**SECOND ROUND OF DRILLING TO COMMENCE IN TWO WEEKS AT THE TAYLOR BROOK
NICKEL-COPPER-COBALT-PGE PROPERTY IN NEWFOUNDLAND**

Northern Abitibi Mining Corp. ("Northern Abitibi") is pleased to announce that a drill contractor has been retained to drill the Taylor Brook Property in Newfoundland.

A minimum 1000 meter drill program is scheduled to commence at Taylor Brook on April 30, 2008, or shortly thereafter as snow conditions in the area allow. The drill program will test several large airborne conductors that were not tested during the December 2007 drill program, along with additional geophysical targets and the margins of the host mafic-ultramafic complex.

Preliminary data from a down hole Crone PEM (pulse electromagnetic) survey completed in March 2008 have been received, however, final interpreted and processed results from the survey are not yet complete. The final results from this survey will be released once they are complete, and may be used to target subsurface conductors surrounding the Layden Showing. The Layden Showing is a high grade massive sulfide lens exposed at surface containing average grades of 5.38% nickel, 1.05% copper, 0.10% cobalt, 112 ppb platinum, 232 ppb palladium and 416 ppb gold.

Northern Abitibi

Northern Abitibi's technical team of experienced, professional geologists are assembling a portfolio of gold, nickel and other base metal projects from opportunities within Canada, Mexico and the United States. Northern Abitibi can earn a majority interest in the Taylor Brook project from Altius Resources Inc. by making staged share and cash payments and funding exploration over a period of 4 years. A description of the Taylor Brook project can be found on our website at www.naminco.ca.
