed that the labor environment has improved over previous years, with substantial improvements of views on the company's strategy, and maintaining perceptions on work organization and relationships with superiors. Personnel promotion and enhancement of professional careers have been identified as in need of improvement.

The affiliated companies in Latin American also resort to studies on the labor environment and employee surveys to prepare social reports. In 2004, COELBA (Brazil), ELECTROPAZ and ELFEO (Bolivia) and ESSAL (Chile) conducted these studies, with high employee participation levels.

Working Hours

Employees at IBERDROLA (Spain) work 37 hours a week, but starting and quitting times are sometimes flexible. The peak work season runs from June 1 to September 15.

Maternity Support Policy

Aware of the problems faced by professionals in reconciling maternity and child care with the business work, IBERDROLA wants to contribute to harmonizing maternity with a successful professional career. Thus, in 2003, a policy designed to support maternity and family was implemented consisting in the following:

- A 15-calendar-day paid maternity leave prior to the expected delivery date. 45 people have already enjoyed this benefit.
- A five-hour flexible work schedule from the expiration of statutory maternity leave to the first anniversary of the delivery date, without any salary reduction. 106 people have already enjoyed this benefit.

IBERDROLA has implemented policies to reconcile family and professional life

HEALTH AND SAFETY

For IBERDROLA, safety is a social, ethical and economic imperative integrated into how it understands sustainability and social responsibility.

Loyal to its goal of outperforming its results and with the ambitious objective to completely eradicate accidents, in 2003, IBERDROLA launched a Special Occupational Risk Prevention Plan, which is based on a maximum commitment to occupational safety and health, the main aspects of which are:

- Integration of prevention standards within the organization.
- Continuous improvement of efficiency in the prevention system.
- Promotion of training and corporate participation.
- Increased preventive monitoring of outsourced work.

In 2004 the number of accidents resulting in leaves dropped by 5%

The ongoing implementation of this Prevention Plan continued throughout 2004. The most significant actions were:

- Redefinition of the Prevention Policy, communication to employees and availability to all the parties involved (at www.iberdrola.com).
- The Management by Objectives program has linked the Health and Safety results to a portion of managers' compensation.
- Review of the Occupational Risk Prevention Management System seeking its continuous improvement.

- The strongest efforts have been made in the training area, reaching 68,882⁽¹⁾ hours, which means 8.06 training hours on prevention per employee.
- More thorough preventive monitoring of outsourced work, exercising stricter controls over both documents and information as well as execution of the work and the preventive methods used, which has translated into a reduction in the accident rate.

IBERDROLA was awarded the OHSAS 18001 Occupational Hazard Prevention Certification for IBERDROLA S.A., IBERDROLA Generación S.A., IBERDROLA Distribución Eléctrica S.A. and IBERDROLA Ingeniería y Consultoría S.A. In 2003, it successfully passed its first follow-up audit, and in December 2004, it successfully passed the second one.

Organization of prevention

Executive Responsibility

Responsibility for prevention lies with the operational business line. The executive entities charged with implementation and coordination are the Prevention Coordination Committees, which work closely with the Prevention Service. During 2004, these Committees, of which there is one for each company, have met quarterly and have become the drivers of preventive activities within the Iberdrola Group.

Prevention Service

IBERDROLA's joint corporate and multidisciplinary Prevention Service has competent employees in the four specialty areas required by government regulations. It is a technical committee that advises, supports and fosters the services of the operational area.

Participation

IBERDROLA has 38 local Safety and Health committees, in addition to a Central Committee, which have been created in accordance with the Occupational Risk Prevention Law. 258 persons participate in the committees. The committees have equal composition and the same number of representatives of the company and of employees. In 2004 the committees met quarterly. They are the most important control authority for IBERDROLA's Prevention Management System, and are the place where formal agreements with trade unions about this issue are established.

⁽¹⁾ Includes the training on Occupational Hazard Prevention for IBERDROLA S.A., Iberdrola Generación and Iberdrola Distribución.

Occupational Health

The company's own medical services monitor the health of employees by means of the preventive treatment of illnesses and regular checkups to monitor health. 7,294 checkups were performed in 2004, and in 97.2% of the cases the employees were fit for their job.

Health and vaccination campaigns enable the prevention of certain specific conditions and the detection and treatment of infectious diseases. As in prior years, in 2004 the company implemented a flu prevention campaign with the participation of 15.23% of employees. Due to the low levels of HIV infections, each case is dealt with individually and confidentially.

Method for recording and reporting occupational accidents and illnesses

IBERDROLA has a procedure for recording and reporting occupational accidents and illnesses that ensures strict compliance with the applicable procedure. Occupational accidents and illnesses are reported to the Prevention Service, the labor authorities and worker representatives.

Main Indicators

IBERDROLA's commitment to prevention is reflected in the continuous decrease in the employee accident rate. Thus, in 2004, the number of accidents resulting in leaves dropped by 5% from 2003. The Frequency Index,* which in 2004 was quite similar to the one in 2003, has remained well below the average figures for Spain and for the electricity industry.

The annual average of training on prevention was 8 hours per employee

CHART 36

Changes in the accident frequency index*

(* Frequency Index = Number of accidents resulting in leaves per million of hours worked)

TABLE 84

Main indicators	2004	2003	2002

Severity index	0.46	0.39	0.44
Absenteeism index	2.71	2.74	2.52

Commitment to Health and Safety in Latin America

Measures to guarantee the health and safety of employees were adopted in Latin America, applying domestic occupational rules and regulations. The health and safety policies and actions reflect ongoing concerns and a commitment to improving results.

In order to plan, control, coordinate and accompany the management of preventive activities, the Latin American companies, except for Guatemala and two small companies in Bolivia, have joint Health and Safety Committees formed by equal number of representatives of the companies and of employees.

In 2004, the accident frequency index at CELPE (Brazil) dropped by 11% from the prior year. In addition, the activities of CELPE, such as *Ginástica Laboral*, *Prêmio de Saúde y Segurança* addressed to its employees, the *Gestão da Economia Familiar*, the *III Jornada de Segurança* program entitled "*Segurança, trabalho de todos*" or the *Encontro RSM & CIPAs* program, intended to coordinate the actions of the Accident Prevention Internal Committees with the overall health, safety and environmental management policy, should also be noted.

COELBA (Brazil) received the *Medalha de Segurança Prata Eloy Chaves* award in 2003, which was awarded by the *Associação Brasileira das Concessionárias de Energia Elétrica* for achieving the second-best results among electricity distribution companies. Noteworthy among activities undertaken in 2004 was the organization of the *1ª Feira de Saúde* and the coordination of projects for third parties within the safety framework, such as *Circo Picolino*, *Vida Brazil* or *Energia Amiga*.

PROFESSIONAL DEVELOPMENT

IBERDROLA invests both in Spain and in its Latin American affiliates in the development and training of its professionals by means of specific technical and management programs.

Reception and Integration Plan

The purpose of the Reception and Integration Plan is to welcome new employees, facilitate their adjustment and offer them a global view of the IBERDROLA Group. Two sessions attended by 76 professionals were held in 2004.

The *Programa de Ambientação* of COSERN (Brazil), and the *Programa de Tutores* developed by COELBA (Brazil) for new employees, are similar initiatives to be noted in this area.

Competency-based Professional Development Model

The *Programa Desarroll@*, program was re-launched in 2004. It is directed towards managers and technicians and its main goal is to make strengthen their to improve, stimulate their development, and consolidate values, attitudes and behavior that we want to incorporate in the culture of the IBERDROLA Group, and foster participatory leadership based on communication.

The *Desarroll@* program enables each professional to propose his own Individual Development Plan, but involved managers in the preparation and follow-up of such plans.

Among new items that have been introduced is the nearly-completed process for identifying and assessing Technical Skills, which is accomplished by means of inquiries to a representative group of company professionals. This enables the cataloguing of knowledge and the identification of experts.

CHART 37

Most requested skills in the 2004 Individual Development Plans

Within the framework of the *Desarroll@* Program, an initiative intended has been implemented to identify and, if necessary, manage the professional skills of distinguished people selected on the basis of their professional behavior, their knowledge, their abilities and attitudes, their results and the commitment to IBERDROLA.

The *Boletín Desarroll@* bulletin, a tool to assist in professional development, has been made available to all employees through the *Portal del Empleado* (Employee Portal). It consists of seven areas with advice, messages and experience that enable reflection on the 9 general skills.

In Latin America, COELBA (Brazil) has a *Programa de Desenvolvimento de Potenciais* (Development of Potential Program) to identify, evaluate and develop employees with management potential.

In addition, COSERN (Brazil) has *Programa de Desenvolvimento de Executivos* (Executive Development Program) and promotes the participation of managers in graduate-level programs.

In CELPE (Brazil), 28 persons participated in the *Programa de Capacitação de Equipes e Gestores de Projetos de P&D* training program.

Training

Continuing from 2003, the general goal of training at IBERDROLA during 2004 was to improve the performance of employees, making professionals accountable for their own development.

Supplementing the prior training methods, the Training Itinerary and Blended Learning methods have been incorporated, which have received favorable opinions.

Improvement in service quality, a strong commitment of IBERDROLA, has brought about the renewal of a signification portion of resources, which has translated into strong efforts in the Specific Training of new professionals.

More than 50% of the training events attended by IBERDROLA personnel took place at the company's own training centers. The main training figures for 2004 were:

Social Report

IBERDROLA organized 160 environmental training courses in 2004

Within the framework of environmental management and improvement, the company organized 160 environmental training courses in 2004, 94 of which were taught with the company's own resources. 1,361 persons attended these training activities, which exceeded 5,600 hours.

⁽¹⁾Includes the training managed by the corporate training department for the entire Iberdrola Group.

In 2004, there were two approaches to training at IBERDROLA Mexico: (i) covering the basic needs of the business and (ii) covering the more specific needs of each position for an improvement in processes and procedures. Noteworthy is the training of personnel for bringing the La Laguna II plant into service, dedicating 33,500 hours to training activities.

The *Programa Trainee* of COELBA (Brazil), directed towards recently graduated professionals, is intended to develop their technical and human skills in different phases (*Integração, Rodício, Estágio Técnico and Projeto Desafio*).

At CELPE (Brazil), in addition to the specific training on electricity through the *Capacitação Continuada de Electricistas* program and the *Formação de Electrotécnicos* program, the *Circuito do Saber* program should be noted.

MBA in Electric Utility company Management

In 2004, IBERDROLA and Universidad Antonio de Nebrija implemented the first MBA in Electric Utility company Management in Spain.

The purpose of the course is to provide participants with knowledge of electricity markets in both developed and developing countries and detailed knowledge of the economic variables and management and decision-making systems used in the energy industry. The study of the decision-making process, the knowledge of the international markets and the analysis of issues relating to sustainable development and environmental concerns are core aspects.

Sports

In 2004, and for the third year in a row, IBERDROLA participated in the 13th annual Raider's Trophy, an inter-company adventure tournament, with two teams made up of six professionals each. The company won second prize in the mixed category.

In addition, 50 of the company's professionals participated in road races in a number of Spanish cities.

IBERDROLA Group at the 13th annual Raider's Trophy

At Corporación EEGSA (Guatemala), the Triatlón 2004 (2004 Triathlon) and the *Campeonato Navideño de Papifútbol* (Christmas Soccer Tournament) should be noted.

The Caminhada da Prevenção e da Solidaridade

(Prevention and Solidarity Walk) organized by CELPE (Brazil) is an event that enables the practice of physical activities and stimulates solidarity and social responsibility. Near 500 persons participated in 2004. Three tons of food were collected and handed to 11 entities that assist children who are in situations of social risk.

INTERNAL COMMUNICATION

Direct access to information about the company's activities, challenges and projects is one of the keys to the high degree of competitiveness of IBERDROLA's employees.

Internal communication is articulated on the basis of a number of channels that are described below. Their common purpose is to support and motivate the daily performance of the excellent human resources make up the company.

Meetings of the Vice-Chairman & CEO with Employees

More than 2,000 employees from all geographical areas and divisions of IBERDROLA attended the four meetings held with Ignacio Galán in Bilbao, Valencia, Valladolid and Madrid. Under the slogan *Un futuro lleno de energía* (A future full of energy), all of them got a fist-hand glimpse from the CEO himself about the company and its future prospects. 2004 was the third time this event has been held, and is much-awaited by the employees, as shown by the fact that approximately 97% of the attendees consider it to be a very important event.

Meetings of the Vice-Chairman & CEO with employees

Energía Interna Magazine

Energía Interna is a bimonthly in-house magazine addressed to all the company's employees. This medium, which is widely accepted, enables the dissemination of the company's goals with an enjoyable human focus, highlighting the quality and capacity of its human team.

Energía Interna is sent to the homes of both active and retired employees in order to involve their families as well. This in-house magazine is an effective tool to communicate news about the life of the company, beyond channels that are more integrated within the structure of its business activities, such as *Ibernoticias Digital* or other internal communications.

Sharing Program

The Sharing Program (*Programa Comparte*) has been another core internal communication during the year. Under the slogan *Energía positiva* (Positive energy), more than 200 meetings have been held, all of them intended to foster a higher degree of participation of employees in attaining IBERDROLA's goals. Almost all employees participated in this initiative and they were able to learn about the company's Strategic Plan, the results of the Labor Environment Survey (with the strengths detected as well as opportunities for improvement) and the challenges for 2005.

Internal Communication Channel

Making the main news of the day available to the company's managers is a key value-added service that enables them to perform their duties with better knowledge of their environment. Therefore, during FY 2004 the company launched the *Canal de Comunicación Interna* (Internal Communication Channel), a working tool designed to satisfy the growing demand for information of the managers of a company such as IBERDROLA. By means of two daily issues (morning and early evening), the managers of the company get up-to-date information about the main news of the day, both related to the company and its industry, and to the socio-economic and political environment.

Ibernoticias Digital and *Ibernoticias Latinoamérica*

The company's employees are also a group with a growing demand for information. Therefore, *Ibernoticias Digital*, a newspaper available at the *Portal del Empleado* (Employee Portal) and updated daily, which is the employees main source of information, is continuously supported and improved.

One of the main programs of improvement to be highlighted is the historical information archive, a tool in high demand by users, which enables the quick and easy viewing of past reports.

One of the achievements for the year has been the launch of *Ibernoticias Latinoamérica*, a monthly e-paper about IBERDROLA in Mexico, Guatemala, Brazil, Bolivia and Chile. It is available in Portuguese and Spanish and may be accessed directly from *Ibernoticias Digital* of Spain.

Employee Mailbox

The Employee mailbox (*Buzón del empleado*) is an effective internal communication tool. Traffic in information has increased this year as a result of the company's efforts to make all information available to serve the needs of its employees

Christmas Card Contest

As usual, the company again organized the Christmas Card contest for employees' children in order to select the drawing that would later become the Christmas greeting sent by the company to its employees, customers, etc.

Other channels of internal communication

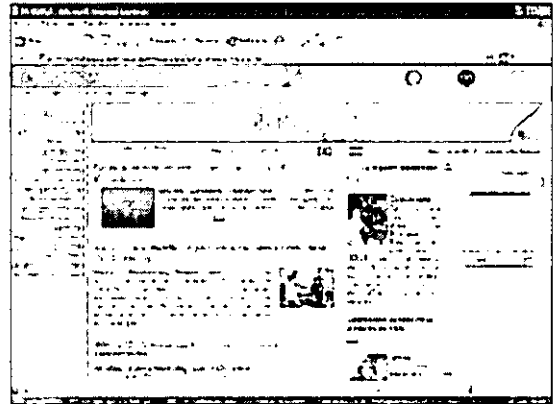

In addition, the company has other channels to communicate information of interest to its personnel, such as the "*Especial para nosotros*" (Special for us) section, available at the Employee Portal. Through this section, which is also regularly updated, the employees are informed of offers and services by IBERDROLA and other companies. In 2004, the company launched specific information campaigns, such as timely and complete information about the General Shareholders' Meeting or the new framework for employee medical and health services. Other important aspects of the life of the company have been made public this year through communication campaigns led by the Vice-Chairman & CEO, Ignacio Galán.

Internal communication in Latin America

The main channel of communication in Latin America is *Ibernoticias Latinoamérica* which has been mentioned above.

Its purpose is to create an information channel among all IBERDROLA employees in the region, sharing knowledge and information to attain a better integration. In addition, it has a link to IBERDROLA's intranet in Spain, which has enabled wider communication of IBERDROLA's achievements in Latin America.

In Mexico, other internal communication actions that have been implemented are meetings with employees, where they are informed of plans, strategies, results, etc.

Ibernoticias Latinoamérica

In Brazil, the Group's subsidiaries COELBA, CELPE and COSERN launched several activities during 2004 in addition to the usual channels (internal magazine, Intranet), such as internal advertising campaigns, news alerts for employees, annual meetings, opinion and environmental surveys, sports and cultural events, etc.

Essal, in Chile, also has an Intranet and an internal magazine, and in Bolivia Electropaz has launched various internal communication campaigns and currently has an internal magazine, *Iberpaz Hoy*.

Empresa Eléctrica de Guatemala (EEGSA) has a number of channels for communication with its employees, such as the *Buzón de Comunicación Corporativa* (Corporate Mailbox) and the regular publication of bulletins, actions that translate into greater transparency and a better labor environment.

SHAREHOLDERS AND THE FINANCIAL COMMUNITY

The IBERDROLA Group has two basic elements to assist and provide an effective response to every person that has trusted in its stock:

- The Shareholders' office
- The Investor Relations Office

THE SHAREHOLDERS' OFFICE

The Office of the Shareholder offers several channels of communication for the more than 20,000 shareholders registered in its database: quarterly, through the *Boletín de Información para Accionistas* (Shareholders' Information Bulletin), and daily, through its corporate website and toll free telephone assistance call center.

Communication Channels

Shareholders' Information Bulletin

It includes a letter to the shareholders, the release of quarterly earnings, changes in the stock market and total return for the shareholder, the most significant news and a section for the most newsworthy event during in the period.

The Office of the Shareholder regularly assesses the shareholders' satisfaction level. The inclusion of a Satisfaction Survey in the Shareholders' Bulletin is

scheduled for 2005, in order to carry out a subsequent study that will enable a deeper understanding of the interests of shareholders and, if applicable, to launch any new initiative that may be useful to improve the service.

Corporate Website

The investors' section of the website offers the shareholders the possibility to access contents about the stock market and dividends, the Annual Reports, earnings, conference calls, presentations, legal information submitted to the National Securities Market Commission, news, fixed income, and a special section for the General Shareholders' Meeting. They also have an e-mail address.

Telephone Assistance Service

The Office of the Shareholder has a toll free line (900 100 019) to deal with any concerns or suggestion of the shareholders. In 2004 this service answered about 28,000 inquiries, 61% of which referred to IBERDROLA's listing.

CHART 38

Breakdown of calls to IBERDROLA's shareholders' assistance line

Breakdown of calls to IBERDROLA's shareholders' assistance line

The inquiries of shareholders received through the various communications channels are handled in accordance with the *Office of the Shareholder's Procedure for Handling Inquiries, Complaints and Claims*.

The Office of the Shareholder enters any question, comment, complaint or claim into a database. After the recordation thereof, a note of incident is created.

That note is communicated to the Office of the Shareholder at the corporate headquarters, which studies the case and then contacts the shareholder personally to resolve it.

Follow-up of the case occurs later, and the response is also recorded in the database upon the close of the incident, which is kept in the database for six months.

Document Delivery Service

Shareholders as well as other persons and institutions that so request are sent the information or documentation they need in connection with their stock or the Company. If they want to receive regular information, they are included in a database for such purpose.

General Shareholders' Meeting

The Office of the Shareholder provides support in issues relating to the organization of and attendance at the General Shareholders' Meeting, fulfilling the shareholders' right to information provided for in Article 14 of the Bylaws.

The call to the General Shareholders' Meeting, any prior documentation, the agenda and business to be transacted are available on the corporate website.

In the days leading up to the Meeting, a document delivery service is available to the shareholders. At the meeting held in 2004, 776 shareholders were present in person and 54,275 were represented by proxy, totaling 55,051 shareholders, for a total of

432,842,744 shares representing 68.01% of the share capital.

The shareholders' line answered more than 4,000 calls relating to the General Shareholders' Meeting, 16% of the total calls received in 2004.

During the General Shareholders' Meeting, the Office of the Shareholder provides shareholders the opportunity to question the Board of Directors through its Chairman. Such questions are answered during question period strictly in the order in which they are made. Shareholders who are unable to attend the Meeting and wish to ask a question may also send their request.

The Call to the General Shareholders' Meeting sets forth the ways in which shareholders may access available information.

INVESTOR RELATIONS OFFICE

The Investor Relations Office deals with the daily inquiries of analysts and investors and provides information regularly by publishing it on the corporate website or sending regular communications to the investors and analysts registered in its database. The Office provides personalized assistance to analysts and investors in both fixed interest and equity securities.

It should be noted that there has been an increase in information provided to financial agents who are active in the area of Socially-Responsible Investment Funds.

Channels of Communication with the Financial Community

The level of activity at the main financial markets of the world remained high in 2004. The main axis of communications with investors and analysts is the quarterly release of IBERDROLA's earnings, which is freely available at www.iberdrola.com and which, since Q1 2004, is also transmitted in the format of a real-time bilingual video conference (Spanish and English) with the opportunity to ask real-time questions. Prior to each conference, the company sends to investors and analysts the documentation required to follow the conference through the website.

Social Report

Physical presentations have been made in Madrid and London, with the presence of more than 200 analysts and investors that have had the opportunity to ask real-time questions. In the aggregate, in the four video-retransmissions for the four quarters of the year, almost 100 questions were asked and answered in real time.

IBERDROLA's website also plays a key role in the communication with the financial community through the Information for Shareholders and Investors section. In 2004, this section of IBERDROLA's corporate website received more than 50,383 visitors, which browsed approximately 475,380 pages and downloaded 550,464 items.

In addition, IBERDROLA's website includes a section within Information for Shareholders and Investors that has been developed in accordance with National Securities Market Commission Communication 1/2004 of March 17 CNMV regarding the Annual Corporate Governance Report of listed corporations and other companies that issue securities listed in official secondary markets, and other means of disclosure for listed corporations.

Communications abroad were occurred through meetings with more than 470 institutional investors in Europe, the United States and Asia, and at other presentations, that were attended by another 200 investors and analysts. In addition, IBERDROLA has had road shows in Europe, the United States and Asia. It has also held one-on-one meetings with investors and analysts abroad.

IBERDROLA has organized meetings and presentations with investors and analysts in Europe, the United States and Asia.

Moreover, IBERDROLA organizes regular meetings with analysts and investors at its offices. Meetings with more than 380 interested parties were held in 2004.

In addition, during 2004, visits to electricity generating plants were organized for investors and analysts at the Sisante wind farm, the Cortes-La Muela hydroelectric plant and the Castellón combined cycle plant.

The intense activities of the Investors Relations Division have been accompanied this year by strong performance of the shares on the Stock Exchange. IBERDROLA's shares ended the year at € 18.70, up 19.3% in 2004. Additionally, one year after it was included in the selective Euro Stoxx 50 index that groups together the 50 largest listed companies in the Euro zone, IBERDROLA increased its weight in such index to 0.9493, and showed a revaluation of 11.78% one year after it was included (September 2003 – September 2004).

Information Provided to Analysts and Investors

The central axis of the documents provided to analysts and investors is the *Quarterly Earnings Release* and the *Quarterly Earnings Brochure*, which are delivered during earnings releases each quarter. Before each release, the *Analysts and Investors Quarterly Bulletin*, IBE-WATCH, which includes information about the main operating, financial and stock exchange figures for the company's activities each quarter is released.

Moreover, 50 communications were sent to analysts and investors relating to significant information about the company in 2004.

Regarding information provided to official entities, during 2004 IBERDROLA has reported 43 significant events and other issues to the National Securities Market Commission

The information provided to Analysts and Investors seeks to reflect the main points to be highlighted about IBERDROLA's Economic/Financial, Social and Environmental aspects.

Information is based on economic aspects and is centered on an analysis of each quarter's earnings. Special attention is also devoted to the communication of the most significant strategic aspects. The quarterly financial information and the strategic updates are usually included in the above-mentioned documents.

Additionally, the information provided includes sections on social and environmental issues. Specifically, a special chapter is included to reflect the most significant events relating to corporate governance. Specific points relating to Emissions Regulations are also included and the Other Events

sections of the Quarterly Earnings Release includes other significant events from a social viewpoint.

Investors and Analysts Addressed by the Office of Investors Relations

Equity Investors and Analysts

IBERDROLA has a database with more than 40 analysts and more than 800 equity investors, which is updated regularly.

- **Earnings Road Shows**

After the release of earnings for the first, third and fourth quarters of the year, road shows for analysts and equity investors were organized in Europe and the United States. About 400 analysts and investors were contacted.

- **First Road Show for Equity Investors in Asia**

This occurred in Tokyo, Hong Kong and Singapore in order to diversity the investors base. Ten equity investors were contacted.

- **Environmental Issues Conference Call**

On March 17, 2004, IBERDROLA held a conference call with analysts and investors to deal with two environmental issues: the New Regulation for Renewable Energy and the Proposed National Allocation Plan.

- **Other Activities**

IBERDROLA has made presentations at a number of international industry forums, including the Edison Forum in San Diego, USA and the Edison Forum in London, where it has also organized individual meetings with investors and analysts that have so requested. IBERDROLA has also made presentations at 8 other industry conferences organized by a number of investment banks in Barcelona, Paris, London and New York.

Fixed-income Investors and Analysts

IBERDROLA has a fixed-income database with more than 25 analysts and more than 150 investors, which is updated regularly, and which is also addressed to 4 rating agencies.

- **Private Issuance of Bonds in the U.S.**
In 2004, IBERDROLA was the first Spanish investor to access the U.S. market for the private issuances of bonds, an initiative that was followed by other Spanish companies. A road show was organized in London and the United States with fixed-income investors. More than 30 investors were contacted.
- **First Road Show with Fixed-income Investors in Asia**
This occurred in Tokyo, Hong Kong and Singapore, seeking to diversify the investor base. Ten fixed-income investors were contacted.
- **Annual Contact with Rating Agencies**
The company has held regular meetings with the three agencies that rate IBERDROLA: Moody's, Standard & Poor's and Fitch, which have maintained the same ratings for short-term and long-term debt as in 2003.
- **Other Activities**
Although no public issuance occurred in the Eurobond market in 2004, the company organized a "Non-Deal Roadshow" in Europe, contacting fixed-income investors in Scandinavia, London and Italy. In addition, IBERDROLA has given presentations at credit conferences organized by Citigroup in France and by BBVA in Portugal.

Increase in the Coverage of Socially-Responsible Investing (SRI)

IBERDROLA deals with the inquiries of entities that analyze and evaluate socially-responsible investments. Some of the analysts that contacted the company in 2004 were Dow Jones Sustainability Index, SiRi, SNS Asset Management, Vigeo, Oekom and Eiris. Other analysts contacted in 2004 were CoreRatings (UK), Ethibel (Belgium) and Innovest Strategic (USA).

IBERDROLA has entered the leading group of electric utilities on the Dow Jones Sustainability World index

In addition, in 2004 the Office of Investors Relations has organized more than 30 meetings with institutions that manage socially-responsible

investment funds, both in Europe and the United States. As a result of its strong efforts, IBERDROLA continues to increase its weighting in the main indexes.

IBERDROLA is within the leading group of utilities present in the Dow Jones Sustainability World Index. IBERDROLA placed first in the section relating to Investor Relations in the Economic Dimension, and this area provided a key contribution for the final rating.

Moreover, OEKOM Research, a German institute researching social responsibility, has recommended IBERDROLA for responsible investment and placed it third in its new ranking on sustainability of the global energy industry with an overall B-rating.

FTSE Group, in charge of publishing the Footsie stock market indexes, in cooperation with International Shareholder Services (ISS), a corporate governance services company, have created a new family of indexes that will assess the corporate good governance, the FTSE ISS Corporate Governance Index, and IBERDROLA, together with other companies, has been included to represent Spain.

Perception Analysis

IBERDROLA's Office of Investors Relations performs continuous follow-up of the perceptions of the main analysts regarding IBERDROLA and its European competitors.

This perception analysis is carried out through different regular reports: one daily report, two monthly reports and an annual report. Other specific perception reports are also prepared. The permanent follow-up of the market's perception about IBERDROLA enables the adoption of timely improvement measures, facilitating communication with analysts and investors.

Additionally, IBERDROLA's Office of Investors Relations wanted to know the opinions about its work directly from the analysts and investors with which it works. Therefore, in July 2004, a *Satisfaction Survey* was sent to more than 65 analysts and was completed by a large percentage of them. The results showed a high level of satisfaction. Based on the comments included in the suggestions section, the

company implemented a number of initiatives, such as visits to facilities and an increase in e-mail communications.

Awards

Best CEO of the EURO STOXX 50

On October 13, 2004, Ignacio Galán won the award for "Best Investor Relations by a CEO" among the Euro Stoxx 50 companies, given by IR Magazine based on a survey of more than 400 Euro zone analysts and investors.

IBERDROLA has won awards in the European financial markets

This award, which is recognized internationally for evaluating excellence in Investor Relations, is new recognition of IBERDROLA's work to strengthen its corporate culture on the basis of full transparency and openness to the financial community. In addition, IBERDROLA was ranked fourth in Europe and first in Spain in this area, with 533 points.

Best European Utility CEO according to the European Equities Market Report 2004

According to the results of a survey among 1,174 analysts and investors from 198 firms conducted by Institutional Investor Research Group for the European Equities Market Report 2004, Ignacio Galán has been elected, for the second year in a row, as the best CEO of the European utilities industry. In addition, the report recognized IBERDROLA as "best European electric utility" for investors and was ranked third among analysts.

For the second year in a row, IBERDROLA has been chosen as the best Spanish listed company in investors relations, according to the Thomson Extel Survey 2004

For the second year in a row, IBERDROLA has been chosen as the best Spanish listed company in investors relations, according to the Thomson Extel Survey 2004. In addition, IBERDROLA is the second-best listed European utility company in the list of the 25 top European utility companies, behind E.O.N. (Germany).

Membership in Investors Relations Associations and Organizations

Since its creation, IBERDROLA has been a member of Asociación Española de Relaciones con Inversores, AERI, the purpose of which is to promote and improve the investor relations of listed companies.

IR Magazine award

REGULATORY ENTITIES

BUSINESS PRINCIPLES

In its relationships with regulatory entities, IBERDROLA adheres to a number of business principles that govern its action in this area. These principles include:

Market

IBERDROLA believes that a competitive marketplace, in which economic players efficiently develop and manage their resources, is the best means for maximizing social well-being.

Consequently, it supports the idea that regulatory provisions should promote the deregulation of the energy market and remove existing obstacles in order for players to have equal opportunities and for end users to be able to choose the supply source that best suits their interests.

Competition

IBERDROLA believes that it is a company that can compete in a non-discriminatory market, and is opposed to all kinds of anticompetitive practices or practices that entail an abuse of market power.

Sustainable Development

Sustainable development, based upon a balance among the three aspects inherent in it –social, economic and environmental– is a cardinal principle that must govern the actions of social players.

Therefore, IBERDROLA endorses the idea that sustainable development should be the ultimate aim pursued by all regulatory provisions affecting the energy industry.

Transparency

IBERDROLA believes that regulatory provisions must be developed and applied with the utmost transparency, within a process in which all the players involved participate.

For this purpose, both the appropriate governmental authorities and the interested players must make their proposals and comments public, in at least in two rounds of comments, until regulatory provisions are finally drafted.

Efficiency

IBERDROLA believes that regulatory provisions must encourage efficiency.

In a free market, it is the market itself that promotes efficiency.

In the area of regulated business, regulatory provisions must permit the recovery of prudently incurred costs, encourage cost reduction and quality improvement, and allow consumers to benefit from efficiency gains.

European Union Market

IBERDROLA is aware of the fact that national energy markets will gradually become integrated into regional markets, and in turn, the latter will integrate with one another in order to achieve the ultimate aim of a single common market, in which the players will be able to offer their supply to a larger number of customers and customers, in turn, will be able to choose among suppliers situated in various member States, thus increasing competition.

Therefore, IBERDROLA encourages the removal of the regulatory and physical barriers that hinder the creation of the single energy market.

Long-term vision

The energy industry calls for large investments in infrastructure, with extended construction periods and a long useful life.

This is why IBERDROLA favors the existence of a predictable regulatory framework, which sends the appropriate economic signals for the long term to investors and customers alike, so that they can make the most sensible decisions.

The regulatory framework must have a forward-looking vision and avoid unsuitable practices which seek to resolve transitory issues over the short term but do not provide stability to the system or to the players that participate in it.

Commitment to Applicable Laws

IBERDROLA is a company that attaches the utmost importance to complying with applicable laws, and endeavors that all activities carried out are law-compliant. For this purpose, it regularly conducts awareness-raising and educational campaigns aimed at its employees.

REGULATORY ENTITIES

General Standards

IBERDROLA's relationship with the regulatory entities in charge of developing and enforcing regulatory provisions in the energy industry, as well as supervising the proper operation of the market, is established along two different tracks.

IBERDROLA maintains fluent cooperative relationships with the various regulatory entities

On the one hand, there are relationships geared to the enactment of regulatory provisions allowing for the development of a competitive market, with a strong business industry that is prepared to meet the demand for energy under appropriate quality and pricing conditions.

These relationships are primarily based upon frequent meetings in which a constructive dialogue is maintained, as well as upon a systematic exchange of information, knowledge and opinions that allows IBERDROLA to become acquainted with the concerns and proposals of such entities, in order to take them into account in future decisions, and also to put forward the company's own opinions and viewpoints in the legitimate defense of its interests.

To this end, IBERDROLA has set up a team of experts in regulatory matters at the corporate level, who have a general vision of the Group and specifically of the individual activities in its business divisions, and who work in an integrated and coordinated fashion.

On the other hand, IBERDROLA provides all the information required by the regulatory entities, whether it be in connection with the conduct of its usual business or as occasionally required for the performance of some evaluation or as a result of any extraordinary situation that may have occurred. IBERDROLA believes that this information must be reliable and verified, and has the proper procedures and structures in place in order to comply with these requirements.

Main Regulatory Institutions

European Community Institutions

The Commission, the Council and the Parliament of the European Union are responsible for the development of community rules and regulations that must thereafter be adopted and applied at the national level. The influence of the European Union, which is already very significant, will continue to increase as the consolidation process unfolds.

Regulatory action develops in four administrative spheres: European Community, national, autonomous community and local

Social Report

Well aware of this significant influence, IBERDROLA has opened a permanent office in Brussels from which it is regularly in contact with these institutions, which also allows the company to apprise itself of the issues that are major concerns to the European authorities and of the prevailing tendencies in the area of energy policy.

National Institutions

The national institutions that have greater influence on regulatory aspects include the following:

Ministry of Economy. Responsible for the formulation of economic policy.

Ministry of Industry, Tourism and Trade. Responsible for regulatory provisions applicable to the industry.

Ministry of the Environment. Responsible for environmental regulations, many of which have a considerable impact on the energy industry. Especially noteworthy, because of its social repercussions throughout 2004, is the development of regulations relating to the fight against climate change and the implementation of trading in emissions rights.

National Energy Commission. The independent regulatory entity in charge of ensuring the proper operation of the market. During 2004, the company participated in various working groups whose goal was to obtain improvements in the regulation of the gas industry and in the electricity deregulation process.

Other governmental organizations at the national level. IBERDROLA also maintains separate relationships with other organizations that are responsible for aspects that affect the company's business, such as the Antitrust Service and the Antitrust Tribunal and the National Securities Markets Commission.

Institutions at the Autonomous Community and Local Levels

Pursuant to applicable legislation, various powers and duties that influence business in the energy industry have been assigned to the Autonomous Communities, which are also actively involved in the development of national regulatory provisions. Among such powers and duties, we can mention the approval of facilities within the Autonomous Communities, quality of supply, environmental issues, etc. Within the

Autonomous Communities, the energy and environmental areas have the greatest influence on the energy business.

Similarly, local institutions also have powers and duties in connection with the approval and construction of facilities, though such powers and duties are confined to the local level.

Being aware of the fact that it is necessary to come as close as possible to local problems in order to find the most appropriate solution, IBERDROLA has an institutional presence in most Autonomous Communities, through which presence it participates and cooperates in the development of regulations and in the scheduling of activities generally.

Other Institutions

In addition to its direct relationships with the regulatory entities, IBERDROLA participates in the regulatory process through associations. Thus, it is a member of UNESA, the association of the Spanish electricity industry. It is also a member of the marketing committee of SEDIGAS, the gas industry association.

Through UNESA, it participates and cooperates in various working groups in organizations such as EURELECTRIC (the European electricity industry association), the Regional Energy Integration Commission (CIER), and the World Energy Council (WEC).

It also participates in various technical institutions, such as those in the area of standardization (AENOR in Spain and CENELEC in Europe), transmission (CIGRED) and supply (CIRED), or in the nuclear area (WANO).

REGULATORY ASPECTS OF PARTICULAR INTEREST

Below is a description of the most significant operating aspects of IBERDROLA's activities which have been or may be relevant from the regulatory point of view, including the company's position in connection with each of them:

Quality of Supply

Since electric power cannot be stored, all the activities required for supply must be carried out simultaneously: production, transmission and distribution; therefore, it is always possible that a disruption might affect supply, whether as a result of causes inherent in the facilities themselves or due to external causes (weather conditions, third party works, etc.).

The governmental authorities establish the minimum regulatory quality levels at the individual and regional levels, as well as the action that the supply company must take in the event of failing to comply with them.

IBERDROLA is aware of how significant electricity supply is for present-day society, and therefore makes large investments in new infrastructure, efficiently operates and maintains the existing network, and makes ongoing efforts towards improving the quality of the service provided to its customers.

In general, rates of continuous supply in the geographical area covered by the company are better than those required by the applicable regulations, and ongoing efforts are made to attain higher quality levels. In those cases in which the required quality level is not achieved, the company complies with the provisions of applicable regulations.

Wholesale Market Prices

The Antitrust Tribunal has made a decision in a case initiated two years ago against Endesa, IBERDROLA and Unión Fenosa due to high prices in the wholesale market on three days in November 2001, holding that the companies used a dominant position within a context of technical restrictions.

In November 2004, the Antitrust Service notified IBERDROLA of the commencement of a similar proceeding related to the Castellón III Plant.

IBERDROLA endorses market transparency and fair competition; therefore, it believes that these situations are the product of regulations that need to be improved, supports the development of supplemental rules that contribute to that end, and hopes that Royal Decree 2315/2004, of December 23, will help clarify the operation of the markets in special situations.

Green Energy

The National Energy Commission prepared a report on the green energy advertising campaigns run by IBERDROLA. The report implies that the company abides by the electricity industry regulations. Nonetheless, the Commission requested the Antitrust Service and the National Consumer Institute to determine whether or not IBERDROLA's advertising conformed with good advertising practices.

Social Report

Both organizations impliedly held these advertising campaigns to be appropriate, and underscored the good side to the sale of green energy as a new product made available to the customers.

In addition, the Court of First Instance of Madrid, with which legal actions were brought in connection with this issue by the *Organización de Consumidores y Usuarios* (Consumers and Users Organization), dismissed the claims filed by this entity.

Dual Offers

Although the Ministry of Industry and Energy acknowledged that IBERDROLA does not carry out any activities which are not permitted by law, it held that by application the rule of legal severance, the "documentary support" represented by the bill issued to electric power customers under the rate system cannot be used to inform them of the existence of joint offerings of natural gas and electricity in the deregulated market, in terms similar to those used by the various energy units. For this reason, it sanctioned the company,

which has appealed the sanction and now awaits the decision of higher authorities.

Since January 2003, all customers have been deregulated and may choose among the various offerings from retail supply companies. However, there are regulatory provisions still to be developed, and therefore, retail supply companies are forced to prepare their offerings within a context of uncertainty. As an innovative company, IBERDROLA wagers on market success based upon deregulation, and it is in advocating this leading position that the company is faced with the risk of regulatory gaps.

Consequently, in the stage preceding the launch of new products, the company thoroughly analyzes their compliance with applicable regulatory provisions. In many cases, the opinion of prospective customers and various institutions and organizations is requested in advance of such launch, while at the same time trying to preserve the degree of secrecy demanded by a competitive framework.

Nonetheless, IBERDROLA will make additional efforts at communication in order to adequately explain the advantages and benefits of the new products and services offered to the market.

CUSTOMERS

IBERDROLA IN THE ENERGY MARKETS

IBERDROLA sells electricity and natural gas in Spain within the context of a deregulated market. The characteristics of this market and the results obtained are set out in the Retailing section of the Activities Report contained in this document.

IBERDROLA has more than 17 million customers in Spain and Latin America

Latin American market

IBERDROLA supplies energy in Latin America through various affiliated companies:

- Brazil: Coelba, Cosern, Celpe.
- Guatemala: Corporación Empresa Eléctrica de Guatemala-EEGSA.
- Bolivia: Electropaz, Elfeo.
- Mexico: Various generation companies.

TABLE 90

Number of customers (millions)

	2004	2003
Spain	9.6	9.4
Latin America	7.8	7.5
Total	17.4	16.9

IBERDROLA'S PRODUCTS AND SERVICES IN SPAIN

As an overall provider of energy services for households and businesses in a deregulated market, IBERDROLA offers its customers customized solutions in response to their specific needs.

IBERDROLA offers its customers electricity and natural gas. The company was the first to sell Green Energy in 2003, and by year-end 2004, it had signed 52,900 contracts with household customers and 1,100 with businesses and organizations using this product. The commitment to environmental protection was recognized in 2004, when the company was ranked in the top position by the organization WWF-Adena, which assesses the environmental responsibility of electric companies in OECD countries and Russia.

Throughout 2004, the company made progress on its multi-product and multi-service strategy and, in addition to its offerings of energy products, began to sell non-energy products that round out the company's overall offerings. Thus, IBERDROLA offers its customers a comprehensive response to their needs:

- Products and services for businesses: infrastructure installation and maintenance, continuous supply systems (generating sets, uninterrupted supply systems, quality monitoring), energy saving, advice on and management of energy contracts (energy management systems, condenser sets), and environmental improvement (environmental audits). Internet and voice and data transmission services were also offered through telecommunications operator Neo-Sky.

- Home equipment: heating, air conditioning, sanitary hot water, home automation, security (alarms, remote assistance), ADSL, and fixed telephony. In selling energy for home use, IBERDROLA offers its customers a free repair, renovation, damage and emergency service through its "*Servicio Tranquilidad*" ("Trouble-Free Service"). In addition, the Payment Protection Service covers customers for the payment of their energy bills in certain personal circumstances (accident, death, etc.).
- IBERDROLA also has a virtual store www.mundogar.com, which offers products and services for the home.
- During 2004, IBERDROLA continued with its active deployment of PLC (Power Line Communications) technology, which provides broad-band access to the Internet through the electric supply grid. In addition, through the company Neo-Sky, the information society has been taken to populations where Internet and broad-band access was unavailable. In addition, Neo-Sky offers businesses Internet access at 4Mb/second (more than double the speed of existing solutions) by means of LMDS (broadband wireless) technology. This company also offers access via satellite.

Although the sale of energy does not entail any kind of labeling, IBERDROLA guarantees that electricity supply complies with the regulatory provisions applicable to energy generation and supply. Moreover, IBERDROLA fulfills all labeling requirements in the sale of its other products, such as ADSL and alarms.

CHANNELS OF COMMUNICATION WITH THE CUSTOMERS

IBERDROLA makes a number of channels of communication available to its customers that allow them to be in permanent contact with the company.

It has commercial agencies, stores in Madrid and Bilbao, telephone service lines and a website, www.iberdrola.com; the characteristics of these channels are described in the Retailing section in this Report.

In addition, IBERDROLA sends monthly informational bulletins by e-mail to household customers, businesses, developers and installers.

In 2004, a separate PLC (Power Line Communications) website was created, which may be accessed through the company's website and provides information on the availability of service by geographical area. The website also features computer graphics showing how this technology works and provides a graphic speed comparison.

IBERDROLA fulfills its commitment to total customer focus through all the channels of communication with its customers. In this regard, there are procedures for responding to various requests made by customers, and a single procedure for all channels of communication is now being developed.

In Brazil, Coelba answers almost seven million calls on its customer service telephone line, and has more than 2.5 million visits to its website. It also has 26 agencies and 22 customer service points.

In 2004, Celpe (Brazil) answered 3.3 million calls on its customer service telephone line (up 7.6% on the prior year).

In Guatemala, EEGSA provides a 24-hour telephone service line to its customers, and receives nearly one million calls a year.

In Bolivia, Electropaz serves its customers through Fonoluz, its telephone service line, as well as at its nine agencies and on its website.

Efficiency and quality of commercial processes

In connection with electricity and gas contracting, IBERDROLA has formulated procedures and methods in order for interrelations among energy suppliers, which are a product of the energy market deregulation, to be fluent and the customer can thus get both products within the shortest time possible and under optimal conditions. Moreover, the quality of billing to both gas and electricity customers has been improved.

IBERDROLA posts a set of documented procedures on its Intranet in order for the entire organization to be aware of and apply them. This ensures the continuous improvement of performance and the organization's effectiveness in its relationship with customers.

Since 1999, IBERDROLA has performed a monthly study of quality in processes, the purpose of which is to measure customers' satisfaction with their relationship with the company.

Customer satisfaction index by processes

IBERDROLA's customer satisfaction index in contracting through agencies reached a score of 7.3 out of 10 in 2004; in the case of telephone services, the satisfaction index was 7.2, and customers' satisfaction with IBERDROLA's billing systems came to 7.1.

Customer satisfaction surveys

IBERDROLA also has various procedures designed to measure its customers' satisfaction with the service provided on an annual basis. In this way, the company obtains the information required to adequately respond to the needs and concerns of its customers and to improve its service.

Since 1993, the company has conducted the *La Voz del Cliente* [The Customer's Voice] poll, the purpose of which is to identify the quality requirements demanded by customers and to determine what their needs are.

In 2004, for the first time, IBERDROLA included a section devoted to the company's Social Responsibility in the *La Voz del Cliente* poll. Customers were asked to state what social aspects should be promoted and supported by a company like IBERDROLA and to assess IBERDROLA's degree of compliance in connection with these social aspects.

Once again this year, IBERDROLA continued to improve its customers' overall satisfaction and purchase predisposition indexes

In Brazil, Coelba conducts an annual customer satisfaction survey; in 2004, 81% of customers stated they were very satisfied with the service provided by the company.

In Guatemala, 74% of EEGSA's customers stated that they were satisfied with the company.

Overall Customer Satisfaction Index by Sectors. Spain

In 2004, IBERDROLA reached a score of 7.16 out of 10 on the overall customer satisfaction index by sectors.

IBERDROLA's Purchase Predisposition Index

The purchase predisposition index measures the market's disposition towards purchasing IBERDROLA's products and services. This index comprises aspects such as customer satisfaction, brand awareness, image, loyalty to products and services, and actual purchasing by customers.

In 2004, the purchase predisposition index was 6.51 out of 10.

Critical projects for the following year are identified on the basis of this date. At present, there are four lines of action: design and planning of offerings, sales, customer service, and strategic planning.

ETHICAL COMMITMENTS TO CUSTOMERS

Data Confidentiality

At IBERDROLA, all required measures are taken to guarantee the security and confidentiality of our customer information at all times. All personal data submitted by them is protected pursuant to the Spanish legal provisions in effect, especially Data Protection Act 15/1999.

IBERDROLA has established the organizational procedures and computer developments required to fulfill privacy policy requirements, with special emphasis on the registration of files with the Data Protection Agency, the duty of confidentiality imposed upon employees and subcontracted personnel, information to the customer in the process of gathering personal data, unequivocal consent for the treatment of such data, and responsiveness to the exercise of our customers' rights at the Customer Office.

In addition, the company has established procedures for notification and management of security issues in connection with data confidentiality throughout the entire process of treatment of customers' files, pursuant to the provisions of the Regulation on security measures applicable to computer files set forth in Royal Decree 994/1999.

The treatment of personal data by third parties as a result of the provision of services is regulated by contract, including a detailed description of the security measures that the party in charge of handling the data has the duty to implement.

Advertising and Commercial Practices

IBERDROLA maintains commercial and advertising practices which are respectful of the legitimate interest of its customers to receive accurate and true information.

During 2004, certain legal actions were commenced in connection with the Green Energy advertising campaigns conducted by IBERDROLA, resulting in decisions favorable to the company, as set forth in the "Regulatory Entities" section of this Report.

IBERDROLA is a member of the *Asociación Española de Comercio Electrónico (AECE)* (Spanish E-Commerce Association), the *Asociación para la Autorregulación Comercial (Autocontrol)* (Association for Commercial Self-Regulation), and the *Asociación Española de Anunciantes* (Spanish Association of Advertisers), whose Ethical Codes it has signed.

IBERDROLA has also signed the Ethical Code for E-Commerce and Internet Advertising, and makes this known to its customers by inserting the "*Confianza On Line*" trustmark in its website.

Finally, IBERDROLA prints all of its commercial communications in 100% recycled and chlorine-free paper.

Awareness-raising Actions on Saving Energy and Environmental Responsibility

IBERDROLA regularly takes action intended to raise environmental awareness among its customers, in keeping with the position adopted by the company. Thus, within the context of the celebration of Environment Day, IBERDROLA distributed brochures containing advice on energy saving and environmental protection, and postcards with seeds in major Spanish cities. In addition, it sponsored mini-slots on local TV networks and the digital platform with advice on energy saving, published a CD on energy efficiency in the hospitality industry, included environmental advice in the bills issued to its customers, and distributed a Guide to Natural Areas in Spain to its customers, among other actions.

SUPPLIERS

PURCHASING CAPACITY

The IBERDROLA Group has more than 50,000 suppliers for the provision of its products and services in Spain and Latin America, with whom it managed a sales volume of € 4,842 million in 2004.

MAIN PRINCIPLES UNDERPINNING THE RELATIONSHIP

The IBERDROLA Group pays special attention to its suppliers, whom it considers business partners. The Group selects supply companies which have practices and procedures in line with the aims and policies pursued by the company and fosters long-term relationships based upon mutual benefit. Moreover, it is a policy of the IBERDROLA Group to comply with contractual conditions, and no breaches have been recorded.

The principles underpinning the relationships between the IBERDROLA Group and its suppliers are as follows:

Objectiveness and Impartiality

The Code of Professional Conduct contains specific sections applicable to the professionals who participate in the purchasing process, who undertake in writing to strictly comply with them (Policies and Rules of Action in the Purchasing Division).

The procedures for the selection of suppliers are developed by complying with standards of objectiveness and impartiality, avoiding any kind of discrimination, conflict of interests or favoritism in the purchasing process at any time.

Transparency

Contracting processes are supported by systems that ensure compliance with the principles of publicity, competition, objectiveness, transparency and equal opportunity, thus contributing to the creation of the spirit of trust required by the relationships.

In December 2004, an announcement on the supplier classification system was published in the Official Journal of the European Communities, thus allowing suppliers to register in an objective and non-discriminatory fashion.

Equal Opportunity

In furtherance of greater transparency in the purchasing process, it is established that the activities of bid solicitation, reception of bids, and negotiation with suppliers all fall exclusively under the jurisdiction of the Purchasing division professionals.

Generally, and depending upon the type of acquisition, the bidding process requires a minimum of three valid bids in each call for bids.

Among other methods, the IBERDROLA Group customarily uses Internet auctions due to the transparency they afford to the process and the equal treatment and equal opportunities enjoyed by the suppliers that participate in them.

Confidentiality

The IBERDROLA Group guarantees the confidentiality and security of its suppliers' data, and avoids any alteration, loss or unauthorized treatment or access in connection with such data, pursuant to the principles of the Data Protection Act.

The Code of Professional Conduct expressly states that the prices and information submitted by providers and suppliers during a process of selection shall be treated confidentially.

Similarly, the company requires its suppliers to provide the same treatment of private data as is set forth in service agreements or contracts for the supply of equipment and materials.

REQUIREMENTS TO BE MET BY SUPPLIERS

One of the duties of the Purchasing division is to maintain the list of suppliers who are qualified to work with the IBERDROLA Group, fostering an ongoing search for new suppliers and supporting their development in areas and products of strategic interest to the company, and to ensure in the selection process the suitability of suppliers from the standpoints of social and environmental commitment, security and quality.

IBERDROLA includes environmental and social conditions among the requirements to be met by its suppliers

In Spain, suppliers and supplied products must comply with the following requirements:

Quality

The IBERDROLA Group has established that an essential requirement in the processes of production and provision of services is the implementation of standardized systems as the main tool for quality assurance.

In the case of strategic products and services, the supplier is required to have obtained ISO 9000 Certification.

With regard to equipment and materials to be used in energy supply facilities, the product must be certified under quality marks (for example, mark N of AENOR). Moreover, IBERDROLA tries to establish quality agreements with its suppliers. These agreements are established for the supplier-product unit, and require one audit per year and a review of the documentation created.

Safety

The company demands compliance with the legal provisions in effect in the area of Occupational Risk Prevention. This is stated in the IBERDROLA Group's general Conditions for the contracting of works and services.

In addition, the company evaluates the implementation of the management by standards system and encourages certification under the OHSAS-18001 Standards.

Social Report

The company includes in its supply chain the "*Plan Objetivo Cero Accidentes*" ("Zero Accident Target Plan"), aimed at the complete elimination of accidents in the conduct of activities.

Environment

As part of the process of continuous improvement of its suppliers, the IBERDROLA Group promotes and encourages the implementation of Environmental Management Systems in the management of the purchasing chain, and requires such implementation by new suppliers of materials, works and services who ask to be qualified for products that are deemed critical or strategic. Along these lines, a working session was conducted in June with suppliers from the Basque Country in order to encourage the implementation and certification of an environmental management system in their business activities; this session was the first within a plan to be developed in the other Autonomous Communities throughout 2005.

In 2004, 71% of the customary suppliers of equipment and materials and 61% of IBERDROLA's suppliers of works and services had already implemented (or were in the process of implementing) Environmental Management Systems.

Moreover, in the product qualification process, suppliers must answer specific questions on waste management in their facilities, the use of contaminating materials, and final disposal of the product at the end of its useful life: reduction to scrap, recycling, etc.

The company also tries to encourage suppliers to apply Eco-design standards in the design and development of products, in line with international reference standards (UNE 150.301).

The environmental management systems that suppliers have in place are taken into account in awarding bids.

Social Responsibility

In 2002, IBERDROLA pledged its firm support for the principles of The Global Compact, an initiative that was designed and promoted by the United Nations Organization. The company has stated its firm

intention of endorsing and promoting such principles dealing with human rights, the environment, labor regulations and business ethics, within the scope of its activities.

Therefore, the company fosters a responsible attitude on the part of its suppliers, and encourages them to comply with Codes of Conduct, to adhere to The Global Compact, and to ensure compliance with human, labor and environmental rights.

Among the actions taken in keeping with this commitment, especially noteworthy seminars in which the main suppliers of the company were introduced to The Global Compact, and the dissemination of the principles during the IBERDROLA 2004 Supplier of the Year Award ceremony; the company plans to extend these actions to the entire list of suppliers, encouraging them to implement an ethical and socially responsible management system.

If there is a prospective supplier in Asian countries or other developing countries, visits are made to the facilities of these companies for an on-site check on working conditions, compliance with and respect for human rights in the manufacturing processes and the supplier's duty not to employ children, and fulfillment of the requirements set by the IBERDROLA Group.

Specifically, two companies located in China were visited in 2004, with a positive assessment.

Standardization

In view of the distinctiveness of the energy industry, assurance of supply quality sometimes requires equipment, materials, works and services to comply with special requirements relating to performance and to reliable operation, safety, supply and service.

In the case of products purchased on a recurring basis, the company complies with domestic and international standards and cooperates with suppliers in the development of standards that help enhance quality in the industry.

Standards are agreed upon with the internal organizations affected by them, and they generate a codification of elements that allow for the formulation of general strategies and the management of joint purchases and master agreements with Group-level suppliers.

RELATIONSHIP CHANNELS WITH SUPPLIERS

IBERDROLA Supplier of the Year Award

In 2002, the IBERDROLA Group created the Supplier of the Year Award, an initiative aimed at contributing to Excellence in Management by the

company's suppliers and focused on Sustainable Development, improvement in Quality, respect for the Environment, Occupational Risk Prevention and Social Commitment.

For more detailed information, see the Quality section in this Sustainability Report.

Supplier Assessment and Development Unit

At the beginning of 2004, the Supplier Development Unit was created within the Purchasing Division of the IBERDROLA Group, the primary goal of which is to establish optimal relationships with suppliers to ensure continuous quality improvement and also allow them to become more competitive.

Contact is also made from this unit with regional business forums in order to inform them of the company's policy, based upon the endorsement of business development and the industrial fabric in those areas in which the IBERDROLA Group carries out its activities and is present, with a increase in the number of suppliers in of the Autonomous Communities during fiscal year 2004.

The actions taken during this fiscal year include meetings held with the *Confederaciones Empresariales* (Business Confederations) of Extremadura, Cartagena and Valencia, translating the company's commitment into economic and social progress in these regions. At these meetings, appropriate channels and means of interaction were established in order to promote the engagement of local suppliers. These actions will extend to the rest of the country throughout 2005.

Additionally, the company has short-term plans to promote the contracting of suppliers through Special Employment Centers, for which reason it is now analyzing the kinds of materials and services that qualify to work with these centers and obtaining the commitment of the requisite areas to cooperate with this initiative.

Social Report

Supplier Service Center

The supplier service center is equipped with a telephone switchboard as a single access point to deal with problems and questions that may arise from any supplier's commercial relationship.

Moreover, this center serves as a channel of communication for all suggestions, complaints and claims that suppliers may raise with relevant organizations in each particular case.

In 2004, the center answered 17,635 calls, which resulted in 9,400 queries with an average resolution time of 18 hours; 65% of such queries were resolved in less than 8 hours. The center also received six complaints, which were duly responded to.

The relationship channels gather comments, opinions, proposals and information provided by suppliers in connection with those aspects that entail opportunities for improvement in the relationships; the information is then appropriately channeled in order to bring it to the relevant areas involved.

Information Dissemination Campaigns

IBERDROLA informs all of its suppliers of significant events that may affect them, whether internal or external in nature.

During 2004, information was sent to works and services contractors in connection with the coming into effect of the new General Tax Law 58/2003 of December 17, as well as information regarding the new plans for Coordination of Business Activities, pursuant to the applicable Legal Framework on Occupational Risk Prevention.

Supplier Website

IBERDROLA provides a supplier portal to its suppliers through its website. Its contents are divided into two parts:

Information and Questions

This consists of two sections:

IBERDROLA's supplier website

- *General information (public access)*

This section may be freely accessed, and allows for the viewing of contracting conditions, coordination plans, lists of standards and technical manuals, as well as specific information that may be of general interest.

- *Supplier information (private access)*

Access is limited to suppliers that have a current supply contract with any of the companies of the IBERDROLA Group.

This section allows suppliers to view their orders, invoices, balances, delivery plans and work in progress, all on a confidential basis.

Operations

- *Calls for bids*

Suppliers may track the bidding process, from bid solicitation to award, view all calls for bids in which they have been invited to participate, and enter their bids.

- *Automatic submission of invoices*

This process allows suppliers to submit their invoices directly to IBERDROLA's computer system, thus avoiding unnecessary delays.

THE MEDIA

INTRODUCTION

IBERDROLA's relationships with the media are based upon transparency of information, continuous availability to respond to requests for information regarding the evolution of the company, and accurate treatment of all news related to the company.

Transparency of information and professional accuracy are two of the mainstays of IBERDROLA's communication policy

This formulation of the strategy for communication between the company and the media is primarily aimed at permitting the various groups of interest to have a true and accurate picture of the policies pursued by the Group and of the results achieved by IBERDROLA in its various fields of action at all times.

In 2004, the company continued with the extensive information efforts deployed in previous years and the efforts to communicate with and respond to journalists from IBERDROLA's various

regions and fields of action who have requested information about the company. This has helped consolidate public opinion about IBERDROLA's bid for sustainable development and clean energy, its commitment to the environment and its progress in compliance with the 2002-2006 Strategic Plan.

2004 was also marked by IBERDROLA's greater presence abroad, as a result of the company's activities in Brazil, Mexico, Portugal and Greece, which has been reflected in leading foreign newspapers specializing in financial information.

Among the main informational items in 2004, especially remarkable are the company's commitment to compliance with the Kyoto Protocol and the model proposed for compliance with the EU Emissions Trading Directive in order to battle climate change, within the framework of the Group's policy of respect for the environment and development of renewable energy.

INFORMATION ISSUED

Press Releases

In 2004, IBERDROLA distributed 361 press releases to the media, which represents a 38 % increase over 2003. Of these releases, 185 (126 in 2003) were nationwide in scope, and 176 (135 the year before) were regional, up 47% and 30%, respectively.

Among such releases, especially noteworthy are those providing the following information:

Generation Division: increased energy production following investments made for the start-up of the new combined cycle plants.

Distribution Division: advance in quality of supply and investments made in the development and modernization of the electrical grid.

Supply Division: opening of the market to new customers and market share achieved, sale of green energy, multi-service offer.

Social Report

Renewable Energy: investments for the start-up of new wind farms, investments made in Portugal, and acquisition of the Greek company Rokas.

Press Conferences

The reporting of quarterly and annual results, as well as the holding of the General Shareholders' Meeting, received wide coverage in the press, on radio and television, which coverage was bolstered by IBERDROLA's investments and its increasingly stronger positioning in the European energy industry.

Other specific occasions, such as the inauguration of new facilities or various other events, helped disseminate the company's activities and initiatives in the Autonomous Communities, where IBERDROLA had a stronger informational presence in 2004.

CHART 39

Distribution of press releases per geographical area

INTERNET PRESS-ROOM

IBERDROLA's corporate website (www.iberdrola.com) has become a routine channel of communication between the company and journalists carrying out their professional tasks in both the written and the audio-visual media.

www.iberdrola.com

In 2004, IBERDROLA enhanced this means of communication with the press and completed two projects: in the first quarter, it thoroughly redesigned its home page, including numerous areas highlighting all kinds of business and corporate information.

In 2004, IBERDROLA enhanced the use of the Internet as the customary channel of communication with the press

The entire section of the website devoted to journalists, called *prensa* (press), was redesigned, with the inclusion of a new menu intended to provide a real-time response to all of the media's requests for information.

More Information via the Internet

The press menu first displays all the press releases sent by IBERDROLA to the media, in both Spanish and English.

Next, there is a new service that has been requested by a large number of communication professionals: a *picture gallery*. This complete *picture gallery* consists of five sections: people, with all the top managers of the company; *facilities*, featuring generation plants, distribution and gas assets, as well as the company's offices; *brand and commercial*, which includes logos and advertising campaigns; *events*, providing a selection of events that have been most significant to the company in recent years; and *centenary company*, which displays historical images of IBERDROLA.

In the third place, there is *regular information*, which hosts all the information disseminated by IBERDROLA to its investors, shareholders, customers and the public at large.

The *webcast/presentations* section serves as a link to the videoconferences regularly held by the company's managers for analysts, and also includes the reports that IBERDROLA makes public.

In the press section, journalists can also find a link to the menu devoted to the *General Shareholders' Meeting* and another sub-section containing an extensive description of IBERDROLA's *Strategic Plan*.

Finally, under *contact us*, they are provided with contact information for persons at the Communications Division to whom they ask any questions, as well as an e-mail address to which they may send requests for information.

Increase in Use of the Service

The enhanced role of IBERDROLA's website as a channel of communication with journalists by means of an expansion of content, among other aspects, has resulted in a significant increase in 2004 in the number of visits to the press page and in the number of pages visited.

TABLE 94

	2004	2003
No. of visitors	97,676	26,358
Daily avg. no. of pages visited	1,130	757
No. of pages visited	412,325	276,633

Within the *press section*, the sub-section with most hits was *press releases*, with 52,567 visitors who viewed 231,431 pages and made 264,244 downloads, which represents more than 50% of the visitors, pages visited and downloads of documents in the entire section. These figures speak for themselves about the importance of new information technologies in the transmission of news and messages, an area that will continue to grow in the coming years and that the company will continue to enhance.

IMPACT ON THE MEDIA

The number of impacts on the media rose to 8,528 impacts on the written press, as compared to 7,887 in 2003, which represents an 8% increase. The 2003 figure does not include impacts arising from the Natural Gas Tender Offer, because this was an extraordinary event in that fiscal year that cannot be compared to 2004. The daily average of published informational items was 23.4, as compared to 21.6 at year-end 2003, without taking into account the Tender Offer effect. 43% of the impacts in the last year occurred in media of nationwide circulation, and the remaining 57% occurred in regional media.

TABLE 95

Impact on the press by subject

Subject	2004	%	2003	%

(*) In 2003, Renewable Energy was included in Generation

(**) In 2003, Environment was included in Corporation and Social Action

CHART 40

Impact on the press by subject (%)

SOCIETY

IBERDROLA carries out activities of general interest to society as a part of its business. In this way, service to society is one more element of the company's strategy.

Social activities are carried out through different channels:

- In Spain, through the Companies of the IBERDROLA Group and through Fundación IBERDROLA.
- In Latin America, through its affiliated companies.

The purpose of these activities is to cooperate in the social and economic development of the environment, and they are carried out in coordination with the main economic and social players. Thus:

- IBERDROLA participates in regional development societies, technological centers and other organizations in the various Spanish Autonomous Communities and cooperates in a large number of workshops, exhibitions and other events.
- IBERDROLA wants to act in harmony with its economic environment. To that end, it has set up Advisory Councils in Castilla y León and in Andalucía involving leading representatives of major industrial and financial groups in the region.

The main purposes of the Advisory Councils are to share corporate projects, exchange management and innovation experience, and channel new initiatives in the respective geographical areas.

Fundación IBERDROLA is a key instrument in the company's strategy. Set up in 2002, its primary goal is to contribute to the general interest of society through the promotion, dissemination and support of social, cultural, scientific and technical activities.

The areas of activity established by the Foundation are the following:

- *Social action with the underprivileged*
- *Cultural promotion and publications*
- *New challenges in the corporate, energy and sustainable development areas (Foro IBERDROLA de Pensamiento Actual (IBERDROLA Contemporary Thought Forum)).*

Particularly noteworthy are the efforts made in the first of these fields (social aid), in which a direct dialogue is established with many non-governmental organizations which express their views, concerns and needs.

These initiatives have resulted in firm commitments involving various cooperation projects over several years to help different groups, such as the elderly, the sick, young people at risk of social exclusion, etc.

The Contemporary Thought Forum, acting through public workshops and debates, seeks to promote reflection on and the assessment of key issues in the social and economic dilemmas of our world, with the contribution of prestigious international figures.

Lastly, cultural promotion focuses on the dissemination in society of the historical and artistic heritage of our country and of the corpus of scientific, technological and humanistic knowledge which makes up the culture of our civilization.

IBERDROLA cooperates with social institutions and players in the socio-economic development of their environment

IBERDROLA has four Programs through which it puts these principles into practice:

- Art and Culture
- Education and Training
- Social Aid
- The Environment

Their activities are described throughout this chapter.

In 2004, growing attention was given to supporting groups that are disadvantaged due to health or disability problems, since the company believes that these problems are not unrelated to the company's business, given that they directly affect and could affect its human team and their families and, indirectly, other interest groups.

The established goal is that, in the coming years, IBERDROLA's activities to help these specific groups be on the same level as its other cultural and social activities. To achieve this goal, social actions will be promoted in line with the company's overall strategy through a specific plan focusing on social activities and based on the development of a fundamental idea resting on two pillars: actions within IBERDROLA's sphere of activities, supported by its human team.

In 2004, IBERDROLA allocated a total of € 8.6 million to the programs described above, almost 20% more than in 2003.

Affiliated companies in Latin America have also assigned financial resources to this type of activity, in varying amounts which can be seen in their own annual information.

ARTS AND CULTURE

IBERDROLA stands out because of its commitment to the rehabilitation and improvement of monuments and cultural assets. In 2004, the aggregate contributions of IBERDROLA and its Foundation to this area totaled over € 4 million.

Support for cultural organizations

The main actions in this respect in fiscal year 2004 were:

Participation in *Fundación Atapuerca*

IBERDROLA became one of the founding companies of *Fundación Atapuerca*, thus consolidating the support given to this ambitious project over the last few years.

The purposes of the Foundation are research into the artistic and cultural heritage of the Sierra de Atapuerca (Burgos), and the sponsorship and promotion of excavations in this mountain range.

Signing of the Agreement with *Fundación Atapuerca*

Fundación San Millán de la Cogolla

IBERDROLA's Chairman was appointed as a member of the Board of Trustees of *Fundación San Millán de la Cogolla*, in recognition of the interest in and efforts to rehabilitate and protect the monuments at San Millán, which was declared a World Heritage Site.

Appointment of Iñigo de Oriol to the Board of Trustees of Fundación San Millán de la Cogolla (La Rioja)

IBERDROLA has been cooperating with the Foundation in recent years through the restoration of the Baroque Ornamental Ironwork of the High Altar of the Yuso Monastery, and the refurbishment of the Exhibitions Hall. It is currently committed to a long-term outside and interior lighting program for the Yuso Monastery.

Participation in Fundación Baluarte

IBERDROLA became a member of the Board of Trustees of Fundación Baluarte (Navarra), whose purpose is to promote cultural activities to be carried out primarily in the Baluarte Palace in Pamplona, in order to become a driving force and cultural benchmark of the highest order in Navarra.

IBERDROLA became a member of the Board of Trustees of Fundación Baluarte

Foundations and Cultural Entities

IBERDROLA has continued to support various foundations and cultural organizations with which it cooperates.

Cultural Foundations in which IBERDROLA Participates

- Fundación San Benito de Alcántara (Cáceres)
- Fundación Rei Afonso Henriques (Zamora)
- Fundación Príncipe de Asturias
- Fundación Museo Guggenheim Bilbao
- Fundación Museo de Bellas Artes de Bilbao
- Fundación San Millán de la Cogolla (La Rioja)
- Fundación La Luz de las Imágenes (Valencia)
- Fundación Blasco de Alagón (Castellón)
- Fundación Orfeo Catalá-Palau de la Música Catalana
- Fundación Carolina (Madrid)
- Fundación Atapuerca (Burgos)
- Fundación Baluarte (Navarra)

Other Cultural Organizations That Have Signed Agreements with IBERDROLA

- Consorcio Casa de América
- Fundación Amigos del Museo del Prado
- Real Asociación de Amigos del Museo Reina Sofía
- Real Academia de la Lengua Española
- Real Sociedad Geográfica
- Asociación Amigos del Museo Nacional de Escultura de Valladolid
- Asociación de Amigos del Centro Gallego de Arte Contemporáneo (Santiago-La Coruña)
- Fundación Cultural Santa Teresa de Ávila
- Patronato Paleontológico de La Rioja

Monument Reconstruction and Lighting

The monument reconstruction and lighting program is one of IBERDROLA's salient cultural initiatives. Its main actions as part of this program in 2004 were:

Lighting of El Sagrario Church (Seville Cathedral)

IBERDROLA put in place the inside lighting of the El Sagrario Church located at the Seville Cathedral. This church was built in the 17th century. Particularly noteworthy are its sculptures of eight large figures and its central altarpiece.

Lighting of the Church of El Sagrario (Seville Cathedral)

Lighting of the Holy Door of Santiago Cathedral

IBERDROLA installed new lighting for the Holy Door of the Santiago de Compostela Cathedral. The Holy Door, the Dome and the Cathedral Balustrades that look onto Quintana square where the Holy Door is located have all been lit.

Lighting of the Royal de la Granja Palace

IBERDROLA, together with National Heritage, installed the outside lighting of the Granja de San Ildefonso Palace, in Segovia. The project included the main façade and the Colegiata façade, the entrance gardens to the Palace, the Three Graces and Cascades fountains, and the Queen's Sewing Room.

Restoration of the Miraflores Cartusian Monastery

Fundación IBERDROLA signed an agreement with Junta de Castilla y León, Fundación del Patrimonio Histórico de Castilla y León, and other institutions to carry out the comprehensive restoration of Cartuja de Santa María de Miraflores (Burgos), to be completed in 2004 and 2005.

Cooperation with the National Anthropology and History Museum of Guatemala

There have also been initiatives of interest in Latin America in the rehabilitation of monument buildings. The most significant was the cooperation of EEGSA, in Guatemala, with the National Anthropology and History Museum to prepare the drawings for the museum's electrical networks and interior electrical installations.

The monument rehabilitation and lighting program is one of IBERDROLA's main cultural initiatives

Lighting of the Granja de San Ildefonso Royal Palace (Segovia)

Other Activities

Monument Lighting Projects

- Church of El Salvador (La Roda-Albacete)
 - Church of La Anunciada (Urueña-Valladolid)
 - Church of El Salvador (Caravaca-Murcia)
 - Panoramic elevator of Cartagena (Murcia)
 - Church of Virgen de las Huertas (Lorca-Murcia)
 - Palace of Justice and other monuments at Estella (Navarra)
 - Church of Nuestra Sra. de Caná (Pozuelo de Alarcón-Madrid)
-

Monument Restoration Projects

- San Blas Chapel of the Toledo Cathedral
 - Santa Catalina Parish Church (Jarafuel-Valencia)
 - San Roque Chapel (Ledaña-Cuenca)
-

Music, Painting and Theater

IBERDROLA has continued with its policy of sponsoring various cultural events in the fields of music, painting and the performing arts.

Its main actions were:

Sponsorship of Musical Groups and Concerts

- Fundación Orquesta Sinfónica de la Región de Murcia
 - Bilbao Choral Society
 - Orfeón Donostiarra (Guipúzcoa)
 - Magdalena Concert (Castellón)
 - International "Ciudad de Valencia" Music Band Competition
 - Vitoria Jazz Festival (Álava)
 - Concert for Peace (Palencia)
-

In painting, IBERDROLA supported the Fundación Museo Ramón Gaya de Murcia, of which it is a Cooperating Member, and the Autumn Salon Prize of the Ateneo Mercantil de Valencia, which IBERDROLA has sponsored since 1998.

Its salient actions in the theater were its support of the Alcántara (Cáceres) Classical Theater Festival and its support of the Calderón de la Barca Theater in Valladolid.

In Chile, ESSAL sponsored several artistic events, including:

Events Sponsored by ESSAL

- Rubén Schneider painting exhibition
 - 15th International Theater Festival 2004 (in Puerto Montt)
 - 4th Cultural Film Season at Osorno
 - 14th Film and Video Exhibition at Chiloé
-

In Brazil, COSERN sponsored several theater projects with the following titles: "Shakespeare na Rua," "Oratório de Santa Luzia" and "Bye Bye Natal."

In Bolivia, ELECTROPAZ cooperated in a concert cycle of the Chorus of the Bolivian-American Center.

Publications and Other Cultural Activities

IBERDROLA has a long tradition of publishing art, cultural, scientific and technological books, either directly or in cooperation with other organizations. In both cases, the books published usually deal with artistic-cultural or scientific-technological subjects.

In 2004, Fundación IBERDROLA published the following titles:

Book published by Fundación IBERDROLA

Fundación IBERDROLA Publicaciones

- The Royal Family in the Spanish Navy
- Science, Technology and Education
- Principles of Sustainable Economic Development: Life, the Environment and Society
- Water and Sustainable Development
- Corporations and Civil Society
- Europe: Community of Values or Legal System?
- The Keys to Energy

In Latin America, IBERDROLA supported a large number of cultural activities, which include:

Support for Publications in Latin America

- EEGSA (Guatemala)
 - "Trip to Guatemala" (set of 23 tourist guides)
 - "Guatemala, a nature paradise"
- COSERN (Brazil)
 - "Matas Potiguares - Nature & Surrealism"
 - "Culture Yearbook"
 - CDs with music by J. Baiano and V. Oliveira
- ESSAL (Chile)
 - 10th Book Fair in Puerto Montt

In Brazil, COSERN sponsored a number of projects with a broad cultural spectrum and aimed at a widely varying public:

- Museu da Luz: Museum of the history of electricity in the Brazilian state of Rio Grande do Norte.
- Operart Project: A cultural space offering art and activities for the needy.
- Casa da Ribeira: Theater performances, videos and exhibitions.
- Circo da Luz: a traveling cultural event which also includes training actions.

Also in Brazil, COELBA carries out a number of similar activities, included in two large programs:

- Culture: Theater, dance, literature, circus, etc.
- Cultural events under the Cultural Incentives Law (Rouanet Law): Symphony Orchestra, theater, etc.

ELECTROPAZ (Bolivia) supported the use of the Kusillo Museum, sponsoring the visit of over 4,000 schoolchildren.

EDUCATION AND TRAINING

One of the main goals of IBERDROLA's social activities, in their broadest sense, is to improve the education and training of groups in the company's social environment.

IBERDROLA supports initiatives to achieve excellence in the education and training of persons in the company's social environment

Different priorities are set, depending on the countries. In Spain, these activities focus on support for universities, while in Latin America, attention is paid primarily to more basic training focused on helping young people enter the job market.

In Spain alone, the resources allocated to these issues in 2004 were approximately € 1 million.

Support for Universities

IBERDROLA supports universities in different ways:

- Through cooperation agreements with universities and their foundations.
- By sponsoring masters programs, specialized postgraduate courses and summer seminars and courses.
- By sponsoring research work through university chairs and lecture halls.

Particularly significant activities in 2004 included the following:

Prince of Asturias Chair in Science and Technology at the University of New Mexico

The University of New Mexico in Albuquerque (United States) is considered one of the five best US universities in supercomputers and the world leader in optoelectronics and microelectronics.

The Prince of Asturias Chair in Science and Information Technology, sponsored by IBERDROLA together with the US Embassy in Spain, was created in 2003. The Prince and Princess of Asturias, Don Felipe and Doña Letícia, inaugurated the chair in 2004 and attended the ceremony in which IBERDROLA's Chairman, Iñigo de Oriol, was awarded the New Mexico University Medal.

Cooperation with Fundación San Benito de Alcántara

IBERDROLA and Fundación San Benito de Alcántara sponsored four international courses at the Universidad de Extremadura in 2004. The courses, given at Fundación San Benito de Alcántara, dealt with European and Brazilian social economy models, energy and environmental strategies, cultural tourism and various art forms

FUNDACIÓN SAN BENITO DE ALCÁNTARA

Agreements with Universities

IBERDROLA has continued to support and promote various activities (masters programs, courses, etc.) in cooperation with different universities. In 2004 it sponsored this type of program at 16 universities and 7 university-related foundations.

Universidad
Antonio de Nebrija

Assistance to Other Institutions

IBERDROLA also supports other institutions doing research in the corporate and technology fields.

It takes an active role in Fundación COTEC, a Foundation for Corporate Technological Innovation, founded in 1992 and inspired and promoted by H.M. the King, who is its Honorary Chairman.

It also cooperates with a large number of foundations, forums and associations involved in the scientific, corporate and cultural development of Spain.

IBERDROLA is also a member of the Spanish Committee of the World Energy Council, and cooperates with Fundación de Estudios Financieros (FEF) and Fundación de Estudios de Economía Aplicada (FEDEA).

Social Report

Fundación IBERDROLA's Contemporary Thought Forum

The Foundation Forum has two work programs in progress in 2004:

- Sustainable development and energy.
- Enterprises and civil society.

Two social research projects were launched in 2004:

- Innovation and Research Universities. This is a study of the reality of research in Spain and how to organize, motivate and foster an effective research and innovation system.
- Values in Europe and European construction. Its purpose is to analyze the European identity, the philosophical and moral crisis of European civilization, universities, liberal democracy and the current state of European construction.

Two international public workshops were held in 2004:

- Europe: Community of values or legal system?
- Public responsibility and social action, a new corporate philosophy.

Training in Electrical Safety and the Efficient Use of Energy

IBERDROLA has, directly or through other organizations, taken initiatives to train facilities technicians and experts and to inform users regarding the most significant issues relating to safety and efficient use of electricity.

The main work done in this area in 2004 was:

- *"Tren de la Energía"* (Energy Train): an initiative of the Ministry for the Environment which was joined by IBERDROLA. Its purpose was to extend and disseminate the notion of rational use of energy and to foster the use of alternative energy.

- Campaign to prevent electrical risk when working close to High Voltage Lines, held in the Community of Madrid, during which 2,500 pamphlets were distributed to contractors and a special telephone line was made available round the clock.

- Technical Workshop on preventing risks at electricity supply facilities, held at the *Gabinete de Seguridad e Higiene en el Trabajo* (Occupational Safety and Health Cabinet) in Valencia.
- Electrical safety campaigns were held in Castilla y León to prevent incidents in three specific types of installations: irrigation facilities, works near underground lines, and temporary supply for public celebrations. Electrical safety courses were also given to members of the Fire Brigade in Valladolid.
- "Workshops on Risk Prevention at Electrical Facilities" were held in Murcia in cooperation with the Institute for Occupational Safety and Health, aimed at Confederations of Companies, Professional Associations and Municipalities.
- The company took part in informational seminars with electrical installers in La Rioja.

- In cooperation with the *Dirección General de Industria* (General Board of Industry) of the Community of Madrid, a general information campaign ("Use Energy Well") was launched, addressed at residential users. 600,000 informative leaflets were distributed together with electricity bills.

In Brazil and Guatemala, COELBA, COSERN, CELPE and EEGSA promoted a large number of initiatives on this subject.

- The main activities undertaken by COELBA were:

Consulting and training to enhance efficiency in power management at various municipalities and industrial facilities.

Educational talks on the safe use of electricity ("*COELBA on your side*" and "*Agent COELBA*" programs).

Coordination of the national accident prevention campaign (Brazil Life Project), and the training of educators of the Public Teaching Network and other institutions (SOS Energy Project).

Dissemination of the principles of electrical safety to the population through a traveling montage ("*Picolino Circus*" project).

- COSERN's actions were:

Efficient energy use workshops at schools and municipalities in 33 cities of the state.

Special attention was given to communities located close to electricity substations.

Distribution of "low-consumption bulbs" to replace others with greater energy consumption. Over 140,000 such bulbs were distributed to over 98,000 customers in the last four years.

- CELPE built the "Energy Partners Educational Space," refurbishing its former Operations Center in Recife. The purpose of the space is to train multiplying agents in the rational use of energy and the preservation of the environment (teachers, students, trade unions, etc.). The Center has trained 145 institutions and 10,000 persons.

It is also carrying out its "Service to Special Communities" Program, where a CELPE team advises 300 communities of the state on high quality and safe supply of electricity.

- EEGSA took part in the energy and fuel saving campaign promoted by the Ministry of Energy and Mining of Guatemala. It also launched its own advertising campaign on the efficient use of electricity.

Training for Young People

IBERDROLA pays particular attention to training young people through the following major initiatives:

- Cooperation agreements with educational centers for in-house training at IBERDROLA. In 2004, 465 young people received this additional training.

TABLE 96

Educational cooperation	2004	2003	2002
University degrees	295	192	251
Diploma holders	125	65	69
No formal qualifications	45	49	35
Total	465	306	355

Social Report

- The company introduced the *Computers for all* and *Languages* educational programs for children of IBERDROLA's employees, which were attended by 210 children from seven to fifteen.
- Cooperation in *The Path of Energy* educational project based on publications and other activities carried out in several Autonomous Communities. It is aimed at the educational sector (*ESO* [Compulsory High School] and upper secondary school teachers and students) and designed to enhance knowledge of the various available sources of energy: electricity, gas, oil, etc.

IBERDROLA's affiliated companies in Brazil and Guatemala have also devoted efforts to training young people.

- COELBA and CELPE participate in the "Junior Achievement do Brasil" Association, an NGO whose purpose is to enhance entrepreneurship in young people, guiding them towards self-employment.
- CELPE participates in the "Quality in Teaching Institute," a non-profit organization managed by the Sao Paulo American Chamber of Commerce with a view to improving the learning process at public schools.

The following actions are also worth noting:

- CELPE Volunteer School (promotion of educational activities in communities).
- Reading Room project (gifts of libraries to charitable institutions in the state of Pernambuco).
- COELBA held courses and seminars, which included:
 - Young Citizen Program.
 - Friendly Energy Project (a cultural competition held at schools).

- COSERN cooperates with FUNDAC, providing supplemental training to teenagers of poor families.
- EEGSA donated computer and office equipment to several educational centers.

SOCIAL AID

In order to improve the living conditions of underprivileged social groups and people in its social environment, IBERDROLA is involved in a number of social aid and cooperation activities.

IBERDROLA assists the underprivileged through the actions of its foundation in Spain and of its affiliated companies in Latin America

In 2004, the volume of resources used for this purpose in Spain was over € 1.8 million, aggregating the contributions of IBERDROLA and its foundation.

The company's social aid policy is carried into practice through the following activities:

- Participation in non-profit social organizations as a member or as member of the Board of Trustees.
- Direct social aid actions through Fundación IBERDROLA and companies members of the Group.
- Cooperation with a wide range of social organizations in socially relevant projects.

Projects of Fundación IBERDROLA

In 2003, Fundación IBERDROLA issued the first call for tenders for Aid for Social Projects; 4 projects were selected. These activities of the foundation were further consolidated in 2004, and 11 projects were in progress at year-end. The subject matter of the projects and the institutions cooperating in them are:

- Inter-generational contact and social and health assistance for the elderly at their homes (cooperating NGO: Solidarios para el Desarrollo).
- Immigration – Ghetto or hope (cooperating NGO: Fundación Tomillo).
- Program on access to mental health resources for the homeless (Cooperating NGO: Fundación RAIS-Red de Apoyo para la Integración Sociolaboral).
- ESPERI project, for young people with behavioral disorders (Cooperating NGO: Fundación O'Belén).
- Transfer of knowledge in social and employment intervention processes with persons with disabilities (Cooperating NGO: Fundación Lantegi Batuak).
- "Science, Technology and Education" workshops, designed to find educational solutions that couple scientific and social development (Cooperating NGO: Fundación Europea Sociedad y Educación).
- "The rural area from the Duero line" project to enhance learning and entrepreneurial activities in the Arribes del Duero region (Cooperating NGO: Fundación Encuentro).
- AVALIVER, directed towards Alzheimer-related institutions (Cooperating NGO: Fundación Alzheimer España).
- Improvement in the operational structures of FEISD to make progress in the actual entry into

the job market of people with disabilities (Cooperating NGO: Federación Española de Instituciones para el Síndrome de Down-FEISD).

- Freeing the elderly and the sick from Alzheimers (Cooperating NGO: Confederación Española de Organizaciones de Mayores-CEOMA).
- "Talento" Project: White Paper on the training itineraries of young people with mental disabilities (Cooperating NGO: Asociación de FEAPS para el Empleo de Personas con Retraso Mental-AFEM).

Support for Social Institutions and Activities:
In 2004, IBERDROLA continued cooperating with various foundations and organizations.

Fundación Empresa y Sociedad

The company has been a member of the Board of Trustees of Fundación Empresa y Sociedad since 1997. It has therefore undertaken the commitment of improving social action strategy and practices at IBERDROLA, of publicizing them transparently and of supporting social activities within the corporate sector.

Fundación Energía sin Fronteras

IBERDROLA has been cooperating regularly with Fundación Energía sin Fronteras. This organization was set up as a result of the initiative of a group of energy professionals who contribute their knowledge and experience pro bono to achieve the goal of the foundation. Its purpose is to extend and facilitate access to energy and drinking water to regions where they are not currently available or where they exist under precarious conditions.

Fundación + Familia

This foundation comprising large families secures the supply of IBERDROLA products (energy solutions –gas and electricity– and other products) on advantageous terms.

Special Olympics. Seville 2004

Special Olympics is an international non-profit movement whose primary aim is to foster the personal development and integration of people with mental disabilities. It has been recognized by the International Olympic Committee and is present in 161 countries.

IBERDROLA was one of the main Sponsors of the 2004 Seville National Games, in which over 1,600 athletes and technical personnel and over 500 volunteers took part.

Other Activities

IBERDROLA has cooperated with many initiatives for assistance to the disadvantaged, promoted by various social institutions providing social assistance in general (the Red Cross, etc.) and assistance to families and children (UNICEF, etc.).

The company has also cooperated with organizations providing assistance against drug addiction (Fundación Etorkintza, "Proyecto Hombre," etc.).

Social Aid in Latin America

IBERDROLA's Latin American affiliated companies have been carrying out intense social activities in their respective communities.

An example are the Brazilian companies (COELBA, COSERN and CELPE), which have put in place a system to raise funds for assistance through the electricity bill, whereby they collect voluntary gifts from customers for certain charitable institutions.

Salient actions in 2004 were:

COELBA gave significant support to various institutions working on health and social assistance to the needy, which included:

- Obras Sociais Irma Dulce (Institute for health, education and social assistance) which has the largest philanthropic hospital in Brazil).
- Instituto de Ciegos de Bahia (for the visually impaired up to age 21).
- Liga Bahiana contra el Cáncer (Aristides Maltez Hospital).
- Axé Project (Center for the defense and protection of children and teenagers).
- House for the support and assistance of carriers of the AIDS virus, the Organización de Auxilio Fraternal and the Centro Expírita Camino de Redención.

CELPE has focused primarily on assistance to young people, cooperating with various initiatives:

- Energía Solidaria Project (promotion and support for the activities of volunteers working with children, teenagers and young people of the state of Pernambuco by CELPE employees and relatives).
- Movimento Pro-Criança (an NGO whose mission is to improve the standard of living of abandoned or at-risk teenagers and young people).

2004 Sustainability Report

- 4th CELPE Children's Festival (for the benefit of 1,000 children from special communities).
- Blood donation and food gathering campaigns.

COSERN took part in the work of various organizations:

- Casa del Menor Trabajador (serves over 500 children without any resources).
- Natal Voluntarios (an NGO that promotes and carries out volunteer programs).

ESSAL (Chile) has been regularly supporting various initiatives, which include:

- Corporación de Ayuda al Niño Limitado -COANIL- (an organization that helps people with mental disabilities who have been abandoned by their families).
- Fundación Integra X Región (through its day-care center network, it helps 6,000 children of the Los Lagos Region who are at social risk).
- Traditional Coverage Program (a system for low-income ESSAL clients, designed to facilitate their connection to drinking water and sewage services, dividing the connection price into monthly installments that are charged on the bill).

In Bolivia, ELECTROPAZ helped locate missing children by publishing their pictures and personal information on the electricity bill.

The Latin American companies generally make gifts to social welfare institutions such as the Red Cross or the Desarrollo Integral de la Familia (Total Family Development) organization in Mexico.

THE ENVIRONMENT

IBERDROLA's commitment to environmental protection is one of the strategic pillars of the company, as shown by its annual publication of an Environmental Report since 1996, the 2004 version of which is part of this Report.

In addition, the company is active in environmental sponsorship and patronage, and allocated € 700,000 to these activities in 2004.

Support for Environmental Organizations
IBERDROLA cooperates with a number of public and private institutions in promoting various environmental initiatives.

The following are particularly relevant:

Rey Jaime I Awards

IBERDROLA participates in the Rey Jaime I Awards, created at the initiative of Fundación Valenciana de Estudios Avanzados, under the patronage of H.M. the King.

Their purpose is to recognize the scientific merit of Spanish persons or research groups working mostly in Spain.

They are awarded in five categories, and IBERDROLA has sponsored the Environmental Protection Prize since 1995.

FUNDACIÓN VALENCIANA DE ESTUDIOS AVANZADOS

Sustainability Excellence Club

IBERDROLA is a founding member of the *Club de Excelencia en Sostenibilidad* (Sustainability Excellence Club), a forum created in 2002 by a number of large companies (20 companies in 2004) to promote sustainable development from the corporate sector.

Other Initiatives

The company is also a member and participates in the activities of:

- Instituto para la Sostenibilidad de los Recursos (Institute for the Sustainability of Resources) (ISR-Cer)
- *Asociación de Empresas del Sector Medioambiental de Andalucía* (Association of Environmental Industry Companies of Andalucía) (AESMA)
- *Foro Doñana para la Empresa Sostenible* (Doñana Forum for the Sustainable company)
- Agenda Local 21 with various Spanish municipalities.

Activities to Publicize Sustainability

In 2004, IBERDROLA cooperated with many dissemination actions on environmental matters, participating in and supporting courses, seminars, workshops, etc.

The most relevant of these actions are listed in the following table:

Support for Environmental Courses, Workshops and Exhibitions

- Seminar on Wind Power (Club Diálogos para la Democracia, Madrid)
- Summer course on the Environment (Universidad Complutense, Madrid)
- Summer course on the Environment (Universidad San Pablo-CEU, Madrid)
- 6th Course on the Biodeterioration of Materials (Universidad Politécnica, Madrid)
- 7th Congress on the Environment 2004 (CONAMA, Madrid)
- 2nd Annual Workshop on Spanish Industry and Kyoto (Madrid)
- ECOFORUM'04 (Generalitat Valenciana-CEV-ECOFIRA, Valencia)
- 2nd Annual Renewable Energy Week (Agencia Regional de la Energía, Murcia)
- Summer course on Energy and the Environment (Universidad Politécnica, Cartagena - Murcia)
- National Workshop on electric lines and preservation of birds in natural spaces (Government of the Region of Murcia)
- Workshop on Sustainable Energy Development (Town Hall of Sanlúcar de Barrameda, Cádiz)
- World Forum on Communication and Sustainable Development (Foro Soria 21)
- Environmental Management Seminar (Instituto Energético de Galicia, Santiago de Compostela)
- 1st Annual Meeting on Energy and the Environment of the Atlantic (Universidad de Vigo, Pontevedra)
- Technical workshop and stand at EXPOENERGÍA (Feria de Energías Renovables, Langreo-Asturias)
- PROMA Environmental Congress (PROMA Fair, Bilbao)
- "Energy and Climate Change" Traveling Exhibition (Fundación Centro de Recursos Ambientales de Navarra-CRAN)
- FOSMINER Minerals and Fossils Fair (Bilbao)

In Latin America, EEGSA participated in the reforestation campaign of the Cerro Alux protected area in Guatemala. At a special ceremony, it gave 500 trees to the town of San Pedro Sacatepéquez.

2004 Sustainability Report

Recognition Received

For the fifth year in a row, IBERDROLA won a place on the *Dow Jones Sustainability Index*. This index has become one of the leading overall benchmarks to measure compliance with sustainable development management criteria and systems.

IBERDROLA has earned worldwide recognition as a leader in environmental protection

In 2004, the company was included for the first time among the world leaders in the industry ("Electric Utilities"). Only 3 companies were included, and IBERDROLA ranked second, after the German company RWE AG.

In 2004, IBERDROLA was awarded second prize in the *European Environmental Corporate Prize* (Basque Section), in the Sustainable Development Management Prize category, created by the European Union.

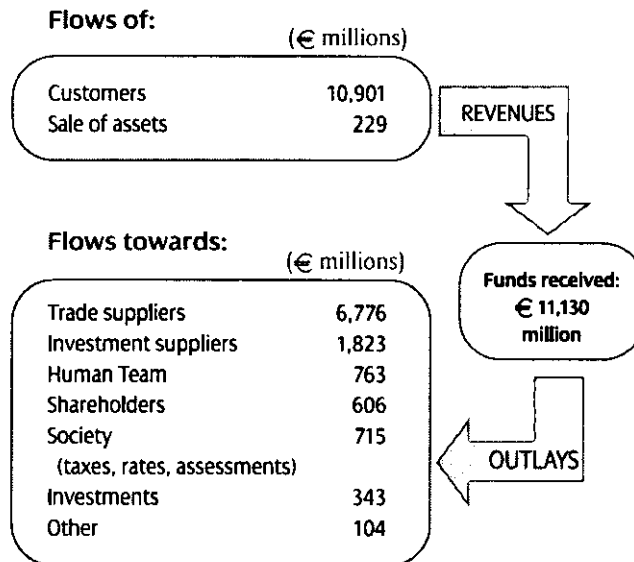

FLOWS IN VALUE BETWEEN IBERDROLA AND ITS INTEREST GROUPS

The activities described throughout this Social Report are important to show the relevance that IBERDROLA assigns to its relationship with its Interest Groups, the initiatives put into practice to understand what these groups expect of the company and the actions designed to provide an appropriate response.

These actions take place within a framework whose purpose is mutual benefit, through the exchange of the assets which each of the players makes available to the others in a more efficient fashion, as shown in the diagram to the right.

Within this framework, there are economic flows among the interested parties, which should be determined so as to assess the level of dependence among them.

The table below provides an estimate of such flows:

N.B.:

This information has been obtained from internal IBERDROLA sources, and should therefore be considered to be informative in nature. For a detailed analysis of IBERDROLA's consolidated financial statements, the audited information is included in the consolidated annual financial statements.

2004 Sustainability Report

QUALITY POLICY

At IBERDROLA, we understand quality to be the integration of activities with the aim of achieving customer satisfaction, respect for the environment and the prevention of occupational risks, thus attaining business excellence in the management of these areas. This proposition is based on the following principles:

Know the expectations of our customers, both internal and external, as a necessary condition for meeting their demands and keeping their loyalty.

Encourage innovation and development in order to satisfy or even exceed the expectations of our customers and employees.

Promote a culture of continuous improvement in the management of all of the company's procedures and activities.

Increase the motivation of our employees through informational transparency, internal communication, training and continuous advancement.

Acknowledge individual achievements and encourage teamwork as a model of behavior at all organizational levels.

Expand all of our activities, while establishing the safety of our employees as an essential requirement.

Establish a culture of risk prevention, which allows us to manage environmental impacts and operating risks in a manner compatible with our surroundings.

Publicize our quality policy in order to boost the company's image and foster communication with the community.

Improve indicators for growth, profitability, leadership, quality, environmental impact, safety and costs, in order to ensure the company's continued success.

Provide information in a transparent manner regarding both business results and the company's other activities.

At IBERDROLA, we understand quality to be the integration of activities in order to achieve the satisfaction of our customers' expectations, respect for the environment and the prevention of labor risks, thus attaining business excellence in the management of these areas

QUALITY MANAGEMENT

During 2004, IBERDROLA made progress on a total quality management model that won the company new certifications and acknowledgements in this area for its businesses and procedures.

Specifically, IBERDROLA received global quality and environmental certificates from AENOR for its management and electric power generation and distribution, and specific certificates for hydroelectric production. The main quality management activities carried out by the various organizations in 2004 are:

Generation

In 2004, IBERDROLA became the first company in the world to obtain a combined Environmental Management Certificate, in accordance with the ISO 14001 standard, for 40 wind farms with 1,313 MW of installed capacity. The combined cycle power plants of Castejón (Navarra) and of Bahía de Bizkaia de Electricidad also obtained the same environmental certificate.

In addition, through its subsidiary, Iberdrola Operación y Mantenimiento (IOMSA), the company that performs the operation and maintenance of all combined cycle power plants, Iberdrola obtained the ISO 9001 Quality certificate, the ISO 14001

Environmental Certificate, and the OHSAS 18001 and the OHSAS 18001 Occupational Risk Prevention certificate. Furthermore, the company already has 42 certifications, which are listed in the table on page 222 of this report.

IBERDROLA became the first company in the world to obtain a combined environmental management certificate for 40 wind farms

Distribution

During 2004, the distribution business obtained the ISO 14001/96 environmental certification for the maintenance of substations, and modified the systems and procedures for measuring service quality in accordance with order ECO 797/2002. In addition, the company put into place a new prevention model and corresponding plan of action in order to achieve the goal of zero accidents.

Supply

In the supply area, the strategic plan was defined and an efficiency, quality and procedures unit was created, with the establishment of a corresponding procedures map.

Bahía de Bizkaia de Electricidad combined cycle plant (Vizcaya)

Quality Report

At the gas unit, the quality system for wholesale trading, risk coverage and related logistical services was certified by AENOR pursuant to ISO 9001/2000.

IBERDROLA Ingeniería y Consultoría

At IBERDROLA Ingeniería y Consultoría (IBERINCO), a Quality Committee was established as a tool to monitor the Quality System. This system has been implemented at IBERINCO México for certification in the near future. In addition, IBERINCO has been authorized by the Mexican Federal Electricity Commission as a provider of engineering services for nuclear power plants.

Corporate Divisions

In 2004, the Corporate Safety area obtained the ISO Quality certificate from AENOR for compliance with the 9001/2000 safety rules. In addition, in order to reinforce control of financial transactions and to assure Asset Protection and the quality of information being managed, the company carried out a process of re-engineering to define an optimized management model with respect to personnel, purchasing and taxes.

IBERDROLA already has 42 certifications for 2004

The Strategy and Development Division impelled the company's self-evaluation process based on the EFQM Business Excellence Model and prepared the group's new Environmental Policy.

During 2004, the Internal Audit unit included a new Information Confidentiality procedure within its Quality System, in response to the application of the Information and Communications Safety Plan (*Plan de Seguridad de la Información y de las Comunicaciones*) (PDSIC). Also, the novel treatment of the Quality Manual, with its integration into the Basic Rules for Internal Auditing and its communication to the group's managers, stands out as a conclusion of the audit carried out by AENOR for the renewal of its ISO 9001/2000 certificate.

In 2004, IBERDROLA's Occupational Risk Prevention Policy was updated to adapt it to the directives and objectives laid out by the company's management. This policy, which has an impact on obtaining the highest possible level of protection for IBERDROLA's workers, was signed by the Vice-Chairman & CEO, and was distributed to all of the company's employees in December 2004. Another notable effort was made in prevention training, after recent changes in legislation resulted in the doubling of the number of hours IBERDROLA's employees attended courses.

IBERDROLA and its Customers

The quality of supply to our customers constitutes an essential element of electricity service, and its improvement is one of the basic goals of IBERDROLA's distribution activity. The principal index to measure the quality of supply is the Installed Capacity Equivalent Interruption Time (ICEIT), which represents the average annual time of disruption of supply to customers.

A record in IBERDROLA's quality of electricity supply

Total customer focus is one of the key objectives in IBERDROLA's Quality Policy. The company made significant advances in this area, and ended the year with a record quality of electricity supply, registering less than two hours for the first time, with an ICEPT of 1.87 hours, 14% better than in 2003 (additional information on pages 81 and 82 of this report).

Customer Satisfaction Studies

Throughout the year, IBERDROLA carried out various studies to measure customer satisfaction levels: *La Voz del Cliente* (The Customer's Voice) (discussed on page 188 of the report) and *Calidad en sus Procesos* (Quality in Procedures).

"Soluciones para tu vida" (Solutions for your life) store interior (Bilbao)

Quality in Procedures

IBERDROLA's Retail Division has prepared a Map of Procedures intended to efficiently guide the business towards the satisfaction of the customer and other interest groups through the continuous improvement of such procedures and the permanent search for excellence. The Map of Procedures ensures efficient attention to and treatment of customer complaints and the detection of reasons for customer dissatisfaction, the determination of the causes thereof and the implementation of measures to avoid them.

QUALITY OF SUPPLY

IBERDROLA ensures the quality of its products through the monitoring and optimization of its supplies. Thus, suppliers who work with the company must comply with standards that assure and guarantee quality in their products and services.

In the case of strategic products and services, the supplier must have ISO 9000 certification. Certification of the product with quality standards is required with respect to equipment and materials intended for energy distribution facilities.

Currently, 90% of IBERDROLA's principal suppliers are certified in accordance with ISO 9001 (quality management), and 20% with ISO 14001 (environmental management).

In order for 90% of the principal suppliers to be certified in ISO 14001 as well, a motivational and awareness campaign was carried out in order to inform them that it takes approximately two years to obtain the environmental certificate.

IBERDROLA Supplier of the Year Award

This award is intended to serve as an incentive to, as well as an acknowledgment of, the efforts of suppliers with respect to quality of service. The award is used by IBERDROLA to foster the continuous improvement of suppliers, the optimization of their products and services and their respect for the environment, and to encourage their management in the prevention of occupational risks and their corporate commitment to sustainable development.

In 2004, the Supplier of the Year Award went to Funtam (Grupo Postigo), Incoesa Trafodis, Grupo Dominguis, CCM.CG and T-Systems EYTC

The third edition of the IBERDROLA Supplier of the Year Awards was held in Valencia, with the following winners: Funtam, in the Equipment and Materials Manufacturers category (Large Companies), *Incoesa Trafodis* in the Equipment and Materials Manufacturers category (SMEs), *Grupo Dominguis* as the best supplier of Services (Large Companies), CCM.CG as the best supplier of Services (SMEs) and T-Systems EYTC in the Non-Electricity Business category.

Delivery of the 2004 IBERDROLA Supplier of the Year Award

2004 Sustainability Report

TABLE OF CONTENTS PURSUANT TO THE GLOBAL REPORTING INITIATIVE (GRI)

In its 2002 Sustainability Reporting Guidelines, the Global Reporting Initiative (GRI) (www.globalreporting.org) recommends the inclusion of a table of contents in order to rapidly identify the location of the various GRI indicators in the documents making up the Annual Report.

The following pages include the recommended table of contents, with the GRI indicators ordered by section and the place where IBERDROLA reports thereon. In some cases, this information might not be complete with respect to the information requested, which should not be interpreted as a lack of transparency on the part of the company, but rather a lack of availability of such information at the time of preparation of this report.

The information corresponding to fiscal year 2004 follows the standards initiated by IBERDROLA in prior years in order to offer complete and truthful information regarding the economic, environmental and social dimensions of its activities. This report maintains the principle of comparability with fiscal

year 2003, as there are no significant changes to the methods of calculation applied to the key information.

IBERDROLA has not made any decision contrary to the application of the GRI principles or postulates. The omission of certain of them, which might still be applied in practice, might be because they have not been explicitly formulated in corporate policies or are not currently used in the Group's management systems. To the extent that the GRI principles or postulates are a valid business reference in terms of sustainability, IBERDROLA's future reports will attempt to integrate them.

There are internal management systems and strict procedures available within the company in order to put into practice the policy of transparency and accuracy on which the public dissemination of the Group's information is based, with auditing mechanisms to ensure that the information provided in the Annual Report is reliable and complete in scope.

In addition, the annual financial statements are supervised by an external independent auditor and the environmental information is backed up by the UNE EN ISO 9001: 2000 certification, in the process of design, preparation and dissemination thereof.

This report has been validated by AENOR in accordance with the GRI 2002 Guidelines. The validation document is included at the end of this chapter, and the corresponding Validation Report, which was also prepared by AENOR, is also available.

The IBERDROLA Group's 2004 information is issued in three volumes, with the same Legal Deposit.

- Sustainability Report
- Corporate Governance Report
- Legal Information

2004 Sustainability Report

As a reference for those GRI indicators that require it, the acronyms used are:

- SR Sustainability Report
- CG Corporate Governance
- LI Legal Information

The referred to in the Table of Contents are:

1) Reports available at www.iberdrola.com

Annual Report: 1999, 2000, 2001, 2002, 2003 y 2004 (*)

Environmental Report: 1997, 1998, 1999, 2000, 2001, 2002, 2003 (**) y 2004 (**)

Social Report 2001

Social Report 2002, 2003 (**) y 2004 (**)

(*) Called the Sustainability Report

(**) The Reports set forth are included in the Annual Report for the corresponding year.

- 2) In addition to the environmental impacts caused by IBERDROLA's activities, social and economic impacts also that occur as a result of the company's new facilities. The basic impacts are those of the generation of direct and induced labor, and an increase in economic activities in the area of the new sites during the construction phase as well as during the subsequent operations.
- 3) The information provided corresponds to the consolidated information of the IBERDROLA Group. The information corresponding to the affiliate companies in Latin America can be seen in their Annual Reports.
- 4) Current systems and procedures do not allow for the availability of information corresponding to affiliate companies in Latin America within the deadlines for the preparation of this report. It is expected that this situation will be corrected for future reports.

- 5) The information provided corresponds to activities carried out in Spain. Information corresponding to affiliate companies in Latin America is currently not available.
- 6) The activities of IBERDROLA's affiliates in Brazil, Chile, Bolivia and Guatemala are not geographically affecting indigenous communities. In Mexico, a gas combined cycle plant is in development in Tamazunchale, in the state of San Luis Potosí, which will be installed in a municipality in which there are several indigenous communities. Although these communities are not affected territorially, communications campaigns are being carried out in collaboration with Mexican entities in order to report on the most significant aspects of the project.
- 7) The management standards adopted by IBERDROLA incorporate standards socially required by its activities in all countries in which it operates, rejecting the use of bribery or corrupt practices, as set forth in the Code of Professional Conduct, or financial contributions to political organizations.

GRI Table of Contents

Note: With the intention to facilitate their identification, the original GRI indicators in this content index have been edited, adapting them to a single line. In order to avoid misinterpretations, the literal and complete descriptions can be consulted in the original document, the GRI 2002 Sustainability Reporting Guidelines.

Global Reporting Initiative (GRI) Content Index		IBERDROLA Information
1.	VISION AND STRATEGY	
1.1	Statement of vision and strategy on sustainable development	SR 43-49,153
1.2	Statement from the CEO describing key elements of the report	SR 3-5
2.	PROFILE	
Organisational Profile		
2.1	Name of reporting organisation	SR 249
2.2	Major products/services, including brands if appropriate	SR 186,187
2.3	Operational structure of the organisation	SR 9,21
2.4	Description of major divisions, operating companies, subsidiaries, and joint ventures	SR 71-93, 232-239
2.5	Countries in which the organisation's operations are located	SR 88
2.6	Nature of ownership; legal form	CG 2-10
2.7	Nature of markets served	SR 50-52, 74,75,85-93
2.8	Scale of the reporting organisation	SR 26-28,63-65,158,159
2.9	List of stakeholders, key attributes of each, relationship to the reporting organisation	SR 153,215
Report Scope		
2.10	Contact person(s) for the report, including e-mail and web address	SR 251
2.11	Reporting period for information provided	Year 2004
2.12	Date of most recent previous report	Note 1
2.13	Boundaries of report and any specific limitations on the scope	SR 95,156 LI 88-95
2.14	Significant changes in the organisational profile since the previous report	SR 156 LI 16-17
2.15	Basis for reporting on situations that can significantly affect comparability	LI 12-14
2.16	Explanation of, and reasons for, any re-statement of information provided earlier	SR 156
Report Profile		
2.17	Decisions not to apply GRI principles or protocols in the preparation of the report	SR 156
2.18	Criteria/definitions used in economic, environmental, and social accounting	SR 95,156 LI 12-17
2.19	Significant changes from previous years in key information measurement methods	SR 156
2.20	Policies and internal practices to assure the reports accuracy, completeness, and reliability	SR 95,241
2.21	Policy and current practice regarding independent assurance of the report	SR 241
2.22	Means by which report users can obtain additional information	SR 95,251
3.	GOVERNANCE STRUCTURE AND MANAGEMENT SYSTEMS	
Structure and Governance		
3.1	Governance structure of the organisation	CG 10-37
3.2	Percentage of independent, non-executive directors in the board of directors	10 of 21 = 48%
3.3	Process for determining the expertise needed by board members	CG 31
3.4	Board-level processes for overseeing identification/management of risks/opportunities	CG 24,34,41-45
3.5	Linkage between executive compensation and achievement of goals	CG 17 SR 161,162,166
3.6	Oversight, implementation and audit of economic, environmental, and social policies	SR 21
3.7	Mission, values, Code of Conduct and their status of implementation	SR 153,154,158
3.8	Mecanismos for shareholders to make recommendations to the board of directors	SR 176

Stakeholder Engagement

3.9	Basis for identification and selection of major stakeholders	SR 95,153-156
3.10	Approaches to stakeholder consultation	SR 95,165,175, 187,188,194,195
3.11	Type of information generated by stakeholder consultations	SR 95,165,175
3.12	Use of information resulting from stakeholder engagements	SR 95,165,175

Overarching Policies and Management Systems

3.13	Explanation of whether and how the organisation addresses the precautionary approach	SR 101,104,145
3.14	Externally developed, voluntary initiatives the organisation subscribes to or endorses	SR 155
3.15	Principal memberships in industry or business associations and/or advocacy organisations	SR 157
3.16	Policies and/or systems for managing upstream and downstream impacts	SR 98,99,104-107,193
3.17	Approach to managing indirect economic, environmental, and social impacts	SR 100-112 Note 2
3.18	Major decisions regarding the location of, or changes in, operations	SR 43-49
3.19	Programs and procedures pertaining to economic, environmental, and social performance	SR 114-117,166,169, 202,203,210
3.20	Status of certification of economic, environmental, and social management systems	SR 35,104-107, 167,222,223

4. PERFORMANCE INDICATORS**4.1 ECONOMIC PERFORMANCE INDICATORS****Customers**

EC1.	Net Sales	SR 57
EC2.	Geographic breakdown of markets	SR 71-93

Suppliers

EC3.	Cost of all goods, materials, and services purchased	SR 191
EC4.	Percentage of contracts paid in accordance with agreed terms	SR 191
EC11.	Supplier breakdown by organisation and country	SR 191

Employees

EC5.	Total payroll and benefits broken down by country or region	LI 10,74 Note 3
------	---	-----------------

Providers of capital

EC6.	Distributions to providers of capital broken down by interest and dividends	LI 9,10
EC7.	Increase/decrease in retained earnings at end of period	LI 106

Public sector

EC8.	Total sum of taxes of all types broken down by country	LI 10,74 Notes 3 y 4
EC9.	Subsidies received broken down by country or region	LI 56 Notes 3 y 4
EC10.	Donations to community broken down by amounts and beneficiaries	SR 201 Notes 4 y 5

4.2 ENVIRONMENTAL PERFORMANCE INDICATORS**Materials**

EN1.	Total materials use other than water, by type	SR 118-120
EN2.	Percentage of materials used that are wastes from external sources	SR 118

Energy

EN3.	Direct energy use segmented by primary source	SR 121-122
EN4.	Indirect energy use	SR 121-122

Water

EN5.	Total water use	SR 123-125
------	-----------------	------------

Biodiversity

EN6.	Location/size of land owned, leased or managed in biodiversity-rich habitats	SR 109-112,127- 129 Notes 4 y 5
------	--	------------------------------------

GRI Table of Contents

EN7.	Description of the major impacts on biodiversity associated with activities	SR 96,97
EN27.	Objectives and Programmes for protecting and restoring native ecosystems and species	SR 109-112
EN29.	Business units operating or planning operations in or around protected or sensitive areas	SR 127-129
Emissions, Effluents, and Waste		
EN8.	Greenhouse gas emissions	SR 130-133
EN9.	Use and emissions of ozone-depleting substances	SR 133
EN10.	NOx, SOx, and other significant air emissions by type	SR 30, 134-138
EN11.	Total amount of waste by type and destination	SR 139-142
EN12.	Significant discharges to water by type	SR 126
EN13.	Significant spills of chemicals, oils, and fuels	SR 143
EN30.	Other relevant indirect greenhouse gas emissions	SR 131
Suppliers		
EN33.	Performance of suppliers relative to environmental aspects described in 3.16	SR 193
Products and Services		
EN14.	Significant environmental impacts of principal products and services	SR 96
EN15.	Percentage of the weight of products sold that is reclaimable	SR 96
Compliance		
EN16.	Incidents of and fines for non-compliance with applicable environmental regulations	SR 143
Overall		
EN35.	Total environmental expenditures by type	SR 144
4.3 SOCIAL PERFORMANCE INDICATORS		
Labour Practices and Decent Work		
Employment		
LA1.	Breakdown of workforce by region/country, employment type and contract	SR 159,160
LA2.	Net employment creation and average turnover segmented by region/country	SR 160 Notes 4 y 5
LA12.	Employee benefits beyond those legally mandated	SR 162,163
Labour/Management Relations		
LA3.	Percentage of employees represented by independent trade union organisations	SR 163,164 Notes 4 y 5
LA4.	Policy of consultation with employees on changes in the organisation's operations	SR 164,165
LA13.	Provision of formal worker representation in decision-making	SR 163,164
Health and Safety		
LA5.	Practices on recording and notification of occupational incidents and diseases	SR 168 Notes 4 y 5
LA6.	Formal joint health/safety committees comprising management and workers	SR 167,169
LA7.	Standard injury, lost day, absence rates, and work related fatalities	SR 168 Notes 4 y 5
LA8.	Description of policies and programmes on HIV/AIDS	SR 168
LA14.	Evidence of substantial compliance with ILO health management guidelines	SR 158,167
LA15.	Formal agreements with trade unions covering health and safety at work	SR 163,167
Training and Education		
LA9.	Average hours of training per year per employee by categorie of employee	SR 171
LA16.	Support of continued employability and management of career endings	SR 169,170
LA17.	Specific policies/programmes for skills management or lifelong learning	SR 169,170
Diversity and Opportunity		
LA10.	Equal opportunities policies and monitoring systems to ensure compliance	SR 161
LA11.	Composition of senior management/corporate governance bodies, female/male ratio	SR 159
Human Rights		
Strategy and Management		
HR1.	Human rights policies, guidelines, and procedures	SR 158

2004 Sustainability Report

HR2.	Evidence of consideration of human rights impacts as part of investment decisions	SR 193
HR3.	Policies/procedures to address human rights performance within the supply chain	SR 193
Non-discrimination		
HR4.	Global policy and procedures preventing all forms of discrimination	SR 158,161
Freedom of association and collective bargaining		
HR5.	Freedom of association policy	SR 158,163
Child labour		
HR6.	Policy excluding child labour as defined by ILO Convention 138	SR 158
Forced and compulsory labour		
HR7.	Policy to prevent forced and compulsory labour	SR 158
Indigenous Rights		
HR12.	Description of policies and procedures to address the needs of indigenous people	Note 6
HR13.	Description of jointly managed community grievance mechanisms/authority	Note 6
HR14.	Share of operating revenues that are redistributed to local communities	Note 6
Society		
Community		
SO1.	Management of impacts on communities in areas affected by activities	SR 98-101,200
SO4.	Awards received relevant to social, ethical, and environmental performance	SR 157,169,180
Bribery and Corruption		
SO2.	Policy and management systems addressing bribery and corruption	Note 7
Political Contributions		
SO3.	Policy and management systems for managing political lobbying and contributions	Note 7
SO5.	Amount of money paid to political parties and institutions who fund political parties	Note 7
Competition and Pricing		
SO6.	Court decisions regarding cases pertaining to anti-trust and monopoly regulations	SR 184
SO7.	Description of policy and management systems for preventing anti-competitive behaviour	SR 181
Product Responsibility		
Customer Health and Safety		
PR1.	Policy for preserving customer health and safety during use of products/services	SR 190,207,208
PR4.	Number and type of instances of non-compliance with regulations	No case of non-compliance in 2004
PR5.	Number of complaints upheld by regulatory or similar official bodies	2004 No complaints
PR6.	Voluntary code compliance, product labels used or awards received	SR 190
Products and Services		
PR2.	Policy and management systems related to product information and labelling	SR 187
PR7.	Number and type of non-compliance with regulations	No case of non-compliance in 2004
PR8.	Policy and management systems related to customer satisfaction	SR 187-189
Advertising		
PR9.	Adherence to standards and voluntary codes related to advertising	SR 189-190
PR10.	Number and types of breaches of advertising and market regulations	SR 184
Respect for privacy		
PR3.	Policy and management systems for consumer privacy	SR 189
PR11.	Number of substantiated complaints regarding breaches of consumer privacy	2004 No complaints

AENOR CERTIFICATION

AENOR Asociación Española de
Normalización y Certificación

SUSTAINABLE REPORT VALIDATION

AENOR
S.M.S.-N° 001/05
The Spanish Association for Standardisation and Certification (AENOR) certifies that the
Sustainable Report of the following firm:

IBERDROLA, S.A.

Entitled: **"SUSTAINABILITY REPORT 2004"**

Legal deposit number: BI-456-05004

This Report is in accordance with the requirements of the 2002 edition guide for the elaboration of Sustainable Reports, developed by the Global Reporting Initiative (GRI). The validation has been fulfilled on 25th February and no subsequent performances can be considered

The present validation will be in force, unless it is cancelled or withdrawn, upon AENOR's written notification and according to specific terms of the contract - application n° GRI - 002/2005 of 8th February 2005 and to the General Regulation of January 2003, which require, amongst other commitments, the permission to visit the installations by the technical services of AENOR to verify the veracity of stated facts.

This declaration does not condition the decision that Global Reporting Initiative can adopt to incorporate to IBERDROLA in the "In accordance reports list", and that GRI publishes in its Web http://www.globalreporting.org/guidelines/reports_list.asp.

Issued on: 25th February 2005

General Manager of AENOR

IDENTIFICATION

IBERDROLA, S.A. was incorporated for an indefinite period of time via a public deed executed on July 19, 1901 before Bilbao Notary Public Isidro de Erquiaga y Barberías, and registered in book 17 of the Companies Section, folio 114, sheet 901, entry no. 1 in the Vizcaya Commercial Registry. The Company's Tax Identification Number is A-48010615.

The Company's By-Laws were adapted to the Consolidated Text of the Spanish Companies Law by virtue of the resolution adopted by the shareholders at the General Shareholders' Meeting held on June 16, 1990, and formalized in a public deed executed on July 6, 1990 before Bilbao Notary José María Arriola Arana under no. 2,080 of his notarial register and registered with the Vizcaya Commercial Registry in volume 2110, folio 56, sheet BI-167-A, entry no. 700.

Its present name was adopted by the shareholders at the General Shareholders' Meeting held on November, 1, 1992 and formalized in a deed executed on December 12, 1992 before Bilbao Notary José María Arriola Arana under no. 4150 of his notarial register and registered with the Vizcaya Commercial Registry in volume BI-233 of the General Companies Section, folio 156, sheet BI-167-A, entry no. 923.

By means of a resolution adopted by the shareholders at the General Shareholders' Meeting on April 1, 2000, the Company's corporate purpose was adapted to meet the provisions of the Spanish Electricity Industry Law 54/1997, of 27 November, which provided for the separation of regulated and non-regulated activities.

By means of a resolution adopted by the shareholders at the General Shareholders' Meeting held on April 3, 2004, the current By-Laws have been adapted to the Transparency Law and to Corporate Governance best practices, which resolution was converted into a public instrument on such date under no. 558 of his notarial register and registered with the Vizcaya Commercial Registry in volume 4040, folio 122, page number BI-167-A, entry no. 1657.

The Company's registered offices are in Bilbao, at calle Cardenal Gardoqui, 8, where the documentation relating to the information contained in this Annual Report, together with all other public information on the Company, is available to the Company's shareholders.

Greeting and introduction

Dear Shareholders:

I have the honor, yet another year, to appear at this General Shareholders' Meeting on behalf of the Board of Directors in order to report on the governance and management of the Company during Fiscal Year 2004 and share with you some comments about the environment in which we conduct our business. First of all, I want to welcome you all here and express our thanks for your presence today at the event that is, no doubt, the most solemn in any corporation throughout the year. I want to extend an especially warm welcome to all those persons who contribute their work and dedication in order to advance the values of IBERDROLA's business culture beyond our frontiers: our heartfelt thanks to you Bolivians, Brazilians, Chileans, Guatemalans, Mexicans and Portuguese, who are with us today at this General Meeting in which we welcome you with open arms. We wish you a pleasant stay in our country.

Let me first tell you that during the year that has elapsed since the last General Meeting, we have been, as is usual at our company, in regular and open communication with all levels of Government. We are bound to maintain such communication because our energy business is a regulated business and the public service we provide to our country is of the utmost importance. The economic and social progress that Spain has witnessed in the last few years could not be understood without relating it to the climate of confidence that has successfully been established between the authorities and private institutions in furtherance of the country's stability and the well-being of all citizens. At IBERDROLA, we have at all times been ready to cooperate and engage in a dialogue with the Central, Autonomous Community and local governments, always confident that the requisite framework will be created for a more effective discharge of our duties in serving the Spanish community.

In a few weeks' time, the most significant elections will take place in this Basque Country where our registered office is located. As members of a company that has had deep roots in this land since its inception, we would like to express our wish and our confidence that these elections will help

strengthen sound and lasting ties among those of us who want to live in this country and contribute towards its enhanced development; ties that must be based upon freedom, peace, democratic dialogue and respect for the legal and institutional system.

As I have done in previous years, I would now like to remember all those shareholders, employees, customers, retirees and suppliers who have left us since the last General Meeting. Our affection and our fondest memories are with them, as is our gratitude for all they have contributed to IBERDROLA. May they rest in peace.

In 2004, Mr. Ramón de Rotaache y Velasco, a distinguished member of a family that has been close to our company since its foundation, ceased to hold office on our Board of Directors upon reaching the age limit established in the regulations. For more than 33 years, Mr. Ramón de Rotaache served on the Board with dedication, loyalty and efficiency, and we will always be grateful to him for that.

In order to fill Mr. Rotaache's vacancy, the Board of Directors resolved to appoint, on an interim basis, Mr. Sebastián Battaner Arias, who earned his degree in Business Sciences at the Universidad Comercial de Deusto and his Law degree at the Universidad de Valladolid and, following a brilliant professional career in Bilbao and in prime institutions in Castilla y León, such as Caja Duero, where he served as executive chairman, now joins the Board as a representative of the savings associations associated in the Federación de Cajas de Castilla y León. We expect a lot of Mr. Sebastián Battaner's experience and capacity for dialogue, and we trust that his appointment and his re-election to a new term of office will be ratified at this Meeting.

I do not want to pass up this occasion without expressing, once again, my gratitude to the Board of Directors for the confidence placed in me year after year. I must say that I am honored by such confidence, which entails a commitment for me and to which I have always tried to correspond with my best efforts and absolute dedication to my duties.

Dear shareholders, I will now turn to the issues on which I want to report to you and which I will address under the following headings:

- The international scenario
- The spanish economy
- European Union: the electricity industry
- Spain: the electricity industry
- Proposed Resolutions
- Fiscal year 2004

and lastly, some

- Final comments

Once I have completed my report, the Vice-Chairman & Chief Executive Officer will provide you with a more detailed analysis of the results for the Year and the progress of the 2002-2006 Strategic Plan.

The international scenario

During 2004, we witnessed one of the highest levels of economic activity in the last decade, with a 4% increase in the world's GDP. Recovery has been widespread in all geographical areas, though at varying rates:

- The United States of America continue to exhibit sustained growth and reached the end of 2004 with rates above 4%, while Japan stayed on the path to recovery it had initiated the previous year and managed to record rates similar to those in America.
- The European Union seems to be overcoming its economic lethargy, with an average growth of 1.8% in 2004 as compared to the 0.5% posted in 2003. In any event, it is still a long way from the results obtained by the United States and Japan that I just mentioned.

Everything leads us to think that the European Union, which is an essential part of the western world, is bound to reinforce its ties with the United States, the greatest world power today.

There are historical, economic and cultural reasons why the European countries should intensify their economic and financial relations with their counterpart across the Atlantic. For decades, these relations have brought large benefits to both parties and have remain unscathed by the political comings and goings and some misunderstandings -especially in recent years- which, fortunately, are now being resolved. Looking ahead, and taking into account the challenges of the ever-growing economic globalization, a United States- European Union axis is indispensable in order to continue to promote innovation, create jobs and, in general, foster the creation of wealth for the 753 million inhabitants on both sides of the Atlantic.

- Latin America posted the best results in the last three years, with growth rates in excess of 5% thanks to the recovery in countries like Brazil, Mexico and Chile, these being countries of great significance in which our company has a solid presence.

As regards emerging countries, we must underscore the growing importance of the new Asian powers, such as India or China, within the context of the world economy. We can feel the increasingly pervasive influence of faraway countries on our nearest, more proximate environment. The increase in the international price of raw materials and fuels during 2004 is, without a doubt, the consequence of this new economic scenario and of the strong impact it is now exerting on a globalized economy.

I will now comment briefly on the Spanish economy.

The spanish economy

Our economy developed favorably during 2004, posting a 2.7% growth rate in real terms, according to the most recent official data. As has been the case in the last few years, this growth was primarily due to domestic demand, thanks to upward trends in consumption and in the construction industry. As a new issue, we must point out the significant recovery in the demand for investments in capital goods, with a growth rate that was above 5% in 2004.

This increase in economic activity translated into the creation of more than 400,000 new jobs, according to the data provided by the Working Population Survey. For its part, the unemployment rate went down to 10.4%, the lowest rate since 1979.

While we must acknowledge the positive nature of this data, we should not forget that the employment situation in our country is still far from the average figures prevailing in the European environment in which we operate. It is true that, thanks to the negotiations conducted between employers' organizations and labor unions, it has been possible to remove certain rigid practices in the job market that hampered the modernization of the Spanish economy. The agreement recently entered into between the labor unions and the CEOE [Spanish Confederation of Business Organizations] gives us the hope that further progress will be made towards the development of an agile and constructive system of industrial relations, which may contribute to job creation and to the reduction of our unemployment rate to levels similar to those in the European Union countries.

Before finishing my discussion of this point, I must say that some disquieting data which should be promptly dealt with by the Government and the social players are looming on the horizon of the Spanish economy. I am talking about the rise in the year-on-year inflation rate, which hit 3.2% in December 2004 as compared to 2.6% the previous year, and the increase in our foreign deficit, which has doubled as compared to year-end 2003 and reflects a step backwards in the competitiveness of our economy.

I think that every possible measure should be adopted in order to stop a process that, were it to continue as it is, might jeopardize the progress made in the last few years in building up a solid economy in Spain.

I will now comment on some aspects of the electricity industry, beginning with the European Union.

European Union: the electricity industry

In 2004, a significant qualitative change occurred on the way to the Single Energy Market, namely the deregulation, since last July, of supply to non-household customers.

Although this step forward is an important one, we daresay that the ultimate goal, that large market comprising the whole continent, is still a long way ahead. We should bear in mind that little progress was made last year in the introduction of the requisite structural reforms -many of which are still to be made- of the domestic energy industries in the member States.

The enlargement that has resulted in the 25-country Europe, following the incorporation into Europe of, among others, a large number of countries within the former Eastern bloc, opens up new international opportunities for our industry, but at the same time renders the process of market unification more complex.

We hope that the new European Commission will take the necessary steps in order to achieve a policy of homogenization of domestic laws. Measures must be taken urgently in order to put an end to the present-day situation of imbalance, which permits companies that operate as virtual monopolies to access third countries, while the latter are prevented from exercising their right to reciprocity.

Finally, let me highlight the significant support granted in Europe in 2004 to the fight against climate change, an issue that is certainly serious and on which our continent has assumed a strong leadership position. In almost record time, the European Union countries have been able to create the technical and regulatory infrastructure required to start a market of greenhouse gas emission certificates on an unprecedented scale. It is quite likely that the European example will become a mandatory benchmark for all countries committed to the principles of the Kyoto Protocol.

Spain: the electricity industry

The recent publication of the Royal Decree which provides for the distribution of the emission rights certificates contemplated in the National Allocation Plan for the 2005-2007 period represents the culmination of the extensive efforts put forth by the Spanish Government and national players in order to implement the European directives on this matter. Nonetheless, this is not the end but the beginning of a road along which we will be faced with new major challenges. In this regard, we think it is important to start to design, right now, not only the National Allocation Plan for the 2008-2012 period, which will require additional cuts in emissions, but also, and most importantly, the strategy that Spain will pursue in the negotiations during the post-Kyoto period beginning thereafter, in order to ensure that the new emission reduction efforts in Europe are evenly deployed by all countries making up the Union.

In addition to this significant measure, the companies and the Government were in contact on several occasions throughout the year, as a result of which the Government carried out the regulatory revision that, as set forth in the Economic Report of the Electricity Industry Law of 1997, should have taken place in 2002.

We should recall that this Law was published eight years ago, providing for the transition to a new deregulated market model which was in line with European directives and deregulation trends throughout the world.

We hope that the revision that has now been started will make it possible to enhance the obvious achievements of these last eight years and to remedy some of the deficiencies that became apparent during this period.

Electricity rates have been reduced by 38% in real terms over the last few years, but their structure is farther and farther removed from the reality of the costs incurred by electric companies.

In spite of the fact that, pursuant to the European Community directives, the abolition of industrial rates is already contemplated, it is indispensable that the entire rate system be reformed in order to acknowledge this reality about the costs incurred, and that rates be periodically adjusted when warranted by market conditions.

Also urgent is an adjustment in the compensation for the supply business – an issue that has remained unsolved for ten years now – in order to reward quality in supply to the largest possible extent.

Promoting energy efficiency and starting plans to cut down waste in consumption must be the cornerstone of the energy policy in a country that is so heavily dependent on foreign countries in this respect.

Also, I want to refer to the Plan for the Revitalization of the Economy, a package of economic measures recently announced by the Government, some of which have already been approved by Royal Decree-Law. We welcome the opportunity of adopting certain decisions which are necessary and urgent for the proper operation of the industry and the fulfilment of the international commitments assumed by Spain, such as the launch of the Iberian Electricity Market (MIBEL).

In conclusion, we are confident that all these regulatory initiatives will lead to an improved capacity of the industry to cope with the challenge of increasing competition and to efficiently achieve the goals that the community requires us to attain and that we, more than anyone else, are eager to accomplish.

Clearly, I am talking about the need to guarantee energy supply in optimal quality conditions, at appropriate prices and trying to minimize, more and more each day, the impact of our actions on the environment.

Proposed Resolutions

The Secretary has already fully informed you about the Proposed Resolutions submitted for your consideration at this General Meeting, almost all of which are aimed at the renewal of yearly resolutions.

At the beginning, I mentioned the proposal for ratification of the appointment on an interim basis of Mr. Battaner, and now I would like to refer to the proposed reelection of Directors, for an additional period of 5 years, as set forth in item nine on the Agenda.

Please note that the current members of the Board of Directors were appointed at the General Shareholders' Meeting held on June 16, 2001 for the maximum legal and by-law-regulated period of five years, or were otherwise appointed Directors on an interim basis in order to fill vacancies resulting from the withdrawal of some directors, with their term of office to end on the same original date.

We now submit for your consideration at this General Meeting the partial renewal of the Board through the reelection of seven directors, whose resumes are contained in the documentation delivered to the shareholders.

First, in order to guarantee the continuity of a management policy that, in the opinion of the Board -and we hope, also in the opinion of the shareholders- is producing most satisfactory results, we propose the reelection of the Vice-Chairman & Chief Executive Officer.

The proposed reelection of the other six directors is supported by the interests they hold in the share capital, whether as representatives of or because of their relationship with institutional shareholders, or as independent directors holding the largest shareholding interests in our company on a personal basis.

We hope that the shareholders will ratify this proposal, the purpose of which is that the directors' terms of office hereafter expire on a staggered basis.

Now I will briefly report on Fiscal Year 2004.

Fiscal year 2004

Fiscal Year 2004, which today we submit for approval at this General Meeting, has been, I think, extremely positive, and I hope you will agree with me on this. I will just provide you with some relevant data:

- The profits recorded in 2004 are the highest in IBERDROLA's history.
- The highest share prices ever have been obtained.
- The dividends to be paid out to the shareholders are the highest in our history.

In the past Fiscal Year, IBERDROLA's net income amounted to 1,211 million euros, with a 14.2% increase over 2003, while maintaining a high investment pace and at the same time decreasing financial leverage.

In view of these results, and abiding by the commitment assumed by the Board to increase dividends to the same extent that income increases, we propose to distribute dividends in the gross amount of 0.768 Euro per share. As last January 3 interim dividends were paid in the gross amount of 0.326 Euro per share, a supplemental gross dividend of 0.442 Euro per share will be paid next July 1, if so approved by the shareholders.

Before making my final comments, I want to acknowledge the entire Board of Directors for their work and the efforts of IBERDROLA's personnel throughout the past year. We know that, nowadays, human resources constitute the most precious assets of a company, and we take pride in having with us at IBERDROLA the most outstanding professionals, capable of successfully facing the competitive challenges of our time. This explains why our company was chosen by analysts and investors as the highest-ranking European Utility among the Euro Stoxx 50 and why our Vice-Chairman & Chief Executive Officer was selected as the best Chief Executive Officer of all companies among the Euro Stoxx 50 and, for the second year in a row, the best Chief Executive Officer in the European Utilities industry.

Our sincerest congratulations to you, Ignacio.

Final comments

Last year, I started to make these final comments by thanking the shareholders for the confidence placed in us as far back as fourteen years ago at the creation of IBERDROLA, an ambitious project that was by no means risk-free. As one more year goes by, we can see, ever more clearly, that the decision at that time was exactly the right one. The most optimistic forecasts have been largely exceeded. Today we stand as a company on a sound footing, one that has opened up to the international market and is ready to compete under the most stringent conditions.

If we look at the period elapsed between 1992 and the present, we will find that, without any capital contribution having been made by the shareholders,

- Sales have risen by 120%.
- Productivity per employee has tripled.
- Net income has increased by 243%.
- The total amount of distributed dividends comes to 5,854 million euros, with cumulative investments totaling almost 20,000 million euros, all while reducing leverage by 17% to stand at 54.8%.
- Pay out was reduced from 91% to 57.1%.
- Dividends will have doubled if the proposal now submitted to you is approved at this Meeting.
- And in terms of market capitalization, IBERDROLA's value is 4.8 times higher today than in 1992.

Behind all these figures, all this progress and aspirations, the shareholders will find a Board of Directors that stands united, whose balanced composition ensures compliance with the most exacting Good Corporate Governance standards; with a Vice-Chairman and & Chief Executive Officer who, thanks to his authority,

intelligence, and position as a man ahead of his time, gives us the confidence and security we need to look into the future; with a first-class management team; with labor unions which, without waiving their principles, responsibly share the goals pursued by the company. We will find, in summary, a compact, solid, modern and well-managed company, that carries out its activities in a climate of trust and loyalty, both in Spain and in the Autonomous Communities of our country and in the international field in which we already operate.

But there is something else, of the utmost importance: IBERDROLA has always counted and continues to count on the support of you, its shareholders. I want you to know that we highly value your confidence, for which we are indebted; I want you to know that your aspirations are also ours and that we are fully in agreement on a common goal: to make IBERDROLA a model company, both in Spain and in the rest of the world.

There is data that confirms that we are on the right track: in a year like this one, in which extreme temperatures have tested our capacity to respond to demand, we have been able to assure our customers of continued energy supply under optimal safety conditions. Also, IBERDROLA's corporate culture has earned significant international recognition for its transparency and its openness towards the international financial community.

It is true that we cannot afford to be self-complacent and that we must continue to give our very best in order to face the challenges of the future. But we cannot fail to congratulate ourselves on having managed to place IBERDROLA, through our joint efforts, in the enviable position in which it is at present. If the more than one hundred years during which we have been doing business as a private company give us wisdom and experience, the horizon ahead encourages us and drives us into the future. For this chairman that is now talking to you and that has been fighting out there for so many years now, the current position of our company, its outstanding track record and its excellent prospects all constitute a reason for satisfaction and, I must admit, a matter for justified pride. I feel rejuvenated when I tell you in conclusion, that never, not even in times of tremendous optimism, could I have dreamed of a better scenario to successfully carry out, on a sound basis and with renewed strength, what has been the most exciting professional adventure in my life.

Thank you once more for your attendance today, for your attention, and for that confidence you have always placed in me and to which I feel so very much committed.

Thank you very much from the bottom of my heart.

Introduction

Ladies and gentlemen, good morning.

Ladies and gentlemen shareholders, good day to you all.

Once again, the city of Bilbao and the Palacio Euskalduna are hosting IBERDROLA's General Shareholders' Meeting, which we are attending in order to inform you, with rigor and transparency, of the major figures and principal activities of the Company during the last Fiscal Year.

And we are doing so with the satisfaction it gives us to present to all of you, our Shareholders, good results, like the ones obtained in 2004, and trusting that you will continue to give us your support as you have done in the past.

In the year 2001, the Board approved a Strategic Plan, whose objective was to double the Company's size and earnings.

The path that we have followed to this point is even more than positive. The 2004 Fiscal Year on which we are reporting to you today has demonstrated, as in prior years, a high degree of fulfillment of the Plan in terms of its various milestones, which is reflected in an accelerated growth in earnings, which increased by 14.2%.

This circumstance -as our Chairman has already announced- has made it possible to propose to this General Shareholders' Meeting the approval of an overall 14.3% increase in the dividend, to 0.768 euro per share.

The results obtained in 2004 reflect the wisdom of a strategic focus based on growth with profitability, centered fundamentally around the expansion of our new generation plants, with new environmentally friendly technologies, both in Spain and in Latin America.

The investments have also made it possible to achieve an historic increase in quality of service, thanks to continuing improvements in the supply network.

All of these achievements are supplemented by two outstanding facts: on the one hand, the very significant improvement in efficiency, and, on the other hand, the notable increase in the solidity and stability of the balance sheet a fact that is particularly noteworthy within this context of major investments and a growing distribution of dividends.

Furthermore, significant decisions were made during the last year in the regulatory area, which have confirmed the Company's strategy and made it a benchmark for the entire industry.

During the last Fiscal Year, the Government approved a new rate methodology for the Special System (renewable energy sources and cogeneration), establishing a transparent, objective, and predictable framework that provides regulatory stability for these technologies; it also defined the National Allocation Plan, which has culminated in the allocation of emission rights on a per-facility basis, as approved this January.

The Plan allows our country to comply with the commitments undertaken according to the Kyoto Protocol and the European Directive, and supported by generation in Spain with new technologies that are more efficient and more environmentally friendly (combined cycle plants and renewable energy sources), which involves significant support for the strategy followed by the Company in recent years.

Accordingly, the estimates issued by the Ministry of Industry Tourism, and Commerce predicts that as early as 2007, combined cycle plants will be generating more than coal-fired plants, whose production should drop by 35%.

I would like to conclude this brief introduction by emphasizing that the management of the Company in these recent years, based on perennial historical values, has made it possible to consolidate IBERDROLA as a company that is increasingly committed to sustainability and the environment, increasingly responsible toward the society in which it conducts its activities, with the quality that it offers to its customers, to people... and to all of you, ladies and gentlemen Shareholders, all of whom I thank for your support and trust.

Because commitment and responsibility are important concepts at IBERDROLA; to the same extent as corporate growth, profitability for the shareholder, and quality of service. The current course of all these parameters and the evolution of the Strategic Plan are allowing IBERDROLA to face the future with optimism and to address new challenges that will make the Company an increasingly stronger enterprise and one with a leading role on the international energy scene.

2004 Results

Business

Starting now with the key operations for the year 2004, I would like to mention the 10.7% increase in IBERDROLA's installed capacity during the Fiscal Year. With the new power plants, the Group has 25,200 MW in operation, 89% of which are located in Spain.

The increase in capacity in our country exceeds 2,250 MW, with the placement in service of the Santurce and Arcos de la Frontera I combined cycle plants, along with 26 wind farms and four minihydroelectric power plants. Overall, IBERDROLA has 22,500 MW in operation, a figure that confirms the Company as the leading mainland company in terms of installed power.

The 36 new wind farms placed 910 new MW in service during the Fiscal Year, such that the total installed capacity of this technology, at the close of 2004, amounted to 3,000 MW. This operating capacity, together with the capacity already under development, make IBERDROLA the world's leading company in wind power.

Notable with regard to Latin America is the entry into operation of the Termopernambuco combined cycle plant in Brazil, which increases the Company's installed and managed capacity in the region to 2,700 MW.

One of the direct consequences of these investments is the improvement in the generation mix, which has significantly reduced the volatility of the Company's production, offsetting low hydroelectric production during dry years with an increased contribution from the new thermal technologies.

Accordingly, production for the Fiscal Year grew by 13.9% over 2003, to almost 82,000 GWh, 80% of which was generated in Spain.

In our country, production during the Fiscal Year grew by 4% over production in 2003: a notable fact, considering that 2004 was a dry year. This increase in generation was due to the contribution from the combined cycles, whose production exceeded 8,600 GWh, and to the 38% growth in production with renewable energy sources, which exceeded 5,400 GWh.

In Latin America, production recorded an annual increase on the order of 90%, to 16,000 GWh. Notable in this area is the excellent performance of the combined cycles in Mexico, which in 2004 generated more than 14,000 GWh, consolidating IBERDROLA as the leading private producer in that country.

With regard to Distribution, I would like to point out that the Group's activity during the Fiscal Year grew by 5.8%, such that we now supply 117,000 GWh to our 17.4 million customers.

Along these lines, I would like to mention the major effort made by the Company, not only to satisfy the growing increases in demand but also to improve the quality of service in those areas in which it is present.

In the case of Spain, energy distributed during the Fiscal Year exceeded 92,000 GWh, 5.1% more than in 2003, while the number of customers supplied reached 9.6 million.

On the other hand, the improvements in efficiency continued, with a 13% increase over the figures for 2003.

Regarding the quality of supply, the Installed Capacity Equivalent Interrupt Time (ICEIT) for the Fiscal Year, which is an indicator of this factor, was 1.87 hours (below two hours for the first time in our history) providing service far superior to that of the rest of the sector. This excellent quality is due to the good design of the supply network, to the major investments that have been made, and quite particularly to the commitment, professionalism, and efficiency of our human team.

In Brazil, our group of distributors supplied 21,654 GWh to approximately seven million customers, which is an increase of 8% over 2003.

I would like to point out the honor bestowed by the Brazilian regulators on our distributor Cosern, in the State of Rio Grande do Norte, as the best Brazilian electrical power company in terms of quality of service and customer satisfaction.

The Company's investment in innovation is not limited to new generation technologies, but also extends to all of the areas of the business. Accordingly, in

terms of Commercial activity, IBERDROLA has continued its resolute customer orientation, through innovation and the creation of products to meet their needs, such as the introduction of "Green Energy," an initiative in which the Company has been a pioneer and that has been received very positively by our customers.

Profit and loss statement

All of these accomplishments are reflected in the profit and loss statement for the Fiscal Year.

For the first time in the Company's history, the Sales Figure exceeded 10,000 million euros, thanks fundamentally to the 13.9% increase in production, and in spite of the low prices posted in the generation market in Spain.

Gross Margin grew by 8.4%, reaching 4,168 million euros, while Net Operating Cost posted a much smaller increase of only 5.8%, to 1,130 million euros.

Accordingly, Gross Operating Income, EBITDA, reached 9.2% in comparison with 2003, totaling 2,858 million euros. Renewable energy sources, with 38.1% growth in EBITDA, and the international business, with growth of 36% at the operating level, represent 67% of the total growth in EBITDA.

Meanwhile, Net Operating Income (EBIT) reached 2,019 million euros, 10.7% higher than EBIT for 2003.

Financial Expenses grew by 13.3%, to approximately 390 million euros, due fundamentally to the reduction in the average cost of debt by 38 basis points, to 4.39%. Similarly, in 2004 its average life increased, from 3.7 years at the end of 2003 to 4.3 years.

Within this context of continuing efforts to reduce financial expenses, we are submitting for the approval of the shareholders at this General Meeting the issuance of Bonds and other Fixed-Income instruments, which, if necessary, will allow us to take advantage of the favorable opportunity offered by the financial markets.

Ordinary Income posted a 15.3% increase, reaching 1,699 million euros.

Extraordinary Income was on the order of 59 million euros, because of the increased values derived from divestments of non-strategic assets, while the increase in the tax rate entailed a greater expense for this item, of 328 million euros.

Overall, Net Income amounted to 1,211 million euros -the largest in the Company's history- and a 14.2% increase over the net income obtained in 2003.

These results make it possible to propose to the shareholders at this General Shareholders' Meeting a total dividend of 0.768 euro per share for the Fiscal Year 2004, which dividend has grown in accordance with the increase in the Company's Net Income.

Investments and balance sheet

The investments made during the Fiscal Year amounted to 2,713 million euros, 81% of which were dedicated to the domestic market.

Generation activities absorbed a large part -1,730 million euros- of which renewable energy sources accounted for 46%.

A total of 504 million euros was invested in Distribution activity, 81% of which was earmarked for Spain, for the continued expansion of facilities and further improvements in the quality of service.

Within this context of major investments and a substantial increase in dividends, I would like to point out that the net debt, at the close of the Fiscal Year, was on the order of 10,569 million euros, with an improvement in leverage of 100 basis points, to 54.8%.

With regard to the Balance Sheet, at the close of 2004, our assets grew by 6.1%, for a total of 25,934 million euros, 71% of which consist of physical assets.

To conclude the analysis of the Balance Sheet and the Profit and Loss Statement, I would like to point out that the application of the new International Financial Reporting Standards (IFRS) to the Company's financial statements do not entail any significant changes therein. This is shown in the Legal Report for this year,

which includes a reconciliation of the General Accounting Plan with these standards, and which constitutes one more proof of the rigor and seriousness of the management of the Company.

Strategic Plan evolution (2001-2004)

Operating and financial details

The increase in the size of the business, as I have described it to you, is the fruit of the efforts made over the last four years.

During this period, IBERDROLA invested a total of 10,268 million euros, 76% of which was dedicated to the businesses in Spain.

Consequently, IBERDROLA 's operational capacity grew by 52%, while production grew even more, by 63%.

With regard to renewable energy sources, I would like to point out that they constitute a key element in the Company's Strategy, having become a basic business area and a clear platform for constant growth. As proof of this, mention should be made of the increase in its contribution to the EBITDA, which grew by a factor of five in just four years.

Notable in the international area is the agreement for the acquisition of a participatory interest in the Greek company Rokas, along with the transactions concluded in Portugal in France, which, together with the existing projects in Brazil and in other European countries, will drive the Company's expansion in the wind area and make it possible to address with optimism the development of IBERDROLA 's international renewable energy business.

Regarding investments in Distribution infrastructure in Spain, 120 new substations, 9,800 transformer centers, and 10,000 km of new high-, medium-, and low-voltage power lines were expanded and placed in service within the last four years.

This has made it possible to handle, with better quality than since the start of the Plan, a demand that has grown by 22%, with one million new customers in our country.

While the investments have made it possible to increase the size of the Group, efficiency has also improved notably. Although gross margin grew by 24.4% over these four years, operating costs grew by only 3.3% – i.e., 21 percentage points less.

Thanks to all of these factors, Net Income has grown by 42.1% since the start of the Plan, which growth is reflected in an increase in the dividend, which is larger by the same proportion.

Over the entire period, the return on equity grew by almost 300 basis points, to 13.9% at the end of 2004.

And all of this was accomplished with a continuing reduction in leverage, despite the fact that investments and dividends for the period reached the sum of 12,300 million euros. Thus, leverage fell by three percentage points, to 54.8% in 2004.

The strength of IBERDROLA 's balance sheet is reflected in a 35% growth in fixed assets since December 2001, while debt was reduced by 2.4% during the period.

Stock market performance

Regarding share prices, over the 2001–2004 period, there has been a 40.1% increase in value, in comparison with zero growth in the Ibex-35 and a 38% drop in the Euro Stoxx 50.

This increase in value, along with the distributed dividends, represented a 58.2% increase in Total Shareholder Return.

Stock-market performance has continued to be favorable for the Fiscal Year to date, with a 6.4% increase in value of the shares to date, which is among the historic highs for their quoted price. During the last month, for the first time in its history, IBERDROLA exceeded capitalization of 18,000 million euros (three trillion pesetas), which represents a creation of value in excess of 6,000 million euros (more than one trillion pesetas) since the start of the Plan.

The collective opinion of financial analysts continues to reflect their confidence in our company's ability to create value. This is demonstrated by the fact that the world's most prestigious financial institutions have identified IBERDROLA as one of the most recommended investment options in Europe today.

Outlook 2005

With regard to Fiscal Year 2005, and as you know, one of the most pressing matters is the constant growth in demand in Spain, which grew by almost 6% over the last 12 months, and which, over the course of the year to date, has posted an increase of more than 11% in comparison with the same period in 2004.

One example of this is the historic record-setting peak demand that occurred on January 27 of this year, which was resolved with no notable incidents. A much different situation occurred in December 2001, when, with a significantly lower demand, we had to interrupt supply to a large part of the country.

I would like to emphasize that the system was able to absorb these recent peak demands essentially because of the 8,200 MW of new combined cycles constructed during the last three years, 44% of which are managed by IBERDROLA.

The strong increase in demand, together with a shortage of rainfall and the increase in fuel costs, have caused production prices on the production market to be significantly higher than the ones posted for the same period in 2004.

To cover these increases in demand, during the current year IBERDROLA will place an additional 1,700 MW in-service in Spain: 1,200 MW in the Aceca and Arcos II combined cycle plants, along with about 40 wind farms, with a total capacity of 500 MW.

We expect that the contribution made by the international businesses to the Group's earnings will continue to grow, thanks to the incorporation of the new La Laguna combined cycle plant in Mexico, which went into operation last week, and to the rate increases expected in Brazil.

The current fiscal year will be a key year from the regulatory point of view in Spain. On the one hand, the Government -as mentioned earlier- prepared a National Allocation Plan in record time; and, on the other hand, it is conducting the revision specified in the Electrical Power Sector Law of 1997, whose text, at page 145 of its Economic Memorandum, states: "an overall review of the

functionality of the competition model is scheduled for 2002. The purpose of this review is to evaluate the overall amount collected by the electrical power companies under the CTC [Competition Transition Charge] heading, along with changes in market price...".

Accordingly, an in-depth analysis is being conducted of the production market, in order to eliminate the current distortions, and with a review of the compensation framework for distribution, which has remained constant in recent years, without taking into account the actual increases in demand or the different levels of investment and quality.

Noteworthy within the regulatory context are the measures for the encouragement of competition that were adopted by the Government at the end of February, including the ones relating to settlements and to possible rate deficits, the effective development of the Iberian Electricity Market, or the revitalization of the deregulated market.

As it did in connection with the Rate Methodology and the recognition of the Deficit in 2002, or in connection with the Compensation for the Special System and the National Allocation Plan during the last Fiscal Year, IBERDROLA is intensifying its regulatory activities. Within this context, numerous contacts with the Administration are being maintained, in the climate of dialogue and cooperation that characterize these relations.

I would now like to address a matter of maximum urgency and importance with regard to business management, namely, our Corporate Reputation.

According to the recently published results of the 2005 Spanish Corporate Reputation Monitor (MERCOS), IBERDROLA is the Company with the best reputation in the Public Utilities Industry, and has risen spectacularly in the overall classification of most admired companies, to eighth place from the seventeenth place in which we appeared in the previous edition, and 34th place at the start of the Plan.

To this should be added our maximum rating on the Dow Jones Sustainability and Oekom indexes.

These results are encouraging us to continue to drive multiple initiatives in 2005, in order to achieve excellence in our relations with individuals, customers, shareholders, and society as a whole.

Because, ultimately, IBERDROLA wants to become a preferred Company through commitment to people, to the environment, to the creation of value, and to the development of our social surroundings.

To do so, we have undertaken various activities for the sake of greater transparency, greater responsibility, and a greater commitment to the areas in which we conduct our business.

On the one hand, we are continuing to strengthen the practices of Good Governance, as outlined in the Corporate Governance Report that you, ladies and gentlemen shareholders, have received.

And, on the other hand, IBERDROLA firmly intends to become even more involved and to actively participate in the development of the societies in which it is present, generating wealth and well-being.

Accordingly, we are continuing our strong support of all of the activities associated with social action and sponsorship and patronage of the arts, to which we allocated approximately 10 million euros in 2004.

We are also maintaining our support for innovation and technological development, to which we allocated more than 40 million euros in 2004. These significant investments will allow us to remain a leader of technological change and to continue the improvements in efficiency and productivity at our company.

Another fundamental aspect of the Company's Corporate Social Responsibility is the professional development and training of the Company's human team. Specifically, in 2004, more than 312,000 hours of training were provided, in which approximately 75% of the workforce participated. This year, we are continuing to drive specific programs for the professional development of IBERDROLA's human team, while they meet the needs of the business.

Conclusions

To conclude my remarks, I would like to state to you that the 2004 Fiscal Year can unquestionably be considered a good year for the Company. And this is so because...

- we significantly increased our size,
- we obtained our best-ever earnings,
- we are able to distribute a dividend of more than 700 million euros in 2005,
- our shareholders have enjoyed an overall return of 23.6%,

...and because, moreover, today IBERDROLA is a much more solid and efficient Company.

For yet another year, it has been demonstrated that, after three years of uninterrupted accomplishment of its goals, IBERDROLA has created, is creating, and will continue to create value, thanks to a successful strategy and human resources that are qualified, motivated, and committed to the Company's development, and that will not spare any efforts to achieve that development.

Because at IBERDROLA we are committed to a modern, dynamic, and innovative company;

- a company that is addressing the future with creativity, and that anticipates challenges;
- a company that knows how to grow and to develop in competitive and demanding settings, doing so with efficiency, quality, and customer orientation;
- a company that is committed to technological changes and to respect for the environment;
- a company that contributes, on a daily basis, to the development of its social surroundings;

- a company that knows how to motivate and develop individuals with an appropriate management of knowledge so that, overall, we can combine our best efforts.

These are the keys to the development of our business, which have marked the path that we have followed in these recent years and that we will continue to follow in the future.

I would like to end by reminding you that IBERDROLA is what it is today because it has the support of thousands of shareholders, like you who are with us today, who have placed in us all of their trust over our more than 100 years of history.

The success of our plan is the success of all of you, ladies and gentlemen Shareholders, to whom I would like to convey my profound thanks for the trust you have placed.

I would like to dedicate a special mention to our Chairman, for his constant support, his help, and his understanding, once again, during this year. Thank you, Mr. Chairman, thank you very much.

I would also like to thank the Board of Directors, along with all of the people who make up this Company, whose commitment, work, and dedication have made it possible for IBERDROLA to be the first-class Company that it is today.

I assure you that all of our professional capability, dedication, and effort will be directed toward continuing to create value for all of you, our Shareholders.

Unquestionably, your confidence in IBERDROLA and your support have helped us in this daily task and encourage us to continue addressing new and greater challenges in the future.

Thank you very much for your attention.

Thank you.

IBERDROLA

First quarter
results
2005
Quarterly report

NET PROFIT UP 12.3 % TO 346.6 MILLION EUROS

Strong investments enable production to be maintained in a quarter marked by unfavourable conditions

- Group production remained stable reaching 21,387 GWh thanks to the increase in combined cycles (+31.7%) and wind energy production (+24.5%).
- The capacity brought into service by Iberdrola over the last 12 months totalled 2,881 MW (73% in Spain).
- Meeting the high electricity demand (mainland's demand is up 8.4%) has been possible thanks to the more than 8,200 MW built in combined cycle plants, being 44% managed by Iberdrola.

Gross Operating Profit (EBITDA) increases 8.8%.

- Net Operating Profit (EBIT) is up 0.1% to 628.8 MM € in line with the growth in EBITDA
 - Net Operating Expenses are down 1.4%.

Renewables & International, growth drivers

- Renewables and International represent 65% of growth in EBITDA
 - In the Renewable Energy Business, EBITDA rose 33.1% to 97.4 million euros.
 - In the International Business, EBITDA rose 30.8% to 96.5 million euros.
 - The La Laguna combined cycle plant (500 MW) in Mexico was brought into commercial operation on March 15th.

Q1 2005: Accounts reported under IFRS for the first time

- The effect of adapting IBERDROLA's financial statements is very slight, therefore showing the consistency of Iberdrola's accounting practices.

Operating Highlights

- The first quarter of the year was characterised by relatively unfavourable economic conditions, including very low hydroelectric production, high prices for certain fuels and strong growth in electricity demand, which has been covered thanks to the investments made in new technologies.
- The strong investments made by the company on generation since the start of the Strategic Plan enabled IBERDROLA to maintain production in an extremely dry quarter, with a 56% drop in hydroelectric production for the Group. The total production of the Group reached 21,387 GWh, in line with the 21,598 GWh of the first quarter of 2004.
- Operating Profit improved both in gross terms (EBITDA +8.8%) and in net terms (EBIT +10.1%).
- The Renewables and International businesses, both with strong increases in Operating Profit, are the main growth drivers of the Group:
 - Renewables: EBITDA up 33.1% to 97.4 million euros, driven by a 24.5% increase in wind energy production.
 - International: EBITDA up 30.8% to over 96.5 million euros, thanks primarily to the good development of business in Mexico and Brazil.
- Net Profit rose to 346.6 million euros (+12.3%).
- In Q1 2005, the Company's results were adapted to the International Financial Reporting Standards (IFRS). The effect of adapting Iberdrola's financial statements is very slight, therefore showing the consistency of Iberdrola's accounting practices.

Development of the Strategic Plan

1. - INVESTMENTS IN GENERATION

In Q1 2005, IBERDROLA brought into service 654 MW of additional capacity, taking the total installed capacity up to 25,891 MW. This additional capacity includes 500 MW for the commissioning of the La Laguna combined cycle plant in Mexico, and 55 MW of wind energy brought online in Spain.

1.1 SPAIN

> Combined cycle plants

Iberdrola's combined cycle plant capacity in Spain totalled 2,800 MW at the end of Q1, corresponding to the Castellon, Castejon (Navarra), BBE (Vizcaya), Tarragona and Santurce plants, and the first two Arcos de la Frontera generating units. At the end of 2005, Iberdrola plans to have 4,000 MW in operation, with this figure to rise to 5,600 MW by the end of 2007.

Santurce and Arcos were effectively brought into commercial operation on 4 January 2005 and 23 February 2005, respectively. The load factor of the combined cycle plants in Q1 2005 has been 65%.

Aceca combined cycle

In the first few days of Q2, the 400 MW Aceca combined cycle plant located in the municipality of Villaseca (Toledo) started operating tests. The plant has already completed the network synchronisation process, after which, on Saturday April 2, it was connected up to the network for the first time. The objective is to start commercial operations this coming June, in line with all of the deadlines set.

Project	Capacity (MW)	Start of Operations
Castellón A	800	2002
Castejón	400	2002
BBE	200	2003
Tarragona	200	2004
Santurce	400	2004
Arcos (sets I and II)	800	2004
Aceca	400	In testing
Arcos (set III)	800	2005
Escombreras	800	2006
Castellón B	800	2007
TOTAL	5,600	

> Renewable Energy

At March 31, 2005, Iberdrola had an installed capacity of 3,261 MW (2,946 MW on wind farms and 315 MW on mini-hydro plants), confirming Iberdrola's position as the world leader on wind energy in terms of installed capacity. For 2008, the goal is to take the installed capacity up to 5,500 MW, with 4,500 MW to be located in Spain and 1,000 MW outside of Spain.

The new power brought online in Q1 2005 represented an additional 55 MW compared with the end of 2004, corresponding to capacity added

at existing wind farms, including: 8.5 MW at the Grado wind farm, 27.9 MW at Bordecorex Norte, 15.3 MW at Serra da Meira, 1.5 MW at Larriba-Hornillos, and 2.07 MW at Préjano-Enciso.

1.2 LATIN AMERICA

Mexico

IBERDROLA puts the 500 MW La Laguna II (Mexico) combined cycle plant into service

IBERDROLA has brought the La Laguna II combined cycle plant into service, located in the state of Durango (Mexico), with an installed capacity of 500 MW. The contract for this plant was awarded to the Company in August 2002 following the bidding issued by the state-owned Comisión Federal de Electricidad (CFE) of Mexico, which selected IBERDROLA's project to fulfil the significant energy needs of this North American country. IBERDROLA has been assured the sale of all of the energy produced by this new combined cycle plant over the next 25 years.

With La Laguna II plant brought into service, IBERDROLA has confirmed its position as the leading private electricity producer in Mexico and number two in the country after the state-owned CFE. The Company now has 2,694 MW of installed capacity in operation, corresponding to the Monterrey III (1,040 MW), Altamira III and IV (1,036 MW) and La Laguna II (500 MW) combined cycle plants and the Enertek cogeneration plant (120 MW).

Furthermore, IBERDROLA is building another two combined cycle plants in Mexico: the 1,121 MW Altamira V plant (Tamaulipas), which will enter into service in November 2006, and the 1,135 MW Tamazunchale plant, which is scheduled to be brought into service in June 2007, representing the two biggest generation projects awarded in

this country to date. The Company now has power generation projects representing a combined total of around 5,000 MW in Mexico, in line with the targets set in its Strategic Plan.

Project	Capacity (MW)	Start of Operations
Enertek	120	100% operational
Monterrey	1,040	100% operational
Altamira IV	1,036	100% operational
La Laguna	500	100% operational
Altamira V	1,121	2006
Tamazunchale	1,135	2007
Total	4,950	

Brazil

In Brazil, Iberdrola has the 450 MW Itapebí hydroelectric plant (175 MW of which are attributable to Iberdrola), whose three generation units are operating at full capacity and the Termopernambuco combined cycle plant, which has an installed capacity of 520 MW (203 MW attributable to Iberdrola). On cogeneration, the company has an operating capacity of 93 MW.

With respect to renewable energy, IBERDROLA awarded Wobben Windpower the contract for the supply, assembly, start-up, running and maintenance of the Rio do Fogo wind farm (50 MW), located in the state of Rio Grande do Norte, for a total of 45.2 million euros. This is the first facility with such characteristics that the Company will put into service in this country. The company awarded this contract is a Brazilian subsidiary owned by the German company Enercon, which has undertaken to complete the construction and put the wind farm into service in 2006. IBERDROLA has signed a 20-year contract with Eletrobrás for the supply of the energy produced at Rio do Fogo.

1.3 EUROPE

Greece

IBERDROLA is a strategic partner of the biggest producer of wind energy in Greece, Rokas, which is listed on the Athens stock market and has more than 400 MW of capacity, with 183 MW already operational. Rokas aims to reach 600 MW in the coming years. Greece represents a key market for the development of IBERDROLA's objectives for renewable energy. This country has major potential in this business, given that it now has 409 MW of wind power in operation and a target of 2,000 MW has been set for 2010.

Portugal

Following Iberdrola's decision to enter the Portuguese wind market by sealing an agreement with Gamesa last year to acquire the Catefica wind farm (18 MW), Iberdrola set up **Aeolia** in order to develop renewable energies in Portugal, first identifying locations and then building new wind farms. In Portugal, IBERDROLA has 75 MW in development and is negotiating for permits to set up an additional 174 MW. It also has an agreement with Gamesa for the acquisition of 250 MW in operation in Portugal and the joint promotion of further wind farms. Iberdrola sees this country as a high-potential, high-growth market for the renewable energy sector, with only 300 MW of wind capacity at year-end 2003 out of the 3,750 MW set as the target for 2010.

Also, in the last auction for building new capacity, Iberdrola was awarded with a 400 MW combined cycle in Figueira da Foz.

France and Italy

In the renewable energy sector, IBERDROLA has signed an agreement for the development and

construction of various wind farms, with plans to install 32 MW in 2005 followed by an additional 100 MW over the next two years in France. This agreement also contemplates the development of 100 MW in Italy over the next two years.

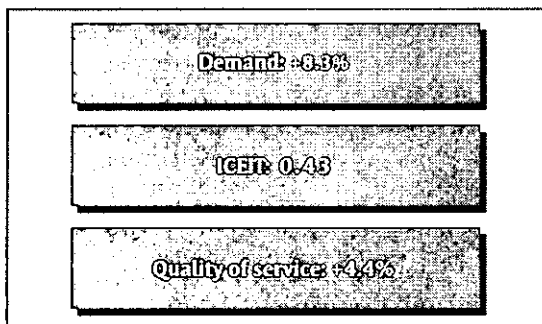

Trading

The Company is developing a major trading business in Europe, with operations in Switzerland, Germany, the Netherlands, France, Portugal, Spain and Belgium. The Company aims to ramp up these energy buying and selling activities in the short term to include other countries in Europe such as Poland, Greece, the United Kingdom and Italy. The trading business is run out of Madrid with a support office in Zurich. The highlights of Q1 2005 were as follows:

- The launch of operations for the capacity acquired from NUON, aiming for 87.6 million KWh in 2005.
- The participation since April 5, the launch date, in the daily capacity auctions for exporting energy from Germany to France, enabling IBERDROLA to optimise its contractual position in Germany, France, and Spain.

2. - DISTRIBUTION

2.1 SPAIN

At March 31, 2005, IBERDROLA had some 9.7 million customers in Spain, reflecting the addition of around 185,000 new customers year-on-year.

The level of energy distributed rose to 25,622 GWh, representing an increase of 8.3% on the same period in 2004, resulting from the record levels of consumption seen due to last winter's cold-wave, pushing peak demand up by more than 8,200 MW since 2001 to over 43,700 MW at present.

In Q1 2005, Iberdrola's ICEIT (Installed Capacity Equivalent Interruption Time) came to 0.43 hours, down 4.4% from 0.45 hours on the same period in 2004, and 38% from the level seen in the same period in 2003 (0.70 hours). The maintaining of these quality levels, representing a historic record for IBERDROLA, under the adverse weather conditions seen over the first three months of the year, has been made possible thanks to the new infrastructures brought into service, and the maintenance and development work carried out on existing facilities, making it possible to meet the surge in demand without any significant incidents.

2.2. LATIN AMERICA

At March 31, 2005 IBERDROLA had some 7.7 million customers managed in the region and the energy distributed managed totalled 6,520 GWh (+9.7%). It's worth highlighting that during the first quarter, the distribution companies of Iberdrola in Brazil have been entitled to additional tariff adjustments which meant a 1% increase over the tariff reviews carried out during the third quarter of 2004. Furthermore, Celpe is under the annual tariff review, and at 29 March, a preliminary 33% increase was approved.

3. - SUPPLY

3.1 ELECTRICITY

> Spanish business: eligible electricity customers

In Q1 2005, Iberdrola sold 7,955 GWh on the Spanish market (+815 GWh), with some 675,000 customers, reflecting the addition of more than 511,000 new customers year-on-year.

During the first quarter, IBERDROLA opened in Seville its first shop outside of its traditional market, following the opening of the Madrid and Bilbao shops.

In addition, IBERDROLA was the first power company to commercialize renewable energy in the Spanish production market, an initiative that concerns seven plants with a capacity of 108.7 MW.

> Portuguese business

IBERDROLA and the CTT Correios de Portugal Group have signed an agreement to work together to sell electricity at the nearly 3,500 offices of the biggest postal communications operator in this country.

This initiative has been made possible thanks to the total deregulation of the Portuguese electricity market, enabling small consumers to choose their electricity suppliers, something that major industrial customers and small and medium-sized businesses have been able to do since January 2003. Through this alliance, IBERDROLA and the CTT Group are seeking to take advantage of the new business opportunities opening up thanks to the deregulation of the Portuguese energy market, where growing competition is expected.

In this way, IBERDROLA will capitalise on CTT's extensive sales network in Portugal in order to increase its presence in this country while the CTT

Group will be able to develop its offering for its customers, with a range of new services.

IBERDROLA already accounts for nearly 12% of this country's deregulated market, with 1,300 contracts signed representing an annual consumption of over 1,100 million kWh. As such, the Company plans to take its share of the Portuguese commercial market up to between 15% and 20% over the next five years, with a portfolio of more than one million customers.

3.2 GAS

> Spain

Procurement:

In Barcelona on March 10, 2005, in line with the planned schedule, IBERDROLA received the biggest methane vessel in the world, the Lalla Fatma N'Soumer, with a load of 145,000 cubic meters of LNG not initially scheduled. This quantity, equivalent to 970 GWh, will make it possible to cover the requirements of a 400 MW combined cycle plant during approximately two months.

The vessel has been chartered by Sonatrach, one of IBERDROLA's suppliers. Once unloading had been completed, the vessel headed for Arzew (Algeria) to reload and sail for the Huelva regasification plant. These two loads were brought in as an extraordinary emergency measure to mitigate the scarcity of gas in Spain, in a further demonstration of the flexibility of IBERDROLA's LNG supplies.

The load received on March 10 corresponds to the long-term LNG supply contract signed between IBERDROLA and Sonatrach in March 2002 for the supply of 1 bcm (annually). The Company has a number of other sourcing contracts with suppliers such as Nigeria LNG or Statoil representing a total of 6 bcm, from a range of sources and based on various economic conditions, enabling the Group to

reduce its exposure to exchange rate risks and fluctuations in oil prices.

The total gas volume supplied by Iberdrola in the first quarter was up 52.5% to 11,862 GWh reaching a share of 11.1% of Spain's total gas market, including gas supplied in the market for customers, in addition to supplies to meet the consumption needs of Iberdrola's combined cycle plants.

> Europe

IBERDROLA has entered the deregulated gas market in France after being awarded 330,000 MWh in an auction organised by Gaz du Sud Ouest (GSO), a subsidiary of Totalfina-Elf, under the auspices of the French Commission on Energy Regulation.

4. - RATIONALISATION AND OPTIMISATION OF FINANCIAL RESOURCES

IBERDROLA signs a loan with the European Investment Bank (EIB) for 450 million euros

IBERDROLA has agreed on a 450 million euro loan with the European Investment Bank (EIB) for investments on electricity distribution between 2005 and 2007. The loan is structured in two tranches: the first, for a total of 350 million euros, is to be paid back in 10 years. The second, amounting to 100 million euros, is to be repaid in 15 years.

5. - NON-ENERGY BUSINESSES

The Iberdrola Group's real estate division closed out Q1 2005 with 20 residential developments under construction, representing a total of 1,540 homes, and 21 residential developments under management, representing another 1,787 homes.

For its part, **IBERDROLA's engineering subsidiary** carried out various operations over the quarter, including: the awarding of a contract for the Angra II nuclear plant in Brazil or the awarding of the

construction of the Sierra del Boquerón 22 MW wind farm (Albacete) for 3.8 million euros.

6. - GENERAL SHAREHOLDERS' MEETING

Iberdrola's General Shareholders' Meeting for 2005 was held at 11:30 am on Friday March 18 at Palacio Euskalduna de Bilbao, with 471,465,698 shares represented (229,641,119 present and 241,824,579 represented by proxy), giving a quorum of 52.30% of the share capital (25.47% present and 26.82% represented by proxy). All of the resolutions were approved by a majority of shareholders, with a favourable vote greater than 95% of the capital present and represented at the meeting.

IBERDROLA's Chairman stated that 2004 had been "extremely positive" for the Company, which generated record levels of profit, dividends and market capitalisation. Iñigo de Oriol highlighted the work carried out by the Executive Vice-Chairman and CEO: "Through his authority, intelligence and sense of anticipation, he has provided us with the confidence and security that we need to face the future".

Ignacio Galán for his part indicated that "the significant decisions taken within the regulatory context have confirmed IBERDROLA's strategy and made it a reference for the entire sector". He then went on to highlight "the high level of fulfilment of the Strategic Plan, based on profitable growth and focusing on the expansion of the generation park with new environmentally-friendly technologies".

7. - SHAREHOLDER COMPENSATION

At the General Shareholders' Meeting, IBERDROLA's Board of Directors approved the proposal to increase the dividend for 2004 to 0.768 euros per share, up 14.3% on 2003, in line with the company's commitment to increasing the retribution of its shareholders in line with the growth in net profit.

8. - SUSTAINABLE DEVELOPMENT AND CORPORATE SOCIAL RESPONSIBILITY

8.1 CORPORATE SOCIAL RESPONSIBILITY

The most notable events of the first quarter of the year in relation to social aspects were:

- **Sponsorships:** IV Centenary of Don Quixote, Salamanca 2005 and the Aztec exhibition at the Guggenheim in Bilbao.
- **Consultative Council of Castile and Leon:** the first meeting of 2005 was held on March 7.
- **Women in the business world:** the Chairman of IBERDROLA calls for more leading roles for women in the presentation ceremony for the Circulo de Progreso study into "*Women and Employment: Options and Decisions*"
- **Conferences on CSR:** IBERDROLA participated in various conferences for initiating and launching CSR practices in conjunction with the Confederación de Empresarios de Galicia (Santiago) and the Valencia Chamber of Commerce.
- **Monument illumination programme:** agreement with the Municipality of Toledo to illuminate the banks of the Tajo River where it passes through Toledo, an agreement to install a new lighting system at the San Juan Bautista church (Jadraque, Guadalajara) and the inauguration of the interior lighting of the San Blas church in Villarrobledo (Albacete).
- **Social action programme:** cooperation with the Fundación Alzheimer España and the Asociación Provincial de Toledo de Padres con Niños y Adultos Minusválidos (APANAS).
- **CSR plan:** IBERDROLA's Corporate Social Responsibility plan has been put into operation

and it will initiate and guide the company's CSR activities in the coming years.

- **Recognitions:** in the MERCO ranking, the Executive Vice-Chairman and Managing Director, Ignacio Galán, holds top place for his reputation among public service industry managers and is one of the ten leaders with the best reputation in Spain.

8.2 PRESENCE OF IBERDROLA IN CORPORATE REPUTATION AND SUSTAINABILITY RANKINGS

In the **MERCO 2005** (Monitor Español de Reputación Corporativa) ranking, IBERDROLA is ranked as the leading player in the public services industry and one of the 10 best companies in Spain for corporate reputation. MERCO is the most significant corporate reputation index published in Spain. To rank companies' reputations, this index calls on company executives, financial analysts, unions, NGOs and representatives of consumer associations.

	Rating / Position
Dow Jones Sustainability World Index	72 points / World Utilities Leadership Group Top 3
Dow Jones Sustainability Stoxx Index	72 points / European Utilities Leadership Group Top 3
OEKOM	B- / World Utilities Leadership Group Top 3
MERCO	Public Services Industry Leader

8.3. OTHER EVENTS

In line with the plan launched in 2004 to enable the implementation and certification of environmental management systems at suppliers, IBERDROLA held sessions in January in the Madrid and Valencia regions to provide information for more than 260 Company suppliers.

9. - CORPORATE GOVERNANCE

The highlights of Q1 2005 were as follows:

- Appointments:** at the General Meeting held on March 18, 2005, shareholders voted to ratify the appointment of Sebastián Battaner Arias, and to re-elect for the maximum term possible under Spanish law and the corporate bylaws of 5 years, the Executive Vice-chairman and CEO Ignacio Galán and the directors Víctor de Urrutia Vallejo, Ricardo Álvarez Isasi, José Ignacio Berroeta Echevarría, Juan Luis Arregui Ciársolo, Julio de Miguel Aynat and Sebastián Battaner Arias, who will continue in the offices held previously on the Board of Directors.
 - Reports and other resolutions:** on February 23, 2005, the Board approved the Annual Report on Corporate Governance for 2004, in accordance with the form required by Circular 1/2004 of 17 March of the Spanish securities regulator (CNMV). On the same date, the Board approved the Report on the Activities of the Audit and Compliance Committee for 2004, which has been published for 6 years now, intended to contribute to corporate governance best practices by publishing, with the maximum transparency, the annual activities of the Audit and Compliance Board, the body in charge of monitoring "good governance" at the company.
- Lastly, on February 23, the Board of Directors also resolved to develop provisions on the right to information prior to General Meetings, representation and remote voting, provided for in the corporate bylaws in order to make it easier for shareholders to exercise these rights at General Shareholders' Meetings.
- Presence of Iberdrola in corporate governance indexes:** since 2004 IBERDROLA has been included in the "FTSE ISS Corporate Governance Index (CGI)", a series of indexes that evaluate good governance in companies and were created by the FTSE Group, which is responsible for the Footsie stock market indexes, in conjunction with the corporate governance service provider International Shareholders Services (ISS). This index is based on the ISS rating, known as the "Corporate Governance Quotient" (CGQ).

10. - INTERNATIONAL FINANCIAL REPORTING STANDARDS (IFRS): EFFECT ON FY2004 ACCOUNTS

The effect of adapting IBERDROLA's financial statements to IFRS is very slight, therefore showing the consistency of Iberdrola's accounting practices.

With respect to the **Balance Sheet**, the main changes are summarised as follows:

ASSETS (Million Euros)	NOTE	Spanish GAAP 2004	Absolute change	IFRS
Tangible & intangible fixed assets	A	18,961.1	+324.3	19,285.4
Financial assets	B	1,989.7	-88.5	1,901.2
Long term taxes receivable	C	767.2	+447.3	1,214.5
Consolidation Goodwill	D	323.9	-323.9	-
Deferred charges	E	175.3	-175.3	-
Current assets – inventories	F	1,142.4	-112.1	1,030.3
Current assets – rest & other	G	2,838.2	-63.0	2,775.2
Total assets		26,197.8	+8.8	26,206.6

A) Tangible and intangible fixed assets:

- Increased due to changes in the scope of consolidation (379 million), the provision for plants decommissioning (74 million), reclassification of nuclear fuel from Inventories to Fixed Assets (240 million), and other (47 million).
- Decreased for the write-off of Start-up Costs (-52 million) and the reallocation of merger differences (-363 million).

B) Financial Fixed Assets: decreased due to changes in the scope of consolidation (-238 million) and increased for the valuation of Long-Term Financial Derivatives (81 million) and other (69 million).

C) Long Term Taxes Receivable: increased for the tax effects associated with the provisions for dismantling (74 million), the valuation of derivatives (109 million), the merger differences (127 million), the change in the scope of consolidation (81 million), and other (56 million).

D) Goodwill: disappears, being allocated to:

- Intangible fixed assets: companies consolidated fully or proportionally (-24 million)
- Financial investments: companies consolidated using the equity method (-118 million)
- Change in the scope of consolidation due to EDP, valued on a market basis (-183 million)

E) Deferred charges: disappear for reclassification as debt (-175 million)

F) Current assets – inventories: reclassification of nuclear fuel, now accounted for as a Fixed Asset (-240 million), the effect of recognizing revenues from developments sold at the real estate division (80 million), change in the scope of consolidation (45 million) and other (2 million)

G) Current assets – other: change in the scope of consolidation: net impact of the increase due to proportional consolidation of subsidiaries (58 million), and the decrease due to the recognition of revenues from developments sold at the real estate division (-100 million) and other (-21 million).

LIABILITIES (Million Euros)	NOTE	Spanish GAAP 2004	Absolute change	IFRS
Shareholders' equity and minority interests	K	8,794.2	-166.6	8,627.6
Merger differences	L	236.4	-236.4	-
Deferred revenues	M	484.3	-10.6	473.7
Provisions	N	1,034.8	+236.1	1,270.9
Financial debt	O	10,800.3	+304.6	11,104.9
Long-term taxes payable	P	488.5	+109.1	597.6
Other long-term payables	Q	309.4	+13.1	322.5
Other short-term payables	R	4,049.9	-240.5	3,809.4
Total equity & liabilities		26,197.8	+8.8	26,206.6

K) Shareholders' equity: adjustments against reserves for the valuation of EDP (-46 million), REE (23 million), GALP (8 million) and others (8 million), valuation of derivatives (-93 million), update of provision for plants decommissioning (-59 million), write-off of Intangible Fixed Assets (-34 million) and increase in Minority Interests and others (25 million).

L) Merger differences: eliminated against lower value of tangible fixed assets associated (-236 million).

M) Deferred revenues: positive exchange gains booked on P&L; elimination of capital subsidies linked to research & development expenses written off in assets.

N) Provisions: increased by the provision for plants decommissioning (202 million), change in the scope of consolidation (54 million) and others (-20 million).

O) Financial Debt: increases by:

- Changes in the scope of consolidation (192 million).
- Valuation of hedging derivatives (224 million).

Decreased by the reclassification of debt expenses (-49 million) and leasing (-63 million).

P) Long-term taxes payable: increases by the tax effect of the valuation of derivatives (109 million).

Q) Other long-term payables: changes in the scope of consolidation (integration of the liabilities of consolidated companies) (13 million).

R) Other short-term payables: changes in the scope consolidation (elimination of payables to equity accounted subsidiaries) (-240 million).

In terms of the **Income Statement**, the changes have been as follows:

(Million euros)	NOTE	Spanish GAAP 2004	Absolute change	IFRS
Net sales	1	10,314.5	-1,741.9	8,572.6
Procurement costs	2	6,146.2	-1,959.5	4,186.7
Gross margin		4,168.3	+217.5	4,385.8
Net operating expense	3	1,129.8	+168.8	1,298.6
Taxes	4	180.8	+14.5	195.3
EBITDA		2,857.7	+34.3	2,892.0
Amortizations & provisions	5	838.8	+51.3	890.1
EBIT		2,018.9	-17.1	2,001.8
Financial result	6	389.7	+5.4	395.1
Cos. carried by Equity Method	7	69.5	-16.2	53.3
Extraordinary results	8	58.9	-58.9	-
Earning from discontinued operations	9	-	+89.5	89.5
Corporate tax & minorities	10	546.9	-8.6	538.3
Net profit		1,210.7	+0.6	1,211.3

- 1) **Net sales:** reduction of energy sales for distribution (-2,328 million), changes in the scope of consolidation (619 million). Real estate division: recognition of revenues from developments sold (-45 million), reclassification of extraordinary results (12 million).
 - 2) **Procurements:** reduction of energy sales for distribution (-2,328 million), change in the scope of consolidation (398 million). Real estate division: recognition of costs for developments sold (-27 million) and others (-3 million).
 - 3) **Net operating expenses:** changes in the scope of consolidation (155 million), reclassification of extraordinary results (35 million) and major maintenance costs and others (-21 million).
 - 4) **Taxes:** reclassification of extraordinary results (13 million) and others (2 million).
 - 5) **Amortizations & provisions:** changes in the scope of consolidation (67 million), lower intangible assets amortization (-28 million) and others (12 million).
 - 6) **Financial result:** changes in the scope of consolidation (-10 million), valuation of derivatives (34 million) and others (-19 million).
 - 7) **Results of companies accounted for by the Equity method:** changes in the scope of consolidation. No goodwill amortization (-16 million).
 - 8 & 9) **Extraordinary results:** these disappear under IFRS and are reclassified to the Earnings from discontinued operations account (89 million) and others (-30 million).
 - 10) **Corporate tax & minorities:** changes in the scope of consolidation.
- Other considerations:**
1. **Change in scope of consolidation:**
 - Global or proportional consolidation of Corporación IBV, Energy Works, Mediapark, Neosky and Iberdrola Energía Chile.
 - Removal of EDP and REE (market valuation).
 2. **Non-energy businesses:** change in the accounting method for the real estate business developments. Under Spanish GAAP, the whole profit from developments sold could be accounted for upon 80% of completion, while under IFRS no accounting of profit is done until full and final delivery of the development.
 3. **Quarterly change in net debt, equity and leverage: IFRS vs. Spanish GAAP.**

Spanish GAAP	Q1 2004	Q2 2004	Q3 2004	Q4 2004
Net debt	10,284	10,211	10,557	10,569
Equity	8,533	8,450	8,750	8,717
Leverage	54.7%	54.7%	54.7%	54.8%

IFRS	Q1 2004	Q2 2004	Q3 2004	Q4 2004
Net debt	10,353	10,274	10,607	10,685
Equity	8,433	8,395	8,679	8,628
Leverage	55.1%	55.0%	55.0%	55.3%

Legal Note:

The financial information presented in this document has been prepared on the basis of all International Financial Reporting Standards (IFRSs) and their interpretation done by the Standing Interpretations Committee (SIC) and International Financial Reporting Interpretations Committee (IFRIC-IASB), effective for the year ended 31 December 2005.

In this respect, all of the following should be noted:

- The financial information has been internally prepared by the Company and has not been audited.
- This information has been prepared on the assumption that current IFRSs will all be in the future endorsed by the European Commission (EC), therefore providing them with full legal value. If the EC fails to endorse some of these standards and interpretations in time for the publication of the Group's Financial Statements for 2005, the information presented in this document might be changed.

· Standards currently in issue and adopted by the European Union are subject to interpretations issued from time to time by the IFRIC. Also, further standards might be issued by the IASB that may be applicable for financial years beginning on or after 1 January 2005.

· Up to now, IFRSs have undergone a significant revision process and are currently being applied in the European Union and in a large number of countries simultaneously for the first time. Accordingly, there is not yet a significant body of well established practice and detailed regulation on which to base the resolution of certain technical issues occasionally arising during the application of these standards to patterns not specifically addressed by IFRSs.

· Changes arising from any of the above listed items or from the evolution of industry practice might also impact certain decisions and interpretations currently adopted by the IBERDROLA Group for the preparation of the information contained in this document.

· As a result of all of the above, it is possible that further changes might be required to this information before it is published as comparative financial information in the 2005 Annual Report of the IBERDROLA Group.

Analysis of q1 2005

Energy production

	GWh	vs. 2004	% Weight
Gas combined cycle	7,155	1,722 31.7%	33.5%
Renewable energy	1,770	276 18.5%	8.3%
Wind energy	1,645	324 24.5%	-
Hydroelectric	2,364	-2,977 -55.7%	11.1%
Nuclear	6,446	-339 -5.0%	30.1%
Fuel-oil	1,200	943 366.9%	5.6%
Coal	1,981	162 8.9%	9.3%
Cogeneration	471	2 0.4%	2.2%
TOTAL NET PRODUCTION	21,387	-211 -1.0%	100.0%
ENERGY DISTRIBUTED	32,142	8.5%	

Energy production: Spain

	GWh	vs. 2004	% Weight
Gas combined cycle	2,881	52.0%	17.1%
Renewable energy	1,770	18.5%	10.5%
Wind energy	1,645	24.5%	-
Hydroelectric	2,148	-57.2%	12.8%
Nuclear	6,446	-5.0%	38.4%
Fuel-oil	1,200	366.9%	7.1%
Coal	1,981	8.9%	11.8%
Cogeneration (attributable)	376	0.8%	2.2%
TOTAL NET PRODUCTION	16,802	-4.8%	100.0%
ENERGY DISTRIBUTED	25,622	8.3%	
LEVEL OF HYDROELECTRIC RESERVES AT 3/31/05		37.2% (4,197 GWh)	

Energy production: Latin America

	GWh	vs. 2004	% Weight
Gas combined cycle	4,274	20.8%	93.2%
Hydroelectric	216	-32.3%	4.7%
Cogeneration	95	-1.0%	2.1%
TOTAL NET PRODUCTION (Iberdrola share)	4,585	16.0%	100.0%
ENERGY DISTRIBUTED (managed)	6,520	9.7%	

1. - PRODUCTION: SPAIN

The Group's net production in Spain came to 16,802 GWh in Q1 2005, successfully limiting the fall in production to 4.8% in one of the driest quarters on record over the last 30 years, with hydroelectric production down 57.2%. This demonstrates the importance of the major investments made on combined cycle plants and renewables, which together accounted for around 28% of total production over the quarter. The most notable events registered are:

- +52.0% increase in combined cycle production up to 2,881 GWh, notably increasing its contribution to total production, accounting for 17.1% compared with 10.7% in Q1 2004. Furthermore, this 17.1% contribution by combined cycles to the mix is significantly greater than the 11.8% contributed by coal. Therefore, production from combined cycles ranked second during the first quarter.
- Wind farm production increased 24.5%, taking the weighting of renewable energies facilities up to 10.5% in the generation mix for the quarter.

- Nuclear production represents the biggest contributor to total production, with 6,446 GWh.

Iberdrola obtained a **28.2% share** of the wholesale production market in Q1 2005. In comparative terms, Energy Production can be broken down as follows:

	Q1 2005	Q1 2004
Gas combined cycle	17.1%	10.7%
Renewable energy	10.5%	8.5%
Hydroelectric	12.8%	28.5%
Nuclear	38.4%	38.5%
Fuel-oil	7.1%	1.5%
Coal	11.8%	10.3%
Cogeneration (attributable)	2.2%	2.1%
Total	100%	100%

With respect to CO₂ emissions, the percentage of total emission-free production rose to 61.7%, with 227 gr. CO₂ per kWh. Furthermore, 81% of production in Spain is based on clean generation sources with combined cycle, nuclear, hydroelectric, renewable and cogeneration facilities representing a combined production of 13,621 GWh.

2. - PRODUCTION: LATIN AMERICA

In Latin America, total production is up 16.0% to 4,585 GWh, with the majority (85%) generated by the combined cycle plants in Mexico.

	Production	% Change
Mexico (combined cycles)	3,891	10.0%
South America (Iberdrola share)	694	67.2%
Combined cycles	383	N/A
Hydroelectric	216	-32.3%
Cogeneration	95	-1.0%
Total	4,585	16.0%

This strong growth is primarily due to the Monterrey (1,040 MW), Altamira (1,036 MW), Enertek (120 MW) and La Laguna (500 MW) plants operating at full capacity, with the latter brought into service in 15 March 2005. The rest of combined cycle production was contributed by the Termopemambuco plant in Brazil. In regards to hydroelectric production, the Itapebi plant has been working without incidents, being the drop in production attributed to the extraordinary contribution recorded in 2004 coming from the sale of its surplus' production to the pool.

3. - MARKET: SPAIN

In the domestic market, Iberdrola's total demand measured on the grid increased 8.3% to 25,622 GWh, once again confirming Iberdrola's position as the leader in the domestic distribution market (Tariff+Commercial: 39.2% share).

The company now has 9.7 million customers representing an increase of around 185,000 year-on-year.

4. - MARKET: LATIN AMERICA

The evolution of demand for Iberdrola's three distribution companies in Brazil is reflected in the following table:

Energy Distributed (GWh) (managed)	Q1 2005	vs. 2004
Coelba	2,830	10.0%
Cosern	834	9.1%
Celpe	2,054	8.4%
Total	5,718	9.3%

It's worth highlighting that during the first quarter, the distribution companies of Iberdrola in Brazil have been entitled to additional tariff adjustments which meant a 1% increase over the tariff reviews carried out during the third quarter of 2004. Furthermore, Celpe is under the annual tariff review, and at 29 March, a preliminary 33% increase was approved.

Analysis of results

January-March 2005. Results under IFRS, with 2004 on like for like terms

	MM €	vs. 2004
NET SALES	2,675.1	+30.0%
GROSS MARGIN	1,182.7	+2.5%
EBITDA	866.8	+8.8%
EBIT	628.8	+10.1%
NET PROFIT	346.6	+12.3%

1.- NET SALES

The Group's Net Sales totalled 2,675.1 million euros in Q1 2005, up 30.0% on the same period in 2004, reflecting the positive contribution of all of the Group's businesses: the Domestic Energy business, the main growth driver, rose 34.1%, the International business 16.4%, and the Non-Energy business 17.6%.

The main factors driving this change in each of the businesses were as follows:

- In the Domestic Energy Business, the 34.1% increase in Net Sales reflects the increases recorded on Generation (22.1%) and Supply

(36.7%), positively affected by the higher prices, Renewables (39.4%) by the increase in production and the high prices, and Distribution (2.2%), in line with the increase in its regulated revenues.

- In the International business, Net Sales is up 16.4% to 376.3 million euros. Mexico is the region that made the biggest relative contribution; with the La Laguna combined cycle plant (500 MW) contributing to results for the first time after it was brought into service in 15 March 2005. Also of note is the increase in Net Sales in Brazil, essentially as a result of the increase in demand and the upward readjustment in tariffs in December 2004.

- On Non-Energy businesses, Net Sales is up 17.6% to 192.3 million euros.

On the other hand, and regarding the tariff deviation generated over the first quarter of 2005, it is worth considering the following issues:

1. On a sector basis, the aforementioned forecasted tariff deviation for Q1 2005 might reach an amount close to 580 million euros.
2. According to the Royal Decree Law 5/2005 of March, 11th, the provisional share for the financing of such tariff deviation that would correspond to Iberdrola is 35.01%, which represents approximately 204 million euros before taxes.
3. Furthermore, in order to support accounting treatment of the tariff deviation adopted by the Company, the following aspects have been factored:
 - a) The articles 15 to 20 of the Electricity Sector Law 54/1997 of November 27th that regulate the economic regime of the different sector activities. In general terms, the remuneration of the generation activities is established in those articles accordingly to the prices resulting from the functioning of a liberalised market.
 - b) The precedent set by the recognition of the total tariff deviation corresponding to years 2000, 2001 and 2002 (Law 53/2002, Art 94.2).
 - c) The objectives set in IAS 18: An "ordinary revenue is recognised when it is probable that future economic benefits flow to the company and the amount of revenue can be measured reliably".

As it is known, although in the existing regulatory framework this deviation is borne by the generation companies, the services rendered by this business complies with all the requirements included in that rule:

- Revenues can be measured reliably, as Generation prices are determined by the pool.
- The periodic C.N.E. settlements explicitly specify the revenues corresponding to each generator. However, there are not enough revenues collected by the distribution companies.

From all of the aforementioned, it can be inferred that at present there are enough reasons for the confirmation at the end of the current fiscal year of the recoverability of the tariff deviation that might arise during 2005.

2.- GROSS MARGIN

On a consolidated level, the Gross Margin came out at 1,182.7 million euros, representing an increase of 2.5% in relation to the same period in 2004. As explained below, the Gross Margin of the Domestic Energy Business includes for the first time the CO₂ emission allowances cost which has totalled 42.1 million euros over the period.

The following contrasting aspects can be highlighted regarding the evolution of the Gross Margin in each business:

2.1. - DOMESTIC ENERGY BUSINESS

The Gross Margin remained stable (-0.6%) at 970.5 million euros:

- The change in the Gross Margin of the Generation business in Spain (506.0 million euros, -3.3%) can be explained in the following context:
 - Increase in fuel costs because of the change in the production mix (less hydroelectric production and greater thermal production) and a context of higher fuel prices, reflected in a 71.5% increase in procurement costs.

- 42.1 million euros booked as expenses for emission allowances consumed during the period.
 - Increase in the pool price, reflected in a 22.1% increase in Net Sales.
 - The production in the ordinary regime fell by 7.1% in a quarter in which hydroelectric production in Spain is down 57.2%.
- On Renewables, Net Sales rose 39.4% to 120.6 million euros, in line with the 32.3% increase in installed capacity in relation to Q1 2004 and a context of high prices. The Gross Margin on the Renewables business now represents 19% of the total Gross Margin obtained by Iberdrola's generation assets in Spain.
 - For its part, the Gross Margin from Distribution grew 2.2% (+339.7 million euros) in line with the increase in the remuneration on the regulated business recognised in the tariff for 2005.
 - The Supply business saw its Gross Margin fall 30.2 million euros to 9.2 million euros, reflecting the 45% increase in the procurement costs as a consequence of the high pool prices recorded over the period. Furthermore, in the first quarter of 2004 there was an extraordinary contribution of 11 million euros from resettlements of energy sales, TPA fees and energy purchases of years 2000 & 2001.

2.2. - INTERNATIONAL BUSINESS

The Gross Margin was 138.3 million euros, reflecting growth of 21.2%, resulting from the good performance of the Group's businesses in the region.

- In Mexico-Guatemala, the Gross Margin was 58.0 million euros (+18.9%). La Laguna combined cycle plant (500 MW) contributed to results for the first time after it was brought into service in this quarter.
- In Brazil, the Gross Margin is up 22.9% (80.4 million euros), thanks to the growth in demand

and the additional tariff increases of 9-10% adopted at the Coelba, Cosern, and Celpe distribution companies in December 2004, correcting upward the initial tariff review.

2.3. - NON-ENERGY BUSINESSES

These contributed 73.9 million euros to the total Gross Margin, reflecting a growth of 11.4 million euros, primarily generated by the real estate activities and Corporación IBV, which, following the application of the IFRS, is now proportionately consolidated. The breakdown is as follows:

Million euros	Q1 2005	Q1 2004	Change in millions
Real estate division	36.1	27.4	8.7
Corporación IBV	33.6	31.5	2.1
Other	4.2	3.6	0.6
TOTAL	73.9	62.5	11.4

3.- EBITDA / GROSS OPERATING PROFIT

Consolidated EBITDA increased 8.8 % as a result of the positive evolution in the Gross Margin and the -1.4% reduction in Net Operating Expenses.

The -1.4% reduction in Net Operating Expenses has been achieved thanks to the moderation in traditional businesses and an increase in new businesses in connection with the upturn in activity.

Net Operating Expenses can be broken down as follows:

- The moderate rise in Personnel Costs (+3.8%) which already includes in Q1 2005 the effects of the annual salary review according to inflation and the labour agreement. In 2004, this increase was not accounted until July.
- a 19.5% increase in External Services linked to the upturn in activity reflecting the new gas combined cycle plants and wind farms.

- A 42.4 million euros increase in Other Operating Revenues mainly reflecting third party services in Structure & Services as a result of framework agreements signed by the Company during the year.

Net Operating Expenses can be broken down as follows:

MM €	Q1 2005 vs. 2004	
Net Personnel Expenses	190.7	4.0%
Personnel	223.1	3.8%
In-house work on fixed assets	-32.4	2.5%
Net External Services	112.3	-9.7%
External Services	188.2	19.5%
Other operating revenues	-75.5	128.1%
TOTAL	303.4	-1.4%

The **Traditional Energy Business workforce** fell 3.5% compared with the same period in 2004 to 8,493 employees. As such, the Gross Margin per Employee ratio improves 3.0% in the Domestic Energy Business, as can be seen in the following table.

MM €	Q1 2005	vs. 2004	Change in %
Gross Margin (Domestic Energy Business) (mm. €)	970.5	976.8	-0.6%
Domestic Ener. Bus. Workforce (Spain)	8,493	8,802	-3.5%
Gross Margin / employee ratio (thousand euros)	114.3	111.0	+3.0%

On the other hand, the Tax was down 4.1% to 46.9 million euros, mainly due to the reduction in Latin America resulting from the application of IFRS.

In addition, EBITDA includes 34.4 million euros for the allocation of emission rights granted to IBERDROLA. Taking into account the 42.1 million euros booked at the Gross Margin level for the consumption of emission rights, the net effect at the operating level for emission rights comes out at -7.7 million euros.

4.- EBIT / NET OPERATING PROFIT

EBIT rose **10.1%** to **628.8 million euros** compared with the same period in 2004, with this rise driven by the operating evolution already mentioned combined with the change in Amortizations and Provisions (+5.4%).

Amortizations are up 3.3% to 229.6 million euros.

Provisions are up 4.8 million euros.

MM €	Q1 2005	vs. 2004	Change in %
Amortizations	229.6	222.2	+3.3%
Provisions	8.4	3.6	+133.3%
TOTAL	238.0	225.8	+5.4%

5.- FINANCIAL RESULT

The **Financial Result** came to **-107.8 million euros, 5.5% higher** than in the same period in 2004. This increase was mainly due to the 5.6% increase in financial expenses in a quarter with a higher average debt balance in relation to the same quarter in 2004. Nevertheless, the net interest cost on debt was reduced from 4.90% in Q1 2004 to 4.44%.

6.- RESULTS OF COMPANIES CONSOLIDATED BY THE EQUITY METHOD

The Results of Companies Consolidated by the Equity Method rose 7.2 million euros to 19.8 million euros, with 55% of the results contributed by Non-Energy businesses. Also of note is the contribution of Iberdrola's engineering subsidiary, which increased its contribution by 2.4 million euros to 3.9 million euros. Following the implementation of IFRS, EDP and REE have been removed from the scope of consolidation.

The results can be broken down as follows:

MM.€	Q1 2005	vs. 2004	Change in %
Non-Energy	11.0	10.7	0.3
Iberdrola's engineering subsidiary	3.9	1.5	2.4
Other	4.9	0.5	4.4
TOTAL	19.8	12.6	7.2

7.- NET PROFIT

Lastly, **Net Profit** rose to **346.6 million euros, up 12.3%** on the same period in 2004, in line with the change seen on Operating Profit. Profit before Taxes is up +11.5%, while the effective tax rate came out at 34.7%, in line with the same period in 2004 (35.8%). This rate will be reduced to around 30% during the fiscal year.

Result by business

1.- ENERGY BUSINESS - SPAIN

1.1 GENERATION

a) Gross Margin

The change in this item in Q1 2005 demonstrates the flexibility of IBERDROLA's generation park, thanks to its new investments in combined cycles, set against a backdrop of high demand and one of the lowest levels of hydroelectric production on record over the last 30 years. In this way, the slight reduction of 3.3% in the Gross Margin on the Generation Business should be explained in the following context:

Net Sales rose 22.1% in a quarter in which prices were 73% higher and despite the 57.2% reduction in hydroelectric production, the ordinary regime production was down only 7.1% to 14,656 GWh. This was achieved thanks to the contribution of combined cycle plants, whose production grew 52%, representing 17% of total production, making it the second biggest source of energy after nuclear, which contributed 6,446 GWh.

In a context of higher thermal production due to falling levels of hydroelectric production and increases in fuel costs, Procurement Costs are up 71%.

Fuel Costs

(Euros/MWh)	Q1 2005	Q1 2004
Nuclear	3.6	3.6
Combined Cycles	32.0	26.6
Coal	25.0	22.2
Fuel-oil	44.0	39.5

Furthermore, for the first time Procurement Costs include costs relating to the consumption of

emission allowances over the quarter, totalling 42 million euros.

b) Operating Profit / EBIT

EBIT is up 3.3% on the same period in 2004, rising to **338.8 million euros**, while EBITDA came out at 432.6 million euros, representing an increase of 4.0%. In addition to the information on the Gross Margin outlined above, a number of other factors have influenced this change:

The reduction in Net Operating Expenses, down -0.2% to 92.0 million euros, reflects various factors. Personnel expenses increased 8.3%, including the effects of the annual salary review according to inflation and the labour agreement. In 2004, this increase was not accounted until July. Meanwhile External Services are up 24.9%, due primarily to the combined cycle plants brought into service. These two increases were offset by the higher income on Other Operating Revenues and In-house Work on Fixed Assets which include, among other items, 12 million euros of revenues that due to the application of IFRS are no longer accounted for as extraordinary results.

MM €	Q1 2005 vs. 2004	
Net Personnel Expenses	49.9	7.1%
Personnel	56.3	8.3%
In-house work on fixed assets	(6.4)	18.5%
Net External Services	41.7	-8.6%
External Services	59.7	24.9%
Other operating revenues	(17.6)	700.0%
TOTAL	92.0	-0.2%

Amortizations and Provisions rose slightly, up 6.7% to 93.8 million euros, primarily as a result of the new combined cycle plants entering into service,

with an additional 1,200 MW in operation since Q1 2004.

Tax increased 4.0% as a result of the new facilities commissioned.

34.1 million euros were booked as emission allowances granted to IBERDROLA. On the Gross Margin, 42.1 million euros were accounted for the consumption of emission rights over the period. As such, the net impact of emission rights at the operating level came out at -7.7 million euros.

The main operating figures for this business are as follows:

GENERATION MM €	Q1 2005 vs. 2004	
Net sales	864.5	22.1%
Gross Margin	506.0	-3.3%
EBITDA	432.7	4.0%
EBIT	338.9	3.3%

1.2 RENEWABLES

a) Gross Margin

The Renewable Energy business has continued to grow as new capacity has been brought into service. In this way, this Business was confirmed as the main growth driver in Iberdrola's Strategic Plan, along with Mexico.

The installed capacity increased by 32.3% (+796 MW), enabling a 24.5% increase in wind energy production and an 18.5% rise in total production generated by renewable energy sources, reaching 1,770 GWh.

The average price obtained rose to 6.81 euro cents/kWh, up from 5.79 euro cents/kWh for the same period in 2004. In 2005, most of the assets were based on the fixed price regime plus incentives.

Therefore, the pool price increases have not been fully reflected in margins.

The mentioned increase in production enabled this business to achieve a 39.4% increase in its Gross Margin, up to 120.6 million euros, despite the low wind factor in January and February 2005.

b) Operating Profit / EBIT:

EBIT increased by 64.5% due to the following factors:

- EBITDA grew 33.1%, in line with the increase in the Gross Margin and despite the rise (+76.8%) in Net Operating Expenses as a result of the new capacity brought into service. The EBITDA margin is already slightly higher than the levels recorded in prior periods of around 80%.
- This growth is even greater on EBIT after the slight fall in Amortizations and Provisions, down 3.2%. The decision to extend the useful accounting life of wind farms to 20 years has had a positive impact of 10 million euros, offsetting the higher amortizations booked for the new capacity installed.

Net Operating Expenses can be broken down as follows:

MM €	Q1 2005 vs. 2004	
Net Personnel Expenses	2.6	N/A
Personnel	3.8	26.7%
In-house work on fixed assets	(1.2)	-57.1%
Net External Services	19.5	58.5%
External Services	20.5	53.0%
Other operating revenues	(1.0)	-9.1%
TOTAL	22.1	76.8%

The main operating figures for this business are as follows:

RENEWABLES; MM €		
	Q1 2005 vs. 2004	
Net sales	120.6	39.4%
Gross Margin	120.6	39.4%
EBITDA	97.4	33.1%
EBIT	64.5	64.5%

1.3 DISTRIBUTION

a) Gross Margin

The Distribution business achieved a 2.2% increase in its Gross Margin, with this upturn attributable to the increase in remuneration for the regulated business recognised in the tariff for 2005. Furthermore, it is worth mentioning the 8.3% increase in energy distributed which has totalled 25,622 GWh.

b) Operating Profit / EBIT:

EBITDA for Distribution rose 6.6%, with Net Operating Expenses falling 4.9%. The moderate rise in Personnel Costs (+3.8%) already includes the effects of the annual salary review according to inflation and the labour agreement. In 2004, this increase was not accounted until July.

Net Operating Expenses can be broken down as follows:

MM €		
	Q1 2005 vs. 2004	
Net Personnel Expenses	48.1	3.2%
Personnel	69.1	3.8%
In-house work on fixed assets	(21.0)	5.0%
Net External Services	69.5	-9.7%
External Services	101.6	0.4%
Other operating revenues	(32.1)	32.6%
TOTAL	117.6	-4.9%

The main operating figures for this business are as follows:

DISTRIBUTION MM €		
	Q1 2005 vs. 2004	
Net Sales	339.7	+2.2%
Gross Margin	339.7	+2.2%
EBITDA	200.7	+6.6%
EBIT	141.8	+10.7%

1.4 SUPPLY

a) Gross Margin

The Supply business saw its Gross Margin fall - 76.7% to 9.2 million euros, driven by the 45.1% increase in Procurements to 768.9 million euros as a result of the high energy prices seen over the period. This high cost took up most of the 778.1 million euros generated in Net Sales (+36.7%) thanks to the significant level of activity maintained on both electricity and gas sales, reflected in a 32.8% rise in GWh sold in both markets for a total of 19.817 GWh.

Furthermore, in the first quarter of 2004 there was an extraordinary contribution of 11 million euros from resettlements of energy sales, TPA fees and energy purchases of years 2000 & 2001.

b) Operating Profit / EBIT

With regard to EBIT, it is important to note the increase in operating expenses (+4.2 million euros), mainly recorded at External Services primarily due to the increase in activities relating to the full deregulation of the market, in addition to the strengthening of advertising campaigns.

Net Operating Expenses can be broken down as follows:

MM €	Q1 2005 vs. 2004	
Net Personnel Expenses	15.5	-8.8%
Personnel	15.6	-8.2%
In-house work on fixed assets	(0.1)	N/A
Net External Services	10.4	121.3%
External Services	20.0	37.0%
Other operating revenues	(9.6)	-3.0%
TOTAL	25.9	19.4%

Furthermore, EBIT on the Supply Business was affected by a slight fall in Amortizations and Provisions (-4.4%) and a 16.7% increase in Tax in light of the increase in the volume of energy sold.

The main figures for this business are as follows:

SUPPLY MM €	Q1 2005 vs. 2004	
Net sales	778.1	+36.7%
Gross Margin	9.2	-76.6%
EBITDA	(23.0)	N/A
EBIT	(29.5)	N/A

1.5 STRUCTURE & SERVICES

It includes adjustments for the inter group expenses between the Corporation and the businesses. The result from Third Party Services represents 2/3 of the total EBITDA of Structure & Services.

2.- INTERNATIONAL BUSINESS

a) Gross Margin

In the International Business, the Gross Margin is up 21.2% (+24.1 million euros) to 138.3 million euros. The impact of the evolution in the exchange rate in the region was practically insignificant.

In Mexico, the Gross Margin rose 18.9%, driven by the La Laguna combined cycle plant (500 MW) brought into service in the first quarter of the year.

In Brazil, the Gross Margin reflects the increase in demand and the additional tariff review adopted in December 2004, correcting upward the tariff increases implemented by the distribution companies in Q3 2004. Total growth comes out at +22.9%.

b) Operating Profit / EBIT

In the International business, EBIT increased 38.8% to 63.7 million euros, reflecting the increase in EBITDA (+30.8%) and the higher levels of amortisation recorded (+17.8%).

Mexico recorded a +15.3% rise in EBITDA, mainly as a result of the upturn in Generation activities, with the production of the La Laguna combined cycle plant added this quarter, while the South America region saw an increase of +46.6% in light of the evolution in demand, the tariff increases adopted and the efficiency improvements achieved. In this way, total EBITDA growth in the International Business comes out at 31.1%.

EBITDA can be broken down by region and business as follows:

- **Mexico-Guatemala**

MM €	Q1 2005 vs. 2004	
Generation	29.4	+18.5%
Distribution	12.8	+8.5%
TOTAL	42.2	+15.3%

- **South America**

MM €	Q1 2005 vs. 2004	
Generation	12.1	-32.4%
Distribution	42.3	+120.3%
TOTAL	54.4	+46.6%

- The change in Net Operating Expenses for the entire Latin America region can be broken down as follows:

MM €	Q1 2005 vs. 2004	
Net Personnel Expenses	12.6	10.5%
Personnel	15.2	15.2%
In-house work on fixed assets	(2.6)	44.4%
Net External Services	27.9	21.3%
External Services	32.8	29.6%
Other operating revenues	(4.9)	113.0%
TOTAL	40.5	17.7%

The 17.7% increase in Net Operating Expenses is 3.5 points lower than the increase recorded on the Gross Margin, which is up 21.2%.

The contribution of Mexico-Guatemala and South America to the Net Operating Expenses of the International business is as follows.

MM €	Q1 2005 vs. 2004	
Mexico-Guatemala	15.8	+29.5%
Net personnel	2.9	+38.1%
Net External Services	12.9	+27.7%
South America	24.7	+10.3%
Net personnel	9.7	+3.2%
Net External Services	15.0	+15.4%
TOTAL	40.5	+17.7%

- Amortizations and Provisions are up 17.8%, primarily on account of the increase in amortizations linked to the bringing into service and operating at full capacity of the Altamira combined cycle in Mexico.

The main operating figures for this business are as follows:

INTERNATIONAL MM €	Q1 2005 vs. 2004	
Net Sales	376.3	+16.4%
Gross Margin	138.3	+21.2%
EBITDA	96.5	+31.1%
EBIT	63.6	+38.8%

3.- NON-ENERGY BUSINESSES

NON-ENERGY (million euros)	Q1 2005 vs. 2004	
NET SALES	192.3	+17.6%
GROSS MARGIN	73.9	+18.4%
EBITDA	36.1	+49.2%
EBIT	30.8	+43.3%
NET PROFIT	25.7	+15.8%

When looking at changes in Non-Energy Businesses, it is worth noting that the real estate division accounts for practically all of the contribution for EBITDA, EBIT and Net Profit. In addition, Corporación IBV, as a result of the application of IFRS, is now proportionally consolidated.

On the other hand, for the 11 million euros booked as the Results of Companies consolidated by the Equity Method, the biggest contribution is linked to the stake in Gamesa.

The main figures for the real estate business to date are as follows:

- Real estate business data

PROPERTY PORTFOLIO (surface area - m ²)	
Total	2,182,070
Residential	1,655,408
Commercial	526,662

DEVELOPMENTS OF DWELLINGS FOR SALE

Balance sheet

January-March 2005

	MM €	Vs Dic. 2004
TOTAL ASSETS	27,542	+5.1%
TANGIBLE & INTANGIBLE		
FIXED ASSETS	19,750	+3.7%
FINANCIAL FIXED ASSETS	1,842	+1.6%
SHAREHOLDERS' EQUITY	8,641	+0.2%
NET DEBT	10,797	+1.0%

At March 31, 2005, Iberdrola's total assets came to 27,542 million euros, highlighting the maintenance of its strong capital position, even taking into account the investments made over the period (420 million euros). This has enabled the **leverage ratio to be set at 55.5%**, 20 bp higher than in December 2004 with the accounts in the IFRS format.

Analysis of the Balance Sheet

1.- FIXED-ASSETS

Investments in Q1 2005 totalled 420 million euros and can be broken down as follows:

	MM €	Jan.-March 2005 %
Spain	246	58.6
Generation	74	
Renewables	69	
Distribution	73	
Other	30	
Mexico	154	36.6
Generation	153	
Distribution	1	
South America	13	3.1
Generation	1	
Distribution	12	
Other International	7	1.7
TOTAL	420	100.0

As regards investments in Spain, those made on energy production stand out, with 143 million euros that can be broken down as follows:

- 74 million euros on the Generation Business.
- 69 million euros on the Renewable Energy Business.

In Mexico, investments have focused on the Altamira V and VI combined cycle plants (72 million euros) and Tamazunchale (73 million euros). In Brazil, investments have primarily been made on the distribution business, financed through funds generated within Brazil.

The figure given for "Other International" reflects the investments made on Renewables outside of Spain, representing a total of 7 million euros.

2. - SHARE CAPITAL

At March 31, 2005, the **Share Capital** comprised **901,549,181 bearer shares** with a par value of 3 euros each.

On January 2, 2005, an interim dividend of 0.326 euros per share was paid out for the 2004 financial year, representing a 14.0% increase on the dividend paid on January 2004.

Furthermore, at the General Shareholders' Meeting held on March 18, a total dividend of 0.768 euros per share was approved, charged to the 2004 financial year, reflecting an increase of 14.3% per share on the dividend paid in 2004. This confirms the commitment made by Iberdrola to increase shareholder remuneration in line with the growth in Net Profit.

On July 1, 2005, an additional dividend of 0.442 euros per share will therefore be paid out.

3. - FINANCIAL DEBT

Net financial debt totalled 10,797 million euros at the end of March, with financial leverage coming out at 55.5%, 20 basis points higher than the 55.3% seen in December 2004. It is worth mentioning that the restating of the accounts for 2004 in line with IFRS added 50 basis points to the leverage figure reported in December 2004 under the Spanish GAAP, as can be observed in the following table:

	Dec. 04 Sp. GAAP (reported)	Dec. 04 IFRS	March 05 IFRS
Shareholders' equity	8,717	8,628	8,641
Net Debt	10,569	10,685	10,797
Leverage	54.8%	55.3%	55.5%

Furthermore, the additional dividend charged against 2004 was approved in Q1 2005 (General Shareholders' Meeting on March 18), while in 2004 this approval was given in the second quarter. This reflects a reduction of 399 million euros in Shareholders' Equity at the end of March 2005. Without this impact, Shareholders' Equity would have come out at 9,040 million euros and leverage at 54.4% compared with 55.1% in March 2004 under IFRS.

The average cost of debt was 4.57%, 60 basis points lower than in March 2004.

The debt structure can be broken down by currency and interest rate as follows:

	March 2005	December 2004
Euro	86.3%	86.4%
Dollar	8.9%	9.4%
Real	4.5%	3.9%
Other currencies	0.3%	0.2%
Fixed rate	57%	58%
Capped	15%	16%
Floating rate	28%	26%

The debt structure per company is shown in the following table:

	March 2005	December 2004
Iberdrola S.A.	83.6%	83.4%
Mexico	5.2%	5.3%
South America	5.7%	5.8%
Renewables	2.9%	2.7%
Real estate & others	2.6%	2.8%
Total	100%	100%

Debt can be broken down by product type as follows:

	March 2005	December 2004
Euro bonds	44.1%	46.0%
Bonds in other currencies	4.0%	3.2%
Domestic commercial paper	4.4%	3.4%
Euro commercial paper (ECP)	4.3%	4.5%
Euro loans	33.5%	32.5%
Loans in other currencies	9.7%	10.4%
Total	100%	100%

In line with the policy to minimise financial risks on debt, foreign currency risks have continued to be mitigated through the financing of investments in Latin America in local currencies (real in Brazil) or in their functional currencies (dollar in Mexico).

At March 31, 2005, the average maturity debt remained unchanged at 4.3 years in relation to the end of 2004.

Lastly, the following changes have been recorded in financial leverage:

	March 2005	December 2004
Shareholders' equity	8,641	8,628
Gross Debt	11,599	11,105
Market value of derivatives	82	81
Short Temp. Financial Inv.	539	216
Cash	181	123
Net Debt	11,797	10,685
Leverage	55.5%	55.3%

4. - WORKING CAPITAL

Net Working Capital totalled 718 million euros, up 161 million from the 557 million euros recorded at the end of 2004, with current assets up 637 million euros and current liabilities up 476 million euros.

5. - FUNDS FROM OPERATIONS

In March 2005, Funds from Operations totalled 567.2 million euros, an increase of 9.0% on March 2004.

The ratio of Funds Generated from Operations to Net Debt improved by 30 bp to 18.6% up from the 18.3% recorded in December 2004.

---	-------------------

A) QUARTERLY ADVANCE OF RESULTS
(For the consolidated information, only the applicable column according to current legislation shall be completed).

Unit: Thousand euro		INDIVIDUAL		CONSOLIDATED UNDER SPANISH LAW		CONSOLIDATED ACCORDING TO IFRS	
		Current Year	Previous Year	Current Year	Previous Year	Current Year	Previous Year
NET TURNOVER (1)	0800	813,691	561,673			2,675,151	2,057,408
PRE-TAX PROFIT / PRE-TAX PROFIT ON CONTINUOUS ACTIVITIES (2)	1040	-81,769	-2,238			538,422	482,656
PROFIT FOR THE YEAR ON CONTINUOUS ACTIVITIES (3)	4700					351,368	309,969
PROFIT FOR THE YEAR (4)	1044	-33,608	3,201			351,368	309,969
Profit attributed to Minority Shareholders / Profit for the year attributed to minority interests	2050					-4,793	-1,353
PROFIT FOR THE YEAR ATTRIBUTED TO THE PARENT COMPANY / PROFIT FOR THE YEAR ATTRIBUTED TO HOLDERS OF INSTRUMENTS IN THE NET WORTH OF THE PARENT COMPANY	2060					346,575	308,616
SUBSCRIBED CAPITAL	0500	2,704,648	2,704,648				
AVERAGE NUMBER OF PERSONS EMPLOYED	3000	2,573	2,625			15,825	15,772

B) EVOLUTION OF BUSINESS

(Although abridged, due to the brief nature of this quarterly report, the information included in this section must allow investors to form an adequate opinion on the activity performed by the company or its group and the results obtained during the period covered by this quarterly report, as well as its financial position and net worth and other essential information regarding its general state of affairs. Finally, a clear distinction should be made between the comments regarding consolidated financial fundamentals and those regarding individual financial fundamentals.)

See annexed sheets

C) BASES OF PRESENTATION AND VALUATION POLICY

(When drawing up the financial and accounting data and information included in this regular public report, the principles, rules of valuation and accounting criteria should be used as stipulated in the current legislation of the sector in which the company operates on compiling financial and accounting information to be included in the annual accounts corresponding to the annual period to which the regular public information submitted. If, by exception, the generally accepted accounting criteria and principles stipulated in the corresponding legislation have not been applied to the data and information attached hereto, this fact and the underlying reason should be stated, indicating the effect that such non-application could have on the net worth, the financial position and the profit/loss of the company or its consolidated group. Furthermore, and with a similar scope, any changes that may have been made since the last preceding audited annual accounts in the accounting principles used in compiling the attached information must be mentioned and explained. If the same accounting policies, criteria and principles have been applied as in the preceding annual accounts, and if the latter were drawn up in accordance with the current accounting legislation applicable to the company, this should be expressly stated. If any adjustments and/or reclassifications were made in the previous period under applicable legislation, owing to changes in accounting policies, correction of errors or changes in the classification of items, this section will include whatever quantitative and qualitative information may be necessary to understand those adjustments and/or reclassifications.)

The financial and accounting information included in this regular public report has been drawn up, as regards the consolidated data, in accordance with the International Financial Reporting Standards (IFRS), considering these to be the standards adopted by the European Commission according to the procedure established in Regulation (EC) No 1606/2002 of the European Parliament and the Council, of 19 July 2002.

The above is applicable to both the information included in the quarterly advance on profits for this year and the comparative information from the previous year.

Consequently, it differs from the information used in the latest consolidated annual accounts, which were prepared according to the prevailing national accounting laws and regulations.

This notwithstanding, the consolidated annual accounts for 2004 included, in Note 29, the reconciliation of the principal items of shareholders' equity under Spanish law and the IFRS, explaining the principal effects of the conversion to the IFRS.

Information set out in thousands of euro.

The average number of persons employed does not include: on an individual level, 100 employees in special employment situations this year and 450 last year; on a consolidated level, it excludes 104 persons employed this year and 527 last year.

The increase in workforce in respect of last year's figures is due to the fact that the consolidated group under the IAS include a number of companies to the consolidated group under the National Chart of Accounts, thus adding to the workforce.

D) DIVIDENDS DISTRIBUTED DURING THE PERIOD:

(All dividends distributed since the beginning of the financial year must be mentioned).

		% of nominal	Euro per share (x.xx)	Amount (thousand euro)
1. Ordinary Shares	3100	10.87	0.326	293.834
2. Preference Shares	3110			
3. Redeemable Shares	3115			
4. Non-Voting Shares	3120			

Additional information on the distribution of dividends (interim, supplementary, etc.)

An interim dividend was paid on 3 January 2005 against the profits of 2004, at the rate of 0.326 euro per share.

E) SIGNIFICANT EVENTS (*)

1. Purchases or transfers of shares in the capital of companies listed on the Stock Exchange giving rise to the obligation to report pursuant to the Stock Market Act s. 53 (5% and multiples)
2. Purchases of own shares giving rise to the obligation to report pursuant to Supplementary Provision 1 of the Corporations Act (1%)
3. Other significant increases or reductions of fixed assets (stakes of over 10% in unlisted companies, significant investments or divestments, etc.)
4. Increases and reductions of share capital or the value of stocks
5. Issues, repayments or cancellations of debenture loans
6. Changes of Directors or the Board of Directors
7. Alterations to the Bylaws
8. Conversions, mergers or demergers
9. Changes in the institutional regulations of the sector with a material effect on the economic or financial position of the Company or Group
10. Lawsuits, litigations or contentious proceedings that may significantly affect the financial position of the Company or Group
11. Situations of bankruptcy, receivership, etc.
12. Special agreements for the limitation, assignment or waiver, in full or in part, of voting and economic rights corresponding to the company's shares
13. Strategic agreements with national or international groups (exchange of blocks of shares, etc.)
14. Other significant events

F) ANNEX EXPLAINING SIGNIFICANT EVENTS

E - 2. Purchases of own shares giving rise to the obligation to report pursuant to Supplementary Provision 1 of the Corporations Act (1%)

On 17 February 2005, the company notified the National Securities Market Commission of the purchase of 13,167,771 own shares (1.46% of the capital).

E - 3. Other significant increases or reductions of fixed assets (stakes of over 10% in unlisted companies, significant investments or divestments in fixed assets, etc.)

Organisation by IBERDROLA, S.A. of the company IBERDROLA FINANZAS, S.A.U., in which IBERDROLA has a direct interest of 100%.

Organisation of the company IBERDROLA SERVICIOS FINANCIEROS, S.A.U., in which IBERDROLA has a direct interest of 1%.

Purchase by IBERDROLA, S.A. of 57.5% of FACTOR ENERGÍA, S.A., giving IBERDROLA a direct interest of 57.5% in that company.

Organisation by IBERDROLA, S.A. and IBERENOVA II (100%-owned by IBERDROLA, S.A.) of the insurance company IBERDROLA RE, S.A., in which IBERDROLA has a direct and indirect interest of 100%.

Sale by IBERDROLA, S.A. to IBERENOVA II (100%-owned by IBERDROLA, S.A.) of Iberdrola Italia, SPA, giving IBERDROLA an indirect interest of 100% in that company.

Capital increase in Hidroeléctrica de San Cipriano de Rueda, S.L., maintaining IBERDROLA's direct interest of 100% in that company.

Purchase by IBERDROLA, S.A. of 2.68% of MEDIA PARK, S.A., bringing IBERDROLA's direct interest in that company to 86.51%.

Organisation by MEDIA PARK, S.A. (86.51%-owned by IBERDROLA, S.A.) of Factoría de Canales, S.A., giving IBERDROLA an indirect interest of 86.51% in that company.

Sale by MEDIA PARK, S.A. (86.51%-owned by IBERDROLA, S.A.) of 49% of its interest in Factoría de Canales, S.A., bringing IBERDROLA's indirect interest in that company to 44.12%.

Subscription on incorporation by Apex 2000, S.A. (100%-owned by IBERDROLA, S.A.) of 60% of Urbanizadora Marina de Cabo Cope, S.L., giving IBERDROLA an indirect interest of 60% in that company.

Purchase by Azertia, S.A. (100%-owned by IBERDROLA, S.A.) of Euroquality, giving IBERDROLA an indirect interest of 100% in that company.

Winding-up and liquidation by Apex 2000, S.A. (100%-owned by IBERDROLA, S.A.) of Nova Cala Villajoyosa, S.A. upon completion of its objects, cancelling IBERDROLA's indirect interest in that company.

Organisation by IBERDROLA, S.A. of Iberdrola Inversiones 2010, S.A.U., in which IBERDROLA has a direct interest of 100%.

F) ANNEX EXPLAINING SIGNIFICANT EVENTS

Purchase by Biovent Holding (85%-owned by IBERDROLA ENERGIA RENOVABLES, II, in turn 100%-owned by IBERDROLA, S.A.) of 60% of the capital of Vientos de Castilla y León, S.A., giving IBERDROLA an indirect interest of 51% in that company.

Purchase by Molinos de la Rioja (33.33%-owned by IBERDROLA ENERGÍA RENOVABLES DE LA RIOJA, in turn owned by IBERDROLA ENERGÍA RENOVABLES II, 100%-owned by IBERDROLA, S.A.) of 75% of the capital of Molinos de Linares, S.A., giving IBERDROLA an indirect interest of 25% in that company.

Purchase by Biovent Holding (85%-owned by IBERDROLA ENERGIA RENOVABLES, II, in turn 100%-owned by IBERDROLA, S.A.) of 60% of the capital of Eólicas Fuente Isabel, S.A., giving IBERDROLA an indirect interest of 51% in that company.

Purchase by Sistemas Energéticos de Navarra, S.A. (100%-owned by IBERDROLA ENERGIA RENOVABLES, II, in turn 100%-owned by IBERDROLA, S.A.) of 50% of the capital of Sistemas Energéticos Astudillo, S.A., giving IBERDROLA an indirect interest of 100% in that company.

Non-monetary capital increase in Iberdrola Energías Renovables de Aragón, S.A. (100%-owned by IBERDROLA ENERGÍA RENOVABLES II, in turn 100%-owned by IBERDROLA, S.A.). The capital increase is subscribed by S.E. de Navarra, which contributes 50% of the companies S.E. Fuentetodos and S.E. Entredicho. Following this operation, S.E. de Navarra holds 99.79% of Iberdrola Energías Renovables de Aragón, S.A. and IBERENNOVA II holds 0.21%, maintaining IBERDROLA's indirect interest in that company unchanged.

Non-monetary capital increase in Iberdrola Energías Renovables de Galicia, S.A. (100%-owned by IBERDROLA ENERGÍA RENOVABLES II, in turn 100%-owned by IBERDROLA, S.A.). The capital increase is subscribed by S.E. de Navarra, which contributes 50% of the companies S.E. Serra de Meira and S.E. Goia Peñote. Following this operation, S.E. de Navarra holds 96.24% of Iberdrola Energías Renovables de Galicia, S.A. and IBERENNOVA II holds 3.76%, maintaining IBERDROLA's indirect interest in that company unchanged.

Capital increases, throughout the first quarter of 2005, in Enerbrasil, S.A., 100%-owned by IBERDROLA ENERGÍA RENOVABLES II (100%-owned by IBERDROLA, S.A.). Following this operation the indirect interest of IBERDROLA, S.A. in that company remains unchanged.

Purchase by Biovent Holding (85%-owned by IBERDROLA ENERGIA RENOVABLES, II, in turn 100%-owned by IBERDROLA, S.A.) of 60% of the capital of Energía Global Castellana, S.A., giving IBERDROLA an indirect interest of 51% in that company.

Purchase by IBERENNOVA II (100%-owned by IBERDROLA, S.A.) of Alnery No. 2485 Limited, giving IBERDROLA an indirect interest of 100% in that company.

Purchase by IBERENNOVA II (100%-owned by IBERDROLA, S.A.) of 0.999% of the capital of Metal Industry of Arcadia C. ROKAS, bringing IBERDROLA's indirect interest in that company to 21.999%.

Non-monetary capital increase in Iberenova Promociones, S.A. (100%-owned by IBERDROLA ENERGÍA RENOVABLES II, in turn 100%-owned by IBERDROLA, S.A.). The capital increase is subscribed by S.E. de Navarra, which contributes 50% of the companies S.E. de Teruelo and S.E. Astudillo. Following this operation, S.E. de Navarra holds 29.54% of Iberenova Promociones, S.A. and IBERENNOVA II holds 70.46%, maintaining IBERDROLA's indirect interest in that company unchanged.

F) ANNEX EXPLAINING SIGNIFICANT EVENTS

Purchase through Navega.COM (55%-owned by Deca II, in turn 49.01%-owned by IBERDROLA ENERGÍA, S.A., 100%-owned by IBERDROLA, S.A.) of 51% of the Honduras company Metrored, S.A., giving IBERDROLA an indirect interest of 13.75% in that company.

E - 6. Changes of directors or the board of directors

The resolutions adopted at the General Meeting held on 18 March 2005 included the following:

RESOLUTION EIGHT (Item Eight on the Agenda)

- Ratification of Director appointed by cooptation

"To ratify, in pursuance of s. 138 of the Consolidation of the Corporations Act and Art. 48.3 of the Bylaws, the appointment by the Board on 26 May 2004 of Sebastián Battaner Arias as Director, which appointment was made through the resolution reading literally as follows, which is fully ratified by the General Meeting ..."

RESOLUTION NINE (Item Nine on the Agenda)

- Partial re-election of Directors

"The General Meeting of Shareholders, upon recommendation by the Board and in view of the favourable report by the Nomination and Remuneration Committee, in accordance with Article 45 of the Bylaws and Article 15 of the Regulations of said Committee, adopted the following resolutions:

a) To re-elect the Vice-Chairman and Chief Executive Officer, JOSÉ IGNACIO SÁNCHEZ GALÁN -of full age, married, with Spanish nationality and business address for this purpose at calle Tomás Redondo no. 1, Madrid, with tax number [...]-, for the maximum legal and statutory term of five years, pursuant to s. 126 of the Corporations Act and Art. 48.1 of the Bylaws.

b) To re-elect the Director VÍCTOR DE URRUTIA VALLEJO -of full age, married, with Spanish nationality and business address for this purpose at calle Cardenal Gardoqui no. 8, Bilbao, with tax number [...]-, for the maximum legal and statutory term of five years, pursuant to s. 126 of the Corporations Act and Art. 48.1 of the Bylaws.

c) To re-elect the Director RICARDO ÁLVAREZ ISASI -of full age, married, with Spanish nationality and business address for this purpose at calle Cardenal Gardoqui no. 8, Bilbao, with tax

F) ANNEX EXPLAINING SIGNIFICANT EVENTS

number [...]-, for the maximum legal and statutory term of five years, pursuant to s. 126 of the Corporations Act and Art. 48.1 of the Bylaws.

d) To re-elect the Director JOSÉ IGNACIO BERROETA ECHEVARRÍA -of full age, married, with Spanish nationality and business address for this purpose at calle Cardenal Gardoqui no. 8, Bilbao, with tax number [...]-, for the maximum legal and statutory term of five years, pursuant to s. 126 of the Corporations Act and Art. 48.1 of the Bylaws.

e) To re-elect the Director JUAN LUIS ARREGUI CIÁRSOLO -of full age, divorced, with Spanish nationality and business address for this purpose at calle Cardenal Gardoqui no. 8, Bilbao, with tax number [...]-, for the maximum legal and statutory term of five years, pursuant to s. 126 of the Corporations Act and Art. 48.1 of the Bylaws.

f) To re-elect the Director JULIO DE MIGUEL AYNAT -of full age, married, with Spanish nationality and business address for this purpose at calle Tomás Redondo no. 1, Madrid, with tax number [...]-, for the maximum legal and statutory term of five years, pursuant to s. 126 of the Corporations Act and Art. 48.1 of the Bylaws.

g) To re-elect the Director SEBASTIÁN BATTANER ARIAS -of full age, married, with Spanish nationality and business address for this purpose at calle Arco no. 7, Salamanca, with tax number [...]-, for the maximum legal and statutory term of five years, pursuant to s. 126 of the Corporations Act and Art. 48.1 of the Bylaws.

The re-elected Directors, who were present at the meeting, all expressly accepted their appointments, declaring that they were not affected by any incompatibility for performing the corresponding duties established in current legislation.

It is expressly put on record, pursuant to Article 146 of the Trade Registry Regulations and Article 38.3 of the company's Bylaws, that on being re-elected Directors, they will continue to hold the positions they hitherto held on the Board."

E - 8. Conversions, mergers or demergers

- Change of name and registered office of Auder Auditores Energéticos, S.L. to Iberdrola II Comercializaçao de Energia Uniperssoal, LDA.

E - 9. Changes in the institutional regulations of the sector with a material effect on the economic or financial position of the company or group

The following legislation published up to 31 March 2005 could be important for the electricity and gas sectors:

ELECTRICITY SECTOR

- ACT 1/2005, of 9 March, regulating greenhouse gas emissions trading.

This Act implements Directive 2003/87/EC of the European Parliament and of the Council of 13 October 2003, which establishes a system for greenhouse gas emissions allowance trading within the Community and amends Directive 96/61/EC.

F) ANNEX EXPLAINING SIGNIFICANT EVENTS

The system established in the Directive is based on one of the market instruments contemplated in the Kyoto Protocol, emissions trading, which, together with those based on projects for investment in clean technology in third countries (clean development and joint action), form the so-called flexibility mechanisms of the Kyoto Protocol.

The Act contains the general provisions for emissions trading, which will initially be applicable to carbon dioxide emissions produced by installations engaged in the activities listed in Schedule I and exceed the capacity thresholds indicated therein.

The Act also regulates the authorisation of greenhouse gas emissions and the rules applicable to authorisations for the grouping of installations of any one activity, as well as the nature and contents of the National Emissions Allowance Allocation Plan (PNA) and the procedure for its approval.

It further sets out the rules regulating emission allowances, which are subjective, transferable, entitling the holder to emit one tonne equivalent of carbon dioxide from an installation falling within the scope of application of this Act. It is only valid for each one of the periods of validity of the PNA.

The Act goes on to regulate the reporting obligations of the owner of the facility, the National Register of Emission Allowances, in which all issuance, title, transfer, delivery, withdrawal and cancellation of allowances must be recorded, and the disciplinary rules.

Finally, the Act incorporates the amendment of the Integral Pollution Prevention and Control Act 16/2002 of 1 July, required by Directive 2003/87/EC, designed to eliminate the imposing of own emission limits of the integral environmental authorisation, insofar as they refer to CO₂ emissions.

- RESOLUTION of 26 January 2005, of the Under Secretary, ordering publication of the Resolution adopted by the Council of Ministers on 12 January 2005, approving the individual allocation of emission allowances to the installations included within the scope of application of Royal Decree Law 5/2004 of 27 August, regulating greenhouse gas emissions allowance trading.

The list of proposed individual allocations of allowances to the applicant facilities was published on 26 November 2004, establishing a deadline for submitting pleadings.

In general, the pleadings have been considered positive, since they contributed interesting comments for improving the allocations initially proposed.

In accordance with Art. 19.4 of Royal Decree-Law 5/2004 regulating greenhouse gas emissions allowance trading, this Resolution approved the individualised allocation of emissions allowances for the period 2005-2007 as set out in the corresponding Schedule.

- ROYAL DECREE LAW 5/2005 of 11 March, of urgent reforms to stimulate productivity and improve public contracting (also contemplated in the gas sector).

This Royal Decree contemplates solely and exclusively those measures whose effectiveness is really urgent, excluding any orders or measures that are to be regulated through Bills, thus respecting the legitimate rights of Parliament.

These measures form part of the Plan for Revitalizing the Economy and Boosting Productivity, for which there are also three Bills and one Resolution of the Council of Ministers, which was passed on 25 February.

It establishes reforms in four markets or sectors: financial, energy, greenhouse gas emissions market and Public Administration.

With regard to energy markets, the classification of principal operators is modified, considering them to be those holding the five largest shares of the market or sector in the areas of energy and telecommunications. The transmission enterprises Red Eléctrica de España (REE), Enagas and

F) ANNEX EXPLAINING SIGNIFICANT EVENTS

Corporación Logística de Hidrocarburos (CLH) are struck off this list, as their activity is not open to competition.

The scope of the principal operators is extended to the Iberian Electricity Market (MIBEL), maintaining that no individual or entity holding a stake equal to or greater than 3% of the capital or voting rights of two principal operators in the same market or sector may exercise in more than one of those operators the voting rights corresponding to that excess stake.

A new classification of controlling operators is created, consisting of those holding a market share of over 10%. This new name only affects the regulation of the energy sector and is intended to foster competition and control restrictive trading practices on those markets. By way of example, the companies included in this group are forbidden to import energy.

A number of obligations are established in the electricity sector regarding reporting on market price formation, to achieve greater information transparency, and the start-up of the Iberian Electricity Market (MIBEL) is approved, making it possible for all players, including distributors, to buy and sell on the daily market, and permits all players to make and enter into all kinds of contracts, including bilateral contracts.

Stakes in Red Eléctrica de España are limited, such that no person or entity may hold a direct or indirect interest in this company in excess of 1% of the capital or voting rights. This limit is not applicable to Sociedad Estatal de Participaciones Industriales (SEPI), the state-owned industrial holdings company, which will have an interest of no less than 10%. This reduction must be made before 1 January 2008.

It is also established that the stranded costs (costs of transition to competition - CTC) corresponding to 2004 will be settled in 2006, by which time a diagnosis may be available, through the White Paper on Energy, before such settlement is made.

In nuclear energy, the sums assigned for costing the handling of radioactive waste, used fuel and dismantling and closing facilities will be financed by the owners of the nuclear plants as from 31 March 2005.

As regards the emissions trading market, the provisions of Article 1 of the Decision of the European Commission of 27 December concerning the Spanish National Emissions Allowance Allocation Plan (PNA) are implemented, increasing the quantity of allowances available, specifying the allocations for facilities that had not received any assignment, and avoiding problems of competition on the Community market, since the later those allocations are known, the smaller the chances they would have to plan their investments and achieve competitive prices.

- RESOLUTION of 4 November 2004 by the National Energy Commission, establishing and publishing, pursuant to Article 34 of Royal Decree-Law 6/2000 of 23 June, the lists of principal operators on the electricity, liquid hydrocarbon and gaseous hydrocarbon energy markets.

This Resolution also affects the gas sector, hence it is not mentioned in the corresponding section of this report.

The list of principal operators contemplates the structure of groups of companies existing when it is drawn up, no material changes having occurred within the electricity sector.

In the gaseous hydrocarbons sector, the "SHELL Spain Group" has disappeared from the list and been replaced by the "Iberdrola Group", in fourth place, relegating the "BP Spain Group" to fifth position.

- RESOLUTION of 11 February 2005, by the Secretariat General for Energy, approving a set of technical and instrumental procedures required for the adequate technical management of the Electricity System.

F) ANNEX EXPLAINING SIGNIFICANT EVENTS

A set of procedures, annexed to the Resolution, is approved for operation of the system, as follows:

- P.O.12.1 Applications for access to connect new facilities to the transmission network
- P.O.12.2 Facilities connected to the transmission network: minimum requirements for design, equipment, functioning, safety and commissioning.
- P.O.12.3 Facilities of the transmission network: design criteria, minimum requirements, inspection of equipment and start-up.

They refer on the whole to information to be included in the applications for access to the transmission network, for: new generators under the ordinary regime, new generators under the special regime with combustion process, wind farms, distribution network facilities, railway infrastructure feeder facilities, etc.

P.O.12.2 contains a definition of the voltage gaps (three-phase, two-phase or single-phase) associated with correctly cleared short circuits, which generation plant should bear without disconnection at the point of connection to the transmission network.

Other provisions of lesser interest are:

- CORRECTION of errors in Royal Decree 2392/2004 of 30 December establishing the electricity tariff for 2005.

Errors detected in certain figures published in the schedules, references to numbers of articles in earlier legislation, etc. are corrected.

- INSTRUMENT of Ratification of the Kyoto Protocol to the United Nations Framework Convention on Climate Change, made in Kyoto on 11 December 1997.

After consideration and examination of the Preamble, the twenty-eight articles and two schedules of the Protocol and granting by Parliament of the authorisation contemplated in Art. 94.1 of the Constitution, this instrument approves and ratifies the contents thereof, promising the Head of State compliance, respect and ensurance of compliance and respect in its entirety.

GAS SECTOR

- ORDER ITC/102/2005, of 28 January, establishing the remuneration of the regulated activities of the gas sector.

It establishes the remuneration of the regulated activities in the gas sector for 2005, namely transmission, distribution, tariff purchases and tariff supplies, based on the system of remuneration established in February 2002.

Slight modifications are made in respect of the remuneration of capacity increases and the criteria for allotting specific distribution remuneration.

It also includes an order for the National Energy Commission to propose, within 9 months, a review of the standard unit values applicable to new regasification, storage and transport facilities granted directly.

F) ANNEX EXPLAINING SIGNIFICANT EVENTS

- ORDER ITC/104/2005 of 28 January, establishing the tariffs for natural gas and piped manufactured gas, meter rental and connection fees for consumers connected to networks with a supply pressure equal to or less than 4 bar.

It explains the method for calculating the cost of the raw material, transfer price and tariffs for 2005, which will be established on a quarterly basis, depending on the variation in prices of different oil products and the Euro-Dollar exchange rate.

It also establishes the values of the tariffs applicable as from Tuesday, 1 February 2005 and the value of the cost of raw material included in them (1.2661 €/kWh). The variation in the different tariffs is applied differently depending on the weight of the cost of the raw material and the cost of the regulated activities: Group 1 (+0.64%), Group 2 (+0.57%), Group 3 (+0.14%) and Group 4 (+0.59%).

- ORDER ITC/103/2005 of 28 January, establishing the tolls and royalties chargeable for access by third parties to gas installations.

The tolls established in Order ECO/32/2004 are kept in force.

A new toll is created for the transshipment of LNG between carriers and the loading of LNG from regasification terminal to carrier.

The threshold above which it is compulsory to have telemetering for customers with consumptions upwards of 5 GWh a year (affects groups 2.3 and 2.4) are lowered, granting a period of 9 months to install it.

- ROYAL DECREE-LAW 5/2005 of 11 March, on urgent reforms to stimulate productivity and improve public contracting.

This grants monopoly status to gas distribution, so that new authorisations may not be granted in an area in which a distributor is already operating. For areas in which there is no authorised distributor, authorisation will continue to be awarded through tendering.

It establishes limits on tariff contracting for consumers who have already exercised their right to choose their supplier. In particular, customers with an annual consumption of over 100 GWh are required to remain on the deregulated market for 3 years and prior notice of 6 months is stipulated for clients connected to networks of P>4 bar. The same 6 months' notice is stipulated for new tariff supplies, fixed for annual consumptions of more than 100 GWh or interruptible for annual consumptions of more than 50 GWh.

Occasionally and by exception, new facilities or large extensions which, by virtue of their characteristics, so require are exempted from inclusion in the third-party access system. This exception goes hand in hand with non-inclusion in the remuneration system.

E - 14. Other significant events

On 5 January 2005, the National Securities Market Commission was notified of the following significant event:

Iberdrola raises its stake in Capital de Energias de Portugal (EDP) to 5.70%.

F) ANNEX EXPLAINING SIGNIFICANT EVENTS

On 10 February 2005, the National Securities Market Commission was notified of the following significant event:

The company reports on its second half 2004 earnings.

On 10 February 2005, the National Securities Market Commission was sent the following notification:

The company remits a presentation on its second half 2004 earnings.

On 23 February 2005, the National Securities Market Commission was notified of the following significant event:

You are hereby advised that the Board of Directors of the company has resolved to call the AGM for 17 and 18 March 2005 on first and second calls. The agenda is enclosed.

On 24 February 2005, the National Securities Market Commission was notified of the following significant event:

The company remits its Annual Report on Corporate Governance for 2004.

On 28 February 2005, the National Securities Market Commission was notified of the following significant event:

Further to our notification of 23 inst., please find enclosed copies of the documents relating to the AGM, which are made available to shareholders as of 28 February on its web site and at its registered office, as indicated in the notice of call. The Commission has already received the Report on Corporate Governance.

On 2 March 2005, the National Securities Market Commission was sent the following notification:

Please be advised that in fulfilment of the resolution adopted by the Board, this company will next week deliver company shares to its employees as part of their variable remuneration.

On 21 March 2005, the National Securities Market Commission was notified of the following significant event:

Please be advised that the AGM held on 18 March passed, with votes in favour of more than two-thirds of the capital present and represented, each and all of the resolutions included on the Agenda, of which you were notified on 23 February., the corresponding documents (made available to the shareholders) having been sent to you on 25 inst.

UPCOMING EVENTS

NINE MONTHS RESULTS 2005: OCTOBER 20th, 2005

Details will be provided soon

IBERDROLA's Net Electricity Production (provisional) (€)

IBERDROLA

Nine months
results

2005

Quarterly report

NET PROFIT UP 12.6% TO 984 MILLION EUROS

Investments carried out in Spain and Latin America, growth drivers

- Combined cycle production in Spain is up 71%.
- Wind-farm production is up 32%.
- The production of Mexico and Brazil is up 26% vs. 2004.
- The capacity brought into service by Iberdrola over the last 12 months has totalled 2,890 Mw (79% in Spain).
- The combined cycle building programme target (4,000 MW) in Spain, initially set for 2006, has been already achieved.

EBITDA is up 10.7% to 2,393 million euros

- EBIT is up 12.1% to 1,644 million euros.

Renewables and International, growth drivers

- Renewables and International represent 27% of EBITDA
 - EBITDA in the Renewable Energies Business totalled 288 million euros (+60.1%)
 - In the International Business, EBITDA rose 56.8% to 371 million euros.

New National Plan for Renewable Energies

- The installed capacity target for wind energy in 2010 (20,000 MW) reinforces the leadership of Iberdrola while increasing the value of its pipeline.

Agreement with Gas Natural*

- If it is implemented, the agreement improves competition and transparency for the benefit of consumers.
- The procedure designed ("up-front buyer") along with the assets valuation by independent experts, guarantees that a market price will be set while optimizing the balance between the public and private interests.
- The agreement is coherent with the Strategy of the Company, consolidates its project in Spain, increases its international presence and allows Iberdrola to enter in new regulated businesses.

** LEGAL NOTE: All and each statement contained in this document referring to the agreement with Gas Natural are subject not only to the condition of the success of the Gas Natural bid, but also to those coming from the necessary administrative approvals that is, the Eleventh Additional Disposition from the Hydrocarbons Sector Act (Ley 34/1998 del Sector de Hidrocarburos); the applicable merger control regulation, and the Spanish Golden Share Act (Ley 5/1995 de Enajenacion de Participaciones Publicas en determinadas empresas).*

Operating highlights

- On 5 September of this year, IBERDROLA entered into an agreement with Gas Natural to acquire certain assets subject to the success of its public offer to acquire Endesa and to approval by the relevant authorities. It provides for the purchase and sale of regulated assets as the Balearic Islands and gas supply points, and other non regulated assets of electricity generation as well as assets in other countries.
- On 26 August, the Government approved the New National Renewables Plan 2005-2010. This Plan increases notably the target for wind energy to 20,000 MW in 2010 from 13,000 MW in 2011. This involves major support to IBERDROLA's strategy, to which it firmly committed in its Strategic Plan for developing wind energy.
- The challenging conditions in 2005 in Spain remained in force during the first nine months of the year, with a drop in hydroelectric production of 46.8% combined with an 18.3% reduction in nuclear production after the Vandellós II and Cofrentes plants were shut down for technical reasons, in addition to high fuel prices. Nevertheless, major investments in combined cycles and renewables, whose total production has increased 43%, have kept total Group production stable, rising to 61,183 GWh (+ 0.6%):
 - It is worth highlighting the growing contribution of combined cycles to Iberdrola's Spanish generation mix in 2005. In the first quarter, combined cycles accounted for 17.1% of production, 20.3% in the first half of the year, and rising to 22.2% in the first nine months of the year, with growth of 71.3%.
 - In addition, renewable energies contributed 10.5% to the Spanish production mix, just behind the 12.8% contribution of hydroelectric energy in a dry year like 2005, with significant growth of 32.1% in the production of wind energy. The special regime, including cogeneration (2.3%), contributed 12.8% to the Spanish mix.
- This entire environment has developed with a 4.6% electricity demand growth for IBERDROLA electricity in Spain to 71,652 GWh, which has been covered improving the quality of service. IBERDROLA's ICEIT (Installed Capacity Equivalent Interruption Time) came to 1.26 hours in the first nine months of the year, less than the 1.43 hours for the same period in 2004 and the 1.68 hours for the same period in 2003. IBERDROLA's high level of quality of service was achieved in a period in which the company set four consumption records.
- Operating Profit improved significantly, both in gross terms (EBITDA +10.7%) and in net terms (EBIT +12.1%), with a moderate evolution of the Net Operating Expenses in line with the evolution of the Gross Margin.
- The Renewable and International Businesses, both with strong increases in Operating Profit, are once again the main growth drivers of the Group:
 - Renewables: EBITDA grew by 60.1% to 287.8 million euros, driven by a 32.1% increase in wind energy production and an increase in its contribution to margins from the third quarter of this financial year, in which 94% of the farms are already in the market participation regime, reflecting the current situation in pool prices.
 - International: EBITDA up 56.8% to over 371 million euros thanks primarily to the good development of businesses in Mexico and Brazil, with increases in production due to the new capacity added (La Laguna and Termopernambuco plants) and improvements in performance and efficiency of the

generation plants and the positive impact of tariff increases in distribution. Also, it is worth mentioning the positive evolution of the real/euro exchange rate over the period.

- Net Profit rose to 984.0 million euros (+12.6%).

Agreement with Gas Natural for the future purchase of assets of the company resulting from the takeover bid for Endesa presented by Gas Natural

On 5 September of this year, IBERDROLA and Gas Natural SDG entered into an agreement for the purchase and sale of certain assets of the company resulting from the takeover of Endesa by the gas company. This agreement is subject to the success of Gas Natural's public offer to acquire Endesa and, consequently, is subject to approval by the relevant authorities. Furthermore, the acquisition of assets by IBERDROLA will also require its approval by the corresponding authorities.

The method established to assess the value of these assets ensures that the price will be determined through an objective and transparent process and at market prices. IBERDROLA and Gas Natural will select two leading international investment banks, one chosen by each party, which will perform the valuation. If the difference between both valuations is less than 10%, the final price will be the average of both. If the difference between the prices they establish exceeds 10%, a third bank will act as arbiter. This third bank will be selected by lottery from among financial entities that are of equal global prestige, and will carry out its own valuation. The final price will be calculated based on the average of this final estimate and the closer of the two previous ones.

The Gas Natural-IBERDROLA agreement is already available to the National Energy Commission (CNE), the Spanish securities regulator (Comisión Nacional del Mercado de Valores - CNMV), and the Spanish authorities for the Defence of Competition (SDC).

The Company will not modify its financial commitments when completing the agreement: it will use debt and capital increases to fund the purchase of assets, while maintaining the objective established in its Strategic Plan to reduce leverage to 50%.

Acquisition of assets

The agreement entered into between IBERDROLA and Gas Natural provides for the purchase and sale of regulated assets as the Balearic Islands and gas supply points, and other non regulated assets of electricity generation as well as assets in other countries.

1. Regulated assets:

1.1 Balearic Islands:

The agreement includes the acquisition of the entire electricity system of the Balearic Islands, both generation and distribution assets.

- Generation assets with a total installed capacity of 1,800 MW:
 - 2 combined cycle plants with a total capacity of 450 MW.
 - 1 imported coal plant of 500 MW.
 - 6 fuel-oil plants with a total capacity of 850 MW.
- Electricity distribution network in the Balearic Islands:
 - 600,000 points of supply with a 5,000 GWh demand.

On the islands, the price-setting mechanism is different from that of the mainland, as the energy sold is remunerated according to the costs of production of each plant. Distribution, as on the mainland, is a natural monopoly. For this reason, IBERDROLA's entry into the Balearic Islands market would not modify the current situation.

In addition, following the same model applied to all of the Autonomous Communities in which it operates, IBERDROLA will make the necessary

investments to better guarantee the supply and quality of service, with the resulting benefits for consumers.

Today, the generation and distribution of electricity, both on the Balearic Islands and on the other so-called "sistemas insulares y extrapeninsulares" or "non-mainlands systems", are regulated activities carried out by only one player. Having a new operator managing one of the island systems will provide the regulator with a benchmark element in order to settle the specific conditions for energy remuneration in the islands, which would imply a higher degree of transparency than currently exists.

1.2 Distribution of gas and electricity:

In addition to the electricity distribution network on the Balearic Islands, the agreement also calls for the transfer of pipeline networks that distribute natural gas on the Balearic Islands and in Madrid, Valencia and Murcia (with a total of 1,250,000 points of supply). These networks are used by all suppliers under equal conditions and at the same fees. The price of these third-party access fees is set by the Government.

There are currently several agents that manage the gas and electricity networks in the same Autonomous Community. This is the case in Asturias, Aragón and Extremadura. In addition, this situation is common in other countries, such as Germany, Italy and Portugal.

The synergies derived from the joint management by the same operator of the electricity and gas networks in certain geographical areas will result in a better service for consumers.

2. Non-regulated assets: Generation on the mainland:

The agreement includes generation assets on the mainland with a total installed capacity of 3,020 MW:

- As Pontes' coal plant (1,400 MW), currently under the process of conversion to imported coal.

- Teruel's coal plant, with 1,100 MW.
- Foix's fuel-oil plant in Barcelona with a capacity of 520 MW and a license to build 800 MW of combined cycle plants.

Electricity generation on the mainland is a competitive business. IBERDROLA's acquisition of plants brings several beneficial effects:

- a) Both the new Group that will be created through the Gas Natural takeover bid and IBERDROLA will have a lower market share in electricity production than the current largest generation company in Spain.
- b) In addition, the purchase of coal plants by IBERDROLA will also improve competition in price setting with this technology, contributing to resolve an issue that has been pointed out by all of the agents in the industry.

3. Assets in Italy:

- Generation: 2,600 MW of installed capacity, with an annual production over 13,000 GWh.
- Renewable energies: 200 MW in wind farms under development.

4. Assets in France:

The 65% stake in the company SNET:

- 2,600 MW of installed capacity in France, with a total annual production of 11,300 GWh.
- 140 MW equivalent in Poland and 13 MW in Turkey.

5. Assets in Latin America:

Lastly, the agreement contemplates the interest of Iberdrola in assets to be defined in those Latin-American countries where it already has operating presence.

The operation is coherent with the Strategy of IBERDROLA, by consolidating the Company project in Spain, increasing the international

presence and entering into new regulated business. It is another milestone in the development of its Strategic Plan; whose solid results have given it increased credibility and the support of the markets.

IBERDROLA considers that the agreement entered into on 5 September with Gas Natural for the purchase and sale of assets, subject to the success of its takeover and the required authorizations, is a firm commitment to the market, as opposed to other ideas that defend interventionism.

The agreement, which follows the trend in other European countries, will open up new opportunities to advance the liberalization of energy in Spain, increase competition in electricity and gas, improve electricity service, accelerate the construction of new gas distribution networks, increase competition in the generation of electricity and result in advantages for the consumer and the Spanish economy.

LEGAL NOTE

All and each statement contained in this document referring to the agreement with Gas Natural are subject not only to the condition of the success of the Gas Natural bid, but also to those coming from the necessary administrative approvals that is, the Eleventh Additional Disposition from the Hydrocarbons Sector Act (Ley 34/1998 del Sector de Hidrocarburos); the applicable merger control regulation, and the Spanish Golden Share Act (Ley 5/1995 de Enajenación de Participaciones Publicas en determinadas empresas).

New National Plan to Promote Renewable Energies

On 26 August, the Council of Ministers approved the Renewable Energies Plan for Spain 2005-2010. This Plan reviews the objectives defined in the Promotion Plan of 1999 and in the 2002 Energy Planning Document and proposes a number of measures to achieve them.

The general objectives in that Plan are the following:

- Reduce excessive dependence on energy imports (80%).
- Meeting environmental commitments.
- That renewable energies cover:
 - 12.1% of the total primary energy consumption in 2010 (this objective was already part of the previous Plan)
 - 29.4% of the gross consumption of electricity production (Directive 2001/77/EC).
 - 5.75% of bio fuels in transportation (Directive 2003/30/EC).

According to this new Plan to Promote Renewable Energies, the growth in these technologies will not be sufficient to reach the objectives defined in the Sector Law and in the Renewables Directive (12.1% of primary energy and 29.4% of electricity from renewable sources in 2010, respectively). This is basically due to two factors: 1) electricity demand has increased more than was forecasted and 2) some technologies, such as biomass, remain underdeveloped.

The table below presents the new objectives, by technology, defined in the new Promotion Plan and compares with those defined in the 2002 Energy Planning Document.

Sources	2002 Planning Document	Plan 2005-2010	Difference
Hydroelectric (10-50 MW)	3,151	3,257	+106
Hydroelectric (<10 MW)	2,380	2,199	-181
Biomass	3,098	2,039	-1,059
Biomass plants	3,098	1,317	-1,781
Co-combustion	0	722	+722
SUW	262	189	-73
Wind	13,000	20,155	+7,155
Solar photovoltaic	144	400	+256
Biogas	78	235	+157
Solar thermoelectric	200	500	+300
Total	22,313	28,947	+6,661

There are basically three key aspects to the Plan:

- The wind energy objectives are being increased significantly, from 13,000 MW in 2011 to more than 20,000 MW in 2010. This involves major support to IBERDROLA's strategy, to which it firmly committed in its Strategic Plan for developing wind energy.
- Biomass objectives are being adjusted (reduced) from 3,098 MW to 2,039 MW in 2010, of which 1,317 MW is from biomass plants and 722 MW is from co-combustion.
- The solar technologies objectives are being raised (from 200 to 500 MW thermo-solar and from 144 to 400 MW photovoltaic).

In addition, it should be emphasised that the premiums for the remuneration of renewable energies foreseen in RD 436/2004 approved in March 2004 are maintained; only rising for biomass and setting for the first time those for co-combustion.

Development of the Strategic Plan

1. - INVESTMENTS IN GENERATION

During the first nine months of 2005, IBERDROLA brought 2,033 MW of additional capacity into service compared to year-end 2004, taking the total installed capacity up to 27,270 MW, with 88% (23,891 MW) in Spain. 84% of the new operating capacity brought into service during this period is combined cycle. The breakdown by technologies is as follows:

Technology	MW	
Combined cycle	1,701	Aceca y Arcos III in Spain. La Laguna in Mexico
Renewable energy	98	New facilities and power increases
Cogeneration	190	Purchase of new operating facilities in Spain and Lat. Am.
Traditional generation	44	Increases in capacity of existing hydroelectric plants
Total	2,033	

Of this total of 2,033 MW in new capacity, 917 MW was added in the third quarter of this financial year, consisting of 800 MW of combined cycle plant brought into operation at Arcos III in Spain, 92 MW from the acquisition of two cogeneration plants in Spain, which makes IBERDROLA the largest cogeneration company in Spain, and an additional 24 MW in wind farms in Spain.

1.1 SPAIN

> Combined Cycle Plants

Iberdrola's combined cycle plant capacity in Spain totalled 4,000 MW at the end of September 2005, corresponding to the Castellon, Castejon (Navarra), BBE (Vizcaya), Tarragona and Santurce plants, the three Arcos de la Frontera generating units and Aceca. With the last Arcos de la Frontera generating unit (800 MW) going into the testing period during the third quarter of 2005, IBERDROLA has reached its objective of 4,000 MW of installed capacity in Spain by 2005. The current objective is to increase installed combined cycle capacity in Spain to 5,600 MW at the end of 2007.

The load factor for combined cycle plants over the period was 73%.

Arcos III combined cycle plant

IBERDROLA began the testing period at the Unit III (800 MW) of the Arcos de la Frontera combined cycle plant in the province of Cadiz, which has 1,600 MW of total installed capacity.

The company's objective is for this group to be available to produce electricity before the end of the year, after already having brought Units I and II into service at the beginning of 2005. This third Central de Arcos unit is a two for one configuration, that is, two gas turbines and one steam generator, all supplied by General Electric. These model 9FB gas turbines, the most advanced technologically, are an improvement over the previous ones, with total performance greater than 58%.

Project	Capacity (MW)	Start of operations
Castellón A	800	2002
Castejón	400	2002
BBE	200	2003
Tarragona	200	2004
Santurce	400	2004
Arcos I and II	800	2004
Aceca	400	2005
Arcos III	800	2005
Escombreras	800	2006
Castellón B	800	2007
TOTAL	5,600	

> Renewable Energy

At 30 September 2005, Iberdrola had an installed capacity of 3,304 MW (2,988 MW on wind-farms and 316 MW on mini-hydro plants), confirming Iberdrola's position as the world leader on wind energy in terms of installed capacity. For 2008, the target is to take the installed capacity up to 5,500 MW, with 4,500 MW to be located in Spain and 1,000 MW outside of Spain.

As for projects in development outside Spain, the objective is to have at least 1,000 MW of these projects in operation in 2008, which total about

1,650 MW. One advance in these, which we will present in greater detail when we outline Iberdrola's position in each of these countries, is the following:

Country	Projects	TOTAL MW
Portugal	18 MW Catefica wind farm already operational 75 MW with permits already obtained 71 MW in development	164
Greece	185 MW in advanced development from the 49% of Rokas 200 MW in development 56 MW purchased from Gamesa	441
France	32 MW in construction 195 MW in development	227
Germany	107 MW in development	107
United Kingdom	145 MW in development	145
Italy	200 MW in development	200
Brazil	50 MW in Rio do Fogo, in construction	50
Mexico	150 MW in Oaxaca, pending PPA	150
Poland	161 MW in development, acquisition of MVV Eternenergy Polska	161
Total		1,645

Operating capacity

Over the first nine months of 2005, the company brought an additional 98 MW into service compared with the end of 2004, corresponding to:

- New wind farm facilities brought into service: Bonete (10 MW), Catefica (18 MW), Hijes (2.6 MW), Badaia (1.7 MW)
- New mini-hydro facilities brought into service: Piarrejas (1.2 MW)
- Capacity added to existing wind facilities. This represents: 6 MW for the Cantalojas wind-farm, 3 MW for Molinos del Cidacos, 8.5 MW for Grado, 27.9 MW for Bordecorex Norte, 15.3 MW for Serra da Meira, 1.5 MW for Larriba-Hornillos and 2.07 MW for Préjano-Enciso.

Capacity under construction in Spain

IBERDROLA's most important projects that begun their construction in the period are the following:

> Wind energy:

- Expansion of the Virgen de Belén I wind farm in Albacete. This will represent an additional 10 MW, raising total capacity to 33.1 MW.
- Four wind-farms in the municipalities of Maranchón and Luzón (Guadalajara) with a capacity of 130 MW, following on from two facilities that are already in the assembly phase and another plant that is scheduled to begin being set up shortly, giving the Maranchón wind-farm complex a total capacity of 208 MW. The investments planned for these seven facilities come to approximately 188 million euros.
- Larriba-Hornillos wind farm located in the Hornillos de Cameros, Munilla and Ajamil municipalities (La Rioja), with an authorised capacity of 32 MW and a likely investment of 28.3 million euros.
- Bordecorex Norte wind farm, which is located in the Caltojar, Velamazán and Barca municipalities (Soria), and will have a capacity of 44.35 MW with an investment of approximately 42.4 million euros.

> Solar energy:

- IBERDROLA has a portfolio of a total of nine solar thermoelectric plants in Spain totalling 450 MW of installed capacity located in the Autonomous Regions of Extremadura, Andalucía, Castilla-La Mancha, Murcia and Castilla y León. Solar thermoelectric energy is one of the strategic objectives for the area of Renewable Energies at IBERDROLA, which in any case is making an in-depth study of the different existing solar technologies.

> Cogeneration

Operating capacity

Iberdrola has 387 MW of attributable capacity in cogeneration plants, equivalent to a total of 562 MW installed. In the third quarter of this year, IBERDROLA has acquired two facilities with a total capacity of 93 MW from Acciona, Gas Natural and Michelin. The plants, of 46 and 47 MW of installed capacity, supply electricity and steam to Michelin plants in Vitoria and Valladolid.

This acquisition makes IBERDROLA the largest cogeneration company in Spain. Besides the agreement with Michelin, the Company participates in more than 30 cogeneration plants, supplying electricity and steam to clients such as General Electric Plastics in Cartagena, Calvo Conservas in La Coruña, Holmen Paper in Madrid and Montefibre in Miranda de Ebro. IBERDROLA has five liquid manure processing plants, of which the two located in Castilla y León are already in operation.

IBERDROLA's commitment to cogeneration is part of its global commitment to reduce CO₂ emissions as a way to comply with the Kyoto Protocol. This is a high-performance source of energy that saves primary energy.

Capacity under construction

IBERDROLA has three other liquid manure processing plants, two in Aragón and one in Murcia, all in an advanced phase of construction.

In addition, the third quarter of this year saw the signing of the agreement to create a company to promote the construction and operation of the Barcial del Barco bio ethanol plant in Zamora. The plant will include a 25 MW cogeneration plant. The investment could total 100 million euros.

1.2 LATIN AMERICA

Mexico

The Laguna II combined cycle plant was brought into service by mid March 2005 with an installed capacity of 500 MW. As in previous cases, this generation plants was awarded to IBERDROLA following the international calls for tenders issued by the CFE, which selected IBERDROLA's bid to fulfil the significant energy needs of that country. Under the terms of the agreements signed, the Company has been assured the sale of all of the energy produced for a 25-year period.

In addition, with this plant brought into service, IBERDROLA has confirmed its position as the leading private electricity producer in Mexico and number two in the country after the state-owned CFE. The Company now has 2,696 MW of installed capacity in operation in Mexico, corresponding to the Monterrey III (1,040 MW), Altamira III and IV (1,036 MW) and La Laguna II (500 MW) combined cycle plants and the Enertek cogeneration plant (120 MW).

The Company is building another two combined cycle plants in that country: the 1,121 MW Altamira V plant, which will enter into service in November 2006, and the 1,135 MW Tamazunchale plant, which is scheduled to be brought into service in June 2007, representing the two biggest plants awarded in this country to date. In addition, it has taken its first steps in the renewable energy sector and is developing wind-farms in the state of Oaxaca, representing over 150 MW of capacity.

Project	Capacity (MW)	Operational status
Enertek	120	100% operational
Monterrey	1,037	100% operational
Altamira IV	1,036	100% operational
La Laguna	500	100% operational
Altamira V	1,121	2006
Tamazunchale	1,135	2007
Total	4,949	

Brazil

In Brazil, Iberdrola has the 450 MW Itapebí hydroelectric plant (175 MW of which are attributable to Iberdrola), whose three generation units are operating at full capacity and the Termopernambuco combined cycle plant, which has an installed capacity of 520 MW (203 MW attributable to Iberdrola). On cogeneration, the company has an operating capacity of 93 MW.

With respect to renewable energy, IBERDROLA has begun construction of the Rio do Fogo wind farm, located in the state of Rio Grande do Norte (Brazil), with 49.3 MW of capacity, which will become the first facility of its type that the Company will put into service in that country. IBERDROLA has signed a 20-year contract with Eletrobrás for the supply of the energy produced at Rio do Fogo. The development of this wind farm is part of IBERDROLA's participation in the Proinfra Programme, backed by the Brazilian government for the development of renewable energies in Brazil.

1.3 EUROPE

Greece

IBERDROLA is a strategic partner of the biggest producer of wind energy in Greece, Rokas, in which it has a 29% stake at the end of September. The Rokas group aims to reach 600 MW of installed capacity over the next few years, some 200 MW of which are already operational. Greece represents a key market for the development of IBERDROLA's objectives for renewable energy. Indeed, this country has major potential in this business, given that it now has 470 MW of wind power in operation and a target of 2,000 MW has been set for 2010. The Company has also signed an agreement with Gamesa in the Greek market for the acquisition of 56 MW of wind capacity.

Portugal

Following Iberdrola's decision to enter the Portuguese wind market by sealing an agreement with Gamesa last year to acquire the Catefica wind farm (18 MW already in operation), Iberdrola set up Aeolia, in order to develop renewable energies in Portugal, first identifying locations and then building new wind farms. In Portugal, IBERDROLA has already obtained permits for 75 MW, has 71 MW in development and is negotiating for permits to set up 174 MW as part of the agreement with Gamesa for the acquisition of 250 MW in operation in Portugal and the joint promotion of further wind farms.

Iberdrola sees this country as a high-potential, high-growth market for the renewable energy sector, with only 300 MW of wind capacity at year-end 2003 out of the 3,750 MW set as the target for 2010. Within this context, Iberdrola aims to bid for more wind-farm generation capacity, with contracts to be put up for tender by the Portuguese government shortly.

In addition to this, Iberdrola continues to have a stake in the Portuguese companies EDP (5.7%) and Galp Energia (4%).

Poland, Germany, France, Italy and the UK

In line with the company's strategy to promote renewable energies, various agreements have been sealed with local developers in Germany, France, Italy, UK and Poland. Specifically:

- IBERDROLA has signed an agreement with the German company Eternegy, which is specialised in the development of wind farms in Europe, to buy the Polish company MVV Eternegy Polska, which has eight wind farms with a total of 161 MW of capacity at various stages of development. In concrete terms, the company, which will be renamed IBERDROLA Energía

Odnawialna Sp. zo.o., will put the first 40 MW of wind energy into operation at the end of 2006, while part of the remaining capacity will become operational during 2008.

- This agreement is in addition to another signed with Eternegy in July to buy 201 MW of capacity at various stages of development in France and Germany. In concrete terms, IBERDROLA acquired 107 MW under development in Germany and 94 MW in France, which has been incorporated into the company's subsidiaries in these two countries: IBERDROLA Regenerative Energien GmbH and IBERDROLA Énergies Renouvelables SAS.
- In the third quarter of this year, IBERDROLA began construction of four wind farms in France with a total capacity of 31.7 MW and which will be the first facilities of its type that the Company puts into service in that country. The wind farms, which are scheduled to be brought into service this coming December, are called La Butte de Fraus (12 MW), Saint Mérec (8 MW), Le Roduel (6.85 MW) and Lérôme (4.85 MW), and are located in the municipalities of Meneac, Mohon and Kergrist, in the department of Morbihan (Brittany).
- IBERDROLA has concluded an agreement with the German developer P&T Technology and its financial services subsidiary EECH AG to buy wind-farm development rights from them in France (100 MW) and Italy (200 MW).
- IBERDROLA has sealed an agreement with Total and OPT for the development of wave power projects, and will start to look into locations in France.

Furthermore, in line with IBERDROLA's interest in developing the international market for renewable energies, the company has opened up new offices in Rennes (France), Birmingham (UK) and Rome

(Italy). IBERDROLA has various projects to build wind-farms in these countries, in addition to its interests in Greece, Portugal, Mexico, Brazil, Germany and Poland.

The company has also joined the Board of Directors of the European Wind Energy Association (EWEA), which aims to actively promote the development of wind farms in Europe and around the world.

Trading

The Company is developing a major trading business in Europe, with operations in Austria, Belgium, France, Germany, the Netherlands, Portugal, Spain and Switzerland. The Company aims to ramp up these energy buying and selling activities in the short term to include other countries in Europe such as Poland, Greece, the United Kingdom and Italy. The trading business is run out of Madrid with a support office in Zurich. The highlights of the first nine months of 2005 were as follows:

- The launch of operations for the capacity acquired from NUON, aiming for 87.6 million KWh in 2005.
- The participation since 5 April, the launch date, in the daily capacity auctions for exporting energy from Germany to France, enabling IBERDROLA to optimise its contractual position in Germany, France, and Spain.
- The launch of emission right buying-selling operations in order to optimise Iberdrola's generation portfolio.

2- DISTRIBUTION

2.1 SPAIN

At 30 September 2005, IBERDROLA had some 9.7 million customers in Spain, reflecting the addition of around 130,000 new customers year-on-year.

IBERDROLA has continued improving the quality of service during 2005, a year in which the demand for electricity increased 4.6%, rising to 71,652 million KWh. Specifically, the ICEIT (Installed Capacity Equivalent Interruption Time) of the Company was 1.26 hours, which is less than the 1.43 hours for the first nine months of the year in 2004 and the 1.68 hours for the same period in 2003. This also contrasts with the average of 2.77 hours for all other companies in the Spanish electricity sector over 2004.

The maintenance of these levels of quality, which represent IBERDROLA's best performance ever, was achieved in a period in which the company set four consumption records, three in winter (11, 12 and 13 January) and this past 22 June, when it exceeded the previous peak demand levels for electricity in summer.

This improvement in quality was possible thanks to the new generation capacity installed on the system, the new infrastructures brought into service, and the maintenance and development work carried out on existing facilities.

2.2. LATIN AMERICA

At 30 September, IBERDROLA had 7.8 million customers under management in the region, and the energy distributed managed totalled 19,720 GWh (+7.8%). It is worth highlighting that in April 2005 Celpe had its four-yearly tariff review. In addition, further tariff reviews have been applied for Coelba and Cosern, where the recognition of the remuneration asset base of Coelba has been adjusted on a retroactive basis since 2003. Furthermore, inflation and the changes in the non-manageable expenses have been incorporated in the tariffs. All these reviews have meant a 30% tariff increase for Coelba and Celpe and a 20% increase in the case of Cosern.

3. - SUPPLY

3.1 ELECTRICITY

> Spanish business: eligible electricity customers

In the first nine months of 2005, IBERDROLA sold 24,004 GWh on the domestic market (+1,545 GWh), with some 917,000 customers, representing an additional 546,000 customers year-on-year.

In June, IBERDROLA reached its 100,000th green energy customer in Spain. Out of all the green energy contracts offered by the Company, 98% correspond to residential customers and small businesses, with the remaining 2% covering large industries and government bodies.

In the first nine months of the year, IBERDROLA opened its first two stores outside of its traditional market in Seville and Zaragoza, following the stores opened previously in Madrid and Bilbao.

> Portuguese business

IBERDROLA already has a share of nearly 12% of this country's liberalised market, with 1,300 contracts signed representing an annual consumption of over 1,100 GWh, and plans to raise this percentage to between 15% and 20% over the next five years, with a portfolio of more than one million customers.

> French business

The Company's new position in the French electricity market is key to maximizing the value of its generation assets in Spain. It already has several end electricity customers and operates actively in the adjustment markets and Pownext, the organized French market, trading a total of 1,260 GWh of electricity during 2004.

In addition, IBERDROLA took part in all of EDF's (Electricité de France) auctions last year, acquiring the right to have up to 362 million KWh of electricity for 2004, 2005 and 2006. It also supplied a total of 276 million KWh to Réseau de Transport d'Electricité (RTE) and EDF GRD (Gestionnaire des Réseaux de Distribution), managers of the French transmission network and electricity distribution grid, in order to cover any losses on this country's network.

3.2 GAS

Supply:

The total volume of gas supplied by IBERDROLA in the first nine months of 2005 is up +61.2% to 38,235 GWh, giving it a 13.8% share of the total market, including gas supplies for both end customers and combined cycle plants. IBERDROLA has made a strong commitment to the natural gas

sector since the liberalisation of this market in Spain, and it has become one of the pillars of its strategy. The Company, which already has supply contracts totalling 6.75 bcm per year for the Spanish market, uses gas to supply its combined cycle plants and to meet the growing demand from end customers.

Procurement:

Proactive policy to guarantee supplies

In the infrastructure sector, IBERDROLA has a 25% stake in the Bahía Bizkaia Gas (BBG) regasification plant - already in operation and with capacity for 6 bcm annually - and a 30% interest in the Sagunto plant. These plants have two 150,000 m³ LNG storage tanks, which are able to receive one large methane tanker every four days, making it possible for them to unload in less than 12 hours, significantly strengthening the Spanish gas system.

Elsewhere, the Company has a 12% stake in the Medgaz gas pipeline, which, with a capacity of 8 bcm (billion cubic meters) a year, will connect Algeria's gas fields directly with Spain after it comes into service in 2009, after being rated as a priority by the Spanish council of ministers only a few weeks ago.

4. - RATIONALISATION AND OPTIMISATION OF FINANCIAL RESOURCES

Sale of our stake in Cementos Portland.

Within the divestment process of non-strategic assets called for in the Strategic Plan, on 3 October Iberdrola sold its 8.06% stake in the listed company Cementos Portland Valderrivas to Fomento de Construcciones y Contratas (FCC). This sale resulted in pocketing around 150.3 million euros and capital gains of more than 70 million euros before taxes,

which will be recorded in the fourth quarter of this financial year. As a result of the sale, the Iberdrola representative left the Board of Directors of Cementos Portland.

Tap of 250 million euros of the bond issued in June 2005

On 22 September, IBERDROLA completed a tap of 250 million euros of the 10-year bond issued on the Euromarket in June for an initial amount of 500 million euros, thus giving that issue more liquidity. The spread over the 10-year interbank interest rate obtained in the tap was 28 basis points, which is an improvement over the 32 basis points obtained in June.

5. - NON-ENERGY BUSINESSES

IBERDROLA Inmobiliaria closed out the first nine months of 2005 with 14 residential developments under construction, representing a total of 1,188 homes. By September 2005, 499 homes had been registered. The key operations carried out in Q3 included:

- Inauguration of the Factory Outlet Shopping Málaga and Málaga Ocio shopping and leisure centres in Málaga. Both facilities have required an investment of 30 million euros and have been developed over the past three years.
- Delivery of 157 homes in Ciudad Real in the "Prados de La Mancha" promotion.

For its part, **IBERDROLA Ingeniería y Construcción** carried out various operations in Q3, including:

- Awarding of a contract by the Mexican state-owned electricity company, Comisión Federal

Electricidad (CFE), for the construction of the electricity infrastructure associated with the La Venta II (83.3 MW) wind farm for 6 million dollars.

- Awarding the construction of the 40 MW El Moral (Ciudad Real) wind farm, with a budget of 4.2 million euros.
- Awarding a contract to install communications systems in Line 1 of the Madrid Underground, with a budget of 1.7 million euros and a development phase of seven months.

6. - REGULATION

Iberdrola and the White Paper

On 26 July, José Ignacio Pérez Arriaga submitted the final version of the White Paper he was appointed to draw up by the government last November on the analysis of the regulation of the electricity market in Spain to the Ministry for Industry, Tourism and Commerce.

Below we include the press release published on July 27, 2005.

Having made a first analysis of the White Paper on the reform of the regulatory framework of the electricity generation in Spain made by the consultant José Ignacio Pérez Arriaga and presented yesterday to the Ministry of Industry, IBERDROLA believes that the inefficiencies of the electricity market are due to regulatory problems instead of the behaviour of the agents.

The Company, that once again rejects the adoption of any measure contrary to the liberalization process started with the approval of the Electricity Sector Law in 1997, does not share either the analysis or the proposals regarding the electricity generation market included in the White Paper, a considerably

dense and theoretical document which is non binding for the Administration.

In addition, IBERDROLA, that has always defended the compliance with the targets set by the Kyoto Protocol and that the electricity sector should bear a bigger effort for the CO2 emissions reduction, believes that, should the consultant Pérez Arriaga's proposals about the allocation of emission allowances be implemented, Spain would not comply with its environmental commitments. Furthermore, the Company misses specific mentions to the reduction of other kind of emissions (NOx, SO2), with a much larger local impact than CO2.

In any case, the Company considers that the White Paper also makes positive proposals, as the new tariff methodology and the promotion of the Special Regime, in addition to some improvements in technical aspects of operation of the system and the market.

IBERDROLA considers that, as established in the aforementioned Electricity Sector Law, a review of the regulatory model should be carried out, in order to solve the structural problems detected along the last years –insufficient generation capacity; energy waste; distancing from the environmental targets of the Kyoto Protocol; foreign energy dependency; problems in the distribution network; tariff deviation -, to which some short term problems have been added in the current year: drought, fuel costs, and strong increase demand.

In the Company's opinion, such a review, that should raise long term solutions for a capital intensive sector, must go further in the liberalisation of the electricity sector, for which both the Spanish Government (Electricity Sector Law 54/97, RD 5/2005 to foster competitiveness, MIBEL treaty, Spanish Constitution) and the European Union (Directive 2003/53 on the internal electricity market, EU Treaty) are committed. IBERDROLA understands that in some subjects the White Paper

surpasses the spirit of the Spanish Electricity Sector Law and the EU legislation.

IBERDROLA thinks that any regulatory change must look into the future instead of the past and be based on the circumstances of the European context in which it operates. In this way, the Company highlights that the status quo existing in 1997 has changed: 35% of the electricity is sold in the liberalised market already, the number of agents has increased and market shares have been reduced. In 2007, 15 agents and more than 30,000 MW of capacity will be competing, and none of them will have a market share above 25% in the Iberian market, according to the estimates made by the Ministry of Industry.

It is worth mentioning that in the 4th Annual Report on the implementation of the Electricity and Gas Internal Market, made public in January 2005, Spain (with 40%) is below the European average as regards market power in production of the largest electricity company: countries as Greece (100%); Belgium, France and Ireland (85%); Portugal and Czech Republic (65%); Italy (55%); and Austria (45%), would be above that figure. It is foreseeable that this situation will improve in two years' time, when, in addition to the countries mentioned, others like Germany and Hungary (30%) and Netherlands (25%) will surpass Spain. The Spanish sector will be, in summary, among the three least concentrated markets in the European Union.

The Company, that welcomes the decision of the Ministry of Industry to submit the report to the National Energy Commission (CNE), warns about the consequences that the implementation of the proposals included in the White Paper might have on the results of the electricity companies and their stock market valuation, although it trusts that it will be able to continue financing with the cash flow obtained from all its generation facilities the investments needed to continue providing a basic service for the country with the appropriate guarantees.

In additions IBERDROLA warns about the danger that the consultant Pérez Arriaga's theory might be applied to other sectors as telecoms or oil, with a similar market concentration to the electricity sector. Proposals as those suggested by the White Paper can be harmful for the Spanish industrial sector.

Analysis of the first nine months of 2005

Energy Production

	GWh	vs. 2004	% Weight
Gas combined cycle	23,874	7,628 47.0%	39.0%
Renewable energy	4,873	1,067 28.0%	8.0%

TOTAL NET PRODUCTION	46,530	-5.4%	100.0%
ENERGY DISTRIBUTED	71,652	4.6%	
HYDRO-ELECTRIC RESERVE LEVELS AT 30/09/05		30.3% (3,420 GWh)	

Note: Production data in accordance with the consolidation method use.

Energy production: Latin america

	GWh	vs. 2004	% Weight
Gas combined cycle	13,523	32.5%	92.3%
Hydroelectric	842	-25.4%	5.7%
Cogeneration	288	-0.3%	2.0%
TOTAL NET PRODUCTION	14,653	26.1%	100.0%
ENERGY DISTRIBUTED (managed)	19,720	7.8%	

Note: Production data in accordance with the consolidation method use.

1. - PRODUCTION: SPAIN

The Group's net production in Spain came to 46,530 GWh in the first nine months of 2005, successfully limiting the fall in production to -5.4% in a period with hydroelectric production down 46.8%, combined with a 18.3% reduction in nuclear production after the Cofrentes and Vandellós plants were temporarily stopped for refuelling during the period. The Cofrentes plant, which was disconnected on 15 May, was reconnected to the grid on August 3 after the 15th fuel reloading was completed. The Vandellós plant was reconnected on 3 September. Iberdrola's balanced generation mix with the growing contribution of combined cycle and renewables of up to 33% of the total, which is the result of the major investments made, has been key in limiting the drop in production in the context discussed of markedly decreased hydroelectric production and technical shutdowns of nuclear production.

The most notable events registered are:

- 71.3% increase in combined cycle production (10,351 GWh), almost doubling its contribution to total production, accounting for 22.2% compared with 12.3% in the first nine months 2004. In this period, the combined cycle technology has consolidated its position as the second biggest contributor to total production in Spain, and continued the upwards trend in its contribution to total production, which is growing from quarter to quarter: in the first quarter it made up 17.1% of the total, which became 20.3% in the first half, reaching the level mentioned above of 22.2% as at 30 September.
- Wind farm production increased 32.1 %, taking the weighting of renewable energies facilities

up to 10.5% in the generation mix during the period. The contribution of these renewable energies to the production mix is just behind the contribution made by hydroelectric generation in a dry year like 2005, which was 12.8% up 30 September.

Iberdrola achieved a **27.2% share of the wholesale production market** in the first nine months of 2005. In comparative terms, energy production can be broken down as follows:

	9M 2005	9M 2004
Gas combined cycle	22.2%	12.3%
Renewable energy	10.5%	7.7%
Hydroelectric	12.8%	22.7%
Nuclear	35.2%	40.7%
Fuel-oil	6.1%	3.7%
Coal	10.9%	10.8%
Cogeneration	2.3%	2.1%
Total	100%	100%

2. - PRODUCTION: LATIN AMERICA

In Latin America, total production is up 26.1% to 14,653 GWh, with the majority (84.3%) generated by the combined cycle plants in Mexico.

	Production	Change
Mexico (c. cycle)	12,360	23.8%
Latin America	2,293	39.9%
Combined cycle	1,163	426.2%
Hydroelectric	842	-25.4%
Cogeneration	288	-0.3%
Total	14,653	26.1%

The growth seen in this region is primarily due to the Monterrey (1,040 MW), Altamira (1,036 MW), Enertek (120 MW) and La Laguna (500 MW) plants operating at full capacity, with the latter brought into service on 15 March, in addition to the Termopernambuco plant in Brazil. With regard to hydroelectric energy, the Itapebí plant in Brazil operated without incidents, with the drop in production attributed to the extraordinary contribution recorded in 2004 coming from the sale of its surplus production to the pool.

3. - MARKET: SPAIN

In the domestic market, Iberdrola's total demand measured on the grid is up 4.6% to 71,652 GWh, once again confirming Iberdrola's position as the leader in the Spanish distribution market (tariff+commercial: 39.4% market share). The company now has 9.7 million customers, representing an increase of around 130,000 year-on-year.

4. - MARKET: LATIN AMERICA

The evolution of demand for Iberdrola's three distribution companies in Brazil is reflected in the following table:

Energy distributed (GWh) (managed)	9M 2005	vs. 2004
Coelba	8,507	8.5%
Cosern	2,570	10.5%
Celpe	6,134	7.8%
Total	17,211	8.6%

Analysis of results for the period (Unaudited)

January-September 2005

The most notable aspects of Iberdrola's financial results for the first nine months of 2005 are as follows:

	Million euros	vs. 2004
NET SALES	8,442.7	+32.6%
GROSS MARGIN	3,497.8	+5.7
EBITDA	2,393.2	+10.7
EBIT	1,643.7	+12.1
NET PROFIT	984.0	+12.6

NOTE: In the accounts for the first nine months of 2005, and in order to increase transparency and visibility in the Company's businesses, the Third Party Services are now recorded at the Gross Margin level, instead of in the Net Operating Expenses. The effect is shown in the two following tables:

CURRENT REPORTING	9M 2005	9M 2004	Var.
Gross Margin ex - Third Party Services	3,437.3	3,291.0	
Third Party Services	60.5	16.7	
Total Gross Margin	3,497.8	3,307.7	5.7%
Net Operating Expenses	-1,065.9	-1,008.4	5.7%

PREVIOUS REPORTING	9M 2005	9M 2004	Var.
Total Gross Margin	3,437.3	3,291.0	4.4%
Net Operating Expenses	-1,065.9	-1,008.4	
Third Party Services	60.5	16.7	
Total Net Operating Expenses	-1,005.4	-991.7	1.4%

1. - NET SALES

The Group's Net Sales totalled 8,442.7 million euros in the first nine months of 2005, up 32.6 % on the same period in 2004, reflecting the positive evolution of all of the Group's businesses: the

Domestic Energy business, the main growth driver, rose 34.0% and contributed 73.9% to the Group's Net Sales; the International business was up 36.8% and contributed 16.4% to total Net Sales; and finally the Non-Energy businesses rose 17.4% to reach a 9.7% contribution to the total.

The main drivers of this change in each of the businesses were as follows:

- In the Domestic Energy Business, Net Sales rose 34% as a result of:
 - The increase recorded on Generation (29.2%): due to the following factors:
 - The current situation in pool prices.
 - Ordinary regime production is down 8.4% in a half-year period marked by a sharp

fall in hydroelectric production in Spain (-46.8%), combined with a 18.3% reduction in nuclear production due to the Cofrentes (100% Iberdrola) and Vandellós II (28% Iberdrola; 72% Endesa) nuclear power plants being shut down temporarily for refuelling. Both plants have already connected to the grid.

- Net Sales in the Supply business rose 29.5%, mainly due to the increase in activity, especially in gas, with a 61.2% increase in volumes supplied.
- In Renewables, Net Sales is up 60.2% to 359.1 million euros, factoring in the 32.1% increase in wind production vs. the first nine months of 2004, as well as the current situation in pool prices, with 94% of the wind parks already under the market participation scheme.
- Net Sales grew 4.0% in Distribution business, in line with the increase in its regulated revenues, being the incentive for losses worth highlighting as well.
- In the International business, Net Sales is up 36.8% to 1,388.9 million euros. Mexico is the region that made the biggest relative contribution (62.8%), showing a 33.8% growth despite the depreciation of the dollar registered along the period. Also of note is the increase in Net Sales in Brazil (42.2%), primarily as a result of the increase in demand and upward readjustment in tariffs, as well as the favourable evolution of the real's exchange rate.
- On Non-Energy businesses, Net Sales is up 17.4% to 816.7 million euros, with this growth driven primarily by the increase in activities in real estate business, Engineering and Services. Regarding this last chapter, it is worth mentioning that since the third quarter of this year Third Party Services is recorded at Gross Margin level in order to increase visibility and transparency.

On the other hand, and regarding the tariff deviation generated over the first half of 2005, it is necessary to take the following aspects into consideration:

- 1) On a sector basis, the aforementioned tariff deviation for 9M 2005 might reach an amount close to 2,493 million euros.
- 2) In accordance with Royal Decree-Law 5/2005 of March 11, the provisional share for the financing of such tariff deviation comes out at 35.01% for Iberdrola, representing approximately 873 million euros before taxes.
- 3) In addition, in order to support the accounting treatment of the tariff deviation, the following aspects have been factored:
 - a) Articles 15 to 20 of the Electricity Sector Law 54/1997 of November 27, governing the economic regime of the various sector activities. In general terms, the remuneration of the generation activities is established in those articles accordingly to the prices resulting from the functioning of a liberalised market.
 - b) The precedent set by the recognition in full of the tariff deviation for 2000, 2001 and 2002 (Art 94.2 Law 53/2002).
 - c) The objectives set in IAS 18: An "ordinary revenue is recognised when it is probable that future economic benefits flow to the company and the amount of revenue can be measured reliably".

As is already known, although in the existing regulatory framework this deviation is borne by the generation companies, the services rendered by this business complies with all the requirements included in that rule:

- * Revenues can be measured reliably, as generation prices are determined for the pool.

- The periodic C.N.E. settlements explicitly specify the revenues corresponding to each generator. However, there are not enough revenues collected by the distribution companies.

In light of the factors outlined above, it is possible to conclude that there are currently enough reasons for the confirmation at the end of the current fiscal year of the recoverability of the tariff deviation that might arise during 2005.

2. - GROSS MARGIN

On a consolidated level, the Gross Margin came out at 3,497.8 million euros, representing an increase of 5.7% in relation to the same period in 2004. As outlined below, the Domestic Energy Business reflects the cost of consumption for emission rights which has totalled 121.3 million euros over the period. The following contrasting aspects can be highlighted regarding this evolution of the Gross Margin in each business:

2.1. - DOMESTIC ENERGY BUSINESS

The Gross Margin remained stable (-0.5%) at 2,663 million euros in a challenging production environment:

- The change in the Gross Margin of the Generation business in Spain (1,287.1 million euros, -5.6%) can be explained in the following context:
 - The evolution of the output and prices along the period, as explained at Net Sales level.
 - Increase in fuel costs because of the change in the production mix (less hydroelectric and nuclear production and greater thermal production) and a context of higher fuel prices, reflected in an 86.4% increase in procurement costs.
 - 121.3 million euros booked as expenses for emission rights consumed during the period.

- The Gross Margin of Renewables is up 60.2%, in line with Net Sales, and represents 21.8% of the total Gross Margin obtained by Iberdrola's generation assets in Spain.

- The Gross Margin of the Distribution business grew 4.0% (1,035.2 million euros) in line with the increase in remuneration from the regulated business recognised in the tariff for 2005.

- The Supply business saw its Gross Margin fall 115.5 million euros to -8.9 million euros, due to the lower margins as a consequence of the energy prices over the period, which resulted in the negative contribution being recorded. Furthermore, the first nine months of 2004 saw an extraordinary contribution of 11 million euros for resettlements of energy sales, network costs and energy purchases in 2000 and 2001.

2.2. - INTERNATIONAL BUSINESS

The Gross Margin was 506.4 million euros, reflecting growth of 43.5%, resulting from the good performance of the Group's businesses in the region and the positive evolution of the exchange rate of the Brazilian real, more than offsetting the effect of the depreciation of the dollar in the accounts of Mexico.

- In Mexico-Guatemala, the Gross Margin was 189.4 million euros (+27.7%), representing an increase of 41.1 million euros. This increase primarily reflects the contribution to results made by the 500 MW La Laguna combined cycle plant after it was brought into service in the first quarter, and the efficiency improvements at the Monterrey plant (I and II). A 3.3% depreciation of the dollar was recorded along the period.
- In Brazil, the Gross Margin is up 55.0% to 317.0 million euros, thanks to the growth in demand and the additional tariff adjustments adopted for Coelba, Cosern, and Celpe, as explained previously. It is also worth noting the appreciation of the real against the euro (14.5%).

2.3. - NON-ENERGY BUSINESSES

These contributed 328.4 million euros to the total Gross Margin, reflecting an increase of 51.2 million euros, primarily generated by **Engineering and Services, IBERDROLA Inmobiliaria and Corporación IBV**, which, following the application of the IFRS, is now proportionately consolidated. The results can be broken down as follows:

Million euros	9M 2005	9M 2004	Change in millions
Engineering and Services	112.2	57.0	55.2
IBERDROLA Inmobiliaria	110.8	118.1	-7.3
IBV corporation	102.7	93.7	9.0
Other	2.7	8.4	-5.7
TOTAL	328.4	277.2	51.2

3. - BASIC MARGIN

This chapter reflects the global effect of the emission allowances in the Company's accounts that comprises:

- An expense reflecting the consumption of such emission allowances up to 121.3 million euros, recorded at Gross Margin level.
- Revenues reflecting the emission allowances granted for free worth 100.5 million euros, recorded below Gross Margin.

All in all, the Basic Margin is obtained adding those revenues due to the allowances received for free to the Gross Margin, so that the net effect of the allowances is recorded in the Company's accounts at that level. Such net effect amounts to Eur -20.8 MM in the first nine months of 2005.

The Basic Margin rose 8.8%, up to Eur 3,598.3 MM, as detailed in the following table:

	9M 2005	9M 2004	Var. %
GROSS MARGIN	3,497.8	3,307.7	5.7%
EMISSION ALLOWANCES (REVENUES)	100.5	--	n/a
BASIC MARGIN	3,598.3	3,307.7	8.8%

4. - EBITDA / GROSS OPERATING PROFIT

Consolidated EBITDA increased 10.7% to 2,393.2 million euros as a result, in addition to the factors previously explained, of the control in Net Operating Expenses that rose 5.7%, more than 3% below the growth recorded at the Basic Margin.

The controlled increase of 5.7% in Net Operating Expenses has been achieved thanks to the moderation in traditional businesses and an increase in new businesses in connection with the upturn in activity. The highlights include:

- The moderate change in Personnel Expenses (+3.0%), despite reflecting the effects of the salary adjustments adopted based on the Labour Agreement and the CPI.
- A 74.8 million euros increase (+14.1%) in External Services linked to the upturn in activity in connection with the new combined cycle and renewable facilities and the commercial activity. This also includes 20 million euros in costs for the second stage of nuclear fuel cycle (Enresa).

Net Operating Expenses can be broken down as follows:

Million euros	9M 2005 vs. 2004	
Net Personnel Expenses	593.7	1.0%
Personnel	716.0	3.0%
In-house work on fixed assets	-122.3	14.0%
Net External Services	472.2	12.3%
External Services	604.9	14.1%
Other operating revenues	-132.7	21.2%
TOTAL	1,065.9	5.7%

The Traditional Energy Business workforce is down 2.9% compared with the same period in 2004 to 8,344 employees, with the Domestic Energy Business' Gross Margin remaining stable. As such, the Gross Margin to employee ratio improved by 2.4% in the Domestic Energy Business, as can be seen in the following table.

	9M 2005	9M 2004	Var. %
Gross Margin (Domestic Energy Business) (million euros)	2,663.0	2,677.7	-0.5
Domestic Ener. Bus. Workforce (Spain)	8,344	8,593	-2.9
Gross Margin / employee ratio (thousands of euros)	319.1	311.6	+2.4

On the other hand, the Tax item is up 1.5% to 139.2 million euros, mainly due to the impact in Latin America resulting from the application of IFRS.

5. - EBIT / NET OPERATING RESULT

EBIT rose 12.1% to 1,643.7 million euros compared with the same period in 2004, with this rise driven by the operating evolution already mentioned combined with the change in Amortizations and Provisions (+7.7%).

- Amortizations are up 6.9% to 723 million euros.
- Provisions rose 34.8% to 27 million euros, basically as a result of the criteria followed in the Engineering business regarding guarantees and contract margins.

Million euros	9M 2005	9M 2004	Var. %
Amortisation	723	676	6.9%
Provisions	27	20	34.8%
TOTAL	750	696	7.7%

6. - FINANCIAL RESULT

The **Financial Result** came to 298.5 million euros, 7.8% higher than in the same period in 2004. This increase was mainly due to the 20.4% increase in financial expenses in a period marked by a higher average debt balance in relation to the same period in 2004, affected by the impact of the Tariff Deviation. This was partially offset by the 42.8% rise in Financial Revenues up to 222.8 million euros.

In addition, the average cost of debt remained stable at 4.56%.

Million euros	9M 2005	9M 2004	Var. %
Financial revenues	222.8	156.0	42.8
Financial expenses	(521.3)	(432.9)	20.4
TOTAL	(298.5)	(276.9)	7.8

7. - RESULTS OF COMPANIES CONSOLIDATED BY THE EQUITY METHOD

The Results of Companies Consolidated by the Equity Method rose 2.0 million euros to 35.7 million euros, with 82.6% of the results contributed by Non-Energy up to 29.5 million euros. Following the implementation of IFRS, EDP and REE have been removed from the scope of consolidation, and the consolidation method for other companies, such as Corporación IBV, has been modified.

The results can be broken down as follows:

Million euros	9M 2005	9M 2004	Var. Million €
Non-Energy	29.5	35.8	-17.4%
Other	6.2	-2.1	N/A
TOTAL	35.7	33.7	+6.0%

8. - NET PROFIT

Lastly, Net Profit rose to 984.0 million euros, up 12.6% on the same period in 2004, in line with the change seen on Operating Profit. Results from non-current assets fell by 50.3 million euros and Profit before Taxes grew +8.2%. The effective tax rate came out at 29.4%, slightly below the same period in 2004 (32.5%).

Results by business

1. - ENERGY BUSINESS: SPAIN

1.1 GENERATION

a) Gross Margin

The change in this item in the first nine months of 2005 demonstrates the flexibility of IBERDROLA's generation facilities. The new combined cycle plants played a key role, with a 71.3% increase in production, almost doubling its contribution to total production, which is now 22.2% compared to 12.3% in the first nine months of 2004. In a period marked by high demand, one of the lowest levels of hydroelectric production on record for the last 60 years, and a downturn in nuclear production due to temporary shutdowns for refuelling at the Cofrentes (100% Iberdrola), and Vandellós II (28% Iberdrola; 72% Endesa), combined cycle production has become the second most important technology in terms of contribution to total production in Spain. The upwards trend in contribution of combined cycles to total production continues, growing from quarter to quarter: 17.1% of the total in the first quarter, growing to 20.3% in the first half of the year, and reaching the level mentioned above of 22.2% as at 30 September.

In this context, the Gross Margin on the Generation Business fell 5.6%, as a result of the following factors:

- Net Sales rose 29.2% in a period marked by the current situation in pool prices. Ordinary regime production limited its downturn to 8.4% (40,604 GWh) in a period in which hydroelectric and nuclear production fell 46.8% and 18.3% respectively. The contribution of combined cycle plants, as explained, has been fundamental to partially offset the decrease in production in this context. With production up to 10,351 GWh combined cycle plants accounted for 25.5% of total production in the ordinary regime for the period.

(Eur/MWh)	9M 2005	9M 2004
Nuclear	3.5	3.3
C. Cycles	33.0	25.9
Coal	24.7	23.2
Oil	52.6	42.4
Cost of CO ₂ allowances (Eur/ton)	17.0	n/a

* Variable O&M costs and gas access fees not included

- In an environment marked by higher thermal production due to falling levels of hydroelectric production and the reduction in nuclear production, in addition to rising fuel costs, Procurement Costs are up 86.4%.
- Furthermore, since the first quarter of 2005, Procurement Costs include costs relating to the consumption of emission allowances, totalling 121.3 million euros for the first nine months of 2005.

b) Operating Profit/EBIT

EBIT is up 2.9% on the same period last year, reaching **743.0 million euros**. EBITDA grew for the first time along the year (Eur 1,036 MM, +0.2%), thanks to the 9.1% growth registered in the third quarter. In addition to the impact of the Gross Margin as outlined above, a number of other factors have influenced this evolution:

Net Operating Expenses are up 7.6% to 305.9 million euros, reflecting various factors:

- Personnel expenses are up 3.4%, factoring in the salary adjustments adopted in line with the

Labour Agreement and the CPI, which in 2004 were not included until the month of July.

- External services are up by 21.8%, reflecting the combined cycle plants brought into service. This item also includes 20 million euros of expenses for the second stage of the nuclear fuel cycle (ENRESA).
- Other Operating Revenues and In-house work on fixed assets, which include among other items 24 million euros resulting from the recovery of revenues through insurance policies that through the application of IFRS are no longer booked as non-current items.

Million euros	9M 2005	vs. 2004
Net Personnel Expenses	149.0	3.2%
Personnel	165.3	3.4%
In-house work on fixed assets	(16.3)	5.2%
Net External Services	156.9	12.1%
External Services	201.3	21.8%
Other operating revenues	(44.4)	75.5%
TOTAL	305.9	7.6%

Amortizations and Provisions are up 8.8% to 293.0 million euros, primarily as a result of the new combined cycle plants brought into service, with an additional 1,600 MW in operation (including Arcos III) since the first nine months 2004.

Tax increased 2.7%, also as a result of the new facilities commissioned.

As explained above, 121.3 million euros were booked on the Gross Margin for the consumption of emission rights over the period. Additionally, 100.5 million euros were booked below Gross Margin as emission rights granted for free to IBERDROLA following the National Allocation Plan of Emission Allowances. As such, the net impact of emission

rights came out at -20.8 million euros. This effect is fully reflected in the Basic Margin that grew by 3.3%.

- The key operating figures for this business are as follows:

GENERATION (Million euros)	9M 2005	vs. 2004
Net Sales	2,557.5	+29.2%
Gross Margin	1,287.1	-5.6%
Basic Margin	1,408.4	+3.3%
EBITDA	1,036.0	+0.2%
EBIT	743.0	-2.9%

1.2 RENEWABLE ENERGY

a) Gross Margin

The Renewable Energy business has continued to grow as new capacity has been brought into service during the period. In addition, growth has accelerated during the third quarter, given that 94% of the farms have been operating under the market participation regime, reflecting the current situation in pool prices. In contrast, during the first half of the year only 25% of the farms were operating under the market participation scheme. In this way, this business is confirmed as the key growth factor in Iberdrola's Strategic Plan, along with Mexico.

The installed capacity increased by 19% (+527 MW), enabling a 32.1% increase in wind energy production and a 28.0% rise in total production generated by renewable energy sources, reaching 4,873 GWh.

The acceleration of growth in the margins of the renewable business in the third quarter, owing to the current situation in pool prices with the majority of the wind farms in the market participation scheme, can be seen in the following

chart that compares the prices obtained by wind energy in 9M 2005 and 9M 2004:

The aforementioned increase in production, combined with the acceleration in growth achieved by placing the majority of the wind farms under the market participation regime factoring in the current situation in pool prices, enabled this Business to achieve a 60.2% increase in its Gross Margin, up to 359.1 million euros, despite the low wind factor in January and February 2005. The wind resource recorded in the third quarter (which is typically scarce in comparison with the rest of the year) was above standards.

b) Operating Profit/EBIT:

EBIT increased by 108.8 million euros (+145.3%) due to the following factors:

- EBITDA grew 60.1%, in line with the increase in the Gross Margin and despite the rise (+61.3%) in Net Operating Expenses as a result of the new capacity brought into service. The margin for EBITDA comes out at around 80%, as seen in previous periods.
- This increase is even higher on EBIT, with Amortizations and Provisions remaining stable

(-0.8%) to reach Eur 104.1 MM. The decision to extend the useful accounting life of wind farms from 15 to 20 years offsets the higher amortizations booked for the new capacity installed.

- Net Operating Expenses can be broken down as follows:

Million euros	9M 2005	vs. 2004
Net Personnel Expenses	9.8	40.0%
Personnel	13.5	35.0%
In-house work on fixed assets	(3.7)	23.3%
Net External Services	57.3	65.6%
External Services	60.4	49.1%
Other operating revenues	(3.1)	-47.5%
TOTAL	67.1	61.3%

- The key operating figures for this business are as follows:

RENEWABLES (million euros)	9M 2005	vs. 2004
Net Sales	359.1	60.2%
Gross Margin	359.1	60.2%
EBITDA	287.8	60.1%
EBIT	183.7	145.3%

1.3 DISTRIBUTION

a) Gross Margin

The Gross Margin for the Distribution business is up 4.0%, driven primarily by the increase in remuneration for the regulated business recognised in the tariff for 2005. In addition, it is important to highlight the 4.6% increase on energy distributed, which has totalled 71,652 GWh, as well as the positive evolution of the incentive for losses.

b) Operating Profit/EBIT:

EBITDA for Distribution rose 8.4%, more than four points above the Gross Margin thanks to improved efficiency, which translates into a 2.3% reduction in Net Operating Expenses. Personnel expenses fell 0.4% and External Services 2.5% as a consequence of the cost reduction policy and the efficiency improvements achieved.

Net Operating Expenses can be broken down as follows:

Million euros	9M 2005 vs. 2004	
Net Personnel Expenses	139.9	-1.7%
Personnel	202.8	-0.4%
In-house work on fixed assets	(62.9)	2.6%
Net External Services	232.3	-2.6%
External Services	300.1	-2.5%
Other operating revenues	(67.8)	-2.0%
TOTAL	372.2	-2.3%

In addition, Amortisation & Provisions fell by 4.8 million euros (2.6%), thanks mainly to the sale of assets to REE. This change in Amortisation & Provisions caused EBIT to grow 5.4 points above EBITDA, to 13.8%.

- The key operating figures for this business are as follows:

DISTRIBUTION (MILLION EUROS)	9M 2005	VS. 2004
Net Sales	1,035.4	4.0%
Gross Margin	1,035.2	4.0%
EBITDA	600.9	8.4%
EBIT	423.2	13.8%

1.4 SUPPLY
a) Gross Margin

The Supply business saw its Gross Margin fall 108.3%, even booking losses of -8.9 million euros, after a 38.2% increase in Procurement costs as a consequence of the high energy costs seen over the period that was not compensated by the 5.4% increase in energy selling prices. Net Sales totalled 2,332.9 million euros, up 29.5% thanks to the increase in gas sales, as the electricity sales show a much more moderated growth.

GWh sold	9M 2005	vs. 2004	%
Electricity	24,004	+1,545	+6.9%
Gas	38,235	+14,515	+61.2%
TOTAL	62,239	+16,060	+34.8%

Furthermore, the first nine months of 2004 saw an extraordinary contribution of 11 million euros from resettlements of energy sales, TPA fees and energy purchases of years 2000 and 2001.

b) Operating Profit/EBIT

With regard to EBIT, it is important to note the increase in operating expenses (+18.9 million euros), primarily due to the increase in External services activities relating to the full liberalisation of the market in addition to the strengthening of advertising campaigns (Desafío Español 2007-America's Cup, etc.).

Net Operating Expenses can be broken down as follows:

Million euros	9M 2005	vs. 2004
Net Personnel Expenses	46.5	5.0%
Personnel	46.9	5.4%
In-house work on fixed assets	(0.4)	100.0%
Net External Services	35.5	88.8%
External Services	64.3	31.5%
Other operating revenues	(28.8)	-4.3%
TOTAL	82.0	30.0%

Furthermore, EBIT on the Supply Business was affected by a 9.5 % increase in Amortisation and Provisions and a 12.2% rise in Tax, in light of the increase in the volume of energy sold.

- The key figures for this business are as follows:

SUPPLY (million euros)	9M 2005	Vs. 2004
Net Sales	2,332.9	+29.5%
Gross Margin	-8.9	N/A
EBITDA	-109.3	N/A
EBIT	-131.2	N/A

1.5. CORPORATION

This includes the elimination of inter-company expenses between the corporation and the businesses.

2. - INTERNATIONAL BUSINESS

a) Gross Margin

In the International Business, the Gross Margin is up 43.5% (+153.6 million euros) to 506.4 million euros. The evolution in the Gross Margin for the Latin America region can be broken down as follows:

- Increase in the Gross Margin (functional currency) due to the evolution of the business: +129.6 million euros.
- Exchange rate effect: total of 24.0 million euros, primarily due to the 14.5% appreciation of the Brazilian real vs. the euro (average year-on-year exchange rate) and the 3.3% devaluation of the dollar/euro exchange rate.

In Mexico, the Gross Margin rose 27.7%, driven primarily by the La Laguna combined cycle plant (500 MW) brought into service in the first quarter of the year and the efficiency improvements achieved at the Monterrey and Altamira plants, which enabled acceleration in their levels of production and reduction in the consumption of gas.

In Brazil, the increase in the Gross Margin (+55.0%) mainly reflects the 8.6% increase in demand, the contribution of the Termopernambuco combined cycle plant, which entered into service on 15 May 2004 and the tariff increases adopted during 2005. In this way, in April 2005 Celpe had its four-yearly tariff review. In addition, further tariff reviews have been applied for Coelba and Cosern, where the recognition of the remuneration asset base of Coelba has been adjusted on a retroactive basis since 2003. Furthermore, inflation and the changes in the non-manageable expenses have been incorporated in the tariffs. All these reviews have meant a 30% tariff increase for Coelba and Celpe and a 20% increase in the case of Cosern.

The following table shows the evolution of the business and the impact of the exchange rate in the International business at the Gross Margin level:

(million euros)	Business evolution	Exchange rate impact	Total
Brasil	+85.8	+26.7	+112.5
México-Guatemala	+43.8	-2.7	+41.1
TOTAL	+129.6	+24.0	+153.6

b) Operating Profit/EBIT

In the International business, EBIT increased 63.8% to 263.4 million euros, reflecting the increase in EBITDA (56.8%) and the higher levels of amortisation recorded (+41.9%), which grew less than the EBITDA mentioned.

- Mexico recorded a +28.8% rise in EBITDA, mainly as a result of the upturn in Generation activities, with the production of the La Laguna combined cycle plant added since the first quarter. The South America region saw an increase of +82.5% in light of the evolution in demand, the tariff increases adopted (see the detailed explanation on the previous Gross Margin section), the contribution of the Termopernambuco combined cycle plant and the efficiency improvements achieved, making it possible to keep the increase in Net Operating Expenses some way below the Gross Margin. Therefore, total EBITDA growth in the International Business comes out at 56.8%.

The following table shows the evolution of the business and the impact of the exchange rate in the International business at the EBITDA level:

(million euros)	Business evolution	Exchange rate impact	Total
Brasil	+84.7	+17.2	+101.9
México-Guatemala	+34.5	-2.0	+32.5
TOTAL	+119.2	+15.2	+134.4

EBITDA can be broken down by region and business as follows:

- **Mexico-Guatemala**

Million euros	9M 2005	vs. 2004
Generation	101.0	+31.3%
Distribution	44.5	+23.3%
TOTAL	145.5	+28.8%

- **South America**

Million euros	9M 2005	vs. 2004
Generation	40.1	+31.5%
Distribution	185.5	+99.3%
TOTAL	225.6	+82.5%

- The change in Net Operating Expenses for the entire Latin America region can be broken down as follows:

Million euros	9M 2005	vs. 2004
Net Personnel Expenses	46.7	24.9%
Personnel	56.0	28.7%
In-house work on fixed assets	(9.3)	52.5%
Net External Services	84.2	20.5%
External Services	103.2	23.6%
Other operating revenues	(19.0)	39.7%
TOTAL	130.9	22.0%

The 22.0% increase in Net Operating Expenses is more than 20 points lower than the increase recorded on the Gross Margin, which is up 43.5%.

This can be broken down by region as follows:

Million euros	9M 2005	vs. 2004
Mexico-Guatemala	43.7	+24.1%
Net Personnel Expenses	9.8	+18.1%
Net External Services	33.9	+26.0%
South America	87.2	+20.9%
Net Personnel Expenses	36.9	+26.8%
Net External Services	50.3	+17.0%
TOTAL	130.9	22.0%

- Amortisation and Provisions are up 41.9%, primarily on account of the increase in amortizations linked to the Altamira and La Laguna combined cycle plants in Mexico and the

Termopernambuco plant in Brazil, now fully operational.

The key operating figures for this business are as follows:

INTERNATIONAL (million euros)	9M 2005	Vs. 2004
Net Sales	1,388.9	+36.8%
Gross Margin	506.4	+43.5%
EBITDA	371.1	+56.8%
EBIT	263.4	+63.8%

3. - NON-ENERGY BUSINESSES

Million euros	9M 2005	vs. 2004
NET SALES	816.7	+17.4%
GROSS MARGIN	328.4	+18.5%
EBITDA	190.5	+40.9%
EBIT	167.1	+44.9%
NET PROFIT	136.5	+13.7%

The Non-Energy Business saw significant growth in results in all of its lines. Of special note is the 44.9% increase in EBIT resulting from the positive change recorded in EBITDA, up 40.9%. The following table shows the breakdown of the operating profit:

	9M 2005	9M 2004	% Change
EBITDA	190.5	135.2	+40.9%
Iberdrola Inmobiliaria (Real Estate)	98.5	101.2	-2.7%
Engineering and Services	75.8	20.0	+279%
Corporación IBV	16.7	14.8	+12.8%
Other	-0.5	-0.8	-37.5%

- The real estate business was the main driver of these results, contributing 51.7% of the total.

The quarterly seasonality of this business provides for the negative evolution of the EBITDA over the first nine months of 2005 compared to same period of last year.

- It is also worth mentioning the contribution of Iberdrola Engineering and Services, with an EBITDA of 75.8 million euros over the period, almost four times more than in 2004. This is a consequence of the upturn in activities, driven primarily by the Third Party Services, which in this quarter are recorded at the Gross Margin level, as it was already explained.
- IBV Corporation, which is proportionally consolidated following the application of IFRS, has contributed 16.7 million euros through its range of industrial business, in line with the results of the previous financial year.

On the other hand, for the 30.1 million euros booked under Results of Companies consolidated using the Equity Method, the biggest contribution is linked to the stake in Gamesa.

The key figures for **IBERDROLA Inmobiliaria** to date are as follows:

- **IBERDROLA Inmobiliaria** business data:

PORTFOLIO OF BUILDABLE AREA RESIDENTIAL USE (m²)	
Total	1,652,902
Under construction	138,324
Under management	221,807

TOTAL	100%	100%	100%	100%

Balance sheet

January-September 2005

Million euros Vs Dec 2004		
TOTAL ASSETS	28,958	+10.0%
TANGIBLE & INTANG. FIXED ASSETS	19,908	+6.2%
LONG-TERM INVESTMENTS	2,151	+16.7%
SHAREHOLDERS' EQUITY	9,463	+9.7%
NET DEBT	12,325	+15.5%

At 30 September 2005, Iberdrola's total assets came to 29,958 million euros, highlighting the maintenance of its strong capital position, even taking into account the large volume of investments made over the period (1,354 million euros). The **leverage ratio was 56.6%**, which is 130 basis points higher than in December 2004 with the accounts in IFRS format, mainly affected by the financing of the tariff deviation corresponding to Iberdrola, which in September 2005 rose to 873 million euros. Without this effect, leverage would have come out at 54.8%.

Analysis of the Balance Sheet

1. - FIXED ASSETS

Investments in the first nine months of 2005 totalled 1,354 million euros and can be broken down as follows:

Million euros	Jan-Sep 2005	%
Spain	915	67.6%
Generation	400	
Renewable energy	209	
Distribution	258	
Other	48	
Mexico	320	23.6%
Generation	316	
Distribution	4	
South America	59	4.3%
Generation	2	
Distribution	57	
Other International	60	4.4%
TOTAL	1,354	100.0

As regards investments in Spain, those made on energy production activities stand out, with 609 million euros that can be broken down as follows:

- 400 million euros on the Generation Business.
- 209 million euros on the Renewables Business.

In Mexico, investments have focused on the Altamira V and VI combined cycle plants (133 million euros) and Tamazunchale (153 million euros). In Brazil, investments have primarily been made on the distribution business, financed by funds generated in Brazil.

The figure given for "Other International" reflects the investments made on Renewables outside of Spain, representing a total of 60 million euros, including the acquisition of an additional 8% in the Greek company Rokas.

2. - SHARE CAPITAL

Share Capital as of 30 September 2005 was comprised of **901,549,181 bearer shares** with a par value of €3 each.

On 2 January 2005, an interim dividend of 0.326 euros per share was paid out for the 2004 financial year, representing a 14.0% increase on January 2004.

Furthermore, at the General Shareholders' Meeting held on 18 March a total dividend of 0.768 euros per share was approved, charged to the 2004 financial year, reflecting an increase of 14.3% per share on the dividend paid in 2004. This confirms the commitment made by Iberdrola to increase shareholder compensation in line with the growth in Net Profit.

On 1 July 2005, an additional dividend of 0.442 euros per share was therefore paid out.

3. - FINANCIAL DEBT

Net financial debt totalled 12,325.4 million euros at the end of September, with financial leverage coming out at 56.6%, 130 basis points higher than the 55.3% seen in December 2004. The figure given for debt includes 873 million euros for financing the tariff deviation corresponding to Iberdrola. Without the effect of this deviation, financial leverage would have been 54.8%, 50 basis points lower than the level seen in December 2004.

With respect to the average cost of debt, it came to 4.56% at 30 September 2005, 7 bp lower than in December 2004.

The debt structure can be broken down by currency and interest rate as follows:

	September 2005	December 2004
Euro	86.5%	86.0%
Dollar	8.1%	9.4%
Real	5.1%	4.4%
Other currencies	0.3%	0.2%
Fixed Rate	52%	58%
Capped	14%	16%
Floating Rate	34%*	26%

* Temporary situation that will change throughout the fourth quarter to reach levels close to 28%

In line with the policy to minimise financial risks on debt, foreign currency risks have continued to be mitigated through the financing of investments in Latin America in local currencies (the real, in the case of Brazil) or in their functional currencies (dollar in Mexico).

The debt structure per company is shown in the following table:

	September 2005	December 2004
Iberdrola S.A.	84.4%	83.4%
Mexico	5.0%	5.3%
South America	5.6%	5.8%
Renewable energy	2.6%	2.7%
Iberdrola Inmobiliaria and other	2.4%	2.8%
Total	100%	100%

Debt can be broken down by product type as follows:

	September 2005	December 2004
Euro bonds	37.2%	46.0%
Bonds in other currencies	4.6%	3.5%
Domestic commercial paper	3.8%	3.5%
Euro commercial paper (ECP)	5.6%	4.5%
Euro loans	39.9%	32.5%
Loans in other currencies	8.9%	10.0%
Total	100%	100%

Furthermore, in light of the refinancing policy pursued by IBERDROLA during the first nine months of 2005, the average maturity of debt has increased significantly to nearly 5 years as at September 2005 from 4.3 years recorded at December 2004.

Lastly, the change in financial leverage has been as follows:

Million euros	September 2005	December 2004
Shareholders' Equity	9,463	8,628
Gross Debt	12,889	11,105
Market value of derivatives	119	61
Short term Financial Investments	266	237
Cash	179	134
Net debt	12,325	10,673
Leverage*	56.6%	55.3%

* Without the effect of the tariff deviation the leverage comes out at 54.8%.

4. - WORKING CAPITAL

Net Working Capital rose to 1,911 million euros, up 1,357 million from the 554 million euros recorded at the end of 2004, with current assets up 1,035 million euros and current liabilities down 322 million euros.

5. - FUNDS FROM OPERATIONS

In September 2005, Funds from Operations totalled 1,667.9 million euros, reflecting an increase of 14.6% on September 2004.

Iberdrola's Credit Rating

Agency	Rating	Outlook
Standard & Poor's (*)	A+	Stable
Moody's (*)	A2	Negative
Fitch Ratings	A+	Stable

(*) Following the agreement entered into with Gas Natural for the acquisition of assets and subject to the required authorizations:

- S&P has placed the ratings of IBERDROLA on "credit watch with negative implications".

- Moody's has placed the ratings of IBERDROLA on "review for a possible downgrade".

ANNEX. - Iberdrola and sustainability

In the development of their activities, companies can exert great influence on and change their natural and social environment. This makes corporate action a key factor in the global sustainability strategy. True to its corporate objective of generating wealth and well-being, IBERDROLA operates with the vision of "being the preferred company because of our commitment to creating value, improving quality of life and taking care of the environment" and considers its success to depend on the ability to meet contractual commitments with its interest groups by putting the following values into practice: Ethics and Corporate Responsibility, Economic Results, Respect for the Environment, Generate Confidence and a Sense of Belonging. In order to reach the objective described, IBERDROLA has adopted a responsible corporate ethic set forth in the following 10 principles:

1. Comply with the laws in force in the country in which it operates while also adopting international standards and directives where the legal framework has not been adequately developed.
2. Adopt advanced corporate governance practices based on maximum corporate transparency and mutual trust with shareholders and investors.
3. Respect all human rights, especially those whose violation degrades workers collectively, rejecting child labour and forced or obligatory labour.
4. Develop a favourable framework of labour relations based on equality of opportunity and non-discrimination, promoting a safe and healthy environment and facilitating communication with our employees.
5. Develop responsible practices in the value chain: establishing transparent, objective and impartial processes with suppliers and providing clients with all relevant information about the products and services we sell.
6. Strengthen a culture of respect for the natural environment, reducing the environmental impact of the company's activities, defending biodiversity and promoting information and training in this culture.
7. Favour transparency and free market regulations, rejecting practices involving bribery, corruption and other types of contributions for purposes of obtaining advantages for the company, and respecting the rules of open competition.
8. Promote socially responsible actions in those companies in which we have management capacity or shareholder power, while also driving suppliers through the processes of selection and contracting.
9. Drive the means of communication and dialogue with the different collectives related to company activities in order to harmonise corporate values and social expectations.
10. Provide relevant and accurate information about our activities, submitting them to internal external processes of verification that guarantee their reliability and provide incentive for their continuous improvement.

2. - INDEXES, RATINGS AND AWARDS

Iberdrola's presence in sustainability, corporate reputation and corporate governance indexes

	Rating / Position
Sustainability	
Dow Jones Sustainability World Index 05	77 points / World Utilities Leadership Group Top 3
Dow Jones Sustainability Stoxx Index 05	77 points / European Utilities Leadership Group Top 3
OEKOM	B- / World Utilities Leadership Group Top 3
Corporate reputation	
MERCO 2005	Public Services Industry Leader
Corporate governance	
FTSE ISS Corporate Governance Index (CGI)	Iberdrola has been included in the index

According to the Dow Jones Index, IBERDROLA is among the global leaders in sustainability, obtaining the maximum qualification (100 points) in Investor Relations, Environmental Information and Social Information

IBERDROLA once again occupies one of the top spots among the principal global electricity companies for its contribution to sustainable development, as can be seen in the composition of the Dow Jones Sustainability Indexes 2005/2006, which were released to the public in September. In our sixth consecutive year in the Index, our Company obtained 77 points, close to the 79 granted to the company that was rated first in the sector. Our point total this year is higher than our total in 2004 (72 points), and is also better than the point total obtained by the first-place company last year (76 points). The Dow Jones Index is the main international reference for measuring the

contribution of companies to economic, environmental and social sustainability.

In the "Economic Dimension" section, Iberdrola received 83 points (compared to 74 last year), and its point total increased in almost all sections. Of special note is the highest qualification (100 points out of 100) in Investor Relations, as well as the point totals obtained in Risk and Crisis Management (94) and Price Risk Management (90).

In the "Environmental Dimension", highlights are the point totals received in Environmental Information (100 points), Climate Change (98 points) and Environmental Policy and Management (92 points). In the "Social Dimension", Iberdrola received the highest qualification in Social Information (100 points), and we substantially increased our scores in Commitment to Interest Groups, where we received 86 points, compared to the 75 obtained in 2004.

Inclusion in this Index strengthens Iberdrola's global reputation and makes the Company part of a select group of companies that meet the demanding criteria for action in the most diverse aspects of their activity. Iberdrola's leadership in the Dow Jones is recognition of its commitment to sustainability, reflected in the Company's Vision and the commitment in its Strategic Plan to the environment and clean energy.

Recognition

IBERDROLA, leader in transparency of environmental and social information, according to the Pacific Sustainability Index of energy companies worldwide

IBERDROLA is among the leaders of energy companies and utilities worldwide in the Pacific Sustainability Index (PSI) by the Roberts Environmental Center of Claremont McKenna College (USA). The index analyzed the sustainability reports of the largest energy companies worldwide in the Fortune Global 500 and the Fortune 1000 of US companies. IBERDROLA is in first place in the

sections of Environmental Information and Social Information, and is number two in the general ranking of 46 companies, only behind National Grid Transco (Great Britain).

IBERDROLA receives the Company of the Year award by the Spanish Chamber of Commerce in the United States

The Board of Directors of the Spanish Chamber of Commerce in the United States highlighted the corporate path that IBERDROLA has taken and its contributions to improving Spain's international image.

3. - COMMITMENT TO THE ENVIRONMENT

IBERDROLA registers its thermal plants in the National CO2 Emissions Register

IBERDROLA has registered its thermal electricity generation plants in the National CO2 Emissions Register (RENADE), managed by IBERCLEAR, as part of its compliance with the Kyoto Protocol and the European Directive. This organisation, attached to the Ministry for the Environment, will open the accounts in which the rights allocated for each thermal installation by the National Allocation Plan (NAP) and the sales operations carried out in the European market are recorded.

IBERDROLA acquires credits for the emission of two million tonnes of CO2 from the GG-CAP carbon fund

IBERDROLA has reached an agreement to acquire two million credits from the Greenhouse Gas Credit Aggregation Pool (GG-CAP), carbon fund, managed by Natsource, which will allow it to emit two million tonnes of CO2 between 2006 and 2012. Thanks to this agreement, the Company is certain to meet its commitments derived from the application of the Kyoto Protocol at a lower cost than that being negotiated on the European CO2 markets, which is about 20 euros per credit. The GG-CAP carbon fund, in which 26 European, North American and

Japanese companies participate, will acquire these credits from projects that prevent CO2 emissions in developing countries that have ratified the Kyoto Protocol but that are exempt from reducing their emissions between 2008 and 2012.

Iberdrola's participation in clean development mechanism (CDM) projects

The government has approved IBERDROLA's project in Guatemala as a clean development mechanism (CDM). The designated National Spanish authority has agreed to consider the Las Vacas hydroelectric plant (Guatemala), a project led by IBERDROLA, as a clean development mechanism (CDM), one of the flexibility elements included in the Kyoto Protocol. Specifically, the plant obtained CDM accreditation for a period of 21 years starting from 1 January 2004. The 45 MW Las Vacas plant, which has been up and running since May 2002, will enable an estimated annual reduction of around 90,000 tonnes of CO2 (1,897,620 tonnes over the entire period). IBERDROLA's participation on CDMs is in line with the company's global strategy to cope with climate change and is being pursued despite the fact that it has one of the generation capacities with the lowest level of emissions in Spain.

IBERDROLA's Global Environmental Management System

IBERDROLA has confirmed its position as the market leader for environmental management, with the implementation and certification of a large part of the organisation for its Environmental Management Systems based on the UNE-EN-ISO 14001 standard, covering 100% of plants for the production of electrical energy from thermal, nuclear and hydroelectric sources, the running and maintenance of 73% of wind-farms, etc. With this favourable situation from the outset, IBERDROLA has now taken a further step forward with the launch of an ambitious project to set up IBERDROLA's Global Environmental Management System, whose scope includes the

generation, distribution and marketing of electricity, the transport, distribution and marketing of gas, and the marketing of other products and services. Its main objective is to ensure the integration of environmental management at the highest level into IBERDROLA's strategic process.

4. - CONTRIBUTION TO SOCIAL DEVELOPMENT

For IBERDROLA, the key events of 2005 for social aspects were as follows:

Specific projects

- **"Andalusia Technology Corporation" Foundation.** IBERDROLA participated as a sponsor. Its objective is to contribute to the scientific, technological and social development of Andalusia in order to improve the productivity of Andalusian companies.
- **Business and disability programme.** IBERDROLA is actively involved in this programme, launched by the Fundación Empresa y Sociedad and Fundación ONCE.
- **OPTIMA programme.** IBERDROLA has joined the programme, launched by the Instituto de la Mujer to promote equal opportunities for men and women at companies.
- **Corporate volunteer programme.** IBERDROLA has launched a programme to promote and channel its employees' volunteer activities in the solidarity field.
- **Family responsible business certificate.** the Fundación +Familia is analysing the policies adopted by IBERDROLA to reconcile work and home lives in order to be able to grant our company the family responsible certificate (planned for the end of 2005).

- **Presentation of the GRI Guide for SMEs.** Together with BBVA, IBERDROLA is promoting and sponsoring a series of workshops presenting the GRI Guide "In five steps".
- **IBERDROLA Foundation Conference for 2005.** At the 2005 conference, various social projects were presented for grants along with innovative initiatives in the social action field.

Sponsorships

- **Art and culture programme.** the main sponsorship actions have included: restoration and illumination of Toledo Cathedral, IV Centenary of Don Quixote de la Mancha, Salamanca 2005 - Plaza Mayor de Europa, "The Aztec Empire" exhibition at the Guggenheim museum in Bilbao, illumination of various historical monuments and renovation of the Castillo de Javier (Navarra)
- **Education and training programme.** the initiatives supported include: doctoral thesis on the Sierra de Atapuerca fields, IBERDROLA's course at Bilbao engineering school, the "Energy Pathway" project with the region of Madrid and the framework agreement with the Valencia Chamber of Commerce for the holding of sessions and seminars, and participation in nine corporate social responsibility days, showcasing IBERDROLA's strategies and experiences, participation in 5 summer courses organised by Spanish universities focused on sustainability and CSR.
- **Environmental programme.** IBERDROLA has supported various initiatives, including: campaign to promote solar energy Madrid solar, "Manual on the Kyoto Protocol", for the Fundación Tormes-EB and various events focusing on the environment in Castilla-La Mancha, Murcia and other regions.

Other initiatives

- **Valencia consultative council.** The IBERDROLA Consultative Council was created in Valencia, similar to the councils already in place in Castilla y León and Andalusia.

5. - CORPORATE GOVERNANCE

The highlights for Corporate Governance over the first nine months of 2005 were as follows:

Appointments:

At the General Meeting on 18 March 2005, shareholders voted to ratify the appointment of Sebastián Battaner Arias, and to re-elect for the maximum term possible under Spanish law and the corporate bylaws of 5 years, the Executive Vice-chairman and Chief Executive Officer José Ignacio Sánchez Galán and the board members Víctor de Urrutia Vallejo, Ricardo Álvarez Isasi, José Ignacio Berroeta Echevarría, Juan Luis Arregui Ciársolo, Julio de Miguel Aynat and Sebastián Battaner Arias, who will continue in the offices held previously on the Board of Directors.

In addition, on 20 April 2005, the Board of Directors agreed that its members Javier Aresti y Victoria de Lecea and José Luis Antoñanzas Pérez-Egea will leave their posts after reaching the retirement age stipulated in the bylaws and Santiago Mayner Oyarbide and José Antonio Fernández Rivero will resign from their positions as members of the Board of Directors.

In order to fill the positions left vacant by Santiago Mayner Oyarbide and José Antonio Fernández Rivero, the company's Board of Directors agreed to appoint, in accordance with the co-opting procedure and subject to ratification at the first General Shareholders' Meeting to be held, the shareholders Xabier de Irala Estévez and Jesús María Cadenato Matía, who were respectively submitted by the institutional shareholders BBK and BBVA, as members of the Board of Directors of IBERDROLA,

S.A., classified as External Proprietary Directors. In addition, it was agreed to appoint the director Jesús María Cadenato Matía to sit on the Executive Delegate Commission and approve the classification of the director José Ignacio Berroeta Echevarría as an External Independent Director.

Lastly, at the Board meeting held on 22 June 2005, the company's Directors voted to appoint the director Xabier de Irala Estévez to sit on the Audit and Compliance Committee.

Reports and other resolutions

On 23 February 2005, the Board approved the Annual Report on Corporate Governance for 2004, in accordance with the form required by Circular 1/2004 of 17 March of the Spanish Securities Exchange Commission (CNMV). On the same date, the Board approved the Audit and Compliance Committee's activity report for 2004, which is intended to contribute to the development of Corporate Governance best practices by publishing information on the annual activities of this Committee.

Lastly, on 23 February the Board of Directors also resolved to develop provisions on the right to information prior to General Shareholder's

Meetings, representation and remote voting, as provided for in the corporate bylaws in order to make it easier for shareholders to exercise these rights at the General Shareholders' Meeting held on 18 March.

Disclosure

One of our Company's core Corporate Governance principles is to promote maximum transparency in the information – financial and other – provided to shareholders and markets. In line with this commitment, in the first half of 2005, the Company maintained a high level of activity with regard to information for institutional investors and financial analysts, which no doubt contributed to the excellent performance of Iberdrola's stock over the period.

Furthermore, the Spanish Securities Exchange Commission (Comisión Nacional del Mercado de Valores) was provided with information on all the relevant events concerning the Company's Corporate Governance, such as the notice to attend, documentation and resolutions from the General Meeting held on 18 March details of the members who have been appointed and who have resigned from the Board of Directors, and information on the Company's results for the first half of 2005.

B) EVOLUTION OF BUSINESS

(Although abridged, due to the brief nature of this quarterly report, the information included in this section must allow investors to form an adequate opinion on the activity performed by the company or its group and the results obtained during the period covered by this quarterly report, as well as its financial position and net worth and other essential information regarding the general state of affairs of the company or its group. Finally, a clear distinction should be made between comments referring to consolidated financial statements and those, if any, referring to separate financial statements.)

SEE ANNEX.

C) BASES OF PRESENTATION AND VALUATION POLICIES

(The financial and accounting data and information included in this regular public report should be prepared in accordance with the principles and criteria for recognition and measurement stipulated in prevailing legislation for drawing up financial and accounting information to be included in the annual accounts corresponding to the annual period to which this report refers. If, by exception, the generally accepted accounting criteria and principles stipulated in the corresponding legislation have not been applied to the data and information attached hereto, this fact and the underlying reasons should be stated, indicating the effect that such non-application could have on the net worth, the financial position and the results of the company or its consolidated group. Furthermore, and with a similar scope, any modifications in respect of the last audited annual accounts that may have been made in the accounting principles used in drawing up the attached information must be mentioned and explained. If the same accounting policies, criteria and principles have been applied as in the last annual accounts, and if the latter were drawn up in accordance with the prevailing accounting standards applicable to the company, this should be expressly stated. If any adjustments and/or reclassifications have been made during the preceding period in pursuance of prevailing legislation, to allow for changes in accounting policies, correction of errors or changes in the classification of accounting items, the necessary quantitative and qualitative information shall be included in this section to understand those adjustments and/or reclassifications.)

The consolidated financial and accounting information included in this regular public report has been prepared in accordance with the International Financial Reporting Standards (IFRS), as adopted by the European Commission following the procedure established in Regulation (EC) No 1606/2002 of the European Parliament and of the Council of 19 July 2002.

The foregoing is applicable to both the quarterly information advanced for this year and the comparative information given for last year.

Consequently, it differs from that used in the last audited consolidated annual accounts, which were prepared in accordance with the prevailing Spanish GAAP.

This notwithstanding, the 2004 consolidated annual accounts included, in Note 29, a reconciliation of the main equity items under the Spanish GAAP and the IFRS, describing the principal effects of the conversion to IFRS.

The accompanying consolidated financial statements have been drawn up in accordance with the accounting principle established for the First-Time Adoption of International Financial Reporting Standards (hereinafter IFRS), including the International Accounting Standards (IAS), the interpretations issued by the International Financial Reporting Interpretations Committee (IFRIC) and the Standing Interpretations Committee (SIC).

It should be borne in mind that:

- This information was prepared entirely by the company and has not been audited.
- The standards currently issued and adopted by the European Union are subject to the interpretations emitted from time to time by the IFRIC. The IASB (International Accounting Standards Board) may also issue new standards, which could be applicable to the financial years commencing as from 1 January 2005.
- The changes deriving from these issues or from the evolution of practice in the sector could also affect certain decisions or interpretations made by the IBERDROLA Group when preparing this information.

As a result of the effects of these changes on the final consolidated financial statements for 2004, to be published for comparative purposes in the 2005 annual accounts, and on the interim financial statements, the latter could differ from the information presented in this report owing to the retrospective application of new or modified accounting standards.

Finally, no set-off has been made in the accompanying financial information of transactions that could be considered to exist on the electricity generation market by Iberdrola Generación, S.A. and Iberdrola, S.A. (as supply undertaking). This is provisional and currently under study within the sector.

The average number of employees does not include 93 workers in special employment situations this year and 125 last year, in the separate and consolidated statements.

The increased number of employees in respect of last year is due to the inclusion under the IAS of a number of companies in the consolidated group that were not included under the GAAP.

D) DIVIDENDS DISTRIBUTED DURING THE PERIOD:

(All dividends effectively paid since the beginning of the financial year must be mentioned).

		% of nominal	Euro per share (x.xx)	Amount (thousand euro)
1. Ordinary Shares	3100	25.6	0.77	692,390
2. Preference Shares	3110			
3. Redeemable Shares	3115			
4. Non-Voting Shares	3120			

Additional information on the distribution of dividends (interim, final, etc.)

The interim dividend for 2004 was paid on 3 January 2005, at the rate of 0.326 euro per share.

The final dividend for 2004 was paid on 1 July 2005, at the rate of 0.44208279 euro per share.

E) SIGNIFICANT EVENTS (*)

1. Purchases or transfers of shares in the capital of companies listed on the Stock Exchange giving rise to the obligation to report pursuant to the Stock Market Act s. 53 (5% and multiples)
2. Purchases of treasury shares giving rise to the obligation to report pursuant to Supplementary Provision 1 of the Corporations Act (1%)
3. Other significant increases or reductions of fixed assets (stakes of over 10% in unlisted companies, significant investments or divestments in fixed assets, etc.)
4. Increases and reductions of share capital or the value of stocks
5. Issues, repayments or cancellations of debentures and notes
6. Changes of Directors or the Board of Directors
7. Alterations to the Bylaws
8. Conversions, mergers or demergers
9. Changes in the institutional regulations of the sector with a material effect on the economic or financial position of the Company or Group
10. Lawsuits, litigations or contentious proceedings that may significantly affect the financial position of the Company or Group
11. Situations of bankruptcy, temporary receivership, etc.
12. Special agreements for the limitation, assignment or waiver, in full or in part, of voting and economic rights corresponding to the company's shares
13. Strategic agreements with national or international groups (exchange of blocks of shares, etc.)
14. Other significant events

2005

Quarterly report

NET PROFIT UP 12.5% TO 653 MILLION EUROS

Strong investments in Spain and the evolution of the International Business, growth drivers

- Combined cycle production in Spain increases 70.4%.
- Wind-energy production is up 32.3%.
- The kWh produced in Mexico and Brazil are up 15.1% over the same period of 2004.
- The capacity brought into service by Iberdrola over the last 12 months totalled 2,487 MW (76% in Spain).

Gross Operating Profit (EBITDA) increases 9.3% to 1,596 million euros

- Net Operating Profit (EBIT) is up 10.2% to 1,111.5 MM €, in line with the growth in EBITDA.

Renewables & International contribute 26% to total EBITDA

- In the Renewable Energy Business, EBITDA totalled 189.7 MM € (+53%).
- In the International Business, EBITDA rose 59% to 230.8 million euros.

Operating Efficiency continues improving

- Net Operating Expenses are down 1.8%.

Financial Leverage drops to 55.0%

- Investments made over the period totalled 993 million euros.
- Interim dividend paid in H1 2005 amounted to 294 million euros.

Operating Highlights

- The first half of the year was characterised by a number of challenging conditions, with a very low level of hydroelectric production combined with a reduction in nuclear production after the Vandellós and Cofrentes plants were temporarily stopped for refuelling, and scheduled maintenance works at Guardo's thermal plant, in addition to high fuel prices. This environment has been marked by strong growth in demand for electricity, which has been fulfilled without any major incidents to report, thanks to the investments made on new technologies.
- The major investments made by the company on generation since the start of the Strategic Plan have enabled IBERDROLA to record only a limited drop in production in an extremely dry semester, with hydroelectric and nuclear production down 48% and 17.5% respectively. In Spain, combined cycle plants have doubled their contribution to make up 20.3% of total production, with renewable energies accounting for 11.3%. The Group's total production came out at 40,027 GWh.
- Operating Profit improved significantly, both in gross terms (EBITDA +9.3%) and in net terms (EBIT +10.2%), reflecting the efficiency improvements achieved, which have made it possible to reduce Net Operating Expenses by -1.8%.
- The Renewable and International Businesses, both with strong increases in Operating Profit, are once again the main growth drivers of the Group:
 - Renewables: EBITDA up 52.5% to 189.7 million euros, driven by a 32.3% increase in wind energy production.
 - International: EBITDA up 59% to 230.8 million euros thanks primarily to the good development of businesses in Mexico and Brazil.
- Net Profit rose to 653 million euros (+12.5%).

Development of the Strategic Plan

1. - INVESTMENTS IN GENERATION

Over the first six months of 2005, IBERDROLA brought 1,117 MW of additional capacity into service (463 MW during the second quarter), taking the total installed capacity up to 26,354 MW.

Combined cycle plants accounted for the majority of the new capacity in operation, with the Aceca plant (400 MW) launched in Q2 and the La Laguna (500 MW) plant in Mexico brought online in Q1. During the first half of the year, a further 74 MW of renewable energies and 44 MW of traditional generation capacity were brought into service.

1.1 SPAIN

> Combined cycle plants

Iberdrola's combined cycle plant capacity in Spain totalled 3,200 MW at the end of H1, corresponding to the Castellon, Castejon (Navarra), BBE (Vizcaya), Tarragona and Santurce plants, the first two Arcos de la Frontera generating units and Aceca (400 MW). By the end of 2005, Iberdrola plans to have 4,000 MW in operation, with this figure to rise to 5,600 MW by the end of 2007.

The Santurce plant entered into service on January 4, 2005, followed by Arcos on February 23, 2005.

The adjusted load factor for combined cycle plants over the first half of the year was 71.3%.

Aceca combined cycle plant

The Aceca plant in Villaseca de la Sagra (Toledo) was brought into service with gas on schedule on July 2, with an installed capacity of 400 MW. On April 2, it was connected to the grid for the first time and in the first few days of Q2 it started operating tests.

Project	Capacity (MW)	Start of operations
Castellón A	800	2002
Castejón	400	2002
BBE	200	2003
Tarragona	200	2004
Santurce	400	2004
Arcos I and II	800	2004
Aceca	400	2005
Arcos III	800	2005
Escombreras	800	2006
Castellón B	800	2007
TOTAL	5,600	

> Renewable Energy

At June 30, 2005, Iberdrola had an installed capacity of 3,280 MW (2,965 MW on wind-farms and 315 MW on mini-hydro plants), confirming Iberdrola's position as the world leader on wind energy in terms of installed capacity. For 2008, the goal is to take the installed capacity up to 5,500 MW, with 4,500 MW to be located in Spain and 1,000 MW outside of Spain.

Operating capacity

Over the first half of 2005, the company brought an additional 74 MW into service compared with the end of 2004, corresponding to:

- New facilities brought online: Bonete (10 MW).
- Capacity added to existing wind facilities. This represents: 6 MW for the Cantalojas wind-farm, 3 MW for Molinos del Cidacos, 8.5 MW for Grado, 27.9 MW for Bordecorex Norte, 15.3 MW for Serra da Meira, 1.5 MW for Larriba-Hornillos and 2.07 MW for Préjano-Enciso.

Capacity under construction

IBERDROLA has begun work on building four wind-farms in the municipalities of Maranchón and Luzón (Guadalajara) with a capacity of 130 MW, following on from two facilities that are already in the assembly phase and another plant that is scheduled to begin being set up shortly, giving the Maranchón Wind-farm Complex a total capacity of 208 MW. The investments planned for these seven facilities come to approximately 188 million euros.

In concrete terms, the company started work on building the 30 MW El Cabezuelo facility, which has 15 G87 Gamesa wind turbines (2 MW nominal capacity). In addition to this facility, there is the Clares wind-farm (32 MW), with 16 wind turbines that are the same as the previous ones; Escalón, with 30 MW and 15 wind turbines; and Luzón-Norte, with 38 MW and 19 wind turbines. All of them will be connected to the Fuentes de la Alcarria substation. These four facilities will be added to the other two, which are already in the wind turbine assembly phase: Maranchón I and Maranchón IV, with 18 MW and 48 MW of capacity respectively. In addition, work to build the Maranchón Sur (12 MW) plant is scheduled to begin shortly.

1.2 LATIN AMERICA

Mexico

In Q1, IBERDROLA brought into service the La Laguna II combined cycle plant in the state of Durango (Mexico), with an installed capacity of 500 MW. IBERDROLA has been assured the sale of all of the energy produced by this new combined cycle plant over the next 25 years. With La Laguna II

plant brought into service, IBERDROLA has confirmed its position as the leading private electricity producer in Mexico and number two in the country after the state-owned CFE. The Company now has 2,694 MW of installed capacity in operation, corresponding to the Monterrey III (1,037 MW), Altamira III and IV (1,036 MW) and La Laguna II (500 MW) combined cycle plants and the Enertek cogeneration plant (120 MW).

Furthermore, IBERDROLA is building another two combined cycle plants in Mexico: the 1,121 MW Altamira V plant (Tamaulipas), which will enter into service in November 2006, and the 1,135 MW Tamazunchale plant, which is scheduled to be brought into service in June 2007, representing the two biggest generation contracts awarded in this country to date. The Company now has power generation projects representing a combined total of around 5,000 MW in Mexico, in line with the targets set in its Strategic Plan.

Project	Capacity (MW)	Operational status
Enertek	120	100% operational
Monterrey	1,037	100% operational
Altamira IV	1,036	100% operational
La Laguna	500	100% operational
Altamira V	1,121	2006
Tamazunchale	1,135	2007
Total	4,949	

In addition, IBERDROLA recently launched its renewable energy operations in Mexico and is developing a number of projects in the state of Oaxaca for over 200 MW.

Brazil

In Brazil, Iberdrola has the 450 MW Itapebí hydroelectric plant (175 MW of which are attributable to Iberdrola), whose three generation units are operating at full capacity and the Termopernambuco combined cycle plant, which has

an installed capacity of 520 MW (203 MW attributable to Iberdrola). On cogeneration, the company has an operating capacity of 93 MW.

With respect to renewable energy, IBERDROLA awarded Wobben Windpower the contract for the supply, assembly, start-up, running and maintenance of the Rio do Fogo wind farm (50 MW), located in the state of Rio Grande do Norte, for a total of 45.2 million euros. This is the first facility with such characteristics that the Company will put into service in this country. The company awarded this contract is a Brazilian subsidiary owned by the German company Enercon, which has undertaken to complete the construction and put the wind farm into service in 2006. IBERDROLA has signed a 20-year contract with Eletrobrás for the supply of the energy produced at Rio do Fogo.

1.3 EUROPE

Greece

IBERDROLA is a strategic partner of the biggest producer of wind energy in Greece, Rokas, in which it has a 26% stake. In line with the agreement signed in December last year (under which Iberdrola acquired 21% of this company), the Company increased its stake by 5% in H1 2005. The Rokas Group aims to reach 600 MW of installed capacity over the next few years, some 200 MW of which are already operational. Greece represents a key market for the development of IBERDROLA's objectives for renewable energy. Indeed, this country has major potential in this business, given that it now has 470 MW of wind power in operation and a target of 2,000 MW has been set for 2010.

Portugal

Following Iberdrola's decision to enter the Portuguese wind market by sealing an agreement with Gamesa last year to acquire the 18 MW Catefica wind farm, which is scheduled to enter into service over the second half of 2005, Iberdrola set up Aeolia with two Portuguese partners in order to

develop renewable energies in Portugal, first identifying locations and then building new wind farms. In Portugal, IBERDROLA already has 75 MW in development and is negotiating for permits to set up 174 MW.

Furthermore, it has an agreement with Gamesa for the acquisition of 250 MW in operation in Portugal and the joint promotion of further wind farms. In H2 2005, Iberdrola plans to bring the Catefica wind-farm into service. Iberdrola sees this country as a high-potential, high-growth market for the renewable energy sector, with only 300 MW of wind capacity at year-end 2003 out of the 3,750 MW set as the target for 2010. Within this context, Iberdrola aims to bid for more wind-farm generation capacity, with contracts to be awarded by the Portuguese government shortly.

In addition to this, Iberdrola continues to be a key shareholder in two Portuguese companies: EDP (5.7%) and Galp Energia (4%).

Germany, France, Italy and the UK

In line with the company's strategy to promote renewable energies, various agreements have been sealed with local developers in Germany, France and Italy:

- IBERDROLA has signed an agreement with the German company Eternegy, which is specialised in the development of wind farms in Europe, to buy 201 MW of capacity at various stages of development in France and Germany. In concrete terms, IBERDROLA is set to acquire 107 MW under development in Germany and 94 MW in France, which will be incorporated into the company's subsidiaries in these two countries: IBERDROLA Regenerative Energien GmbH and IBERDROLA Énergies Renouvelables SAS.
- IBERDROLA has concluded an agreement with the German developer P&T Technology and its financial services subsidiary EECH AG to buy wind-farm development rights from them in France (131.7 MW) and Italy (200 MW).

- IBERDROLA has sealed an agreement with Total and OPT for the development of wave power projects, and will start to look into locations in France.

Furthermore, in line with IBERDROLA's interest in developing the international market for renewable energies, the company has opened up new offices in Rennes (France), Birmingham (UK) and Rome (Italy). IBERDROLA has various projects to build wind-farms in these countries, in addition to its interests in Greece, Portugal, Mexico, Brazil and Germany.

The company has also joined the Board of Directors of the European Wind Energy Association (EWEA), which aims to actively promote the development of wind farms in Europe and around the world.

Trading

The Company is developing a major trading business in Europe, with operations in Austria, Belgium, France, Germany, the Netherlands, Portugal, Spain and Switzerland. The Company aims to ramp up these energy buying and selling activities in the short term to include other countries in Europe such as Poland, Greece, the United Kingdom and Italy. The trading business is run out of Madrid with a support office in Zurich. The highlights of H1 2005 were as follows:

- The launch of operations for the capacity acquired from NUON, aiming for 87.6 million KWh in 2005.
- The participation since April 5 – the launch date – in the daily capacity auctions for exporting energy from Germany to France, enabling IBERDROLA to optimise its contractual position in Germany, France, and Spain.
- The launch of emission right buying-selling operations in order to optimise Iberdrola's generation portfolio.

2.- DISTRIBUTION

2.1 SPAIN

At June 30, 2005, IBERDROLA had some 9.7 million customers in Spain, reflecting the addition of around 130,000 new customers year-on-year.

The level of energy distributed rose to 48,368 GWh, up 5.9% on the same period in 2004. This growth has consistently come out at over 5% over the last few years, and is even more significant in peak demand, with successive record levels of consumption, up from 12,668 MW in the winter of 2000/2001 to 16,976 MW in the winter of 2004/2005, representing an increase of 34% over four years.

In H1 2005, Iberdrola's ICEIT (Installed Capacity Equivalent Interruption Time) came to 0.82 hours, a 7% improvement from 0.88 hours on the same period in 2004, and 27% from the level seen for the same period in 2003 (1.13 hours). Maintaining this level of quality represents a historical record for Iberdrola, especially considering the particularly adverse climatologic conditions seen over the first few months of the year. This has been made possible thanks to the new infrastructures brought into service and the maintenance and development work carried out on existing facilities, making it possible to meet the surge in demand without any significant incidents to report.

2.2. LATIN AMERICA

At June 30, IBERDROLA had 7.8 million customers managed in the region, and the energy distributed managed totalled 9,209 GWh (+15.1%). During the first half of the year, the distribution companies of Iberdrola in Brazil (Coelba, Cosern and Celpe) have been entitled to additional tariff adjustments which meant a 1% increase over the tariff reviews carried out by the Brazilian government in Q3 2004. In April 2005, Celpe had its four-yearly tariff review. In addition, for Coelba and Cosern, the recognition of the regulatory asset base has been adjusted on a retroactive basis.

3.- SUPPLY

3.1 ELECTRICITY

> Spanish business: eligible electricity customers

In H1 2005, IBERDROLA sold 16,064 GWh on the domestic market (+1,522 GWh), with some 843,000 customers, representing an additional 555,000 customers year-on-year.

In June, IBERDROLA reached its 100,000th green energy customer in Spain. Out of all the green energy contracts offered by the company, 98% correspond to residential customers and small businesses, with the remaining 2% covering large industries and government bodies.

In the first six months of the year, IBERDROLA opened its first two stores outside of its traditional market in Seville and Zaragoza, following the stores opened previously in Madrid and Bilbao.

- Portuguese business

After strengthening its focus on Portugal, with the creation of its Portuguese subsidiary IBERDROLA Portugal in 2004, IBERDROLA has stepped up its supply activity, and now has a share of nearly 12% of this country's liberalised market, with 1,300

contracts signed for an annual consumption in excess of 1,100 million kWh. As such, the Company plans to take its share of the Portuguese supply market up to between 15% and 20% over the next five years, with a portfolio of more than one million customers.

3.2 GAS

> *Spain*

Procurement:

Proactive policy to guarantee supplies

In the infrastructure sector, IBERDROLA has a 25% stake in the Bahía Bizkaia Gas (BBG) regasification plant and a 30% interest in the Sagunto plant. These plants have two 150,000 m³ LNG storage tanks, which are able to receive one large methane vessel every four days, making it possible for them to unload in less than 12 hours, significantly strengthening the Spanish gas system.

Elsewhere, the company has a 12% stake in the Medgaz gas pipeline, which, with a capacity of 8 bcm (billion cubic meters) a year, will connect Algeria's gas fields directly with Spain after it comes into service in 2009, after being rated as a priority by the Spanish council of ministers only a few weeks ago.

CORES (Corporación de Reservas Estratégicas de Productos Petrolíferos) certifies that IBERDROLA has exceeded the minimum requirements for reserves

Regarding the diversification of its gas supplies, IBERDROLA has one of the most reliable ranges of natural gas procurements of the Spanish gas system. In this respect, it is worth mentioning that IBERDROLA has exceeded the minimum level of safety reserves required for natural gas in accordance with the legislation in force, as certified recently by the Corporation for Strategic Petroleum Product Reserves (Corporación de Reservas Estratégicas de Productos Petrolíferos, CORES), attesting to the reliability of the company's sourcing

and supply system. Following the inspection carried out by this entity after the Royal Decree came into force, IBERDROLA has been accredited as having 42 days of gas reserves, compared with the 35 required by law, enabling it to fulfil the contracts signed with its customers without any problems at all.

The reserves of the Company, which this year aims to provide 13% of the total gas consumed on the Spanish market, are stored in underground storage facilities, tanks at the regasification plants in Barcelona, Bilbao and Huelva, in transport in the gas pipelines and on methane tankers near to the regasification terminals where they are going to unload. It is important to note that the above-mentioned Royal Decree, published in August last year, governs the obligation to maintain backup gas supplies in order to service customers with firm levels of consumption in emergency situations. In these cases, the company would be able to harness its reserves and ENAGAS would be responsible for putting them on the grid in order to guarantee supplies for IBERDROLA's customers.

The total volume of gas supplied by IBERDROLA in H1 2005 is up +59% to 24,663 GWh, giving it a 13.0% share of the total market, including gas supplies for both end customers and combined cycle plants. IBERDROLA now has supply contracts in place for over 6.75 bcm per year for the Spanish market, and it is the second biggest developer of gas infrastructures in Spain, thanks to its interests in the Bilbao and Sagunto regasification plants and the Medgaz underwater gas pipeline.

> *Europe*

IBERDROLA is the only Spanish power company involved in the opening up of the French gas market. After entering the market after being awarded 330,000 MWh in an auction organised by Gaz du Sud Ouest (GSO), a subsidiary of Totalfin-Elf, under the auspices of the French Commission on Energy Regulation, IBERDROLA has sealed its first gas sales on the liberalised French market with Ford and ADA. Indeed, IBERDROLA will supply both

of these companies with 330,000 MWh of gas in France from mid-2005 to mid-2008, placing all of the 330,000 MWh that were granted to it in the GSO auction and that it undertook to supply in the south west region of France.

4.- RATIONALISATION AND OPTIMISATION OF FINANCIAL RESOURCES

Taking advantage of the excellent conditions prevailing in the financial markets in H1 2005, IBERDROLA has improved the conditions of its financial debt both in terms of cost and increasing the average maturity, while maintaining its policy of minimizing the volatility of the financial expenses.

IBERDROLA signs a seven-year loan for 1,200 million euros

On May 13, IBERDROLA concluded a seven-year syndicated loan for 1,200 million euros with 16 leading financial entities. The transaction is split into two tranches both with same maturity: a 500 million euros syndicated loan that replaces the club-deal loan signed in May 2004, and a 700 million euros revolving loan facility. The loan tranche has a floating rate referenced to Euribor with a 0.17% margin (compared with 0.275% in the previous transaction), while the revolving line has a 0.15% margin, which represents the lowest margin on record for such kind of transactions among Spanish companies.

The operation's goal is to take advantage of the excellent conditions available at present on the banking market in order to finance IBERDROLA's general financing needs and refinance the five-year Club Deal loan set up by the Company in May 2004 for 500 million euros, improving its conditions.

500 million euro 10-year bond issue on the euro market

On June 10, IBERDROLA closed a 10-year bond issue for 500 million euros on the euro bond market with a 3.50% coupon (equivalent to mid swaps plus 32 bp), the lowest ever achieved by a Spanish business for a financing operation of this type. This issue will enable the company to refinance its debt under very favourable conditions while increasing its average maturity, following a principle of financial prudence, and continuing to finance the investments provided for in its Strategic Plan.

The bonds were placed with around 50 European investors, primarily mutual funds, insurance companies, pension funds and banks. The placement was rated as a resounding success with the market, even more so because of the volatility seen over the last few months. The transaction confirms, once more, the financial standing and low-risk profile of IBERDROLA, which are reflected in the company's total accessibility for the various financing markets.

This operation, which marks IBERDROLA's return to the European bond market and has become a new reference for the market, replaces the company's other five-year bond, which matured in May.

Restructuring of credit lines

IBERDROLA has agreed with its main financial entities, to sign three-year bilateral credit lines for a total amount of 500 million euros aiming to strengthen its liquidity instruments.

In addition, the amount of 364-days credit lines has been reduced to 230 million euros.

Liquidity

As a consequence of this strengthening of its liquidity instruments, the rating agency Moody's has rated the liquidity of Iberdrola as "excellent" in its latest review of June 2005.

5.- NON-ENERGY BUSINESSES

IBERDROLA Inmobiliaria closed out H1 2005 with 21 residential developments under construction, representing a total of 1,578 homes. The key operations carried out in Q2 included:

- Investment in Rosas (Gerona) for a 533-home residential development. This operation is moving on to a ground development phase and another home development phase. Both phases are planned for 2007 and 2009 respectively. The land investment comes to 18.4 million euros.
- Investment in the Las Minas sector (Ciudad Real) for a 110-home residential development. This operation is scheduled for 2010, with a land investment of 3.4 million euros.
- Signature of an agreement with the municipality of Valladolid to restore a historical building with a view to converting it into a five-star hotel.
- Investment in a new 62-home residential development in Lardero (Logroño), with work scheduled to finish in 2007.

For its part, **IBERDROLA Ingeniería y Construcción** carried out various operations in Q2, including:

- Awarding of a contract to strengthen the electricity infrastructure in the states of Baja California Sur, Chihuahua, Sonora, Durango and Tamaulipas in Mexico for 55 million dollars.
- Awarding of a contract for the building and installation of the electricity infrastructure in the Mexican states of Chihuahua and Nuevo León for 67.7 million dollars.
- Awarding of a contract for a turnkey project to build a dispatch generation centre for the AES combined cycle plant in Cartagena, with a capacity of 1,200 MW. This project will take place over 10 months.

- Awarding of a contract to develop in just 6 months a wind-farm operation and control centre for Corporación Eólica SA (CESA) in Madrid, covering 26 wind parks with a total capacity of 800 MW, in addition to 23 substations.

6. - SHAREHOLDER COMPENSATION

As approved at the General Shareholders' Meeting on March 18, IBERDROLA paid out a gross additional dividend for 2004 of 0.442 euros per share – 0.375 euros after tax – representing an increase of 14.3% on the previous year. The company had already paid out an interim dividend of 0.326 euros per share (gross) on January 3 on the profits for 2004. In this way, the total dividend for the year comes out at 0.768 euros per share (gross), up 14.3% on the total dividend paid out for 2003. This increase reflects the company's commitment to increasing the remuneration of its shareholders in the same proportion as growth in its net profit

7. – THE BOARD OF DIRECTORS APPOINTS Mr. IGNACIO GALAN SUCCESSOR OF Mr. IÑIGO DE ORIOL AS CHAIRMAN OF IBERDROLA

On April 20, 2005, the Board of Directors voted that when Iñigo de Oriol e Ybarra retires as Chairman of the Company's Board of Directors, in accordance with the internal statutes governing the Board of Directors, he will be replaced in this position by the current Executive Vice-chairman and Chief Executive Officer, José Ignacio Sánchez Galán.

During the meeting, the members of the Board of Directors emphasized the extraordinarily brilliant and exemplary career of Iñigo de Oriol at the helm first of Hidroeléctrica Española, and later of IBERDROLA, agreeing that he will doubtless be regarded as one of the most emblematic entrepreneurs the Spanish electricity industry has ever had.

The Board of Directors also stressed the model way in which Mr. Oriol proposed his replacement as the top executive of IBERDROLA: in an orderly and logical fashion and with no surprises, which will serve to eliminate uncertainties. The Board also

emphasize that Mr. Oriol successfully appointed an executive as Ignacio Galan to head the Company, and noted his decision to propose him as his successor, after four intense years of teamwork and a trajectory that is beyond reproach.

Analysis of H1 2005

Energy production

	GWh	vs. 2004	% Weight
Gas combined cycle	14,762	4,006 37.2%	36.9%
Renewable energy	3,470	742 27.2%	8.7%
Wind energy	3,152	769 32.3%	-
Hydroelectric	4,940	-4,553 -48.0%	12.3%
Nuclear	10,794	-2,290 -17.5%	27.0%
Fuel-oil	1,871	1,240 196.5%	4.7%
Coal	3,246	-135 -4.0%	8.1%
Cogeneration	944	41 4.5%	2.4%
TOTAL NET PRODUCTION	40,027	-949 -2.3%	100.0%
ENERGY DISTRIBUTED	61,552	6.2%	

Energy Production: Spain

	GWh	vs. 2004	% Weight
Gas combined cycle	6,247	70.4%	20.3%
Renewable energy	3,470	27.2%	11.3%
Wind energy	3,152	32.3%	-
Hydroelectric	4,466	-49.1%	14.5%
Nuclear	10,794	-17.5%	35.0%
Fuel-oil	1,871	196.5%	6.1%
Coal	3,246	-4.0%	10.5%
Cogeneration	724	1.5%	2.3%
TOTAL NET PRODUCTION	30,818	-6.5%	100.0%
ENERGY DISTRIBUTED	48,368	5.9%	
LEVEL OF HYDROELECTRIC RESERVES AT 06/30/05		36.5% (4,120 GWh)	

Note: Production data in accordance with the consolidation method used

Energy Production: Latin America

	GWh	vs. 2004	% Weight
Gas combined cycle	8,515	20.1%	92.5%
Hydroelectric	474	-34.0%	5.1%
Cogeneration	220	15.8%	2.4%
TOTAL NET PRODUCTION	9,209	15.1%	100.0%
ENERGY DISTRIBUTED (managed)	13,184	7.4%	

Note: Production data in accordance with the consolidation method used

1. - PRODUCTION: SPAIN

The Group's net production in Spain came to 30,818 GWh in H1 2005, successfully limiting the fall in production to 6.5% in one of the driest half-years on record over the last 60 years, with hydroelectric production down 49.1%, combined with a 17.5% reduction in nuclear production after the Cofrentes and Vandellós plants were temporarily stopped for refuelling, and scheduled maintenance works at Guardo's thermal plant. This demonstrates the importance of the major investments made on combined cycle and renewables, which together accounted for around 32% of Iberdrola's total production in Spain over the half-year period.

Furthermore, these exceptional circumstances aforementioned are not likely to happen again during H2 2005 given the end of the refuelling at the nuclear plants and the finishing of the maintenance works at the thermal plants.

The most notable events registered are:

- +70.4% increase in combined cycle production up to 6,247 GWh, doubling its contribution to total production, accounting for 20.3% compared with 11.1% in H1 2004. Over the first six months of this year, the combined cycle technology has consolidated its position as the second biggest contributor to total production in Spain.
- Wind energy production increased 32.3 %, taking the weighting of renewable energies facilities up to 11.3% in the generation mix for the semester.
- Iberdrola achieved a **26.9% share of the wholesale production market** in H1 2005. In comparative terms, energy production can be broken down as follows:

	H1 2005	H1 2004
Gas combined cycle	20.3%	11.1%
Renewable energy	11.3%	8.3%
Hydroelectric	14.5%	26.6%
Nuclear	35.0%	39.7%
Fuel-oil	6.1%	1.9%
Coal	10.5%	10.3%
Cogeneration	2.3%	2.2%
Total	100%	100%

With respect to CO₂ emissions, the percentage of total emission-free production in Spain rose to 60.8% (18,730 GWh) with 219 gr. CO₂ per KWh.

2. - PRODUCTION: LATIN AMERICA

In Latin America, total production is up 15.1% to 9,209 GWh, with the majority (92.5%) generated by the combined cycle plants.

	Production	Change
Mexico (combined cycles)	7,744	10.8%
South America	1,465	44.9%
Combined cycles	771	648.5%
Hydroelectric	474	-34.0%
Cogeneration	220	15.8%
Total	9,209	15.1%

The growth seen in this region is primarily due to the Monterrey (1,037 MW), Altamira (1,036 MW), Enertek (120 MW) and La Laguna (500 MW) plants operating at full capacity, with the latter brought into service on March 15, in addition to the contribution of the Termopernambuco plant in Brazil. With regard to hydroelectric energy, the Itapebí plant in Brazil has been working without incidents, being the drop in production attributed to the extraordinary contribution recorded in 2004 coming from the sale of its surplus production to the pool.

3. - MARKET: SPAIN

In the domestic market, Iberdrola's total demand measured on the grid is up 5.9% to 48,368 GWh, once again confirming Iberdrola's position as the leader in the Spanish distribution market (tariff + commercial: 39.4% market share). The company now has 9.7 million customers representing an increase of around 130,000 year-on-year.

4. - MARKET: LATIN AMERICA

The evolution of demand for Iberdrola's three distribution companies in Brazil is reflected in the following table:

Energy Distributed (GWh) (managed)	H1 2005	vs. 2004
Coelba	5,654	8.5%
Cosern	1,706	10.3%
Celpe	4,175	8.8%
Total	11,535	8.9%

It is worth highlighting that during the first half of the year, the distribution companies of Iberdrola in Brazil (Coelba, Cosern and Celpe) have been entitled to additional tariff adjustments which meant a 1% increase over the tariff reviews carried out in Q3 2004. In April 2005, Celpe had its four-yearly tariff review. In addition, for Coelba and Cosern, the recognition of the regulatory asset base has been adjusted on a retroactive basis.

Analysis of results for the period (Unaudited)

January- June 2005

The most notable aspects of the results for H1 2005 are as follows:

	MM €	vs. 2004
NET SALES	5,419.9	+30.7%
GROSS MARGIN	2,302.7	+2.7%
BASIC MARGIN	2,366.9	+5.6%
EBITDA	1,596.4	+9.3%
EBIT	1,115.5	+10.2%
NET PROFIT	653.0	+12.5%

1. - NET SALES

The Group's Net Sales totalled 5,419.9 million euros in H1 2005, up 30.7% on the same period in 2004, reflecting the positive contribution of all of the Group's businesses: the Domestic Energy business, the main growth driver, rose 33.1%, the International business 23.1%, and the Non-Energy business 25.6%.

The main factors driving this change in each of the businesses were as follows:

- In the Domestic Energy Business, the 33.1% increase in Net Sales reflects the increases recorded on Generation (21.3%) and Supply (31.8%), positively affected by the higher prices, Renewables (52.5%) by the increase in
- production and installed capacity, and Distribution (3.0%), in line with the increase in its regulated revenues.
- In the International business, Net Sales is up 23.1% to 830.2 million euros. Mexico is the region that made the biggest relative contribution (60.8%). Also of note is the increase in Net Sales in Brazil, primarily as a result of the increase in demand and upward readjustment in tariffs.
- On Non-Energy businesses, Net Sales is up 25.6% to 540.8 million euros, as a result of the activity in the real estate business, in addition to including Iberdrola Ingenieria in accordance to IFRS, and others.

On the other hand, and regarding the tariff deviation generated over the first half of 2005, it is necessary to take the following aspects into consideration:

- 1) On a sector basis, the aforementioned tariff deviation for H1 2005 might reach an amount close to 1,422 million euros.
- 2) In accordance with Royal Decree-Law 5/2005 of March 11, the provisional share for the financing of such tariff deviation comes out at 35.01% for Iberdrola, representing approximately 498 million euros before taxes.
- 3) In addition, in order to support the accounting treatment of the tariff deviation, the following aspects have been factored:
 - a) Articles 15 to 20 of the Electricity Sector Law 54/1997 of November 27, governing the economic regime of the various sector activities. In general terms, the remuneration of the generation activities is established in those articles accordingly to the prices resulting from the functioning of a liberalised market.
 - b) The precedent set by the recognition in full of the tariff deviation for 2000, 2001 and 2002 (Art 94.2 Law 53/2002).
 - c) The objectives set in IAS 18: An "ordinary revenue is recognised when it is probable that future economic benefits flow to the company and the amount of revenue can be measured reliably".

As is already known, although in the existing regulatory framework this deviation is borne by the generation companies, the services rendered by this business complies with all the requirements included in that rule:

- Revenues can be measured reliably, as generation prices are determined by the pool.
- The periodic C.N.E. settlements explicitly specify the revenues corresponding to each generator. However, there are not enough revenues collected by the distribution companies.

In light of the factors outlined above, it is possible to conclude that there are currently enough reasons for the confirmation at the end of the current fiscal year of the recoverability of the tariff deviation that might arise during 2005.

2. - GROSS MARGIN

On a consolidated level, the Gross Margin came out at 2,302.7 million euros, representing an increase of 2.7% in relation to the same period in 2004. As outlined below, the Gross Margin of the Domestic Energy Business includes the CO2 emission allowances cost which has totalled 78.6 million euros over the period. The following contrasting aspects can be highlighted regarding the evolution of the Gross Margin in each business:

2.1. - DOMESTIC ENERGY BUSINESS

The Gross Margin has dipped slightly (-3.1%), down to 1,786.6 million euros:

- The change in the Gross Margin for the Generation Business in Spain (854.4 million euros, -9.0%) can be explained in the following context:
 - The production in the ordinary regime is down 9.9% in a half-year period marked by a sharp fall in hydroelectric production in Spain (-49.1%) combined with a 17.5% reduction in nuclear production due to the Cofrentes (100% owned by Iberdrola) and Vandellós (28% Iberdrola; 72

% Endesa) nuclear power plants being stopped temporarily for refuelling.

- Increase in fuel costs because of the change in the production mix (less hydroelectric and nuclear production and greater thermal production) and a context of higher fuel prices, reflected in a 120.8% increase in procurement costs.
- 78.6 million euros booked as expenses for emission rights consumed during the period.
- Higher pool price, which has been reflected in a 21.3% increase in Net Sales.
- On Renewables, Net Sales is up 52.5% to 237 million euros, in line with the 32.3% increase in wind energy production in relation to H1 2004, with installed capacity 23.1% higher. The Gross Margin on the Renewables business now represents 21.7% of the total Gross Margin obtained by Iberdrola's generation assets in Spain.
- For its part, the Gross Margin from Distribution grew 3.0% (685.1 million euros) in line with the increase in the remuneration on the regulated business recognised in the tariff for 2005.
- The Supply business saw its Gross Margin fall 70.5 million euros to 17.9 million euros, due to the lower margins as a consequence of the high pool prices recorded over the period. In addition, in H1 2004 there was an extraordinary contribution of 11 million euros from resettlements of energy sales, TPA fees and energy purchases of years 2000 and 2001.

2.2. - INTERNATIONAL BUSINESS

The Gross Margin came out at 318.2 million euros, reflecting growth of 38.2%, resulting from the good performance of the Group's businesses in the region.

- In Mexico-Guatemala, the Gross Margin was 121.9 million euros (+30.7%), representing an increase of 28.7 million euros. This increase primarily reflects the contribution to results made by the 500 MW La Laguna combined cycle

plant after it was brought into service in Q1, and secondly the efficiency improvements at the Monterrey plant (I and II) which meant an 8 million euro increase in the Gross Margin.

- In Brazil, the Gross Margin is up 43.4% (196.3 million euros), thanks to the growth in demand and the additional tariff increases of 9-10% adopted at the Coelba, Cosern, and Celpe distribution companies in December 2004, correcting upward the initial tariff review. For Coelba and Cosern, the recognition of the regulatory asset base has been adjusted on a retroactive basis from 2003 onwards in these tariff adjustments for 2005. In addition, Celpe had its four-yearly tariff review in April 2005.

2.3. - NON-ENERGY BUSINESSES

These contributed 197.8 million euros to the total Gross Margin, reflecting an increase of 29.4 million euros, primarily generated by **IBERDROLA Inmobiliaria** and **Corporación IBV**, which, following the application of the IFRS, is now proportionately consolidated. The results can be broken down as follows:

Million euros	H1 2005	H1 2004	Change % MM
IBERDROLA Inmobiliaria	88.4	72.1	16.3
Corporación IBV	70.4	65.1	5.3
IBERDROLA Ingeniería, services & other	39.0	31.2	7.8
TOTAL	197.8	168.4	29.4

3. - EBITDA / GROSS OPERATING PROFIT

Consolidated EBITDA increased 9.3% as a result of the positive evolution in the Gross Margin and the 1.8% reduction in Net Operating Expenses.

The 1.8% reduction in Net Operating Expenses has been achieved thanks to the moderation in traditional businesses and an increase in new businesses in connection with the upturn in activity. The highlights include:

- The moderate evolution in Personnel Costs (+1.4%).
- A 38.2 million euro increase (+10.4%) in External Services linked to the upturn in activity in connection with the new combined cycle and renewable facilities. This also includes 9 million euros in costs for the second stage of nuclear fuel cycle (Enresa).
- A 46.9 million euro increase in Other Operating Revenues, primarily reflecting work carried out for third parties by IBERDROLA Ingeniería and other services rendered, booked for the Non-Energy business. Furthermore, this item includes revenues that are no longer recorded as Extraordinary Results under IFRS.

Net Operating Expenses can be broken down as follows:

Million euros	H1 2005	Vs. 2004
Net Personnel Expenses	392.5	-0.9%
Personnel	475.1	1.4%
In-house work on fixed assets	-82.6	13.5%
Net External Services	283.1	-3.0%
External Services	404.9	10.4%
Other operating revenues	-121.8	62.6%
TOTAL	675.6	-1.8%

The **Traditional Energy Business workforce** is down 3.2% compared with the same period in 2004 to 8,403 employees, with the Domestic Energy Business' Gross Margin falling by a similar proportion, down 3.1%. As such, the Gross Margin to employee ratio has remained stable in the Domestic Energy Business, as can be seen in the following table.

MM €	H1 2005	H1 2004	Chge. %
Gross Margin (Domestic Energy Business) (mm €)	1,786.6	1,843.5	-3.1
Domestic Ener. Bus.			
Workforce (Spain)	8,403	8,685	-3.2
Gross Margin / employee ratio (thousand euros)	212.6	212.2	-0.2

On the other hand, the Tax item is up 5.3% to 89.8 million euros, mainly due to the reduction in Latin America resulting from the application of IFRS.

Furthermore, EBITDA includes 14.4 million euros for the net effect of emission rights. This figure reflects 64.2 million euros for revenues on emission allowances granted to IBERDROLA and 78.6 million euros booked at the Gross Margin level for the consumption of emission rights.

4. - EBIT / NET OPERATING PROFIT

EBIT rose 10.2% to 1,111.5 million euros compared with the same period in 2004, with this rise driven by the operating evolution already mentioned combined with the change in Amortizations and Provisions (+7.3%).

Amortizations are up 5.6% to 470 million euros.

Provisions are up 7 million euros.

MM €	H1 2005	H1 2004	Chge. %
Amortizations	470	445	+5.6
Provisions	15	8	+98.8
TOTAL	485	452	+7.3

5. - FINANCIAL RESULT

The **Financial Result** came to 196.1 million euros, 3.8% higher than in the same period in 2004. This increase was mainly due to the 11.2% increase in interest expenses in a half-year period marked by a higher average debt balance in relation to the same period in 2004. Nevertheless, the average cost of debt was reduced from 4.89% in the same period in 2004 to 4.57%.

MM €	H1 2005	H1 2004	Chge. %
Financial Revenue	155.8	129.6	+20.2
Financial Expense	-351.9	-318.4	+10.5
TOTAL	-196.1	-188.8	+3.8

6. - RESULTS OF COMPANIES CONSOLIDATED BY THE EQUITY METHOD

The Results of Companies Consolidated by the Equity Method rose 4.3 million euros to 25.2

million euros, with 77% of the results contributed by Non-Energy up to 19.5 million euros. Following the implementation of IFRS, EDP and REE have been removed from the scope of consolidation.

The results can be broken down as follows:

MM €	H1 2005	H1 2004	Chge. %
Non-Energy	19.5	25.3	-22.9
Other	5.7	4.2	35.7
TOTAL	25.2	29.5	-14.6

7. - NET PROFIT

Lastly, Net Profit rose to 653.0 million euros, up 12.5% on the same period in 2004, in line with the change seen on Operating Income. Profit before Taxes grew +10.4%, while the effective tax rate came out at 31.7%, slightly below the same period in 2004 (33.3%).

Result by business

1.- ENERGY BUSINESS - SPAIN

1.1 GENERATION

a) Gross Margin

The change in this item in H1 2005 demonstrates the flexibility of IBERDROLA's generation facilities. The new combined cycle plants have doubled this technology's contribution to the production mix in a half-year marked by high demand, the lowest levels of hydroelectric production on record for the last 60 years, a downturn in nuclear production after the Cofrentes (100% owned by Iberdrola) and Vandellós (28% Iberdrola; 72% Endesa) nuclear power plants were temporarily stopped for refuelling, and scheduled maintenance works at Guardo's thermal plant. In this way, the 9.0% reduction in the Gross Margin on the Generation Business can be explained in the following context:

Net Sales rose 21.3% in a semester marked by significantly higher prices. Ordinary regime production limited its downturn to 9.9% (26,264 GWh) in a semester in which hydroelectric and nuclear production fell 49.1% and 17.5% respectively. The contribution of combined cycle plants, which have doubled their contribution to the production mix, has been fundamental to maintaining high levels of total production in this context. With production up to 6,247 GWh (+70.4%), combined cycle plants accounted for 23.5% of total production in the ordinary regime for the first six months of the year.

Fuel cost (Eur/MWh)	H1 2005	H1 2004
	Nuclear	3.9
C. cycles	31.5	25.5
Coal	24.8	22.1
Oil	48.0	39.4

In an environment marked by higher thermal production due to falling levels of hydroelectric production and the reduction in nuclear production, in addition to rising fuel costs, Procurement Costs are up 77.7%.

Furthermore, since Q1 2005, Procurement Costs include costs relating to the consumption of emission allowances over the period, totalling 78.6 million euros for the first half of 2005.

b) Operating Profit / EBIT

EBIT is down 7.5% on the same period last year, to **500.4 million euros**. At the EBITDA level, the drop is 3.8% to 688.7 million euros. In addition to the impact on the Gross Margin as outlined above, a number of other factors have influenced this change:

Net Operating Expenses are up 3.2% to 198.1 million euros, reflecting various factors:

- Personnel expenses increased 4.3%.
- External services are up by 16.9%, reflecting the combined cycle plants brought into service. This item also includes 9 million euros of expenses for the second stage of the nuclear fuel cycle (ENRESA).
- Other Operating Revenues and In-house work on fixed assets, which include among other items 19 million euros of revenues that due to the application of IFRS, are no longer accounted for as extraordinary results.

Million euros	H1 2005	vs. 2004
Net Personnel Expenses	98.9	4.9%
Personnel	110.4	4.3%
In-house work on fixed assets	(11.5)	0.0%
Net External Services	99.2	1.6%
External Services	133.9	16.9%
Other operating revenues	(34.7)	105.3%
TOTAL	198.1	3.2%

Amortizations and Provisions are up 7.4% to 188.3 million euros, primarily as a result of the new combined cycle plants brought into service, with an additional 1,200 MW in operation since H1 2004.

Tax is up 4.3% as a result of the new facilities commissioned.

64.2 million euros were booked as emission allowances granted to IBERDROLA. On the Gross Margin, 78.6 million euros were accounted for the consumption of emission rights over the period. As such, the net impact of emission rights at the operating level came out at -14.4 million euros.

The main operating figures for this business are as follows:

GENERATION (MM €)	H1 2005	H1 2004
Net Sales	1,581.6	21.3
Gross Margin	854.4	-9.0
EBITDA	688.7	-3.8
EBIT	500.4	-7.5

1.2 RENEWABLES

a) Gross Margin

The Renewable Energy business has continued to grow as new capacity has been brought into service. In this way, this Business has confirmed its position

as the main growth driver in Iberdrola's Strategic Plan, along with Mexico.

The installed capacity is up 23.1% (+616 MW), enabling a 32.3% increase in wind energy production and a 27.2% rise in total production generated by renewable energy sources, reaching 3,470 GWh.

The average price obtained rose to 6.83 euro cents/kWh, up from 5.70 euro cents/kWh for the same period in 2004. In 2005, most of the assets were based on the fixed price regime plus incentives. Therefore, the pool price increases have not been fully reflected on margins.

The aforementioned increase in production enabled this business to achieve a 52.5% increase in its Gross Margin, up to 237 million euros, despite the low wind factor in January and February 2005.

b) Operating Profit / EBIT:

EBIT increased by 113.7% due to the following factors:

- EBITDA grew 52.5%, in line with the increase in the Gross Margin and despite the 51.7% rise in Net Operating Expenses as a result of the new capacity brought into service. The EBITDA margin comes out at around 80%, as seen in previous periods.
- This growth is even higher on EBIT, with Amortizations and Provisions remaining stable. The decision to extend the useful accounting life of wind farms from 15 to 20 years has had a positive impact of 17 million euros, offsetting the higher amortizations booked for the new capacity installed.

Net Operating Expenses can be broken down as follows:

MM € H1 2005 vs. 2004		
Net Personnel Expenses	6.6	34.7%
Personnel	9.1	31.9%
In-house work on fixed assets	(2.5)	25.0%
Net External Services	38.0	55.1%
External Services	39.7	39.3%
Other operating revenues	(1.7)	-57.5%
TOTAL	44.6	51.7%

The main operating figures for this business are as follows:

RENEWABLES MM € H1 2005 vs. 2004		
Net Sales	237.0	52.5
Gross Margin	237.0	52.5
EBITDA	189.7	52.5
EBIT	122.9	113.7

1.3 DISTRIBUTION

a) Gross Margin

The Gross Margin for the Distribution business is up 3.0%, driven primarily by the increase in remuneration for the regulated business recognised in the tariff for 2005. Furthermore, it is worth mentioning the 5.9% increase on energy distributed which has totalled 48,368 GWh.

b) Operating Profit / EBIT:

EBITDA for Distribution rose 6.8%, almost four points above the Gross Margin thanks to a 2.8% reduction in Net Operating Expenses. Personnel Expenses are down 0.6%, as a consequence of the cost reduction policy and the efficiency improvements achieved. External Services are also down 2.8%.

Net Operating Expenses can be broken down as follows:

MM € H1 2005 vs. 2004		
Net Personnel Expenses	94.5	-2.0%
Personnel	136.4	-0.6%
In-house work on fixed assets	(41.9)	2.7%
Net External Services	147.7	-3.3%
External Services	199.8	-2.8%
Other operating revenues	(52.1)	-1.3%
TOTAL	242.2	-2.8%

The main operating figures for this business are as follows:

DISTRIBUTION MM € H1 2005 vs. 2004		
Net Sales	685.1	3.0
Gross Margin	685.1	3.0
EBITDA	400.2	6.8
EBIT	282.2	11.4

1.4 SUPPLY

a) Gross Margin

The Supply business saw its Gross Margin fall 79.8% to 17.9 million euros, driven by the lower margins as a consequence of the high energy prices seen over the period. This high cost took up most of the 1,531.5 million euros generated in Net Sales (+31.8%) thanks to the significant level of activity maintained on both electricity and gas sales, with a 65.5% increase in the total GWh sold on both markets for a total of 49,727 GWh:

GWh sold	H1 2005	VS. 2004	%
Electricity	16,064	14,542	+10.5
Gas	24,663	15,508	+59.0
TOTAL	49,727	30,050	+65.5

Furthermore, in the first half of 2004 there was an extraordinary contribution of 11 million euros from resettlements of energy sales, TPA fees and energy purchases of years 2000 and 2001.

b) Operating Profit / EBIT

With regard to EBIT, it is important to note the increase in operating expenses (+10.2 million euros), mainly recorded at External Services activities primarily due to the increase in activities relating to the full liberalization of the market in addition to the strengthening of advertising campaigns (Desafío Español 2007-America's Cup, etc.).

Net Operating Expenses can be broken down as follows:

MM €	H1 2005 vs. 2004	
Net Personnel Expenses	31.6	0.3%
Personnel	31.6	0.3%
In-house work on fixed assets		
Net External Services	26.0	63.5%
External Services	45.5	26.7%
Other operating revenues	(19.5)	-2.5%
TOTAL	57.6	21.5%

Furthermore, EBIT on the Supply Business was affected by a 6.1% increase in Amortizations and Provisions and an 11.1% rise in Tax, in light of the increase in the volume of energy sold.

The main figures for this business are as follows:

SUPPLY MM €	H1 2005 vs. 2004	
Net Sales	1,531.5	31.8
Gross Margin	17.9	-79.8
EBITDA	(51.7)	N/A
EBIT	(65.7)	N/A

1.5. CORPORATION

It includes adjustments for the inter-group expenses between the Corporation and the businesses.

2. - INTERNATIONAL BUSINESS

a) Gross Margin

In the International Business, the Gross Margin is up 38.2% (88.0 million euros) to 318.2 million euros. The evolution in the Gross Margin for the Latin America region can be broken down as follows:

- Increase in the Gross Margin in functional currency: 80.2 million euros
- Impact of exchange rate evolution: +7.9 million euros, primarily due to the appreciation of the Brazilian real.

In Mexico, the Gross Margin rose 30.7%, driven primarily by the La Laguna combined cycle plant (500 MW) brought into service in the first quarter of the year and the efficiency improvements achieved at the Monterrey plant.

In Brazil, the increase in the Gross Margin (43.4%) mainly reflects the increase in demand, the tariff increases adopted and the contribution of the Termopernambuco combined cycle plant, which entered into service on May 15, 2004.

b) Operating Profit / EBIT

In the International business, EBIT increased 70.0% to 160.8 million euros, reflecting the increase in EBITDA (59.0%) and the higher levels of amortisation recorded (38.3%) that grew less than the EBITDA.

- Mexico recorded a 42.2% rise in EBITDA, mainly as a result of the upturn in Generation activities, with the production of the La Laguna combined cycle plant added this semester. The South America region saw an increase of 72.4% in light of the evolution in demand, the tariff increases adopted, the contribution of the Termopernambuco combined cycle plant and the efficiency improvements achieved, that make it possible to keep the increase in Net Operating Expenses some way below the Gross

Margin. Therefore, total EBITDA growth in the International Business comes out at 59.0%.

EBITDA can be broken down by region and business as follows.

- **Mexico-Guatemala**

MM €	1H 2005 vs. 2004	
Generation	63.9	+36.8%
Distribution	28.1	+56.1%
TOTAL	92.0	+42.2%

- **South America**

MM €	1H 2005 vs. 2004	
Generation	25.7	+35.2%
Distribution	113.1	+83.9%
TOTAL	138.8	+72.4%

The change in Net Operating Expenses for the entire Latin America region can be broken down as follows:

MM €	1H 2005 vs. 2004	
Net Personnel Expenses	32.0	18.1%
Personnel	37.5	20.6%
In-house work on fixed assets	(5.5)	37.5%
Net External Services	52.5	2.9%
External Services	62.0	8.0%
Other operating revenues	(9.5)	48.4%
TOTAL	84.5	8.2%

The 8.2% increase in Net Operating Expenses is 30 points lower than the increase recorded on the Gross Margin, which is up 38.2%.

This can be broken down by region as follows:

MM €	1S 2005 vs. 2004	
Mexico-Guatemala	29.7	+3.8%
Net Personnel Expenses	6.3	+5.0%
Net External Services	23.4	+3.5%
South America	54.8	+10.7%
Net Personnel Expenses	25.7	+21.8%
Net External Services	29.1	+2.5%
TOTAL	84.5	+8.2%

- Amortizations and Provisions are up 38.3%, primarily on account of the increase in amortizations linked to the Altamira and La Laguna combined cycle plants in Mexico and the Termopernambuco plant in Brazil, now fully operational.

The main operating figures for this business are as follows:

INTERNATIONAL MM €	H1 2005 vs. 2004	
Net Sales	830.2	+23.1%
Gross Margin	318.2	+38.2%
EBITDA	230.8	+59.0%
EBIT	160.8	+70.0%

3. - NON-ENERGY BUSINESSES

MM €	H1 2005 vs. 2004	
NET SALES	540.8	25.6%
GROSS MARGIN	197.8	17.5%
EBITDA	122.6	60.5%
EBIT	108.0	58.1%
NET PROFIT	89.7	32.9%

The Non-Energy Businesses unit has recorded a significant growth of results throughout the entire P&L account. It is worth mentioning the 60.5% increase at the EBITDA level. The breakdown of the operating profit is as follows:

	H1 2005	H1 2004	Var %
EBITDA	122.6	76.4	60.5%
IBERDROLA INMOBILIARIA	77.1	60.1	28.3%
IBERDROLA INGENIERÍA Y CONSTRUCCIÓN	31.7	3.0	N/A
CORPORACIÓN IBV	10.5	10.3	1.9%
OTHER	3.3	3.0	10.0%

- The main driver of these results is the real estate business with a 28.3% EBITDA growth, being 63% its contribution to total EBITDA.
- It is also worth mentioning the contribution of Iberdrola Ingeniería y Construcción, which recorded a margin of 28.7 million euros over the first half of the year. In addition, the engineering business, as a result of the application of IFRS, is now fully consolidated.
- Corporación IBV, which is proportionally consolidated following the application of IFRS, has contributed 10.5 million euros through its range of industrial businesses, in line with the result shown over the same period of 2004.

The main figures for **IBERDROLA Inmobiliaria** to date are as follows:

SHAREHOLDERS' EQUITY	9,114	+5.6%
NET DEBT	11,133	+4.2%

At June 30, 2005, Iberdrola's total assets came to 28,872 million euros, highlighting the maintenance of its strong capital position, even taking into account the large volume of investments made over the period (993 million euros). This has enabled the leverage ratio to be set at 55.0%, 30 bp lower than in December 2004 with the accounts in the IFRS format. Without taking into account for the tariff deviation corresponding to Iberdrola over the period (498 million euros), the leverage ratio will come down to 53.9% as of June 2005.

Analysis of the Balance Sheet

1. - FIXED ASSETS

Investments in H1 2005 totalled 993 million euros and can be broken down as follows:

MM €	Jan-Jun 2005	%
Spain	683	68.8
Generation	205	
Renewable energy	166	
Distribution	171	
Other	141	
Mexico	250	25.2
Generation	247	
Distribution	3	
South America	39	3.9
Generation	1	
Distribution	38	
Other international	21	2.1
TOTAL	993	100.0

As regards investments in Spain, those made on energy production activities stand out, with 371 million euros that can be broken down as follows:

- 205 million euros on the Generation Business.
- 166 million euros on the Renewables Energy Business.

In Mexico, investments have focused on the Altamira V and VI combined cycle plants (109 million euros) and Tamazunchale (118 million euros). In Brazil, investments have primarily been made on the distribution business, financed through funds generated within Brazil.

The figure given for "Other International" reflects the investments made on Renewables outside of Spain, representing a total of 21 million euros, including the acquisition of an additional 5% stake in the Greek company Rokas.

2. - SHARE CAPITAL

At June 30, 2005, the Share Capital comprised 901,549,181 bearer shares with a par value of 3 euros each.

On January 2, 2005, an interim dividend of 0.326 euros per share was paid out for the 2004 financial

year, representing a 14.0% increase on the dividend paid on January 2004.

Furthermore, at the General Shareholders' Meeting held on March 18, a total dividend of 0.768 euros per share was approved, charged to the 2004 financial year, reflecting an increase of 14.3% per share on the dividend paid out in 2004. This confirms the commitment made by Iberdrola to increase shareholder remuneration in line with the growth in Net Profit.

On July 1, 2005, an additional dividend of 0.442 euros per share was therefore paid out.

3. - FINANCIAL DEBT

Net financial debt totalled 11,132.7 million euros at the end of June, with financial leverage coming out at 55.0%, 30 basis points lower than the 55.3% seen in December 2004. It is worth highlighting that the figure given for debt includes 498 million euros for financing the tariff deviation corresponding to Iberdrola.

With respect to the average cost of debt, it came to 4.57% at June 30, 2005, 32 bp lower than in June 2004.

The debt structure can be broken down by currency and interest rate as follows:

	June 2005	December 2004
Euro	86.2%	86.0%
Dollar	8.4%	9.4%
Real	5.1%	4.4%
Other currencies	0.3%	0.2%
Fixed Rate	57%	58%
Capped	14%	16%
Floating Rate	29%	26%

The debt structure per company is shown in the following table:

	June 2005	December 2004
Iberdrola S.A.	83.9%	83.4%
Mexico	5.2%	5.3%
South America	5.6%	5.8%
Renewables	2.8%	2.7%
Iberdrola Inmobiliaria and other	2.5%	2.8%
Total	100%	100%

In line with the policy to minimise financial risks, foreign currency risks have continued to be mitigated through the financing of investments in Latin America in local currencies (real in Brazil) or in their functional currencies (dollar in Mexico).

Debt can be broken down by product type as follows:

	June 2005	December 2004
Euro bonds	39.7%	46.0%
Bonds in other currencies	4.1%	3.5%
Domestic commercial paper	3.8%	3.5%
Euro commercial paper (ECP)	5.2%	4.5%
Euro loans	37.5%	32.5%
Loans in other currencies	9.7%	10.0%
Total	100%	100%

Furthermore, in light of the refinancing policy followed by IBERDROLA over the first half of 2005, the average maturity of debt increased significantly to nearly 5 years from 4.3 years recorded at December 2004.

Lastly, the change in financial leverage has been as follows:

	June 2005	December 2004
Shareholders' equity	9,114	8,628
Gross Debt	12,489	11,105
Market value of derivatives	126	81
Short Temp. Financial Inv.	1,017	216
Cash	213	123
Net debt	11,133	10,685
Leverage*	55.0%	55.3%

* Without the impact of the tariff deviation the leverage comes out at 53.9%

4. - WORKING CAPITAL

Net Working Capital rose to 1,759 million euros, up 1,373 million from the 386 million euros recorded at the end of 2004, with current assets up 1,773 million euros and current liabilities up 400 million euros.

5. - FUNDS FROM OPERATIONS

In June 2005, Funds from Operations totalled 1,087.3 million euros, reflecting an increase of 11.3% on June 2004.

The ratio of Funds from Operations to Net Debt improved by 120 bp to 18.6% up from 17.4% recorded in June 2004.

Iberdrola and Sustainability

For IBERDROLA, Corporate Social Responsibility represents an integrating framework for its policies and actions in relation to its customers, shareholders, employees and all of its stakeholders. This has enabled it to develop its business within an advanced society that raises the achievement of new and increasingly stringent demands and expectations to the companies.

In this way, IBERDROLA sees sustainable development as a strategic factor for its business, devoting its management capabilities and financial and technological potential to make it a reality. The Company is committed to achieving profitable growth, creating value for its environment, and contributing to the development of energy infrastructures in Spain and in the other countries in which it carries out its activities, making

profitability compatible with environmental and social best practices.

This commitment is incorporated into the company's general strategy in an effective way through the Strategic Plan, based on developing power generation capacity with less-polluting, more effective and more environmentally-friendly technologies and improving the quality of service for its customers.

For the development of its activities, IBERDROLA aims to build up the best possible knowledge of the demands of its stakeholders and maintain fluid relations with all of them in order to be able to incorporate their expectations into the Company's strategies and policies.

Recognition

IBERDROLA receives the Worldwide Business Research award for the most environmentally-friendly company

In Venice on May 18, IBERDROLA received the Worldwide Business Research award for the most environmentally-friendly company at the 2005 Power Congress, one of the significant events in Europe for the electricity and natural gas sector. This award, granted by this American institution after polling 150 professionals from the European energy sector over the last six months, is intended to reward the efforts made by the company to renew its generation portfolio in order to contribute to limiting CO2 emissions. The Power Congress, which was held for the first time back in 1997, brought together 250 professionals from the leading European companies in the sector for this year's event.

3. - COMMITMENT TO THE ENVIRONMENT

IBERDROLA's Global Environmental Management System

IBERDROLA has confirmed its position as the market leader for environmental management, with the implementation and certification in a large part of the Company of its Environmental Management Systems based on the UNE-EN-ISO 14001 standard - covering 100% of plants for the production of electricity from thermal, nuclear and hydroelectric sources, the running and maintenance of 73% of wind-farms, etc.-.

With this favourable situation from the outset, IBERDROLA has now taken a further step forward with the launch of an ambitious project to set up IBERDROLA's Global Environmental Management System, whose scope includes the generation, distribution and supply of electricity, the transport, distribution and supply of gas, and the marketing of other products and services. Its main objective is to ensure the integration of environmental management at the highest level into IBERDROLA's strategic process. This is a complex project, spanning the entire company, which will be rolled out in 2005 and 2006, involving over 60 people split between 11 working groups.

Iberdrola's participation in Clean Development Mechanism (CDM) projects

The Government has approved IBERDROLA's project in Guatemala as a Clean Development Mechanism (CDM). The designated National Spanish authority has agreed to consider the Las Vacas hydroelectric plant (Guatemala), a project led by IBERDROLA, as a Clean Development Mechanism (CDM), one of the flexibility elements included in the Kyoto Protocol.

In concrete terms, this plant has been accredited as a CDM for a period of 21 years as of January 1, 2004. This became the first project in Spain or Guatemala to be registered with the United Nations

(UN) after it was validated by AENOR last April once it had achieved its accreditation as a Designated Operational Entity thanks to the cooperation of IBERDROLA. Furthermore, the Company now has the voluntary participation letter issued by the Government of Guatemala, which gives priority to production from renewable energy sources.

The 45 MW Las Vacas plant, which has been up and running since May 2002, will enable an estimated annual reduction of around 90,000 tonnes of CO₂ (1,897,620 tonnes over the entire period). IBERDROLA is taking part in this project through its subsidiary Comercializadora Eléctrica de Guatemala (Comegsa) working with various local partners. The project design document submitted to the Spanish Ministry for the Environment certifies that it meets the required conditions as it represents an economic investment in this country, contributing to its sustainable development while reducing greenhouse gas emissions, the ultimate objective of the Kyoto Protocol.

IBERDROLA's participation on CDMs is in line with the Company's global strategy to cope with climate change and is being pursued despite the fact that it has one of the generation portfolios with the lowest level of emissions in Spain. At the end of 2004, 74% of the energy generated by the Company was free of greenhouse gas emissions. IBERDROLA is also analysing a number of other projects that may be considered as CDMs, including the 50 MW Río do Fogo wind-farm in Brazil, the 100 MW La Ventosa wind-farm in Mexico, and the El Recreo hydroelectric facility in Guatemala, which is currently being developed.

4. - CONTRIBUTION TO SOCIAL DEVELOPMENT

For IBERDROLA, the key events of 2005 for social aspects were as follows:

Specific projects to support various associations

- **Business and disability programme:** IBERDROLA is actively involved in this programme, launched by the Fundación Empresa y Sociedad and Fundación ONCE.
- **OPTIMA programme:** IBERDROLA has joined the OPTIMA programme, launched by the Instituto de la Mujer (Spanish Ministry for Employment and Social Affairs) to promote equal opportunities.
- **Corporate volunteer programme:** IBERDROLA has launched a programme to promote and channel its employees' volunteer activities in the solidarity field.
- **Family responsible business certificate:** the Fundación +Familia is analysing the policies adopted by IBERDROLA to reconcile work and home lives in order to be able to grant our Company the family responsible certificate (planned for the end of 2005).

Sponsorships:

- **Art and culture programme:** the main sponsorship actions have included: restoration and illumination of Toledo Cathedral, IV Centenary of Don Quixote de la Mancha, Salamanca 2005 - Plaza Mayor de Europa, "The Aztec Empire" exhibition at the Guggenheim museum in Bilbao, illumination of various historical monuments and renovation of the Castillo de Javier (Navarra).
- **Education and training programme:** the initiatives supported include: doctoral thesis on the Sierra de Atapuerca site, IBERDROLA's course at Bilbao engineering school, the "Energy Pathway" project with the region of Madrid and the framework agreement with the Valencia Chamber of Commerce for the holding of sessions and seminars, and participation in nine corporate social responsibility days, showcasing IBERDROLA's strategies and experiences.

- **Environmental programme:** IBERDROLA has supported various initiatives, including: campaign to promote solar energy: Madrid solar, book "Manual on the Kyoto Protocol", for the Fundación Tormes (Salamanca) and various events focusing on the environment in Castilla-La Mancha, Murcia and other regions.

Other initiatives

- **Valencia Consultative Council:** similar to the councils already in place in Castilla y León and Andalusia.
- **IBERDROLA Foundation Conference for 2005:** at the 2005 conference, various social projects were presented for grants along with innovative initiatives in the social action field.

5. - CORPORATE GOVERNANCE

The highlights for Corporate Governance over the first six months of 2005 were as follows:

Appointments:

At the General Shareholder's Meeting on March 18, 2005, shareholders voted to ratify the appointment of Sebastián Battaner Arias, and to re-elect for the maximum term possible under Spanish law and the corporate bylaws of 5 years, the Executive Vice-chairman and Chief Executive Officer José Ignacio Sánchez Galán and the board members Víctor de Urrutia Vallejo, Ricardo Álvarez Isasi, José Ignacio

Berroeta Echevarría, Juan Luis Arregui Ciársolo, Julio de Miguel Aynat and Sebastián Battaner Arias, who will continue in the offices held previously on the Board of Directors.

On 20 April 2005, the Board of Directors agreed that its members Javier Aresti y Victoria de Lecea and José Luís Antoñanzas Pérez-Egea will leave their posts after reaching the retirement age stipulated in the bylaws and Santiago Mayner Oyarbide and José Antonio Fernández Rivero will resign from their positions as members of the Board of Directors.

In order to fill the positions left vacant by Santiago Mayner Oyarbide and José Antonio Fernández Rivero, the Company's Board of Directors agreed to appoint, in accordance with the co opting procedure and subject to ratification at the first General Shareholders' Meeting to be held, the shareholders Xabier de Irala Estévez and Jesús María Cadenato Matía, who were respectively submitted by the institutional shareholders BBK and BBVA, as members of the Board of Directors of IBERDROLA, S.A., classified as External Proprietary Directors. In addition, it was agreed to appoint the director Jesús María Cadenato Matía to sit on the Executive Delegate Commission and approve the classification of the director José Ignacio Berroeta Echevarría as an External Independent Director.

Lastly, at the Board meeting held on June 22, 2005, the company's Directors voted to appoint the director Xabier de Irala Estévez to sit on the Audit and Compliance Committee.

Reports and other resolutions:

On February 23, 2005, the Board approved the Annual Report on Corporate Governance for 2004, in accordance with the form required by Circular 1/2004 of March 17 of the Spanish Securities Exchange Commission (CNMV). On the same date, the Board approved the Audit and Compliance Committee's activity report for 2004, which is intended to contribute to the development of Corporate Governance best practices by publishing information on the annual activities of this Committee.

Lastly, on February 23, the Board of Directors also agreed to develop provisions on the right to information prior to General Shareholder's Meetings, representation and remote voting, as provided for in the corporate bylaws in order to make it easier for shareholders to exercise these rights at the General Shareholders' Meeting held on March 18.

Disclosure

One of our Company's core Corporate Governance principles is to promote maximum transparency in the information – financial and other – provided to shareholders and markets. In line with this commitment, in the first half of 2005, the Company maintained a high level of activity with regard to information for institutional investors and financial analysts, which no doubt contributed to the excellent performance of Iberdrola's stock over the period.

Furthermore, the Spanish Securities Exchange Commission (Comisión Nacional del Mercado de Valores) was provided with information on all the relevant events concerning the Company's Corporate Governance, such as the notice to attend, documentation and resolutions from the General Meeting held on March 18, details of the members who have been appointed and who have resigned from the Board of Directors, and information on the Company's results for the first half of 2005.

CNMV: Key Events and Other Communications since January

Event	Registration No.
The Company publishes its energy production figures for Q1 2005.	18152
The Company publishes a presentation on the reconciliation of the 2004 Financial Statements with International Financial Reporting Standards (IFRS).	18173 / 18177
The Company publishes details on the changes to its Board, as approved by the Board of Directors on April 20, 2005	56970
The Company publishes information of its financial results for Q1 2005.	56980 / 18193
Unicaja announces that it has raised its stake in Iberdrola to 1%, further to a series of acquisitions on the stock market during the present year.	57034
The Company announces that it has set up the company Iberdrola Participações, SGPS, S.A. on April 22, 2005, to which it has transferred the 208,422,650 shares held by EDP Energias de Portugal, S.A., representing 5.7% of this company's share capital.	18237
The Company announces that it has acquired 24% of the Rokas Group's shares after acquiring a further 3% of the capital.	57659

III. BASES OF PRESENTATION AND VALUATION POLICIES

(The financial and accounting data and information included in this regular public report should be prepared in accordance with the principles and criteria for recognition and measurement stipulated in prevailing legislation for drawing up financial and accounting information to be included in the annual accounts corresponding to the annual period to which this report refers. If, by exception, the generally accepted accounting criteria and principles stipulated in the corresponding legislation have not been applied to the data and information attached hereto, this fact and the underlying reasons should be stated, indicating the effect that such non-application could have on the net worth, the financial position and the results of the company or its consolidated group. Furthermore, and with a similar scope, any modifications in respect of the last audited annual accounts that may have been made in the accounting principles used in drawing up the attached information must be mentioned and explained. If the same accounting policies, criteria and principles have been applied as in the last annual accounts, and if the latter were drawn up in accordance with the prevailing accounting standards applicable to the company, this should be expressly stated. If any adjustments and/or reclassifications have been made during the preceding period in pursuance of prevailing legislation, to allow for changes in accounting policies, correction of errors or changes in the classification of accounting items, the necessary quantitative and qualitative information shall be included in this section to understand those adjustments and/or reclassifications.)

On 2 September 2005, the information corresponding to the first half was expanded to include the following sections:

- In Section III Bases of Presentation, a) Accounting Standards Applied, the text of paragraph 3 ("The Iberdrola Group...") was modified.
- In Section IV Consolidated Balance Sheet (International Financial Reporting Standards Adopted), a breakdown was given of the amounts stated for Tangible Fixed Assets and Property Investments for the previous year.
- In Section VI Comparative Consolidated Balance Sheet between current national accounting standards and the International Financial Reporting Standards Adopted, and the amount corresponding to the Adjustment against reserves for the transition to the IFRS was included in Liabilities and Net Worth.
- In Section XIV Related-Party Transactions, in part 1 Transactions with the significant shareholders of the company, a breakdown was included of all the transactions.

Bases of Presentation of the Consolidated Balance Sheets

a) Accounting Standards Applied

The accompanying consolidated financial statements have been drawn up in accordance with the accounting principle established for the First-Time Adoption of International Financial Reporting Standards (hereinafter IFRS), including the International Accounting Standards (IAS), the interpretations issued by the International Financial Reporting Interpretations Committee (IFRIC) and the Standing Interpretations Committee (SIC).

The purpose of preparing the accompanying consolidated balance sheet and explanatory notes is to present information that can be used for comparison in the 2005 Annual Accounts. In this regard, the final consolidated financial statements for 2004, to be published for corporate purposes in the annual accounts for 2005, could differ from the accompanying consolidated financial statements, due to the possible effect of retrospective application of newly published accounting standards or modification of existing standards.

The IBERDROLA Group already applied the following standards in 2004, since they have been mandatory since 1 January 2005:

- IFRS 3 – Business Combinations (*)
- IAS 2 – Inventories
- IAS 8 – Accounting Policies
- IAS 10 – Events after the Balance Sheet Date
- IAS 16 – Property, Plant and Equipment
- IAS 17 – Leases
- IAS 21 – The Effects of Changes in Foreign Exchange Rates
- IAS 24 – Related Party Disclosures
- IAS 27 – Consolidated and Separate Financial Statements
- IAS 28 – Investments in Associates

(*) This Standard is operative as from 31 March 2004. The IBERDROLA Group has applied it retrospectively as from 1 January 2004.

- IAS 31 – Interests in Joint Ventures
- IAS 32 – Financial Instruments: Disclosure and Presentation
- IAS 33 – Earnings per Share
- IAS 39 – Financial Instruments: Recognition and Measurement
- IAS 40 – Investment Property

The accompanying consolidated financial statements have been prepared in accordance with IFRS 1, which establishes, for certain specific cases, alternatives that entities applying IFRS for the first time may use in the preparation of their financial and accounting information. The alternatives chosen by the IBERDROLA Group are described below:

- The Group has opted not to restate the business combinations as though they had taken place under IFRS, and has eliminated against reserves the assets and liabilities recorded under Spanish GAAP that do not have this consideration under the IFRS.

- The book value of the assets under Spanish GAAP has been taken as the amortised cost of tangible and intangible fixed assets at 31 December 2003, as the IBERDROLA Management assumes that the restatement of assets made under the accounting standards prevailing in the countries in which companies belonging to the IBERDROLA Group operate reflect, approximately, the price variations in those countries.

- The translation differences generated prior to 31 December 2003 have been transferred to reserves. Consequently, in the event of disposal of an investee company, the profit and loss account would only show the translation differences generated after said date.

- When recording the production plant decommissioning costs, the IBERDROLA Group has opted to record the provision required to meet said future costs at their current value at the date of commissioning the respective asset, against the item "Tangible fixed assets" on the accompanying consolidated balance sheet.

Both the cumulative depreciation and amortisation of assets at 31 December 2003 and the financial adjustment of the corresponding provision at that date are based on the estimates made by the IBERDROLA Group at that date, recorded as debit and credit, respectively, in the item "Unappropriated reserves" on the accompanying consolidated balance sheet.

The IFRS also establish certain alternatives in their application, including the following:

- i) The IFRS establish the alternative of capitalising financial expenses generated on the external financing assigned to construction in progress and nuclear fuel stocks. The IBERDROLA Group has opted to capitalise these financial expenses.

- ii) Interests in joint ventures may be recognised by proportionate consolidation or by the equity method, using the same criteria for all interests held by the Group in joint ventures. The IBERDROLA Group applies proportionate consolidation to all jointly controlled entities.

- iii) Both intangible assets and the assets recorded under "Property, plant and equipment" and "Investment properties" may be carried at fair value or purchase cost after deducting any accumulated depreciation and accumulated impairment, if any. The IBERDROLA Group has opted to record these assets at cost.

- iv) The IFRS allow actuarial differences in excess of the greater value between 10% of the actuarial present value of the benefit and 10% of the fair value of the assets assigned to the plan to be deferred over the remaining average life of the employees included in the plan. The IBERDROLA Group has decided to recognise the total amount of actuarial differences when produced.

- v) The IFRS allow two treatments for recognising capital grants: deducting the amount of the capital grants from the book value of the asset or recording capital grants as deferred income on the liabilities side of the balance sheet. The IBERDROLA Group has chosen the latter option.

b) Consolidation principles

The subsidiaries controlled by the IBERDROLA Group have generally been recorded by full consolidation, except where they represent an insignificant interest in respect of the true and fair view of the IBERDROLA Group. The potential effect of recording these entities by full consolidation is, therefore, entirely irrelevant in the consolidation financial statements of the IBERDROLA Group.

The IBERDROLA Group is considered to control a subsidiary when it has sufficient power to establish the financial and operating policies, so that it can obtain a return on its activities.

The multi-group entities jointly controlled by the IBERDROLA Group have been carried by proportionate consolidation.

The associates not controlled by the IBERDROLA Group, but in which it has a significant influence, have been carried by the equity method. When preparing these consolidated financial statements, it has been considered to have a significant influence in those entities in which it has an interest of more than 20%, save in specific cases in which, with a smaller interest, the existence of a significant influence can be clearly proved.

A list of the subsidiaries, jointly controlled entities and associates of IBERDROLA is set out in the Annex, indicating the consolidation or valuation method applied when preparing the accompanying consolidated financial statements and other relevant information.

The transactions of IBERDROLA and its consolidated subsidiaries have been consolidated according to the following basic principles:

1. At the date of acquisition, the assets, liabilities and contingent liabilities of the subsidiary are carried at fair value without considering minority interests. If there is a positive difference between the acquisition cost of the subsidiary and the value of that entity, after assessing its assets, liabilities and contingent liabilities at fair value, that difference is recorded as goodwill.

If the difference is negative, it is recorded in the consolidated profit and loss account.

2. Goodwill arising from business combinations is no longer amortised as from 1 January 2004, date of transition to the IFRS, although it is tested at least annually for impairment.
3. The result of carrying these interests by the equity method (after eliminating the results of intercompany transactions) is included in the items "Other unappropriated reserves" and "Profit/loss of companies carried by the equity method" on the accompanying Consolidated Balance Sheet and Consolidated Profit and Loss Account, respectively.
4. The reserves of subsidiaries recorded by the full consolidation and proportionate consolidation methods are recorded, according to their nature, in "Undistributable reserves" or "Other undistributable reserves".
5. The values of the shares held by minority shareholders in the net worth and profit/loss of subsidiaries recorded by full consolidation and jointly controlled companies carried by proportionate consolidation are included in "Minority interests" on the liabilities side of the accompanying Consolidated Balance Sheet and "Profit/loss attributed to minority interests" on the accompanying Consolidated Profit and Loss Account, respectively.
6. The financial statements of overseas companies have been translated applying the exchange rate at balance-sheet date. This method consists of translating to euro all assets, rights and obligations at the exchange rate in force at the date of the consolidated financial statements, applying the average exchange rate for the year to the items on the Consolidated Profit and Loss Accounts, maintaining shareholders' equity at the historic exchange rate at the date of initial consolidation or date of acquisition (or at the average exchange rate for the year of its generation in the case of cumulative profit/loss), as appropriate.
7. The accompanying consolidated financial statements include certain adjustments to homogenise the accounting principles and methods applied by subsidiaries with those of IBERDROLA.
8. All balances and transactions between companies recorded by full or proportionate consolidation have been eliminated in the consolidation process.

Transition to the International Financial Reporting Standards (IFRS)

Conciliation at 31 December 2004 between the net worth of the IBERDROLA Group under Spanish GAAP and IFRS.

Code 5010 and 5020 Tangible fixed assets and Property investments

1) The increase produced through reclassification of leased assets, the capitalisation of the present value of the estimated decommissioning costs of electricity generation facilities and changes in the consolidation perimeter of certain companies which had been carried by the equity method under Spanish GAAP, is partly adjusted by the accounting reclassification of the negative goodwill arising from business combinations made by the Group in earlier years.

This negative goodwill was recognised as the assets of the business combination, recorded in the accounts, under Spanish GAAP, in "Merger differences" on the liabilities side of the balance sheet. The accounting treatment of these merger differences in the transition to the IFRS does not entail altering the business combination, but merely reclassifying those differences as a smaller value of the assets to which they were assigned in due course.

Moreover, the Iberdrola Group has classified the properties operated under lease as "investment properties".

The details of these effects are set out below:

	Thousand Euro
Reclassification of leased assets	123,266
Decommissioning costs	74,142
Change of consolidation perimeter	319,430
Assignment merger differences	(363,662)
Reclassification of investment properties	(341,592)
Others	<u>(1,321)</u>
	(189,737)

Code 5030 Goodwill

2) Owing to the differences between Spanish GAAP and the IFRS regarding the indicators establishing the degree of control over investees, Energias de Portugal, S.A. (formerly Electricidade de Portugal, S.A.) is excluded from the consolidation perimeter, with the consequent derecognition of the goodwill contemplated under Spanish GAAP.

The goodwill corresponding to companies carried by the equity method has been classified under the IFRS as an increased value of the portfolio.

The adjustments made for transition to the IFRS are summarised below:

	Thousand Euro
Designation of Energias de Portugal, S.A. (formerly Electricidade de Portugal, S.A.) as available for sale	(182,484)
Gas Natural México, S.A. de C.V.	(47,136)
Gamesa Corporación Tecnológica, S.A.	(51,204)
Others	<u>(167)</u>
	(280,991)

Code 5040 Other intangible assets

3) The reduction in this account is mainly due to the reclassification of leased assets to the corresponding accounts, according to the nature of each asset. This reclassification amounted to 123,266 thousand euro at 31 December 2004.

Code 5050 Non-current financial assets

4) The variation produced in the transition to IAS of this item is due to several reasons:

i) Owing to the differences between Spanish GAAP and the IFRS in respect of the indicators establishing the degree of control over investees, in the transition to the IFRS Energias de Portugal, S.A. (formerly Electricidade de Portugal, S.A.) and Red Eléctrica de España, S.A. are excluded from the consolidation perimeter. They are now considered investments available for sale and, consequently, are carried at their year-end market values.

ii) Moreover, under Spanish GAAP some entities that were carried by the equity method are now recorded by full or proportionate consolidation. This is the case of Corporación IBV Participaciones Empresariales, S.A., NEO SKY 2002, S.A., Media Park, S.A., Iberdrola Ingeniería y Construcción, S.A. (formerly Iberdrola Ingeniería y Consultoría, S.A.) and the sub-group IBERDROLA Cogeneración, among others.

iii) Under IAS 39 – Financial instruments, all derivatives contracted by the IBERDROLA Group at year-end must be measured at fair value, even if they are considered hedging. This change in respect of Spanish GAAP means that a financial asset is recognised at the positive fair value of those derivatives.

These effects are summarised below:

	Thousand Euro
Designation of the interest in Energias de Portugal, S.A. (formerly Electricidade de Portugal, S.A.) as available for sale	102,317
Designation of the interest in Red Eléctrica de España as available for sale	43,761
Change in consolidation perimeter	(538,345)
Reclassification of the goodwill from Gas Natural México, S.A. de C.V.	52,375
Reclassification of the goodwill from Gamesa Corporación Tecnológica, S.A.	51,204
Valuation of derivatives	65,948
Others	31,198
	<hr/>
	(191,542)

Code 5070 Other non-current assets

5) The negative goodwill recorded in previous years, which, under Spanish GAAP, had been included in “Merger differences” net of the corresponding tax effect, has been reclassified as an asset, according to the assignment made at the time of the business combination. This reclassification has been recorded at the gross value before tax, recognising at the same time the deferred tax assets corresponding to the difference between the book value and fiscal value of those assets.

Furthermore, in pursuance of the IFRS, the Iberdrola Group has recognised the deferred tax assets as non-current assets even though they are expected to be used within a period of less than twelve months.

The details of these and other effects of the transition to the IFRS are set out below:

	Thousand Euro
Assignment of merger differences	127,282
Reclassification to long-term of deferred tax assets	96,897
Provision for decommissioning costs	72,756
Valuation of derivatives	91,946
Change in consolidation perimeter	46,812
Designation of the interest in Energias de Portugal, S.A. (formerly Electricidade de Portugal, S.A.) as available for sale	34,441
Others	<u>(20,523)</u>
	449,611

Code 5060 Long-term shares in the parent company

6) Under Spanish GAAP, treasury shares acquired for purposes other than capital redemption were recorded in assets, at the lowest of their acquisition cost, theoretical book value and fair value.

The IFRS establish that treasury shares must be recorded in equity at their acquisition cost.

Code 5090 Deferred charges

7) Under Spanish GAAP the expenses incurred in issuing financial instruments and the difference between the redemption value and the value of the assets received when contracting certain financing transactions are classified as "Deferred charges".

In the transition to IFRS, these deferred expenses have been reclassified, reducing the value of the financial liability that gave rise to them so that said liability is carried at its amortised cost, in pursuance of IAS 39 – Financial Instruments.

Code 5100 Inventories

8) Iberdrola Inmobiliaria, S.A. (formerly Apex 2000, S.A.U.), a company wholly-owned by IBERDROLA, having as its objects the performance of property-related activities, applied the principle, in accordance with the specific Spanish accounting standards for this type of companies, of recognising the entire revenues on the sale of property developments when construction progress reached 80% and there were firm commitments for sale. IFRS criteria differ from Spanish GAAP in that it is only possible to recognise these revenues when the risks of the asset have been transferred, i.e. when it is registered. This different principle in the recognition of revenue has led to an increase in "Inventories" of 82,853 thousand euro in the translation at 31 December 2004.

Code 5110 - 5150 Current assets

9) The variations in these items correspond mainly to the incorporation of assets contributed by the entities included within the consolidation perimeter and, where appropriate, by the elimination of intercompany balances produced by the same cause.

Code 5270 Minority interests

10) The balance sheet item "Minority interests", which shows the value of the interests held by minority shareholders in the equity and profit/loss of subsidiaries carried by full consolidation must, according to the IFRS, be recorded as an integral part of equity. By applying this principle, the equity has increased, considering also the increase produced by the change in consolidation method applied to certain companies in the IBERDROLA Group which, under the IFRS, are now included by full consolidation.

Code 5290 Negative difference on consolidation

11) The negative differences on consolidation that were not assigned to assets at the time of the business combination have been assigned to reserves at the transition date.

Code 5330 Provisions

12) The IBERDROLA Group has been providing for the costs it will have to incur in the dismantling, ground conditioning and other necessary actions up to the final decommissioning of certain generation facilities (essentially thermal and nuclear facilities) and for the cost of part of the nuclear fuel that will not be burnt in the nuclear power plant reactors.

The change in "Provisions" is because under the IFRS this provision must be carried against tangible fixed assets at the time of building the facility, for the present value of the estimate of future costs, updated annually according to a financial principle.

The effect of applying this accounting principle has increased Provisions by 202,013 thousand euro (of which 65,793 thousand euro correspond to a reduction of the balance of nuclear fuel stocks in the reactor, in "Inventories") at 31 December 2004.

Code 5310, 5320, 5360 and 5370 Financial Debt

13) The changes in the financial debt of the IBERDROLA Group are due essentially to the incorporation of new companies within the consolidation perimeter, the carrying at fair value of the hedging derivatives and financial liabilities, for which a reasonable value hedging has been established, and the carrying at amortised cost of the other financial liabilities.

These effects are summarised below:

	Thousand Euro
Carrying of debt at amortised cost	(94,882)
Change in consolidation perimeter	192,134
Assessment of derivatives	262,703
Carrying of debt at fair value, subject to hedging of a reasonable value	<u>(55,368)</u>
	304,587

Code 5340 Other non-current liabilities

14) The carrying at fair value of hedging derivatives and available-for-sale financial assets with a positive valuation have generated the corresponding deferred tax liability:

	Thousand Euro
Redesignation of Red Eléctrica de España as associate	20,572
Assessment of derivatives	30,044
Reclassification as long-term of deferred tax liabilities	13,883
Temporary differences generated in foreign entities with functional currencies other than their national currency	10,124
Others	34,055
	<u>108,678</u>
Variation in other non-current liabilities	13,100
	<u>121,778</u>

Code 5230 Valuation adjustments

15) Under the IFRS, all value adjustments of derivative instruments classified as cash flow hedging instruments and available-for-sale assets are carried, net of tax, in "Reserve for valuation of unrealised assets and liabilities".

Code 5200 Reserves

16) According to the alternatives established in IFRS 1 – First-Time Adoption, the Group has decided to eliminate the balance accumulated at 1 January 2004 in "Translation differences" against reserves.

17) The main adjustments to reserves made in the transition to the IFRS are shown below:

	Thousand Euro
Redesignation of associate	(80,437)
Provision for decommissioning of generation facilities	(53,896)
Recognition of revenues from property development activities	(17,031)
Assessment of non-hedging derivatives	(40,424)
Valuation and gains with treasury shares	8,295
Others	(2,231)
	<u>(185,724)</u>
Profit/loss 2004	1,210,727
Effect on profit/loss of transition to IFRS	637
Assignment merger differences	(236,380)
Assessment available-for-sale investments	40,247
Assessment cash flow hedging derivatives	(28,281)
Others	3,517
	<u>804,743</u>

IX. EVOLUTION OF BUSINESS

(The information included in this section, in addition to complying with the instructions for completing this half-year report, must expressly mention the following aspects: evolution of turnover and related costs; composition and analysis of the principal transactions giving rise to the extraordinary profit obtained, if any; comment on the most important investments and disinvestments, explaining their effect on the working capital of the company and especially on the company's cash situation; adequate explanation of the nature and effects of any items that may have caused a significant change in the turnover or profits of the company during this six-month period in respect of those reported in the previous quarter. Furthermore, entities submitting consolidated balance sheets and profit and loss accounts prepared in accordance with the IFRS adopted must provide detailed information on any transactions producing a significant effect on the financial positions, the profits or the net worth of the company or its group as a result of the impairment of assets or reversion thereof, the valuation of assets and liabilities at reasonable value, including derivatives and hedging, exchange differences, provisions, business combinations, discontinued operations or any other operations having a significant effect, and a description of the material changes in the item "non-current assets held for sale and discontinued operations" and related liabilities, any significant changes in the risk assumed and operations effected to reduce it, and events after the balance sheet date, which, although significant, are not recorded in the financial information presented. Finally, a clear distinction should be made between comments referring to consolidated financial statements and those, if any, referring to separate financial statements.)

See annexed sheets

X.1.) ISSUES, REDEMPTIONS OR CANCELLATIONS OF DEBENTURES & NOTES

(This section will include specific information on each issue, redemption or cancellation of debentures and notes made since the beginning of the year by the company obliged to file the regular public report or, as the case may be, by a company included within the consolidation perimeter, indicating for each issue, redemption or cancellation the information indicated in the attached tables. This information must be set out separately, distinguishing between issues, redemptions or cancellations for which a prospectus for the issue or placement of the securities has had to be filed with a Competent Authority (24) of a member State of the European Union and those for which this has not been required. In the case of issues, redemptions or calculations made by associates or any investee other than the parent, subsidiaries or jointly controlled entities, that information will only be included insofar as the issue or cancellation is fully or partially guaranteed by the parent, or any subsidiary or jointly controlled entity thereof. Issues or placements of securities on the monetary market (25) may be added (26) by type of transaction (27), just like issues made by one entity within one country, provided they have similar features. If an issue, redemption or cancellation is made through a special purpose vehicle (28), this circumstance must be expressly mentioned.)

Other aspects (43)

Description of transactions pending specification of code:

Line 1 Debt derivatives

Line 4 Portfolio and treasury stock derivatives

Line 5 Credit facility

Line 6 Foreign exchange trading

Line 7 Notes issuance

On 3 January 2005, the company paid an interim dividend against the 2004 profits of 0.326 euro per share.

The transactions effected with significant shareholders during the first half of 2005 were made in the normal course of business, on arm's length conditions, and the information thereon is not necessary to give a true and fair view of the net worth, financial position and results of the company, although the most significant transactions entered into with Banco Bilbao Vizcaya Argentaria, S.A. (BBVA) are described below:

1. Bank financing:

On 13 April a loan of 1.2 billion euro was arranged with 16 top-ranking financial institutions, with two tranches, the first (500 million euro) being a renewal of the 'Club Deal' loan made in May 2004, with a new repayment period of seven years, and the second, a 7-year credit facility of 700 million euro. BBVA reduced its share from 100 million euro to 50 million euro in the first tranche and took up 70 million euro in the second.

On 25 May, within a strategy of strengthening liquidity through bilateral transactions of 500 million euro with top-ranking financial institutions, a bilateral credit facility of 60 million euro was arranged with BBVA for a period of three years. On the same date, the loan agreement was reduced to 364 days for the same amount.

2. Interest and exchange rate derivatives

Interest and exchange rate hedges have been arranged for 840 million euro, 80 million of which correspond to transactions contracted with BBVA.

The derivatives were contracted following a competitive bid among prestigious financial institutions.

3. Placements of surpluses and drawdown under credit facilities

Credit current accounts and credit facilities have been drawn down in an average daily sum equivalent to 216 million euro, some 35 million of which correspond to BBVA.

Cash surpluses have been placed in an average daily sum equivalent to 39 million euro; BBVA accounts for 26% of that sum.

These transactions are effected on a daily basis to regulate the Group liquidity, following competition among approximately 20 financial institutions.

4. Capital Market Transactions

On 1 June, BBVA acted as issue manager for a private bond issue made by Iberdrola Finanzas, S.A., guaranteed by Iberdrola, S.A., for 60 million euro.

On 22 June, Iberdrola Finanzas, S.A., guaranteed by Iberdrola, S.A., made a public bond issue on the Euro Market for 500 million euro, placed through 8 financial institutions, in which BBVA was Lead Manager and Underwriter, together with another three top-ranking institutions.

Promissory notes for the value of 534 million euro have been issued on the short-term capital markets, of which BBVA placed 44%. Supplementing the domestic notes issuance facility, Iberdrola International BV has also issued 643 million euro, guaranteed by Iberdrola, S.A., of which 5 million were placed through BBVA.

5. Guarantees

BBVA has furnished bank guarantees for companies in the Iberdrola Group in a value of 50 million euro.

6. Foreign exchange

Transactions have been made for an equivalent of 1,218 million euro, 39% of which were contracted with BBVA.

7. Equity derivatives

Portfolio and treasury stock derivatives have been contracted with BBVA in an aggregate sum of 78 million euro.

2. TRANSACTIONS WITH DIRECTORS AND EXECUTIVES OF THE COMPANY (36)

Code (37)	Description of the transaction (37)	Alt (38)	Cu/Pr (39)	Amount (thous.euro)	Profit/Loss (40) (thous.euro)	ST/LT (41)	Related Party (42)
026	Remuneration	Aggregate Information	Previous	4,281	0	ST	
026	Remuneration	Aggregate Information	Current	11,485	0	ST	
027	Severance pay	Aggregate Information	Previous	355	0	ST	
028	Contributions to pension schemes and life assurance	Aggregate Information	Current	3,603	0	ST	
023	Dividends and other benefits distributed	Aggregate Information	Current	4,876	0	ST	

Other aspects (43)

The remunerations include a bonus of 5,836 thousand euro for meeting the multi-year strategic objectives.

The contributions to pension schemes and life assurance include the payment of an annual premium for an insurance policy covering commitments for executive pensions, in a sum of 3,148 thousand euro.

3. TRANSACTIONS AMONG PERSONS, COMPANIES OR ENTITIES OF THE GROUP (36)

Code (37)	Description of the transaction (37)	A/I (38)	Cu/Pr (39)	Amount (thous.euro)	Profit/Loss (40) (thous.euro)	ST/LT (41)	Related Party (42)

010	Services received	Aggregate Information	Current	5,266	0	ST	GAMESA EOLICA, S.A.

Other aspects (43)

The transactions described have been made in the normal course of business and on arm's length conditions. The remunerations include a bonus of 1,280 thousand euro for meeting the multi-year strategic objectives. The contributions to pension schemes and life assurance include the payment of an annual premium for an insurance policy covering commitments for executive pensions, in a sum of 821 thousand euro.

4. TRANSACTIONS WITH OTHER RELATED PARTIES (36)

Code (37)	Description of the transaction (37)	A/I (38)	Cu/Pr (39)	Amount (thous.euro)	Profit/Loss (40) (thous.euro)	ST/LT (41)	Related Party (42)

Other aspects (43)

XV. SPECIAL AUDITORS' REPORT

(This section shall be completed only in the report corresponding to the first half of the year following the last financial year closed and audited and shall be applicable for all issuing companies which, pursuant to section thirteen of the Ministerial Order of 18 January 1991, are obliged to submit a special report issued by their auditors, when the auditors' report of the annual accounts of the immediately preceding financial year included no opinion or a negative or qualified opinion. The report shall mention that said special auditors' report is annexed to the half-year report, together with a copy of the information provided or declarations made by the company directors on the current situation of the reservations included by the auditors in their auditors' report on the annual accounts of the preceding financial year, on which, in pursuance of the applicable Technical Rules for Audit, the special report was based.)

Results

2005

Quarterly report

**NET PROFIT UP 15.6%
TO 1,382.0 MILLION EUROS**

Dividend charged to financial year 2005 to be proposed to the General Shareholders Meeting grows 15.2%, to 0.885 euros per share.

Increase in production and efficiency

- Group's production grows due to Combined cycles (+60%) and Renewables (+34%) that offsets the lower hydroelectric production (-47%).
- Improving efficiency: Basic Margin grows 510 p.b. above Net Operating Expenses.

EBITDA grows 16% to reach 3,377.6 million euros

- Renewables and International, growth drivers, representing 30% of total EBITDA.
 - Renewable Energy Business EBITDA stood at 465.7 million euros (+ 82.8%).
 - EBITDA of International Business reaches 555.8 million euros (+59.7%).

Development of the Strategic Plan

- The construction targets for combined cycles (+4,000 MW) and renewables (+3,800 MW) in Spain, estimated for the end of 2006, were reached in 2005. The installed capacity of the Group grows 68% to reach 27,791 MW, and the production 75% surpassing 83,000 GWh.
- Net Profit grows more than 62% since 2000 and EBITDA more than 69%, both in line with the growth in the dividend per share (+64%).*

(*) Includes the dividend proposed for 2005.

Regulation

- National Reform Programme: The need for a transparent framework to guarantee supply and price formation based on market mechanisms is pointed out.
- National Renewable Energies Plan: The objectives of renewable installed capacity for 2010 (20,000 MW) strengthen the leadership position of Iberdrola and increase the value of its pipeline of projects.
- 2006 electricity tariff rises 4.48% and includes total recognition of the right to collect the tariff deviation of 2005 in the amounts contributed by each company.

Agreement with Gas Natural

- IBERDROLA considers that the approval with conditions by the Spanish government of the bid of Gas Natural on Endesa will improve the competition in the Energy Industry and does not prevent the execution of the agreement between Gas Natural and IBERDROLA.

* *INFORMATIVE NOTE: All and each statement contained in this document referring to the agreement with Gas Natural are subject not only to the condition of the success of the Gas Natural bid, but also to those coming from the obtaining of the necessary administrative authorizations as the ones included in the Eleventh Additional Disposition from the Hydrocarbons Sector Act (Ley 34/1998 del Sector de Hidrocarburos) and the applicable merger control regulation.*

Operating Highlights

- In 2005 IBERDROLA has achieved part of the targets set in its Strategic Plan in operating terms, reaching a total installed capacity of 27,791 MW, 68% more than in 2000.
- Due to its investments in combined cycles and renewables, which register a 36% growth in production the Company has achieved growth in the total production of the Group reaching 83,009 GWh (+1%). This growth has been possible despite an environment of difficult business conditions in Spain, with a decline of -47.3% in hydroelectric production and -12.2% in nuclear production due to technical shut-downs:
 - It should be emphasised the growing contribution of combined cycles to the generation mix of IBERDROLA in Spain, with a 60.4% growth in production, and is confirmed as the second technology in the Spanish generation mix, with a weight of 21.7%.
 - In addition, wind energy production shows a growth of 33.5%, which has made the capacity under the Special Regime have a weight of 13.4% in the Spanish generation mix.
- With respect to the evolution of demand, its growth has reached 4.4% to 96,295 GWh, and it has been covered with the best quality of supply ever recorded, situating the ICEIT at 1.68 hours, a figure lower than the 1.88 hours recorded in 2004.
- The Operating Profit shows significant development, both in gross terms (EBITDA +16.0%) as well as in net terms (EBIT +13.7%). Furthermore, the improvement in the operating efficiency is being maintained, with Basic Margin growing at 13.6%, 510 p.b. above the growth of 8.5% in the Net Operating Expenses. In line with the operating evolution, Net Profit reached 1,382 MM€ (+15.6%).
- Renewables and International businesses, with strong growths in Operating Profit, have been the growth engines for the Group in 2005:
 - Renewables: EBITDA increases 82.8% reaching 465.7 million euros, thanks an increase of 30.4% in the production and rise of 29.7% in the prices of wind energy.
 - International: Growth of 59.7% in terms of the EBITDA, exceeding 555 million euros, thanks to the good development of the businesses in Mexico and Brazil. The increases in production is worth mentioning, both from the addition of new capacity (La Laguna and Termopernambuco plants) as well as from the improvements in its availability and efficiency in the generation business. On the Distribution side, what stands out is the positive impact of the increases in tariffs. On the other hand, it should be mentioned the positive development in the exchange rate for the currencies of reference in the period.

- Net Profit reaches 1,382.0 million euros (+15.6%). The dividend to be proposed against the full year results will be 0.885 euros per share, up 15.2% in line with the evolution in the profits of the Company, fulfilling the policy established for that purpose by IBERDROLA.
- The leverage of the Company has been kept under control, reaching 53.8% excluding the impact from the tariff deviation (56.5% including such tariff insufficiency), compared to the 55,6% recorded in 2004.
- With respect to Regulation, several significant news have arisen during the last months of 2005, being worth highlighting:
 - Approval of the National Reforms Programme, which establishes the requirement of a "transparent regulatory framework that guarantees the energy supply, the implementation of new investments, and the formation of prices based on market mechanisms."
 - The New National Plan to Promote Renewable Energies, which significantly increases the targets for wind energy, from 13,000 MW to more than 20,000 MW in 2010.
 - The publication of the 2006 Tariff, which includes an increase of 4.48% and recognition of all of the tariff insufficiency that emerged during 2005. The Government will carry out an additional tariff rise in July within the context of an overall revision of the costs of the system, including mechanisms for recovering the tariff deviation.
- On 5 September of this year, IBERDROLA signed an agreement to acquire assets from Gas Natural, conditional upon the success of its public offer to acquire Endesa, as well as the approval of the appropriate authorities and any necessary consent from third parties.

Development of the Strategic Plan

1. INVESTMENTS IN GENERATION

During 2005 IBERDROLA put into operation 2,554 MW of additional capacity compared to the one existing at the end of 2004, reaching 27,791 MW, which implies a growth of 10.1%. Spain represents 88% of the total installed capacity, with 24,502 MW, of which 4,000 MW pertain to combined cycles and 3,810 MW to renewables.

The breakdown of the additions during 2005 is as follows:

Additional capacity (MW)	MW in 2005	Facilities put into operation in 2005	MW since December of 2000
Combined cycle	+1,714	Aceca and Arcos III in Spain. La Laguna in Mexico	+6,897
Renewable energy	+604	New facilities in Spain and Europe, and increases in capacity	+3,303
Cogeneration	+185	Purchase of new operating facilities in Spain and Latin America	+480
Traditional generation	+51	Recognized capacity increases Traditional generation plants	+542
Total	+2,554		+11,222

By geographic area, the largest portion of the installed capacity put into operation since the start of the Strategic Plan pertains to Spain, with an additional 7,933 MW (+48%), in combined

cycles (50%) and renewables (42%). In Latin America 3,289 MW have been put into operation, mainly in combined cycles in Mexico.

Capacity (MW)	December 2000	December 2005	Added MW
Spain	16,569	24,502	+7,933
Latin America	0	3,289	+3,289
Total	16,569	27,791	+11,222

By technology, IBERDROLA has achieved a greater balance in its installed capacity in Spain, while maintaining its profile of low environmental emissions, compared to the mix existing at December of 2000. Thus, there has been an increase of the weight of renewable energies from 3% to 16%, and combined cycles already represent 17%.

1.1 Spain

- Combined Cycle Plants

The total operating capacity of IBERDROLA in Combined Cycle Plants in Spain at the end of 2005 reached 4,000 MW, thus meeting the target marked at the start of the Strategic Plan. The operating capacity corresponds to nine combined cycles, two of which entered into service in fiscal year 2005, Aceca and Arcos III, with joint capacity of 1,200 MW. The Aceca combined cycle has been in commercial operation since 1 July. Arcos III, in

conjunction with the Groups of Arcos I and Arcos II, completes the facilities in Arcos de la Frontera with total capacity of 1,600 MW.

The load factor of the combined cycle plants in the period has been 65.9%.

With respect to the capacity under construction, IBERDROLA has two plants under construction that will enable the Company to reach 5,600 MW in 2007.

Thus, in the last quarter of 2006 the Escombreras combined cycle plant will be put into operation, having 800 MW of capacity, the civil work of which has been completed, with the assembly of the electrical and mechanical BOP along with other work in progress.

Project	Capacity (MW)	Start of operations
Castellón A	800	2002
Castejón	400	2002
BBE	200	2003
Tarragona	200	2004
Santurce	400	2004
Arcos (sets I and II)	800	2004
Aceca	400	2005
Arcos (set III)	800	2005
Escombreras	800	2006
Castellón B	800	2007
TOTAL	5,600	

The Castellón B combined cycle, with capacity of 800 MW, is forecast to start operation in 2007. The Environmental Impact Report (Declaración de Impacto Ambiental) has been issued by the

Ministry of the Environment (MIMAM) and the preliminary work of preparing the site has been started. The contract for the supply of the capacity island has been signed with General Electric.

- Renewable Energy

At the end of fiscal year 2005, IBERDROLA'S installed capacity reached 3,810 MW (3,494 MW wind energy and 316 MW mini-hydroelectric), thus multiplying more than seven times its installed capacity since the start of the Strategic Plan, which strengthens IBERDROLA as world leader in installed wind energy capacity. The increase achieved in 2005 was 19%. The objective of IBERDROLA is to reach 6,200 MW of capacity in 2008, of which at least 1,200 MW will be located outside Spain.

With respect to the breakdown of installed capacity by geographic area, 94% is located in Spain with 3,574 MW. Regarding projects outside of Spain, IBERDROLA already has 236 MW in operation. As a whole, 99% of the 3,810 MW of

total installed capacity of IBERDROLA is located in Europe.

According to the European Wind Energy Association (EWEA), the wind energy capacity of the 15 principal countries of Europe at the end of 2005 was slightly higher than 40,500 MW. In light of this data, IBERDROLA would represent 9% of the European wind energy capacity. The wind farms put into operation by IBERDROLA (+604 MW; +19%) reflect 10% of the new ones installed in Europe (+6,183 MW; +18%).

In addition, IBERDROLA has a portfolio of projects of 15,000 MW in various stages of development in Spain, Europe and Latin America, which gives IBERDROLA ample potential for increasing its targets for installed capacity in renewables from 2008 onward.

By geographic area, the portfolio of projects in development is 10,489 MW in Spain (in the majority, wind farms), and 4,399 MW in other countries such as Portugal, Greece, France, the United Kingdom, Italy, Germany, Poland, Mexico or Brazil.

MW	Potential development	Validated resource	Grid connection rights & under construction
Spain	10,489	5,959	1,797
International (Wind)	4,399	3,223	784
Total	14,888	9,182	2,581

* Wind

Operating capacity:

Spain

The new capacity put into operation in Spain during 2005 reaches a total of 368 MW, corresponding to:

Additional capacity (MW)	In 2005
Castilla La Mancha	+229.1
Galicia	+15.3
Castilla y León	+87.8
La Rioja	+9.9
País Vasco	+25.0
National	+367.1
Portugal	+18.0
France	+19.7
Greece	+192.1
Brazil	+6.4
International	+236.2
Total Wind	+603.3
Minihydroelectric	+1.2
Solar	+0.1
Total	+604.5

- New wind energy facilities put into operation: Bonete (10 MW), Hijes (13.2 MW), Badaia (25.0 MW), Cerro de la Silla (15 MW), Somolinos (10.6 MW), Maranchón Sur (12 MW), Maranchón I (18 MW), Maranchón IV (48 MW), El Cabezuelo (30 MW), Clares (32 MW), Igea-Cornago (3.3 MW), Dueñas (3.4 MW), Tarayuela (10 MW), Escalón (16 MW), Luzón Norte (18 MW), Urbel del Castillo II (38 MW).
- Capacity added to existing wind energy facilities. The following has been added: 6 MW to the Cantalojas wind farm, 3 MW to Molinos del Cidacos, 8.5 MW to the Grado wind farm,

27.9 MW to Bordecorex Norte, 15.3 MW to Serra da Meira, 1.5 MW to Larriba-Hornillos, 2.1 MW to Préjano-Enciso.

- New mini-hydroelectric facilities: Piarrejas (1,2 MW).

International

IBERDROLA has already 236.2 MW of wind energy capacity outside of Spain, of which 192.1 MW are located in Greece, where IBERDROLA has become the biggest industrial partner of the Rokas Group with 49.9% of the capital stock, 18 MW in Portugal (the Catefica wind farm), 19.7 MW in France, located in the communes of Kergrist, Meneac and Mohon, in the department of Morbihan (Brittany), and, finally, 6.4 MW in Brazil, pertaining to the Rio do Fogo wind farm.

Capacity under construction in Spain

At the end of 2005, the capacity under construction reached 204.6 MW and the rights considered to be firm reached 639.5 MW. The sum of these items, as well as the rest of the projects presently forecast on the medium and long term referred to earlier when discussing the portfolio of projects, amply exceed the target initially set in the Strategic Plan.

IBERDROLA's most important construction projects started in the period are the following:

- Start of the commissioning of the wind energy complex of Maranchón (Guadalajara), the biggest in Europe, comprised of seven wind farms with combined capacity of 208 MW.

- Putting into operation of the expansion of the Virgen de Belén I wind farm in Albacete. This will amount to 10 MW additional, which raises total capacity to 33.1 MW.
- Larriba – Hornillos wind farm, located in the municipalities of Hornillos de Cameros, Munilla and Ajamil (La Rioja), with an authorized capacity of 32 MW.
- The wind farm of Bordecorex Norte, which, located in the Soria municipalities of Caltójar, Velamazán and Barca, will have capacity of 44.35 MW.

Capacity under Development

IBERDROLA has signed various agreements during this fiscal year:

- IBERDROLA entered into an agreement with Gamesa to acquire a total of 700 MW of installed capacity in wind farms, presently in the phase of promotion, in Spain and Italy, for an approximate amount between 850 and 900 million euros. The agreement includes the purchase of 600 MW in Spain and 100 MW in Italy during the period 2006-2009, which can be extended until the year 2012. The final amount of the transaction will be adjusted taking into account the actual hours of operation of the various farms.
- IBERDROLA has acquired from Naturener 100% of its subsidiary Naturener Eólica, which has 280 MW of capacity in an advanced state of development in the Autonomous Regions of Castilla-La Mancha, Andalusia and Castile and León. The acquisition includes 30 MW at the point of starting construction, 50 MW in the final phase of tramits, and

200 MW with high probabilities of authorization. The amount of the transaction reaches around 26 million euros, while the final figure will depend on the capacity ultimately installed.

- In the Region of Murcia IBERDROLA will build next year the wind farms of Almendros, Almendros II, and Reventones, and will put into operation the expansion of the wind farm of Gavilanes and that of Yecla. These developments will be carried out through the firm Energias Renovables de la Región de Murcia (ERRM), of which IBERDROLA is the main shareholder, with 50% of the capital stock.

Solar energy

In its portfolio IBERDROLA has a total of nine projects for thermoelectric solar energy in Spain, adding up to 450 MW of installed capacity located in Extremadura, Castile and León, Andalusia, Castilla-La Mancha, and Murcia. Finally, the construction and operation of the bioethanol plant of Barcial del Barco (Zamora) and the development of wave energy projects should be pointed out. Regarding wave energy, an agreement has been signed with Total and OPT for studying sites in France.

- *Cogeneration*

Operating capacity

IBERDROLA owns 387 attributable MW of operating capacity in cogeneration plants in Spain, equivalent to a total of 562 MW installed, corresponding to the 28 cogeneration plants in which IBERDROLA has a stake. During 2005 IBERDROLA has acquired two facilities with joint

capacity of 93 MW from Acciona, Gas Natural y Michelin, located at the plants that the latter has in Valladolid and Vitoria, supplying steam and electrical energy to the plants of these companies. As a result, the growth established in the long-term energy services sales business plan of IBERDROLA Cogeneración is accomplished.

This acquisition makes IBERDROLA the largest cogenerator in Spain. In addition to the agreement with Michelin, the Company supplies steam and electrical energy to customers such as General Electric Plastics in Cartagena, Calvo Conservas in La Coruña, Holmen Paper in Madrid, or Montefibre in Miranda de Ebro. IBERDROLA has five liquid manure processing plants, of which the two located in Castile and León are already in operation.

IBERDROLA's investments in cogeneration are part of its global commitment to reduce CO₂ emissions as a way to comply with the Kyoto Protocol. This is an efficient source of energy that saves primary energy.

Capacity under construction

Construction of the liquid manure treatment plants of Fonz and Monzón in Huesca and FUDEPOR in Murcia started in 2005, with an electrical capacity of 7.4 MW, 14.8 MW and 14.8 MW, respectively. Their placement into operation will take place during 2006. In addition, during the third quarter of the fiscal year, the agreement for the incorporation of the company that will promote the construction and operation of the Barcial del Barco Bioethanol Plant in Zamora was signed.

1.2 Latin America

Mexico

The combined cycle plant of La Laguna II entered into operation in the middle of March of 2005 with an installed capacity of 500 MW. As in earlier cases, this generation plant was awarded to IBERDROLA in an international bid competition promoted by the CFE. Under the terms of the contract signed, the Company has assured the sale of all of the energy produced for 25 years.

Project	Capacity (MW)	Start of Operations
Enertek	120	100% operational
Monterrey	1,037	100% operational
Altamira IV	1,036	100% operational
La Laguna	500	100% operational
Altamira V	1,121	2006
Tamazunchale	1,135	2007
Total	4,949	

In addition, with the entry into operation of this plant, IBERDROLA has been strengthened as the top private producer of electricity in Mexico, and number two in this country, after the CFE. The Company has already 2,696 MW of installed capacity in Mexico, shared among the Combined Cycle Plants of Monterrey III (1,040 MW), Altamira III and IV (1,036 MW), and La Laguna II (500 MW), and the cogeneration plant of Enertek (120 MW).

The Company is building another two combined cycle plants in that country: Altamira V, with 1,121 MW, which will be put into operation in November of 2006, and Tamazunchale, with 1,135 MW, which will start to operate in June of 2007, the two biggest plants awarded up to now in Mexico. In addition, it has taken its first steps in the renewable energies industry, developing wind energy promotions in the State of Oaxaca that add up to 150 MW of capacity.

Brazil

In Brazil, IBERDROLA has the 450 MW hydroelectric plant of Itapebí (175 MW attributable to Iberdrola) and the combined cycle of Termopemambuco, with an installed capacity of 520 MW (203 MW attributable to Iberdrola). In addition, IBERDROLA has six cogeneration plants (93 MW) for private customers through its subsidiary Energyworks Brazil (100% IBERDROLA).

With respect to renewable energies, IBERDROLA has already started to put into operation the wind farm of Rio do Fogo, a Clean Development Mechanism project. Located in the State of Rio Grande do Norte (Brazil) its total capacity amounts to 49.3 MW, out of which 6.4 MW are already in operation. IBERDROLA has signed a 20-year contract with Eletrobrás for the supply of the energy produced at Rio do Fogo. The development of this wind energy facility is within the context of the participation by IBERDROLA in the Proinfa Program, promoted by the Brazilian government for the development of renewable energies in that country.

Last December, Neoenergia (the electric group participated by IBERDROLA with a 39% stake),

won the bid to build, maintain and operate the two minihydro plants of Nova Aurora and Goiandira, located in the Versissimo river, state of Goias, with an installed capacity of 21 and 27 MW respectively.

Likewise, Neoenergia was also awarded the concession to build, maintain and operate the Baguari plant (140 MW in Minas Gerais state). This bid was won by the consortium formed by Neoenergia (51%), Cemig (34%) and Furnas (15%). The plant will have a dam of 20 kms in the Doce river and 5 additional kms in the Corrente Grande river.

1.3 Europe

Greece

IBERDROLA is the strategic partner of Rokas, the biggest producer of wind energy in Greece, with stake of 49.9% at the end of 2005. The Company closed this purchase in advance, announced in December of 2004 and forecast for 2009, thanks to the good relations with its Greek partners. The total amount invested by IBERDROLA was 88 million euros. At present this company has already 192.1 MW installed, 48.5 MW under construction, and another 600 MW in development. Also in Greece, IbeRenova will soon acquire 56 MW from Gamesa by means of an agreement signed for such purpose in the month of July.

Portugal

In the area of renewables, IBERDROLA has 18 MW in operation in Portugal, pertaining to the

Catefica wind farm acquired from Gamesa. In addition to the capacity already operating, IBERDROLA has connection points for 156 MW that will enter into operation in the next two years.

IBERDROLA and GAMESA, by means of the Nuevas Energías Ibéricas consortium, in which there is also participation on the part of the Portuguese companies lusas Visabeira, Alberto Mesquita, MECI and Galucho, presented in Lisbon, last 18 January, an ambitious industrial project contemplating the construction of five wind power generation plants in Portugal that will represent a significant investment. These companies have also announced the presentation of that consortium to the bidding process for the distribution of wind energy capacity in Portugal that was called by the Portuguese government in 2005. The new facilities will be capable of manufacturing more than 100 wind turbines per year, which will supply a capacity of close to 300 MW. With a portfolio of orders for eight years already guaranteed since their placement into operation, it is forecast that they will export more than half of the total production.

Other Countries in European Union

IBERDROLA has various projects in other countries in the EU, basically in the area of renewables:

- In France, 132 MW in renewables will be installed in the next two years, of which 19.7 MW have already been installed as of the end of 2005. In addition, IBERDROLA is developing another 95 MW in this country. Furthermore, IBERDROLA has entered into an agreement with Total and OPT to develop
- wave energy projects and it will start studying sites in France.
- In Italy, in the area of renewables, during the period 2006 – 2009 IBERDROLA will acquire from Gamesa a total of 100 MW by means of an agreement signed for that purpose in the month of October. This capacity will be added to the 100 MW that is already being developed through its own promotion. IBERDROLA has an agreement with the German promoter P&T Technology and its financial services subsidiary EECH AG for the purchase of wind farm development rights both in France (100 MW) and in Italy (200 MW).
- In Germany, there is a portfolio of projects in renewables that reaches 100 MW. This capacity is to be added to the 28 MW that the company has agreed to acquire from Gamesa during 2006.
- With respect to Poland, IBERDROLA has a portfolio exceeding 160 MW in renewables, which are to be developed in the coming years. The first wind farms are to be put into operation during the year 2006. IBERDROLA has an agreement with the German company Eternergy in order to purchase the Polish company MVV Eternergy Polska, which has eight wind farms with a total of 161 MW of capacity in various phases of development. The company, which will change its name to IBERDROLA Energia Odnawialna Sp. zo.o., will put the first 40 MW of wind energy into operation at the end of 2006, while the remaining portion will be operational during the year 2008. This agreement is added to the other reached in July with Eternergy for the purchase from it of 201 MW of wind energy in

various phases of development located in France and Germany.

- In the **United Kingdom**, its own projects are being developed in the area of renewables and, although they are in the initial phases, they could reach 145 MW.

Other Geographical Areas

In **Latvia**, IBERDROLA has been awarded the construction, as well as the operational supervision and maintenance, of a combined cycle plant of 420 MW in installed capacity in Riga (Latvia) for about 300 million euros. This represents the most significant contract of such characteristics obtained by a Spanish company in Eastern Europe and confirms the Company's focus on internationalization. IBERDROLA Ingeniería will take charge of the turn-key construction of this electric plant in a term of 28 months, while IBERDROLA Generación will assume the supervision of the operation and its maintenance during 12 years.

Regarding **Morocco**, IBERDROLA and the Office National de l'Electricité (ONE) signed an agreement in Madrid last 26th December on cooperation in the energy field for the development of wind farms and combined cycle plants in Morocco. The agreement, with a duration of an extendable 5 years, enables ONE to develop new electrical energy production technologies and IBERDROLA to participate in the energy development of Morocco. The first project to be studied will be the Touahar wind farm located to the north-east of the city of Fez and it will be availed of 70 MW of installed capacity.

Trading

The Company is developing a major trading business in Europe, with operations in Austria, Belgium, France, Germany, the Netherlands, Portugal, Spain and Switzerland. The Company aims to ramp up these energy buying and selling activities in the short term to include other countries in Europe such as Poland, Greece, the United Kingdom and Italy. The trading business is run from Madrid with a support office in Zurich. Among the operations that are most noteworthy carried out in 2005 there are:

- The start-up in operation of the capacity acquired from NUON to provide 87.6 million kWh during the year 2005.
- The participation starting on 5 April, in daily auctions for capacity to export energy from Germany to France by means of which IBERDROLA is optimizing its contractual position in Germany, France, and Spain.
- The start-up of the performance of purchase and sale transactions for emissions rights, with the purpose of optimizing the portfolio of IBERDROLA Generación.
- IBERDROLA will export 262,800 MWh from Belgium to the Netherlands during the year 2006, by virtue of the recent awarding in part of the bidding for the use of the electrical interconnections between the two countries. The business volume for the transaction will exceed 27 million euros as a result of the high price of energy in the Belgian and Dutch

markets, which will reach more than 50 euros per MWh in the year 2006.

2. DISTRIBUTION

2.1 Spain

As of the end of 2005, IBERDROLA has 9.7 million customers in Spain, for whom the quality of service continues to improve. IBERDROLA ended 2005 with the best supply quality in all of its history, with an the ICEIT of 1.68 hours, a figure better than the 1.88 hours recorded in 2004 and the 2.49 hours in 2000.

DEMAND: +4.4%

These record quality levels were reached in a year which demand of the Company grew 4.4% in Spain and IBERDROLA hit four consumption maximums: three in winter (11, 12, and 13 January) and another this past 22 June, when it exceeded the electrical energy demand maximums in the summer.

The improvement in the supply quality of IBERDROLA has been possible thanks to the new

generation capacity installed, to the placement in operation of additional distribution infrastructures and to the maintenance and renovation work on the ones that already exist.

2.2 Latin America

As of the end of 2005, IBERDROLA has already exceeded the figure of 8 million customers managed in the region and the managed distributed energy reached 26,609 GWh (+6.8%).

3. SUPPLY

3.1 Electricity

- Spanish business: eligible electricity customers

IBERDROLA ended the fiscal year with close to 900,000 customers and sales of more than 30,000 million kWh in gross production in the deregulated electricity market, reaching a share of 33.5%, more than 38.1% in 2004, influenced by the difficulty environment of this business.

With respect to Green Energy, IBERDROLA continued to strengthen its leadership in Spain, with 218,499 contracts signed with individuals and 1,863 with governmental agencies and enterprises as of the end of the year, reflecting interannual growth greater than 300%. This electricity derives from 100% renewable energy sources free of emissions of CO₂ and of greenhouse gases, in accordance with that established by European Directive 2001/77/CE, of 27 September 2001, and this has been certified both by the RECS International association,

represented in Spain by the REE, as well as by the external entity Bureau Veritas Quality International.

- Portuguese business

In the Portuguese market IBERDROLA has maintained its positions, with more than 1,400 supply contracts representing an annual consumption of 951 million kWh and a deregulated market share close to 9%.

- French business

The Company has a incipient position in the French electricity market, with various end customers for electricity, and is actively operating on the official and settlement markets, Powernext, where it traded 1,260 million kWh of electrical energy during 2005.

In addition, IBERDROLA attended this past fiscal year all of the auctions organized by Electricite de France (EDF), acquiring the right to dispose of up to 362 million kWh of electrical energy for 2004, 2005 and 2006. Furthermore, it supplied electrical energy for a total of 276 million kWh to Réseau de Transport d'Electricité (RTE) and EDF GRD (Gestionnaire des Réseaux de Distribution), operators of the French electricity distribution and transport grid, meant for covering the losses from the grid of that country.

3.2 Gas

Procurement:

During 2005, IBERDROLA has consolidated its position as the number two Spanish gas

company. The Company acquired 4.6 bcm of gas, 50% more than in the previous fiscal year (3.1 bcm). During the year the Company received 136 cargoes of liquid natural gas (LNG), in carriers that unloaded at all of the regasification plants presently operating in Spain: Barcelona, Bilbao, Cartagena and Huelva. The derivation of the gas was as follows: Algeria, 41%; Nigeria, 34%; Egypt, 13%; Oman, 7%; Qatar, 3% and Trinidad Tobago, 2%.

On a macroeconomic level, during 2005 the increase in the international prices of oil and natural gas continued, reaching maximums in North America, Europe, and Asia. Nevertheless, the flexibility of the long-term gas contracts of IBERDROLA plus certain annual agreements and purchases on the spot market enabled the volumes necessary to be available at all times for their use as fuel at the combined cycle plants and in the marketing to end customers, despite the fact that Spain suffered one of the driest years in its history.

IBERDROLA signs a strategic agreement with Sonatrach for the development of the gas and electricity businesses

In a new step for strengthening the gas activity and assuring the supply for its Combined Cycle Plants and for marketing to end customers, IBERDROLA signed an important agreement in December of 2005 for strategic cooperation with the Algerian state enterprise Sonatrach, which opens the door for it to investments in reserves, exploration, and production of natural gas (upstream) as well as to maritime transport and liquefaction projects (midstream). Also as part of the agreement, the Company has increased the

volume of gas to be received through the Medgaz gas pipeline from 2009 by 0.6 bcm, up to 1.6 bcm per year.

Infrastructures

In 2005 IBERDROLA confirmed its position as the number one Spanish company - after Enagás- in terms of investments in major gas infrastructures, reinforcing the guarantees of the supply of gas to its customers and to its combined cycles. The investments, in various percentages, are located at the liquid natural gas (LNG) storage and regasification plants of Bahía de Bizkaia Gas (Bilbao), of which it has 25% and which has operated at full yield since the end of 2003, and Sagunto (Valencia), of which it has 30% and which will enter into service at the beginning of 2006, as well as the Algeria-Spain direct gas pipeline promoted by Medgaz (the Company has 12% of its capital stock), in planning, and various transport gas pipelines to supply its combined cycles.

Guarantee of Supply

Finally, the reliability of the system of sourcing and supply of IBERDROLA was recognised this past July by the Corporación de Reservas Estratégicas de Productos Petrolíferos (CORES), which certified that the Company exceeded the minimum security inventories of natural gas established in the legislation in force.

Supply:

Spain

In 2005, IBERDROLA strengthened its position as the number two marketer of gas in Spain with a

deregulated market share of 13.9% including both the gas supplied to customers as well as that supplied to combined cycles, which represents a significant increase compared to the 10.8% of the previous year. The total volume of gas marketed by IBERDROLA in 2005 reached 51,985 GWh (+50.7%).

Europe

IBERDROLA, carrying out pioneer activity in the deregulation of the French market, started to supply gas to industrial customers in that country in 2005. In parallel, it was also the first domestic company that exported gas from Spain to France through the interconnection gas pipeline, contributing to providing linkage for the internal energy market of the European Union.

4. RATIONALISATION AND OPTIMISATION OF FINANCIAL RESOURCES

Finance Transactions

Taking advantage of the good conditions on the long-term markets in 2005, IBERDROLA improved the conditions of its debt, both in terms of costs as well as in terms of lengthening the average maturity, maintaining its policy of reducing the volatility of the financial expenses.

The most notable transactions in 2005 were:

Signing of a loan with the European Investment Bank (EIB) FOR 450 million euros

IBERDROLA has agreed on a 450 million euro loan with the European Investment Bank (EIB) for investments on electricity distribution between

2005 and 2007. The loan is structured in two tranches: the first, for a total of 350 million euros, is to be paid back in 10 years. The second, amounting to 100 million euros, is to be repaid in 15 years.

Signing of a seven-year loan in the amount of 1,200 million euros

On 13 May IBERDROLA signed a syndicated seven-year loan in the amount of 1,200 million euros with 16 top-level financial institutions. The transaction is divided into two tranches, both with the same term of 7 years: one for 500 million euros that was made in the form of a syndicated loan and results from the renegotiation of a transaction signed in May of 2004 and the other, for 700 million euros, in the form of a line of credit. The tranche of the loan has a variable interest rate referenced to Euribor with a margin of 0.17% (compared to the previous 0.275%), while the line of credit has a margin of 0.15%.

Issuance and later expansion of a 10-year bond on the Euromarket for 500 million euros

On 10 June IBERDROLA stipulated the conditions for the issuance of bonds on the Euromarket for an amount of 500 million euros and a term of 10 years with an interest rate of 3.50%, the lowest in history obtained by any Spanish company for financing with such characteristics. In addition, this past 22 September IBERDROLA stipulated an expansion of 250 million euros of the bond, thus providing greater liquidity for that issue. The spread over the 10-year interbank interest rate at 10 years obtained in the capital increase was 28 basis points, which is an improvement over the 32 basis points obtained in June.

US Private Market (USPP)

Taking advantage of the experience from 2004, the year when IBERDROLA first appeared on the United States private market, and given the liquidity existing on that market, in December of 2005 IBERDROLA carried out a new private placement of Debt in the amount of 300 million US dollar with maturities of 12 and 15 years.

Restructuring of the lines of credit

With the institutions that are its main co-workers in financing, IBERDROLA agreed on formalizing bilateral lines of credit of 3 years in the amount of 435 million euros for the purpose of providing greater solidity to its liquidity instruments. In addition, the amount of the credit facilities on 364 days have been reduced by 230 million euros.

Renegotiation of the Brazil Debt

In the international area, advantage has been taken of the good situation of the markets and the reduction of the country risk in order to renegotiate the debt of various Brazilian companies with the aim of reducing its cost and lengthening its term, which reached 4 years. The following transactions carried out by 3 companies are to be noted:

- Coelba: Issue of obligations on the Brazilian market for 540 million Brazilian reais on a term of 5.5 years and the refinancing in July of a loan for 150 million US dollar .
- Celpe: Refinancing of the debt by means of the issuance of obligations in the amount of 430 million Brazilian reais with maturity in 5 and 6 years.

- Termopernambuco: Total substitution of the debt (IDB loan and obligations) by financing from the BNDES and new issues of obligations with maturities in 5 and 7 years.

Divestment Transactions

Sale of the stake in Cementos Portland.

Within the process of divesting non-strategic assets contemplated in the Strategic Plan, this past 3 October IBERDROLA sold its 8.06% stake in the listed company Cementos Portland Valderrivas to Fomento de Construcciones y Contratas (FCC). This sale was reflected in income of 150.3 million euros and gains of more than 70 million euros before taxes. As a result of the sale, the IBERDROLA representative left the Board of Directors of Cementos Portland.

5. NON-ENERGY BUSINESSES

IBERDROLA Inmobiliaria

As of the end of the fiscal year it maintained 16 residential developments in progress representing 1,462 houses and delivered 987 houses in 2005 distributed over 19 projects. Furthermore, at the end of 2005, IBERDROLA Inmobiliaria had significant real estate property in the process of development in Valencia, called AQUA MULTIESPACIO with a constructed surface area of around 83,000 m². This real estate activity is being carried out through the company Oceanic Centre, in which IBDI has a 50% stake.

Among the transactions carried out during the year, 4 projects were finalized for rental property and they were put into operation during this

period. The following is a listing of the real property:

- Five-star hotel in the Diagonal Mar Zone in Barcelona, with a buildable 30,000 m². This hotel is operated by the Hilton chain.
- Office building in the Diagonal Mar Zone in Barcelona. It forms part of the same real estate complex and has a buildable 17,500 m².
- Leisure centre in Málaga with an above-ground of 22,500 m². This centre is operated 50% with another partner through the company NORAPEX.
- Factory Outlet in Málaga with an above-ground surface of 15,407 m².

IBERDROLA Ingeniería y Construcción

During 2005 the growth of its activity within and outside of the Group has been given impulse and its international expansion has been strengthened. In line with the strategic objective of internationalizing the company, IBERINCO is already availed of two subsidiaries in the Federal District of Mexico and Brazil, commercial offices in Moscow and Qatar, and branch offices in Tunisia, Latvia, and Slovakia. The Mexican subsidiary has confirmed its growth in 2005 by contracting 125 million euros with third parties and sales reaching 170 million euros. The most significant transactions carried out in the fiscal year were the following:

International

- Awarding of the turn-key construction of a combined cycle in Riga (Latvia) for an amount

- of 300 million euros, representing the biggest contract obtained by IBERINCO to date.
- Contract for the development of the electrical grid control SCADA communications of the Constantine Region in Algeria for 6 million euros.
 - The entry into force of a contract to strengthen the electricity infrastructure of the State of Falcón for \$79.4 million US dollar from the Company Anónima de Administración y Fomento Eléctrico (Cadafe) of Venezuela is expected.
 - Awards from the Comisión Federal de Electricidad (CFE) of Mexico for strengthening the electricity infrastructure of the States of Baja California Sur, Sonora, Durango and Tamaulipas for 55 million US dollar.
 - Execution of all of the work necessary for the construction and installation of the electricity infrastructure for the States of Chihuahua and Nuevo León for the amount of 67.7 million US dollar.
 - Project for selecting the optimum fuel for the C.N. Laguna Verde (Mexico).
 - In consortium with Gamesa, it was awarded for the construction of the wind farm of La Venta II (83 MW) in addition to the contract for putting the associated electrical infrastructure into operation for the amount of 6 million US dollar . In addition, a new contract was signed at the end of the year to strengthen the electricity infrastructure of the State of Tamaulipas for 63.6 million US dollar.
 - In Nuclear Generation, the awarding of significant projects by the European Commission in the Ukraine, Russia and Kazakhstan.
 - The start-up of Technical Assistance Work for the Kola Nuclear Plant in Northern Russia
 - In Western Europe, the awarding of two projects by the EFDA (European Fusion for Development Agreement) for a total amount of 4.62 million euros.
 - Awarding of a new contract put out for bid by the governmental electricity enterprise of Mexico, the Comisión Federal de Electricidad (CFE), for the construction of the electricity infrastructure associated with the wind farm of La Venta II (83.3 MW) for an amount of 6 million US dollar .

Spain

- Works for the building of wind farms totalling around 400 MW, notably the turn-key projects for the wind farms of Moral de Calatrava and Canredondo with 60 MW in total.
- Construction of the biggest on-roof photovoltaic solar plant in Europe, and one of the biggest in the world, at the new operational headquarters of Telefónica in Madrid, and other solar facilities in Cuenca, Soria, Jaén and Madrid.
- Awarding of two projects to MINTRA for installing communications systems for various segments of the Madrid metro, adding up to about 3 million euros.
- In the area of transport and distribution, putting into service of 2,783 MVA of transformer capacity, the construction of 13 new substations, expansion or remodelling activities at 9 facilities of 400 and 220 kV, and the execution of 61 expansions at already existing facilities at other voltages.

- Awarding of the construction of the wind farm of El Moral (Ciudad Real), with 40 MW of capacity, and with a budget of 4.2 million euros.
- Awarding of a contract to install communications systems on Line 1 of the Madrid Metro with a budget of 1.7 million euros and a development period of 7 months.

6. REGULATION

6.1 National Reforms Programme

During 2005 the government approved the National Reforms Program, which includes measures for making some of the key industries in the economy more dynamic. With respect to the energy industries, the text establishes that "the strengthening of the deregulation in the various subsectors and the context of strong growth in demand require a transparent regulatory framework that guarantees the supply of energy and the making of new investments, a non-discriminatory access to the grid by third parties, a gradual elimination of the barriers of entry for new agents and price formation based on market mechanisms, internalizing environmental costs."

It goes on to include the wording that "in this regard, limits have been placed on cross participations in the capital of the main companies in the sector and measures have been approved to eliminate distortions that hinder the functioning of the market, promoting more effective competition. More specifically, in the case of the electricity sector, various topics have been addressed, such as Competition Transition Costs, the transparency of market information and the

internalisation of the environmental costs for power generation into electricity prices. With respect to natural gas, measures have been approved aimed at guaranteeing the security of the supply and facilitating changes of supplier."

"These reforms are in line with a sustainable development strategy, supplemented by actions that will make it possible to meet the Kyoto Protocol and Water Directive commitments. In concrete terms, the 2005-2007 Action Plan, the Energy Efficiency and Savings Strategy (E4) and the 2005-2010 Renewable Energy Plan have recently been approved, aiming to improve the energy efficiency of the country and reduce its dependency on imports."

The main points of the National Reforms Program relating to the energy industry are reflected in a series of Objectives and Measures:

Objectives

- "Expand connections on the capacity grid up to the equivalent of 10% of 2005's power production capacity is reached by 2010."
- "Provide incentives for and optimise the development of new energy infrastructures."
- "Improve coordination between power systems in order to ensure that demand is met."

Measures

Electricity

- "Reform of the wholesale market for electricity generation with the purpose of improving the conditions for effective

competition and guaranteeing the formation of prices based on competitive mechanisms.”

- “Reform of the mechanism for the obtaining of the Costs of Transition to Competition (CTCs) in such manner as not to interfere with or distort the formation of prices on the market.”
- “Development of a new system of payments for guaranteeing capacity assuring the availability of generation plants and the new investment for covering the growth in demand, in such way as to assure the supply on the medium term.”
- “Expansion of the electricity interconnections with France and Portugal that increase the commercial capacity and improve the coverage of the demand in zones that have insufficient generation.”
- “The creation of a new transparent and objective methodology for determining the electricity tariff that takes into account all of the recognised costs, enables the development of marketing activities and favours efficiency in consumption, in production, and in the supply of electricity.”
- “A deepening of the independence and transparency of the operation of the distribution grids with the purpose of avoiding discriminatory situations in the access by third parties to such infrastructures.”
- “Application of the new methodology for the remuneration of the electricity distribution developed by the National Energy Commission (CNE) and allowed for all of the agents in the sector so that each company may obtain the costs associated with its own grid, taking into account the demand that is expected, the geographic characteristics of the distribution zones, the percentage of losses from their grids,

and the quality of the supply and efficiency in the development of the grids.”

- “Development of information and sensitivity campaigns to inform society of the need to build electricity lines and review the procedures for facilitating their construction.”

Natural Gas

- “A medium-term elimination of the tariffs for major consumers of natural gas when effective competition in marketing exists.”
- “Improvement in the mechanisms of coordination of the Technical Management of the Gas System with the Electricity System Operation.”
- “Development of the Technical Management Rules of the Gas System to improve the procedures for the management, balance, and supply of gas, introducing the mechanisms necessary for greater guarantee of the supply and more efficient management of the system.”
- “A deepening of the independence and transparency of the operation of the distribution networks with the purpose of avoiding discriminatory situations in the access by third parties to such infrastructures.”
- “Revision of the methodology and structure of the fees for resolving situations of congestion and improving the efficiency in the use of the networks, creating an uninterruptible fee.”
- “Increase in the efficiency of the mechanisms for planning, construction, and operation of the transport networks.”
- “Revision of the remuneration for the distribution of natural gas to assure the quality in the supply and the efficient deployment of new infrastructures.”

- "Development of secondary markets for gas and for reserve of capacity at gas facilities."
- "Deepening of the reforms for eliminating obstacles to changes of supplier and continuing with the drive to deregulate the gas retail market."
- "Structure international transit fees."
- 12.1% total primary energy consumption in 2010 (objective already part of the previous Plan)
- 29.4% of the gross consumption of electrical production (Directive 2001/77/EC).
- 5.75% of biofuels in transportation (Directive 2003/30/EC).

6.2 New National Plan to Promote Renewable Energies

This past 26 August, the Council of Ministers approved the Renewable Energies Plan for Spain 2005-2010. This plan revises the objectives defined in the Promotion Plan of 1999 and in the 2002 Energy Planning Document and proposes a number of measures to achieve them.

The general objectives in that Plan are the following:

- Reduce excessive dependence on energy imports (80%).
- Meeting environmental commitments.
- That renewable energies cover:

According to this new Plan to Promote Renewable Energies, the growth in these technologies will not be sufficient to reach the objectives defined in the Sector Law and in the Renewables Directive (12,1% from primary energy and 29,4% renewable electricity in 2010, respectively). This is basically due to two factors: 1) demand for power has increased more than was forecast and 2) some technologies, such as biomass, remain underdeveloped.

The table below presents the new objectives, by technology, defined in the Promotion Plan and compares with those defined in the 2002 Energy Planning Document.

Sources	2002 Planning Document	Plan 2005-2010	Difference
Hydroelectric (10-50 MW)	3,151	3,257	+106
Hydroelectric (<10 MW)	2,380	2,199	-181
Biomass	3,098	2,039	-1,059
Biomass plants	3,098	1,317	-1,781
Co-combustion	0	722	+722
SUW	262	189	-73
Wind farms	13,000	20,155	+7,155
Solar photovoltaic	144	400	+256
Biogas	78	235	+157
Solar thermoelectric	200	500	+300
Total	22,313	28,947	+6,661

There are basically three key aspects to the Plan:

- The wind generation objectives are being increased significantly, from 13,000 MW in 2011 to more than 20,000 MW in 2010. This involves major support to IBERDROLA's strategy, to which it firmly committed in its Strategic Plan for developing wind power.
- Biomass objectives are being adjusted (reduced) from de 3,098 MW to 2,039 MW in 2010, of which 1,317 MW is from biomass plants and 722 MW is from co-combustion.
- The solar technologies objectives are being raised (from 200 to 500 MW thermo-solar and from 144 to 400 MW photovoltaic).

In addition, it should be emphasised that the remuneration premiums for renewable energies foreseen in RD 436/2004 approved in March 2004 are only rising for biomass and were set for the first time for co-combustion.

6.3 2006 Tariff

The government approved the Royal Decree on prices for 2006 on 23 December 2005 with an increase in the average price of 4.48%.

- The total revenues expected for the sector have grown to 19,086 million euros, up 10% in comparison with the estimate for 2005.
- Total recognition of the right to recover the 2005 tariff deviation through the tariffs of the coming years in the amounts contributed by each company.

- Higher price per MWh for the combined cycles: the total estimate of revenues is situated at 57.8 € /MWh.
- Full application of the regulations on renewable energies approved in 2004.
- Funds for CTCs due to differences are not estimated.
- The government will carry out a new modification of the average price on 1 July 2006 to revise the costs of the system (and include the mechanism for recouping the tariff deviation).

The following is a more detailed analysis of the content of the Royal Decree on tariffs:

Increase of 4.48% in the tariff for 2006

This increase is the result of the addition of the following factors:

- A base increase of 1.40% according to the methodology of the present tariffs
- Revision of the deviations of 2004 and 2005 reflecting a +0.60%, up to 2%.
- Additional increase of 2.48% due to regulatory modifications:
 - Recognition of the effect of the higher prices on the renewable energies market (for those who chose to participate in the market), according to the Royal Decree approved in 2004.
 - Regulation of non mainland systems.

- Strategy of energy efficiency and savings
- Integral tariffs are increasing 4.68%
- Access tariffs rise 2.86%

The estimated revenues for the sector are increasing more than 10% in comparison with the estimate of 2005, up to 19,086 million euros

This is a result of the combining of the increase of 4.48% in prices and the increase in demand expected to be 5.00%.

The government will be carrying out a new modification of the average tariff on 1 July in order to revise the costs of the system, including the mechanism for the recovery of the 2005 tariff insufficiency, which has been recognised in full, by means of the tariffs in the coming years.

The Royal Decree approved includes the following phrase:

"(...)On 1 July 2006, after the appropriate processes and reports, the government, by Royal Decree, will proceed to approve or modify the average or reference price, revising the costs derived from necessary activities for the supply of electrical energy, the permanent costs of the system and the costs of the diversification and security of procurement, including the incorporation, applied to the charging of the electricity price in the coming fiscal years, of the negative balances resulting from the settlements made under the methodology in force by the National Energy Commission pertaining to the

tariff for the year 2005 for each of the electricity companies that appear in part 1.9 of Annex I of Royal Decree 2017/1997 of 26 December, at the amounts actually contributed by each one of them with inclusion of such financial costs as may be incurred."

This sentence implies:

- A revision of the tariff that will be carried out on 1 July to revise the change in the costs of the system.
- Full recognition of the 2005 price deviation. The final amounts will result, according to the legal framework, from the present methodology of settlement of the income and costs of the system carried out by the National Energy Commission.
- As indicated, the final amount, which will include the corresponding financial costs, will be recouped by means of the income from the prices in the coming years.

Full application of the regulation on renewable energies approved in 2004

The regulations of 2004 apply in full with an estimate of more than 50% of the renewables market opting to participate in the market. The estimate of the price is increasing more than 10%. The energy under the Special Regime is expected to represent more than 20% of the total energy produced, thanks to the new wind farms installed.

Funds for CTCs for differences are not estimated

Recognition of new items, as well as the greater cost of renewables and combined cycles, reduces the figure for CTCs for differences to 0.

Changes in the net revenues of electricity companies

- Increase in the revenues of electricity companies deriving from the reduction in the percentage allotted to paying the debt of the nuclear moratorium from 3.04% in 2005 (526 million euros) to 1.72% in 2006 (329 million euros).
- Change in the legal system for the tariff related to consumption by the employees of electricity companies.

7. AGREEMENT WITH GAS NATURAL FOR THE FUTURE PURCHASE OF ASSETS OF THE COMPANY RESULTING FROM THE TAKEOVER BID FOR ENDESA PRESENTED BY GAS NATURAL

IBERDROLA considers that the decision of the government to approve, with conditions, the takeover of the shares of Endesa by Gas Natural, presented this past 5 September, is in line with the public interest, given that it is of the opinion that the transaction will be beneficial both to consumers as well as to the companies and society in general.

Furthermore, the Company believes that the resolution that was adopted by the Council of Ministers is logical from the point of view of protecting competition given that, if the takeover

by Gas Natural goes ahead under the terms already proposed, it will improve the present competitive situation in the industry,

For IBERDROLA this decision will, on the one hand, guarantee investments in new generation plants and electricity distribution grids that are necessary for covering the growing demand for energy, which will have the effect of greater quality in the service for the Autonomous Regions affected. On the other hand, it will also enable a gradual expansion of the gas network throughout Spain.

Furthermore, IBERDROLA understands that the government has respected the principle of free enterprise in allowing it to be the shareholders that make the decision they deem most appropriate for their interests. The Company underlines that this process could result in a structure for the energy sector in Spain that is similar to the ones in other European countries.

On the other hand, IBERDROLA considers that in principle the resolution announced by the government does not affect the agreement signed between the Company and Gas Natural for the purchase and sale of assets, which is subject to the success of the takeover, as well as to the obtaining of the pertinent administrative and third party authorizations.

Under the terms of that agreement signed on 5 September of last year, IBERDROLA would purchase generation plants and gas and electricity supply points in Spain, as well as electricity plants in Italy and 65% of the French company SNET, and it has expressed an interest

in other assets in areas of Latin America where it is already present.

***INFORMATIVE NOTE:**

All and each statement contained in this document referring to the agreement with Gas Natural are subject not only to the condition of the success of the Gas Natural bid, but also to those coming from the obtention of the necessary authorizations as the ones included in the Eleventh Additional Disposition from the Hydrocarbons Sector Act (Ley 34/1998 del Sector de Hidrocarburos) and the applicable merger control regulation.

Analysis of Fiscal year 2005

Energy production

	GWh	vs. 2004	% weight
Gas combined cycle	31,693	+8,531	36.8%
Renewable energy	7,058	+1,645	30.4%
Wind farms	6,471	+1,625	33.5%
Hydroelectric	8,816	-7,106	-44.6%
Nuclear	23,212	-3,226	-12.2%
Fuel-oil	3,431	+1,014	42.0%
Coal	6,945	-112	-1.6%
Cogeneration	1,854	-41	-2.2%
TOTAL NET PRODUCTION	83,009	+705	0.9%
ENERGY DISTRIBUTED	122,904	4.9%	

Energy production in Spain

	GWh	vs. 2004	% Weight
Gas combined cycle	13,819	+60.4%	21.7%
Renewable energy	7,058	+30.4%	11.1%
Wind farms	6,471	+33.5%	-
Hydroelectric	7,657	-47.3%	12.0%
Nuclear	23,212	-12.2%	36.5%
Fuel-oil	3,431	+42.0%	5.4%
Coal	6,945	-1.6%	10.9%
Cogeneration	1,460	+3.3%	2.3%
TOTAL NET PRODUCTION	63,582	-3.5%	100.0%
ENERGY DISTRIBUTED	96,295	4.4%	
HYDRO ELECTRIC RESERVE LEVELS AT 12/31/05		37,4% (4,222 GWh)	

Energy production in Latin America

	GWh	vs. 2004	% Weight
Gas combined cycle	17,874	+22.9%	92.0%
Hydroelectric	1,159	-17.5%	6.0%
Cogeneration	394	-18.3%	2.0%
TOTAL NET PRODUCTION	19,427	+18.2%	100.0%
ENERGY DISTRIBUTED (managed)	26,609	+6.8%	

1. PRODUCTION: SPAIN

The net production of the Group in Spain reached 63,582 GWh in 2005, thanks to an increase in production with renewables and combined cycles that offset the decline of -47.3% in hydroelectric production, and the reduction of -12.2% in nuclear production due to the technical shutdowns at the Cofrentes and Vandellós plants carried out in the year. The balanced mix of IBERDROLA, achieved thanks to new investments in renewables and combined cycles, totalling a joint contribution of 32.8%, has been key in limiting the decline in production in the mentioned context.

The most notable events recorded are:

- Increase of 60.4% in the production of the combined cycles up to 13,819 GWh, already reflecting 21.7% of the production compared to the 13.1% recorded in 2004. In this period, the combined cycles were strengthened as the number two technology in terms of total production volume in Spain.
- Wind farm production increased 33.5 %, taking the weighting of renewable energies facilities up to 11.1% in the generation mix during the period. The overall production under the Special Regime, including the contribution of cogenerators, has reached 13.4% to 8,518 GWh, exceeding the contribution of hydroelectric generation in a dry year like 2005, which has reached 7,657 GWh with a weight of 12%.

IBERDROLA has obtained a **market share of 25.6%** in the wholesale production market in 2005.

Comparatively speaking, energy production can be broken down as follows:

	2005	2004
Gas combined cycle	21.7%	13.1%
Renewable energy	11.1%	8.2%
Hydroelectric	12.0%	22.0%
Nuclear	36.5%	40.1%
Fuel-oil	5.4%	3.7%
Coal	10.9%	10.7%
Cogeneration	2.3%	2.1%
Total	100%	100%

2. PRODUCTION: LATIN AMERICA

The total production of Latin America recorded growth of 18.2% reaching 19,427 GWh. Of this total, 84% pertains to the combined cycles in Mexico.

	Production	Change
Mexico (cycle)	16,320	15.8%
South America	3,107	32.7%
Combined cycle	1,554	241.5%
Hydroelectric	1,159	-17.5%
Cogeneration	394	-18.3%
Total	19,427	18.2%

The increase recorded in the area is mainly due to the full functioning and better availability of the Mexican plants of Monterrey (1,040 MW), Altamira (1,036 MW), Enertek (120 MW), and La Laguna (500 MW), which entered into operation this past 15 March, and, secondly, to the

Termopernambuco plant in Brazil. With respect to hydroelectric energy, the Itapebí plant in Brazil has been functioning normally, with the decline in production attributable to an extraordinary contribution recorded in 2004 for the sale of its production surpluses.

3. MARKET: SPAIN

In the domestic market the total demand of IBERDROLA measured on the grid increased 4.4% reaching 96,295 GWh. With respect to the number of customers, the 9.7 million has already increased by about 65,000 customers in the fiscal year.

4. MARKET: LATIN AMERICA

The trend for demand at the three distributors in which IBERDROLA has an interest in Brazil is reflected in the following table:

Energy distributed (GWh) (under management)	2005	vs. 2004
Coelba	11,501	7.6%
Cosern	3,515	10.1%
Celpe	8,261	6.3%
Total	23,277	7.5%

Analysis of results for the period (unaudited)

January-December 2005

The most notable aspects of the Results of fiscal year 2005 are as follows:

	Million €	vs. 2004
NET SALES	11,738.3	+34.5%
GROSS MARGIN	4,946.7	+10.6%
EBITDA	3,377.6	+16.0%
EBIT	2,262.2	+13.7%
NET PROFIT	1,382.0	+15.6%

1. NET SALES

The Group's Net Sales totalled 11,738.3 million euros in 2005, reflecting an increase of 34.5% compared to 2004, as a result of the positive contribution of all of the businesses in the Group: The Domestic Energy business, the main growth driver contributed 71.0% in the Group's Net Sales and rose 35.1%, in second place the International business, with a weight of 17.3%, increased 47.2% and, finally, the Other Businesses rose a 16.6%, to reach a 11.7% contribution to the total.

The main factors driving this change in each of the businesses were as follows:

In the Domestic Energy Business, the 35.1% registered in Net sales was the result of:

- The upward trend recorded in Generation (37.4%), deriving from the following factors:
 - The pool price increase (87%) relating to a greater increase in the costs of fuel as described later.
 - Production under the ordinary regime is down 6.7% in a period when, in addition to the mentioned decline in hydraulic production in Spain (-47.3%), a 12.2% reduction was recorded in nuclear production, due to the technical shutdowns of the Nuclear Plants of Cofrentes (100% owned by IBERDROLA) and Vandellós II (28% owned by IBERDROLA and 72% owned by Endesa), because of its refuelling period. Both plants have already been connected to the grid. The mentioned declines are offset by an increase of 60.4% in the production of combined cycles, reaching 21.7% of the total production.
- Supply business has increased its Net Sales by 26.0% mainly due to the higher activities, especially in Gas, with an increase of 26% in the volumes supplied.
- In Renewables, Net Sales is up 69.1% to 557.3 million euros as a result of the increase of

33.5% in wind production vs 2004, as well as the higher prices obtained. It is worth mentioning that as of December 2005 94% of the wind farms are under the market participation scheme. In addition, changes have occurred in the scope of consolidation, basically in the stake in Rokas.

- The Net Sales from Distribution grew 1.6%, in line with its regulated revenues, to which the incentive for losses is added.
- Net Sales from International business has increased 47.2% to 2,031.1 million euros. Mexico, with a 63% of the total, is the region that made the biggest relative contribution, showing a 45.8% growth. The placement in operation of the La Laguna cycle has contributed to this increase. It is also notable that there has been a rise in the Net Sales in Brazil by 49.7%, basically due to the increase in demand and the upward readjustment in tariffs, as well as the favourable change in the currency exchange rate.

It should be pointed out that since April of 2005 the Celpe tariff review that arises every four years has been applied, the Coelba and Cosem tariff adjustments, where there has been a retroactive adjustment of the recognition of the basis for remuneration of assets at Coelba since 2003, and inflation and changes in non-manageable expenses have been incorporated in the tariffs.

- Net Sales from Other Businesses has increased 16.6% to 1,375.0 million euros, as a result of increase in activities in real estate and

Engineering business, and the contribution of IBV, which grew at similar rates. It is worth mentioning that Third Party Services, has been accounted for since the third quarter of the fiscal year at the Gross Margin level in order to provide a higher visibility and transparency.

2. GROSS MARGIN

On a consolidated level, the Gross Margin came out at 4,946.7 million euros, representing an increase of 10.6% in relation to the same period in 2004. As we will describe later, the Domestic Energy Business reflects the cost of consumption for emission rights, which has totalled 168.5 million euros over the period.

As described below, the Basic Margin is obtained by adding to the Gross Margin the effect of the revenues from the free allowances, so that it reflects the net effect of such allowances. The Basic Margin of the period increased 13.6% to reach 5,081.1 million euros.

Regarding the change in the Gross Margin, it is worthy highlighting the following aspects:

2.1 Domestic Energy Business

The Gross Margin remains stable and grows 3.7% compared to 2004, in an environment of difficult production conditions, amounting to 3,560.0 million euros:

- Gross Margin of the Generation business in Spain reached 1,825.2 million euros, rising

1.2% in relation to 2004. This change should be analyzed in the following context:

- An increase of the pool price by 87%, neutralizing the lower production (-6.7%).
- Higher consumption of fuel due to the change in the production mix (less hydroelectric and nuclear production and higher thermal production) in an environment of higher fuel prices, reflected in an 94.6% increase in procurement cost.
- 168.5 million euros were recorded under the category of cost for emission allowances consumed in the period.
- Gross Margin of Renewables business is up 69.1%, in line with its Net Sales, due to the increase in the wind energy production by 33.5%. The Gross Margin of Renewables already represents 23.4% of the total of the Gross Margin obtained by the generation businesses of IBERDROLA in Spain. The change in the remuneration system contributed to this, with 94% of the wind farms under the market participation system at December of 2005. In addition, changes were made in the scope of consolidation (Rokas).
- Gross Margin from Distribution grew 1.6% to reach 1,215.1 million euros, in line with the increase in the remuneration from regulated business recognised in 2005 tariff.
- In the Supply business there was a decline in the Gross Margin (-16.2 million euros) due to the losses in margins related to the business. In addition, there is a negative effect of -4 million euros due to greater resettlements of revenues from sale of energy, costs of

access fees and purchases of energy from fiscal years 2000 and 2001, compared with 2004.

2.2 International Business

The Gross Margin was 742.7 million euros, reflecting growth of 49.1% due to the good performance of the Group's businesses in the region and the positive evolution of the exchange rate of the Brazilian currency.

- In Mexico-Guatemala, the Gross Margin amounted to 293.3 million euros (+36.1%). This increase is basically due to the contribution to results from the combined cycle of La Laguna (500 MW), after its entry into operation in the first quarter, and, secondly, to the improvements in efficiency at the plants of Monterrey and Altamira III.
- In Brazil, the Gross Margin shows a positive evolution up 59.0% (reaching 449.4 million euros), thanks to: higher contribution from the Distribution businesses due to the demand growth (+7.7%) and tariff revisions and adjustments. A greater contribution from generation was recorded due to the entry into operation of Termopernambuco in May of 2004. It should also be pointed about the increase in value of the Brazilian currency in relation to the euro (19.3%), with a positive effect of 73.9 million.

2.3 Other Businesses

These businesses have contributed with 644.0 million euros to the total Gross Margin,

representing growth of 18.6%, basically due to IBERDROLA Inmobiliaria, Ingeniería and to Corporación IBV. The breakdown of the results are as follows:

Million euros	2005	2004	Change % million
Ingeniería	143.2	81.4	61.8
IBERDROLA Inmobiliaria	198.4	170.7	27.7
IBV Corporation	140.0	129.3	10.6
Other Services	162.4	161.5	0.8
TOTAL	644.0	542.8	101.1

It should be pointed out that "Other Businesses" includes other services rendered that, up to this quarter, were accounted for in the Distribution Business, following the recommendations of the auditor and conforming to the criterion traditionally followed in the Annual Report.

3. BASIC MARGIN

This entry reflects the global effect of the emission allowances on the accounts of the Company, which consist on:

- An expense for the consumption of such emission allowances in the amount of 168.5 million euros, recorded at the level of the Gross Margin.
- Revenues from free emission allowances assigned in the amount of 134.4 million euros, accounted for under the Gross Margin.

Therefore, the Basic Margin is obtained by adding to the Gross Margin the effect of the revenues from the free rights assigned so that it reflects the

net effect of such rights on the accounts of the Company, that in this period amounts to -34.1 million euros.

The Basic Margin of the period increased 13.6% to reach 5,081.1 million euros, as can be seen in the following table:

	2005	2004	Change %
GROSS MARGIN	4,946.7	4,473.2	10.6%
INCOME FROM			
EMISSION RIGHTS	134.4		
BASIC MARGIN	5,081.1	4,473.2	13.6%

4. EBITDA/GROSS OPERATING RESULT

The consolidated EBITDA increased 16.0% to reach 3,377.6 million euros, as a result, in addition to what has already been explained, the improved efficiency achieved by increasing the Net Operating Expense (+8.5%) at a level below the increase in the Basic Margin (+13.6%). The greater contribution from the new businesses should be highlighted, as well as the extraordinary effects recorded in the Net Operating Expense. There is a positive impact from currency exchange differences of 51.8 million euros (from currency devaluation of South American business).

The Net Operating Expense, despite the containing of the expenses in the traditional businesses, rose 8.5% connected with the greater activity of the new businesses. They can be broken down as follows:

- The moderate change in the Net Personnel Expenses (-0.1%)
- An increase of 21.05% in the Net External Services due to the greater activity in connection with the new installations of combined cycles, renewables, and Latin America, as well as expenses coneted with suply activity. 33 million euros are also included due to costs for the second nuclear fuel cycle (Enresa).
- Other Operating Income includes other compensations received.

It should be pointed out that, without taking into account the impact of the exchange rate for the currencies of reference, the Net Operating Expense would have increased +7.0% instead of the +8.5% mentioned.

Net Operating Expenses can be broken down as follows:

Million euros	2005	vs. 2004
Net personnel expenses	805.6	-0.1%
Personnel	-979.8	2.1%
In house work on fixed assets	174.3	13.6%
Net External Services	675.2	21.0%
External Services	-862.9	15.5%
Other operating revenues	187.7	-0.8%
TOTAL	1,480.8	8.5%

The worforce in the Traditional Energy Business reduced 3.4% in relation to 2004 to reach 8.252 employees, and the gross margin of the Domestic Energy Business 3.7% growth. As a result, the ratio of gross margin per Employee in the

Domestic Energy Business recorded an improvement of 7.4%, as can be observed in the following table:

	2005	2004	Change %
Gross Margin (Domestic Energy Business) (million euros)	3,560.0	3,432.2	3.7%
Dom. Energy Bus. workforce Spain	8,252	8,546	-3.4%
Gross Margin/employee ratio (thousands of euros)	431.4	401.6	+7.4%

On the other hand, Taxes increased 13.7% to reach 222.7 million euros, with the explanation for such change being basically the impact in Latin America deriving from the application of the IFRS and from the higher payments of local taxes.

5. EBIT / NET OPERATING RESULT

The EBIT reached 2,262.2 million euros, with an increase of 13.7% in relation to 2004, the contribution from new businesses being worth highlighty. The item of Amortizations and Provisions, which increased 192.9 million euros (+20.9%), offsets the increase generated by the operations and what was mentioned earlier. The increase in Amortizations and Provisions is mainly due to:

- Amortizations recorded an increase of 9.7%, to reach 966.7 million euros. This increase was basically caused by the increase in the installed capacity of renewables by 18.8% and the new combined cycle facilities (+33.1%) that have entered into operation.

Million euros	2005	2004	Change %
Amortizations	966.7	881.1	9.7%
Provisions	148.7	41.5	258.8%
TOTAL	1,115.4	922.6	20.9%

- Provisions recorded an increase of 258.8% reaching 148.7 million euros, with 70% of the total corresponding to activities in Spain and the remaining 30% to Latin America. Regarding total provisions, 116 million euros are not recurrent.

6. FINANCIAL RESULT

The Financial Result amounted to 455.6 million euros, 15.5% above that of 2004. The increase is basically due to the 10.3% increase in the financial expenses, mainly as a result of the impact of the tariff deviation in the period and investments carried out in the year, generating a greater average balance of debt in relation to 2004 (+1,733.4 million euros).

Million euros	2005	2004	Change %
Financial revenues	266.7	260.0	2.6%
Financial expenses	(722.3)	(654.6)	10.3%
TOTAL	(455.6)	(394.6)	15.5%

The average financial cost of the debt was 4.55% during 2005, below 4.63% obtained in 2004.

7. RESULTS OF COMPANIES CONSOLIDATED BY THE EQUITY METHOD

Results of Companies Consolidated Using the Equity Method recorded a reduction of 9.0 million

euros and reached 34.4 million euros, with most of the result contributed from Other Businesses. The results can be broken down as follows:

Million euros	2005	2004	Change % millions
Other Businesses	39.8	41.2	-1.4
Rest	(5.4)	2.2	-7.6
TOTAL	34.4	43.4	-9.0

Because of the implementation of the IFRS, the companies EDP and REE have exited from the scope of consolidation which has reduced this line contribution. Other companies such as Corporacion IBV have modified their method of consolidation. It is also affected by lower contribution of Gamesa, due to its results evolution.

8. NET PROFIT

The Income from Non-Current Assets is mainly comprised of the capital gain obtained from the sale of the stake in Cementos Portland (74 million euros) and the gains obtained in other real estate transactions.

Pre-Tax Earnings grew +13.3%. The effective tax rate for fiscal year 2005 is 28.3%, lower than that of 2004 (30.1%) due to the applied deductions for investment. Finally, the Net Profit reached 1,382.0 million euros, with an increase of 15.6% in relation to that obtained in 2004. Its evolution is in line with the evolution experienced by the Operating Profit.

Results by business

1. ENERGY BUSINESS: SPAIN

1.1 Generation

a) Gross Margin

The change in this item in 2005 demonstrates the capacity of the generation facilities of IBERDROLA. In a period of high demand, one of the lowest hydroelectric production in the last 60 years, and a decline in nuclear production due to the technical shutdown for fuel reloading of the Nuclear Plants of Cofrentes (100 % owned by Iberdrola), and Vandellós II (72% owned by Endesa, 28% owned by IBERDROLA), the combined cycles have consolidated as the second technology contributing most to the total production in Spain. The new combined cycles have had a key role, increasing their production by 60.4% and practically doubling their contribution to the total production, already representing 21.7% compared to 13.1% in 2004.

In this context, despite the environment of high fuel prices for the combined cycles, the Gross Margin of the Generation business increased 1.2%. It is appropriate to point out the following factors:

The Net Sales displayed growth of 37.4% in a fiscal year in which pool prices increased 87%. The production under the ordinary regime limited its decline to 6.7% to reach 55,064 GWh despite the fact that hydroelectric production fell 47.3% and nuclear 12.2%. As already explained, the contribution from the combined cycles was

fundamental for partially offsetting the decline in production in this context. The entry into operation of the new cycles and the higher price of the pool have enabled the increase in the gas price to be offset. With production of 13,819 GWh, the combined cycles contributed 21.7% of the total production under the ordinary regime in the period, reaching a load factor of 65.9% as of December 2005.

Eur/MWh	C. Cycles	Coal	Oil
Avg. Fuel	30.0*	246	58.4
Avg. CO ₂ (Eur/ton)	210		

* Includes TPA

In an environment of greater thermal production due to the lower level of hydroelectric production and the decline in nuclear production, and with several fuel costs on the rise, the Procurement cost went up 94.6%.

It should be pointed out that the cost of consumption of free emission rights, included Procurement Cost, reached 168.5 million euros.

Regarding Basic Margin, which includes, in addition to the expense for the consumption of emission rights, the revenues corresponding to free emission allowances received (134.4 million euros), amounts to 1,959.6 million euros, increasing 8.6%.

b) Operating Profit/EBIT

The EBIT recorded an increase of 7.2% in relation to the previous fiscal year, reaching 1,054.1 million

euros. At the level of the EBITDA (1,448.5 million euros) there was an increase of 8.2%. In addition to that already mentioned concerning the Gross Margin, an increase of 11.5% took place in the Net Operating Expenses (46.3 million euros), as a result of various factors:

- The personnel expenses increased 6.0%, already reflecting the increases deriving from the update due to the labour agreement and CPI.
- The External Services rose 28.5% mainly due to the entry into operation of the Combined Cycle Plants. It should also be pointed out that this chapter includes 33.9 million euros in expenses from the second part of the cycle of the nuclear fuel (ENRESA).

The Net Operating Expenses are broken down as follows:

Million euros	2005	vs. 2004
Net personnel expenses	-212.9	6.0%
Personnel	-236.8	6.0%
In-house work on fixed assets	23.9	5.8%
Net External Services	234.3	17.1%
External Services	296.7	28.5%
Other operating revenues	-62.4	102.6%
TOTAL	447.2	11.5%

Tax increased 0.5% as a result of the new facilities brought into service.

Increase of 10.8% in the item for Amortizations and Provisions, reaching 394.4 million euros, basically from the entry into operation of the new combined cycles, with 1,200 MW put into operation in 2005.

- The key operating figures for this business are as follows:

GENERATION (Million euros)	2005	vs. 2004
Net Sales	3,641.7	37.4%
Gross Margin	1,825.2	1.2%
Basic Margin	1,959.6	8.6%
EBITDA	1,448.5	8.2%
EBIT	1,054.1	7.2%

1.2 Renewable energy

a) Gross Margin

The Renewables Business has been affected by various factors that have contributed to its growth in fiscal year 2005 and that confirm the Renewables Business to be the most important vector of growth in the Strategic Plan of IBERDROLA along with Mexico. These factors can be summarized as follows:

- Entry into operation of new facilities throughout the fiscal year. The installed capacity increased by 18.8% (+604 MW), as reflected in a 33.5% increase in wind energy production and an 30.4% rise in total production generated by renewable energy sources, reaching 7,058 GWh.

- Increase of 29.7% in prices obtained.
- During the fiscal year 2005 there was a progressive change in the remuneration option chosen by the facilities in operation. At December of 2005 94% of the parks operated under the market participation system.
- Incorporations into the scope of consolidation of Rokas, due to the stake has been increased until 49.9%. EBITDA contributed by Rokas amounted to 14.5 million euros.

Thus, the mentioned increase in production, in conjunction with the acceleration in the growth achieved by transferring most of the facilities to the market participation system, has enabled an increase in the Gross Margin of this business by 69.1%, reaching 557.3 million euros.

b) Operating Profit/EBIT:

EBIT increased by 170.2 million euros (+115.4%) due to the following factors:

- EBITDA grew 82.8%, increasing more than Gross Margin, due to Net Operating Expenses increased 22.9%, as a result of the new capacity brought online. The margin for EBITDA comes out at around 80%, as seen in previous periods.
- This growth is even greater at the level of the EBIT (115.4%), reaching 317.7 million euros, despite the increase in the Amortizations and Provisions of 38.1%, an increase due the addition of 18.8% of installed capacity during the fiscal year.
- Net Operating Expenses can be broken down as follows:

Million euros	2005	vs. 2004
Net personnel expenses	16.0	72.0%
Personnel	21.6	63.6%
In-house work on fixed assets	-5.6	43.6%
Net External Services	69.4	15.3%
External Services	77.4	12.7%
Other operating revenues	-8.0	-5.9%
TOTAL	85.4	22.9%

- The key operating figures for this business are as follows:

RENEWABLES (Million euros)	2005	vs. 2004
Net Sales	557.3	69.1%
Gross Margin	557.3	69.1%
EBITDA	465.7	82.8%
EBIT	317.7	115.4%

1.3 Distribution

Note: "Other Businesses" includes items considered as "Other Services" that, up to the third quarter, had been included in the Distribution business.

a) Gross Margin

The Distribution business achieved a 1.6% increase in its Gross Margin, attributable to the higher level of remuneration for the regulated business recognised in the tariff for 2005.

b) Operating Profit/EBIT:

The EBITDA of Distribution grew 0.6%, one point below the Gross Margin, due to the fact that the increase in the Net Operating Expense of 3.0% and in Taxes of 1.5% were not offset by an increase in regulated revenues of 1.6%.

Net Operating Expenses can be broken down as follows:

Million euros	2005	vs. 2004
Net personnel expenses	191.9	0.8%
Personnel	262.9	0.4%
In-house work on fixed assets	-71.0	-0.6%
Net External Services	297.6	4.5%
External Services	383.4	2.1%
Other operating revenues	-85.8	-5.4%
TOTAL	489.5	3.0%

Despite the fact that there was containment of the Net Personnel Expenses, there was an increase of 3% in the Net Operating Expense

mainly caused by the decline in the Other Operating Revenues (-5.4%).

Amortizations and Provisions increased 9.8%, despite the reduction in the amortizations of the distribution lines because some were fully amortized and because of the sale of assets to REE. This increase is due to provisions registered which caused an EBITDA to grow 4 points higher than EBIT, which fell 3.4%.

- The key operating figures for this business are as follows:

DISTRIBUCIÓN (Million euros)	2005	vs. 2004
Net Sales	1,215.1	1.6%
Gross Margin	1,215.1	1.6%
EBITDA	644.9	0.6%
EBIT	430.3	-3.4%

1.4 Supply

a) Gross Margin

The Gross Margin of Supply recorded losses of -16.2 million euros, given the fact that the increase of the price in the sales of energy has not compensated the growth in the procurement costs. The 26.0% increase in the Net Sales, up to 3,119.8 million euros, was basically due to the increase in the volumes of sales of gas, while the sales of electricity registered a more moderate growth, as a consequence of the policy followed by the company, which has triggered a market share fell to 33.5%.

GWh sold	2005	vs. 2004
Electricity	30,149	0.1%
Gas	22,255	25.5%
TOTAL	52,404	9.5%

b) Operating Profit/EBIT

At the level of the EBIT, the increase in the operating costs (+14.1 million euros), should be mentioned mainly at the level of External Services due to the increase in activities relating to the process of deregulation and advertising campaigns.

Net Operating Expenses can be broken down as follows:

Million euros	2005	2004
Net personnel expenses	62.4	6.6%
Personnel	63.4	6.9%
In-house work on fixed assets	-1.0	24.8%
Net External Services	41.9	32.1%
External Services	81.5	20.6%
Other operating revenues	-39.6	10.5%
TOTAL	104.3	15.6%

Furthermore, the EBIT of the Supply Business was influenced by:

- An increase of 39.6 million euros in the Amortizations and Provisions, which includes provisions related to the business.

- An increase of 155.5% in the Taxes due to the significant activity increase.
- The key figures for this business are as follows:

SUPPLY BUSSINES (million euros)	2005	vs. 2004
Net Sales	3,119.8	26.0%
Gross Margin	-16.2	N/A
EBITDA	-178.5	N/A
EBIT	-245.3	N/A

1.5 Corporation

This includes eliminations of inter-company expenses between the corporation and the businesses.

2. INTERNATIONAL BUSINESS

a) Gross Margin

In the International Business, the Gross Margin is up 49.1% (+244,6 million euros) to 742,7 million euros. The change in the total Gross Margin for the Latin America region can be broken down as follows:

- Increase in the Gross Margin (functional currency): +170.7 million euros.
- Exchange rate effect: 73.9 million euros in total, mainly from the increase in the value of the Brazilian currency in relation to the euro.

In Mexico, the Gross Margin rose 36.2%, driven primarily by the La Laguna combined cycle plant (500 MW) brought into service in the first quarter of the year and the efficiency improvements achieved at the Monterrey and Altamira plants, which enabled an acceleration in their levels of production.

In Brazil, the growth in the Gross Margin (+59.0%) was basically caused by the 7.7% increase in demand, the contribution of the Termopernambuco combined cycle plant, which entered into operation on 15 May 2004 and the tariff revisions that took place throughout 2005. Thus, since April of 2005 the Celpe tariff review that arises every four years has been applied – the Coelba and Cosem tariff adjustments, where there has been a retroactive adjustment of the recognition of the basis for remuneration of assets at Coelba since 2003 – and inflation and changes in non-manageable expenses have been incorporated in the prices.

b) Operating Profit/EBIT

The change in the EBIT of International, which increased 71.1%, reaching 371.4 million euros, is the result of an increase in the EBITDA of 59.7% and the growth in amortizations (+40.8%), at a lower rate recorded than the mentioned EBITDA.

- Mexico recorded a +39.8% rise in EBITDA, mainly as a result of the increase in Generation activities, with the production of the La Laguna combined cycle plant added since the first quarter, and the lower increase in Operating Expenses. In South America there was a rise of +79.3% from the already

described change in the Gross Margin item. In this way, total EBITDA growth in the International Business comes out at 59.7%.

The EBITDA per region and business is broken down as follows:

- *Mexico-Guatemala*

Million euros	2005	vs. 2004
Generation	175.1	50.7%
Distribution	65.7	16.7%
TOTAL	240.8	39.6%

- *South America*

Million euros	2005	vs. 2004
Generation	78.6	49.1%
Distribution	236.4	92.5%
TOTAL	315.0	79.5%

- The change in Net Operating Expenses for the entire Latin America region can be broken down as follows:

Million euros	2005	vs. 2004
Net personnel expenses	71.0	38.7%
Personnel	85.1	41.4%
In-house work on fixed assets	14.1	56.7%
Net external services	111.9	23.9%
External services	143.9	24.4%
Other operating revenues	-32.0	26.0%
TOTAL	182.9	29.3%

The 29.3% increase in the Net Operating Expense was affected by the impact of the change in the exchange rate. Eliminating this effect, this item grew 14.4%, much lower than International Gross Margin.

Net Operating Expenses can be broken down by region as follows:

Million euros	2005	vs. 2004
Mexico-Guatemala	52.1	+21.7%
Net personnel expenses	12.2	+8.9%
Net external services	39.9	+26.3%
South America	130.8	+32.5%
Net personnel expenses	58.8	+47.0%
Net external services	72.0	+22.7%
TOTAL	182.9	29.3%

- Amortizations and Provisions are up 41.9%, primarily due to the effect of the increase in amortizations booked as a result of the Altamira and La Laguna combined cycles plants in Mexico and the Termopernambuco plant in Brazil entering into service and operating at full capacity. Some provisions have been recorded following prudence criterion.

The key operating figures for this business are as follows:

INTERNATIONAL		
Million euros	2005	vs. 2004
Net sales	2,031.1	47.2%
Gross margin	742.7	49.1%
EBITDA	555.8	59.7%
EBIT	371.4	71.1%

3. OTHER BUSINESSES

The Other Businesses division recorded significant growth in results on all lines. The following table breaks down the EBITDA:

	2005	2004	Var%
EBITDA	403.7	338.5	19.3%
Real estate	162.4	146.2	11.1%
Engineering	88.8	29.9	196.3%
IBV Corporation	26.3	22.3	17.8%
Other	126.3	140.0	-9.8%

- The main engine of these results was the real estate business, which contributed 40.2 % of the total EBITDA.
- The contribution from IBERDROLA Ingeniería also stands out, the EBITDA of which reached 88.8 million euros in the fiscal year, generated by the increase in activities, mainly with respect to the providing of services.
- Corporación IBV, which is consolidated by proportional consolidation according to the IFRS, has contributed 26.3 million euros through its various industrial businesses.
- It should be pointed out that "Other Businesses" includes other services up to the third quarter, which had been included under the Distribution business, thus complying with the criterion followed for the Annual Report.

The key operating figures for this business are as follows:

Million euros	2005	vs. 2004
NET SALES	1,375.0	16.6%
GROSS MARGIN	644.0	18.6%
EBITDA	403.7	19.3%
EBIT	329.2	24.6%

- IBERDROLA Inmobiliaria income statement data

	Million euros	vs. 2004
NET SALES	467.9	13.7%
GROSS MARGIN	198.4	16.2%
EBITDA	162.4	11.0%
EBIT	161.1	19.9%
NET PROFIT	95.6	8.8%

The main items for IBERDROLA Inmobiliaria at the end of fiscal year 2005 are the following:

- IBERDROLA Inmobiliaria business data:

PORTFOLIO OF BUILDABLE AREA RESIDENTIAL USE (m ²)	
Total	1,412.4
Under construction	145.8
Under management	175.1
In planning	1,091.5

PORTFOLIO OF BUILDABLE AREA SUPPLY BUSINESS USE (m ²)	
Total	491.6
Under construction	34.5
Under management	54.7
In planning	402.4

- IBERDROLA Inmobiliaria balance sheet data:

	MM €
TOTAL ASSETS	1,445
INTANGIBLE FIXED AND INVESTMENT ASSETS	563
CURRENT ASSETS	854
SHAREHOLDERS' EQUITY	583
FINANCIAL DEBT	93

Balance Sheet

January-December 2005

	Million euros	vs. Dec. 2004
TOTAL ASSETS	30,479	+16.4%
TANGIBLE & INTANG.		
FIXED ASSETS	21,342	+11.8%
LONG-TERM INVESTMENTS	1,630	+3.7
SHAREHOLDERS' EQUITY	9,415	+10.5%
NET DEBT	12,211	+14.4%

At 31 December 2005, Iberdrola's Total Assets came to 30,479 million euros, highlighting the maintenance of its strong capital position, even taking into account the large volume of investments made in the period (2,201 million euros). The leverage ratio was 56.5% (53.8% without the tariff insufficiency effect), 90 pb higher than in December of 2004 with the accounts under IFRS format, mainly affected by the financing of the price tariff insufficiency corresponding to IBERDROLA that amounted to 1,259 million euros at December of 2005.

Analysis of the Balance Sheet

1. FIXED ASSETS

Investments in fiscal year 2005 totalled 2,201 million euros. They can be broken down as follows:

	Jan-Dec. 2005	%
Spain	1,573	71.5%
Generation	558	
Renewable energy	489	
Distribution	392	
Other	134	
Mexico	403	18.3%
Generation	387	
Distribution	16	
South America	80	3.6%
Generation	10	
Distribution	70	
International: other	145	6.6%
TOTAL	2,201	100.0

With respect to the investments in Spain, those made in the production activity stand out, totalling 1,047 million euros, broken down as follows:

- 558 million euros destined for the Generation business.

- 489 million euros dedicated to the Renewables business.

In Mexico, investments were mainly focused on the Tamazunchale combined cycle, with 201 million euros, as well as to the Altamira V one, in which 141 million euros has been invested. In Brazil, investments have primarily been made on the distribution business, financed by funds generated in Brazil.

Under the heading "International: other", totalling 145 million euros, the investments in Renewables outside of Spain are reflected, including the acquisition of an additional 28.9% in the Greek company Rokas.

2. SHARE CAPITAL

Share Capital as of 31 December 2005 was comprised of 901.549.181 bearer shares with a par value of €3 each.

The General Shareholders' Meeting held this past 18 March approved the distribution of a total dividend of 0.768 euro per share charged against financial year 2004, representing an increase of 14.3% per share over the dividend paid in 2004. This confirms the commitment made by IBERDROLA to increase shareholder compensation in line with the growth in Net Profit.

On 2 January 2005 an interim dividend was paid out in the amount of 0.326 euro per share and on 1 July 2005 an additional dividend of 0.442 euro per share was paid out, both relative to the 2004 financial year.

Furthermore, the total dividend proposed by the Board of Directors to the General Shareholders' Meeting to be held within the first quarter of 2006 amounts to 0.885 euro per share, of which 0.367 euro per share was credited on account on 2 January 2006.

3. FINANCIAL DEBT

The net financial debt at the end of December amounted to 12,211.4 million euros and the financial leverage stood at 56.5%, 90 basis points above the 55.6% recorded at December of 2004. It should be pointed out that the debt figure mentioned includes 1,259 million euros from financing the tariff insufficiency effect corresponding to Iberdrola. Without such effect, financial leverage would have been 53.8%, 180 basis points lower than the level seen at December 2004.

With respect to the average cost of debt, it came to 4.55% at 31 December 2005, 8 bp lower than at December of 2004.

The debt structure can be broken down by currency and interest rate as follows:

	December 2005	December 2004
Euro	84.1%	86.4%
Dollar	10.4%	9.5%
Real	5.0%	3.9%
Other currencies	0.5%	0.2%
Fixed Rate	61%	58%
Capped	13%	16%
Floating Rate	26%	26%

In line with the policy to minimise financial risks on debt, foreign currency risks have continued to be mitigated through the financing of investments in Latin America in local currencies (real, in the case of Brazil) or in functional currencies (dollar, in the case of Mexico).

The debt structure per company is shown in the following table:

	December 2005	December 2004
Iberdrola S.A.	84.6%	83.5%
Mexico	5.0%	5.3%
South America	5.1%	5.8%
Renewable energy	2.9%	2.7%
Iberdrola Inmobiliaria and other	2.4%	2.7%
Total	100%	100%

Debt can be broken down by product type as follows:

	December 2005	December 2004
Euro bonds	36.8%	41.4%
Bonds in other currencies	9.2%	7.8%
Domestic Supply bussines paper	2.4%	3.4%
Euro Supply bussines paper (ECP)	5.7%	4.5%
Euro loans	36.7%	34.8%
Loans in other currencies	9.2%	8.1%
Total	100%	100%

Furthermore, resulting from the policy of refinancing followed by IBERDROLA during 2005, the average duration of the debt increased significantly to exceed 5 years at December of 2005 compared to the 4.3 years existing at December of 2004.

Lastly, the change in financial leverage has been as follows:

Million euros	December 2005	December 2004
Shareholders' equity	9,415	8,520
Gross Debt	13,111	11,105
Derivatives (assets)	-90	-86
Temporary Financial Investments	601	211
Cash	208	134
Net debt	12,211	10,673
Leverage*	56.5%	55.6%

*Without the effect of the tariff deviation, leverage is 53.8%.

4. WORKING CAPITAL

The figure for the Net Working Capital rose to 263 million euros, representing a decline of 152 million euros in relation to the 522 million euros

recorded at the end of fiscal year 2004. This increase is broken down as an increase of 558 million euros in Current Assets and an increase of 817 million euros in Current Liabilities.

5. FUNDS GENERATED FROM OPERATIONS

The Funds Generated from Operations at December 2005 stood at 2,346 million euros, representing an increase of 19.8% in relation to September 2004.

Company, has accounted for the tariff deviation registered in 2005, under receivable accounts, maintaining the same criteria during the year, which has been reinforced at the end of 2005 by the right recognition from the Government of the right of the companies to recover the tariff insufficiency.

Furthermore, Moody's rating agency, in its last review dated June 2005, rated the liquidity of IBERDROLA for the next 12 months at the "Excellent" level. In the last quarterly review done by Moody's, this liquidity rating was maintained.

Iberdrola's Credit Rating		
Agency	Rating	Outlook
Standard & Poors (*)	A+	Negative
Moody's (*)	A2	Negative
Fitch IBCA (**)	A+	Negative

(*) By virtue of the agreement for the acquisition of assets signed with Gas Natural and subject to the approval of the pertinent authorities:

- S&P has rated IBERDROLA at "credit watch with negative implications"

- Moody's has rated IBERDROLA at "review for a possible downgrade"

- After Government approval of Gas Natural bid over Endesa, Fitch has set up Iberdrola rating in "Rating watch negative" (RWN)

APPENDIX.- IBERDROLA and sustainability

IBERDROLA considers sustainable development to be a strategic factor in its business activity, to which it dedicates its operating capacity and its financial and technological potential. True to its corporate objective of generating wealth and well-being, IBERDROLA operates with the vision of "being the preferred company because of our commitment to creating value, quality of life and taking care of the environment" and considers its success to depend on the ability to meet contractual commitments with its Interest Groups by putting the following values into practice: Ethics and Corporate Responsibility, Economic Results, Respect for the Environment, Generate Confidence and a Sense of Belonging.

To reach the objective described, IBERDROLA is adopting responsible business ethics formulated as reflected in 10 principles:

1. **Comply with the laws in force** in the country in which it operates while also adopting international standards and directives where the legal framework has not been adequately developed.
2. **Adopt advanced corporate governance practices** based on maximum corporate transparency and mutual trust with shareholders and investors.
3. **Respect all human rights**, especially those whose violation degrades workers collectively, rejecting child labour and forced or obligatory labour.
4. **Develop a favourable framework of labour relations** based on equality of opportunity and non-discrimination, promoting a safe and healthy environment and facilitating communication with our employees.
5. **Develop responsible practices in the value chain:** establishing transparent, objective and impartial processes with suppliers and providing clients with all relevant information about the products and services sold.
6. **Strengthen a culture of respect for the natural environment**, reducing the environmental impact of the company's activities, defending biodiversity and promoting information and training in this culture.
7. **Favour transparency and free market regulations**, rejecting practices involving bribery, corruption and other types of contributions for purposes of obtaining advantages for the company, and respecting the rules of open competition.
8. **Promote socially responsible actions** in those companies in which we have management capacity or shareholder power, while also driving suppliers through the processes of selection and contracting.
9. **Drive the means of communication and dialogue** with the different collectives related to company activities in order to harmonise corporate values and social expectations.
10. **Provide relevant and accurate information** about our activities, submitting them to internal external processes of verification that guarantee their reliability and provide incentive for their continuous improvement.

IBERDROLA, considered one of the 100 most sustainable companies in the world according to the Global 100 Most Sustainable Corporations in the World index

IBERDROLA is one of the 100 most sustainable companies in the world according to the Global 100 Most Sustainable Corporations in the World, an index presented in the World Economic Forum

in Davos (Switzerland) at the end of January 2006. This is the first time that a Spanish electricity company has appeared in this index, made for the second year by the Canadian magazine specializing in corporate social responsibility Corporate Knights and by the sustainability research firm Innovest Strategic Value Advisors, which analyzes the components of stock market value and risk and their relation to incentives on protecting the environment, social responsibility, and corporate governance.

IBERDROLA, leader in transparency of environmental and social information, according to the Pacific Sustainability Index of global power companies

IBERDROLA is among the leaders of global power companies and utilities in the Pacific Sustainability Index (PSI) by the Roberts Environmental Centre of Claremont McKenna College (USA). The index analyzed the sustainability reports of the largest global energy companies in the Fortune Global 500 and the Fortune 1000 of US companies. IBERDROLA is in first place in the sections of Environmental Information and Social Information, and is number two in the general ranking of 46 companies, only behind National Grid Transco (Great Britain).

According to the Dow Jones Index, IBERDROLA is among the global leaders in sustainability, obtaining the maximum qualification (100 points) in Investor Relations, Environmental Information and Social Information

IBERDROLA once again occupies one of the top spots among the principal global electricity companies for its contribution to sustainable development, as can be seen in the composition

of the Dow Jones Sustainability Indexes 2005/2006, which were released to the public in September. In our sixth consecutive year in the Index, our Company obtained 77 points, close to the 79 granted to the company that was rated first in the sector. Our point total this year is higher than our total in 2004 (72 points), and is also better than the point total obtained by the first-place company last year (76 points). The Dow Jones Index is the principal international reference for measuring the contribution of companies to sustainability within their economic, environmental, and social scopes.

Recognition

Ignacio Galán, for the third consecutive time, has won the award of "Best CEO" in Europe
In Vienna, Ignacio Galán, Vice-Chairman and Managing Director of IBERDROLA, has received, for the third consecutive time, the award of Best CEO for Investor Relations of the European companies included in the FT Global 250, given by IR Magazine. In this seventh publication of the awards, Ignacio Galán won the top prize, given based on an opinion survey done among about 500 European investors and analysts.

Platts Global Energy Awards

This past December the Company received two top awards in the Platts Global Energy Awards, the most prestigious in the energy industry on a worldwide level. In a gala in New York, Platts named IBERDROLA Electricity Company of the Year and Energy Investor of the Year, stressing its commitment to renewable energies and the progress in carrying out the Strategic Plan.

IBERDROLA receives the Company of the Year award by the Spanish Chamber of Commerce in the United States

The Board of Directors of the Spanish Chamber of Commerce in the United States highlighted the corporate path that IBERDROLA has taken and its contributions to improving Spain's international image.

3. ENVIRONMENTAL COMMITMENT

We are improving our environmental management according to the analysts of the Dow Jones Sustainability Index

IBERDROLA has improved its score in the environmental dimension, and it is 5 points from the score of the best company on the Dow Jones Sustainability Index. The analysis of the environmental dimension for this index includes the following items: Environmental management and policy, environmental results (eco-efficiency), environmental information, advanced environmental management system, advanced environmental results, climate strategy, infrastructure projects, electricity

generation, transport and distribution, and biodiversity.

Leaders in Climate Strategy and in environmental strategy, policy, and management according to the evaluations of the principal experts

The Company is leader among the companies in its industry in the evaluation of Climate Strategy according to the evaluation of the analyst of the Dow Jones Sustainability Index, with 98 points out of 100. IBERDROLA appears in third place in a ranking of the most noteworthy companies in the world in the management of greenhouse gases.

Furthermore, IBERDROLA appears in the ranking of the 10 companies in the world that have contributed most to the reduction of greenhouse gases and have led in environmental management throughout the last 10 years. It holds first place among the electricity companies of the world that are included. In addition,

Worldwide companies that have made management of greenhouse gases an executive priority

1	STMicroelectronics
2	BP
3	IBERDROLA
4	Scottish Capacity
5	Alcan
6	Alcoa
7	BHP Billiton

10	Weyerhaeuser

Source: Climate Group, Innovest, Panel of Judges, BusinessWeek

IBERDROLA has been present at the two meetings of the Global Roundtable on Climate Change held in 2005.

In 2005, IBERDROLA actively participated in the Energy Wisdom program (EWP) of EURELECTRIC, a voluntary initiative where European companies contribute energy saving and CO₂ emissions reduction activities, contributed since 1990, along with the pertinent quantification.

IBERDROLA is included in the index of leading companies in Climate Change made within the framework of the Carbon Disclosure Project. This initiative, sponsored by more than 155 international investors representing capital of more than 21 trillion dollars, has the objective of providing information to investors on the main risks and opportunities relating to climate change as well as informing the management of companies of the growing interest of

shareholders in these issues, given their impact on the value of the company.

We are maintaining the highest evaluation in the transparency of our environmental management

The Company has won the best score in its industry in environmental information according to the analysts of the Dow Jones Sustainability Index (100 out of 100) and of the Pacific Sustainability Index (with an evaluation twice that of the average for energy companies).

IBERDROLA won the most points for the quality of its sustainability reporting among the companies of the Ibx 35, according to the report "Corporate Social Responsibility in Annual Reports of the Companies of the IBEX 35", awarded in April 2005 by the Observatorio de la Responsabilidad Social Corporativa*. It holds eighth place in the ranking of companies in the Monitor Español de Reputación Corporativa**. And it has won the prize as the private company that informs the best, granted by El Nuevo Lunes.

Furthermore, among the environmental activities carried out in 2005, the following stand out:

- Acquisition of credits for the emission of two million tonnes of CO₂ from the GG-CAP carbon fund.
- **Registration of its thermal plants in the National Register of CO₂ Emissions.**
- **Participation in Clean Development Mechanism (CDM) projects.** The government has approved IBERDROLA's project in Guatemala as a clean development mechanism (CDM). The Designated National Authority of Spain has approved considering the hydroelectric plant of Las Vacas (Guatemala), a project led by IBERDROLA, to be a Clean Development Mechanism (CDM). In concrete terms, this plant has been accredited as a CDM for a period of 21 years as of January 1, 2004. IBERDROLA has already registered this project with the United Nations. The 45 MW Las Vacas plant, which has been up and running since May 2002, will enable an estimated annual reduction of

around 90,000 tonnes of CO₂ (1,897,620 tonnes over the entire period).

- **IBERDROLA's Global Environmental Management System.** In 2005 the implementation started for IBERDROLA's Global Environmental Management System, the validation of which is forecast for the end of 2006. In this context, there has been approval of the Environmental Directives for 2006 that are to be deployed as concrete targets and objectives throughout the scope of the Company.
- In 2005 IBERDROLA continued with its plan of action for optimizing the environmental impact of the combined cycles. In concrete terms, there has been implementation throughout the year in various combined cycle plants of the "yellow plume" elimination and control system enabling the gas combustion process to be controlled in transitional situations, especially in start-ups.
- During 2005 the elimination of nearly 170 tonnes of transformers with PCB's (polychlorobiphenyls) has been completed, most of which have been replaced by cleaner and more modern equipment, within the ELIRE project for adaptation to the rules in force in the area of waste management.

4. CONTRIBUTION TO SOCIAL DEVELOPMENT

For IBERDROLA, the key events of 2005 for social aspects were as follows:

Specific projects

- **Support for disabled persons.** IBERDROLA is actively participating in the Business and

disability programme, launched by the Fundación Empresa y Sociedad and by the Fundación ONCE.

- **Corporate volunteer programme.** IBERDROLA has launched a programme to promote and channel its employees' volunteer activities in the solidarity field.
- **OPTIMA Programme.** IBERDROLA has joined the OPTIMA programme, launched by the *Instituto de la Mujer* (Spanish ministry for employment and social affairs) to promote equal opportunities.
- **Family Responsibility Business Certificate.** The Fundación + Familia is analysing the policies that IBERDROLA has been practicing to reconcile work and home lives.

"Surrounding Economic Development" Programme

- **Regional Advisory Boards.** Advisory Boards of IBERDROLA have been created in Castile and León, Andalusia, and the Community of Valencia.
- **Participation in the Neotec Programme.** IBERDROLA will participate in the Spanish investment in risk capital programme (Neotec), promoted by the Centro para el Desarrollo Tecnológico Industrial (CDTI) and the European Investment Fund (EIF).
- **Dissemination of advanced models of business management.** Along with BBVA, IBERDROLA has sponsored the translation and publication in Spanish of the GRI guide "In Five Steps".
- **Support for business organizations.** IBERDROLA is participating in 14 organizations promoting regional development and in 12 Technological Centres.

"Art and Culture" Programme

- **2005 Special Projects.** There has been participation in 3 notable initiatives: IV Centenary of D. Quixote de la Mancha; Salamanca 2005 - Plaza Mayor of Europe; and the "Aztec" Exposition in the Guggenheim Museum.
- **Reconstruction and Illumination of Monuments.** 10 important activities have been carried out.
- **Publications.** 20 publications have been published in the year 2005.

"Education and Training" Programme

- **Support for the university and other institutions.** During 2005 there has been sponsorship for various activities (masters, specialized courses, etc.) with 30 universities and foundations.
- **Training in electrical safety and the efficient use of energy.** IBERDROLA has developed various initiatives for training specific groups and informing consumers.

"Solidarity" Programme

- **Fundación IBERDROLA projects.** The Fundación IBERDROLA in 2005 announced the II Conference on Social Project Assistance, selecting 11 projects.

Environmental sponsorship programme

- **Support for the organizations relating to the environment.** IBERDROLA is cooperating with public and private institutions in the promotion of various environmental incentives.

- **Dissemination of Sustainability.** There has been cooperation in 17 activities for dissemination in the environmental field.

5. CORPORATE GOVERNANCE

The most noteworthy events occurring in Corporate Governance in 2005 were:

Appointments:

The General Shareholders Meeting held on 18 March 2005 agreed to ratify the appointment by cooption of Mr. Sebastián Battaner Arias, as well as to re-elect, for the maximum term under the law and the corporate bylaws of 5 years, the Executive Vice Chairman and Managing Director Mr. José Ignacio Sánchez Galán and the directors Mr. Víctor de Urrutia Vallejo, Mr. Ricardo Álvarez Isasí, Mr. José Ignacio Berroeta Echevarría, Mr. Juan Luis Arregui Ciársolo, Mr. Julio de Miguel Aynat and Mr. Sebastián Battaner Arias, who will continue to hold the offices they held previously on the Board of Directors.

Furthermore, on 20 April 2005, the Board of Directors, upon the report from the Committee on Appointments and Remuneration, resolved that when the term of office of Mr. Iñigo de Oriol e Ybarra as Chairman of the Board of Directors of the Company ends, in accordance with the regulations governing the Board of Directors, he will be replaced in the mentioned position of Chairman by the current Executive Vice-Chairman and Managing Director, José Ignacio Sánchez Galán.

On this same date, the directors Javier Aresti y Victoria de Lecea and José Luís Antoñanzas Pérez-Egea will stand down after reaching the regulatory age limit and Santiago Mayner Oyarbide and José Antonio Fernández Rivero will resign from their positions as members of the Board of Directors.

In order to fill the positions left vacant by Santiago Mayner Oyarbide and José Antonio Fernández Rivero, the company's Board of Directors agreed to appoint, with the prior advisory report from the Committee on Appointments and Remuneration, in accordance with the co-opting procedure and subject to ratification at the first general shareholders' meeting to be held, the shareholders Xabier de Irala Estévez and Jesús María Cadenato Matía, who were respectively submitted by the institutional shareholders "Bilbao Bizkaia Kutxa" (BBK) and "Banco Bilbao Vizcaya Argentaria, S.A." (BBVA), as members of the Board of Directors of IBERDROLA, S.A., classified as external advisors. In addition, it was agreed to appoint the director Jesús María Cadenato Matía to sit on the Executive Delegate Commission and approve the classification of the director José Ignacio Berroeta Echevarría as an independent external advisor.

Finally, the Board of Directors of the Company, in the session held on 22 June 2005, agreed to appoint the director Mr. Xabier de Irala Estévez as a member of the Audit and Compliance Board.

Reports and other resolutions

On 23 February 2005, the Board approved the Annual Report on Corporate Governance for

2004, in accordance with the form required by Circular 1/2004 of 17 March of the Spanish securities regulator (CNMV).

On the same date, the Board of Directors approved the Report on the Activities of the Audit and Compliance Board for fiscal year 2004, the publication of which is intended to contribute to "good practices" in corporate governance by disseminating the annual activities of the latter Board.

Lastly, on 23 February the Board of Directors also resolved to develop provisions on the right to information prior to General Meetings, representation and remote voting, as provided for in the corporate bylaws in order to make it easier for shareholders to exercise these rights at the General Shareholders' Meeting held on 18 March.

Disclosure

One of our Company's core corporate governance principles is to promote maximum transparency in the information – financial and other – provided to shareholders and markets. In this regard, in fiscal year 2005 the high level of informational activity has been maintained for institutional investors and financial analysts, which has certainly contributed to the excellent performance of the price of the IBERDROLA share in the period.

Furthermore, the Spanish stock market commission has been informed as to all of the pertinent facts arising in relation to the Corporate Governance of the Company, such as the notice of meeting, documentation, and

resolutions of the general shareholders' meeting held this past 18 March, the terminations of office and appointments occurring within its management body and the information relating to the results of fiscal year 2005.

DEPT OF UNITED STATES
SECURITIES AND EXCHANGE COMMISSION

Madrid, May 12, 2005
National Securities Market Commission
Attention: Mr. Antonio Mas Sirvent
Director of Markets
Madrid

Subject: Notification of significant event

Dear Sirs:

It is our pleasure to inform you that Iberdrola S.A. now holds a 24% stake in the Rokas Group, the largest wind power generator in Greece, after buying a further 3% in the capital. The company has closed this deal, announced in December, thanks to the good relations it has with its Greek partners.

According to the agreement then signed, the company plans to buy 49.9% of the shares in this Greek company for around 85 million euro. It already has an option to buy another 2% within the first half of this year, giving it a 26% stake.

The Rokas Group, listed on the Athens stock exchange, has a 45% share of the wind power generation in Greece and plans to invest more than 600 million euro in that country up to 2008, to reach an installed capacity of 600 MW, of which practically 200 MW are already in use, operating on average 2,800 hours/year.

Greece has wind farms in operation with a capacity of approximately 470 MW, of the 2,000 MW set as its target for the year 2010. IBERDROLA has set its sights on this country as one of the most important markets for developing its objectives in the area of renewable energies: it aims to have 5,500 MW by 2008, of which 1,000 MW will be installed beyond Spanish borders. In addition to its current portfolio, which guarantees meeting forecasts, IBERDROLA has projects under development with a further capacity of 6,350 MW, of which 4,750 MW are in Spain and 1,600 MW overseas.

In 2005, IBERDROLA remains at the vanguard of the world wind power sector, with an installed capacity in renewables of 3,261 MW at the end of the first quarter, which is 32% more than the 2,754 MW it had at the same time last year. Of this figure, 2,946 MW correspond to wind farms and 315 MW to mini hydros. The company's capacity has increased fivefold since it decided to back this type of energy, from 607 MW in 2000 to the 3,800 MW it envisages by the end of this year, during which the company will install 600 MW of new capacity. As always, we remain at your and the Securities Market Commission's disposal.

With kind regards,
Federico San Sebastian

RECEIVED

TO: DIRECTOR GENERAL
COMMISSION

IBERDROLA

Madrid, July 26, 2005
National Securities Market Commission
Attention: Mr. Antonio Mas Sirvent
Director of Markets
Madrid

Subject: Notification of significant event

Dear Sirs:

It is our pleasure to inform you that Iberdrola and Gamesa have reached a collaboration agreement in the Greek renewable energy market that includes the acquisition of 56 megawatts (MW) of wind farms for around 78 million euros.

The company has been awarded these wind farms, currently under development, in competition with other companies from the sector. Besides this, Iberdrola has also agreed the purchase from Gamesa of wind powered generators to install a further 110 MW in Europe during the 2005-2008 period.

With the purchase of these assets in Greece, Iberdrola is strengthening its presence here, where last year it became the strategic partner of Rokas. This company is the leading producer of wind energy in Greece (45% market share) and plans to achieve 600 MW of installed power over the coming years, of which practically 200 MW are already operational.

Greece is a key country for Iberdrola to achieve its aims in the renewables field, as it has only around 470 MW of wind power in operation of the 2,000 MW forecast for 2010. The company plans to have 5,500 MW in 2008, of which 1,000 MW will be installed outside Spain. The company has a project portfolio already totalling 14,900 MW throughout the world, ensuring that it achieves its targets.

The purchase of these assets from Gamesa is included in Iberdrola's strategy for developing renewable energies, a sector which the company continues to lead worldwide, with an installed power of 3,280 MW at the close of the first six months of 2005, 23% up on the 2,664 MW for the same period last year. Of this amount, 2,965 MW correspond to wind farms and 315 MW to mini-hydraulic power stations.

With kind regards,
Federico San Sebastian

CENTRO DE ATENCION AL CLIENTE

**GAS NATURAL REACHES AGREEMENT WITH IBERDROLA
TO SELL ASSETS AFTER ENDESA'S ACQUISITION**

- **The Agreement is subject to completion of the Takeover Bid over ENDESA launched by Gas Natural SDG today.**

Gas Natural SDG and Iberdrola have signed an agreement today whereby Iberdrola will acquire certain assets from the combined company, resulting of the acquisition of Endesa by the gas utility.

The sale agreement comprises power generation and electric distribution facilities in Spain, power generation facilities in Europe (SNET in France and certain in Italy), and certain gas distribution systems in Spain that cover 1.25 million customers in areas where Iberdrola currently operates.

The transaction under consideration will be carried out at market values, to be determined by internationally recognized Investment Banks. Its amount may be preliminarily estimated in a range between Euro 7,000 and 9,000 million.

This agreement fits into the gas and electric asset disposal plan that Gas Natural intends to present to the Spanish authorities in connection with the Takeover Bid ENDESA.

The deal provides Gas Natural and Iberdrola a better equilibrium in Spanish gas and electricity sectors. Also, both companies consider that the operation will accelerate Spain's energy sector's reorganisation and liberalisation processes, increasing effectively the competition and benefiting the consumers. Furthermore, the transaction improves the companies' position in international markets where gas and power integration is the trend, as other European deals underway confirm.

RE: Securities market filing

SEP 21 10 10 AM '05

Dear Sirs:

We are pleased to inform you that IBERDROLA S.A. has today reached an agreement with the German company ETERNEGY, which develops wind farms in Europe, to buy the Polish company MVV ETERNEGY POLSKA, which will now be known as IBERDROLA ENERGÍA ODNAWIALNA SP. ZO.O., and which has several wind farms at different stages of development, with combined capacity of of 161 megawatts (MW).

The acquisition does not represent a significant monetary amount for Iberdrola S.A.

We remain, as always, at your disposition for any clarification or further information you may require.

Best regards,

Federico San Sebastián

IBERDROLA

The utility pulls out of the cement company's board

IBERDROLA SELLS 8.06% OF CEMENTOS PORTLAND VALDERRIBAS TO FCC FOR 150.3 MILLION EUROS

- **Through this transaction, which is in keeping with the objectives of the Strategic Plan 2002-2006, the company has obtained a capital gain of more than 70 million euros before tax**

IBERDROLA today sold the 8.06% it held in Cementos Portland Valderribas, equivalent to 2,243,412 shares, to Fomento de Construcciones y Contratas (FCC), through its subsidiary Asesoría Financiera y de Gestión (AFIGESA), pocketing around 150.3 million euro and capital gains of more than 70 million euro before tax.

The deal was closed at a price of 67 euro per share in Cementos Portland, which is currently quoted with a P/E ratio 20% above the sector average. The transaction falls in with the objective marked in IBERDROLA's Strategic Plan 2002-2006 of focusing on its core business and shedding its other interests.

Within this divestment process on which the company embarked in 2001, it has sold real estate, sub-stations, non-energy businesses and securitized its tariff deficit, disposing also of the transmission grid and its shares in Telefónica, Repsol YPF, Red Eléctrica, Pridesa and Ondagua.

The sale of its 8.06% stake in Cementos Portland obliges IBERDROLA to pull its representative out of the Board of Directors of that company, of which it has been a shareholder since the middle of last century.

The purpose of the company's divestment plan is to concentrate its resources in its core business, increase its financial strength and reduce its debt. IBERDROLA closed the first half of 2005 with a leverage of 55%, despite the hefty investments of 10.3 billion euro made during the period 2001-2004.

END
