Dear Shareholders,

It is an honour to present the first annual report for Living Cell Technologies. We closed our IPO in late August after successfully raising \$6.36m and on 1 September 2004 listed on the Australian Stock Exchange (ASX:LCT). While our efforts over the past few months have concentrated on the transfer from the Newcastle Stock Exchange, our scientific team have maintained their commitment to fast-track the development of our cell therapies for Huntington's disease, Haemophilia and Diabetes.

The Board of LCT remain committed to consolidating a clear pathway for commercialisation of the technologies and the core focus of our business plan is to concentrate on progressing the pre-clinical trials underway in Singapore and Rhode Island, USA.

On behalf of the Board of LCT, I thank you for your support to date – to those who stayed with us in the transfer from the NSX to the main Australian bourse, the ASX, and to those who have subsequently joined us. Our destination is to fully commercialise our disease treatments through clinical trials and international alliances. And, of course, we have a commitment to delivering value to our shareholders.

We will keep you informed on our progress throughout the year through regular announcements, newsletters, updates and our website, but if you have any queries I encourage you to call the company headquarters in Adelaide on 08 8179 2873.

Michael Yates
Chairman

During the past year Living Cell Technologies (LCT) has evolved from a privately held research company into a public listed biotechnology company focused on the final stages of product development. We now have three divisions operating in different geographic locations:

The research and production division is located in Auckland. This unit is now headed by Dr Paul Tan who has extensive experience in running research facilities and protecting Intellectual Property;

The product development division is located in Rhode Island, USA, headed by Mr. Alfred Vasconcellos whose experience with CytoTherapeutics, Pfizer and Sertoli is well suited to leading the company through the regulatory pathways of the FDA. The design of the last stages of pre-clinical trials is critical to gaining acceptance from the regulatory authorities;

Adelaide is the head office focusing on investor relations, finance and corporate governance.

This image displays a highly textured, high-contrast black and white pattern. The surface is covered in a dense, irregular arrangement of small, dark, elongated features, possibly fibers or mineral grains, which create a complex, almost crystalline appearance. The lighting is uneven, with brighter areas highlighting the edges of the structures and darker regions in the recesses, emphasizing the three-dimensional nature of the texture. The overall effect is one of extreme detail and complexity, typical of a microscopic or high-magnification photograph of a material's surface.

The business of LCT began in 1997 as a cure for a treatment for type 1 diabetes that not only provided only expensive at first but also avoided the long term complications of the disease. The past 17 years have seen substantial progress and milestones achievable in the Company's research and development program and pre-clinical testing. It is the view of the Board of Directors that the Company is now poised to make significant progress toward the commercialisation of its products.	Huntington's Disease NeurotrophinCell is derived from cells within the brain and will be used to treat stroke and diseases such as Huntington's, Parkinson's and Alzheimer's. Huntington's disease has been chosen as the initial focus of this product because it is expected that the FDA will give "orphan drug" status to the tools which shorten the regulatory process and therefore the pathway to commercialisation. Patients can be diagnosed using genetic testing prior to symptoms developing, which usually occur between the ages of 35 and 45. Once symptoms develop there is currently no way of stopping the deterioration into chronic disability and eventually death. LCT has engaged Brown University, Rhode Island, USA, to conduct studies on primates induced with Huntington's disease in a model recognised by the FDA to test the scale-up of the product to a larger brain. Once this has been completed an FDA application will be written to commence clinical trials in patients showing early symptoms of the disease. The disease affects 10 in every 100,000 people. There are approximately 35,000 cases in the US and a further 75,000 people are expected to be pre-symptomatic. As patients require continual care once they enter the latter stages of the disease, the annual health cost in the US is estimated to be greater than US\$2.5 billion.	Haemophilia FactorCell is a product derived from human liver cells to treat haemophilia, a hereditary metabolic disorder. There are over 2,500 different forms which individually are rare but collectively account for extensive cost to the community. Initially FactorCell is being tested to treat Haemophilia. Haemophilia was chosen by LCT as a therapeutic target because of the relatively high prevalence (1 in 10,000 males), the high cost of treatment (over \$100,000 per patient each year) and the high profile of the disease. LCT has acquired a colony of haemophilic rodents which is a model recognised by the FDA as being as close to the human disease that human animal testing may not be required before clinical trials can commence. The rodents were treated with implants of FactorCell in September 2004 at Brown University. The results of this test will assist in the progress of the application for clinical trials.	Diabetes DiabetoCell is a product designed for the treatment of insulin dependent diabetes. Islets, insulin producing clusters of cells, extracted from donor pancreases, are encapsulated in alginate. The product produces insulin at a rate appropriate to the amount of glucose detected in the bloodstream of the recipient. The World Health Organisation estimates that there are over 1.3 million diabetics in the world and the number will double over the next 25 years. Roughly 25% of diabetics are insulin dependent. The Diabetes Association of America estimates that the total cost in the US was US\$132 billion in 2002. Pigs are used for donor organs to produce DiabetoCell because diabetes is so prevalent that human pancreases supply is grossly insufficient. LCT commenced primary trials of DiabetoCell in Singapore in December 2003 and expects preliminary data to be released in early 2005. Once tests are completed it will be possible to ascertain whether further trials will be needed prior to submitting an application with the FDA for clinical trials.	Focus on near term income The products derived from LCT's intellectual property can be commercialised in several ways. Generally drugs or devices are partnered with a suitable pharmaceutical company producing an up-front payment, payments upon agreed milestones and a royalty from the sale of product. It has been shown that the best return for Biotech is to enter into a partnering deal after completion of Phase I trials. Entering into a deal prior to this reduces the cash return to the Biotech and reduces the royalty percentage. However, the cost of conducting extensive clinical testing usually prohibits smaller companies from progressing beyond Phase I. The inclusion of Michael Yates as Chairman and Adriano Vascuncellos as CEO of LCT's US entity are precursors to commercialisation and discussions have been undertaken to involve additional people experienced in commercialisation or pharmaceutical negotiation. Negotiations for partnering of the NeurotrophinCell product are expected to begin shortly.	Before the end of January 2005, the LCT board will review the developments of the products, the stage of grant applications and negotiations with pharmaceutical companies. At this point the board will decide whether to: > continue with grant funding in place; > sell the NeurotrophinCell technology at an early stage; or > re-enter the capital markets to fund the next stages of development. Capital gained through one or more of the above will be applied to the human clinical trials and continued product development.
Technology Platform A healthy body maintains a chemical balance and many diseases are caused by the dysfunction of cells that normally either produce or process a chemical. LCT's technology platform implants new living cells to replace the function of the affected body tissues. Our products are intended to avoid the need for the continual infusion of the substance without the requirements for invasive catheters upon insertion or the use of toxic immunosuppressant drugs. LCT extracts the specific cells from the donor organ from neurotrophin cells in an alginate gel to protect them from the recipient's immune system. LCT has three main product lines sourced from three different cell sources. Each product can potentially treat a number of disorders. LCT currently focuses on one disorder for each product. The disorders have been selected for either speed to the market or size of market.				Monies raised from the recent issue of shares are being applied to the completion of pre-clinical work on the three key products and to cover the running costs until the end of the 2005 financial year. Part of the funds will be applied to plant applications to assist in the trials.	

The image is a high-contrast, black and white scan of a document page. It is heavily degraded with significant noise, including numerous black specks, streaks, and large areas of white space. The text is mostly illegible due to the extreme contrast and noise. The layout appears to be a standard document with a header section at the top, followed by several paragraphs of text. The right side of the page shows a vertical margin or binding edge.

NeurotrophinCell <i>Develops improvements for stroke treatment and Huntington's disease</i> Demonstrating their leadership in this field of neuroscience, LCT scientists have published an author's review paper in the journal, <i>Expert Opinion in Biology and Therapeutics</i>. The review, a collaboration with the Medical College of Georgia, USA, describes the structure of CP and emphasises that it is a source of neurotrophic factors and hence has great neuroprotective and neuroregenerative potential. This is the basis of LCT's neurotrophinCell product which comprises CP cells encapsulated in an immunomodulatory alginate capsule. The first transplantation of NeurotrophinCell into rats with Huntington's disease has been completed and LCT has started to repeating and publishing this scientific data in the first quarter of 2004. Meanwhile, LCT will place its focus on the next stage to transplant NeurotrophinCell into non-human primates with Huntington's disease. NeurotrophinCell produced from pig CP cells has also been successfully transplanted into mice suffering from stroke. The pig CP cells were not rejected by the immune system in the rat. The rat brain tissue showed an inflammatory response to unencapsulated CP cells but not to the encapsulated CP cells in LCT's neurotrophinCell product.	Compared with rats, <i>swine</i> have suffered stroke and treated with empty capsules, the pig CP cells NeurotrophinCell on the surface of the affected brain showed significant improvement in brain function. The volume of rat brain damaged by the stroke was reduced by 20% with NeurotrophinCell treatment. FaceCell <i>Successful implementation in mice</i> In the past year, the FaceCell team has advanced the isolation, culture and transplantation of pig liver cells. Liver cells from normal piglets were placed in <i>TheraCyte</i>® and implanted in the abdomen of healthy mice and left there for 8 weeks. There was no evidence of immune rejection despite the absence of any toxic drugs that also routinely used to suppress immune rejection of a transplant. After 8 weeks, the liver cells were still alive and able to take up the dye, indicating a good survival. Demonstrating that these cells function as liver cells that can remove chemicals from its micro-environment. More importantly the transplanted liver cells secrete the clotting factor, factor VIII. This successful transplantation of pig liver cells into mice allowed LCT to move to the next stage of transplanting the FaceCell into mice suffering from the bleeding disorder, haemophilia.	DiabeCell <i>Successful implementation in primates</i> At the international transplantation meeting in Vienna in September 2004, LCT scientists reported the successful transplantation of insulin-producing DiabeCell in mice and in non-human primates. LCT's immunoprotective DiabeCell technology has advanced further. LCT is able to micro-encapsulate the islets in alginate. At the same time LCT's R&D programme has placed the islets into a device (TheraCyte) which is permeable to glucose and insulin but not immune cells. LCT scientists have successfully reversed disease in the non-obese diabetic (NOD) mice by transplanting alginate-encapsulated islets of transplanting islets in <i>TheraCyte</i>®. In the past year, LCT demonstrated successful transplantation of the alginate-encapsulated islets into two healthy non-human or manes (non-obese monkey). Islets in <i>TheraCyte</i>® that were placed under the skin of two healthy primates were also not rejected. There are the first studies to confirm that the immune system of primates, not just small laboratory animals, do not reject DiabeCell in vivo for 8 weeks. This success has allowed LCT to proceed to transplanting DiabeCell into diabetic non-human primates as a prelude to human trials. The study in diabetic primates is well advanced and the first stage is expected to be completed in early 2005.	Your directors submit their report for the period beginning 17 March, 2003 and ending 30 June, 2004. Directors The names and details of the company's directors in office during the financial year and until the date of this report are as follows. Directors were in office for the entire period unless otherwise stated. Michael Yates Appointed Director 15 April, 2004. Age and position: 64, Chairman Formal qualifications: BA(Hons) Leeds University UK Experience: Mr Michael Yates is a globally experienced CEO, having spent almost 30 years working for multinationals in Europe, the United States and across the Asia Pacific region. Mr Yates is based in the United Kingdom In his senior management positions with Procter & Gamble and Johnson & Johnson, Mr Yates was responsible for widespread international teams, public sales, marketing, manufacturing and organisation. Mr Yates is a Director of the Burch Consultancy Group in the UK and a Director of Architects' Interiors; Incubator (Sydney, Australia). He is a member of the Board of Trustees of Save the Children (USA), a past member of the Board of Save the Children Korea, and a Chief Advisor to the Save the Children Global Alliance in London. He brings to LCT valuable experience in corporate strategy and commercial negotiation with pharmaceutical companies.	Simon O'Loughlin Resigned as Director of Waymouth Resources Ltd 15 January, 2004 and appointed Director of Living Cell Technologies Ltd 12 May, 2004. Age and position: 47, Non Executive Director. Formal qualifications: BA(Acc), Experience: Simon O'Loughlin is a legal practitioner with over 25 years experience as a corporate and commercial solicitor. He has had extensive involvement in the corporate world, especially in relation to the formation, structuring and listing of small to medium sized companies. Mr O'Loughlin is a director of Hindmarsh Resources Ltd, Penrathern Ltd and Challenge Recruitment Ltd. In recent times he has been a director of Govit Ltd (now Agriobut Resources Ltd) and Waymouth Resources Ltd. Simon is a past President of the Save the Children Fund (USA Division) and a past Chairman of Toxicology Institute of Australia (SA Division) Mr O'Loughlin's knowledge of Australian Corporate Law and ASX listing rules is critical for his role on the Board and its committees.	Professor Elliott founded LCT. He is Emeritus Professor of Child Health research, Professor of Paediatrics and a world leader in diabetes and autoimmune related research. Professor Elliott is on the board of the New Zealand Child Health Foundation and the King's Trust; a NZ trust for the treatment of alcohol and substance abuse. He is also patron of the NZ Cystic Fibrosis Foundation. In 1998 he was awarded a CBE for his services to the New Zealand order of Merit for services to the community. David Collinson Appointed Director 15 January, 2004 Age and position: 56, Executive Director and Chief Executive Officer (CEO). Experience: Mr Collinson is a New Zealand company director who, with Professor Robert Elliott, founded LCT's research and development activity in 1987 when his son became diabetic at the age of two. Mr Collinson has contributed a substantial amount of private capital to the establishment of LCT and has been instrumental in raising further funding for the development and growth of LCT. He has been the driving force behind the international development of the company. Mr Collinson is a director of J Collinson Ltd. He also founded the New Zealand textile importers' association.

The assessed person is during the period beginning 17 March, 2003 and ending 20 June, 2004 at the commerce within the accounting entry were.

Summary: The development of cell-based medical therapies requires the generation of cell lines that are capable of producing the desired product in a reproducible manner.

Group Overview

The business of Living Cell Technology as a pharmaceutical company began in 1987 in a quest for a treatment for type 1 diabetes that would not only minimize or replace daily injections of insulin but would also avoid the long term complications created by the disease. The past 17 years have seen substantial progress in the research and development program and preclinical testing sponsored by companies associated with the Directors. It is the *will* of the Board of Directors that the company is now poised to make significant progress towards the commercialisation of the company's products.

Significant Changes in the State of Affairs

The following significant changes in the state of affairs of the parent entity occurred during the financial year:

On 21 October, 2002 Waymouth Resources Limited listed on the Newcasalla Stock Exchange Limited

On 10 April, 2004 the company issued a note to Taycol Norminex Pty Ltd in consideration for \$150,000, convertible into 750,000 ordinary shares.

FDA and negotiations with major pharmaceutical companies. The design of the last stages of pre-clinical trials is critical to gaining acceptance from the regulatory authorities.

included is the head office focusing on customer relations, capital raising and development financing.

Employees

Significant Events After the Balance Date

On 1 September, 2004 the company obtained listing on the Australian Stock Exchange Ltd (ASX).

As at 1 September, 2004 the company had raised the following capital through a rights and general issue and private placement:

- > Rights and general issue 25,716,581 ordinary shares were issued for \$5,143,316.
- > Private placement 1,500,000 ordinary shares were issued for \$300,000.

(This is in addition to approximately \$916,000 raised prior to 30 June, 2004 under the same capital raising.)

Likely Developments and Expected Results

The economic entity expects to maintain the present status and level of operations in the research, development and commercialisation of its 3 product lines. The Directors expect that research and development losses will continue to be made for the year ended 30 June, 2005.

Environmental Regulation and Performance

The company's operations are not regulated by any significant environmental legislation under a law of the Commonwealth or of a State or Territory.

Share Options

As at 30 June, 2004 the company had issued 13,536,150 options over ordinary shares. All options have no vesting period. Of the total, 12,536,150 have an exercise price of \$0.21 and expire on 30 June, 2010 and 1,000,000 have an exercise price of \$0.22 and expire on 30 June, 2008.

Indemnification and Insurance of Directors and Officers

During or since the end of the financial year the company has not given an indemnity or entered into an agreement to indemnify any of the officers or auditors of the company.

Directors' and Other Officers' Emoluments

Details of the nature and amount of each element of the emolument of each director of the company and the non-executive officers of the company are detailed in Note 25.

Proceedings on Behalf of Company

No person has applied for leave of Court to bring proceedings on behalf of the company or intervene in any proceedings to which the company is a party for the purpose of taking responsibility on behalf of the company for all or any part of those proceedings.

The company was not a party to any such proceedings during the year.

Directors' Meetings

The numbers of meetings of directors held during the period and the number of meetings attended by each director were as follows:

Number of meetings held	2
Number of meetings attended	2
Michael Yates (eligible to attend 2)	2
Simon O'Loughlin (eligible to attend 2)	2
Robert Elliott (eligible to attend 5)	5
David Collinson (eligible to attend 6)	6
Roger Coats (eligible to attend 6)	6
Donald Stephens (eligible to attend 1)	1
Peter Cox (eligible to attend 1)	1

Corporate Governance

In recognising the need for the highest standards of corporate behaviour and accountability, the directors of Living Cell Technologies Ltd support and have adhered to the principles of corporate governance. The company's corporate governance statement is contained in the following section of this annual report.

Signed in accordance with a resolution of the directors.

Michael Yates
Chairman

Auckland, 6 September 2004

The company was admitted to the Australian Stock Exchange (ASX) on 1 September 2004 and it is proposed that all of the best practice recommendations of the ASX Corporate Governance Council will be implemented during the financial year ended 30 June, 2005. Implementation of the Corporate Governance Policy is in progress and the current status is summarised below:	Securities Trading Policy The company's policy regarding directors' and employees trading in its securities is set by the Board. The policy requires directors and employees from acting on material information until it has been released to the market and adequate time has been given for this to be reflected in the security's price.	Remuneration Committee A Remuneration Committee will be formed to: - set policies for senior officers' remuneration; - set policies for directors' remuneration; - make specific recommendations to the board on remuneration of directors and senior officers; - set the terms and conditions of employment of a Chief Executive Officer (CEO); - undertake a detailed review of the CEO's performance, at least annually, including setting, with the CEO, goals for the coming year and reviewing progress in achieving these goals; and - approve the recommendations of the CEO on the remuneration of all line managers.	Compliance Committee A Compliance Committee will be formed and will be responsible for: - setting, reviewing and ratifying corporate compliance policies; - overseeing the implementation of a corporate compliance system including, but not limited to: - liquidity; - financial and structural; - tax returns; - licences and permits; - safety; - environment; - industrial relations, including employment contracts; - quality assurance, including good manufacturing practice; - trade practices; - privacy; - if practical; - risk management; and - equal opportunity and anti discrimination. - referring to the Board, if necessary, any substantial matters arising from compliance reviews.	Nomination Committee A Nomination Committee will be formed to: - devise criteria for board membership; - identify specific candidates with skills for nomination; - provide advice on corporate governance; - make recommendations to the board for new directors and membership of corporate governance committees; - assist the chairperson in advising directors about their performance and possible retirement; and - monitor management succession plans, including the CEO and line management.	Nomination Committee The Nomination Committee will be chaired by the chairman of the board. The CEO will not be a member of the Nomination Committee.
The terms of the independent directors of the company are detailed below (effective from 15 April, 2004) and Simon O'Loughlin (effective from 12 May, 2004) Independent directors have the right to seek independent professional advice in the furtherance of their duties as directors at the company's expense. Written approval must be obtained from the chairman prior to incurring any expense on behalf of the company.	Audit Committee An Audit Committee will be formed and will be responsible for: - overseeing and appraising the quality of the external audit and the internal control procedures, especially in the following areas: - financial reporting and practices; - business ethics, policies and practices; - accounting policies; and - management and internal controls; - providing, through regular meetings, a forum for communication between the board, senior financial management staff involved in internal control procedures and the external auditors; and - enhancing the credibility and objectivity of financial reports with other interested parties, including creditors, key shareholders and the general public.	Audit Committee The Audit Committee will comprise a minimum of one independent director who will chair the meetings. The Chief Operating Officer (COO) and the Accountant will initially be invited to the meetings but will not be members of the committee.	Scientific Committee The Scientific Committee has been formed and is responsible for review and reporting to the Board of: - Scientific developments and improvements; - Regulatory matters associated with the science; - Feasibility of commercialisation and research of existing and new products; and - Patents and other intellectual property developments.	Scientific Committee The Scientific Committee is chaired by an independent adviser to the Board. The CEO will not be a member of the Scientific Committee.	Scientific Committee The Scientific Committee is chaired by an independent adviser to the Board. The CEO will not be a member of the Scientific Committee.

The Statement of Financial Position is to be read in conjunction with the Notes to the Financial Statements.

Notes to the Financial Statements

1. Summary of significant accounting policies

(a) Basis of accounting

The financial report is a general purpose financial statement which has been prepared in accordance with the requirements of the Companies Act 2003 which includes applicable Accounting Standards. Other provisions of International Accounting Standards (IAS) and International Financial Reporting Standards (IFRS) have also been considered with the financial report has been prepared in accordance with the International Financial Reporting Standards.

(b) Changes in accounting policies and accounting period

The accounting policies adopted have been applied for the first time as they are the first financial statements prepared since incorporation of the company on 17 March 2003. Consequently, the financial statements reflect the results of the operations of the Economic Entity for the period beginning 17 March 2003 and ending 30 June 2004.

(c) Principles of consolidation

The consolidated financial statements are those of the consolidated entity comprising Living Cell Technologies Ltd (the parent entity) and all entities which Living Cell Technologies Ltd controlled during the year and at balance date.

Information from the financial statements of subsidiaries is included from the date the parent company obtained control until such time as control ceases. Where there is a loss of control or a subsidiary, the consolidated financial statements include the results for the part of the reporting period during which the parent company had control.

Subsidiary accounts have not been accounted for using the abbreviated method of accounting. The financial statements of subsidiaries are prepared by the same reporting entity as the parent entity, using consistent accounting policies. Adjustments are made to bring into line any dissimilar accounting policies which may exist.

All inter-company balances and transactions, including transactions profits arising from intra-group transactions, have been eliminated in full. Unrealised losses are eliminated unless costs cannot be recovered.

(d) Foreign currencies

Transactions in foreign currency

Transactions in foreign currencies of entities within the consolidated entity are converted to local currency at the rate of exchange ruling at the date of the transaction.

Foreign currency monetary items that are outstanding at the reporting date are translated using the spot rate at the end of the financial year.

Translation of financial reports of overseas subsidiaries

All overseas subsidiaries are deemed to be financially and operationally dependent on Living Cell Technologies Ltd. The financial reports of overseas entities are translated using the functional rate method and any exchange differences are recognised as revenues or expenses in net profit or loss.

(e) Cash and cash equivalents

Cash on hand and in banks and short term deposits are stated at nominal value. For the purposes of the Statement of Cash Flows, cash includes cash on hand and in banks, and money market investments readily convertible to cash within 2 working days, net of outstanding bank overdrafts.

Bank overdrafts are carried on the principal amount. Interest is charged as an expense as it accrues.

(f) Receivables

Trade receivables are recognised and carried at original invoice amount less a provision for any uncollectible debts. An estimate for doubtful debts is made when collection of the full amount is no longer probable. Bad debts are written off as incurred.

Bills of exchange and promissory notes are measured at the lower of cost and net realisable value.

(g) Investments

Non-current investments are carried at the lower of cost and recoverable amount. The carrying amount of non-current investments is reviewed annually by directors to ensure that it is not in excess of the recoverable amount of those investments.

(h) Inventories

Inventories consist of materials used in laboratory testing and are valued at the lower of cost or net realisable value.

(i) Recoverable Amount

Non-current assets measured using the cost basis are not carried at an amount above their recoverable amount and where a carrying value exceeds the recoverable amount, the asset is written down.

(j) Property, plant and equipment

Cost and valuation
All classes of property, plant and equipment are measured at cost.

Depreciation

Depreciation is provided on a diminishing value basis on all property, plant and equipment.

	2004
Leasehold improvements	9.5%
Plant and equipment	15%-31%
Motor vehicles	25%
Furniture and fittings	9%-25%
Office equipment	11%-48%

(k) Leases

Leases are classified at their inception as either operating or finance leases based on the economic substance of the agreement so as to reflect the risks and benefits incidental to ownership.

Operating leases

The minimum lease payments of operating leases, where the lessor effectively retains substantially all of the risks and benefits of ownership of the leased item, are recognised as an expense on a straight line basis.

Finance leases

Leases which effectively transfer substantially all of the risks and benefits incidental to ownership of the leased item to the group are capitalised at the present value of the minimum lease payments and disclosed as property, plant and equipment under lease. A lease liability of equal value is also recognised.

Capitalised lease assets are depreciated over the shorter of the estimated useful life of the assets and the lease term. Minimum lease payments are allocated between interest expense and reduction of the lease liability with the interest expense calculated using the interest rate implicit in the lease and charged directly to the Statement of Financial Performance.

The cost of improvements to or on leasehold property is capitalised, disclosed as leasehold improvements, and amortised over the unexpired period of the lease or the estimated useful lives of the improvements, whichever is the shorter.

(l) Intangibles

Goodwill

Goodwill represents the excess of the purchase consideration over the fair value of identifiable net assets acquired at the time of acquisition of a business or shares in a controlled entity.

Goodwill arising on the purchase of the LCT Products Group has been charged to profit/loss from ordinary activities before income tax.

(m) Payables

Liabilities for Trade creditors and other amounts are carried at cost which is the fair value of the consideration to be paid in the future for goods and services received, whether or not billed to the consolidated entity.

Payables to related parties are carried at the principal amount. Interest, when charged by the lender, is recognised as an expense on an accrual basis.

(n) Interest bearing liabilities
All loans are measured at the principal amount. Interest is charged as an expense as it accrues.

Finance lease liability is determined in accordance with the requirements of IASB IFRS "Leases".

(o) Provisions

Provisions are recognised when the economic entity has a legal, equitable or constructive obligation to make a future sacrifice of economic benefits to other entities as a result of past transactions or other past events, it is probable that a future sacrifice of economic benefits will be required and a reliable estimate can be made of the amount of the obligation.

(p) Contributed equity

Issued and paid up capital is recognised at the fair value of the consideration received by the company.

Any transaction costs arising on the issue of ordinary shares are recognised directly in equity as a reduction of the share proceeds received.

(q) Revenue recognition

Revenue is recognised to the extent that it is probable that the economic benefits will flow to the entity and the revenue can be reliably measured.

2. Revenue from Ordinary Activities		
30 June 2004	Notes	Economic Entity 2004 \$
Revenues from operating activities		
Revenue from sale of goods		791
Revenues from non operating activities		
Interest		-
> Other persons/corporations		28,758
Total interest		28,758
Other income		21,923
Total revenues from non operating activities		100,681
Total revenues from ordinary activities		101,472
		23,209

Employee benefit expenses and revenues arising in respect of the following categories:

- > wages and salaries, non monetary benefits, annual leave, long service leave, and other leave benefits are charged against profits on a net basis in their respective categories.

(i) Earnings per share
Basic EPS is calculated as net profit/loss attributable to members, adjusted to exclude costs of servicing equity (other than dividends), divided by the weighted average number of ordinary shares, adjusted for any bonus element.

Diluted EPS is calculated as net profit/loss attributable to members, adjusted for:

- > costs of servicing equity (other than dividends);
- > the after tax effect of dividends and interest associated with dilutive potential ordinary shares that have been recognised as expenses; and
- > other non discretionary changes in revenues or expenses during the period that would result from the dilution of potential ordinary shares; divided by the weighted average number of ordinary shares and dilutive potential ordinary shares, adjusted for any bonus element.

(ii) Research and development costs
Curiosity, research and development costs are charged to profit/loss from ordinary activities before income tax as incurred as reasonable outlay events that sufficient future benefits will be derived so as to recover the costs.

Cash flows are included in the Statement of Cash Flows on a gross basis and the GST component of cash flows arising from investing and financing activities, which is recoverable from, or payable to the taxation authority, are classified as operating cash flows.

Commitments and contingencies are disclosed net of the amount of GST recoverable from, or payable to, the taxation authority.

(a) Employee benefits

Provision is made for employee benefits accumulated as a result of employees rendering services up to the reporting date. These benefits include wages and salaries, annual leave, and long service leave.

Liabilities arising in respect of wages and salaries, annual leave and any other employee benefits, expected to be settled within twelve months of the reporting date are measured at their nominal amounts based on remuneration rates which are expected to be paid when the liability is settled. All other employee benefit liabilities are measured at the present value of the estimated future cash outflow to be made in respect of salaries provided by employees up to the reporting date. In determining the present value of future cash outflows, the market yield as at the reporting date on national government bonds, which have terms to maturity approximating the terms of the related liability, are used.

(i) Taxes
Tax effect accounting is applied using the liability method whereby income tax is regarded as an expense and is calculated on the accounting profit after allowing for permanent differences. To the extent timing differences occur between the time items are recognised in the financial statements and when items are incorporated in determining taxable income, the net related to current benefit or liability, calculated at current rates, is disclosed as a future income tax benefit or a provision for deferred income tax. The net future income tax benefit, relating to tax losses and timing differences is not carried forward as an asset unless the benefit is virtually certain of being realised.

Leasing assets are recorded as provisions for potential capital goods tax have been made.

Goods and Services Tax (GST)

Revenues, expenses and assets are recognised net of the amount of GST except:

- > where the GST incurred on a purchase of goods and services is not recoverable from the taxation authority, in which case the GST is recognised as part of the cost of acquisition of the asset or as part of the expense item as applicable; and
- > liabilities and payables are stated net of the amount of GST included.

The net amount of GST receivable from, or payable to, the taxation authority is included as part of receivables or payables in the Statement of Financial Position.

Convertible notes consist of the following:

- 1 B Class convertible notes of \$113,354.83 with an interest rate of 5% per annum convertible to ordinary shares at a rate of \$0.21 and held by the Avery Foundation. When the company raises capital of \$1 million or more from 15 January 2004, the holder of the convertible notes, has 21 days from the time the company advises of the capital raising to convert the notes to ordinary shares. If the Avery Foundation chooses not to convert the B Class convertible notes to ordinary shares, the company will automatically redeem 1 B Class convertible note for every \$1 million raised.
- 1 D Class convertible note of \$150,000 with an interest rate of 11% per annum held by Taycol Nominees Pty Ltd with an automatic conversion when the company raises \$2.5 million capital. If the notes are converted automatically to ordinary shares, the rate of conversion will be the same as that paid by investors in raising the \$2.5 million capital. The notes can be converted by Taycol Nominees Pty Ltd prior to the automatic conversion date at a rate being the lower of \$0.20 and the last capital raising undertaken by the company.

(f) Loans to directors and specified executives

There have been no loans made to directors or specified executives during the period 17 March, 2003 to 30 June, 2004.

25. Director and Executive Disclosures continued

(g) Other transactions and balances with directors and specified executives

Services:
Mr S. O'Loughlin is a partner of O'Loughlin Lawyers which provided legal services to the economic entity. During the period from 17 March, 2003 to 30 June, 2004 services rendered by O'Loughlin Lawyers to the economic entity totalled \$35,603 (excluding GST).
Mr D. Stephens is a partner of HLB Mann Judd Stephens (SA) which provided accounting services to the economic entity. During the period from 17 March, 2003 to 30 June, 2004 services rendered by HLB Mann Judd Stephens (SA) to the economic entity totalled \$5,361 (excluding GST).

Amounts recognised at the reporting date in relation to other transactions:

Current liabilities	Economic Entity 2004 \$
Payables - current	670,978
Total liabilities	670,978

Michael Yaffe (\$141,443) and David Collinson (\$520,535) are the beneficial holders of convertible notes that are repayable at any time and that can be converted to ordinary shares at a rate of \$0.20. There is no interest payable on the liability by the economic entity.

26. Related Party Disclosures

Director related entity transactions
Pancell Ltd, a New Zealand company, whose directors and shareholders are Robert Elliott, David Collinson and Sandy Ferguson, supplies Auctioned Island pig cells to the economic entity. The economic entity finances the activities of Pancell Ltd with a monthly payment of NZ\$17,000. An option to purchase the assets or shares of Pancell Ltd by the economic entity has been signed with consideration being NZ\$300,000 plus GST.

At 30 June, 2004 amounts of \$18,153 (current receivable) and \$46,134 (non-current receivable) have been claimed to be paid to the economic entity. A provision for discount of \$46,134 has been raised against the non-current receivable balance. The loans are interest free unless the option to purchase assets or shares of Pancell Ltd is not set up and the economic entity demands the return of the funds. In this case, interest will accrue at the National Australia Bank indicating lending rate.

Wholly owned group transactions
Loans

All loan balances between the companies in the group have been eliminated on consolidation. These loans are interest free.

Service Fee

LCT BioPharma Inc. and Dainippon New Zealand Ltd charge Living Cell Products Pty Ltd a service fee based on direct costs incurred and an appropriate margin. The financial effect of the service fee has been eliminated on consolidation.

Other related party transactions

Services
Mr C.R. Funnell, Company Secretary, is a partner of Funnell Allen & Co. Chartered Accountants which provides accounting, administrative, secretarial, taxation services and office accommodation to the economic entity. Mr Funnell has a beneficial interest in 71,527 shares and 247,680 Class A options acquired in full consideration of services provided, 1,232,500 Class B options were acquired by Mr Funnell from Class B option holders. Services rendered by Funnell Allen & Co. to the economic entity for the period 17 March, 2002 to 30 June, 2004 totalled \$172,881 (including GST).

27. Segment Information

Segment products and locations

The economic entity operates one business segment of research and development and product development into Living Cell Technologies. Geographicality, the majority of the research and development was performed in New Zealand and the balance was performed in the USA. The base office is located in Australia.

Directors' Declaration

(2) In the opinion of the directors, as at the date of this declaration, there are reasonable grounds to believe that the members of the Group identified in note 10 will be able to meet any obligations or liabilities to which they are or may become subject, by virtue of support provided by the parent company.

On behalf of the Board

 Michael Yates
 Chairman

Adelaide, 5 September, 2004

In accordance with a resolution of the directors of Living Cell Technologies Ltd, I state that:

(1) In the opinion of the directors

(a) the financial statements and notes of the company and of the consolidated entity are in accordance with the Corporations Act 2001, including:

(i) giving a true and fair view of the company's and consolidated entity's financial position as at 30 June 2004 and of their performance for the period beginning 17 March 2003 and ended on 30 June 2004, and

(ii) complying with Accounting Standards and the Corporations Regulations 2001; and

(b) there are reasonable grounds to believe that the company will be able to pay its debts as and when they become due and payable.

Income taxes

Under the Australian equivalent to IAS12 Income taxes, the company will be required to use a balance sheet liability method which focuses on the tax effects of transactions and other events that affect amounts recognised in either the Statement of Financial Position or a tax based balance sheet. The most significant impact will be the recognition of a deferred tax liability in relation to the asset recognition reserve. Previously, the capital gains tax effects of asset revaluations were not recognised. It is not expected that there will be any further material impact as a result of adoption of this standard.

30. Company details and Ultimate Parent Entity

Living Cell Technologies Ltd is the ultimate parent entity.

The registered office of the company is:
 Living Cell Technologies Ltd
 160 Greenhill Road
 Parkside, SA, 5063

Classification of Financial Instruments

Under AASB 139 Financial Instruments: Recognition and Measurement, financial instruments will be required to be classified into one of five categories which will, in turn, determine the accounting treatment of the item. The classifications are loans and receivables measured at amortised cost, held to maturity measured at amortised cost, held for trading measured at fair value with fair value changes recognised in net profit or loss, available for sale measured at fair value with fair value changes taken to equity and non-trading facilities measured at amortised cost. This will result in a change in the current accounting policy that does not classify financial instruments. Current measurement is at amortised cost, with certain derivative financial instruments not recognised on the Statement of Financial Position. The future financial effect of this change in accounting policy is not yet known as the classification and measurement process has not yet been fully completed.

Share based payments

Under AASB 2 Share based Payments, the company will be required to determine the fair value of options issued to employees as remuneration and recognise an expense in the Statement of Financial Performance. This standard is not limited to options and also extends to other forms of equity based remuneration. Reliable estimation of the future financial effects of this change in accounting policy is not practicable as the details of future equity based remuneration plans are unknown.

29. Impact of adopting AASB equivalents to IASB standards

Living Cell Technologies Ltd will continue to track leading accounting policies and financial reporting from external Australian Standards to Australian equivalents of International Financial Reporting Standards (IFRS). The company will discuss internal measures and prepare expert consultants to perform investigations and conduct internal assessments to identify key areas that will be impacted by the transition to IFRS. As a result of these procedures, Living Cell Technologies Ltd will grade impact areas as either high, moderate or low. An IFRS steering committee will be established to oversee the progress of each of the relevant teams and make necessary decisions. As Living Cell Technologies Ltd has a 30 June year end, priority will be given to considering the preparation of an opening balance sheet in accordance with AASB equivalents to IFRS as at 1 July 2004. This will form the basis of accounting for Australian equivalents of IFRS in the future and is required when Living Cell Technologies Ltd prepares its first fully IFRS compliant financial report for the year ended 30 June 2005. Subject below are the key areas where accounting policies will change and may have an impact on the financial report of Living Cell Technologies Ltd. As far as the company has not been able to reliably quantify the impacts on the financial report.

Independent Audit Report to the Members of Living Cell Technologies Ltd

Scope

The financial report and directors' responsibilities

The financial report comprises the statement of financial position, statement of financial performance, statement of cash flows, accompanying notes to the financial statements, and the directors' declaration for Living Cell Technologies Ltd (the company) and the consolidated entity, for the 30 June 2004 period from incorporation on 17 March, 2003 and to 30 June, 2004. The consolidated entity comprises both the company and the entities it controlled during that year.

The directors of the company are responsible for preparing a financial report that gives a true and fair view of the financial position and performance for the company and the consolidated entity, and that complies with Accounting Standards in Australia, in accordance with the Corporations Act 2001. This includes responsibility for the maintenance of accurate accounting records and internal controls that are designed to prevent and detect fraud and error, and for the accounting policies and accounting estimates inherent in the financial report.

Audit Opinion

We conducted an independent audit of the financial report in order to express an opinion on it to the members of the company. Our audit was conducted in accordance with Australian Auditing Standards in order to provide reasonable assurance as to whether the financial report is free of material misstatement. The nature of an audit is influenced by factors such as the use of professional judgement, selective testing, the inherent limitations of internal control, and the possibility of persuasive rather than conclusive evidence.

Therefore, an audit cannot guarantee that all material misstatements have been detected.

We performed procedures to assess whether in all material respects the financial report presents fairly, in accordance with the Corporations Act 2001, including compliance with Accounting Standards in Australia, and other mandatory financial reporting requirements in Australia, a view which is consistent with our understanding of the company's and the consolidated entity's financial position, and of their performance as represented by the results of their operations and cash flows.

We formed our audit opinion on the basis of these procedures, which included:

- Examining, on a test basis, information to provide evidence supporting the amounts and disclosures in the financial report; and
- Assessing the appropriateness of the accounting policies and disclosures used and the reasonableness of significant accounting estimates made by the directors.

Chartered Accountants
and Business Advisors

While we considered the effectiveness of management's internal controls over financial reporting when determining the nature and extent of our procedures, our audit was not designed to provide assurance on internal controls.

We performed procedures to assess whether the substance of business transactions was accurately reflected in the financial report. Those and our other procedures did not include consideration of judgment of the appropriateness or reasonableness of the business plans or strategies adopted by the directors and management of the company.

Independence

We are independent of the company, and have met the independence requirements of Australian professional ethical pronouncements and the Corporations Act 2001. In addition to our audit of the financial report, we were engaged to undertake the services disclosed in the notes to the financial statements. The provision of these services has not impaired our independence.

Audit Opinion

In our opinion, the financial report of Living Cell Technologies Ltd is in accordance with:

- (a) The Corporations Act 2001, excluding
- (i) Giving a true and fair view of the financial position of Living Cell Technologies Ltd and the consolidated entity at 30 June, 2004 and of their performance for the period from incorporation on 17 March, 2003 to 30 June, 2004,
- (ii) Complying with Accounting Standards in Australia and the Corporations Regulations 2001; and
- (b) Other mandatory financial reporting requirements in Australia.
