PRESS RELEASE

2007 APR 25 A 10:13

Tiomín Reports First Drilling Results from 15,500 Meter Program at Pukaqaga Copper-Gold Project in Peru

Toronto, Canada. April 19, 2007. Tiomin Resources Inc. ("Tiomín" or the "Company") (TSX: TIO) is pleased to report the drill results of the first 35 holes of a 15,500 meter drilling program at its Pukaqaga copper-gold project located in central Peru. Tiomin is earning a 49% interest in the project from Compañía Minera Milpo S.A. ("Milpo"), a well established Peruvian mining company.

Milpo, the operator of the project, has completed the drilling program that started in August 2006. The company has received complete assay results for the first 35 holes totaling 8,203 meters. The drilling program was carried out systematically, starting from the north end of the Blanket Norte towards the Blanket Sur.

Highlights of the program include:

07022918

PROCESSED

APR 30 2007

THOMSON
FINANCIAL

The results from the infill drilling program indicate that both the Blanket Norte and the Gaby Breccia have substantial variability in grade and volume, which will require a tighter spacing to upgrade the resource to the measured and indicated categories. The Blanket Norte is now wider than initially interpreted towards the southwest but has decreased in width towards the northwest. A relatively higher grade mineralized zone joins the Northern and Southern Blanket deposits, extending for 200 metres with a width ranging from 50 to 100 metres to a depth of 170 metres.

The Blanket Norte and the Blanket Sur zones are essentially flat-lying mineralized skarn deposits that are flanked to the east by the steeply dipping Gaby Breccia and Monica Breccia zones and to the west by the Raurac Breccia zone.

The Pukaqaga deposit contains a measured and indicated resource of 17.1 million tonnes grading 0.54% copper and 0.071 g/t gold (204 million pounds of copper and 39,000 ounces of gold) and an inferred

DLW 4/26

resource of 114.6 million tonnes grading 0.60% copper and 0.096 g/t gold (1.5 billion pounds of copper and 354,000 ounces of gold), using a 0.30% copper cut-off grade. The objective of the current drilling program is to convert a large portion of the inferred resource to the indicated resources and start a pre-feasibility study for the development of project. This study would contemplate the development of an open pit mine together with a flotation plant. Tiomin released the results of a preliminary economic assessment study on February 6, 2007.

A detailed assay result table for holes PND-06-120 to 154 is posted on the Company's website under Pukaqaqa project.

Quality Assurance/Quality Control and Qualified Person

Milpo has implemented a Quality Control program to ensure the accuracy in the collection and analysis of samples. Drill core (mainly HQ size) is sampled at two metres interval on average and split in half using a diamond saw. One half of the core is archived at the core storage facility on site while the other half is crushed, pulverized, split and a 250 gram portion is assayed at Actlabs Skyline Peru SAC (subsidiary of Activation Laboratories Ltd.). Actlabs have an ISO-9001:2000 certification in exploration and mineral preparation; gold determination by fire assay method, atomic absorption and gravimetry; and atomic absorption determination of Ag, Cu, Zn, As, Ni, Bi, Fe, Mn, and Mo. Accuracy of results is tested through the systematic inclusion of standards, field blanks and duplicate samples. The standards are prepared by SGS Peru, categorized into low, medium and high grade.

The Pukaqaqa exploration program is being managed by Mr. Jorge Hinostroza, Exploration Manager for Compañía Minera Milpo S.A.A. Mr. Robert Borst, Vice president - Project Development for Tiomin, a Qualified Person within the meaning of National Instrument 43-101, has verified and approved the data disclosed in this release.

For further information, please contact Tiomin at (416) 350-3779 Jean Charles Potvin, CEO, ext. 227 or Robert Jackson, President, ext. 230. Visit the Company's website at www.tiomin.com.

Certain of the information contained in this news release constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements, including but not limited to those respect to the prices of metals and minerals, estimated future production, estimated costs of future production and the Company's sales policy, involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company to be materially different from any forecast results, performance or achievements expressed or implied by such forward-looking statements. Such factors include, among others, the actual prices of copper and gold, the actual results of current exploration, development and mining activities, changes in project parameters as plans continue to be evaluated, as well as those factors disclosed in the Company's documents filed from time to time with the Ontario Securities Commission.

Table 1. Summary Drill Results for the Pukaqqa Project
