土地使用权租赁框架协议

二00六年九月五日

土地使用权租赁框架协议

本协议由以下双方于 2006 年 9 月 5 日在中华人民共和国(以下简称"中国")北京签订：

出租方：中国中煤能源集团公司

营业执照注册号：1000001000085

住址：北京市朝阳区黄寺大街 1 号

法定代表人：经天亮

承租方： 中国中煤能源股份有限公司

营业执照注册号：1000001004047

住址：北京市朝阳区黄寺大街 1 号

法定代表人：经天亮

鉴于：

1、 出租方系依据中国法律设立的全民所有制企业。

2、 承租方系出租方经国务院国有资产监督管理委员会批准进行资产重组，作为发起人独家发起设立之股份公司。承租方于 2006 年 8 月 22 日成立，拟在境外公开发行股票，并将该等股票在境外（包括在香港联合交易所有限公司（以下简称"香港联交所"） ）上市。

3、 在本协议签订之日，出租方拥有承租方 100%的股权。在乙方公开发行股票和在境上市完成后，出租方将继续为承租方的控股股东。

4、 出租方同意将本协议附件一所列地块之土地使用权按照本协议的规定出租予承租方，承租方愿意依照本协议的规定，租赁该等土地使用权。

基于以上所述，根据《中华人民共和国合同法》等相关法律、法规的规定，

为明确出租方与承租方的权利义务关系，以上双方经过友好协商，签订本协议。具体内容如下：

第一条 协议主体

1.1 如适用或除非文意另有所指外，本协议所指出租方为出租方及/或其不时之联系人（“联系人”的定义与不时生效的《香港联合交易所有限公司证券上市规则》（以下简称"《上市规则》"）中的“联系人”的定义相同）。

1.2 如适用或除非文意另有所指外，本协议所指承租方为承租方及/或其附属公司（“附属公司”的定义与《上市规则》中“附属公司”的涵义相同）。

第二条 租赁范围

2.1 出租方同意按照本协议的条款和条件将其合法拥有土地使用权并列于附件一之地块（每处地块的资料详见附件一，以下称"租赁地块"）的土地使用权租赁予承租方；承租方愿意依照本协议的规定，向出租方支付相应之对价以承租出租方在本协议项下全部租赁地块的使用权。

2.2 出租方保证其已通过授权经营、出让等合法方式取得上述租赁地块的土地使用权,有合法出租的权利。

2.3 出租方下属拥有相应地块土地使用权的企业将严格按照本协议规定的条款和条件就其所拥有使用权的一处或多处地块与承租方签署具体租赁合同（以下简称“具体租赁合同”）。具体租赁合同必须依本协议确立的租赁原则签订，凡与本协议有冲突的，以本协议为准。如本协议按条款中止或终止，所有具体租赁合同同步中止或终止。

第三条 租赁期限

3.1 本协议经双方法定代表人或授权代表签署并加盖公章后，有效期追溯至承租方依法设立之日（即 2006 年 8 月 22 日）起二十年止。在这 3.1 条的前提下，本协议项下每一处租赁地块的租赁期限在相关具体租赁合同中明确和规定。在租赁期限内任何时间，承租方有权提前终止承租租赁地块中的任何部分地块的土地使用权。

3.2 在本协议签订之后的 90 日内，承租方应协同出租方依有关规定持本协议（如需要）以及相关具体租赁合同向各有关主管部门办理备案登记手续。

3.3 双方约定，本协议的有效期届满，在不违反承租方上市地的上市规则的前提下，承租方有权要求延长租赁地块部分或全部土地使用权的租赁期限，

但承租方应在前述有效期届满前至少 6 个月以书面形式通知出租方。出租方接到承租方上述通知，除本协议约定的不可抗力情况发生外，出租方不得拒绝，双方应按照协商一致的原则对租赁地块的数量、范围和租金总额进行相应调整并应与承租方续签土地使用权租赁框架协议。双方应共同向有关主管部门办理租赁地块续租的一切备案登记手续。

3.4 如承租方未按前述约定行使续约权，但在本协议有效期满时，确因生产经营的原因无法将有关租赁地块的使用权实际交还出租方，出租方应当酌情延长有关租赁地块的租赁期限，并有权就延长期限向承租方按当时收取的年租金计算应收取的日租金，直至承租方将使用权实际交还出租方。

3.5 如果出租方就本协议项下有关租赁地块按以上第 3.4 条延长土地使用权使用年限，而承租方在本协议有效期满仍需继续租赁有关租赁地块，即使承租方未按第 3.3 条的约定行使续约权，在同等条件下，承租方享有优先承租权。

第四条 租金及支付方式

4.1 承租方同意按照本协议的约定向出租方支付土地使用权租金，具体租赁双方及租金数额详见附件一。

4.2 租金以年度计算。在租赁期限内，每满 3 个年度可调整租金一次，惟调整前（无论是调高或调低）须对年租金价格比照当地类似土地使用权租赁的市场价格，并经协商后调整，调整后的价格需由独立评估师确认为市场价格或低于市场价格。另，如双方同意，租金可于租赁期限内任何时间予以调低而不受前述须满三年的限制。

4.3 租金每年就对上一个年度的年租金结算一次。年租金的支付方法在具体租赁合同中明确和规定。

4.4 双方同意，如承租方提前终止承租租赁地块中的部分地块的土地使用权，出租方同意承租方按照该终止租赁地块的租金相应减少承租方向出租方应支付而尚欠的租金总额，如需要，届时双方另行协商并签订补充协议。

4.5 出租方负责交纳所有与租赁本协议下租赁地块的土地使用权有关的土地税、费及其他法定的费用。

第五条 租赁用途

5.1 承租方应在租赁地块的国有土地使用证所限定的用途范围内使用土地。

5.2 在符合 5.1 条的前提下，租赁期内承租方若要依法将租赁地块的部分或全

部改作他用时，应书面通知出租方。出租方应在接到承租方书面通知之日起三十日内决定是否同意该等改变。如同意，则出租方应协助承租方到有关部门办理相应批准手续。在取得批准后，承租方方可按改变后的用途使用。有关费用由承租方承担。

第六条 租赁地块交付使用

6.1 出租方自本协议生效之日将租赁地块交付承租方。

6.2 承租方在出租方将该土地使用权交付之日起，必须依照有关国有土地使用证规定的土地用途及土地使用条件实施相应的经营、管理、使用等行为。

第七条 双方权利和义务

7.1 出租方的权利和义务：

7.1.1 依据本协议约定向承租方收取租金。

7.1.2 出租方需根据本协议的约定，及时完整地向承租方提供租赁地块之土地使用权，并自本协议签订之后的 90 日内向有关主管部门办理土地租赁备案登记手续。

7.1.3 出租方保证出租土地的产权的合法性以及根据本协议出租有关土地的合法性，同时保证出租土地不存在任何抵押权和其他第三方权利。

7.1.4 出租方保证不侵犯承租方在租赁地块上的任何建筑物、附着物的所有权，包括占有、使用、处分及收益的权利和利益。

7.1.5 在本协议有效期内，未经承租方书面同意，出租方不得提前终止协议或收回任何部分租赁地块或项下的土地使用权，但本协议另有规定者除外。

7.1.6 本协议期限届满，承租方不再续租的，出租方有权收回本协议项下的出租地块的土地使用权，但是应对承租方在该等租赁地块上出资修建的尚可正常使用的建筑物予以适当补偿。

7.2 承租方的权利和义务：

7.2.1 承租方有权依据本协议的约定使用租赁地块。

7.2.2 在租赁期内，承租方须向出租方及时按本协议支付租金。

第八条 陈述和保证

8.1 双方均根据中国法律正式注册成立、有效存续。

8.2 双方已采取一切所需行动，以及取得签订本协议所需的一切同意书、批文、授权和许可。本协议的签订，不会违反(i)各方的公司章程，(ii)各方的其它任何协议或义务，或(iii)任何中国或其它有关的法域的现行法律、法规或法令。其在本协议上签字的代表已被授予全权签署本协议。

8.3 在本协议的基础上并依据租赁地块所在地的地方法规，第 1.1 和 1.2 条所述之有关联系人（就出租方而言）和附属公司（就承租方而言）作为本协议责任和义务的承担者（详见附件一中承租方和出租方）就土地租赁事项另行具体约定并签署相关具体租赁合同，以便共同遵守。双方保证促使前述各项具体租赁合同的签署并获得全面有效的履行。

第九条 出租方的变更

9.1 出租方将本协议项下的土地使用权出售时，须在 3 个月前通知承租方。在同等条件下，承租方有优先购买权。

9.2 如果出租方将任何部分租赁地块的土地使用权转移给任何第三方时，出租方保证本协议对新的土地使用权所有者继续有效。

第十条 协议履行、变更和终止

10.1 若本协议项下的任何交易构成《上市规则》所述之关连交易或持续性关连交易，且根据《上市规则》该等交易需在获得香港联交所豁免或承租方（即中国中煤能源股份有限公司）独立股东的事先批准或遵守《上市规则》有关关连交易或持续性关连交易的任何其它规定后方可进行，则本协议与该等交易有关的履行以按照香港联交所给予豁免的条件进行及/或按照《上市规则》的规定获得承租方（即中国中煤能源股份有限公司）独立股东在股东大会上的事先批准及/或遵守《上市规则》有关关连交易或持续性关连交易的任何其它规定为先决条件。

10.2 若香港联交所的豁免是附条件的，则本协议应按所附条件履行。

10.3 在本协议有效期内，若香港联交所对本协议下某一项关连交易或持续性关连交易的豁免被收回、撤销或失效，或其他原因导致该项交易需要但未能符合不时生效的《上市规则》有关关连交易或持续性关连交易的要求，则本协议该项交易有关的履行中止。

10.4 在本协议有效期内任何时间，若本协议下的交易所涉及的有关财政年度累

计交易总金额可能或预期会超越已公布的该年度的总金额上限(如适用)，双方同意承租方尽快通知香港联交所并履行《上市规则》下所有适用和必须履行的监管义务，包括根据《上市规则》召开承租方（即中国中煤能源股份有限公司）独立股东大会对有关关连交易和重新厘定的年度金额上限寻求独立股东批准（如适用)。未满足所有有关监管规定前，双方同意尽力控制有关交易该年度总额不超过已公布的金额上限。否则，本协议下与该项交易有关的履行中止。

10.5 若本协议与所有各项交易有关的履行均按第 10.3 及/或 10.4 条中止，则本协议终止。

10.6 本协议任何一条款成为非法、无效或不可强制执行并不影响本协议其它条款的效力及可强制执行性。如本协议内的任何条款被裁定无效，但如作部分删除或削减可成为有效者，该条款可在作必要的删除或修订使之有效及有可强制执行性后仍可实施。

10.7 本协议的修订仅可经书面协议并经双方法定代表人或授权代表签字且须经双方采取适当的法人行动批准和符合并满足《上市规则》及有关适用法律法规的监管规定的前提下作出。

10.8 承租方有下列情形之一的，出租方有权通知承租方立即终止协议：

10.8.1 在租赁期内，未经出租方同意，承租方擅自将租赁地块转租、转让或转借他人（转租、转让或转借承租方的附属公司或关联公司除外）；

10.8.2 在租赁期内，承租方未按照 5.2 条的规定事先征得出租方同意而擅自改变租赁地块的用途，或利用租赁地块进行非法活动，损害公共利益的。

10.9 出租方违反 8.2 条下任何声明、保证，承租方有权随时通知出租方立即终止本协议。

10.10 双方同意,承租方可以在第 3.1 条租赁期满前的任何时候终止租赁本协议项下部分或全部土地使用权，但承租方须在其所要求的终止日前三个月书面通知出租方。

第十一条 不可抗力

11.1 如果本协议任何一方因受不可抗力事件(此等事件包括但不限于水灾、火灾、旱灾、台风、地震、其它自然灾害、罢工、骚动、暴乱及战争以及政府部门的作为及不作为)影响而未能履行其在本协议下的全部或部分义务，该义务的履行在不可抗力事件妨碍其履行期间应予中止。

11.2 由于不能预见并且对其发生和后果不能防止或避免的不可抗力事件，致使直接影响本协议的履行或者不能按约定的条件履行时，遇有上述不可抗力事件的一方，应将事件情况尽可能在最短的时间内以通知书形式通知对方，并应在15天内，提供事件详情及本协议不能履行或者部分不能履行，或者需要延期履行的理由的有效证明文件。声称不可抗力事件导致其对本协议的履行在客观上成为不可能或不实际的一方，有责任尽一切合理的努力消除或减轻此等不可抗力事件的影响。

11.3 不可抗力事件发生时，双方应立即通过友好协商决定如何执行本协议。按照不可抗力事件对履行协议影响的程度，由双方协商决定是否解除本协议，或者部分免除履行本协议的责任，或者延期履行本协议。

第十二条 公告

任何一方未经另一方事先书面同意，不得作出与本协议事项有关的任何公告，但根据中国法律或中国证监会、香港联交所、香港证券及期货事务监察委员会或任何其他相关的规定作出公告的除外。

第十三条 违约责任

13.1 除非本协议另有约定，任何一方违反本协议约定,另一方可以要求或采纳本协议和法律所允许的补救措施,包括但不限于实际履行和补偿经济损失。

13.2 如果一方未能履行本协议规定的义务应视为违反协议，违约方从另一方收到具体说明违约情况的通知后应在 30 日内纠正该违约行为。如 30 日后，违约行为没有纠正，则违约方应向另一方负责赔偿违约引起的一切直接和可预见的损失。

13.3 如果由于出租方的过失而产生承租方对租赁地块使用权占有的延期，则本协议项下的土地使用权的租赁期限相应推延。

第十四条 通知

14.1 一方根据本协议规定作出的通知或其它通讯应采用书面形式并以中文书写，并可经专人手递或挂号邮件发至另一方指定的地址，或传真至另一方指定的传真号码。通知被视为已有效作出的日期应按以下的规定确定：

法定代表人：经天亮

乙方：中国中煤能源股份有限公司

企业法人营业执照注册号：1000001004047

住所：北京市朝阳区黄寺大街 1 号

法定代表人：经天亮

本协议中，甲方、乙方单称"一方"，合称"双方"。

鉴于：

1、 甲方系依据中国法律设立的全民所有制企业。

2、 乙方系甲方经国务院国有资产监督管理委员会批准进行资产重组，作为发起人独家发起设立之股份公司。乙方于 2006 年 8 月 22 日成立，拟在境外公开发行股票，并将该等股票在境外上市，包括在香港联合交易所有限公司（以下简称"香港联交所"）。

3、 在本协议签订之日，甲方拥有乙方 100%的股权，在全球募股完成后，甲方将继续为乙方的控股股东。

4、 甲方拥有本协议项下的商标的所有权，乙方（附属公司的定义与香港联交所上市规则中附属公司的定义相同）在其业务经营过程中，需要使用该等商标。基于甲乙双方的关联性，甲方和乙方拟通过本协议规范乙方使用甲方该等商标事宜。

为此，甲乙双方根据《中华人民共和国合同法》、《中华人民共和国商标法》以及其他相关法律法规的规定，经友好协商，达成本协议。

第一条 协议主体

1.1 如适用或除非文意另有所指外，本协议所指乙方为乙方及/或其附属公司（“附属公司”的定义与《上市规则》中“附属公司”的涵义相同）。

第二条 商标及许可

2.1 本协议项下的商标是指截至本协议签署时，甲方在中华人民共和国境内外已经注册和已经申请注册的商标，该等商标的详情列于本协议附录(以下统称"许可商标")。

2.2 甲方许可乙方于中华人民共和国境内外在许可商标登记注册的类别范围内，在本协议的有效期限内依照本协议规定使用许可商标。

2.3 甲方有权自用或许可其附属公司使用许可商标。

第三条 期限

3.1 本协议经双方授权代表签章并加盖公章后，有效期限自乙方依法成立之日（即2006年8月22日）起10年。

3.2 在本协议有效期届满一个月前，在符合有关法律法规及证券监管机构要求的情况下，经乙方书面通知甲方，本协议有效期将自动延长10年。以后延期按上述原则类推。

3.3 乙方可以使用任何一个或多个许可商标，直至双方达成协议的终止有关许可商标使用的日期，或直至乙方不再从事需使用有关许可商标的业务（以较早者为准）。但该款所述之终止，不影响本合同项下其他未终止使用的许可商标的许可使用。

第四条 费用

4.1 甲方同意乙方使用许可商标的许可使用费为人民币1元/年。

4.2 甲方须按照有关法律法规的规定自行缴纳维系许可商标有效性应缴纳的所有费用。除第4.1条约定的许可使用费外，乙方无须就使用许可商标向甲方支付其它任何费用。商标续展后，除双方另有协议外，甲方应按本协议

条件与条款继续授予乙方使用许可商标的权利。

4.3 在本协议有效期内，若甲方不依照本协议维持许可商标的有效性而缴纳费用及办理有关商标续展手续，乙方可自行办理商标续展手续，但甲方应向乙方提供一切协助（包括但不限于签署有关文件），并补偿乙方因此而产生的所有费用。

第五条 双方的权利和义务

5.1 甲方的权利：

5.1.1 甲方有权在中华人民共和国境内外于许可商标登记注册类别范围内使用许可商标；

5.1.2 甲方有权要求乙方依本协议约定使用许可商标；

5.1.3 甲方有权许可其全资子公司及参控股公司使用许可商标。

5.2 甲方的义务：

5.2.1 甲方承诺并保证在本协议项下商标许可的合法性及有效性，并保证不会作出有意损害该等合法性及有效性的行动。如果因许可商标侵犯第三者的知识产权或其他权益导致第三人对乙方提起索赔、诉讼，并给乙方造成实际经济损失的，甲方应予赔偿，但由于乙方违反本协议规定而造成的损失除外；

5.2.2 甲方保证在本协议有效期内，按时向有关机关缴纳维系许可商标有效性的费用；负责保持许可商标的注册状况，不放弃续展注册，不申请注销；并依据乙方的合理要求，增加许可商标注册类别；或在乙方合理要求的国家和地区注册登记许可商标。上述有关注册费用及维持商标有效性的费用由甲方承担；

5.2.3 对于许可商标中的已申请注册但未授权的商标，甲方保证不撤回/撤销商标申请；在甲方收到有关该等商标的任何商标局授权文件后3日内，向乙方提供相应授权文件复印件。

5.2.4 本协议签订后，甲方负责依法向中华人民共和国境内外的商标管理机关办理本协议项下的注册商标使用许可所需的备案手续；

5.2.5 根据乙方要求或许可商标保护需要，甲方应向国家或境外有关机构就有关许可商标申请保护；

5.2.6 发生许可商标被第三方侵权的情形时，甲方应当及时书面通知（“该等通知”）乙方，并向有权部门投诉或起诉或采取其他法律行动，并应承担相关费用。若甲方未按本协议的规定向乙方发出该等通知，则乙方才可自费采取一切所需的行动禁止该等侵

权。甲方应赔偿乙方因上述行动而支出的费用；

5.2.7 甲方应当负责监督使用许可商标的商品和/或服务的质量，如其经营行为影响许可商标的信誉等应及时纠正。

5.3 乙方的权利：

5.3.1 乙方有权按照本协议之规定依商标注册类别在其生产的商品上、提供的服务以及文件资料（包括但不限于招股文件、公文稿纸、宣传推广材料、通过各种媒体投放的广告）中使用许可商标的全部或一部分；

5.3.2 乙方有权要求甲方履行其在本协议项下的所有义务(包括及时办理商标续展登记手续等)。

5.4 乙方的义务：

5.4.1 未经甲方书面同意，乙方不得许可任何第三方使用或向任何第三方转让许可商标的使用权；

5.4.2 发生许可商标被第三方侵权或被指侵犯第三方权益等情形时，甲方负责向有关部门投诉或起诉或抗辩。如相关侵权事宜与乙方使用许可商标有关，则乙方应当协助甲方查明事实；

5.4.3 若甲方许可乙方使用的已申请但未授权的商标被商标局驳回，乙方应停止使用该商标。

5.4.4 乙方应当保证使用许可商标的商品和/或服务的质量。

第六条 双方的陈述和保证

6.1 双方均根据中国法律正式注册成立、有效存在。

6.2 双方已采取一切所需行动，以及（除本协议另有明确规定外）取得签订本协议所需的一切同意书、批文、授权和许可。本协议的签订，不会违反(i)各方的公司章程，(ii)各方的其它任何协议或义务，或(iii)任何中国或其它有关的国家或地域的现行法律、法规或法令。其在本协议上签字的代表已被授予全权签署本协议。

6.3 双方均承诺促使其各自下属企业从事一切需要从事（或不从事一切不应该从事）的行为或事项以使其能够适当地履行其在本协议中的义务。如任何一方在本协议期限内任何时间要求另一方的任何下属企业就该下属企业对有关本协议的执行和在本协议约定的前提下另行签署一份具体执行或补充协议，双方保证促使有关的下属企业和另一方就所要求的形式签署该协议。

第七条 本协议的变更及终止

7.1 若本协议项下的任何交易构成《上市规则》所述之关连交易或持续性关连交易，且根据《上市规则》该等交易需在获得香港联交所豁免或乙方（即中国中煤能源股份有限公司）独立股东的事先批准或遵守《上市规则》有关关连交易或持续性关连交易的任何其它规定后方可进行，则本协议与该等交易有关的履行以按照香港联交所给予豁免的条件进行及/或按照《上市规则》的规定获得乙方（即中国中煤能源股份有限公司）独立股东在股东大会上的事先批准及/或遵守《上市规则》有关关连交易或持续性关连交易的任何其它规定为先决条件。

7.2 若香港联交所的豁免是附条件的，则本协议应按所附条件履行。

7.3 在本协议有效期内，若香港联交所对本协议下某一项关连交易或持续性关连交易的豁免被收回、撤销或失效，或其他原因导致该项交易需要但未能符合不时生效的《上市规则》有关关连交易或持续性关连交易的要求，则本协议该项交易有关的履行中止。

7.4 在本协议有效期内任何时间，若本协议下的交易所涉及的有关财政年度累计交易总金额可能或预期会超越已公布的该年度的总金额上限(如适用)，双方同意乙方尽快通知香港联交所并履行《上市规则》下所有适用和必须履行的监管义务，包括根据《上市规则》召开乙方（即中国中煤能源股份有限公司）独立股东大会对有关关连交易和重新厘定的年度金额上限寻求独立股东批准（如适用）。未满足所有有关监管规定前，双方同意尽力控制有关交易该年度总额不超过已公布的金额上限。否则，本协议下与该项交易有关的履行中止。

7.6 本协议任何一条款成为非法、无效或不可强制执行并不影响本协议其它条款的效力及可强制执行性。如本协议内的任何条款被裁定无效，但如作部分删除或削减可成为有效者，该条款可在作必要的删除或修订使之有效及有可强制执行性后仍可实施。

7.7 本协议的修订仅可经书面协议并经双方授权代表签字且须经双方采取适当的法人行动批准和符合并满足《上市规则》及有关适用法律法规的监管规定的前提下作出。

重 组 协 议

本重组协议（以下简称“本协议”）于2006年9月[·]日由下列双方在中华人民共和国（以下简称“中国”）北京市订立：

(1) 中国中煤能源集团公司（以下简称“中煤集团”），一家依据中国法律成立并有效存续的国有企业（企业法人营业执照注册号为1000001000085号），其住所为北京市朝阳区黄寺大街1号。

(2) 中国中煤能源股份有限公司（以下简称“中煤股份”），一家由中煤集团依据中国法律独家发起设立的股份有限公司（企业法人营业执照注册号为1000001004047号），其住所为北京市朝阳区黄寺大街1号。

以下统称“双方”。

鉴于：

(1) 中煤集团经中华人民共和国国务院（以下简称“国务院”）批准独家发起设立中煤股份，中煤股份将在中国境外公开募集股份，包括向中国境外投资者发行在香港联合交易所有限公司（以下简称“香港联交所”）上市的“境外上市外资股”（以下简称“H股”）（以下简称“境外募股”）。为此，中煤集团进行本协议项下的重组。

(2) 中煤集团将其拥有的与煤炭生产、煤炭贸易、煤化工、煤机装备制造、相关工程技术服务等与煤炭主业密切相关业务的资产及负债，及相关的权益、权利及义务，包括其目前拥有的相关全资企业、控股企业、合营企业和参股企业的权益及相关债务（详见附件六）经评估注入中煤股份。中煤集团作为唯一发起人以发起设立方式于2006年8月22日设立中煤股份。

(3) 在本协议签订之日，中煤集团拥有中煤股份100%的股权。在境外募股完成之后，中煤集团将继续为中煤股份的控股股东。

(4) 为确保重组的内容和目的得到贯彻和落实，中煤集团和中煤股份同意订立本协议以对重组及其相关事宜作出适当安排。

为此，中煤集团和中煤股份经过友好协商，订立如下条款：

第三条 中煤集团出资

3.1 中煤集团以其拥有的重组资产作为出资注入中煤股份。中煤集团向中煤股份注入重组资产的价值应以资产评估报告所载明的评估确认值为准。

3.2 在基准日，中煤集团注入中煤股份的重组资产包括：

(1) 附件六所列的中煤集团拥有的与煤炭产业有关的资产和负债。

(2) 中煤集团拥有的与附件六所列各投入企业有关的公司或企业业务记录、营运记录、营运数据、营运统计资料、说明书、维护手册、

董事、高级职员及员工资料、记录、培训手册，以及有关技术记录、技术资料、技术数据、技术图纸、技术手册、技术书籍及其他一切技术诀窍（无论是以文字书写的或保存在计算机或电脑硬盘或软件内的），中煤集团保证注入中煤股份的重组资产的完整性。

3.3 重组资产以及相关业务在相关期间产生的盈利或亏损，由中煤集团享有和承担。

3.4 在相关期间，重组资产若因亏损而相对于资产评估值发生净资产减少，中煤集团应当补足。

3.5 中煤集团确认，重组资产在基准日经中联资产评估有限公司评估和经国务院国资委核准，在资产评估报告中列明的资产评估值为：截至基准日，重组资产的资产总额为 2,278,023.72 万元人民币，负债总额为 1,095,368.4 万元人民币，净资产总额为 1,182,655.32 万元人民币。重组资产于重组生效日注入中煤股份，在重组完成日前分期办理完毕与交付重组资产相关的过户手续。

3.7 中煤集团确认，中煤股份向中煤集团发行 80 亿股每股面值为人民币一元的内资股后，中煤股份即被视为已经完全履行其于本条项下的支付全部对价的义务。中煤集团在本协议项下无任何权利、权力要求中煤股份向其支付关于重组资产的任何其他对价。

3.8 对于中煤集团未注入中煤股份的资产、权利、权益、负债、义务及责任（包括潜在的债务和义务），除非中煤集团与中煤股份另有约定，在重组生效日后仍由中煤集团继续享有及承担，中煤股份不享有或承担任何权益或责任、义务。

在中煤股份成立后留在中煤集团或未进入中煤股份的员工及离退休员工承担全部责任（包括承担有关退休、养老及其他福利的责任）。

第四条 声明和保证

5.1 对于本协议签订日之前应完成而未能完成及应在本协议签订日之后完成的与重组有关的工作和步骤，中煤集团和中煤股份同意密切合作，尽最大努力使这些工作和步骤于重组生效日后 180 日内（除非双方另有约定）完成，并且双方无需为该等合作向对方支付任何费用。

5.2 中煤集团与中煤股份同意采取一切必要措施以确保重组按本协议和重组文件的约定全面实施。对重组文件中未提及的重组须完成事项，双方将本着平等、公平和合理的原则，妥善处理。

5.3 在重组生效日后，中煤集团应根据重组方案，依法办理与重组资

(1) 若任何必须取得的第三方授权、批准、同意、许可、确认或豁免直至重组生效日后 180 日仍未获取，则中煤股份可做出书面决定，该等重组资产、业务被视为未被重组注入；中煤集团须向中煤股份补偿由此导致的一切费用、损失和责任，包括但不限于中煤股份为获得相应代替资产、权益、业务需发生的一切费用和责任。

中煤集团按照本条规定代表中煤股份并为其利益在重组生效日后继续持有有关资产、权益和负债期间，该等资产、权益和负债所引起的或与之有关一切权利、盈利及一切义务、损失及索赔（不包括中煤集团未履行其在本条中的义务而引起的义务、损失及索赔）由中煤股份享有或承担。

5.4 双方进一步约定，对于因重组应转入中煤股份但截止重组生效日（包括重组生效日当日）该等转让未取得相关贷款人同意的贷款，中煤集团承诺将为中煤股份的利益继续作为该等贷款的借款人，直到以下任一情况先发生：

(2) 如果该等资料移交未能在重组生效日之前（含重组生效日当日）完成，除双方应采取一切必要措施以促使该等移交尽早完成外，中煤集团应代表中煤股份并为中煤股份利益继续持有并遵循安全、保密的原则妥善保存该等资料直至该等资料合法地、完整地移交于中煤股份。

(3) 中煤集团持有并保存该等资料期间，中煤股份可无偿使用该等资料且中煤集团应为中煤股份的使用提供一切方便。如果该等资料因其特殊性质（如不可分割）而无法移交给中煤股份，中煤集团妥善保存该等资料并应中煤股份随时提出的要求，允许中煤股份免费查阅、复制或以其他方式使用。

5.9 中煤集团与中煤股份将依据不时签订的协议，在重组生效日后相互为对方提供房屋租赁、土地使用权租赁、综合原料、产品和服务互供、出口代理、煤炭及设备销售等服务。中煤股份除按签署的协议承担约定的义务外，不就该等协议的主题事宜承担其他责任。

5.11 中煤集团在此承诺，按照其与中煤股份另行签署的《不竞争协议》，对其现有竞争业务及今后可能产生竞争的业务机会赋予中煤股份以优先交易及选择权、优先受让权和优先购买权。

3.2 对本协议所定之避免同业竞争范围和乙方主营业务的范围的任何变动，均须按双方另行达成的协议作出。

第四条 甲方之承诺

4.1 除第 5 条及第 6 条所规定外，甲方向乙方(及乙方的所有附属企业)作出以下不可撤销的承诺及保证，在本协议之有效期内:

4.1.1 除剥离业务以外，甲方确认其本身及甲方附属企业、参股企业目前没有以任何形式从事或参与对乙方(及乙方附属企业)主营业务构成或可能构成直接或间接竞争关系的业务或活动。

4.1.2 除了剥离业务以外，甲方承诺将不会，并促使甲方之附属企业及参股企业不会：

(i) 在中国境内和境外，单独或与他人，以任何形式（包括但不限于投资、并购、联营、合资、合作、合伙、承包或租赁经营、购买上市公司股票或参股）直接或间接从事或参与，或协助从事或参与任何与乙方及乙方附属企业目前及今后进行的主营业务构成竞争或可能构成竞争的业务或活动，包括但不限于：

第五条 新业务机会及选择权

5.1 甲方承诺，在本协议有效期内，如果甲方或其附属企业发现任何与乙方主营业务构成或可能构成直接或间接竞争的新业务机会，应立即书面通知乙方，并尽力促使该业务机会按合理和公平的条款和条件首先提供给乙方或某附属企业。乙方在收到该通知的 30 日内，有权以书面形式通知甲方准许乙方或乙方的附属企业参与上述之业务机会。甲方或其有关的附属企业应当将该新业务以公平合理条款转让与乙方或乙方的附属企业。

甲方承诺尽最大努力促使除其附属企业外的其它参股企业依照本条的规定，将任何与乙方主营业务构成或可能构成直接或间接竞争的业务机会提供给乙方或乙方的附属企业。

5.2 乙方的独立非执行董事应决定乙方是否从事前述新业务机会，或促使乙方的附属企业从事该等新业务机会。

如果乙方或乙方附属企业因任何原因决定不从事有关的新业务，应及时通知甲方，甲方或其附属企业依据本协议可以自行经营有关的新业务。

5.3 就甲方保留的煤炭出口业务中，如果与境外买方签订煤炭出口供应合同，则除非该合同对煤炭供应方另有约定，否则甲方应优先选择乙方作为煤炭供应方，以避免乙方煤炭的境外销售市场被挤占。

5.4 就甲方而言：

5.4.1 进行上市重组而保留与乙方主营业务直接或间接相竞争的剥离业务；及/或

5.4.2 将来甲方依照本协议第 5.2 条的约定可能获得的与乙方主营业务构成或可能构成直接或间接相竞争的新业务，

甲方承诺，在本协议有效期内，给予乙方选择权，即在适用法律允许的前提下乙方有权按本协议 5.4 条的条文随时一次性或多次向甲方或其附属企业收购在上述竞争性业务中的任何股权、资产及其他权益，或由乙方根据中国法律法规许可的方式选择委托经营、租赁或承包经营甲方或其附属企业在上述竞争性业务中的资产或业务。

尽管有前款规定，如果第三方在同等条件下根据有关法律及公司章程具有并且将要行使法定的优先受让权，则前款规定将不适用。但在这种情况下，甲方及甲方附属企业应尽最大努力促使该第三方放弃其法定的优先受让权。

甲方同时承诺，尽最大努力促使除其附属企业外的参股企业依照本条的规定向乙方提供本条所述的选择权。

5.5 本协议 5.4 条所述的收购或出让价格应当依据甲乙双方共同指定的第三方专业评估机构评估后所作的评估值并按照当时适用的有关法律要求的方式和程序由甲乙双方协商决定。

第六条 优先受让权

6.1 甲方承诺，在本协议有效期内，如果甲方拟向第三方转让、出售、出租、许可使用或以其他方式转让或允许使用：

6.1.1 甲方现有的与乙方主营业务直接或间接相竞争的剥离业务或权益；及/或

6.1.2 将来甲方依照本协议第 5.2 条的约定可能获得的与乙方构成或可能构成与主营业务直接或间接相竞争的新业务，

甲方或其附属企业应事先书面向乙方发出有关书面通知(下称"出让通知")。出让通知应附上甲方拟向第三方转让、出售、出租或许可使用的条件及乙方作出投资判断所需要的相关合理资料。乙方在收到甲方或其附属企业的上述通知后，乙方在甲方没有任何职位的董事，包括独立非执行董事应决定乙方是否愿意收购该竞争业务或权益，并应在接到出让通知后应在 30 日内向甲方或其附属企业作出书面答复。甲方或某附属企业承诺在收到乙方上述答复之前，不得向第三方发出拟向其转让、出售、出租或许可其使用该竞争业务或权益的任何出让通知。如果乙方拒绝收购该竞争业务或在规定时间内未就出让通知答复甲方或其附属企业，则甲方或其附属企业可以按照出让通知所载的条件向第三方出让、出售、出租、许可使用该竞争业务或权益。

如果乙方拒绝以出让通知所载条件受让该竞争业务，但在规定期限内向甲方发出书面通知并载明乙方可以接受的出让条件，如果甲方或其附属企业不接受乙方提出的出让条件，则甲方或其附属企业可以向第三方出让、出售、出租、许可使用该竞争业务或权益，但其必须按照出让通知中所载条件向第三方出让、出售、出租、许可使用该竞争业务或权益。

6.2 甲方承诺尽最大努力促使除其附属企业外的参股企业，依照本条的规定向乙方提供优先受让权。

第七条 甲方的承诺

7.1 甲方向乙方承诺本着最终将其经营的竞争性业务通过授予乙方的优先交易及选择权及/或优先受让权及/或优先收购权转让给予乙方的原则，积极改善、重组及妥善经营其保留的剥离业务和其将来依照本协议第 4.2 条的约定可能获得的竞争性新业务。

7.2 甲方在此无条件且不可撤销地向乙方作出下列声明、承诺及保证：

7.2.1 甲方为按中国法律注册成立及有效存续的国有独资公司，有权拥有其资产及经营现时经营及拟定经营的业务；

7.2.2 甲方拥有全部权利及能力订立本协议，并可按本协议履行其在本协议项下的所有义务及责任。本协议对甲方构成合法、有效和具约束力的文件；及

7.2.3 甲方不会由于订立本协议，按本协议履行甲方的义务或责任，而违反:

(i) 甲方须遵从的任何法律、法规或指令；或

(ii) 任何对甲方有约束力的合同，而使乙方不能按本协议从甲方受让本协议项下由甲方拥有的资产及业务。

第八条 同等责任

(3) emoluments in respect of other service the management of our Company and any subsidiary of our Company;

(4) payment by way of compensation for loss of office, or as consideration for or in connection with his retirement from office.

Except under the contract entered into in accordance with the foregoing, no proceedings may be brought by a Director or Supervisor against our Company for any benefit due to him in respect of the above matters.

The contracts concerning the emoluments between our Company and its Directors or Supervisors should provide that, in the event of an acquisition of our Company, the Directors and Supervisors shall, subject to the prior approval of the shareholders' general meeting, have the right to receive compensation or other payment in respect of his loss of office or retirement. An "acquisition of our Company" referred to in this paragraph means either:

(1) an offer made by any person to all shareholders; or

(2) an offer made by any person with a view to the offeror becoming a "controlling shareholder" within the meaning set out in the Articles of Association (see the section headed "Rights of the Minorities in Relation to Fraud or Oppression" below).

If the relevant Director or Supervisor does not comply with the above, any sum so received by him shall belong to those persons who have sold their Shares as a result of the offer made. The expenses incurred in distributing such sum pro rata amongst those persons shall be borne by the relevant Director or Supervisor and not paid out of that sum.

Loans to Directors, Supervisors and Other Officers

Our Company shall not directly or indirectly make a loan to, or provide any guarantee in connection with the making of a loan to a Director, Supervisor, our President or other senior executive officer of our Company or of our Company's holding company or any of their respective associates. However, the following transactions are not subject to such prohibition:

- the provision by our Company of a loan or a guarantee of a loan to a company which is a subsidiary of our Company;
- the provision by our Company of a loan or a guarantee in connection with the making of a loan or any other funds to any of its Directors, Supervisors, our President and other senior executive officers for them to pay for expenditure incurred or to be incurred by him for the purposes of our Company or for the purpose of enabling him to perform his duties properly, in accordance with the terms of a service contract approved by the shareholders' general meeting; and
- Our Company may make a loan to or provide a guarantee in connection with the making of a loan to any of the relevant Directors, Supervisors, our President and other senior executive officers or their respective associates on normal commercial terms, provided that the ordinary course of business of our Company includes the lending of money or the giving of guarantees.

A loan made by our Company in breach of the above provisions shall be forthwith repayable by the recipient of the loan regardless of the terms of the loan.

A guarantee provided by our Company in breach of the above provisions shall be unenforceable against our Company, unless:

1. the guarantee was provided in connection with a loan to an associate of any of the Directors, Supervisors, our President and other senior executive officers of our Company or of our Company's holding company and at the time the loan was advanced the lender did not know the relevant circumstances; or

2. the collateral provided by our Company has been lawfully disposed of by the lender to a bona fide purchaser.

For these purposes:

(a) a guarantee includes an undertaking or property provided to secure the performance of obligations by the obligor; and

(b) a definition of an associate as referred to in sub-section headed "Duties" below applies, mutatis mutandis, to this provision.

Financial Assistance for the Acquisition of Shares in our Company or any Subsidiary

Subject to the exceptions in the Articles of Association, our Company and our subsidiaries shall not, by any means at any time, provide any kind of financial assistance (as defined below) to a person who is acquiring or is proposing to acquire shares of our Company. The said acquirer of shares of our Company includes a person who directly or indirectly incurs any obligations (as defined below) due to the acquisition of the shares. Our Company and our subsidiaries shall not, by any means at any time, provide financial assistance to the said acquirer as referred to above for the purpose of reducing or discharging the obligations assumed by that person.

The following activities shall not be deemed to be prohibited activities:

- the provision of financial assistance by our Company where the financial assistance is given in good faith in the interest of our Company, and the principal purpose in giving the financial assistance is not for the acquisition of shares in our Company, or the giving of the financial assistance is an incidental part of some larger purpose of our Company;
- the lawful distribution of our Company's assets by way of dividend in accordance with law;
- the allotment of bonus shares as dividends;
- a reduction of registered capital, a repurchase of shares of our Company or a reorganization of the share capital structure of our Company effected in accordance with these Articles of Association;
- the lending of money by our Company in the ordinary course of its business, where the lending of money is part of the scope of business of our Company (provided that the net assets of our Company are not thereby reduced or that, to the extent that the assets are thereby reduced, the financial assistance is provided out of distributable profits); and
- the provision of money by our Company for contributions to staff and workers' shares schemes (provided that the net assets of our Company are not thereby reduced or that, to the extent that the assets are thereby reduced, the financial assistance is provided out of distributable profits).

For these purposes:

(a) "financial assistance" includes (without limitation) the following meanings:

(1) gift;

(2) guarantee (including the assumption of liability by the guarantor or the provision of assets by the guarantor to secure the performance of obligations by the obligor), or compensation (other than compensation in respect of our Company's own default) or release or waiver of any rights;

(3) provision of loan or any other agreement under which the obligations of our Company are to be fulfilled before the obligations of another party, or a change in the parties to, or the novation of, or the assignment of rights arising under, such loan or agreement; or

(4) any other form of financial assistance given by our Company when our Company is unable to pay its debts or has no net assets or when its net assets would thereby be reduced to a material extent.

(b) "incurring an obligation" includes the incurring of obligations by the changing of the obligor's financial position by way of contract or the making of an arrangement (whether enforceable or not, and whether made on its own account or with any other persons), or by any other means.

Disclosure of Interests in Contracts with our Company or any of its Subsidiaries

Where a Director, Supervisor, our President or other senior executive officer of our Company is in any way, directly or indirectly, materially interested in a contract, transaction or arrangement or proposed contract, transaction or arrangement with our Company, (other than his contract of service with our Company), he shall declare the nature and extent of his interests to the Board at the earliest opportunity, whether or not the contract, transaction or arrangement or proposal therefor is otherwise subject to the approval of the Board under normal circumstances.

Unless the interested Director, Supervisor, President or other senior executive officer discloses his interests in accordance with the Articles of Association and the contract, transaction or arrangement is approved by the Board at a meeting in which the interested Director, Supervisor, President or other senior executive officer is not counted in the quorum and refrains from voting, a contract, transaction or arrangement in which that Director, Supervisor, our President or other senior executive officer is materially interested is voidable at the instance of our Company except as against a bona fide party thereto acting without notice of the breach of duty by the interested Director, Supervisor, our President or other senior executive officer.

For these purposes, a Director, Supervisor, our President or other senior executive officer of our Company is deemed to be interested in a contract, transaction or arrangement in which an associate of his/hers is interested.

Where a Director, Supervisor, our President or other senior executive officer of our Company gives to the Board a general notice in writing stating that, by reason of the facts specified in the notice, he is interested in contracts, transactions or arrangements of any description, which may subsequently be made by our Company, such notice shall be deemed for the purposes of this paragraph to be a sufficient declaration of his interests, so far as the content stated in such notice is concerned, provided that such general notice shall have been given before the date on which the question of entering into the relevant contract, transaction or arrangement is first taken into consideration on behalf of our Company.

Remuneration

The remuneration of Directors must be approved by the shareholders' general meeting, as referred to under the section headed "Emoluments, Compensation or Payments for Loss of Office" above.

Appointment, Removal and Retirement

The term of office of the chairman of the Board and the other Board members shall be three years. If the term of appointment of a Director expires and he is re-elected, the Director may be reappointed for consecutive terms.

Directors shall be elected and removed by the shareholders' general meeting. A written notice of the intention to propose a person for election as director and a notice in writing by that person indicating his acceptance of such election is required to be given to our Company not earlier than the date of notice but no later than 7 days before the day of meeting.

The Board shall consist of 9 Directors, of which 5 shall be independent non-executive Directors. The Board shall have one chairman and one vice-chairman. The chairman and vice-chairman shall be elected and removed by a majority of all of the Directors. A Director is not required to hold shares of our Company.

A person may not serve as a Director, Supervisor, our President and any other senior executive officer of our Company if any of the following circumstances apply:

- a person without legal or with restricted legal capacity;
- a person who has committed an offence of corruption, bribery, infringement of property, misappropriation of property or sabotaging the social economic order and has been punished because of committing such offence; or who has been deprived of his political rights, in each case where no more than five (5) years has elapsed since the date of the completion of implementation of such punishment or deprivation;
- a person who is a former director, factory manager or manager of a company or enterprise which has entered into insolvent liquidation because of mismanagement and he is personally liable for the insolvency of such company or enterprise, where no more than three (3) years has elapsed since the date of the completion of the insolvency and liquidation of such company or enterprise;

- a person who is under criminal investigation or prosecution by judicial organization for violation of the criminal law which investigation or prosecution is not yet concluded;
- a person who is not eligible for enterprise leadership according to laws and administrative regulations;
- a non-natural person;
- a person convicted of the contravention of provisions of relevant securities regulations by a relevant government authority, and such conviction involves a finding that he has acted

fraudulently or dishonestly, where less than five (5) years has elapsed since the date of the conviction; or

- a person who is a public servant.

There is no provision in our Articles of Association which imposes any age limit for Directors beyond which retirement as a Director is mandatory.

The validity of an act of a Director, our President or other senior executive officer on behalf of our Company is not, vis-à-vis a bona fide third party, affected by any irregularity in his office, election or any defect in his qualification.

Borrowing Powers

Subject to compliance with applicable laws and regulations of the PRC, our Company has the power to raise and borrow money, which power includes, without limitation, the issue of debentures, the charging or mortgaging of part or whole of our Company's business or properties and other rights permitted by PRC laws and administrative regulations. The Articles of Association do not contain any specific provision in respect of the manner in which borrowing powers may be exercised by the Directors nor do they contain any specific provision in respect of the manner in which such powers may be varied, other than: (a) provisions which give the Directors the power to formulate proposals for the issuance of debentures by our Company; and (b) provisions which provide that the issuance of debentures must be approved by the shareholders' general meeting by way of a special resolution.

Duties

In addition to obligations imposed by laws, administrative regulations or required by the stock exchanges on which Shares are listed, each of our Company's Directors, Supervisors, our President and other senior executive officers owes a duty to each shareholder, in the exercise of the functions and powers of our Company entrusted to him:

- not to cause our Company to exceed the scope of the business stipulated in its business license;
- to act honestly in the best interest of our Company;
- not to expropriate in any guise our Company's property, including (without limitation) usurpation of opportunities advantageous to our Company; and
- not to expropriate the individual rights of shareholders, including (without limitation) rights to distribution and voting rights, save pursuant to a restructuring of our Company submitted to shareholders' general meeting for approval in accordance with the Articles of Association.

Each of our Company's Directors, Supervisors, our President and other senior executive officers owes a duty, in the exercise of his powers and discharge of his duties, to exercise the care, diligence and skill that a reasonably prudent person would exercise in comparable circumstances. Each of our Company's Directors, Supervisors, our President and other senior executive officers shall exercise his powers or carry on his duties in accordance with the principle of fiduciary and shall not put himself in a position where his duty and his interest may conflict. This principle includes (without limitation) discharging the following obligations:

- to act honestly in the best interests of our Company;
- to exercise powers within the scope of his powers and not to exceed those powers;

- to exercise the discretion vested in him personally and not to allow himself to act under the control of another and, unless and to the extent permitted by laws, administrative regulations or with the informed consent of shareholders' general meeting, not to delegate the exercise of his discretion;
- to treat shareholders of the same class equally and to treat shareholders of different classes fairly;
- except in accordance with the Articles of Association or with the informed consent of shareholders' general meeting, not to enter into any contract, transaction or arrangement with our Company;
- without the informed consent of shareholders' general meeting, not to use our Company's property for his own benefit;
- not to exploit his position to accept bribes or other illegal income or expropriate our Company's property by any means, including (without limitation) opportunities advantageous to our Company;
- without the informed consent of shareholders' general meeting, not to accept commissions in connection with our Company's transactions;

- not to compete with our Company in any form unless with the informed consent of shareholders' general meeting;
- not to misappropriate our Company's funds or lend such funds to others, not to open accounts in his own name or other names for the deposit of our Company's assets and not to provide a guarantee for debts of a shareholder of our Company or other individual(s) with our Company's assets; and
- unless otherwise permitted by informed shareholders' general meeting, to keep in confidence information acquired by him in the course of and during his tenure and not to use the information other than in furtherance of the interests of our Company, save that disclosure of such information to the court or other governmental authorities is permitted if: (i) disclosure is made under compulsion of law; (ii) the interests of the public require disclosure; (iii) the interests of the relevant Director, Supervisor, our President or other senior executive officer require disclosure.

Each Director, Supervisor, our President or other senior executive officer of our Company shall not cause the following persons or institutions ("associates") to do what he is prohibited from doing:

(1) the spouse or minor child of that Director, Supervisor, our President or other senior executive officer;

(2) a person acting in the capacity of trustee of that Director, Supervisor, our President or other senior executive officer or any person referred to in the preceding paragraph;

(3) a person acting in the capacity of partner of that Director, Supervisor, our President or other senior executive officer or any person referred to in paragraphs (1) and(2) above;

(4) a company in which that Director, Supervisor, our President or other senior executive officer, alone or jointly with one or more persons referred to in paragraphs (1), (2) and (3) above and

other Directors, Supervisors, our President and other senior executive officers have a de facto controlling interest; and

(5) the directors, supervisors, general manager and other senior executive officers of the controlled company referred to in the preceding paragraph.

The fiduciary duties of the Directors, Supervisors, our President and other senior executive officers of our Company do not necessarily cease with the termination of their tenure. The duty of confidence in relation to trade secrets of our Company survives the termination of their tenure. Other duties may continue for such period as fairness may require depending on the time lapse between the termination and the act concerned and the circumstances under which the relationships between them and our Company are terminated.

In addition to any rights and remedies provided by the laws and administrative regulations, where a Director, Supervisor, President or other senior executive officer of our Company is in breach of his duties to our Company, our Company has a right to:

- claim damages from the Director, Supervisor, our President or other senior executive officer in compensation for losses sustained by our Company as a result of such breach;
- rescind any contract or transaction entered into by our Company with the Director, Supervisor, our President or other senior executive officer or with a third party (where such third party knows or should know that there is such a breach of duties by such Director, Supervisor, our President or other senior executive officer);
- demand an account of the profits made by the Director, Supervisor, our President or other senior executive officer in breach of his duties;
- recover any funds received by the Director, Supervisor, our President or other senior executive officer that should have been received by our Company, including (without limitation) commissions;
- demand payment of the interest earned or which may have been earned by the Director, Supervisor, our President or other senior executive officer on the funds that should have been paid to our Company; and
- take legal actions to obtain judgment that our Company should own the properties earned by the Director, Supervisor, our President or other senior executive officer in breach of his duties.

Subject to the Articles of Association, a Director, Supervisor, our President or other senior executive officer of our Company may be relieved of liability for specific breaches of his duty by the informed consent of shareholders' general meeting.

Alterations to Constitutional Documents

Our Company may amend its Articles of Association in accordance with the requirements of law, administrative regulation and the Articles of Association.

Amendments to the Articles of Association involving the contents of the Mandatory Provisions shall become effective upon approvals by the companies approving department authorized by the State Council and securities authority of the State Council. If there is any change relating to the registered particulars of our Company, application shall be made for registration of the changes in accordance with law.

Variation of Rights of Existing Shares or Classes of Shares

Holders of Domestic Shares and holders of overseas listed foreign Shares of the Company shall be considered as different classes of shareholders.

Under the recently amended Company Law, all the existing Domestic Shares may not be transferred within a period of one year from the date of the Listing of H Shares on the Stock Exchange. Under the Articles of Association, it is provided that upon approval of the State Council or its authorized supervisory departments and subject to the requirements of the Stock Exchange, the Domestic Shares may be converted into H Shares.

Rights conferred on any class of shareholders in the capacity of shareholders ("class rights") may not be varied or abrogated unless approved by a special resolution of shareholders' general meeting and by holders of Shares of that class at a separate meeting conducted in accordance with the Articles of Association.

Upon the approval of the State Council or its authorized approving authority, the domestic ordinary shares of our Company may be totally or partially transferred or converted to foreign investment shares and become publicly tradable and listed on any overseas stock exchange. Unless the regulatory authorities of the place of listing requires otherwise, the transfer or conversion of the shares of our Company held by domestic shareholders to foreign investment shares and their listing on any overseas stock exchange will not require the approval of separate class meeting of our Company.

The following circumstances shall be deemed to be a variation or abrogation of the class rights of a class:

(1) to increase or decrease the number of Shares of such class, or to increase or decrease the number of Shares of a class having voting or equity rights or privilege equal or superior to those of the Shares of such class, except for where Shares of our Company held on our Domestic Share register may be transferred to overseas investors, and such transferred Shares may be listed or traded on an overseas stock exchange, subject to the approval of the securities authorities of the State Council;

(2) to effect an exchange of all or part of the Shares of such class into Shares of another class or to effect an exchange or create a right of exchange of all or part of the Shares of another class into the Shares of such class, except for where Shares of our Company held on our Domestic Share register may be transferred to overseas investors, and such transferred Shares may be listed or traded on an overseas stock exchange, subject to the approval of the securities authorities of the State Council;

(3) to remove or reduce rights to accrued dividends or rights to cumulative dividends attached to Shares of such class;

(4) to reduce or remove a dividend preference or a liquidation preference attached to Shares of such class;

(5) to add, remove or reduce conversion privileges, options, voting rights, transfer or pre-emptive rights, or rights to acquire securities of our Company attached to Shares of such class;

(6) to remove or reduce rights to receive payment payable by our Company in particular currencies attached to Shares of such class;

(7) to create a new class of Shares having voting or equity rights or privileges equal or superior to those of the Shares of such class;

(8) to restrict the transfer or ownership of the Shares of such class or add to such restriction;

(9) to allot and issue rights to subscribe for, or convert into, shares in our Company of such class or another class;

(10) to increase the rights or privileges of Shares of another class;

(11) to restructure our Company where the proposed restructuring will result in different classes of shareholders bearing a disproportionate burden of such proposed restructuring; and

(12) to vary or abrogate provisions in chapter 9 of the Articles of Association.

Shareholders of the affected class, whether or not otherwise having the right to vote at shareholders' general meetings, shall nevertheless have the right to vote at class meetings in respect of matters concerning paragraphs (2) to (8), (11) and (12) above, but interested shareholder(s) (as defined below) shall not be entitled to vote at class meetings.

Resolutions of a class of shareholders shall be passed by votes representing more than two-thirds of the voting rights of shareholders of that class represented at the relevant meeting who are entitled to vote at class meetings.

Written notice of a class meeting shall be given forty-five (45) days before the date of the class meeting to notify all of the shareholders in the share register of the class of the matters to be considered and the date and the place of the class meeting. A shareholder who intends to attend the class meeting shall deliver his written reply concerning attendance at the class meeting to our Company twenty (20) days before the date of the class meeting.

If the number of Shares carrying voting rights at the meeting represented by the shareholders who intend to attend the class meeting reaches one half or more of the voting Shares at the class meeting, our Company may hold the class meeting; if not, our Company shall within five (5) days notify the shareholders of the class, again by public notice, of the matters to be considered, the date and the place for the class meeting. Our Company may then hold the class meeting after publication of such notice.

Notice of class meetings need only be served on shareholders entitled to vote thereat.

Meetings of any class of shareholders shall be conducted in a manner as similar as possible to that of general meetings of shareholders. The provisions of the Articles of Association relating to the manner of conducting any shareholders' general meeting shall apply to any meeting of a class of shareholders. Holders of domestic-invested Shares and foreign-invested Shares are deemed to be shareholders of different classes.

The special procedures for voting at a class of shareholders shall not apply in the following circumstances:

(1) where our Company issues, upon the approval by a special resolution of its shareholders' general meeting, either separately or concurrently once every twelve months, not more than 20% of each of its existing issued domestic-invested Shares and overseas-listed foreign-invested Shares;

(2) where our Company's plan to issue domestic-invested Shares and overseas-listed foreign-invested Shares at the time of its establishment is carried out within fifteen (15) months from the date of approval of the securities authority of the State Council; or

(3) where upon the approval from the relevant State Council securities regulatory authority, the domestic shareholders of our company may transfer the domestic shares held thereby to overseas investors and such transferred shares may be listed or traded on an overseas stock exchange.

For the purposes of the class rights provisions of the Articles of Association, the meaning of "interested shareholder(s)" is:

(1) in the case of a repurchase of Shares by offers to all shareholders pro rata or public dealing on a stock exchange, a "controlling shareholder" within the meaning of the Articles of Association;

(2) in the case of a repurchase of Shares by an off-market contract, a holder of the Shares to which the proposed contract relates; and

(3) in the case of a restructuring of our Company, a shareholder within a class who bears less than a proportionate burden imposed on that class under the proposed restructuring or who has an interest in the proposed restructuring different from the interest of shareholders of that class.

Resolutions — Majority Required

Resolutions of shareholders' general meetings shall be divided into ordinary resolutions and special resolutions.

To adopt an ordinary resolution, votes representing one half or more of the voting rights represented by the shareholders (including proxies) present at the meeting must be exercised in favor of the resolution in order for it to be passed.

To adopt a special resolution, votes representing two-thirds or more of the voting rights represented by the shareholders (including proxies) present at the meeting must be exercised in favor of the resolution in order for it to be passed.

Voting Rights (generally, on a poll and right to demand a poll)

The ordinary shareholders of our Company have the right to attend or appoint a proxy to attend shareholders' general meetings and to vote thereat. A shareholder (including proxy) when voting at a shareholders' general meeting may exercise voting rights in accordance with the number of shares carrying the right to vote and each share shall have one vote. At any general meeting of shareholders a resolution shall be decided on a show of hands unless a poll is (before or after any vote by show of hands) demanded:

- by the chairman of the meeting;
- by at least two shareholders entitled to vote present in person or by proxy; or
- by one or more shareholders present in person or by proxy and representing 10% or more of all shares carrying the right to vote at the meeting.

Unless a poll be so demanded, a declaration by the chairman that a resolution has on a show of hands been carried, unanimously, or carried by, a particular majority, or lost, and an entry to that effect in the minutes of the meeting shall be conclusive evidence of the fact without proof of the number or proportion of the votes recorded in favor of or against such resolution. The demand for a poll may be withdrawn by the person who makes such demand.

A poll demanded on the election of the chairman of the meeting, or on a question of adjournment of the meeting, shall be taken forthwith. A poll demanded on any other question shall be taken at such time as the chairman of the meeting directs, and any business, other than that upon which a poll has been demanded

may be proceeded with, pending the taking of the poll. The result of the poll shall be deemed to be a resolution of the meeting at which the poll was demanded.

On a poll taken at a meeting, a shareholder (including proxy) entitled to two or more votes need not cast all his votes in the same way.

In the case of an equality of votes, whether on a show of hands or on a poll, the chairman of the meeting at which the show of hands takes place or at which the poll is demanded shall be entitled to one additional vote.

Requirements for Annual General Meetings

The Board shall convene an annual shareholders' meeting once each year and within six (6) months from the close of the preceding financial year.

Accounts and Audit

Our Company shall establish its financial and accounting system in accordance with the laws, administrative regulations and PRC accounting standards formulated by the finance regulatory department of the State Council.

The Board shall place before the shareholders at every annual general meeting such financial reports as are required by any laws, administrative regulations or directives promulgated by competent regional and central governmental authorities to be prepared by our Company.

If there is any material difference between the financial statements prepared respectively in accordance with the two accounting standards, such difference shall be stated in an appendix to the financial statements. When our Company is to distribute its profits, it is required to distribute dividends based on the lower of the Company's distributable reserves determined under the two accounting standards.

Any interim results or financial information published or disclosed by our Company must also be prepared and presented in accordance with PRC accounting standards and regulations, and also in accordance with either International Financial Reporting Standards or that of the overseas place where our Company's shares are listed.

Our Company shall publish its financial reports twice every fiscal year, that is, the interim financial report shall be published within sixty (60) days after the expiration of the first six (6) months of each fiscal year and the annual financial report shall be published within one hundred and twenty (120) days after the expiration of each fiscal year.

Notice of Meetings and Business to be Conducted thereat

The shareholders' general meeting is the organ of authority of our Company and shall exercise its functions and powers in accordance with law. Our Company shall not, without the prior approval of shareholders' general meeting, enter into any contract with any person other than a Director, Supervisor, our

President or other senior executive officer whereby the management and administration of the whole or any substantial part of the business of our Company is to be handed over to such person. Shareholders' general meetings are divided into annual general meetings and extraordinary general meetings. Shareholders' general meeting shall be convened by the Board. Under any of the following circumstances, the Board shall convene an extraordinary general meeting within two (2) months:

- when the number of Directors is less than the number of Directors required by the PRC Company Law or two-thirds of the number of Directors specified in the Articles of Association;
- when the unrecovered losses of our Company amount to one-third of the total amount of its share capital;

When our Company convenes a shareholders' general meeting, written notice of the meeting shall be given forty-five (45) days before the date of the meeting to notify all of the shareholders in the share register of the matters to be considered and the date and the place of the meeting. A shareholder who intends to attend the meeting shall deliver his written reply concerning the attendance of the meeting to our Company twenty (20) days before the date of the meeting.

When our Company convenes a shareholders' annual general meeting, shareholders holding 3% or more of the total voting shares of our Company shall have the right to propose new motions in writing, and Our Company shall place matters in the proposed motions within the scope of functions and powers of the shareholders' general meeting on the agenda.

A shareholders' extraordinary general meeting shall not decide on those matters not stated in the notice of meeting.

Our Company shall, based on the written replies received twenty (20) days before the date of the shareholders' general meeting from the shareholders, calculate the number of voting shares represented by shareholders who intend to attend the meeting. If the number of voting shares represented by the shareholders who intend to attend the meeting reaches one half or more of our Company's total voting shares, our Company may hold the meeting. If not, then our Company shall within five (5) days notify the shareholders again by public notice of the matters to be considered, the place and the date for the meeting. Our Company may hold the meeting after the publication of such notice.

A notice of meeting of shareholders shall be required to:

- be in writing;
- specify the place, the day and the hour of the meeting;
- list out the share registration date of shareholders who are entitled to attend the meeting;
- state the matters to be discussed at the meeting;
- provide such information and explanations as are necessary for the shareholders to exercise an informed judgment on the proposals before them. Without limiting the generality of the foregoing,

where a proposal is made to amalgamate our Company with another, to repurchase shares, to reorganize the share capital or to restructure our Company in any other way, the terms of the proposed transaction must be provided in detail together with copies of the proposed agreement, if any, and the cause and effect of such proposal must be properly explained;

- contain a disclosure of the nature and extent, if any, of the material interests of any Director, Supervisor, our President or other senior executive officer in the transaction proposed and the effect of the proposed transaction on them in their capacity as shareholders in so far as it is different from the effect on the interests of the shareholders of the same class;
- contain the full text of any special resolution proposed to be voted at the meeting;
- contain conspicuously a statement that a shareholder entitled to attend and vote is entitled to appoint one or more proxies to attend and vote instead of him and that a proxy need not be a shareholder; and
- specify the time and place for lodging proxy forms for the relevant meeting.

Notice of shareholders' general meeting shall be served on the shareholders (whether or not entitled to vote at the meeting), by delivery or prepaid mail to their addresses as shown in the register of shareholders. For the holders of Domestic Shares, notice of the meetings may be issued by way of public notice.

The public notice shall be published in one or more newspapers designated by the securities governing authority of the State Council within the interval between forty-five (45) days and fifty (50) days before the date of the meeting. After the publication of such notice, the holders of domestic invested Shares shall be deemed to have received the notice of the relevant shareholders' general meeting. The accidental omission to give notice of a meeting to, or the non-receipt of notice of a meeting by, any person entitled to receive notice shall not invalidate the proceedings at that meeting.

The following matters shall be resolved by an ordinary resolution at a shareholders' general meeting:

- work reports of the Board and the supervisory committee;
- plans formulated by the Board for the distribution of profits and for making up losses;
- appointment and removal of the members of the Board and members of the supervisory committee, their remuneration and method of payment;

4. 记账本位币

本公司以人民币作为记账本位币．

5. 现金等价物的确定标准

二、不符合会计核算前提

无

三、公司主要会计政策、会计估计的说明

1．本公司执行的会计制度

本公司执行相关的企业会计准则和《企业会计制度》及其补充规定。

2．会计年度

本公司自每年公历 1 月 1 日起至 12 月 31 日止为一个会计年度。

3．记账基础和计价原则

本公司采用借贷记账法，以权责发生制为记账基础，资产于取得时按实际成本入账；其后，如果发生减值，则计提相应的减值准备。

4．记账本位币

本公司以人民币作为记账本位币．

5．现金等价物的确定标准

本公司以持有期限短（一般是指从购买日起三个月内到期）、流动性强、易于转换为已知金额现金、价值变动风险很小的投资作为现金等价物。

本公司现金及现金等价物包括：现金、银行存款、其他货币资金和持有期限不超过三个月的短期投资。

6. 应收账款

本公司应收账款按实际发生额计价，坏账损失采用备抵法核算，采用个别认定法与账龄分析法结合计提坏账准备，对于有确凿证据表明确实无法收回的应收款项，经本公司董事会或股东大会批准后列作坏账损失，冲销提取的坏账准备。

采用账龄分析法计提坏账准备的计提比例为：

行业类别	计提比例				
	3个月-1年（含1年）	1-2年（含2年）	2-3年（含3年）	3-5年（含5年）	5年以上
其他	2%	10%	30%	80%	100%

7. 存货

（1）存货的分类：包括各类原材料、燃料、备品备件（修理用配件）、辅助材料、外购件、商品、在产品（含施工企业未完施工、房产开发企业的开发产品）、半成品、产成品，以及包装物、低值易耗品、委托代销商品等。

（2）存货取得和发出的计价方法：存货在取得时按实际成本计价；领用或发出存货，按照实际成本核算的，采用先进先出法（加权平均法、移动平均法、个别计价法、后进先出法）确定其实际成本。（按照计划成本核算的，对存货的计划成本和实际成本之间的差异，应当单独核算；领用和发出存货时，应于月度终了，结转其应负担的成本差异，将计划成本调整为实际成本。）

（3）低值易耗品和包装物的摊销：低值易耗品、包装物、周转材料等存货，在领用当月开始摊销。2000元（含2000元）以下的一次摊销；2000元以上的，分别采用五五摊销或分期（次）摊销，其中单位（批）价值较大（一般4000元及其以上）、数量较多的周转材料、包装物，实行分期（次）摊销，摊销期间不超过3年（或不超过受益产品的加工或建设期）。如此类存货发生丢失、毁损，应在发生（发现）当月并在查清原因后，将其摊余价值扣除责任人赔偿后，一次计入成本费用。

（4）期末存货计价原则及存货跌价准备确认标准和计提方法：期末存货按成本与可变现净值孰低原则计价；期末，在对存货进行全面盘点的基础上，对于存货因被淘汰、全部或部分陈旧过时或销售价格低于成本等原因导致成本高于可变现净值的部分，以及承揽工程预计存在的亏损部分，提取存货跌价准备。存货跌价准备按单个（或类别）存货项目的成本高于其可变现净值的差额提取。可变现净值按估计售价减去估计完工成本、销售费用和相关税金后确定。

8. 固定资产及其折旧政策

(1)固定资产标准：使用年限超过1年的房屋、建筑物、机器设备、运输工具及其它与生产经营

有关的工具、器具、仪器等．不属于生产经营主要设备的物品，单位价值在2,000元以上，并且使用年限超过2年以上的，也列作固定资产。

(2)固定资产分类：房屋建筑物、机械设备、运输设备、其他。

(3)固定资产的计价：固定资产按其成本作为入账价值，其中：外购的固定资产的成本包括买价、运输费、及其他相关税费，以及为使固定资产达到预定可使用状态前所发生的可直接归属于该资产的其他支出；投资者投入的固定资产，按投资各方确认的价值作为入账价值．

(4)固定资产折旧采用直线法．

固定资产的预计经济使用年限、预计净残值率和折旧率如下：

房屋建筑物	15-45	4%	2.1-6.4
机械设备	5-22	4%	19.2—4.36
运输设备	8-10	4%	12-9.6

9．在建工程

按实际发生的支出确定在建工程的工程成本，其中：自营工程按直接材料、直接工资、直接施工费等计量；出包工程按应支付的工程价款等计量；设备安装工程按所安装设备的价值、安装费用、工程试运转所发生的支出等确定工程成本；更新改造工程按更新改造前该固定资产的账面价值、更新改造直接费用、工程试运转支出以及所分摊的工程管理费等确定工程成本．未办理竣工决算的工程在达到预定可使用状态之日起，根据工程预算、造价或工程实际成本等，按估计的价值结转固定资产并于次月起开始计提折旧．待办理了竣工决算手续后再作调整．

10．无形资产

无形资产在取得时，按实际成本计量，自取得当月起按预计使用年限、合同规定的受益年限和法律规定的有效年限三者中最短者分期平均摊销，计入当期损益．合同、法律均未规定年限的，按10年摊销．

11．借款费用

无。

三、公司主要会计政策、会计估计的说明

1.本公司执行的会计制度

本公司执行相关的企业会计准则和《企业会计制度》及其补充规定。

2.会计年度

本公司自每年公历1月1日起至12月31日止为一个会计年度。

3.记账基础和计价原则

本公司采用借贷记账法,以权责发生制为记账基础,资产于取得时按实际成本入账;其后,如果发生减值,则计提相应的减值准备。

4.记账本位币

本公司以人民币作为记账本位币。

5.现金等价物的确定标准

本公司以持有期限短(一般是指从购买日起三个月内到期)、流动性强、易于转换为已知金额现金、价值变动风险很小的投资作为现金等价物。

本公司现金及现金等价物包括:现金、银行存款、其他货币资金和持有期限不超过三个月的短期投资。

6.应收账款核算方法

（1）坏账损失的核算方法：本公司坏账损失采用备抵法核算，采用个别认定法与账龄分析法结合计提坏账准备，对于有确凿证据表明确实无法收回的应收款项，经本公司董事会或股东大会批准后列作坏账损失，冲销提取的坏账准备。

采用账龄分析法计提坏账准备的计提比例为：

行业类别	计提比例				
其他	3个月-1年（含1年）	1-2年（含2年）	2-3年（含3年）	3-5年（含5年）	5年以上
计提比例	2%	10%	30%	80%	100%

如某项应收款项的可收回性具有一定特殊性，按账龄计提坏账准备无法真实反映其可收回金额的，应对该项应收款项采取个别认定坏账准备，其中：

a 对应收非关联方款项，金额较大、收回有困难的，结合实际情况和经验计提坏账准备。除有确凿证据表明该项应收款不能收回，或收回可能性很小（如债务单位撤销、破产、资不抵债、现金流量严重不足、发生严重自然灾害等导致停产而在短时间内无法偿付的债务等，以及应收款项逾期3年以上）外，下列情况一般不能全额计提减值准备：

当年发生的应收款项；

计划对应收款项进行重组；

其他已逾期，但无确凿证据表明不能收回的应收款项。

b 与关联方发生的应收款项，一般不全额计提坏账准备。如有确凿证据表明关联方（债务单位）已撤销、破产、资不抵债、现金流量严重不足等，并且不准备对应收款项进行重组或无其他收回方式的，则对预计无法收回的应收关联方的款项也全额计提坏账准备。

（2）应收款项的转让、质押、贴现：

本公司以应收债权向银行等金融机构转让、质押或贴现等方式融资时，根据相关合同的约定，当债务人到期未偿还该项债务时，若本公司负有向金融机构还款的责任，则该应收债权作为质押贷款处理；若本公司没有向金融机构还款的责任，则该应收债权作为转让处理，并确认债权的转让损益。

7．存货核算方法

（1）存货的分类：包括各类原材料、燃料、备品备件（修理用配件）、辅助材料、外购件、商品、在产品、半成品、产成品，以及包装物、低值易耗品、委托代销商品等。

（2）存货取得和发出的计价方法：存货在取得时按实际成本计价；领用或发出存货，按照实际成本核算的，采用加权平均法(其中兰炭采用个别计价法)确定其实际成本。

（3）低值易耗品和包装物的摊销：低值易耗品、包装物、周转材料等存货，在领用当月开始摊销。2000元（含2000元）以下的一次摊销；2000元以上的，分别采用五五摊销或分期（次）摊销。其中单位（批）价值较大（一般4000元及其以上）、数量较多的周转材料、包装物，实行分期（次）

摊销，摊销期间不超过3年（或不超过受益产品的加工或建设期）。如此类存货发生丢失、毁损，应在发生（发现）当月并在查清原因后，将其摊余价值扣除责任人赔偿后，一次计入成本费用。

（4）期末存货计价原则及存货跌价准备确认标准和计提方法：期末存货按成本与可变现净值孰低原则计价；期末，在对存货进行全面盘点的基础上，对于存货因被淘汰、全部或部分陈旧过时或销售价格低于成本等原因导致成本高于可变现净值的部分，以及承揽工程预计存在的亏损部分，提取存货跌价准备。存货跌价准备按单个（或类别）存货项目的成本高于其可变现净值的差额提取，可变现净值按估计售价减去估计完工成本、销售费用和相关税金后确定。

8．固定资产计价及其折旧政策

(1)固定资产标准：使用年限超过1年的房屋、建筑物、机器设备、运输工具及其它与生产经营有关的工具、器具、仪器等。不属于生产经营主要设备的物品，单位价值在2,000元以上，并且使用年限超过2年以上的，也列作固定资产。

(2)固定资产分类：房屋建筑物、机械设备、运输设备、其他。

(3)固定资产的计价：固定资产按其成本作为入账价值，其中：外购的固定资产的成本包括买价、运输费、及其他相关税费，以及为使固定资产达到预定可使用状态前所发生的可直接归属于该资产的其他支出；投资者投入的固定资产，按投资各方确认的价值作为入账价值。

(4)固定资产折旧采用直线法。

固定资产的预计经济使用年限、预计净残值率和折旧率如下：

固定资产类别	预计使用年限	残值率	年折旧率(%)
房屋建筑物	15-45	4%	2.1-6.4
机械设备	5-22	4%	19.2—4.36
运输设备	8-10	4%	12-9.6

（5）固定资产减值准备的确认标准和计提方法

当固定资产由于市价持续下跌，或技术陈旧、损坏、长期闲置等原因，导致其可收回金额低于账面价值的，将可收回金额低于其帐面价值的差额作为固定资产减值准备。计提的固定资产减值准备在“营业外支出—计提的固定资产减值准备”中列支。

固定资产减值准备按单项资产计提。

结合以下因素确定某项固定资产的减值准备：

a资产的市价大幅下跌，其跌幅大大高于因时间推移或正常使用而预计的下跌，并且预计在近期内不可能恢复，以该项资产的账面价值与市价的差额计提减值准备；

b技术、市场、经济或法律等企业经营环境，或者产品营销市场，在当期或近期发生重大变化，并对企业产生负面影响，以技术部门、营销部门从技术进步、业务政策等角度对该项资产的使用价值

出具的技术鉴定来确定减值准备的金额；

c 同期市场利率等大幅度提高，进而很可能影响计算固定资产可收回金额的折现率，并导致固定资产可收回金额大幅度降低，根据单位有关部门测算的影响程度确定减值准备的金额；

d 有证据表明，资产已经陈旧过时或实体损坏，以固定资产管理部门和技术部门对该项资产的使用价值出具的技术鉴定来确定减值准备的金额；

e 固定资产预计使用方式发生重大不利变化，如企业计划终止或重组该资产所属的经营业务、提前处置资产等情形，从而对企业产生负面影响，以技术部门、营销部门从业务政策等角度出具的鉴定来确定减值准备的金额；

f 如存在其他有可能表明资产已发生减值的情况，也计提减值准备。

当某项固定资产存在下列情况之一时，全额计提减值准备：

a 长期闲置不用，在可预见的未来不会再使用，且已无转让价值的固定资产；

b 由于技术进步等原因，已不可使用的固定资产；

c 虽然资产尚可使用，但使用后产生大量不合格产品的固定资产；

d 已遭毁损，以至于不再具有使用价值和转让价值的固定资产；

e 其他实质上已经不能再给企业带来经济利益的固定资产。

土地不计提减值准备。

已提足折旧继续使用的固定资产不计提减值准备。

9. 在建工程核算

(1)在建工程的计价：按实际发生的支出确定在建工程的工程成本，其中：自营工程按直接材料、直接工资、直接施工费等计量；出包工程按支付的工程价款等计量；设备安装工程按所安装设备的价值、安装费用、工程试运转所发生的支出等确定工程成本；更新改造工程按更新改造前该固定资产的账面价值、更新改造直接费用、工程试运转支出以及所分摊的工程管理费等确定工程成本。

（2）在建工程结转固定资产的时点：本公司建造的固定资产在达到预定可使用状态之日起，根据工程预算、造价或工程实际成本等，按估计的价值结转固定资产并于次月起开始计提折旧。待办理了竣工决算手续后再作调整。

（3）在建工程减值准备的确认标准和计提方法：本公司于每年年度终了，对在建工程进行全面检查，当存在下列一项或若干项情况时，分别按该单项工程可收回金额低于其账面价值的差额计提减值准备：

a 长期停建并且预计在未来 3 年内不会重新开工的在建工程；

b 所建项目无论在性能上，还是在技术上已经落后，并且给本公司带来的经济利益具有很大的不确定性；

c 其他足以证明在建工程已经发生减值的情形。

10. 无形资产计价及摊销方法

（1）无形资产的计价方法：无形资产在取得时，按实际成本计量。购入的无形资产，按实际支付的价款作为实际成本；投资者投入的无形资产，按投资各方确认的价值作为实际成本；自行开发并按法律程序申请取得的无形资产，按依法取得时发生的注册费、聘请律师费等费用作为无形资产的实际成本，在研究与开发过程中发生的材料、工资及其他费用直接计入当期损益。

（2）无形资产摊销方法和期限：无形资产自取得当月起按预计使用年限、合同规定的受益年限和法律规定的有效年限三者中最短者分期平均摊销，计入当期损益。合同、法律均未规定年限的，按10 年摊销。本公司的无形资产分为土地使用权、计算机软件等，其中土地使用权按出让年限分别为30 年和 42 年摊销，计算机软件按 5 年摊销。

11. 借款费用

为购建固定资产所发生的借款费用，在该固定资产达到预定可使用状态前所发生的，计入所购建固定资产成本，在达到预定可使用状态后所发生的，于发生时直接计入当期财务费用。

12. 长期摊销费用的会计处理方法

长期待摊费用是指已经支出，但摊销期限在一个会计年度以上（不含一年）的各项费用，包括露天矿开发用地支付的土地补偿费、拆迁费，以及摊销期限在一年以上的其他待摊费用。

摊销期限以费用发生对象的受益期确定。

经营单位筹建期间发生的除购建固定资产以外的其他“开办费”，在本项目中归集，待开始经营的当月一次性计入当期损益（管理费用）。

当某项长期待摊费用已基本确定不能使以后会计期间受益，在被判断当期（月），将其摊余价值全部计入当期（月）管理费用。

由本期负担的借款利息、租金等，不作为长期待摊费用处理。

13. 收入确认方法

本公司的营业收入主要包括产品销售收入，其收入确认原则如下：

销售商品时，同时符合以下四个条件，即确认为收入：

（1） 企业已将商品所有权上的主要风险和报酬转移给买方；

（2） 企业没有保留通常与所有权相联系的继续管理权，也没有对已售出的商品实施控制；

（3） 与交易相关的经济利益能够流入企业；

（4） 相关的收入和成本能够可靠的计量。

14. 所得税的会计处理方法

本公司所得税的会计处理采用应付税款法。

15. 利润分配

二、不符合会计核算前提

无。

三、公司主要会计政策、会计估计的说明

1．本公司执行的会计制度

本公司执行相关的企业会计准则和《企业会计制度》及其补充规定。

2．会计年度

本公司自每年公历 1 月 1 日起至 12 月 31 日止为一个会计年度。

3．记账基础和计价原则

本公司采用借贷记账法，以权责发生制为记账基础，资产于取得时按实际成本入账；其后，如果发生减值，则计提相应的减值准备。

4．记账本位币

本公司以人民币作为记账本位币。

5．外币业务的核算

本公司发生外币业务时，按业务发生当天（或当月月初）的中国人民银行公布的市场汇价的中间价折算为人民币记账，月度终了，按月末市场汇价中间价进行调整。由此产生的汇兑损益，在生产经营期间发生的，计入当期财务费用；筹建期间发生的先计入长期待摊费用，待开始生产经营的第一个月全部计入当期损益；与购建固定资产有关的，按照借款费用资本化的原则处理。

6．现金等价物的确定标准

本公司以持有期限短（一般是指从购买日起三个月内到期）、流动性强、易于转换为已知金额现金、价值变动风险很小的投资作为现金等价物。

本公司现金及现金等价物包括：现金、银行存款、其他货币资金和持有期限不超过三个月的短期投资。

7．应收账款核算方法

（1）坏账损失的核算方法：本公司坏账损失采用备抵法核算，账龄分析法计提坏账准备，对于有确凿证据表明确实无法收回的应收款项，经本公司董事会或股东大会批准后列作坏账损失，冲销提取的坏账准备。

采用账龄分析法计提坏账准备的计提比例为：

行业类别	计提比例				
	3个月-1年（含1年）	1-2年（含2年）	2-3年（含3年）	3-5年（含5年）	5年以上
矿业	2%	10%	30%	80%	100%

如某项应收款项的可收回性具有一定特殊性，按账龄计提坏账准备无法真实反映其可收回金额的，应对该项应收款项采取个别认定坏账准备，其中：

a.对应收非关联方款项，金额较大、收回有困难的，结合实际情况和经验计提坏账准备。除有确凿证据表明该项应收款不能收回，或收回可能性很小（如债务单位撤销、破产、资不抵债、现金流量严重不足、发生严重自然灾害等导致停产而在短时间内无法偿付的债务等，以及应收款项逾期3年以上）外，下列情况一般不能全额计提减值准备：

当年发生的应收款项；

计划对应收款项进行重组；

其他已逾期，但无确凿证据表明不能收回的应收款项。

b.与关联方发生的应收款项，一般不全额计提坏账准备，如有确凿证据表明关联方（债务单位）已撤销、破产、资不抵债、现金流量严重不足等，并且不准备对应收款项进行重组或无其他收回方式的，则对预计无法收回的应收关联方的款项也全额计提坏账准备。

8．存货核算方法

（1）存货的分类：包括各类原材料、燃料、备品备件（修理用配件）、辅助材料、外购件、商品、在产品、半成品、产成品，以及包装物、低值易耗品、委托代销商品等。

（2）存货取得和发出的计价方法：存货在取得时按实际成本计价，采用加权平均法确定其实际成本。

（3）低值易耗品和包装物的摊销：低值易耗品、包装物、周转材料等存货，在领用当月开始摊销。

9．在建工程核算

（1）在建工程的计价：按实际发生的支出确定在建工程的工程成本，其中：自营工程按直接材料、直接工资、直接施工费等计量；出包工程按支付的工程价款等计量；设备安装工程按所安装设备的价值、安装费用、工程试运转所发生的支出等确定工程成本；更新改造工程按更新改造前该固定资产的账面价值、更新改造直接费用、工程试运转支出以及所分摊的工程管理费等确定工程成本。

（2）在建工程结转固定资产的时点：本公司建造的固定资产在达到预定可使用状态之日起，根

据工程预算、造价或工程实际成本等，按估计的价值结转固定资产并于次月起开始计提折旧。待办理了竣工决算手续后再作调整。

（3）在建工程减值准备的确认标准和计提方法：本公司于每年年度终了，对在建工程进行全面检查，当存在下列一项或若干项情况时，分别按该单项工程可收回金额低于其账面价值的差额计提减值准备：

2　会计年度

本公司会计年度为公历 1 月 1 日至 12 月 31 日。

3　记账本位币

本公司以人民币为记账本位币。

4 记账原则和计价基础

本公司会计核算采用权责发生制原则进行核算，计价以历史成本为计价基础。

5 外币折算

本公司外币业务按业务发生当日中国人民银行公布的市场汇价折算为人民币记账，资产负债表日的外币货币性资产和负债按该日中国人民银行公布的市场汇价进行调整，外币汇兑损益除与工程建造有关的计入在建工程之外，其余均计入当期的财务费用。

6 现金等价物

本公司现金等价物是指企业持有的期限短（一般是指从购买日起三个月内到期）、流动性强、易于转换为已知金额现金、价值变动风险很小的投资。

7 短期投资核算方法

短期投资计价方法：短期投资在取得时按投资成本计量，其中，以现金购入的短期投资，按实际支付的全部价款扣除尚未领取的现金股利或债券利息作为投资成本。

短期投资收益确认方法：短期投资持有期间所收到的股利、利息等收益，不确认为投资收益，作为冲减投资成本处理。出售短期投资所获得的价款，减去短期投资账面价值以及尚未收到的已计入应收项目的股利、利息等后的余额，作为投资收益或损失，计入当期损益。

8 应收款项坏账准备核算方法

坏账的确认标准：债务单位撤销、破产、资不抵债、现金流量严重不足、发生严重自然灾害等导致停产而在可预见的时间内无法偿付债务等；债务单位

逾期未履行偿债义务超过 3 年；其他确凿证据表明确实无法收回或收回的可能性不大。

坏账损失的核算方法：坏账核算采用直接转销法，发生坏账损失经批准后直接记入管理费用。

9 存货

本公司存货主要包括库存商品、库存材料、产成品、在产品、自制半成品、在途商品和低值易耗品等。

存货购进采用实际成本计价，发出分别采用加权平均法核算。存货的成本由买价加运费、装卸费、保险费等构成。低值易耗品采用一次摊销法核算成本。

10 长期投资

本公司长期投资包括股权投资和一年以上的有价证券投资（即债券、股票等）。长期投资的成本按投资时实际支付的价款或确定的价值入账。

长期股权投资：

投资额占被投资单位有表决权资本总额 20%以下或虽占该单位有表决权资本总额 20%或以上，但不具有重大影响的采用成本法核算；投资额占被投资单位有表决权资本总额的 20%至 50%，或虽投资不足 20%但有重大影响的，中期期末或年度终了，按分享（或分担）的被投资单位当年实现的净利润（或净亏损）确认投资收益(或投资额占被投资单位有表决权资本总额 50%以下或虽占该单位有表决权资本总额 50%或以上，但不具有重大影响的采用成本法核算)；投资额占被投资单位有表决权资本总额 50%以上以及投资额虽占该单位有表决权资本总额不足 50%，但本公司实质上对其拥有控制权的，采用权益法核算并合并会计报表。

11 固定资产及折旧

固定资产指使用期限超过一年的房屋、建筑物、机器、机械、运输工具和其他与经营有关的设备、器具等。不属于生产、经营主要设备的物品、单位价值在 2000 元以上，并且使用年限超过 2 年的，也作为固定资产。

本公司外购或自建的固定资产以实际成本入账。固定资产折旧自其投入使用之次月起，按照预计使用年限采用直线法计算，并按固定资产类别，预计使用年限和预计残值确定折旧率。固定资产预计残值为资产原值的 3%，预计使用年限一般为：

	使用年限	年折旧率
房屋及建筑物	30 年	3.2%
机器设备	10 至 15 年	6.5%-9.7%
运输设备	8 至 15 年	6.5%-12.1%
其他设备	8 至 15 年	6.5%-12.1%

融资租入固定资产的计价方法：按租赁开始日租赁资产的原账面价值与最低租赁付款额的现值两者中较低者，作为入账价值。

12 在建工程

在建工程的计价：按实际发生的支出确定工程成本。自营工程按直接材料、直接工资、直接施工费等计量；出包工程按应支付的工程价款等计量；设备安装工程按所安装设备的价值、安装费用、工程试运转等所发生的支出等确定工程成本。

2003 年度

一　公司的基本情况

山西平朔房地产开发有限公司（以下简称本公司）成立于 2002 年，现隶属于平朔煤炭工业公司。本公司 2002 年 1 月 15 日取得山西省工商行政管理局核发的 1400001009587（2-1）号企业法人营业执照，注册资本为 2000 万元，由平朔煤炭工业公司、平朔多种经营开发公司建筑公司、平朔房地产物业有限公司出资，各股东出资额及出资比例分别为：1800 万元、90%；180 万元、9%；20 万元、1%。法定代表人：王志新，企业住所：朔州市振华东街。

本公司主要从事：房地产开发，物业管理。批发零售建材，日用百货。

二　不符合会计核算前提的说明

本公司无不符合会计核算前提的情况。

三　重要会计政策和会计估计的说明

1　会计制度

本公司执行《企业会计准则》和《房地产开发企业会计制度》及其补充规定。

2　会计年度

本公司会计年度为公历 1 月 1 日至 12 月 31 日。

3　记账本位币

本公司以人民币为记账本位币。

4 记账原则和计价基础

本公司会计核算采用权责发生制原则进行核算，计价以历史成本为计价基础。

5 外币折算

本公司外币业务按业务发生当日中国人民银行公布的市场汇价折算为人民币记账，资产负债表日的外币货币性资产和负债按该日中国人民银行公布的市场汇价进行调整，外币汇兑损益除与工程建造有关的计入在建工程之外，其余均计入当期的财务费用。

6 现金等价物

本公司现金等价物是指企业持有的期限短（一般是指从购买日起三个月内到期）、流动性强、易于转换为已知金额现金、价值变动风险很小的投资。

7 短期投资核算方法

短期投资计价方法：短期投资在取得时按投资成本计量，其中，以现金购入的短期投资，按实际支付的全部价款扣除尚未领取的现金股利或债券利息作为投资成本。

短期投资收益确认方法：短期投资持有期间所收到的股利、利息等收益，不确认为投资收益，作为冲减投资成本处理。出售短期投资所获得的价款，减去短期投资账面价值以及尚未收到的已计入应收项目的股利、利息等后的余额，作为投资收益或损失，计入当期损益。

8 应收款项坏账准备核算方法

坏账的确认标准：债务单位撤销、破产、资不抵债、现金流量严重不足、发生严重自然灾害等导致停产而在可预见的时间内无法偿付债务等；债务单位逾期未履行偿债义务超过 3 年；其他确凿证据表明确实无法收回或收回的可能性不大。

坏账损失的核算方法：坏账核算采用备抵法，坏账准备按年末应收账款余额的 0.5%计提。

9 存货

本公司存货主要包括库存商品、库存材料、产成品、在产品、自制半成品、在途商品和低值易耗品等。

存货购进采用实际成本计价，发出分别采用加权平均法核算。 存货的成本由买价加运费、装卸费、保险费等构成。低值易耗品采用一次摊销法核算成本。

10 长期投资

本公司长期投资包括股权投资和一年以上的有价证券投资（即债券、股票等)。长期投资的成本按投资时实际支付的价款或确定的价值入账。

长期股权投资：

投资额占被投资单位有表决权资本总额 20%以下或虽占该单位有表决权资本总额 20%或以上，但不具有重大影响的采用成本法核算；投资额占被投资单位有表决权资本总额的 20%至50%，或虽投资不足 20%但有重大影响的，中期期末或年度终了，按分享（或分担）的被投资单位当年实现的净利润（或净亏损）确认投资收益(或投资额占被投资单位有表决权资本总额50%以下或虽占该单位有表决权资本总额 50%或以上，但不具有重大影响的采用成本法核算)；投资额占被投资单位有表决权资本总额 50%以上以及投资额虽占该单位有表决权资本总额不足50%，但本公司实质上对其拥有控制权的，采用权益法核算并合并会计报表。

11 固定资产及折旧

固定资产指使用期限超过一年的房屋、建筑物、机器、机械、运输工具和其他与经营有关的设备、器具等。不属于生产、经营主要设备的物品、单位价值在 2000 元以上，并且使用年限超过 2 年的，也作为固定资产。

本公司外购或自建的固定资产以实际成本入账。 固定资产折旧自其投入使用之次月起，按照预计使用年限采用直线法计算，并按固定资产类别，预计使用年限和预计残值确定折旧率。固定资产预计残值为资产原值的 3%，预计使用年限一般为：

	使用年限	年折旧率
房屋及建筑物	30 年	3.2%
机器设备	10 至 15 年	6.5%-9.7%
运输设备	8 至 15 年	6.5%-12.1%
其他设备	8 至 15 年	6.5%-12.1%

融资租入固定资产的计价方法：按租赁开始日租赁资产的原账面价值与最低租赁付款额的现值两者中较低者，作为入账价值。

12 在建工程

在建工程的计价：按实际发生的支出确定工程成本。自营工程按直接材料、直接工资、直接施工费等计量；出包工程按应支付的工程价款等计量；设备安装工程按所安装设备的价值、安装费用、工程试运转等所发生的支出等确定工程成本。

在建工程结转固定资产的时点：本公司建造的固定资产在达到预定可使用状态之日起，根据工程预算、造价或工程实际成本等，按估计的价值结转固定资产，次月起开始计提折旧。待办理了竣工决算手续后再作调整。

13 无形资产

本公司土地使用权以支付的土地出让金入账，按土地使用期限平均摊销。

其他无形资产按形成或取得时的实际成本入账。按合同期限或法律规定有效年限平均摊销，若无合同和法律规定则按不超过 10 年的年限平均摊销。

14 长期待摊费用

本公司以实际成本入账。开办费从开始生产经营的当月起，按不超过 5 年的期限平均摊销。其他递延支出按受益期限或不少于 10 年的期限平均摊销。

15 收入确认原则

本公司商品销售的收入以企业已将商品所有权上的主要风险和报酬转移给购货方：企业既没有保留通常与所有权相联系的继续管理权，也没有对已售出的商品实施控制；与企业相关的经济利益能够流入企业；相关的收入和成本能够可靠地计量，即作为收入的实现。

提供劳务的开始和完成分属不同的会计年度，按完工百分比法确认为营业收入。

利息和使用费收入在与交易相关的经济利益能够流入企业，收入的金额能够可靠地计量，即作为收入的实现。

劳务收入：在劳务已提供或技术成果已交付，同时收讫价款或取得收取价款凭证时，确认收入的实现。

16 利润分配

本公司按《公司法》及其他有关规定进行利润分配，缴纳所得税后的利润，除国家另有规定者外，按照下列顺序分配：

被没收的财物损失，支付各项税收的滞纳金和罚款。

弥补企业以前年度亏损。

提取法定盈余公积金。法定盈余公积金按照税后利润扣除前两项后的10%提取，盈余公积金已达注册资金50%时可不再提取。

提取公益金。

向投资者分配利润。公司以前年度未分配的利润，可以并入本年度向投资者分配。

二、不符合会计核算前提

无。

三、公司主要会计政策、会计估计的说明

1．本公司执行的会计制度

本公司执行相关的企业会计准则和《企业会计制度》及其补充规定。

2．会计年度

本公司自每年公历 1 月 1 日起至 12 月 31 日止为一个会计年度。

3．记帐基础和记价原则

本公司采用借贷记账法，以权责发生制为记账基础，资产于取得时按实际成本入账；其后，如果发生减值，则计提相应的减值准备。

4．记账本位币

本公司以人民币作为记账本位币。

5．外币业务的核算

本公司发生外币业务时，按业务发生当天（或当月月初）的中国人民银行公布的市场汇价的中间价折算为人民币记账，月度终了，按月末市场汇价中间价进行调整。由此产生的汇兑损益，在生产经营期间发生的，计入当期财务费用；筹建期间发生的先计入长期待摊费用，待开始生产经营的第一个月全部计入当期损益；与购建固定资产有关的，按照借款费用资本化的原则处理。

6．现金等价物的确定标准

本公司以持有期限短（一般是指从购买日起三个月内到期）、流动性强、易于转换为已知金额现金、

价值变动风险很小的投资作为现金等价物。

本公司现金及现金等价物包括：现金、银行存款、其他货币资金和持有期限不超过三个月的短期投资。

7．短期投资核算方法

（1）短期投资是指能够随时变现并且持有时间不准备超过一年（含一年）的投资，包括股票、债券、基金等。

（2）短期投资计价方法：短期投资在取得时按投资成本计量，其中，以现金购入的短期投资，按实际支付的全部价款扣除尚未领取的现金股利或债券利息作为投资成本；投资者投入的短期投资，按投资各方确认的价值作为投资成本。

（3）短期投资收益确认方法：短期投资持有期间所收到的股利、利息等收益，不确认为投资收益，作为冲减投资成本处理。出售短期投资所获得的价款，减去短期投资账面价值以及尚未收到的已计入应收项目的股利、利息等后的余额，作为投资收益或损失，计入当期损益。

（4）短期投资跌价准备的确认标准和计提方法：本公司期末对短期投资按成本与市价孰低计量，对于市价低于成本的差额，计提短期投资跌价准备。具体计提时，按单项投资计提跌价准备。

本公司以投资项目在年末最后一个交易日的收盘价格，作为各项短期投资在年末的市值，并与年末账面余额做出比较，确定是否存在期末市价低于账面成本的单项投资，并计算市价低于账面成本的金额，作为短期投资跌价准备。

如短期投资为非上市流通项目，计提跌价准备按以下办法：

A 投资期即将届满能够全部收回的，不计提跌价准备。

B 被投资单位已经宣告破产，或进入破产清算程序，或因经营不善清理整顿、歇业而非持续经营的，在证据确凿的情况下，无论是否逾期，均应全额计提跌价准备。

C 其他已逾期的，由各二级单位根据逾期时间长短在以下标准范围内确定跌价准备计提比例，作为二级单位本部和所属各级次单位跌价准备的统一计提比例。没有投资期限的短期投资，以该项投资自购买之日起一年为限，超出一年视同逾期，并按确定的标准计提跌价准备。

项　　目	计提比例
逾期 3 个月—1 年（含 1 年）	0-10%
逾期 1—2 年（含 2 年）	10-30%
逾期 2—3 年（含 3 年）	30-50%
逾期 3 年以上	50-100%

8．应收账款核算方法

（1）坏账损失的核算方法：本公司坏账损失采用备抵法核算，采用个别认定法与账龄分析法结合计提坏账准备，对于有确凿证据表明确实无法收回的应收款项，经本公司董事会或股东大会批准后列

作坏账损失，冲销提取的坏账准备。

采用账龄分析法计提坏账准备的计提比例为：

行业类别	计提比例				
	3个月-1年（含1年）	1-2年（含2年）	2-3年（含3年）	3-5年（含5年）	5年以上
矿业	2%	10%	30%	80%	100%

如某项应收款项的可收回性具有一定特殊性，按账龄计提坏账准备无法真实反映其可收回金额的，应对该项应收款项采取个别认定坏账准备，其中：

a 对应收非关联方款项，金额较大、收回有困难的，结合实际情况和经验计提坏账准备。除有确凿证据表明该项应收款不能收回，或收回可能性很小（如债务单位撤销、破产、资不抵偿、现金流量严重不足、发生严重自然灾害等导致停产而在短时间内无法偿付的债务等，以及应收款项逾期3年以上）外，下列情况一般不能全额计提减值准备：

当年发生的应收款项；

计划对应收款项进行重组；

其他已逾期，但无确凿证据表明不能收回的应收款项。

b 与关联方发生的应收款项，一般不全额计提坏账准备。如有确凿证据表明关联方（债务单位）已撤销、破产、资不抵偿、现金流量严重不足等，并且不准备对应收款项进行重组或无其他收回方式的，则对预计无法收回的应收关联方的款项也全额计提坏账准备。

（2）应收款项的转让、质押、贴现：

本公司以应收债权向银行等金融机构转让、质押或贴现等方式融资时，根据相关合同的约定，当债务人到期未偿还该项债务时，若本公司负有向金融机构还款的责任，则该应收债权作为质押贷款处理；若本公司没有向金融机构还款的责任，则该应收债权作为转让处理，并确认债权的转让损益。

9. 存货核算方法

（1）存货的分类：包括各类原材料、燃料、备品备件（修理用配件）、辅助材料、外购件、商品、在产品、半成品、产成品，以及包装物、低值易耗品、委托代销商品等。

（2）存货取得和发出的计价方法：存货在取得时按实际成本计价；领用或发出存货，按照实际成本核算的，采用加权平均法确定其实际成本。

（3）低值易耗品和包装物的摊销：低值易耗品、包装物、周转材料等存货，在领用当月开始摊销。2000元（含2000元）以下的一次摊销；2000元以上的，分别采用五五摊销或分期（次）摊销，其中单位（批）价值较大（一般4000元及其以上）、数量较多的周转材料、包装物，实行分期（次）摊销，摊销期间不超过3年。如此类存货发生丢失、毁损，应在发生（发现）当月并在查清原因后，将其摊余价值扣除责任人赔偿后，一次计入成本费用。

（4）期末存货计价原则及存货跌价准备确认标准和计提方法：期末存货按成本与可变现净值孰低

原则计价；期末，在对存货进行全面盘点的基础上，对于存货因被淘汰、全部或部分陈旧过时或销售价格低于成本等原因导致成本高于可变现净值的部分，以及承揽工程预计存在的亏损部分，提取存货跌价准备。存货跌价准备按单个存货项目的成本高于其可变现净值的差额提取，可变现净值按估计售价减去估计完工成本、销售费用和相关税金后确定。

10．长期投资核算方法

（1）长期股权投资核算方法

a 长期股权投资的计价及收益确认方法：长期股权投资在取得时按实际支付的价款或确定的价值作为初始成本。本公司对投资额占被投资企业有表决权资本总额 20%以下，或虽占 20%或 20%以上但不具重大影响的股权投资，采用成本法核算；对投资额占被投资企业有表决权资本总额 20%或 20%以上，或虽不足 20%但具有重大影响的股权投资，采用权益法核算。

b 长期股权投资差额的摊销方法和期限：投资成本小于应享有被投资单位所有者权益份额的差额，作为资本公积；初始投资成本大于应享有被投资单位所有者权益份额的差额，采用直线法按合同规定的投资期限摊销，合同没有规定投资期限的股权投资差额采用直线法按 10 年摊销。

（2）长期投资减值准备的确认标准和计提方法

本公司期末对由于市价持续下跌、被投资单位经营状况恶化等情形，导致可收回金额低于其账面价值的长期投资，按其可收回金额低于账面价值的差额计提长期投资减值准备。可收回金额是指该长期投资投资的出售净价与预期从该投资的持有和到期处置中形成的预计未来现金流量的现值两者之中的较高者。其中，出售净价是指投资的出售价格减去所发生的处置费用后的余额。

长期投资减值准备在区分长期股权投资和长期债权投资的基础上，按单项项目计提。

对于有市价的长期股权投资和长期债权投资，以其在年末最后一个交易日的收盘价格，作为长期投资在清查基准日的市值，并与基准日账面余额做出比较，确定是否存在期末市价低于账面成本的单项投资，计算市价低于账面成本的金额，作为长期投资减值准备。

当无市价的长期股权投资存在下列迹象时，在取得确凿证据后计提减值准备：

a 影响被投资单位经营的政治或法律环境的变化，如税收、贸易等法规的颁布或修订，可能导致被投资单位出现巨额亏损；

b 被投资单位所供应的商品或提供的劳务因产品过时或消费者偏好改变而使市场的需求发生变化，从而导致被投资单位财务状况发生严重恶化；

c 被投资单位所在行业的生产技术等发生重大变化，被投资单位已失去竞争能力，从而导致财务状况发生严重恶化，如进行清理整顿、清算等；

d 有证据表明该项投资实质上已经不能再给企业带来经济利益的其他情形。

对按权益法核算的长期股权投资，不论是否纳入投资企业的合并会计报表合并范围，均不计提减值准备；

因按成本法核算的长期投资或其他原因未纳入投资企业合并会计报表合并范围，则以年末（资产清查基准日，下同）投资企业占被投资企业的股权比例计算所享有的净资产金额，如低于长期投资的账面价值，按差额计提减值准备；如高于长期股权投资的账面价值，不计提减值准备。

几种特殊情况下长期股权投资减值准备计提标准：

a 被投资单位被工商吊销营业执照的，一般按 100%计提；

b 被投资单位已经资不抵债但仍持续经营的，一般按 100%计提；

c 被投资单位已经停止营业的，一般按 50%计提；

d 连续三年不能取得被投资单位的会计报表及相关会计资料，且无收益的，在第三个会计年度终了一般按 50%计提，四年及以上按 100%计提。

11. 固定资产计价及其折旧政策

(1)固定资产标准：使用年限超过 1 年的房屋、建筑物、机器设备、运输工具及其它与生产经营有关的工具、器具、仪器等。不属于生产经营主要设备的物品，单位价值在 2,000 元以上，并且使用年限超过 2 年以上的，也列作固定资产。

(2)固定资产分类：房屋建筑物、机械设备、运输设备、其他。

(3)固定资产的计价：固定资产按其成本作为入账价值，其中：外购的固定资产的成本包括买价、运输费、及其他相关税费，以及为使固定资产达到预定可使用状态前所发生的可直接归属于该资产的其他支出；投资者投入的固定资产，按投资各方确认的价值作为入账价值。

(4)固定资产折旧采用直线法。

固定资产的预计经济使用年限、预计净残值率和折旧率如下：

固定资产类别	预计使用年限	残值率	年折旧率(%)
房屋建筑物	15-30 年	3%	3.33%-6.47%
机械设备	10-30 年	3%	3.33%-9.7%
运输设备	8-15 年	300 元	6.5%-12.1%
其　　他	1-15 年	3%	6.5%-100%

（5）固定资产减值准备的确认标准和计提方法

当固定资产由于市价持续下跌，或技术陈旧、损坏、长期闲置等原因，导致其可收回金额低于账面价值的，将可收回金额低于其账面价值的差额作为固定资产减值准备。计提的固定资产减值准备在“营业外支出—计提的固定资产减值准备”中列支。

固定资产减值准备按单项资产计提。

结合以下因素确定某项固定资产的减值准备：

a 资产的市价大幅下跌，其跌幅大大高于因时间推移或正常使用而预计的下跌，并且预计在近期

内不可能恢复，以该项资产的账面价值与市价的差额计提减值准备；

b 技术、市场、经济或法律等企业经营环境，或者产品营销市场，在当期或近期发生重大变化，并对企业产生负面影响，以技术部门、营销部门从技术进步、业务政策等角度对该项资产的使用价值出具的技术鉴定来确定减值准备的金额；

c 同期市场利率等大幅度提高，进而很可能影响计算固定资产可收回金额的折现率，并导致固定资产可收回金额大幅度降低，根据单位有关部门测算的影响程度确定减值准备的金额；

d 有证据表明，资产已经陈旧过时或实体损坏，以固定资产管理部门和技术部门对该项资产的使用价值出具的技术鉴定来确定减值准备的金额；

e 固定资产预计使用方式发生重大不利变化，如企业计划终止或重组该资产所属的经营业务、提前处置资产等情形，从而对企业产生负面影响，以技术部门、营销部门从业务政策等角度出具的鉴定来确定减值准备的金额；

f 如存在其他有可能表明资产已发生减值的情况，也计提减值准备。

当某项固定资产存在下列情况之一时，全额计提减值准备：

a 长期闲置不用，在可预见的未来不会再使用，且已无转让价值的固定资产；

b 由于技术进步等原因，已不可使用的固定资产；

c 虽然资产尚可使用，但使用后产生大量不合格产品的固定资产；

d 已遭毁损，以至于不再具有使用价值和转让价值的固定资产；

e 其他实质上已经不能再给企业带来经济利益的固定资产。

土地不计提减值准备。

已提足折旧继续使用的固定资产不计提减值准备。

（6）固定资产后续支出：与固定资产有关的后续支出，如果使可能流入本公司的经济利益超过了原先的估计，如延长了固定资产的使用寿命，或者使产品质量实质性提高，或者使产品成本实质性降低，则计入固定资产账面价值，但其增计后的金额不会超过该固定资产的可收回金额。除计入固定资产账面价值以外的后续支出，本公司将其确认为费用。

经营租赁方式租入的固定资产发生的改良支出，单设“1503 经营租入固定资产改良”科目核算，并在剩余租赁期与租赁资产尚可使用年限两者中较短的期限内，采用与原固定资产相同的折旧计提方法，单独计提折旧。

其他固定资产后续支出，包括固定资产修理、装修和融资租入固定资产后续支出。其中：

固定资产修理费，原采用预提或待摊方式已发生的大修理费用尚未支付或摊销完毕的，继续采用原会计政策，直至冲减或摊销完毕；自执行企业会计制度后发生的修理费，直接计入当期费用。

固定资产装修费用，在装修后符合能延长固定资产的使用寿命，或产品质量实质性提高，或产品成本实质性降低的条件，在“固定资产”科目下单设“固定资产装修”明细科目核算，并在两次装修

期间与固定资产尚可使用年限两者中较短的期间内，单独计提折旧。下次装修时，该科目的余额减去相关折旧后的差额，一次全部计入“营业外支出”。

融资租入固定资产发生的后续支出，除修理费计入当期费用外，发生的装修费用符合上述条件的可予资本化，在两次装修期间、剩余租赁期和固定资产尚可使用年限三者中较短的期间内，单独计提折旧。

12. 在建工程核算

(1)在建工程的计价：按实际发生的支出确定在建工程的工程成本，其中：自营工程按直接材料、直接工资、直接施工费等计量；出包工程按支付的工程价款等计量；设备安装工程按所安装设备的价值、安装费用、工程试运转所发生的支出等确定工程成本；更新改造工程按更新改造前该固定资产的账面价值、更新改造直接费用、工程试运转支出以及所分摊的工程管理费等确定工程成本。

(2) 在建工程结转固定资产的时点：本公司建造的固定资产在达到预定可使用状态之日起，根据工程预算、造价或工程实际成本等，按估计的价值结转固定资产并于次月起开始计提折旧。待办理了竣工决算手续后再作调整。

(3) 在建工程减值准备的确认标准和计提方法：本公司于每年年度终了，对在建工程进行全面检查，当存在下列一项或若干项情况时，分别按该单项工程可收回金额低于其账面价值的差额计提减值准备：

a 长期停建并且预计在未来 3 年内不会重新开工的在建工程；

b 所建项目无论在性能上，还是在技术上已经落后，并且给本公司带来的经济利益具有很大的不确定性；

c 其他足以证明在建工程已经发生减值的情形。

13. 无形资产计价及摊销方法

(1) 无形资产的计价方法：无形资产在取得时，按实际成本计量。购入的无形资产，按实际支付的价款作为实际成本；投资者投入的无形资产，按投资各方确认的价值作为实际成本；自行开发并按法律程序申请取得的无形资产，按依法取得时发生的注册费、聘请律师费等费用作为无形资产的实际成本，在研究与开发过程中发生的材料、工资及其他费用直接计入当期损益。

(2) 无形资产摊销方法和期限：无形资产自取得当月起按预计使用年限、合同规定的受益年限和法律规定的有效年限三者中最短者分期平均摊销，计入当期损益。合同、法律均未规定年限的，按 10 年摊销。

(3) 无形资产减值准备的确认标准和计提方法：

当无形资产将来为企业创造的经济利益还不足以补偿无形资产账面价值（摊余成本），即在年末估

计其可收回金额低于账面价值时，将无形资产预计可收回金额低于账面价值的差额计提减值准备。计提的无形资产减值准备在“营业外支出—计提的无形资产减值准备”中列支。

当存在下列一项或若干项情况时，计提无形资产的减值准备：

a 某项无形资产已被其他新技术等所替代，使其为企业创造经济利益的能力受到重大不利影响；

b 某项无形资产的市价在当期大幅下跌，在剩余摊销年限内预期不会恢复；

c 某项无形资产已超过法律保护期限，但仍然具有部分使用价值；

d 其他足以证明某项无形资产实质上已经发生了减值的情形。

无形资产减值准备按单项项目计提。

14．长期摊销费用的会计处理方法

长期待摊费用是指已经支出，但摊销期限在一个会计年度以上（不含一年）的各项费用，包括露天矿开发用地支付的土地补偿费、拆迁费，以及本暂行规定执行前已发生的，并已计入“长期待摊费用”且尚未摊销完毕的、股份有限公司委托其他单位发行股票的手续费或佣金等相关费用，减去股票发行冻结期间的利息收入后的余额较大的费用（不超过 2 年平均摊销）以及摊销期限在一年以上的其他待摊费用。

摊销期限以费用发生对象的受益期确定。

上述股票发行费用减去发行股票冻结期间产生的利息收入后的余额，如股票溢价发行，从发行股票的溢价中抵扣；如没有溢价或溢价金额不足以支付发行费用的，直接计入当期财务费用，不再通过长期待摊费用中核算。本暂行规定执行前发生的股票发行费用，可继续采用原会计政策，直至摊销完毕为止。

经营单位筹建期间发生的除购建固定资产以外的其他“开办费”，在本项目中归集，待开始经营的当月一次性计入当期损益（管理费用）。

当某项长期待摊费用已基本确定不能使以后会计期间受益，在被判断当期（月），将其摊余价值全部计入当期（月）管理费用。

由本期负担的借款利息、租金等，不作为长期待摊费用处理。

15．应付债券

（1）应付债券的计价和溢、折价的摊销：应付债券按照实际的发行价格计价；发行价格总额与债券面值总额的差额，作为债券溢价或折价，在债券的存续期内按直线法于计提利息时摊销，并按借款费用的处理原则处理。

（2）应付债券的应计利息：根据应付债券的债券面值和规定的利率按期计提应计利息，并按借款费用资本化的处理原则，分别计入工程成本或当期财务费用。

16．预计负债。

确认原则：当与对外担保、商业承兑汇票贴现、未决诉讼或仲裁、产品质量保证等或有事项相关

的业务同时符合以下条件时，企业应将其确认为负债：

（1）该义务是企业承担的现实义务；

（2）该义务的履行很可能导致经济利益流出企业；

（3）该义务的金额能够可靠的计量。

因或有事项而确认的负债的金额，是清偿该负债所需支出的最佳估计数。如果所需支出存在一个金额区间，则最佳估计数按该范围的上、下限金额的平均数确定；如果所需支出不存在一个金额范围，则最佳估计数按如下方法确定：

a 或有事项涉及单个项目时，最佳估计数按最可能发生金额确定；

b 或有事项涉及多个项目时，最佳估计数按各种可能发生额及其发生概率计算确定。

（4）预期可能获得补偿的处理：

企业清偿因或有事项而确认的负债所需支出全部或部分预期由第三方或其他方补偿，在基本确定能收到时，才能作为资产单独确认。确认的补偿金额不能超过所确认负债的账面金额。

17. 收入确认方法

本公司的营业收入主要包括煤炭收入、其他产品收入和劳务收入，其收入确认原则如下：

销售商品时，同时符合以下四个条件，即确认为收入：

（1）企业已将商品所有权上的主要风险和报酬转移给买方；

（2）企业没有保留通常与所有权相联系的继续管理权，也没有对已售出的商品实施控制；

（3）与交易相关的经济利益能够流入企业；

（4）相关的收入和成本能够可靠的计量。

提供劳务的收入分别按下列情况确认和计量：

（1）在同一年内开始并完成的劳务，在劳务完成时确认收入，确认的金额为合同和协议总金额，确认的方法参照商品销售收入的确认的原则。

（2）如劳务的开始和完成分属不同的会计年度，且在资产负债表日能对该项交易的结果作出可靠的估计的，按完工百分比法确认收入。

（3）如果预计已经发生的劳务成本全部不能得到补偿，则不确认收入，但将已经发生的成本确认为当期费用。

如在提供劳务交易的结果不能可靠估计的情况下，在资产负债表日对收入分别以下情况予以确认和计量：

（1）如果已经发生的劳务成本预计能够得到补偿，按已经发生的劳务成本金额确认收入，并按相同金额结转成本，不确认利润；

（2）如果已经发生的劳务成本预计不能全部得到补偿，按能够得到补偿的劳务成本金额确认收入，并按已经发生的劳务成本结转当期成本费用，确认的收入金额小于已经发生的劳务成本的差额，作为

当期损失；

（3）如果已经发生的劳务成本全部不能得到补偿，按已经发生的劳务成本作为当期费用，不确认收入。

让渡资产使用权收入的确认与计量：

（1）与交易相关的经济利益能够流入企业。

（2）收入的金额能够可靠的计量。

以上收入的确认可结合被审计单位会计制度的具体规定详细说明。

18. 所得税的会计处理方法

本公司所得税的会计处理采用应付税款法。

19. 合并报表的编制方法

根据财政部财会字(1995)11号《关于印发<合并会计报表暂行规定>的通知》及有关补充规定编制合并会计报表。

合并范围包括：

（1）全资子公司；

（2）绝对控股公司。即直接或间接占其权益性资本50%（不含50%）以上，拥有绝对控股权的公司；

（3）相对控股公司。即直接或间接占其资本额虽然不足50%（但一般在20%以上 ）但具有实质控制权的公司；

（4）双方各持50%的均股公司；

（5）对集团内部股权多元化相互持股的公司，由股份最多的一方进行合并。如持股均等，由上一级母公司指定一方合并；

（6）由集团内部两家以上单位参股，对上一级母公司已形成间接控制的公司。由上一级母公司指定一家合并；

（7）其他拥有控制、共同控制或具有重大影响的企业。

不纳入合并会计报表范围的子公司：

（1）已经关停并转的公司；

（2）按照破产程序，已经宣告被清理整顿的子公司；

（3）已宣告破产的子公司；

（4）准备近期出售而短期持有其半数以上的权益性资本的子公司；

（5）非持续经营的所有者权益为负数的子公司；

（6）受所在国外汇管制及其他管制，资金调度受到限制的境外子公司。

凡控股子公司均纳入合并会计报表范围；在编制合并会计报表时，将母公司与子公司间的债权、

债务、投资、交易及未实现内部利润予以抵销，在此基础上相对应的资产、负债、权益以及收入、成本费用逐项合并。

20．利润分配

根据国家有关法律和财务制度规定，企业所得税后利润按以下顺序分配：

按当年税后利润（减弥补亏损）10%提取法定盈余公积金，当法定盈余公积金已达注册资本的50%时，不再提取；同时按税后利润的10%提取公益金。

提取上述两金后的未分配利润，在扣除上交集团公司利润（资产收益）和有关投资者红利后的余额，全额转增任意盈余公积金；当年财务决算有规定的，从其规定。

四、本公司合并报表范围

1.本公司上年度将控股子公司双安皮带运输机有限公司纳入合并会计报表范围，本年度4月份，本公司按照中煤集团公司清理撤并四级子公司的要求，撤并了双安皮带运输机有限公司，因此本年度不再编制合并会计报表，本期期初数也一并进行了相应调整。

2.本公司未纳入合并范围的控股子公司及合营企业的情况如下：

公司名称	注册资本	投资金额	持股比例	注册地址	主营业务	备注
朔州平宇化工有限责任公司	500,000.00	500,000.00	100%	朔城区开发北延长路	树脂锚固剂	

3．未纳入合并会计报表范围的控股子公司基本情况及未纳入原因：

朔州平宇化工有限责任公司(以下简称平宇公司)是2004年1月由平朔实业公司与山东宇强工贸公司共同出资设立，主要以生产洗煤厂用絮凝剂和井工矿用树脂锚剂产品为主。注册资金50万元，其中平朔实业公司投资27.5万元，占注册资金的55%，山东宇强工贸公司投资22.5万元，占注册资金的45%。本年度按照中煤集团公司清理撤并四级子公司的要求，本公司按照22.5万元价格收购了山东宇强工贸公司持有的股权，平宇公司实质上暂时成为本公司之全资子公司。股权收购完成后，本公司接管了平宇公司所有债权债务，并拟于2006年度注销朔州平宇化工有限公司。鉴于以上，本年度未将平宇公司纳入合并会计报表范围。截止2005年12月，平宇公司资产总额为192.59万元，负债总额为178.79万元，所有者权益为13.80万元。

本公司主要从事房地产开发、物业管理、批发零售建材，日用百货等。主要业务是平朔煤炭工业公司的房地产开发及管理。

二、不符合会计核算前提

本公司无不符合会计前提的事项。

三、公司主要会计政策、会计估计的说明

1．本公司执行的会计制度

本公司执行相关的企业会计准则和《企业会计制度》及其补充规定。

2．会计年度

本公司自每年公历 1 月 1 日起至 12 月 31 日止为一个会计年度。

3．记账基础和计价原则

本公司采用借贷记账法，以权责发生制为记账基础，资产于取得时按实际成本入账；其后，如果发生减值，则计提相应的减值准备。

4．记账本位币

本公司以人民币作为记账本位币。

5．现金等价物的确定标准

本公司以持有期限短（一般是指从购买日起三个月内到期）、流动性强、易于转换为已知金额现金、价值变动风险很小的投资作为现金等价物。

本公司现金及现金等价物包括：现金、银行存款、其他货币资金和持有期限不超过三个月的短期投资。

6．应收账款

本公司应收账款按实际发生额计价，坏账损失采用备抵法核算，采用个别认定法与账龄分析法结合计提坏账准备，对于有确凿证据表明确实无法收回的应收款项，经本公司董事会或股东大会批准后

列作坏账损失，冲销提取的坏账准备。

采用账龄分析法计提坏账准备的计提比例为：

行业类别	计提比例				
	3个月-1年（含1年）	1-2年（含2年）	2-3年（含3年）	3-5年（含5年）	5年以上
房地产业	2%	10%	30%	80%	100%

7．存货

本公司存货主要包括库存商品、库存材料、产成品、在产品、自制半成品、在途商品和低值易耗品等。

存货购进采用实际成本计价，发出分别采用加权平均法核算。 存货的成本由买价加运费、装卸费、保险费等构成。低值易耗品采用一次摊销法核算成本。

期末存货计价原则及存货跌价准备确认标准和计提方法：期末存货按成本与可变现净值孰低原则计价；期末，在对存货进行全面盘点的基础上，对于存货因被淘汰、全部或部分陈旧过时或销售价格低于成本等原因导致成本高于可变现净值的部分，以及承揽工程预计存在的亏损部分，提取存货跌价准备。存货跌价准备按单个（或类别）存货项目的成本高于其可变现净值的差额提取，可变现净值按估计售价减去估计完工成本、销售费用和相关税金后确定。

8．长期投资

长期股权投资的计价及收益确认方法：长期股权投资在取得时按实际支付的价款或确定的价值作为初始成本。本公司对投资额占被投资企业有表决权资本总额20%以下，或虽占20%或20%以上但不具重大影响的股权投资，采用成本法核算；对投资额占被投资企业有表决权资本总额20%或20%以上，或虽不足20%但具有重大影响的股权投资，采用权益法核算。

9．固定资产计价及其折旧政策

(1)固定资产标准：使用年限超过1年的房屋、建筑物、机器设备、运输工具及其它与生产经营有关的工具、器具、仪器等。不属于生产经营主要设备的物品，单位价值在2,000元以上，并且使用年限超过2年以上的，也列作固定资产。

(2)固定资产分类：房屋建筑物、机械设备、运输设备、其他。

(3)固定资产的计价：固定资产按其成本作为入账价值，其中：外购的固定资产的成本包括买价、运输费、及其他相关税费，以及为使固定资产达到预定可使用状态前所发生的可直接归属于该资产的其他支出；投资者投入的固定资产，按投资各方确认的价值作为入账价值。

(4)固定资产折旧采用直线法。

固定资产的预计经济使用年限、预计净残值率和折旧率如下：

固定资产类别	预计使用年限	残值率	年折旧率(%)

房屋建筑物	15－30年	3%	3.33%－6.47%
机械设备	10－30年	3%	3.33%－9.7%
运输设备	8－15年	3%	6.5%－12.1%
其　他	1－15年	3%	6.5%－97%

（5）固定资产减值准备的确认标准和计提方法

当固定资产由于市价持续下跌，或技术陈旧、损坏、长期闲置等原因，导致其可收回金额低于账面价值的，应当将可收回金额低于其账面价值的差额作为固定资产减值准备。计提的固定资产减值准备在“营业外支出—计提的固定资产减值准备”中列支。

10. 借款费用的会计处理方法

为购建固定资产所发生的借款费用，在该固定资产达到预定可使用状态前所发生的，计入所购建固定资产成本，在达到预定可使用状态后所发生的，于发生时直接计入当期财务费用。

11. 收入确认方法

本公司的营业收入主要包括房地地产开发收入、工程施工收入和材料销售收入。

本公司商品销售的收入以企业已将商品所有权上的主要风险和报酬转移给购货方；企业既没有保留通常与所有权相联系的继续管理权，也没有对已售出的商品实施控制；与企业相关的经济利益能够流入企业；相关的收入和成本能够可靠地计量，即作为收入的实现。

提供劳务的开始和完成分属不同的会计年度，按完工百分比法确认为营业收入。

利息和使用费收入在与交易相关的经济利益能够流入企业，收入的金额能够可靠地计量，即作为收入的实现。

劳务收入：在劳务已提供或技术成果已交付，同时收讫价款或取得收取价款凭证时，确认收入的实现。

1. The above table shows 100% of the resources at each mine managed by China Coal
2. A Mining Right for the Pingshuo East OP is expected to be granted in March 2007

As a result of the rigourous methodology applied, the resources reported here are considered by SRK to be conservative relative to other interpretations of the People's Republic of China (PRC) standards, but are also considered to be highly reliable and transparently verifiable by an independent auditor, thus providing much greater confidence in China Coal's resources.

It is highly probable that a large portion of the inferred resources could be converted to in-situ reserves upon further in-fill drilling. SRK has reached this view because particular assets in the inferred category have a high probability of regular (stable) geology and only reasonably varying quality parameters. These characteristics have been demonstrated, for example, at Shaqu mine.

China Coal is undertaking a resources conversion program well ahead of development and its policy of ongoing exploration is comparable to world best practice in coal asset development and exploration.

SRK is impressed with China Coal's current exploration program, as it includes the use of high technology 3D seismic surveys to map and predict structural and lithological variation ahead of drilling. These predictions allow for efficient utilisation of drilling funds by defining structural variability ahead of drilling.

Using the JORC Code principles as guidelines and incorporating parameters consistent with Chinese industry standards, SRK estimates China Coal's coal resources and reserves as at 30 June 2006 as indicated in Table 1-10 and Table 1-11.

Mining Rights

China Coal holds granted mining rights for each of the mines reviewed in the SRK report. The mining rights are for a defined mining area and for a defined time period. Within these parameters, and as long as China Coal continues to meet its other statutory requirements, the group will continue to enjoy the exclusive rights to mine and process coal from these tenements.

China Coal's mining rights have been renewed over the past six years and provide for mining to continue until approximately 2030 for most mines and until 2020 for the Nanliang mine. Details are provided in the relevant sections of this report.

On the basis of precedent, SRK has assumed that China Coal will be able to renew its mining rights for a further period, possibly 30 years, when the current mining rights are due for renewal.

1.8 Geology

The geology and types of coal products vary across the mines operated by China Coal, from simple geology to complex and difficult geological conditions and from coking coal to thermal coal suitable for both domestic and export markets.

1.8.1 Pingshuo Coal

At Pingshuo Coal Company (Pingshuo Coal) operations, there are two large scale open-pit mines successfully extracting three thick seams (from 2 to 22 m) at depths of up to 200 m. These coal seams are high energy thermal coals. The two basal seams have higher sulphur content and require blending with the upper seam to meet Chinese emission standards. The new Anjialing underground mine is performing well as the strata conditions are highly favourable for longwall extraction with the top coal caving method and methane gas levels are very low.

1.8.2 Datun Coal

Geological conditions at Shanghai Datun Energy Resources Co Ltd (Datun Coal) operations are quite complex causing difficult conditions for underground extraction of coal seams. Datun Coal has employed good mining strategies to successfully extract coal using mechanised longwall methods. It also uses modern three dimensional (3D) seismic surveys to detect the presence of faulting in the coal seams, allowing more efficient planning of mining. The top two seams are the thickest with best quality coal and are the current mining horizons. The area contains many minor faults which have minimal impact on current mining targets. The lower seam (#17 seam) has a higher sulphur content which will require blending with the upper seams. Datun Coal's products are suited to the domestic coking coal market.

1.8.3 Huajin Coal

Huajin Coking Coal Co Ltd's (Huajin Coal) Shaqu underground mine has relatively high levels of methane gas however these are well managed with gas drainage systems and adequate ventilation. Shaqu mine has excellent geological conditions with good roof conditions and an absence of any imposing structural features. Shaqu mine produces a good domestic coking coal and a smaller quantity of export coking coal.

1.8.4 Nanliang Coal

The Nanliang mine of Shanxi Nanliang Coal Co Ltd (Nanliang Coal) has excellent conditions for underground coal mining including a competent roof, little structural disturbance, no detectable methane gas and produces good quality thermal coal products.

1.9 Resources and Reserves

In order to provide an internationally recognised form of reporting resources and reserves, SRK has used the principles of the Joint Ore Reserves Committee (JORC) Code as guidelines. The methodology employed is set out in greater detail in Section 2.2 of this report.

China Coal has estimated Marketable Reserves of 3 Bt as at 30 June 2006 and 9.5 Bt of coal resources under management, representing a large and high quality resource base for future development. Almost half of this resource base is in measured and indicated categories, and converts to in-situ recoverable reserves of over 3.4 Bt of coal.

The workforce employed at China Coal mines as of December 2005 is shown in Table 1-8. Employee numbers reflect the competitive salaries in China compared to most other coal producing countries.

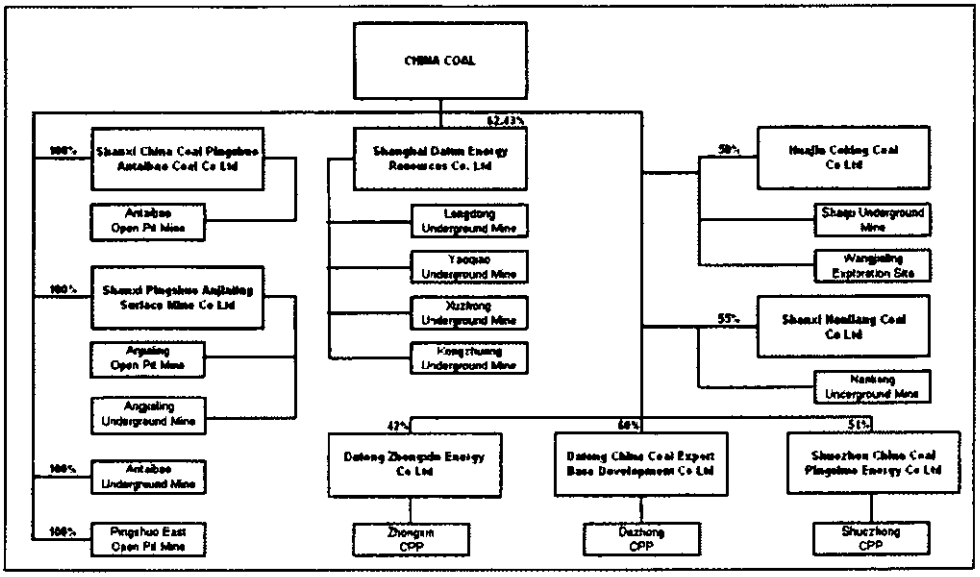
1.6 Operating Costs



China Coal has provided mine production costs for all of its managed mines for the period 2003 to 2005. SRK has reviewed and accepted these costs as reflecting China Coal's mining operations. Cash production costs are directly associated with coal production (excluding CPPs) and includes but are not limited to, salaries and wages, consumables, electricity and water, maintenance, rehabilitation, materials, explosives and contract operations. China Coal's low-cost structure from a world industry perspective is driven by efficient coal production, especially from the Pingshuo highly productive open-pit mines and Anjialing underground mine, and attractive rates for materials and labour. Historic average annual mine cash costs are shown in Table 1-7.

1.7 Organisational Structure and Workforce

The following chart summarises China Coal's organisational structure and the operating mines at each of the subsidiary companies. Diagrams of organisational structures of operating companies are shown in Appendix 2.

The ROM coal production in 2005 totalled 50.12 Mt with the contribution from each subsidiary company as shown in Figure 1-4 below.

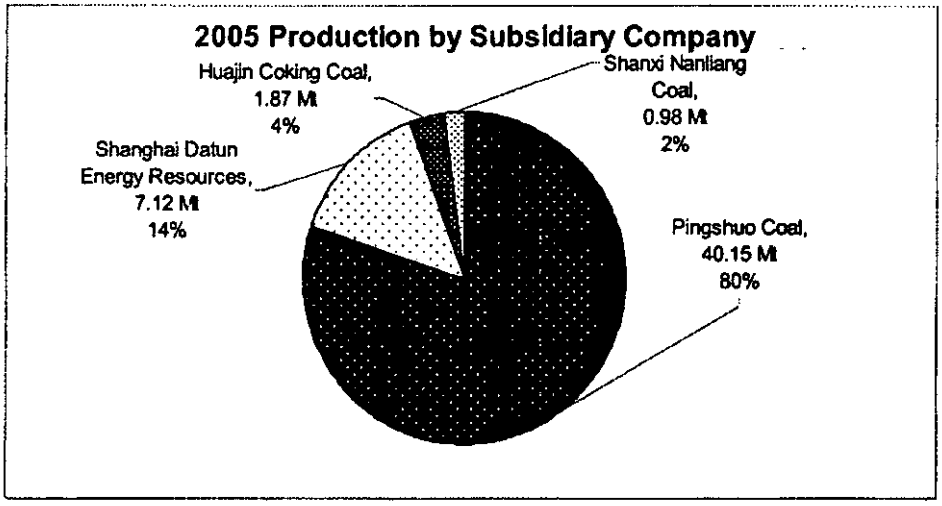

Figure 1-4: China Coal 2005 Production by Subsidiary Company

1.5 Capital Expenditure

China Coal has made considerable investment in production capacity in recent years and plans to invest a further RMB2,840 M in 2006. Forecast capital investment in 2007 and 2008 is RMB5,994 M and RMB5,578 M respectively (Table 1-6) mainly due to increased capital investment for the construction of the Pingshuo East open-pit and Wangjialing underground mine.

2. Capital expenditure reflects 100% ownership – China Coal ownership and contribution 50%

China Coal's total historical ROM coal production has increased by 51% from 2003 to 2005. A further increase of approximately 80% is forecast by 2008, when production is projected to amount to approximately 90 Mtpa, as shown in the following graph (Figure 1-2).

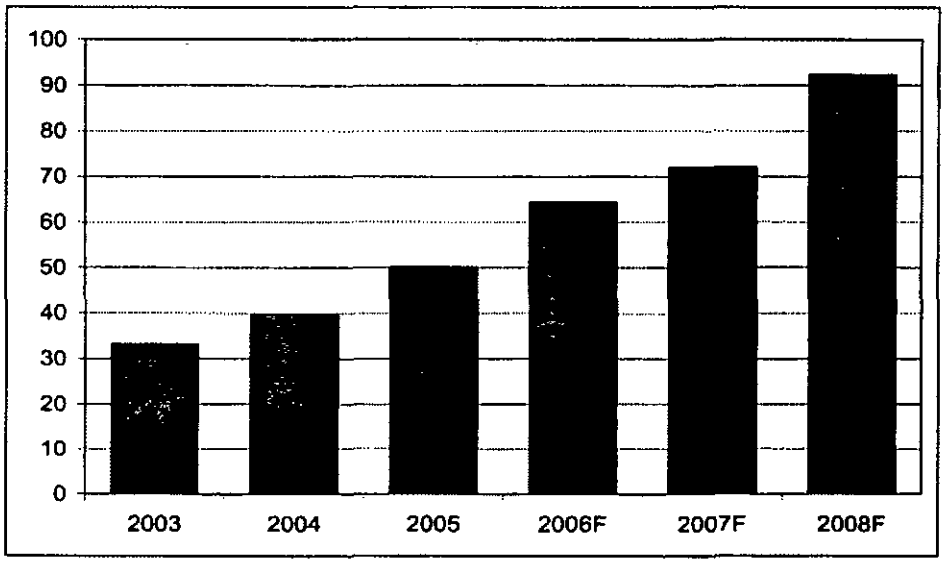

Figure 1-2: China Coal Historical and Forecast Production, 2003 to 2008

While China Coal operates both open-pit and underground mines, production has been dominated by highly productive, low cost open-pit mines using international brands of truck and shovel mining equipment. As shown in the following figure, forecast production over the period from 2005 to 2008 from open-pit mines varies between 57% and 64% and from 37% to 43% from underground mines.

Among the mining assets owned and operated by China Coal, Antaibao mine and Anjialing mine are some of the larger open-pit coal mines in China and compare well with large international operations in physical size and output. The seam thickness at the Antaibao and Anjialing open-pit mines is a considerable advantage allowing efficient mining production and low operating costs.

Antaibao and Anjialing open-pit mines use modern shovel and truck mining equipment, imported from manufacturers including Caterpillar, Dresser and Komatsu. The large efficient open-pit mine at Anjialing and the planned mine at Pingshuo East have mine lives in excess of 40 years at the current forecast production rate.

1.3 Coal Processing Assets

China Coal uses dense-media cyclone (DMC) processing methods for over 90% of its coal output, which is the processing method used at best practise CPPs in the coal industry. Details of China Coal's CPPs are shown in Table 1-3.

Wangjialing	UG	2007	2010	6.0

1. A Mining Right for the Pingshuo East OP is expected to be granted in March 2007

Antaibao underground mine will utilise top coal caving methods to extract seams up to 16 m thick, and is expected to produce at a low unit cost similar to the Anjialing underground mine. Pingshuo East open-pit mine will extract the same seams and have similar strip ratios to both the Anjialing and Antaibao open-pit mines and is therefore expected to produce coal of similarly high quality and low cost. Wangjialing underground mine will utilise longwall methods of mining, and is planning to supply a new CPP and power station in the local area.

Infrastructure

The mines operated by China Coal are well serviced by existing infrastructure and have reliable supplies of water and electricity, some of which is generated at on-site power stations.

Capital Expenditure

China Coal recorded capital expenditure of RMB1,503 Million (M) in 2004 and RMB1,581 M in 2005, mostly for mine and CPP expansions. Expansion of the Antaibao and Anjialing open-pit mines and the Anjialing underground mine in 2006, 2007 and 2008 is forecast to require capital expenditure for additional mining equipment and modifications to the mines. Construction of the Pingshuo East open-pit mine and the Wangjialing underground mine are scheduled to commence during 2006 and 2007 respectively, which results in a significant increase in total capital expenditure from 2007 onwards.

1.1.2 Overview of Operations

China Coal manages two large open-pit mines and seven underground mines in the Shanxi, Shaanxi and Jiangsu Provinces of China as shown in the following diagram. Location maps for individual mines are set out in Appendix 1.

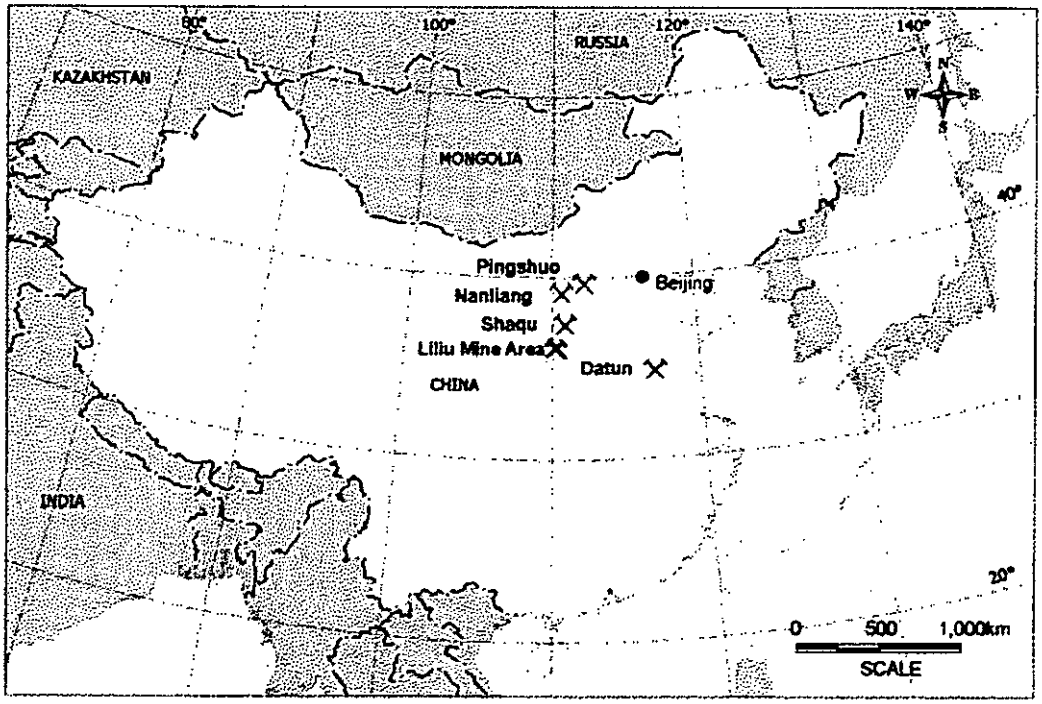

Figure 1-1: Overall Location Map

These mines are conveniently situated with respect to the Chinese rail and port network, as well as key customers. The total managed run-of-mine (ROM) production from these mines for 2005 was approximately 50 Mt of high energy thermal and coking coal. In addition, China Coal has one large open-pit project which will commence with preliminary pre-stripping operations in 2006 and two new underground mines, one of which commenced construction during 2005 and the other planned to commence construction during 2007. The mines managed by China Coal are forecast to produce approximately 64 Mt of ROM coal in 2006. Production from these mines is forecast to increase to approximately 72 Million tonnes per annum (Mtpa) of ROM coal by 2007 and 90 Mtpa by 2008.

1.1.1 Overview of Findings

SRK's inspection of China Coal's operations revealed well managed and well maintained assets and a demonstrated commitment to providing a safe and efficient workplace at the company's mine sites. Management quality is demonstrated by the good safety record and strong commitment to methane gas management throughout underground operations. SRK also witnessed a strong environmental policy which is effectively implemented and monitored to world class standards.

Open-pit Mines

China Coal's large open-pit mines use modern, imported truck and shovel technology in seams as thick as 22 metres (m) and with strip ratios as low as 5 to 1. China Coal's open-pits are world class assets in terms of both total size and the scale at which the seams are being mined. China Coal operates its machinery efficiently and effectively, and is experimenting with additional improvements to increase efficiency further. China Coal's open cut mines have reasonably flat lying seams.

Underground Mines

China Coal's underground mines have seams which dip as steeply as 40 degrees, and use longwall retreat mining equipment in coal seams of between 1 m and 16 m thickness. The highly productive top caving method has been pioneered in three of the underground mines with thicker seams. This technique allows much improved panel recovery over previous techniques and provides significantly increased resource utilisation.

The Anjialing underground operation has implemented world class infrastructure to support advanced production technology. In particular modern transport facilities and road header technology with continuous haulage systems are utilised, representing leading edge technology for global coal development. Anjialing and Yaoqiao underground mines are highly productive compared to the average of Chinese underground mines. Nanliang mine is likely to become a similarly productive low cost mine following the introduction of longwall mining.

Coal Preparation Plants

The mines transport coal to coal preparation plants (CPPs) which process the coal to remove impurities. China Coal operated nine CPPs in 2004 producing approximately 42 Million tonnes (Mt) of marketable coal, 93% of which was thermal coal and 7% coking coal. During 2005, China Coal expanded existing CPPs, and constructed and commissioned four new CPPs, resulting in production of 44.2 Mt of marketable coal in 2005. China Coal is forecasting an increase in processed output to 52.4 Mt of marketable coal in 2006.

Resources and Reserves

China Coal's resources and reserves provide its mines with an average indicative mine life of 38 years. Two of the group's high production open-pit mines, Anjialing mine and the planned Pingshuo East mine have lives of 26 and 47 years respectively at the current forecast production rate. The resource and reserve estimates have high probability to extend significantly when the available inferred resources are converted to reserves following further in-fill drilling. The mines managed by China Coal have in excess of 4,000 Mt of coal in the inferred resource category which could be converted in this manner. China Coal manages mines which have coal seams of very high quality relative to international standards (due to low ash and low sulphur). The two large and efficient open-pit mines at Antaibao and Anjialing produced 33% and 30% respectively of China Coal's total production in 2005.

Safety

Safety statistics for China Coal's mines are superior to the local industry average. China Coal recorded four fatal accidents at its mines in 2005, and the ratio of fatalities per Mt of production in 2005 of 0.08 is comparable to the best safety performance in the Chinese coal mining industry.

1 Report Summary

1.1 Introduction

China Coal Energy Company Limited (China Coal) requested SRK Consulting China Ltd (SRK) to review the coal mining assets of China Coal to assist with a proposed restructuring and listing of the group. This Competent Persons Report has been prepared in conjunction with the listing of the group on the Stock Exchange of Hong Kong Limited (HKSE), in particular Chapter 18 of the Listing Rules.

Based on our inspection of China Coal's assets and operations, SRK believes China Coal is a well-managed, integrated business enterprise with an excellent portfolio of assets and industry-leading production and distribution capabilities. SRK believes China Coal is well positioned to compete effectively in both the domestic and international markets.

China Coal is one of the largest coal enterprises in China with coal production, sales and trading as their core business. It also has a diversified portfolio of other related operations to supplement its core coal operations. The principal products and services of China Coal include:

- Coal Reserves

Mine plans reviewed by SRK were prepared on the basis of extraction of the entire resource at each site. Reserves have been estimated incorporating the following parameters:

- Mining recovery factors of 95% for open pit and 75% for underground mines have been applied to the entire resources estimate to estimate recoverable reserves

- A constant beneficiation yield specific to each coal preparation plant and mine site that includes wash plant yield, by-pass coal and rejects sold at a profit, has been applied to estimate marketable reserves for each mine

Mine plans and supporting information supplied to SRK were used in principle, to verify the feasibility of mining and recoveries. SRK can deduce from a review of reconciliation of the production records that the reserves estimates are a reasonable indication of future performance of the reserves.

Reporting Standard

The following Report has been prepared to the standard of, and is considered by SRK to be a Technical Assessment Report under the guidelines of the Valmin Code. The Valmin Code is the code adopted by the Australasian Institute of Mining and Metallurgy (AusIMM) and the standard is binding upon all AusIMM members. It is SRK's opinion that the Report is prepared in accordance with international reporting standards for mineral resources and ore reserves.

In comparing China Coal's practices against international best practice, SRK has made comparisons in the Report which are qualitative in nature. In the case of quantitative comparison, sources of data are provided. This Report is not a Valuation Report and does not express an opinion as to the value of mineral assets. Aspects reviewed in this Report do include product prices, socio-political issues and environmental considerations, however SRK does not express an opinion regarding the specific value of the assets and tenements involved.

Consents

SRK consents to this Report being included, in full, in the China Coal prospectus, in the form and context in which the technical assessment is provided, and not for any other purpose. SRK provides this consent on the basis that the technical assessments expressed in the individual sections of this Report are considered with, and not independently of, the information set out in the complete Report and the Cover Letter.

Yours Sincerely

SRK Consulting

Resources and Reserves

- Coal Resources

SRK's methodology for resource classification has been rigorous, particularly as it relates to both drill-hole spacing and to the treatment of drill-core recoveries. SRK has strictly applied the line spacing criteria as defined by the most recent People's Republic of China regulations, resulting in the exclusion of all 'Category C' coal resource blocks from the resources calculation in accordance with the principles of the JORC Code.

Resource estimates are based on estimates that have been validated and authorised by China's leading authority for reporting Chinese resources, the Ministry of Land and Resources (MOLAR). Parameters used by MOLAR are consistent with Chinese standards and include coal seam core recovery >75% from boreholes and categorisation for resources based on the following borehole spacing criteria: Measured: 500 to 1,000 metres distance, Indicated: 1,000 to 2,000 metres distance and Inferred: 2,000 to 4,000 metres distance.

- Coal Reserves

Mine plans reviewed by SRK were prepared on the basis of extraction of the entire resource at each site. Reserves have been estimated incorporating the following parameters:

- Mining recovery factors of 95% for open pit and 75% for underground mines have been applied to the entire resources estimate to estimate recoverable reserves
- A constant beneficiation yield specific to each coal preparation plant and mine site that includes wash plant yield, by-pass coal and rejects sold at a profit, has been applied to estimate marketable reserves for each mine

Mine plans and supporting information supplied to SRK were used in principle, to verify the feasibility of mining and recoveries. SRK can deduce from a review of reconciliation of the production records that the reserves estimates are a reasonable indication of future performance of the reserves.

Reporting Standard

The following Report has been prepared to the standard of, and is considered by SRK to be a Technical Assessment Report under the guidelines of the Valmin Code. The Valmin Code is the code adopted by the Australasian Institute of Mining and Metallurgy (AusIMM) and the standard is binding upon all AusIMM members. It is SRK's opinion that the Report is prepared in accordance with international reporting standards for mineral resources and ore reserves.

In comparing China Coal's practices against international best practice, SRK has made comparisons in the Report which are qualitative in nature. In the case of quantitative comparison, sources of data are provided. This Report is not a Valuation Report and does not express an opinion as to the value of mineral assets. Aspects reviewed in this Report do include product prices, socio-political issues and environmental considerations, however SRK does not express an opinion regarding the specific value of the assets and tenements involved.

Consents

SRK consents to this Report being included, in full, in the China Coal prospectus, in the form and context in which the technical assessment is provided, and not for any other purpose. SRK provides this consent on the basis that the technical assessments expressed in the individual sections of this Report are considered with, and not independently of, the information set out in the complete Report and the Cover Letter.

Yours Sincerely

Note: Mr. Charles C K Chan, a Chartered Estate Surveyor, MSc, FRICS, FHKIS, MCIArb, RPS(GP), has about 22 years' experience in the valuation of properties in Hong Kong and has extensive experience in the valuation of properties in the PRC and the Asia Pacific regions.

The market value is the best price reasonably obtainable in the market by the seller and the most advantageous price reasonably obtainable in the market by the buyer. This estimate specifically excludes an estimated price inflated or deflated by special terms or circumstances such as atypical financing, sale and leaseback arrangements, special considerations or concessions granted by anyone associated with the sale, or any element of special value. The market value of a property is also estimated without regard to costs of sale and purchase, and without offset for any associated taxes.

The property interests in Group I are held by the Group for owner occupation. Due to the specific purposes for which the buildings and structures in Group I have been constructed, there are no readily identifiable market comparables available, thus the buildings and structures cannot be valued on the basis of direct comparison. They have therefore been valued on the basis of their depreciated replacement cost. We would define depreciated replacement cost to be our opinion of the land value in its existing use together with an estimate of the new replacement costs of the buildings and structures, including fees and finance charges, from which deductions are then made to allow for age, condition and functional obsolescence. The depreciated replacement cost approach generally provides the most reliable indication of value for property in the absence of a known market based on comparable sales.

Regarding the land use rights transferred to the Group under the Restructuring Agreement, we have classified the land use rights into five categories by reference to its title documents obtained and the legal opinion of the Group's PRC legal adviser, Jia Yuan Law Firm. The five categories of the land use rights are set out below:

(1) The land use rights which ChinaCoal Group or its subsidiaries have obtained granted land use rights certificates ("Granted Land");

(2) The land use rights which ChinaCoal Group or its subsidiaries have obtained allocated land use rights certificates and have been authorized by The Ministry of Land and Resources of the PRC (the "MLR") to manage and operate, including contributing these parcels of allocated land as capital in the Company ("Authorized Allocated Land");

(3) The land use rights which the relevant subsidiaries of ChinaCoal Group have obtained allocated land use rights certificates and have been authorized by the MLR to retain the land use rights of these parcels of land ("Retained Allocated Land");

(4) The land use rights which ChinaCoal Group has obtained allocated land use rights certificates but such parcels of land are not included in the authorized allocated land and retained allocated land respectively referred to in sub-paragraphs (2) and (3) above ("Allocated Land"); and

(5) The land that the Group is in the process of applying for the land use rights certificates ("Without Title Land").

The property interests in Group II which are leased by the Group have no commercial values due to the prohibition against assignment or sub-letting or otherwise due to the lack of substantial profit rents.

We have been provided with copies of extracts of title documents relating to the properties. However, we have not inspected the original documents to verify the ownership or to verify any amendments which may not appear on the copies handed to us. We have relied to a considerable extent on information given by the Group and its legal adviser on PRC laws, regarding to the titles and other legal matters relating to the properties and have accepted advice given to us on such matters as planning approvals or statutory notices, easements, tenure, particulars of occupancy, identification of the properties, floor and site areas and all other

Respective Responsibilities of Directors of Shanghai Datun and of China Coal Energy Company Limited and Accountants

The PRC Interim Financial Information is prepared based on the unaudited interim financial statements of Shanghai Datun Group. The China Securities Regulatory Commission of the People's Republic of China (the "PRC") requires enterprises whose securities are listed on any stock exchange in the PRC to prepare interim financial statements, which comply with Accounting Standard for Business Enterprises - "Interim Financial Reporting" issued by the Ministry of Finance of the PRC and the relevant provisions thereof. The interim financial statements are the responsibility of, and have been approved by, the directors of Shanghai Datun. The PRC Interim Financial Information is the responsibility of the directors of China Coal Energy Company Limited.

It is our responsibility to form an independent conclusion, based on our review, on the PRC Interim Financial Information.

Review Work Performed

We conducted our review with reference to Statement of Auditing Standards 700 "Engagements to Review Interim Financial Reports" issued by the Hong Kong Institute of Certified Public Accountants. A review consists principally of making enquiries of management of Shanghai Datun Group and China Coal Energy Company Limited, and applying analytical procedures to the PRC Interim Financial Information and based thereon, assessing whether the accounting policies and presentation have been consistently applied unless otherwise disclosed. A review excludes audit procedures such as tests of controls and verification of assets, liabilities and transactions. It is substantially less in scope that an audit and therefore provides a lower level of assurance than an audit. Accordingly we do not express an audit opinion on the PRC Interim Financial Information.

向投资者分配利润。公司以前年度未分配的利润，可以并入本年度向投资者分配。

18、所得税的会计处理方法

本公司所得税的会计处理采用应付税款法

19、合并会计报表的编制方法：

根据财政部财会字(1995)11号《关于印发<合并会计报表暂行规定>的通知》及有关补充规定编制合并会计报表。

合并范围包括：

（1）全资子公司；

（2）绝对控股公司。即直接或间接占其权益性资本50%（不含50%）以上，拥有绝对控股权的公司；

在建工程结转固定资产的时点：本公司建造的固定资产在达到预定可使用状态之日起，根据工程预算、造价或工程实际成本等，按估计的价值结转固定资产，次月起开始计提折旧。待办理了竣工决算手续后再作调整。

每期期末，本公司对在建工程进行全面检查，如果有证据表明在建工程已发生减值，计提在建工程减值准备。在建工程在资产清查基准日存在以下一项或若干项情况的，计提在建工程减值准备：

（1）长期停建并且预计在未来3年内不会重新开工的在建工程。但停建当年计提的减值准备不得超过在建工程帐面价值的30%。

（2）所建项目无论在性能上，还是在技术上已经落后，并且给企业带来的经济效益具有很大的不确定性。

（3）其他足以证明在建工程已经发生减值的情况。

14、无形资产及无形资产减值准备核算方法

本公司的无形资产是指公司为生产商品或者提供劳务、出租给他人、或为管理目的而持有的、没有实物形态的非货币性长期资产。

本公司的无形资产在取得时，按取得时的实际成本计价。

无形资产的成本，自取得当月起在预计使用年限内分期平均摊销。如果预计使用年限超过了相关合同规定的受益年限或法律规定的有效年限，摊销年限不超过受益年限与有效年限两者之中较短者；如果合同没有规定受益年限，法律也没有规定有效年限的，摊销年限不超过10年。

每期期末，检查各项无形资产预计给企业带来未来经济利益的能力，当无形资产将来为企业创造的经济利益还不足以补偿无形资产帐面价值（摊余成本），即在清产核资基准日估计其可收回金额低于帐面价值时，将无形资产预计可收回金额低于帐面价值的差额计提减值准备。

15、长期待摊费用的核算方法

长期待摊费用能够确定收益期的，在收益期内平均摊销；当某项长期待摊费用已基本确定不能使以后会计期间受益，应在被判断当期（月），将其摊余价值全部计入当期（月）管理费用。

开办费从开始生产经营的当月起，一次计入当期损益。

a被投资单位被吊销营业执照的，一般全额计提减值准备。

b被投资单位已经资不抵债但仍持续经营的，一般全额计提减值准备。

c被投资单位已经停止营业的，一般按50%计提减值准备。

d 连续三年不能取得被投资单位的会计报表及相关会计资料，且无收益的，在第三个会计年度终了按50%计提减值准备，四年及以上全额计提减值准备。

e对于国债投资，一律不计提减值准备。

12、固定资产、累计折旧及固定资产减值准备的核算方法：

本公司固定资产在取得时，按取得时的实际成本计价。

固定资产确认的标准为：使用年限在一年以上的房屋、建筑物、机器、机械、运输工具和其他与生产经营有关的设备、器具等；不属于生产经营主要设备的物品，单位价值在2000元以上，并且使用期限超过2年的，也应作为固定资产核算。

固定资产折旧采用平均年限法计算，并按固定资产类别、预计使用年限和预计残值率(3%)确定其折旧率。固定资产预计使用年限及年折旧率列表如下：

资产类别	使用年限	年折旧率
房屋建筑物	20—35年	2.77%—4.85%
机器设备	5—10年	9.70%—19.40%
运输设备	5—10年	9.70%—19.40%
其他设备	5—15年	6.47%—19.40%

每期期末对固定资产进行逐项检查，对固定资产由于市价持续下跌，或技术陈旧、损坏、长期闲置等原因，导致其可收回金额低于帐面价值的，将可收回金额低于其帐面价值的差额作为固定资产减值准备，土地和已提足折旧继续使用的固定资产不计提减值准备。

13、在建工程及在建工程减值准备核算方法

在建工程的计价：按实际发生的支出确定工程成本。自营工程按直接材料、直接工资、直接施工费等计量；出包工程按应支付的工程价款等计量；设备安装工程按所安装设备的价值、安装费用、工程试运转等所发生的支出等确定工程成本。在各项工程达到预定可使用状态之前发生的专项借款的辅助费用、利息支出、汇兑损益、债券溢折价摊销均计入该工程成本。在交付使用后计入财务费用。

被投资企业有表决权资本总额20%以下，或虽占20%或20%以上，但不具有重大影响，采用成本法核算；投资额占被投资企业有表决权资本总额20%或20%以上，或虽投资不足20%但有重大影响的，采用权益法核算。对股权投资差额，在年末分期平均摊销计入损益。股权投资差额的摊销期限：合同规定了投资期限的，按照合同规定的投资期限摊销；合同没有规定投资期限的，借方差额按不超过10年的年限摊销，贷方差额记入资本公积。

（2）长期债权投资

按实际支付的价款扣除自发行日至债券购入日的应计利息后的余额作为实际成本。实际成本与债券面值的差额，作为溢价或折价，在债券存续期间内确认债券利息收入时，采用直线法摊销。

（3）长期投资减值准备

对长期投资由于市价持续下跌或被投资单位经营状况恶化，导致其可收回金额低于帐面价值的，计提长期投资减值准备；长期投资减值准备在区分长期股权投资和长期债权投资的基础上，按单项项目计提；对于非上市流通的长期债权投资减值准备的计提按以下标准：

A 投资期即将届满能够全部收回的，不计提减值准备。

B 未逾期、但未按期收到债券利息的，分析债券发行单位的性质及实际财务状况，如有确凿证据表明该项资产发生了减值，计提长期投资减值准备。

C被投资单位已经宣告破产，或进入破产清算程序进行清理整顿而难以持续经营的，在取得相关政府批文、公告等条件下，无论是否逾期，均全额计提减值准备。

D 已经逾期的长期债权投资，根据逾期时间长短在以下标准范围内确定减值准备的计提比例。

项　　目	减值准备计提比例
逾期不超过1年（含1年）	10%
逾期1—2年（含2年）	30%
逾期2—3年（含3年）	50%
逾期3年以上	80%

E 几种特殊情况下长期投资减值准备计提标准

每期期末，按单个委托贷款本金高于可收回金额的差额计提减值准备。

9、应收款项坏账准备核算方法

坏账的确认标准：债务单位撤销、破产、资不抵债、现金流量严重不足、发生严重自然灾害等导致停产而在可预见的时间内无法偿付债务等；债务单位逾期未履行偿债义务超过3年；其他确凿证据表明确实无法收回或收回的可能性不大。

坏账损失的核算方法：坏账核算采用备抵法，每期期末按账龄分析法计提坏账准备，比例如下：

帐　　龄	坏帐准备计提比例
1年以内（含1年）	0%
1—2年（含2年）	10%
2—3年（含3年）	20%
3—5年（含5年）	50%
5年以上	80%

坏账准备计提范围：对本公司的应收款项（包括应收账款、其他应收款）计提坏账准备，职工个人借款除外。

10、存货及存货跌价准备核算方法

本公司存货主要包括：原材料、低值易耗品等。

本公司存货的取得和发出的计价方法：取得时按实际成本计价，发出按加权平均法计价。

低值易耗品的摊销方法：低值易耗品领用时采用一次摊销法核算。

存货的盘存制度：实行永续盘存制。

每期期末，存货按成本与可变现净值孰低法计量，对存货由于遭受毁损、全部或部分陈旧过时或销售价格低于成本等原因，使其成本高于可变现净值的，按存货成本高于可变现净值部分，计提存货跌价准备；低值易耗品不计提跌价准备。

11、长期投资及长期投资减值准备核算方法

（1）长期股权投资

对于长期股权投资的核算，以投资时实际支付的价款或确定的价值入账。投资额占

外币汇兑损益除与工程建造有关的计入在建工程之外，其余均计入当期的财务费用。

6、现金等价物的确定标准

本公司现金等价物是指企业持有的期限短（一般是指从购买日起三个月内到期）、流动性强、易于转换为已知金额现金、价值变动风险很小的投资。

7、短期投资及短期投资跌价准备的核算方法：

短期投资按取得时实际支付的全部价款包括税金和手续费等相关费用,扣除已宣告但尚未领取的现金股利或已到付息期但尚未领取的债券利息后的余额计入投资成本。持有期间所获得的股利或利息冲减短期投资账面价值，处置时按所收到的处置收入与短期投资账面价值的差额确认为当期投资收益。

每期期末，短期投资按成本与市价孰低计量，短期投资跌价准备按单项投资成本高于市价的差额提取；对无市价的短期投资跌价准备，按以下方法执行：

（1）投资期即将届满能够全部收回的，不计提跌价准备；

（2）被投资单位已经宣告破产，或进入破产清算程序、或因经营不善整顿、歇业而非持续经营的，证据确凿的情况下，无论是否逾期，均全额计提跌价准备。

（3）其他已逾期的，根据逾期时间长短在以下标准范围内确定跌价准备计提比例。没有投资期限的短期投资，以该项目自投资购买之日起一年为限，超出一年视同逾期，并按照确定的标准计提跌价准备。比例如下：

项　　目	跌价准备计提比例
逾期3个月—1年（含1年）	0%
逾期1—2年（含2年）	10%
逾期2--3年（含3年）	30%
逾期3年以上	50%

已确认跌价损失的短期投资的价值又得以恢复后在原先已确认的投资损失金额内转回。

8、委托贷款及委托贷款减值准备的核算方法

委托贷款按期计提利息，计入损益；已按期计提的利息到付息期不能收回的，停止计提利息，并冲回原已计提的利息。

19、会计政策、会计估计变更及会计差错更正的说明

(1)报告期会计政策变更

公司以前年度执行《勘查设计企业会计制度》，自本年度起按《企业会计制度》作了如下变更：

①坏账准备，原应收款项年末不计提坏账准备，现改为按应收款项年末账龄分析计提。

②短期投资原按成本计价，现改为期末按成本与可变现净值孰低原则计量，并按单项投资计提跌价准备。

③存货原按成本计价，现改为期末按成本与可变现净值孰低原则计量，并按存货类别计提跌价损失准备。

④长期投资原按成本计价，现改为期末按长期投资未来可收回金额低于账面价值的差额计提减值准备。

⑤固定资产原按成本计价，现改为期末按单项固定资产可收回金额低于其账面价值的差额计提减值准备。

固定资产折旧年限进行了调整，固定资产变更前后折旧年限及折旧率见下表：

类别	变更前		变更后	
	折旧年限	折旧率%	折旧年限	折旧率%
房屋建筑物	10-50	1.9-9.7	20-35	2.77-4.85
机器设备	8-18	5.4-12.1	5-10	9.70-19.40

（3）其他足以证明在建工程已经发生减值的情况。

14、无形资产及无形资产减值准备核算方法

本公司的无形资产是指公司为生产商品或者提供劳务、出租给他人、或为管理目的而持有的、没有实物形态的非货币性长期资产。

本公司的无形资产在取得时，按取得时的实际成本计价。

无形资产的成本，自取得当月起在预计使用年限内分期平均摊销。如果预计使用年限超过了相关合同规定的受益年限或法律规定的有效年限，摊销年限不超过受益年限与有效年限两者之中较短者；如果合同没有规定受益年限，法律也没有规定有效年限的，摊销年限不超过10年。

每期期末，检查各项无形资产预计给企业带来未来经济利益的能力，当无形资产将来为企业创造的经济利益还不足以补偿无形资产帐面价值（摊余成本），即在清产核资基准日估计其可收回金额低于帐面价值时，将无形资产预计可收回金额低于帐面价值的差额计提减值准备。

15、长期待摊费用的核算方法

长期待摊费用能够确定收益期的，在收益期内平均摊销；当某项长期待摊费用已基本确定不能使以后会计期间受益，应在被判断当期（月），将其摊余价值全部计入当期（月）管理费用。

开办费从开始生产经营的当月起，一次计入当期损益。

16、收入确认原则

商品销售：本公司将商品所有权上的主要风险和报酬转移给购货方；本公司不再对该产品实施继续管理权和实际控制权；相关的收入已经收到或取得了收款的证据；并且与销售该产品相关的成本能够可靠地计量时确认为营业收入的实现。

提供劳务：劳务已经提供，其经济利益能够流入本公司，并且与提供该劳务相关的成本能够可靠地计量时确认为收入的实现。在同一会计年度内开始并完成的劳务，则完成劳务时确认收入，如劳务的开始和完成属不同的会计年度，在提供劳务交易的相关成本能够可靠地计量时，则在资产负债表日按照完工百分比法确认相关的劳务收入。

他人使用本公司资产：与交易相关的经济利益能够流入企业且收入的金额能够可靠的计量确认收入。

17、利润分配顺序

本公司按《公司法》及其他有关规定进行利润分配，缴纳所得税后的利润，除国家另有规定者

固定资产确认的标准为：使用年限在一年以上的房屋、建筑物、机器、机械、运输工具和其他与生产经营有关的设备、器具等；不属于生产经营主要设备的物品，单位价值在 2000 元以上，并且使用期限超过 2 年的，也应作为固定资产核算。

固定资产折旧采用平均年限法计算，并按固定资产类别、预计使用年限和预计残值率(3%)确定其折旧率。固定资产预计使用年限及年折旧率列表如下：

资产类别	使用年限	年折旧率
房屋建筑物	20—35 年	2.77%—4.85%
机器设备	5—10 年	9.70%—19.40%
运输设备	5—10 年	9.70%—19.40%
其他设备	5—15 年	6.47%—19.40%

每期期末对固定资产进行逐项检查，对固定资产由于市价持续下跌，或技术陈旧、损坏、长期闲置等原因，导致其可收回金额低于帐面价值的，将可收回金额低于其帐面价值的差额作为固定资产减值准备，土地和已提足折旧继续使用的固定资产不计提减值准备。

13、在建工程及在建工程减值准备核算方法

在建工程的计价：按实际发生的支出确定工程成本。自营工程按直接材料、直接工资、直接施工费等计量；出包工程按应支付的工程价款等计量；设备安装工程按所安装设备的价值、安装费用、工程试运转等所发生的支出等确定工程成本。在各项工程达到预定可使用状态之前发生的专项借款的辅助费用、利息支出、汇兑损益、债券溢折价摊销均计入该工程成本。在交付使用后计入财务费用。

在建工程结转固定资产的时点：本公司建造的固定资产在达到预定可使用状态之日起，根据工程预算、造价或工程实际成本等，按估计的价值结转固定资产，次月起开始计提折旧。待办理了竣工决算手续后再作调整。

每期期末，本公司对在建工程进行全面检查，如果有证据表明在建工程已发生减值，计提在建工程减值准备。在建工程在资产清查基准日存在以下一项或若干项情况的，计提在建工程减值准备：

（1）长期停建并且预计在未来 3 年内不会重新开工的在建工程。但停建当年计提的减值准备不得超过在建工程帐面价值的 30%。

（2）所建项目无论在性能上，还是在技术上已经落后，并且给企业带来的经济效益具有很大的不确定性。

（2）长期债权投资

按实际支付的价款扣除自发行日至债券购入日的应计利息后的余额作为实际成本。实际成本与债券面值的差额，作为溢价或折价，在债券存续期间内确认债券利息收入时，采用直线法摊销。

（3）长期投资减值准备

对长期投资由于市价持续下跌或被投资单位经营状况恶化，导致其可收回金额低于帐面价值的，计提长期投资减值准备；长期投资减值准备在区分长期股权投资和长期债权投资的基础上，按单项项目计提；对于非上市流通的长期债权投资减值准备的计提按以下标准：

A 投资期即将届满能够全部收回的，不计提减值准备。

B 未逾期、但未按期收到债券利息的，分析债券发行单位的性质及实际财务状况，如有确凿证据表明该项资产发生了减值，计提长期投资减值准备。

C 被投资单位已经宣告破产，或进入破产清算程序进行清理整顿而难以持续经营的，在取得相关政府批文、公告等条件下，无论是否逾期，均全额计提减值准备。

D 已经逾期的长期债权投资，根据逾期时间长短在以下标准范围内确定减值准备的计提比例。

项　　目	减值准备计提比例
逾期不超过 1 年（含 1 年）	10%
逾期 1—2 年（含 2 年）	30%
逾期 2—3 年（含 3 年）	50%
逾期 3 年以上	80%

E 几种特殊情况下长期投资减值准备计提标准

a 被投资单位被吊销营业执照的，一般全额计提减值准备。

b 被投资单位已经资不抵债但仍持续经营的，一般全额计提减值准备。

c 被投资单位已经停止营业的，一般按 50%计提减值准备。

d 连续三年不能取得被投资单位的会计报表及相关会计资料，且无收益的，在第三个会计年度终了按 50%计提减值准备，四年及以上全额计提减值准备。

e 对于国债投资，一律不计提减值准备。

12、固定资产、累计折旧及固定资产减值准备的核算方法：

本公司固定资产在取得时，按取得时的实际成本计价。

坏账的确认标准：债务单位撤销、破产、资不抵债、现金流量严重不足、发生严重自然灾害等导致停产而在可预见的时间内无法偿付债务等；债务单位逾期未履行偿债义务超过3年；其他确凿证据表明确实无法收回或收回的可能性不大。

坏账损失的核算方法：坏账核算采用备抵法，每期期末按账龄分析法计提坏账准备，比例如下：

帐　　龄	坏帐准备计提比例
1年以内（含1年）	0%
1—2年（含2年）	10%
2—3年（含3年）	20%
3—5年（含5年）	50%
5年以上	80%

坏账准备计提范围：对本公司的应收款项（包括应收账款、其他应收款）计提坏账准备，职工个人借款除外。

10、存货及存货跌价准备核算方法

本公司存货主要包括：原材料、低值易耗品等。

本公司存货的取得和发出的计价方法：取得时按实际成本计价，发出按加权平均法计价。

低值易耗品的摊销方法：低值易耗品领用时采用一次摊销法核算。

存货的盘存制度：实行永续盘存制。

每期期末，存货按成本与可变现净值孰低法计量，对存货由于遭受毁损、全部或部分陈旧过时或销售价格低于成本等原因，使其成本高于可变现净值的，按存货成本高于可变现净值部分，计提存货跌价准备；低值易耗品不计提跌价准备。

11、长期投资及长期投资减值准备核算方法

（1）长期股权投资

对于长期股权投资的核算，以投资时实际支付的价款或确定的价值入账。投资额占被投资企业有表决权资本总额20%以下，或虽占20%或20%以上，但不具有重大影响，采用成本法核算；投资额占被投资企业有表决权资本总额20%或20%以上，或虽投资不足20%但有重大影响的，采用权益法核算。对股权投资差额，在年末分期平均摊销计入损益。股权投资差额的摊销期限：合同规定了投资期限的，按照合同规定的投资期限摊销；合同没有规定投资期限的，借方差额按不超过10年的年限摊销，贷方差额记入资本公积。

6、现金等价物的确定标准

本公司现金等价物是指企业持有的期限短（一般是指从购买日起三个月内到期）、流动性强、易于转换为已知金额现金、价值变动风险很小的投资。

7、短期投资及短期投资跌价准备的核算方法：

短期投资按取得时实际支付的全部价款包括税金和手续费等相关费用,扣除已宣告但尚未领取的现金股利或已到付息期但尚未领取的债券利息后的余额计入投资成本。持有期间所获得的股利或利息冲减短期投资账面价值，处置时按所收到的处置收入与短期投资账面价值的差额确认为当期投资收益。

每期期末，短期投资按成本与市价孰低计量，短期投资跌价准备按单项投资成本高于市价的差额提取；对无市价的短期投资跌价准备，按以下方法执行：

（1）投资期即将届满能够全部收回的，不计提跌价准备；

（2）被投资单位已经宣告破产，或进入破产清算程序、或因经营不善整顿、歇业而非持续经营的，证据确凿的情况下，无论是否逾期，均全额计提跌价准备。

（3）其他已逾期的，根据逾期时间长短在以下标准范围内确定跌价准备计提比例。没有投资期限的短期投资，以该项目自投资购买之日起一年为限，超出一年视同逾期，并按照确定的标准计提跌价准备。比例如下：

项　　目	跌价准备计提比例
逾期3个月—1年（含1年）	0%
逾期1—2年（含2年）	10%
逾期2—3年（含3年）	30%
逾期3年以上	50%

已确认跌价损失的短期投资的价值又得以恢复后在原先已确认的投资损失金额内转回。

8、委托贷款及委托贷款减值准备的核算方法

委托贷款按期计提利息，计入损益；已按期计提的利息到付息期不能收回的，停止计提利息，并冲回原已计提的利息。

每期期末，按单个委托贷款本金高于可收回金额的差额计提减值准备。

11、所得税的会计处理方法

12、会计政策、会计估计变更及会计差错更正的说明

1、报告期会计政策变更

公司以前年度执行《勘查设计企业会计制度》，自本年度起执行《企业会计制度》作了如下变更：

① 坏账准备，原应收款项年末不计提坏账准备，现改为按应收款项年末账龄分析计提，计提标准详见附注二、6。

③存货原按成本计价，现改为年末按成本与可变现净值孰低原则计量，并按存货类别计提跌价损失准备。

⑤固定资产原按成本计价，现改为年末按单项固定资产可收回金额低于其账面价值的差额计提减值准备。

公司上述会计政策变更，已采用追溯调整法，累积影响数为 123,811.39 元，明细如下：

A、坏帐准备

项目	2003年累计影响数	2004年累计影响数
对公司报表影响		
资产减少	145,732.00	19,604.40
净资产减少	145,732.00	19,604.40
期初未分配利润减少	57,340.00	145,732.00

固定资产折旧采用平均年限法计算，并按固定资产类别、预计使用年限和预计残值率(3%)确定其折旧率。固定资产预计使用年限及年折旧率列表如下：

资产类别	使用年限	年折旧率
房屋建筑物	20—35 年	4.85%—2.77%
机器设备	5—10 年	19.40%—9.70%
运输设备	5—10 年	19.40%—9.70%
其他设备	5—15 年	19.40%—6.47%

年末对固定资产进行逐项检查，对固定资产由于市价持续下跌，或技术陈旧、损坏、长期闲置等原因，导致其可收回金额低于帐面价值的，将可收回金额低于其帐面价值的差额作为固定资产减值准备。土地和已提足折旧继续使用的固定资产不计提减值准备。

9、收入确认原则

商品销售：本公司将商品所有权上的主要风险和报酬转移给购货方；本公司不再对该产品实施继续管理权和实际控制权；相关的收入已经收到或取得了收款的证据；并且与销售该产品相关的成本能够可靠地计量时确认为营业收入的实现。

提供劳务：劳务已经提供，其经济利益能够流入本公司，并且与提供该劳务相关的成本能够可靠地计量时确认为收入的实现。在同一会计年度内开始并完成的劳务，则完成劳务时确认收入，如劳务的开始和完成属不同的会计年度，在提供劳务交易的相关成本能够可靠地计量时，则在资产负债表日按照完工百分比法确认相关的劳务收入。

他人使用本公司资产：与交易相关的经济利益能够流入企业且收入的金额能够可靠的计量确认收入。

10、利润分配顺序

本公司按《公司法》及公司章程进行利润分配，缴纳所得税后的净利润，按照下列顺序分配：

弥补企业以前年度亏损。

坏账的确认标准：债务单位撤销、破产、资不抵债、现金流量严重不足、发生严重自然灾害等导致停产而在可预见的时间内无法偿付债务等；债务单位逾期未履行偿债义务超过 3 年；其他确凿证据表明确实无法收回或收回的可能性不大。

坏账损失的核算方法：坏账损失核算采用备抵法，年末按账龄分析法计提坏账准备，比例如下：

帐　　龄	坏帐准备计提比例
1 年以内（含 1 年）	0%
1--2 年（含 2 年）	10%
2--3 年（含 3 年）	20%
3--5 年（含 5 年）	50%
5 年以上	80%

坏账准备计提范围：对本公司的应收款项（包括应收账款、其他应收款）计提坏账准备。

7、存货及存货跌价准备核算方法

本公司存货主要包括：原材料、低值易耗品等。

本公司存货的取得和发出的计价方法：取得时按实际成本计价，发出按加权平均法计价。

低值易耗品的摊销方法：低值易耗品领用时采用一次摊销法核算。

存货的盘存制度：实行永续盘存制。

年末，存货按成本与可变现净值孰低法计量，对存货由于遭受毁损、全部或部分陈旧过时或销售价格低于成本等原因，使其成本高于可变现净值的，按存货成本高于可变现净值部分，计提存货跌价准备；低值易耗品不计提跌价准备。

8、固定资产、累计折旧及固定资产减值准备的核算方法：

本公司固定资产在取得时，按取得时的实际成本计价。

固定资产确认的标准为：使用年限在一年以上的房屋、建筑物、机器、机械、运输工具和其他与生产经营有关的设备、器具等；不属于生产经营主要设备的物品，单位价值在 2000 元以上，并且使用期限超过 2 年的，也应作为固定资产核算。

三、会计政策、会计估计变更及会计差错更正的说明

1、报告期会计政策变更

公司以前年度执行《勘查设计企业会计制度》，自本年度起按《企业会计制度》作了如下变更：

① 坏账准备，原应收款项年末不计提坏账准备，现改为按应收款项年末账龄分析计提，计提标准详见附注二、9。

②存货原按成本计价，现改为期末按成本与可变现净值孰低原则计量，并按存货类别计提跌价损失准备。

③固定资产原按成本计价，现改为期末按单项固定资产可收回金额低于其账面价值的差额计提减值准备。

2004年1月1日，本公司根据集团公司执行《企业会计制度》的决议，开始执行新的《企业会计制度》，对固定资产折旧年限进行了调整，固定资产变更前后折旧年限及折旧率见下表：

类别	变更前		变更后	
	折旧年限	折旧率%	折旧年限	折旧率%
房屋建筑物	10—50年	9.70—1.94	20—35年	4.85%—2.77%
机械设备	8—18年	12.13—5.38	5—10年	19.40%—9.70%

固定资产折旧采用平均年限法计算，并按固定资产类别、预计使用年限和预计残值率(3%)确定其折旧率。固定资产预计使用年限及年折旧率列表如下：

资产类别	使用年限	年折旧率
房屋建筑物	20—35 年	4.85%—2.77%
机器设备	5—10 年	19.40%—9.70%
运输设备	5—10 年	19.40%—9.70%
其他设备	5—15 年	19.40%—6.47%

每期期末对固定资产进行逐项检查，对固定资产由于市价持续下跌，或技术陈旧、损坏、长期闲置等原因，导致其可收回金额低于帐面价值的，将可收回金额低于其帐面价值的差额作为固定资产减值准备，土地和已提足折旧继续使用的固定资产不计提减值准备。

9、收入确认原则

商品销售：本公司将商品所有权上的主要风险和报酬转移给购货方；本公司不再对该产品实施继续管理权和实际控制权；相关的收入已经收到或取得了收款的证据；并且与销售该产品相关的成本能够可靠地计量时确认为营业收入的实现。

提供劳务：劳务已经提供，其经济利益能够流入本公司，并且与提供该劳务相关的成本能够可靠地计量时确认为收入的实现。在同一会计年度内开始并完成的劳务，则完成劳务时确认收入，如劳务的开始和完成属不同的会计年度，在提供劳务交易的相关成本能够可靠地计量时，则在资产负债表日按照完工百分比法确认相关的劳务收入。

他人使用本公司资产：与交易相关的经济利益能够流入企业且收入的金额能够可靠的计量确认收入。

10、利润分配顺序

本公司按《公司法》及其他有关规定进行利润分配，缴纳所得税后的利润，除国家另有规定者外，按照下列顺序分配：

被没收的财物损失，支付各项税收的滞纳金和罚款。

发生严重自然灾害等导致停产而在可预见的时间内无法偿付债务等；债务单位逾期未履行偿债义务超过3年；其他确凿证据表明确实无法收回或收回的可能性不大。

坏账损失的核算方法：坏账核算采用备抵法，每期期末按账龄分析法计提坏账准备(个人欠款不提)，比例如下：

帐　　龄	坏帐准备计提比例
1年以内（含1年）	0%
1--2年（含2年）	10%
2--3年（含3年）	20%
3—5年（含5年）	50%
5年以上	80%

坏账准备计提范围：对本公司的应收款项（包括应收账款、其他应收款）计提坏账准备。

7、存货及存货跌价准备核算方法

本公司存货主要包括：原材料、低值易耗品等。

本公司存货的取得和发出的计价方法：取得时按实际成本计价，发出按加权平均法计价。

低值易耗品的摊销方法：低值易耗品领用时采用一次摊销法核算。

存货的盘存制度：实行永续盘存制。

每期期末，存货按成本与可变现净值孰低法计量，对存货由于遭受毁损、全部或部分陈旧过时或销售价格低于成本等原因，使其成本高于可变现净值的，按存货成本高于可变现净值部分，计提存货跌价准备；低值易耗品不计提跌价准备。

8、固定资产、累计折旧及固定资产减值准备的核算方法：

本公司固定资产在取得时，按取得时的实际成本计价。

固定资产确认的标准为：使用年限在一年以上的房屋、建筑物、机器、机械、运输工具和其他与生产经营有关的设备、器具等；不属于生产经营主要设备的物品，单位价值在2000元以上，并且使用期限超过2年的，也应作为固定资产核算。

1.10 Occupational Health and Safety

At all China Coal mining sites, safety meetings are held at the beginning of each day with resources consistently applied in an attempt to achieve the best possible safety record. All sites appoint safety monitors from management and the workforce to inspect safety matters in the mines and implement changes to improve safety conditions and standards.

The mines conduct formal investigations after accidents or incidents to identify the root cause and to communicate and prevent the occurrence of similar incidents. Safety training at all mines is a formalised and scheduled process which includes both permanent and contract employees. In general, good performance was reflected in safety statistics and some mines have been reporting zero minor or serious injuries for a number of consecutive years.

The safety performance reported for all operating companies between 2003 and 2005 is shown in Table 1-12.

Table 1-12: Safety Performance – China Coal

Operating Company	Number of Occurences		
	2003	2004	2005

1. Fatal: accident causing death (number indicates lives claimed)
2. Serious: accident requiring hospitalisation and do not return to work for more than 24 hours (include fatal incidents)
3. Minor: accident which does not require hospitalisation and the employee returns to work within 24 hours

1.11 Environmental

SRK found China Coal to be an environmentally pro-active and compliant company across the subsidiary companies assessed. SRK found no incidence of environmental breach and that China Coal's environmental compliance procedures either meet or exceed all requirements placed on the company at all statutory levels. At some sites the company's water recycling and treatment technologies are of world-class standard. Based on information provided by China Coal and inspection of the above listed sites, SRK concludes that it is unlikely that China Coal has any major environmental liability concerns.

1.12 Infrastructure

1.12.1 Water

With regard to water the mine sites are all self-sufficient, with supply from surface boreholes controlled by the respective mines. In all cases the supply of water is in excess of usage, and in most cases the boreholes also supply water to local villages and towns for domestic use. Water collected in the underground mines is generally pumped to the surface and treated for use as sewerage handling on the surface or recycled for underground use. In some cases the mines have an inflow of groundwater with infrastructure established to gather water for underground use or pumping water to the surface for alternative uses.

1.12.2 Electricity

Electricity supply to the mines is through the government-owned public grid except for the Kongzhuang, Yaoqiao and Longdong mines, which are supplied by two local power stations owned by Datun Coal. We understand the supply of power varies from reliable to extremely reliable. The power supply is in excess of the required usage for the mines except at Shaqu mine where power supply is insufficient during four months in spring and winter, causing longwall production to cease for between 5 and 10 days per month. Alternative power supply options are already under investigation with the low cost option of a local gas-fired power station being considered. The supply of methane to the power station is likely to be sourced from the underground network at Shaqu mine.

1.12.3 Ventilation and Dust Prevention

Most of the underground mines operated by China Coal use large ventilation shafts connected to the surface to supply fresh air to underground operations. In all cases ventilation quantities in the underground mines are in compliance with Chinese legislative requirements. Roof and sidewalls are sprayed and washed down with water on a periodic basis as required by Chinese regulation. Zero to very low levels of methane were reported or detected during underground visits, except for Shaqu mine which has been identified as a high methane level mine. This situation is being adequately managed by the use of gas drainage systems and adequate ventilation. Dust prevention measures are implemented and maintained at all the mines and personal protective equipment (PPE) is supplied to personnel when required by environmental conditions.

2.1 Background

2.1.1 Nature of the Brief

China Coal commissioned SRK to provide an independent Competent Persons Report on the assets of the company in connection with the proposed listing of the group on the HKSE. This report describes the mines and processing facilities managed by China Coal and reviews all technical aspects of these assets.

2.1.2 Purpose of the Report

The purpose of this report is to provide potential investors in the proposed China Coal Initial Public Offering (IPO) with an independent opinion of the condition, production capability and future prospects of the mines and processing facilities that are managed by the company.

This report is required to comply with the reporting standards under the listing rules of HKSE and may be included in China Coal's information circular to be prepared in conjunction with the proposed listing of the company. This report does not provide a valuation of the mineral assets or any comment on the fairness and reasonableness of any transactions related to the assets of the company.

2.1.3 Reporting Standard

This report has been prepared to the standard of, and is considered by SRK to be a Technical Assessment Report under the guidelines of the Valmin Code. The Valmin Code is the code adopted by the Australasian Institute of Mining and Metallurgy (AusIMM) and the standard is binding upon all AusIMM members. The Valmin Code incorporates the JORC Code (see www.jorc.org.au) for the reporting of Mineral Resources and Coal Reserves.

This report is not a valuation report and does not express an opinion as to the value of mineral assets. Aspects reviewed in this report do include product prices, socio-political issues and environmental considerations, however SRK does not express an opinion regarding the specific value of the assets and tenements involved. SRK has estimated China Coal's resources using the principles of the JORC Code as guidelines and incorporating parameters consistent with Chinese standards.

2.2 Methodology

2.2.1 Resource Classification

SRK's methodology for resource classification has been rigorous, particularly as it relates to both drill-hole spacing and to the treatment of drill-core recoveries. SRK has strictly applied the line spacing criteria as defined by the most recent PRC regulations, resulting in the exclusion of all 'category C' coal resource blocks from the resources calculation in accordance with the principles of the JORC Code.

Resource estimates are based on estimates that have been validated and authorised by China's leading authority for reporting Chinese resources, the Ministry of Land and Resources (MOLAR). Parameters used by MOLAR are consistent with Chinese standards and include coal seam core recovery >75% from boreholes and categorisation for resources based on the following borehole spacing criteria:

- Measured: 500 to 1,000 m distance
- Indicated: 1,000 to 2,000 m distance
- Inferred: 2,000 to 4,000 m distance

As an example, SRK performed a comparison check using a computer model of a subset of the Antaibao data representing a third of the Antaibao mine area. It was established that the Chinese method of estimation was under-estimating the 'Resources' by 3%, an error well within the limits of the expected 'Measured Resource' estimation accuracy level. In applying additional factors to the conversion/classification of resources, SRK has reviewed the complexity of the geology and overall reconciliation of the operating mines as a guide to future performance of the resource.

2.2.2 Exploration Core Recovery

The JORC Code includes a guideline that exploration core recovery should be greater than 95% for the borehole to be included in 'Resources' calculations. SRK reviewed the core recovery of China Coal exploration boreholes providing an assessment of the quality of the resulting seam core recovery. SRK then assigned each category from the Chinese reserves estimates to equivalent resources categories. As recommended in the guidelines to the JORC Code, where core recovery was less than 95%, SRK assigned the Chinese estimates to a lower resources category.

2.2.3 Coal Resources

Data throughout this report and in the following tables show SRK's resources estimate on a mine site basis and indicate the resources estimate based on 100% ownership of each mine.

2.2.4 Coal Reserves

Mine plans and supporting information supplied to SRK were used, in principle, to verify the feasibility of mining and recoveries. SRK can deduce from a review of reconciliation of the production records that the reserves estimates are a reasonable indication of future performance of the reserves.

Mine plans reviewed by SRK were prepared on the basis of extraction of the entire resource at each site. Reserves have been estimated incorporating the following parameters:

- Mining recovery factors of 95% for open-pit and 75% for underground mines have been applied to the entire resources estimate to estimate recoverable reserves
- A constant beneficiation yield specific to each CPP and mine site that includes wash plant yield, by-pass coal and rejects sold at a profit, has been applied to estimate marketable reserves for each mine

2.2.5 Environmental

SRK completed an environmental assessment of all China Coal's mines. In addition to assessing the actual mine sites, relevant infrastructure associated with coal mining, handling, processing and transporting operations were inspected and reviewed.

2.2.6 Work Program

The SRK work program included the following items:

- Desktop review of data provided by the group and planning for site visits

- Travel to China to inspect assets and discuss technical aspects with the group staff.
- Compilation of a draft report
- Data analysis and completion of draft report
- Review of draft report by China Coal, its lawyers, accountant and advisers, who provided comments to SRK
- Report editing by SRK as required
- Finalisation of the report

SRK relied upon China Coal for the provision of production and cost data which was reviewed and analysed by SRK to confirm the reasonableness of the information.

2.3 Risk analysis

SRK has reviewed a range of risk issues at each mine and CPP operated by China Coal. SRK does not regard China Coal's mining operations to be high risk, inadequately managed or otherwise unduly susceptible to major events. There is no basis to predict or otherwise anticipate major operational shortfalls at any of China Coal's mining operations. China Coal's management is aware of potential risk issues and the sustained proactive safety and engineering controls are an essential component of operations management to minimise and manage risk. Within the context of event risks, it must be recognized that while such events are rare, there is no allowance in China Coal's plans and projections for major production shortfalls. China Coal's major mines are planned to operate at capacity, and in the unlikely case that a material failure occurs at one of China Coal's major mines, there is no excess production capacity available to offset the loss of production and associated revenue stream from the affected mine.

2.4 SRK Consulting

2.4.1 Statement of SRK Independence

Neither SRK nor any of the authors of this report have any material present or contingent interest in the outcome of this report, nor do they have any pecuniary or other interest that could be reasonably regarded as being capable of affecting their independence or that of SRK.

SRK has no prior association with China Coal in regard to the mineral assets that are the subject of this report. SRK has no beneficial interest in the outcome of the technical assessment being capable of affecting its independence.

SRK's fee for completing this report is based on its normal professional rates, plus reimbursement of incidental expenses. The payment of that professional fee is not contingent upon the outcome of the report.

2.4.2 Warranties

China Coal has represented to SRK that full disclosure has been made of all material information and that, to the best of its knowledge and understanding, such information is complete, accurate and true.

2.4.3 Indemnities

As recommended by the Valmin Code, China Coal has provided SRK with an indemnity under which SRK is to be compensated for any liability and/or any additional work or expenditure resulting from any additional work required:

- which results from SRK's reliance on inaccurate information provided by China Coal or relates to China Coal not providing material information, or
- which relates to any consequential extension workload through queries, questions or public hearings arising from this report.

3 Pingshuo Coal Company

3.1 Introduction

China Coal owns 100% of Pingshuo Coal Company (Pingshuo Coal) which has three operating companies namely, Pingshuo No.1 Coal Company, Pingshuo Anjialing OP Coal Company and Pingshuo East OP Mine. These companies own and operate the Antaibao open-pit mine and CPP, the Anjialing open-pit mine and CPP and the Anjialing underground mine and Muguajie CPP. The company is proposing to construct a new mine to the east of the existing mines (known as Pingshuo East or the Donglutian Project) and an underground mine (Antaibao underground) to the north of the current Antaibao open-pit mine. The company is actively seeking to expand existing mines and production facilities. Two new CPPs are in final stages of construction and another CPP is proposed to be constructed within the next two years to wash the coal produced at Pingshuo East mine.

In 2004 Pingshuo Coal mined 30.1 Mt of raw coal, purchased 9.1 Mt of raw coal and processed 35.3 Mt of coal to produce 29.7 Mt of product coal. Approximately one-third was exported via the port at Qinhuangdao and approximately two-thirds was sold to power generating stations on the east coast of China.

3.2 Corporate Management Structure

Pingshuo Coal uses a hierarchical management structure as shown in Appendix 2.

Workforce numbers for Pingshuo Coal are shown in Table 3-1.

Table 3-1: Workforce Numbers - Pingshuo Coal

Category	Employees
Production [1]	
Antaibao OP	1,464
Anjialing OP	774
Anjialing UG	609
Management [2]	963
Other [3]	4,996
Total	**8,806**

1. Permanent and contractor employees involved in mining activities
2. Senior management - excludes functional departments
3. Only personnel involved with the mines - excludes Coal Handling Preparation Plants, rail etc

Salaries for junior staff are generally RMB1,500 per month, those for skilled underground miners are approximately RMB2,000 per month, and those for senior staff are as high as RMB8,000 per month.

3.3 Occupational Health and Safety

Pingshuo Coal has a senior manager who is responsible for safety and training. The mine uses a system of safety monitors appointed from management and staff as well as from underground workers at the mines. The company has an accident and injury reporting system which adheres to Chinese industry standards. The recent accident statistics for Pingshuo Coal are shown in Table 3-2. These figures include the Antaibao open-pit, Anjialing open-pit and Anjialing underground mines and the three CPPs. These figures relate to employees of the company and contractors working on the mine sites.

Table 3-2: Accident Statistics, 2003 to 2005 - Pingshuo Coal

Category	2003	2004	2005
Fatal [1]	0	6	1
Serious [2]	9	10	7
Minor [3]	18	20	15

1. Accident causing death (number indicates lives claimed)
2. Accident requiring hospitalisation and do not return to work for more than 24 hours (includes fatal incidents)
3. Accident which does not require hospitalisation and employee returns to work within 24 hours

Three fatalities in 2004 occurred in the CPPs. No fatalities occurred in the open-pit mines, however three fatalities occurred to contractors during 2004 at the Anjialing underground mine. One fatality occurred at the Anjialing underground operation during 2005.

The safety statistics for Pingshuo Coal are superior to the average of the Chinese coal industry. The ratio of fatalities to Mt of production in 2005 was a relatively low 0.025. Formal investigations are conducted after an incident to establish the root cause and to formally communicate findings to employees and other mines (if relevant) at the start of shift safety meetings. This communication is delivered by the team leader to company employees.

The company provides a reward of RMB100 to workforce members who report safety hazards. Safety training is conducted annually and amounts to between 48, 60 and 120 hours/year depending on the position of the employee. Pingshuo Coal focuses on safety initiatives and procedures and provides induction and safety training for new employees and contractors.

3.4 Environmental Assessment

3.4.1 Introduction, Scope and Background

SRK conducted an environmental assessment of all Pingshuo Coal's mines including interviews with key environmental staff members of Pingshuo Coal, inspection of relevant environmental documentation and interpretation of responses to an environmental questionnaire provided by SRK.

This environmental assessment is reported entirely at corporate level. This approach was adopted as Pingshuo Coal maintains an environmental group within its technical division located at head office that oversees all operations. Pingshuo Coal's company-wide environmental management model has been developed to allow feedback from all three operational mines, with site-specific variations as required. Comments specific to a particular mine are detailed as appropriate throughout the text of this environmental assessment.

3.4.2 Corporate Environmental Awareness

Pingshuo Coal has ISO14001:1996 accreditation for its environmental management system at the Antaibao open-pit mine and for the management of its residential facilities and infrastructure in Pingshuo town proper. Antaibao open-pit mine is also accredited under ISO9001:2000 for quality system management. Pingshuo Coal has applied for both ISO14001:1996 and ISO9001:2000 accreditation for its Anjialing open-pit mine which was pending in 2005. Anjialing underground mine has only been producing coal since 2003 and as a result, Pingshuo Coal has not yet applied for either ISO14001:1996 or ISO9001:2000 but plans to do so in future years. The company has applied for OHSAS18000 safety accreditation for Antaibao and Anjialing open-pit mines, in addition to Anjialing underground mine. A decision on accreditation was still pending at the time of this report.

3.4.3 Mining Title and Royalty Payments

Pingshuo Coal is licenced to mine at Antaibao and Anjialing open-pit mines, and also at Anjialing underground mine. Pingshuo Coal currently holds an exploration licence for the proposed Pingshuo East open-pit mine, and has received official mining approval from MOLAR, and is currently awaiting receipt of its mining licence. Pingshuo Coal submitted a feasibility study to MOLAR in November 2004 to mine 8 Mtpa from the proposed Antaibao underground mine. MOLAR has issued an exclusive resource rights certificate to Pingshuo Coal for the area, and Pingshuo Coal has also received a mining licence for 6 Mtpa from MOLAR, dated 30 August 2006. Mining licence details are provided in Table 3-3.

Pingshuo Coal holds the surface rights on all mining sites, with the only options being held by the government. Pingshuo Coal is not permitted to divest mining licences to other commercial operations. Should Pingshuo Coal still have mineable coal reserves following expiration of the mining licences, the standard accepted procedure is to apply for a new or extended licence. All mining licences were issued by MOLAR.

Table 3-3: Mining Licence Details – Pingshuo Coal

Mine	Mining Licence No.	Mining Area (km^2)	Issue Date	Licence Tenure
Antaibao Open-pit	1000000120004	24.0	Sept 2004	27 years
Anjialing Open-pit	1000009940011	54.7	May 1999	30 years[1]
Anjialing Underground	1000009940027	10.7	July 2004	30 years[1]
Pingshuo East Exploration Area	1400000330067 (Exploration licence)[2]	48.7	May 2003	30 years (anticipated)[1]
Antaibao Underground	1000000610106	19.2	August 2006	30 years

1. The maximum permissible mining tenure under the Mineral Resources Law (1996 as amended) is 30 years
2. Pingshuo Coal has received MOLAR approval to mine an area of 48.7 km^2, and is presently awaiting a mining licence which is expected in March 2007

Pingshuo Coal pays mining royalties and taxes according to Chinese Mineral Resources Law.

3.4.4 Environmental Licensing, Compliance and Reporting

For all new projects in China, it is a statutory requirement that environmental considerations are factored into a detailed project feasibility study which is presented to the Environmental Protection Bureau of the respective province in which the operation is located (Shanxi in this instance). This environmental component is essentially akin to an environmental impact assessment report. The various operational environmental licences are then granted to the mining company based on the sustainability of the operation according to the environmental feasibility study, in addition to its ability to manage environmental obligations under the National Environment Protection Law (1989).

For Pingshuo Coal operations, operational licences were granted at provincial level for Antaibao open-pit and Anjialing underground and open-pit mines for boundary noise, gaseous emissions and water discharge. Pingshuo Coal maintains licences at individual mine levels from the local Shouzhou County Water Resource Management Commission for groundwater extraction. In 2005 Pingshuo Coal was in the process of applying to the local, provincial and state governments' Environmental Protection Bureaus for individual environmental emission and discharge licences (e.g. water, waste, gaseous emissions etc.) as a new licencing system is being implemented. The project feasibility study for the proposed Pingshuo East open-pit coal mine has been submitted for approval to the Shanxi Environmental Protection Bureau.

Each mine operated by Pingshuo Coal prepares an individual environment report to the Chinese (State) Environmental Protection Bureau, the Shanxi Environmental Protection Bureau and the local Shouzhou Environmental Protection Bureau twice yearly. The reports incorporate information regarding volumes of solid waste generated, noise data, wastewater data, gaseous emissions data, environmental budgets and completed rehabilitation. The reports are passed down from state to provincial regulators for approval, then to local county environmental regulators who conduct random inspections. Pingshuo Coal must, therefore, remain environmentally vigilant and be prepared for random checks, which are carried out by both provincial and local environment agencies several times a year to ensure compliance. In addition, Pingshuo Coal submits a twice-yearly summary environmental planning report to the State Environmental Protection Bureau.

SRK completed random inspections of the following environmental reports and found that all reported environmental data were within relevant guidelines and standards, including:

- Half-yearly Pingshuo Coal corporate summary environmental planning report to the State Environmental Protection Bureau (2004)
- Residential area waste water treatment plant proposed expansion report (2004)
- Application report for ISO14001:1996 compliance at Anjialing open-pit mine (2004)

To date, Pingshuo Coal has not been fined for any breach of environmental non-compliance.

3.4.5 Environmental Staff

Pingshuo Coal has two environmental professionals located in its corporate office, in addition to one environment manager located at Antaibao and another at Anjialing who look after both the underground and open-pit mines. In addition to these four environmental staff, there are up to approximately 30 additional technical and operational staff assisting with data capture and day-to-day environmental assistance across the sites. Pingshuo Coal ensures that its environmental managers are suitably qualified. In addition to these staff, the waste water treatment plants owned and operated by Pingshuo Coal have a dedicated environmental staff member who oversees environmental issues.

3.4.6 Environmental Planning and Budgets

Pingshuo Coal is proactive in its environmental budgeting, having invested over RMB5.2 M towards mine site rehabilitation at both Antaibao and Anjialing open-pit mines for the year 2004 as reported in the Pingshuo Coal 2004 Annual Environmental Report. A similar amount was spent on noise, dust, water and emissions management equipment and monitoring across the company. A further RMB6.6 M was spent on improvements and upgrades to the Pingshuo 'life area' located in the town proper, which included landscaping, waste water management and heating. A further, RMB11.5 M has been allocated for environmental protection measures for the proposed Antaibao underground mine as stated in the 2004 feasibility study. Environmental planning at the mines comprises 10 year progressive rehabilitation and environmental management plans, which is in line with both Chinese and western standards.

3.4.7 Water Management

Pingshuo Coal has a strong company-wide emphasis on water conservation, as demonstrated by extensive on-site recycling. This policy extends across the mines, coal washing plants and waste water treatment plants (WWTP). These plants are all working towards a zero water discharge policy. The town's WWTP, which is operated by Pingshuo Coal, releases water that meets relevant criteria into the Qili River during the wet season.

Pingshuo Coal recently completed an upgrade of its water holding reservoir located between Antaibao and Anjialing open-pit mines. Pingshuo Coal has a recycled water policy with zero discharge during agricultural irrigation periods, and a 95% re-use criterium during non-irrigation periods. The 5% balance is discharged into Dashna Creek under licence. Any surplus run-off water is used for dust suppression on the mines, while treated sewage water is used for coal washing and on rehabilitated areas.

Supplementary water is sourced for the mines from 10 groundwater wells approved by local authorities and located at Liu Jiakou. The majority of this water is used for coal washing. Surface water is managed across the mine sites by a series of drains and sedimentation dams.

3.4.8 Waste Rock, Tailings and Rehabilitation Management

The Chinese mining industry is regulated by MOLAR under the Mineral Resources Law (1996 as amended). Under this law no rehabilitation bond or surety is required, however if mining activities result in damage to arable land, grassland or afforested areas, the mining operator must take appropriate measures to return the land to a suitable condition within a prescribed time frame. Any entity or individual that fails to fulfil its rehabilitation obligations may be fined and denied application for land use rights for new land. Government regulators routinely inspect the progress of rehabilitation in this regard.

Waste rock at both Antaibao and Anjialing open-pit mines is disposed of within the mine voids, though out-of-pit disposal was required during the initial mine development stages at both mines. The waste rock is a mixture of silicious sandstone, calcite and claystone. The claystone contains some visible pyrite, though as the waste is disposed of within the mine pits and subsequently buried, it is not considered to be a potential contamination issue as any sulphides will be stored in an anoxic environment. The minimal volumes of waste rock generated from Anjialing underground mine are disposed of in Anjialing open-pit mine. The same waste management and disposal policy is planned for Antaibao underground mine. SRK believes that these waste management policies are logical given the centralised location of the coal wash and power station infrastructure relative to the mine sites. Any potential lack of space in the open-pits due to the 'bulking' of waste rock upon removal is compensated for by the additional space generated by coal extraction from the pits. Waste (or tailings) from the coal wash plants is either burnt in the on-site power station or disposed of in pit. Following completion of the new coal wash plants and upgrades to existing plants, 100% of coal wash rejects will be used as fuel in the power plant. Total solid waste volumes as reported in 2004 across all operations were approximately 5.6 Mt, of which over 99% was waste rock.

Both of the two out-of-pit waste rock dumps at Antaibao open-pit mine have been rehabilitated using a 1.5 m thick clay cap and revegetated using local species. The local clay soil used as a capping layer has a pH value of approximately 8, and therefore has a slightly neutralising effect on any acid generated as a result of oxidising sulphide minerals. Surface water on the dumps is redirected through a series of channels and sedimentation dams. Work is soon to begin on progressive rehabilitation of Anjialing open-pit waste rock dumps.

3.4.9 Dust Management

Dust is managed on-site at the open-pit mines by recycling surface run-off water. Antaibao open-pit has six operating water tankers while Anjialing has five. In addition, dust is suppressed at Anjialing underground mine through the use of water sprays attached to the longwall mining equipment. Dust is monitored monthly on the open-pit mine sites by automatic laser sampling methods in line with environmental compliance requirements. A computerised dust monitoring system is operational at Anjialing underground mine.

3.4.10 Social and Regulatory Relations

Following discussions with Pingshuo Coal representatives it appears that relations with both local residents and regulatory bodies are sound. Good relations with the local community are primarily due to Pingshuo Coal providing continued local job opportunities and employment for a large number of individuals, with positive flow-on effects on the local and regional economy in service industries. Residents directly affected by both underground and open-pit mining operations are compensated by Pingshuo Coal and relocated from the area as required under the Mineral Resources Law (1996).

In accordance with the legal requirements for rehabilitation of affected agricultural land and re-settlement and compensation of affected persons, Pingshuo Coal includes a budgetary allocation for such activities. One notable impact of Pingshuo Coal's mining activities is surface subsidence, which is the lowering of the land surface due to the extraction of subsurface coal, often with concomitant surface cracking. Pingshuo Coal has removed any such impacts on local landowners at Anjialing underground mine by purchasing the surface rights to the land. Pingshuo Coal plans to manage these impacts at the proposed Antaibao underground mine by relocating small villages and financially compensating any affected persons, plus financially compensating farmers whose land is affected by subsidence so that rehabilitation may be effected. The budgeted financial consideration will also be used to temporarily relocate any major infrastructure including roads and powerlines prior to sub-surface mining, as SRK observed almost 100% surface expression of the extracted coal seam height due to a combination of its relatively shallow sub-surface depth and the nature of the overlying stratigraphy. In addition, Pingshuo Coal plans to leave coal pillars below major settlements that are not relocated to avoid impacts from surface subsidence.

All indications are that relations with stautory bodies are sound. It should be noted that Pingshuo Coal has never been fined for any environmental mishaps. Pingshuo Coal possesses documentation from the local regulators supporting its environmental record. Further, rapid approval of proposed mining at Pingshuo East and Antaibao underground is testimony to the sound relationships with regulatory authorities.

3.4.11 Environmental Assessment Conclusion

Following interviews with key Pingshuo Coal environmental staff and inspection of environmental documentation and operational sites, it is apparent that Pingshuo Coal takes its environmental responsibilities very seriously. SRK found that Pingshuo Coal has a sound and proactive approach to its environmental responsibilities and is managing its operations in compliance with its environmental obligations. This opinion is supported by the fact that Pingshuo Coal has not been fined for any environmental incident to date across its operations. Specific focus is on water management and conservation, with several plans in place for increasing the use of recycled water.

3.5 Coal Processing and Transport

All coal produced by the Pingshuo Coal mines is washed before it is sold to customers. Two-thirds of the product is sold to power stations in the coastal areas of China, although the majority is handled through port facilities at Qinhuangdao before distribution to customers. The balance of the product is exported through the port. Pingshuo Coal purchases external coal to supply the demand of customers, with between 2.8 Mt and 7.4 Mt purchased per annum over the last four years.

The Materials Handling and Process Plant flowsheets are similar for all CPPs in the Pingshuo area and are applicable to the operating plants, i.e. Antaibao and Anjialing, and the newly constructed plants, i.e. Muguajie and the new Antaibao and Anjialing CPPs. A copy of a typical Materials Handling and Process Plant flowsheet is attached in Appendix 3. Operating plants at Antaibao and Anjialing and the Muguajie plant are all equipped with their own on-site magnetite mills.

Pingshuo Coal utilises the government rail network to rail its coal within the 750 kilometre (km) railway system which is capable of transporting 200 Mtpa. The company has a contractual agreement with Datong Rail for the use of its rail loop, and although this agreement lapsed on 31 July 2004, it remains in place unless further negotiations are called by either party. A separate fee is then paid for use of the government railway system which is controlled by the China National Railway Ministry.

3.5.1 Antaibao CPP

Materials Handling

Three hoppers each with a capacity of 1,800 tonnes per hour (tph) have been installed at the CPP. The feed passes to a single stage plant that can either by-pass ROM coal to product (1,600 tph maximum) to produce high ash power plant product or direct the coal to the CPP. Product bins are dedicated for 120,000 tonne (t) fine coal, 15,000 t low sulphur coal and 15,000 t high sulphur coal. A reject bin accepts the reject stream and no tailings are raised as all fines are included in the product.

Process Plant

The CPP consists of three identical modules each nominally 783 tph and operating to 800 tph. Each module consists of:

- Dense medium bath for 50 millimetre (mm) x 13 mm
- Dense medium cyclone for 13 mm x 0.5 mm
- Drying only for 0.5 mm x 0 mm

A workforce of 242 operates and maintains the Antaibao CPP.

Capital Works

Three new remote dump hoppers are being installed to reduce travel distance of the mine trucks. The raw coal from these hoppers is conveyed to a new ROM area that includes rill towers. The fines are dried in a two-stream drying plant, however this is being replaced by a four-unit hyperbaric filter installation which is in the commissioning phase. The purpose of this is to save power and decrease cost, however the fines product moisture will rise from 10% to 20%. As the fines are a small component of the total product, total product moisture will only increase by a small amount and should not affect the sales price.

Rejects and CPP Yield

Tailings are added into the product stream and the large reject returns to the open-pit. A yield of 75% to 80% is achieved from the CPP which is reasonable.

3.5.2 Anjialing CPP

The construction of this plant commenced in 1998. In 2005 it processed 15.54 Mt and operated at 65 t per man shift.

Materials Handling

Coal handling consists of two feed lines, each with a capacity of 2,500 tph and containing a primary and a secondary MMD crusher. Coal is dumped in two bins of 1,700 and 2,500 t capacity respectively and a rill tower. The dump hoppers are situated 2.2 km from the plant.

Process Plant

There are three, two-stage modules for production of high grade product and middlings and two single stage modules for domestic thermal coal production. A new line with a capacity of 1,300 tph has been added for plant bypass. Scheduled plant maintenance is carried out for 32 hours twice per month and modular maintenance is carried out for eight hours each week. Availability is reported to be above 90%.

The operational capacity of the plant is 2,400 tph and the total capacity including bypass amounts to approximately 17.5 Mtpa. Yield was reported as 75% to 80% and magnetite usage is 1.4 kilograms (kg) per ROM t.

A workforce of 161 operates the plant with an additional 100 people forming the maintenance pool. The plant is generally well-maintained and in very good order.

Quality

Coal quality as shown in Table 3-4 applies to both Anjialing and Antaibao, as both plants are on adjacent sites.

3.5.3 Muguajie CPP

Muguajie CPP is a new plant which was commissioned during 2005.

Materials Handling

The plant has been provided with a large ROM area set up with two large rill towers, one for each seam. The product area has three similar rill towers and the stated capacity for each tower is 1 Mt. The Muguajie plant is very closely situated to a plant belonging to another company which will enable sharing of the train loading loop. Each plant will however be equipped with its own loading bin.

Process Plant

Two single stage modules process coal for domestic thermal markets with each module rated at 750 tph. The plant is set up for:

- Dense medium bath for 50 mm x 13 mm
- Dense medium cyclones for 13 mm x 0.5 mm
- Fines unwashed to product for 0.5 mm x 0 mm

Production is budgeted for 300 days/year and 14 hours/day. The plant has a budgeted design rate of 6 Mtpa but is expected to operate at 10 Mtpa. The two bath modules are set up opposing each other with one constructed from imported equipment and the other with locally manufactured equivalent.

The plant will operate with 57 operators and 100 maintenance personnel.

Coal Quality

Quality figures for the feed stream and the product at Muguajie plant are shown in Table 3-5.

3.5.4 New CPPs for Antaibao and Anjialing Underground

Two new plants are in the final stages of construction in close vicinity to the two existing CPPs of the open-pit mines. Each plant is reported to have the same flow chart as Muguajie and has been designed with three modules for a capacity of 10 Mtpa each. These sites were inspected by SRK during May 2005, and at the time the plant at Anjialing was approximately 30% complete. The construction of the body of the plant was well underway, the thickener shell was complete and the conveyor transfer towers were in progress. The plant at Antaibao was approximately 15% built during the site visit, with the rill towers erected and the ground floor of the plant completed.

3.5.5 Coal Production History

The historical production for the Pingshuo Coal processing plants is shown in Table 3-6, Table 3-7 and Table 3-8.

3.6 Long Term Plans

Pingshuo Coal demonstrates a determined approach to expansion and production increase through the development of Pingshuo East open-pit and the Antaibao underground mine, as well as a significant production increase planned for Anjialing underground mine. In the meantime, if there are good opportunities, China Coal proposes it will acquire mines in the Pingshuo area, to further increase their reserves and production.

3.7 Antaibao Open-pit Mine

3.7.1 Introduction

The Antaibao open-pit coal mine was established as a joint venture between China Coal and Island Creek Coal Company of the United States of America. Design work and construction was completed in 1986 and production commenced in 1987. Antaibao took 100% control when Island Creek Coal Company of the United States of America exited the joint venture. Antaibao uses mostly imported mining equipment and produced 14.8 Mt of raw coal during 2004 and 16.4 Mt in 2005. The coal preparation plant processed 15.8 Mt of product coal during 2005. Antaibao open-pit coal mine produces 100% thermal coal with a contracting company employed to conduct pre-stripping operations.

3.7.2 Geology and Mineral Resources

The topography consists of undulating hills with an elevation range from 1,200 to 1,500 m above sea level. The variation is primarily due to the large river systems that wind through the region.

The stratigraphy of the Pingshuo mines is outlined in Table 3-9.

Table 3-9: Stratigraphic Sequence - Antaibao and Anjialing

Stratigraphic Unit	Thickness Range (m)	Average Thickness (m)
Quaternary	0 to 63	25
Tertiary	0 to 59	23
Upper Permian	0 to 148	25
Upper Lower Permian	0 to 97	49
Lower Lower Permian (Shanxi Group)	11 to 98	60
Upper Carboniferous (Taiyuan Group)	57 to 105	79

The Quaternary material is usually unconsolidated and weathered soil, clays, sands and gravel deposited by recent river systems. The Tertiary material, although generally semi-consolidated sediments, has some hard bands of sandy siltstone interspersed throughout the sequence. The Tertiary sediments constitute the bulk of the overburden material and unconformably overlie the Permian sediments.

The #1 seam to the #3 seam belong to the Shanxi Group. Generally the #1 to the #3 seams are either too thin or not present due to being eroded away by the overlying Tertiary sediments. The #4 to the #11 seams are of the Taiyuan Group. Most of the seams are too thin or absent and are not recovered in the mining operations. Only the #4, the #9 and the #11 seams are mined. The #4 seam is often found directly below the unconformity between the Tertiary and Permian sediments. The overburden averages 100 m to the #4 seam, but due to topographic variation the #4 seam can be found as close as 40 m to the surface (see Table 3-10). The top 1 m of the #4 seam is weathered and a parting band at the base of this weathered zone is the marker for the top of the working section.

Table 3-10: Open-pit Seam Statistics - Antaibao

Seam	Thickness Range (m)	Average Thickness (m)	Average Interburden (m)
#4	8 to 14	10	100 (to surface)
#9	10 to 17	14	31
#11	3 to 6	4.5	15

The interburden between the #4 and the #9 seams ranges from 30 to 40 m and is generally comprised of sandstone with minor siltstone and claystone. These sediments are strong, requiring blasting prior to removal. Between the #9 and the #11 seams the interburden ranges from 10 to 20 m. The sediments between the #9 and the #11 seams are generally sandstones and siltstones. The siltstones display abundant pyrite on the bedding planes. As well, extremely hard ironstone nodules (up to 10 centimetres (cm) in diameter) are found to occur in the sandstone sediments which themselves are extremely hard due to silicification.

Structure

The Antaibao area is bound to the east and the west by major faults trending N20°E. Faults within the Antaibao area are small scale (less than 5 m throw), with normal faults trending N15°W, and have little or no affect on the mining recovery of the seams.

Antaibao has one main fold feature 475 m along an axis of N60°W, with dips of 3 to 4 degrees on the flanks of the fold. There is no evidence of igneous activity in the Antaibao coalfield.

Coal Quality

All coal mined at Antaibao produces thermal coal products, primarily for power station use. Although the majority of products are utilised in the domestic market, the lower ash products are generally sold on the export market.

All ROM coal is washed through a dense medium cyclone wash plant at the mine site (see Coal Processing section for more details). The typical quality parameters of each seam are summarised in Table 3-11.

Table 3-11: Typical Coal Quality - Antaibao Open-pit Seams

Seam	Inherent Moisture % (ad)	Raw Ash % (ad)	Washed Ash F1.60 % (ad)	Raw Sulphur % (ad)	Washed Sulphur % (ad)
#4	2.8	27.0	14.0	0.40	0.68
#9	2.1	25.0	13.0	1.50	2.18
#11	2.0	33.0	14.5	3.00	2.17

Resource Estimation

There have been three phases of drilling at Antaibao, each having different levels of reliability in terms of seam tonnage and coal quality.

In the 1960s drilling was performed by the Chinese Central Government using NQ-size (47.6 mm diameter) core drilling equipment. These boreholes were found to have a low core recovery rate (usually less than 90%) but are considered to be reasonably reliable in terms of coal thickness (due to the use of geophysical logs). In the resource estimation process, government boreholes were given a lower reliability rating in accordance with the Chinese Resource Estimation rules.

The second drilling program was conducted in the 1980s using a drilling rig imported from the United States of America. This rig provided PQ-size (85 mm diameter) and proved to be successful in attaining a coal seam recovery rate greater than 95% on average. If the core recovery was lower, the borehole was re-drilled.

The third drilling program commenced in the 1990s and continues on an ongoing basis. The drilling techniques of the 1980s program are the same as used in the third program. A geologist is in attendance at the drilling rig at all times to record chip samples and to determine coring intervals. Seams are sampled as one complete ply for analytical testing and average borehole spacing is 300 m.

Therefore, in terms of reliable data, the boreholes of the 1980s and 1990s (to current) are regarded as highly reliable data points for use in the estimation of coal resources.

The parameters used to estimate coal reserves for all the Pingshuo Coal mines are as follows:

- Minimum coal seam thickness of 1 m
- Maximum ash content of 40% (air dried)
- Maximum sulphur content of 3%
- Tonnage is calculated using coal density only and does not include partings (e.g. for the #11 seam, actual density ranges from 1.5 tonnes per cubic metre (t/m^3) to 1.7 t/m^3, but for resource calculations, a density of 1.42 t/m^3 is used)
- Partings greater than 5 mm within a coal seam have been excluded from the thickness used to estimate coal resources
- For areas where no coal was found or where coal is oxidised, the reserve estimate projects coal to half-way between drill holes
- For known faults with 10 m throw or greater, a zone of 50 m either side of the fault is down-graded to the next category

The coal resources for Antaibao mine are shown in Table 3-12 and were current as at 30 June 2006.

3.7.3 Coal Reserves

SRK has applied a 95% mining recovery factor to the coal resources to allow for those resources which will not be accessible in a practical mine design, such areas as final batters and pit end-walls. Mining loss and mining dilution factors have also been applied to calculate recoverable reserves. A saleable recovery percentage was then applied to calculate marketable reserves. The resulting coal reserves are shown in Table 3-13.

Table 3-13: Coal Reserves - Antaibao Open-pit

Mining Recovery (%)	Proved Reserve (Mt)	Probable Reserve (Mt)	Proved + Probable Reserve (Mt)	Mining Loss (%)	Mining Dilution (%)	Recoverable Reserves (Mt)	Saleable Recovery (%)	Marketable Reserves (Mt)

3.7.4 Mining and Operations

The length of the Antaibao mining area is 4.9 km and the width 2.1 km with the depth of the pit varying between 180 and 240 m. The layout of the seams and open-pit mines is shown in Figure 3-1.

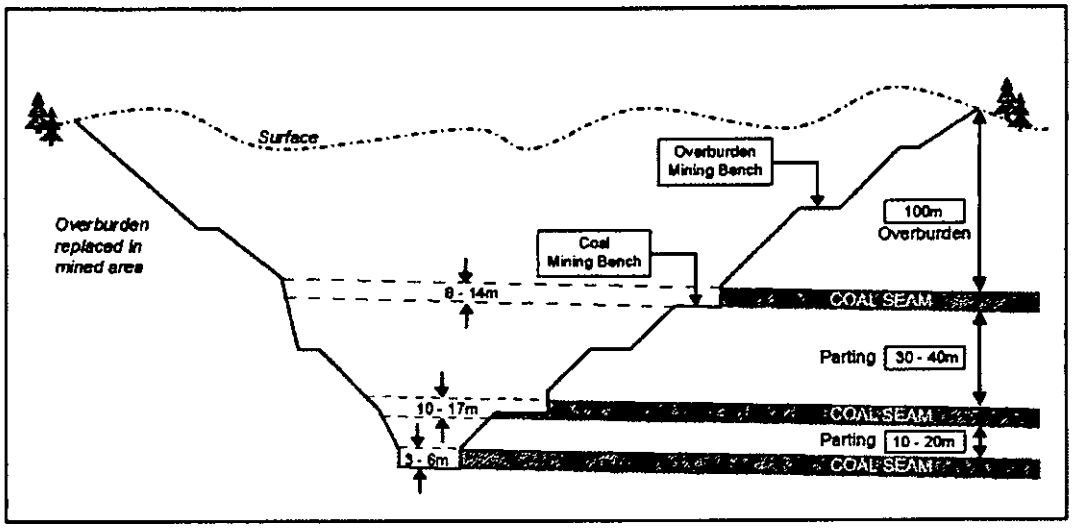

Figure 3-1: General Diagram of Antaibao and Anjialing Open-pit Coal Mines

Antaibao open-pit coal mine uses modern truck and shovel mining methods to remove waste and to mine coal from the #4, #9 and the #11 coal seams. In the pit, drilling is completed by 9 Ingersoll Rand mast drills which can drill the 15 m bench in one pass. Blasting is done using non-electric initiation and ammonium nitrate/fuel oil (ANFO) explosive. 13 P&H 2800XPB electric shovels load blast waste rock into a fleet of trucks of 150 t to 170 t capacity. The truck fleet is a mixture of Caterpillar 789, Dresser R190 and Komatsu 730E trucks. The total truck fleet consists of 125 trucks with 89 trucks in operation at the same time. The mining process at Antaibao mine is supported by 32 track dozers, 14 tyre dozers, 7 graders and 6 water trucks. The strip ratio in 2005 was 6.12 m^3 of waste to 1 t of in-situ coal (6.12:1). Coal is loaded into the truck fleet by 11 front-end loaders (FELs). The trucks transport the coal up the ramp to a dump hopper. The trucking distance is reduced by the dump hopper being located close to the top of the ramp.

Coal loss during mining is estimated by the company at 12.6% and dilution by waste rock is estimated at 10%. Historical production statistics are shown in Table 3-14.

3.7.5 Infrastructure

Electrical power is supplied to Antaibao mine by a connection to the provincial government-owned grid. The 220 kilovolt (kV) supply is fed through the Pushang substation which is situated 13 km from the mine site. The substation is equipped with a 240 megavolt-ampere (MVA) transformer and feeds the mine at 110 kV via overhead lines. The power supply is stepped down from 110 to 35 kV and subsequently to 6 kV for supply to the open-pit mines. The power supply to site is very reliable with minimum negative impact to the mining operation.

The water source for the Antaibao mine is a borefield at Liujiakou in which 10 bores have been drilled with a production capacity of 34 megalitres (Ml)/day. The borefield is 7 km from the mine and also supplies water to Anjialing open-pit and underground coal mines. Water for domestic use in town is supplied by separate boreholes. The mines are reported to have a usage of 19 Ml/day and 3 Ml/day is also supplied to external parties. At times, the usage can rise to near the capacity of the borefield, but storage facilities of 18 Ml are available on surface. A supplementary water supply is available from the nearby town of Gengzhuang but has not been required recently. Pingshuo Coal is considering construction of a dam on a local river as an alternative supply source for both mines. An application for government approval for this dam construction has been submitted.

3.7.6 Capital and Operating Costs

The historical and forecast capital expenditure for Antaibao open-pit mine is indicated in Table 3-15 and the average annual historical operating expenditure in Table 3-16. Although the cash operating cost has been increasing over the past three years, Antaibao open-pit achieved very competitive unit cost results with the high levels of production realised.

3.8 Anjialing Open-pit Mine

3.8.1 Introduction

Construction at the Anjialing open-pit mine started in May 1998 with production commencing in 2001. Conditions are very similar to Antaibao as the mines are located adjacent to one another and similar seams, i.e. #4 seam, #9 seam and #11 seam, are mined. The mine mainly uses imported equipment and has significantly increased production since 2002 to produce 14.5 Mt during 2004 and 15 Mt in 2005. The mine has adopted a staffing approach of employing young people and actively trains young graduates for the company. A contracting company is employed to conduct pre-stripping operations.

3.8.2 Geology and Mineral Resources

The topography consists of undulating hills with an elevation range from 1,160 to 1,410 m above sea level. The variation is primarily due to the large river systems that wind through the region.

The stratigraphy of Anjialing coal mine is outlined in Table 3-17. The Quaternary and Tertiary material is similar to that at Antaibao. The seams mined in Anjialing are the same as those mined at Antaibao, with the addition of #7 seam which is found in mineable localities. There is less weathering of the top of the #4 seam in Anjialing than in Antaibao.

Table 3-17: Seam Statistics - Anjialing Open-pit

Seam	Thickness Range (m)	Average Thickness (m)	Average Interburden (m)
#4	0.8 to 18.9	9.45	100 (to surface)
#7	0.0 to 2.39	0.59	19
#9	8.2 to 22.4	14.4	11
#11	2.1 to 9.8	4.2	15

The interburden between the #4 and the #9 seams ranges from 30 to 40 m and generally comprises sandstone with minor siltstone and claystone. These sediments are fresh and competent, requiring blasting prior to removal.

The #7 seam occurs sporadically throughout the Anjialing lease, and will be mined in areas where it is thicker than 0.3 m and economically viable.

Between the #9 and the #11 seams the interburden ranges from 10 to 20 m. Sediments between the #9 and the #11 seams are generally sandstones and siltstones. The siltstones display abundant pyrite on the bedding planes. As well, extremely hard ironstone nodules (up to 10 cm in diameter) are found to occur in the sandstone sediments which themselves are extremely hard due to silicification.

Structure

Anjialing geology is more structurally complex than that of Antaibao. At Anjialing, a series of synclines and anticlines cross the area. A major syncline/anticline feature strikes ENE and stretches some 6 km in length, with dips between 5 and 9 degrees. Smaller synclines are oriented NS and EW.

A series of reverse and normal faults are generally found striking in a NNE or NE direction. These faults have significant vertical displacements ranging from 10 to 125 m. These faults will modify the shape and economics of the open-pit design, but will not significantly affect the overall reserves of the mine. There is no evidence of igneous activity in Anjialing coalfield.

Coal Quality

As in Antaibao, all the coal mined at Anjialing produces thermal coal products.

All the ROM coal is washed through a dense medium cyclone wash plant at the mine site (see Coal Processing section for more details). The typical quality parameters of each seam are summarised in Table 3-18.

Table 3-18: Typical Coal Quality - Anjialing Open-pit Seams

Seam	Inherent Moisture % (ad)	Raw Ash % (ad)	Washed Ash % (ad)	Raw Sulphur % (ad)	Washed Sulphur % (ad)

#9	2.1	22.4	15.0	2.19	2.18
#11	2.0	29.8	18.0	2.75	2.17

Resource Estimation

As Anjialing commenced construction in 1998, the drilling program was executed as recently as the 1990s using a drilling rig imported from the United States of America. Consequently, all boreholes have a high level of reliability due to the excellent core recovery achieved.

The coal resources for Anjialing mine are shown in Table 3-19 and were current as at 30 June 2006.

3.8.3 Coal Reserves

Similar recovery factors, mining dilution factors and mining losses to Antaibao as indicated in Section 3.7.3 were applied to determine the coal reserves for Anjialing. The resulting figures are shown in Table 3-20.

Table 3-20: Coal Reserves - Anjialing Open-pit

95	235	451	686	13	10	656	87.1	572

3.8.4 Mining and Operations

The Anjialing mining operation covers an area of 48 km^2 with the pit bottom in 2005 being mined to a length of 900 m. The layout of the seams and open-pit mines is shown in Figure 3-1. Anjialing coal mine uses standard truck and shovel mining methods. Pre-stripping is completed by a local contractor using a fleet of 5 m^3 FELs and 25 t capacity trucks. In the pit, drilling is completed by 10 Ingersoll Rand mast drills which can drill the 15 m bench in one pass. Blasting is done using non-electric initiation and ANFO explosive. Seven P&H 2800XPB electric shovels load blasted waste rock into a fleet of trucks of 150 to 170 t capacity.

The fleet of 49 trucks is a mixture of Caterpillar 789C, Dresser Haulpack and Komatsu 730E trucks. Anjialing open-pit also operates 13 track dozers, 4 tyre dozers, 5 water trucks and 8 graders. The strip ratio in 2005 was 4.6 m^3 waste to 1 t of in-situ coal (4.6:1). Coal is loaded by two FELs. The trucks transport the coal up the ramp to a dump hopper. The trucking distance is reduced by the dump hopper being located close to the top of the ramp.

Historical production statistics are shown in Table 3-21 below.

3.8.5 Infrastructure

Electrical power is provided to Anjialing mine from the same grid supplying Antaibao open-pit mine with similar reliability. Due to the large demand from electric shovels, electric drills, the CPP and the worksite, Pingshuo Coal receives preferential supply reliability from the provincial suppliers.

The water source for the Anjialing mine is the same borefield which supplies Antaibao coal mine. To conserve water supplies, Anjialing has constructed a dam on the mine site to retain some flood waters during the wet months of June to August every year.

3.8.6 Capital and Operating Costs

Historical capital expenditure for Anjialing open-pit has been reported as a combined number with Anjialing underground mine as indicated in Table 3-22. Planned capital expenditure until 2008 has been indicated separately. Similar to Antaibao open-pit mine, cash operating cost has increased since 2003, but Anjialing open-pit has historically achieved very competitive unit cost results as indicated in Table 3-23.

3.9 Anjialing Underground Mine

3.9.1 Introduction

The Anjialing underground mine is an extension of the Anjialing open-pit operation to curb the higher strip ratios in this part of the coal reserve. Construction commenced in 2003 and the mine produced 8.7 Mt during 2005. The underground mine consists of two shaft systems (No. 1 and No. 2 shaft), which are totally independent of each other for ventilation, coal conveyance and man and material transport and access purposes. Each shaft is equipped with a longwall mining system cutting at 3.2m, while both utilise the top coal caving method of heights up to 10 m.

The design capacity of the mine incorporating both shaft systems and including upgrades to infrastructure and expansion to production equipment, has been estimated at 20 Mtpa through a feasibility study completed by the Design Institute in October 2005. Pingshuo Coal plans to invest RMB1,726 M from 2006 to 2008 as sustaining capital and to implement two additional longwall systems and upgrade current infrastructure to increase production from the two shafts to a combined 20 Mtpa during 2008. Mining is currently done in the #4 and the #9 seam at No. 1 shaft and in the #9 seam at No. 2 shaft.

3.9.2 Geology and Mineral Resources

The topography consists of undulating hills and is similar to that of Anjialing.

The stratigraphy of Anjialing Underground coal mines is outlined in Table 3-24. The Quaternary and Tertiary material is similar to that at Anjialing open-pit mine. The seams mined in Anjialing Underground are the $#4^1$, the $#4^2$, the #9 and the #11 seams. The #4 seam has split into the $#4^1$ and the $#4^2$ seams in Anjialing underground. There is little or no weathering of the top of the $#4^1$ seam in Anjialing underground.

Table 3-24: Seam Statistics - Anjialing Underground Mine

Seam	Thickness Range (m)	Average Thickness (m)	Average Interburden (m)
$#4^1$	4.6 to 14.4	7.3	100 (to surface)
$#4^2$	0.9 to 4.8	3.1	1
#9	9.9 to 16.5	13.8	45
#11	0.4 to 7.7	3.7	15

The interburden between the $#4^1$ and the $#4^2$ seams ranges from 0.5 to 2 m and generally comprises siltstone and claystone.

Between the $#4^2$ and the #9 seams the interburden ranges from 40 to 50 m, generally consisting of sandstones and siltstones. It is considered that this interval is adequately thick and competent to allow for the subsequent extraction of the #9 seam.

Between the #9 and the #11 seams the interburden ranges from 10 to 20 m. The sediments between the #9 and the #11 seams are generally sandstones and siltstones which are quite strong due to the siliceous cement. It is considered that this interval is also adequately competent to allow for the subsequent extraction of the #11 seam.

Structure

Anjialing underground geology is not as structurally complex as that of Anjialing open-pit. At Anjialing underground, one major syncline crosses the area striking N50°E and stretching for some 6.75 km in length, with dips from 5 to 12 degrees.

Two major faults have been delineated at this stage from exploration drilling. Fault F25 is a normal fault striking N20°E, stretching for 1.5 km in length and with vertical displacements ranging from 40 m to 60 m. Fault F30 is also a normal fault striking N45°W, stretching for 1.1 km in length and with a vertical displacement of 20 m. F30 will only affect Anjialing underground over a 95 m interval. There is no evidence of igneous activity in Anjialing underground coalfield.

Coal Quality

As in Anjialing open-pit, all the coal mined at Anjialing underground produces thermal coal products.

All the ROM coal is washed through a dense medium cyclone wash plant at the mine site (see Coal Processing section for more details). The typical quality parameters of each seam are summarised in Table 3-25. Coal quality at Anjialing underground is very similar to that of Anjialing open-pit.

Table 3-25: Typical Coal Quality - Anjialing Underground Seams

#9	2.1	22.4	15.0	2.19	1.70
#11	2.0	29.8	18.0	2.75	2.00

Gas

Methane gas concentration levels have not been measured in the #9 and #11 seams, however gas monitoring in the #4[1] seam indicates low levels (0.01 to 0.03%) of methane, which is expected to be the general case for the rest of the #4[1] and #4[2] seams.

Resource Estimation

As Anjialing underground is a relatively new project, the drilling program was executed as recently as the 1990s using a drilling rig imported from the United States of America. Consequently, all boreholes have a high level of reliability due to the excellent core recovery achieved.

The coal resources for Anjialing underground mine are shown in Table 3-26 and were current as at 30 June 2006.

3.9.3 Coal Reserves

SRK has applied a 75% mining recovery factor to the coal resources to allow for those resources which will not be accessible in a practical mine design. This has been assumed to allow for areas which will not be mineable or fully extractable, such as faults and intrusions, gateroads, main development entries etc.

A recovery factor of 80% has been applied as a mining loss based on the practical experience gained with the top coal caving method applied to mining heights in excess of 10m during the last year, and mining dilution factors have also been applied to calculate recoverable reserves. A saleable recovery percentage was then applied to calculate marketable reserves. The resulting coal reserves are shown in Table 3-27.

Table 3-27: Coal Reserves - Anjialing Underground

3.9.4 Mining and Operations

Anjialing underground mine utilises the longwall mining method of extraction with top coal caving behind the hydraulic shields. Coal is extracted at 3.2 m height with the shearer, and coal left in the roof up to a thickness of 10 m cave in when the shields are advanced. This coal is transported with a separate armoured face conveyor (AFC) installed behind the shields, and conveyed through a crusher before the coal is loaded onto a conveyor for transport to surface.

The longwall system at No.1 shaft commenced production during 2004 and produced 913,000 t combined with development production. The longwall system at No. 2 shaft was commissioned during May 2005, with a combined production of 8.7 Mt achieved between the two systems during 2005 as indicated in Table 3-28. Planned maintenance in the mining panels is scheduled every morning from 08:00am to 12:00pm. All longwall mining equipment has been manufactured and supplied locally in China, except for internationally supplied high-pressure pumps and switchgear. The shearer models are MGTY400/930-3.3D with 800 t, ZFS8000/23/37 shields installed along the mining faces. Pingshuo Coal has planned for additional capital expenditure of RMB360 M during 2006 to install two additional longwall systems and ancillary equipment at each shaft respectively, to achieve the increased production capacity of 20 Mtpa in 2008. The implementation of the second longwall system at No. 1 shaft occurred in August 2006 and the additional system at No. 2 shaft is planned to occur during early 2007.

Table 3-28: Mine Production History, 2003 to 30 June 2006 – Anjialing Underground

Total Output (Mtpa)	-	0.91	8.70	6.57

Development in the mine is done by a combination of fully mechanised mining systems and blasting operations. The mechanised development panels are equipped with Chinese supplied S-150 roadheaders and the panels utilise continuous haulage for conveyance and hand bolting practices for roof support. Primary development of roadways is conducted with blasting methods.

The longwall faces are approximately 240 m wide and up to 3 km long. The life of mine extends to the western part of the reserve block and longwall panels in this area have been designed up to 6 km long.

Ground conditions are generally good except for localised areas where faults and intrusions occur in the coal seam. Standard bolting patterns require the installation of anchor and cable bolts with mesh as required for specific conditions and steel arches are utilised at spacings of between 0.3 and 2.7 m when required. Standard bolting requirements were displayed in the development panel during SRK's site visit.

No stonedusting practices are employed at the mine. Sidewalls and roof are washed down periodically with water according to the requirements of Chinese legislative requirements. Water barriers are in use as required by local legislation.

Ventilation quantities are generally lower than international standards but comply with local requirements. The quantity reported for the longwall panel is 25 cubic metres per second (m^3/sec) and for the development panel 5 m^3/sec. Low methane levels were reported and detected underground. In-time methane monitoring is available on the surface in a centralised control room and equipment underground is interlocked to trip power when methane levels exceed 1% concentration. Heat is generated during winter months and pumped into the mine to curb the extremely cold conditions experienced during winter.

Dust measurements are taken twice per month and are kept in compliance with legislation. No excessive dust levels were obvious underground during SRK's site visit.

Anjialing underground mine utilises modern methods of transportation which allow for lower installation and maintenance cost with flexibility to adapt to production and operational requirements. Coal is transported from the panels to surface by rubber belt conveyor systems and personnel and material are transported by diesel rubber-tyred equipment. Diesel equipment utilised underground complies with statutory flameproof requirements.

3.9.5 Infrastructure

The underground mine is equipped with six shafts. No.1 shaft system has two incline shafts, one for coal conveyance by conveyor belt to surface and one for men and material transport. The third shaft is vertical for ventilation extraction from the mining area. No.2 shaft is also equipped with three shafts, with all three constructed as incline shafts.

Capital of RMB2.6 M has been provided during 2006 for additional stockholding of conveyor equipment and parts to ensure minimum impact on the increased production capacity due to possible delays on the coal conveyor systems. China Coal acknowledges the importance of high capacity and reliable incline conveyor systems to convey the coal from underground to surface, and distribute the coal to the various coal handling stations on surface. Therefore, additional capital expenditure of RMB73.4 M (RMB25.6 M for No.1 shaft and RMB47.8 M for No.2 shaft) has been provided during 2007 to increase the belt widths at both incline shafts to 2.0m and increase conveyance capacity to approximately 6,000 tph each. Both conveyor systems will be equipped with variable frequency 'soft start' drive systems and the capital provision includes upgrading and replacement of the conveyor drives and control systems as required. The replacement and upgrade plan allows six months for placement of orders and delivery to site, with one month allocated per shaft system to remove the existing conveyor system and replace with the upgraded system. China Coal has reported that it is in the process of planning an increase in production levels during the remaining 11 months of 2007 to ensure minimum negative impact on forecast production levels for the year.

The feasibility study further indicated that the current ventilation capacity at No.2 shaft will require doubling to provide for the ventilation requirements with an increased production capacity of 10 Mtpa. It has been established that this will be achievable by adjusting blade angles on the surface fan, however Pingshuo Coal additionally provided for capital investment in 2007 to the value of RMB1.8 M to install a higher capacity ventilation system and ensure a more reliable system with redundancy.

As reported, the water supply network for the underground mine is similar to the open-pit mines'. Water is recycled for underground use through a surface dam. The approval for the expansion of the water supply network will also serve the underground mine.

The current power supply system has been reliable after a few minor problems were rectified during 2004. The same power supply network for the open-pit mines is used for the underground mine and reports on reliability are consistent with feedback from the open-pit operations. Power is supplied via the two surface substations and supplied to the underground mine at 35 kV. Four lines supply the underground network and the feeds are transformed to 10 kV through two underground 1,250 kVA transformers and distributed to the underground workings. The installed capacity of the supply network currently exceeds the maximum usage of the mine. Pingshuo Coal has provided for additional capital expenditure of RMB25 M during 2006 to upgrade the current distribution system to allow for the increased capacity envisaged for the mine in future.

3.9.6 Capital and Operating Costs

Capital and operating costs for Anjialing underground mine are shown in Table 3-29 and Table 3-30. Anjialing underground mine commenced operations in 2004, with 2005 the first year to measure and report representative unit operating costs. Production figures increased sharply from 2004 resulting in a very competitive cost result for an underground operation as indicated for 2005. Capital expenditure has been planned separately from Anjialing open-pit mine from 2006 onwards, and an increased expenditure has been allowed for 2006 to fund the upgrading of equipment and infrastructure to increase the production capacity of the mine.

3.10 Antaibao Underground Mine

3.10.1 Introduction

Pingshuo Coal commenced the establishment of an underground mine to the north of the current Antaibao open-pit mine during 2005. Two of the three shaft systems have been developed to the coal seam and the auxiliary shaft construction has commenced but has been awaiting the anticipated government approval for a mining licence by October 2006 before completion. A mining licence has subsequently been received, dated 30 August 2006.

A feasibility study was completed by the Design Institute in November 2004 to establish an underground operation with an annual capacity of 8 Mt. A schedule of implementation and commissioning indicates the commencement of one longwall operation 14 months after government approval has been received, with a second longwall unit commencing production 12 months later.

The feasibility study provides for the extraction of the total seam with top coal caving methods similar to the highly successful method applied at the adjacent and operating Anjialing underground mine.

As the mining licence for Antaibao underground has been issued earlier as anticipated on 30 August 2006, China Coal management has indicated that all available resources will be applied to further improve on the construction and implementation schedule of the longwalls, and commence production within a reduced timeline compared to that indicated in the feasibility study. It has also been indicated that plans are being developed to implement the two longwall systems simultaneously to reach maximum production levels in the shortest possible time period.

Total project value has been estimated at RMB1.013 Billion with RMB296 M expended up to the end of 2005.

3.10.2 Geology and Mineral Resources

The topography consists of undulating hills and broad valleys and is similar to that of Antaibao open-pit mine.

The stratigraphy of Antaibao underground coal mine is outlined in Table 3-31. The Quaternary and Tertiary material is similar to that at Antaibao open-pit mine. The seams mined in Antaibao underground are the #4 and the #9, while it is planned to mine the #11 seam in the future. There appears to be a washout zone in the #11 seam in the northern part of the area where the seam thins to 0.35 m. Coal less than 0.7 m in this area has been excluded from the resource, however China Coal plans to utilise ploughs or similar technology to mine the thinner areas of the #11 seam between 0.7 and 1.5 m thickness. There is some weathering of the top of the #4 seam in Antaibao underground and these weathered areas have been defined by the borehole data and excluded from the resource estimation.

Table 3-31: Seam Statistics - Antaibao Underground

Seam	Thickness Range (m)	Average Thickness (m)	Average Interburden (m)
#4	5.1 to 15.9	10.5	120 (to surface)
#9	6.7 to 18.6	12.8	40
#11	0.95 to 6.5	2.9	15

The interburden between the #4 and the #9 seams averages 38 m to 40 m and generally consists of sandstones and siltstones. It is considered that this interval is adequately thick and competent to allow for the subsequent extraction of the #9 seam.

Between the #9 and the #11 seams the interburden ranges from 10 m to 20 m. The sediments between the #9 and the #11 seams are generally sandstones and siltstones which are quite strong due to the siliceous cement. It is considered that this interval is also adequately competent to allow for the subsequent extraction of the #11 seam.

Seams #6, #8 and #10 have some areas of potential resources, however they are generally thin seams (about 1m thick), have limited aerial extent and have limited borehole data available. Therefore, these three seams have been excluded from the resource estimation for the Antaibao underground mine.

Structure

From the current borehole data and resultant structural contour plans of each seam roof, it is deduced that Antaibao underground geology is not structurally complex. The seams are generally flat with the average dip of 5 degrees near the subcrop and less than 2 degrees further down dip. At Antaibao underground, one major fault near the southern boundary of the project area trends East-West and stretches for some 5 km in length. Resources for the project have excluded coal south of the fault.

Minor faults have been delineated but their location and displacement have yet to be accurately defined. These minor faults are expected to have little impact on the mining operations.

Coal Quality

As in Antaibao open-pit, all the coal mined at Antaibao underground will produce thermal coal products.

All the ROM coal will be washed through a heavy-dense medium cyclone wash plant at the mine site (see Coal Processing section for more details). The typical quality parameters of each seam are summarised in Table 3-32. The coal quality at Antaibao underground is very similar to that of Antaibao open-pit.

Table 3-32: Typical Coal Quality - Antaibao Underground Seams

Seam	Inherent Moisture % (ad)	Raw Ash % (ad)	Washed Ash % (ad)	Raw Sulphur % (ad)	Washed Sulphur (ad)
#4	2.0	28.0	8.1	0.42	0.48
#9	2.2	20.7	7.1	2.46	1.05
#11	2.5	23.9	-	2.02	1.27

Gas

Gas samples have been taken for seams #4 and #9 from the boreholes drilled in the Antaibao underground area. All tests indicate very minor volumes of gas (generally less than 1 m^3/tonne) and minor methane content (<5%). No results were available for the #11 seam at the time of writing to assess the concentration of gas in this seam.

Methane gas monitoring in the #4 and #9 seams indicates low levels (0.01 to 0.03%) of methane, which is expected to be the general case for the rest of the resource for these seams.

Resource Estimation

Two phases of drilling were completed in the Antaibao underground mining area. Most of the boreholes were drilled in the 1980s, and subsequently 12 boreholes were completed in 2005. The quality of the results is similar in both programs. Generally the core recovery was less than 90%.

The parameters used to estimate the coal reserves are as follows:

- Minimum coal seam thickness of 0.7 m

- Maximum ash content of 40% (air dried)
- Maximum sulphur content of 3%
- Tonnage is calculated using coal density only and does not include partings (e.g. for the #11 seam, actual density ranges from 1.5 to 1.7 t/m^3, but for resource calculations, a density of 1.42 t/m^3 is used)
- Partings greater than 5 mm within a coal seam have been excluded from the thickness used to estimate the coal resources
- For areas where no coal was found or where coal is oxidised, the reserve estimate projects coal to half-way between drill holes
- For known faults with 10 m throw or greater, a zone of 50 m either side of the fault is down-graded to the next category

A MOLAR approved resources report was completed in 2006 for the northern half of Antaibao underground. However, as the report for the other half of the deposit was not finalised at the time of writing this report, resource estimates are conservatively based on the MOLAR approved report dated 2004.

The coal resources for the Antaibao underground coal mine are shown in Table 3-33 and were current as at 30 June 2006.

3.10.3 Coal Reserves

SRK has applied a 75% mining recovery factor to the coal resources to allow for those resources which will not be accessible in a practical mine design. This has been assumed to allow for areas which will not be mineable or fully extractable, such as faults and intrusions, gateroads, main development entries etc. A recovery factor of 80% has been applied as a mining loss based on the practical experience gained with the top coal caving method applied to mining heights in excess of 10 m at Anjialing underground during the last year, and mining dilution factors have also been applied to calculate recoverable reserves. A saleable recovery percentage was then applied to calculate marketable reserves. The resulting coal reserves are shown in Table 3-34.

75	275	221	496	20	10	436	87	380

3.10.4 Mining and Operations

According to the feasibility study, longwall production is planned to commence 14 months after government approval for a mining licence has been received. Construction of the shaft systems commenced during the first half of 2005 and orders have already been placed for three roadheader machines to enable development activities to commence immediately after approval has been received.

Mining will commence in the #9 seam and the mining schedule indicates the commissioning of a second longwall system a year later in the #4 seam. A feasibility study was completed in November 2004 to this effect, forecasting the mine to reach 8 Mtpa at full production levels. The longwall systems will be set up to cut at 3.2 m high with the rest of the coal seam to be extracted with the top coal caving method.

It has been budgeted to implement similar modern transport arrangements with rubber-tyred vehicles to those successfully implemented at Anjialing underground mine.

3.10.5 Infrastructure and Coal Processing

Three shaft systems are planned for Antaibao underground mine. All three shafts are incline shafts, with the following levels of development advance completed in June 2006:

- Main shaft for coal conveyance at 14 degrees – reached the #9 seam with a length of 487 m
- Auxiliary shaft for transport of men and material at 5.5 degrees – developed 240 m and awaiting government approval. Total shaft length to the #9 seam is planned at 1,300 m
- Ventilation shaft at 20 degrees – length of 359 m and intersected the #9 and the #11 seam

The main shaft reaches the surface within the confines of the Muguajie CPP providing for limited overland conveyance of the ROM coal to the wash plant for processing.

3.10.6 Capital Costs

The forecast capital for the Antaibao underground mine are shown in Table 3-35. Capital expenditure is predicted to increase further during 2006 and peak at almost RMB400 M in 2007 with the installation of the longwall unit.

3.11 Pingshuo East (Donglutian Project – Pingshuodong Open-pit)

3.11.1 Introduction

A request for a feasibility study of the mine was submitted to the Design Institute by Pingshuo Coal at the end of April 2005 with the report completed in June 2005. Verification and approval of the feasibility study report was expected to determine the mining method and other detailed information.

Pingshuo Coal has received approval to mine an area of 48.7 km^2 within the lease, and is presently awaiting a mining licence. Preliminary construction activities and the establishment of services have commenced during 2006 to enable pre-stripping operations.

3.11.2 Geology and Mineral Resources

The topography consists of undulating hills and is similar to that of Anjialing open-pit mine.

Table 3-36: Stratigraphic Sequence – Pingshuo East

Stratigraphic Unit	Thickness Range (m)	Average Thickness (m)
Quaternary	0 to 63	25
Tertiary	0 to 59	23
Upper Permian	0 to 148	25
Upper Lower Permian	0 to 97	49
Lower Lower Permian (Shanxi Group)	11 to 98	60
Upper Carboniferous (Taiyuan Group)	57 to 105	79

The Quaternary and Tertiary material is similar to that at Anjialing. The seams to be mined in Pingshuo East are the #4, #5, #6, #7, #8, #9 and the #11 seams. There is little weathering off the top of the #4 seam.

Table 3-37: Seam Statistics – Pingshuo East

Seam	Thickness Range (m)	Average Thickness (m)	Average Interburden (m)
#4	4.4 – 25.7	14.0	100 (to surface)
#9	6.0 – 22.4	13.95	37
#11	0.5 – 10.1	5.4	6

The interburden strata at Pingshuo East are similar in nature to those of Anjialing mine. Samples taken of immediate roof and floor material adjacent to the seams were analysed and showed high sulphur contents:

- The #9 seam roof material averages 10% sulphur (max 14%)
- The #11 seam floor material averages 15% sulphur

Structure

As with Anjialing, Pingshuo East geology is structurally complex. Dips up to 30 degrees and evidence of large scale faults have been interpreted from exploration drilling.

Similar to Anjialing, this complex structure will modify the shape and economics of the open-pit design, but will not significantly affect the overall reserves of the mine. There is no evidence of igneous activity in the Pingshuo East area.

Coal Quality

The coal mined at Pingshuo East will produce thermal coal products.

The ROM coal will be washed through a dense medium cyclone wash plant. The typical quality parameters of each seam are summarised in Table 3-38. Information for seams #5, #6, #7 and #8 is not abundant as reflected in the resource classification.

Table 3-38: Typical Coal Quality - Pingshuo East Seams

Seam	Inherent Moisture % (ad)	Raw Ash % (ad)	Washed Ash % (ad)	Raw Sulphur % (ad)	Washed Sulphur % (ad)

#9	3.4	27.7	15.0	2.36	2.20
#11	1.5	33.9	16.0	2.96	2.20

Resource Estimation

The drilling program in the Pingshuo East area was executed in the 1990s using a drilling rig imported from the United States. All boreholes have a high level of reliability due to the excellent core recovery achieved.

The coal resources for Pingshuo East mine are shown in Table 3-39 and were current as at 30 June 2006.

3.11.3 Coal Reserves

SRK has applied a 95% mining recovery factor to the coal resources to allow for those resources which will not be accessible in a practical mine design, including such areas as final batters and pit end-walls. Mining loss and mining dilution factors have also been applied to calculate recoverable reserves. A saleable recovery percentage was then applied to calculate marketable reserves. The resulting coal reserves are shown in Table 3-40.

3.11.4 Capital Costs

The forecast capital expenditure for the Pingshuo East mine is shown in Table 3-41.

1. A Mining Right for the Pingshuo East OP is expected to be granted in March 2007

The capital expenditure is being used to construct the new mine and associated infrastruture. Pingshuo East mine is forecast to produce at the rate of 20 Mtpa at full production which is scheduled to occur in 2009. The capital expenditure predicted includes the construction of a CPP and rail facilities with improvement to port facilities as required, to an amount of approximately RMB1,000 M, to support a 20 Mtpa production capacity.

4 Shanghai Datun Energy Resources

4.1 Introduction

China Coal is the major shareholder (62.43%) in Shanghai Datun Energy Resources Co Ltd (Datun Coal) which owns and operates four underground mines in close vicinity (10 to 20 minutes drive) to the town of Datun. Datun is one hour's drive from Xuzhou in Jiangsu province. The head office of the company is located in the centre of town and staff provide strategic direction for the company. An extensive maintenance facility is also located in town to refurbish the underground mining equipment after use and is leased back to the mines as agreed with the head office in their yearly plans.

Datun Coal operates the Longdong, Yaoqiao, Xuzhuang and Kongzhuang underground mines and also supplies coal to the two power stations owned by the company. The power plants supply electricity for internal and local use with excess sold to the provincial grid. A small portion of the coal product is destined for export purposes. The company also owns a railway line of 86 km to the city of Xuzhou for the transportation of coal and people.

The underground mines operate in difficult to very difficult mining conditions (up to 30 degrees dip in the coal seam in local areas at Kongzhuang mine) and are either currently mining or planning to mine under the Zhaoyang and Weishan Lakes. The mines are operating from 280 to 780 m below surface with sufficient clay content in the overlaying strata to isolate the mines from any inflow of surface water from the lakes.

During 2005, Datun Coal produced a total of 7.12 Mt of raw coal between the four underground mines.

4.2 Corporate Management Structure

Datun Coal management structure is shown in Appendix 2 and workforce numbers are shown in Table 4-1.

Table 4-1: Workforce Numbers - Datun Coal

Category	Employees

Longdong UG	1,749
Yaoqiao UG	2,833
Xuzhuang UG	2,117
Kongzhuang UG	2,090
Management [2]	11
Other [3]	766
Total	**9,566**

1. Permanent and contractor employees involved in mining activities
2. Senior management – excludes functional departments
3. Only personnel involved with the mines – excludes CHPP, rail etc

The minimum wage paid by the company is RMB900 per month. Salaries and wages are as far as possible set at the same level between the mines with cost figures indicating the average salary at RMB1,690 per month.

4.3 Occupational Health and Safety

The mines in Datun Coal have all implemented a typical structure of a safety vice-president at the mine sites with safety monitors from head office and at the sites to conduct inspections and improve safety conditions. Employees are also encouraged to identify and report hazards and recognition is given by financial means or otherwise when employees participate in this process.

Accident and incident investigations are conducted after an incident occurs in an attempt to determine the root cause. Safety procedures are in place and developed through the accident investigations to prevent a re-occurrence of a similar incident. This information is also communicated at the other mine sites to prevent future occurrences. Safety training is conducted with all personnel on an annual and bi-annual basis.

Safety statistics for the four mines combined since 2003 are listed in Table 4-2.

Table 4-2: Accident Statistics, 2003 to 2005 - Datun Coal

Category	2003	2004	2005
Fatal [1]	4	0	3
Serious [2]	4	2	3
Minor [3]	0	15	0

1. Accident causing death (number indicates lives claimed)
2. Accident requiring hospitalisation and do not return to work for more than 24 hours (includes fatal incidents)
3. Accident which does not require hospitalisation and employee returns to work within 24 hours

SRK observed at all the mines operated by Datun Coal that safety is a significant consideration with resources consistently applied to achieve the best possible result. The safety statistics reflect good performance compared to the Chinese average.

4.4 Environmental Assessment

4.4.1 Introduction, Scope and Background

An environmental assessment of Datun Coal was completed to assess environmental management across its operations. The primary reason for assessing Datun Coal's environmental management was to identify any potential financial liabilities arising from its operations, which include:

- Longdong, Yaoqiao, Xuzhuang and Kongzhuang underground coal mines and associated infrastructure
- Auxiliary facilities located in and around the town of Datun, including a mining equipment maintenance facility, two power plants and a waste water treatment plant

In addition to visiting the above listed major sites, the environmental assessment included interviews with key environmental staff members of Datun Coal, inspection of relevant environmental documentation and interpretation of responses to an environmental questionnaire provided by SRK.

This environmental assessment is reported entirely at corporate level. This approach was adopted as Datun Coal maintains an environmental group within its technical division located at head office that oversees all operations. Its company-wide environmental management model has been developed so that it is reproduced almost identically at all four operational mines, with minor site-specific variations as required. The model allows for site feedback to head office to provide input to fine tune annual environmental plans, a method which appears to operate well. Comments relevant to the operational facilities in the Datun township are incorporated as appropriate.

4.4.2 Corporate Environmental Awareness

In 2005 Datun Coal had ISO14001:1996 accreditation for its corporate environmental management systems, which incorporates the management of Longdong, Yaoqiao, Xuzhuang and Kongzhuang underground mines, as well as the auxiliary facilities in and around Datun township.

In addition to ISO14001:1996 accreditation, Datun Coal also has ISO9001:2000 quality assurance and Chinese GB/T28001 occupational health and safety accreditation, which also incorporates the management of all four mines and auxiliary facilities. All three accreditations are valid until 2007. Independent audits are completed yearly by the China Quality Association to maintain these accreditations. Datun Coal also has a continual environmental improvement program in place across its operations.

4.4.3 Mining Title and Royalty Payments

Datun Coal is licenced to mine coal at all four of its underground mines, each of which were inspected by SRK. Mining licence details are provided in Table 4-3. Datun Coal has surface rights on the mining sites for 50 years, with all mining licences valid until April 2029. Should Datun Coal still have mineable coal reserves following expiration of mining licences, it has the priority right to apply for a new or extended licence. All mining licences were issued by MOLAR. It is understood by SRK that all four mining licences have been transferred from Datun Coal to China Coal for the purpose of the IPO.

Table 4-3: Mining Licence Details – Datun Coal

Mine	Mining Licence No.	Mining Area (km^2)	Issue Date	Licence Tenure
Yaoqiao	1000000020071	63.8	April 2000	29 years
Xuzhuang	1000000320025	38.4	August 2003	26 years
Longdong	1000000020073	25.0	April 2000	29 years
Kongzhuang	1000000020072	44.1	April 2000	29 years

Datun Coal pays mining royalties and taxes according to the Mineral Resources Law (1996 as amended). There are no options held over the mining land other than by the government and Datun Coal is not permitted to divest mining licences to other commercial operations.

4.4.4 Environmental Licencing, Compliance and Reporting

For Datun Coal operations, operational licences were granted at provincial level for boundary noise, gaseous emissions and water discharge. Further to these environmental licences, Datun Coal maintains licences at individual mine level from the local Pei County Water Resource Management Commission for groundwater extraction, in addition to licences from Xuzhou Xushou Public Security Bureau for fuel storage.

Each mine operated by Datun Coal prepares an individual annual environment report to the Chinese (State) Environmental Protection Bureau. This report incorporates information on waste volumes generated, noise data, wastewater data and gaseous emissions data. The report is passed down from state to provincial regulators for approval, then to the local county environmental regulators, both of which conduct random inspections. In this regard, Datun Coal must remain environmentally vigilant and be prepared for these random checks, which are carried out by the provincial agency approximately every six months and by the local agency on average once per month.

Should Datun Coal not meet relevant Chinese National Standards for gaseous emissions, water and noise, it faces either a warning, financial penalty, or criminal liability in extreme cases. Datun Coal ensures it is well prepared for such inspections by maintaining its own in-house environmental monitoring station which collects data on noise, water and emissions to monitor its continued compliance. SRK completed a random check on monthly water quality discharge data from Datun Coal's town WWTP. This data was reported by the local county environment officials to meet national standard GB8978-1996. SRK found that all discharge data was within the relevant criteria. SRK also inspected the Annual Environment Report for Kongzhuang Mine and found all environmental data to be in compliance with relevant criteria.

In addition to these local and provincial environment inspections at the individual mine operational level, the China Quality Association audits Datun Coal annually to maintain its corporate ISO14001:1996 accreditation for environment management systems. Datun Coal has sound results in regard to environmental credentials, with zero fines to date, as well as continued ISO14001:1996 accreditation. SRK has observed that Datun Coal has proactively implemented a continuous environmental improvement program, and it is SRK's opinion that there is a strong likelihood that Datun Coal will maintain its unblemished environmental record.

4.4.5 Environmental Staff

Datun Coal's commitment to the environment is reflected in its allocation of human resources. The head office technical centre has two environmental managers supervising approximately 30 technical staff, with an additional 10 staff employed in a separate environmental monitoring station. Each individual mine has between four and six environmental managers overseeing between 20 and 60 general staff who assist with day-to-day environmental management on site. Auxiliary facilities in Datun township also have at least one on-site staff member responsible for environmental management. Although none of the operational workforce responsible for environmental management have tertiary qualifications in environmental studies, Datun Coal ensures that environmental managers are suitably qualified. SRK observes that Datun Coal's commitment to its environmental management responsibilities is suitably reflected in the number of staff dedicated to the environment across all operations.

4.4.6 Environmental Planning and Budgets

Datun Coal produces annual environment plans and budgets that are overseen and compiled at corporate level, with input and feedback from the individual mine level throughout the preparatory stages. Individual mines are autonomous with respect to spending the allocated environmental funding, however final sign-off responsibility remains at corporate level.

SRK inspected Datun Coal's 2005 annual environmental plan and budget, which contained details of company-wide environment projects primarily focused on:

- Improving water use and treatment efficiency
- Improving energy efficiency through heating and lighting
- Dust management
- Noise reduction schemes
- Environmental audits
- Purchasing environmental data management software

The environmental plan showed that Datun Coal had allocated approximately RMB4.4 M for environmental projects during 2005. This figure excludes an additional environment budget of RMB18.5 M across all four mines solely dedicated to land rehabilitation over the next five years.

4.4.7 Water Management

Datun Coal has a company-wide emphasis on water conservation, as demonstrated by extensive use of on-site treatment and recycling. SRK visited the water treatment facility on Kongzhuang Mine where American-made reverse osmosis technology was being utilised to treat water to potable standards. This water is re-used across the mine in other applications including staff showering and coal washing. While this technology is not present across all Datun Coal facilities, industrial waste water recycling is. This policy extends across the mines, coal washing plants, site WWTP and power stations, with these plants having a zero water discharge policy. Some treated water that meets relevant criteria is discharged in Datun township from the WWTP, which is owned and operated by Datun Coal as required.

Supplementary water is sourced at each mine and at town facilities by a series of groundwater wells approved by local authorities. Use of this groundwater is being phased out for dust suppression in the underground mines in favour of using recycled water. Similarly, Datun Coal has long term plans to upgrade its WWTP to treat water to potable standards. Surface water is well managed across the mine sites by a series of drains, sedimentation dams and treatment methods.

4.4.8 Waste Rock, Tailings and Rehabilitation Management

Due to the underground nature of all four mines at Datun Coal, the generation of waste rock is significantly less than for an open-pit mine. The waste rock is typically shale, which is non-reactive when exposed to oxygen. Visible pyrite was however noted in the waste rock at the Longdong mine, though no geochemical data was available to review. Each mine has a temporary waste rock stockpile where shale is stored prior to being re-used to infill mine subsidence in addition to road building. Despite the presence of visible pyrite in the waste, the regulators encourage the re-use of all waste rock as backfill and road base. SRK inspected a rehabilitated area near the Longdong mine and noted after discussion with local residents that they (local residents) appeared to be satisfied with the roads and fish breeding ponds constructed by Datun Coal. Tree planting and landscaping had also been completed on the rehabilitated areas by sub-contractors. There was no visible pyrite or secondary salts evident on road surfaces and SRK noted the presence of near-surface limestone quarries locally, evidence of the potential acid-neutralising capability of the local geology. Datun Coal is also completing a feasibility study to determine if the waste shale can be used in the brick making industry.

Discussions with environment managers at each mine indicated that the temporary waste rock stockpiles were all decreasing in size as wastes were beneficially re-used. All environment managers indicated that they were confident this trend would continue. Environmental management on the waste rock dumps included dust suppression and diversion trenches for surface water run-off that leads to sedimentation ponds. There were also sufficient storage capacity at all four mines for the waste rock generated.

As noted earlier, Datun Coal has a five year budget of RMB18.5 M across all four mines solely dedicated to land rehabilitation over the next five years. No long term closure plans have been compiled as yet, although head office does maintain five year progressive rehabilitation plans, commensurate with the management of mine subsidence.

Coal wash tailings from the Datun Coal wash plant located in Datun township proper are transferred via conveyor to the adjacent power plant and beneficially re-used as fuel. Tailings from the two coal wash plants at Longdong and Kongzhuang mines are either dried and sent to the second Datun Coal power plant in the mine precinct, or sold cheaply to local brick makers as fuel for their kilns. The waste has been classified locally as 'Grade A' and has been approved for re-use. Power plant ash is then sold to the local cement plant where it is also beneficially re-used.

4.4.9 Dust Management

Datun Coal regularly monitors dust as environmental best practice. In this regard, dust is monitored at the underground longwall working face for employee occupational health and safety. Dust suppression underground occurs in the form of water sprays at the longwall working face. Dust suppression also occurs via water sprays on waste rock stockpiles and on conveyors in the coal washing plants.

4.4.10 Social and Regulatory Relations

Following discussions with Datun Coal representatives it appears that relations with both local residents and regulatory bodies are sound. Good relations with the local community are primarily due to continued job opportunities, with approximately 28,000 people employed across all sectors of Datun Coal's business. Employment for this large number of individuals also has positive downstream effects on the local and regional economy in service industries and the like.

Residents directly affected by underground mine site operations are compensated by Datun Coal and relocated from the area. Datun Coal compensates residents for loss of land and as Datun Coal rehabilitates land subsidence into fish breeding ponds, local residents also have access to these facilities.

Relations with statutory bodies are also sound as evidenced by the fact that Datun Coal has never been fined for any environmental incidents. It is SRK's opinion that Datun Coal's proactive approach in addressing its environmental responsibilities helps to maintain these positive relationships with relevant regulatory staff.

4.4.11 Environmental Assessment Conclusions

Following interviews with key Datun Coal environmental staff and inspection of environmental documentation and operational sites, it is apparent that Datun Coal views itself as a champion of environmental management in China and prides itself on its environmental performance to date. SRK believes that Datun Coal has a sound and proactive approach to its environmental responsibilities and is managing its operations in compliance with its environmental obligations. This opinion is supported by the fact that Datun Coal has not been fined for any environmental breaches across its operations to date. Specific focus appears to be on water management and conservation, with several plans in place for increasing the use of recycled water. Plans to increase water recycling is evident both in investment in plant and equipment to treat and re-use water, as well as through messages displayed around various sites reminding staff to minimise their water use. Several constructive plans are also in place to reduce energy use and discharge of emissions.

4.5 Coal Processing and Transport

The CPPs are situated very close to the mines with Yaoqiao and Xuzhuang mines sharing a plant, while Longdong and Kongzhuang are both provided with separate CPPs. Rejects are used in the company-owned power stations in the area, while product coal is railed for 86 km on a company-owned railway to Xuzhou. A small portion of the coal is destined for the export market through Shanghai via Nanjing.

4.5.1 Datun CPP

Datun CPP processes coal from the Yaoqiao and Xuzhuang mines. This processing plant is a jig plant which was constructed in 1996. The plant is well maintained and in good operating order. The ROM feed is delivered by train and dumped with a tippler to two 3,700 t capacity bins. The coal is then screened and the oversize handpicked before it is crushed to 50 mm top size. The full size range is fed to four three-product 2 m jigs. These jigs appeared to be operating overloaded and with insufficient expansion of the bed of solids, resulting in less than optimum separation of waste from coal. This situation provides an opportunity for further performance improvement.

Reject is either used as power station fuel or dumped. A reject pile was examined and no coal was observed. Middlings are stored in a 2,800 t bin for supply to a small power station on an adjacent site which is owned by others. The jig product is de-slimed and the fines reported to a flotation plant. Fine coal is dried with centrifuges and the flotation product is dried with disc vacuum filters. The flotation tailings are dried with plate and frame filters and added to the jig middlings. The train loading station operates at a rate lower than 1,000 tph.

Process Plant

The plant is budgeted to operate for 300 days/year. The ROM stream operates 24 hours a day, seven days a week and the plant operates for 14 hours a day, seven days a week. The capacity of the plant is 428 tph which delivers the required throughput of 1.8 Mtpa. Availability for the plant in 2004 was 76% which is lower than for comparable plants and therefore offers considerable potential for improvement. No flocculent is used in the thickener or filter feed.

Total workforce numbers including train loading and maintenance personnel are approximately 600.

Efficiency

The plant's efficiency is calculated by comparison of plant yield achieved and the software prediction of yield from washability data. The information made available was a predicted yield of 71%, an actual yield of 63% and an efficiency of 63/71 which equates to 88%. Based on these calculations, it is not a good result. However the near gravity content of the feed was quoted as ± 0.1 Specific Gravity (SG), which equates to near gravity material at 14% of the feed. These tight operating conditions of ±0.1 SG is regarded by SRK as a difficult operating range for jigs. SRK observed the operating jigs and the low froth mobility on the cells, and believes the poor efficiency quoted indicates a real opportunity for improvement. The auto samplers in the plant are also primitive and could provide biased sampling results.

Quality

The plant yield for commercially traded coal is 68% and the product is sold as a blending coal. Ash and sulphur values are indicated in Table 4-4 below.

Table 4-4: Quality Parameters - Datun CPP

		Ash (%)	CV (kcal/kg)	Sulphur (%)	TM (%)
Feed	#7 Seam	21	-	0.9	-
	#8 Seam	24	-	0.7	-
Product	High Grade	7.7	6,500	0.55	11
	Middlings	9.2	6,500	0.7	11

4.5.2 Longdong CPP

The Longdong plant is a small, low capital CPP with the allocated maintenance budget obviously affecting plant condition. It is however in good operating condition but visibly not as tidy as the other CPPs. Due to capital considerations and constraints the plant is operated as a 'lump jig plant'.

It is equipped with a small single elevator jig that washes the 50 mm x 13 mm size range while the 13 mm x 0 mm size is all bypassed to product.

The plant is rated at 200 tph and is budgeted to run 300 days/year but only runs for approximately 10 hours/day as it is constrained by mine output. Availability was not identified as a limiting factor. The raw feed ash content is 20 to 35% and product quality (Calorific Value) is 6,500 kilocalories per kilogram (kcal/ kg) for lumps and 5,500 kcal/kg for the fines product. Sulphur is reported to be between 0.70 and 0.75%. The total yield of the plant is approximately 85% including bypass and the entire product is sold as steaming coal. Quality parameters are shown in Table 4-5.

Table 4-5: Quality Parameters - Longdong CPP

		Ash (%)	CV (kcal/kg)	Sulphur (%)	TM (%)
Feed	#7 Seam	27	-	0.7	-
Product	High Grade	23	6,500	0.7	4.5

Total workforce at the Longdong plant is 245.

4.5.3 Kongzhuang CPP

Kongzhuang CPP is small in terms of throughput, however physically it is a very large plant. It has been converted from jig operation to dense medium operation with two new thermal drying units being commissioned. The plant is situated at the head of the mine drift and fed from skips. The plant was observed to be very clean and in good condition.

Materials Handling

The skips report to a single ROM bin with a capacity of 3,000 t. The plant is equipped with three product bins at 1,200 t capacity each, six middling bins with a total capacity of 2,000 t and two reject bins each with a capacity of 400 t. Train loading is done at 1,200 tph for product and 300 tph for middlings.

Process Plant

The 50 mm x 0.5 mm coal is washed in two stages. The first stage is by a Chinese manufactured Larcodem style dense media cyclone. The reject is rewashed in the same medium in a DMC with a wheel-driven shaft in the top to change cut point.

The 0.5 mm x 0 mm is floated in 'jet cells'. The product is dried on a vacuum filter and the tailings are dried on plate frame presses. The fines are planned to be dried further on the thermal driers when they are fully operational. One drier is already operational and is preceded by a feeder and pelletiser. The yield figures for the plant are:

- Product 68%
- Middlings 17%
- Tailings 4%
- Reject 11%

Budgeted operation is 300 days/year and 14 hours/day. Actual operation is 16 hours/day and the total throughput in 2005 was 0.85 Mt ROM.

The Kongzhuang plant is operated and maintained with a workforce of 420.

Quality

The quality parameters at the Kongzhuang plant were quoted as shown in Table 4-6.

Table 4-6: Quality Parameters - Kongzhuang CPP

		Ash (%)	CV (kcal/kg)	Sulphur (%)	TM (%)

4.5.4 Coal Production History

4.6 Long Term Plans

Datun Coal's strategy for the future is to focus on the expansion of the four underground mines to maintain production at very similar rates to current levels. The ROM production volumes for the four mines and the group until 2008 are indicated in Table 4-10.

4.7 Kongzhuang Underground Mine

4.7.1 Introduction

Mine development activities at Kongzhuang commenced during 1971 and longwall mining activities started in 1977. The mine is equipped with an operating longwall system and a 'standby' longwall system that is utilised for pre-installation purposes for the next longwall panel. A top coal caving method is utilised for extracting the total coal seam of 5 m during longwall operations.

Two seams are mined at three levels at the Kongzhuang mine, i.e. the #7 and #8 seams. The top level caving method is used in the #7 seam and a slicing method of first taking the top part of the seam and then the lower part, is applied in the #8 seam. The seams mined vary from 375 up to 785 m below surface. Kongzhuang mine is undermining the Weishan Lake, however no inflow of water from the lake is evident due to the composition and thickness of the overlying strata. The mine achieved 1.15 Mt during 2004 and 2005 compared to the respective plans of 1.05 Mtpa.

4.7.2 Geology and Mineral Resources

Topographic relief for the Datun region is considerably flat, averaging 35 m above sea level. The majority of the mining areas underlie farming land.

The general trend of the geology for the Datun region is characterised by the more simple geology occurring in the northern part of the area (Longdong mine) where the Permian strata dip is 10 degrees, with the geology increasing in complexity towards the south (Kongzhuang mine) where the seams are deeper, steeper (25 to 30 degrees) and have higher gas content.

Kongzhuang mine covers an area of approximately 44 km^2. The area is 13.8 km in length along the strike (EW direction) and about 5 km in width. The Permian strata dips to the north and varies from 24 degrees to 31 degrees.

The Kongzhuang area contains a large igneous intrusion in the east, eliminating almost half of the coal resources in the area. Consequently, only the western half of the area can be mined but still contains a large Marketable Reserve.

The stratigraphy of Kongzhuang coal mine is outlined in Table 4-11.

Table 4-11: Stratigraphic Sequence - Kongzhuang

Stratigraphic Unit	Thickness Range (m)	Average Thickness (m)
Quaternary	0 to 195	140
Jurassic and Cretaceous	0 to 320	0[1]
Upper Permian (Shang Shi Hi Zi Group)	200 to 320	270
Upper Lower Permian (Xia Shi Hi Zi Group)	185 to 295	225
Lower Lower Permian (Shanxi Group)	90 to 135	100
Upper Carboniferous (Taiyuan Group)	135 to 160	155

1. Zero indicates unit does not exist in mining area but range reflects regional geology beyond mining area

The Quaternary material is usually unconsolidated and weathered soil, clay and sand. The Cretaceous and Jurassic material is generally semi-consolidated sediments, but these units have been intersected in only one borehole. Therefore, the Quaternary material is generally found to directly overlie (unconformably) the Permian sediments.

The #1 to the #4 seams belong to the Xia Shi Hi Zi Group. Generally the #1 to the #4 seams are either thin or not present due to being eroded away by the overlying Quaternary sediments. The #5 to the #8 seams belong to the Shanxi Group. Generally the #5 and the #6 seams are too thin for underground mining extraction. The #7 and the #8 seams are both mined at Kongzhuang mine. The #9 to the #22 seams belong to the Taiyuan Group. Most of the seams are generally too thin and cannot be recovered with underground mining operations. The #17 seam is planned to be mined.

The #7 seam is the main seam mined at Kongzhuang. The seam averages 4.9 m in thickness and is extracted using top level caving in longwall panels. The roof conditions are very favourable for this method of mining and the recovery of the total seam is good with minimal dilution involved. The #8 seam is extracted with the slicing method if the seam is too thick for one pass with the longwall shearer. The interburden between the #7 and the #8 seams is between 8 to 20 m thick. It was noted in sections of the main roadways and some gateroads that the floor on the #7 seam level was heaving and consequently pinching the working height. Although this did not prohibit mining, it may cause delays and poor strata conditions as the two seams deepen. The thicknesses and interburdens for the various seams are indicated in Table 4-12.

Table 4-12: Seam Statistics - Kongzhuang

Seam	Thickness Range (m)	Average Thickness (m)	Average Interburden (m)
#7	2.2 to 8.3	4.9	600 (to surface)
#8	0 to 7.5	3.1	16
#17	0.3 to 3.3	0.8	98

The #17 seam is yet to be mined. Two-thirds of the mineable area is situated below a lake.

Structure

The geology at Kongzhuang area is regularly disrupted with faults. The major structural features trend NE-SW, are generally normal faults and have vertical displacements up to 150 m. The average fault has between 3 and 8 m throw which causes minor disruption to the mining operation. Seismic surveys using modern 3D techniques have been conducted over about a 4 km^2 area, with many of these larger faults detected prior to mining.

During the mine inspection, six faults of less than 5 m throw were encountered along one gateroad. These caused minimal disruption to the mining operations.

The western part of Kongzhuang area is affected by igneous activity, prohibiting the mining of coal in this area. In the eastern part of Kongzhuang, there is minor igneous activity in the way of dykes and small areas intruded by sills.

Coal Quality

All the coal mined at Kongzhuang produces coking coal products, primarily for domestic use.

All the ROM coal is washed through a dense medium cyclone wash plant at the mine site (see Coal Processing section for more details). The typical quality parameters of each seam are summarised in Table 4-13.

Table 4-13: Typical Coal Quality - Kongzhuang Seams

Gas

There were only a few gas samples taken from the bore cores during the exploration program. Very few gas samples have ever been taken from the lower #17 seam.

Gas samples taken from bore cores for the #7 seam indicate generally low levels (less than 0.5 m^3/t) of methane. However, one borehole measured 4.8 m^3/t and pockets of gas (in the order of 5 m^3/t to 8 m^3/t) have been encountered during hydraulic mining of the #7 seam. To date, these areas of higher gas have been well managed by the company.

Resource Estimation

The majority of the exploration boreholes were drilled in the 1970s, while a few were drilled more recently in the 1990s. In general, the core recovery of the seams averaged around 75% of the coal in each of the target seams. Most if not all boreholes were logged using geophysical logging tools to accurately measure the seam thickness which allows the coal tonnage to be accurately calculated.

The coal resources for Kongzhuang mine are shown in Table 4-14 and were current as at 30 June 2006. The #17 seam has been excluded by SRK due to the low seam thickness and high sulphur content.

4.7.3 Coal Reserves

SRK has applied a 75% mining recovery factor to the coal resources to allow for those resources which will not be accessible in a practical mine design. This has been assumed to allow for areas which will not be mineable or fully extractable, such as faults and intrusions, gateroads, main and development entries. Mining loss and mining dilution factors have also been applied to calculate recoverable reserves. A saleable recovery percentage was then applied to calculate marketable reserves. The resulting coal reserves are shown in Table 4-15.

Table 4-15: Coal Reserves - Kongzhuang

75	15	17	32	6	10	33	92.9	30

4.7.4 Mining and Operations

Coal production is achieved with longwall mining methods supported by development blasting operations and a hydraulic cutting panel. Very difficult mining conditions exist at the mine as the coal seam is extracted at 25 degrees dip and in some localised areas up to 30 degrees.

Development activities are conducted with blasting operations of which five panels mine in coal for longwall panel formation and five panels mine in rock for future mine development. The mine also has access to two roadheaders (Chinese-supplied S-100) for coal development if required.

A panel applying hydraulic cutting methods is operational in the south-eastern part of the mining reserve delivering 300,000 tonnes per annum (tpa). This mining method was implemented to extract coal in the highly faulted areas of the reserve. Total production figures just in excess of 1 Mtpa have been achieved for the mine during the last five years, but the plan is to expand to 1.8 Mtpa. This production expansion will be achieved by phasing out and replacing the current hydraulic cutting method with an additional longwall system within the next five years. Historical production figures for the mine are shown in Table 4-16.

Table 4-16: Mine Production History, 2003 to 30 June 2006 – Kongzhuang

	2003	2004	2005	30 June 2006
Longwall (Mtpa)	1.20	1.15	1.15	0.64
Development (m)	15,058	15,666	14,506	1,085

Very difficult mining conditions were evident during the site visit underground. The depth of mining and the severe dip in the coal seam contribute to broken roof conditions developing in the coal seam which requires excessive support in localised areas where high levels of stress are concentrated. Intensive support is generally required during development to keep roadways up and to prevent premature collapse during longwall mining. Poor stability is exacerbated in the areas where the slicing method of mining is used and the roadways have to withstand two mining sequences. Normal support during development includes steel and cable anchors combined with wire mesh. Steel straps and steel arches are also utilised as required, with the placement of mechanical and hydraulic props closer to the longwall mining face.

All development for access to future mining panels is carried in rock to assist in stability and to ensure longevity over the mining life of the panels. These roadways are also developed in an arch to further enhance stability for the longer term at a width of 4.2 m and a cross-section of 13.65 m^2. After applying shotcrete, the net area of the roadway is 11.88 m^2. A canal is also formed and grouted on ground level in the corner of the roadway to provide a water channel for water management in the roadways.

No stonedusting practices are employed at the mine. Sidewalls and roof are washed down periodically with water according to the requirements of Chinese legislative requirements. Water barriers are in use as required by local legislation.

Ventilation quantities are generally lower than international standards but comply with local requirements. The airflow quantity reported for the longwall panel is 14 m^3/sec and for the development panel 5 m^3/sec. A total of 150 m^3/sec is circulated through the mine. Low methane levels are reported and detected underground. In-time methane monitoring is available on the surface in a centralised control room and equipment underground is interlocked to trip power when methane levels exceed 1.5% concentration. Heat experienced is high and temperatures measured underground in the panels indicated 27 degrees Celsius (^{0}C) and 28^{0}C dry-bulb.

Dust levels were evident and measurements are taken every week in identified areas in compliance with legislation. The following methods to prevent dust generation are implemented:

- Water injection to coal seam prior to mining (holes up to 100 m length)
- Water sprays on production machines
- Water fog in development panels
- Washing of sidewalls and roof on a frequent basis

Kongzhuang mine utilises conventional methods of transportation underground. Coal is transported from the longwall panel to the surface by rubber belt conveyor systems and in development panels initially by a scraper chain conveyor and subsequently by the rubber belt conveyor system. Electric trains are utilised to transport personnel closer to the mining panels and chairlift systems transport personnel between the different levels of the mine. Material and waste are transported by conventional winch and skip systems.

4.7.5 Infrastructure

The mine is serviced by four vertical shaft systems of which two serve as ventilation extraction shafts at a depth of approximately 180 m in the south and east of the mining reserve. The other two shafts are respectively equipped with gear to transport coal, men and material. The main shaft is utilised to convey coal to the surface and has an annual capacity of 1.5 Mt, while the auxiliary shaft is utilised to convey men and material to and from the surface. The depth of the auxiliary shaft is 410 m and is situated very closely to all surface infrastructure and facilities.

Water for underground use is captured in underground dams from the inflowing groundwater in the strata which is the main supply of water for underground use and can be supplemented from a surface reservoir fed by boreholes. The boreholes are situated 200 m from the ventilation shaft in the east and the water supply is piped through the eastern shaft to the underground workings. This supplementary water supply is mainly used to supplement water supply for dust suppression services.

The mine is supplied with electricity by two 35 kV surface substations feeding with a total of four supply lines. The one substation situated at the main shaft is equipped with two 12,500 kVA transformers and the other substation at the east ventilation shaft with two 6,000 kVA transformers. Reports indicate that the maximum power usage for 2004 reached 14,400 kWh with an average of 10,083 kWh. Ringfeeds have been implemented underground with the supply reported as very reliable.

4.7.6 Capital and Operating Costs

Capital cost for Kongzhuang mine has varied historically but is forecast to stabilise at very similar levels to 2005 for 2006 and 2007 and to drop off again in 2008 (refer Table 4-17). The operating unit cost for Kongzhuang mine shows a steady increase during the last three years (refer Table 4-18).

4.8 Xuzhuang Underground Mine

4.8.1 Introduction

Construction of the mine commenced in 1970 and longwall production started in 1979. Xuzhuang mine has increased its production level during the life of the mine from 0.9 Mtpa in 1985 up to 1.5 Mtpa in 1997. Production for 2004 totalled 1.42 Mt compared to a plan of 1.35 Mtpa and 1.41 Mt during 2005 compared to a plan of 1.40 Mt, all within the mine design capacity of 1.5 Mtpa.

Mining at Xuzhuang is conducted at a depth of approximately 400 m and future plans include mining the lower seam at a depth of 750 m. The mine is equipped with two longwall systems employed in different areas of the mine.

4.8.2 Geology and Mineral Resources

Topography in the Xuzhuang area is flat and similar to that of Kongzhuang. The stratigraphic sequence of Xuzhuang coal mine is outlined in Table 4-19.

Table 4-19: Stratigraphic Sequence - Xuzhuang

Stratigraphic Unit	Thickness Range (m)	Average Thickness (m)
Quaternary	0 to 195	140
Jurassic and Cretaceous	0 to 522	0[1]
Lower Permian (Shang Shi Hi Zi Group)	153 to 242	220
Lower Permian (Shanxi Group)	73 to 123	102
Upper Carboniferous (Taiyuan Group)	150 to 164	158

1. Zero indicates unit does not exist in mining area but range reflects regional geology beyond mining area

Xuzhuang mine covers an area 10 km in length along the strike (EW direction) and about 3.8 km in width. The Permian strata dips to the north and varies from 15 to 30 degrees, averaging around 18 degrees. The stratigraphy of Xuzhuang is outlined in Table 4-20. The Quaternary material is similar to that at Kongzhuang. The seams mined in Xuzhuang are the same as those for Kongzhuang.

Table 4-20: Seam Statistics - Xuzhuang

Seam	Thickness Range (m)	Average Thickness (m)	Average Interburden (m)
#7	1.4 to 8	5	400 (to surface)
#8	0.6 to 6.6	2.9	8
#17	0.2 to 2.4	1.1	110

The #17 seam is yet to be mined.

Structure

The geology at Xuzhuang is similar to the Kongzhuang area. It is frequently disrupted with faults of less than 1 m throw. The major structural features trend NE-SW, are generally normal faults and have vertical displacements up to 70 m. The average fault has between 3 and 8 m throw which causes minor disruptions to the mining operation.

Two dykes have been intersected in old mine workings. It is not expected that any significant igneous intrusions will be found in future workings.

Coal Quality

Coal mined at Xuzhuang produces thermal coal products.

All the ROM coal is washed through a dense medium cyclone wash plant at the mine site (see Coal Processing section for more details). The typical quality parameters of each seam are summarised in Table 4-21.

Table 4-21: Typical Coal Quality - Xuzhuang Seams

Seam	Inherent Moisture % (ad)	Raw Ash % (ad)	Washed Ash % (ad)	Raw Sulphur % (ad)
#7	1.35-1.8	14.2	6.7	0.78
#8	1.35-1.8	12.6	5.7	1.10
#17	1.35-1.8	18.7	13.3	2.14

Gas

There were very few gas samples taken from the bore cores during the Xuzhuang exploration program. Gas samples taken from bore cores for the #7 seam indicate generally low levels (less than 1.5 m^3/tonne) of methane, however one borehole measured 3.7 m^3/tonne.

Resource Estimation

The majority of the exploration boreholes were drilled in the 1970s, while a few were drilled more recently in the 1990s. In general, the core recovery of the seams averaged around 75% of the coal in each of the target seams. Most if not all boreholes were logged using geophysical logging tools to accurately measure the seam thickness which allows the coal tonnage to be accurately calculated.

Coal resources for Xuzhuang mine are shown in Table 4-22 and were current as at 30 June 2006. The #17 seam was excluded by SRK due to low seam thickness and high sulphur content.

4.8.3 Coal Reserves

SRK has applied a 75% mining recovery factor to the coal resources to allow for those resources which will not be accessible in a practical mine design. This has been assumed to allow for areas which will not be mineable or fully extractable, such as faults and intrusions, gateroads, main and development entries. Mining loss and mining dilution factors have also been applied to calculate recoverable reserves. A saleable recovery percentage was then applied to calculate marketable reserves. The resulting coal reserves are shown in Table 4-23.

Table 4-23: Coal Reserves - Xuzhuang

75	20	28	48	6	10	50	80.8	40

4.8.4 Mining and Operations

Two longwall systems operate in the mine, within difficult mining conditions. The average dip of the seam is at 18 degrees and in localised areas up to 22 degrees. A single lift is taken by the longwall to extract the 3.7 m seam with a panel width of 180 m and generalised length of 1 km per panel. Chinese-supplied longwall equipment is used, namely a MG-475 shearer and 105 shields along the width of the face each rated at 360 t.

Development is done by a combination of roadheader and blasting techniques. Two roadheader panels are in operation producing at an average of 10 m/day. Development is driven through coal for the establishment of gateroads for the longwall and through rock to establish main entries to new areas of the mine to ensure stability in the longer term. Handbolting practices are employed in all development panels. The historical production figures for Xuzhuang for the last three years are shown in Table 4-24.

Table 4-24: Mine Production History, 2003 to 30 June 2006 – Xuzhuang

	2003	2004	2005	30 June 2006
Longwall (Mtpa)	1.45	1.42	1.41	0.82
Development (m)	13,879	12,520	13,333	1,220

Very difficult mining conditions were present in 2005 requiring intensive support during the development cycle. Areas in the roadways were fractured and broken and required additional support to secure these areas effectively. Roadways are developed at a width of 4.2 m and a height of 2.7 m. Normal support during development includes steel and cable anchors combined with wire mesh. Channel steel beams are installed as required and tensioned by the cable anchors. Hydraulic props are placed closer to the longwall mining face.

The roadways developed in rock are profiled in an arch to further enhance stability for the longer term at a width of 4.6 m and a cross-section of 15.41 m^2. After applying shotcrete the net area of the roadway is 13.76 m^2. A canal is also formed and grouted on ground level in the corner of the roadway to provide a water channel for water management in the roadways.

No stonedusting practices are employed at the mine. Sidewalls and roof are washed down periodically with water and water barriers are in use at strategic points.

Ventilation quantities are in compliance with Chinese legislation. The ventilation quantity reported for the longwall panel is 9 m^3/sec and for the development panel 3 m^3/sec. A total of 103 m^3/sec is circulated through the mine. Low methane levels are reported and detected underground. Real-time methane monitoring on the surface is not available but fixed monitors are fitted in the production panels. Production equipment underground is interlocked to trip power when methane levels exceed 1.5% concentration. Alarm levels are set at 1% concentration and the source of methane is investigated and addressed as soon as alarms are activated. Temperature in the mining panels is high with high levels of humidity present.

Dust in the underground mine were visible at the time of the SRK inspection. Measurements for respirable dust are taken twice a month and are taken at identified areas in production faces and conveyor roadways in compliance with legislation. All other dust measurements are conducted once a month. The following methods to prevent dust generation are relevant to Xuzhuang mine:

- Water sprays on production machines
- Water sprays on conveyor transfer points
- Water curtains 50 m behind roadheaders in development panels
- Washing down of production faces
- Washing of sidewalls and roof on a frequent basis
- PPE for operators exposed to high dust levels, i.e. dust masks

The mine utilises conventional methods of transportation underground. Coal is transported from the longwall panel to the surface by rubber belt conveyor systems and in development panels initially by a scraper chain conveyor and subsequently by the rubber belt conveyor system. Electric trains are utilised to transport personnel closer to the mining panels and chairlift systems transport personnel between the different levels of the mine. Material and waste are transported by conventional winch and skip systems.

4.8.5 Infrastructure

Electricity supply to the mine is via four incoming supply lines at 35 kV. The power station is situated 3 km from the mine and owned by the local government, with a generating capacity of 645 MW. The supply is fed through a surface substation with 2 x 12,500 kVA capacity and distributed to the underground workings at 6 kV. Ringfeeds underground distribute the supply to the various working areas. The shearers operate at 1,100 volts (V) and the development panels at 690 V. The installed underground power capacity is 8,000 kW. Power supply is very reliable with no interruptions or downtime reported, resulting in an availability of 100%.

Water supply for the mining process is sourced from boreholes on the surface and groundwater from the overlying strata. Used water from underground is pumped to a main dam in close proximity to the auxiliary shaft and from there pumped to surface at 250 m^3 per hour. The water is treated in a water treatment plant to be re-used for sewerage handling on the surface and grouting and fire prevention underground. The recycled water is piped back underground through the ventilation shaft.

Two surface boreholes are situated at 100 and 150 m respectively from the mine and are used to supply Xuzhuang mine only. The two boreholes can each deliver at 40 m^3 per hour and store water in two surface reservoirs of 100 and 600 m^3 respectively. Water usage at 5,000 m^3/day, half of which is for domestic use in the adjacent workers' village, is less than the current available supply. In the event of a shortage of water, a fall-back position is available to source water from Weishan Lake or Gang River situated 800 m from the mine.

The mine is equipped with three vertical shafts for ventilation and transportation purposes. One shaft is equipped as a ventilation shaft, the main shaft with an elevator system to convey coal to the surface and the auxiliary shaft to transport men and material to and from the surface.

4.8.6 Capital and Operating Costs

Actual capital expenditure at Xuzhuang mine from 2003 to 2005 and planned expenditure to 2008 is shown in Table 4-25.

The operating unit cost at the mine increased from 2003 to 2005 as indicated in Table 4-26. The significant increase in 2004 was reported as a change in accounting practices and reporting.

4.9 Longdong Underground Mine

4.9.1 Introduction

Longdong mine started production during 1987 and has been designed to produce at 1.2 Mtpa. One longwall face is operational at the mine with five development panels both in coal and rock. In 2005 the mine was extracting one seam, i.e. the #7 seam at a depth varying from 200 to 230 m below the surface, and future plans include the extraction of two lower seams, i.e. the #17 and #21 seams. The slicing method of coal extraction is used in the #7 seam where the top part of the seam is extracted and then the longwall returns to extract the bottom part of the seam.

A production level of 1.2 Mtpa was achieved during 2004 compared to a plan of 900,000 t for the year, and 1.16 Mt was produced in 2005.

4.9.2 Geology and Mineral Resources

Longdong mine is the most northern of the Datun Coal leases and covers an area of 10 km in length along the strike (EW direction) and about 4 km in width. Topography at Longdong is flat, similar to that of Kongzhuang. The Permian strata dips to the north and varies from 3 to 8 degrees, averaging around 5 degrees.

The stratigraphic sequence of Longdong coal mine is outlined in Table 4-27.

Table 4-27: Stratigraphic Sequence - Longdong

Stratigraphic Unit	Thickness Range (m)	Average Thickness (m)
Quaternary	154 to 207	195
Jurassic and Cretaceous	0 to 488	0[1]
Upper Permian (Shang Shi Hi Zi Group)	0 to 59	0[1]
Lower Permian (Shang Shi Hi Zi Group)	270 to 298	285
Lower Permian (Shanxi Group)	89 to 116	103
Upper Carboniferous (Taiyuan Group)	146 to 181	166

1. Zero indicates unit does not exist in mining area but range reflects regional geology beyond mining area

The stratigraphy of Longdong is outlined in Table 4-28. The Quaternary material is similar to that at Kongzhuang.

The #7 seam is the main seam mined at Longdong. The seam averages 5.5 m in thickness and is extracted using two passes with the longwall shearer. Since the roof conditions are not ideal, wire mesh is placed at the roof on the first pass so as to hold the roof up for the shearer on the second pass.

Table 4-28: Seam Statistics - Longdong

Seam	Thickness Range (m)	Average Thickness (m)	Average Interburden (m)
#7	1.4 to 8	5.5	400 (to surface)
#17	0.1 to 1.2	0.7	100

The #17 seam has yet to be mined.

Structure

The geology at Longdong is considered to be the least complex geology of the four Datun mines. It has gently dipping strata and very few major faults. There are major normal faults (between 50 and 100 m throw) to the north which form the northern boundary of Longdong mine. A major structure forms the southern boundary between Longdong and Yaoqiao mines.

Longdong is transected by a syncline in the northern half of the area and an anticline in the southern half of the area, both trending EW. Many minor faults and fractures are associated with the hinges of these folds causing minor difficulty to mining conditions. The minor faults (generally less than 5 m throw) cannot be detected from either drilling or from 3D seismic surveys which have a minimal vertical resolution of 5 m. These faults are encountered in the gateroads and have minimal affect on the mining operations.

Igneous dykes have minimal affect on the mining operations.

Coal Quality

Coal mined at Longdong produces thermal coal products. All the ROM coal is washed through a dense medium cyclone wash plant at the mine site (see Coal Processing section for more details). The typical quality parameters of each seam are summarised in Table 4-29.

Table 4-29: Typical Coal Quality - Longdong Seams

Seam	Inherent Moisture % (ad)	Raw Ash % (ad)	Raw Sulphur % (ad)	Raw Phosphorus % (ad)
#7	2.1	15.9	0.90	0.002
#17	1.8	14.9	2.50	0.002

Gas

Sixteen gas samples were taken from the bore cores during the Longdong exploration program. Only seven of the results were deemed reliable by Datun Coal.

Gas samples taken from bore cores for the #7 seam indicate generally low levels (less than 0.5 m^3/tonne) of methane. However, two boreholes measured high levels of methane, one recording 5.9 m^3/tonne while the other recorded 11 m^3/tonne. To date, these areas of higher gas have been managed well by the company.

Resource Estimation

The majority of the exploration boreholes were drilled in the 1970s, while a few were drilled more recently in the 1990s. In general, the core recovery of the seams averaged around 75% of the coal in each of the target seams. Most if not all boreholes were logged using geophysical logging tools to accurately measure the seam thickness which allows the coal tonnage to be accurately calculated.

The coal resources for Longdong mine are shown in Table 4-30 and were current as at 30 June 2006.

Table 4-30: Coal Resources - Longdong

Seam	Resources (Mt)			Total Resources (Mt)	Mineable Resources (Mt)
	Measured	Indicated	Inferred

#17	0	1	4	5	0[1]
Total	**21**	**10**	**16**	**47**	**30**

1. #17 seam excluded from Mineable Resources due to low seam thickness and high sulphur content

4.9.3 Coal Reserves

SRK has applied a 75% mining recovery factor to the coal resources to allow for those resources which will not be accessible in a practical mine design. This has been assumed to allow for areas which will not be mineable or fully extractable, such as faults and intrusions, gateroads, main and development entries.

Mining loss and mining dilution factors have also been applied to calculate recoverable reserves. A saleable recovery percentage was then applied to calculate marketable reserves. The resulting coal reserves are shown in Table 4-31.

Table 4-31: Coal Reserves- Longdong

Mining Recovery (%)	Proved Reserve (Mt)	Probable Reserve (Mt)	Proved + Probable Reserve (Mt)	Mining Loss (%)	Mining Dilution (%)	Recoverable Reserves (Mt)	Saleable Recovery (%)	Marketable Reserves (Mt)
75	16	7	23	6	10	23	91	21

4.9.4 Mining and Operations

The #7 coal seam mined at Longdong is approximately 5.5 m thick and dips at between 3 degrees and 8 degrees. The coal seam is extracted with the slicing method by taking 2.6 m at the top of the seam and laying down mesh behind the shields as the longwall retreats. When the panel is completed at the top level the longwall returns to remove the bottom 2.6 m of the coal seam. This method has been successfully operated in previous longwall panels. Although it could be restrictive in productive rates when mining the bottom part of the seam, it ensures complete extraction of the reserves in the panel. Longwall panels were previously restricted to a length of 1 km, as the Design Institute responsible for the mining design orientated panels along the dip at a maximum length of 1 km. This design criterion has subsequently changed and panels up to 2 km are being mined. Future longwall panels have been planned to undermine Zhaoyang Lake and also a dam wall that has been established on the surface.

All equipment used at the mine is supplied by Chinese manufacturers with the shearer a MGTY250/600 model and the shields ZY3600-16/36 models. A total of 124 shields are installed along the width of the current face and have a capacity of 360 t each. Five development panels are deployed of which four utilise conventional blasting methods and one panel utilises an S-100 roadheader. Handbolting practices are used in the development panels with on average development figures of 3 m/day for blasting panels and 15 m/day for the roadheader panel achieved. Development for the forming of longwall panels is done in coal with the roadheader panel supplemented by blasting panels, while development of roadways for future mine life is driven in rock by the blasting panels.

The historical production figures achieved at Longdong mine are shown in Table 4-32.

Table 4-32: Mine Production History, 2003 to 30 June 2006 – Longdong

	2003	2004	2005	30 June 2006
Longwall (Mtpa)	1.10	1.20	1.16	0.65
Development (m)	7,818	7,318	9,458	0

Current mining conditions in the #7 seam are acceptable and manageable. Development of main entry roadways are driven in rock to ensure stability for the mine life. The mining in rock is also done to an arched profile at a width of 4 m with further support and shotcreting with wire mesh applied afterwards. Mining in coal to develop panels for longwall mining is done at a width of 4.2 m and a height of 2.4 m.

Stonedusting is not applied at the mine. Sidewalls and roof are washed down periodically with water and water barriers are in use.

Ventilation quantities are generally lower than internationally accepted standards. The airflow quantity reported for the longwall panel is 30 m^3/sec and for the development panels 1.8 m^3/sec. A total of 115 m^3/sec is circulated through the mine. Low methane levels are reported and detected underground. In-time methane monitoring is available on the surface in a centralised control room and equipment underground is interlocked to trip power when methane levels exceed 1.5% concentration. Although low levels of methane have occurred, it was noted that boreholes in future western mining reserves indicated higher levels of methane up to in-situ values of 11 m^3/tonne. These high methane levels will require a different approach to managing methane content in these areas, e.g. pre-drainage, higher ventilation velocities etc. Temperature levels underground and in the mining panels are acceptable.

Only low levels of dust are evident underground and measurements are taken every 10 days in identified areas in compliance with legislation. A chemical (identified as NCZ-1) is applied to the floors of the main intake roadways to prevent excessive dust generation and carriage into the rest of the mine.

Longdong mine utilises conventional methods of transportation underground. Coal is transported from the longwall panel to the surface by rubber belt conveyor systems and in development panels initially by a scraper chain conveyor and subsequently by the rubber belt conveyor system. Electric trains are utilised to transport personnel closer to the mining panels. Material and waste are transported by conventional winch and skip systems to the main shaft system where it is transported by an elevator system with a capacity of 1.2 Mtpa.

4.9.5 Infrastructure

Three vertical shafts have been established at Longdong mine. One shaft serves as a ventilation extraction shaft, one shaft as the main shaft to transport coal and waste to the surface and one shaft as an auxiliary shaft to transport men and material to and from the surface. The depth of the auxiliary shaft is 328 m.

Electricity for the mine is supplied from a power plant owned by Datun Coal. Power is supplied at 35 kV and three independent feeds have been established. The supply has historically been very reliable with no failures or interruptions occurring. Supply capacity to the mine is 5,237 kWh and the usage is stated at 3,200 kWh.

Water is supplied to the mine from closely situated boreholes at 4,000 cubic metres per day (m^3/day) and stored in reservoirs on surface. A total of 3,000 m^3/day of water is consumed, of which 1,000 m^3/day is for industrial purposes and 2,000 m^3/day for domestic use. Three pumps of 80 cubic metres per hour (m^3/hr) capacity each have been installed on the surface to pump water for underground use with only one pump required for the underground water supply. Underground water is pumped to the surface and utilised for sewerage handling and coal washing in the CPP. No water is recycled for underground use.

4.9.6 Capital and Operating Costs

Historical capital investment and planned investment for Longdong mine until 2008 is indicated in Table 4-33. Unit cost at Longdong mine increased from 2003 to 2004 due to a change in accounting practice and reporting similar to Xuzhuang mine, with a decrease in operating cost achieved from 2004 to 2005 (refer Table 4-34 below).

4.10 Yaoqiao Underground Mine

4.10.1 Introduction

Yaoqiao is the best performing mine in Datun Coal. The mine started in 1976 and had a design capacity of 1.2 Mtpa. A new shaft was implemented in 2000 to increase production by a further 1.8 Mtpa to reach a total of 3 Mtpa.

Two seams are extracted at Yaoqiao mine, the #7 and #8 seams, of which the #7 is the main mining seam. The seams are located at a depth of approximately 400 m. The mine has already undermined 17.2 km^2 of Zhaoyang Lake, however no inflow of water from the lake has been evident.

Three longwall systems and nine development panels were in operation at the mine in 2005. The top coal caving method is used in the longwall mining process to extract the complete seam at 5.5 m. The mine produced 3.5 Mt in 2003 and 3.4 Mt in 2004 and 2005 respectively.

4.10.2 Geology and Mineral Resources

The stratigraphic sequence of Yaoqiao coal mine is outlined in Table 4-35.

Table 4-35: Stratigraphic Sequence - Yaoqiao

Stratigraphic Unit	Thickness Range (m)	Average Thickness (m)
Quaternary	81 to 227	163
Jurassic and Cretaceous	0 to 449	0[1]
Upper Permian (Shang Shi Hi Zi Group)	180 to 212	200
Lower Permian (Xia Shi Hi Zi Group)	201 to 297	242
Lower Permian (Shanxi Group)	64 to 131	105
Middle and Upper Carboniferous (Benxi and Taiyuan Group)	180 to 200	190

1. Zero indicates unit does not exist in mining area but range reflects regional geology beyond mining area

Topography at Yaoqiao is flat, similar to that of Longdong. Yaoqiao mine lies adjacent to the south of Longdong mine and covers an area of some 57 km^2, 13.5 km in length along the strike (EW direction) and about 4.2 km in width. The Permian strata dips to the north and varies from 8 degrees to 20 degrees, averaging around 12 degrees. The stratigraphy of Yaoqiao is outlined in Table 4-36. The Quaternary material is similar to that at Kongzhuang.

The #7 seam is the main seam mined at Yaoqiao. The seam averages 5.5 m in thickness and is extracted using top level caving in longwall panels. The roof conditions are very favourable for this method of mining and the recovery of the total seam is good, with minimal dilution involved.

The #8 seam is not present in the western part of the area, but in the east it is mined in selective areas of Yaoqiao. When the interburden between the #7 and the #8 seams is less than 1 m, the seams are mined together using top level caving as their combined thickness reaches a maximum of 11 m. Otherwise, they are mined separately.

Table 4-36: Seam Statistics - Yaoqiao

Seam	Thickness Range (m)	Average Thickness (m)	Average Interburden (m)
#7	1.4 to 9.9	5.5	600 (to surface)
#8	0 to 9.9	3.3	9
#17	0.1 to 2.6	1.1	95

The #17 seam has yet to be mined.

Structure

The geology at Yaoqiao is considerably more complex than that of Longdong mine. It is disrupted with frequent faults of less than 1 m throw. The major structural features trend NE-SW and are generally normal faults. The average normal fault has between 3 and 8 m throw which causes minor disruptions to the mining operation.

The #7 seam is intruded by a number of igneous sills within the Yaoqiao area. A large sill is located in the south, a smaller one in the west (intersected by two boreholes) and another is found on the eastern boundary. As well as sills, the coal seams in Yaoqiao are dissected by large Dioritic dykes up to 150 m wide, some 1 km in length and trending E-W. These dykes generally consist of fresh material and therefore are hard to penetrate for the longwall shearer.

Coal Quality

Coal mined at Yaoqiao produces thermal coal products.

All the ROM coal is washed through a dense medium cyclone wash plant at the mine site (see Coal Processing section for more details). The typical quality parameters of each seam are summarised in Table 4-37.

Table 4-37: Typical Coal Quality - Yaoqiao Seams

Seam	Inherent Moisture % (ad)	Raw Ash % (ad)	Washed Ash % (ad)	Raw Sulphur % (ad)	Washed Sulphur % (ad)	Washed Phosphorus % (ad)
#7	1.3-1.67	14.3	7.2	0.74	0.41	0.013
#8	1.3-1.67	11.6	5.1	0.93	0.81	0.004
#17	1.3-1.67	15.9	7.0	2.08	1.54	0.004

Gas

Twenty-eight gas samples were taken from the bore cores during the Yaoqiao exploration program. Seventeen samples of the #7 seam recorded methane levels between 0 and 0.1m^3/t. Six samples of the #17 seam recorded methane levels between zero and 4.0m^3/t. To date, these areas of higher gas have been well managed by the company.

Resource Estimation

The majority of exploration boreholes were drilled in the 1970s, while a few were drilled more recently in the 1990s. In general, the core recovery of the seams averaged around 75% of the coal in each of the target seams. Most if not all boreholes were logged using geophysical logging tools to accurately measure the seam thickness which allows the coal tonnage to be accurately calculated.

The coal resources for Yaoqiao mine are shown in Table 4-38 and were current as at 30 June 2006.

Table 4-38: Coal Resources - Yaoqiao

Seam	Resources (Mt) Measured	Indicated	Inferred	Total Resources (Mt)	Mineable Resources (Mt)
#7	141	18	102	261	159
#8	22	26	14	62	48
#17	0	0	58	58	0
Total	**163**	**44**	**174**	**381**	**207**

4.10.3 Coal Reserves

SRK has applied a 75% mining recovery factor to the coal resources to allow for those resources which will not be accessible in a practical mine design. This has been assumed to allow for areas which will not be mineable or fully extractable, such as faults and intrusions, gateroads, main development entries etc. Mining loss and mining dilution factors have also been applied to calculate recoverable reserves. A saleable recovery percentage was then applied to calculate marketable reserves. The resulting coal reserves are shown in Table 4-39.

Table 4-39: Coal Reserves - Yaoqiao

Mining Recovery (%)	Proved Reserve (Mt)	Probable Reserve (Mt)	Proved + Probable Reserve (Mt)	Mining Loss (%)	Mining Dilution (%)	Recoverable Reserves (Mt)	Saleable Recovery (%)	Marketable Reserves (Mt)
75	122	33	155	6	10	161	80.8	130

4.10.4 Mining and Operations

The main seam mined at Yaoqiao mine is the #7 seam, however the #8 seam occasionally moves towards the #7 seam with a very small interburden of a few millimetres. In this case the #8 seam is extracted together with the #7 seam, with a cut-off interburden of 1 m. This coalescing of the #7 and #8 seams is more prevalent in the eastern part of the mining reserve, making the extraction of the #8 seam economical in this area.

The mine is equipped with three longwall panels utilising the top coal caving method. One longwall panel visited by SRK (panel 7001), was 170 m wide and 1.4 km long. Equipment is Chinese-supplied with the shearers a MGTY250/600 model and the shields 139 x ZFSB4400, 100 x ZFSB3800 and 133 x ZF2800 for the three panels respectively. Development is undertaken with nine panels, including six conventional blasting panels for rock development and three roadheader panels equipped with S-100 roadheader machines for coal roadway development. The blasting panels produce at an average of 100 m per month and the roadheader panels at 400 m per month. The record development production in coal with a roadheader achieved in the past was 700 m per month. The historical production figures for Yaoqiao mine during the last three years are shown in Table 4-40.

Table 4-40: Mine Production History, 2003 to 30 June 2006 – Yaoqiao

	2003	2004	2005	30 June 2006
Longwall (Mtpa)	3.51	3.41	3.40	1.93
Development (m)	17,018	16,008	16,038	0

The average dip in the coal seam at Yaoqiao mine is 18 degrees. Fair to difficult mining conditions are present requiring relatively intensive support to ensure stability in the long term. Additional secondary support is required in localised areas where faulting and intrusions intersect the mining seam. Coal roadways are developed at 4.2 m width by 2.6 m height and are supported as a standard with steel point and cable anchors.

Development for future expansion of the mine is done through rock with blasting panels. This method of development is conducted to ensure longevity of main access roadways over the life of the mine. The roadway is driven at a base width of 4.8 m and a height of 3.8 m and profiled in an arch to further enhance stability. Shotcrete and mesh are also applied after support has been installed, and a water canal is formed at the side of the roadway to assist in water management.

Ventilation quantities are generally less than international standards. The airflow quantity reported for the longwall panel is 11 m^3/sec and for the development panels 8 m^3/sec. Low methane levels are reported and detected underground. In-time methane monitoring was not available on the surface in 2005, however it was being implemented. Equipment underground is interlocked with local monitors in the panel to trip power when methane levels exceed 1.5% concentration. Temperature levels underground are acceptable.

No stonedusting practices are employed at the mine. Water barriers are in use.

Excessive dust levels are not evident in the underground workings and measurements are taken every week in identified areas in compliance with legislation.

The mine utilises conventional methods of transportation underground. Coal is transported from the longwall panel to the surface by rubber belt conveyor systems and in development panels initially by a scraper chain conveyor and subsequently by the rubber belt conveyor system. Electric trains are utilised to transport personnel closer to the mining panels. Travelling distances of up to 5 km exist between the shaft system and the working panels. Material and waste are transported by conventional winch and skip systems.

4.10.5 Infrastructure

In 2000, Yaoqiao mine implemented an additional shaft system to cater for the increased production capacity of 3 Mtpa. By 2005, a total of seven vertical shafts had been established at Yaoqiao mine. Two auxiliary shafts are utilised to transport men and material to and from surface and two main shaft systems with a combined design capacity of 3.9 Mtpa are utilised to transport coal and waste material to the surface. Three ventilation shafts provide ventilation capacity to the mine.

Electricity is supplied to the mine by the Datun Coal-owned power station via 35k V overhead powerlines. There is a total of 51,150 kVA installed capacity, with the reported required installed capacity underground at a maximum of 15,000 kW and an average of 8,000 kW. The system is reported to be reliable, and other than a few thunderstorms in the past resulting in interruptions, no major delays or interruptions have been experienced.

Water supply to the mine is from four boreholes (spaced at 500 m) with the furthest hole situated approximately 2 km from the mine. The water is stored in a 400 m^3 reservoir on the surface before being piped underground through the three ventilation shafts. These boreholes supply Yaoqiao mine only, but are also used to supply requirements for domestic use. Water is recycled from underground through a water treatment plant to be used as sewerage water.

Mine personnel are aware of and have reported that the water supply capacity from the boreholes is decreasing. To counter this, water restrictions have been implemented for domestic use and domestic supply is cut off every day from 12:00pm to 5:00am. A current supply capacity of 7,000 m^3/day is available and 2,700 m^3/day is used, leaving a surplus capacity of 4,300 m^3/day. A further 3,600 m^3/day capacity is available through the water treatment plant.

4.10.6 Capital and Operating Costs

The historical and planned capital investment at Yaoqiao mine is indicated in Table 4-41 below.

Operating cash cost at Yaoqiao mine in 2004 increased compared to 2003 due to a change in accounting practice, with a further cost increase experienced in 2005 (refer to Table 4-42 below).

5 Huajin Coking Coal

5.1 Introduction

Huajin Coking Coal Co Ltd (Huajin Coal) was formed by a joint venture between China Coal (50%) and the Sanshi Coking Group (50%). The company operates the Shaqu underground mine and is developing the Wanjialing underground mine. The Shaqu mine is situated adjacent to the town of Liulin, 230 km south of Taiyuan in the Liliu Coal Field which is within the Hedong Coal Field which is a 7.6 Bt resource. The Wangjialing exploration site situated south-west of the Xiangning mining area in Shanxi province has been approved for mining by the provincial and state governments. The project plan is to start development of the mine during 2007.

Shaqu mine's current design production capacity is 3 Mtpa and coal is washed at a company-owned wash plant with a capacity of 1.5 Mtpa. In 2005 a second plant with a capacity of 3 Mtpa was under construction. Shaqu mine produced 1.63 Mt in 2004 and 1.87 Mt in 2005. The capacity of the Wangjialing mine at full production is planned at 6 Mtpa for 2010.

Shaqu mine produces coking coal of which approximately one-third is exported to South Korea and Japan, one-third sold to local clients and one-third used by Huajin Coal to produce coke for steel work clients. The export coal is shipped through three ports which are all situated approximately 800 km from the mine.

5.2 Corporate Management Structure

The corporate management structure is shown in Appendix 2. Workforce numbers for Huajin Coal are shown in Table 5-1.

Table 5-1: Workforce Numbers - Huajin Coal

Category	Employees
Production [1]	
Shaqu UG	1,755
Management [2]	10
Other [3]	419
Total	**2,184**

1. Permanent and contractor employees involved in mining activities
2. Senior management – excludes functional departments
3. Only personnel involved with the mines – excludes CHPP, rail etc

Salaries for skilled non-technical workers start at RMB600 per month while skilled underground mine workers earn RMB1,800 per month. Technical personnel are remunerated at RMB1,900 per month and high level personnel at RMB2,400 per month.

5.3 Occupational Health and Safety

Shaqu mine utilises a safety management system that appoints safety monitors from head office and site personnel to conduct inspections and improve safety conditions. A total of 78 safety monitors are appointed at Shaqu mine. Investigations are conducted after an incident occurs in an attempt to determine the root cause. This information is communicated to all employees and contractors at special workforce meetings and at the start of shift safety meetings. Safety procedures are developed through accident investigations to prevent recurrence of similar incidents.

Employees undergo safety training through a government training centre every year and position-specific training every three years. Workers are also trained and encouraged to identify and report hazards, for which the company offers a financial reward.

The safety statistics for Shaqu mine since 2003 are listed in Table 5-2.

Table 5-2: Accident Statistics, 2003 to 2005 - Huajin Coal

Category	2003	2004	2005
Fatal [1]	0	0	0
Serious [2]	1	0	0
Minor [3]	1	3	0

1. Accident causing death (number indicates lives claimed)
2. Accident requiring hospitalisation and do not return to work for more than 24 hours (includes fatal incidents)
3. Accident which does not require hospitalisation and employee returns to work within 24 hours

Contractors are included in the above figures, which reflect very low levels of injury frequency. Only one serious injury, namely a broken leg, has occurred at the mine since 1999. No minor or serious injuries are planned for, however a maximum limit for a fatality rate of 0.5 persons per Mt of coal mined is set every year.

Mine representatives consistently demonstrate that safety is a priority and that it remains a significant consideration in all aspects of planning and operation. Similarly, the safety statistics reflect good performance.

Shaqu mine is reported to be one of the highest methane level mines in China. Very high levels of methane in the coal seam are apparent and the mine utilises in-seam drilling practices prior to longwall mining to de-gas the seam to mineable levels.

5.4 Environmental Assessment

5.4.1 Introduction, Scope and Background

An environmental assessment of Huajin Coal was completed by SRK to assess Huajin Coal's environmental management across its operations. The primary reason for assessing Huajin Coal's environmental management was to identify any potential financial liabilities arising from its operations, which include:

- Shaqu underground coal mine and Wangjialing Exploration Zone (for the proposed Wangjialing underground coal mine)
- Two coking plants operated under contract to Huajin Coal by the China Coal Coking Group Ltd (Coking Plant No. 1) and the Longquan Cokechem Company Ltd (Coking Plant No. 2)

In addition to visiting the above major sites, the SRK environmental assessment included interviews with key environmental staff members of Huajin Coal, inspection of relevant environmental documentation and interpretation of responses to an environmental questionnaire provided by SRK.

As for environmental assessments of previous China Coal subsidiary companies, this environmental assessment is reported entirely at corporate level. This approach was adopted as Huajin Coal has an office adjacent to its Shaqu mine at Liulin from which the environmental management of both Shaqu underground mine and the proposed Wangjialing underground mine is resourced.

5.4.2 Corporate Environmental Awareness

Huajin Coal has only been operating the Shaqu mine since 2004. ISO9001 and ISO14001 accreditation require a qualifying operational period prior to a mine being permitted to apply for International Standards Organisation (ISO) status. Huajin Coal plans to apply for environmental, quality and safety accreditation for both the Shaqu and Wangjialing mines when they have been operational for several years

This is also the situation for Coking Plant No. 1, while Coking Plant No. 2 is internally evaluating the ability to meet the requirements for application.

5.4.3 Mining Title and Royalty Payments

Huajin Coal is licenced to mine underground at both its Shaqu and Wangjialing mines. Mining licence details are provided in Table 5-3. Huajin Coal holds both the surface and mineral rights at its Shaqu mine and at the proposed Wangjialing mine, with the mining licences valid until September 2031.

Table 5-3: Mining Licence Details – Huajin Coal

Mine	Mining Licence No.	Mining Area (km^2)	Issue Date	Licence Tenure
Shaqu	1000000420071	138.4	December 2004	27 years
Wangjialing	1000000420072	176.7	December 2004	27 years

Should Huajin Coal still have mineable coal reserves following expiration of its mining licences, it can apply for a new or extended licence. The mining licences were issued by MOLAR in December 1999. Huajin Coal pays mining royalties and taxes at its Shaqu mine according to Chinese Mineral Resources Law (1996 as amended).

There are no options held over the mining land other than by the government and it is not permitted to divest mining licences to other commercial operations.

5.4.4 Environmental Licencing, Compliance and Reporting

As previously noted, it is a statutory requirement that environmental considerations are detailed in the project feasibility study for all new projects in China, which is subsequently presented to the Environmental Protection Bureau of the respective province in which the operation is located, which in this instance is Shanxi province. This environmental component is essentially akin to an environmental impact assessment report and is passed to the state agency if required, commensurate with the scale of the proposed operation. The various operational environmental licences are then granted to the mining company based on the sustainability of the operation according to this environmental feasibility study, in addition to its ability to manage its environmental obligations under the National Environment Protection Law (1989). For the Shaqu operation, environmental licences were granted at provincial level for boundary noise, gaseous emissions and water discharge. Further to these environmental licences, Huajin Coal maintains a licence at Shaqu from the local Liulin County Water Resource Management Commission for groundwater extraction.

Shaqu mine is required to prepare an individual annual environment report to the Shanxi provincial Environmental Protection Bureau that incorporates data on waste volumes generated, noise, wastewater and gaseous emissions. After approval, the report is passed from the provincial regulators to the local county environmental regulators who conduct random inspections approximately every four months. Huajin Coal also maintains its own on-site environmental laboratory to monitor water quality on site. A similar reporting system is in operation at both the coal coking facilities, though Coking Plant No. 1 is still under construction and is only operating at approximately 25% of capacity at this stage.

The plant was expected to be fully operational in early 2006. Coking Plant No. 2 has approval from the local government to expand its coal washing plant capacity by an additional 600,000 tonnes per annum.

The environmental approvals pathway prior to commissioning the Wangjialing mine is appoaching completion. The Xian Coal Design Institute designed the mine and submitted the final feasibility study to State Development and Reform Committee in March 2003.

The environmental plan for the mine was approved by the State Environmental Protection Bureau at the end of 2003, while the water plan was approved by the State Ministry of Water Resources also in late 2003. The State Ministry policy changed in August 2004 however, to one that required a series of different approvals. In this regard, the 'location' report was approved by the Shanxi government in 2004, with the 'land use' report being approved by both the local and provincial governments in late 2004. These were also approved by MOLAR in March 2005, with the only remaining approval required being from the State Development and Reform Committee, which is pending.

SRK inspected the Annual Environment Report for the Shaqu coal wash plant and found all environmental data to be in compliance with relevant criteria.

5.4.5 Environmental Staff

Huajin Coal maintains the following environmental staff at its head office that oversees both the Shaqu and Wangjialing sites. There are two professional environmental managers that are included in the operational staff, with an additional four technical staff in the coal wash plant located at Shaqu dedicated to environmental management. In addition, Huajin Coal maintains an 'environmental protection team' that consists of 13 staff from various departments to oversee environmental compliance. The two coking plants both have two environmental staff members who report on and maintain environmental compliance.

5.4.6 Environmental Planning and Budgets

Huajin Coal produces 10 year long term environment plans for their Shaqu operations, while the environmental planning for Wangjialing is still at the feasibility stage. As noted above however, the environmental and water plans for the proposed Wangjialing mine have been approved by the relevant authorities. No environmental plans were sighted by SRK at either coal coking plant, however, plant No. 1 was still being built with environmental plans approved by the regulators, while plant No. 2 also had expansion plans approved by the regulators. It should be noted that the gas power technology, emissions scrubbing equipment and water recycling equipment being installed at plant No. 1 suggest it will be a leader in environmental or 'clean production' technology in China.

SRK inspected Huajin Coal's 2005 environmental budgets and noted that it planned to spend upwards of RMB500,000 on site rehabilitation. Furthermore, as the plant has been operational for less than one year, all environmental infrastructure is relatively new, and large budgets for upgrading and/or maintaining environmental equipment are not required at this early stage of operation.

5.4.7 Water Management

Huajin Coal has a company-wide policy on water conservation, and is aware that it operates in a semi-arid environment. This awareness is demonstrated by on-site water treatment and recycling. Water is sourced for Shaqu mine by five groundwater wells approved by local authorities. Groundwater also supplies the water for both coking plants with Coking Plant No. 1 having six wells as supply and Coking Plant No. 2 having three wells to supply its water needs. There is no off-site water discharge at either of the coking plants, with all industrial water recycled into either the coal wash plant, the quenching operations and/or used as on-site dust suppression. There is a WWTP under construction at Coking Plant No. 1 (expected to be operational in October 2005), while Coking Plant No. 2 does not have an on-site waste water treatment plant.

Shaqu mine has an on-site WWTP that treats coal wash water prior to it being recycled for on-site industrial use. Limited seasonal discharge of wastewater is undertaken at one discharge point from treated residential wastewater by Huajin Coal. SRK inspected discharge water quality data and found it to be in compliance with relevant Chinese environmental standards. Overall, it is the opinion of SRK that Huajin Coal takes its water management responsibilities seriously and manages its water use accordingly.

5.4.8 Waste Rock, Tailings and Rehabilitation Management

Due to the underground nature of the Shaqu mine, waste rock generation is significantly less than for an open-pit mine. This fact considered, Huajin Coal still produces sufficient waste rock to require a management plan. In this regard, the waste rock from Shaqu mine is disposed of in waste rock dumps on the side of the hillside immediately behind Shaqu Mine. Due to the geotechnical challenges imposed by the method of waste rock disposal at Shaqu, the work is subcontracted out to the Shanxi Rehabilitation Company. Rehabilitation is undertaken in a progressive fashion with a 2 m thick soil cap covering the shale and sandstone waste rock. The soil cap is then covered with a geo-membrane and revegetated. The rehabilitated areas at Shaqu blend in with local geomorphology very well. Sediment traps and channels are also constructed on the rehabilitated areas to manage surface water run-off.

The anticipated life of the waste rock dump at Shaqu is 12 years, after which waste rock will be transported to a new site with an anticipated life of approximately 10 years. The mine life at Shaqu is expected to exceed this timeframe and an alternative waste rock disposal area will be required following expiration of the current and proposed sites. Coal wash tailings at Shaqu mine are beneficially re-used by being dried and sold to local brick makers as a cheap fuel source. This tailings management plan has been approved by local government. Boiler ash at Shaqu mine is disposed of in the waste rock dump and rehabilitated. The presence of boiler ash in the waste rock dump will have a small neutralising effect on any oxidising sulphide minerals potentially present in the waste rock, although none were sighted during SRK's visit.

In 2005, no waste was generated at the Wangjialing site, though SRK was not supplied with the mine plan and can therefore not comment on any proposed waste rock or tailings management plans. The coal wash plant at Coking Plant No. 1 was not yet operational at the time of SRK's visit; therefore, no waste was being generated. When the plant is completed, it is planned to use the coal wash rejects as a fuel in a yet-to-be established power plant. Coal wash plant rejects at Coking Plant No. 2 are sold as briquettes for power generation to the local power plant.

Overall, it is the opinion of SRK that Huajin Coal's plans for waste rock and tailing management are suitable for the operations. Furthermore, considering the remote nature of the operation, it is unlikely Huajin Coal will experience any major problems locating alternate waste rock disposal areas following expiration of the current and proposed sites.

5.4.9 Dust Management

Dust at the proposed Wangjialing site was not an issue in 2005 as the land was being cropped and there were no mining operations on site. Dust is managed at the Shaqu mine in both underground and above ground operations. Water sprays are in place on the longwall cutting equipment to suppress underground dust, while water is sprayed over temporary coal stockpiles above ground. Dust is routinely monitored and data reported for the coal storage area and also in the coal wash facility. In this regard, Huajin Coal attempts to keep the coal damp throughout the coal handling and treatment process in order to suppress dust.

As noted the WWTP at Coking Plant No. 1 is still under construction, however it is planned to use the recycled water from the plant once completed for on-site dust suppression, including in the coal washing facility still under construction. While there is no waste water treatment facility on site at Coking Plant No. 2, waste water is also recycled and used in on-site dust suppression. Both coking plants are required to report on dust emissions as part of their environmental licensing requirements.

5.4.10 Social and Regulatory Relations

Following discussions with Huajin Coal staff it appears that relations with both local residents and regulatory bodies are sound. The good relationship with the local community of Liulin is primarily due to employment opportunities. Direct mine employment also has positive downstream effects on the local and regional economy in service industries.

Residents directly affected by mine site operations are compensated by Huajin Coal and relocated from the area. Relocations are also likely to occur at the proposed Wangjialing operation prior to commencement of mining activities. The remote location of Coking Plant No. 1 minimises impact on residents while also providing good employment opportunities. There is minimal impact on residents from operations at Coking Plant No. 2, due to it being located in a specifically designed 'heavy industry' park.

Huajin Coal's relations with statutory bodies are sound, as evidenced by the fact that Huajin Coal has not been fined for breaching environmental standards at either its Shaqu mine or the operating coking plants. Furthermore, the proposed Wangjialing mine has been approved for operation and such approvals are not granted if the mining company has previously logged a large number of environmental incidents or proved to be environmentally irresponsible. It is the opinion of SRK that Huajin Coal's proactive approach to its environmental responsibilities, in particular its water management requirements, has helped to maintain these positive relationships with relevant regulatory staff.

5.4.11 Environmental Assessment Conclusions

Following interviews with key Huajin Coal environmental and managerial staff, and inspection of environmental documentation and operations, SRK found that Huajin Coal has a sound and proactive approach to its environmental responsibilities and is managing its operations in compliance with its environmental obligations. This opinion is supported by the fact that Huajin Coal has not been fined for any environmental breaches across its operations to date.. Specific focus is on water management and conservation, along with cleaner production technology. These areas of focus are evident in investment in plant and equipment at operating sites, as well as at sites under construction.

5.5 Coal Processing and Transport

During 2005, 30% of coal from Huajin was destined for export and 70% for the local market. The export coal is shipped through three ports, each of which is approximately 800 km from the mine site. The three ports are Qingdao, Rizhao and Tianjin. The local product is sold to steel manufacturers and is railed to customers through the public railway network.

The coal is initially transported by train from the mine for 1.5 km on a company-owned rail line to the Muchun railway station. From this railway station the company utilises the public rail network to supply the coal to customers. Trucks are used to deliver coal to local customers within a radius of 100 km and consideration is being given to increase the supply to these customers to minimise congestion on the public railway system.

Huajin Coal is also preparing to expend funds to improve its ability to transport coal by upgrading the current system or by consideration of a new line with electric trains. Finances to initiate these improvements were provided in the 2005 budget.

Furthermore, the government is planning the construction of an additional railway line with a capacity of 16 Mtpa, with construction to commence at the end of 2005.

5.5.1 Shaqu CPP

This site has been equipped with two processing plants, namely a traditional Chinese jig plant with a capacity of 1.5 Mtpa and a new dense medium plant with a capacity of 3 Mtpa. The latter plant commenced trial production in August 2005. It is also planned for the current ROM section to be upgraded to match the increased capacity which will increase efficiency and allow for different quality feeds. Subsequent to the ROM upgrade, the old jig plant will be stripped out and rebuilt as another new dense medium plant.

Jig Plant

The Shaqu jig plant was first operated in 1996 and is still in excellent order. A picking belt system feeds the 200 mm x 50 mm raw feed from the ROM stockpiles with the material then crushed to -50 mm. It then passes through four bins of 360 t capacity each to reach the plant. The full size range is then washed in a 2 m, three-product jig. The jig rejects are discarded and the middlings are either bunkered for the on-site boiler that generates steam for heating, sent to a truck bin for local sales or conveyed to the 3,300 t train loading bin.

The jig product is screened at 10 mm and the oversize is stored in 3 x 2,300 t train loading bins. The fine jig product is separated at 0.5 mm using an elevator separator and screen, and the 10 mm x 0.5 mm product is dewatered in four centrifuges and sent to train loading. The 0.5 mm x 0 mm product is thickened with the thickener underflow cleaned in a flotation plant. The product is dried on two disc filters and the flotation tailings are dried in plate press filters and sold for home fires.

The Shaqu jig plant was due to be taken out of service in late 2005. Workforce numbers in 2005 were 170 plus additional maintenance staff.

New Dense Media Plant

In 2005 a new dense media plant was constructed by an Australian company using equipment sourced from Australia. It was built according to typical Australian design with steel structure and cladding, but typical of Chinese design, is large and very spacious.

The 50 mm x 0.5 mm feed is processed in two stages of dense medium cyclones. The high grade and middlings product are dried by horizontal centrifuges while the fines are floated in conventional cells. The cell product is dried in Chinese manufactured hyperbaric filters and the tailings are thickened in a thickener and dried in a press. The new plant mass balance is shown in Table 5-4.

Table 5-4: New Plant Mass Balance – Shaqu CPP

New Plant	Tonnes/hour	Ash (%)
Feed	650	23
High Grade Product	480	10
Middlings	52	38
Reject	100	71
Tailings	18	42

Forecast availability figures are not considered to be an issue as the plant is only required to run for 10 hours/day. The new plant will however be budgeted to run 16 hours/day.

A workforce of 339 is planned for the new dense media plant.

Quality

Typically ROM float/sink tests show 80% yield at 9% ash for a 1.70 SG cut. The new plant is planned to be run with the primary cyclone at 1.62 SG for 9% to 10% ash and the secondary cyclone at 1.80 SG for 45% ash.

The ROM coal supplied from Shaqu mine is reported to have an ash range of between 21% and 29% and volatiles ranging between 17.5% and 19.0%. The calorific value (CV) of the product is 7,700 kcal/kg with a crucible swelling number (CSN) between 6.5 and 8.0. Sulphur values range between 0.4% and 1.0%.

The quality parameters for the plant are indicated in Table 5-5.

5.5.2 Coal Production History

The historical production for the Huajin Coal processing plant is shown in Table 5-6.

5.6 Long Term Plans

Huajin Coal produced 1.63 Mt from Shaqu mine in 2004 and 1.87 Mt during 2005. The production plan indicates an increase to 2.4 Mt for 2006. The five year plan for Shaqu mine includes the increase of production to 8 Mtpa but no formal plan has yet been finalised. An application for approval has been lodged with the local government and pending the outcome, three additional longwalls will be purchased and deployed in the western and eastern sides of the current mine. Planned production figures indicate Shaqu mine to double current production by 2008 as shown in Table 5-7.

Table 5-7: ROM Production Forecast - Shaqu

Year	Production (Mt)
2006	2.40
2007	3.00
2008	5.00

Construction at Wangjialing exploration site was approved by the state government and is planned to commence during 2007. This timeframe implies that longwall production will commence in 2009 with full production capacity of the mine planned at 6 Mtpa. A wash plant with a capacity of 6 Mtpa will also be constructed to wash Wangjialing coal. The total investment for this project is reported at RMB2,311M.

5.7 Shaqu Underground Mine

5.7.1 Introduction

Construction of the mine commenced in 1992 but ceased in 1998 due to a lack of sufficient funds. In February 2002 construction recommenced under a new joint venture between China Coal (50%) and the Sanshi Coking Group (50%). The #4 seam has been mined since 1999, however full-scale operations only commenced again in 2004.

The #4 seam is being mined at a depth of 400 m below the surface. Two longwall systems are in operation at Shaqu mine, one in the north and one in the south. The longwall in the south cuts at the seam height of 2.4 m and the longwall in the north cuts at 4 m in a 4.2 m seam height. The longwall panels are supported by four development panels.

The mine produced 1.63 Mt in 2004 and 1.87 Mtpa during 2005.

5.7.2 Geology and Mineral Resources

General topography over the Shaqu mine consists of a wide river flat and therefore has no relief. Beyond the river flat there are high mountainous areas. The stratigraphic sequence of Shaqu coal mine is outlined in Table 5-8.

Table 5-8: Stratigraphic Sequence - Shaqu

Stratigraphic Unit	Thickness Range (m)	Average Thickness (m)
Quaternary	20 to 130	100
Triassic	0 to 59	0
Upper Permian	0 to 148	25
Upper Lower Permian	0 to 97	49
Lower Lower Permian (Shanxi Group)	11 to 98	60
Upper Carboniferous (Taiyuan Group)	57 to 105	79

The Quaternary material is usually unconsolidated and weathered soil, clays, sands and gravel deposited by recent river systems. Gravel is often found at the base of the Quaternary. The Triassic, which consists of greywacke sandstones with minor siltstones and gravel beds in places, is generally not present in the Shaqu mine area.

Seams #2 to #5 belong to the Shanxi Group. Generally the #2 and #3 seams are either too thin or not present due to being eroded away by the overlying Quaternary sediments. Seam #6 through to #10 seam are of the Taiyuan Group. The #6 and #7 seams are too thin or absent and are not recovered in the mining operations. Only the #4, #5, #8, #9 and #10 seams are mined. The #4 seam is thickest in the north area at 4.2 m and gradually thins towards the south to 2.4 m. The #4 seam can include up to six partings, but generally has only one or two stone bands. The partings are usually less than 0.2 m thick. Roof conditions are good, the roof primarily being a competent mudstone. The #5 seam has little or no partings and has a competent limestone roof.

The #8, #9 and #10 seams often coalesce to form a large working section up to 8 m thick. This combined unit has up to seven partings (each generally less than 0.2 m thick) and has a strong and competent limestone roof.

The average dip of the Permian strata is 7 degrees, but can steepen in some areas to more than 15 degrees.

Table 5-9: Seam Statistics - Shaqu

Seam	Thickness Range (m)	Average Thickness (m)	Average Interburden (m)
#4	0.8 to 6	3	115 to 750 (base plate deeply embedded)
#5	0.1 to 5	2.7	5.5
#8/9/10	1.0 to 9.5	7	44.6

Structure

The Shaqu area has little or no structural features. There are very few faults within the Shaqu area and the few that are found are small scale (less than 1 m throw), with little or no affect on the mining recovery of the seams. Minor folding of the strata was found in places, while the general strike of the seams is NE dipping to the NW at dips ranging from 3 to 7 degrees.

A 3D seismic survey was trialled in the area, but found to be unsuccessful due to the gravel layers at the base of the Quaternary. There is no evidence of igneous activity in Shaqu coalfield.

Coal Quality

All the coal mined at Shaqu produces coking coal products. Approximately 30% of the total product is sold on the export market.

All the ROM coal is washed through a dense medium cyclone wash plant at the mine site (see Coal Processing section for more details). The typical quality parameters of each seam are summarised in Table 5-10.

Table 5-10: Typical Coal Quality - Shaqu Seams

Seam	Inherent Moisture % (ad)	Raw Ash % (ad)	Washed Ash % (ad)	Raw Sulphur % (ad)	Washed Sulphur % (ad)	Washed Phosphorus % (ad)
#4	0.5	20.0	7.0	0.45	-	0.050
#5	0.6	22.0	9.0	1.00	0.70	0.050
#8/9/10	0.6	15.0	6.0	2.50	2.00	0.006

Gas

Many gas samples were taken from the bore cores of the three target seams during the Shaqu exploration program. The Shaqu mine is regarded as one of the highest methane gas mines in China.

Bore core gas samples ranged from 7 to 30 m^3/t. The #4 and #5 seams averaged around 10 m^3/t at 92% methane, while the #8, #9 and #10 seams averaged 15 m^3/t at 96% methane. To date, the areas of higher gas have been well managed by the company using gas drainage systems and adequate ventilation.

More lead time will be required to desorb the gas in the lower seams before the panels are safe to mine. Desorption from surface drilling is being investigated by Huajin Coal.

Resource Estimation

There have been two phases of drilling at Shaqu, each having different levels of reliability in terms of seam tonnage and coal quality.

In the 1970s drilling was performed by the Chinese central government using NQ-size core drilling equipment. These boreholes were found to have a low core recovery rate (usually less than 80%) and are considered to be reasonably reliable in terms of coal thickness (due to the use of geophysical logs).

The second drilling program was conducted in the 1990s using good drilling equipment. This program proved to be successful in attaining a coal seam recovery rate of greater than 95% on average. Therefore, in terms of reliable data, the boreholes of the 1990s (to current) are regarded as very reliable data points for use in the estimation of coal resources. The earlier boreholes are regarded as unreliable due to lower than acceptable core recovery and therefore resulted in a downgrading of the resource categorisation.

Reserves have been estimated in areas where the #8, #9 and #10 seams coalesce to form one thick working section.

The parameters used to estimate the Coal Reserve are as follows:

- Minimum coal seam thickness of 0.6 m
- Maximum seam dip of 15 degrees
- Small mining blocks based on coal rank
- Coal excluded beneath surface infrastructure

The coal resources for Shaqu mine are shown in Table 5-11 and were current as at 30 June 2006.

5.7.3 Coal Reserves

SRK has applied a 75% mining recovery factor to the coal resources to allow for those resources which will not be accessible in a practical mine design. This has been assumed to allow for areas which will not be mineable or fully extractable, such as faults and intrusions, gateroads, main and development entries. Mining loss and mining dilution factors have also been applied to calculate recoverable reserves. A saleable recovery percentage was then applied to calculate marketable reserves. The resulting coal reserves are shown in Table 5-12.

Table 5-12: Coal Reserves - Shaqu

Mining Recovery (%)	Proved Reserve (Mt)	Probable Reserve (Mt)	Proved + Probable Reserve (Mt)	Mining Loss (%)	Mining Dilution (%)	Recoverable Reserves (Mt)	Saleable Recovery (%)	Marketable Reserves (Mt)
75	166	243	409	6	10	423	89.7	379

5.7.4 Mining and Operations

Eight seams are present in the resource block of which three are too thin to be economically mined. The #4 seam is being mined, with the #5 seam planned for 2006. The #8, #9 and #10 seams are also deemed to be mineable in future. The #4 seam dips at an average of 7 degrees and is 400 m below the surface.

Two longwall systems are deployed in two separate areas of the mine. The longwall panel visited by SRK during the site visit (panel 14201) is 200 m wide and 1.2 km long. This longwall extracts the whole seam at 2.4 m, however the other longwall extracts 4 m in a seam height of 4.2 m in the northern part of the mine. Equipment is supplied by Chinese manufacturers with the shearer a MGTY300/730-1.1D-model in the north and a MG-200 in the south. The shields are ZZ5200/25/47-models in the north and ZZ4600/16/32 in the south. Three development panels mine in coal and rock, with two roadheader panels equipped with S-120 roadheaders deployed in the north and one blasting panel operating in the south during the time of the visit. The longwall system in the south has a production capacity of 1 Mtpa and the system in the north 2 Mtpa. The historical ROM production figures for Shaqu mine are shown in Table 5-13.

Table 5-13: Mine Production History, 2003 to 30 June 2006 – Shaqu

	2003	2004	2005	30 June 2006
Longwall (Mtpa)	0.98	1.63	1.87	1.25
Development (m) [1]	0	190	1,954	1,417

1. Development meters reported are low due to development activities completed as part of the establishment period of mine

Development in coal is done at a width of 4 m and a height of 4 m in the north and at a height of 2.6 m in the south. To achieve this height in the south requires cutting into the floor by 200 mm. Mining conditions can become fairly difficult, especially in the tailgate where the roadway is pinching and intensive support in the roof and sidewalls, with additional standing support, is required to keep the roadway open. The high level of stresses on the tailgate side could have been brought about by the widely accepted practice in China of mining a longwall panel with previously mined longwall panels on both sides.

Long term development for mine expansion is done in rock in an arched profile with a base width of 5 m and a height of 4.5 m. A concrete floor of 350 mm is constructed along the roadway and shotcrete applied at a thickness of between 100 mm and 150 mm on the sidewalls and the roof.

Stonedust is not used at the mine. Sidewalls and roof are washed down periodically with water and water barriers are in use as prescribed by legislation.

Ventilation quantities are generally lower than internationally acceptable standards. The airflow quantity reported for the longwall panel is 32.5 m^3/sec and for the development panel measurements indicate 17 m^3/sec in the intake and 8.3 m^3/sec in the mining face. Levels of methane are consistently detected underground. Some of the values detected during the site visit ranged from 0.65 to 1.2%.

Shaqu mine uses in-seam drilling techniques into the longwall block before mining to drain methane to a mineable level. The gas holes are drilled every 10 m to a depth of 150 m and plumbed with hoses to a common pipeline to pipe the methane to the surface for flaring. Surface-to-seam drilling techniques were not used in 2005, however this technique is under investigation to be implemented at a later stage. High concentrations of methane liberates from the #4 seam floor, indicating that the lower seams also contain high levels of methane.

In-time methane monitoring is available on the surface in a centralised control room and equipment underground is interlocked to trip power when methane levels exceed 1.5% concentration in intakes and working faces, and 2% in the longwall return roadway. Monitors are placed in underground workings in positions prescribed by legislation. A 5% methane peak the day before the site visit was observed on a historical graph in the control room. This peak reading was caused by a power failure and it was reported that all personnel in the ventilation district were evacuated to the main intake until the problem was rectified.

Heat levels experienced underground were acceptable and temperatures are measured in the panels and relayed to surface with the methane and carbon-dioxide readings. Maintenance on underground equipment is scheduled and conducted every day from 4:00pm to 12:00am.

Dust levels were evident during the site visit and measurements are taken every 10 days in identified areas in compliance with legislation and experience of high dust areas. The following methods to prevent dust generation are applied.

- Water injection to coal seam prior to mining
- Sprays on production machines
- Water fog in development panels
- Drilling with water
- Washing of sidewalls and roof on a frequent basis

Shaqu mine utilises conventional methods of transportation underground. Coal is transported from the longwall panel to the surface by rubber belt conveyor systems and in development panels initially by a scraper chain conveyor and subsequently by the rubber belt conveyor system. Personnel travel on foot to their working places and material and waste are transported by conventional winch and skip systems.

5.7.5 Infrastructure

Six shafts in total have been established at Shaqu mine. Four shafts are utilised as intake shafts and two as return shafts. The services installed in each shaft are:

- Intake:
  - Vertical ventilation shaft
  - Vertical auxiliary shaft
  - Incline coal conveyor shaft
  - Incline escape shaft
- Return:
  - Vertical ventilation shaft
  - Incline ventilation shaft

The auxiliary shaft is 378 m deep and is equipped to convey men and material to and from the surface.

The mine is supplied by the local public electricity grid from the Liulin power station (200 Megawatts (MW)) at 110 kV. A surface substation steps the supply down to 10 kV to separately distribute it to the northern side of the mine. This side of the mine is supplied by one supply line over a distance of 2.72 km. For the southern side of the mine, a duplex line of 3.13 km feeds a substation where the supply is transformed to 35 kV to be supplied to a further substation equipped with 2 x 16,000 kVA transformers. Electricity supply is then stepped down to 10 kV and supplied to various substations on the surface and mobile substations underground. Power is supplied to production equipment at 1,140 V and 660 V.

Longwall production is forced to cease during peak times between five and 10 days per month for three to four months of the year because of insufficient supply of power to the mine. The reduced power supply particularly occurs during the seasons of spring and winter.

During this time only development operations and maintenance with other general work can continue. Research and investigative work has commenced to build a company-owned gas-fired power station to utilise the methane drained from underground and alleviate dependency on the local grid.

Water is supplied to the mine from five surface boreholes situated at Kangjiagou, 3.4 km from the mine. The wells have a combined supply capacity of 10,000 m^3/day and in 2005 the total consumption at the mine was 6,397 m^3/day. Only two or three boreholes are required at any given time to sufficiently supply the mine. A total surface storage capacity of 3,200 m^3 is available for mine usage and 600 m^3 for residential use.

5.7.6 Capital and Operating Costs

Historical and planned capital cost figures for Shaqu mine are presented in Table 5-14. A significant increase in capital expenditure is planned for 2007 and 2008 to increase the capacity of the mine.

Table 5-14: Capital Expenditure - Shaqu

Reported actual operating costs at Shaqu mine increased significantly from 2003 to 2004 due to a change in accounting practices. The unit cost showed a further slight increase during 2005 as indicated in Table 5-15.

5.8 Wangjialing Underground Mine

5.8.1 Introduction

The Wangjialing resource is situated south-west of the Xiangning mining area in the Shanxi province. Construction of an underground mine is planned to commence during 2007. At full production capacity, the mine will produce 6 Mtpa and a power plant will also be constructed at a capacity of 2 x 50 MW to supply power to the mine and the processing plant. The power plant will be situated 8.66 km from the mine.

The total investment for the project is reported at RMB2,311.24 M of which RMB13.79 M has already been spent.

5.8.2 Geology and Mineral Resources

The topography consists of steep hills with an elevation range from 400 to 1,420 m above sea level. The variation is primarily due to the large river systems and large erosional valleys that have been cut into the thick soft Quaternary cover across the region. The steep hills are aligned with terraced farming.

The stratigraphic sequence of the Wangjialing area is outlined in Table 5-16.

Table 5-16: Stratigraphic Sequence - Wangjialing

Stratigraphic Unit	Thickness Range (m)	Average Thickness (m)
Upper Permian (Shi Qian Feng Group)	0 to 17	0[1]
Upper Permian (Shang Shi Hi Zi Group)	452 to 556	495
Lower Permian (Xia Shi Hi Zi Group)	71 to 119	90
Lower Permian (Shanxi Group)	20 to 36	25
Upper Carboniferous (Taiyuan Group)	43 to 91	60
Middle Carboniferous (Benxi Group)	-	11

1. Zero indicates unit does not exist in mining area but range reflects regional geology beyond mining area

The Quaternary material is usually unconsolidated and weathered soil and clays, with gravel at the base of the unit. The Neocene sediments are essentially clay material. The Quaternary and Neocene sediments constitute the bulk of the overburden material and unconformably overlie the Permian sediments.

The #2 and #3 seams belong to the Shanxi Group. The #2 seam averages 6 m in thickness (see Table 5-17) and contains between two and five partings which are generally less than 0.2 m thick. The immediate roof consists of mudstone and siltstone, while the immediate floor generally comprises mudstone, siltstone or fine sandstone. Generally the #3 seam is too thin (average 0.8 m) for consideration of underground extraction.

The #7 to #10 seams are of the Taiyuan Group. The #7 seam is generally too thin (averaging 0.5 m) or absent and is unlikely to be recoverable in underground mining operations. The #10 seam averages 2.4 m in thickness and contains between one and two partings which are generally less than 0.2 m thick. The immediate roof consists of sandstone, while the immediate floor generally comprises mudstone or fine sandstone. The #12 seam belongs to the Benxi Group and is generally too thin (average 1.2 m) at the depth it occurs for consideration of underground extraction.

Structure

The Wangjialing area has two zones of steep dipping strata. In the east, a small area of the coalfield has strata dipping at 40 degrees over a 250 m wide zone. In the south-east corner of the area, a 500 m wide zone has dips ranging from 15 to 25 degrees.

There have been five significant faults delineated from the borehole exploration.

The major faults generally strike east-west, the largest having a displacement of up to 50 m while the remainder of the faults have between 20 and 30 m displacement.

Coal Quality

The #2 seam produces a mid-ash (average 7% after washing), low sulphur coking coal. The typical quality parameters of each seam are summarised in Table 5.18.

Resource Estimation

The exploration boreholes at Wangjialing were drilled in the 1970s. In general, the core recovery of the seams averaged around 75% of the coal in each of the target seams. Most if not all boreholes were logged using geophysical logging tools to accurately measure the seam thickness which allows the coal tonnage to be accurately calculated. The coal resources for Wangjialing mine are shown in Table 5-19 and were current as at 30 June 2006.

5.8.3 Coal Reserves

SRK has applied a 75% mining recovery factor to the coal resources to allow for those resources which will not be accessible in a practical mine design. This has been assumed to allow for areas which will not be mineable or fully extractable, such as faults and intrusions, gateroads, main development entries etc. Mining loss and mining dilution factors have also been applied to calculate recoverable reserves. A saleable recovery percentage was then applied to calculate marketable reserves. The resulting coal reserves are shown in Table 5-20.

Table 5-20: Coal Reserves - Wangjialing

Mining Recovery (%)	Proved Reserve (Mt)	Probable Reserve (Mt)	Proved + Probable Reserve (Mt)	Mining Loss (%)	Mining Dilution (%)	Recoverable Reserves (Mt)	Saleable Recovery (%)	Marketable Reserves (Mt)

5.8.4 Mining and Operations

Longwall production is planned to commence in 2009. According to planning documentation, a total of 45,007 m would have been developed at that stage, comprising 11,899 m in rock, 14,700 m in rock and coal together and 18,408 m in coal. Development operations will commence 26 months after the start date of the project and are planned to be completed within 17 months. Allowing three months for the longwall installation and preparation, this results in a total of 46 months implementation and commissioning from the start of the project.

The feasibility study was completed in March 2003 and the environmental management report at the end of 2003. All approvals have been received except for final approval from the state government. Huajin Coal has been granted finance for the project by the China Development Bank. In 2005, temporary water and power supply was installed to the site.

5.8.5 Coal Processing and Transport

A processing plant at a capacity of 6 Mtpa is planned to wash coal mined at Wangjialing mine. An established rail network has been identified to rail coal to Rizhao port which is located 1,050 km from the mine. The Hou-Xi rail line, situated on the south-west corner of the mining resource, will be utilised to transport the coal over a distance of 8.8 km to the train loading station. The Hou-Xi line has a capacity of 16 Mtpa and was utilised at 8 Mtpa in 2005.

From there the coal will be transported on the Hou-Yue railway line, which has a design capacity of 70 Mtpa and was utilised at 30 Mtpa during 2005. A range of railway connection lines (Xin-Jiao, Yan-Xin and Yan-Shi rail lines) will lead to the Rizhao port situated 1,050 km from the mine.

5.8.6 Infrastructure

Temporary water and power supply were being installed to service the site.

5.8.7 Capital Costs

Huajin Coal plans to commence construction of the new Wanjialing underground mine during 2007. Capital expenditures to cover the costs of mine development, equipment acquisition and infrastructure establishment until 2008 are indicated in Table 5-21.

6 Shanxi Nanliang Coal

6.1 Introduction

Shanxi Nanliang Coal Co Ltd (Nanliang Coal) is a joint venture between six shareholders of which three are major shareholders. The major shareholders are Huaguang Resources Ltd Australia (32%), which is 100% owned by China Coal, Yulin Coal Import and Export (26%) and China Coal (23%). Nanliang Coal operates the Nanliang underground mine in the Shenmu County, Shaanxi province, approximately 40 minutes drive by car from the town of Datong.

The project was approved in 1998 and the capital registered for the project was reported as RMB68.75 M. Prior to 1995 the mine was owned by the local government and between 1995 and 1998 it was under the ownership of Yulin Coal Import and Export. The mine initially started as a bord and pillar operation with a total of 200,000 t extracted with this mining method. Two seams were extracted, namely the #2 seam and the #3 seam and mining was simply from the outcrop on the side of a hill. In 1998 the joint venture was formed and the Xian Coal Mining Design Institute, which is a national organisation, designed the mine. A unique mining method is used in that 220 m wide blocks are formed by development mining and then extracted with blasting methods along the width of the face. Coal is transported from the mining face by a scraper conveyor and the roof is supported behind the face with hydraulic props. A barrier pillar of 10 m thick is left across the panel at intervals of 50 m.

Future plans include the stabilising of mine production at 1 Mtpa and the possible introduction of a longwall mining system. The subsequent addition of a second longwall system is also under consideration.

Nanliang mine produces steam coal which is sold to local customers only. Coal is loaded on trucks and transported 15 km to be loaded on trains, then transported 600 km by train to the Qinhuangdao port and distributed to customers from there.

6.2 Corporate Management Structure

Nanliang Coal's management structure is illustrated in Appendix 2. Workforce numbers for Nanliang Coal are shown in Table 6-1.

Table 6-1: Workforce Numbers - Nanliang Coal

Category	Employees
Production[1]	
Nanliang UG	566
Management[2]	3
Other[3]	38
Total	**607**

1. Permanent and contractor employees involved in mining activities
2. Senior management – excludes functional departments
3. Only personnel involved with the mines – excludes CHPP, rail etc

As the Nanliang mine is situated in an isolated area in the countryside, only 15 staff members are employed by the mine on a full-time basis. These staff members are accommodated on site and train-in and train-out over weekends on a scheduled basis. All other mine workers are local to the area and are employed by a contracting company.

Cost figures indicate that the staff members employed by the company are paid at an average of RMB9,833 per month, while contracting employees earn on average RMB1,466 per month.

6.3 Occupational Health and Safety

Nanliang mine employs 15 staff members with all other personnel at the mine employed by a contracting company. Contractor employees are all covered by Nanliang Coal's on-site safety management system. Twelve staff members and six contractors are appointed as safety monitors to inspect and improve safety conditions.

A system of fines has been implemented at Nanliang mine to encourage all parties to prevent any injuries. Staff members are required to pay a deposit at the start of the year (which may be up to 15% of their annual salary), which is forfeited if a fatality occurs. If no fatality occurs during the year, staff members will receive their deposit back and also receive a further bonus of twice the amount. Investigations are conducted after an incident occurs in an attempt to determine the root cause and the responsible party. Depending on the outcome of an incident investigation, the contracting company and workers of the contracting company (including the whole team) can be fined when found responsible for the occurrence of the incident or injury.

Safety procedures are developed through the accident investigations to prevent recurrence of a similar incident. The contracting company has the responsibility to communicate information following on from an investigation.

All employees undergo safety training through a government organisation once every two years. Additional safety and procedural training is conducted twice per year per employee by the contracting company, and Nanliang mine permanent personnel are involved in the evaluation of employees after that training. The contracting company has the responsibility to encourage its employees to identify and report hazards.

The supplied historical safety statistics for Nanliang mine since 2003 are shown in Table 6-2.

Table 6-2: Accident Statistics, 2003 to 2005 - Nanliang Coal

Category	2003	2004	2005
Fatal [1]	0	0	0
Serious [2]	0	0	0
Minor [3]	0	4	3

1. Accident causing death (number indicates lives claimed)
2. Accident requiring hospitalisation and do not return to work for more than 24 hours (includes fatal incidents)
3. Accident which does not require hospitalisation and employee returns to work within 24 hours

The accident statistics indicate very low levels of injury frequency, with only four minor injuries in 2004 and three in 2005. Health and safety is clearly given the highest priority at the mine, as reflected in the accident statistics.

6.4 Environmental Assessment

6.4.1 Introduction, Scope and Background

An environmental assessment was completed by SRK to assess Nanliang Coal's environmental management practices. In addition to visiting the Nanliang underground coal mine, the environmental assessment included interviews with key environmental staff members at Nanliang mine, inspection of relevant environmental documentation and interpretation of the responses to an environmental questionnaire provided by SRK.

As for the environmental assessments of the other China Coal subsidiary companies, this environmental assessment is reported entirely at corporate level. This approach was adopted as Nanliang Coal has its corporate office adjacent to the Nanliang mine in Shaanxi province from which the environmental management of the mine is undertaken.

6.4.2 Corporate Environmental Awareness

While Nanliang mine has been operational since 1989, the joint venture which now operates the Nanliang mine was only established in May 2005. As noted earlier in this report, in order to apply for ISO9001 and/or ISO14001 status, a mine must be operating for a qualifying period of time. Nanliang Coal plans to apply for quality, environmental and safety accreditation when it has operated for a suitable period of time under the new joint venture. Following discussions with staff, site inspection and document review, it is SRK's opinion that Nanliang Coal is an environmentally aware company and should have few problems achieving the quality and environmental accreditations should it apply.

6.4.3 Mining Title and Royalty Payments

Nanliang Coal is licenced to mine underground at Nanliang mine. Mining licence details are provided in Table 6-3. Nanliang Coal holds both the surface and mineral rights at the Nanliang mine, with mining licences valid until 2019. Should Nanliang Coal still have mineable coal reserves following expiration of the mining licences, it has a priority right to apply for a new or extended licence. The mining licence was issued by MOLAR.

Table 6-3: Mining Licence Details - Nanliang

Mine	Mining Licence No.	Mining Area (km^2)	Issue Date	Licence Tenure
Nanliang	1000009920052	19.3	August 1999	20 years

Nanliang Coal pays mining royalties and taxes to the government in respect of it Nanliang mine according to the Mineral Resources Law (1996 as amended). There are no options held over the mining land other than by the government and Nanliang Coal is not permitted to divest mining licences to other commercial operators.

6.4.4 Environmental Licencing, Compliance and Reporting

Environmental licences have been granted to Nanliang Coal at provincial level for boundary noise, gaseous emissions and water discharge. Further to these licences, Nanliang Coal maintains a licence from the local Fugu County Water Resource Management Commission for groundwater extraction to supply the mine.

Nanliang mine is required to prepare an Annual Environment Report to the Shaanxi provincial Environmental Protection Bureau that incorporates data on waste volumes generated, noise, wastewater and gaseous emissions.

After approval, the report is passed from the provincial regulators to the local county environmental regulators who conduct random inspections approximately every six months. In reality, there are very few environmental issues to manage at the Nanliang site, as the mine is underground and there is no coal wash facility on site. There is however a very small capacity waste water treatment plant (maximum capacity 360 m^3/day) and a coal crushing plant on-site.

SRK inspected the final inspection report of the environmental facilities for the proposed mine expansion compiled by the Environmental Protection Station of Yulin City, Shaanxi Province, dated May 2004. SRK found that all environmental factors were in compliance with relevant national standards with the exception of dust at three locations around the site. Upon further investigation, it was revealed that the dust breaches were due to topsoil removal from local farms by seasonal winds, rather than as a result of mining operations.

6.4.5 Environmental Staff

Due to the relatively simple nature of mining operations at Nanliang and the small amount of environmental infrastructure present at the mine, Nanliang Coal distributes the responsibilities for environmental management between a few senior safety and engineering staff members. In 2005 there were 15 permanent management staff at the mine site, with operational personnel being employed on a contract basis. After inspecting the mine site facilities, the rehabilitated areas, the environmental documentation and completing discussions with key Nanliang Coal staff members, it is the opinion of SRK that Nanliang Coal has suitably qualified and motivated staff to ensure and maintain environmental compliance.

6.4.6 Environmental Planning and Budgets

Nanliang Coal's current environmental plan was approved in 2004 by the local environmental regulators. Since its formation, Nanliang Coal has spent more than RMB7.3 M on landscaping, infrastructure and rehabilitation. This figure represents approximately 5.5% of the total mine budget. No budget for environmental monitoring is required at Nanliang mine as the local Environmental Protection Bureau monitors environmental issues. Nanliang Coal provides an annual report to the local Environmental Protection Bureau. Due to the recent plant expansion, all environmental infrastructure is relatively new, with only a small operating budget required for local waste rock dump management and rehabilitation and operation of the waste water treatment plant. In this regard, SRK concludes that Nanliang Coal has allocated sufficient funds for environmental considerations.

6.4.7 Water Management

Nanliang Coal is aware of its water conservation responsibilities as a result of its mine being located in a semi-arid area. Water is sourced at Nanliang mine by five groundwater wells approved by local authorities. Nanliang Coal draws water from three of these wells. All industrial wastewater at Nanliang mine is treated by the on-site waste water treatment plant and is subsequently recycled on the rehabilitated areas to assist with vegetation establishment.

SRK reviewed data on both industrial and sewage wastewater during a visit to Nanliang Coal and found that results for all treated water met with relevant government environmental standards. Overall, it is SRK's opinion that Nanliang Coal takes its water management responsibilities seriously and manages its water use accordingly.

6.4.8 Waste Rock, Tailings and Rehabilitation Management

Due to the Nanliang mine being underground, volumes of waste rock generated are significantly less than those for an open-pit mine. The total volume of waste rock and soil generated at Nanliang Coal amounts to only approximately 2,000 to 3,000 m^3 per annum in comparison to a total coal production of approximately 750,000 tpa. This low waste rock generation rate is largely due to the simplicity of the geology at Nanliang mine and the relatively simple accessibility to the mineable coal. Waste rock largely comprises soil and sandstone removed during mine development work, rather than during actual coal mining operations. As a result, SRK does not believe that excess waste rock will be an issue at the Nanliang mine.

The waste rock has been used in the local town to infill large gullies in the landscape. The sandstone is placed in the gullies, with up to 2 m of local topsoil placed over the sandstone. Finally, vegetation is established where required, or else the reclaimed land is used by locals as cultivation areas for food. In this regard, there is demand from local farmers for rehabilitation on their land far in excess of the waste rock supply from the Nanliang mine.

As there is no coal washing facility at Nanliang mine, there are no coal wash rejects to be stored. A small boiler operates on-site during winter to generate heat for the residential building at the mine, with waste boiler ash disposed of into gullies, along with the waste rock, which are subsequently rehabilitated. SRK believes that Nanliang Coal is proactively and responsibly managing its solid wastes and has a large and low cost waste area in which to dispose of them.

6.4.9 Dust Management

Localised dust at the site is a seasonal issue from exposed cropping surfaces on adjacent farmland, with the source of this dust unlikely to be the Nanliang mine site itself. Dust suppression is undertaken on any stockpiled coal, in addition to Nanliang Coal's utilisation of dust suppression techniques in the boiler area when it is seasonally operating. An inspection of the site indicated that dust should not be a major issue due to the relatively simplistic nature of coal handling on site.

6.4.10 Social and Regulatory Relations

Nanliang Coal enjoys a good relationship with both the local residents as well as the regulatory authorities. The strong relationship with the local residents is based on both employment opportunities and concomitant downstream effects, in addition to the increased area of available arable land following the beneficial re-use of waste rock. This solid relationship with the local residents was reflected in a questionnaire issued by the mine that indicated in excess of 90% of respondents supported the mine, while over 95% said it would have a positive effect on the local economy.

Relations with the local and provincial Environment Protection Bureau staff appear sound, as evidenced by approval of Nanliang Coal's mine expansion plans. Feedback from regulatory staff indicates positive relationships with Nanliang Coal. These relationships are likely to continue given Nanliang Coal's attention to its environmental responsibilities and compliance requirements. To date, Nanliang Coal has not received a fine for breach of any environmental conditions.

6.4.11 Environmental Assessment Conclusions

Following interviews with key Nanliang Coal managerial staff and inspection of environmental documentation and the Nanliang mine site, SRK finds that Nanliang Coal has a sound and proactive approach to its environmental responsibilities and is managing its operations in compliance with its environmental obligations. This opinion is supported by the fact that Nanliang Coal has not been fined for any environmental breaches at its mine to date. SRK believes this sound environmental management is likely to continue into the foreseeable future.

6.5 Long Term Plans

Nanliang Coal plans to produce 1 Mt in 2006 and 2007 respectively and 1.2 Mt in 2008. It is envisaged that a longwall mining system will be introduced to produce at 1 Mtpa from one panel compared to 1 Mtpa from two panels under the current system. Other mines in the area have successfully introduced longwall equipment.

All services are deemed sufficient by Nanliang to support a rate of 1 Mtpa and research and investigative work is underway to specify a suitable longwall shield for the mining conditions. Development panels will also be converted to roadheader mining operations and an additional longwall panel is also envisaged in the future.

6.6 Nanliang Underground Mine

6.6.1 Introduction

Construction at Nanliang mine in its current lay-out commenced in 1998. An initial production level of 150,000 tpa increased to 980,000 t during 2005. The current design capacity of the mine is 750,000 tpa and is supported by services designed for 1 Mtpa. Prior to 1998, the mine started as a bord-and-pillar operation mining the #2 seam and #3 seam, extracting a total of 200,000 t. At that stage the mine belonged to the local government.

In 2005 Nanliang mine was mining the #2 seam. Access to the coal seam is from the side of a hill below the #2 seam to reach it at a depth of 70 m below the surface. In some areas of the mine the seam is as low as 30 m below the surface. Mining is done in a unique way in that 220 m wide blocks are formed by blasting development panels and then extracted with blasting methods along the width of the face. The whole coal seam is mined at a height of 2.4 m with coal transported from the mining face by a scraper conveyor. The roof is supported behind the face with hydraulic props.

The mine is situated in an isolated area of the countryside with the 15 staff members employed by the mine accommodated on site and trained-in and out over weekends on a scheduled basis. All production workers are local to the area and are employed by a contracting company. Approximately 550 workers are employed through the contracting company, however this number would reduce to about 200 if and when longwall equipment is introduced at the mine.

6.6.2 Geology and Mineral Resources

The topography over the Nanliang mine has reasonably high relief (in the order of 200 m) due to the river system cutting deep into the surface. In some places, the coal seams outcrop in the river valleys. The stratigraphic sequence of Nanliang coal mine is outlined in Table 6-4.

Table 6-4: Stratigraphic Sequence - Nanliang

Stratigraphic Unit	Thickness Range (m)	Average Thickness (m)
Quaternary	0 to 50	20
Neocene	0 to 80	50
Jurassic	50 to 250	170

The Quaternary material is usually unconsolidated and weathered sandy soil. The Neocene consists of competent fine sandstones and siltstones. In some parts of Nanliang, the Neocene sediments are absent. The coal seams in Nanliang are of Jurassic age. There are five main seams in Nanliang area, four of which are amenable to underground extraction.

The geology of the Nanliang area is such that in places where the Neocene is absent, the coal seams are close to the surface particularly where the Quaternary can be as little as 30 m thick. This is of concern to underground mining as the highly weathered nature of this thin depth of cover provides a very unstable roof. Consequently, underground mining of the coal seam must advance to a minimum depth of cover of 70 m.

In 2005, the #2 seam was being mined. The roof material was so competent that it did not readily collapse in the goaf area. The roof is drilled and subsequently blasted behind the mining face so as to reduce the potential for wind blasts.

The average dip of the Jurassic strata is 2 degrees. The stratigraphy at Nanliang mine is indicated in Table 6-5.

Table 6-5: Seam Statistics - Nanliang

Seam	Thickness Range (m)	Average Thickness (m)	Average Interburden (m)
#1[2]	0 to 2.4	1.6	70
#2[2]	1.2 to 2.7	2.1	30
#3[1]	1.5 to 2.9	2.1	40
#3[1] combined with 3[1L]	3.8 to 4.7	4.1	0
#3[1L]	0 to 1.6	1.1	3
#5	0.1 to 3.7	1.7	85

Structure

The Nanliang area has little or no structural features. Thirty-two boreholes have been drilled indicating no structural issues. The coal is too shallow for seismic surveys to be successful. No faults have been encountered in the mining operations to date.

There is no evidence of igneous activity in the Nanliang coalfield.

Coal Quality

All the coal mined at Nanliang produces thermal coal products. Although there is potential for a Pulverised Coal Injection (PCI) product, the coal has too high a volatile matter content (around 35%) for the PCI market but can be sold as a high quality energy coal.

The ROM coal does not require beneficiation. The typical quality parameters of each seam are summarised in Table 6-6.

Table 6-6: Typical Coal Quality - Nanliang Seams

Seam	Inherent Moisture % (ad)	Raw Ash[1] % (ad)	Raw Sulphur % (ad)	Raw Phosphorus % (ad)

#5	7.51	10.0	0.30	0.030

1. Raw ash values exclude partings in the seams

Gas

Due to the shallow depth of cover, there is no gas of any significance in Nanliang mine.

Resource Estimation

The drilling program was conducted in recent years using good drilling equipment which proved to be successful in attaining a coal seam recovery rate of greater than 95% on average. Therefore, in terms of reliable data, the boreholes are regarded as very reliable data points for use in the estimation of coal resources.

The coal resources for Nanliang mine as shown in Table 6-7 were current as at 30 June 2006. Since 26 May 1998, when the reserves for Nanliang mine were certified by MOLAR, approximately 2 Mt has been extracted from the area, mainly in the #3[1] seam.

Table 6-7: Coal Resources - Nanliang

Seam	Resources (Mt)			Total Resources (Mt)	Mineable Resources (Mt)

6.6.3 Coal Reserves

SRK has applied a 75% mining recovery factor to the coal resources to allow for those resources which will not be accessible in a practical mine design. This has been assumed to allow for areas which will not be mineable or fully extractable, such as faults and intrusions, gateroads, main and development entries. Mining loss and mining dilution factors have also been applied to calculate recoverable reserves. A saleable recovery percentage was then applied to calculate marketable reserves. The resulting coal reserves are shown in Table 6-8.

Table 6-8: Coal Reserves - Nanliang

Mining Recovery (%)	Proved Reserve (Mt)	Probable Reserve (Mt)	Proved + Probable Reserve (Mt)	Mining Loss (%)	Mining Dilution (%)	Recoverable Reserves (Mt)	Saleable Recovery (%)	Marketable Reserves (Mt)
75	28	23	51	5	5	51	100	51

6.6.4 Mining and Operations

The #2 seam mined at Nanliang has a height of 2.4 m and dips at an average of 1.2 degrees. This seam will be mined for the foreseeable future, thereafter the #3[1] seam and the #3[2] seam will be targeted. These seams are situated closely together at 1.6 m thick coal each and a mudstone band of 0.4 m in between. The seams will be mined together at 3.6 m.

The mining method used at Nanliang mine is a combination of longwall mining and blasting methods. Panels at a width of 220 m in total and split by a roadway at 110 m width along the length of the panel are developed utilising blasting and hand-loading methods onto rubber-tyred tractors and trailers. The panels are then extracted by blasting along the width of the face, with the coal transported along the face with a scraper conveyor. The roof behind the mining face is supported with two rows of hydraulic props placed along the width of the face. A total of 9,244 props are owned by Nanliang mine to ensure sufficient support in the two mining faces. A barrier pillar of 10 m thick is formed and left every 50 m along the length of the panel to reduce stresses on the props and the mining face. After retreat of 20 m from the barrier pillar, the roof is drilled behind the props and blasted to fracture the roof strata and ensure collapse of the roof to form a goaf.

Two of these panels, which are supported by two development panels, are operated at the mine and produced 980,000 t in 2005 with the plan set at 1 Mt for 2006. The historical ROM production figures for Nanliang mine are shown in Table 6-9.

Table 6-9: Mine Production History, 2003 to 30 June 2006 – Nanliang

	2003	2004	2005	30 June 2006
Longwall (Mtpa)	0.37	0.78	0.98	0.50
Development (m)	5,479	0	0	877

Nanliang mine has very shallow mining and practically a flat seam with only a 2.4 m mining height, which results in very favourable mining conditions. The roof is undulating and irregular but very competent. No severe levels of stress were apparent in the underground workings.

Strategic roadways for mine life are driven in rock and lined with bricks and cement after development. The thickness of the lining is approximately 300 mm. Roadways are developed in an arch profile at a base width of 4.2 m and a height of 3.7 m. After installation of the brick lining support the net cross section of the roadways is 10 m^2.

No stonedusting is done in the mine. At the time of the SRK inspection, the airflow quantity reported for the longwall panel was 6.3 m^3/sec and for the development panel 3.3 m^3/sec. No methane is reported or detected underground. In-time methane monitoring is available on the surface in a centralised control room and equipment underground is interlocked to trip power when methane levels exceed 1.5% concentration. The alarm level has been set at 1% concentration. After blasting a reading of 32.5 parts per million (ppm) carbon monoxide was observed in the control room. It was reported that the cut-off value for power to be switched off was 240 ppm carbon monoxide.

No heat was experienced during the underground visit with hot air generated during winter months and pumped into the mine to curb the extremely cold conditions (as low as -27^{0}C). Dust levels are not evident underground, and continuous monitoring is done with fixed units and measurements taken every two weeks at 12 points in the mine. Dust prevention methods utilised are water sprays and water curtains at strategic points.

Nanliang mine utilises diesel rubber-tyred transportation underground which allow for lower installation and maintenance cost with flexibility to adapt to production and operational requirements. Coal is transported from the panels to the surface by rubber belt conveyor systems and material is transported by diesel rubber-tyred tractors and trailers and forklifts. All diesel equipment utilised underground complies with statutory flameproof requirements and is certified by suppliers when delivered to the mine. Personnel reach their working places by walking as the production panels are relatively close to the mine entry.

6.6.5 Coal Processing and Transport

ROM coal is supplied from underground to the surface by a rubber belt conveyor. Human stone-pickers remove contamination from the coal stream, thereafter the coal is crushed to -50 mm top size. The coal is dropped in a surface silo and loaded on trucks to be transported to a train loading station 15 km from the mine. The coal is loaded on trains and transported 600 km to the Qinhuangdao Port and distributed to local power stations from there. No coal is sold in the export market.

The train loading station and railway is owned by the government and Nanliang mine is allowed to transport 540,000 tpa of its product on this system. The balance is trucked to local customers in closer vicinity to the mine.

6.6.6 Infrastructure

Three shafts have been established at Nanliang mine to provide for ventilation, men and material access and coal conveyancing respectively. Personnel access the mine and return to the surface in the horizontal auxiliary shaft on foot, with material transported via the auxiliary shaft by rubber-tyred tractors and trailers and forklifts. Coal is transported by conveyor from underground and draws ROM coal from a coal bin that has been established between the #2 seam and #3 seam. The capacity of the coal bin is 1,500 t.

Electricity is supplied to the mine via the national grid known as the North-West grid. Dual supply lines feed a government-owned substation at 35 kV, one from the north and one from the west. The substation is equipped with 2 x 5,000 kVA transformers which transform the feed to 10 kV. This substation is situated approximately 500 m from the mine site. Dual supply lines feed the mine surface substation at 10 kV to supply power to the surface and underground operations. A 630 kVA transformer feeds surface production equipment and two 400 kVA transformers feed other surface equipment at 380 V. A dual supply line feeds the underground operations at 10 kV which is converted to 660 V at underground substations for underground equipment supply. The total capacity of the underground supply is 2,000 kVA.

Two borehole systems situated 1.3 km and 2.2 km respectively from the site, supply Nanliang mine with water. One borehole system comprises two boreholes with capacities of 300 m^3/day and 180 m^3/day respectively. These two boreholes are 200 m from each other with a 100 m^3 reservoir situated at one borehole to store water pumped from the boreholes. The other borehole has a capacity of 150 m^3/day resulting in a total capacity of 630 m^3/day. A 100 m^3 reservoir is located at this borehole, with a 400 m^3 reservoir on the surface at the mine to store water before it is required for use. Water usage is reported as 300 m^3/day and water from underground is also pumped back to the surface and used for sewerage handling.

6.6.7 Capital and Operating Costs

Capital expenditure figures from 2003 up to 2008 are provided in Table 6-10. Capital investment decreased during 2005 compared to historical annual expenditure, but is expected to increase during 2006 if a decision is made to implement a longwall mining system at the mine.

7 Independent China Coal CPPs

7.1 Coal Processing

In addition, China Coal owns and operates three CPPs in Shanxi province (see Section 1.7 of this report for ownership structure). The three plants, Shuozhong CPP, Zhongxin CPP and Dazhong CPP are forecast to produce 1.85 Mt, 1.01 Mt and 1.60 Mt respectively for 2006. All three plants are relatively new and have been constructed by an Australian company.

The plants are each equipped with a dedicated boiler plant to provide heat for the operating areas and prevent freezing of plant equipment and coal during the harsh winter season.

The coal qualities delivered at each plant are indicated in Table 7-1.

7.1.1 Shuozhong CPP

The historical production throughput for the plant is indicated in Table 7-2:

Materials Handling

The ROM feed is delivered by truck and pushed up with dozers on a stockpile. The ROM stockpile capacity is 650,000 t and the plant is equipped with an underground reclaimer delivering ROM feed by conveyor.

The product coal is stockpiled by aerial conveyor. Total storage capacity for high and low ash products is approximately 100,000 t. The products are reclaimed with an underground feeder and conveyor system and the train loader is operated at 2.5 hours for an 8,400 t train. The system is rated for 5,000 tph and utilises a 'quantity-constant', i.e. an Aliquot loading system, with the local rail line stretching 5 km to the main line.

A bin is used to store the rejects for removal by truck with no tailings disposal required as all the slimes are dried and returned to product.

Processing Plant

The plant is rated at and runs at 850 tph and has been designed to bypass the coal feed and only crush to product, however this bypass facility was not in use at the plant due to product requirements. The plant is relatively new and construction was completed in 2004 by an Australian company. Production in 2005 was 2.51 Mt of product and forecast at 1.85 Mt in 2006.

The plant has been constructed as a single module with the 50 mm x 1.5 mm processed in a two-stage DMC plant. The DMC plant uses a 1.5 m cyclone at 1.5 to 1.6 SG to produce a low ash product and the underflow reports to the secondary cyclone. The secondary cyclone is a 1.15 m model running at 1.85 to 1.95 SG to produce a high ash product. The primary cyclone utilised in this plant is the largest in operation.

The 1.5 mm x 0.1 mm fraction is processed in spirals and the product reports to the low ash product. The 0.1 mm x 0 mm product is thickened and then dried on Plate and Frame filters and reports to either product as required. Quality control is achieved by on-line ash analysers which are calibrated by cross-belt samplers.

Total cost of operations for the Shuozhong plant in 2005 was RMB11.00 per ROM tonne with total workforce numbers of 126.

7.1.2 Zhongxin CPP

The feed coal for this CPP is purchased from various mines resulting in the feed ash fluctuating significantly. Negotiations were in progress in 2005 to purchase a mine to feed the plant on a dedicated basis which will stabilise the feed ash and optimise operations significantly.

This plant was constructed in 2002, followed by a substantial upgrade in 2005 by an Australian company. Table 7-3 indicates the production numbers for the plant since 2003.

Table 7-3: Coal Processing Plant Production History, 2003 to 30 June 2006 - Zhongxin

Materials Handling

Materials handling conveyors are rated at 1,000 tph capacity to feed a 700 tph plant. The feed entering the plant is delivered by truck and stockpiled by dozer. The ROM capacity of the stockpile is 600,000 t. Feed to the plant is achieved by dozer push to underground feeders, however an older generation reclaimer with restricted rate is also available on site.

Product handling is by aerial conveyor and underground reclaiming feeders to the train loading bin with 6,000 t capacity. The train loader is rated at 3,000 tph and the reject bin is serviced by trucks. No slimes disposal is required, as these are dried and returned to product.

Process Plant

The plant is a single module, 700 tph capacity plant with a single 1.35 m DMC and spirals, with slimes dried in a Plate and Frame press and returned to product. The DMC is utilised to process the 50 mm x 1.5 mm fraction and spirals for the 1.5 mm x 0.1 mm fraction. Thickeners and a Plate and Frame press process the slimes. The product is composed of the qualities shown in Table 7-4.

Table 7-4: Plant Mass Balance - Zhongxin

	Mass (%)	Ash (%)
Feed	100	15
DMC Product	68	7
Spirals product	13	15
Slimes	4	19
Total	85	8-10
Rejects	15	60-65

Sulphur values for the current supply to the plant are typically 1.7% in the feed and 0.88% in the product. Quality control is achieved by on-line ash analysers which are calibrated by cross-belt samplers.

Total cost of operations for the plant in 2005 was RMB11.00 per ROM t with total workforce numbers to operate, maintain and manage the plant being 324.

7.1.3 Dazhong CPP

The production levels for the plant during the last three years are listed in Table 7-5.

Table 7-5: Coal Processing Plant Production History, 2003 to 30 June 2006 - Dazhong

Raw Coal and Waste	Mt	0.28	0.37	0.32	0.22
Total	**Mt**	**3.69**	**3.78**	**3.63**	1.82

Materials Handling

The Dazhong plant is fed directly from a drift conveyor belt from an adjacent mine. The drift belt feeds a skyline or aerial conveyor on to a stockpile and the coal is reclaimed to the plant by dozers to underground feeders. Product is fed directly to three 12,000 t bunkers with no provision required for stockpile product on the ground, as the rail service has proven effective and sufficient in the past to prevent delays.

The train loader is rated for 5,000 tph and utilises a 'quantity-constant', i.e. an Aliquot loading system. Reject is removed from site by trucks from a bin.

Process Plant

This plant also incorporates a single module 700 tph, single 1.3 m DMC and spirals, with slimes dried in a Plate and Frame press and returned to product. Similar to the Zhongxin plant, the DMC is utilised to process the 50 mm x 1.5 mm fraction, spirals for the 1.5 mm x 0.1 mm product and thickeners and a Plate and Frame press for the slimes. The plant has been designed and constructed with a spirals bypass and a 13 mm x 0 mm ROM bypass if required, but this has not often been in use due to product requirements.

The scheduled operating time for the plant is set at 20 hours/day with four hours scheduled for maintenance on seven days of the week. Quality control is achieved by on-line ash analysers which are calibrated by cross-belt samplers.

Total cost of operations for the Dazhong plant in 2005 was RMB11.70 per ROM t.

Personnel employed at the plant total 134.

1. After this report was written China Coal informed SRK of a restructure in Pingshuo Coal Company. China Coal reported: "All coal mines, mining rights permits, and other coal business related assets were transferred to China Coal Energy Company Limited during the restructuring of China Coal Group, effective from August 22, 2006." China Coal also reported: "...except the mining assets, all the other assets in the "Pingshuo Coal Company" remained in the China Coal Group, not China Coal, so many of the subsidiaries are no longer in the listed company."
