FIRST URANIUM CORPORATION 2008 ANNUAL FINANCIAL STATEMENTS

First Uranium Corporation
Management's Responsibility for Financial Reporting

The accompanying consolidated financial statements have been prepared by management and are in accordance with Canadian generally accepted accounting principles and reflect informed judgments and estimates based on currently available information and with due consideration given to materiality. Management acknowledges its responsibility for the fairness, integrity and objectivity of all information in the consolidated financial statements.

As a means of fulfilling its responsibility, management relies on the system of internal controls of First Uranium Corporation (First Uranium or the Corporation). This system has been established to ensure, within reasonable limits, that the assets are safeguarded, transactions are properly recorded and are executed in accordance with management's authorization and that the accounting records provide a solid foundation from which to prepare the consolidated financial statements.

The Board of Directors carries out its responsibility for the consolidated financial statements principally through its Audit Committee, consisting solely of non-management directors. The Audit Committee meets with management as well as the external auditors to ensure that management is properly fulfilling its financial reporting responsibilities to the Directors who approve the financial statements. The external auditors have full and unrestricted access to the Audit Committee to discuss the scope of the external audit, the adequacy of the system of internal controls and financial reporting issues.

The consolidated financial statements have been audited by PricewaterhouseCoopers LLP, Chartered Accountants. Their report outlines the scope of their examination and opinion on the consolidated financial statements.

Auditors' Report

To the Shareholders of First Uranium Corporation

We have audited the consolidated balance sheets of First Uranium Corporation as at March 31, 2008 and 2007, the consolidated statements of operations and deficit and comprehensive loss, and cash flows for the years then ended. These consolidated financial statements are the responsibility of the company's management. Our responsibility is to express an opinion on these financial statements based on our audit.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the company as at March 31, 2008 and 2007 and the results of its operations and its cash flows for the years then ended in accordance with Canadian generally accepted accounting principles.

 Supplementary information (Note 20)

1. NATURE OF OPERATIONS AND BASIS OF PRESENTATION

First Uranium Corporation is a Canadian resource company focused on the development of uranium and gold projects in South Africa. See Note 7, Property, Plant and Equipment for a description of the Corporation's key projects. The Corporation has a primary listing on the Toronto Stock Exchange (TSX) and a secondary listing on the Johannesburg Stock Exchange (JSE). First Uranium owns 100% of First Uranium Limited (FUL), which in turn holds 100% of First Uranium (Proprietary) Limited (FUSA) and 100% of Ezulwini Mining Company (Proprietary) Limited (EMC), which owns and operates the Ezulwini Mine.

On June 6, 2007, the Corporation, through FUSA, acquired all the issued and outstanding shares of Mine Waste Solutions (Proprietary) Limited and its subsidiary, Chemwes (Proprietary) Limited (collectively MWS), an existing tailings treatment company which had an operating gold recovery plant in place. As a result of the MWS acquisition, First Uranium changed its plans for the Buffelsfontein Tailings Recovery Project so that the historical and future tailings from the Buffelsfontein mine (the Buffelsfontein Tailings) are now transported by pipeline to the MWS site and processed through MWS's existing gold plant and, subject to their completion, through the new uranium recovery plant and additional gold recovery facilities which are currently being constructed at the MWS site. The Buffelsfontein Tailings Recovery Project, as enhanced and modified by the addition of MWS, is henceforth referred to as MWS.

On December 14, 2007, First Uranium issued 6.1 million shares to Waterpan Mining Consortium (Waterpan) completing the purchase of the remaining 10% interest in EMC (the Waterpan transaction) as contemplated in the Corporation's initial public offering in December 2006 (the Offering) and as disclosed in the Offering documents and in the annual consolidated financial statements for the year ended March 31, 2007 and the interim consolidated financial statements for the three months ended June 30, 2007, September 30, 2007 and December 31, 2007. This transaction resulted in EMC becoming wholly owned by First Uranium. First Uranium and Waterpan collaborated to effect this transaction considering the terms of the Offering and, as such, the acquisition of the remaining 10% interest in EMC is accounted for under Canadian generally accepted accounting principles (Canadian GAAP) as a continuity of interests.

All amounts in these financial statements are in US\$, except where otherwise indicated.

1.1 Investment in subsidiaries

1.2 Basis of preparation

The consolidated financial statements have been prepared by First Uranium in accordance with Canadian GAAP.

Consolidated financial statements

The acquisition by First Uranium of shareholdings in FUSA and EMC are accounted for under Canadian GAAP as a continuity of interests. Certain adjustments have been reflected in the financial statements to reflect the reorganization pursuant to which First Uranium acquired 100% of FUSA and 100% of EMC.

Acquisition from entities under common control

A business combination involving entities or businesses under common control is a business combination in which all of the combining entities or businesses are ultimately controlled by the same party or parties both before and after the business combination, and that control is not transitory.

The assets and liabilities acquired in a business combination under common control are recognized at the carrying amounts recognized previously in the Corporation's controlling shareholder, Simmer & Jack Mines, Limited's (Simmer & Jack), consolidated financial statements.

SIGNIFICANT ACCOUNTING POLICIES

2.1 Consolidation

The consolidated financial statements include the accounts of First Uranium and all of its subsidiaries (including special purpose entities/variable interest entities). All significant inter company balances and transactions are eliminated on consolidation.

2.2 Subsidiaries

A subsidiary is an entity which is controlled by the Corporation. The consolidated financial statements include all the assets, liabilities, revenues, expenses and cash flows of First Uranium and its subsidiaries after eliminating inter company balances and transactions.

2.3 Use of estimates

The preparation of these consolidated financial statements in accordance with Canadian GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amount of revenues and expenses during the reporting period.

Significant areas requiring the use of management estimates relate to the determination of impairment of capital assets, goodwill estimation of future site restoration costs and future income taxes, and classification of current portion of long term debt. Financial results as determined by actual events could differ from those estimated.

Foreign currency translation

Items included in the financial statements of each entity in the Corporation are measured using the currency that best reflects the economic substance of the underlying events and circumstances relevant to that entity (the functional currency).

Foreign currency transactions are translated into the functional currency using the exchange rates prevailing at the dates of the transactions. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation of monetary assets and liabilities denominated in foreign currencies are recognized in the statements of operations and deficit, and comprehensive loss.

The translated amounts are of a foreign entity where its subsidiaries are accounted for as integrated foreign operations and as such, the translation to US\$ was made using the temporal method. Monetary assets and liabilities denominated in foreign currencies are translated in US\$ at the year-end exchange rates, while non-monetary items are translated at the exchange rate in effect at the transaction dates. Revenue and expense items are translated at the exchange rates in effect on the date of the transaction. Exchange gains and losses resulting from the translation of these amounts are included in the consolidated statements of operations and deficit, and comprehensive loss.

2.5 Property, plant and equipment

The cost of an item of property, plant and equipment is recognized as an asset when:

- it is probable that future economic benefits associated with the item will flow to the Corporation; and
- the cost of the item can be measured reliably.

Costs include costs incurred initially to acquire or construct an item of property, plant and equipment and costs incurred subsequently to add to, replace part of, or service it. If a replacement cost is recognized in the carrying amount of an item of property, plant and equipment, the carrying amount of the replaced part is derecognized.

Property, plant and equipment are carried at cost less accumulated amortization and any impairment losses.

Amortization is provided on all property, plant and equipment other than freehold land, to write down the cost, less residual value, over their useful lives as follows:

Item Buildings Plant and equipment Office furniture and equipment Motor vehicles Computer equipment and software	Average useful life Life of mine – straight line Life of mine – units-of-production 6 years – straight-line 5 years – straight-line 3 years – straight-line
Mining assets <ul style="list-style-type: none"> • Mining assets are stated at cost, less accumulated amortization and impairments. • All separately identifiable equipment is amortized over the estimated useful life of the asset. • Amortization is first charged on new mining ventures from the date on which production reaches commercial quantities. 	Life of mine
Mine Infrastructure <ul style="list-style-type: none"> • Mine infrastructure costs include expenditures incurred to develop new ore bodies, to define further mineralization in existing ore bodies and to expand the capacity of a mine. Cost includes pre-production expenditures incurred during the development of the mine to the extent it provides access to gold and uranium bearing deposits and have future economic benefit. Cost also includes borrowing costs capitalized during the construction period where such costs are financed by borrowings. • Mine infrastructure costs are amortized using the units-of-production method, based on proven and probable reserves. These reserves are reassessed annually. 	Proven and probable reserves
Mining rights <ul style="list-style-type: none"> • The cost of acquiring mining rights are capitalized and amortized over the mining period awarded by the Department of Minerals and Energy (DME) to the Corporation for the respective mining right. If the mining right period exceeds the estimated life of mine, then the amortization period is limited to the life of mine. 	Mining period as per licence – straight-line

Exploration costs incurred to the date of establishing that a property has mineral reserves, which have the potential of being economically recoverable, are expensed. Exploration and development expenses incurred subsequent to this date are capitalized. If the project becomes feasible, the costs are amortized over the life of the mine. If the project is stopped, the costs are written off immediately.

Once a development mineral property goes into commercial production, the property is classified as "Producing" and the accumulated costs are amortized over the estimated recoverable reserves in the current mine plan using a unit-of-production basis. Commercial production occurs when the operation has reached a steady state of production.

Costs associated with start-up activities on constructed plants are deferred from the date of mechanical completion of the facilities until the date the Corporation is ready to commence service. Any revenues earned during this period are recorded as a reduction in deferred start-up costs. These costs are amortized using the units-of-production method over the life of the mine, commencing on the date of commercial service.

The amortization charge for each period is recognized in earnings or loss unless it is included in the carrying amount of another asset.

2.6 Capitalization of interest

Net interest costs incurred during the development, construction and start-up phase of major projects are capitalized.

2.7 Asset retirement obligations

The Corporation recognizes the fair value of a future asset retirement obligation as a liability in the year in which it incurs a legal obligation associated with the retirement of tangible long-lived assets resulting from the acquisition, construction, development, and/or normal use of the assets. The obligations are measured initially at fair value and the resulting costs are capitalized and added to the carrying value of the related assets. In subsequent periods, the liability is adjusted for the accretion of the discount and the expense is recorded in the statement of operations, deficit, and comprehensive income. Changes in the amount or timing of the underlying future cash flows are immediately recognized as an increase or decrease in the carrying amounts of the liability and related assets. These costs are amortized to the results of operations over the life of the asset.

The Corporation's activities are subject to numerous governmental laws and regulations. Estimates of future reclamation liabilities for asset decommissioning and site restoration are recognized in the period when such liabilities are incurred. These estimates are updated on a periodic basis and are subject to changing laws, regulatory requirements, changing technology and other factors which will be recognized when appropriate. Liabilities related to site restoration include long-term treatment and monitoring costs and incorporate total expected costs net of recoveries. Expenditures incurred to dismantle facilities, restore and monitor closed resource properties are charged against the related reclamation and remediation liability.

2.8 Impairment of long-lived assets

The Corporation applies CICA Handbook Section 3063: Impairment of Long-Lived Assets which provides standards for the recognition, measurement and disclosure of impairment of long-lived assets including property, plant and equipment. Long-lived assets are assessed by management for impairment whenever events or changes in circumstances indicate that the related carrying amounts may not be recoverable. The amount of the impairment loss is determined as the excess of the carrying value of the asset over its fair value and is charged to the results of operations. Fair value represents future undiscounted cash flows from an area of interest, including estimates of selling price and costs to develop and extract the mining assets.

2.9 Future income and mining taxes

The Corporation utilizes the asset and liability method of accounting for income and mining taxes. Under the asset and liability method, future income and mining tax assets are recognized for the future tax consequences attributable to differences between the consolidated financial statements' carrying amounts of existing assets and liabilities and their respective tax bases, reduced by a valuation allowance to reflect the recoverability of any future income tax asset. Future income and mining tax assets and liabilities are measured using enacted or substantively enacted tax rates expected to apply when the asset is realized or the liability settled. The effect on future income and mining tax assets and liabilities of a change in tax rates is recognized in income in the year the enactment or substantive enactment occurs.

2.10 Stock-based compensation

The Corporation has a stock-based compensation plan which is described in Note 14. The Corporation accounts for all stock-based payments under the fair value based method.

Under the fair value based method, stock-based compensation cost is measured at fair value at the grant date and recognized in earnings on a straight-line basis over the relevant vesting period. The counterpart is recognized in contributed surplus. Upon the exercise of a stock option, share capital is recorded at the sum of the proceeds received and the related amount of contributed surplus. The fair value previously recognized in earnings relating to forfeited stock options is debited to contributed surplus and credited to the statement of operations and deficit, and comprehensive loss.

2.11 Interest recognition

Interest income is recognized on a time proportion basis, taking account of the principal outstanding and the effective rate over the period of maturity, when it is determined that such income will accrue to the Corporation.

2.12 Leased assets

Leases of property, plant and equipment, where the Corporation has substantially all the risks and rewards of ownership, are classified as capital leases. Capital leases are capitalized at the inception of the lease at the lower of the fair value of the leased property or the present value of the minimum lease payments. Each lease payment is allocated between the liability and finance charges so as to achieve a constant rate on the finance balance outstanding. The corresponding obligations, net of finance charges, are included in other liabilities. The interest element of the installment is charged to the statement of operations and deficit, and comprehensive loss over the lease period so as to produce a constant periodic rate of interest on the remaining balance of the liability for each period. The property, plant and equipment acquired under capital leases are amortized over the shorter of the useful life of the asset or the lease term.

2.13 Inventories

Inventories include ore stockpiles, gold work-in-progress and spares and consumables, and are recorded at the lower of cost or net realizable value. The cost of ore stockpiles and gold produced is determined principally by the weighted average cost method using related production costs. Costs of gold produced inventories include costs such as milling costs, mining costs and mine general and administration costs but exclude transport, refining and taxes. Net realizable value is determined with reference to current market prices. Stockpiles consist of ore to be processed through the processing plant. The stockpiles have been sampled and evaluated and are on surface. All ore is expected to be fully processed within the life of mine. Spares and consumable stores are valued at weighted average cost after appropriate impairment of redundant and slow moving items.

2.14 Revenue recognition

Revenue from sales is recognized when significant risks and rewards of title and ownership of the concentrate are transferred, and collection is reasonably assured.

2.15 Earnings or loss per share

Basic earnings or loss per share is computed by dividing earnings or loss available to common shareholders by the weighted average number of common shares outstanding during the period. The treasury stock method is used to calculate diluted earnings or loss per share. Diluted earnings or loss per share is similar to basic earnings or loss per share, except that the denominator is increased to include the number of additional common shares that would have been outstanding assuming that stock options with an average market price for the period greater than their exercise price are exercised and the proceeds used to repurchase common shares. In applying the treasury stock method, options with an exercise price greater than the average quoted market price of the common shares are not included in the calculation of diluted earnings or loss per share, as the effect is anti-dilutive.

For convertible securities that may be settled in cash or shares at the holder's option the more dilutive of cash settlement and share settlement is used in computing diluted earnings or loss per share. Where the exchange price of the convertible securities is greater than the common share price, their impact on the diluted earnings or loss per share is excluded from the calculation, as they are considered anti-dilutive.

2.16 Financial instruments

Transaction costs for financial assets and financial liabilities

For a financial asset or financial liability classified other than as held-for-trading, the Corporation has added the transaction costs that are directly attributable to the acquisition or issue of a financial asset or financial liability to the fair value of that asset or liability established at the recognition of that asset or liability.

2.17 Comparative Figures

Certain 2007 comparative figures have been reclassified to conform to the presentation adopted in 2008.

3. CHANGES IN ACCOUNTING POLICIES

Effective April 1, 2007, the Corporation adopted two new accounting standards that were issued by the Canadian Institute of Chartered Accountants (CICA):

- Handbook Section 1530 – Comprehensive Income
- Handbook Section 3855 – Financial Instruments – Recognition and Measurement

As provided under the standards, the comparative consolidated financial statements have not been restated. There were no transitional effects and as a result no adjustments have been recorded to deficit as at April 1, 2007.

Section 1530 – Comprehensive Income

This section describes the reporting and disclosure standards with respect to comprehensive income and its components. Comprehensive income or loss consists of changes in the equity of the Corporation from sources other than the Corporation's shareholders, and includes earnings or losses of the Corporation, the foreign currency translation adjustment relating to self sustaining foreign operations and unrealized gains and losses on changes in fair values of available-for-sale assets and effective cash flow hedging instruments. Other comprehensive income or loss comprises revenues, expenses and gains and losses that are recognized in comprehensive income or loss but are excluded from earnings or losses for the year. This change in accounting policy had no effect on the consolidated financial statements of First Uranium.

Section 3855 – Financial Instruments – Recognition and Measurement

This section establishes standards for recognizing and measuring financial assets, financial liabilities and non-financial derivatives. It requires that financial assets and financial liabilities, including derivatives, be recognized on the consolidated balance sheet when the Corporation becomes a party to the contractual provisions of the financial instrument or a non-financial derivative contract. All financial instruments should be measured at fair value on initial recognition, except for certain related party transactions. Fair value is the amount at which an item could be exchanged between willing parties. Measurement in subsequent periods depends on whether the financial instruments have been classified as held-for-trading, available-for-sale, held-to-maturity, loans and receivables, or other financial liabilities.

The Corporation designated certain financial assets and financial liabilities and adopted the following new accounting policies:

Cash and cash equivalents

Cash and cash equivalents are classified as "assets available-for-sale" and are measured at fair value at each balance sheet date. Any changes in fair value are recognized in Other comprehensive income in the period in which the change arises. Fair value is calculated using published price quotations in an active market, where applicable. The carrying amounts for cash and cash equivalents at March 31, 2008 approximated their fair values because of their short terms of maturity; no adjustments were made to the opening values.

Accounts receivable and receivables from related parties

These assets are classified as "loans and receivables" and are recorded at amortized cost, which upon their initial measurement is equal to their fair value. Subsequent measurements are recorded at amortized cost using the effective interest rate method. The carrying amounts for these assets as at March 31, 2008 approximated their fair values because of their short terms of maturity; no adjustments were made to the opening values.

Asset retirement funds

Asset retirement funds are classified as "assets available-for-sale" and are measured at fair value at each balance sheet date. Any changes in fair value are recognized in Other comprehensive income in the period in which the change arises. Fair value is calculated using the quoted prices of equities in an active market, with interest and dividends recognized in net income. Any equities without market quotes are carried using the cost method. The carrying values for the asset retirement funds as at March 31, 2008 approximated their fair values; no adjustments were made to the opening values.

Accounts payable and accrued liabilities and payable to related parties

These liabilities are classified as "other financial liabilities" and are initially measured at their fair values. Subsequent measurements are recorded at amortized cost using the effective interest rate method. The carrying values for these liabilities as at March 31, 2008 approximated their fair values; no adjustments were made to the opening values.

Senior unsecured convertible debentures

The sum of the carrying amounts assigned to the liability and equity components of the convertible debentures on initial recognition is always equal to the carrying amount that would be ascribed to the instrument as a whole. The debt portion is recorded at fair value on initial recognition and subsequently accreted over the life of the convertible debentures. No gain or loss arises from recognizing and presenting the components of the instrument separately. The relative fair value method is used to determine the value of the option directly either by reference to the fair value of a similar option, if one exists, or by using an option pricing model. The value determined for each component is then adjusted on a pro rata basis to the extent necessary to ensure that the sum of the carrying amounts assigned to the components equals the amount of the consideration received for the convertible debentures.

Section 1506 - Accounting Changes

In July 2006, the CICA issued a new version of Section 1506 of the CICA Handbook, "Accounting Changes". This new standard establishes criteria for changing accounting policies, together with the accounting treatment and disclosure of changes in accounting policies and estimates, and correction of errors. This new section was adopted by the Corporation on January 1, 2007 and had no impact on the Corporation's results.

Accounting policy choice for transaction costs

On June 1, 2007, CICA Emerging Issues Committee issued Abstract no. 166, "Accounting Policy Choice for Transaction Costs" (EIC 166). This EIC addresses the accounting policy choice of expensing or adding transaction costs related to the acquisition of financial assets and financial liabilities that are classified as other than held-for-trading. Specifically, it requires the same accounting policy choice be applied to all similar financial instruments classified as other than held-for-trading, but permits a different policy choice for financial instruments that are not similar. EIC 166 requires retroactive application to all transaction costs accounted for in accordance with Section 3855. The current recognition policy for transaction costs is consistent with this guidance.

On December 1, 2007, the CICA issued the following new accounting standards which became effective for interim periods beginning on or after October 1, 2007:

Section 1535 - Capital disclosures

This section establishes standards for disclosing information about an entity's capital and how it is managed. It describes the disclosure of the entity's objectives, policies and processes for managing capital, the quantitative data about what the entity regards as capital, whether the entity has complied with any capital requirements, and, if it has not complied, the consequences of such non-compliance. The Corporation has included disclosures recommended by Section 1535 in Note 22.

Section 3862 - Financial instruments - disclosures

This section describes the required disclosure for the assessment of the significance of financial instruments for an entity's financial position and performance and of the nature and extent of risk arising from financial instruments to which the entity is exposed and how the entity manages those risks. The Corporation has included disclosures recommended by Section 3862 in Note 23.

Section 3863 - Financial instruments - presentation

This section establishes standards for presentation of the financial instruments and non-financial derivatives. It carries forward the presentation related requirement of Section 3861, "Financial Instruments – Disclosure and Presentation". The Corporation has included disclosures recommended by Section 3863 in Note 23.

Future accounting standards

The CICA issued the following amendments to the accounting standards for periods beginning on or after January 1, 2008:

General standards on financial statement presentation

Section 1400 "General standards on financial statement presentation" has been amended to include requirements to assess and disclose an entity's ability to continue as a going concern. The Corporation does not expect the adoption of these changes effective January 1, 2008, to have an impact on its consolidated financial statements.

Inventories

Section 3031 "Inventories" provides guidance on the determination of costs and its subsequent recognition as an expense, including any write-down to net realizable value. It also provides guidance on the cost formulas that are used to assign cost to inventories. The Corporation does not expect the adoption of these changes effective January 1, 2008, to have an impact on its consolidated financial statements.

Goodwill and intangible assets

Section 3064, "Goodwill and intangible assets" establishes revised standards for recognition measurement, presentation and disclosure of goodwill and intangibles assets. Concurrent with the introduction of this standard, the CICA withdrew EIC 27, "Revenues and expenses during the pre-operating period". As a result of the withdrawal of EIC 27, the Corporation will no longer be able to defer costs and revenues incurred prior to commercial production at new operations. This is effective for periods beginning on or after January 1, 2009.

4. BUSINESS ACQUISITION

Acquisition of Mine Waste Solutions (Proprietary) Limited

First Uranium, through its wholly owned subsidiary, FUSA, acquired all of the issued and outstanding shares of MWS. MWS owns and operates an existing gold mine tailings and re-processing facility adjacent to First Uranium's Buffelsfontein Tailings Recovery Project in South Africa.

The MWS acquisition closed on June 6, 2007 (effective date of acquisition), at which point First Uranium assumed management control of MWS.

A total consideration of \$32.3 million was paid for the MWS acquisition in the form of an issuance of 3.1 million First Uranium common shares valued at \$31.6 million and \$0.7 million in cash for transaction costs.

The acquisition was accounted for by the purchase method of accounting and the allocation of fair value to the assets acquired and liabilities assumed as at June 6, 2007 was:

	Book value	Fair value adjustments	Fair value
	US\$'000	US\$'000	US\$'000
Current assets	4,608	-	4,608
Asset retirement fund	1,950	-	1,950
Property, plant and equipment	5,226	35,204	40,430
Total assets acquired	11,784	35,204	46,988
Current liabilities	1,476	-	1,476
Lease obligations	28	-	28
Asset retirement obligation	2,777	-	2,777
Future tax liability	236	10,209	10,445
Total liabilities assumed	4,517	10,209	14,726
Net assets acquired	7,267	24,995	32,262

Current assets include cash and cash equivalents of \$2.0 million (see Note 20.5).

The excess of the purchase consideration over the net book value of MWS was attributed to the Tailings for processing of \$29.6 million and \$5.6 million adjustment of the fair value of property, plant and equipment obtained with the MWS acquisition less the related future tax liability arising on these assets.

5. ACCOUNTS RECEIVABLE

	2008	2007
	US\$'000	US\$'000
Trade receivables	3,100	99
Value Added Tax and Goods and Services Tax	6,538	1,463
Prepayments and advances	80	144
Deposits and guarantees	2	7
	9,720	1,713

6. INVENTORIES

	2008	2007
	US\$'000	US\$'000
Gold work-in-progress	514	-
Spares and consumables	1,550	292
Stockpiles	744	-
	2,808	292

7. PROPERTY, PLANT AND EQUIPMENT

	Cost	Accumulated amortization	Net carrying amount
March 31, 2008	US\$'000	US\$'000	US\$'000
Land and buildings	1,616	(44)	1,572
Mine infrastructure	81,642	(143)	81,499
Mining assets	17,922	-	17,922
Tailings for processing	29,642	(1,197)	28,445
Mining rights	55	-	55
Plant and equipment	72,228	(139)	72,089
Exploration	1,010	-	1,010
Motor vehicles	1,080	(101)	979
Office furniture and equipment	517	(38)	479
Computer equipment and software	729	(129)	600
Total	206,441	(1,791)	204,650

March 31, 2007	Cost US\$'000	Accumulated amortization US\$'000	Net carrying amount US\$'000
Land and buildings	863	-	863
Mine infrastructure	3,710	-	3,710
Mining assets	16,942	-	16,942
Mining rights	13	-	13
Plant and equipment	9,000	-	9,000
Motor vehicles	179	(8)	171
Office furniture and equipment	56	(1)	55
Computer equipment and software	205	(5)	200
Total	30,968	(14)	30,954

Included in the above are mining related assets with a net carrying amount of \$124.6 million (March 31, 2007: \$29.0 million) related to the Ezulwini Mine and \$43.9 million (March 31, 2007: \$0.8 million) related to MWS.

As at March 31, 2008 all property, plant and equipment were owned by the Corporation, except for motor vehicles with a net carrying amount of \$0.02 million, which are held under capitalized lease contracts.

Ezulwini Mine

The Ezulwini Mine project involves the recommissioning of an underground uranium and gold mining operation located on the outskirts of the town of Westonaria in Gauteng Province, South Africa. The Corporation has been in the process of ramping up underground production. The development of the Ezulwini Mine includes the rehabilitation and re-engineering of the main mine shaft through the installation of a floating steel tower, de-stressing the area where the shaft pillar intersects the shaft barrel, and the construction of uranium and gold processing facilities.

EMC purchased certain surface and underground assets relating to the Ezulwini Mine for a total consideration of \$7.8 million, effective December 22, 2006.

As part of the Ezulwini acquisition, the related environmental rehabilitation trust fund amounting to \$2.7 million (see Note 8, Asset retirement funds) was transferred into the Ezulwini trust fund and EMC took over the related environmental rehabilitation provision of \$5.1 million (see Note 12, Asset retirement obligations), as determined by the DME. The difference of \$2.4 million between the environmental rehabilitation trust fund and the environmental rehabilitation provision has been capitalized as part of mining infrastructure.

On December 8, 2006, the Ezulwini mining right was awarded to Simmer & Jack by the DME. On December 20, 2006, EMC and Simmer & Jack entered into an agreement (the Ezulwini Mining Right Agreement), pursuant to which Simmer & Jack agreed to take all necessary steps to obtain all ministerial approvals in order to effect the transfer of the Ezulwini mining right from Simmer & Jack to EMC. On March 20, 2008, the DME accepted Simmer & Jack's application to cede the Ezulwini mining right from Simmer & Jack to EMC.

MWS

MWS is a uranium and gold tailings recovery operation located in the western portion of the Witwatersrand Basin. With the MWS acquisition (see Note 4), the Corporation acquired an existing operating gold mine tailings re-processing facility and an historic uranium plant, adjacent to the Buffelsfontein property, where the Buffelsfontein Tailings are now being treated. The Corporation commissioned the pump station and a pipeline between the MWS property and the Buffelsfontein property during December 2007 and hydraulic mining of the Buffelsfontein Tailings commenced.

During December 2006, FUSA entered into an agreement to acquire surface tailings from Buffelsfontein Gold Mines Limited (BGM), a subsidiary of Simmer & Jack (the Buffelsfontein Tailings and Rights Agreement). It was originally contemplated that the transaction would be recognized on the satisfaction of the conditions precedent in the Buffelsfontein Tailings and Rights Agreement. While the conditions have not yet been satisfied, MWS commenced processing the material from the Buffelsfontein Tailings in December 2007. All the benefits thereof accrued to MWS, and consequently, MWS assumed the asset retirement obligation related to the Buffelsfontein Tailings (see Note 12, Asset retirement obligations). The corresponding asset of \$10.2 million associated with the Buffelsfontein Tailings is capitalized as part of tailings for processing and amortized over the estimated life of the Buffelsfontein Tailings.

8. ASSET RETIREMENT FUNDS

	2008 US\$'000	2007 US\$'000
Balance, beginning of the year	2,791	-
Trust fund assumed on acquisition of Ezulwini Mine	-	2,686
Trust fund assumed on acquisition of MWS (see Note 4)	1,950	-
Investment income	194	82
Contributions in respect of investment funds	109	103
Costs incurred	-	(80)
Foreign exchange differences	(197)	-
Balance, end of the year	4,847	2,791

The asset retirement funds, consisting of environmental rehabilitation trust funds under the Corporation's control are to be used to fund the respective mining operation's rehabilitation liabilities. Funds in the trust consist primarily of cash held in interest-bearing accounts, as well as investment funds which consist of a combination of South African effective trusts. An accredited South African financial institution manages the trust funds under the direction of the trustees. The trust deed limits the trustees' investments to institutions and investment vehicles as referred to in section 37A of the South African Income Tax Act. Trust funds can only be drawn for rehabilitation purposes.

9. GUARANTEES

The following guarantees have been issued:

To	Regarding	Guarantee value US\$'000
DME	Ezulwini environmental rehabilitation provision	4,585
Murray and Roberts Cementation (Pty) Ltd	Ezulwini shaft rehabilitation project	1,220
Eskom Holdings Ltd	Electricity accounts	1,037

The Ezulwini rehabilitation trust funds included in the asset retirement funds (see Note 8) have been pledged as security against all of the above guarantees. These guarantees are reviewed and renewed on an annual basis. The guarantee concerning the Murray and Roberts Cementation (Pty) Ltd will be terminated once the shaft rehabilitation project is complete.

10. ACCOUNTS PAYABLE AND ACCRUED LIABILITIES

	2008 US\$'000	2007 US\$'000
Trade payables	17,664	5,302
Accruals	6,639	400
	24,303	5,702

The trade payables primarily relate to capital expenditure of \$8.7 million and \$0.7 million at the Ezulwini Mine and MWS, respectively.

11 SENIOR UNSECURED CONVERTIBLE DEBENTURES

On May 3, 2007 First Uranium issued senior unsecured convertible debentures (the Debentures) in denominations of \$1,000 Canadian dollars (Cdn\$) in the principal amount of \$135.1 million (Cdn\$150 million). The interest rate on the Debentures is 4.25% per annum. The Debentures pay interest semi-annually in arrears on June 30 and December 31 and have a maturity date of June 30, 2012. The Debentures are convertible at the option of the holder into common shares at any time prior to the maturity date at an exchange price of Cdn\$16.42 per share.

The Debentures may not be redeemed by the Corporation prior to June 30, 2010. On or after June 30, 2010 and prior to the maturity date, the Debentures may be redeemed by the Corporation, in whole or in part from time to time, provided that the weighted average trading price of the common shares on the TSX for the 20 consecutive trading days ending five trading days prior to the date on which notice of redemption is provided is at least 130% of the exchange price of Cdn\$16.42 per share.

First Uranium has the option, subject to regulatory approval, to satisfy its obligations to repay the principal amount of the Debentures on redemption or at maturity by issuing and delivering that number of its freely tradable common shares obtained by dividing the principal amount of the Debentures by 95% of the weighted average trading price of its common shares on the TSX for the 20 consecutive trading days ending five trading days before the date fixed for the redemption or maturity.

The equity component of the Debentures was valued on issuance at \$46.5 million which is recorded as a separate component of shareholders' equity. The conversion option was valued using the Black-Scholes pricing model with the following assumptions: Expected dividend yield, 0%; expected volatility, 56%; risk-free interest rate of 4.2% and expected life of five years.

The liability component of the Debentures is being accreted such that the liability at maturity will equal the gross proceeds of \$135.1 million (Cdn\$150 million) less conversions. The amounts accreted during the year ended March 31, 2008 was \$8.5 million (March 31 2007: \$nil). The cost of issuing the Debentures amounted to \$4.5 million.

As at March 31, 2008, no portion of the Debenture had been converted. Interest paid and accrued for the year ended March 31, 2008 amounted to \$4.2 million and \$1.6 million, respectively.

12. ASSET RETIREMENT OBLIGATIONS

	2008 US\$'000	2007 US\$'000
Balance, beginning of the year	5,377	-
Provision assumed on acquisition of the Ezulwini Mine	-	5,133
Provision assumed on acquisition of MWS (see Note 4)	2,777	-
Provision recognized with commencement of processing the Buffelsfontein Tailings	10,162	-
Accretion expense	896	244
Rehabilitation expenditure incurred	(1,841)	-
Additional rehabilitation provision on MWS	2,530	-
Balance, end of the year	19,901	5,377

The following are the key assumptions used during the year:

	2008 ZAR'000	2007 ZAR'000
Gross amount of estimated cash flows - Ezulwini Mine	40,495	23,206
Gross amount of estimated cash flows - MWS	178,195	-
Number of years over which cash flows will occur:		
- Ezulwini Mine	26	19
- MWS	25	-
First Uranium credit-adjusted risk free rate	9%	8%
South African inflation rate assumed	6%	6%

The environmental rehabilitation provision assumed by EMC as part of the acquisition of the Ezulwini assets was determined by the DME as at November 2006. During March 2008 an independent review was performed by Johan Fourie & Associates on the Ezulwini assets relating to environmental rehabilitation provision that confirmed the current cost estimate of the provision at March 31, 2008 was sufficient.

The environmental rehabilitation provision assumed as part of the MWS acquisition is to be partly funded by its environmental rehabilitation trust fund (see Note 8). During March 2008, an independent valuation of the environmental rehabilitation provision was completed by GCS (Proprietary) Limited, a water environmental engineering and science consultancy company. The provision was based on the estimated cost to rehabilitate the mine.

The environmental rehabilitation provision associated with the Buffelsfontein Tailings was recognized with the commencement of the hydraulic mining of the Buffelsfontein Tailings in December 2007. Management estimated the respective environmental rehabilitation provision assumed at \$10.2 million (see Note 7).

13. SHARE CAPITAL

	Number of shares		2008 US\$'000	2007 US\$'000
	2008 '000	2007 '000		
Common shares				
Balance, beginning of the year	121,686	87,536	206,726	4,176
Shares issued in public or private offering	-	33,350	-	201,795
Shares issued in respect of acquisition (see Note 4)	3,094	-	31,557	-
Shares issued pursuant to the Waterpan transaction (see Note 1)	6,141	-	-	-
Exercise of stock options	153	800	1,063	728
Contributed surplus relating to stock options exercised	-	-	642	27
	131,074	121,686	239,988	206,726
Less: Share issue costs	-	-	(24,053)	(24,053)
Balance, end of the year	131,074	121,686	215,935	182,673

Authorized

The authorized share capital of First Uranium consists of an unlimited number of common shares.

Issued and outstanding

On June 1, 2006, 800,000 stock options were exercised for proceeds of \$0.7 million.

During December 2006, First Uranium issued 33.35 million shares pursuant to the Offering at Cdn\$7 per share for gross proceeds of \$201.8 million;

On June 6, 2007, First Uranium issued 3.1 million shares valued at \$31.6 million relating to the acquisition of MWS (see Note 4).

On December 14, 2007, First Uranium issued 6.1 million shares pursuant to the Offering (see Note 1).

During the year ended March 31, 2008, 153,001 stock options were exercised, at an exercise price of Cdn\$7 per share.

14. CONTRIBUTED SURPLUS – STOCK-BASED COMPENSATION

The Corporation maintains a stock option plan (the Option Plan) for employees, officers, directors and for certain consultants who provide ongoing support to First Uranium and its subsidiaries. Under the Option Plan, options typically are granted for a period of up to ten years following the date of grant. The amounts granted reflect the level of responsibility of the particular optionee and his or her contributions to First Uranium.

The Board of Directors has discretion to set the terms of any vesting schedule of each option granted. Except in specified circumstances, stock options are not assignable and non-transferable and terminate 90 days after the optionee ceases to be employed or associated with First Uranium.

The terms of the Option Plan further provide that the price at which shares may be issued under the Option Plan shall not be less than the volume weighted average trading price of the shares on the TSX for the five trading days immediately preceding the day the option is granted.

The following table details the movements of contributed surplus during the year:

	2008 US\$'000	2007 US\$'000
Balance, beginning of the year	2,460	27
Transfer to share capital relating to stock options exercised	(642)	(27)
Stock options vesting expense recognised during the year	6,039	2,460
Stock options forfeited during the year	(849)	-
Balance, end of the year	7,008	2,460

Assumptions

The fair value of shares used to calculate the compensation expense was determined using the share price on the grant date and was adjusted for the probability of the recipients remaining employed or associated with the Corporation until the vesting date.

During the year ended March 31, 2008, the fair values of the stock options were estimated using the Black-Scholes option pricing model with the following assumptions:

Expected dividend yield - 0% (March 31, 2007: 0%)

Expected volatility of the Corporation's share price ranged between 56% and 66.7% (March 31, 2007: 85%).

Risk-free interest rate ranged between 3.84% and 4.81% (March 31, 2007: 3.90%).

Expected life - 3 years (March 31, 2007: 3 years)

During the year ended March 31, 2008, 2,551,433 stock options were granted for a period of ten years following the date of the grant and are subject to vesting within two years from the date of grant. The fair value of the stock options granted during the year ended March 31, 2008 was Cdn\$9.4 million. The weighted average fair value of each stock option granted was Cdn\$3.70 per share.

The following table is a summary of the Corporation's options granted under its stock-based compensation plan:

	Number of options		Weighted average exercise price (Cdn\$)	
	2008	2007	2008	2007
Outstanding options, beginning of year	1,223,001	800,000	7.30	1.00
Granted during the year	2,551,433	1,223,001	9.02	7.30
Exercised during the year	(153,001)	(800,000)	(7.00)	(1.00)
Forfeited during the year	(182,477)	-	(7.56)	-
Outstanding options, end of year	3,438,956	1,223,001	9.13	7.30

The stock-based compensation expense recognized in the statements of operations and deficit and comprehensive loss was \$5.0 million (March 31, 2007: \$2.5 million). During the year ended March 31, 2008 \$0.2 million stock-based compensation was capitalized to the projects (March 31 2007: \$nil). As at March 31, 2008, the aggregate unexpensed fair value of unvested stock options granted amounted to \$5.8 million (March 31, 2007: \$2.9 million).

The following table summarizes information about First Uranium's outstanding stock options as at March 31, 2008:

Exercise price ranges Cdn\$	Options outstanding			Options exercisable		
	Number of options outstanding	Weighted average remaining life (years)	Weighted average exercise price (Cdn\$)	Number of options exercisable	Weighted average remaining life (years)	Weighted average exercise price (Cdn\$)
7.00 to 8.99	3,057,670	9.58	8.83	1,263,387	9.42	8.09
9.00 to 11.99	321,286	9.45	11.31	152,475	9.32	10.12
12.00 to 13.99	60,000	9.17	12.87	20,000	9.17	12.87
	3,438,956	9.56	9.13	1,435,862	9.40	8.37

15. CONTRIBUTION FROM PARENT

	2008 US\$'000	2007 US\$'000
Balance, beginning of year	-	-
Stock-based compensation relating to parent	153	-
Balance, end of year	153	-

These contributions represent the stock-based compensation relating to stock options granted under the Simmer & Jack stock option scheme to individuals that were previously employed by Simmer & Jack and that got transferred to First Uranium during the year. During the year ended March 31, 2008, 7.6 million Simmer & Jack stock options were granted to these employees. The weighted average fair value of the Simmer and Jack options assumed was ZAR4.3 per stock option. The fair value of these stock options was ZAR22 million (\$2.8 million).

The fair values of the stock options were estimated using the Black-Scholes option pricing model with the following assumptions:

- Expected dividend yield - 0%
- Expected volatility of Simmer & Jack's share price ranged between 56% and 90%.
- Risk-free interest rate ranged between 8.98% and 10.02%
- Expected life - 6 years
- Vesting period - 3 years

16. TAXATION

Provision for income taxes

The reconciliation of income taxes attributable to operations computed at the statutory tax rates to income tax recovery, using a Canadian statutory tax rate of 35.47% for the year ended March 31, 2008 (March 31, 2007: 36.12%), is as follows:

	2008 US\$'000	2007 US\$'000
Loss before income taxes	(21,381)	(7,907)
Income tax recovery at statutory rate	7,584	(2,864)
Difference between Canadian rates and foreign jurisdiction	(636)	130
Change in valuation allowance	5,322	3,536
Adjustment for future tax rate difference	(2,716)	(612)
Non-taxable items	(10,398)	(211)
Other	(122)	-
Income tax charge	(966)	(21)

Future income tax assets

	2008 US\$'000	2007 US\$'000
Property, plant and equipment	4	-
Non-capital loss carry-forwards	5,684	1,602
Share issue costs	6,697	6,629
Foreign resource expenses	1,102	1,099
Foreign exchange	6,040	850
	19,527	10,180
Less: Valuation allowance	(19,527)	(10,180)
	-	-

Future income tax liabilities

	2008 US\$'000	2007 US\$'000
Property, plant and equipment	(10,649)	-
	(10,649)	-

As at March 31, 2008, the Corporation had non-capital losses of approximately \$7.1 million (March 31, 2007: \$4.9 million) in Canada that may be applied against earnings in future years. These losses are expected to expire between 2026 and 2028. The Corporation had non-capital losses of approximately \$12.3 million (March 31, 2007: \$1.5 million) in South Africa that may be applied against earnings in future years, unlimited.

Due to uncertainties in the Corporation's ability to utilize its net operating losses in all of its operations, the Corporation has provided a valuation allowance against those future tax assets for which uncertainty exist.

17. OTHER INCOME

	2008 US\$'000	2007 US\$'000
Sludge pumping income	1,929	27
Rental income	503	-
Scrap sales	242	-
Other income	64	-
	2,738	27

18. FOREIGN EXCHANGE LOSSES

	2008 US\$'000	2007 US\$'000
Foreign exchange losses	(2,611)	(4,612)

The foreign exchange losses on translation during the year ended March 31, 2008 reflect the overall strengthening of the Cdn\$ against the US\$ and the overall weakening of the ZAR against both the Cdn\$ and US\$.

19. BASIC AND DILUTED LOSS PER COMMON SHARE

	2008	2007
Basic and diluted loss per share of (US\$)	(0.18)	(0.08)
is calculated based on loss for the year of (US\$'000)	(22,347)	(7,928)
and a weighted average number of common shares outstanding of ('000)	126,096	97,522

For the years ended March 31, 2008 and 2007, the impact of outstanding share options was excluded from the diluted common shares calculation because it was anti-dilutive for earnings per share purposes.

The impact of the Debentures issued on May 3, 2007, has been excluded from the diluted common shares computation because it was anti-dilutive for earnings per share purposes.

20. NOTES TO THE CONSOLIDATED STATEMENTS OF CASH FLOWS

20.1 Non-cash interest income

	2008 US\$'000	2007 US\$'000
Total interest income	14,847	3,433
Add back: Cash interest income	(14,653)	(2,767)
	194	666

Non-cash interest expense

	2008 US\$'000	2007 US\$'000
Total interest expense	(5,782)	(162)
Add back: Cash interest paid	4,203	-
	(1,579)	(162)

20.3 Decrease (increase) in net receivables from/payable to related parties

	2008 US\$'000	2007 US\$'000
Decrease (increase) in receivables from related parties	6,763	(4,033)
Increase (decrease) in payable to related parties	541	(5,300)
Add back:		
- Interest income accrued on accounts receivable	-	583
- Interest expense accrued on accounts payable	-	(1,130)
	7,304	(9,880)

20.4 Additions to property, plant and equipment

	2008 US\$'000	2007 US\$'000
Total additions to property, plant and equipment	(140,541)	(30,968)
Add back:		
Asset associated with MWS (no cash outflow)	5,493	-
Capital expenditure included in Trade payables	9,386	3,282
Assets associated to the Asset rehabilitation obligation	12,692	2,447

21. COMMITMENTS**Lease agreement**

The Corporation has an operating lease agreement which expires on May 31, 2012. The total rent expense charged under this agreement was \$69,125 (March 31, 2007: \$nil).

Minimum lease payments under the operating lease in effect through 2013 are as follows:

	US\$'000
Year 2009	91
Years 2010 to 2012	279
Year 2013	16
	386

Capital commitments

	2008 US\$'000	2007 US\$'000
Ezulwini Mine	35,128	14,836
MWS	5,173	-
Total contractual obligations	40,301	14,836

The capital commitments are payable within one year.

Toll treatment agreement

The Corporation entered into an agreement with a third party, commencing in January 2009, to calcine the ammonium diuranate (yellowcake) from First Uranium to produce uranium oxide packaged for dispatch to converters. Either party may terminate the agreement on 18 months notice. The third party calciner will construct a plant with one half of the capacity of the plant to be dedicated for the processing of the First Uranium yellowcake and will acquire a road tanker to transport the yellowcake from the First Uranium operations to the calciner's operations. First Uranium will pay one-half of the construction cost of the calcining plant up to a maximum of \$1.8 million and one half of the cost of the tanker (together referred to as the Loan). The Loan will be effective as of January 5, 2009 and is to be repaid in monthly instalments over a seven year period commencing January 30, 2009. The Loan will bear interest equal to the prime overdraft rate as quoted by the South African Reserve Bank (SARB), plus 2% commencing on January 5, 2009.

Royalty agreements

On December 20, 2006, FUSA, Simmer & Jack and Aberdeen International Incorporated (Aberdeen) entered into an arrangement (the Aberdeen Arrangement) pursuant to which (i) Simmer & Jack confirmed that it will pay to Aberdeen the amount of any royalty owing to Aberdeen under the Aberdeen Loan Agreement in respect of gold produced from the tailings to be acquired by FUSA from BGM, pursuant to the Buffelsfontein Tailings and Rights Agreement, and (ii) FUSA confirmed that it will pay to Simmer & Jack, immediately prior to any payment contemplated in (i) above, an amount equal to the amount of any royalty payment to be made by Simmer & Jack to Aberdeen in respect of gold produced from the tailings to be acquired by FUSA from BGM, pursuant to the Buffelsfontein Tailings and Rights Agreement.

Pursuant to the Buffelsfontein Tailings and Rights Agreement dated December 20, 2006 among BGM, Simmer & Jack and FUSA, in consideration for the cession of the Buffelsfontein Tailings and Mining Right from BGM to FUSA, as well as certain servitudes, and the right to the tailings arising from future underground mining operations by BGM at the BGM Underground Mine, FUSA agreed to pay to BGM a royalty of 1%, plus value added tax of the gross revenue earned by FUSA from the sale of uranium, gold, sulphur and other minerals recovered from the processing of tailings acquired by FUSA from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement. When the Corporation purchased MWS in June 2007, the Corporation acquired an existing operating gold mine tailings re-processing facility and an historic uranium plant, adjacent to the Buffelsfontein property. The Corporation changed its plans for the Buffelsfontein Tailings Recovery Project such that the historical and future tailings from the Buffelsfontein mine would be transported to the MWS site and processed through the existing gold plant, and subject to their commissioning, through the planned uranium recovery plant and additional gold recovery facilities. A new agreement has subsequently been entered into between MWS, BGM and Simmer & Jack, that reflects the change in plans subsequent to the Offering with MWS assuming the obligations of FUSA under the original agreement. MWS has indemnified BGM against any tax liability incurred by BGM from the sale recorded on the basis that MWS has no liability unless the amount of any claim exceeds \$2 million and then only in respect of any amounts in excess of \$2 million.

In summary, as and when there is production from the Buffelsfontein Tailings acquired from BGM, pursuant to the Buffelsfontein Tailings and Rights Agreement, MWS will become liable to pay: (i) to Simmer & Jack, under the Aberdeen Arrangement Agreement, an amount equal to the royalty payable by Simmer & Jack to Aberdeen pursuant to the Aberdeen Agreement in respect of the tailings to be acquired from BGM, pursuant to the Buffelsfontein Tailings and Rights Agreement; and (ii) to BGM the above-mentioned 1% royalty, pursuant to the terms of the Buffelsfontein Tailings and Rights Agreement.

During December 2007, MWS commenced processing the Buffelsfontein Tailings and, as a result, MWS is now obligated to pay a royalty to BGM, pursuant to the Buffelsfontein Tailings and Rights Agreement and make other payments to Simmer & Jack pursuant to the Aberdeen Arrangement in respect of the metals recovered from the Buffelsfontein Tailings. The total royalties expensed amounted to \$0.4 million.

22. CAPITAL MANAGEMENT

First Uranium's capital includes convertible debentures and shareholders' equity. The Corporation's objectives when managing shareholders' equity are to provide returns for shareholders and safeguard its ability to continue as a going concern. Mining is capital intensive and the Corporation strives to achieve lowest industry costs at all of its operations and meet cash flow requirements through internally generated cash flows.

The Corporation's current operations involve the re-opening and development of the Ezulwini Mine and the development of MWS. During December 2006, the Corporation raised \$177.7 million net proceeds of sale of shares and is dependent on these funds to finance its current operations.

First Uranium intends to use the net proceeds from the issue of the Debentures raised in May 2007 to fund the Ezulwini Expansion Program which is designed to determine the potential for a possible expansion of the Ezulwini Mine; together with the balance of the net proceeds of the Offering, fund the development of the Ezulwini Mine and MWS and for general corporate purposes.

In order to carry out the planned development and exploration and pay for administrative costs, the Corporation plans to spend the capital raised to date, as well as its existing working capital and raise additional amounts as needed. The Corporation will continue to assess new properties and seek to acquire an interest in additional properties if it feels there is sufficient geologic or economic potential and if it has adequate financial resources to do so.

The Corporation manages its capital structure and makes adjustments to it, based on the funds available to the Corporation, in order to support the development of its operations and the exploration and development of mineral properties. The Board of Directors does not establish quantitative return on capital criteria for management, but rather relies on the expertise of the Corporation's management to sustain future development of the business.

Management reviews its capital management approach on an ongoing basis and believes that this approach, given the relative size of the Corporation, is reasonable.

There were no changes in the Corporation's approach to capital management during the year ended March 31, 2008. Neither the Corporation nor its subsidiaries is subject to externally imposed capital requirements.

23. FINANCIAL INSTRUMENTS

Financial risk factors

First Uranium's activities expose it to a variety of financial risks, including the effects of changes in debt and equity market prices, foreign currency exchange rates and interest rates.

a) Credit risk

Credit risk is the risk of loss associated with a counter party's inability to fulfill its payment obligations. The Corporation's credit risk is primarily attributable to gold sales and value-added taxes receivable. The Corporation has a concentration of credit risk with one customer which is closely monitored by management. Value-added taxes receivable are collectable from the South African government. Management believes that the credit risk concentration with respect to financial instruments attributable to gold sales and value-added taxes receivable is remote.

In addition, the majority of the Corporation's cash and cash equivalents are on deposit with highly-rated financial institutions.

b) Liquidity risk

First Uranium has sufficient funds (March 31, 2008: \$164.7 million; March 31, 2007: \$138.9 million) to settle current and long term liabilities. The Corporation's accounts payable and accrued liabilities, as well as the payable to related party, have contractual maturities of less than 30 days and are subject to normal trade terms.

c) Market risk

Market risk is the risk of loss that may arise from changes in market factors such as interest rates, foreign exchange rates, and gold prices.

i. Interest rate risk

First Uranium has significant cash balances and long-term debt, with the latter having a fixed rate of interest of 4.25% (see Note 11, Senior unsecured convertible debentures). The Corporation's current policy is to invest excess cash in short-term deposits in banks with which it keeps its bank accounts. The Corporation monitors the investments it makes and is satisfied with the credit ratings of its banks.

ii. Foreign currency risk

The Corporation's functional currency is the US\$. The Corporation is affected by currency transaction risk and currency translation risk. Consequently, fluctuations of the US\$ in relation to other currencies impact the fair value of financial assets, liabilities and operating results. The Corporation does not hedge its exposure to foreign currency exchange risk.

Certain short term financial liabilities are denominated in other currencies, predominantly Cdn\$ and ZAR. The Corporation's operations are primarily in South Africa and as a result the Corporation has maintained significant cash and cash equivalents during the year in ZAR to meet these operation's short term liquidity requirements. Financial assets and liabilities subject to currency translation risk primarily include non-US\$ cash and cash equivalents and the Debentures.

The SARB approval that was required in connection with the issue of the Debentures includes a condition that the Corporation transfers the net Debenture proceeds to bank accounts of the Corporation in South Africa and convert the funds to ZAR, by May 3, 2008. SARB has granted an extension in respect of Cdn\$60 million of such funds pending consideration of an application by the Corporation to permit the funds to remain in Canada. As at March, 31 2008, the net proceeds from the issue of the Debentures were held in Canadian dollar denominated short-term deposits bearing interest at 4.85% per annum.

iii. Price risk

Gold price risk is defined as the potential adverse impact on earnings and economic value due to gold price movements and volatilities. The Corporation does not hedge its exposure to commodity price fluctuation risk.

Sensitivity analysis

The Corporation has designated its cash and cash equivalents as available-for-sale, which are measured at fair value. Financial instruments included in accounts receivable and receivables from related party are classified as loans and receivables, which are measured at amortized cost. Accounts payable and accrued liabilities and payable to related party are classified as other financial liabilities, which are measured at amortized cost.

Based on management's knowledge and experience of the financial markets, First Uranium believes the following movements are "reasonably possible" over a 12 month period.

As of March 31, 2008, management estimates that if interest rates had changed by 1%, assuming all other variables remained, constant, the impact to net loss would have been approximately \$148,466.

Financial instruments that impact the Corporation's operations due to currency fluctuations include:

- Cdn\$ denominated cash and cash equivalents, accounts receivable, loan to related party, accounts payable and accrued liabilities, and the debt portion of convertible debentures.
- ZAR denominated cash and cash equivalents, accounts receivable, accounts payable and accrued liabilities, and payables to related party.

As at March 31, 2008, management estimates that if the foreign exchange rates had changed 10% against the US\$ assuming all other variables remained constant, the impact on net loss would have been approximately as follows:

	US\$'000
10% increase in value of Cdn\$	4,240
10% decrease in value of Cdn\$	(4,240)
10% increase in value of ZAR	1,295
10% decrease in value of ZAR	(1,295)

The Corporation's current exposure to price risk on the commodities in which it produces and sells is limited.

Fair value estimation

In assessing the fair value of other financial instruments, the Corporation uses a variety of methods and makes assumptions that are based on market conditions existing at each balance sheet date.

The face values less any estimated credit adjustments for financial assets and financial liabilities with a maturity of less than one year are assumed to approximate their fair values. The fair value of financial liabilities for disclosure purposes is estimated by discounting the future contractual cash flows at the current market interest rate available to the Corporation for similar financial instruments.

As at March 31, 2008, the actual disclosed values of the financial instruments all approximate the fair values of these instruments.

24. RELATED PARTY TRANSACTIONS AND COMMITMENTS

Related party balances	2008 US\$'000	2007 US\$'000
First Uranium amount from Simmer & Jack	-	1,684
Loan to Chief Executive Officer	978	-
FUSA amount (to) from Simmer & Jack	(541)	5,079
Contribution from parent (see Note 15)	(153)	-

Related party transactions	2008 US\$'000	2007 US\$'000
Shared services fees to Simmer & Jack	(2,258)	(2,639)
Fees paid to empowerment company	(222)	(53)
Stock-based compensation to parent (see Note 15)	(153)	-
Royalties paid to BGM (see Note 21)	(62)	-
Capital purchase of asset from BGM	(1,702)	-
Interest paid to Simmer & Jack by EMC	-	(1,130)
Interest received from Simmer & Jack by FUSA	-	583
Interest received on loan to Chief Executive Officer	15	-

These transactions are in the normal course of operations and are measured at the exchange amount of consideration established and agreed to by the parties involved, having regard to prevailing market rates.

On December 20, 2006, First Uranium and Simmer & Jack entered into a shared services agreement (the Shared Services Agreement). Pursuant to the terms of the Shared Services Agreement, First Uranium may retain certain services to be provided by Simmer & Jack, including project management and technical services, cash management and investment services, accounting, treasury and financial services, corporate secretarial support and human resources and staffing services, including payroll and benefits administration, and such other services as may be required by First Uranium and which Simmer & Jack is able and willing to provide. The expenses for the year ended March 31, 2007 relates to such services received.

During the year ended March 31, 2008, \$1.4 million (March 31, 2007: \$0.6 million) of the fees to Simmer & Jack pursuant to the Shared Services Agreement were expensed and \$0.9 million (March 31, 2007: \$2.0 million) of the fees were capitalized, representing services provided in respect of technical services for the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project.

Prior to December 2006, the Corporation shared its premises with other companies that had common directors and reimbursed the related companies for its proportional share of expenses or was reimbursed by the related companies for their proportional share of expenses. During the year ended March 31, 2007, the Corporation was charged \$0.6 million for consulting services provided by related directors, officers and consultants of the Corporation.

In addition, First Uranium has agreed to reimburse Simmer & Jack with respect to 50% of fees that Simmer & Jack is required to pay to an empowerment company for consulting services regarding transformation, human resources and occupational health and safety. BJ Njenje, AX Sisulu and SLB Mapisa, shareholders of the empowerment company, are also directors of Simmer & Jack.

On September 13, 2007, the Ezulwini Mine acquired a reconditioned mill for the first 50,000 tonne per month milling unit from BGM for a consideration of \$1.7 million.

On September 27, 2007, the Board of Directors approved a loan in the amount of Cdn\$1 million to the Chief Executive Officer of First Uranium for the purpose of facilitating his purchase of a family home. The loan is for a term of six years, is unsecured and bears interest at 4% per annum payable monthly in arrears. The loan was advanced on October 17, 2007.

As previously disclosed, the Corporation entered into an agreement on December 20, 2006 with Waterpan for the purchase of the remaining 10% of the shares of EMC in consideration for 6.1 million common shares of First Uranium. On December 14, 2007, EMC obtained a bridging loan from a South African banking institution to purchase Waterpan's 10% shareholding in EMC. Waterpan used the proceeds to partially fund the purchase of 6.1 million common shares (the Waterpan Shares) of First Uranium for a consideration of \$42.4 million. First Uranium used the proceeds from the sale of the Waterpan Shares to repay the bridging loan to the South African banking institution and to pay the taxes resulting from the purchase of the EMC shares. Concurrent with the closing of this transaction, one million of the Waterpan Shares were sold by way of a private placement. Waterpan has a contractual agreement to retain its remaining Waterpan Shares until April 1, 2009. Certain shareholders of Waterpan are officers or employees of First Uranium or directors of its subsidiaries. The Waterpan transaction had no net impact on the cash flow of the First Uranium group of companies.

25. SUBSEQUENT EVENTS

During May 2008, the Corporation entered into an agreement for the purchase of a 30 megawatt diesel-fired power plant and associated equipment, refurbished and configured in accordance with the Corporation's specifications for \$8.5 million. The vendor will oversee the installation, construction, start-up and commissioning of the power plant at the operations of the Corporation at its own cost. Eighty percent of the purchase price is payable upon shipment of the power plant and the balance upon installation and the successful commissioning at site. The Corporation is responsible for shipping charges of approximately \$750,000.

During May 2008, the Corporation also agreed to lease ten self contained diesel powered generating sets (gensets) for an initial term of eighteen months. The fixed monthly rental charge is \$13,500 per genset for the first twelve months, reducing to \$12,500 per genset thereafter. After the initial eighteen months period, the Corporation has the option to extend the lease agreement period for up to sixty months, in successive twelve month periods. The fixed monthly charge per genset is \$12,500 for months 19 to 24; \$12,000 for months 25 to 36; \$11,500 for months 37 to 48; and \$11,000 for months 49 to 60. If the gensets are rented for sixty months, the Corporation is entitled to purchase the gensets for \$50,000 per set. The Corporation is also obligated to pay a monthly fixed charge of \$25,000 and a running hourly charge of EUR11.30 (\$17.85). These charges are subject to indexation based on consumer prices. The Corporation is also responsible for \$75,000 mobilization charges and \$56,250 demobilization charges per shipment. The gensets will be installed over a three month period commencing July 2008. The total rental and fixed charges for the initial eighteen month period are estimated at \$2.2 million and \$0.5 million, respectively.

As the rental period is shorter than the useful life of the gensets, this agreement will be accounted for as an operating lease. This treatment will be reviewed in accordance with any changes that may be made in the successive agreements.

26. SEGMENTED INFORMATION

Segmented information is presented in respect of the Corporation's business and geographical segments. The primary format business segments, are based on the Corporation's management and internal reporting structure. Inter-segment reporting is determined on an arm's length basis.

Segment results, assets and liabilities include items directly attributable to a segment as well as those that can be allocated on a reasonable basis. Unallocated items comprise mainly income earning assets and revenue, interest-bearing loans, borrowing and expenses, and corporate assets and expenses. Segment capital expenditure is the total cost incurred during the year to acquire segment assets that are expected to be used for more than one year.

March 31, 2008	South Africa		Canada	Total US\$'000

Management's discussion and analysis of the audited consolidated financial condition and results of operations for the years ended March 31, 2008 and March 31, 2007

This Management's Discussion and Analysis ("MD&A") of the consolidated financial position and results of operations reviews the activities, audited consolidated results of operations and financial condition of First Uranium Corporation and its subsidiaries ("First Uranium" or the "Corporation") for the years ended March 31, 2008 ("FY 2008") and March 31, 2007 ("FY 2007"), together with certain trends and factors that are expected to have an impact in the future. References to "Q1 2008", "Q2 2008", "Q3 2008" and "Q4 2008" refer to the Corporation's three months ending June 30, 2007, September 30, 2007, December 31, 2007 and March 31, 2008, respectively. References to "Q1 2009" refer to the Corporation's three month period ending June 30, 2008.

This MD&A is intended to supplement and complement the audited consolidated financial statements for the year ended March 31, 2008 and the notes thereto (collectively the "Financial Statements") which have been prepared in accordance with Canadian generally accepted accounting principles ("Canadian GAAP"). The information contained in this MD&A is current as of June 9, 2008, unless otherwise indicated.

The reporting currency for the Corporation is the US dollar, and all amounts in the following discussion are in US dollars ("\$"), except where otherwise indicated.

This MD&A includes certain forward-looking statements. Please read the cautionary note at the end of this document.

Responsibility of Management and the Board of Directors

Management is responsible for the information disclosed in this MD&A and the accompanying Financial Statements and has in place the appropriate information systems, procedures and controls to ensure that information used internally by management and disclosed externally is materially complete and reliable. In addition, the Corporation's Audit Committee, on behalf of the Board of Directors, provides an oversight role with respect to all public financial disclosures made by the Corporation, and has reviewed and approved this MD&A and the accompanying Financial Statements.

Disclosure Controls and Procedures

Disclosure controls and procedures are designed to provide reasonable assurance that all relevant information is gathered and reported on a timely basis to senior management, including the Corporation's Chief Executive Officer and Chief Financial Officer, so that appropriate decisions can be made regarding public disclosure. As at the end of the period covered by this MD&A, management of First Uranium, under the direction of the Chief Executive Officer and the Chief Financial Officer, evaluated the effectiveness of the Corporation's disclosure controls and procedures as required by Canadian securities laws.

Based on this evaluation, the Chief Executive Officer and the Chief Financial Officer have concluded that as of the end of the period covered by this MD&A, the disclosure controls and procedures were effective to provide reasonable assurance that information required to be disclosed in First Uranium's annual filings and interim filings (as such terms are defined under Multilateral Instrument 52-109 – Certification of Disclosure in Issuers' Annual and Interim Filings) and other reports filed or submitted under Canadian securities laws is recorded, processed, summarized and reported within the time periods specified by those laws, and that material information is accumulated and communicated to management of First Uranium, including the Chief Executive Officer and the Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

During the most recent year there were no changes in the Corporation's internal controls over financial reporting that materially affected, or are reasonably likely to materially affect, the Corporation's internal control over financial reporting.

Overview

First Uranium is a Canadian resource company focused on the development of uranium and gold projects in South Africa. The Corporation's goal is to become a significant low-cost producer of uranium and gold through the re-opening and development of the Ezulwini Mine and the expansion of Mine Waste Solutions ("MWS"). To expand its production profile, First Uranium plans to pursue value-enhancing opportunities in South Africa and elsewhere.

First Uranium is currently focused on the rehabilitation and bringing into production of the Ezulwini underground uranium ("U₃O₈") and gold ("Au") mine (the "Ezulwini Mine") and the recovery of uranium and gold from the existing and future surface tailings at the Buffelsfontein mine through gold and uranium plants originally planned to be constructed near the tailings at the Buffelsfontein mine (the "Buffelsfontein Tailings Recovery Project"). In June 2007, the Corporation acquired Mine Waste Solutions (Proprietary) Limited, an existing tailings treatment company which had an operating gold recovery plant in place. As a result of the acquisition, First Uranium changed its plans for the Buffelsfontein Tailings Recovery Project so that the historical and future tailings from the Buffelsfontein mine (the "Buffelsfontein Tailings") are now transported by pipeline to the MWS site and processed through MWS's existing gold plant and, subject to their commissioning, through the planned uranium recovery plant and additional gold recovery facilities. For greater clarity, the Buffelsfontein Tailings Recovery Project, as enhanced and modified by the acquisition of MWS, was renamed Mine Waste Solutions.

The Corporation received net proceeds of \$177.7 million from the sale of 33 million common shares in an initial public offering (the "Offering") in December 2006 and raised an additional \$130.6 million (net of expenses) from the sale of convertible debentures (as defined below) in May 2007. The common shares and the convertible debentures are listed on the Toronto Stock Exchange (the "TSX"). In addition, the common shares are listed on the Johannesburg Stock Exchange (the "JSE"). As of June 9, 2008, Simmer and Jack Mines, Limited ("Simmer & Jack"), a South African incorporated public company listed on the JSE, owned 62.3% of the common shares of First Uranium.

Highlights

During Q1 2008, First Uranium:

- raised gross proceeds of Cdn\$150 million in May 2007 through an issue of 4.25% senior unsecured convertible debentures (the "Debentures")
- acquired, effective June 6, 2007, 100% of the equity and management control, of Mine Waste Solutions (Proprietary) Limited and its wholly-owned subsidiary Chemwes (Proprietary) Limited, following which First Uranium commenced to record for its account, production from the MWS gold plant
- filed a revised technical report for each of the Ezulwini Mine and MWS, which indicated improvement to the net present value ("NPV") and internal rate of return ("IRR") of each project, reflecting the accelerated timetables
- accelerated capital investment at the Ezulwini Mine to advance the plant commissioning and production startup by three months

During Q2 2008, First Uranium:

- began hoisting development material at its Ezulwini Mine in September 2007, as scheduled
- defined initial underground and surface drilling targets related to the possible expansion of the existing Ezulwini Mine (the "Ezulwini Expansion Program")
- approved an \$11.7 million capital program to construct a reclamation station and pipelines at MWS and increase the planned processing rate from 500,000 tonnes per month to 630,000 tonnes per month
- entered into an agreement with a third party to calcine ammonium diuranate ("yellowcake") produced by First Uranium to produce uranium oxide for dispatch to converters commencing January 2009

During Q3 2008, First Uranium:

- completed construction of the reclamation station at MWS and the 10.5-kilometre pipeline from the Buffelsfontein Tailings to the MWS gold plant
- completed the clean up and processing of the remaining tailings from the MWS No.2 tailings dam and commenced hydraulic mining and pumping of material from the Buffelsfontein No.2 tailings dam to the MWS gold plant for processing during mid-December
- completed a pre-feasibility study of MWS during November 2007 incorporating higher average uranium and gold price assumptions and increased capital investment, which projected the MWS project's expected NPV to increase by 71% to \$505 million and its IRR to increase from 69% to 151%
- entered into an interim off-take agreement pursuant to which a third party will purchase yellowcake from First Uranium from June 2008 until January 2009 at rates based upon the then prevailing spot prices
- issued 6.1 million First Uranium common shares to Waterpan Mining Consortium ("Waterpan") in connection with the acquisition of the remaining 10% interest in Ezulwini Mining Company (Proprietary) Limited ("EMC") which owns and operates the Ezulwini Mine, resulting in EMC becoming wholly-owned by First Uranium (the "Waterpan Transaction")

During Q4 2008, First Uranium:

- commenced drilling the initial three of nine exploration and expansion diamond core holes as part of the Ezulwini Expansion Program
- was granted an unconditional prospecting right for 6,843 hectares of additional property adjacent to the Ezulwini Mine
- on March 20, 2008, the South African Department of Minerals and Energy (the "DME") consented to Simmer & Jack's application to cede the Ezulwini mining rights from Simmer & Jack to EMC
- commenced earthworks in preparation for the construction of the second gold plant module and the first two uranium plant modules at MWS

During FY 2008, First Uranium:

- ended FY 2008 with \$164.7 million cash and cash equivalents on hand
- toll-treated 46,271 tonnes of ore from the Ezulwini Mine at a recovered grade of 5.2 grams of gold per tonne, producing 7,735 ounces of gold
- treated a total of 4.1 million tonnes of tailings through the MWS gold plant at a recovered grade of 0.22 grams of gold per tonne, producing a total of 28,192 ounces of gold at a Cash Cost of \$533 per ounce (as defined in the notes to the production tables in the Operations Overview of this MD&A)

Subsequent to the end of Q4 2008, First Uranium:

- approved, subject to financing, a plan to build an acid plant at MWS to secure low-cost supply of sulphuric acid, a necessary reagent for the production of uranium, from the sulphur contained in the pyritic material within the tailings dams, which are already being processed for gold
- approved a plan and entered into agreements to supplement the power supplied by the South African national power utility, Eskom, by obtaining and installing diesel-fired generators and a power plant to secure a steady supply of electrical power with a total capacity of 54 megawatts ("MW"), inclusive of existing stand-by units, to the two operations until Eskom could be expected to restore a steady, reliable supply of electrical power
- filed updated independent technical reports on June 5, 2008 on both the Ezulwini Mine and MWS, taking into consideration the capital and operating costs of generating additional power, revised acid price assumptions and a revaluation of metal price and exchange rate assumptions, for which projected revised NPVs are \$667 million for the Ezulwini Mine and \$413 million for MWS and the projected IRRs for the projects are 336% for the Ezulwini Mine and 70% for MWS (See Outlook in this MD&A for more detail).
- commenced wet commissioning of the Ezulwini gold plant during May 2008
- completed the upgrading of the MWS gold plant to increase the design capacity from 500,000 tonnes per month to 633,000 tonnes per month during May 2008
- upgraded MWS No.5 tailings dam to enable a deposition rate of 633,000 tonnes of material per month during May 2008

- on June 9, 2008, the Corporation was notified by Eskom that it will be able to increase its supply of power to the Ezulwini Mine from 40 MW to 55 MW, which is expected to reduce the Corporation's requirement and cost to generate its own power. Further updates will be provided in due course.

During Q1 2009, First Uranium plans to:

- hoist and stockpile 30,000 tonnes of ore, of which 18,000 tonnes would come from gold and uranium bearing ore in the ME reef horizon and 12,000 tonnes would come from gold bearing ore in the UE reef horizon, resulting in a stockpiled inventory of 157,500 tonnes containing:
 - o 2,800 ounces of gold from the existing stockpile of 127,500 tonnes at an average recoverable grade of 0.7 grams per tonne
 - o an additional 5,600 ounces of gold from the newly stockpiled 30,000 tonnes at an average recovery grade of 5.8 grams per tonne
 - o 23,760 pounds of uranium from the newly stockpiled 18,000 tonnes of ME ore at an average recovery grade of 0.6 kilograms per tonne
- continue commissioning the Ezulwini Mine's 200,000 tonne per month gold plant with the first 50,000 tonne per month module on schedule for production of gold on carbon in June 2008 and gold bullion in July 2008
- commence final commissioning of the Ezulwini Mine's uranium plant in June 2008
- process 1.7 million tonnes of tailings through the MWS gold plant at a yield of approximately 0.15 grams of gold per tonne with expected production in excess of 8,100 ounces of gold

Financial Overview

First Uranium's primary focus has been the initial development of the Ezulwini Mine and MWS, resulting in limited gold production and no uranium production to date. During FY 2008 a total of 35,927 ounces of gold were produced and sold from the Ezulwini Mine and MWS at an average selling price of \$784 per ounce.

During FY 2008, gold was produced at average Cash Costs of \$533 per ounce at MWS. The relatively high average Cash Costs at MWS can be attributed primarily to the diminishing resources taken from the MWS No.2 tailings dam, which necessitated a low-volume, high-cost mechanical load and placement operation. With the transition to the high-volume, low-cost operations associated with the mining of the Buffelsfontein Tailings during December 2007, the average Cash Costs started to decrease and are expected to decrease further as the throughput to the MWS gold plant increases. As the Ezulwini Mine is still in a ramp-up phase and has not yet achieved commercial levels of production, the \$6.7 million revenue from its mining operations has been credited against mine infrastructure costs at the Ezulwini Mine, in Property, Plant and Equipment.

General, consulting and administrative expenditures combined with the limited ore and gross profit from tailings processed during the development phase of the two uranium and gold projects resulted in an operating loss of \$18.5 million in FY 2008. The Corporation reported an operating loss of \$6.6 million in FY 2007, reflecting expenditures incurred in preparation of the uranium and gold projects for production, along with general and administrative expenses.

The loss of \$22.3 million in FY 2008 was primarily the result of the ongoing expenditures mentioned above. The Corporation reported a loss of \$7.9 million in FY 2007, primarily as a result of expenditures incurred in preparation of the mining projects for production, general, consulting and administrative expenses and foreign exchange losses on translation of Canadian and South African assets, liabilities, revenues and expenses converted to the US dollar.

At the end of FY 2008 (March 31, 2008), First Uranium had total assets of \$387.7 million, total liabilities of \$155.3 million and shareholders' equity of \$232.4 million. It had cash and cash equivalents of \$164.7 million, compared to \$138.9 million at the end of FY 2007. The Corporation currently holds its funds in cash and bank-sponsored guaranteed investment certificates. It has no exposure to asset-backed commercial paper. The increase in cash and cash equivalents from the end of FY 2007 was primarily attributable to the net proceeds of \$130.6 million received from the sale of the Debentures in May 2007, offset by \$112.7 million of cash utilized for capital expenditure at the Corporation's two mining operations during FY 2008.

The Power Situation

On January 24, 2008, Eskom communicated to the South African mining industry that the utility could not guarantee power availability and asked the industry to operate at electrical power levels below historical load requirements until 2012 (the "Power Situation"). While Eskom has announced plans to increase the supply of power incrementally in the years leading up to 2012, Eskom also reported that full power availability cannot be guaranteed until then.

Subsequent to the Power Situation, the Corporation investigated the economic viability of generating its own power at the Ezulwini Mine and MWS for the next five years, as a result of the significantly reduced supply of electrical power currently available in South Africa and Eskom's concerns about its ability to supply power to the country's mining industry in the short and medium term.

Prior to the Power Situation, management believed that Eskom would be able to provide all of the power to operate both of its current projects. Management believes that Eskom will be able to provide a minimum of approximately 40 MW at the Ezulwini Mine and 12 MW at MWS. To supplement the Eskom power at the Ezulwini Mine, the Corporation will use the 14 MW of its existing stand-by capacity at the Ezulwini Mine but expects to require an additional 10 MW of power to fill any gaps during periods of peak power consumption. At MWS, the Corporation expects to require a minimum of an additional 14 MW.

The Corporation agreed to lease diesel generators for the Ezulwini Mine with a combined capacity of 10 MW for an initial term of eighteen months, with the option to extend the lease agreement for a period of up to sixty months. In addition, the Corporation has purchased a 30 MW power plant (comprising twelve 2.5 MW generating sets) for installation where required. (See Liquidity and Capital Resources in this MD&A)

The Corporation expects to power its generators using diesel fuel for approximately five years, based on the assumption that the Power Situation is alleviated by then as Eskom plans. Once the purchased diesel generators are no longer required, the Corporation intends to sell the power generators at that time and recoup a significant portion of their cost.

On June 9, 2008, the Corporation was notified by Eskom that it will be able to increase its supply of power to the Ezulwini Mine from 40 MW to 55 MW, which is expected to reduce the Corporation's requirement and cost to generate its own power. Further updates will be provided in due course.

Operations overview

Ezulwini Mine

	FY 2008	FY 2007
Ezulwini Mine		
Tonnes processed (000s)	46	—
Average gold recovery grade (grams/tonne)	5.2	—
Total ounces of gold produced and sold	7,735	—
Average selling price per ounce (\$)	869	—
Revenue (\$000s) credited against mine infrastructure costs	6,723	—

The Ezulwini Mine is located approximately 40 kilometres from Johannesburg on the outskirts of the town of Westonaria in the Gauteng Province, South Africa. The Ezulwini Mine is an underground mine constructed in the 1960s. Although the mine was put on care-and-maintenance from 2001 until 2006 when the Corporation acquired the mine, it has historically produced approximately 14 million pounds of uranium and 12 million ounces of gold. The mine has two separate tabular ore bodies about 400 metres apart. The Upper Elsburg ore body, where most of the mining has been done to date, is a gold only deposit. The Middle Elsburg ore body is a gold and uranium deposit and is relatively un-mined.

The Ezulwini Mine is part of the Ezulwini mining right, which includes certain surface and underground assets, acquired by EMC. On the date of the Offering, Simmer & Jack was the registered owner of the Ezulwini mining right. On December 20, 2006, EMC and Simmer & Jack entered into an agreement (the "Ezulwini Mining Right Agreement") pursuant to which Simmer & Jack agreed to take the necessary steps to obtain all ministerial approvals in order to effect the ceding of the Ezulwini mining right from Simmer & Jack to EMC. On March 20, 2008, the DME consented to the ceding of the Ezulwini mining right to EMC. EMC will operate the Ezulwini Mine under a new order mining right as described in detail in the Corporation's Annual Information Form for the year ended March 31, 2008 (the "AIF").

The Corporation has substantially completed the re-commissioning of the Ezulwini Mine that began in December 2006 and was, until the onset of the Power Situation in January 2008, in the process of ramping up underground production. As announced in the Corporation's press release dated April 21, 2008, the Corporation conducted a study subsequent to the onset of the Power Situation assessing the economic viability of First Uranium generating its own power at the Ezulwini Mine and MWS for the next five years.

The impact of the Power Situation on the Ezulwini Mine is as follows:

- given the uncertainty of power supply from the end of January 2008 until mid-April 2008, the Ezulwini Mine halted toll-milling of its ore and reduced mine development and hoisting ore to surface during February and March, 2008. The Ezulwini Mine instead directed its focus on completing the shaft refurbishment, which was also underway and well advanced, until the operation's gold plant commenced commissioning during April 2008, when mine development and hoisting ore resumed at planned rates.
- management expects to recover any interim production shortfalls arising from the reduction of mine development as the new processing plant has available milling capacity to accommodate additional throughput for the next 12 months
- commissioning of the gold plant and the first 50,000 tonne per month mill commenced on schedule in April 2008 using power from Eskom
- the uranium plant remains on schedule for commissioning to begin in June 2008 using the Corporation's existing stand-by power generation capacity. Current mine production from the UE section and the ME section is being stockpiled separately on surface in the interim
- the second 50,000 tonne per month mill is on schedule for commissioning to begin in September 2008
- the Corporation does not expect any material adjustments to the previously reported production forecasts
- prior to the Power Situation, electrical power costs were expected to represent about 9% of the operating costs. The impact of additional operating costs for power generation are estimated to be an additional \$3.59 (a 12% overall increase) per pound for uranium and an additional \$35.50 (an 8% overall increase) per ounce for gold over the five-year period of self power generation.

As disclosed above, the revenue from the Ezulwini Mine's mining operations of \$6.7 million has been credited against mine infrastructure costs in Property, Plant and Equipment during FY 2008 as the mine is still in a ramp-up phase and has not yet achieved commercial levels of production.

The ramp-up of production at the Ezulwini Mine during FY 2008 resulted in the toll-treatment of 46,271 tonnes of ore at a recovered grade of 5.2 grams of gold per tonne, producing 7,735 ounces of gold.

During Q4 2008 the production ramp-up resulted in the toll-treatment of 18,320 tonnes of ore at a recovered grade of 4.6 grams of gold per tonne, producing 2,680 ounces of gold. Q4 2008 production was limited as a result of the decision to curtail underground development due to the shutdown of toll-milling capacity and lack of sufficient ventilation due to the shortage of power during the initial months of the Power Situation and the slower than anticipated shaft refurbishment program.

The Ezulwini Mine terminated the third-party toll-treatment arrangement at the end of March 2008 in order to start building a stockpile to be used during the commissioning of the gold plant in June 2008.

As at June 9, 2008, the clean-up process on surface and underground activities generated the following stockpiles at the Ezulwini Mine:

- from the material removed during the mining and excavation of the previous plant foundations and gold bearing soil, in excess of 127,500 tonnes containing an average grade of 1.1 grams per tonne of gold
- from the UE section, approximately 6,000 tonnes containing an average grade of 5 grams per tonne of gold
- from the ME section, approximately 6,000 tonnes containing an average grade of 3.5 grams per tonne of gold and 0.6 kilogram per tonne of U_3O_8

During May 2008, the Ezulwini Mine commenced wet commissioning of the gold plant. Final commissioning is expected to commence in June 2008 and finish during July 2008. The UE section stockpile will also be introduced to the plant during this phase.

Stoping for de-stressing of the 41 level MB raise has resulted in an area of 712 square metres being mined at an in-situ stope grade of 4.74 grams per tonne. In the ME section, stope production in the newly re-established 45 10B stope commenced in Q3 2008 and has resulted in an area of 1,059 square metres being mined at an in-situ stope grade of 25.78 grams of gold per tonne. Further stope development has been postponed due to the Power Situation, but is expected to resume closer to the start-up of the gold plant.

The Corporation continues to develop access to the Ezulwini Mine shaft de-stress cut on the UE section on levels 38a and 41. During Q4 2008, 169 metres were developed, bringing the total metres developed in the shaft pillar to 1,002 metres.

Current construction activities include the stabilization and refurbishment of the shaft and construction of the gold and uranium plant, surface gantry, transfer tower and crusher. EMC has accelerated the main shaft rehabilitation program and is continuing the refurbishment of the infrastructure in the ME section and the UE section from which hoisting of the ore began in October 2007.

The following is a summary of the process of shaft stabilization at the Ezulwini Mine:

- the second phase of the main shaft refurbishment, which involves support of the shaft where it passes through the Western Areas Formation ("WAF"), continues to be undertaken from the access provided by the new floating tower steelwork located above and below the WAF
- the section where the shaft barrel traverses the WAF zone has been consolidated and reinforced through the injection of resin and reinforced with anchors
- to prevent bulging of the low-strength WAF between the anchors, a combined cladding consisting of the original lining, strengthened heavy screens and high quality shotcrete, form a load-distribution diaphragm that will spread the points of loading of the anchors and injection rods more uniformly over the weak WAF layer
- the resulting reinforced thick "shell" will then be tied back to the surrounding rock mass by means of long anchors. These anchors are designed to withstand large amounts of elongation and high ground acceleration resulting from seismic events without compromising their initial stiffness.

The shaft operational time has been limited to four days per week while shaft rehabilitation work is executed.

Dry commissioning of the uranium plant is expected to commence in June 2008 with the first shipment of yellowcake production expected in August 2008.

As at March 31, 2008, \$112.3 million cash has been spent on the capital projects at the Ezulwini Mine (FY 2007: \$19.3 million) including \$20.3 million capitalized pre-production costs and pumping and other capital related costs (FY 2007: \$10.0 million). The costs of production from the Ezulwini Mine will be capitalized and the related proceeds of sales credited against capital until such time as the Ezulwini Mine has achieved commercial levels of production. Until completion of the Ezulwini Mine capital projects there will be additional pumping and other capital related costs capitalized although these costs will decrease on completion of the various phases of the capital projects. In terms of the revised project costs released in April 2008, the original estimate of \$271 million increased to \$312 million of total capital required over the life of the mine (inclusive of sustaining capital) of which \$220 million still has to be spent. The increase is attributable to inflation related increases of 7% or \$15 million, cost overruns of \$5 million as a result of barrel reparations and additional provisions for sustaining capital from years 16 to end of life of mine that increased from \$31 million to \$58 million.

Ezulwini Expansion Program

Based upon an internal concept evaluation, the combined Phase 1 drilling target areas have the potential to delineate a substantial portion of measured and indicated resources which would be required to justify the construction of a new 250,000 tonne-per-month shaft and a related mill expansion having the potential to triple production capacity from the uranium bearing ME ore body. The conceptual evaluation excludes any potential contribution from the UE1A reef. Approximately 16,000 metres will need to be drilled in order to complete Phase 1. To date, a total of 4,321 metres have been drilled. Of the four holes being drilled, three have intersected the Black Reef and one hole has intersected both the UE1A and the E9EC reefs. Additional Phase 2 target areas have been defined and Controlled Budget Estimates have been developed for these additional target areas.

It is expected that all four holes will have intersected the E9EC reef horizon by the end of the September 2008. Deflections from these four existing boreholes to supplement borehole valuation data and the start of the Phase 2 drilling project are expected to take place in the third quarter of fiscal 2009.

The final holes of the Phase 1 drilling project and the first reef intersections of the Phase 2 drilling project are expected to begin during Q4 2009.

Mine Waste Solutions

	FY 2008	FY 2007
MWS		
Tonnes processed (000s)	4,053	–
Average gold recovery grade (grams/tonne)	0.22	–
Total ounces of gold produced and sold	28,192	–
Average selling price per ounce (\$)	760	–
Average cost per ounce produced and sold (\$)	588	–
Average Cash Cost per ounce (\$)	533	–
Revenue (\$000s)	21,429	–
Cost of sales (\$000s)	(15,025)	–
Amortization (\$000s)	(1,555)	–
Total cost of sales (\$000s)	(16,580)	–
Gross profit	4,849	–

"Cash Costs" are costs directly related to the physical activities of producing gold, and include mining, processing and other plant costs, third-party refining and smelting costs, marketing expense, on-site general and administrative costs, royalties, on-mine drilling expenditures that are related to production and other direct costs. Sales of by-product metals are deducted from the above in computing cash costs. Cash costs exclude depreciation, depletion and amortization, corporate general and administrative expense, exploration, interest, and pre-feasibility costs and accruals for mine reclamation. Cash costs are calculated and presented using the "Gold Institute Production Cost Standard" applied consistently for all periods presented.

Total cash costs per ounce is a non-GAAP measurement and investors are cautioned not to place undue reliance on it and are urged to read all GAAP accounting disclosures presented in the consolidated financial statements and accompanying footnotes.

MWS is a uranium and gold tailings recovery operation located in the western portion of the Witwatersrand Basin, approximately 160 kilometres from Johannesburg. MWS consists of 14 tailings deposits from three gold and uranium mines that operated for 50 years. These tailings represent in excess of 355 million tonnes of mineral resources including inferred resources, of which 325 million are mineable reserves estimated to contain 55 million pounds of uranium and 3.0 million ounces of gold. The tailings dams are spread over an area that stretches approximately 13.5 kilometres north-south and 14 kilometres east-west and cover an area of approximately 1,100 hectares. The tailings dams are being hydraulically mined with high-pressure water cannons.

When the Corporation's wholly-owned subsidiary, First Uranium (Proprietary) Limited ("FUSA") acquired MWS in June 2007, it acquired an existing operating gold tailings re-processing facility and an historic uranium plant, adjacent to the Buffelsfontein property. The Corporation changed its plans for the Buffelsfontein Tailings Recovery Project such that the historical and future tailings from the Buffelsfontein mine would be transported to the MWS site and processed through the existing gold plant, and subject to their commissioning, through the planned uranium recovery plant and additional gold recovery facilities.

FUSA had entered into an agreement on December 20, 2006 to acquire surface tailings from Buffelsfontein Gold Mines Limited ("BGM"), a subsidiary of Simmer & Jack (the "Buffelsfontein Tailings and Rights Agreement"). A new agreement has subsequently been entered into between MWS, BGM and Simmer & Jack, that reflects the change in plans, with MWS assuming the obligations of FUSA under the original agreement. MWS has also agreed to pay FUSA the amounts due to Simmer & Jack by FUSA under the Aberdeen Arrangement as described below. MWS has indemnified BGM against any tax liability incurred by BGM from the sale recorded on the basis that MWS has no liability unless the amount of any claim exceeds \$2 million and then only in respect of any amounts in excess of \$2 million.

It was originally contemplated that the transaction pursuant to the Buffelsfontein Tailings and Rights Agreement would be recognized upon the satisfaction of the conditions precedent in the Buffelsfontein Tailings and Rights Agreement, including the transfer of the mining rights to MWS. While the transfer of the mining rights has not yet occurred, MWS commenced processing and accounting for Buffelsfontein Tailings in December 2007. Consequently, MWS has assumed the asset retirement obligation related to the Buffelsfontein Tailings. The corresponding asset of \$10.2 million associated with the Buffelsfontein Tailings is capitalized as part of tailings for processing under Property, Plant and Equipment and amortized over the estimated life of the Buffelsfontein Tailings. (See Note 7 to the Financial Statements.)

A loan agreement (the "Aberdeen Loan Agreement") was entered into by Simmer & Jack with Aberdeen International Inc. ("Aberdeen") dated March 30, 2006 pursuant to which Aberdeen provided to Simmer & Jack a loan facility in the amount of \$10 million in respect of the financing of Simmer & Jack's acquisition of BGM and the BGM Underground Mine. As part of the consideration for the facility, Simmer & Jack granted to Aberdeen a net smelter royalty on all of the gold assets held by Simmer & Jack through BGM. The royalty as determined in the Aberdeen Loan Agreement, will be applicable to any gold produced by MWS from tailings acquired from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement and will continue until the loan is repaid to Aberdeen, which Simmer and Jack has advised, is expected to occur by December 31, 2008 (unless extended by Simmer & Jack to December 31, 2010).

In addition, pursuant to the Aberdeen Loan Agreement, Aberdeen has the sole option, at any time following the one year anniversary of the first advance thereunder, to convert the amount of the facility outstanding at that time into ordinary shares of Simmer & Jack at a conversion rate of ZAR0.80, subject to the approval of Simmer & Jack's shareholders. In the event that such shareholder approval is not obtained within a reasonable period of time, Aberdeen will be entitled to a 1.0% net smelter royalty in perpetuity on gold produced from properties held by BGM, including the Buffelsfontein Tailings. The capital portion of the loan will not be required to be repaid under a Simmer & Jack shareholders non-conversion into Simmer & Jack equity.

On December 20, 2006, FUSA, Simmer & Jack and Aberdeen entered into an arrangement (the "Aberdeen Arrangement") pursuant to which (i) Simmer & Jack confirmed that it will pay to Aberdeen the amount of any royalty owing to Aberdeen under the Aberdeen Loan Agreement in respect of gold produced from the Buffelsfontein Tailings and (ii) FUSA confirmed that it will pay to Simmer & Jack, immediately prior to any payment contemplated in (i) above, an amount equal to the amount of any royalty payment to be made by Simmer & Jack to Aberdeen in respect of gold produced from the Buffelsfontein Tailings.

Pursuant to the Buffelsfontein Tailings and Rights Agreement, in consideration for the cession of the Buffelsfontein Tailings and Mining Right from BGM to MWS as well as certain servitudes, and the right to the tailings arising from future underground mining operations by BGM at the BGM Underground Mine, MWS agreed to pay to BGM a royalty of 1% plus value added tax of the gross revenue earned by MWS from the sale of uranium, gold, sulphur and other minerals recovered from the processing of tailings acquired by FUSA from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement.

In summary, as and when there is production from the tailings acquired from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement, FUSA will become liable to pay: (i) to Simmer & Jack, under the Aberdeen Arrangement, an amount equal to the royalty payable by Simmer & Jack to Aberdeen pursuant to the Aberdeen Loan Agreement in respect of gold produced from the Buffelsfontein Tailings, and (ii) to BGM the above-mentioned 1% royalty pursuant to the terms of the Buffelsfontein Tailings and Rights Agreement.

Since MWS is now processing Buffelsfontein Tailings, the royalty is paid monthly in arrears to BGM and Simmer & Jack as described above. During FY 2008 \$0.4 million have been accrued as royalties.

The impact of the Power Situation on MWS is as follows:

- the current MWS operation remains unaffected as it is drawing additional power from BGM
- upgrading of the MWS gold plant to increase the design capacity from 500,000 to 633,000 tonnes per month was completed in May 2008
- the Corporation expects to start commissioning the second gold plant module and the first two modules of the uranium plant in December 2008
- the construction schedule for the third modules of its gold and uranium plants is planned to be completed by December 2009
- prior to the Power Situation, electrical power costs were expected to represent about 9% of the operating costs. The impact of additional operating costs for power generation at MWS are estimated to be an additional \$2.49 (a 10% overall increase) per pound for uranium and an additional \$44.70 (a 13% overall increase) per ounce for gold over the five-year period of self power generation.

The project to construct the initial long-life reclamation station and 10.5-kilometre pipeline from the Buffelsfontein Tailings to the MWS plant facility was initiated in June 2007. Despite a delay due to late delivery of slurry pumps and heavy rains during October 2007, which made construction difficult, these new production facilities were commissioned in mid-December.

As a result of the late commissioning of the production infrastructure at the Buffelsfontein No.2 tailings dam, it was necessary to continue hydraulic mining from MWS No.2 tailings dam until December rather than stop in October, as previously planned.

As the resources in the MWS No.2 tailings dam neared exhaustion during the third quarter, the volume of ore declined and it was necessary to use mechanical loading and placement of the remnant material in addition to hydraulic mining, which resulted in increased handling costs relative to a normal reclamation operation. Only 0.8 million tonnes of tailings (0.4 million tonnes in Q1 2008 and 1.2 million tonnes in Q2 2008) were reclaimed from the MWS No.2 tailings dam during Q3 2008.

The reclamation station and the pipeline between the Buffelsfontein property and the MWS gold plant were completed and operation commenced during December which enabled the Corporation to stop mining from the MWS No.2 tailings dam and to initiate the hydraulic mining of the Buffelsfontein No.2 tailings dam on the Buffelsfontein property. The material from the Buffelsfontein No.2 tailings dam is being transported via the pipeline to the MWS gold plant for processing. Full commissioning of the introduction of the material from Buffelsfontein No. 2 tailings dam to the plant is ongoing.

During FY 2008, MWS processed 1.7 million tonnes of material from the Buffelsfontein No.2 tailings dam through the MWS gold plant at a Cash Cost of \$533 per ounce that includes 1.6 million tonnes reclaimed during Q4 at a Cash Cost of \$455 per ounce.

Results from the mining of Buffelsfontein No.2 tailings dam to date have confirmed the mineral resource estimates for gold and uranium, as well as the estimated sulphur content. Minor modifications to the hydraulic mining system to improve throughput and to the carbon-in-leach ("CIL") plant flow sheet to improve recovery are being implemented and are expected to be completed in July 2008 after which the commissioning of the first phase of the transition to the Buffelsfontein complex of dams should be complete.

These modifications include:

- installation of a slime re-pulping system to break up clay lumps and improve hydraulic mining rates to 1.9 million tonnes per quarter and to stabilize pulp densities pumped to the plant
- completion of the current work to re-route flotation tailings from the tailings disposal line to the CIL gold circuit to reduce float tails grades and increase overall gold recovery rates from 0.15 grams per tonne to expected levels of 0.19 grams per tonne
- installation of high shear oxygen reactors to improve gold recovery grades to 0.19 grams per tonne in the expanded CIL circuit

The current and planned capital projects at MWS include:

- completing the commissioning of the hydraulic mining, pumping and processing system to reclaim material from the Buffelsfontein No.2 tailings dam at the full capacity of 21,000 tonnes per day
- upgrading the CIL circuit, which is expected to improve overall recoveries
- construction of one additional gold and two uranium modules that is scheduled for commissioning in January 2009
- construction of one additional gold and one additional uranium module that is scheduled for commissioning in December 2009 – this will increase plant capacity to 1.9 million tonnes per month
- establishing a single large tailings dam that will contain all future production tailings as well as tailings from processing BGM's ore for uranium. Although additional deposition capacity must be commissioned within the next two to three years as the MWS No.5 dam will run out of deposition capacity within that time, management is confident that a solution will be in place this year.

The design and construction of the one additional gold and one additional uranium module for the MWS plant that is scheduled for commissioning in December 2009 was awarded to MDM Engineering. Orders for long lead items have been placed and a total of \$3.6 million has been committed. Civil construction commenced during April 2008. To save time, MWS is adopting as many designs as possible from the Ezulwini Mine processing plant, which is expected to save considerable design time.

As at March 31, 2008, \$21.2 million cash has been spent on the capital projects at MWS (FY 2007: \$1.5 million). In terms of the revised project costs released in April 2008, the total capital required over the life of mine is estimated at \$272 million (inclusive of sustaining capital).

The Mineral Resources detailed in the table below are effective as at 31 March 2008.

MWS Mineral Resource Estimates

Surface			Tonnes	Gold			Uranium		
Category	Place	Dam	Mt	Aug/t	Au('000oz)	Au tons	U ₃ O ₈ kg/t	U ₃ O ₈ Mlb	U ₃ O ₈ tons
Measured	Buffels	2	23.2	0.36	267	8.3	0.09	4.61	2,090
	Buffels	3	24.9	0.35	280	8.7	0.10	5.44	2,466
	Buffels	4	14.1	0.37	170	5.3	0.10	3.17	1,439

Total Inferred			21.2	0.28	189	5.9	0.10	4.64	2,106

Notes:

1. Mineral Resources are quoted as in-situ Mineral Resources.
2. No cut-off grades were applied.
3. Rows and columns may not add exactly due to rounding.
4. Mineral Resources are quoted as inclusive of Mineral Reserves. Resources which are not Reserves do not have demonstrated economic viability.
5. MWS No.4 tailings dam is split into two domains, namely Domain 1, which is the uppermost section of the dam, and Domain 2, the lowermost portion of the dam. The tailings dam has been evaluated in two separate sections as they show distinct differences in grade.

On March 31, 2008, the Corporation declared an updated mineral reserve estimate for MWS.

MWS Mineral Reserves

Surface			Tonnes	Gold			Uranium			
Category	Place	Dam	Mt	Aug/t	Au('000oz)	Au (t)	U ₃ O ₈ kg/t	U ₃ O ₈ Mlb	U ₃ O ₈ (t)	
Proven	Buffels	2	23.2	0.36	267	8.3	0.09	4.61	2,090	
	Buffels	3	24.9	0.35	280	8.7	0.10	5.44	2,466

	Harties	6	13.3	0.20	85	2.6	0.06	1.85	839	
Total Proven			99.4	0.30	965	30.0	0.08	18.33	8,313	
Probable	Buffels	5	47.6	0.24	360	11.2	0.06	6.62	3,001	
	Harties	1	74.4	0.26	624	19.4	0.06	10.17	4,611	
	Harties	2	43.8	0.26	369	11.5	0.06	5.79	2,626	
	Harties	7	1.3	0.27	11	0.3	0.16	0.46	211	
	Harties	NKGE		1.2	0.50	19	0.6	0.18	0.47	214
	MWS	4 dom 2		17.4	0.28	157	4.9	0.13	5.12	2,322
	MWS	5		40.3	0.31	402	12.5	0.09	7.81	3,543
Total Probable			226.0	0.27	1,941	60.4	0.07	36.44	16,529	
Total Proven & Probable			325.4	0.28	2,907	90.4	0.08	54.77	24,842	

Notes:

1. Mineral Reserves are quoted as fully diluted delivered to mill estimates.
2. Based on assumptions of a gold price of \$711 per ounce, a uranium price of \$49 per pound and ZAR/\$ exchange rate of 7.57, which are long term forecast figures (post 2012).
3. A Reserve cut-off grade of 0.28 grams per tonne gold equivalent was used. Uranium grades were converted to gold equivalent using a conversion factor of 1 gram per tonne, which equals 0.503 kilograms per tonne on an extracted metal basis.
4. Rows and columns may not add exactly due to rounding.
5. The average Life of Mine gold recovery applied was 68% and 34% for uranium.
6. Only Domain 2 of the MWS No.4 tailings dam has been converted to a Mineral Reserve as the gold grade in Domain 1 is below cut-off.

Technical Disclosure

All technical disclosure under the heading "Mine Waste Solutions" and in respect of MWS under "Outlook - Operating Cost Impact" has been prepared in accordance with National instrument 43-101 ("NI 43-101") by Daan van Heerden, B.Sc., M.Comm., Charles Muller, B.Sc, Pr.Sci.Nat, and Johan Odendaal, B.Sc., M.Sc., Pr.Sci.Nat all of Minxcon (Pty) Ltd, each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium.

Technical disclosure under the heading "Mine Waste Solutions" and in respect of MWS under "Outlook - Operating Cost Impact" is extracted from a technical report entitled "Technical Report on the Mine Waste Solutions ("MWS") Tailings Recovery Project, located near Stilfontein, North West Province, South Africa" with an effective date of March 31, 2008, prepared in accordance with NI 43-101 by Daan van Heerden, B.Sc., M.Comm., Charles Muller, B.Sc, Pr.Sci.Nat, Johan Odendaal, B.Sc., M.Sc., Pr.Sci.Nat, and Heidi Sternberg, B.Sc. Hons. (Geol.), GDE, Pr.Sci.Nat all of Minxcon (Pty) Ltd, each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium.

All technical disclosure under the heading "Ezulwini Mine", other than the disclosure on the stockpiles, date of first yellowcake production and the Ezulwini Exploration Program, and in respect of the Ezulwini Mine under "Outlook - Operating Cost Impact" has been prepared in accordance with NI 43-101 by R. Dennis Bergen, P.Eng and Wayne Valliant P.Geo of Scott Wilson Roscoe Postle Associates Inc. ("Scott Wilson RPA") each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium.

Technical information under the heading "Ezulwini Mine", other than the disclosure on the stockpiles, date of first yellowcake production and Ezulwini Exploration Program, and in respect of the Ezulwini Mine under "Outlook - Operating Cost Impact" is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa" dated June 5, 2008 prepared in accordance with NI 43-101 by Messrs. Bergen and Valliant, who have also reviewed and approved the disclosure in this MD&A relevant to their respective contributions.

Results of Operations

Consolidated Results

	FY 2008	FY 2007
Group		
Revenue (\$000s)	21,429	–
Cost of sales (excluding amortization) (\$000s)	(15,025)	–
Amortization (\$000s)	(1,555)	–
Total cost of sales (\$000s)	(16,580)	–
Gross profit	4,849	–

Revenue for FY 2008 was generated from the sale of the gold from the MWS operations. As the Ezulwini Mine is still in a ramp-up phase and has not yet achieved commercial levels of production, revenues from the material, which was mined and then toll-treated at a neighbouring third party gold plant, have been credited against mine infrastructure costs relating to the Ezulwini Mine's mining operations in Property, Plant and Equipment. The Corporation had no production during FY 2007.

Other income

(thousands of dollars)	FY 2008	FY 2007
Other income	2,738	27

Other income consists primarily of fees for sludge pumping services to a third party and hostel rental income at the Ezulwini Mine.

Expenditures

(thousands of dollars)	FY 2008	FY 2007
General, consulting and administrative expenditures	(15,573)	(3,262)
Stock-based compensation	(5,125)	(2,460)
Pumping, feasibility and rehabilitation costs	(5,343)	(871)
Total expenditures	(26,041)	(6,593)
Operating loss	(18,454)	(6,566)

General, consulting and administrative expenditures included \$5.5 million for FY 2008 (FY 2007: \$1.6 million) for employee compensation costs, consulting and professional fees, as well as fees charged by Simmer & Jack for services provided pursuant to the Shared Services Agreement of \$1.4 million for FY 2008 (FY 2007: \$0.6 million). (See Related Party Transactions in this MD&A)

General, consulting and administrative expenses in FY 2008 primarily reflect the ongoing and increasing project activities, the costs of corporate offices in Johannesburg and Toronto and other expenses of operating a public company, which were not applicable in FY 2007.

The FY 2008 stock-based compensation expense reflects the amortized cost relating to 2,551,433 stock options granted during FY 2008 and the amortized cost relating to 1,223,001 stock options granted during FY 2007. The fair value of the stock-based compensation was estimated using the Black-Scholes option pricing model.

Pumping, feasibility and rehabilitation costs for FY 2008 were primarily comprised of the \$4.6 million portion expensed of the pumping and feasibility costs incurred at the Ezulwini Mine. During FY 2007, only \$0.8 million (mostly feasibility costs) were expensed to this account, as the majority of the pumping costs were capitalized. An increasing amount of pumping costs will be expensed as part of cost of production as the Ezulwini Mine production expands.

(thousands of dollars)	FY 2008	FY 2007
Operating loss	(18,454)	(6,566)
Interest income	14,847	3,433
Interest expense	(5,782)	(162)
Accretion expense on Debentures	(8,485)	–
Accretion expense on Asset Retirement Obligations	(896)	
Foreign exchange losses	(2,611)	(4,612)
Loss before income taxes	(21,381)	(7,907)

Interest income in FY 2008 primarily represents interest earned on the net proceeds from the Offering and the Debentures. Cash balances have been invested in short-term deposits with the Corporation's bankers until required for capital projects or to fund operating costs. The interest income in FY 2007 primarily represents the interest earned from the December 2006 Offering to the March 31, 2007 yearend.

Interest expense in FY 2008 consists of the interest paid on the Debentures. The interest expense during FY 2007 consisted of the non-capital portion of interest paid by EMC on the loan payable to Simmer & Jack. The accretion expense on Debentures relates to the senior unsecured convertible debentures issued during May 2007. (See Note 11 to the Financial Statements.) The accretion expense on Asset Retirement Obligations relates to the environmental rehabilitation liabilities of the Ezulwini Mine and MWS. (See Note 12 to the Financial Statements.)

The foreign exchange losses on translation in FY 2008 reflect the overall strengthening of the Cdn\$ against the US dollar and the overall weakening of the ZAR against the Cdn\$ and the US dollar.

The table below shows the exchange rate movements over the quarters of FY 2008 relative to FY 2007:

	Q4 2008	Q3 2008	Q2 2008	Q1 2008	FY 2008	FY 2007
Cdn\$ to the ZAR – closing rate	8.02	6.99	6.98	6.68	8.02	6.30
Cdn\$ to the ZAR – average rate	7.52	6.93	6.81	6.47	6.93	6.20
Cdn\$ to the US\$ – closing rate	0.98	1.10	1.01	0.94	0.98	0.87
Cdn\$ to the US\$ – average rate	1.00	1.01	0.95	0.91	0.97	0.88
US\$ to the ZAR – closing rate	8.20	6.85	6.92	7.01	8.20	7.28
US\$ to the ZAR – average rate	7.55	6.79	7.12	7.11	7.14	7.06

Loss before income taxes

(thousands of dollars)	FY 2008	FY 2007
Loss before income taxes	(21,381)	(7,907)
Income tax charge	(966)	(21)
Loss for the year	(22,347)	(7,928)

The loss before taxes in FY 2008 increased year over year as a result of increased ongoing expenditures that more than offset gross profit from gold sales. The increase in expenditures year over year reflects the ramp-up of activities, ongoing project activities, the costs of corporate offices in Johannesburg and Toronto and other expenses of operating a public company, which were not applicable for most of FY 2007.

The income tax charge increased year over year as a result of the deferred taxation provision at MWS for the period from acquisition to March 31, 2008.

Use of Proceeds

Offering

Pursuant to the Offering in December 2006, First Uranium raised total net proceeds of \$177.7 million of which \$143.6 million had been expended as at March 31, 2008 leaving a balance on hand at that date of \$34.1 million:

(millions of dollars)	Use of net proceeds		
	Total spent at March 31, 2008	Spent during FY 2008	Spent during FY 2007
Development of the Ezulwini Mine	(112.3)	(93.0)	(19.3)
Development of MWS	(21.2)	(19.7)	(1.5)
Repayment of indebtedness owed by EMC to Simmer & Jack	(14.1)	-	(14.1)
Purchase of the Ezulwini Mine infrastructure	(8.9)	-	(8.9)
Working capital and general corporate purposes	12.9	4.3	8.6
Total	(143.6)	(108.4)	(35.2)

While First Uranium intends to apply the net proceeds of the Offering approximately as disclosed in the Corporation's final prospectus dated December 12, 2006 in connection with the Offering, such uses are by definition, based on estimates and assumptions and are subject to variance. In addition, there may be circumstances where, for sound business reasons, a re-allocation of the funds may be necessary or advisable.

Debentures

The Corporation intends to use the net proceeds from the issue of the Debentures together with the balance of the net proceeds of the Offering, to fund the Ezulwini Expansion Program, the development of the Ezulwini Mine and MWS as described above and for general corporate purposes. The net proceeds of \$130.6 million from the issue of the Debentures are currently held in Canadian dollar denominated short-term deposits bearing interest at 4.85% per annum. The approval of the South African Reserve Bank ("SARB"), which was required in connection with the issue of the Debentures, included a condition that the Corporation transfers the net Debenture proceeds to bank accounts of the Corporation in South Africa and convert the funds to ZAR, by May 3, 2008. On April 30, 2008, Cdn\$50 million was transferred to the Corporation's bank account in South Africa and converted to ZAR. The balance remains in Canadian dollar pending consideration by SARB of the Corporation's application to allow the funds to remain in Canada.

Cash flows

(thousands of dollars)	FY 2008	FY 2007
Cash flows utilized in operating activities	(1,723)	(15,743)
Cash flows utilized in investing activities	(111,612)	(24,373)
Cash flows from financing activities	131,624	178,470
Net effect of exchange rates on cash held in foreign currencies	7,536	-
Net increase in cash and cash equivalents for the year	25,825	138,354
Cash and cash equivalents at beginning of year	138,914	560
Cash and cash equivalents at end of year	164,739	138,914

The cash utilized in operating activities during FY 2008 was primarily used to fund the ongoing expenditures incurred by the Corporation during the year that more than offset the gross profit from gold sales. The cash utilized in operating activities during FY 2007 was mainly the result of a reduction in net receivables from related parties and an increase in accounts payable and accrued liabilities.

The cash utilized in investing activities in FY 2008 primarily relates to \$93.0 million and \$19.7 million of capital expenditures at the Ezulwini Mine and MWS, respectively. The cash utilized in investing activities in FY 2007 relates to capitalized pumping costs at the Ezulwini Mine.

The cash generated during FY 2008 from financing activities was primarily attributable to the \$130.6 million of net proceeds raised from the Debentures in May 2007. The cash generated from financing activities during FY 2007 was attributable to the \$177.7 million of net proceeds from the Offering in December of 2006.

The net effect of exchange rates on cash held in foreign currencies (Cdn\$ and ZAR) during FY 2008 is primarily the result of the Debenture proceeds held in cash and the debt portion of the Debentures translated to US dollars at the exchange rate in effect at the end of FY 2008, while the equity portion of the Debentures was translated to US dollars at the rate in effect on the date that the Debentures were issued.

Financial Position and Liquidity

Assets

Cash and cash equivalents increased by \$25.8 million during FY 2008 to \$164.7 million as at March 31, 2008. The increase was primarily the net result of the \$130.6 million of Debenture net proceeds, offset by capital expenditures of \$112.7 million at the Corporation's two operations.

Accounts receivable of \$9.7 million at March 31, 2008 (FY 2007: \$1.7 million) were primarily comprised of \$2.3 million of gold revenue (after toll-treatment and transport costs) and \$6.5 million of value-added tax and goods and services taxes recoverable, mainly relating to the ongoing capital expenditures on the projects.

Inventories of \$2.8 million at the end of FY 2008 (FY 2007: \$0.3 million) include \$0.5 million of gold work-in-progress and \$1.6 million of spares and consumables from the MWS operations. At the end of FY 2008, the Corporation also had surface stockpiles at the Ezulwini Mine measured and valued at \$0.7 million.

Property, plant and equipment increased to \$204.7 million at March 31, 2008 (FY 2007: \$31.0 million) representing capital expenditures at the Corporation's two mining operations as well as the \$40.4 million of MWS assets acquired in June 2007 (see Note 4 to the Financial Statements) and the \$10.2 million value of Buffelsfontein Tailings associated with the asset retirement obligation related to the processing of Buffelsfontein Tailings that was assumed during December 2007 (See Note 7 to the Financial Statements).

Cash capital expenditures at the Ezulwini Mine of \$93.0 million for FY 2008 were primarily related to additions to mining infrastructure and construction of its gold and uranium plants. At MWS, cash capital expenditures of \$19.7 million for FY 2008 were mostly related to the construction of the reclamation station and the pipeline between the Buffelsfontein Tailings and the MWS gold plant.

The increase in asset retirement funds to \$4.8 million (FY 2007: \$2.8 million) was the result of the \$2.0 million environmental rehabilitation trust fund assumed by the Corporation on the acquisition of MWS in June 2007.

The \$1.0 million loan to a related party represents the loan advanced to the President and Chief Executive Officer on October 17, 2007. (See Note 24 to the Financial Statements.)

Investing activities

During FY 2008, investing activities were primarily comprised of mining and pumping costs incurred and capitalized to mine development expenditures.

Liabilities

At March 31, 2008, total liabilities were \$155.3 million (FY 2007: \$11.1 million), consisting of the debt portion of \$99.9 million of the Debentures (see Note 11 to the Financial Statements), accounts payable and accrued liabilities of \$24.3 million (FY 2007: \$5.7 million), the future tax liability in the amount of \$10.6 million arising from the MWS acquisition, the asset retirement obligation of \$19.9 million (FY 2007: \$5.3 million) and the payable to a related party of \$0.5 million (FY 2007: Nil).

Included in the accounts payable and accrued liabilities of \$24.3 million (FY 2007: \$5.7 million) at the end of FY 2008 was \$8.7 million and \$0.7 million of payables related to the capital expenditures incurred at the Ezulwini Mine and MWS, respectively, as well as trade payables of \$7.2 million and \$3.3 million related to the Ezulwini Mine and MWS operations, respectively.

The payable to a related party of \$0.5 million at the end of FY 2008 results from transactions pursuant to the Shared Services Agreement between First Uranium and Simmer & Jack, which were incurred in the normal course of business. At the end of FY 2007, the Corporation had a receivable from a related party of \$6.8 million, representing funds held by Simmer & Jack on behalf of the Corporation's South African operations while the Corporation was establishing their own bank accounts. (See Related Party Transactions in this MD&A.)

Asset retirement obligations increased as a result of the \$2.8 million environmental rehabilitation obligation assumed with the MWS acquisition in June 2007 and the environmental rehabilitation obligation of \$10.2 million relating to the mining of the Buffelsfontein Tailings commencing in December 2007. (See Note 12 to the Financial Statements.)

Liquidity and Capital Resources

At March 31, 2008, First Uranium had working capital of \$152.4 million (FY 2007: \$142.0 million). The increase in working capital from FY 2007 is mainly attributable to the net proceeds of \$130.6 million from the Debentures offset by the \$112.7 million cash utilized on capital expenditures incurred at the Corporation's two operations.

Capital investments of \$312 million and \$272 million, inclusive of expenditures to date, are the total estimated cash required to complete the capital projects at the Ezulwini Mine and MWS, respectively, for which current commitments of \$40.3 million (FY 2007: \$14.8 million) are in place. As at March 31, 2008, the Corporation's cumulative cash investments relating to its two projects were \$133.4 million (FY 2007: \$20.3 million).

Capital of \$0.9 million was spent during FY 2008 in relation to the approved exploration budgets of \$10 million for the contiguous properties to the north-east and south-east of the Ezulwini Mine and \$30 million for the Ezulwini Mine. The extent to which the budgeted amounts are spent depends on the ongoing exploration results. Current commitments of \$0.5 million relating to exploration work existed as at March 31, 2008.

The Corporation entered into an agreement with a third party, commencing in January 2009, to calcine the yellowcake received from First Uranium's operations to produce uranium oxide packaged for dispatch to converters ("Toll Treatment Agreement"). Either party may terminate the agreement on 18 months notice. The third party calciner will construct a plant with one-half of the capacity of the plant to be dedicated for the processing of the First Uranium yellowcake and will purchase a road tanker to transport the yellowcake from the First Uranium operations to the third party calciner's facility. First Uranium will pay one-half of the construction cost of the calcining plant up to a maximum of \$1.8 million and one-half of the cost of the road tanker (together referred to as the "Loan"). The Loan will be effective as of January 5, 2009 and is to be repaid in monthly installments over a seven-year period commencing January 30, 2009. The Loan will bear interest at a rate equal to the prime overdraft rate as quoted by SARB, plus 2%, commencing January 5, 2009. If First Uranium cancels the agreement, in the absence of a right under the agreement to cancel the agreement in a prescribed circumstance, First Uranium will continue to be obligated to repay the entire Loan.

As at March 31, 2008, First Uranium had the following contractual obligations:

(thousands of dollars)	Payments due by date				
	Less than 1 year	1-3 Years	4-5 Years	After 5 Years	Total
Operating leases	91	279	16	–	386
Purchase obligations	40,301	–	–	–	40,301
Asset retirement obligations	–	–	–	19,901	19,901
Senior unsecured convertible debentures	–	–	99,880	–	99,880
Total contractual obligations	40,392	279	99,896	19,901	160,468

Subsequent to March 31, 2008, the Corporation:

- entered into an agreement to purchase a 30 MW diesel-fired power plant and associated equipment, refurbished and configured in accordance with the Corporation's specifications for \$8.5 million. The vendor will oversee the installation, construction, start-up and commissioning of the power plant at both of the Corporation's operations. Eighty percent of the purchase price is payable upon shipment of the power plant and the balance upon installation and the successful commissioning at site. The Corporation is responsible for shipping charges of approximately \$750,000. In addition, the costs of civil, structural and electrical switchgear and transmission equipment are estimated to be \$6.5 million.
- agreed to lease ten self contained diesel powered generating sets ("gensets") for an initial term of eighteen months. The fixed monthly rental charge is \$13,500 per genset for the first twelve months, reducing to \$12,500 per genset thereafter. After the initial eighteen months period, the Corporation has the option to extend the lease agreement period for up to sixty months, in successive twelve month periods. The fixed monthly charge per genset is \$12,500 for months 19 to 24; \$12,000 for months 25 to 36; \$11,500 for months 37 to 48; and \$11,000 for months 49 to 60. If the gensets are rented for sixty months, the Corporation is entitled to purchase the gensets for \$50,000 per set. The Corporation is also obligated to pay a monthly fixed charge of \$25,000 and a running hourly charge of EUR11.30 (\$17.85). These charges are subject to indexation based on consumer price indexes. The Corporation is also responsible for \$75,000 mobilization charges and \$56,250 demobilization charges per shipment.

First Uranium anticipates that the estimated \$471 million of capital required (exclusive of a proposed acid plant) over the remaining life of the Ezulwini Mine and MWS (inclusive of sustaining capital) as well as \$40 million approved for the long-term Ezulwini Expansion Program are expected to be funded from existing cash and cash equivalents of \$164.7 million and from internally generated cash flow from future sales of gold and uranium at current price assumptions, along with funds that may be available under a proposed mandate letter and term sheet with a financial institution for a credit facility. Discussions in respect of the credit facility and potential lines of credit are ongoing. The Corporation expects to fund the proposed acid plant through a separate project and/or end-user financing arrangement.

Summary of Quarterly Results

The table below sets out selected financial data for the periods indicated (as derived from First Uranium's consolidated financial statements):

Fiscal Quarters Ended (thousands of dollars, except per share amounts)	Revenue	Loss (income) for the three months	Basic & diluted loss (earnings) per share	Total assets	Long term liabilities
March 31, 2008	6,360	(26,871)	(0.21)	387,742	(130,430)
December 31, 2007	6,633	(3,998)	(0.03)	404,555	(128,182)
September 30, 2007	6,254	3,051	0.02	389,554	(117,349)
June 30, 2007	2,183	5,471	0.04	373,549	(118,900)
March 31, 2007	Nil	(2,689)	(0.02)	181,427	(5,377)
December 31, 2006	Nil	(3,787)	(0.04)	195,374	Nil
September 30, 2006	Nil	786	0.01	8,839	Nil
June 30, 2006	Nil	(2,238)	(0.03)	4,120	Nil

Fourth Quarter Results

During Q4 2008, the Corporation generated \$6.4 million revenue from gold sales at MWS at a total cost of sales of \$3.6 million resulting in \$2.8 million gross profit. Ezulwini generated \$2.5 million revenue during Q4 2008 that has been credited against mine infrastructure cost relating to the Ezulwini Mine in Property, Plant and Equipment. Q4 2008 production at the Ezulwini Mine was limited as a result of the decision to curtail underground development due to the shutdown of toll-milling capacity and lack of sufficient ventilation due to the shortage of power during the initial months of the Power Situation and the slower than anticipated shaft refurbishment program.

The operating loss (loss before interest, accretion expenses and foreign exchange translation losses) for Q4 2008 was \$8.6 million and is the result of higher ongoing expenditures relating to development and corporate activities during the quarter as well as higher stock-based compensation cost as a result of the 2.2 million stock options granted during Q4 2008.

The Corporation recorded a loss in Q4 2008 of \$26.9 million which is primarily attributable to the ongoing expenditures as well as foreign exchange translation losses of \$16.2 million resulting from the significant weakening of the ZAR against the US\$ during Q4 2008.

Cash flows utilized in operating activities was \$23.8 million which is the result of increased ongoing expenditures during the quarter as well as the foreign exchange translation losses incurred during the quarter.

Cash used in investing activities was \$23.8 million of which \$22.3 million was comprised of capital expenditures incurred at the Corporation's two operations.

There was a \$0.2 million increase in cash from financing activities due to the exercise of 30,476 stock options during Q4 2008.

Outlook

As mentioned above, the Corporation conducted studies to assess the economic viability of First Uranium generating its own power at the Ezulwini Mine and MWS for the next five years and to build its own acid plant to secure future supply of sulphuric acid for its uranium plants at reduced costs. The following table summarizes the impact of the power supply and acid cost changes at the Ezulwini and MWS:

Operating Cost Impact of Revised Project Economics

	MWS	Ezulwini Mine
Electrical power required	43 MW	56MW
Eskom commitment	29 MW	32MW
Self-generated power	14 MW	24MW
<u>Life-of-mine average operating costs</u>		
Operating cost per reclaimed tonne gold (\$/tonne)	2.12	
Operating cost per concentrate tonne U ₃ O ₈ (\$/tonne)	9.82	
Operating cost per milled tonne (\$/tonne)		71.82
Uranium cash cost (\$/pound)	22	33
Gold cash cost (\$/ounce)	347	376
Capital expenditures	\$251 million	\$220 million
<u>Average annual life-of-mine production</u>		
Uranium (pounds)	1,317,000	952,000
Gold (ounces)	130,000	306,000
<u>MWS production milestones</u>		
1 st module of gold plant	June 2007	
2 nd module of gold plant	Dec. 2008	
3 rd module of gold plant	Dec. 2009	
1 st module of uranium plant	Dec. 2008	
2 nd module of uranium plant	Dec. 2008	
3 rd module of uranium plant	Dec. 2009	
<u>Ezulwini Mine production milestones</u>		
Gold plant commissioning commences		April 2008
1 st 50,000 tonne per month mill		June 2008
Uranium plant commissioning commences		June 2008
2 nd 50,000 tonne per month mill		Sep 2008
3 rd 50,000 tonne per month mill		Jan 2009
4 th 50,000 tonne per month mill		Jan 2009
NPV ₈	\$413 million	\$667 million
IRR	70%	336%

Notes:

1. The assumed exchange rate for South African rand for all dates in the table above is as shown in the table below.
2. Co-product costs assume that operating cash costs are split in proportion to the revenue earned from each product.
3. NPV is calculated using a nominal discount rate of 8%.
4. The MWS figures differs from the November 2007 model in that the Corporation's fiscal year 2008, which ended on March 31, 2008, has not been considered in the above calculations.
5. At MWS, the first gold plant module became operational with the acquisition of the MWS gold plant in June 2007.
6. The Corporation previously disclosed the NPV as \$419 million and an IRR of 75% for MWS.

The following assumptions were used in the above assessment of the impact of the power supply and acid cost changes at Ezulwini and MWS:

	Unit	Mar 2009	Mar 2010	Mar 2011	Mar 2012	Beyond Mar 2012
Gold price	(\$/oz.)	890	907	874	797	711
Uranium price	(\$/lb.)	96	92	79	75	50
Currency exchange rate	(ZAR/\$US)	7.27	7.36	7.50	7.45	7.57
Market sulphuric acid price (incl. transport)	\$/tonne	350	265	170	95	95
Project sulphuric acid price (MWS)	\$/tonne	266	266	34.2	34.2	34.2
Project sulphuric acid price (Ezulwini)	\$/tonne	565	565	47.5	47.5	47.5

Based on the positive economic results of the studies, the Corporation also entered into an agreement to purchase a power plant (30 MW, comprised of twelve 2.5 MW generating sets) that is expected to arrive in South Africa during July 2008, with construction, installation and commissioning to be completed during December 2008. The Corporation also entered into an agreement to lease gensets (1 MW each) with a combined capacity of 10 MW that will be delivered to the Ezulwini Mine over a three-month period with the first four generators arriving during July 2008 with commissioning by the end of the month. (See Liquidity and Capital Resources in this MD&A)

In April 2008, the Corporation also announced plans, subject to financing, to purchase and install at the MWS facility an "off the shelf" acid plant to produce sulphuric acid to reduce the future costs and secure the supply of acid required for its two uranium and gold mining projects. The projected cost is approximately \$124 million. Based on an analysis of pyrite feed-stock potential from the MWS tailings dams, a preliminary technical assessment and a recent market analysis, the Corporation expects that it will take nineteen months to procure and commission the acid plant with anticipated production beginning in January 2010. Until the Corporation can produce its own acid, it has secured its initial requirements for sulphuric acid in a market where acid supplies remain very tight. The Corporation anticipates that significant acid price increases will continue in the medium term, as acid prices are closely related to the market for sulphur which is also indicating tight supply and significant price increases. A specification and procurement study has been initiated and is expected to be completed by the middle of the second fiscal quarter. To date the Corporation has not made any capital commitments with regards to the acid plant.

Once the acid plant is completed, the Corporation will direct all of the pyrite currently produced as waste at the MWS plant to the acid plant for the production of sulphuric acid, which will eliminate the need to source acid from third-party vendors. Since the planned production of the acid would be more than sufficient to supply both the Ezulwini Mine's and MWS's projected acid requirements, excess acid could be sold into the market at the then prevailing market rates. In addition, as the production of acid in the plant will be an exothermic reaction, there is the opportunity to generate a by-product of approximately 4 MW of power, which will be available to augment the power supply to MWS.

The next major milestone for the Ezulwini Mine is the completion of the commissioning of the 200,000 tonne per month gold plant, which is on schedule for June 2008 and to produce gold bullion in July 2008. The 100,000 tonne per month uranium plant is on schedule to deliver its first shipment of yellowcake in August 2008. Current mine production from the UE section and the ME section is being stockpiled separately on surface to feed the plants during its commissioning phases.

In addition to the Toll Treatment Agreement with a third party discussed in this MD&A under Liquidity and Capital Resources, the Corporation also entered into an interim off-take agreement with the third party, for the period from the planned startup of the uranium plant at the Ezulwini Mine in June 2008 until January 2009, pursuant to which the third party will purchase First Uranium's yellowcake production at rates based on the then prevailing spot prices.

At MWS, the pipeline from the Buffelsfontein No.2 tailings dam to the MWS gold plant is complete and operating. Commissioning of the introduction of the new material from the Buffelsfontein No.2 tailings dam to the MWS gold plant is ongoing. Upgrades to re-pulping of the tailings, the pumping and the plant processes are expected to improve volume, recoveries and costs in the MWS gold plant.

An upgrade to accommodate a deposition rate of 1.3 million tonnes of material per month on the MWS No.5 tailings dam is planned in advance of the commissioning of the second module of the MWS gold plant and the first two modules of the uranium plant.

Related Party Transactions

On December 20, 2006, First Uranium and Simmer & Jack entered into a shared services agreement (the "Shared Services Agreement"). For a description of the Shared Services Agreement, see the Corporation's AIF for 2008. During FY 2008, the Corporation paid \$2.3 million to Simmer & Jack pursuant to the Shared Services Agreement (FY 2007: \$2.6 million). During FY 2008 \$0.9 million of the fees charged by Simmer & Jack relating to technical services provided to the Ezulwini Mine and MWS were capitalized (FY 2007: \$2.0 million).

Prior to December 2006, the Corporation shared its premises with other companies that had common directors and reimbursed the related companies for its proportional share of expenses or was reimbursed by the related companies for their proportional share of expenses. During FY 2007, the Corporation was also charged \$0.6 million for consulting services provided by related directors, officers and consultants of the Corporation.

First Uranium has agreed to reimburse Simmer & Jack for 50% of the fees that Simmer & Jack is required to pay to an empowerment company for consulting. During FY 2008 the Corporation paid \$0.2 million to Simmer & Jack in connection with such services (FY 2007: \$0.05 million).

As previously disclosed and at the same time as the Offering, the Corporation entered into an agreement on December 12, 2006 with Waterpan providing for the acquisition of the remaining 10% of the shares of EMC in consideration for 6.1 million common shares of First Uranium. On December 14, 2007 this transaction was completed. (See Note 1, 13 and 24 to the Financial Statements.)

On September 13, 2007, the Ezulwini Mine acquired a reconditioned mill for the first 50,000 tonne per month milling unit from BGM for a consideration of \$1.7 million.

On September 27, 2007, the Board approved a loan in the amount of Cdn\$1 million to the President and Chief Executive Officer of First Uranium for the purpose of facilitating the relocation of his family to Toronto, where the corporate office is located. The loan carries interest at 4% payable monthly in arrears, is for a term of six years from date of closing of the purchase of a family residence and is unsecured. The loan was advanced on October 17, 2007. Interest of \$14,680 was received during FY 2008.

Critical Accounting Policies and Estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amount of assets and liabilities and disclosure of contingent liabilities at the date of the financial statements, and reported amounts of revenues and expenditures during the reporting period. Note 2 to the Financial Statements describes all of the Corporation's significant accounting policies.

Property, plant and equipment

The cost of an item of property, plant and equipment is recognized as an asset when:

- it is probable that future economic benefits associated with the item will flow to the Corporation; and
- the cost of the item can be measured reliably.

Costs include costs incurred initially to acquire or construct an item of property, plant and equipment and costs incurred subsequently to add to, replace part of, or service it. If a replacement cost is recognized in the carrying amount of an item of property, plant and equipment, the carrying amount of the replaced part is derecognized.

Property, plant and equipment are carried at cost less accumulated amortization and any impairment losses.

Amortization is provided on all property, plant and equipment other than freehold land, to write down the cost, less residual value, over their useful lives. See Note 2.5 to the Financial Statements for detail.

Exploration costs incurred to the date of establishing that a property has mineral reserves, which have the potential of being economically recoverable, are expensed. Exploration and development expenses incurred subsequent to this date are capitalized. If the project becomes feasible, the costs are amortized over the life of the mine. If the project is stopped, the costs are written off immediately.

Once a development mineral property goes into commercial production, the property is classified as "Producing" and the accumulated costs are amortized over the estimated recoverable reserves in the current mine plan using a unit-of-production basis. Commercial production occurs when a property is substantially complete and ready for its intended use.

Costs associated with start-up activities on constructed plants are deferred from the date of mechanical completion of the facilities until the date the Corporation is ready to commence service. Any revenues earned during this period are recorded as a reduction in deferred start-up costs. These costs are amortized using the units-of-production method over the life of the mine, commencing on the date of commercial service.

The amortization charge for each period is recognized in earnings or loss unless it is included in the carrying amount of another asset.

Asset retirement obligations

The Corporation recognizes the fair value of a future asset retirement obligation as a liability in the year in which it incurs a legal obligation associated with the retirement of tangible long-lived assets resulting from the acquisition, construction, development, and/or normal use of the assets. The obligations are measured initially at fair value and the resulting costs are capitalized and added to the carrying value of the related assets. In subsequent periods, the liability is adjusted for the accretion of the discount and the expense is recorded in the statement of operations, deficit, and comprehensive income. Changes in the amount or timing of the underlying future cash flows are immediately recognized as an increase or decrease in the carrying amounts of the liability and related assets. These costs are amortized to the results of operations over the life of the asset.

The Corporation's activities are subject to numerous governmental laws and regulations. Estimates of future reclamation liabilities for asset decommissioning and site restoration are recognized in the period when such liabilities are incurred. These estimates are updated on a periodic basis and are subject to changing laws, regulatory requirements, changing technology and other factors which will be recognized when appropriate. Liabilities related to site restoration include long-term treatment and monitoring costs and incorporate total expected costs net of recoveries. Expenditures incurred to dismantle facilities, restore and monitor closed resource properties are charged against the related reclamation and remediation liability.

Stock-based compensation

The Corporation has a stock-based compensation plan which is described in Note 14 to the Financial Statements. The Corporation accounts for all stock-based payments under the fair value based method.

Under the fair value based method, compensation cost is measured at fair value at the grant date. Compensation cost is recognized in earnings on a straight-line basis over the relevant vesting period. The counterpart is recognized in contributed surplus. Upon the exercise of a stock option, share capital is recorded at the sum of the proceeds received and the related amount of contributed surplus. The fair value relating to forfeited stock options is debited to contributed surplus and credited to the statement of operations and deficit, and comprehensive loss.

Changes in accounting policies

Effective April 1, 2007, the Corporation adopted two new accounting standards that were issued by the Canadian Institute of Chartered Accountants (“CICA”):

- Handbook Section 1530 – Comprehensive Income
- Handbook Section 3855 – Financial Instruments – Recognition and Measurement

As provided under the standards, the comparative consolidated financial statements have not been restated. There were no transitional effects and as a result no adjustments have been recorded to deficit as at April 1, 2007.

Section 1530 – Comprehensive Income

This section describes the reporting and disclosure standards with respect to comprehensive income and its components. Comprehensive income or loss consists of changes in the equity of the Corporation from sources other than the Corporation’s shareholders, and includes earnings or losses of the Corporation, the foreign currency translation adjustment relating to self sustaining foreign operations and unrealized gains and losses on changes in fair values of available-for-sale assets and effective cash flow hedging instruments. Other comprehensive income or loss comprises revenues, expenses and gains and losses that are recognized in comprehensive income or loss but are excluded from earnings or losses for the year. This change in accounting policy had no effect on the consolidated financial statements of First Uranium.

Section 3855 – Financial Instruments – Recognition and Measurement

This section establishes standards for recognizing and measuring financial assets, financial liabilities and non-financial derivatives. It requires that financial assets and financial liabilities, including derivatives, be recognized on the consolidated balance sheet when the Corporation becomes a party to the contractual provisions of the financial instrument or a non-financial derivative contract. All financial instruments should be measured at fair value on initial recognition, except for certain related party transactions. Fair value is the amount at which an item could be exchanged between willing parties. Measurement in subsequent periods depends on whether the financial instruments have been classified as held-for-trading, available-for-sale, held-to-maturity, loans and receivables, or other financial liabilities.

The Corporation designated certain financial assets and financial liabilities and adopted the following new accounting policies:

Cash and cash equivalents

Cash and cash equivalents are classified as “assets available-for-sale” and are measured at fair value at each balance sheet date. Any changes in fair value are recognized in Other comprehensive income in the period in which the change arises. Fair value is calculated using published price quotations in an active market, where applicable. The carrying amounts for cash and cash equivalents at March 31, 2008 approximated their fair values because of their short terms of maturity; no adjustments were made to the opening values.

Accounts receivable and receivables from related parties

These assets are classified as “loans and receivables” and are recorded at amortized cost, which upon their initial measurement is equal to their fair value. Subsequent measurements are recorded at amortized cost using the effective interest rate method. The carrying amounts for these assets as at March 31, 2008 approximated their fair values because of their short terms of maturity; no adjustments were made to the opening values.

Asset retirement funds

Asset retirement funds are classified as “assets available-for-sale” and are measured at fair value at each balance sheet date. Any changes in fair value are recognized in Other comprehensive income in the period in which the change arises. Fair value is calculated using the quoted prices of South African equities in an active market, with interest and dividends recognized in net income. Any equities without market quotes are carried using the cost method. The carrying values for the asset retirement funds as at March 31, 2008 approximated their fair values; no adjustments were made to the opening values.

Accounts payable and accrued liabilities and payable to related parties

These liabilities are classified as “other financial liabilities” and are initially measured at their fair values. Subsequent measurements are recorded at amortized cost using the effective interest rate method. The carrying values for these liabilities as at March 31, 2008 approximated their fair values; no adjustments were made to the opening values.

Senior unsecured convertible debentures

The sum of the carrying amounts assigned to the liability and equity components of the convertible debentures on initial recognition is always equal to the carrying amount that would be ascribed to the instrument as a whole. The debt portion is recorded at fair value on initial recognition and subsequently accreted over the life of the convertible debentures. No gain or loss arises from recognizing and presenting the components of the instrument separately. The relative fair value method is used to determine the value of the option directly either by reference to the fair value of a similar option, if one exists, or by using an option pricing model. The value determined for each component is then adjusted on a pro rata basis to the extent necessary to ensure that the sum of the carrying amounts assigned to the components equals the amount of the consideration received for the convertible debentures.

Section 1506 - Accounting Changes

In July 2006, the CICA issued a new version of Section 1506 of the CICA Handbook, “Accounting Changes”. This new standard establishes criteria for changing accounting policies, together with the accounting treatment and disclosure of changes in accounting policies and estimates, and correction of errors. This new section was adopted by the Corporation on January 1, 2007 and had no impact on the Corporation’s results.

Accounting policy choice for transaction costs

On June 1, 2007, CICA Emerging Issues Committee issued Abstract no. 166, “Accounting Policy Choice for Transaction Costs” (EIC 166). This EIC addresses the accounting policy choice of expensing or adding transaction costs related to the acquisition of financial assets and financial liabilities that are classified as other than held-for-trading. Specifically, it requires the same accounting policy choice be applied to all similar financial instruments classified as other than held-for-trading, but permits a different policy choice for financial instruments that are not similar. EIC 166 requires retroactive application to all transaction costs accounted for in accordance with Section 3855. The current recognition policy for transaction costs is consistent with this guidance.

On December 1, 2007, the CICA issued the following new accounting standards which became effective for interim periods beginning on or after October 1, 2007:

Section 1535 - Capital disclosures

This Section establishes standards for disclosing information about an entity’s capital and how it is managed. It describes the disclosure of the entity’s objectives, policies and processes for managing capital, the quantitative data about what the entity regards as capital, whether the entity has complied with any capital requirements, and, if it has not complied, the consequences of such non compliance. The Corporation has included disclosures recommended by Section 1535 in Note 22 to the Financial Statements.

Section 3862 - Financial instruments - disclosures

This Section describes the required disclosure for the assessment of the significance of financial instruments for an entity's financial position and performance and of the nature and extent of risk arising from financial instruments to which the entity is exposed and how the entity manages those risks. The Corporation has included disclosures recommended by Section 3862 in Note 23 to the Financial Statements.

Section 3863 - Financial instruments - presentation

This Section establishes standards for presentation of the financial instruments and non-financial derivatives. It carries forward the presentation related requirement of Section 3861, "Financial Instruments – Disclosure and Presentation". The Corporation has included disclosures recommended by Section 3863 in Note 23 to the Financial Statements.

Future accounting standards

The CICA issued the following amendments to the accounting standards for periods beginning on or after January 1, 2008:

General standards on financial statement presentation

Section 1400 "General standards on financial statement presentation" has been amended to include requirements to assess and disclose an entity's ability to continue as a going concern. The Corporation does not expect the adoption of these changes effective January 1, 2008, to have an impact on its consolidated financial statements.

Inventories

Section 3031 "Inventories" provides guidance on the determination of costs and its subsequent recognition as an expense, including any write-down to net realizable value. It also provides guidance on the cost formulas that are used to assign cost to inventories. The Corporation does not expect the adoption of these changes effective January 1, 2008, to have an impact on its consolidated financial statements.

Goodwill and intangible assets

Section 3064, "Goodwill and intangible assets" establishes revised standards for recognition measurement, presentation and disclosure of goodwill and intangibles assets. Concurrent with the introduction of this standard, the CICA withdrew EIC 27, "Revenues and expenses during the pre-operating period". As a result of the withdrawal of EIC 27, the Corporation will no longer be able to defer costs and revenues incurred prior to commercial production at new operations. This is effective for periods beginning on or after January 1, 2009.

Outstanding Share Data

	FY 2008	FY 2007
Common shares outstanding at beginning of period	121,686,047	87,536,047
Shares issued during the period	9,387,990	34,150,000
Common shares outstanding at end of period	131,074,037	121,686,047
Unexercised stock options outstanding at end of period	3,438,956	1,223,001
Average strike price of outstanding options (Cdn\$)	9.13	7.30

As at June 9, 2008, First Uranium had 131,074,037 common shares outstanding and there were 3,438,956 unexercised stock options outstanding, at an average strike price of Cdn\$9.13 per share.

As at March 31, 2008 and June 9, 2008, First Uranium also had \$135.1 million (Cdn\$150 million) principal amount of Debentures outstanding which are convertible into 60.9013 common shares for each Cdn\$1,000 principal amount of Debentures, representing 9,135,195 common shares.

Risks and Uncertainties

Uncertainties

There are a number of uncertainties in the mining business of First Uranium that are beyond First Uranium's control, including:

- demand and prices for the Corporation's future production of uranium and gold
- the consistent supply of sufficient electrical power
- the consistent supply of sufficient sulphuric acid
- government legislation regarding mining companies in South Africa
- securities regulation regarding public listed companies in Canada and South Africa
- foreign exchange rates
- interest rates
- the decisions and activities of the Corporation's competitors in the uranium and gold mining business, which impact the supply of uranium and the demand for available services, construction materials, labour and the rights for prospecting and mining
- the continued endorsement of nuclear power as a preferred source for the world's energy needs
- the decisions of investors to continue to buy and hold the securities of the Corporation
- natural disasters, war or random occurrences or acts that could result in a material change to economic and market performance, business conditions or operations

Risks

In addition, First Uranium's mining properties are in the development stage and are subject to the risks and challenges similar to other companies in a comparable stage of development. The risks include, but are not limited to, certain business, operational and market risks. For a detailed discussion of the Corporation's risks please refer to the Corporation's 2008 AIF, which is available on the Corporation's website www.firsturanium.com and on www.sedar.com or upon request from the Corporation.

Business Risks

Simmer & Jack

Simmer & Jack and First Uranium share the Chair of the Board and the same President & CEO, as well as several services that benefit both companies.

In addition, SARB requires that Simmer & Jack maintain a controlling interest in the Corporation, which could reduce or impede the Corporation's ability to raise additional required funds at favourable rates should Simmer & Jack desire to avoid dilution of their shareholding in the Corporation.

First Uranium also relies on Simmer & Jack for its BEE credentials, among other things.

Black Economic Empowerment ("BEE") Requirements

Failure to comply with BEE requirements could jeopardize First Uranium's ability to obtain and retain mining and prospecting rights. There is also no guarantee that the interests of First Uranium will be wholly aligned with the interests of its (direct or indirect) BEE shareholders.

Mining and prospecting rights, licenses and titles

The Corporation has not obtained all mining rights and government approvals required to develop its proposed uranium and gold project at MWS. The Corporation will make significant expenditures in respect of MWS prior to it obtaining the mining rights necessary to construct and operate its project.

Senior Management

As a new company with a small management team, First Uranium is dependant on certain key management personnel for the successful operation of the business. Loss of key personnel could harm the Corporation's operations and financial condition.

Business interruption

The Corporation is exposed to risks that could interrupt its business. One of the Corporation's two projects, the Ezulwini Mine, is an underground mine that has historically had ground movement problems in the UE shaft pillar. On one occasion it was necessary to cease shaft operations and excavate the lava unit around the shaft and then to reinstall the necessary shaft hardware. To eliminate the ground control problems in the shaft area, the Corporation is executing its plan to mine out the shaft pillar and to stabilize the main shaft.

There is a risk of flooding at the Ezulwini underground mine, where the Corporation pumps approximately 65 million litres of water from the site every day. The pumps are well maintained and there are several contingency arrangements including multiple power sources, large diesel generators, back-up pumps and catch basins in the event of failure of the main pumps. The mine has never been flooded, including during the period of 2001 through 2006 when the mine ceased operations and was on care and maintenance.

Disclosure

The Corporation is required to comply with securities reporting legislation and accounting standards in Canada and South Africa. To ensure that the First Uranium meets its regulatory obligations and mitigate risks associated with inaccurate or incomplete disclosure, the Audit Committee is responsible for reviewing and assessing the quality and integrity of the Corporation's continuous disclosure documents. The Corporation is also in the process of implementing a disclosure policy.

Insurance

First Uranium's insurance coverage does not cover all of its potential losses, liabilities and damage related to its business and certain risks are uninsured or uninsurable. The Corporation makes its insurance decisions based on the likelihood of any risk occurring, the cost of the insurance and the Corporation's tolerance for risk.

Financing

Although management believes that First Uranium has secured sufficient financing to bring its two projects into production as currently contemplated, the Corporation may require additional capital in the future and no assurance can be given that such capital will be available at all, or on terms acceptable to First Uranium.

Foreign Currency Exchange Rates

The Corporation has exposure to the risk of significant change in foreign currency exchange rates between US dollars, Canadian dollars and the South African rand. Most of the Corporation's expenses are currently in rand. When the Corporation starts to produce and sell uranium and gold, those sales will be in US dollars. As a result, an increase in the US dollar value of the rand would decrease profitability. In addition, the Corporation runs a small office in Canada and any further increase in the value of the Canadian dollar relative to the US dollar, increases expenses as the Corporation's reporting currency is in US dollars.

Operational Risks

Mining

The business of mining generally involves a high degree of risk and First Uranium has a limited operating history. No assurance can be given that the development and bringing into commercial production of a mine or tailings processing facility will be completed as contemplated and for the estimated capital costs or within the estimated schedule. Also, no assurance can be given that the intended production schedule, metal recoveries, estimated operating costs and/or that profitable operations will be achieved.

Confidence in resources

The economic analysis for the Ezulwini project is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as mineral reserves. There is no certainty that the reserves, development, production and economic forecasts on which such preliminary assessments are based, will be realized.

Labour

The Corporation will employ most of its labour at its two project sites. There has historically been much higher employment in the areas of the two projects and management does not consider availability of general labourers a risk. The higher demand for uranium, gold and other metals has raised the demand for skilled professionals, such as mining engineers, metallurgists and geologists.

The cost of that labour is a risk since labour costs have risen significantly since the last time uranium mines were in production at these sites. Higher costs have been identified and factored into the economic forecasts for these projects.

A trend that could increase risk for the Corporation is the heightened labour unrest in South Africa. Workers at various South African mining operations have been demanding, through their unions, higher compensation as a result of increased revenues in the mining sector being driven by rising mineral prices. Strikes have been threatened during some of the negotiations. First Uranium has mitigated the threat of work stoppages by negotiating recent settlements with unions representing workers at its operations.

Similarly, workers in other industries have been demanding higher compensation and threatening strike action. One such example is the strike by petroleum workers in early August 2007, which limited the supply of petrol. Strikes in the public sector and service industries, if protracted, also have the potential to disrupt the development of the Corporation's two projects. No material delays have been experienced to date and the projects are on track for their scheduled completion dates.

South Africa has significantly higher HIV infection rates than those prevailing in North America and Europe. Current and future First Uranium employees may have or could contract this potentially deadly virus. While the Corporation is not aware of any lost-time incident related to HIV, the prevalence of HIV could cause the Corporation to sustain higher costs to replace sick employees.

Operational safety is considered a top priority by management and the Board has established an Environmental, Health and Safety Committee. The Committee has the responsibility to review and make recommendations in regard to the Corporation's health and safety programs and compliance issues.

Power

Regular power outages have recently beset South Africa, causing disruption in business activities. Coal-fed power stations have run low on fuel and several power-generating facilities have been down for maintenance. No new power-generating facilities are expected to start up in South Africa until 2012. Eskom's primary response to these power deficiencies is to ask that its customers conserve energy and/or to restrict the amount of power supplied to them.

On January 24, 2008, Eskom advised that continuity of electric power supply could not be guaranteed. Specific warnings were communicated to South African mining companies, including the Corporation, which were specifically asked by Eskom to reduce power consumption to 80% of load requirements. While this was subsequently increased to 90%, Eskom also informed mining companies that this authorization could be withdrawn at a later date, as electrical power supply remains tight.

To mitigate the impact of these power restrictions, the Corporation is in the process of adding power generation to its two projects, having committed to purchase a power plant and lease diesel-powered generators, which will secure a total capacity of 54 MW of power at the Ezulwini Mine.

See also the section entitled, Assessment of the Impact of the Power Situation for each operation as discussed earlier in this MD&A.

Acid

Reduced availability of electrical power in South Africa has caused cutbacks in the operation of smelters and other facilities that produce sulphuric acid as a byproduct. The reduced supply of acid, increases in the cost of elemental sulphur (which is used to produce acid) and increased demand for acid in the base metal sector and for fertilizer production have led to rapidly increasing global acid prices. The Corporation has assessed and confirmed the economic viability of constructing an acid plant to provide the required sulphuric acid for its operations to mitigate the effects of supply constraints and rapidly rising costs for acid.

On April 21, 2008, the Corporation announced that, subject to financing, it will purchase and install an "off the shelf" acid plant to produce sulphuric acid to reduce the future costs and secure supply of acid required for the Ezulwini Mine and MWS. Based on an analysis of pyrite feed-stock potential from the MWS tailings dams, a preliminary technical assessment and a recent market analysis, the Corporation expects that it will take 19 months to procure and commission the acid plant with anticipated production beginning in January 2010. Until the Corporation can produce its own acid, it has secured its initial requirements for sulphuric acid in a market where acid supplies remain very tight. The Corporation anticipates significant acid price increases that are expected to continue in the medium term, as acid prices are closely related to the market for sulphur which is also indicating tight supply and significant price increases.

Construction Costs

First Uranium is in the development stage and is building its gold and uranium plants. To complete the construction of these plants requires steel, concrete and construction tradespeople. With the vast amount of construction underway in South Africa, materials and construction tradespeople are difficult to acquire and retain, particularly in light of the upcoming World Cup of soccer in South Africa in 2010 and the high metal prices, which has driven the demand for new mines and plants around the world.

To mitigate this risk, First Uranium has secured its supply of materials and tradespeople for the construction of the mills and the gold and uranium plants for the planned modules of the Ezulwini Mine.

For MWS, the required materials to expand the gold plant and build the uranium plant have not yet been secured. To mitigate the impact of rising costs, the Corporation has ordered the long-lead items for expansion of this project.

Fuel

Rising costs of fuel impact the costs of running the plants and the transportation of labour and materials to the sites and eventually the costs of moving rock from the underground mine and the metals that are to be produced at both projects. Higher costs of other fuels have increased the demand for uranium offsetting the negative impact of the increase in the costs of these fuels in the Corporation's operations.

As a result of the Corporation's decision to install diesel-powered generators, it will be exposed to changes in the availability and price of diesel fuel. Close geographic proximity to a government source of fuel provides the Corporation with some confidence in its ability to source some of its diesel fuel requirements domestically, but it may also have to transport diesel fuel from South African ports. To mitigate the risk of price escalation for the transport of diesel fuel, the Corporation will seek long term transportation contracts.

Securing Permitting for Tailings Deposition Areas

The success of MWS is, in part, dependent on the permitting of sufficient tailings deposition areas. While one such deposition area was acquired in June 2007, the Corporation requires permitting for one additional deposition area in the next two to three years. Failure to acquire permitting for such an area on schedule could delay production of uranium and gold at this project.

Environmental and hazardous materials

Laws and regulations involving the protection and remediation of the environment and the governmental policies for implementation of such laws and regulations are constantly changing and are generally becoming more restrictive. Mining operations have inherent risks and liabilities associated with pollution of the environment and the disposal of waste products and hazardous materials occurring as a result of mining and production. First Uranium cannot give any assurance that, notwithstanding its precautions, breaches of environmental laws (whether inadvertent or not) or environmental pollution will not materially and adversely affect its financial condition and its results of operations.

First Uranium's proposed mining projects are subject to the risk of uranium exposure. The Corporation has put systems in place to manage exposure to uranium or uranium metal and no known exposures have occurred at First Uranium to date. Exposure by First Uranium's employees, however, could result in the Corporation having to incur extra compensation costs.

Market risks

Uranium and Gold Prices

First Uranium's future revenues will be directly related to the world market prices of uranium and gold as its revenues will be derived primarily from gold and uranium mining, assuming that First Uranium is able to develop one or more of the Ezulwini Mine and MWS projects. Uranium and gold prices can be subject to volatile price movements, which can be material and can occur over short periods of time and are affected by numerous factors beyond First Uranium's control.

If, after the commencement of commercial production, uranium and/or gold prices fall below the costs of production at First Uranium's mines for a sustained period, it may not be economically feasible to continue production at such sites. This would materially and adversely affect production, profitability and First Uranium's financial position. A decline in uranium and/or gold prices may also require First Uranium to write down its mineral reserves and mineral resources, which would have a material adverse effect on its earnings and profitability. First Uranium's future profitability may be materially and adversely affected by the effectiveness of any hedging strategy. While First Uranium currently does not hedge or forward sell any of its future gold and uranium production, should circumstances in future so warrant (including the need to obtain debt financing), First Uranium may hedge, or forward sell, future production.

The spot price for uranium ranged between \$60 and \$136 per pound during FY 2008 but the more indicative price for establishing contracts is the term price which has ranged between \$85 and \$95 per pound during FY 2008. As of June 9, 2008, the uranium spot price was \$59 per pound and the term price was \$90 per pound. The spot price for gold ranged between \$642.10 and \$1,011.25 per ounce during FY 2008. As of June 9 2008, the gold spot price was \$896.25 per ounce. The Corporation has no plans to hedge the price it receives for its gold production at this time.

Public Perception and Acceptance of Nuclear Energy

Growth of the uranium and nuclear power industry will depend, amongst other factors, upon continued and increased acceptance of nuclear technology as a means of generating electricity. Because of unique political, technological and environmental factors that affect the nuclear industry, the industry is subject to public opinion risks that could have an adverse impact on the demand for nuclear power and increase the regulation of the nuclear power industry. An accident at a nuclear reactor anywhere in the world could impact the continuing acceptance of nuclear energy and the future prospects for nuclear power generation, which may have a material adverse effect on First Uranium.

Uranium and Gold Industry Competition

International uranium and gold industries are highly competitive. There is no guarantee that First Uranium will be able to compete successfully with other mining companies, particularly the larger, seasoned mining companies. The Corporation can not assure that it will be able to compete successfully with its competitors in developing or acquiring uranium or gold projects or in attracting and retaining skilled and experienced employees.

First Uranium intends to market its uranium in a number of potential markets in direct competition with supplies available from a relatively small number of mining companies. Current and future international trade agreements and policies, governmental policies and trade restrictions are beyond the control of First Uranium and may affect the supply of uranium available to the market.

Competition from other energy sources

Nuclear energy competes with other sources of energy, including oil, natural gas, coal and hydroelectricity. These other energy sources are to some extent interchangeable with nuclear energy, particularly over the longer term. Sustained lower prices of oil, natural gas, coal and hydro-electricity may result in lower demand for uranium concentrates.

Additional Information

Additional information relating to First Uranium is included in the Corporation's Annual Information Form dated June 9, 2008 and it is available on SEDAR at www.sedar.com.

Forward-looking Information

This MD&A and consolidated financial statements for the year ended March 31, 2008 contain certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the availability of electrical power, the planned addition of owner-operated power generation, price of uranium and gold, price of electrical power, supply and price of sulphuric acid, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the realization of estimated pyrite content in MWS tailings dams, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, availability of financing on acceptable terms, government regulation of mining operations, environmental risks, unanticipated reclamation expenses and title disputes or claims and limitations on insurance coverage. In certain cases, forward-looking statements can be identified by the use of words such as "goal", "objective", "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at the date of this MD&A; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason. In making the forward-looking statements in this MD&A, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) consistent supply of sufficient power will be available to develop and operate the projects as planned; (ii) approvals to transfer or grant, as the case may be, mining rights or prospecting rights will be obtained; (iii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iv) mineral resource estimates are accurate; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

Form 52-109F1 - Certification of Annual Filings

I, Emma Oosthuizen, Senior Vice President and Chief Financial Officer of First Uranium Corporation, certify that:

1. I have reviewed the annual filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of First Uranium Corporation (the "issuer") for the period ending March 31, 2008;
2. Based on my knowledge, the annual filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the annual filings;
3. Based on my knowledge, the annual financial statements together with the other financial information included in the annual filings fairly present in all material respects the financial condition, results of operations and cash flows of the issuer, as of the date and for the periods presented in the annual filings;
4. The issuer's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures and internal control over financial reporting for the issuer, and we have:
 - (a) designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which the annual filings are being prepared;
 - (b) designed such internal control over financial reporting, or caused it to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer's GAAP; and
 - (c) evaluated the effectiveness of the issuer's disclosure controls and procedures as of the end of the period covered by the annual filings and have caused the issuer to disclose in the annual MD&A our conclusions about the effectiveness of the disclosure controls and procedures as of the end of the period covered by the annual filings based on such evaluation; and
5. I have caused the issuer to disclose in the annual MD&A any change in the issuer's internal control over financial reporting that occurred during the issuer's most recent interim period that has materially affected, or is reasonably likely to materially affect, the issuer's internal control over financial reporting.

DATED this 9th day of June, 2008

CONSOLIDATED FINANCIAL STATEMENTS
for the year
ended March 31, 2007

First Uranium Corporation
Management's Responsibility for Financial Reporting

The accompanying consolidated financial statements have been prepared by management and are in accordance with Canadian generally accepted accounting principles and reflect informed judgments and estimates based on currently available information and with due consideration given to materiality. Management acknowledges its responsibility for the fairness, integrity and objectivity of all information in the consolidated financial statements.

As a means of fulfilling its responsibility, management relies on the Corporation's system of internal controls. This system has been established to ensure, within reasonable limits, that the assets are safeguarded, transactions are properly recorded and are executed in accordance with management's authorization and that the accounting records provide a solid foundation from which to prepare the consolidated financial statements.

The Board of Directors carries out its responsibility for the consolidated financial statements principally through its Audit Committee, consisting solely of non-management directors. The Audit Committee meets with management as well as the external auditors to ensure that management is properly fulfilling its financial reporting responsibilities to the Directors who approve the financial statements. The external auditors have full and unrestricted access to the Audit Committee to discuss the scope of the external audit, the adequacy of the system of internal controls and financial reporting issues.

The consolidated financial statements have been audited by PricewaterhouseCoopers LLP, Chartered Accountants. Their report outlines the scope of their examination and opinion on the consolidated financial statements.

Auditors' Report

To the Shareholders of First Uranium Corporation

We have audited the consolidated balance sheets of **First Uranium Corporation** as at March 31, 2007 and 2006 and the consolidated statements of expenditures and deficit and cash flows for the years then ended. These financial statements are the responsibility of the Corporation's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Corporation as at March 31, 2007 and 2006 and the results of its operations and its cash flows for the years then ended in accordance with Canadian generally accepted accounting principles.

See accompanying notes to the Consolidated Financial Statements

1. NATURE OF OPERATIONS AND BASIS OF PRESENTATION

The consolidated financial statements have been prepared by First Uranium Corporation ("First Uranium" or "the Corporation") in accordance with Canadian generally accepted accounting principles ("Canadian GAAP"). The preparation of the consolidated financial statements is based on accounting policies and practices consistent with those used in the prior year.

First Uranium is a Canadian corporation with a primary listing on the Toronto Stock Exchange ("TSX") and a secondary listing on the Johannesburg Stock Exchange ("JSE"). First Uranium is a resource company focused on the development of uranium and gold projects in South Africa, see Note 5 "Property, Plant and Equipment" for a description of the projects. First Uranium owns 100% of First Uranium Limited ("FUL"), which in turn holds 100% of First Uranium (Proprietary) Limited ("FUSA") and 90% of Ezulwini Mining Company (Proprietary) Limited ("EMC"). As at March 31, 2007, Simmer and Jack Mines, Limited ("Simmer & Jack") owned 67.2% of First Uranium's common shares.

1.1 Investment in subsidiaries

Group financial statements

The acquisition by First Uranium of shareholdings in FUSA and EMC are accounted for under Canadian GAAP as a continuity of interests. Certain adjustments have been reflected in the financial statements to reflect the reorganization pursuant to which First Uranium acquired 100% of FUSA and 90% of EMC as if the share exchange had been effective for the period from inception to March 31, 2007.

Acquisition from entities under common control

A business combination involving entities or businesses under common control is a business combination in which all of the combining entities or businesses are ultimately controlled by the same party or parties both before and after the business combination, and that control is not transitory.

The assets and liabilities acquired in a business combination under common control are recognized at the carrying amounts recognized previously in the Group's controlling shareholder, Simmer & Jack's, consolidated financial statements.

2. SIGNIFICANT ACCOUNTING POLICIES

2.1 Basis of preparation

The consolidated financial statements have been prepared in accordance with accounting principles generally accepted in Canada.

2.2 Consolidation

The consolidated financial statements include the accounts of First Uranium and all of its subsidiaries. All significant inter-company balances and transactions are eliminated on consolidation.

2.2.1 Subsidiaries

A subsidiary is an entity which is controlled by the Corporation. The consolidated financial statements include all the assets, liabilities, revenues, expenses and cash flows of First Uranium and its subsidiaries after eliminating inter-company balances and transactions. For partly owned subsidiaries, the net assets and net earnings attributable to minority shareholders are presented as minority interests on the consolidated balance sheet and consolidated statement of expenditures and deficit.

2.3 Use of estimates

The preparation of these consolidated financial statements in accordance with Canadian generally accepted accounting practice requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amount of revenues and expenses during the reporting period.

Significant areas requiring the use of management estimates relate to the determination of impairment of capital assets, goodwill estimation of future site restoration costs and future income taxes, and classification of current portion of long term debt. Financial results as determined by actual events could differ from those estimated.

2.4 Foreign currency translation

Items included in the financial statements of each entity in the Corporation are measured using the currency that best reflects the economic substance of the underlying events and circumstances relevant to that entity ("the functional currency").

Foreign currency transactions are translated into the functional currency using the exchange rates prevailing at the dates of the transactions. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation of monetary assets and liabilities denominated in foreign currencies are recognized in the statements of expenditures and deficit.

The Corporation considers the United States dollar ("US\$") to be the functional and reporting currency. The translated amounts are of a foreign entity where its subsidiaries are accounted for as integrated foreign operations and as such, the translation to US dollar was made using the temporal method. Monetary assets and liabilities denominated in foreign currencies are translated in United States dollars at the year-end exchange rates, while non-monetary items are translated at the exchange rate in effect at the transaction date. Revenue and expense items are translated at the exchange rates in effect on the date of the transaction. Exchange gains and losses resulting from the translation of these amounts are included in the consolidated statements of operations.

2.5 Financial instruments

Financial assets and financial liabilities are recognized on the balance sheet when the Corporation has become party to the contractual provisions of the instruments.

Measurement

Financial instruments are initially measured at cost, which includes transaction costs. Subsequent to initial recognition these instruments are measured as set out below:

Investments

Purchases and sales are recognized on the trade date, which is the date that the Corporation commits to purchase or sell the asset. After initial recognition, investments, which include the Corporation's listed investments and which are designated as long term investments, are measured at the lesser of historic cost or net realizable value. Listed investments, which are designated as short term investments, are measured at fair value. Losses on long term investments and profits and losses on short term investments are recognized in the consolidated statement of expenditures and deficit.

Other long term investments that are intended to be held to maturity are subsequently measured at amortized cost using the effective interest rate method. Amortized cost is calculated by taking into account any discount or premium on acquisition over the period to maturity. For investments carried at amortized cost, gains and losses are recognized in the income statement when the investments are derecognized or impaired, as well as through the amortization process.

Cash and cash equivalents

Cash and cash equivalents consist of cash on hand, bank balances, deposits held at call and certificate of deposits with a remaining maturity of three months or less. Bank and cash balances are reported separately from bank overdraft balances, which are included in accounts payable.

Accounts receivable

Accounts receivable are carried at original invoice amount unless a provision has been recorded for impairment of these receivables. A provision for impairment of accounts receivable is established when there is objective evidence that the Corporation will not be able to collect all amounts due according to the original terms of receivables.

Financial liabilities

After initial recognition, financial liabilities other than trading liabilities are subsequently measured at amortized cost using the effective interest rate method. Amortized cost is calculated by taking into account any transaction costs and any discount or premium on settlement.

Accounts payable

Liabilities for trade and other payables which are normally settled on 30 to 90 day terms are carried at cost.

Impairment and uncollectability of financial assets

An assessment is made at each balance sheet date to determine whether there is objective evidence that a financial asset or group of financial assets may be impaired. If such evidence exists, the estimated recoverable amount of the asset is determined and an impairment loss is recognized for the difference between the recoverable amount and the carrying amount as follows: The carrying amount of the asset is reduced to its discounted estimated recoverable amount, either directly or through the use of an allowance account and the resulting loss is recognized in the income statement for the period.

Offset

Where a legally enforceable right of offset exists for recognized financial assets and financial liabilities, and there is an intention to settle the liability and realize the asset simultaneously, or settle on a net basis, all related financial effects are offset.

Equity instruments

Equity instruments issued by the Corporation are recorded on the date the proceeds are received, net of direct issue costs.

The carrying amounts for cash and cash equivalents, short term investments, accounts receivable and accounts payable and accrued liabilities approximate fair value due to the short maturities of these instruments.

2.6 Property, plant and equipment

The cost of an item of property, plant and equipment is recognized as an asset when:

- it is probable that future economic benefits associated with the item will flow to the Corporation; and
- the cost of the item can be measured reliably.

Costs include costs incurred initially to acquire or construct an item of property, plant and equipment and costs incurred subsequently to add to, replace part of, or service it. If a replacement cost is recognized in the carrying amount of an item of property, plant and equipment, the carrying amount of the replaced part is derecognized.

Property, plant and equipment are carried at cost less accumulated depreciation and any impairment losses.

Depreciation is provided on all property, plant and equipment other than freehold land, to write down the cost, less residual value, on a straight-line basis over their useful lives as follows:

Item	Average useful life
Buildings	20 years
Plant and equipment	25 years
Office furniture and equipment	6 years
Motor vehicles	5 years
Computer equipment and software	3 years
Mining assets <ul style="list-style-type: none"> Mining assets are stated at cost less accumulated amortization and impairments. Cost includes pre-production expenditures incurred during the development of the mine. Cost also includes borrowing costs capitalized during the construction period where such costs are financed by borrowings. Amortization is first charged on new mining ventures from the date on which production reaches commercial quantities. 	Life of mine
Mine development costs <ul style="list-style-type: none"> Mine development costs include expenditures incurred to develop new ore bodies, to define further mineralization in existing ore bodies and to expand the capacity of a mine. Mine development costs are amortized using the units-of-production method based on estimated measured and indicated mineral resources. These resources are reassessed annually. 	Measured and indicated mineral resources
Mine infrastructure <ul style="list-style-type: none"> Plant, equipment and buildings are amortized using the units-of-production method based on estimated measured and indicated mineral resources 	Measured and indicated mineral resources
Mining rights <ul style="list-style-type: none"> The cost of acquiring mining rights are capitalized and amortized over the mining period awarded by the Department of Minerals and Energy ("DME") to the Corporation for the respective mining right. 	Mining period as per licence
Exploration <ul style="list-style-type: none"> Exploration costs incurred to the date of establishing that a property has mineral resources, which have the potential of being economically recoverable, are expensed; exploration and development expenses incurred subsequent to this date are capitalized. If the project becomes feasible, the costs are amortized over the life of the mine. If the project is stopped, the costs are written off immediately. 	Life of mine

The residual value and the useful life of each asset are reviewed at each financial year-end.

Each part of an item of property, plant and equipment with a cost that is significant in relation to the total cost of the item shall be depreciated separately.

The depreciation charge for each period is recognized in profit or loss unless it is included in the carrying amount of another asset.

2.7 Capitalization of interest

Net interest costs incurred during the development, construction and start up phase of major projects are capitalized.

2.8 Asset retirement obligations

The Corporation recognizes the fair value of a future asset retirement obligation as a liability in the year in which it incurs a legal obligation associated with the retirement of tangible long-lived assets that results from the acquisition, construction, development, and/or normal use of the assets. The Corporation concurrently recognizes a corresponding increase in the carrying amount of the related long-lived asset that is depreciated over the life of the asset. The fair value of the asset retirement obligation is estimated using the expected cash flow approach that reflects a range of possible outcomes discounted at credit adjusted risk-free interest rate. Provision is made in full for the estimated future costs of pollution control and rehabilitation, in accordance with statutory requirements. The fair value of asset retirement obligations is recognized and provided for in the financial statements and capitalized to mining assets when incurred.

Subsequent to the initial measurement, the asset retirement obligation is adjusted at the end of each year to reflect the passage of time and changes in the estimated future cash flows underlying the obligation.

Changes in the obligation due to the passage of time are recognized in income as an operating expense using the interest method. Changes in the obligation due to changes in estimated cash flows are recognized as an adjustment of the carrying amount of the long-lived asset that is depreciated over the remaining life of the asset.

Annual increases in the provision are accreted into income and consist of financing costs relating to the change in present value of the provision and inflationary increases in the provision estimate. The present value of additional environmental disturbances created is capitalized to mining assets against an increase in rehabilitation provision.

2.9 Impairment of long-lived assets

Where impairment is identified, the carrying value of the related property, plant and equipment is written down to fair value. Recoverability of the long term assets of the Corporation, which includes development costs and undeveloped property costs, are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amounts may not be recoverable, based on future undiscounted cash flows. In preparing this evaluation, the Corporation compares the carrying amount of the asset to its fair value. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash flows. To determine fair value, management makes its best estimates of the future cash inflows that will be obtained each year over the life of the asset and discounts the cash flows by a rate that is based on the time value of money, adjusted for the risk associated with the applicable asset.

Management's best estimate includes only those projections which it believes are reliable. These estimates are subject to risks and uncertainties including future metal prices. It is therefore reasonably possible that changes could occur which may affect the recoverability of the assets.

2.10 Future income and mining taxes

The Corporation utilizes the asset and liability method of accounting for income and mining taxes. Under the asset and liability method, future income and mining tax assets are recognized for the future tax consequences attributable to differences between the consolidated financial statements carrying amounts of existing assets and liabilities and their respective tax bases reduced by a valuation allowance to reflect the recoverability of any future income tax asset. Future income and mining tax assets and liabilities are measured using enacted or substantively enacted tax rates expected to apply when the asset is realized or the liability settled. The effect on future income and mining tax assets and liabilities of a change in tax rates is recognized in income in the year the enactment or substantive enactment occurs.

2.11 Stock-based compensation

The Corporation has a stock-based compensation plan which is described in note 11. The Corporation accounts for all stock-based payments under the fair value based method.

Under the fair value based method, compensation cost is measured at fair value at the grant date. Compensation cost is recognized in earnings on a straight-line basis over the relevant vesting period. The counterpart is recognized in contributed surplus. Upon the exercise of a stock option, share capital is recorded at the sum of the proceeds received and the related amount of contributed surplus. Any consideration paid upon the exercise of stock options, in addition to the fair value attributable to stock options granted, is credited to share capital. The fair value attributable to stock options that expire unexercised is credited to contributed surplus.

2.12 Interest recognition

Interest income is recognized on a time proportion basis, taking account of the principal outstanding and the effective rate over the period of maturity, when it is determined that such income will accrue to the Corporation.

2.13 Leased assets

Leases of property, plant and equipment where the Corporation has substantially all the risks and rewards of ownership, are classified as finance leases. Finance leases are capitalized at the inception of the lease at the lower of the fair value of the leased property or the present value of the minimum lease payments. Each lease payment is allocated between the liability and finance charges so as to achieve a constant rate on the finance balance outstanding. The corresponding rental obligations, net of finance charges, are included in other long-term payables. The interest element of the installment is charged to the income statement over the lease period so as to produce a constant periodic rate of interest on the remaining balance of the liability for each period. The property, plant and equipment acquired under finance leases are depreciated over the shorter of the useful life of the asset or the lease term.

2.14 Inventories

Inventories, which include in-circuit metals and consumable stores, are stated at the lower of cost or net realizable value. The related direct production costs associated with in-circuit metals are deferred and charged to costs as the contained gold is recovered. Consumable stores are valued on the weighted average cost basis. In-circuit metals are identified and measured from the ore stockpiles up to and including the on-site refining plant.

2.15 Earnings or loss per share

Basic earnings or loss per share is computed by dividing earnings or loss available to common shareholders by the weighted average number of common shares outstanding during the year. The treasury stock method is used to calculate diluted earnings or loss per share. Diluted earnings or loss per share is similar to basic earnings or loss per share, except that the denominator is increased to include the number of additional common shares that would have been outstanding assuming that options with an average market price for the year greater than their exercise price are exercised and the proceeds used to repurchase common shares. As a result of the loss for each of the reporting years, the potential effect of exercising stock options has not been included in the calculation of diluted loss per share as to do so would be anti-dilutive.

3. ACCOUNTS RECEIVABLE

	2007 US\$'000	2006 US\$'000
Trade receivables	99	-
Value Added Tax and General Sales Tax	1,463	13
Prepayments and advances	144	130
Deposits and guarantees	7	-
	<u>1,713</u>	<u>143</u>

4. INVENTORIES

	2007 US\$'000	2006 US\$'000
Spares and consumables	292	-

5. PROPERTY, PLANT AND EQUIPMENT

2007	Cost US\$'000	Accumulated amortization US\$'000	Net carrying amount US\$'000
Owned assets			
Land and buildings	863	-	863
Mine infrastructure	3,710	-	3,710
Mining assets	16,942	-	16,942
Mining rights	13	-	13
Plant and equipment	9,000	-	9,000
Motor vehicles	179	(8)	171
Office furniture and equipment	56	(1)	55
Computer equipment and software	205	(5)	200
Total net carrying amount	30,968	(14)	30,954

Included in the above are mining related assets with a net carrying value of US\$29 million related to the Ezulwini Mine and US\$0.8 million related to the Buffelsfontein Tailings Recovery Project.

First Uranium had no property, plant or equipment in the year ending March 31, 2006.

Ezulwini Mine

The Ezulwini Mine involves the recommissioning of an underground uranium and gold mining operation located on the outskirts of the town of Westonaria in Gauteng Province, South Africa. The mine, previously on care and maintenance, is being readied for production. The mine was constructed in the 1960s. In 2001, mine production at Ezulwini was ceased primarily as a result of capital constraints compounded by a weak gold and uranium market environment. The geology of the Ezulwini property includes a number of reef packages, with the Upper Elsburg and Middle Elsburg reefs being the primary focus of First Uranium's mine reopening plans at the Ezulwini Mine. First Uranium's plans for the development of the Ezulwini Mine include the rehabilitation and re-engineering of the main mine shaft through the installation of a floating steel tower, de-stressing the area where the shaft pillar intersects the shaft barrel, and the construction of uranium and gold processing facilities.

On December 8, 2006 the Ezulwini mining right was registered to Simmer & Jack. On December 20, 2006, EMC and Simmer & Jack entered into an agreement (the "Ezulwini Mining Right Agreement") pursuant to which Simmer & Jack agreed to take all necessary steps to obtain all ministerial approval in order to effect the ceding of the Ezulwini mining right from Simmer & Jack to EMC.

On October 19, 2006, EMC entered into an agreement with Randfontein Estates Limited ("REL"), a wholly-owned subsidiary of Harmony Gold Mining Company Limited ("Harmony"), in respect of the purchase of certain surface and underground assets relating to the Ezulwini Mine, including two shaft headgears and four winders, fans, compressors, generators and underground equipment as well as the necessary surface freehold required to operate the mine. A total consideration of US\$7.8 million was paid to REL. The effective date of the transaction was December 22, 2006.

As part of the Ezulwini acquisition, the related environmental rehabilitation trust fund amounting to US\$2.7 million (see Note 6) was transferred into the Ezulwini trust fund and EMC took over the related environmental rehabilitation provision of US\$5.1 million (see Note 9) as determined by the DME. The difference of US\$2.4 million between the environmental rehabilitation trust fund and the environmental rehabilitation provision has been capitalised as part of mining infrastructure.

Buffelsfontein Tailings Recovery Project

The Buffelsfontein Tailings Recovery Project is a uranium and gold tailings recovery operation located in the western portion of the Witwatersrand Basin. First Uranium will conduct hydraulic mining of thirteen tailings dumps on the Buffelsfontein property and two dams on the property of MWS (as defined below) using high pressure water cannons to slurry the tailings which will then be pumped to processing plants for the recovery of uranium and gold.

In October 2005, Simmer & Jack purchased Buffelsfontein Gold Mines Limited ("BGM"), consisting of the Buffelsfontein and Hartebeesfontein underground gold mines and mill (the "BGM Underground Mine"), out of provisional liquidation (the "Buffelsfontein Liquidation Acquisition").

BGM holds an old order mining right in respect of mining gold at the BGM Underground Mine but not for the recovery of the gold and uranium in the tailings dams at Buffelsfontein. On June 4, 2007 the DME granted to BGM a prospecting right with respect to uranium and other minerals in the Buffelsfontein property and tailings dams subject to certain conditions which are expected to be satisfied in due course. BGM has also filed with the DME an application to convert its old order mining right for BGM into a new order mining right. If and when this conversion application is approved, BGM intends to file with the DME one or more applications (which, together with the foregoing conversion application, are collectively referred to herein as the "Buffelsfontein Conversion Application") to: (i) amend, with effect from the date of conversion, the new order mining right to include the authority to mine for uranium underground and for gold, uranium and other minerals in respect of the tailings; (ii) divide the new order mining right, if granted, into two separate new order mining rights — one in respect of the mining for gold, uranium and other minerals at the BGM Underground Mine and the other, the Buffelsfontein Tailings Mining Right, in respect of the mining of the gold, uranium and other minerals in the Buffelsfontein tailings dams; and (iii) cede the Buffelsfontein Tailings Mining Right, if granted, to FUSA. The recognition of the BGM transaction will only take effect when the above stated conditions precedent are met.

On December 20, 2006, FUSA, BGM and Simmer & Jack entered into an agreement (the "Buffelsfontein Tailings and Rights Agreement") pursuant to which, among other things:

- (i) BGM agreed to take all necessary steps to obtain all ministerial approvals required for the items requested in the Buffelsfontein Conversion Application in order to effect the transfer of the Buffelsfontein Tailings Mining Right to FUSA as soon as possible;
- (ii) BGM agreed to sell to FUSA upon FUSA's receipt of the Buffelsfontein Tailings Mining Right, the Buffelsfontein tailings dams as well as certain property required for construction of the proposed processing plants, and grant to FUSA a right to the tailings arising from BGM's ongoing mining operations at its underground Buffelsfontein mine; and
- (iii) BGM agreed to grant a servitude to FUSA for access and egress to BGM's property to enable FUSA, its employees, consultants, agents and subcontractors access for purposes of constructing, servicing and operating the uranium and gold processing plants and tailings pipelines to be built by FUSA.

The underground mines that were purchased by Simmer & Jack pursuant to the Buffelsfontein Liquidation Acquisition will not form part of First Uranium's assets at the Buffelsfontein Tailings Recovery Project.

The Corporation plans to acquire from BGM three additional tailings dams (Harties - Flanagan, Harties - Ellaton and Harties - NKGE).

The Corporation, through its wholly-owned subsidiary FUSA, also acquired Mine Waste Solutions (Proprietary) Limited ("MWS") and its subsidiary Chemwes (Proprietary) Limited on April 1, 2007 ("the MWS Acquisition"). The MWS Acquisition closed on June 6, 2007, at which point First Uranium assumed management control of MWS. For accounting purposes, any net income from MWS operations for the period from April 1, 2007 to June 6, 2007 will be applied to reduce the cost of the MWS Acquisition. MWS owns and operates an existing gold mine tailings and re-processing facility adjacent to First Uranium's Buffelsfontein Tailings Recovery Project in South Africa. See Note 18.

6. ASSET RETIREMENT FUND

	2007 US\$'000	2006 US\$'000
Investment in Environmental Trust Fund		
- Trust fund obtained on acquisition of mine	2,686	-
- Investment income	82	-
- Contributions in respect of guarantee	103	-
- Costs incurred	(80)	-
	2,791	-

The environmental rehabilitation trust fund is under the Corporation's control and is to be used to fund the rehabilitation liabilities. Funds in the trust consist of primarily cash held in interest bearing accounts, together with investments in South African equities. An accredited South African financial institution manages the trust funds under the direction of the trustees. The trust deed limits trustees to make investments to institutions and investment vehicles as referred to in section 37A of the South African Income Tax Act.

7. GUARANTEES

The following guarantees have been issued:

To	Regarding	Guarantee value US\$'000
DME	Ezulwini environmental rehabilitation provision	5,162
Murray and Robberts Cementation (Pty) Ltd	Ezulwini shaft rehabilitation project	1,374
Eskom Holdings Ltd	Electricity accounts	1,168

The funds in the Ezulwini rehabilitation trust fund have been pledged as security against the guarantees.

8. ACCOUNTS PAYABLE AND ACCRUED LIABILITIES

	2007 US\$'000	2006 US\$'000
Trade payables	5,302	408
Accruals	400	379
	5,702	787

9. ASSET RETIREMENT OBLIGATION

	2007 US\$'000	2006 US\$'000
Provision taken over with acquisition of the Ezulwini Mine	5,133	-
Accretion expense	244	-
Total obligation	5,377	-

The following are the key assumptions used during 2007:

	2007 US\$'000	2006 US\$'000
Undiscounted and uninflated amount of estimated cash flows	23,206	-
Currency payable	ZAR	-
Payable in years	19	-
Risk-free interest rate – South African rate	8%	-

The environmental rehabilitation provision taken over by EMC as part of the acquisition of the Ezulwini assets was determined by the DME as at November 2006. During March 2007 an independent review was performed by Johan Fourie & Associates on the Ezulwini assets relating to environmental rehabilitation provision.

An environmental rehabilitation trust fund (see Note 6) has been set up as sinking funds for the purposes of funding the environmental rehabilitation and closure costs. The trust deed prohibits use of the funds for any other purpose. In addition, the Corporation raised financial guarantees with Lombards Insurance in favour of the DME to top-up the difference between the environmental rehabilitation trust fund and the environmental rehabilitation provision (see Note 7). The fair value of the Ezulwini Mine's restricted assets at year end is US\$29.0 million (2006: US\$nil). See Note 5.

10. SHARE CAPITAL

	Number of shares		Value of shares	
	2007 '000	2006 '000	2007 US\$'000	2006 US\$'000
Ordinary shares				
Opening balance of shares in issue and share capital	87,536	-	4,176	-
Shares issued relating to share-split	-	938	-	-
Shares issued in public or private offering	33,350	86,598	201,795	4,176
Exercise of stock options	800	-	728	-
Contributed surplus relating to stock options exercised	-	-	27	-
	121,686	87,536	206,726	4,176
Less: Share issue costs	-	-	(24,053)	-
Closing balance of shares in issue and share capital	121,686	87,536	182,673	4,176

Authorized

The authorized capital of First Uranium consists of an unlimited number of common shares.

Issued and outstanding

In December 2005 and January 2006 First Uranium raised a total of US\$4.2 million through the private placement issues of 4,875,000 shares at Cdn\$1 per share. US\$3 million of the capital raised was used to acquire the 20% interest in FUSA. There were share issue costs of US\$218,749 for the period.

On June 1, 2006, 800,000 stock options were exercised for proceeds of US\$728,480.

As part of the First Uranium reorganization (the "Reorganization") and initial public offering (the "Offering") in December 2006:

- the 5,675,001 issued and outstanding shares of First Uranium were split resulting in an increase in the issued and outstanding shares to 6,613,394. This split was determined based on the initial public offering issue price of Cdn\$7 per share and the agreed valuation of the assets, which was supported by a valuation assessment provided by an independent valuator;
- First Uranium issued to Simmer & Jack 26,416,295 shares valued at US\$187,495,878 for 1,196 FUL shares relating to the 80% FUSA shares previously owned by Simmer & Jack;
- First Uranium issued to Simmer & Jack 55,306,358 shares valued at US\$391,732,461 for 2,504 FUL shares relating to the 90% EMC shares previously owned by Simmer & Jack;
- First Uranium issued 29 million shares to the public at Cdn\$7 per share for gross proceeds of US\$175.5 million;
- First Uranium issued an additional 4.35 million shares at Cdn\$7 per share pursuant to the exercise of an over-allotment option granted for gross proceeds of US\$26.3 million.

Under the continuity of interests, the shares issued to Simmer & Jack for EMC and FUSA are deemed to have always been outstanding.

The share issue costs include fees payable to Investec Bank Limited of South Africa, in respect of various advisory and regulatory services provided in connection with the Offering, as well as advisory fees payable to a number of technical consultants.

11. CONTRIBUTED SURPLUS – STOCK-BASED COMPENSATION

The stock-option plan (the "Option Plan") is for employees, officers, directors and consultants that provide ongoing support to First Uranium and its subsidiaries. Under the Option Plan, options typically are granted for a period of up to ten years following the date of grant. The amounts granted usually reflect the level of responsibility of the particular optionee and his or her contributions to First Uranium.

The Board of Directors has the complete discretion to set the terms of any vesting schedule of each option granted. Except in specified circumstances, options are not assignable and non-transferable, and terminate upon the optionee ceasing to be employed or associated with First Uranium.

The terms of the Option Plan further provide that the price at which shares may be issued under the Option Plan shall not be less than the volume weighted average trading price of the shares on the TSX for the five trading days immediately preceding the day the option is granted.

The following table details the movements of contributed surplus during the year:

	2007 US\$'000	2006 US\$'000
Balance, beginning of year	27	-
Transfer to share capital surplus relating to stock options exercised	(27)	-
Stock options granted during the period	2,460	27
Balance, end of year	2,460	27

Assumptions

The fair value of shares used to calculate the compensation expense was determined as the share price on the grant date adjusted by the probability of the recipients remaining employed or associated with the Corporation until the vesting date.

For purposes of stock-based compensation, the fair values of these stock options were estimated using the Black-Scholes option pricing model with the assumptions used for the grants as follows:

	2007	2006
Expected dividend yield	0%	0%
Expected volatility of the Corporation's share price	85%	0%
Risk free interest rate – Canadian rates	3.9%	4.1%
Expected life	3 years	1 year

Due to the short history of First Uranium trading on the TSX, changes in the subjective input assumptions can materially affect the fair value estimate, and therefore, the existing model does not necessarily provide a reliable measure of the fair value of First Uranium's stock options.

During the 2006 year, 800,000 stock options were granted to directors, officers, and consultants of First Uranium with an exercise price of Cdn\$1 per share. The options fully vested on the date of grant. On June 1, 2006, the total 800,000 stock options were exercised for proceeds of US\$728,480.

During the 2007 year, 1,223,001 stock options were granted for a period of 10 years following the date of the grant and are subject to vesting within 2 years from the date of grant.

The following table is a summary of the Corporation's options granted under its stock-based compensation plan:

	Number of options		Weighted average exercise price (Cdn\$)	
	2007	2006	2007	2006
Outstanding options at beginning of year	800,000	-	1.00	-
Granted during the year	1,223,001	800,000	7.30	1.00
Exercised during the year	(800,000)	-	1.00	-
Outstanding options at end of year	1,223,001	800,000	7.30	1.00

The stock-based compensation expense recognised in the statements of expenditure and deficit is US\$2,459,569 (2006: US\$26,620). As at March 31, 2007, the aggregate unexpensed fair value of unvested stock options granted amounted to US\$2,858,354 (2006: US\$nil).

The following table summarizes information about the First Uranium's outstanding stock options at March 31, 2007:

Exercise price ranges Cdn\$	Options outstanding			Options exercisable		
	Number outstanding at Mar 31, 2007	Weighted average remaining life (years)	Weighted average exercise price (Cdn\$)	Number outstanding at Mar 31, 2007	Weighted average remaining life (years)	Weighted average exercise price (Cdn\$)
7.00 to 8.99	1,127,144	9.73	7.04	339,051	9.73	7.04
9.00 to 11.99	95,857	9.93	10.37	31,952	9.93	10.37
	1,223,001	9.74	7.30	371,003	9.74	7.33

12. FOREIGN EXCHANGE (LOSSES)/GAINS

	2007	2006
	US\$'000	US\$'000
Foreign exchange (losses)/gains	(4,612)	29

The foreign exchange losses incurred in the year ending March 31, 2007, are mainly the result of the foreign currency conversion of the net proceeds from the Offering placed by the Corporation into a South African bank account at year-end.

Pursuant to the terms of the approval granted by the South African Reserve Bank ("SARB") of the Reorganization, the Corporation was required to convert the net proceeds of the Offering into South African Rand and transfer such amount to a South African bank account within 30 days from the date of closing the Offering. Subsequent to the conversion of the funds from the Offering into South African Rand, the South African Rand weakened against the US dollar resulting in the foreign exchange loss at year-end.

13. INCOME TAXES

Provision for income taxes

The reconciliation of income taxes attributable to operations computed at the statutory tax rates to income tax recovery, using a statutory tax rate of 36.12% is as follows:

	2007	2006
	US\$'000	US\$'000
Net loss/(income) before taxation	7,928	6,857
Income tax payable at statutory rate	2,864	2,477
Difference between Canadian rates and foreign jurisdiction	(130)	(2,304)
Change in valuation allowance	(3,536)	(74)
Adjustment for future tax rate difference	612	-
Permanent differences	211	(99)
Normal taxation – current	21	-

Future income taxes

	2007	2006
	US\$'000	US\$'000
Non-capital loss carry-forwards	1,602	-
Share issue costs	6,629	46
Foreign resource expenses	1,099	-
Foreign exchange	850	95
	10,180	141
Less: Valuation allowance	(10,180)	(141)
	-	-

As at March 31, 2007, the Corporation had non-capital losses of approximately US\$4.9 million that may be applied against earnings in future years. These losses are expected to expire US\$0.5 million in 2025 and US\$4.4 million in 2027.

The Corporation has provided a full valuation allowance against future tax assets as at March 31, 2007 due to uncertainties in the Corporation's ability to utilize its net operating losses.

14. BASIC LOSS PER SHARE AND DILUTED LOSS PER SHARE

	2007	2006
Basic and diluted loss per share of (US\$)	(0.08)	(0.08)
is calculated based on net loss for the period of (US\$'000)	(7,928)	(6,857)
and a weighted average number of shares outstanding of ('000)	97,522	84,172

For the years ended March 31, 2007 and 2006, the impact of outstanding share options was excluded from the diluted share calculation because it was anti-dilutive for earnings per share purposes.

15. NOTES TO THE CASH FLOW STATEMENT

15.1 (Increase)/decrease in net amounts receivable from related parties

	2007	2006
	US\$'000	US\$'000
Increase in amounts receivable from related parties	(4,033)	(2,730)
(Decrease)/increase in amounts payable to related parties	(5,300)	5,300
Add back:		
- Interest income accrued on amounts receivable	583	-
- Interest expense accrued on amounts payable	(1,130)	-
	(9,880)	2,570

15.2 Non-cash interest income

	2007	2006
	US\$'000	US\$'000
Total interest income	3,433	-
Add back: Cash interest income	(2,767)	-
	666	-

15.3 Additions to property, plant and equipment

	2007	2006
	US\$'000	US\$'000
Total additions to property, plant and equipment	(30,968)	-
Add back:		
- Capitalized mining infrastructure	2,447	-
- Capitalized interest	969	-
- Accrued capital expenditure	3,282	-
	(24,270)	-

The capitalized mining infrastructure is the difference between the environmental rehabilitation trust fund and the environmental rehabilitation provision that were taken over from REL with the acquisition of the Ezulwini assets. See Notes 5, 6 and 9.

16. CONTRACTUAL OBLIGATIONS

	2007	2006
	US\$'000	US\$'000
Capital commitments	14,836	-
Total contractual obligations	14,836	-

The capital commitments relate to capital expenditure on the Ezulwini Mine and are payable within one year.

17. FINANCIAL INSTRUMENTS

Financial risk factors

The Corporation's activities expose it to a variety of financial risks, including the effects of changes in debt and equity market prices, foreign currency exchange rates and interest rates. The Corporation's overall risk management program focuses on the unpredictability of financial markets and seeks to minimize potential adverse

effects on the financial performance of the Corporation. The Corporation does not hedge its exposure to foreign currency exchange risk.

Risk management carried out by the Corporation is approved by the Board of Directors.

(i) Foreign exchange and commodity price risk

The Corporation does not hedge its exposure to foreign currency exchange risk nor does it hedge its exposure to commodity price fluctuation risk.

(ii) Interest rate risk

The Corporation does not hedge its exposure to interest rate risk. Deposits attract interest at rates that vary with prime. The Corporation's policy is to manage interest rate risk so that fluctuations in variable rates do not have a material impact on the statement of operations and deficit.

(iii) Credit risk

The Corporation has no significant concentrations of credit risk. The Corporation has policies in place to ensure that sales of products and services are made to customers with an appropriate credit history. The Corporation has policies that limit the amount of credit exposure to any one financial institution.

(iv) Liquidity risk

Prudent liquidity risk management implies maintaining sufficient cash and marketable securities, the availability of funding through an adequate amount of committed credit facilities and the ability to close out market positions. The Corporation manages liquidity risk through an ongoing review of future commitments and credit facilities. Cash flow forecasts are prepared and adequate utilized borrowing facilities are monitored.

Fair value estimation

The fair value of publicly traded derivatives and trading securities is based on quoted market prices at the balance sheet date.

In assessing the fair value of other financial instruments, the Corporation uses a variety of methods and makes assumptions that are based on market conditions existing at each balance sheet date. Option pricing models and estimated discounted value of future cash flows, are used to determine fair value for the remaining financial instruments.

The face value less any estimated credit adjustments for financial assets and liabilities with a maturity of less than one year are assumed to approximate their fair values. The fair value of financial liabilities for disclosure purposes is estimated by discounting the future contractual cash flows at the current market interest rate available to the Corporation for similar financial instruments.

The actual disclosed values of the financial instruments all approximate the fair values of these instruments.

18. SUBSEQUENT EVENTS

Mine Waste Solutions

The Corporation, through its wholly-owned subsidiary FUSA, acquired MWS and its subsidiary Chemwes (Proprietary) Limited on June 6, 2007, with an April 1, 2007 effective date ("the MWS Acquisition") for the equivalent of ZAR200 million (approximately \$27.5 million) to be satisfied in exchange for 3,093,980 First Uranium common shares. MWS owns and operates an existing gold mine tailings and re-processing facility adjacent to First Uranium's Buffelsfontein Tailings Recovery Project in South Africa. The MWS Acquisition closed on June 6, 2007, at which point First Uranium assumed management control of MWS. For accounting purposes, any net income from MWS operations for the period from April 1, 2007 to June 6, 2007 will be applied to reduce the cost of the MWS Acquisition.

Convertible debentures

On May 3, 2007, First Uranium completed a private placement of Cdn\$150 million aggregate principal amount of senior unsecured convertible debentures (the "Debentures") due June 30, 2012. The Debentures bear interest at a rate of 4.25% per annum payable semi-annually and are convertible into common shares of the Corporation at Cdn\$16.42 per share.

The Corporation may redeem all or a portion of the Debentures for cash at any time on or after June 30, 2010 at a redemption price equal to the principal amount of the Debentures plus accrued and unpaid interest provided that the weighted average trading price of the common shares of the Corporation on the TSX for the 20 consecutive days prior to the notice of redemption is 130% of the conversion price.

The Corporation at its option, and subject to regulatory approval, may satisfy its obligations to repay the Debentures upon redemption or maturity by issuing freely tradeable common shares at a price per share equal to 95% of the weighted average trading price of the common shares of the Corporation on the TSX for the 20 consecutive days ending five trading days before the date fixed for redemption or maturity, as the case may be.

Holders of the Debentures may require the Corporation to repurchase the Debentures if there is an acquisition of voting control or direction of at least 50.1% of the aggregate voting rights attached to the common shares outstanding at the relevant time by any person or group of persons acting jointly or in concert at par plus accrued and unpaid dividends. If such an event occurs and it results from a transaction in respect of which the consideration for the common shares is or can be received partially in cash, holders of the Debentures may, prior to completion of the offer to purchase for all Debentures, elect to convert their Debentures and receive, in addition to the number of common shares they otherwise would have been entitled to receive on conversion, an additional number of common shares which will vary depending upon the effective date and the share price.

The proceeds from the sale of the Debentures, net of underwriters' fees and other expenses of \$136.6 million, are held in Canadian dollars. The approval of the SARB to the sale of the Debentures included a condition that the Corporation transfer the Debentures net proceeds and convert the funds to South African Rand by May 3, 2008.

19. RELATED PARTY TRANSACTIONS AND COMMITMENTS

	2007 US\$'000	2006 US\$'000
Related party balances		
FUSA receivable from Simmer & Jack	5,079	2,730
First Uranium advance to Simmer & Jack	1,684	-
EMC payable to Simmer & Jack	-	(5,300)
	6,763	(2,570)
Related party transactions		
Management fees paid to Simmer & Jack	(2,639)	(798)
Fees paid to empowerment company	(53)	-
Interest paid to Simmer & Jack by EMC	(1,130)	-
Interest received from Simmer & Jack by FUSA	583	-

Prior to December 2006, the Corporation shared its premises with other companies, including Simmer & Jack, which had common management and directors and reimbursed the related companies for its proportional share of expenses or was reimbursed by the related companies for their proportional expenses. During the year ended March 31, 2007, the Corporation was charged \$575,665 (2006: \$368,599) for consulting services provided by related directors, officers and consultants of the Corporation.

The inter-company receivable between Simmer & Jack and FUSA and payable between Simmer & Jack and EMC bears interest at South African prime rate. The inter-company advance to Simmer & Jack by FUC bears no interest. All the inter-company receivables, payables and advances are due by June 30, 2007.

Subsequent to the Reorganization and the Offering in December 2006, Simmer & Jack had a 67.2% shareholding in First Uranium. Prior to the Reorganization, Simmer & Jack held directly 70% in FUSA and 90% in EMC.

On December 20, 2006 First Uranium and Simmer & Jack entered into a corporate opportunity agreement (the "Corporate Opportunity Agreement"), a maintenance agreement (the "Maintenance Agreement") and a shared services agreement (the "Shared Services Agreement").

Pursuant to the terms of the Shared Services Agreement, First Uranium may retain certain services to be provided by Simmer & Jack, including project management and technical services, cash management and investment services, accounting, treasury and financial services, corporate secretarial services and human resources and staffing services, including payroll and benefits administration, and such other services as may be required by First Uranium and which Simmer & Jack is able and willing to provide. The 2007 expense relates to such services received, together with those provided prior to December 2006. Fees paid to Simmer & Jack in the amount of \$2

million were capitalized in 2007, representing services provided in respect of technical services for the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project.

In addition, First Uranium has agreed to reimburse Simmer & Jack with respect to 50% of fees (to a maximum of ZAR125,000 per month) that Simmer & Jack is required to pay to an empowerment company for consulting services regarding transformation, human resources and occupational health and safety. BJ Njenje, AX Sisulu and SLB Mapisa, shareholders of the empowerment company, are also directors of Simmer & Jack.

Waterpan Mining Consortium ("Waterpan") currently holds a 10% shareholding in EMC. On December 20, 2006, Waterpan, FUL and the Corporation entered into a purchase agreement (the "Waterpan Purchase Agreement") pursuant to which Waterpan agreed to sell its shares in EMC to FUL and as consideration for such sale, First Uranium will issue 6,141,009 common shares of First Uranium to Waterpan (the "Waterpan Shares"). The closing of the transaction is subject to approval of the South African Reserve Bank. Pursuant to the Waterpan Purchase Agreement, Waterpan has agreed not to sell or transfer 90% of the Waterpan Shares for a period of two years from the date of issuance and 100% of the Waterpan shares will be subject to a lock-up until June 18, 2007. One shareholder of Waterpan is a director of EMC, two other shareholders of Waterpan are officers and/or employees of First Uranium and EMC.

20. SEGMENTED INFORMATION

Segmented information is presented in respect of the Corporation's business and geographical segments. The primary format business segments, is based on the Corporation's management and internal reporting structure.

Inter-segment reporting is determined on an arm's length basis.

Segment results, assets and liabilities include items directly attributable to a segment as well as those that can be allocated on a reasonable basis. Unallocated items comprise mainly income earning assets and revenue, interest-bearing loans, borrowing and expenses, and corporate assets and expenses. Segment capital expenditure is the total cost incurred during the period to acquire segment assets that are expected to be used for more than one period.

FIRST URANIUM CORPORATION
MANAGEMENT DISCUSSION AND ANALYSIS

Management's Discussion and Analysis of Consolidated Financial Condition and Results of Operations

for the years ended March 31, 2007 and March 31, 2006

Set out below is a review of the activities, consolidated results of operations and financial condition of First Uranium Corporation and its subsidiaries ("First Uranium" or the "Corporation") for the years ended March 31, 2007 ("Fiscal 2007") and March 31, 2006 ("Fiscal 2006"), together with certain trends and factors that are expected to have an impact in the future. This management's discussion and analysis of the consolidated financial position and results of operations ("MD&A") should be read in conjunction with the Corporation's audited consolidated financial statements for the year ended March 31, 2007 and the notes thereto which have been prepared in accordance with Canadian generally accepted accounting principles ("Canadian GAAP"). Information contained in this MD&A is current as of June 13, 2007.

The reporting currency for the Corporation is the US Dollar, and all amounts in the following discussion are in US Dollars ("\$"), except where otherwise indicated.

This MD&A includes certain forward-looking statements. Please read the cautionary note at the end of this document.

Overall Performance

Highlights

During Fiscal 2007, First Uranium:

- Completed the Company's initial public offering in December 2006 on the Toronto Stock Exchange, raising gross proceeds of \$201.8 million
- Commenced underground development at the Ezulwini Mine in February 2007 (two months ahead of schedule)
- Completed an evaluation to optimize uranium recovery using pressure leaching at the Buffelsfontein tailings recovery project
- Ended Fiscal 2007 with cash and cash equivalents of \$138.9 million
- Incurred a net loss of \$7.9 million
- Invested \$24.3 million to develop the Ezulwini Mine and the Buffelsfontein tailings recovery project
- Completed a secondary listing on the Johannesburg Stock Exchange

Subsequent to the end of Fiscal 2007, First Uranium:

- Raised gross proceeds of Cdn\$150 million through an issue of senior unsecured convertible debentures
- Filed revised technical reports for each of the Ezulwini Mine and the Buffelsfontein tailings recovery project, which improved their NPV and IRR reflecting the accelerated timetables of both projects
- Accelerated capital investment at the Ezulwini Mine to advance by three months plant commissioning and production startup
- Acquired Mine Waste Solutions (Proprietary) Limited to advance the Buffelsfontein tailings recovery project
- Received acceptance by the South African Department of Mines and Energy for a prospecting permit application on incremental ground contiguous to the Ezulwini Mine
- Added a Chief Financial Officer and an Executive Vice-President, Compliance to round out the executive management team

Overview

First Uranium is a Canadian resource company focused on the development of uranium and gold projects in South Africa. The Corporation's goal is to become a significant producer of uranium and gold through the re-opening and development of the Ezulwini underground mine and the construction of the Buffelsfontein tailings recovery project. To expand its

production profile, First Uranium plans to continue to identify and acquire additional uranium projects.

The common shares of First Uranium were listed on the Toronto Stock Exchange (the "TSX") on December 20, 2006. In addition, First Uranium listed its common shares on the Johannesburg Stock Exchange ("JSE") on March 30, 2007, in satisfaction of the conditions of the approval of the South African Reserve Bank ("SARB") to the transfer by Simmer and Jack Mines, Limited ("Simmer & Jack") of its ownership in First Uranium (Proprietary) Limited ("FUSA") and Ezulwini Mining Company (Proprietary) Limited ("EMC") to First Uranium. FUSA has an agreement to acquire surface tailings from Buffelsfontein Gold Mines Limited ("BGM"), a subsidiary of Simmer & Jack, and intends to develop and construct a facility for processing the uranium and gold contained in these surface tailings as well as the tailings from the ongoing gold mining operations at BGM's underground gold mine (the "Buffelsfontein Tailings Recovery Project"). EMC owns a previously operated underground uranium and gold mine near Westonaria (the "Ezulwini Mine").

First Uranium was incorporated on September 22, 2005 under the *Business Corporations Act* (Ontario) and on December 15, 2006 was continued under the *Business Corporations Act* (British Columbia).

Simmer & Jack and First Uranium entered into an agreement in December 2005 that was subsequently amended in October 2006, pursuant to which First Uranium acquired a 20% equity interest in FUSA .

In December 2006, First Uranium raised funds from the public offering of 33,350,000 common shares at Cdn\$7.00 per share for gross proceeds of \$201.8 million (the "Offering"). Concurrently with the Offering, First Uranium acquired from Simmer & Jack pursuant to a reorganization (the "Reorganization") of certain additional assets, including the remaining 80% equity interest in FUSA and a 90% equity interest in EMC in exchange for 81,722,653 common shares of First Uranium. As at March 31, 2007, Simmer & Jack owned 67.2% of First Uranium's common shares.

The proceeds of the Offering, net of underwriting fees and expenses related to the Offering, were \$177.7 million. The balance of the funds raised from the Offering and a portion of the proceeds from the issuance on May 3, 2007 of Cdn\$150 million of 4.25% senior unsecured convertible debentures (the "Debentures") due June 30, 2012 are being used to: (i) reopen, develop and rebuild the Ezulwini Mine and (ii) to develop the Buffelsfontein Tailings Recovery Project. First Uranium also intends to seek additional uranium opportunities.

Financial Overview

First Uranium is a development stage company and does not currently generate operating revenue from mining operations.

As at March 31, 2007, the Corporation had cash of \$138.9 million (\$0.6 million in Fiscal 2006). With the combined capital resources of cash and cash equivalents, the proceeds from the Debentures and anticipated revenue from future sales of uranium and gold, the Corporation currently believes that it is fully funded to develop its two existing mining projects and advance them to full production as currently planned by 2010.

In setting up the Corporation and starting to prepare its two uranium and gold projects for production, First Uranium incurred a net loss of \$7.9 million for Fiscal 2007.

As at March 31, 2007 First Uranium had total assets of \$181.4 million, total liabilities of \$11.1 million and shareholders' equity of \$170.3 million.

Operations

Ezulwini Mine

The Corporation is in the process of re-commissioning the Ezulwini Mine located approximately 40 kilometres from Johannesburg on the outskirts of the town of Westonaria in Gauteng Province, South Africa. Recommissioning activities, which involve the refurbishment of the shaft and construction of the gold and uranium plants, began in earnest in December 2006, subsequent to the successful completion of the Offering. EMC owns certain surface and underground assets, acquired from Randfontein Estates Limited ("REL"), a wholly-owned subsidiary of Harmony Gold Mining Company Limited, related to the Ezulwini Mine, including two shaft headgears and four hoists, fans, compressors, generators and underground equipment as well as the necessary surface freehold required to operate the mine.

Simmer & Jack is the registered owner of the Ezulwini mining right. On December 20, 2006, EMC and Simmer & Jack entered into an agreement (the "Ezulwini Mining Right Agreement") pursuant to which Simmer & Jack agreed to take all necessary steps to obtain all ministerial approval in order to effect the ceding of the Ezulwini mining right from Simmer & Jack to EMC. The Corporation expects the transfer of the Ezulwini mining right to be completed in due course. EMC continues with the ongoing water pumping required to keep the Ezulwini Mine dry and the pre-construction planning and structural work necessary for the project to the extent permitted by law.

Scott Wilson RPA prepared a preliminary economic assessment of the Ezulwini Mine for First Uranium in connection with the Offering which was subsequently updated in a technical report dated May 9, 2007 (the "Ezulwini Report"), which incorporates the latest developments in respect of permitting/mining rights, changes to the mineral resource estimate, ongoing process selection and capital and operating forecasts. As a result, the net present value ("NPV") of the Ezulwini Mine improved by 29% or \$74 million, from \$258 million to \$332 million and the IRR improved by 6%, from 26% to 32%. Although these improvements are primarily the reflection of the increase in the long-term price assumption for uranium from \$40 per pound to \$50 per pound, the NPV of the Ezulwini Mine also increased due to the investment of pre-production capital at a faster rate than originally planned, which results in an accelerated schedule for planned uranium and gold production. The improved NPV assumes the original discount rate of 8% and a gold price of \$500 per ounce and excludes sunk capital costs.

The Ezulwini Report also projects a \$24.2 million increase in metallurgical plant costs from \$88.6 million to \$112.8 million, due to higher than expected increases in the cost of steel and cement caused by an industry-wide construction boom. The contingency has been reduced by \$13.1 million from \$44.1 million to \$31.0 million due to confirmation of firm pricing, thus increasing the level of confidence in the capital estimates.

The results of the Ezulwini Report include a net reduction of the shaft pillar gold mineral resource in the Upper Elsberg reef of 122,000 ounces; however, it will not have an impact on the project economics as the mill feed can be made up from other resource areas.

Due to the excellent condition of the stopes, an accelerated schedule for mining the Middle Elsberg uranium and gold reef at Ezulwini Mine is planned. The increased uranium production rate will also enable EMC to leverage the strong uranium pricing fundamentals.

The following tables show the mineral resource statements for the Ezulwini Mine as of July 2006 and the revised mineral resource statement as of January 2007, which incorporates the results of an additional 22 drill holes in the shaft pillar area of the Upper Elsberg reef.

RESOURCE STATEMENT (as of July 2006)

	Tonnes (000s)	Grade		Content	
		Gold (g/t)	U ₃ O ₈ (%)	Gold (oz 000s)	U ₃ O ₈ (lb 000s)
Measured					
UE Shaft Pillar	2,101	7.7	-	520	-
Middle Elsburg	2,450	4.9	0.072	384	3,888
Total	4,551	6.2	n/a	904	3,888
Indicated					
UE Shaft Pillar	4,586	6.1	-	900	-
Middle Elsburg	1,370	5.8	0.095	257	2,880

7. This mineral resource statement has been prepared in accordance with NI 43-101. Wayne Valliant, P. Geo. of Scott Wilson Roscoe Pastle Associates Inc., is a "qualified person" under NI 43-101, independent of First Uranium and responsible for the mineral resource estimates.

An accelerated schedule for commissioning all modules of the gold and uranium plants is also planned, resulting in an accelerated capital investment profile, which will provide the flexibility sooner to significantly increase uranium production if and when market pricing dictates. EMC will use construction contractors until all phases of the mill and plants are completed. The Corporation estimates that \$271 million of capital will be required for the Ezulwini project, \$193 million of which is expected to be invested in the first four years of the project.

The following table depicts the revised planned production from April 2007 through to March 2015:

	From April To March	2007	2008	2009	2010	2011	2012	2013	2014	2015
	Report Date	2008	2009	2010	2011	2012	2013	2014	2015	
Gold ore 000s tonnes	Dec 2006	92	196	736	1,186	1,243	1,091	759	806	
	May 2007	93	196	736	1,186	1,243	1,091	759	806	
Uranium ore 000s tonnes	Dec 2006	-	-	800	969	892	1,077	981	951	
	May 2007	-	410	725	784	943	1,077	981	951	
Recovered gold 000s oz	Dec 2006	17.2	50.3	251.7	363.0	364.9	334.1	247.2	246.9	
	May 2007	17.8	98.6	242.9	341.3	370.5	334.1	247.2	246.9	
Recovered uranium 000s lbs	Dec 2006	-	-	662.6	804.7	750.4	929.1	893.2	895.8	
	May 2007	-	335.5	602.6	652.3	793.4	929.1	893.2	895.8	

Mining at the Ezulwini Mine is planned to commence in the third quarter of the year ending March 31, 2008, the first gold plant module is scheduled for completion in April 2008 (accelerating the previously disclosed planned dates for production by three months) and the first uranium plant module is scheduled for completion in June 2008. The average annual production at Ezulwini for the life of the project (2007-2024) is expected to be 290,000 ounces of gold and 888,000 pounds of uranium (U₃O₈).

The above economic analysis is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as mineral reserves. There is no certainty that the reserves development, production and economic forecasts on which this preliminary assessment is based, will be realized.

Buffelsfontein Tailings Recovery Project

The Buffelsfontein Tailings Recovery Project is a proposed uranium and gold tailings recovery operation located in the Western portion of the Witwatersrand Basin approximately 160 kilometres from Johannesburg. FUSA plans to conduct hydraulic mining of tailings dams on the Buffelsfontein property using high pressure water canons to slurry the tailings which will then be pumped to processing plants for the recovery of uranium and gold. FUSA had planned to process the tailings from the ongoing mining operations at a plant to be located at the nearby Buffelsfontein underground mine owned and operated by BGM, however, subsequent to year-end, the Corporation entered into an agreement to acquire Mine Waste Solutions (Proprietary) Limited and its subsidiary Chemwes (Proprietary) Limited (collectively, "MWS"), which includes an operating gold mine tailings and re-processing facility adjacent to First Uranium's Buffelsfontein Tailings Recovery Project and three additional tailings dams (the "MWS Acquisition"). First Uranium acquired MWS for 3,093,980 of the Corporation's common shares in full consideration of the purchase price. With this acquisition, the mined tailings from Buffelsfontein will be moved by a new pipeline to the MWS plant, which will be expanded to replace the plant originally planned at the Buffelsfontein mine site. As well, the Corporation proposes to acquire three small additional tailings dams from BGM (the "Additional Dams Acquisition").

BGM held an old order mining right in respect of mining gold at the BGM underground mine, which did not cover the recovery of the gold and uranium in the tailings dams at Buffelsfontein. On June 4, 2007, the South African Department of Mines and Energy (the "DME") granted to BGM a prospecting right with respect to uranium and other minerals in the Buffelsfontein property and tailings dumps, subject to certain conditions which BGM expects to satisfy in due course. BGM has also filed with the DME an application to convert its old order mining right for BGM into a new order mining right. If and when this conversion application is approved, BGM intends to file with the DME one or more applications (which, together with the foregoing conversion application, are collectively referred to herein as the "Buffelsfontein Conversion Application") to: (i) amend, with effect from the date of conversion, the new order mining right to include the authority to mine for uranium underground and for gold, uranium and other minerals in respect of the tailings; (ii) divide the new order mining right, if granted, into two separate new order mining rights — one in respect of the mining for gold, uranium and other minerals at the BGM underground mine and the other, the Buffelsfontein Tailings Mining Right, in respect of the

mining of the gold and uranium in the Buffelsfontein tailings dams; and (iii) cede the Buffelsfontein Tailings Mining Right, if granted, to FUSA.

On December 20, 2006, FUSA, BGM and Simmer & Jack entered into an agreement (the "Buffelsfontein Tailings and Rights Agreement") pursuant to which, among other things: (i) BGM agreed to take all necessary steps to obtain all ministerial approvals required for the items requested in the Buffelsfontein Conversion Application in order to effect the transfer of the Buffelsfontein Tailings Mining Right to FUSA as soon as possible; and (ii) BGM agreed to sell to FUSA upon FUSA's receipt of the Buffelsfontein Tailings Mining Right, the Buffelsfontein tailings dams as well as certain property required for construction of the proposed processing plants, and grant to FUSA a right to the tailings arising from BGM's ongoing mining operations at its Buffelsfontein underground mine. In exchange for the above mentioned rights, FUSA will be required to (i) pay a nominal consideration of \$13.50 to BGM; (ii) assume the rehabilitation obligation relating to the dams; and (iii) pay to BGM, a 1% royalty plus value-added tax of the gross revenue accrued by FUSA from the sale of uranium, gold and any other minerals recovered from the tailings. In addition, FUSA will be responsible for making payments to Aberdeen International Inc. in respect of a net smelter royalty on all gold produced from the Buffelsfontein Tailings Recovery Project on a graduated basis with reference to the price of gold. For a more detailed discussion of these arrangements, reference should be made to the Corporation's Annual Information Form.

Scott Wilson Roscoe Postle Associates Inc. ("Scott Wilson RPA") prepared a preliminary economic assessment of the Buffelsfontein Tailings Recovery Project for First Uranium in connection with the Offering which was revised in January 2007 to incorporate the results of ongoing process selection work and to demonstrate the impact of this work on the preliminary economic assessment. The results of the preliminary assessment as revised are contained in a technical report dated January 31, 2007 (the "Prior Buffels Report"). The Prior Buffels Report was subsequently revised, incorporating the MWS Acquisition and the Additional Dams Acquisition, and reported in a technical report dated May 22, 2007 (the "Revised Buffels Report"). In addition, to better reflect the current uranium pricing environment, the assumed price per pound of uranium has been increased from \$40 to \$50 from the assumption in the Prior Buffels Report.

According to the Revised Buffels Report, the projected net present value ("NPV") of the Buffelsfontein Tailings Recovery Project (assuming the completion of the Additional Dams Acquisition and a discount rate of 8%) is \$295 million with a projected internal rate of return ("IRR") of 69% (as compared to \$211 million and 39%, respectively, as disclosed in the Prior Buffels Report). The incorporation of the MWS Acquisition and the Additional Dams Acquisition into the Buffelsfontein Tailings Recovery Project accounted for an increase in the projected NPV and IRR to \$237 million and 57% respectively as compared to the Prior Buffels Report. In addition, according to the Revised Buffels Report, the increase in the uranium price assumption resulted in an increase in the projected NPV from \$237 million to \$295 million and in the projected IRR from 57% to 69%.

The first of the following two tables reflects the original mineral resource statement for the Buffelsfontein Tailings Recovery Project as of April 2006, excluding the MWS Acquisition and the proposed Additional Dams Acquisition.

The second table reflects the revised mineral resource statement for the Buffelsfontein Tailings Recovery Project as per the Revised Buffels Report of May 22, 2007, adjusted for the MWS Acquisition and the proposed Additional Dams Acquisition.

ORIGINAL RESOURCE STATEMENT (as of April 2006)

	Tonnes (000s)	Grade		Content

Notes:

1. CIM definitions were followed for mineral resources.
2. A zero grade cut-off grade was used.
3. Rows and columns may not add exactly due to rounding.
4. Preliminary metallurgical test results indicate that recoveries will be approximately 27% for uranium and 68% for gold.
5. Mineral resources that are not mineral reserves do not have demonstrated economic viability.
6. Harties - Flanagan, Harties - Ellaton and Harties - NKGE are the three tailings dams proposed to be acquired by First Uranium pursuant to the Additional Dams Acquisition.
7. This mineral resource statement has been prepared in accordance with NI 43-101. Wayne Valliant, P. Geo. of Scott Wilson Roscoe Postle Associates Inc., is a "qualified person" under NI 43-101, independent of First Uranium and responsible for the mineral resource estimates.

While the MWS Dam 5 resource is included in the revised resource statement, it has not been included in the economic analysis on the Buffelsfontein Tailings Recovery Project.

With the MWS resources included and better defined, the life of the Buffelsfontein Tailings Recovery Project is now estimated to be 16 years.

As the Corporation allocates the Buffelsfontein Tailings Recovery Project's projected cash costs in proportion to the projected revenue contribution from each product and the Corporation is assuming higher uranium prices and revenues, the Corporation expects that on a co-product basis, the cash cost of gold should be \$220 per ounce and the cash cost of uranium should be \$22.05 per pound.

The Corporation acquired MWS on June 6, 2007 with an April 1, 2007 effective date. The MWS Acquisition closed on June 6, 2007, at which point First Uranium assumed management control of MWS. For accounting purposes, any net income from MWS for the period from April 1, 2007 to June 6, 2007 will be applied to reduce the cost of the MWS Acquisition. Uranium production from the first two of three uranium plant modules is scheduled to commence in November 2008. The average annual production for the life of the Buffelsfontein Tailings Recovery Project (March 2007 to April 2023) is expected to be 128,000 ounces of gold and 922,000 pounds of uranium.

The preparation of a pre-feasibility study for the Buffelsfontein Tailings Recovery Project is planned to start immediately.

The above economic analysis is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as mineral reserves. There is no certainty that the reserves development, production and economic forecasts on which this preliminary assessment is based, will be realized.

Technical Disclosure

All technical disclosure in this MD&A relating to the Buffelsfontein Tailings Recovery Project is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Buffelsfontein Project, Northwest Province, Republic of South Africa" (the "Buffelsfontein Technical Report") originally submitted on November 8, 2006, revised on December 5, 2006, revised on January 31, 2007 and further revised on May 22, 2007. All technical disclosure in this MD&A relating to the Ezulwini Mine is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa" (the "Ezulwini Report") originally submitted on November 8, 2006, revised on December 5, 2006, and further revised on May 9, 2007 prepared in accordance with NI 43-101. The Buffelsfontein Technical Report and the Ezulwini Report were prepared by R. Dennis Bergen, P. Eng. and Wayne Valliant, P. Geo of Scott Wilson Roscoe Postle Associates Inc., each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium. The technical disclosure contained in this MD&A has been reviewed and approved by Mr. Bergen and Mr. Valiant.

Selected Financial Information

The following table sets out selected financial information relating to First Uranium for the fiscal years ended March 31, 2007 and 2006. This financial data is derived from the Corporation's audited consolidated financial statements, which are prepared in accordance with Canadian GAAP.

Selected Consolidated Financial Information (in 000s of US Dollars, except per share amounts)	For the year ended March 31, 2007 \$000	For the year ended March 31, 2006 \$000
Statement of Expenditure and Deficit		
Net loss	(7,928)	(6,857)
Net loss per share - basic and diluted	(0.08)	(0.08)
Balance Sheet		
Total assets	181,427	3,433
Current liabilities	(5,702)	(6,087)
Non-current liabilities	(5,377)	-
Share capital	(182,673)	(4,176)
Contributed surplus	(2,460)	(27)
Deficit	14,785	6,857

Dividend Policy

There are no restrictions in First Uranium's constating documents that would restrict or prevent First Uranium from paying dividends. Management, however, does not contemplate

that any dividends will be paid on any shares of First Uranium in the immediate future, as it is anticipated that all available capital will be reinvested to finance the growth of the Corporation's business. Any decision to pay dividends on common shares in the future will be made by the First Uranium Board of Directors on the basis of the earnings, financial requirements and other conditions existing at such time and will be subject to the restrictions imposed by the terms of the indenture governing the Debentures. As at March 31, 2007 First Uranium has declared no dividends.

Results of Operations

Expenditures

First Uranium is in a capital project development phase and did not generate any operating revenues from inception to March 31, 2007.

Expenditures for Fiscal 2007 were \$6.6 million (Fiscal 2006: \$6.9 million).

The expenditures for Fiscal 2007 include fees of \$2.2 million (Fiscal 2006: \$1.5 million) for consulting contract arrangements with persons and legal entities, principally to majority shareholder, Simmer & Jack, to provide services as officers and management to the Corporation. The higher expenditures in Fiscal 2007 resulted primarily from an increase in services provided and a longer period of activity of 12 months compared to 6 months in Fiscal 2006.

In anticipation of the Offering, the existing consulting contracts were terminated effective November 2006 and a Shared Services Agreement executed with Simmer & Jack. Since then, First Uranium has filled key management positions, including President and Chief Executive Officer, Chief Operating Officer and Chief Financial Officer and is in the process of hiring additional employees to manage and operate the Corporation's projects.

In addition to consulting and management fees, First Uranium's expenses included general and administrative expenses of \$1.0 million during Fiscal 2007 (Fiscal 2006: \$0.3 million). The year-over-year increase reflects the hiring of management and the cost of setting up the Corporation's offices in Johannesburg and Toronto.

First Uranium also recognized a stock-based compensation expense of \$2.5 million during Fiscal 2007 (Fiscal 2006: Nil). The expense relates to the grant of 1,223,001 stock options to the directors, officers, employees and consultants. The fair value of the stock-based compensation was estimated using the Black-Scholes option pricing model.

Expenditures also include pumping and feasibility costs of \$0.8 million during Fiscal 2007 (Fiscal 2006: \$5.1 million). These costs relate to the care and maintenance of the Ezulwini Mine. The year-over-year decrease is the result of the pumping and feasibility costs of \$1.6 million being capitalized, as part of mine infrastructure costs, from the end of May 2006, when the DME granted the mining right to Simmer & Jack, its 90% shareholder at that time.

The Corporation earned interest income of \$3.4 million during Fiscal 2007 (Fiscal 2006: Nil). The interest income was primarily earned on the net proceeds from the Offering.

The interest expense of \$0.2 million during Fiscal 2007 (Fiscal 2006: \$Nil) consists of the non-capital portion of interest paid by EMC on the loan payable to Simmer & Jack. An additional \$1.0 million of interest was capitalized in Fiscal 2007.

The foreign exchange loss of \$4.6 million during Fiscal 2007 is mainly the result of moving the net proceeds (in Canadian dollars) from the Offering into a South African bank account at year-end and converting them into South African rand, which was a condition of the approval granted by SARB for the Reorganization. The Corporation was required to convert the net proceeds of the Offering into South African rand and transfer such amount to a South African bank account within 30 days from the date of closing the Offering. Subsequent to the

conversion of the funds from the Offering into South African rand, the South African rand weakened against the US dollar resulting in the foreign exchange loss.

Use of proceeds from the Offering

In the final prospectus dated December 12, 2006 filed by First Uranium in connection with the Offering (the "Final Prospectus"), First Uranium provided the following disclosure as to the anticipated uses of the estimated \$162.6 million net proceeds (after deducting the applicable underwriters' commission of \$10.5 million and estimated offering expenses of \$2.4 million) from the sale of 29 million common shares by First Uranium to the public pursuant to the Offering:

- Development of the Ezulwini Mine - \$77.2 million
- Development of the Buffelsfontein Tailings Recovery Project - \$53.6 million
- Repayment of indebtedness owed by EMC to Simmer & Jack - \$18.3 million
- Repayment of the purchase price for the Ezulwini Mine assets under the REL Purchase Agreement - \$7.7 million
- Decrease in working capital plus general corporate costs - \$5.8 million

The estimated \$162.6 million net proceeds from the Offering and the above estimated uses of such proceeds as disclosed in First Uranium's Final Prospectus specifically did not include any proceeds received by First Uranium from the exercise of the over-allotment option granted to the underwriters. On December 29, 2006 the underwriters exercised the over-allotment option in full in respect of the sale of an additional 4.35 million shares of First Uranium and First Uranium received additional net proceeds as a result of approximately \$24.7 million (after deducting the applicable underwriters' commission of \$1.6 million).

Of the total net proceeds of \$179.6 million received by First Uranium pursuant to the Offering (after deducting total underwriters' commission of \$22.2 million), \$40.7 million had been spent as at March 31, 2007 as follows (resulting in \$138.9 million of the net proceeds on hand as at March 31, 2007):

- Development of the Ezulwini Mine - \$19.3 million
- Development of the Buffelsfontein Tailings Recovery Project - \$1.5 million
- Repayment of indebtedness owed by EMC to Simmer & Jack - \$14.1 million
- Repayment of the purchase price for the Ezulwini Mine assets under the REL Purchase Agreement - \$8.9 million
- Expenses of the Offering - \$5.5 million
- Increase in working capital less general corporate costs - \$8.6 million

While only a portion of the net proceeds of the Offering had been applied as at March 31, 2007, First Uranium is not aware of any notable variances between the estimated and actual uses of proceeds other than higher than anticipated expenses of the Offering which was primarily the result of the payment of \$7.0 million to Investec Bank Limited in respect of the various South African advisory and regulatory services it provided in connection with the Offering as well as advisory fees of \$1.2 million payable to a number of technical consultants, which amounts were not factored into the estimated expenses set out in the Final Prospectus. First Uranium believes that the net proceeds of the Offering, in addition to the \$136.6 million (net of underwriters' fees and other expenses) raised in May 2007 from the Debentures, are sufficient to fund its plans regarding the near-term development of the Ezulwini Mine and Buffelsfontein Tailings Recovery Project.

While First Uranium intends to apply the net proceeds of the Offering approximately as set out in the Final Prospectus and above, such uses are by definition based on estimates and assumptions and are subject to variance. In addition, there may be circumstances where, for sound business reasons, a re-allocation of the funds may be necessary or advisable.

Net loss

First Uranium incurred a net loss of \$7.9 million during Fiscal 2007 (Fiscal 2006: loss of \$6.9 million). The loss for the period reflects that the Corporation is not yet generating revenue while incurring expenses relating to the development of the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project, the establishment of First Uranium's corporate offices and general and administrative expenses.

Cash flows

Cash utilized in operating activities was \$15.7 million during Fiscal 2007 (Fiscal 2006: \$3.6 million). The increase in cash utilized by operations was mainly the result of increased expenditures as well as the net cash movement on the related party loans.

At March 31, 2007, Simmer & Jack held \$5.9 million of cash on behalf of First Uranium and its subsidiaries. The net proceeds from the Offering and the cash from the issue of shares to the Corporation's subsidiaries were temporarily held by Simmer & Jack while the Corporation was still in the process of setting up separate bank accounts for itself and its subsidiaries. These bank accounts were opened very close to the Fiscal 2007 year-end and due to closing the accounts and inter-company account transactions at the Fiscal 2007 year-end, it resulted in an advance to Simmer & Jack from First Uranium and receivables from Simmer & Jack to FUSA of \$1.6 million and \$5.1 million, respectively. EMC settled its payables to Simmer & Jack during Fiscal 2007 through the issue of shares by First Uranium to EMC.

Investing activities utilized \$24.4 million during Fiscal 2007 (Fiscal 2006: \$Nil), consisting mainly of additions to property, plant and equipment relating to the Ezulwini Mine of \$23.7 million (Fiscal 2006: \$Nil).

First Uranium raised net cash of \$178.5 million during Fiscal 2007 (Fiscal 2006: \$4.2) through its financing activities, of which \$177.7 million relate to the gross proceeds of \$201.8 million raised through the issue by First Uranium of 33.35 million common shares at Cdn\$7.00 per share to the public.

Subsequent to the end of Fiscal 2007 on May 3, 2007, the Corporation completed the private placement of Cdn\$150 million aggregate principal amount of Debentures due June 30, 2012. The Debentures bear interest at a rate of 4.25% per annum payable semi-annually and are convertible into common shares of First Uranium at Cdn\$16.42 per share.

The Corporation may redeem all or a portion of the Debentures for cash at any time on or after June 30, 2010 at a redemption price equal to the principal amount of the Debentures plus accrued and unpaid interest provided that the weighted average trading price of the common shares of the Corporation on the TSX for the 20 consecutive days prior to the notice of redemption is 130% of the conversion price.

The Corporation at its option, and subject to regulatory approval, may satisfy its obligations to repay the Debentures upon redemption or maturity by issuing freely-tradeable common shares at a price per share equal to 95% of the weighted average trading price of the common shares of the Corporation on the TSX for the 20 consecutive days ending five trading days before the date fixed for redemption or maturity, as the case may be.

Holders of the Debentures may require the Corporation to repurchase the Debentures if there is an acquisition of voting control or direction of at least 50.1% of the aggregate voting rights attached to the common shares outstanding at the relevant time by any person or group of persons acting jointly or in concert at a par plus accrued and unpaid dividends. If such an event occurs and it results from a transaction in respect of which the consideration for the common shares is or can be received partially in cash, holders of the Debentures may, prior to completion of the offer to purchase for all Debentures, elect to convert their Debentures and receive, in addition to the number of common shares they otherwise would

have been entitled to receive on conversion, an additional number of common shares which will vary depending upon the effective date and the share price.

The proceeds from the sale of the Debentures, net of underwriters' fees and costs of the offering, are held in Canadian dollars. The approval of SARB to the sale of the Debentures included a condition that the Corporation transfer the net proceeds of the Debentures into South Africa and convert the funds to South African rand by May 3, 2008.

Financial Position and Liquidity

Cash and non-cash assets

Cash and cash equivalent balances available at March 31, 2007 increased by \$138.3 million to \$138.9 million (March 31, 2006: \$0.6 million), primarily as a result of the net proceeds of the Offering.

Accounts receivable was \$1.7 million at March 31, 2007 (March 31, 2006: \$0.1 million) primarily comprised of a value-added tax refund..

The amounts receivable from a related party increased by \$4.0 million to \$6.8 million, primarily as a result of the cash held by Simmer & Jack while the Corporation was still in the process of setting up separate bank accounts for itself and its subsidiaries, as described above.

Non-current assets increased to \$33.7 million at March 31, 2007 (March 31, 2006: Nil), mainly as a result of the additions to property, plant and equipment by EMC. The costs include pumping costs capitalized and the acquisition of certain surface and underground assets.

Investing activities

Prior to the completion of the Offering, First Uranium owned a 20% shareholding in FUSA. First Uranium Limited ("FUL") was incorporated under the laws of Cyprus and is a wholly-owned subsidiary of First Uranium. First Uranium transferred its direct interest in FUSA to FUL a Cypriot company wholly-owned by First Uranium. The remaining 80% equity interest in FUSA was acquired by FUL from Simmer & Jack in consideration for 26.4 million common shares of First Uranium.

FUL also acquired the remaining 90% equity interest in EMC from Simmer & Jack in consideration for 55.3 million common shares of First Uranium.

Total Liabilities

As of March 31, 2007, First Uranium had total liabilities of \$11.1 million (March 31, 2006: \$6.1 million), consisting of accounts payable and accrued charges of \$5.7 million (March 31, 2006: \$0.8 million). EMC has fully settled the \$5.3 million amount payable to Simmer & Jack during Fiscal 2007.

The increase in accounts payable and accrued charges is primarily the result of capital costs incurred by EMC and outstanding at March 31, 2007.

Liquidity and Capital Resources

At March 31, 2007, First Uranium had working capital of \$142.0 million (March 31, 2006: deficit of \$2.7 million). The significant increase in working capital is attributable to the completion of the Offering which resulted in net proceeds of \$177.7 million.

Subsequent to the end of Fiscal 2007, the Corporation completed the private placement of Cdn\$150 million aggregate principal amount of Debentures. The Debentures bear interest

at a rate of 4.25% per annum payable semi-annually and are convertible into common shares of First Uranium at Cdn\$16.42 per share.

The Corporation may redeem all or a portion of the Debentures for cash at any time on or after June 30, 2010 at a redemption price equal to the principal amount of the Debentures plus accrued and unpaid interest provided that the weighted average trading price of the common shares of the Corporation on the TSX for the 20 consecutive days prior to the notice of redemption is 130% of the conversion price. The Corporation at its option, and subject to regulatory approval, may satisfy its obligations to repay the Debentures upon redemption or maturity by issuing freely tradable common shares of the Corporation at a share price equal to 95% of the weighted average trading price of the common shares on the TSX for the 20 consecutive days ending five trading days before the date fixed for redemption or maturity, as the case may be.

The net proceeds of \$136.6 million from the sale of the Debentures, net of underwriters' fees, were held in Canadian dollars. The approval of the SARB to the sale of the Debentures included a condition that the Corporation transfer the net proceeds from the sale of the Debentures and convert the funds to South African Rand ("ZAR") by May 3, 2008.

First Uranium anticipates that future capital requirements relating to its development of the Ezulwini Mine and Buffelsfontein Tailings Recovery Project will be funded through the proceeds of the Offering and a combination of internal cash flow and the proceeds from the issuance of the Debentures.

Capital expenditures of \$151.0 million and \$270.6 million will be required to complete the currently planned construction of the Buffelsfontein Tailings Recovery Project and the Ezulwini Mine, respectively, for which \$14.8 million current commitments exist.

Exploration budgets for the Ezulwini Mine and on the contiguous properties to the north-east and south-east of the Ezulwini Mine of \$30 million and \$10 million, respectively, have been approved by the Board of Directors. The extent to which the budgeted amounts are spent depends on the ongoing exploration results. The exploration expenditures will be funded out of the available working capital.

First Uranium has executed a mandate letter and term sheet with Investec Bank Limited in respect of potential debt financing originally planned to be used towards the development of the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project. The Corporation is continuing with satisfying certain conditions precedent and is in discussions with Investec to modify the proposed facility to a corporate facility.

As at March 31, 2007, First Uranium had the following contractual obligations:

Contractual Obligations	Payments due by Date				Total \$000
	Less than 1 year \$000	1-3 Years \$000	4-5 Years \$000	After 5 Years \$000	
Operating Leases	36	115	40	-	191
Purchase Obligations	14,836	-	-	-	14,836
Other Long-Term Obligations	-	-	-	5,377	5,377
Total Contractual Obligations	14,872	115	40	5,377	20,404

Subsequent to end of Fiscal 2007, the Corporation created another contractual obligation with the issue of the Debentures, which mature and are repayable in full on June 30, 2012, unless earlier redeemed according to their terms.

Summary of Quarterly Results

The table below sets out selected financial data for the periods indicated. The financial data presented is derived from First Uranium's consolidated financial statements, which are prepared in accordance with Canadian GAAP.

Fiscal Quarters Ended	Total Assets \$000	Net Loss \$000	Basic Net Loss per Share \$	Long Term Liabilities \$000
March 31, 2007 (audited)	181,427	(2,689)	(0.02)	5,377
December 31, 2006	195,374	(3,787)	(0.04)	Nil
September 30, 2006	3,619	786	0.01	Nil
June 30, 2006	3,522	(2,238)	(0.03)	Nil
March 31, 2006 (audited)	3,433	(4,656)	(0.05)	Nil
December 31, 2005	4,519	(2,201)	(0.03)	Nil
September 30, 2005	n/a	n/a	n/a	n/a
June 30, 2005	n/a	n/a	n/a	n/a

Fourth Quarter

The net loss of \$2.8 million for the fourth quarter of Fiscal 2007 was less than the net loss of \$3.7 million for the third quarter, mainly as a result of an increase in expenditures capitalized and interest income earned in the fourth quarter on the cash proceeds from the Offering.

Total assets at the end of the fourth quarter of Fiscal 2007 were \$181.4 million compared to the total assets of \$195.4 million at the end of the third quarter. The decrease is mainly a result of the utilization of cash and cash equivalents for settling the amount payable by EMC to Simmer & Jack of \$12.7 million at the end of the third quarter.

Accounts payable and accrued liabilities were \$5.7 million at the end of Fiscal 2007 as compared to \$11.6 million at the end of the third quarter, when payables included additional costs related to the Offering.

Non-current liabilities of \$5.4 million at the end of Fiscal 2007 consist of the environmental rehabilitation provision taken over by EMC for the infrastructure and surface lands of the Ezulwini Mine.

Outlook

The Corporation acquired MWS on June 6, 2007 with an April 1, 2007 effective date. The MWS Acquisition closed on June 6, 2007, at which point First Uranium assumed management control of MWS. For accounting purposes, any net income from MWS for the period from April 1, 2007 to June 6, 2007 will be applied to reduce the cost of the MWS Acquisition. The Corporation is preparing to undertake a pre-feasibility study for this project's new gold and uranium plant modules. The second gold module and the first two uranium modules are expected to be commissioned in November 2008.

Gold production at the Ezulwini Mine is expected to commence by the end of the third quarter of the year ending March 31, 2008 using a gold toll milling operation at a neighbouring mine. The current plan is for the Ezulwini Mine to process gold and uranium at its own plants by April 2008 and June 2008, respectively.

First Uranium believes that the current growth in demand for uranium will continue for a number of years and recently raised its life-of-mine uranium price assumptions from \$40 to \$50 per pound. The spot prices for uranium for March 31, 2007 and June 4, 2007 were \$95 per pound and \$135 per pound, respectively.

Electricity demand

The demand for uranium is directly proportional to the level of electricity generated by nuclear power plants, which in turn is driven by the future growth in global consumption of

electricity. According to the Energy Information Administration's ("EIA") International Energy Outlook 2006 (base case), world net energy consumption will more than double before 2030, from 14,781 billion kilowatt hours in 2003, to 21,699 billion kilowatt hours in 2015, and 30,116 billion kilowatt hours in 2030. Most of the growth in electricity demand is expected to occur in the non-OECD nations, where electricity use is expected to increase on average by 3.9 percent per year from 2003 to 2030, as compared with 1.5 percent per year in the OECD nations. This represents a combined growth rate in net energy consumption of 2.7 percent over the same period. According to the EIA, for all the non-OECD regions combined, economic activity, as measured by gross domestic product (GDP) in purchasing power parity terms, is anticipated to expand by 5.0 percent per year on average, as compared with an average of 2.6 percent per year for the OECD economies.

Uranium demand

With power generation as the most common commercial use of uranium, nuclear power plants are predominantly responsible for the world demand of uranium resources. According to the World Nuclear Association ("WNA"), as of September 2006, there were a total of 442 operable commercial nuclear power plants globally with an aggregate installed generating capacity of 370,721 megawatts of electricity per year. As reported by the WNA, these commercial nuclear plants currently supply approximately 16% of the world's electricity production.

Another 28 commercial nuclear power plants (representing 22,510 megawatts of electricity) are under construction, with a further 62 (68,021 megawatts) planned and 160 (118,825 megawatts) proposed. New construction is presently centred in Asia, principally in China and India. Planned and proposed plants are centred primarily in China, India, Russia, South Africa, and the United States for which more than 65,000 tonnes of uranium would be required. The WNA (base case) projects that reactor-related demand will increase by more than 65% by 2030, up to 110,776 tonnes of required uranium.

Apart from the increased consumption of electricity, demand for uranium power may also be escalated by the inherent nature of the fuel in comparison to other sources. For example, the abundance of naturally occurring uranium offers security of supply in comparison to energy sources such as oil and gas, which can be vulnerable to interruption of deliveries. There has been growing concern about the increasing concentration in the atmosphere of greenhouse gases such as carbon dioxide, which, it is believed, has resulted in a heating of the earth's atmosphere. The WNA estimates that without nuclear power today, carbon dioxide emissions from the energy sector would be 20% higher. In addition, countries like the United States, through its recent National Energy Bill, and the United Kingdom have begun to acknowledge that nuclear energy may become a growing source of each country's energy supply in the future, constituting a significant change in policy from prior years.

Demand for uranium power will also be affected by the economics of production in comparison to other fuel sources. The costs of electricity production are usually broken down into three major categories: investment, operation and maintenance, and fuel. Fuel costs include costs related to the fuel cycle, including purchasing, converting, and enriching uranium, fabrication, reprocessing, disposal of spent fuel, and transport. According to the OECD, fuel costs make up only about 20% of the costs of nuclear-generated electricity, making it relatively insensitive to fuel price fluctuations in contrast to the cost structure of fossil fuel-generated electricity. In addition, in comparison to wind, gas, combined heat power, and coal, nuclear power generation is, on average, the least expensive method of electricity production.

Uranium supply

To satisfy increasing demand, uranium is supplied from both primary production (the mining of uranium ores) and secondary sources such as the drawdown of excess inventories, and uranium made available from the decommissioning of nuclear weapons, re-enriched depleted uranium tails, and used reactor fuel that has been reprocessed. According to the WNA, after

a decade of falling mine production ending in 1993, primary production has been on the rise and now comprises 60% of the supply made available for nuclear power generation.

According to the WNA, the uranium primary production industry is projected to undergo a significant expansion during the next 10 years as existing production projects are expanded and new production centres are brought online. Later, closure of existing mines due to resource depletion is expected to result in a levelling and downward trend in production capability. The WNA projects that in 2015 global primary production will peak at 71,512 tonnes of uranium per year, before declining to 70,474 tonnes per year by 2019.

Supply versus demand

Since 1990, global uranium demand has exceeded global uranium supply provided by primary production (mining). The deficit between demand and supply has typically been filled by the supply of uranium from secondary sources. However, as this finite stockpile becomes used up, there is increasing pressure on primary production to meet total demand. According to the OECD, secondary sources of uranium are expected to fall short of meeting the deficit requirement by 2016.

According to the WNA, in 2005, primary production of uranium from all reported existing and committed production centres satisfied only 64% of demand. Based on WNA base case forecasts, production supply in 2030 will still satisfy only 64% of demand. However, as discussed in the OECD Red Book, the decline in secondary supply will mean that a substantial global uranium deficit will result beginning in 2016, which must be met either by expanding existing production centres or opening and developing new projects.

Uranium prices and contracts

According to industry sources, from relative highs of more than US\$40.00 per pound in the late 1970s, U₃O₈ spot prices dipped dramatically reaching a low of US\$7.10 per pound at the end of 2000.

Since then, price levels have more than recovered, surpassing the previous historical high to reach \$95.00 per pound by March 31, 2007. This represents respective increases of 135%, 322%, and 443% over prices one, two, and three years prior, and 1238% over the recent low at the end of 2000. The spot price for uranium reached \$135 per pound on June 4, 2007. Current high prices indicate a turn-around in the market for sellers following two decades of uranium prices that were depressed by recycling and previously accumulated stockpile selling.

There is currently an exchange-traded commodity market for uranium that is still developing with light trading volumes. Utilities typically purchase uranium pursuant to contracts with producers on either a medium (less than five years) or long-term (greater than five years) basis, with delivery of the uranium generally commencing two to three years after the date of the contract. Pricing formulas are complicated and generally remain confidential and undisclosed to the public. However, contracts may specify a base price, such as the uranium spot price, and rules for escalation. In base-escalated contracts, the buyer and seller agree on a base price that escalates over time on the basis of an agreed-upon formula, which may take economic indices, such as GDP or inflation factors, into consideration. Uranium purchase contracts will also set out the specifications applicable to the product subject to the contract.

Utilities may also purchase uranium through spot and near-term purchases from traders as well as producers.

Spot market buying usually calls for delivery within one year rather than multiple year delivery dates. In this regard, traders generally purchase uranium through organizations, such as utilities, that hold excess inventory.

According to Ux Consulting, demand in the spot market in 2005 was for delivery of approximately 27 million pounds of uranium oxide (U₃O₈) according to published reports.

It is important to understand the way in which utilities with nuclear power plants buy their fuel. Instead of buying fuel bundles from the fabricator, the usual approach is for utilities to enter into contracts with various suppliers at each stage of the uranium processing stages. Utilities may purchase a combination of U_3O_8 , uranium hexafluoride, enriched uranium and fabricated fuel pellets. Sellers consist of suppliers at each of the four stages of uranium processing as well as brokers and traders. Depending on the stage at which the uranium product is purchased, the purchasing utility will be responsible for any remaining processing of the uranium required in order to generate the appropriate fuel for its nuclear plant. Although uranium prices have increased considerably during the last few years, many uranium producers are still parties to legacy contracts with purchasers at lower historical prices.

Trends in mining costs

Demand for uranium and gold and other metals has significantly increased construction of mines and related processing plants around the globe. In South Africa, as elsewhere, this higher level of construction activity has increased demand for construction materials, specifically cement and steel, as well as increasing the need for construction engineers and skilled tradesmen. Rising fuel costs, despite having a positive effect on potential revenue for First Uranium, impact negatively the costs of running mines and the transportation of services and materials to the mines.

Related Party Transactions

Prior to December 2006, the Corporation shared its premises with other companies that had common directors and reimbursed the related companies for its proportional shares of expenses or was reimbursed by the related companies for their proportional share of expenses. During the year ended March 31, 2007, the Corporation was charged \$575,665 (2006: \$368,599) for consulting services provided by related directors, officers and consultants of the Corporation.

The inter-company receivable between Simmer & Jack and FUSA and payable between Simmer & Jack and EMC bears interest at the South African prime rate. The inter-company advance to Simmer & Jack by the Corporation bears no interest. All the inter-company receivables, payables and advances are due by June 30, 2007.

Pursuant to the Reorganization in December 2006, First Uranium, through its wholly-owned subsidiary FUL, acquired (i) the 80% equity interest in FUSA from Simmer & Jack in exchange for 26.4 million common shares of First Uranium and (ii) the 90% equity interest in EMC from Simmer & Jack in exchange for 55.3 million common shares of First Uranium.

Immediately subsequent to the completion of the Reorganization and the Offering in December 2006, Simmer & Jack had a 67.16% shareholding in First Uranium. Prior to the Reorganization, Simmer & Jack held directly 70% in FUSA and 90% in EMC. Subsequent to the MWS Acquisition, Simmer & Jack has a 65.49% shareholding in First Uranium.

On December 20, 2006, First Uranium and Simmer & Jack entered into a corporate opportunity agreement (the "Corporate Opportunity Agreement"), a maintenance agreement (the "Maintenance Agreement") and a shared services agreement (the "Shared Services Agreement").

Pursuant to the terms of the Shared Services Agreement, First Uranium is entitled to certain services to be provided by Simmer & Jack, including project management and technical services, cash management and investment services, accounting, treasury and financial services, corporate secretarial services and human resources and staffing services, including payroll and benefits administration, and such other services as may be required by First Uranium and which Simmer & Jack is able and willing to provide. As a result of the staffing of First Uranium subsequent to the Offering, certain of these services are no longer required to be provided by Simmer & Jack.

In addition, First Uranium has agreed to reimburse Simmer & Jack with respect to 50% of management fees (to a maximum of ZAR125,000 per month) that Simmer & Jack is required to pay to an empowerment company for consulting services regarding transformation, human resources and occupational health and safety. BJ Njenje, AX Sisulu and SLB Mapisa, shareholders of the empowerment company, are also directors of Simmer & Jack.

Waterpan Mining Consortium ("Waterpan") currently holds a 10% shareholding in EMC. On December 20, 2006, Waterpan, FUL and the Corporation entered into a purchase agreement (the "Waterpan Purchase Agreement") pursuant to which Waterpan agreed to sell its shares in EMC to FUL and as consideration for such sale, First Uranium will issue 6,141,009 common shares of First Uranium to Waterpan (the "Waterpan Shares"). The closing of the transaction is subject to approval of SARB. Pursuant to the Waterpan Purchase Agreement, Waterpan has agreed not to sell or transfer 90% of the Waterpan Shares for a period of two years from the date of issuance. One shareholder of Waterpan is a director of EMC, two other shareholders of Waterpan are officers and/or employees of First Uranium and EMC.

Critical Accounting Policies and Estimates

The preparation of these consolidated financial statements in accordance with Canadian generally accepted accounting practice requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amount of revenues and expenses during the reporting period.

Significant areas requiring the use of management estimates relate to the determination of impairment of capital assets, goodwill estimation of future site restoration costs, stock-based compensation and future income taxes, and classification of current portion of long term debt. Financial results as determined by actual events could differ from those estimated.

Foreign currency translation

The Corporation considers the United States dollar ("US\$") to be the functional and reporting currency. The translated amounts are of a foreign entity where its subsidiaries are accounted for as integrated foreign operations and as such, the translation to US dollar was made using the temporal method. Monetary assets and liabilities denominated in foreign currencies are translated in United States dollars at the year-end exchange rates, while non-monetary items are translated at the exchange rate in effect at the transaction date. Revenue and expense items are translated at the exchange rates in effect on the date of the transaction. Exchange gains and losses resulting from the translation of these amounts are included in the consolidated statements of operations.

Property, plant and equipment

The application of the Corporation's accounting policies for these assets has a material impact on its financial statements. Property, plant and equipment and related capitalized expenditures are recorded at cost. Amortization expense is based on the estimated useful lives of these assets. The carrying values of mining properties and property, plant and equipment are reviewed for impairment when events or changes in circumstances indicate that the carrying amounts may not be recoverable. Impairment assessments are based on estimates of future cash flows, which include: the quantity of mineral reserves; future metal prices and future operating and capital costs to mine and process the Corporation's reserves.

The variability of these factors depends on a number of conditions, including the uncertainty of future events, and as a result, accounting estimates may change from one period to another. Asset balances could be materially impacted if other assumptions and estimates had been used. In addition, future operating results could be impacted if different assumptions and estimates are applied in future periods.

Asset retirement obligations

Mining, development and exploration activities are subject to various laws and regulations governing the protection of the environment. The Corporation has recorded a liability for future costs related to these regulations with a corresponding adjustment to the carrying amount of the related assets.

Significant judgments and estimates are made when determining the nature and costs associated with asset retirement obligations. Changes in the underlying assumptions used to estimate the obligation as well as changes to environmental laws and regulations could cause material changes in the expected cost and the fair value of asset retirement obligations.

Stock-based compensation

The Corporation accounts for all stock-based payments under the fair value based method. Under the fair value based method, compensation cost is measured at fair value at the grant date using the Black Scholes option pricing model that takes into account the exercise price, the expected life of the options, expected volatility of the underlying shares, expected dividend yield and the risk free interest rate for the term of the option.

Changes in Accounting Standards

In January 2005, the CICA issued three new standards relating to financial instruments.

Section 3855, Financial Instruments – Recognition and Measurement, prescribes when a financial asset, financial liability, or non-financial derivative is to be recognized on the balance sheet and at what amount – sometimes using fair value; other times using cost-based measures. It also specifies how financial instruments gains and losses are to be presented.

Section 3865, Hedges, is applicable whenever an enterprise chooses to designate a hedging relationship for accounting purposes. It expands on AcG No.13, Hedging Relationships, and Section 1650, Foreign Currency Translation by specifying how hedge accounting is applied and what disclosures are necessary when it is applied. Section 1530, Comprehensive Income, introduces new rules for the reporting and display of comprehensive income. Comprehensive Income is the change in equity (net assets) of an enterprise during a reporting period from transaction and other events and circumstances from non-owner sources. It includes all changes in equity during a period except those resulting from investments by owners and distribution to owners.

These standards are applicable for fiscal years beginning on or after October 1, 2006. If an enterprise elects to early adopt such standards, the early adoption election must be applied to all three standards at the same time.

Outstanding Share Data

As at March 31, 2007 and June 13, 2007, First Uranium had 121,686,047 and 124,780,027 issued and outstanding common shares, respectively. As at March 31, 2007 there were 1,223,001 unexercised stock options outstanding, exercisable for 1,223,001 common shares of the Corporation at an average strike price of Cdn\$7.30 per share. As at June 13, 2007 there were 1,283,001 unexercised stock options outstanding, exercisable for 1,283,001 common shares of the Corporation at an average strike price of Cdn\$7.56 per share.

As at June 13, 2007, First Uranium also had Cdn\$150 million principal amount of Debentures outstanding which are convertible into 60.9013 common share of First Uranium for each Cdn\$1,000 principal amount of Debentures, representing 9,135,195 common shares.

Disclosure Controls and Procedures

Disclosure controls and procedures are designed to provide reasonable assurance that all relevant information is gathered and reported on a timely basis to senior management, including the Corporation's President and Chief Executive Officer and the Chief Financial Officer, so that appropriate decisions can be made regarding public disclosure. As at the end of the period covered by this Management's Discussion and Analysis, management of First Uranium, by the direction of the President and Chief Executive Officer and the Chief Financial Officer, evaluated the effectiveness of the Corporation's disclosure controls and procedures.

Based on that evaluation, the President and Chief Executive Officer and the Chief Financial Officer have concluded that First Uranium should restate the consolidated interim financial statements for the three months ended December 31, 2006 to reflect additional costs relating to the Offering. These additional costs include fees payable to Investec Bank Limited of South Africa, in respect of various advisory and regulatory services provided in connection with the Offering, as well as advisory fees payable to a number of technical consultants. The President and Chief Executive Officer and the Chief Financial Officer have also concluded that as of the end of the period covered by this Management's Discussion and Analysis, the disclosure controls and procedures were effective to provide reasonable assurance that the remaining information required to be disclosed in First Uranium's annual filings and interim filings (as such terms are defined under Multilateral Instrument 52-109 – Certification of Disclosure in Issuers' Annual and Interim Filings) and other reports filed or submitted under Canadian securities laws is recorded, processed, summarized and reported within the time periods specified by those laws, and that material information is accumulated and communicated to management of First Uranium, including the President and Chief Executive Officer and the Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

During the most recent year end there were no changes in the Corporation's internal controls over financial reporting that materially affected, or are reasonably likely to materially affect, the Corporation's internal control over financial reporting.

Risks and Uncertainties

Uncertainties

There are a number of uncertainties in the mining business of First Uranium that are beyond First Uranium's control, including:

- Demand and prices for the Corporation's future production of uranium and gold
- Government legislation regarding mining companies in South Africa
- Securities regulation regarding public listed companies in Canada and South Africa
- Foreign exchange rates
- Interest rates
- The decisions and activities of the Corporation's competitors in the uranium and gold mining business, which impact the supply of uranium and the demand for available services, construction materials, labour and the rights for prospecting and mining
- The continued endorsement of nuclear power as a preferred source for the world's energy needs
- The decisions of investors to continue to buy and hold the securities of the Corporation
- Natural disasters, war or random occurrences or acts that could result in a material change to economic and market performance, business conditions or operations.

Risks

In addition, First Uranium is in the development stage and is subject to the risks and challenges similar to other companies in a comparable stage of development. The risks include, but are not limited to, the following business, operational and market risks. For a

complete discussion of the Corporation's risks, reference should be made to the Corporation's Annual Information Form.

Business Risks

Simmer & Jack

Simmer & Jack and First Uranium share the Chair of the Board and the same President & CEO, as well as several services that benefit both companies.

In addition, SARB requires that Simmer & Jack maintain a controlling interest in the Corporation, which could reduce or impede the Corporation's ability to raise additional required funds at favourable rates in order to avoid dilution in Simmer & Jack's shareholding in the Corporation.

First Uranium relies on Simmer & Jack for its BEE credentials, among other things.

Black Economic Empowerment ("BEE") Requirements

Failure to comply with BEE requirements could jeopardize First Uranium's ability to obtain and retain mining and prospecting rights. There is also no guarantee that the interests of First Uranium will be wholly aligned with the interests of its (direct or indirect) BEE shareholders.

Mining and prospecting rights, licenses and titles

The Corporation has not obtained all mining rights and government approvals required to develop its proposed uranium and gold projects. The Corporation will make significant expenditures in respect of the Ezulwini Mine and Buffelsfontein Tailings Recovery Project prior to it obtaining the mining rights necessary to construct and operate its projects.

Senior Management

As a new company with a small management team, First Uranium is dependant on certain key management personnel for the successful operation of the business. Loss of key personnel could harm the Corporation's operations and financial condition.

Business interruption

The Corporation is exposed to risks that could interrupt its business. One of the Corporation's two projects, Ezulwini, is an underground mine that has historically had ground movement problems in the Upper Elsburg shaft pillar. On one occasion it was necessary to cease shaft operations and excavate the lava unit around the shaft and then to reinstall the necessary shaft hardware. To eliminate the ground control problems in the shaft area the Corporation is executing its plan to mine out the shaft pillar and to stabilize the shaft prior to restarting mining operations.

There is a risk of flooding at the Ezulwini underground mine, where the Corporation pumps approximately 65 million litres of water from the site every day. The pumps are well maintained and there are several contingency arrangements including multiple power sources, large diesel generators, back-up pumps and catch basins in the event of failure of the main pumps. The mine has never been flooded, including during the period of 2001 through 2006 when the mine ceased operations and was on care and maintenance.

Disclosure

The Corporation is required to comply with securities reporting legislation and accounting standards in Canada and South Africa. To ensure that the First Uranium meets its regulatory obligations and mitigate risks associated with inaccurate or incomplete disclosure, the Audit Committee is responsible for reviewing and assessing the quality and integrity of the Corporation's continuous disclosure documents. The Corporation is also in the process of implementing a disclosure policy.

Insurance

First Uranium's insurance coverage does not cover all of its potential losses, liabilities and damage related to its business and certain risks are uninsured or uninsurable. The

Corporation makes its insurance decisions based on the likelihood of any risk occurring, the cost of the insurance and the Corporation's tolerance for risk.

Financing

Although management believes that First Uranium has secured sufficient financing to bring its two projects into production as currently contemplated, the Corporation may require additional capital in the future and no assurance can be given that such capital will be available at all or available on terms acceptable to First Uranium.

Foreign Currency Exchange Rates

The Corporation has exposure to the risk of significant change in foreign currency exchange rates between U.S. dollars, Canadian dollars and the South African rand. Most of the Corporation's expenses are in rand. When the Corporation starts to produce and sell uranium and gold, those sales will be in U.S. dollars. As a result, an increase in the U.S. dollar value of the rand would decrease profitability. In addition, the Corporation runs a small office in Canada and any further increase in the value of the Canadian dollar relative to the US dollar, increases expenses as the Corporation's reporting currency is in U.S. dollars.

Operational Risks

Mining

The business of mining generally involves a high degree of risk and First uranium has no operating history. No assurance can be given that the development and bringing into commercial production of a mine or tailings processing facility will be completed as contemplated and for the estimated capital costs or within the estimated schedule. Also, no assurance can be given that the intended production schedule, metal recoveries, estimated operating costs and/or that profitable operations will be achieved.

Confidence in resources

The economic analysis for the Corporation's two projects is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as mineral reserves. There is no certainty that the reserves development, production and economic forecasts on which such preliminary assessments are based, will be realized.

Labour

The Corporation will employ most of its labour at its two project sites. There has historically been much higher employment in the areas of the two projects and management does not consider availability of general labourers a risk. The higher demand for uranium, gold and other metals has raised the demand for skilled professionals, such as geologists.

The cost of that labour is a risk since labour costs have risen significantly since the last time uranium mines were in production at these sites. Higher costs have been identified and factored into the economic forecasts for these projects.

South Africa has a significantly higher HIV infection rates than those prevailing in North America and Europe. Current and future First Uranium employees may have or could contract this potentially deadly virus. While the Corporation is not aware of any lost-time incident related to HIV, the prevalence of HIV could cause the Corporation to sustain higher training costs to replace sick employees.

Operational safety is considered a top priority by management and the Board has established an Environmental, Health and Safety Committee. The Committee has the responsibility to review and make recommendations in regard to the Corporation's health and safety programs and compliance issues.

Construction Materials

Due to the increased demand for uranium, gold and other metals, construction of mines and processing plants has increased placing a significant demand on construction materials, specifically cement and steel, as well as increased need for construction engineers and skilled tradesmen.

Fuel

Rising costs of fuel impact the costs of running the plants and the transportation or labour and materials to the sites and eventually the costs of moving rock from the underground mine and the metals that are to be produced at both projects. Higher costs of other fuels have increased the demand for uranium offsetting the negative impact of the increase in the costs of these fuels in the Corporation's operations.

Securing Permitting for Tailings Deposition Areas

The success of the Buffelsfontein Tailing Recovery Project is, in part, dependent on the permitting of sufficient tailings deposition areas. While the MWS Acquisition includes one such deposition area, the Corporation requires permitting for one additional deposition area by November 2008. Failure to acquire permitting for such an area on schedule could delay production of uranium and gold at this project.

Environmental and hazardous materials

Laws and regulations involving the protection and remediation of the environment and the governmental policies for implementation of such laws and regulations are constantly changing and are generally becoming more restrictive. Mining operations have inherent risks and liabilities associated with pollution of the environment and the disposal of waste products and hazardous materials occurring as a result of mining and production. First Uranium cannot give any assurance that, notwithstanding its precautions, breaches of environmental laws (whether inadvertent or not) or environmental pollution will not materially and adversely affect its financial condition and its results of operations.

First Uranium's proposed mining projects are subject to the risk of uranium exposure. The Corporation has put systems in place to manage exposure to uranium or uranium metal and no known exposures have occurred at First Uranium to date. Exposure by First Uranium's employees, however, could result in the Corporation having to incur extra compensation costs

Market risks

Uranium and Gold Prices

First Uranium's future revenues will be directly related to the world market prices of uranium and gold as its revenues will be derived primarily from gold and uranium mining, assuming that First Uranium is able to develop one or more of the Ezulwini and Buffelsfontein projects. Uranium and gold prices can be subject to volatile price movements, which can be material and can occur over short periods of time and are affected by numerous factors beyond First Uranium's control.

If, after the commencement of commercial production, uranium and/or gold prices fall below the costs of production at First Uranium's mines for a sustained period, it may not be economically feasible to continue production at such sites. This would materially and adversely affect production, profitability and First Uranium's financial position. A decline in uranium and/or gold prices may also require First Uranium to write down its mineral reserves and mineral resources, which would have a material adverse effect on its earnings and profitability. First Uranium's future profitability may be materially and adversely affected by the effectiveness of any hedging strategy. While First Uranium currently does not hedge or forward sell any of its future gold and uranium production, should circumstances in future so warrant (including to obtain debt financing), First Uranium may hedge, or forward sell, future production.

Public Perception and Acceptance of Nuclear Energy

Furthermore, growth of the uranium and nuclear power industry will depend upon continued and increased acceptance of nuclear technology as a means of generating electricity. Because of unique political, technological and environmental factors that affect the nuclear industry, the industry is subject to public opinion risks that could have an adverse impact on the demand for nuclear power and increase the regulation of the nuclear power industry. An accident at a nuclear reactor anywhere in the world could impact the continuing acceptance of nuclear energy and the future prospects for nuclear power generation, which may have a material adverse effect on First Uranium.

Uranium and Gold Industry Competition

International uranium and gold industries are highly competitive. There is no guarantee that First Uranium will be able to compete successfully with other mining companies, particularly seasoned mining companies. The Corporation can not assure that it will be able to compete successfully with its competitors in developing or acquiring uranium or gold projects or in attracting and retaining skilled and experienced employees.

First Uranium intends to market its uranium in a number of potential markets in direct competition with supplies available from a relatively small number of mining companies. Current and future international trade agreements and policies, governmental policies and trade restrictions are beyond the control of First Uranium and may affect the supply of uranium available to the market.

Competition from other energy sources

Nuclear energy competes with other sources of energy, including oil, natural gas, coal and hydroelectricity. These other energy sources are to some extent interchangeable with nuclear energy, particularly over the longer term. Sustained lower prices of oil, natural gas, coal and hydro-electricity may result in lower demand for uranium concentrates.

Additional Information

Additional information relating to First Uranium is included in the Corporation's Annual Information Form dated June 13, 2007 and it is available on SEDAR at www.sedar.com.

Forward-looking Information

This MD&A and consolidated financial statements for the period ended March 31, 2007 contain certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the price of uranium and gold, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at June 13, 2007; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this MD&A, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) approvals to transfer or grant, as the case may be, mining rights will be obtained; (ii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iii) mineral resource estimates are accurate; (iv) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (v) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vi) that outstanding approvals for the completion of an acquisition, the transfer of mining rights and the approval of mining rights will be granted; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024; and (ix) the completion of the Additional Dams Acquisition.

Form 52-109F1 - Certification of Annual Filings

I, Gordon Miller, President and Chief Executive Officer of First Uranium Corporation, certify that:

1. I have reviewed the annual filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of First Uranium Corporation (the "issuer") for the period ending March 31, 2007;
2. Based on my knowledge, the annual filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the annual filings;
3. Based on my knowledge, the annual financial statements together with the other financial information included in the annual filings fairly present in all material respects the financial condition, results of operations and cash flows of the issuer, as of the date and for the periods presented in the annual filings;
4. The issuer's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures and internal control over financial reporting for the issuer, and we have:
 - (a) designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which the annual filings are being prepared;
 - (b) designed such internal control over financial reporting, or caused it to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer's GAAP; and
 - (c) evaluated the effectiveness of the issuer's disclosure controls and procedures as of the end of the period covered by the annual filings and have caused the issuer to disclose in the annual MD&A our conclusions about the effectiveness of the disclosure controls and procedures as of the end of the period covered by the annual filings based on such evaluation; and
5. I have caused the issuer to disclose in the annual MD&A any change in the issuer's internal control over financial reporting that occurred during the issuer's most recent interim period that has materially affected, or is reasonably likely to materially affect, the issuer's internal control over financial reporting.

DATED this 14 day of June, 2007

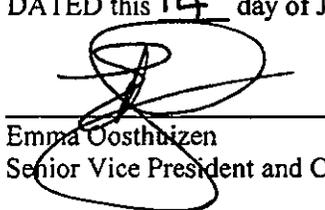

Gordon T. Miller
President and Chief Executive Officer

Form 52-109F1 - Certification of Annual Filings

I, Emma Oosthuizen, Senior Vice President and Chief Financial Officer of First Uranium Corporation, certify that:

1. I have reviewed the annual filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of First Uranium Corporation (the "issuer") for the period ending March 31, 2007;
2. Based on my knowledge, the annual filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the annual filings;
3. Based on my knowledge, the annual financial statements together with the other financial information included in the annual filings fairly present in all material respects the financial condition, results of operations and cash flows of the issuer, as of the date and for the periods presented in the annual filings;
4. The issuer's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures and internal control over financial reporting for the issuer, and we have:
 - (a) designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which the annual filings are being prepared;
 - (b) designed such internal control over financial reporting, or caused it to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer's GAAP; and
 - (c) evaluated the effectiveness of the issuer's disclosure controls and procedures as of the end of the period covered by the annual filings and have caused the issuer to disclose in the annual MD&A our conclusions about the effectiveness of the disclosure controls and procedures as of the end of the period covered by the annual filings based on such evaluation; and
5. I have caused the issuer to disclose in the annual MD&A any change in the issuer's internal control over financial reporting that occurred during the issuer's most recent interim period that has materially affected, or is reasonably likely to materially affect, the issuer's internal control over financial reporting.

Uranium Corporation
Unaudited Consolidated Statements of Cash Flows
 For the three months ended June 30, 2008 and 2007

	Notes	2008 US\$000	2007 US\$000
(Loss) income for the period		(5,795)	5,471
Changes not affecting cash:			
- Interest income	19.1	-	(197)
- Accretion expenses		952	1,071
- Amortization on property, plant and equipment	6	333	327
- Stock-based compensation	16	1,648	770
Loss after interest and non-cash items		(2,862)	7,442
Expenses in respect of asset retirement obligations	11	(358)	-
Movement in working capital:			
- (Increase) decrease in inventories		(3,042)	355
- (Increase) in accounts receivable		(4,237)	(813)
- Decrease in net receivables from/payables to related parties	19.2	54	6,086
- Decrease in accounts payable and accrued liabilities		(9,165)	(3,091)
Cash flows (utilized in) generated from operating activities		(19,610)	9,979
Additions to property, plant and equipment	19.3	(34,202)	(9,812)
(Increase) decrease in asset retirement fund	7	(164)	105
Cash transferred to restricted cash	8	(9,714)	-
Net cash movement on acquisition of MWS	19.4	-	1,310
Cash outflow from investing activities		(44,080)	(8,397)
Issuance of senior unsecured convertible debentures net of issue costs	10	-	130,561
Cash inflow from financing activities		-	130,561
Net effect of exchange rate changes on cash held in foreign currencies		1,056	4,177
Net (decrease) increase in cash and cash equivalents for the period		(62,634)	136,320
Cash and cash equivalents, beginning of the period		164,739	138,914
Cash and cash equivalents, end of the period		102,105	275,234

See accompanying notes to the Consolidated Financial Statements.

1. NATURE OF OPERATIONS

First Uranium Corporation (the Corporation or First Uranium) is a Canadian resource company focused on the development of uranium and gold projects in South Africa. See Note 6, Property, Plant and Equipment for a description of the Corporation's key projects. The Corporation has a primary listing on the Toronto Stock Exchange (TSX) and a secondary listing on the Johannesburg Stock Exchange (JSE). First Uranium owns 100% of First Uranium Limited (FUL), which in turn holds 100% of First Uranium (Proprietary) Limited (FUSA) and 100% of Ezulwini Mining Company (Proprietary) Limited (EMC). The Corporation's controlling shareholder, Simmer and Jack Mines, Limited's (Simmer & Jack) had a 62.3% shareholding in First Uranium as at June 30, 2008.

EMC owns and operates the Ezulwini Mine. FUSA owns 100% of Mine Waste Solutions (Proprietary) Limited and its wholly-owned subsidiary, Chemwes (Proprietary) Limited (collectively MWS), a tailings treatment company that processes tailings from the Buffelsfontein mine (the Buffelsfontein Tailings) at its gold recovery plant.

All amounts in these financial statements are in US\$, except where otherwise indicated.

2. SIGNIFICANT ACCOUNTING POLICIES

The unaudited interim consolidated financial statements have been prepared by First Uranium in accordance with Canadian generally accepted accounting principles (Canadian GAAP) for the preparation of interim financial statements. The accounting policies used in the preparation of these unaudited interim consolidated financial statements are based on the same accounting policies and practices as those disclosed in note 1 "Nature of operations" and note 2 "Significant accounting policies" to the Corporation's audited consolidated financial statements for the year ended March 31, 2008, except for changes as described below and in note 3 "Changes in accounting policies".

These unaudited interim consolidated financial statements do not include all disclosures required by Canadian GAAP for annual financial statements, and accordingly should be read in conjunction with the Corporation's audited consolidated financial statements for the year ended March 31, 2008.

3. CHANGES IN ACCOUNTING POLICIES

Going Concern

Effective April 1, 2008, the Corporation adopted an amendment to CICA Handbook Section 1400 - General Standards of Financial Statement Presentation in relation to going concern. The amendment requires management to assess an entity's ability to continue as a going concern. When management is aware of material uncertainties related to events or conditions that may cast doubt on an entity's ability to continue as a going concern, those uncertainties must be disclosed. In assessing the appropriateness of the going concern assumption, the standard requires management to consider all available information about the future, which is at least, but not limited to, twelve months from the balance sheet date. The adoption did not have a material impact on the Financial Statements for the period presented.

Inventories

Effective April 1, 2008, the Corporation adopted CICA Handbook Section 3031 - Inventories, which prescribes the accounting treatment for inventories and provides guidance on the determination of costs and the subsequent recognition as an expense, including any write-down to net realizable value. It also provides guidance on the cost formulas that are used to assign costs to inventories. This new section had no impact on the Corporation's results.

Future and new accounting standards

Goodwill and Intangible Assets

CICA Handbook Section 3064, Goodwill and Intangible Assets, establishes revised standards for recognition, measurement, presentation and disclosure of goodwill and intangible assets. Concurrent with the introduction of this standard, the CICA withdrew EIC 27, Revenues and Expenses during the pre-operating period. As a result of the withdrawal of EIC 27, companies will no longer be able to defer costs and revenues incurred prior to commercial production at new mine operations. The changes are effective for interim and annual financial statements beginning January 1, 2009. The Corporation is in the process of assessing the impact for its 2010 financial year.

International Financial Reporting Standards (IFRS)

In February 2008, the Accounting Standards Board (AcSB) approved a strategic plan which requires public companies to converge with IFRS for fiscal periods beginning on or after January 1, 2011. The Corporation is in the process of assessing the impact of convergence of Canadian GAAP and IFRS.

4. ACCOUNTS RECEIVABLE

(in thousands of dollars)	June 30, 2008	March 31, 2008
Trade receivables	1,082	3,100
Value Added Tax and Goods and Services Tax	11,679	6,538
Prepayments and advances	1,169	80
Deposits and guarantees	27	2
	13,957	9,720

5. INVENTORIES

(in thousands of dollars)	June 30, 2008	March 31, 2008
Gold work-in-progress	1,136	514
Stockpiles	2,996	744
Spares and consumables	1,718	1,550
	5,850	2,808

6. PROPERTY, PLANT AND EQUIPMENT

June 30, 2008 (in thousands of dollars)	Cost	Accumulated Amortization	Net carrying amount
Land and buildings	3,753	(79)	3,674
Mine infrastructure	130,388	(202)	130,186
Mining assets	2,630	-	2,630
Tailings for processing	29,642	(1,077)	28,565
Plant and equipment	89,585	(378)	89,207
Motor vehicles	1,087	(121)	966
Office furniture and equipment	622	(62)	560
Computer equipment and software	1,123	(205)	918
Total	258,830	(2,124)	256,706

March 31, 2008 (in thousands of dollars)	Cost	Accumulated Amortization	Net carrying amount
Land and buildings	1,616	(44)	1,572
Mine infrastructure	82,652	(143)	82,509
Mining assets	17,922	-	17,922
Tailings for processing	29,642	(1,197)	28,445
Mining rights	55	-	55
Plant and equipment	72,228	(139)	72,089
Motor vehicles	1,080	(101)	979
Office furniture and equipment	517	(38)	479
Computer equipment and software	729	(129)	600
Total	206,441	(1,791)	204,650

Included in the above are mining related assets with a net carrying amount of \$161.3 million (March 31, 2008: \$124.6 million) related to the Ezulwini Mine and \$58.3 million (March 31, 2008: \$43.9 million) related to MWS.

As at June 30, 2008 all property, plant and equipment were owned by the Corporation, except for motor vehicles with a net carrying amount of \$0.01 million (March 31, 2008: \$0.02 million), which are held under capitalized lease contracts.

Ezulwini Mine

The Ezulwini Mine project involves the recommissioning of an underground uranium and gold mining operation located on the outskirts of the town of Westonaria in Gauteng Province, South Africa. The Corporation is in the ramp-up phase of underground production. The development of the Ezulwini Mine includes the rehabilitation and stabilisation of the main mine shaft pillar and the construction of uranium and gold processing facilities.

MWS

MWS is a uranium and gold tailings recovery operation located in the western portion of the Witwatersrand Basin. With the MWS acquisition on June 6, 2007 the Corporation acquired an operating gold mine tailings re-processing facility and an uranium plant, adjacent to the Buffelsfontein property, where the Buffelsfontein Tailings are now being treated.

7. ASSET RETIREMENT FUNDS

(in thousands of dollars)	June 30, 2008	March 31, 2008
Balance, beginning of the period	4,847	2,791
Trust fund assumed on acquisition of MWS	-	1,950
Investment income	49	194
Contributions in respect of investment funds	115	109
Loss on investment (Ezulwini)	(54)	-
Foreign exchange differences	137	(197)
Balance, end of the period	5,094	4,847

The asset retirement funds, consisting of environmental rehabilitation trust funds under the Corporation's control, are to be used to fund the respective mining operation's rehabilitation liabilities. Funds in the trust consist primarily of cash held in interest-bearing accounts, as well as investment funds which consist of a combination of South African effective trusts. An accredited South African financial institution manages the trust funds under the direction of the trustees. The trust deed limits the trustees' investments to institutions and investment vehicles as referred to in Section 37A of the South African Income Tax Act. Trust funds can only be drawn for rehabilitation purposes.

8. GUARANTEES

The following guarantees have been issued:

To	Regarding	Guarantee value (\$000)
DME	Ezulwini environmental rehabilitation provision	4,765
Murray and Roberts Cementation (Pty) Ltd	Ezulwini shaft rehabilitation project	1,268
Eskom Holdings Ltd	Electricity accounts	1,078
Jozi Power	Power generating services	500

The Ezulwini rehabilitation trust funds included in the asset retirement funds (see Note 7) have been pledged as security against all of the above guarantees. These guarantees are reviewed and renewed on an annual basis. The guarantee concerning the Murray and Roberts Cementation (Pty) Ltd will be terminated once the shaft rehabilitation project is complete.

A Letter of Credit (LC) of \$9.25m has been taken out in respect of a 30 megawatts ("MW") power plant to be installed at MWS. Cash cover of \$9.7 million (approximately 110% of the value of the purchase price of the LC) has been placed in an investment account with a South African banking institution as of June 25, 2008 and earns interest at 12.5% per annum. 90% of the LC will be released on shipment of the equipment to South Africa that is expected to take place in August 2008. The remaining portion will be released when installation has been successfully completed.

9. ACCOUNTS PAYABLE AND ACCRUED LIABILITIES

(in thousands of dollars)	June 30, 2008	March 31, 2008
Trade payables	20,953	17,664
Accruals	12,843	6,639
	33,796	24,303

The trade payables primarily relate to capital expenditure of \$14.1 million (March 31, 2008: \$8.7 million) and \$4.1 million (March 31, 2008: \$0.7 million) at the Ezulwini Mine and MWS, respectively.

10. SENIOR UNSECURED CONVERTIBLE DEBENTURES

On May 3, 2007 First Uranium issued senior unsecured convertible debentures (the Debentures) in denominations of \$1,000 Canadian dollars (Cdn\$) in the principal amount of \$135.1 million (Cdn\$150 million). The interest rate on the Debentures is 4.25% per annum. The Debentures pay interest semi-annually in arrears on June 30 and December 31 and have a maturity date of June 30, 2012. The Debentures are convertible at the option of the holder into common shares at any time prior to the maturity date at an exchange price of Cdn\$16.42 per share.

The liability component of the Debentures is being accreted such that the liability at maturity will equal the gross proceeds of \$135.1 million (Cdn\$150 million) less conversions. The cost of issuing the Debentures amounted to \$4.5 million. As at June 30, 2008, no portion of the Debenture had been converted. The amount accreted during the three months ended June 30, 2008 and 2007 was \$0.6 million and \$1.1 million, respectively. Interest for the three months ended June 30, 2008 and 2007 amounted to \$1.6 million and \$1.2 million, respectively.

11. ASSET RETIREMENT OBLIGATIONS

(in thousands of dollars)	June 30, 2008	March 31, 2008
Balance, beginning of the period	19,901	5,377
Provision assumed on acquisition of MWS	-	2,777
Provision recognized with commencement of processing the Buffelsfontein Tailings	-	10,162
Accretion expense	381	896
Additional rehabilitation provision on MWS	-	2,530
Rehabilitation expenditure incurred	(358)	(1,841)
Balance, end of the period	19,924	19,901

During March 2008, Johan Fourie & Associates performed an independent review of the Ezulwini assets relating to the environmental rehabilitation provision, which confirmed that the current cost estimate of the provision at March 31, 2008 was sufficient.

During March 2008, an independent valuation of the environmental rehabilitation provision for MWS was completed by GCS (Proprietary) Limited, a water environmental engineering and science consultancy company. The provision was based on the estimated cost to rehabilitate the mine.

These valuations are performed on an annual basis.

SHARE CAPITAL

	Number of shares (000)		(\$000)	
	June 30, 2008	March 31, 2008	June 30, 2008	March 31, 2008

Authorized

The authorized share capital of First Uranium consists of an unlimited number of common shares.

Issued and outstanding

On June 6, 2007, First Uranium issued 3.1 million shares valued at \$31.6 million relating to the acquisition of MWS.

On December 14, 2007, First Uranium issued 6.1 million shares to Waterpan Mining Consortium (Waterpan) completing the purchase of the remaining 10% interest in EMC (the Waterpan transaction) as contemplated in the Corporation's initial public offering in December 2006 (the Offering). First Uranium and Waterpan collaborated to effect this transaction considering the terms of the Offering and, as such, the acquisition of the remaining 10% interest in EMC is accounted for under Canadian GAAP as a continuity of interests.

There were no options exercised during the three months ended June 30, 2008.

13. CONTRIBUTED SURPLUS – STOCK-BASED COMPENSATION

The Corporation maintains a stock option plan (the Option Plan) for employees, officers, directors and for certain consultants who provide ongoing support to First Uranium and its subsidiaries. Under the Option Plan, options typically are granted for a period of up to ten years following the date of grant. The amounts granted reflect the level of responsibility of the particular optionee and his or her contributions to First Uranium.

The Board of Directors has discretion to set the terms of any vesting schedule of each option granted. Except in specified circumstances, stock options are not assignable and non-transferable and terminate 90 days after the optionee ceases to be employed or associated with First Uranium.

The terms of the Option Plan further provide that the price at which shares may be issued under the Option Plan shall not be less than the volume weighted average trading price of the shares on the TSX for the five trading days immediately preceding the day the option is granted.

The following table details the movements of contributed surplus during the period:

(in thousands of dollars)	June 30, 2008	March 31, 2008
Balance, beginning of the period	7,008	2,460
Transfer to share capital relating to stock options exercised	-	(642)
Stock options vesting expense recognised during the period	1,379	6,039
Stock options forfeited during the period	(134)	(849)
Balance, end of the period	8,253	7,008

Assumptions

The fair value of shares used to calculate the compensation expense was determined using the share price on the grant date and was adjusted for the probability of the recipients remaining employed or associated with the Corporation until the vesting date.

No stock options were granted during the three months ended June 30, 2008. During the three months ended June 30, 2007 60,000 stock options were granted.

The following table is a summary of the Corporation's options granted under its stock-based compensation plan:

	Number of options		Weighted average exercise price (Cdn\$)	
	June 30, 2008	March 31, 2008	June 30, 2008	March 31, 2008
Outstanding options, beginning of period	3,438,956	1,223,001	9.13	7.30
Granted during the period	-	2,551,433	-	9.02
Exercised during the period	-	(153,001)	-	(7.00)
Forfeited during the period	(239,570)	(182,477)	(8.82)	(7.56)
Outstanding options, end of period	3,199,386	3,438,956	8.56	9.13

The stock-based compensation expense recognized in the statements of operations and deficit and comprehensive loss was \$1.2 million for the three months ended June 30, 2008 (2007: \$0.8 million) (see Note 16, Stock-based compensation). During the three months ended June 30, 2008 \$0.005 million stock-based compensation was capitalized to the projects (2007: \$nil). As at June 30, 2008, the aggregate unexpensed fair value of unvested stock options granted amounted to \$3.9 million (2007: \$3 million).

The following table summarizes information about First Uranium's outstanding stock options as at June 30, 2008:

Exercise price ranges Cdn\$	Options outstanding			Options exercisable		
	Number of options outstanding	Weighted average remaining life (years)	Weighted average exercise price (Cdn\$)	Number of options exercisable	Weighted average remaining life (years)	Weighted average exercise price (Cdn\$)
7.00 to 8.99	2,901,172	9.34	8.34	1,210,460	9.20	8.13
9.00 to 11.99	238,214	9.23	10.13	114,168	9.14	10.19
12.00 to 13.99	60,000	8.92	12.87	39,999	8.92	12.87
	3,199,386	9.33	8.56	1,364,627	9.18	8.43

14. CONTRIBUTION FROM PARENT

(in thousands of dollars)	June 30, 2008	March 31, 2008
Balance, beginning of period	153	-
Stock-based compensation relating to parent	408	153
Balance, end of period	561	153

These contributions represent the stock-based compensation relating to 7.6 million Simmer & Jack stock options granted during the year ended March 31, 2008, to individuals that were previously employed by Simmer & Jack and that were transferred to First Uranium during that year. No such stock options were granted during the three months ended June 30, 2008.

15. OTHER INCOME

(in thousands of dollars)	June 30, 2008	June 30, 2007
Sludge pumping income	259	-
Rental income	21	-
Other income	38	-
	318	-

16 STOCK-BASED COMPENSATION

(in thousands of dollars)	June 30, 2008	June 30, 2007
Stock-based compensation cost - First Uranium Options (see Note 13)	1,245	770
Stock-based compensation cost - Simmers Stock Options (see Note 14)	408	-
Stock-based compensation capitalized during the period	(5)	-
	<u>1,648</u>	<u>770</u>

17. FOREIGN EXCHANGE (LOSSES) GAINS

(in thousands of dollars)	June 30, 2008	June 30, 2007
Foreign exchange (losses) gains	<u>(524)</u>	<u>6,425</u>

The foreign exchange losses on translation during the three months ended June 30, 2008 reflect the overall strengthening of the Cdn\$ against the US\$ and the weakening of the ZAR against both the Cdn\$ and US\$.

18. BASIC AND DILUTED (LOSS) INCOME PER COMMON SHARE

	June 30, 2008	June 30, 2007
Basic and diluted (loss) income per share of (\$)	(0.04)	0.04
is calculated based on (loss) income for the period of 000)	(5,795)	5,471
and a weighted average number of common shares outstanding of (000)	<u>131,074</u>	<u>122,989</u>

For the three months ended June 30, 2008 and 2007, the impact of outstanding share options was excluded from the diluted common shares calculation because it was anti-dilutive for earnings per share purposes.

The impact of the Debentures issued on May 3, 2007, has been excluded from the diluted common shares computation because it was anti-dilutive for earnings per share purposes.

19. NOTES TO THE CONSOLIDATED STATEMENTS OF CASH FLOWS

19.1 Non-cash interest income

(in thousands of dollars)	June 30, 2008	June 30, 2007
Total interest income	(1,831)	(4,366)
Add back: Cash interest income	1,831	4,169
	-	(197)

19.2 Decrease (increase) in net receivable from/payable to related parties

(in thousands of dollars)	June 30, 2008	June 30, 2007
Decrease (increase) in receivable from related parties	(12)	5,873
Increase (decrease) in payable to related parties	66	156
Add back:		
- Interest income accrued on accounts receivable	-	57
	<u>54</u>	<u>6,086</u>

19.3 Additions to property, plant and equipment

(in thousands of dollars)	June 30, 2008	June 30, 2007
Total additions to property, plant and equipment	(52,389)	(15,075)
Add back:		
Capital expenditure included in Trade payables	18,182	5,263
Stock-based compensation included in Property, plant and equipment	5	-
	<u>(34,202)</u>	<u>(9,812)</u>

Net cash movement on acquisition of MWS

(in thousands of dollars)	June 30, 2008	June 30, 2007
Cash and cash equivalents taken over on date of acquisition	-	1,954
Less: Expenses related to MWS acquisition	-	644
	-	1,310

20. COMMITMENTS

Lease agreements

The Corporation has an operating lease agreement which expires on May 31, 2012. The total rent expense charged under this agreement was \$0.031 million for the three months ended June 30, 2008 (2007: \$nil).

During May 2008, the Corporation agreed to lease ten self contained diesel powered generating sets of 1 MW each (gensets) for an initial term of eighteen months. The fixed monthly rental charge is \$13,500 per genset for the first twelve months, reducing to \$12,500 per genset thereafter. After the initial eighteen months period, the Corporation has the option to extend the lease agreement period for up to sixty months, in successive twelve month periods. The fixed monthly charge per genset is \$12,500 for months 19 to 24; \$12,000 for months 25 to 36; \$11,500 for months 37 to 48; and \$11,000 for months 49 to 60. If the gensets are rented for sixty months, the Corporation is entitled to purchase the gensets for \$50,000 per set. The Corporation is also obligated to pay a monthly fixed charge of \$25,000 and a running hourly charge of EUR11.30 (\$17.85). These charges are subject to indexation based on consumer prices.

The Corporation is also responsible for \$75,000 mobilization charges and \$56,250 demobilization charges per shipment. The gensets will be installed over a three month period commencing July 2008. The total rental and fixed charges for the initial eighteen month period are estimated at \$2.2 million and \$0.5 million, respectively. The agreement will commence on arrival of the first two gensets (anticipated to be at the end of July 2008).

As the Corporation does not assume substantially all of the benefits and risks of ownership of the gensets, this agreement will be accounted for as an operating lease. This treatment will be reviewed in accordance with any changes that may be made in the successive agreements

Capital commitments

(in thousands of dollars)	June 30, 2008	March 31, 2008
Ezulwini Mine	27,259	35,128
MWS	42,466	5,173
Total contractual obligations	69,725	40,301

The capital commitments are payable within one year.

During May 2008 the Corporation entered into an agreement to purchase a 30 MW diesel-fired power plant and associated equipment, refurbished and configured in accordance with the Corporation's specifications for \$8.5 million. The vendor will oversee the installation, construction, start-up and commissioning of the power plant at both of the Corporation's operations. Eighty percent of the purchase price is payable upon shipment of the power plant and the balance upon installation and the successful commissioning at site. The Corporation is responsible for shipping charges of approximately \$750,000. In addition, the costs of civil, structural and electrical switchgear and transmission equipment are estimated to be \$6.5 million. As at June 30, 2008, the equipment has not yet been shipped to South Africa. (see Note 8, Guarantees)

Toll treatment agreement

The Corporation entered into an agreement with a third party, commencing in January 2009, to calcine the ammonium diuranate (yellowcake) from First Uranium to produce uranium oxide packaged for dispatch to converters. Either party may terminate the agreement on 18 months notice. The third party calciner will construct a plant with one half of the capacity of the plant to be dedicated for the processing of the First Uranium yellowcake and will acquire a road tanker to transport the yellowcake from the First Uranium operations to the calciner's operations. First Uranium will pay one-half of the construction cost of the calcining plant up to a maximum of \$1.8 million and one half of the cost of the tanker (together referred to as the Loan). The Loan will be effective as of January 5, 2009 and is to be repaid in monthly instalments over a seven year period commencing January 30, 2009. The Loan will bear interest equal to the prime overdraft rate as quoted by the South African Reserve Bank (SARB), plus 2% commencing on January 5, 2009.

Royalty agreements

MWS is required to pay: (i) to Simmer & Jack, an amount equal to the royalty payable by Simmer & Jack to Aberdeen pursuant to the Aberdeen Agreement in respect of the tailings to be acquired from Buffelsfontein Gold Mines Limited (BGM), pursuant to the Buffelsfontein Tailings and Rights Agreement; and (ii) to BGM a 1% royalty, pursuant to the terms of the Buffelsfontein Tailings and Rights Agreement.

During December 2007, MWS commenced processing the Buffelsfontein Tailings and, as a result, MWS is obligated to pay the royalty to BGM, pursuant to the Buffelsfontein Tailings and Rights Agreement, and make other payments to Simmer & Jack pursuant to the Aberdeen Arrangement in respect of the metals recovered from the Buffelsfontein Tailings. The total royalties and related payments expensed during the three months ended June 30, 2008 amounted to \$0.4 million (2007: \$nil). (see Note 23, Related party transactions and commitments)

21 CAPITAL MANAGEMENT

First Uranium's capital includes convertible debentures and shareholders' equity. The Corporation's objectives when managing shareholders' equity are to provide returns for shareholders and safeguard its ability to continue as a going concern. Mining is capital intensive and the Corporation strives to achieve lowest industry costs at all of its operations and meet cash flow requirements through internally generated cash flows.

The Corporation's current operations involve the re-opening and development of the Ezulwini Mine and the development of MWS. First Uranium intends to use the remaining proceeds from the issue of the Debentures raised in May 2007 to fund the development of the Ezulwini Mine and MWS and for general corporate purposes and to fund the Ezulwini Expansion Program, which is designed to determine the potential for a possible expansion of the Ezulwini Mine.

In order to carry out the planned development and exploration and pay for administrative costs, the Corporation plans to spend the capital raised to date, as well as its existing working capital and raise additional amounts as needed. The Corporation will continue to assess new properties and seek to acquire an interest in additional properties if it feels there is sufficient geologic or economic potential and if it has adequate financial resources to do so.

The Corporation manages its capital structure and makes adjustments to it, based on the funds available to the Corporation, in order to support the development of its operations and the exploration and development of mineral properties. The Board of Directors does not establish quantitative return on capital criteria for management, but rather relies on the expertise of the Corporation's management to sustain future development of the business.

Management reviews its capital management approach on an ongoing basis and believes that this approach, given the relative size of the Corporation, is reasonable.

There were no changes in the Corporation's approach to capital management during the three months ended June 30, 2008. Neither the Corporation nor its subsidiaries is subject to externally imposed capital requirements.

2. FINANCIAL INSTRUMENTS

Financial risk factors

First Uranium's activities expose it to a variety of financial risks, including the effects of changes in debt and equity market prices, foreign currency exchange rates and interest rates.

a) Credit risk

Credit risk is the risk of loss associated with a counter party's inability to fulfill its payment obligations. The Corporation's credit risk is primarily attributable to gold sales and value-added taxes receivable. The Corporation has a concentration of credit risk with one customer which is closely monitored by management. Value-added taxes receivable are collectable from the South African government. Management believes that the credit risk concentration with respect to financial instruments attributable to gold sales and value-added taxes receivable is remote.

In addition, the majority of the Corporation's cash and cash equivalents are on deposit with highly-rated financial institutions.

b) Liquidity risk

First Uranium has sufficient funds (June 30, 2008: \$111.8 million inclusive of the restricted cash) to settle its current and long-term liabilities (excluding the senior unsecured convertible debentures). The Corporation's accounts payable and accrued liabilities, as well as the payable to related party, have contractual maturities of less than 30 days and are subject to normal trade terms.

c) Market risk

Market risk is the risk of loss that may arise from changes in market factors such as interest rates, foreign exchange rates, and gold prices.

i. Interest rate risk

First Uranium has significant cash balances and long-term debt, with the latter having a fixed rate of interest of 4.25% (see Note 10, Senior unsecured convertible debentures). The Corporation's current policy is to invest excess cash in short-term deposits in banks with which it maintains its bank accounts. The Corporation monitors the investments it makes and is satisfied with the credit ratings of its banks.

ii. Foreign currency risk

The Corporation's functional currency is the US\$. The Corporation is affected by currency transaction risk and currency translation risk. Consequently, fluctuations of the US\$ in relation to other currencies impact the fair value of financial assets, liabilities and operating results. The Corporation does not hedge its exposure to foreign currency exchange risk.

Certain short-term financial liabilities are denominated in other currencies, predominantly Cdn\$ and ZAR. The Corporation's operations are primarily in South Africa and as a result the Corporation has maintained significant cash and cash equivalents during the year in ZAR to meet these operations' short-term liquidity requirements. Financial assets and liabilities subject to currency translation risk primarily include non-US\$ cash and cash equivalents and the Debentures.

The SARB approval that was required in connection with the issue of the Debentures includes a condition that the Corporation transfers the net Debenture proceeds to bank accounts of the Corporation in South Africa and convert the funds to ZAR, by May 3, 2008. SARB has granted an extension in respect of Cdn\$60 million of such funds pending consideration of an application by the Corporation to permit the funds to remain in Canada. As at June 30, 2008, \$92.5 million of the net proceeds from the issue of the Debentures were held in Canadian dollar denominated short-term deposits bearing interest at 4.85% per annum.

iii. Price risk

Gold price risk is defined as the potential adverse impact on earnings and economic value due to gold price movements and volatilities. The Corporation does not hedge its exposure to commodity price fluctuation risk.

Sensitivity analysis

The Corporation has designated its cash and cash equivalents as available-for-sale, which is measured at fair value. Financial instruments included in accounts receivable and receivables from related party are classified as loans and receivables, which are measured at amortized cost. Accounts payable and accrued liabilities and payable to related party are classified as other financial liabilities, which are measured at amortized cost.

Based on management's knowledge and experience of the financial markets, First Uranium believes the following movements are "reasonably possible" over a 12 month period.

As of June 30, 2008, management estimates that if interest rates had changed by 1%, assuming all other variables remained constant, the impact to net loss would have been approximately \$118,819.

Financial instruments that impact the Corporation's operations due to currency fluctuations include:

- Cdn\$ denominated cash and cash equivalents, accounts receivable, loan to related party, accounts payable and accrued liabilities, and the debt portion of convertible debentures.
- ZAR denominated cash and cash equivalents, accounts receivable, accounts payable and accrued liabilities, and payables to related party.

As at June 30, 2008, management estimates that if the foreign exchange rates had changed 10% against the US\$ assuming all other variables remained constant, the impact on net loss would have been approximately as follows:

(in thousands of dollars)	
10% increase in value of Cdn\$	912
10% decrease in value of Cdn\$	(912)
10% increase in value of ZAR	989
10% decrease in value of ZAR	(989)

The Corporation's current exposure to price risk on the commodities in which it produces and sells is limited.

Fair value estimation

In assessing the fair value of other financial instruments, the Corporation uses a variety of methods and makes assumptions that are based on market conditions existing at each balance sheet date.

The face values less any estimated credit adjustments for financial assets and financial liabilities with a maturity of less than one year are assumed to approximate their fair values. The fair value of financial liabilities for disclosure purposes is estimated by discounting the future contractual cash flows at the current market interest rate available to the Corporation for similar financial instruments.

As at June 30, 2008, the actual disclosed values of the financial instruments all approximate the fair values of these instruments.

23. RELATED PARTY TRANSACTIONS AND COMMITMENTS

	June 30, 2008	March 31, 2008
Related party balances (in thousands of dollars)		
Loan to Chief Executive Officer	990	978
FUSA amount to Simmer & Jack	(607)	(541)
Related party transactions (in thousands of dollars)		
Shared services fees to Simmer & Jack	(427)	(528)
Fees paid to empowerment company	(52)	(53)
Stock-based compensation to parent (see Note 14)	(408)	-
Royalties paid to BGM (see Note 20)	(68)	-
Payments to Simmer & Jack pursuant to the Aberdeen Arrangement Agreement (see Note 20)	(324)	-
Interest received from Simmer & Jack by FUSA	-	57
Interest received on loan to Chief Executive Officer	10	15

These transactions are in the normal course of operations and are measured at the exchange amount of consideration established and agreed to by the parties involved, having regard to prevailing market rates.

First Uranium and Simmer & Jack have a shared services agreement (the Shared Services Agreement) pursuant to which First Uranium may retain certain services provided by Simmer & Jack. During the three months ended June 30, 2008, \$0.3 million (2007: \$0.2 million) of the fees to Simmer & Jack pursuant to the Shared Services Agreement were expensed and \$0.2 million (2007: \$0.3 million) of the fees were capitalized, representing services provided in respect of technical services for the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project.

In addition, First Uranium has agreed to reimburse Simmer & Jack with respect to 50% of fees that Simmer & Jack is required to pay to an empowerment company for consulting services regarding transformation, human resources and occupational health and safety. BJ Njenje, AX Sisulu and SLB Mapisa, shareholders of the empowerment company, are also directors of Simmer & Jack.

On September 27, 2007, the Board of Directors approved a loan in the amount of Cdn\$1 million to the Chief Executive Officer of First Uranium for the purpose of facilitating his purchase of a family home. The loan is for a term of six years, is unsecured and bears interest at 4% per annum payable monthly in arrears.

24. SEGMENTED INFORMATION

Segmented information is presented in respect of the Corporation's business and geographical segments. The primary format business segments are based on the Corporation's management and internal reporting structure. Inter-segment reporting is determined on an arm's length basis.

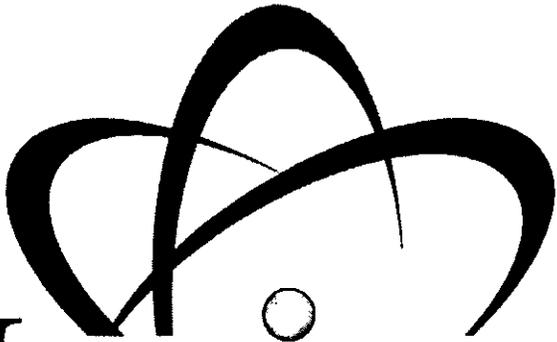

Segment results, assets and liabilities include items directly attributable to a segment as well as those that can be allocated on a reasonable basis. Unallocated items comprise mainly income earning assets and revenue, interest-bearing loans, borrowing and expenses, and corporate assets and expenses. Segment capital expenditure is the total cost incurred during the year to acquire segment assets that are expected to be used for more than one year.

For the three months ended June 30, 2008 (in thousands of dollars)	South Africa		Canada	Total
	Ezulwini Mine	MWS*	Corporate

MANAGEMENT'S DISCUSSION AND ANALYSIS
of the financial results
for the three months ended
June 30, 2008 and June 30, 2007

Management's discussion and analysis of the unaudited consolidated financial condition and results of operations for the three months ended June 30, 2008 and June 30, 2007

This Management's Discussion and Analysis ("MD&A") of the consolidated financial position and results of operations reviews the activities, unaudited consolidated results of operations and financial condition of First Uranium Corporation and its subsidiaries ("First Uranium" or the "Corporation") for the three months ended June 30, 2008 ("Q1 2009") and June 30, 2007 ("Q1 2008"), together with certain trends and factors that are expected to have an impact in the future. References to "FY 2009" refer to the Corporation's fiscal years ending March 31, 2009. References to "Q2 2009" refer to the Corporation's three-month period ending September 30, 2008.

This management's discussion and analysis of the consolidated financial position and results of operations ("MD&A") is intended to supplement and complement the unaudited consolidated financial statements and notes thereto for Q1 2009 and Q1 2008 (collectively the "Financial Statements") which have been prepared in accordance with Canadian generally accepted accounting principles ("Canadian GAAP"). The MD&A should be read in conjunction with the Financial Statements and First Uranium's audited consolidated financial statements for the fiscal year ended March 31, 2008 ("FY 2008") and the notes thereto and the related management's discussion and analysis. Information contained in this MD&A is current as at August 11, 2008, unless otherwise indicated.

The reporting currency for the Corporation is the US dollar, and all amounts in the following discussion are in US dollars ("\$"), except where otherwise indicated.

This MD&A includes certain forward-looking statements. Please read the cautionary note at the end of this document.

Responsibility of Management and the Board of Directors

Management is responsible for the information disclosed in this MD&A and the accompanying Financial Statements and has in place the appropriate information systems, procedures and controls to ensure that information used internally by management and disclosed externally is materially complete and reliable. In addition, the Corporation's Audit Committee, on behalf of the Board of Directors, provides an oversight role with respect to all public financial disclosures made by the Corporation and has reviewed and approved this MD&A and the accompanying Financial Statements.

Disclosure Controls and Procedures

Disclosure controls and procedures are designed to provide reasonable assurance that all relevant information is gathered and reported on a timely basis to senior management, including the Corporation's Chief Executive Officer and Chief Financial Officer, so that appropriate decisions can be made regarding public disclosure. As at the end of the period covered by this MD&A, management of First Uranium, under the direction of the Chief Executive Officer and the Chief Financial Officer, evaluated the effectiveness of the Corporation's disclosure controls and procedures as required by Canadian securities laws.

Based on this evaluation, the Chief Executive Officer and the Chief Financial Officer have concluded that as of the end of the period covered by this MD&A, the disclosure controls and procedures were effective to provide reasonable assurance that information required to be disclosed in First Uranium's annual filings and interim filings (as such terms are defined under Multilateral Instrument 52-109 – Certification of Disclosure in Issuers' Annual and Interim Filings) and other reports filed or submitted under Canadian securities laws is recorded, processed, summarized and reported within the time periods specified by those laws, and that material information is accumulated and communicated to management of First Uranium, including the Chief Executive Officer and the Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

During the most recent period there were no changes in the Corporation's internal controls over financial reporting that materially affected, or are reasonably likely to materially affect, the Corporation's internal control over financial reporting.

Overview

First Uranium is a Canadian resource company focused on the development of uranium and gold projects in South Africa. The Corporation's goal is to become a significant low-cost producer of uranium and gold through the re-opening and development of the Ezulwini Mine and the expansion of the Mine Waste Solutions tailings recovery project ("MWS"). To expand its production profile, First Uranium plans to pursue value-enhancing opportunities in South Africa and elsewhere.

First Uranium is currently focused on the rehabilitation and bringing into production of the Ezulwini underground uranium ("U₃O₈") and gold ("Au") mine (the "Ezulwini Mine") and the recovery of uranium and gold from the existing and future surface tailings at the Buffelsfontein mine through MWS's existing gold plant and, subject to their commissioning, through the planned uranium recovery plant and additional gold recovery facilities.

The Corporation received net proceeds of \$177.7 million from the sale of 33 million common shares in its initial public offering (the "Offering") in December 2006 and raised an additional \$130.6 million (net of expenses) from the sale of senior unsecured convertible debentures (the "Debentures") in May 2007. The common shares and the convertible debentures are listed on the Toronto Stock Exchange (the "TSX"). In addition, the common shares are listed on the Johannesburg Stock Exchange (the "JSE"). As of August 11, 2008, Simmer and Jack Mines, Limited ("Simmer & Jack"), a South African incorporated public company listed on the JSE, owned 62.3% of the common shares of First Uranium.

Highlights

During Q1 2009, First Uranium:

- ended the quarter with \$102.1 million cash and cash equivalents on hand
- hoisted 24,238 tonnes of ore at the Ezulwini Mine, which resulted in a stockpiled inventory of 12,695 tonnes of gold and uranium bearing ore from the Middle Elsburg ("ME") reef horizon and 11,543 tonnes of gold bearing ore from the Upper Elsburg ("UE") reef horizon, estimated to contain in aggregate:
 - 3,164 ounces of gold from the stockpiled 24,238 tonnes, comprising 11,543 tonnes at an average grade of 4.64 grams of gold per tonne and 12,695 tonnes at an average grade of 3.89 grams of gold per tonne
 - 10,060 pounds of uranium from the stockpiled 12,695 tonnes of ME ore at an average grade of 0.45 kilograms per tonne
- reclaimed 1.7 million tonnes of tailings through the MWS gold plant at a yield of 0.16 grams of gold per tonne, producing 8,530 ounces of gold at a Cash Cost (as defined in the notes to the production tables in the Operations Overview of this MD&A) of \$464 per ounce
- completed upgrading the MWS gold plant to increase the design capacity from 500,000 tonnes per month to 633,000 tonnes per month during May 2008
- upgraded MWS No.5 tailings dam during May 2008 to enable a deposition rate of 633,000 tonnes of material per month
- approved, subject to financing, a plan to build an acid plant at MWS to secure a low-cost supply of sulphuric acid, a necessary reagent for the production of uranium, from the sulphur contained in the pyritic material within the tailings dams, which are already being processed for gold at MWS
- approved a plan and entered into agreements to supplement the power supplied by the South African national power utility ("Eskom") by obtaining and installing diesel-fired generators and a power plant to secure a steady supply of electrical power with a total capacity of 54 megawatts ("MW"), inclusive of existing stand-by units, to the two operations until Eskom could be expected to restore a steady, reliable supply of electrical power
- filed updated independent technical reports on June 5, 2008 on both the Ezulwini Mine and MWS, taking into consideration the capital and operating costs of generating additional power, revised acid price assumptions and a revaluation of metal price and exchange rate assumptions, for which projected revised net present values are \$667 million for the Ezulwini Mine and \$413 million for MWS and the projected internal rate of returns are 336% for the Ezulwini Mine and 70% for MWS
- received notification on June 9, 2008 that Eskom will be able to increase its supply of power to the Ezulwini Mine from 40 MW to 55 MW, which is expected to reduce the Corporation's requirement to generate its own additional power and the costs thereof

Subsequent to the end of Q1 2009, First Uranium:

- continued commissioning the Ezulwini Mine's 200,000 tonne per month gold plant with the first 50,000 tonne per month module commencing production of gold bullion in July 2008
- continued commissioning the Ezulwini Mine's 100,000 tonne per month uranium plant, which had been scheduled for production of ammonium diuranate ("yellowcake") in August 2008 and is now scheduled for October 2008
- finalized and implemented two-year agreements with the National Union of Mineworkers ("NUM") at both the Ezulwini Mine and MWS
- resolved previously disclosed issues of handling clay content in tailings at MWS, with the result that the MWS gold plant throughput and recovery rates are at, and sometimes slightly above, design specifications

During Q2 2009, First Uranium plans to:

- hoist approximately 83,300 tonnes of ore at the Ezulwini Mine, of which approximately 65,500 tonnes would comprise gold and uranium bearing ore from the ME reef horizon and approximately 17,800 tonnes would comprise gold bearing ore from the UE reef horizon
- process approximately 17,200 tonnes of gold bearing ore through the newly commissioned gold plant at the Ezulwini Mine
- commission the second 50,000 tonne per month mill module at the Ezulwini Mine during September 2008
- publish an updated technical report for the Ezulwini Mine
- reclaim 1.9 million tonnes of tailings through the MWS gold plant at a yield of approximately 0.2 grams of gold per tonne with expected production of approximately 12,000 ounces of gold

Financial Overview

First Uranium's primary focus has been the development of the Ezulwini Mine and MWS, resulting in early gold production and sales. While the initial mining of uranium bearing ore has commenced, no uranium has been recovered to date. There was no recovery of either gold or uranium concentrates from processing facilities located at the Ezulwini Mine during Q1 2009 or Q1 2008.

During Q1 2009 a total of 8,530 ounces of gold were reclaimed at MWS at an average Cash Cost of \$464 per ounce compared to 3,420 ounces of gold reclaimed during Q1 2008 at an average Cash Cost of \$581 per ounce. MWS generated \$6.8 million of revenue from 7,741 ounces of gold sold at an average selling price of \$879 per ounce compared to \$2.2 million from 3,395 ounces of gold sold at an average selling price of \$643 per ounce in Q1 2008.

For Q1 2008 only the results of MWS for the month of June 2007 were included in the Corporation's consolidated results as the effective date of acquisition of MWS was June 6, 2007.

The relatively high average Cash Costs at MWS for Q1 2008 can be attributed primarily to the diminishing resources taken from the MWS No.2 tailings dam, which necessitated a high-cost mechanical load and placement operation. With the transition during December 2007 to the high-volume, low-cost operations associated with the mining of the Buffelsfontein Tailings, the average Cash Costs started to decrease. As throughput and gold production increase, average Cash Costs are expected to decrease further.

General, consulting and administrative expenditures which more than offset the gross profit from tailings reclaimed at MWS resulted in an operating loss of \$3.8 million in Q1 2009 compared to an operating loss of \$3.3 million in Q1 2008. The operating loss in Q1 2009 reflects increased revenues but also the increase in corporate and administration expenses as activities expand.

The loss of \$5.8 million in Q1 2009 was primarily the result of the ongoing expenditures mentioned above and foreign exchange losses on translation of Canadian and South African assets, liabilities, revenues and expenses converted to the US dollar. The Corporation reported net income of \$5.5 million in Q1 2008 that was primarily the result of foreign exchange translation gains and net interest income earned, partially offset by operating losses.

At the end of Q1 2009, First Uranium had total assets of \$394.4 million, total liabilities of \$166.1 million and shareholders' equity of \$228.3 million. It had cash and cash equivalents of \$102.1 million (excluding \$9.7 million of restricted cash on deposit) compared to \$164.7 million at the end of FY 2008. The Corporation currently holds its funds in cash and bank-sponsored guaranteed investment certificates. It has no exposure to asset-backed commercial paper. The decrease in cash and cash equivalents from the end of FY 2008 was primarily attributable to \$34.2 million of cash utilized during Q1 2009 for capital expenditures for the development of the Corporation's two mining operations and increased working capital.

Power update

The electrical power requirements required in Q1 2009 by MWS and the Ezulwini Mine were supplied by Eskom without any interruptions that plagued the country in the previous quarters. As a backup plan to secure a continual supply of electrical power at the Ezulwini Mine however, the Corporation has connected the existing 14 MW of standby diesel generated power to the new plant and has proceeded with its order to secure diesel generators with a further capacity of 10 MW on a capital lease basis. At MWS, the Corporation is in the process of shipping the 30 MW power plant that it recently acquired to secure sufficient power to start up the uranium and add-on gold plant modules planned for commissioning in the fourth quarter of fiscal 2009.

Operations overview

Ezulwini Mine

	Q1 2009	Q1 2008
Ezulwini Mine		
Tonnes hoisted (000s)	24,238	-

The Ezulwini Mine is located approximately 40 kilometres from Johannesburg on the outskirts of the town of Westonaria in the Gauteng Province, South Africa. The Ezulwini Mine is an underground mine constructed in the 1960s. Although the mine was put on care-and-maintenance from 2001 to 2006, when the Corporation acquired the mine, it had historically produced approximately 14 million pounds of uranium and 12 million ounces of gold. The mine has two separate tabular ore bodies about 400 metres apart. The UE ore body, where most of the mining has been done to date, is a gold only deposit. The ME ore body is a gold and uranium deposit and is relatively un-mined.

The Ezulwini Mine terminated a third-party toll-treatment arrangement at the end of March 2008 in order to start building a stockpile to be used for the commissioning of the gold plant and as a result there was no metal recovered during Q1 2009.

As at July 2, 2008 the clean-up process on surface and underground activities generated the following stockpiles at the Ezulwini Mine:

- from the material removed during the mining and excavation of the previous plant foundations and gold bearing soil, in excess of 127,500 tonnes containing an average grade of 1.1 grams per tonne of gold
- from the UE section, approximately 11,543 tonnes containing an average grade of 4.64 grams per tonne of gold
- from the ME section, approximately 12,695 tonnes containing an average grade of 3.89 grams per tonne of gold and 0.45 kilogram per tonne of U₃O₈

Final commissioning of the 200,000 tonne per month gold plant at the Ezulwini Mine commenced in Q1 2009 and gold was produced in July 2008. The first 50,000 per month mill was started up mid-July with ore from the UE section stockpile feeding the gold plant.

Commenced commissioning of the 100,000 tonne per month uranium plant at the Ezulwini Mine in June 2008 and the Corporation expects the first shipment of yellowcake production in October 2008. The delay in expected production (from August 2008) is due to late delivery of construction material caused by the EPCM contractor.

Current construction activities include the stabilization and refurbishment of the shaft and construction of the gold and uranium plant, surface gantry, transfer tower and crusher.

As at June 30, 2008, \$135.9 million cash has been spent on the capital projects at the Ezulwini Mine (FY 2008: \$112.3 million) including \$22.7 million capitalized pre-production costs and pumping and other capital related costs (FY 2008: \$20.3 million). The costs of production from the Ezulwini Mine will be capitalized and related proceeds of sales credited against capital until such time as the Ezulwini Mine has achieved commercial levels of production. Until completion of the Ezulwini Mine capital projects there will be additional pumping and other related costs capitalized although these costs will decrease on completion of the various phases of the capital projects. The revised project costs released in April 2008 indicated that the total capital required over the life of the mine was estimated at \$312 million (inclusive of sustaining capital).

Ezulwini Expansion Program

Based upon an internal concept evaluation, the combined Phase 1 drilling target areas required approximately 16,000 metres to be drilled to complete this phase. To date, a total of 6,146 metres have been drilled.

Currently four surface rigs are in operation, drilling holes through the UE1a, E9Ec, E8 and Kimberly Reefs. Values for the intersections are outstanding and in process.

The drilling has, so far, extended the geological information further down dip of the current workings and has assisted in the re-interpretation of the structural interpretation of the E9Ec – the main uranium carrier. The E8 and Kimberly Reef has been a good producer of both gold and uranium on the West Rand and the possibility of discovering additional potential on the Ezulwini property is anticipated.

Mine Waste Solutions

	Q1 2009	Q1 2008
MWS		
Tonnes reclaimed (000s)	1,665	402
Average gold recovery grade (grams/tonne)	0.16	0.27
Total ounces of gold reclaimed	8,530	3,420
Total ounces of gold sold	7,741	3,395
Average selling price per ounce (\$)	879	643
Average cost per ounce reclaimed (\$)	482	669
Average Cash Cost per ounce reclaimed (\$)	464	581
<i>(in thousands of dollars)</i>		
Revenue	6,805	2,183
Cost of sales	(3,340)	(1,956)
Amortization	(189)	(299)
Total cost of sales	(3,529)	(2,255)
Gross profit (loss)	3,276	(72)

"Cash Costs" are costs directly related to the physical activities of producing gold and include mining, processing and other plant costs; third-party refining and smelting costs; marketing expense, on-site general and administrative costs; royalties; on-mine drilling expenditures that are related to production and other direct costs. Sales of by-product metals are deducted from the above in computing cash costs. Cash costs exclude depreciation, depletion and amortization, corporate general and administrative expense, exploration, interest, and pre-feasibility costs and accruals for mine reclamation. Cash costs are calculated and presented using the "Gold Institute Production Cost Standard" applied consistently for all periods presented. The Gold Institute was a non profit industry association comprised of leading gold producers, refiners, bullion suppliers and manufacturers. This institute has now been incorporated into the National Mining Association. The guidance was first issued in 1996 and revised in November 1999.

Total cash costs per ounce is a non-GAAP measurement and investors are cautioned not to place undue reliance on it and are urged to read all GAAP accounting disclosures presented in the consolidated financial statements and accompanying footnotes.

Note:

For Q1 2008 only the results of MWS for the month of June 2007 were included in the Corporation's consolidated results as the effective date of acquisition of MWS was June 6, 2007.

MWS is currently a gold tailings recovery operation located in the western portion of the Witwatersrand Basin, approximately 160 kilometres from Johannesburg. MWS consists of 14 tailings deposits from three gold and uranium mines that had operated for 50 years. These tailings represent in excess of 355 million tonnes of mineral resources including inferred resources, of which 325 million are mineable reserves estimated to contain 55 million pounds of uranium and 3.0 million ounces of gold. The tailings dams are spread over an area that stretches approximately 13.5 kilometres north-south and 14 kilometres east-west and cover an area of approximately 1,100 hectares. The tailings dams are being hydraulically mined with high-pressure water cannons.

The monthly average tonnes reclaimed have increased significantly quarter on quarter mainly as a result of the change in mining area from MWS No.2 tailings dam (depleted – high cost/low volume) to the Buffelsfontein No.2 tailings dam (high volume/low cost). The introduction of clay handling systems and ongoing plant modifications and upgrades also contributed to increased throughput.

The Q1 2009 average recovery grade is lower than the average recovery grade during Q1 2008 due to the change in material reclaimed from the MWS No.2 tailings dam relative to the Buffelsfontein No.2 tailings dam.

During the quarter, MWS implemented minor modifications to the hydraulic mining system to improve throughput and to the carbon-in-leach ("CIL") plant flow sheet to improve recoveries. This resulted in the throughput increasing by 5% from the previous quarter and the average recovery grades improving from 0.14 to 0.16 grams per ounce for Q1 2009, notwithstanding a 5-day shut down in June of the newly constructed reclamation station to complete outstanding tasks at the station. Improvements are expected to continue during Q2 2009, with the throughput to increase by another 10% per month during Q2 2009 and the average recovery grades improving to 0.19 grams per ounce, resulting in an overall improvement in gold production of 30%.

The design and construction of the second gold module and the first two uranium modules for the MWS plant are now scheduled for commencement of commissioning in January 2009 and completion in April 2009. The commissioning scheduled for December 2008 has been delayed as a result of the delay of ordering long lead items pending resolution of the power situation at MWS. Earthworks have been completed with the inclusion of a terrace for the acid plant. Civil construction commenced in April 2008. Metallurgical test work is ongoing and detailed engineering is approximately 32% complete.

As at June 30, 2008, \$31.8 million has been spent on the capital projects at MWS (FY 2008: \$21.2 million). The revised project costs released in April 2008 indicated that the total capital required over the life of mine was estimated at \$272 million (inclusive of sustaining capital).

Results of Operations

Consolidated Results

(in thousands of dollars)

	Q1 2009	Q1 2008
Group		
Revenue	6,805	2,183
Cost of sales (excluding amortization)	(3,340)	(1,956)
Amortization	(189)	(299)
Total cost of sales	(3,529)	(2,255)
Gross profit (loss)	3,276	(72)

Revenue for Q1 2009 and Q1 2008 was generated only from the sale of the gold from the MWS operations although Q1 2008 reflects only the results from MWS gold sales during the month of June 2007. There was no revenue generated from the Ezulwini Mine during Q1 2009 or Q1 2008.

Other income		
(in thousands of dollars)	Q1 2009	Q1 2008
Other income	318	-

Other income consists primarily of fees for sludge pumping services to a third party and hostel rental income at the Ezulwini Mine.

Expenditures		
(in thousands of dollars)	Q1 2009	Q1 2008
General, consulting and administrative expenditures	(4,347)	(2,103)
Stock-based compensation	(1,648)	(770)
Pumping, feasibility and rehabilitation costs	(1,447)	(347)
Total expenditures	(7,442)	(3,220)
Operating loss	(3,848)	(3,292)

General, consulting and administrative expenditures included \$2.9 million for Q1 2009 (Q1 2008: \$1.1 million) for employee compensation costs, consulting and professional fees, as well as fees charged by Simmer & Jack for services provided pursuant to the Shared Services Agreement of \$0.3 million for Q1 2009 (Q1 2008: \$0.2 million) (See Related Party Transactions in this MD&A).

The higher general, consulting and administrative expenses in Q1 2009 primarily reflect the ongoing and increasing scope of activities, including the progression of work at the Ezulwini Mine and MWS, the costs of corporate offices in Johannesburg and Toronto, other expenses of operating a public company and in Q1 2009 royalties and related payments made to Buffelsfontein Gold Mines Limited ("BGM") and Simmer & Jack in respect of revenues from production at MWS.

The Q1 2009 stock-based compensation expense reflects the amortized cost relating to 2,551,433 stock options granted during FY 2008 and the amortized cost relating to 1,223,001 stock options granted during FY 2007. The fair value of the stock-based compensation was estimated using the Black-Scholes option pricing model.

Pumping, feasibility and rehabilitation costs for Q1 2009 were primarily comprised of the \$1.3 million (Q1 2008: \$0.3 million) pumping costs expensed at the Ezulwini Mine. The Ezulwini Mine has an ongoing obligation to pump water from its underground mine irrespective of being in production or not. As a result of the increased operational activities, pumping costs increased quarter over quarter.

(in thousands of dollars)	Q1 2009	Q1 2008
Operating loss	(3,848)	(3,292)
Interest income	1,832	4,366
Interest and accretion expense on the Debentures	(2,149)	(2,028)
Accretion expense on Asset Retirement Obligations	(381)	-
Foreign exchange (losses) gains	(524)	6,425
(Loss) income before income taxes	(5,070)	5,471

Interest income primarily represents interest earned on cash and cash equivalents. Cash balances have been invested in short-term deposits with the Corporation's bankers until required for capital projects or to fund operating costs. The interest income in Q1 2008 primarily represents the interest earned from the proceeds of the Offering and the Debentures whereas the lower interest income in Q1 2009 reflects lower excess cash balances as the Offering proceeds were used on capital expenditures.

Interest and accretion expense on the Debentures were in respect of the full quarter in Q1 2009. The Q1 2008 expense related to only two months that the Debentures were outstanding. (See Note 10 to the Financial Statements.)

The foreign exchange losses on translation of Canadian dollar ("Cdn\$") and South African rand ("ZAR") accounts in Q1 2009 reflect the overall strengthening of the Cdn\$ against the US dollar and the overall

weakening of the ZAR against the Cdn\$ and the US dollar. The foreign exchange gains on translation in Q1 2008 reflect the overall strengthening of both the Cdn\$ and the ZAR against the US dollar during the quarter.

The table below shows the exchange rate movements over the comparative quarters of FY 2009 relative to FY 2008:

	Q1 2009	Q1 2008
Cdn\$ to the ZAR – closing rate	7.88	6.68
Cdn\$ to the ZAR – average rate	7.72	6.47
Cdn\$ to the US\$ – closing rate	0.99	0.94
Cdn\$ to the US\$ – average rate	0.99	0.91
US\$ to the ZAR – closing rate	7.96	7.08
US\$ to the ZAR – average rate	7.80	7.11

(Loss) income before income taxes

(in thousands of dollars)	Q1 2009	Q1 2008
(Loss) income before income taxes	(5,070)	5,471
Income tax charge	(725)	–
(Loss) income for the period	(5,795)	5,471

The loss in Q1 2009 compared to the profit in Q1 2008 is primarily the result of fluctuations of the Canadian dollar against the US dollar and the South African rand against the Canadian and US dollar over the respective periods along with increases in expenditures quarter over quarter.

Use of Proceeds

(in millions of dollars)	Use of net proceeds			
	Total spent at June 30, 2008	Spent during Q1 2009	Spent during FY 2008	Spent during FY 2007
Development of the Ezulwini Mine	(135.9)	(23.6)	(93.0)	(19.3)
Development of MWS	(31.8)	(10.6)	(19.7)	(1.5)
Repayment of indebtedness owed by EMC to Simmer & Jack	(14.1)	–	–	(14.1)
Purchase of the Ezulwini Mine infrastructure	(8.9)	–	–	(8.9)
Working capital and general corporate purposes	(15.1)	(28.0)	4.3	8.6
Total	(205.8)	(62.2)	(108.4)	(35.2)

Of the December 2006 Offering net proceeds of \$177.7 million, \$143.6 million had been utilized as at March 31, 2008. The remaining \$34.1 million was utilized during Q1 2009 and the Corporation started utilizing funds from the \$130.6 million raised from the issue of the Debentures in May 2007. As at June 30, 2008, \$28.1 million of the Debentures' net proceeds had been used.

The Corporation intends to use the remaining net proceeds from the Debentures to continue the development of the Ezulwini Mine and MWS, for general corporate purposes and to fund the Ezulwini Expansion Program. As at June 30, 2008 \$92.5 million of the Debenture proceeds were held in Canadian dollar denominated short-term deposits bearing interest at 4.85% per annum. The approval of the South African Reserve Bank ("SARB"), which was required in connection with the issue of the Debentures, included a condition that the Corporation transfer the net Debenture proceeds to bank accounts of the Corporation in South Africa and convert the funds to ZAR by May 3, 2008. As at June 30, 2008, Cdn\$50 million had been transferred to the Corporation's bank account in South Africa and converted to ZAR. The balance remains in Canadian dollars pending consideration by SARB of the Corporation's application to allow the funds to remain in Canada.

Cash flows

(in thousands of dollars)	Q1 2009	Q1 2008
Cash flows (utilized in) generated from operating activities	(19,610)	9,979
Cash flows utilized in investing activities	(44,080)	(8,397)
Cash flows from financing activities	–	130,561
Net effect of exchange rates on cash held in foreign currencies	1,056	4,177
Net (decrease) increase in cash and cash equivalents for the period	(62,634)	136,320
Cash and cash equivalents at beginning of period	164,739	138,914
Cash and cash equivalents at end of period	102,105	275,234

The cash utilized in operating activities during Q1 2009 was primarily used to fund the ongoing expenditures in excess of the cash generated from gold sales. The cash generated from operating activities during Q1 2008 was mainly the result of the net interest earned on cash balances during the quarter and the payment by Simmer & Jack of an outstanding receivable.

The cash utilized in investing activities in Q1 2009 primarily relates to restricted cash of \$9.7 million and capital expenditures of \$34.2 million (\$23.6 million and \$10.6 million at the Ezulwini Mine and MWS, respectively). The cash utilized in investing activities during Q1 2008 primarily comprised capital expenditures of \$9.2 million related to the Ezulwini Mine.

The cash generated during Q1 2008 from financing activities represented the \$130.6 million of net proceeds raised from the Debentures in May 2007.

The net effect of exchange rates on cash held in foreign currencies (Cdn\$ and ZAR) during both Q1 2009 and Q1 2008 are primarily the result of the Debenture proceeds held in cash and the debt portion of the Debentures translated to US dollars at the exchange rate in effect at the end of the respective periods, while the equity portion of the Debentures was translated to US dollars at the rate in effect on the date that the Debentures were issued.

Financial Position and Liquidity

Assets

Cash and cash equivalents decreased by \$62.6 million during Q1 2009 to \$102.5 million as at June 30, 2008 (FY 2008: 164.7 million). The decrease was represented by \$34.2 million capital expenditures at the Corporation's two operations and increased working capital.

The restricted cash relates to a Letter of Credit (LC) of \$9.25 million that has been taken out by the Corporation in respect of a 30 MW power plant to be installed at MWS. Cash cover of 110% of the value of the purchase price of the LC has been placed in an investment account with a South African banking institution as of June 25, 2008 and earns interest at 12.5% per annum. (See Note 8 to the Financial Statements.)

Accounts receivable of \$14.0 million at June 30, 2008 (FY 2008: \$9.7 million) were primarily comprised of \$11.7 million of value-added tax and goods and services taxes recoverable, mainly relating to the ongoing capital expenditures on the projects.

Inventories of \$5.9 million at the end of Q1 2009 (FY 2008: \$2.8 million) include \$1.1 million of gold work-in-progress and \$1.7 million of spares and consumables from the MWS operations. At the end of Q1 2009, the Corporation also had measured surface stockpiles at the Ezulwini Mine with an estimated value of \$3.0 million.

Property, plant and equipment increased to \$256.7 million at June 30, 2008 (FY 2008: \$204.7 million). Property, plant and equipment primarily include assets with a net book value of \$161.3 million and \$95.4 million relating to the Ezulwini Mine and MWS, respectively. (See Note 6 to the Financial Statements.)

The increase in asset retirement funds to \$5.1 million (FY 2008: \$4.8 million) was the result investment income earned and contributions made to the fund during the quarter.

The \$1.0 million loan to a related party represents the loan advanced to the President and Chief Executive Officer on October 17, 2007. (See Note 23 to the Financial Statements.)

Liabilities

At June 30, 2008, total liabilities were \$166.1 million (FY 2008: \$155.3 million), consisting of the debt portion of \$101.6 million (FY 2008: \$99.9 million) of the Debentures (see Note 10 to the Financial Statements), the asset retirement obligation of \$19.9 million (FY 2008: \$19.9 million), the future tax liability in the amount of \$10.2 million relating to MWS (FY 2008: \$10.6 million), accounts payable and accrued liabilities of \$33.8 million and the payable to a related party of \$0.6 million.

Included in the accounts payable and accrued liabilities of \$33.8 million (FY 2008: \$24.3 million) at the end of Q1 2009 was \$14.1 million and \$4.1 million of payables related to the capital expenditures incurred at the Ezulwini Mine and MWS, respectively, as well as trade payables of \$7.8 million and \$4.0 million related to the Ezulwini Mine and MWS operations, respectively.

The payable to a related party of \$0.6 million (FY 2008: \$0.5 million) at the end of Q1 2009 results from transactions pursuant to the Shared Services Agreement between First Uranium and Simmer & Jack, which were incurred in the normal course of business. (See Related Party Transactions in this MD&A.)

Liquidity and Capital Resources

At June 30, 2008, First Uranium had working capital of \$97.2 million (FY 2008: \$152.4 million). The decrease in working capital from FY 2008 is mainly attributable to the cash utilized to fund operating and capital activities at the Corporation's two operations.

Capital investments of \$312 million and \$272 million, inclusive of expenditures to date, are the total estimated cash required to complete the capital projects at the Ezulwini Mine and MWS, respectively. As at June 30, 2008, the Corporation's cumulative cash capital investments relating to its two projects were \$145 million (FY 2008: \$113 million).

Capital of \$1.6 million was spent during FY 2008 (FY 2008: \$0.9 million) in relation to the approved exploration budgets of \$10 million for the contiguous properties to the north-east and south-east of the Ezulwini Mine and \$30 million for the Ezulwini Mine. The extent to which the budgeted amounts are spent depends on the ongoing exploration results. Current commitments of \$1.8 million (FY 2008: \$0.5 million) relating to exploration work existed as at June 30, 2008.

The Corporation entered into an agreement with a third party, commencing in January 2009, to calcine the yellowcake received from First Uranium's operations to produce uranium oxide packaged for dispatch to converters ("Toll Treatment Agreement"). Either party may terminate the agreement on 18 months notice. The third party calciner will construct a plant with one-half of the capacity of the plant to be dedicated for the processing of the First Uranium yellowcake and will purchase a road tanker to transport the yellowcake from the First Uranium operations to the third party calciner's facility. First Uranium will pay one-half of the construction cost of the calcining plant up to a maximum of \$1.8 million and one-half of the cost of the road tanker (together referred to as the "Loan"). The Loan will be effective as of January 5, 2009 and is to be repaid in monthly installments over a seven-year period commencing January 30, 2009. The Loan will bear interest at a rate equal to the prime overdraft rate as quoted by SARB, plus 2%, commencing January 5, 2009. (See Note 20 to the Financial Statements.)

During May 2008 the Corporation entered into an agreement to purchase a 30 MW diesel-fired power plant and associated equipment, refurbished and configured in accordance with the Corporation's specifications for \$8.5 million. The vendor will oversee the installation, construction, start-up and commissioning of the power plant at both of the Corporation's operations. (See Note 20 to the Financial Statements.)

During May 2008 the Corporation agreed to lease ten self contained diesel powered generating sets ("gensets") for an initial term of eighteen months. The fixed monthly rental charge is \$13,500 per genset for the first twelve months, reducing to \$12,500 per genset thereafter. After the initial eighteen months period, the Corporation has the option to extend the lease agreement period for up to sixty months, in successive twelve month periods. If the gensets are rented for sixty months, the Corporation is entitled to purchase the gensets for \$50,000 per set. The Corporation is also obligated to pay a monthly fixed charge of \$25,000 and a running hourly charge of EUR11.30 (\$17.85). These charges are subject to indexation based on consumer price indexes. The Corporation is also responsible for \$75,000 mobilization charges and \$56,250 demobilization charges per shipment. (See Note 20 to the Financial Statements.)

As at June 30, 2008, First Uranium had the following contractual obligations:

(in thousands of dollars)	Payments due by date				
	Less than 1 year	1-3 Years	4-5 Years	After 5 Years	Total
Operating leases	92	188	72	–	352
Purchase obligations	69,725	–	–	–	69,725
Asset retirement obligations	–	–	–	19,924	19,924
Senior unsecured convertible debentures	–	–	101,645	–	101,645
Total contractual obligations	69,817	188	101,717	19,924	191,646

First Uranium anticipates that the estimated \$439 million remaining capital required (exclusive of a proposed acid plant) over the remaining life of the Ezulwini Mine and MWS (inclusive of sustaining capital) as well as \$40 million approved for the long-term Ezulwini Expansion Program will be funded from existing cash and cash equivalents and restricted cash totaling \$111.8 million and from internally generated cash flow from future sales of gold and uranium at current price assumptions, along with funds that may be available under a proposed mandate letter and term sheet with a financial institution for a credit facility. Discussions in respect of the credit facility and potential lines of credit are ongoing. The Corporation expects to fund the proposed acid plant through a separate project and/or end-user financing arrangement.

Summary of Quarterly Results

The table below sets out selected financial data for the periods indicated (as derived from First Uranium's consolidated financial statements):

Fiscal Quarters Ended (in thousands of dollars, except per share amounts)	Revenue	(Loss) income for the three months	Basic & diluted loss (income) per share	Total assets	Long-term Liabilities
June 30, 2008	6,805	(5,795)	(0.04)	394,416	(131,741)
March 31, 2008	6,360	(26,871)	(0.21)	387,742	(130,430)
December 31, 2007	6,633	(3,998)	(0.03)	404,555	(128,182)
September 30, 2007	6,254	3,051	0.02	389,554	(117,349)
June 30, 2007	2,183	5,471	0.04	373,549	(118,900)
March 31, 2007	Nil	(2,689)	(0.02)	181,427	(5,377)
December 31, 2006	Nil	(3,787)	(0.04)	195,374	Nil
September 30, 2006	Nil	786	0.01	8,839	Nil

Outlook

The next major milestone for the Ezulwini Mine is the completion of the commissioning of the 100,000 tonne per month uranium plant which is scheduled to deliver its first shipment of yellowcake in October 2008. Current mine production from the ME section of the Ezulwini Mine is being stockpiled separately on surface to feed the uranium plant during its commissioning phase. The Ezulwini Mine also plans to commission the second 50,000 tonne per month mill module during September 2008.

First Uranium has not yet signed any long-term contracts to sell uranium, although the Corporation has the option to use a take and pay agreement with Nufcor. As long-term uranium supply contracts are

currently all tending to be of a fixed delivery nature, First Uranium wants to complete the commissioning of at least one of its uranium plants prior to entering into any such uranium contracts.

It is expected that all four holes being drilled under the Ezulwini exploration program will have intersected the E9EC reef horizon by the end of the September 2008. Deflections from these four existing boreholes will provide supplemental borehole valuation data. The Phase 2 drilling project is expected to start in the third quarter of fiscal 2009. The final holes of the Phase 1 drilling project and the first reef intersections of the Phase 2 drilling project are expected to begin during Q4 2009.

The current and planned capital projects at MWS include:

- construction of the second gold module and the first two uranium modules that are scheduled for commencement of commissioning in January 2009 and completion in April 2009
- construction of the third gold module and the third uranium module that are scheduled for commissioning in December 2009, increasing plant capacity to 1.9 million tonnes per month
- establishing a single large tailings dam that will accommodate all future production tailings as well as tailings from processing the ore of the Buffelsfontein mine for uranium. Permitting for additional tailings deposition facilities is being undertaken.

An upgrade to accommodate a deposition rate of 1.3 million tonnes of material per month on the MWS No.5 tailings dam is planned in advance of the commissioning of the second module of the MWS gold plant and the first two modules of the uranium plant. In the event that the MWS No.5 tailings dam is found to be insufficient, additional tailings dam locations have been identified.

As previously reported, a specification and procurement study for a sulphuric acid plant has been initiated and is expected to be completed in October 2008.

Related Party Transactions

During Q1 2009, the Corporation paid \$0.5 million to Simmer & Jack pursuant to the Shared Services Agreement (Q1 2008: \$0.5 million). During Q1 2009 \$0.2 million of the fees charged by Simmer & Jack relating to technical services provided to the Ezulwini Mine and MWS were capitalized (Q1 2008: \$0.3 million).

First Uranium has agreed to reimburse Simmer & Jack for 50% of the fees that Simmer & Jack is required to pay to an empowerment company for consulting. During Q1 2009 the Corporation paid \$0.05 million to Simmer & Jack in connection with such services (Q1 2008: \$0.05 million).

On September 27, 2007, the Board approved a loan in the amount of Cdn\$1 million to the President and Chief Executive Officer of First Uranium for the purpose of facilitating the relocation of his family to Toronto, where the corporate office is located. The loan carries interest at 4% payable monthly in arrears, is for a term of six years from date of closing of the purchase of a family residence and is unsecured. The loan was advanced on October 17, 2007. Interest on this loan of \$10,071 was received during Q1 2009.

Pursuant to the Buffelsfontein Tailings and Rights Agreement and the Aberdeen Arrangement (Refer to the Company's Annual Information Form for the year ended March 31, 2008 for more detail), MWS is liable to pay: (i) to Simmer & Jack, an amount equal to the royalty payable by Simmer & Jack to Aberdeen pursuant to the Aberdeen Loan Agreement in respect of gold produced from the Buffelsfontein Tailings, and (ii) to BGM a royalty of 1% of the gross revenue earned by MWS from the sale of uranium, gold, sulphur and other minerals recovered from the processing of the Buffelsfontein Tailings. During Q1 2009 the total royalties and payments to BGM and Simmer & Jack were \$0.07 million and \$0.3 million, respectively. There were no such payments during Q1 2008.

Critical Accounting Policies and Estimates

The accounting policies used in the preparation of the accompanying unaudited consolidated financial statements are consistent with those used in the Corporation's audited consolidated financial statements for the fiscal year ended March 31, 2008, and described in Note 2 therein, except for the changes in accounting policies described in the following section.

The preparation of these consolidated financial statements in accordance with Canadian GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amount of revenues and expenses during the reporting period. Significant areas requiring the use of management estimates relate to the determination of impairment of capital assets, goodwill estimation of future site restoration costs and future income taxes, and classification of current portion of long term debt. Financial results as determined by actual events could differ from those estimated.

There have been no material changes to the critical accounting estimates as described in the Corporation's audited consolidated financial statements for the fiscal year ended March 31, 2008.

Changes in accounting policies

Going Concern

Effective April 1, 2008, the Corporation adopted an amendment to CICA Handbook Section 1400 – General Standards of Financial Statement Presentation in relation to going concern. The amendment requires management to assess an entity's ability to continue as a going concern. When management is aware of material uncertainties related to events or conditions that may cast doubt on an entity's ability to continue as a going concern, those uncertainties must be disclosed. In assessing the appropriateness of the going concern assumption, the standard requires management to consider all available information about the future, which is at least, but not limited to, twelve months from the balance sheet date. The adoption did not have a material impact on the Financial Statements for the period presented.

Inventories

Effective April 1, 2008, the Corporation adopted CICA Handbook Section 3031 – Inventories, which prescribes the accounting treatment for inventories and provides guidance on the determination of costs and its subsequent recognition as an expense, including any write-down to net realizable value. It also provides guidance on the cost formulas that are used to assign costs to inventories. This new section had no impact on the Corporation's results.

Future accounting standards

Goodwill and Intangible Assets

CICA Handbook Section 3064, Goodwill and Intangible Assets, establishes revised standards for recognition, measurement, presentation and disclosure of goodwill and intangible assets. Concurrent with the introduction of this standard, the CICA withdrew EIC 27, Revenues and Expenses during the pre-operating period. As a result of the withdrawal of EIC 27, companies will no longer be able to defer costs and revenues incurred prior to commercial production at new mine operations. The changes are effective for interim and annual financial statements beginning January 1, 2009. The Corporation is in the process of assessing the impact for its 2010 financial year.

International Financial Reporting Standards ("IFRS")

In February 2008, the Accounting Standards Board ("AcSB") approved a strategic plan which requires public companies to converge with IFRS for fiscal periods beginning on or after January 1, 2011. The Corporation is in the process of assessing the impact of convergence of Canadian GAAP and IFRS.

Outstanding Share Data

	Q1 2009	FY 2008
Common shares outstanding at beginning of period	131,074,037	121,686,047
Shares issued during the period	–	9,387,990
Common shares outstanding at end of period	131,074,037	131,074,037
Unexercised stock options outstanding at end of period	3,199,386	3,438,956
Average strike price of outstanding options (Cdn\$)	8.56	9.13

As at August 11, 2008, First Uranium had 131,074,037 common shares outstanding and there were 3,138,196 unexercised stock options outstanding, at an average strike price of Cdn\$8.56 per share.

As at June 30, 2008 and August 11, 2008 First Uranium also had \$135.1 million (Cdn\$150 million) principal amount of Debentures outstanding, which are convertible into 60.9013 common shares for each Cdn\$1,000 principal amount of Debentures, representing 9,135,195 common shares.

Risks and Uncertainties

Uncertainties

There are a number of uncertainties in the mining business of First Uranium that are beyond First Uranium's control, including:

- demand and prices for the Corporation's future production of uranium and gold
- the consistent supply of sufficient electrical power
- the consistent supply of sufficient sulphuric acid
- government legislation regarding mining companies in South Africa
- securities regulation regarding publicly listed companies in Canada and South Africa
- foreign exchange and interest rates
- the decisions and activities of the Corporation's competitors in the uranium and gold mining business, which impact the supply of uranium and the demand for available services, construction materials, labour and the rights for prospecting and mining
- the continued endorsement of nuclear power as a preferred source for the world's energy needs
- the decisions of investors to continue to buy and hold the securities of the Corporation
- natural disasters, war or random occurrences or acts that could result in a material change to economic and market performance, business conditions or operations

Risks

In addition, First Uranium's mining properties are in the development stage and are subject to the risks and challenges similar to other companies in a comparable stage of development. The risks include, but are not limited to, certain business, operational and market risks. For a detailed discussion of the Corporation's risks please refer to the Corporation's 2008 AIF, which is available on the Corporation's website, www.firsturanium.com and on www.sedar.com or upon request from the Corporation.

Market prices

The spot price for uranium ranged between \$57 and \$71 per pound during Q1 2009 but the more indicative price for establishing contracts is the term price which has ranged between \$80 and \$95 per pound during Q1 2009. As of August 8, 2008, the uranium spot price was \$64.50 per pound and the term price was \$80.00 per pound. The spot price for gold ranged between \$854.25 and \$951.50 per ounce during Q1 2009. As of August 8, 2008, the gold spot price was \$852.50 per ounce. The Corporation has no plans to hedge the price it receives for its gold production at this time.

Additional Information

Additional information relating to First Uranium is included in the Corporation's Annual Information Form dated June 9, 2008 and it is available on SEDAR at www.sedar.com.

Forward-looking Information

This MD&A and consolidated financial statements for the three months ended June 30, 2008 contain certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the availability of electrical power, the planned addition of owner-operated power generation, price of uranium and gold, price of electrical power, supply and price of sulphuric acid, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the realization of estimated pyrite content in MWS tailings dams, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, availability of financing on acceptable terms, government regulation of mining operations, environmental risks, unanticipated reclamation expenses and title disputes or claims and limitations on insurance coverage. In certain cases, forward-looking statements can be identified by the use of words such as "goal", "objective", "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at the date of this MD&A; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason. In making the forward-looking statements in this MD&A, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) consistent supply of sufficient power will be available to develop and operate the projects as planned; (ii) approvals to transfer or grant, as the case may be, mining rights or prospecting rights will be obtained; (iii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iv) mineral resource estimates are accurate; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

Form 52-109F2 - Certification of Interim Filings

I, Gordon Miller, President and Chief Executive Officer of First Uranium Corporation, certify that:

1. I have reviewed the interim filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of First Uranium Corporation (the "issuer") for the period ending June 30, 2008;
2. Based on my knowledge, the interim filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the interim filings;
3. Based on my knowledge, the interim financial statements together with the other financial information included in the interim filings fairly present in all material respects the financial condition, results of operations and cash flows of the issuer, as of the date and for the periods presented in the interim filings;
4. The issuer's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures and internal control over financial reporting for the issuer, and we have:
 - (a) designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which the interim filings are being prepared;
 - (b) designed such internal control over financial reporting, or caused it to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer's GAAP; and
5. I have caused the issuer to disclose in the interim MD&A any change in the issuer's internal control over financial reporting that occurred during the issuer's most recent interim period that has materially affected, or is reasonably likely to materially affect, the issuer's internal control over financial reporting.

Form 52-109F2 - Certification of Interim Filings

I, Emma Oosthuizen, Senior Vice President and Chief Financial Officer of First Uranium Corporation, certify that:

1. I have reviewed the interim filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of First Uranium Corporation (the "issuer") for the period ending June 30, 2008;
2. Based on my knowledge, the interim filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the interim filings;
3. Based on my knowledge, the interim financial statements together with the other financial information included in the interim filings fairly present in all material respects the financial condition, results of operations and cash flows of the issuer, as of the date and for the periods presented in the interim filings;
4. The issuer's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures and internal control over financial reporting for the issuer, and we have:
 - (a) designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which the interim filings are being prepared;
 - (b) designed such internal control over financial reporting, or caused it to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer's GAAP; and
5. I have caused the issuer to disclose in the interim MD&A any change in the issuer's internal control over financial reporting that occurred during the issuer's most recent interim period that has materially affected, or is reasonably likely to materially affect, the issuer's internal control over financial reporting.

DATED this 11th day of August, 2008

See accompanying notes to the Consolidated Financial Statements

1. NATURE OF OPERATIONS AND BASIS OF PRESENTATION

First Uranium Corporation ("First Uranium" or "the Corporation") is a Canadian resource company focused on the development of uranium and gold projects in South Africa. See Note 7 "Property, Plant and Equipment" for a description of the projects. The Corporation has a primary listing on the Toronto Stock Exchange ("TSX") and a secondary listing on the Johannesburg Stock Exchange ("JSE"). First Uranium owns 100% of First Uranium Limited ("FUL"), which in turn holds 100% of First Uranium (Proprietary) Limited ("FUSA") and 100% of Ezulwini Mining Company (Proprietary) Limited ("EMC"), which owns and operates the Ezulwini Mine.

During the three months ending June 30, 2007, the Corporation acquired all the issued and outstanding shares of Mine Waste Solutions (Proprietary) Limited and its subsidiary, Chemwes (Proprietary) Limited (collectively "MWS"), an existing tailings treatment company which had an operating gold recovery plant in place. As a result of the MWS purchase, First Uranium changed its plans for the Buffelsfontein Tailings Recovery Project so that the historical and future tailings from the Buffelsfontein mine (the "Buffelsfontein Tailings") will now be transported by pipeline to the MWS site and processed through MWS's existing gold plant and, subject to their completion, through the new uranium recovery plant and additional gold recovery facilities which are currently being constructed at the MWS site. For greater clarity, the Buffelsfontein Tailings Recovery Project, as enhanced and modified by the addition of MWS, will henceforth be referred to as MWS.

During the three months ending December 31, 2007, First Uranium issued 6.1 million shares to Waterpan Mining Consortium ("Waterpan") completing the purchase of the remaining 10% interest in EMC as contemplated in the Corporation's initial public offering in December 2006 ("the Offering") (the "Waterpan transaction") and as disclosed in the Offering documents and in the annual financial statements for the year ending March 31, 2007 and the interim financial statements for the three months ending June 30, 2007 and September 30, 2007. This transaction resulted in EMC becoming wholly-owned by First Uranium. First Uranium and Waterpan collaborated to effect this transaction considering the terms of the Offering and as such the acquisition of the remaining 10% interest in EMC is accounted for under Canadian GAAP as a continuity of interests. Certain adjustments have been reflected in the financial statements to reflect the acquisition as if the share exchange had been effective for the period from inception to December 31, 2007.

The reporting currency of the Corporation is the US dollar, and all amounts in these financial statements are in US dollars (US\$), except where otherwise indicated.

2. SIGNIFICANT ACCOUNTING POLICIES

The unaudited interim consolidated financial statements have been prepared by First Uranium in accordance with Canadian generally accepted accounting principles ("Canadian GAAP") for preparation of the interim financial statements. The preparation of the unaudited interim consolidated financial statements is based on the same accounting policies and practices as those disclosed in Note 1 "Nature of operations" and Note 2 "Significant accounting policies" to the Corporation's audited consolidated financial statements for the year ended March 31, 2007, except for changes as described in Note 3 "Changes in accounting policies". These unaudited interim consolidated financial statements do not include all disclosures required by GAAP for annual financial statements, and accordingly should be read in conjunction with the Corporation's audited consolidated financial statements for the year ended March 31, 2007.

2.1 Financial instruments

Transaction costs for financial assets and liabilities

For a financial asset or financial liability classified other than as held for trading, the Corporation has added the transaction costs that are directly attributable to the acquisition or issue of a financial asset or financial liability to the fair value of the asset or liability established at the recognition of the asset or liability.

2. Inventories

Inventories include ore stockpiles, gold in process and supplies and spares, and are recorded at the lower of cost or net realizable value. The cost of ore stockpiles and gold produced is determined principally by the weighted average cost method using related production costs. Costs of gold produced inventories include costs such as milling costs, mining costs and mine general and administration costs but excluding transport, refining and taxes. Net realizable value is determined with reference to current market prices. Stockpiles consist of ore to be processed through the processing plant. The stockpiles have been sampled and evaluated and are on surface. All ore is expected to be fully processed within the life of mine. Spares and consumable stores are valued at weighted average cost after appropriate impairment of redundant and slow moving items.

2.3 Revenue recognition

Revenue from sales is recognized when significant risks and rewards of title and ownership of the goods are transferred upon delivery to the final refiner.

Interest income is recognized on a time proportion basis, taking account of the principal outstanding and the effective rate over the period of maturity, when it is determined that such income will accrue to the Corporation.

2.4 Earnings or loss per share

Basic earnings or loss per share is computed by dividing earnings or loss available to common shareholders by the weighted average number of common shares outstanding during the period. The treasury stock method is used to calculate diluted earnings or loss per share. Diluted earnings or loss per share is similar to basic earnings or loss per share, except that the denominator is increased to include the number of additional common shares that would have been outstanding assuming that options with an average market price for the period greater than their exercise price are exercised and the proceeds used to repurchase common shares. In applying the treasury stock method, options with an exercise price greater than the average quoted market price of the common shares are not included in the calculation of diluted earnings per share, as the effect is anti-dilutive.

3. CHANGES IN ACCOUNTING POLICIES

Effective April 1, 2007, the Corporation adopted two new accounting standards that were issued by the Canadian Institute of Chartered Accountants ("CICA"):

- Handbook Section 1530 – Comprehensive Income
- Handbook Section 3855 – Financial Instruments – Recognition and Measurement

As provided under the standards, the comparative interim consolidated financial statements have not been restated. There were no transitional effects and as a result no adjustments have been recorded to deficit as at April 1, 2007.

Section 1530 – Comprehensive income

This section describes the reporting and disclosure standards with respect to comprehensive income and its components. Comprehensive income is composed of net income and other comprehensive income. At this time the Corporation has none of the elements that will give rise to comprehensive income.

Section 3855 – Financial instruments – recognition and measurement

This section establishes standards for recognizing and measuring financial assets, financial liabilities and non-financial derivatives. It requires that financial assets and liabilities including derivatives be recognized on the balance sheet when the Corporation becomes a party to the contractual provisions of the financial instrument or a non-financial derivative contract. All financial instruments should be measured at fair value on initial recognition except for certain related party transactions. Fair value is the amount at which an item could be exchanged between willing parties. Measurement in subsequent periods depends on whether the financial instruments have been classified as held for trading, available-for-sale, held-to-maturity, loans and receivables, or other liabilities.

The Corporation designated certain financial assets and liabilities and adopted the following new accounting policies:

Cash and cash equivalents

Cash and cash equivalents are classified as "assets available-for-sale" and are measured at fair value at each balance sheet date. Any changes in fair value are recognized in net income in the period in which the change arises. Fair value is calculated using published price quotations in an active market, where applicable. The carrying values for cash and cash equivalents at March 31 2007 approximated their fair values because of their short terms of maturity; no adjustments were made to the opening values.

Accounts receivable and receivables from related party

These assets are classified as "loans and receivables" and are recorded at amortized cost, which upon their initial measurement is equal to their fair value. Subsequent measurements are recorded at amortized cost using the effective interest rate method. The carrying values for these assets at March 31 2007 approximated their fair values because of their short terms of maturity; no adjustments were made to the opening values.

Asset retirement funds

The asset retirement funds are classified as "assets available-for-sale" and are measured at fair value at each balance sheet date. Any changes in fair value are recognized in net income in the period in which the change arises. Fair value is calculated using the quoted prices of South African equities in an active market, with interest and dividends recognized in net income; unrealized gains or losses are recognized in Other Comprehensive Income. Any equities without market quotes are carried using the cost method. The carrying values for the asset retirement funds at March 31 2007 approximated their fair values; no adjustments were made to the opening values.

Accounts payable and accrued liabilities and payable to related party

These liabilities are classified as "other financial liabilities" and are initially measured at their fair values. Subsequent measurements are recorded at amortized cost using the effective interest rate method. The carrying values for these liabilities at March 31 2007 approximated their fair values; no adjustments were made to the opening values.

Senior unsecured convertible debentures

The sum of the carrying amounts assigned to the liability and equity components of the convertible debenture on initial recognition is always equal to the carrying amount that would be ascribed to the instrument as a whole. No gain or loss arises from recognizing and presenting the components of the instrument separately. The relative fair value method is used to determine the value of the option directly either by reference to the fair value of a similar option, if one exists, or by using an option pricing model. The value determined for each component is then adjusted on a pro rata basis to the extent necessary to ensure that the sum of the carrying amounts assigned to the components equals the amount of the consideration received for the convertible debenture.

Accounting Changes

In July 2006, the Canadian Institute of Chartered Accountants (CICA) issued a new version of Section 1506 of the CICA Handbook, "Accounting Changes". This new standard establishes criteria for changing accounting policies, together with the accounting treatment and disclosure of changes in accounting policies and estimates, and correction of errors. This new section was adopted by the Company on January 1, 2007 with no impact on results.

Accounting policy choice for transaction costs

On June 1, 2007, CICA Emerging Issues Committee issued Abstract no. 166, "Accounting Policy Choice for Transaction Costs" (EIC - 166). This EIC addresses the accounting policy choice of expensing or adding transaction costs related to the acquisition of financial assets and financial liabilities that are classified as other than held-for-trading. Specifically, it requires the same accounting policy choice be applied to all similar financial instruments classified as other than held-for-trading, but permits a different policy choice for financial instruments that are not similar. EIC - 166 requires retroactive application to all transaction costs accounted for in accordance with Section 3855. The current recognition policy for transaction costs is consistent with this guidance.

Future accounting standards

The CICA has issued the following new sections which are effective for interim periods beginning on or after October 1, 2007. These new standards relate only to disclosure and presentation and will have no impact on the Company's results.

Financial instruments - disclosures

Section 3862, "Financial Instruments – Disclosures", describes the required disclosure for the assessment of the significance of financial instruments for an entity's financial position and performance and of the nature and extent of risk arising from financial instruments to which the entity is exposed and how the entity manages those risks.

Financial instruments - presentation

Section 3863, "Financial Instruments – Presentation", establishes standards for presentation of the financial instruments and non-financial derivatives. It carries forward the presentation related requirement of Section 3861, "Financial Instruments – Disclosure and Presentation".

Capital disclosures

Section 1535, "Capital Disclosures", establishes standards for disclosing information about an entity's capital and how it is managed. It describes the disclosure of the entity's objectives, policies and processes for managing capital, the quantitative data about what the entity regards as capital, whether the entity has complied with any capital requirements, and, if it has not complied, the consequences of such non compliance.

4. BUSINESS ACQUISITION

Acquisition of Mine Waste Solutions (Proprietary) Limited

First Uranium, through its wholly-owned subsidiary FUSA, acquired all of the issued and outstanding shares of MWS. MWS owns and operates an existing gold mine tailings and re-processing facility adjacent to First Uranium's Buffelsfontein Tailings Recovery Project in South Africa.

The MWS acquisition closed on June 6, 2007 (effective date of acquisition), at which point First Uranium assumed management control of MWS. For accounting purposes, net income from MWS operations of US\$1.9 million for the period from April 1, 2007 to June 6, 2007 has been applied to reduce the cost of the MWS acquisition.

A total consideration of US\$32.3 million was paid for the MWS acquisition in the form of an issuance of 3.1 million First Uranium common shares valued at US\$31.6 million and US\$0.7 million in cash for transaction costs.

The table below sets out the preliminary allocation of the purchase price to the assets acquired and liabilities assumed, based on preliminary estimates of fair value. Final valuations of the assets and liabilities have not been completed. Furthermore, the future income tax assets and liabilities are not yet complete due to the inherent complexity associated with these valuations. The preliminary purchase price allocation is subject to adjustments.

The acquisition was accounted for by the purchase method of accounting and the estimated allocation of fair value to the assets acquired and liabilities assumed as at June 6, 2007 was:

	Reported at December 31, 2007 US\$'000	Adjustments US\$'000	Reported at September 30, 2007 US\$'000
Current assets	4,608	-	4,608
Asset retirement fund	1,950	-	1,950
Property, plant and equipment	40,430	-	40,430
Total assets acquired	46,988	-	46,988
Current liabilities	1,476	-	1,476
Lease obligations	28	-	28
Asset retirement obligation	2,777	-	2,777
Future tax liability	10,445	-	10,445
Total liabilities assumed	14,726	-	14,726
Net assets acquired	32,262	-	32,262

Current assets include cash and cash equivalents of US\$1.3 million (net of transaction costs) (see Note 18.5).

Although the estimated allocation of fair value to the assets acquired and liabilities assumed is subject to changes as additional information becomes available, the final allocation is not expected to differ materially from the estimated allocation.

The excess of the purchase consideration over the net book value of MWS of US\$35.2 million was attributed to the tailings for processing of US\$29.5 million and US\$5.6 million adjustment of the fair value of property, plant and equipment obtained with the MWS acquisition less the related future tax liability arising on these assets.

5. AMOUNTS RECEIVABLE

	December 31 2007 US\$'000	March 31 2007 US\$'000
Trade receivables	5,017	99
Value Added Tax and Goods and Services Tax	8,866	1,463
Prepayments and advances	73	144
Deposits and guarantees	82	7
	14,038	1,713

6. INVENTORIES

	December 31 2007 US\$'000	March 31 2007 US\$'000
Gold work-in-progress	751	-
Spares and consumables	835	292
Stockpiles	875	-
	2,461	292

7. PROPERTY, PLANT AND EQUIPMENT

December 31, 2007	Cost US\$'000	Accumulated amortization US\$'000	Net carrying amount US\$'000
Land and buildings	3,826	(32)	3,794
Mine infrastructure	27,558	-	27,558
Mining assets	64,127	-	64,127
Tailings for processing	29,642	(1,108)	28,534
Mining rights	82	-	82
Plant and equipment	41,191	(135)	41,056
Motor vehicles	862	(74)	788
Office furniture and equipment	366	(15)	351
Computer equipment and software	476	(89)	387
Total	168,130	(1,453)	166,677

March 31, 2007	Cost US\$'000	Accumulated amortization US\$'000	Net carrying amount US\$'000
Land and buildings	863	-	863
Mine infrastructure	3,710	-	3,710
Mining assets	16,942	-	16,942
Mining rights	13	-	13
Plant and equipment	9,000	-	9,000
Motor vehicles	179	(8)	171
Office furniture and equipment	56	(1)	55
Computer equipment and software	205	(5)	200
Total	30,968	(14)	30,954

Included in the above are mining related assets with a net carrying value of US\$101.4 million (March 31, 2007: US\$29.0 million) related to the Ezulwini Mine and US\$64.3 million (March 31, 2007: US\$0.8 million) related to MWS.

Included in the US\$64.3 million net carrying value related to the MWS, is US\$28.5 million relating to the Tailings for processing acquired with the MWS acquisition as well as US\$5.4 million adjustment of the fair value of property, plant and equipment obtained with the MWS acquisition (see Note 4).

As at December 31, 2007, all property, plant and equipment were owned by the Corporation, except for motor vehicles with a net carrying value of US\$0.02 million which are held under capitalized lease contracts.

As at March 31, 2007, all property, plant and equipment were owned by the Corporation.

Ezulwini Mine

The Ezulwini Mine project involves the recommissioning of an underground uranium and gold mining operation located on the outskirts of the town of Westonaria in Gauteng Province, South Africa. The Corporation has substantially completed the re-commissioning of the Ezulwini Mine and has been in the process of ramping up underground production. The development of the Ezulwini Mine includes the rehabilitation and re-engineering of the main mine shaft through the installation of a floating steel tower, de-stressing the area where the shaft pillar intersects the shaft barrel, and the construction of uranium and gold processing facilities.

EMC purchased certain surface and underground assets relating to the Ezulwini Mine for a total consideration of US\$7.8 million, effective December 22, 2006.

As part of the Ezulwini acquisition, the related environmental rehabilitation trust fund amounting to US\$2.7 million (see Note 8 - Asset retirement funds) was transferred into the Ezulwini trust fund and EMC took over the related environmental rehabilitation provision of US\$5.1 million (see Note 12 – Asset retirement obligations) as determined by the South African Department of Minerals and Energy (the "DME"). The difference of US\$2.4 million between the environmental rehabilitation trust fund and the environmental rehabilitation provision has been capitalized as part of mining infrastructure.

On December 8, 2006 the Ezulwini mining right was awarded to Simmer & Jack by the DME. On December 20, 2006, EMC and Simmer & Jack entered into an agreement (the "Ezulwini Mining Right Agreement") pursuant to which Simmer & Jack agreed to take all necessary steps to obtain all ministerial approvals in order to effect the transfer of the Ezulwini mining right from Simmer & Jack to EMC.

MWS

MWS is a uranium and gold tailings recovery operation located in the western portion of the Witwatersrand Basin. With the MWS acquisition (see Note 4), the Corporation acquired an existing operating gold mine tailings re-processing facility and an historic uranium plant, adjacent to the Buffelsfontein property, where the Buffelsfontein Tailings are now being treated. The Corporation commissioned the pump station and 10.5-kilometre pipeline between the MWS property and the Buffelsfontein property during December 2007 and hydraulic mining of the Buffelsfontein tailings dams commenced. MWS is also in the process of expanding the plant facilities on the MWS property.

During December 2006, FUSA entered into an agreement to acquire surface tailings from Buffelsfontein Gold Mines Limited ("BGM"), a subsidiary of Simmer & Jack (the "Buffelsfontein Tailings and Rights Agreement"). It was originally contemplated that the transaction would be recognized upon the satisfaction of the conditions precedent in the Buffelsfontein Tailings and Rights Agreement. While the conditions have not yet been satisfied, MWS commenced processing the material from the Buffelsfontein tailings dams and receiving the benefits thereof, in December 2007 and consequently MWS assumed the asset retirement obligation related to the Buffelsfontein tailings dams (see Note 12 – Asset retirement obligations). The corresponding asset of US\$6.2 million associated with the Buffelsfontein tailings dams is capitalized as part of tailings for processing and amortized over the estimated life of the Buffelsfontein tailings dams.

8. ASSET RETIREMENT FUNDS

	December 31 2007 US\$'000	March 31 2007 US\$'000
Balance, beginning of the period	2,791	-
Trust fund assumed on acquisition of Ezulwini mine	-	2,686
Trust fund assumed on acquisition of MWS (see Note 4)	1,950	-
Investment income	146	82
Contributions in respect of guarantee	-	103
Costs incurred	-	(80)
Foreign exchange differences	257	-
Balance, closing of the period	5,144	2,791

The asset retirement funds consisting of environmental rehabilitation trust funds are under the Corporation's control and are to be used to fund the respective mining operation's rehabilitation liabilities. Funds in the trust consist primarily of cash held in interest bearing accounts, together with investments in South African equities. An accredited South African financial institution manages the trust funds under the direction of the trustees. The trust deed limits the trustees' investments to institutions and investment vehicles as referred to in section 37A of the South African Income Tax Act.

9. GUARANTEES

The following guarantees have been issued:

To	Regarding	Guarantee value US\$'000
DME	Ezulwini environmental rehabilitation provision	5,427
Murray and Roberts Cementation (Pty) Ltd	Ezulwini shaft rehabilitation project	2,174
Eskom Holdings Ltd	Electricity accounts	1,228

The Ezulwini rehabilitation trust funds included in the asset retirement funds (see Note 8) have been pledged as security against the guarantees.

10. ACCOUNTS PAYABLE AND ACCRUED LIABILITIES

	December 31 2007 US\$'000	March 31 2007 US\$'000
Trade payables	17,083	5,302
Accruals	2,029	400
	19,112	5,702

The trade payables primarily relate to committed purchases for capital expenditure of US\$11.5 million and US\$2.4 million at the Ezulwini Mine and MWS, respectively.

SENIOR UNSECURED CONVERTIBLE DEBENTURES

On May 3, 2007 First Uranium issued senior unsecured convertible debentures (the "Debentures") in denominations of Cdn \$1,000 in the principal amount of US\$135.1 million (Cdn\$150 million). The interest rate on the Debentures is 4.25% per annum. The Debentures pay interest semi-annually in arrears on June 30th and December 31st and have a maturity date of June 30, 2012. The Debentures are convertible at the option of the holder into common shares at any time prior to the maturity date at an exchange price of Cdn\$16.42 per share.

The Debentures may not be redeemed by the Corporation prior to June 30, 2010. On or after June 30, 2010 and prior to the maturity date, the Debentures may be redeemed by the Corporation, in whole or in part from time to time, provided that the weighted average trading price of the Common Shares on the TSX for the 20 consecutive trading days ending five trading days prior to the date on which notice of redemption is provided is at least 130% of the exchange price of Cdn\$16.42.

First Uranium has the option, subject to regulatory approval, to satisfy its obligations to repay the principal amount of the Debentures upon redemption or at maturity by issuing and delivering that number of freely tradable Common Shares obtained by dividing the principal amount of the Debentures by 95% of the weighted average trading price of the Common Shares on the TSX for the twenty consecutive trading days ending five trading days before the date fixed for the redemption or maturity.

The equity component of the Debentures was valued on issuance at US\$46.5 million which is recorded as a separate component of shareholders' equity. The conversion option was valued using the Black-Scholes pricing model with the following assumptions: Expected dividend yield 0%, expected volatility 56%, risk free interest rate 4.2% and expected life of five years.

The liability component of the Debentures is being accreted such that the liability at maturity will equal the gross proceeds of US\$135.1 million (Cdn\$150 million) less conversions. The amounts accreted during the three and nine months ending December 31, 2007 were US\$3.7 million and US\$8.1 million respectively. The cost of issuing the Debentures amounted to US\$4.5 million.

As at December 31, 2007, no portion of the Debenture had been converted. Interest paid for the three and nine months ending December 31, 2007 amounted to US\$1.6 million and US\$ 4.1 million.

12. ASSET RETIREMENT OBLIGATIONS

	December 31 2007 US\$'000	March 31 2007 US\$'000
Balance, beginning of the period	5,377	-
Provision assumed on acquisition of the Ezulwini Mine	-	5,133
Provision assumed on acquisition of MWS (see Note 4)	2,777	-
Provision assumed with commencement of hydraulic mining of the Buffelsfontein tailings dams	6,231	-
Accretion expense	59	244
Rehabilitation costs	(272)	-
Balance, closing of the period	14,172	5,377

The environmental rehabilitation provision assumed by EMC as part of the acquisition of the Ezulwini assets was determined by the DME as at November 2006. During March 2007 an independent review was performed by Johan Fourie & Associates on the Ezulwini assets relating to environmental rehabilitation provision that confirmed the provision at March 31, 2007 was sufficient.

The environmental rehabilitation provision assumed as part of the MWS acquisition is to be partly funded by its rehabilitation trust fund (see Note 8). During April 2007, an independent valuation of the rehabilitation provision was completed by GCS (Proprietary) Limited, a water environmental engineering and science consultancy company. The provision was based on the estimated net cost to rehabilitate the mine.

The environmental rehabilitation provision associated with the Buffelsfontein tailings dams was assumed with the commencement of the hydraulic mining of the Buffelsfontein tailings dams in December 2007. Management estimated the respective environmental rehabilitation provision assumed at US\$ 6.2 million (see Note 7).

13. SHARE CAPITAL

	Number of shares		December 31 2007 US\$'000	March 31 2007 US\$'000
	December 31 2007 '000	March 31 2007 '000		
Ordinary shares				
Balance, beginning of period	121,686	87,536	206,726	4,176
Shares issued pursuant to the Waterpan transaction	6,141	-	-	-
Balance adjusted with shares issued to Waterpan	127,827	87,536	206,726	4,176
Shares issued in public or private offering	-	33,350	-	201,795
Shares issued in respect of acquisition (see Note 4)	3,094	-	31,557	-
Exercise of stock options	123	800	848	728
Contributed surplus relating to stock options exercised	-	-	559	27
	131,044	121,686	239,690	206,726
Less: Share issue costs	-	-	(24,053)	(24,053)
Balance, closing of period	131,044	121,686	215,637	182,673

Authorized

The authorized share capital of First Uranium consists of an unlimited number of common shares.

Issued and outstanding

On June 1, 2006, 800,000 stock options were exercised for proceeds of US\$0.7 million.

During December 2006, First Uranium issued 33.35 million shares pursuant to the Offering at Cdn\$7 per share for gross proceeds of US\$201.8 million;

On June 6, 2007, First Uranium issued 3,093,980 shares valued at US\$31.6 million relating to the acquisition of MWS (see Note 4).

On December 14, 2007, First Uranium issued 6.1 million shares pursuant to the Offering (see Note 1).

During the three and nine months ending December 31, 2007, 71,430 and 122,525 stock options were exercised respectively, at an exercise price of Cdn\$7 per share.

14. CONTRIBUTED SURPLUS – STOCK-BASED COMPENSATION

The Corporation maintains a stock-option plan (the "Option Plan") for employees, officers, directors and for certain consultants who provide ongoing support to First Uranium and its subsidiaries. Under the Option Plan, options typically are granted for a period of up to ten years following the date of grant. The amounts granted usually reflect the level of responsibility of the particular optionee and his or her contributions to First Uranium.

The Board of Directors has discretion to set the terms of any vesting schedule of each option granted. Except in specified circumstances, options are not assignable and non-transferable, and terminate 90 days after the optionee ceases to be employed or associated with First Uranium.

The terms of the Option Plan further provide that the price at which shares may be issued under the Option Plan shall not be less than the volume weighted average trading price of the shares on the TSX for the five trading days immediately preceding the day the option is granted.

The following table details the movements of contributed surplus during the period:

	December 31 2007 US\$'000	March 31 2007 US\$'000
Balance, beginning of period	2,460	27
Transfer to share capital relating to stock options exercised	(559)	(27)
Stock options granted during the period	2,648	2,460
Balance, end of period	4,549	2,460

Assumptions

The fair value of shares used to calculate the compensation expense was determined as the share price on the grant date adjusted by the probability of the recipients remaining employed or associated with the Corporation until the vesting date.

For purposes of stock-based compensation, the fair values of these stock options were estimated using the Black-Scholes option pricing model with the assumptions used for the grants as follows:

	December 31 2007	September 30 2007	June 30 2007	March 31 2007
Expected dividend yield	0%	0%	0%	0%
Expected volatility of the Corporation's share price	63%	63%	56%	85%
Risk free interest rate – Canadian rates	4.75%	4.75%	4.81%	3.90%
Expected life	3 years	3 years	3 years	3 years

Due to the short history of First Uranium trading on the TSX, changes in the subjective input assumptions can materially affect the fair value estimate, and therefore, the existing model does not necessarily provide a reliable measure of the fair value of First Uranium's stock options.

During the 2007 fiscal year, 1,223,001 stock options were granted for a period of 10 years following the date of the grant and are subject to vesting within 2 years from the date of grant.

During the three and nine months ending December 31, 2007, 209,286 and 325,715 stock options were granted respectively for a period of 10 years following the date of the grant and are subject to vesting within 2 years from the date of grant.

The following table is a summary of the Corporation's options granted under its stock-based compensation plan:

	Number of options		Weighted average exercise price (Cdn\$)	
	December 31 2007	March 31 2007	December 31 2007	March 31 2007
Outstanding options at beginning of period	1,223,001	800,000	7.30	1.00
Granted during the period	325,715	1,223,001	10.48	7.30
Exercised during the period	(122,525)	(800,000)	(7.00)	(1.00)
Forfeited during the period	(76,192)	-	(7.00)	-
Outstanding options at end of period	1,349,999	1,223,001	8.73	7.30

The stock-based compensation expense recognized in the statements of operations and deficit was US\$1.1 million and US\$2.5 million for the three and nine months ending December 31, 2007, respectively. For both the three and nine months ending December 31, 2006, the stock-based compensation expense was US\$0.5 million. During the three and nine months ending December 31, 2007 US\$0.06 and US\$0.2million stock-based compensation was capitalized to the projects. No stock-based compensation was capitalized to projects during the three and nine months ending December 31, 2006. As at December 31, 2007, the aggregate unexpensed and fair value of unvested stock options granted amounted to US\$0.8 million (March 31, 2007: US\$2.9 million).

The following table summarizes information about the First Uranium's outstanding stock options at December 31, 2007:

Exercise price ranges Cdn\$	Options outstanding			Options exercisable		
	Number of options outstanding	Weighted average remaining life (years)	Weighted average exercise price (Cdn\$)	Number of options exercisable	Weighted average remaining life (years)	Weighted average exercise price (Cdn\$)
7.00 to 8.99	928,427	8.97	7.94	237,955	8.97	7.06
9.00 to 11.99	361,572	9.67	10.05	120,523	9.67	10.05
12.00 to 13.99	60,000	9.41	12.87	20,000	9.41	12.87
	1,349,999	9.18	8.73	378,478	9.22	8.32

15. TAXATION

Provision for income taxes

The reconciliation of income taxes attributable to operations computed at the statutory tax rates to income tax recovery, using a statutory tax rate of 35.47% for the three and nine months ending December 31, 2007 (three and nine months ending December 31, 2006: 36.12%), is as follows:

	Three months ended December 31		Nine months ended December 31	
	2007	2006	2007	2006
Net (loss) income before taxation	(4,125)	786	4,448	(1,452)
Income tax payable (receivable) at statutory rate	(1,463)	284	1,577	(525)
Difference between Canadian rates and foreign jurisdiction	(300)	(95)	(345)	41
Change in valuation allowance	(229)	-	(834)	-
Adjustment for future tax rate difference	3,385	(170)	1,924	417
Permanent differences	(1,419)	(19)	(2,514)	67
Other	(101)	-	116	-
	(127)	-	(76)	-

Future tax liability

	Dec 31 2007 US\$'000	Mar 31 2007 US\$'000
Capital assets	11,043	-
Non-capital loss carry-forwards	(995)	(1,602)
Share issue costs	(7,405)	(6,629)
Foreign resource expenses	(1,136)	(1,099)
Foreign exchange	(3,142)	(850)
	(1,635)	(10,180)
Less: Valuation allowance	11,977	10,180
	10,342	-

As at December 31, 2007, the Corporation had non-capital losses of approximately US\$3.3 million that may be applied against earnings in future years. These losses are expected to expire in 2026.

Due to uncertainties in the Corporation's ability to utilize its net operating losses in all of its operations, the Corporation has provided a valuation allowance against those future tax assets for which uncertainty exist.

FOREIGN EXCHANGE GAINS

	Three months ended December 31		Nine months ended December 31	
	2007 US\$'000	2006 US\$'000	2007 US\$'000	2006 US\$'000
Foreign exchange gains	1,245	(2,741)	13,636	(1,335)

The Corporation's assets are held in Canadian dollars ("Cdn\$") and South African Rand ("ZAR"), while its accounts are presented in US dollars. The foreign exchange gains on translation during the three and nine months ending December 31, 2007 reflect the strengthening of the Canadian dollar and the South African Rand against the US dollar.

The majority of the Corporation's funds are currently held in Canadian dollar denominated short-term deposits bearing interest at 4.85% per annum. The approval of the South African Reserve Bank ("SARB"), which was required in connection with the issue of the Debentures, includes a condition that the Corporation transfers the net Debenture proceeds to bank accounts of the Corporation in South Africa and convert the funds to ZAR, by May 3, 2008.

17. BASIC AND DILUTED (LOSS) EARNINGS PER SHARE

	Three months ended December 31		Nine months ended December 31	
	2007	2006	2007	2006
Basic (loss) earnings per share of (US\$)	(0.03)	(0.04)	0.04	(0.06)
is calculated based on net (loss) income for the period of (US\$'000)	(3,998)	(3,787)	4,524	(5,239)
and a weighted average number of shares outstanding of ('000)	129,614	94,975	128,622	95,243
Diluted (loss) earnings per share of (US\$)	(0.03)	(0.04)	0.04	(0.06)
is calculated based on net (loss) income for the period of (US\$'000)	(3,998)	(3,787)	4,524	(5,239)
and a diluted weighted average number of shares outstanding of ('000)	129,993	93,048	128,642	89,393

The impact of the Debentures issued on May 3, 2007, has been excluded from the diluted shares computation because it was anti-dilutive for earnings per share purposes.

The Waterpan transaction is accounted for under Canadian GAAP as a continuity of interests. As a result the weighted average number of shares outstanding has been adjusted to reflect the acquisition as if the share exchange had been effective for the period from inception to December 31, 2007 (see Note 1).

18. NOTES TO THE CASH FLOW STATEMENT

18.1 Non-cash interest income

	Three months ended December 31		Nine months ended December 31	
	2007 US\$'000	2006 US\$'000	2007 US\$'000	2006 US\$'000
Total interest income	(4,467)	(529)	(12,840)	(422)
Add back: Cash interest income	4,419	115	12,694	422
	(48)	(414)	(146)	-

	December 31		December 31	
	2007	2006	2007	2007
	US\$'000	US\$'000	US\$'000	US\$'000
Cash and cash equivalents taken over on date of acquisition	-	-	1,954	-
Less: Expenses related to MWS acquisition	-	-	(705)	-
	-	-	1,249	-

19. COMMITMENTS

Capital commitments

	December 31	March 31
	2007	2007
	US\$'000	US\$'000
Ezulwini Mine	53,390	14,836
MWS	3,393	-
Total contractual obligations	56,783	14,836

The capital commitments are payable within one year.

Toll treatment agreement

The Corporation entered into an agreement with a third party, commencing in January 2009, to calcine the yellowcake from First Uranium to produce uranium oxide packaged for dispatch to converters. Either party may terminate the agreement on 18 months notice. The third party calciner will construct a plant with one-half of the capacity of the plant to be dedicated for the processing of the First Uranium yellowcake and will acquire a road tanker to transport the yellowcake from the First Uranium operations to the calciner's operations. First Uranium will pay one-half of the construction cost of the calcining plant up to a maximum of ZAR15 million and one-half of the cost of the tanker (together referred to as the "Loan"). The Loan will be effective as of January 5, 2009 and is to be repaid in monthly instalments over a seven year period commencing January 30, 2009. The Loan will bear interest equal to the prime overdraft rate as quoted by the South African Reserve Bank, plus 2% commencing January 5, 2009. If First Uranium cancels the agreement, in the absence of a right under the agreement to cancel the agreement in prescribed circumstances, First Uranium will continue to be obligated to repay the entire Loan.

Royalty agreements

On December 20, 2006, FUSA, Simmer & Jack and Aberdeen entered into an arrangement (the "Aberdeen Arrangement") pursuant to which (i) Simmer & Jack confirmed that it will pay to Aberdeen the amount of any royalty owing to Aberdeen under the Aberdeen Loan Agreement in respect of gold produced from the tailings to be acquired by FUSA from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement, and (ii) FUSA confirmed that it will pay to Simmer & Jack, immediately prior to any payment contemplated in (i) above, an amount equal to the amount of any royalty payment to be made by Simmer & Jack to Aberdeen in respect of gold produced from the tailings to be acquired by FUSA from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement.

Pursuant to the Buffelsfontein Tailings and Rights Agreement dated December 20, 2006 among BGM, Simmer & Jack and FUSA, in consideration for the cession of the Buffelsfontein Tailings and Mining Right from BGM to FUSA as well as certain servitudes, and the right to the tailings arising from future underground mining operations by BGM at the BGM Underground Mine, FUSA agreed to pay to BGM a royalty of 1% plus value added tax of the gross revenue earned by FUSA from the sale of uranium, gold, sulphur and other minerals recovered from the processing of tailings acquired by FUSA from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement.

As and when there is production from the Buffelsfontein tailings dams acquired from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement, FUSA will become liable to pay: (i) to Simmer & Jack, under the Aberdeen Arrangement Agreement, an amount equal to the royalty payable by Simmer & Jack to Aberdeen pursuant to the Aberdeen Loan Agreement in respect of the tailings to be acquired from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement, and (ii) to BGM the above-mentioned 1% royalty pursuant to the terms of the Buffelsfontein Tailings and Rights Agreement.

During December 2007 MWS commenced processing the Buffelsfontein tailings and as a result MWS is now obligated to pay a royalty to BGM pursuant to the Buffelsfontein Tailings and Rights Agreement and make other payments to Simmer & Jack pursuant to the Aberdeen Arrangement in respect of the metals recovered from the Buffelsfontein tailings.

20. FINANCIAL INSTRUMENTS

Financial risk factors

The Corporation's activities expose it to a variety of financial risks, including the effects of changes in debt and equity market prices, foreign currency exchange rates and interest rates. The Corporation's overall risk management program focuses on the unpredictability of financial markets and seeks to minimize potential adverse effects on the financial performance of the Corporation.

Risk management carried out by the Corporation is approved by the Board of Directors.

(i) Foreign exchange and commodity price risk

The Corporation does not hedge its exposure to foreign currency exchange risk nor does it hedge its exposure to commodity price fluctuation risk.

(ii) Interest rate risk

The Corporation does not hedge its exposure to interest rate risk. Deposits attract interest at rates that vary with prime. The Corporation's policy is to manage interest rate risk so that fluctuations in variable rates do not have a material impact on the statement of operations and deficit.

(iii) Credit risk

The Corporation has no significant concentrations of credit risk. The Corporation has policies in place to ensure that sales of products and services are made to customers with an appropriate credit history. The Corporation has policies that limit the amount of credit exposure to any one financial institution.

(iv) Liquidity risk

Prudent liquidity risk management implies maintaining sufficient cash and marketable securities, the availability of funding through an adequate amount of credit facilities and the ability to close out market positions. The Corporation manages liquidity risk through an ongoing review of future commitments and credit facilities. Cash flow forecasts are prepared and adequate utilized borrowing facilities are monitored.

Fair value estimation

The fair value of publicly traded derivatives and trading securities is based on quoted market prices at the balance sheet date.

In assessing the fair value of other financial instruments, the Corporation uses a variety of methods and makes assumptions that are based on market conditions existing at each balance sheet date. Option pricing models and estimated discounted value of future cash flows, are used to determine fair value for the remaining financial instruments.

The face value less any estimated credit adjustments for financial assets and liabilities with a maturity of less than one year are assumed to approximate their fair values. The fair value of financial liabilities for disclosure purposes is estimated by discounting the future contractual cash flows at the current market interest rate available to the Corporation for similar financial instruments.

The actual disclosed values of the financial instruments all approximate the fair values of these instruments.

21. RELATED PARTY TRANSACTIONS AND COMMITMENTS

Fees to empowerment company	(55)	-	(271)	-
Interest to Simmer & Jack by EMC	-	(46)	-	(101)
Interest from Simmer & Jack by FUSA	-	106	-	235
Interest on loan to Chief Executive Officer	9	-	9	-

On December 20, 2006 First Uranium and Simmer & Jack entered into a shared services agreement (the "Shared Services Agreement"). Pursuant to the terms of the Shared Services Agreement, First Uranium may retain certain services to be provided by Simmer & Jack, including project management and technical services, cash management and investment services, accounting, treasury and financial services, corporate secretarial support and human resources and staffing services, including payroll and benefits administration, and such other services as may be required by First Uranium and which Simmer & Jack is able and willing to provide. The expenses for the three and nine months ending December 31, 2007 relates to such services received.

During the three months ending December 31, 2007, US\$0.4 million (December 31, 2006: US\$0.9 million) of the total shared services fees were capitalized, representing services provided in respect of technical services for the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project. During the nine months ending December 31, 2007, US\$0.8 million (December 31, 2006: US\$1.0 million) of such costs were capitalized.

Prior to December 2006, the Corporation shared its premises with other companies that had common directors and reimbursed the related companies for its proportional share of expenses or was reimbursed by the related companies for their proportional share of expenses. During both the three and nine months ending December 31, 2006, the Corporation was charged \$0.6 million for consulting services provided by related directors, officers and consultants of the Corporation.

In addition, First Uranium has agreed to reimburse Simmer & Jack with respect to 50% of fees that Simmer & Jack is required to pay to an empowerment company for consulting services regarding transformation, human resources and occupational health and safety. BJ Njenje, AX Sisulu and SLB Mapisa, shareholders of the empowerment company, are also directors of Simmer & Jack.

On September 27, 2007, the Board approved a loan in the amount of Cdn\$1 million to the Chief Executive Officer of First Uranium for the purpose of facilitating his purchase of a family home. The loan is for a term of six years, is unsecured and bears interest at 4% payable monthly in arrears. The loan was advanced on October 17, 2007.

As previously disclosed, the Corporation entered into an agreement on December 12, 2006 with Waterpan for the purchase of the remaining 10% of the shares of EMC in consideration for 6.1 million common shares of First Uranium. On December 14, 2007, EMC obtained a bridging loan from a South African banking institution to purchase Waterpan's 10% shareholding in EMC. Waterpan used the proceeds to partially fund the purchase of 6.1 million common shares (the "Waterpan Shares") of First Uranium for a consideration of \$43.6 million. First Uranium used the proceeds from the sale of the Waterpan Shares to repay the bridging loan to the South African banking institution and to pay the taxes resulting from the purchase of the EMC shares. Concurrent with the closing of this transaction, one million of the Waterpan Shares were sold by way of a private placement. Waterpan has a contractual agreement to retain the remaining Waterpan Shares until April 1, 2009. Certain shareholders of Waterpan are officers or employees of First Uranium or directors of its subsidiaries. The Waterpan transaction had no net impact on the cash flow of the First Uranium group of companies.

22. SUBSEQUENT EVENTS

Regular power outages have recently beset South Africa, causing disruption in business activities. Coal-fed power stations are running low on fuel and several power-generating facilities are down for maintenance. No new power generating facilities are expected to start up in South Africa until 2012. The primary response of Eskom, South Africa's national power utility, to these power deficiencies is to ask that its customers conserve energy and/or to restrict the amount of power supplied to them.

On January 25, 2008, Eskom advised that continuity of electric power supply could not be guaranteed. Specific warnings were communicated to South African mining companies, including the Corporation, which were specifically asked by Eskom to reduce power consumption to 80% of load requirements. While this was subsequently increased to 90%, Eskom also informed mining companies that this authorization could be withdrawn at a later date, as electrical power supply remains tight.

After a preliminary review of the feasibility of the Corporation generating its own power, the Board has provisionally concluded that the Corporation's two projects are sufficiently robust to continue development as planned based on the addition of power generation capacity.

The initial impact of this decision is as follows:

For the Ezulwini Mine:

- given the uncertainty of power supply at a third-party gold plant to toll-treat the Corporation's ore, the Board has decided to postpone the ramp-up of the underground production and to accelerate the shaft refurbishment program
- the weekly operating plan to date has been to focus on mine development and hoisting for three days and on shaft rehabilitation for four days; henceforth the intention is to focus entirely on shaft refurbishment until the operation's gold plant is commissioned in April 2008
- the first 50,000 tonne per month module of the gold plant is on schedule for commissioning in April 2008 using existing generator capacity; should Eskom power not be forthcoming, the Ezulwini Mine has existing power generating capacity of 13 MVA ("1 Megavolt Ampere = 1 Mega Watt") which will be utilized
- the first 50,000 tonne per month module of the uranium plant remains on schedule for commissioning in June 2008; a feasibility study of power generation options is underway to reduce power reliance on Eskom;
- commissioning of the remaining modules of the gold and uranium plant will be deferred by approximately a year to January 2010 to coincide with the corresponding mine development plan

For MWS:

- the current MWS operation is presently unaffected by the power situation as it has been drawing additional power from BGM
- upgrading of the MWS gold plant to increase the design capacity to 630,000 tonnes per month remains on schedule for completion in Q4 2008
- the expansion of the current operations, however, will require additional power; a power generation feasibility study has been initiated with the expected result that the expansion will be delayed by approximately three months

The decision to invest in generating our own power is a temporary measure until the power situation has normalized which may take several years. It is expected that the Corporation will be able to monetize a significant portion of its investment in owner-generated power at that time.

23. SEGMENTED INFORMATION

Segmented information is presented in respect of the Corporation's business and geographical segments. The primary format business segments, is based on the Corporation's management and internal reporting structure. Inter-segment reporting is determined on an arm's length basis.

Segment results, assets and liabilities include items directly attributable to a segment as well as those that can be allocated on a reasonable basis. Unallocated items comprise mainly income earning assets and revenue, interest-bearing loans, borrowing and expenses, and corporate assets and expenses. Segment capital expenditure is the total cost incurred during the period to acquire segment assets that are expected to be used for more than one period.

FIRST URANIUM CORPORATION

MANAGEMENT'S DISCUSSION AND ANALYSIS
of the financial results
for the three and nine months ended
December 31, 2007

Management's discussion and analysis of the unaudited consolidated financial condition and results of operations for the three and nine months ended December 31, 2007

This Management's Discussion and Analysis ("MD&A") of the consolidated financial position and results of operations review the activities, unaudited consolidated results of operations and financial condition of First Uranium Corporation and its subsidiaries ("First Uranium" or the "Corporation") for the three months ended December 31, 2007 ("Q3 2008") and the nine months ended December 31, 2007 ("2008 YTD"), compared to the corresponding three months of the preceding year ("Q3 2007") and the nine months ended December 31, 2006 ("2007 YTD"), together with certain trends and factors that are expected to have an impact in the future. References to "Q4 2008" refer to the Corporation's next three months ending March 31, 2008. References to "FY 2008" and "FY 2007" refer to the fiscal years ending March 31, 2008 and March 31, 2007, respectively.

This MD&A is intended to supplement and complement the unaudited consolidated financial statements and notes thereto for Q3 2008 and 2008 YTD (collectively the "Financial Statements") which have been prepared in accordance with Canadian generally accepted accounting principles ("Canadian GAAP"). The MD&A should be read in conjunction with the Financial Statements, the audited consolidated financial statements for FY 2007 and the related management's discussion and analysis. The information contained in this MD&A is current to February 13, 2008, unless otherwise indicated.

First Uranium is currently focused on the rehabilitation and bringing into production of the Ezulwini underground uranium ("U₃O₈") and gold ("Au") mine (the "Ezulwini Mine") and the recovery of uranium and gold from the existing and future surface tailings at the Buffelsfontein mine through gold and uranium plants originally planned to be constructed near the tailings at the Buffelsfontein mine (the "Buffelsfontein Tailings Recovery Project"). In June 2007, the Corporation acquired Mine Waste Solutions (Proprietary) Limited ("MWS"), an existing tailings treatment company which had an operating gold recovery plant in place. As a result of the MWS purchase, First Uranium changed its plans for the Buffelsfontein Tailings Recovery Project so that the historical and future tailings from the Buffelsfontein mine (the "Buffelsfontein Tailings") will now be transported by pipeline to the MWS site and processed through MWS's existing gold plant and, subject to their completion, through the new uranium recovery plant and additional gold recovery facilities which are currently being constructed at the MWS site. For greater clarity, the Buffelsfontein Tailings Recovery Project, as enhanced and modified by the addition of MWS, will henceforth be referred to as MWS.

The reporting currency for the Corporation is the US dollar, and all amounts in the following discussion are in US dollars ("\$"), except where otherwise indicated.

This MD&A includes certain forward-looking statements. Please read the cautionary note at the end of this document.

Responsibility of Management and the Board of Directors

Management is responsible for the information disclosed in this MD&A and the accompanying Financial Statements and has in place the appropriate information systems, procedures and controls to ensure that information used internally by management and disclosed externally is materially complete and reliable. In addition, the Corporation's Audit Committee, on behalf of the Board of Directors, provides an oversight role with respect to all public financial disclosures made by the Corporation, and has reviewed and approved this MD&A and the accompanying Financial Statements.

Disclosure Controls and Procedures

Disclosure controls and procedures are designed to provide reasonable assurance that all relevant information is gathered and reported on a timely basis to senior management, including the Corporation's Chief Executive Officer and Chief Financial Officer, so that appropriate decisions can be made regarding public disclosure. As at the end of the period covered by this MD&A, management of First Uranium, under the direction of the Chief Executive Officer and the Chief Financial Officer, evaluated the effectiveness of the Corporation's disclosure controls and procedures as required by Canadian securities laws.

Based on this evaluation, the Chief Executive Officer and the Chief Financial Officer have concluded that as of the end of the period covered by this MD&A, the disclosure controls and procedures were effective to provide reasonable assurance that information required to be disclosed in First Uranium's annual filings and interim filings (as such terms are defined under Multilateral Instrument 52-109 – Certification of Disclosure in Issuers' Annual and Interim Filings) and other reports filed or submitted under Canadian securities laws is recorded, processed, summarized and reported within the time periods specified by those laws, and that material information is accumulated and communicated to management of First Uranium, including the Chief Executive Officer and the Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

During the most recent quarter there were no changes in the Corporation's internal controls over financial reporting that materially affected, or are reasonably likely to materially affect, the Corporation's internal control over financial reporting.

Overview

First Uranium is a Canadian resource company focused on the development of uranium and gold projects in South Africa. The Corporation's goal is to become a significant producer of uranium and gold through the re-opening and development of the Ezulwini Mine and the development of MWS. To expand its production profile, First Uranium plans to continue to identify and acquire additional uranium and gold projects in southern Africa and elsewhere. The Corporation received net proceeds of \$177.7 million from the sale of 33 million common shares in an initial public offering (the "Offering") in December 2006 and raised an additional \$130.6 million from the sale of senior unsecured convertible debentures (the "Debentures") in May 2007. The common shares and the Debentures of First Uranium are listed on the Toronto Stock Exchange (the "TSX"). In addition, the common shares are listed on the Johannesburg Stock Exchange (the "JSE"). As of February 11, 2008, Simmer and Jack Mines, Limited ("Simmer & Jack"), a South African incorporated public company listed on the JSE, owned 62.4% of the common shares of First Uranium.

Recent Highlights

During Q3 2008, First Uranium:

- toll-treated 27,951 tonnes of ore from the Ezulwini Mine at a recovered grade of 5.6 grams of gold per tonne, producing 5,055 ounces of gold at a Cash Cost (as defined in the notes to the production tables in the Operations Overview of this MD&A) of \$348 per ounce
- started drilling specific targets related to the possible expansion of the existing Ezulwini Mine (the "Ezulwini Expansion Program")
- completed construction of the pump station at MWS and the 10.5-kilometre pipeline to the MWS gold plant at a total cost of \$11.7 million

- completed the clean up and processing of the remaining tailings of the MWS No.2 tailings dam and commenced hydraulic mining and pumping of material from the Buffelsfontein No.2 dam to the MWS gold plant for processing during mid-December
- processed a total of 832,208 tonnes of tailings through the MWS gold plant at a recovered grade of 0.275 grams of gold per tonne, producing a total of 7,357 ounces of gold at a Cash Cost of \$674 per ounce
- completed a pre-feasibility study of MWS incorporating higher average uranium and gold price assumptions and increased capital investment, which projected the project's expected net present value ("NPV") increasing by 71% to \$505 million and its internal rate of return ("IRR") increasing from 69% to 151%
- entered into an interim off-take agreement with a third party pursuant to which the third party will purchase yellowcake from First Uranium from June 2008 until January 2009 at rates based upon the then prevailing spot prices
- issued 6.1 million First Uranium common shares to Waterpan Mining Consortium ("Waterpan") in connection with the acquisition of the remaining 10% interest in Ezulwini Mining Company (Proprietary) Limited ("EMC") which owns and operates the Ezulwini Mine, resulting in EMC becoming wholly-owned by First Uranium (the "Waterpan Transaction")
- ended the period with \$215.2 million in cash and cash equivalents

Subsequent to the end of Q3 2008, First Uranium:

- was granted an unconditional prospecting right for 6,843 hectares of additional property adjacent to the Ezulwini Mine
- filed the technical report for the pre-feasibility study of MWS, details of which were announced on December 19, 2007
- due to the significantly reduced supply of electrical power currently available in South Africa, its national power utility ("Eskom") developed concerns about its ability to supply power in the short and medium term. As a result, First Uranium has had to impose voluntary shut-downs of mine development and hoisting activity at the Ezulwini Mine. Most recently, Eskom has implemented compulsory cut-backs of power consumption on businesses and mining companies generally (the "Power Situation"). The specific effects of these measures mandated by Eskom on First Uranium's operations and development projects and any modifications thereto have been and continue to be analyzed. In addition to specific discussions and references to the affect of the Power Situation in certain areas of this MD&A, there may be other affects that are not known or foreseen at this time. See further discussion under 'Risks - Power Supply' in this MD&A.

During Q4 2008, and prior to the Power Situation, First Uranium had planned to:

- commence the upgrading of the MWS gold plant to increase the design capacity from 500,000 tonnes per month to 630,000 tonnes per month, with completion scheduled in Q4 2008
- upgrade MWS No.5 tailings dam to enable a deposition rate of 630,000 tonnes of material per month. The upgrade is expected to be completed during Q4 2008.
- start on-site preparation for the construction of the additional gold plant module and the two uranium plant modules at MWS

Preliminary Assessment of the Impact of the Power Situation

After a preliminary review of the feasibility of the Corporation generating its own power, the Board has provisionally concluded that the Corporation's two projects are sufficiently robust to continue development as planned based on the addition of owner-operated power generation.

The initial impact of this decision is as follows:

For the Ezulwini Mine:

- given the uncertainty of power supply to a third-party gold plant which toll treats the Corporation's ore, the Board has decided to postpone the ramp-up of the underground production and to accelerate the shaft refurbishment program
- the weekly operating plan to date has been to focus on mine development and hoisting for three days and shaft rehabilitation for four days; henceforth the intention is to focus entirely on shaft refurbishment until the operation's gold plant is commissioned
- the first 50,000 tonne per month module of the gold plant remains on schedule for commissioning in April 2008 using existing generator capacity; should Eskom power not be forthcoming, the Ezulwini Mine has existing power generating capacity of 13 MVA ("1 Megavolt Ampere = 1 Mega Watt") which will be utilized
- the first 50,000 tonne per month module of the uranium plant remains on schedule for commissioning in June 2008; a feasibility study of power generating options is underway to reduce power reliance on Eskom;
- commissioning of the remaining modules of the gold and uranium plant will be deferred by approximately a year to January 2010 to coincide with the corresponding mine development plan

For MWS:

- the current MWS operation is presently unaffected by the Power Situation as it has been drawing additional power from Buffelsfontein Gold Mines Limited ("BGM")
- upgrading of the MWS gold plant to increase the design capacity to 630,000 tonnes per month remains on schedule for completion in Q4 2008
- the expansion of the current operations, however, will require additional power; a power generation feasibility study has been initiated with the expected result that the expansion will be delayed by approximately three months

The decision to invest in generating our own power is a temporary measure until the Power Situation has normalized which will take several years. It is expected that the Corporation will be able to monetize a significant portion of its investment in owner-generated power at that time.

Financial Overview

First Uranium's primary focus has been the development of the Ezulwini Mine and MWS, resulting in limited gold production to date.

During Q3 2008, a total of 12,412 ounces of gold were produced and sold from the Ezulwini Mine and MWS, at an average price of \$873 per ounce. Combined production during 2008 YTD totaled 25,956 ounces of gold, which was sold at an average price of \$742 per ounce.

In Q3 2008, gold was produced at average Cash Costs of \$348 and \$674 per ounce at the Ezulwini Mine and MWS, respectively. As the Ezulwini Mine is still in a ramp-up phase and has not yet achieved commercial levels of production, the revenue less cost of production from its mining operations of \$2.4 million have been capitalized against Mine infrastructure costs in Property, Plant and Equipment. The relatively high average cash costs at MWS can be attributed primarily to the diminishing resources taken from the MWS No. 2 tailings dam, which necessitated a low-volume, high-cost mechanical load and placement operation. With the transition to the high-volume, low-cost operations associated with the mining of the Buffelsfontein Tailings during December 2007, the average cash costs started to decrease and are expected to decrease significantly as the throughput to the MWS gold plant increases.

General, consulting and administrative expenditures combined with the limited ore and tailings processed during the development phase of the two uranium and gold projects resulted in an operating loss of \$4.5 million and \$9.8 million in Q3 2008 and 2008 YTD, respectively. The Corporation reported an operating loss of \$1.6 million in Q3 2007 and \$4.2 million in 2007 YTD, reflecting expenditures incurred in preparation of the uranium and gold projects for production, along with general and administrative expenses.

The net loss of \$4.1 million in Q3 2008 was primarily the result of the ongoing expenditures mentioned above. The \$4.4 million net income for 2008 YTD was primarily the result of foreign exchange gains on translation of net assets held in Canadian dollars and South African Rand into US dollars, offset by higher expenditures. The Corporation reported a net loss of \$3.8 million in Q3 2007 and \$5.2 million for 2007 YTD, primarily as a result of expenditures incurred in preparation of the mining projects for production, general, consulting and administrative expenses and foreign exchange losses.

As at December 31, 2007, First Uranium was well funded and in a strong financial position, with total assets of \$404.6 million, total liabilities of \$148.1 million and shareholders' equity of \$256.4 million. At the end of Q3 2008, First Uranium had cash and cash equivalents of \$215.2 million (Q3 2007: \$154.6 million), compared to \$138.9 million at the end of FY 2007. The Corporation currently holds its funds in cash and bank-sponsored guaranteed investment certificates. It has no exposure to asset-backed commercial paper. The increase in cash and cash equivalents from the end of FY 2007 was primarily attributable to the net proceeds of \$130.6 million received from the sale of the Debentures in May 2007, offset by \$28.0 million and \$76.4 million of cash utilized for capital expenditure at the Corporation's two mining operations during Q3 2008 and 2008 YTD, respectively.

Prior to the recent onset of the Power Situation, the Corporation believed that with anticipated revenue from future sales of gold and uranium at current price assumptions, together with funds from the proceeds of the Offering and the Debentures, it would have the cash resources necessary to develop and advance its two existing mining projects to full production by 2010, as currently planned. The Corporation has reviewed its operating and expansion plans, is making provision to purchase additional power generation capacity and has modified the timing of its capital projects. The Corporation believes that the above-mentioned sources of capital, along with funds that may be available under a mandate letter and term sheet with a financial institution (see 'Liquidity and Capital Resources' in this MD&A) are sufficient funding to develop and advance its two existing mining projects, inclusive of the purchase of additional power generation capacity.

Operations overview

Ezulwini Mine

	Q3 2008	Q3 2007	2008 YTD	2007 YTD
Ezulwini Mine				
Tonnes processed (000s)	28	—	28	—

Ounces of gold sold	5,055	—	5,055	—
Average selling price per ounce (\$)	832	—	832	—
Average cost per ounce (\$)	348	—	348	—
Average Cash Cost per ounce (\$)	348	—	348	—
Revenue (\$000s)	4,203	—	4,203	—
Cost of production (\$000s)	(1,760)	—	(1,760)	—
Amortization (\$000s)	—	—	—	—
Total cost of production (\$000s)	(1,760)	—	(1,760)	—
	2,443	—	2,443	—

"Cash Costs" are costs directly related to the physical activities of producing gold, and include mining, processing and other plant costs, third-party refining and smelting costs, marketing expense, on-site general and administrative costs, royalties, in-mine drilling expenditures that are related to production and other direct costs. Sales of by-product metals are deducted from the above in computing cash costs. Cash costs exclude depreciation, depletion and amortization, corporate general and administrative expense, exploration, interest, and pre-feasibility costs and accruals for mine reclamation. Cash costs are calculated and presented using the "Gold Institute Production Cost Standard" applied consistently for all periods presented.

Total cash costs per ounce is a non-GAAP measurement and investors are cautioned not to place undue reliance on it and are urged to read all GAAP accounting disclosures presented in the consolidated financial statements and accompanying footnotes.

The Corporation has substantially completed the re-commissioning of the Ezulwini Mine and was, until the onset of the Power Situation, in the process of ramping up underground production. The Board has decided to postpone the ramp-up of underground production and to focus entirely on shaft refurbishment until the operation's gold plant is commissioned in April 2008. The Ezulwini Mine is part of the Ezulwini mining right, which includes certain surface and underground assets, acquired by EMC. Simmer & Jack is presently the registered owner of the Ezulwini mining right. On December 20, 2006, EMC and Simmer & Jack entered into an agreement (the "Ezulwini Mining Right Agreement") pursuant to which Simmer & Jack agreed to take the necessary steps to obtain all ministerial approvals in order to effect the ceding of the Ezulwini mining right from Simmer & Jack to EMC. The Corporation remains confident that the transfer will be completed in due course.

EMC operates the Ezulwini Mine under a new order mining right as described in detail in the Corporation's Annual Information Form for the fiscal year ended March 31, 2007 (the "AIF") (www.firsturanium.com).

As disclosed above, the revenue less cost of production from the Ezulwini Mine's mining operations of \$2.4 million have been capitalized against Mine infrastructure costs in Property, Plant and Equipment during both Q3 2008 and 2008 YTD. The Ezulwini Mine is still in a ramp-up phase and has not yet achieved commercial levels of production.

The ramp-up of production at the Ezulwini Mine during Q3 2008 resulted in the toll-treatment of 27,951 tonnes of ore at a recovered grade of 5.6 grams of gold per tonne, producing 5,055 ounces of gold at a cash cost of \$348 per ounce. Production during the first two months of Q3 2008 was negatively influenced by the lower than planned grades, but this was more than offset in December, when Ezulwini's production exceeded the planned rate due to higher than expected grades. The Corporation continues to expect that the "average grades" at the Ezulwini Mine will be as originally forecast.

The Corporation is continuing to develop access to the Ezulwini Mine shaft de-stress cut on the Upper Elsburg ("UE") gold only horizon on levels 38a and 41. During Q3 2008, 247.5 metres were developed, bringing the total metres developed in the shaft pillar to 833 metres. Progressive grades encountered on the MA and MB raises in the shaft pillar to date were 5.09 and 5.81 grams of gold per tonne, respectively.

Stopeing for de-stressing of the 41 level MB raise has resulted in an area of 712 square metres being mined at an in-situ stope grade of 4.74 grams per tonne. In the Middle Elsburg ("ME") uranium and gold section, stope production in the newly re-established 45 10B stope commenced in Q3 2008 and has resulted in an area of 1,059 square metres being mined at an in-situ stope grade of 25.78 grams of gold per tonne. Further stope development has been postponed due to the Power Situation, but is expected to resume closer to the start-up of the operation's gold plant.

As of the end of December 2007, the clean-up process on surface and underground has generated a stockpile in excess of 124,000 tonnes containing an average grade of 1.1 grams per tonne of gold or approximately 2,800 ounces of recoverable gold, assuming an average recovery rate of 64%. This stockpile will be utilized during mill commissioning, which is currently scheduled for April 2008.

Construction activities, which include the refurbishment of the shaft and construction of the first modules of both the gold and uranium plants, began in December 2006 and are still planned to continue until the gold and uranium plants are completed in April 2008 and June 2008, respectively. While the Ezulwini Mine has authorization from Eskom for the running of the gold plant, should Eskom power not be forthcoming, the Ezulwini Mine has existing power generating capacity of 13 MVA which will be utilized. For the additional modules planned for the uranium plant, a feasibility study of options for power generation is underway to reduce power reliance on Eskom.

EMC has accelerated the main shaft rehabilitation program and is continuing the refurbishment of the infrastructure in the ME uranium and gold section and the UE gold only section from which hoisting of ore began in October 2007.

The following is a summary of the progress on the Ezulwini main shaft refurbishment project:

- the second phase of the main shaft refurbishment, which involves support of the Western Areas Formation ("WAF") continues to be undertaken from the access provided by the new tower steelwork and is nearing completion.
- the section where the shaft barrel traverses the WAF zone has been consolidated through the injection of resin and reinforced with anchors.
- to prevent bulging of the low-strength WAF between the anchors, pre-formed curved panels of heavy metallurgical screens are being installed to provide a cladding layer. During Q3 2008, 186 screens were installed, which now secure the full WAF intersection in the shaft.

- a layer of ultra high quality shotcrete is being applied over the screens, anchors and concrete lining to provide improved area load distribution around the anchors. During Q3 2008, 70% of the screens were shotcreted.
- shaft operational time has been limited to four days per week while shaft rehabilitation work is executed; however, with no opportunity to continue toll treating the ore for the recovery of gold, a decision has been made to temporarily postpone mining in the ME and focus full time on the completion of the shaft refurbishment.

Construction of the first 50,000 tonne per month module of the gold plant is on schedule for completion in April 2008, accelerating the originally disclosed planned date for completion of construction by three months. As of December 31, 2007 this plant was 64% complete.

The first 50,000 tonne per month module of the uranium plant is on schedule for commissioning in June 2008. As of December 31, 2007 this plant was 42% complete.

Prior to the Power Situation, the Corporation estimated that \$271 million of capital would be required for the Ezulwini Mine, \$193 million of which was expected to be invested in the first four years of the project. This estimate is being re-calculated to make provision for the installation of power generation capacity. As of the end of Q3 2008, \$76.2 million cash has been spent at the Ezulwini Mine (\$21.4 million in Q3 2008, \$35.2 million in the first six months of FY 2008 and \$19.3 million during FY 2007).

Mine Waste Solutions

	Q3 2008	Q3 2007	2008 YTD	2007 YTD
MWS				
Tonnes processed (kt)	832	–	2,461	–
Ounces of gold sold	7,357	–	20,901	–
Average selling price per ounce (\$)	902	–	721	–
Average cost per ounce (\$)	739	–	623	–
Average Cash Cost per ounce (\$)	674	–	560	–
Revenue (\$000s)	6,633	–	15,069	–
Cost of production (\$000s)	(4,961)	–	(11,697)	–
Amortization (\$000s)	(472)	–	(1,333)	–
Total cost of production (\$000s)	(5,433)	–	(13,030)	–
	1,200	–	2,039	–

"Cash Costs" are costs directly related to the physical activities of producing gold, and include mining, processing and other plant costs, third-party refining and smelting costs, marketing expense, on-site general and administrative costs, royalties, in-mine drilling expenditures that are related to production and other direct costs. Sales of by-product metals are deducted from the above in computing cash costs. Cash costs exclude depreciation, depletion and amortization, corporate general and administrative expense, exploration, interest, and pre-feasibility costs and accruals for mine reclamation. Cash costs are calculated and presented using the "Gold Institute Production Cost Standard" applied consistently for all periods presented.

Total cash costs per ounce is a non-GAAP measurement and investors are cautioned not to place undue reliance on it and are urged to read all GAAP accounting disclosures presented in the consolidated financial statements and accompanying footnotes.

MWS is a uranium and gold tailings recovery operation located in the western portion of the Witwatersrand Basin approximately 160 kilometres from Johannesburg.

When the Corporation's wholly-owned subsidiary, First Uranium (Proprietary) Limited ("FUSA") acquired MWS in June 2007, the Corporation acquired an existing operating gold mine tailings re-processing facility and an historic uranium plant, adjacent to the Buffelsfontein property, where the Buffelsfontein Tailings are now being retreated. During Q3 2008, production activities were limited to hydraulic mining using high pressure water cannons to slurry the tailings, clean up and processing of material from the MWS No.2 tailings dam. As a result of the late commissioning of the production infrastructure at the Buffelsfontein No.2 tailings dam it was necessary to continue hydraulic mining MWS No. 2 tailings dam until December rather than October, as previously anticipated.

The project to construct the initial long-life pump station and 10.5-kilometre pipeline was initiated in June 2007 and, while it was delayed due to late delivery of slurry pumps and heavy rains that fell during October making construction difficult, these new production facilities were commissioned in mid-December.

As the resources in the MWS No.2 tailings dam neared exhaustion during Q3 2008, it was necessary to use mechanical loading and placement of the remnant material, in addition to hydraulic mining, which resulted in increased handling costs relative to a normal reclamation operation in addition to the reduced tonnages. As a result, only 770,436 tonnes of tailings (0.4 million tonnes in Q1 2008 and 1.2 million tonnes in Q2 2008) were reclaimed from the MWS No.2 tailings dam during Q3 2008.

The pump station and the pipeline between the Buffelsfontein property and the MWS gold plant were completed and commenced operation during December 2007 which enabled the Corporation to stop mining from the MWS No.2 tailings dam and to initiate the hydraulic mining of the Buffelsfontein No.2 tailings dam on the Buffelsfontein property. The material from the Buffelsfontein No.2 tailings dam is being transported via the pipeline to the MWS gold plant for processing. Full commissioning of the introduction of the material from Buffelsfontien No. 2 tailings dam to the plant is ongoing.

The high-pressure pump train located at Buffelsfontein No.2 tailings dam is performing as designed, despite having a low utilization of 75% during the quarter. Once the second train of standby pumps is commissioned, the utilization is expected to increase to 95%, which will sustain production at or better than the planned rate of 20,800 tonnes per day. In the meantime, production rates have reached 20,000 tonnes per day and have not yet been affected by the Power Situation as MWS has been drawing additional power from BGM.

During December, 61,772 tonnes of material from the Buffelsfontein No.2 tailings dam were processed through the MWS gold plant. The initial lower daily tonnages at the start of the hydraulic mining of the Buffelsfontein No.2 tailings dam were the result of vegetation restricting the flow of material to the pump station. By the end of December, the vegetation was sufficiently removed to allow the daily tonnages to exceed 17,000 tonnes per day. The transition to hydraulic mining of the Buffelsfontein Tailings will result in a decrease in the Cash Cost as a result of the increased throughput at the MWS gold plant.

To date, the achieved grade of 0.36 grams of gold per tonne mined from the Buffelsfontein No.2 tailings dam is in line with the resource estimates for the initial mining benches, although lower than the planned 0.40 grams of gold per tonne. The grade is expected to improve as the lower portion of the dam is mined, resulting in higher grade material being treated.

Due to the Power Situation, the planned expansion of MWS will depend on the feasibility of acquiring power generation capacity. A feasibility study of the options for power generation has been initiated which will result in a delay of the construction of additional modules to the plant of approximately three months.

FUSA has an agreement to acquire surface tailings from BGM, a subsidiary of Simmer & Jack (the "Buffelsfontein Tailings and Rights Agreement"). Please see the Corporation's MD&A in respect of its audited consolidated financial statements for Fiscal 2007 for a summary of this agreement. It was originally contemplated that the BGM transaction would be recognized upon the satisfaction of the conditions precedent in the Buffelsfontein Tailings and Rights Agreement, including the transfer of the mining rights to MWS. While all of the conditions have not yet been satisfied, MWS commenced processing and accounting for, Buffelsfontein Tailings in December 2007. Consequently, MWS has assumed the asset retirement obligation related to the Buffelsfontein Tailings. The corresponding asset of \$6.2 million associated with the Buffelsfontein Tailings is capitalized as part of Tailings for processing under Property, Plant and Equipment and amortized over the estimated life of the Buffelsfontein Tailings. (See Note 7 to the interim financial statements.)

A loan agreement (the "Aberdeen Loan Agreement") was entered into by Simmer & Jack with Aberdeen International Inc. ("Aberdeen") dated March 30, 2006 pursuant to which Aberdeen provided to Simmer & Jack a loan facility in the amount of US\$10 million in respect of the financing of Simmer & Jack's acquisition of BGM and the BGM Underground Mine. As part of the consideration for the facility, Simmer & Jack granted to Aberdeen a net smelter royalty on all of the gold assets held by Simmer & Jack through BGM. The royalty as determined in the Aberdeen Loan Agreement, will be applicable to any gold produced by FUSA from tailings acquired from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement and will continue until the loan is repaid to Aberdeen, which Simmer and Jack has advised is expected to occur by December 31, 2008 (unless extended by Simmer & Jack to December 31, 2010). In addition, pursuant to the Aberdeen Loan Agreement, Aberdeen has the sole option, at any time following the one year anniversary of the first advance thereunder, to convert the amount of the facility outstanding at that time into ordinary shares of Simmer & Jack at a conversion rate of ZAR0.80, subject to the approval of Simmer & Jack's shareholders. In the event that such shareholder approval is not obtained within a reasonable period of time, Aberdeen will be entitled to a 1.0% net smelter royalty in perpetuity on gold produced from properties held by BGM, including the Buffelsfontein Tailings.

On December 20, 2006, FUSA, Simmer & Jack and Aberdeen entered into an arrangement (the "Aberdeen Arrangement") pursuant to which (i) Simmer & Jack confirmed that it will pay to Aberdeen the amount of any royalty owing to Aberdeen under the Aberdeen Loan Agreement in respect of gold produced from the Buffelsfontein Tailings and (ii) FUSA confirmed that it will pay to Simmer & Jack, immediately prior to any payment contemplated in (i) above, an amount equal to the amount of any royalty payment to be made by Simmer & Jack to Aberdeen in respect of gold produced from the Buffelsfontein Tailings.

Pursuant to the Buffelsfontein Tailings and Rights Agreement, in consideration for the cession of the Buffelsfontein Tailings and Mining Right from BGM to FUSA as well as certain servitudes, and the right to the tailings arising from future underground mining operations by BGM at the BGM Underground Mine, FUSA agreed to pay to BGM a royalty of 1% plus value added tax of the gross revenue earned by FUSA from the sale of uranium, gold, sulphur and other minerals recovered from the processing of tailings acquired by FUSA from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement.

In summary, as and when there is production from the tailings acquired from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement, FUSA will become liable to pay: (i) to

Simmer & Jack, under the Aberdeen Arrangement, an amount equal to the royalty payable by Simmer & Jack to Aberdeen pursuant to the Aberdeen Loan Agreement in respect of gold produced from the Buffelsfontein Tailings, and (ii) to BGM the above-mentioned 1% royalty pursuant to the terms of the Buffelsfontein Tailings and Rights Agreement.

Since MWS is now processing Buffelsfontein Tailings, the royalty is accruing and will be paid to BGM and Simmer & Jack as described above. During Q3 2008 and 2008 YTD, \$0.04 million have been accrued as royalties.

The Corporation is in the process of expanding the existing MWS gold plant to increase the design capacity of 500,000 tonnes per month to an average of 630,000 tonnes per month, as previously planned and announced; however, the decision to complete the planned expansion to construct additional modules to the plant and the timing thereof is currently subject to the completion of the feasibility study of the options of power generation.

To facilitate the plant expansion, an upgrade is planned for MWS No.5 tailings dam to enable a deposition rate of 630,000 tonnes of material per month. The upgrade is expected to be completed during Q4 2008.

During January 2008, MWS started on-site preparation for the construction of the additional module of the gold plant and the two modules of the uranium plant. Due to the Power Situation, the plans to add a second module of the gold plant and to construct the first two modules of the uranium plant will be postponed pending the completion of a feasibility study of the options for power generation. The completion of the feasibility study is expected to delay the planned start-up of the plants by approximately three months. The MWS No.5 tailings dam requires a further upgrade to accommodate a deposition rate of 1,283,000 tonnes of material per month.

Prior to the Power Situation, the Corporation estimated that \$260 million of capital would be required for MWS, 93% of which was expected to be invested in the first three years of the project. This estimate is being re-calculated to make provision for the installation of power generation capacity. Over and above any additional power generation costs, a feasibility study has been undertaken which will include an assessment of the impact of reconfiguring the new modules of the plant to run on alternative sources of power. As of the end of Q3 2008, \$10.2 million cash has been spent on MWS (\$2.6 million in Q3 2008, \$6.1 million in the first six months of FY 2008 and \$1.5 million during FY 2007).

On December 19, 2007, the Corporation declared its first mineral reserve estimate for MWS. The following tables show the updated resource estimate, followed by the mineral reserve estimate.

MINERAL RESOURCE ESTIMATE 2007 (includes mineral reserves)

Resource Category		Gold			Uranium	
Place	Dam	Tonnes	Grade	Content	Grade	Content
		(millions)	(g/t)	(oz 000s)	(kg/t)	(Mlb)
Measured

MWS	5 (from 2)	4.7	0.18	26	0.102	1.05
Total Inferred		21.2	0.28	189	0.100	4.64

Notes:

1. Mineral resources are quoted as in-situ mineral resources.
2. No cutoff grades were applied.
3. Rows and columns may not add exactly due to rounding.
4. Effective date: November 1, 2007.
5. Mineral resources include mineral reserves. Resources which are not reserves do not have demonstrated economic viability.
6. Table reflects depletion of 1.5 million tonnes from July through October 2007 for MWS No. 2 Dam.
7. MWS No. 4 dam is split into 2 domains, namely Domain 1 which is the uppermost section of the dam, and Domain 2, the lower most portion of the dam. The tailings dam has been evaluated in two separate sections as they show distinct differences in grade.

MINERAL RESERVE ESTIMATE 2007

Reserve Classification		Gold			Uranium	
Place	Dam	Tonnes	Grade	Content	Grade	Content
		(millions)	(g/t)	(oz 000s)	(kg/t)	(Mlb)
Proven						
Buffels	2	24.1	0.40	309	0.086	4.58
Buffels	3	24.9	0.35	280	0.099	5.44
Buffels	4	14.1	0.37	170	0.102	3.17
Harties	5	23.9	0.21	163	0.062	3.26
Harties	6	13.3	0.20	85	0.063	1.85
Total Proven		100.3	0.31	1,008	0.083	18.30
Probable						
Buffels	5	47.6	0.24	360	0.063	6.62
Harties	1	74.4	0.26	624	0.062	10.17

Harties	7	1.3	0.27	11	0.164	0.46
Harties	NKGE	1.2	0.50	19	0.182	0.47
MWS	2	0.6	0.45	9	0.082	0.11
MWS	4 (Dom 2)	17.4	0.28	157	0.133	5.12
MWS	5 Indicated	40.3	0.31	402	0.088	7.81
Total Probable		226.6	0.27	1,950	0.073	36.55
Total Proven & Probable		326.9	0.28	2,958	0.076	54.85

Notes:

1. Mineral reserves are quoted as fully diluted delivered to mill estimates.
2. Effective date: November 1, 2007.
3. Based on assumptions of a gold price of \$635 per ounce, a uranium price of \$45 per pound and and ZAR/\$ exchange rate of 7.40.
4. A reserve cutoff grade of 0.28 grams per tonne gold equivalent was used, uranium grades were converted to gold equivalent using a conversion factor of 1 gram per tonne, which equals 0.503 kilograms per tonne on an extracted metal basis.
5. Rows and columns may not add exactly due to rounding.
6. The average life of mine gold recovery applied was 66%.
7. An effective life of mine uranium recovery of 27% was used and is based on an atmospheric leach process.
8. Table reflects depletion of 1.5 million tonnes from July through October 2007 for MWS No. 2 Dam.
9. Only Domain 2 of the MWS No. 4 dam has been converted to a mineral reserve as the gold grade in Domain 1 is below cut-off.

Technical Disclosure

All technical disclosure under the heading "Buffelsfontein Tailings Recovery Project" has been prepared in accordance with National instrument 43-101 ("NI 43-101) by Daan van Heerden, B.Sc., M.Comm., Charles Muller, B.Sc, Pr.Sci.Nat, and Johan Odendaal, B.Sc., M.Sc., Pr.Sci.Nat all of Minxcon (Pty) Ltd, each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium.

Historical technical disclosure under the heading "Buffelsfontein Tailings Recovery Project" is extracted from a technical report entitled "Technical Report on the Pre-feasibility of the Buffelsfontein Tailings Reclamation Project" submitted on November 1, 2007, prepared in accordance with NI 43-101 by Daan van Heerden, B.Sc., M.Comm., Charles Muller, B.Sc, Pr.Sci.Nat, and Johan Odendaal, B.Sc., M.Sc., Pr.Sci.Nat all of Minxcon (Pty) Ltd, each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium.

The disclosure contained in this MD&A relevant to their respective contributions has been reviewed and approved by Messrs. van Heerden, Muller and Odendaal.

Results of Operations

Consolidated Results

	Q3 2008	Q3 2007	2008 YTD	2007 YTD
Group				
Revenue (\$000s)	6,633	-	15,069	-
Cost of production (\$000s)	(4,960)	-	(11,697)	-
Amortization (\$000s)	(473)	-	(1,333)	-
Total cost of production (\$000s)	(5,433)	-	(13,030)	-
	1,200	-	2,039	-

Revenue for Q3 2008 as presented above was generated from the processing of tailings material and sale of the related gold at the MWS operations. As the Ezulwini Mine is still in a ramp-up phase and has not yet achieved commercial levels of production, revenue from the sale of its ore, which was mined and then toll-treated at a neighboring third party gold plant, have been set off against Mine infrastructure cost relating to the Ezulwini Mine's mining operations in Property, Plant and Equipment.

The Corporation had no production during FY 2007.

Other income

(thousands of dollars)	Q3 2008	Q3 2007	2008 YTD	2007 YTD
Other income	1,379	-	2,276	-

Other income consists primarily of fees for sludge pumping services to a third party and hostel rental income at the Ezulwini Mine. There was no such income during the same period last year.

Expenditures

(thousands of dollars)	Q3 2008	Q3 2007	2008 YTD	2007 YTD
General, consulting and administrative expenditures	(4,058)	(706)	(8,548)	(3,356)
Stock-based compensation	(1,079)	(519)	(2,513)	(519)
Pumping, feasibility and rehabilitation costs	(1,880)	(350)	(2,948)	(350)
Amortization of property, plant and equipment	(46)	-	(144)	-
Total expenditures	(7,063)	(1,575)	(14,153)	(4,225)
Operating loss	(4,484)	(1,575)	(9,838)	(4,225)

General, consulting and administrative expenditures included \$2.3 million and \$4.8 million for Q3 2008 and 2008 YTD, respectively, for employee compensation costs, consulting and professional fees, as well as fees charged by Simmer & Jack for services provided pursuant to the Shared Services Agreement (see "Related Party Transactions") of \$0.5 million and \$1.1 million for Q3 2008 and 2008 YTD, respectively.

For Q3 2007 and 2007 YTD, employee compensation costs, consulting and professional fees were \$0.6 million and \$2.6 million, respectively, and shared services fees from Simmer & Jack expensed for Q3 2007 and 2007 YTD were \$0.1 million and \$0.7 million, respectively.

General, consulting and administrative expenses in Q3 2008 and 2008 YTD primarily reflect the ongoing project development activities, the costs of corporate offices in Johannesburg and Toronto and other expenses of operating a public company, which were not applicable in Q3 2007 and 2007 YTD.

The Q3 2008 stock-based compensation expense reflects the amortized cost of 1,223,001 stock options granted during FY 2007 and the amortized cost of 325,715 stock options granted during 2008 YTD. The fair value of the stock-based compensation was estimated using the Black-Scholes option pricing model.

During Q3 2008, pumping costs not capitalized at the Ezulwini Mine were included in expenditures until hoisting commenced at the end of October 2007. As of November 2007, pumping costs are included in the cost of production, which has been capitalized to Mine infrastructure cost in Property, Plant and Equipment. Feasibility assessment activities were higher during 2007 YTD, as the Corporation initiated early reviews in respect of re-commissioning the Ezulwini Mine. As the Corporation continues to explore new opportunities, feasibility assessments are ongoing. Included in the costs for Q3 2008 and 2008 YTD are rehabilitation costs incurred at the MWS operations of \$0.2 million and \$0.6 million, respectively.

Amortization of property, plant and equipment in Q3 2008 and 2008 YTD relate to amortization of non-mining assets such as computer equipment and software, furniture and equipment and motor vehicles. There was no amortization during the same periods of FY 2007.

Non-operating Income and Expenses

(thousands of dollars)	Q3 2008	Q3 2007	2008 YTD	2007 YTD
Operating loss	(4,484)	(1,575)	(9,838)	(4,225)
Interest income	4,467	529	12,840	422
Interest expense	(1,629)	-	(4,087)	(101)
Accretion expense on the Debentures	(3,724)	-	(8,103)	-
Foreign exchange gains	1,245	(2,741)	13,636	(1,335)
Net (loss) income before income taxes	(4,125)	(3,787)	4,448	(5,239)

Interest income in Q3 2008 and 2008 YTD represents interest earned on the net proceeds from the Offering and the Debentures. Cash balances have been invested in short-term deposits with the Corporation's bankers until required for capital projects or to fund operating costs.

Interest expense in Q3 2008 and 2008 YTD consists of the interest paid on the Debentures. The interest expense during the same periods of FY 2007 consisted of the non-capital portion of interest paid by EMC on the loan payable to Simmer & Jack. The accretion expense in Q3 2008 and 2008 YTD relates to the Debentures. (See Note 11 to the interim financial statements.)

The Corporation's net assets are held in Canadian dollars ("Cdn\$") and South African Rand ("ZAR"), while its accounts are presented in US dollars. The foreign exchange gains on translation in Q3 2008 and for 2008 YTD reflect the strengthening of the Canadian dollar and the South African Rand against the US dollar. The majority of the Corporation's funds are currently held in Canadian dollar denominated short-term deposits.

The table below shows the exchange rate movements over the first nine months of FY 2008 relative to the first six months and three months of FY 2008 and FY 2007:

	Q3 2008	Q2 2008	Q1 2008	FY 2007
Cdn\$ to the ZAR – closing rate	6.99	6.98	6.68	6.30
Cdn\$ to the ZAR – average rate	6.93	6.81	6.47	6.20
Cdn\$ to the US\$ – closing rate	1.10	1.01	0.94	0.87
Cdn\$ to the US\$ – average rate	1.01	0.95	0.91	0.88
US\$ to the ZAR – closing rate	6.85	6.92	7.01	7.28
US\$ to the ZAR – average rate	6.79	7.12	7.11	7.06

Net (loss) income before income taxes

(thousands of dollars)	Q3 2008	Q3 2007	2008 YTD	2007 YTD
Net (loss) income before income taxes	(4,125)	(3,787)	4,448	(5,239)
Provision for income taxes	127	-	76	-
Net (loss) income for the period	(3,998)	(3,787)	4,524	(5,239)

Net loss before taxes in Q3 2008 increased marginally year over year as a result of increased expenditures that more than offset revenue from gold sales. The Corporation recorded net income before taxes in 2008 YTD compared to net loss before taxes for 2007 YTD as a result of the net foreign exchange translation gains partially offset by increased expenditures.

The increase in expenditures year over year reflects ongoing project development activities, the costs of corporate offices in Johannesburg and Toronto and other expenses of operating a public company, which were not applicable in Q3 2007 and 2007 YTD.

Use of Proceeds

Offering

Pursuant to the Offering, in December 2006 First Uranium raised total net proceeds of \$177.7 million of which \$93.1 million had been expended as at December 31, 2007 leaving a balance on hand at that date of \$84.6 million:

(millions of dollars)	Use of net proceeds			
	To December 31, 2007	During Q3 2008	During first half of FY 2008	During FY 2007
Development of the Ezulwini Mine	(76.2)	(21.4)	(35.5)	(19.3)
Development of MWS	(10.2)	(2.6)	(6.1)	(1.5)
Repayment of indebtedness owed by EMC to Simmer & Jack	(14.1)	-	-	(14.1)
Purchase of the Ezulwini Mine infrastructure	(8.9)	-	-	(8.9)
Working capital and general corporate purposes	16.3	3.7	4.0	8.6
Total	(93.1)	(20.3)	(37.6)	(35.2)

While First Uranium intends to apply the net proceeds of the Offering approximately as disclosed in the Corporation's MD&A in respect of its audited consolidated financial statements for the Fiscal 2007, such uses are by definition, based on estimates and assumptions and are subject to variance. In addition, there may be circumstances where, for sound business reasons, a re-allocation of the funds may be necessary or advisable.

Debentures

The Corporation intends to use the net proceeds from the issue of the Debentures to: fund the Ezulwini Expansion Program which is designed to determine the potential for a possible expansion of the Ezulwini Mine; together with the balance of the net proceeds of the Offering, fund the development of the Ezulwini Mine and MWS and for general corporate purposes. The net proceeds of \$130.6 million from the issue of the Debentures are currently held in Canadian dollar denominated short-term deposits bearing interest at 4.85% per annum. The approval of the South African Reserve Bank ("SARB"), which was required in connection with the issue of the Debentures, includes a condition that the Corporation transfers the net Debenture proceeds to bank accounts of the Corporation in South Africa and convert the funds to ZAR, by May 3, 2008.

Prior to the Power Situation, First Uranium believed that the net Debenture proceeds and the unused portion of the net proceeds of the Offering were sufficient to fund its plans for the near-term development of the Ezulwini Mine, the Ezulwini Expansion Program and MWS expenditures, as adjusted to reflect changed project capital with the acquisition of MWS. The Corporation believes that the anticipated revenue from future sales of gold and uranium at current price assumptions, together with funds from the proceeds of the Offering and the Debentures, along with funds that may be available under a mandate letter and term sheet with a financial institution (see section "Liquidity and Capital Resources" in this MD&A) are sufficient funding to develop and advance its two existing mining projects, inclusive of the purchase of additional power generating capacity.

Cash flows

Quarterly Cash Flow

(thousands of dollars)	Q3 2008	Q3 2007
Cash flows utilized in operating activities	(12,541)	(15,307)
Cash flows utilized in investing activities	(28,035)	(11,726)
Cash flows from financing activities	506	177,696
Net effect of exchange rates on cash held in foreign currencies	954	2,741
Net (decrease) increase in cash and cash equivalents for the period	(39,116)	153,404
Cash and cash equivalents at beginning of period	254,332	1,158
Cash and cash equivalents at end of period	215,216	154,562

The cash utilized by operating activities in Q3 2008 is primarily the result of an increase in expenditures during the quarter, \$3.4 million of interest paid on the Debentures and \$3.2 million of gold revenue in December from the Ezulwini Mine, which was not received until after the end of Q3 2008. The cash utilized in operating activities in Q3 2007 was primarily the result of an increase in the net receivables from related parties. During Q3 2007, the Corporation's South African operations had not yet established their own bank accounts and as a result, cash was held by Simmer & Jack on behalf of the Corporation.

Investing activities utilized \$28.0 million in Q3 2008, comprising capital expenditures of \$17.7 million and \$10.8 million relating to the Ezulwini Mine and MWS, respectively. The cash utilized in investing activities during Q3 2007 was primarily pumping costs at the Ezulwini Mine capitalized as part of mine development expenditures.

Cash generated from financing activities in Q3 2008 reflects the proceeds from 71,430 share options exercised during the quarter.

The net effect of exchange rates on cash held in foreign currencies (Cdn\$ and ZAR) in Q3 2008 is primarily the result of the Debenture proceeds held in cash and the debt portion of the Debentures translated to US dollars at the exchange rate in effect at the end of the quarter, whilst the equity portion of the Debentures was translated to US dollars at the rate in effect on the date that the Debentures were issued.

Cash Flow for 2008 YTD

(thousands of dollars)	2008 YTD	2007 YTD
Cash flows generated from (utilized in) operating activities	9,323	(8,858)
Cash flows utilized in investing activities	(75,419)	(16,945)
Cash flows from financing activities	131,409	178,470
Net effect of exchange rates on cash held in foreign currencies	10,989	1,335
Net increase in cash and cash equivalents for the period	76,302	154,002
Cash and cash equivalents at beginning of period	138,914	560
Cash and cash equivalents at end of period	215,216	154,562

The cash generated from operating activities during 2008 YTD was primarily derived from net interest received and the transfer by Simmer & Jack of the Corporation's South African operations' cash funds into their own respective bank accounts at the beginning of FY 2008. The cash utilized in operating activities during 2007 YTD was mainly the result of a reduction in net receivables from related parties and an increase in accounts payable and accrued liabilities.

The cash utilized in investing activities in 2008 YTD primarily relates to \$60.3 million and \$17.0 million of capital expenditures at the Ezulwini Mine and MWS, respectively. The cash utilized in investing activities in 2007 YTD relates to capitalized pumping costs at the Ezulwini Mine.

The cash generated during 2008 YTD from financing activities was primarily attributable to the \$130.6 million of proceeds raised from the Debentures in Q1 2008. The cash generated from financing activities during 2007 YTD was attributable to the \$177.7 million of net proceeds from the Offering in December of 2006.

The net effect of exchange rates on cash held in foreign currencies (Cdn\$ and ZAR) during 2008 YTD is primarily the result of the Debenture proceeds held in cash and the debt portion of the Debentures translated to US dollars at the exchange rate in effect at the end of the quarter, whilst the equity portion of the Debentures was translated to US dollars at the rate in effect on the date that the Debentures were issued.

Financial Position and Liquidity

Assets

Cash and cash equivalents increased by \$76.3 million during 2008 YTD to \$215.2 million. The increase is primarily the net result of the \$130.6 million of Debenture net proceeds,

offset by capital expenditures of \$60.3 million at the Ezulwini Mine and \$17.0 million at MWS.

Amounts receivable of \$14.0 million at December 31, 2007 (FY 2007: \$1.7 million) is primarily comprised of \$3.2 million of gold revenue (after toll-treatment and transport costs) related to the toll-treatment processing of Ezulwini Mine ore in December and \$8.9 million of value-added tax and goods and services taxes recoverable, mainly relating to the ongoing capital expenditures on the projects.

Inventories of \$2.5 million at December 31, 2007 (FY 2007: \$0.3 million) include \$0.8 million of gold work-in-progress and \$0.8 million of spares and consumables from the MWS operations. At the end of the quarter, the Corporation also had surface stockpiles at the Ezulwini Mine, measured and valued at \$0.9 million.

Property, plant and equipment increased to \$166.7 million at December 31, 2007 (FY 2007: \$31.0 million). The increase is a result of capital expenditures at the Corporation's two mining operations related to the capital projects as well as the \$41.1 million of MWS assets acquired in June 2007 and the \$6.2 million value of Buffelsfontein Tailings associated with the asset retirement obligation related to the processing of Buffelsfontein Tailings. (See Note 7 of interim financial statements.)

Capital expenditures at the Ezulwini Mine of \$28.9 million for Q3 2008 and \$71.2 million for 2008 YTD were primarily related to additions to mining infrastructure and construction of the gold and uranium plants. At MWS, capital expenditures of \$13.0 million for Q3 2008 and \$18.5 million for 2008 YTD were primarily related to the construction of the pump station and the pipeline between the Buffelsfontein property and the MWS gold plant.

The increase in asset retirement funds to \$5.1 million (FY 2007: \$2.8 million) was primarily the result of the \$2.0 million environmental rehabilitation trust fund assumed by the Corporation on the acquisition of MWS in June 2007.

The \$1.0 million loan to a related party represents the loan advanced to the President and Chief Executive Officer of First Uranium on October 17, 2007. (see Note 21 to the interim financial statements.)

Investing activities

During Q3 2007, investing activities represented primarily pumping costs incurred and capitalized to mine development expenditures.

Liabilities

As of December 31, 2007, total liabilities were \$148.1 million (FY 2007: \$11.1 million), consisting of the debt portion of \$103.7 million of the Debentures, accounts payable and accrued liabilities of \$19.1 million (FY 2007: \$5.7 million), the future tax liability in the amount of \$10.3 million arising from the MWS acquisition and the asset retirement obligation of \$14.2 million (FY 2007: \$5.3 million).

The increase of accounts payable and accrued liabilities to \$19.1 million (FY 2007: \$5.7 million) at the end of Q3 2008 was primarily comprised of \$11.5 million and \$2.4 million of payables related to the capital expenditures incurred at the Ezulwini Mine and MWS, respectively, as well as trade payables of \$1.3 million and \$2.3 million related to the Ezulwini Mine and MWS operations, respectively.

The payable to a related party of \$0.8 million at the end of Q3 2008 results from transactions pursuant to the Shared Services Agreement between First Uranium and Simmer & Jack, which were incurred in the normal course of business. At the end of FY 2007, the Corporation had a receivable from a related party of \$6.8 million, which were funds held by Simmer & Jack on behalf of the Corporation's South African operations while the Corporation was establishing their own bank accounts.

The asset retirement obligation increased as a result of the \$2.8 million environmental rehabilitation obligation assumed with the MWS acquisition in June 2007 and the environmental rehabilitation obligation relating to the mining of the Buffelsfontein Tailings commencing in December 2007. (See Note 12 to the interim financial statements.)

Liquidity and Capital Resources

At December 31, 2007, First Uranium had working capital of \$211.8 million (FY 2007: \$142.0 million). The significant increase in working capital from the comparable period in FY 2007 is mainly attributable to the net proceeds of \$130.6 million from the Debentures.

First Uranium anticipates that future capital requirements relating to development of the Ezulwini Mine and MWS, as currently planned, will be funded from existing cash resources (a combination of the funds remaining from the net proceeds of the Offering and the Debentures of \$84.6 million and \$130.6 million respectively as at December 31, 2007) and from internal cash flow. The above statement excludes the planned installation of power generating capacity, which may be funded by a general corporate credit facility pursuant to a mandate letter and term sheet with Investec Bank Limited ("Investec"). The Corporation is continuing with the process of satisfying certain conditions precedent to this facility and is in discussions with Investec.

Capital investments of \$260 million and \$271 million, inclusive of expenditures to date, are the total project costs estimated to complete the construction of MWS and the Ezulwini Mine, respectively, for which current commitments of \$56.8 million (FY 2007: \$5.2 million) are in place. As at December 31, 2007, the Corporation's cumulative cash investments relating to its two projects were \$86.4 million (\$24.0 million in Q3 2008, \$31.1 million in Q2 2008, \$10.5 million in Q1 2008 and \$20.8 million in FY 2007).

Capital of \$0.5 million was spent in both Q3 2008 and 2008 YTD in relation to the approved exploration budgets of \$10 million for the contiguous properties to the north-east and south-east of the Ezulwini Mine and \$30 million for the Ezulwini Mine. The extent to which the budgeted amounts are spent depends on the ongoing exploration results. Current commitments of \$1.3 million relating to exploration work existed as at December 31, 2007. The exploration expenditures are expected to be funded from available working capital.

The Corporation entered into an agreement with a third party, commencing in January 2009, to calcine the yellowcake from First Uranium to produce uranium oxide packaged for dispatch to converters ("Toll Treatment Agreement"). Either party may terminate the agreement on 18 months notice. The third party calciner will construct a plant with one-half of the capacity of the plant to be dedicated for the processing of the First Uranium yellowcake and will purchase a road tanker to transport the yellowcake from the First Uranium operations to the third party calciner's facility. First Uranium will pay one-half of the construction cost of the calcining plant up to a maximum of ZAR15 million and one-half of the cost of the road tanker (together referred to as the "Loan"). The Loan will be effective as of January 5, 2009 and is to be repaid in monthly installments over a seven-year period commencing January 30, 2009. The Loan will bear interest at a rate equal to the prime overdraft rate as quoted by SARB, plus 2%, commencing January 5, 2009. If First Uranium cancels the agreement, in the absence of a right under the agreement to cancel the agreement in a prescribed circumstance, First Uranium will continue to be obligated to repay the entire Loan.

As at December 31, 2007, First Uranium had the following contractual obligations:

(thousands of dollars)	Payments due by date				Total
	Less than 1 year	1-3 Years	4-5 Years	After 5 Years	
Operating leases	45	90	252	70	457
Purchase obligations	75,996	—	—	—	75,996
Capital lease obligations	13	9	—	—	22
Asset retirement obligations	—	—	—	14,171	14,171
Senior unsecured convertible debentures	—	—	130,060	—	130,060
Total contractual obligations	76,054	99	130,312	14,241	220,706

Summary of Quarterly Results

The table below sets out selected financial data for the periods indicated (as derived from First Uranium's consolidated financial statements):

Fiscal Quarters Ended (thousands of dollars, except per share amounts)	Total Assets	Net Income/(Loss)	Basic and Diluted Earnings/ (Loss) per Share	Long Term Liabilities
December 31, 2007	404,555	(3,998)	(0.03)	128,182
September 30, 2007	389,554	3,051	0.02	117,349
June 30, 2007	373,549	5,471	0.04	118,900
March 31, 2007 (audited)	181,427	(2,689)	(0.02)	5,377
December 31, 2006	195,374	(3,787)	(0.04)	Nil
September 30, 2006	8,839	786	0.01	Nil
June 30, 2006	4,120	(2,238)	(0.03)	Nil
March 31, 2006 (audited)	3,433	(4,656)	(0.05)	Nil
December 31, 2005	4,519	(2,201)	(0.03)	Nil

Outlook

The next major milestone for the Ezulwini Mine is the commissioning of the first 50,000 tonne per month module of the gold plant, which is on schedule for April 2008. The first 50,000 tonne per month module of the uranium plant is on schedule for commissioning in June 2008.

At MWS, the pipeline is complete and is operating. Commissioning of the introduction of the new material from the Buffelsfontein No. 2 tailings dam to the MWS gold plant is ongoing. Together with the plant upgrade program the operation of the pipeline to allow processing of Buffelsfontein Tailings is expected to have a significant positive impact on MWS operations in terms of volume treated and costs.

The grade mined from the Buffelsfontein No.2 tailings dam is expected to return to the planned average grade of 0.40 grams per tonne as hydraulic mining is extended to include the lower portion of the dam.

The short-term outlook is highly dependent upon the Power Situation. The Corporation has initiated a feasibility study of the options for power generation. If the results of the feasibility study are positive, the Corporation plans to proceed with the construction of the additional modules for the gold and uranium plants at the Ezulwini Mine and MWS. For a full discussion of the Corporation's decisions regarding the Power Situation, please refer to the section entitled 'Preliminary Assessment of the Impact of the Power Situation, as discussed earlier in this MD&A.

The following summary of expected changes and developments at MWS are a result of the implementation of the pre-feasibility study announced in December 2007 and the filing of the related technical report on February 1, 2008; however, they do not factor in any changes, which may result from the Power Situation:

SUMMARY OF CHANGES TO MWS

	Units of measure	Previous May 2007	Current Dec 2007	Change
Gold Plant				
	Tonnes per month	600,000	633,000	6%
		600,000	650,000	8%
		600,000	650,000	8%
		1,800,000	1,933,000	7%
Average annual gold production	000 oz.	128	126	-2%
Peak annual gold production	000 oz.	165	182	10%
Total LOM ¹ gold production	000 oz.	2,054	2,024	-1%
Average LOM ¹ gold recovery	%	67.2%	66.0%	-120 bps
Uranium Plant				
Design capacity of uranium plant ² :				
Module 1	Tonnes per month	60,000	63,000	5%
Module 2		60,000	65,000	8%
Module 3		60,000	65,000	8%
Total		180,000	193,000	7%
Average annual uranium production	000 lb.	922	1,339	45%
Peak annual uranium production	000 lb.	1,595	2,231	44%
Total LOM ¹ uranium production	000 lb.	14,748	20,078	36%
Average LOM ¹ uranium recovery	%	28.8%	33.0%	420 bps
Financial Measures				
Net present value (NPV) ³	\$millions	295	505	71%
Internal rate of return (IRR)	%	69%	151%	8200 bps
Capital investment	\$ millions	148	260	76%
Peak funding	\$ millions	83	67	-19%
Life of Mine	Years	16	16	-
Cash cost – gold	\$/ oz.	220	264	20%
Cash cost – uranium	\$/ lb.	22	24	9%
Total operating cost	\$/ tonne	2.55	3.10	22%

Notes:

1. LOM is the abbreviation of 'life of mine'.
2. The tonnes to be processed in the uranium plant are included in, not additional to, the tonnes to be processed in the gold plant.
3. NPV is calculated using an 8% real discount rate.

As discussed earlier in this MD&A, the expansion of the existing MWS gold plant to increase capacity to an average of 630,000 tonnes per month is scheduled for completion by the end of Fiscal 2008.

To facilitate the plant expansion, an upgrade is planned for MWS No.5 tailings dam to enable a deposition rate of 630,000 tonnes of material per month with expected completion by the end of February 2008. In advance of the commissioning of the second module of the gold plant and the first two modules of the uranium plant, a further upgrade to accommodate a deposition rate of 1,283,000 tonnes of material per month the MWS No.5 tailings dam is planned.

The decision to proceed with and the timing of the commissioning of the second module of the gold plant and the first two modules of the uranium plant at MWS is currently uncertain due to the Power Situation.

In addition to the Toll Treatment Agreement with a third party discussed in this MD&A under 'Liquidity and Capital Resources', the Corporation also entered into an interim off-take agreement with the third party, for the period from the planned startup of the uranium plant at the Ezulwini Mine in June 2008 until January 2009, pursuant to which the third party will purchase First Uranium's yellowcake production at rates based on the then prevailing spot prices.

The spot price for uranium ranged between \$75 and \$92 per pound during Q3 2008. As of February 13, 2008, the uranium spot price was \$75 per pound. The spot price for gold ranged between \$725.50 and \$841.10 per ounce during Q3 2008. As of February 11, 2008, the gold spot price was \$920 per ounce. The Corporation has no plans to hedge the price it receives for its gold production at this time.

Based on the consensus analysts' outlook at leading North American brokerage firms, as of December 19, 2007 management updated its outlook for uranium and gold prices as per the following table. Previous estimates used in the Corporation's technical reports were for a flat average price of \$50 per pound for uranium and \$500 per ounce for gold.

CHANGES TO PROJECT ASSUMPTIONS

Years ending		Unit	Mar 2009	Mar 2010	Mar 2011	Mar 2012	Beyond Mar 2012
Previous May 2007	Gold price	(\$/oz.)	\$500	\$500	\$500	\$500	\$500
	Uranium price	(\$/lb.)	\$50	\$50	\$50	\$50	\$50
	Exchange rate	(ZAR/\$)	7.4	7.4	7.4	7.4	7.4
Current Dec 2007	Gold price	(\$/oz.)	\$737	\$734	\$683	\$627	\$635
	Uranium price	(\$/lb.)	\$104	\$104	\$91	\$78	\$45
	Exchange rate	(ZAR/\$)	7.4	7.4	7.4	7.4	7.4

Note:

The current real term commodity price assumptions are based on the consensus of the nominal forecasts by the investment research analysts at 13 North American-based brokerage firms, adjusted downward by the US inflation rate for the period covering the construction of the Project.

Offsetting the higher price assumptions, mine construction costs have risen for labour, reflecting higher negotiated wage settlements across the sector, and for materials, such as steel and concrete. First Uranium has included assumptions for higher costs in its revised technical reports and future planning assumptions.

Related Party Transactions

On December 20, 2006, First Uranium and Simmer & Jack entered into a shared services agreement (the "Shared Services Agreement"). For a detailed description of the Shared Services Agreement, see the Corporation's MD&A in respect of its audited consolidated financial statements for FY 2007. During Q3 2008, the Corporation paid \$0.9 million to Simmer & Jack (\$1.9 million for 2008 YTD) pursuant to the Shared Services Agreement. During Q3 2007, the Corporation paid \$0.9 million for shared services relating to the operations to Simmer & Jack (\$1.7 million for 2007 YTD). Fees charged by Simmer & Jack of \$0.4 million and \$0.9 million, respectively, were capitalized during Q3 2008 and 2008 YTD for technical services provided to the Ezulwini Mine and MWS. During Q3 2007 and 2008 YTD, \$0.8 million and \$1.0 million, respectively, of shared services fees were capitalized.

Prior to December 2006, the Corporation shared its premises with other companies that had common directors and reimbursed the related companies for its proportional share of expenses or was reimbursed by the related companies for their proportional share of expenses. During both Q3 2007 and 2007 YTD, the Corporation was charged \$0.6 million for consulting services provided by related directors, officers and consultants of the Corporation.

First Uranium has agreed to reimburse Simmer & Jack for 50% of the fees that Simmer & Jack is required to pay to an empowerment company for consulting. During Q3 2008 and 2008 YTD, the Corporation paid \$0.06 million and \$0.3 million, respectively, to Simmer & Jack in connection with such services.

As previously disclosed, and at the same time as the Offering, the Corporation entered into an agreement on December 12, 2006 with Waterpan providing for the acquisition of the remaining 10% of the shares of EMC in consideration for 6.1 million common shares of First Uranium. On December 14, 2007 this transaction was completed. (See Note 21 to the interim financial statements.)

On September 27, 2007, the Board approved a loan in the amount of Cdn\$1 million to the President and Chief Executive Officer of First Uranium for the purpose of facilitating the relocation of his family to Toronto, where the corporate office is located. The loan carries interest at 4% payable monthly in arrears, is for a term of six years from date of closing of the purchase of a family residence and is unsecured. The loan was advanced on October 17, 2007. Interest of \$8,682 was received during Q3 2008 and 2008 YTD.

Critical Accounting Policies and Estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amount of assets and liabilities and disclosure of contingent liabilities at the date of the financial statements, and reported amounts of revenues and expenditures during the reporting period. Note 2 of the interim financial statements describes all of the Corporation's significant accounting policies.

Changes in accounting policies

Effective April 1, 2007, the Corporation adopted the Canadian Institute of Chartered Accountants ("CICA") Handbook Sections 1530 – Comprehensive Income, Section 3855 – Financial Instruments – Recognition and Measurement and Section 3865 – Hedges. The adoption of these new standards resulted in changes in the accounting for financial instruments and hedges, as well as the recognition of certain transition adjustments. As provided under the standards, the comparative consolidated financial statements have not been restated.

The adoption of these Sections is done retroactively without restatement of the consolidated financial statements of prior periods. There was no impact on the consolidated balance sheet of as at April 1, 2007.

The effect of these changes in the accounting policies on net income for Q1 2008 is not significant.

Effective April 1, 2007, the Corporation adopted the revised Section 1506 – Accounting Changes relating to changes in accounting policies, changes in accounting estimates, and errors. Adoption of these recommendations had no effect on the consolidated financial statements for the Q1 2008, except for the disclosure of accounting changes that have been issued by the CICA but have not yet been adopted by the Corporation because they are not effective until a future date (refer to Future accounting standards below).

Section 1535, Capital Disclosures, which is effective for the Corporation for the fiscal year beginning April 1, 2008. This standard requires disclosure of information that enables users of its financial statements to evaluate the entity's objectives, policies and processes for managing capital. The adoption is not expected to have a significant effect on the Corporation's financial statements.

Section 3862, Financial Instruments – Disclosures and Section 3863, Financial Instruments – Presentation, which are effective for the Corporation for the fiscal year beginning April 1, 2008. The objective of Section 3862 is to provide financial statement disclosure to enable users to evaluate the significance of financial instruments for the Corporation's financial position and performance and the nature and extent of risks arising from financial instruments that the Corporation is exposed to during the reporting period and the balance sheet date and how the Corporation is managing those risks. The purpose of Section 3863 is to enhance the financial statement user's understanding of the significance of financial instruments to the Corporation's financial position, performance and cash flows.

In March 2007, CICA approved Handbook Section 3031 – Inventories, which replaces the existing Section 3030 – Inventories. This standard is effective for the Corporation for interim and annual financial statements relating to the fiscal year beginning April 1, 2008. The standard provides more guidance on the measurement and disclosure requirements for inventories.

The Corporation is currently assessing the impact of these new accounting standards on its financial statements.

Outstanding Share Data

	Q3 2008	Q3 2007	2008 YTD	2007 YTD
Common shares outstanding at beginning of period	124,831,222	88,336,047	121,686,047	87,536,047
Shares issued during the period	6,212,339	33,350,000	9,357,514	34,150,000
Common shares outstanding at end of period	131,043,561	121,686,047	131,043,561	121,686,047
Unexercised stock options outstanding at end of period	1,349,999	1,115,715	1,349,999	1,115,715
Average strike price of outstanding options (Cdn\$)	8.73	7.00	8.73	7.00

As at February 13, 2007, First Uranium had 131,043,561 common shares outstanding and there were 1,349,999 unexercised stock options outstanding, at an average strike price of Cdn\$8.73 per share.

As at December 31, 2007 and February 13, 2007, First Uranium also had \$135.1 million (Cdn\$150 million) principal amount of Debentures outstanding which are convertible into 60.9013 common shares of First Uranium for each Cdn\$1,000 principal amount of Debentures, representing 9,135,195 common shares.

Risks and Uncertainties

Uncertainties

There are a number of uncertainties in the mining business of First Uranium that are beyond First Uranium's control, including:

- demand and prices for the Corporation's future production of uranium and gold
- the consistent supply of sufficient electrical power
- government legislation regarding mining companies in South Africa
- securities regulation regarding public listed companies in Canada and South Africa
- foreign exchange rates
- interest rates
- the decisions and activities of the Corporation's competitors in the uranium and gold mining business, which impact the supply of uranium and the demand for available services, construction materials, labour and the rights for prospecting and mining
- the continued endorsement of nuclear power as a preferred source for the world's energy needs
- the decisions of investors to continue to buy and hold the securities of the Corporation
- natural disasters, war or random occurrences or acts that could result in a material change to economic and market performance, business conditions or operations

Risks

In addition, First Uranium is in the development stage and is subject to the risks and challenges similar to other companies in a comparable stage of development. The risks include, but are not limited to, certain business, operational and market risks. For a discussion of the Corporation's risks please refer to the Corporation's MD&A in respect of its audited consolidated financial statements for the fiscal year ended March 31, 2007, the 2007 Annual Information Form and other filings, which are available on the Corporation's website www.firsturanium.com and on www.sedar.com or upon request from the Corporation.

Construction costs

First Uranium is in the development stage and is building its gold and uranium plants. To complete the construction of these plants requires steel, concrete and construction tradespeople. With the vast amount of construction underway in South Africa, materials and construction tradespeople are difficult to acquire and retain, particularly in light of the upcoming World Cup of soccer in South Africa in 2010 and the high metal prices, which has driven the demand for new mines and plants around the world.

To mitigate this risk, First Uranium has secured its supply of materials and tradespeople for the construction of the mills and the gold and uranium plants for the planned modules of the Ezulwini Mine.

For MWS, the required materials to expand the gold plant and build the uranium plant have not yet been secured. To mitigate the impact of rising costs, the Corporation has completed a feasibility study for the project, with the exception of the pressure leach circuit, which is still at the pre-feasibility stage. The Corporation expects to secure the materials for expansion of this project pending Eskom's commitment to meet our future power requirements.

Labour

A trend that could increase risk for the Corporation would be the heightened labour unrest in South Africa. Workers at various South African mining operations have been demanding, through their unions, higher compensation as a result of increased revenues in the mining sector being driven by heightened mineral prices. Strikes have been threatened during some of the negotiations. First Uranium has mitigated the threat of work stoppages by negotiating recent settlements with unions represented at its operations.

Similarly, workers in other industries have been demanding higher compensation and threatening strike action. One such example is the strike by petroleum workers in early August, which limited the supply of petrol. Strikes in the public sector and service industries, if protracted, have the potential to disrupt the development of the Corporation's two projects. No material delays have been experienced to date and the projects are on track for their scheduled completion dates.

Power Supply

Regular power outages have recently beset South Africa, causing disruption in business activities. Coal-fed power stations are running low on fuel and several power-generating facilities are down for maintenance. No new power-generating facilities are expected to start up in South Africa until 2012. Eskom's primary response to these power deficiencies is to ask that its customers conserve energy and/or to restrict the amount of power supplied to them.

On January 25, 2008, Eskom advised that continuity of electric power supply could not be guaranteed. Specific warnings were communicated to South African mining companies, including the Corporation, which were specifically asked by Eskom to reduce power consumption to 80% of load requirements. While this was subsequently increased to 90%, Eskom also informed mining companies that this authorization could be withdrawn at a later date, as electrical power supply remains tight.

To mitigate the impact of these power restrictions, the Board has concluded that the Corporation's two projects are sufficiently robust to continue development as planned based on the addition of owner-operated power generation. The initial impact of this decision is discussed in the section entitled, 'Preliminary Assessment of the Impact of the Power Situation' as discussed earlier in this MD&A. In addition, First Uranium is implementing power savings solutions and power backup systems where possible.

These actions, however, may not be enough. Management plans to continue to monitor the Power Situation for any changes in the power supply from Eskom and any impact on the Corporation's ability to sustain its operations and complete its growth plans.

Additional Information

Additional information relating to First Uranium is included in the Corporation's Annual Information Form dated June 13, 2007 and it is available on SEDAR at www.sedar.com.

Forward-looking Information

This MD&A and consolidated financial statements for the period ended December 31, 2007 contain certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the availability of electrical power, the possible addition of owner-operated power generation, price of uranium and gold, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, government regulation of mining operations, environmental risks, unanticipated reclamation expenses and title disputes or claims and limitations on insurance coverage. In certain cases, forward-looking statements can be identified by the use of words such as "goal", "objective", "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at the date of this MD&A; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this MD&A, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) consistent supply of sufficient power will be available to develop and operate the projects as planned; (ii) approvals to transfer or grant, as the case may be, mining rights or prospecting rights will be obtained; (iii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iv) mineral resource estimates are accurate; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

Form 52-109F2 - Certification of Interim Filings

I, Gordon Miller, President and Chief Executive Officer of First Uranium Corporation, certify that:

1. I have reviewed the interim filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of First Uranium Corporation (the "issuer") for the period ending December 31, 2007;
2. Based on my knowledge, the interim filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the interim filings;
3. Based on my knowledge, the interim financial statements together with the other financial information included in the interim filings fairly present in all material respects the financial condition, results of operations and cash flows of the issuer, as of the date and for the periods presented in the interim filings;
4. The issuer's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures and internal control over financial reporting for the issuer, and we have:
 - (a) designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which the interim filings are being prepared;
 - (b) designed such internal control over financial reporting, or caused it to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer's GAAP; and
5. I have caused the issuer to disclose in the interim MD&A any change in the issuer's internal control over financial reporting that occurred during the issuer's most recent interim period that has materially affected, or is reasonably likely to materially affect, the issuer's internal control over financial reporting.

DATED this 13th day of February, 2008

"Gordon T. Miller" (signed)

Gordon T. Miller
President and Chief Executive Officer

Form 52-109F2 - Certification of Interim Filings

I, Emma Oosthuizen, Senior Vice President and Chief Financial Officer of First Uranium Corporation, certify that:

1. I have reviewed the interim filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of First Uranium Corporation (the "issuer") for the period ending December 31, 2007;
2. Based on my knowledge, the interim filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the interim filings;
3. Based on my knowledge, the interim financial statements together with the other financial information included in the interim filings fairly present in all material respects the financial condition, results of operations and cash flows of the issuer, as of the date and for the periods presented in the interim filings;
4. The issuer's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures and internal control over financial reporting for the issuer, and we have:
 - (a) designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which the interim filings are being prepared;
 - (b) designed such internal control over financial reporting, or caused it to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer's GAAP; and
5. I have caused the issuer to disclose in the interim MD&A any change in the issuer's internal control over financial reporting that occurred during the issuer's most recent interim period that has materially affected, or is reasonably likely to materially affect, the issuer's internal control over financial reporting.

DATED this 13th day of February, 2008

See accompanying notes to the Consolidated Financial Statements

1. NATURE OF OPERATIONS AND BASIS OF PRESENTATION

First Uranium Corporation ("First Uranium" or "the Corporation") is a Canadian resource company focused on the development of uranium and gold projects in South Africa and beyond. See Note 7 "Property, Plant and Equipment" for a description of the projects. The Corporation has a primary listing on the Toronto Stock Exchange ("TSX") and a secondary listing on the Johannesburg Stock Exchange ("JSE"). First Uranium owns 100% of First Uranium Limited ("FUL"), which in turn holds 100% of First Uranium (Proprietary) Limited ("FUSA") and 90% of Ezulwini Mining Company (Proprietary) Limited ("EMC"). During the first quarter ended June 30, 2007, First Uranium, through FUSA, acquired all the issued and outstanding shares of Mine Waste Solutions (Proprietary) Limited and its subsidiary, Chemwes (Proprietary) Limited (collectively "MWS"). See Note 4 "Business Acquisitions". As at September 30, 2007, Simmer and Jack Mines, Limited ("Simmer & Jack"), a JSE listed company, owned 65.5% of First Uranium's common shares.

The reporting currency of the Corporation is the US dollar, and all amounts in these financial statements are in US dollars (US\$), except where otherwise indicated.

2. SIGNIFICANT ACCOUNTING POLICIES

The unaudited interim consolidated financial statements have been prepared by First Uranium in accordance with Canadian generally accepted accounting principles ("Canadian GAAP") for preparation of the interim financial statements. The preparation of the unaudited interim consolidated financial statements is based on the same accounting policies and practices as those disclosed in Note 1 "Nature of operations" and Note 2 "Significant accounting policies" to the Corporation's audited consolidated financial statements for the year ended March 31, 2007, except for changes as described in Note 3 "Changes in accounting policies". These unaudited interim consolidated financial statements do not include all disclosures required by GAAP for annual financial statements, and accordingly should be read in conjunction with the Corporation's audited consolidated financial statements for the year ended March 31, 2007.

2.1 Financial instruments

Transaction costs for financial assets and liabilities

For a financial asset or financial liability classified other than as held for trading, the Corporation has added the transaction costs that are directly attributable to the acquisition or issue of a financial asset or financial liability to the fair value of the asset or liability established at the recognition of the asset or liability.

2.2 Inventories

Inventories include ore stockpiles, gold in process and supplies and spares, and are recorded at the lower of cost or net realizable value. The cost of ore stockpiles and gold produced is determined principally by the weighted average cost method using related production costs. Costs of gold produced inventories include costs such as milling costs, mining costs and mine general and administration costs but excluding transport, refining and taxes. Net realizable value is determined with reference to current market prices. Stockpiles consist of ore to be processed through the processing plant. The stockpiles have been sampled and evaluated and are on surface. Spares and consumable stores are valued at weighted average cost after appropriate impairment of redundant and slow moving items.

2.3 Revenue recognition

Revenue from sales is recognized when significant risks and rewards of title and ownership of the goods are transferred upon delivery to the final refiner.

Interest income is recognized on a time proportion basis, taking account of the principal outstanding and the effective rate over the period of maturity, when it is determined that such income will accrue to the Corporation.

2.4 Earnings or loss per share

Basic earnings or loss per share is computed by dividing earnings or loss available to common shareholders by the weighted average number of common shares outstanding during the period. The treasury stock method is used to calculate diluted earnings or loss per share. Diluted earnings or loss per share is similar to basic earnings or loss per share, except that the denominator is increased to include the number of additional common shares that would have been outstanding assuming that options with an average market price for the period greater than their exercise price are exercised and the proceeds used to repurchase common shares. In applying the treasury stock method, options with an exercise price greater than the average quoted market price of the common shares are not included in the calculation of diluted earnings per share, as the effect is anti-dilutive.

3. CHANGES IN ACCOUNTING POLICIES

Effective April 1, 2007, the Corporation adopted two new accounting standards that were issued by the Canadian Institute of Chartered Accountants ("CICA"):

- Handbook Section 1530 – Comprehensive Income
- Handbook Section 3855 – Financial Instruments – Recognition and Measurement

As provided under the standards, the comparative interim consolidated financial statements have not been restated. There were no transitional effects and as a result no adjustments have been recorded to deficit as at April 1, 2007.

Section 1530 – Comprehensive income

This section describes the reporting and disclosure standards with respect to comprehensive income and its components. Comprehensive income is composed of net income and other comprehensive income. At this time the Corporation has none of the elements that will give rise to comprehensive income.

Section 3855 – Financial instruments – recognition and measurement

This section establishes standards for recognizing and measuring financial assets, financial liabilities and non-financial derivatives. It requires that financial assets and liabilities including derivatives be recognized on the balance sheet when the Corporation becomes a party to the contractual provisions of the financial instrument or a non-financial derivative contract. All financial instruments should be measured at fair value on initial recognition except for certain related party transactions. Fair value is the amount at which an item could be exchanged between willing parties. Measurement in subsequent periods depends on whether the financial instruments have been classified as held for trading, available-for-sale, held-to-maturity, loans and receivables, or other liabilities.

The Corporation designated certain financial assets and liabilities and adopted the following new accounting policies:

Cash and cash equivalents

Cash and cash equivalents are classified as "assets available-for-sale" and are measured at fair value at each balance sheet date. Any changes in fair value are recognized in net income in the period in which the change arises. Fair value is calculated using published price quotations in an active market, where applicable. The carrying values for cash and cash equivalents at March 31 2007 approximated their fair values because of their short terms of maturity; no adjustments were made to the opening values.

Accounts receivable and receivables from related party

These assets are classified as "loans and receivables" and are recorded at amortized cost, which upon their initial measurement is equal to their fair value. Subsequent measurements are recorded at amortized cost using the effective interest rate method. The carrying values for these assets at March 31 2007 approximated their fair values because of their short terms of maturity; no adjustments were made to the opening values.

Asset retirement funds

The asset retirement funds are classified as "assets available-for-sale" and are measured at fair value at each balance sheet date. Any changes in fair value are recognized in net income in the period in which the change arises. Fair value is calculated using the quoted prices of South African equities in an active market, with interest and dividends recognized in net income; unrealized gains or losses are recognized in Other Comprehensive Income. Any equities without market quotes are carried using the cost method. The carrying values for the asset retirement funds at March 31 2007 approximated their fair values; no adjustments were made to the opening values.

Accounts payable and accrued liabilities and payable to related party

These liabilities are classified as "other financial liabilities" and are initially measured at their fair values. Subsequent measurements are recorded at amortized cost using the effective interest rate method. The carrying values for these liabilities at March 31 2007 approximated their fair values; no adjustments were made to the opening values.

Senior unsecured convertible debentures

The sum of the carrying amounts assigned to the liability and equity components of the convertible debenture on initial recognition is always equal to the carrying amount that would be ascribed to the instrument as a whole. No gain or loss arises from recognizing and presenting the components of the instrument separately. The relative fair value method is used to determine the value of the option directly either by reference to the fair value of a similar option, if one exists, or by using an option pricing model. The value determined for each component is then adjusted on a pro rata basis to the extent necessary to ensure that the sum of the carrying amounts assigned to the components equals the amount of the consideration received for the convertible debenture.

4. BUSINESS ACQUISITION

Acquisition of Mine Waste Solutions (Proprietary) Limited

First Uranium, through its wholly-owned subsidiary FUSA, acquired all of the issued and outstanding shares of MWS. MWS owns and operates an existing gold mine tailings and re-processing facility adjacent to First Uranium's Buffelsfontein Tailings Recovery Project in South Africa.

The MWS acquisition closed on June 6, 2007 (effective date of acquisition), at which point First Uranium assumed management control of MWS. For accounting purposes, net income from MWS operations of \$1,866,086 for the period from April 1, 2007 to June 6, 2007 has been applied to reduce the cost of the MWS acquisition.

A total consideration of US\$32,262,765 was paid for the MWS acquisition in the form of an issuance of 3,093,980 First Uranium common shares valued at US\$31,557,061 and US\$705,704 in cash for transaction costs.

The table below sets out the preliminary allocation of the purchase price to the assets acquired and liabilities assumed, based on preliminary estimates of fair value. Final valuations of the assets and liabilities have not been completed. Furthermore, the future income tax assets and liabilities are not yet complete due to the inherent complexity associated with these valuations. The preliminary purchase price allocation is subject to adjustments.

The acquisition was accounted for by the purchase method of accounting and the estimated allocation of fair value to the assets acquired and liabilities assumed as at June 6, 2007 was:

	Reported at September 30, 2007 US\$'000	Adjustments US\$'000	Reported at June 30, 2007 US\$'000
Current assets	4,608	-	4,608
Asset retirement fund	1,950	-	1,950
Property, plant and equipment	40,430	(1,299)	41,729
Total assets acquired	46,988	(1,299)	48,287
Current liabilities	1,476	-	1,476
Lease obligations	28	-	28
Asset retirement obligation	2,777	(716)	3,493
Future tax liability	10,445	(644)	11,089
Total liabilities assumed	14,726	(1,360)	16,086
Net assets acquired	32,262	61	32,201

Current assets include cash and cash equivalents of US\$1,248,531 (net of transaction costs) (see Note 18.5).

Although the estimated allocation of fair value to the assets acquired and liabilities assumed is subject to changes as additional information becomes available, the final allocation is not expected to differ materially from the estimated allocation.

The excess of the purchase consideration over the net book value of MWS of US\$35.2 million was attributed to the tailings for processing of US\$29.6 million and US\$5.6 million adjustment of the fair value of property, plant and equipment obtained with the MWS acquisition less the related future tax liability arising on these assets.

5. AMOUNTS RECEIVABLE

	September 30 2007 US\$'000	March 31 2007 US\$'000
Trade receivables	38	99
Value Added Tax and Goods and Services Tax	7,046	1,463
Prepayments and advances	1,097	144
Deposits and guarantees	9	7
	8,190	1,713

6. INVENTORIES

	September 30 2007 US\$'000	March 31 2007 US\$'000
Gold work-in-progress	1,283	-
Spares and consumables	759	292
Stockpiles	867	-
	2,909	292

7. PROPERTY, PLANT AND EQUIPMENT

September 30, 2007	Cost US\$'000	Accumulated amortization US\$'000	Net carrying amount US\$'000
Land and buildings	3,826	(17)	3,809
Mine infrastructure	14,555	-	14,555
Mining assets	36,175	-	36,175
Tailings for processing	29,642	(710)	28,932
Mining rights	28	-	28
Plant and equipment	34,727	(84)	34,643
Motor vehicles	518	(49)	469
Office furniture and equipment	108	(9)	99
Computer equipment and software	428	(61)	367
Total	120,007	(930)	119,077

March 31, 2007	Cost US\$'000	Accumulated amortization US\$'000	Net carrying amount US\$'000
Land and buildings	863	-	863
Mine infrastructure	3,710	-	3,710
Mining assets	16,942	-	16,942
Mining rights	13	-	13
Plant and equipment	9,000	-	9,000
Motor vehicles	179	(8)	171
Office furniture and equipment	56	(1)	55
Computer equipment and software	205	(5)	200
Total	30,968	(14)	30,954

Included in the above are mining related assets with a net carrying value of US\$72.4 million (March 31, 2007: US\$29.0 million) related to the Ezulwini Mine and US\$41.1 million (March 31, 2007: US\$0.8 million) related to the Buffelsfontein Tailings Recovery Project.

Included in the US\$41.1 million net carrying value related to the Buffelsfontein Tailings Recovery Project, is US\$28.9 million relating to the Tailings for processing acquired with the MWS acquisition as well as US\$5.5 million adjustment of the fair value of property, plant and equipment obtained with the MWS acquisition (see Note 4).

As at September 30, 2007, all property, plant and equipment were owned by the Corporation, except for motor vehicles with a net carrying value of US\$17,854 which are held under capitalized lease contracts.

As at March 31, 2007, all property, plant and equipment were owned by the Corporation.

Ezulwini Mine

The Ezulwini Mine project involves the recommissioning of an underground uranium and gold mining operation located on the outskirts of the town of Westonaria in Gauteng Province, South Africa. The mine, previously on care and maintenance, is being readied for production. The development of the Ezulwini Mine includes the rehabilitation and re-engineering of the main mine shaft through the installation of a floating steel tower, de-stressing the area where the shaft pillar intersects the shaft barrel, and the construction of uranium and gold processing facilities.

EMC purchased certain surface and underground assets relating to the Ezulwini Mine for a total consideration of US\$7.8 million, effective December 22, 2006.

As part of the Ezulwini acquisition, the related environmental rehabilitation trust fund amounting to US\$2.7 million (see Note 8 - Asset retirement funds) was transferred into the Ezulwini trust fund and EMC took over the related environmental rehabilitation provision of US\$5.1 million (see Note 12 – Asset retirement obligations) as determined by the South African Department of Minerals and Energy (the “DME”). The difference of US\$2.4 million between the environmental rehabilitation trust fund and the environmental rehabilitation provision has been capitalized as part of mining infrastructure.

On December 8, 2006 the Ezulwini mining right was awarded to Simmer & Jack by the DME. On December 20, 2006, EMC and Simmer & Jack entered into an agreement (the “Ezulwini Mining Right Agreement”) pursuant to which Simmer & Jack agreed to take all necessary steps to obtain all ministerial approvals in order to effect the transfer of the Ezulwini mining right from Simmer & Jack to EMC.

Buffelsfontein Tailings Recovery Project

The Buffelsfontein Tailings Recovery Project is a uranium and gold tailings recovery operation located in the western portion of the Witwatersrand Basin. Hydraulic mining of the tailings dams on the Buffelsfontein property will be conducted using high pressure water cannons to slurry the tailings which will then be pumped to processing plants for the recovery of uranium and gold. Following the MWS acquisition (see Note 4), First Uranium commenced hydraulic mining of two tailings dams on the MWS property. The Corporation is constructing a pipeline between the MWS property and the Buffelsfontein property and is also expanding the plant facilities on the MWS property.

In October 2005, Simmer & Jack purchased Buffelsfontein Gold Mines Limited (“BGM”), consisting of the Buffelsfontein and Hartebeesfontein underground gold mines and mill (the “BGM Underground Mine”), out of provisional liquidation (the “Buffelsfontein Liquidation Acquisition”).

BGM holds an old order mining right in respect of mining gold at the BGM Underground Mine but not for the recovery of the uranium in the tailings dams at Buffelsfontein. On June 4, 2007 the DME granted to BGM a prospecting right with respect to uranium and other minerals in the Buffelsfontein property and tailings dams subject to certain conditions which are expected to be satisfied in due course. BGM has also filed with the DME an application to convert its old order mining right for BGM into a new order mining right. If and when this conversion application is approved, BGM intends to file with the DME one or more applications (which, together with the foregoing conversion application, are collectively referred to herein as the “Buffelsfontein Conversion Application”) to: (i) amend, with effect from the date of conversion, the new order mining right to include the authority to mine for uranium underground and for gold, uranium and other minerals in respect of the tailings; (ii) divide the new order mining right, if granted, into separate new order mining rights — one in respect of the mining for gold, uranium and other minerals at the BGM Underground Mine and the other, the Buffelsfontein Tailings Mining Right, in respect of the mining of the gold, uranium and other minerals in the Buffelsfontein tailings dams; and (iii) cede the Buffelsfontein Tailings Mining Right, if granted, to MWS, a wholly-owned subsidiary of FUSA. The recognition of the BGM transaction will only take effect when the above stated conditions precedent are met.

On December 20, 2006, FUSA, BGM and Simmer & Jack entered into an agreement (the “Buffelsfontein Tailings and Rights Agreement”) pursuant to which, among other things: (i) BGM agreed to take all necessary steps to obtain all ministerial approvals required for the items requested in the Buffelsfontein Conversion Application in order to effect the transfer of the Buffelsfontein Tailings Mining Right to FUSA as soon as possible; (ii) BGM agreed to sell to FUSA upon FUSA’s receipt of the Buffelsfontein Tailings Mining Right, the Buffelsfontein tailings dams as well as certain property required for construction of the proposed processing plants, and grant to FUSA a right to the tailings arising from BGM’s ongoing mining operations at its underground Buffelsfontein mine; and (iii) BGM agreed to grant a servitude to FUSA for access and egress to BGM’s property to enable FUSA, its employees, consultants, agents and subcontractors access for purposes of constructing, servicing and operating the uranium and gold processing plants and tailings pipelines to be built by FUSA.

The underground mines that were purchased by Simmer & Jack pursuant to the Buffelsfontein Liquidation Acquisition do not form part of First Uranium’s assets at the Buffelsfontein Tailings Recovery Project.

8. ASSET RETIREMENT FUNDS

	September 30 2007 US\$'000	March 31 2007 US\$'000
Balance, beginning of the period	2,791	-
Trust fund assumed on acquisition of Ezulwini mine	-	2,686
Trust fund assumed on acquisition of MWS (see Note 4)	1,950	-
Investment income	97	82
Contributions in respect of guarantee	-	103
Costs incurred	-	(80)
Foreign exchange differences	208	-
Balance, closing of the period	5,046	2,791

The asset retirement funds consisting of environmental rehabilitation trust funds are under the Corporation's control and are to be used to fund the respective mining operation's rehabilitation liabilities. Funds in the trust consist primarily of cash held in interest bearing accounts, together with investments in South African equities. An accredited South African financial institution manages the trust funds under the direction of the trustees. The trust deed limits the trustees' investments to institutions and investment vehicles as referred to in section 37A of the South African Income Tax Act.

9. GUARANTEES

The following guarantees have been issued:

To	Regarding	Guarantee value US\$'000
DME	Ezulwini environmental rehabilitation provision	5,427
Murray and Roberts Cementation (Pty) Ltd	Ezulwini shaft rehabilitation project	1,445
Eskom Holdings Ltd	Electricity accounts	1,228

The Ezulwini rehabilitation trust funds included in the asset retirement funds (see Note 8) have been pledged as security against the guarantees.

10. ACCOUNTS PAYABLE AND ACCRUED LIABILITIES

	September 30 2007 US\$'000	March 31 2007 US\$'000
Trade payables	10,162	5,302
Accruals	2,928	400
	13,090	5,702

The trade payables primarily relate to committed purchases for capital expansion at the Ezulwini Mine and normal operational expenses at the Buffelsfontein Tailings Recovery Project.

11. SENIOR UNSECURED CONVERTIBLE DEBENTURES

On May 3, 2007 First Uranium issued senior unsecured convertible debentures (the "Debentures") in denominations of Cdn\$1,000 in the principal amount of US\$135,060,000 (Cdn\$150,000,000). The interest rate on the Debentures is 4.25% per annum. The Debentures pay interest semi-annually in arrears on June 30th and December 31st and have a maturity date of June 30, 2012. The Debentures are convertible at the option of the holder into common shares at any time prior to the maturity date at an exchange price of Cdn\$16.42 per share.

The Debentures may not be redeemed by the Corporation prior to June 30, 2010. On or after June 30, 2010 and prior to the maturity date, the Debentures may be redeemed by the Corporation, in whole or in part from time to time, provided that the weighted average trading price of the Common Shares on the TSX for the 20 consecutive trading days ending five trading days prior to the date on which notice of redemption is provided is at least 130% of the exchange price of Cdn\$16.42.

First Uranium has the option, subject to regulatory approval, to satisfy its obligations to repay the principal amount of the Debentures upon redemption or at maturity by issuing and delivering that number of freely tradable Common Shares obtained by dividing the principal amount of the Debentures by 95% of the weighted average trading price of the Common Shares on the TSX for the twenty consecutive trading days ending five trading days before the date fixed for the redemption or maturity.

The equity component of the Debentures was valued on issuance at US\$46,503,825 which is recorded as a separate component of shareholders' equity. The conversion option was valued using the Black-Scholes pricing model with the following assumptions: Expected dividend yield 0%, expected volatility 56%, risk free interest rate 4.2% and expected life of five years.

The liability component of the Debentures is being accreted such that the liability at maturity will equal the gross proceeds of US\$135,060,000 (Cdn\$150,000,000) less conversions. The amount accreted in during the three and six months ending September 30, 2007 was US\$3,307,858 and US\$4,378,260 respectively. The cost of issuing the Debentures amounted to US\$4,498,778.

As at September 30, 2007, no portion of the Debenture had been converted and US\$956,679 interest was paid on the Debentures on June 30, 2007. Interest accrued for the three months ending September 30, 2007 amounted to US\$1,499,222.

12. ASSET RETIREMENT OBLIGATIONS

	September 30 2007 US\$'000	March 31 2007 US\$'000
Balance, beginning of the period	5,377	-
Provision assumed on acquisition of the Ezulwini Mine	-	5,133
Provision assumed on acquisition of MWS (see Note 4)	2,777	-
Accretion expense	59	244
Rehabilitation costs	(272)	-
Balance, closing of the period	7,941	5,377

The environmental rehabilitation provision assumed by EMC as part of the acquisition of the Ezulwini assets was determined by the DME as at November 2006. During March 2007 an independent review was performed by Johan Fourie & Associates on the Ezulwini assets relating to environmental rehabilitation provision that confirmed the provision at March 31, 2007 was sufficient.

The environmental rehabilitation provision assumed as part of the MWS acquisition is to be partly funded by its rehabilitation trust fund (see Note 8). During April 2007, an independent valuation of the rehabilitation provision was completed by GCS (Proprietary) Limited, a water environmental engineering and science consultancy company. The provision was based on the estimated net cost to rehabilitate the mine.

13. SHARE CAPITAL

	Number of shares		September 30 2007 US\$'000	March 31 2007 US\$'000
	September 30 2007 '000	March 31 2007 '000		
Ordinary shares				
Balance, beginning of period	121,686	87,536	206,726	4,176
Shares issued in public or private offering	-	33,350	-	201,795
Shares issued in respect of acquisition (see Note 4)	3,094	-	31,557	-
Exercise of stock options	51	800	342	728
Contributed surplus relating to stock options exercised	-	-	215	27
	124,831	121,686	238,840	206,726
Less: Share issue costs	-	-	(24,053)	(24,053)
Balance, closing of period	124,831	121,686	214,787	182,673

Authorized

The authorized share capital of First Uranium consists of an unlimited number of common shares.

Issued and outstanding

On June 1, 2006, 800,000 stock options were exercised for proceeds of US\$728,480.

During December 2006, First Uranium issued 33.35 million shares pursuant to its initial public offering ("the Offering") at Cdn\$7 per share for gross proceeds of US\$201.8 million;

On June 6, 2007, First Uranium issued 3,093,980 shares valued at US\$31,557,061 relating to the acquisition of MWS (see Note 4).

During the three months ending September 30, 2007, 51,095 stock options were exercised at an exercise price of Cdn\$7 per share.

14. CONTRIBUTED SURPLUS – STOCK-BASED COMPENSATION

The Corporation maintains a stock-option plan (the "Option Plan") for employees, officers, directors and for certain consultants who provide ongoing support to First Uranium and its subsidiaries. Under the Option Plan, options typically are granted for a period of up to ten years following the date of grant. The amounts granted usually reflect the level of responsibility of the particular optionee and his or her contributions to First Uranium.

The Board of Directors has discretion to set the terms of any vesting schedule of each option granted. Except in specified circumstances, options are not assignable and non-transferable, and terminate 90 days after the optionee ceases to be employed or associated with First Uranium.

The terms of the Option Plan further provide that the price at which shares may be issued under the Option Plan shall not be less than the volume weighted average trading price of the shares on the TSX for the five trading days immediately preceding the day the option is granted.

The following table details the movements of contributed surplus during the period:

	September 30 2007 US\$'000	March 31 2007 US\$'000
Balance, beginning of period	2,460	27
Transfer to share capital surplus relating to stock options exercised	(215)	(27)
Stock options granted during the period	1,569	2,460
Balance, end of period	3,814	2,460

Assumptions

The fair value of shares used to calculate the compensation expense was determined as the share price on the grant date adjusted by the probability of the recipients remaining employed or associated with the Corporation until the vesting date.

For purposes of stock-based compensation, the fair values of these stock options were estimated using the Black-Scholes option pricing model with the assumptions used for the grants as follows:

	September 30 2007	June 30 2007	March 31 2007
Expected dividend yield	0%	0%	0%
Expected volatility of the Corporation's share price	63%	56%	85%
Risk free interest rate – Canadian rates	4.75%	4.81%	3.90%
Expected life	3 years	3 years	3 years

Due to the short history of First Uranium trading on the TSX, changes in the subjective input assumptions can materially affect the fair value estimate, and therefore, the existing model does not necessarily provide a reliable measure of the fair value of First Uranium's stock options.

During the 2007 fiscal year, 1,223,001 stock options were granted for a period of 10 years following the date of the grant and are subject to vesting within 2 years from the date of grant.

During the quarter ending June 30, 2007, and the quarter ending September 30, 2007, 60,000 and 56,429 stock options were granted respectively for a period of 10 years following the date of the grant and are subject to vesting within 2 years from the date of grant.

The following table is a summary of the Corporation's options granted under its stock-based compensation plan:

	Number of options		Weighted average exercise price (Cdn\$)	
	September 30 2007	March 31 2007	September 30 2007	March 31 2007
Outstanding options at beginning of period	1,223,001	800,000	7.30	1.00
Granted during the period	116,429	1,223,001	7.78	7.30
Exercised during the period	(51,095)	(800,000)	(7.00)	(1.00)
Forfeited during the period	(28,572)	-	(7.00)	-
Outstanding options at end of period	1,259,763	1,223,001	7.67	7.30

The total stock-based compensation recognized for the three and six months ending September 30, 2007 was US\$663,895 and US\$1,568,976, respectively. The stock-based compensation expense recognized in the statements of operations and deficit was US\$663,395 and US\$1,433,989 for the three and six months ending September 30, 2007 (September 30, 2006: US\$nil). During the three months ending September 30, 2007 \$134,987 stock-based compensation was capitalized to the projects. As at September 30, 2007, the aggregate unexpensed fair value of unvested stock options granted amounted to US\$278,275 (March 31, 2007: US\$2,858,354).

The following table summarizes information about the First Uranium's outstanding stock options at September 30, 2007:

Exercise price ranges Cdn\$	Options outstanding			Options exercisable		
	Number of options outstanding	Weighted average remaining life (years)	Weighted average exercise price (Cdn\$)	Number of options exercisable	Weighted average remaining life (years)	Weighted average exercise price (Cdn\$)
7.00 to 8.99	1,047,477	9.22	7.04	287,956	9.22	7.05
9.00 to 11.99	152,286	9.58	9.95	50,761	9.58	9.95
12.00 to 13.99	60,000	9.66	12.87	20,000	9.66	12.87
	1,259,763	9.29	7.67	358,717	9.30	7.79

TAXATION

Provision for income taxes

The reconciliation of income taxes attributable to operations computed at the statutory tax rates to income tax recovery, using a statutory tax rate of 35.72% for the three and six months ending September 30, 2007 (three and six months ending September 30, 2006: 36.12%), is as follows:

	Three months ended September 30		Six months ended September 30	
	2007	2006	2007	2006
Net profit (loss) before taxation	3,653	786	9,124	(1,452)
Income tax payable (receivable) at statutory rate	1,305	284	3,259	(525)
Difference between Canadian rates and foreign jurisdiction	18	(95)	104	41
Change in valuation allowance	-	-	(570)	-
Adjustment for future tax rate difference	3,667	(170)	4,133	417
Permanent differences	(4,939)	(19)	(7,087)	67
Other	-	-	212	-
	51	-	51	-

Future tax liability

	Sep 30 2007 US\$'000	Mar 31 2007 US\$'000
Capital assets	11,072	-
Non-capital loss carry-forwards	(629)	(1,602)
Share issue costs	(8,399)	(6,629)
Foreign resource expenses	(1,273)	(1,099)
Foreign exchange	(3,540)	(850)
	(2,769)	(10,180)
Less: Valuation allowance	13,214	10,180
	10,445	-

As at September 30, 2007, the Corporation had non-capital losses of approximately US\$381,000 that may be applied against earnings in future years. These losses are expected to expire in 2026.

Due to uncertainties in the Corporation's ability to utilize its net operating losses in all of its operations, the Corporation has provided a valuation allowance against those future tax assets for which uncertainty exist.

16. OTHER INCOME

	Three months ended September 30		Six months ended September 30	
	2007 US\$'000	2006 US\$'000	2007 US\$'000	2006 US\$'000
Other income	897	-	897	-

Other income primarily includes fees for sludge pumping services to a third party and hostel rental income at the Ezulwini Mine.

14 FOREIGN EXCHANGE GAINS

	Three months ended		Six months ended	
	September 30		September 30	
	2007	2006	2007	2006
	US\$'000	US\$'000	US\$'000	US\$'000
Foreign exchange gains	5,967	663	12,391	1,408

The Corporation's net assets are held in Canadian dollars ("Cdn\$") and South African Rand ("ZAR"), while its accounts are presented in US dollars. During the reporting periods for FY 2008 and FY 2007, the Canadian dollar and South African Rand both appreciated relative to the value of the US dollar. The translation of the stronger currency assets (Cdn\$ and ZAR) into US dollars for reporting purposes resulted in the foreign exchange translation gain in the second quarter and six months for both FY 2008 and FY 2007. The larger foreign exchange translation gain in Q2 2008 and in the first half of FY 2008 reflects the significant weakening of the US dollar, particularly with respect to the Cdn\$, but also relative to the ZAR.

18. BASIC AND DILUTED EARNINGS (LOSS) PER SHARE

	Three months ended		Six months ended	
	September 30		September 30	
	2007	2006	2007	2006
Basic earnings (loss) per share of (US\$)	0.02	0.01	0.07	(0.02)
is calculated based on net income (loss) for the period of (US\$'000)	3,051	786	8,522	(1,452)
and a weighted average number of shares outstanding of ('000)	122,475	87,738	122,679	97,522
Diluted earnings (loss) per share of (US\$)	0.02	0.01	0.07	(0.02)
is calculated based on net income (loss) for the period of (US\$'000)	3,051	786	8,522	(1,452)
and a diluted weighted average number of shares outstanding of ('000)	122,714	87,738	122,739	97,522

The impact of the Debentures issued on May 3, 2007, has been excluded from the diluted shares computation because it was anti-dilutive for earnings per share purposes.

19. NOTES TO THE CASH FLOW STATEMENT

19.1 Non-cash interest income

	Three months ended		Six months ended	
	September 30		September 30	
	2007	2006	2007	2006
	US\$'000	US\$'000	US\$'000	US\$'000
Total interest income	(4,110)	(69)	(8,373)	(139)
Add back: Cash interest income	4,045	6	8,276	6
	(65)	(63)	(97)	(133)

20. COMMITMENTS AND CONTINGENCIES

Commitments

	September 30	March 31
	2007	2007
	US\$'000	US\$'000
Capital commitments – Ezulwini Mine	26,171	14,836
Capital commitments – Buffelsfontein Tailings Recovery Project	8,577	-
Total contractual obligations	34,748	14,836

The capital commitments are payable within one year.

The Corporation entered into an agreement with a third party to calcine the yellowcake from First Uranium to produce uranium oxide packaged for dispatch to converters as of January 2009. Either party may terminate the agreement on 18 months notice. The calciner will construct a plant with one-half of the capacity of the plant dedicated for the processing of the First Uranium yellowcake and a road tanker to transport the yellowcake from the First Uranium operations to the calciner's operations. First Uranium will pay one-half of the construction cost of the calcining plant up to a maximum of ZAR15 million and one-half of the cost of the tanker (together referred to as the "Loan"). The Loan will be effective January 5, 2009 and be repaid in monthly instalments over a seven year period commencing January 30, 2009. The Loan will bear interest at a rate of the prime overdraft rate, as quoted by the South African Reserve Bank, plus 2% commencing January 5, 2009. If First Uranium cancels the agreement, in absence of a right to cancel the agreement in prescribed circumstances, First Uranium will continue to be obligated to repay the entire Loan.

Contingencies

A loan agreement (the "Aberdeen Loan Agreement") was entered into by Simmer & Jack with Aberdeen International Inc. ("Aberdeen") dated March 30, 2006 pursuant to which Aberdeen provided to Simmer & Jack a loan facility in the amount of US\$10 million in respect of the financing of Simmer & Jack's acquisition of BGM and the BGM Underground Mine. As part of the consideration for the facility, Simmer & Jack granted to Aberdeen a net smelter royalty on all of the gold assets held by Simmer & Jack through BGM. The royalty as determined in the Aberdeen Loan Agreement will be applicable to any gold produced by FUSA from tailings acquired from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement (see Note 7) and will continue until the loan is repaid to Aberdeen, which is expected to occur by December 31, 2008 (unless extended by Simmer & Jack to December 31, 2010). In addition, pursuant to the Aberdeen Loan Agreement, Aberdeen has the sole option, at any time following the one year anniversary of the first advance there under to convert the amount of the facility outstanding at that time into ordinary shares of Simmer & Jack at a conversion rate of ZAR0.80, subject to the approval of Simmer & Jack's shareholders. In the event that such shareholder approval is not obtained within a reasonable period of time, Aberdeen will be entitled to a 1.0% net smelter royalty in perpetuity on gold produced by properties held by BGM, including the Buffelsfontein Tailings Recovery Project.

On December 20, 2006, FUSA, Simmer & Jack and Aberdeen entered into an arrangement agreement (the "Aberdeen Arrangement Agreement") pursuant to which (i) Simmer & Jack confirmed that it will pay to Aberdeen the amount of any royalty owing to Aberdeen under the Aberdeen Loan Agreement in respect of gold produced from the tailings to be acquired by FUSA from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement, and (ii) FUSA confirmed that it will pay to Simmer & Jack, immediately prior to any payment contemplated in (i) above, an amount equal to the amount of any royalty payment to be made by Simmer & Jack to Aberdeen in respect of gold produced from the tailings to be acquired by FUSA from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement.

Pursuant to the Buffelsfontein Tailings and Rights Agreement dated December 20, 2006 among BGM, Simmer & Jack and FUSA, in consideration for the cession of the Buffelsfontein Tailings and Mining Right from BGM to FUSA as well as certain servitudes, and the right to the tailings arising from future underground mining operations by BGM at the BGM Underground Mine, FUSA agreed to pay to BGM a royalty of 1% plus value added tax of the gross revenue earned by FUSA from the sale of uranium, gold, sulphur and other minerals recovered from the processing of tailings acquired by FUSA from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement.

In summary, as and when there is production from the tailings acquired from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement, FUSA will become liable to pay: (i) to Simmer & Jack, under the Aberdeen Arrangement Agreement, an amount equal to the royalty payable by Simmer & Jack to Aberdeen pursuant to the Aberdeen Loan Agreement in respect of the tailings to be acquired from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement, and (ii) to BGM the above-mentioned 1% royalty pursuant to the terms of the Buffelsfontein Tailings and Rights Agreement.

21. FINANCIAL INSTRUMENTS

Financial risk factors

The Corporation's activities expose it to a variety of financial risks, including the effects of changes in debt and equity market prices, foreign currency exchange rates and interest rates. The Corporation's overall risk management program focuses on the unpredictability of financial markets and seeks to minimize potential adverse effects on the financial performance of the Corporation. The Corporation does not hedge its exposure to foreign currency exchange risk.

Risk management carried out by the Corporation is approved by the Board of Directors.

(i) Foreign exchange and commodity price risk

The Corporation does not hedge its exposure to foreign currency exchange risk nor does it hedge its exposure to commodity price fluctuation risk.

(ii) Interest rate risk

The Corporation does not hedge its exposure to interest rate risk. Deposits attract interest at rates that vary with prime. The Corporation's policy is to manage interest rate risk so that fluctuations in variable rates do not have a material impact on the statement of operations and deficit.

(iii) Credit risk

The Corporation has no significant concentrations of credit risk. The Corporation has policies in place to ensure that sales of products and services are made to customers with an appropriate credit history. The Corporation has policies that limit the amount of credit exposure to any one financial institution.

(iv) Liquidity risk

Prudent liquidity risk management implies maintaining sufficient cash and marketable securities, the availability of funding through an adequate amount of credit facilities and the ability to close out market positions. The Corporation manages liquidity risk through an ongoing review of future commitments and credit facilities. Cash flow forecasts are prepared and adequate utilized borrowing facilities are monitored.

Fair value estimation

The fair value of publicly traded derivatives and trading securities is based on quoted market prices at the balance sheet date.

In assessing the fair value of other financial instruments, the Corporation uses a variety of methods and makes assumptions that are based on market conditions existing at each balance sheet date. Option pricing models and estimated discounted value of future cash flows, are used to determine fair value for the remaining financial instruments.

The face value less any estimated credit adjustments for financial assets and liabilities with a maturity of less than one year are assumed to approximate their fair values. The fair value of financial liabilities for disclosure purposes is estimated by discounting the future contractual cash flows at the current market interest rate available to the Corporation for similar financial instruments.

The actual disclosed values of the financial instruments all approximate the fair values of these instruments.

Interest received from Simmer & Jack by FUSA	57	63	57	133

On December 20, 2006 First Uranium and Simmer & Jack entered into a shared services agreement (the "Shared Services Agreement").

Pursuant to the terms of the Shared Services Agreement, First Uranium may retain certain services to be provided by Simmer & Jack, including project management and technical services, cash management and investment services, accounting, treasury and financial services, corporate secretarial services and human resources and staffing services, including payroll and benefits administration, and such other services as may be required by First Uranium and which Simmer & Jack is able and willing to provide. Subsequent to entering into the agreement, the Corporation hired eight senior executives, including Mr. Miller, President and Chief Executive Officer, Mr. Fisher, Executive Vice President and Chief Operating Officer and Ms. Emma Oosthuizen, Senior Vice President and Chief Financial Officer, and other staff, resulting in certain of these services being no longer required to be provided by Simmer & Jack. The expense for the financial year ending March 31, 2007 relates to such services received, together with those provided prior to December 2006.

During the three months ending September 30, 2007, US\$458,576 (September 30, 2006: US\$381,678) shared services fees were charged respectively by Simmer & Jack of which US\$110,247 were capitalized, representing services provided in respect of technical services for the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project. During the six months ending September 30, 2007, US\$986,457 (September 30, 2006: US\$806,384) shared services fees were charged by Simmer & Jack of which US\$578,157 were capitalized. During the three and six months ending September 30, 2006 US\$298,322 shared services fees were capitalized.

Prior to December 2006, the Corporation shared its premises with other companies that had common directors and reimbursed the related companies for its proportional share of expenses or was reimbursed by the related companies for their proportional share of expenses. During Q2 2007, the Corporation was charged US\$598,828 for consulting services provided by related directors, officers and consultants of the Corporation.

In addition, First Uranium has agreed to reimburse Simmer & Jack with respect to 50% of fees (to a maximum of ZAR125,000 per month) that Simmer & Jack is required to pay to an empowerment company for consulting services regarding transformation, human resources and occupational health and safety. BJ Njenje, AX Sisulu and SLB Mapisa, shareholders of the empowerment company, are also directors of Simmer & Jack.

Waterpan Mining Consortium ("Waterpan") currently holds a 10% shareholding in EMC. On December 20, 2006, Waterpan, FUL and the Corporation entered into a purchase agreement (the "Waterpan Purchase Agreement") pursuant to which Waterpan agreed to sell its shares in EMC to FUL and as consideration for such sale, First Uranium will issue 6,141,009 common shares of First Uranium to Waterpan (the "Waterpan Shares"). The closing of the transaction is subject to approval of the South African Reserve Bank. Pursuant to the Waterpan Purchase Agreement, Waterpan has agreed not to sell or transfer 90% of the Waterpan Shares for a period of two years from the date of issuance. One shareholder of Waterpan is a director of EMC, two other shareholders of Waterpan are officers and/or employees of First Uranium and EMC.

On September 27, 2007, the Board approved a housing loan in the amount of Cdn\$1 million to the President and Chief Executive Officer of First Uranium for the purpose of facilitating the relocation of his family to Toronto, where the corporate office is located. The loan carries interest at 4% payable monthly in arrears, is for a term of six years from date of closing of the purchase of a family residence and is unsecured. The loan was advanced on October 17, 2007.

23. SEGMENTED INFORMATION

Segmented information is presented in respect of the Corporation's business and geographical segments. The primary format business segments, is based on the Corporation's management and internal reporting structure. Inter-segment reporting is determined on an arm's length basis.

Segment results, assets and liabilities include items directly attributable to a segment as well as those that can be allocated on a reasonable basis. Unallocated items comprise mainly income earning assets and revenue, interest-bearing loans, borrowing and expenses, and corporate assets and expenses. Segment capital expenditure is the total cost incurred during the period to acquire segment assets that are expected to be used for more than one period.

FIRST URANIUM CORPORATION

MANAGEMENT'S DISCUSSION AND ANALYSIS
of the financial results
for the three and six months ended
September 30, 2007

Management's discussion and analysis of the unaudited consolidated financial condition and results of operations for the three and six months ended September 30, 2007

This Management's Discussion and Analysis ("MD&A") of the consolidated financial position and results of operations review the activities, unaudited consolidated results of operations and financial condition of First Uranium Corporation and its subsidiaries ("First Uranium" or the "Corporation") for the three and six months ended September 30, 2007 ("Q2 2008") and the first half of the fiscal year ended March 31, 2008 ("FY 2008"), compared to the corresponding period of the preceding year ("Q2 2007") and the first half of the fiscal year ended March 31, 2007 ("FY 2007"), together with certain trends and factors that are expected to have an impact in the future. References to "Q3 2008" refer to the next fiscal quarter ending December 31, 2007.

This MD&A is intended to supplement and complement the unaudited consolidated financial statements and notes thereto for Q2 2008 and the first half of FY 2008 (collectively the "Financial Statements") which have been prepared in accordance with Canadian generally accepted accounting principles ("Canadian GAAP"). The MD&A should be read in conjunction with the Financial Statements, the audited consolidated financial statements for FY 2007 and the related management's discussion and analysis. The information contained in this MD&A is current to November 9, 2007, unless otherwise indicated. References to "FY 2008" refer to the fiscal year ending March 31, 2008.

First Uranium's current operations are entirely focused on the Ezulwini underground uranium ("U₃O₈") and gold ("Au") mine (the "Ezulwini Mine") and the recovery of uranium and gold from the existing and future surface tailings at the Buffelsfontein mine, inclusive of the assets of Mine Waste Solutions (Proprietary) Limited ("MWS") (collectively, the "Buffelsfontein Tailings Recovery Project").

The reporting currency for the Corporation is the US dollar, and all amounts in the following discussion are in US dollars ("\$"), except where otherwise indicated.

This MD&A includes certain forward-looking statements. Please read the cautionary note at the end of this document.

Responsibility of Management and the Board of Directors

Management is responsible for the information disclosed in this MD&A and the accompanying Financial Statements and has in place the appropriate information systems, procedures and controls to ensure that information used internally by management and disclosed externally is materially complete and reliable. In addition, the Corporation's Audit Committee, on behalf of the Board of Directors, provides an oversight role with respect to all public financial disclosures made by the Corporation, and has reviewed and approved this MD&A and the accompanying Financial Statements.

Disclosure Controls and Procedures

Disclosure controls and procedures are designed to provide reasonable assurance that all relevant information is gathered and reported on a timely basis to senior management, including the Corporation's Chief Executive Officer and Chief Financial Officer, so that appropriate decisions can be made regarding public disclosure. As at the end of the period covered by this MD&A, management of First Uranium, by the direction of the Chief Executive Officer and the Chief Financial Officer, evaluated the effectiveness of the Corporation's disclosure controls and procedures as required by Canadian securities laws.

Based on the evaluation, the Chief Executive Officer and the Chief Financial Officer have concluded that as of the end of the period covered by this MD&A, the disclosure controls and procedures were effective to provide reasonable assurance that information required to be disclosed in First Uranium's annual filings and interim filings (as such terms are defined under Multilateral Instrument 52-109 – Certification of Disclosure in Issuers' Annual and Interim Filings) and other reports filed or submitted under Canadian securities laws is recorded, processed, summarized and reported within the time periods specified by those laws, and that material information is accumulated and communicated to management of First Uranium, including the Chief Executive Officer and the Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

During the most recent quarter there were no changes in the Corporation's internal controls over financial reporting that materially affected, or are reasonably likely to materially affect, the Corporation's internal control over financial reporting.

Overview

First Uranium is a Canadian resource company focused on the development of uranium and gold projects in South Africa. The Corporation's goal is to become a significant producer of uranium and gold through the re-opening and development of the Ezulwini Mine and the construction of the Buffelsfontein Tailings Recovery Project. To expand its production profile, First Uranium plans to continue to identify and acquire additional uranium and gold projects in southern Africa and beyond. In December 2006, the Corporation received net proceeds of \$177.7 million from the sale of 33 million common shares (the "Offering"). In May 2007, an additional \$130.6 million was raised from the sale of senior unsecured convertible debentures (the "Debentures"). The common shares and the Debentures of First Uranium are listed on the Toronto Stock Exchange (the "TSX") and the common shares on the Johannesburg Stock Exchange (the "JSE"). Simmer and Jack Mines, Limited ("Simmer & Jack"), a public company listed on the JSE, owns approximately 65.5% of the common shares of First Uranium.

Recent Highlights

During Q2 2008, First Uranium:

- benefited from the first full quarter of gold production from its 100% ownership of MWS, which was acquired effective June 6, 2007 and that now forms part of the Buffelsfontein Tailings Recovery Project
- processed 1.2 million tonnes of tailings through its MWS gold plant, producing 10,124 ounces of gold at a total cost of \$527 per ounce
- began hoisting development material at its Ezulwini Mine in September, as scheduled, with a total of 9,940 tonnes hoisted by the end of the quarter
- defined initial underground and surface drilling targets related to the possible expansion of the existing Ezulwini Mine (the "Ezulwini Expansion Program")
- approved an \$11.7 million capital program to construct a reclamation station and pipelines at the Buffelsfontein Tailings Recovery Project and increase the planned processing rate from 500,000 tonnes per month to 630,000 tonnes per month
- entered into an agreement with Nuclear Fuels Corporation of South Africa (Proprietary) Limited ("Nufcor") to calcine the yellowcake from First Uranium to produce uranium oxide for dispatch to converters beginning January 2009

Subsequent to the end of Q2 2008, First Uranium:

- completed an interim off-take agreement with Nufcor pursuant to which Nufcor will purchase yellowcake from First Uranium from June 2008 until January 2009 at rates based on the then prevailing spot prices
- pending completion of the Ezulwini Mine gold plant (expected in April 2008), commenced third-party toll-milling of the hoisted development material and gold ore from the Ezulwini Mine
- was granted a conditional prospecting right over an area of 6,843 hectares of property, known to contain gold and uranium minerals, adjacent to the Corporation's Ezulwini mining rights, which are comprised of 3,717 hectares

During Q3 2008, First Uranium plans to:

- hoist 30,000 tonnes of gold and uranium bearing ore at the Ezulwini Mine
- toll treat the 30,000 tonnes of ore at a yield of approximately 5.5 to 6.0 grams of gold per tonne, producing in excess of 5,500 ounces of gold
- process approximately 1.4 million tonnes of tailings through its MWS gold plant, with expected production of in excess of 9,600 ounces of gold
- complete the hydraulic mining and clean up of the remnant of MWS No. 2 tailings dam
- complete the construction of the pipeline to the MWS gold plant in November, whereafter hydraulic mining of the mineral resources in the Buffelsfontein tailings dams will commence
- commence the MWS gold plant upgrade to increase planned capacity from 500,000 tonnes per month to 630,000 tonnes per month, with completion scheduled in Q4 2008
- complete a feasibility study for the further expansion of the MWS gold plant which is targeted for completion in November 2008. The expansion will involve the construction of two additional gold plant modules and three uranium plant modules.

Financial Overview

First Uranium's primary focus has been on the development activities of the Ezulwini Mine and Buffelsfontein Tailings Recovery Project. As such, production activities to date have been limited to hydraulic mining, clean up and processing of approximately 1.6 million tonnes of tailings (0.4 million tonnes in Q1 2008 and 1.2 million tonnes in Q2 2008) from the MWS tailings dam No.2. The MWS gold mining operations generated revenue of \$6.3 million in Q2 2008 and \$8.4 million during the first half of FY 2008 from the sale of gold. No revenues were generated in 2007.

As the Corporation was nearing the final stages of pumping the material from the MWS tailings dam No.2, mechanical handling of the material was necessary for more effective hydraulic mining. This reduced tonnages and increased handling costs relative to a normal reclamation operation. Accordingly, the cash cost of processing and sale of gold of \$4.8 million in Q2 2008 and \$6.7 million during the first half of FY 2008 resulted in unit costs which were significantly higher than the long-term expectation of unit costs for this operation. The remnants of the current MWS resource is expected to be exhausted in Q3 2008 and the use of higher mechanical handling costs will cease as the Buffelsfontein dams are brought online.

General, consulting and administrative expenditures combined with the limited ore production during the development phase of the two uranium and gold projects resulted in an operating loss of \$2.2 million in Q2 2008 and an operating loss of \$5.4 million during the first half of FY 2008. In Q2 2007, an operating profit of \$0.3 million was reported, reflecting the capitalization of shared services fees and pumping costs which had been expensed in prior accounting periods. For the first half of 2007, an operating loss of \$2.7 million was incurred, reflecting expenditures in preparation of the uranium and gold projects for production, along with general and administrative expenses.

Net income of \$3.1 million in Q2 2008 and \$8.5 million in the first half of FY 2008 was primarily the result of foreign exchange gains on translation of net assets held in Canadian dollars and South African Rand into US dollars, along with interest income earned, partially offset by expenses. The Corporation reported net income of \$0.8 million in Q2 2007, as foreign exchange translation gains and interest income more than offset expenses. A net loss of \$1.5 million was incurred in the first half of FY 2007 primarily from expenditures in connection with preparing the mining projects for production and general and administrative expenses.

As at September 30, 2007, First Uranium was well funded and in a strong financial position, with total assets of \$389.6 million total liabilities of \$130.7 million and shareholders' equity of \$258.9 million.

At the end of Q2 2008, First Uranium had cash and cash equivalents of \$254.3 million (Q2 2007: \$1.2 million), compared to \$138.9 million at the end of FY 2007. The increase in cash and cash equivalents from the end of FY 2007 was primarily attributable to the net proceeds received from the sale of the Debentures. The Corporation believes that with anticipated revenue from future sales of uranium and gold, together with funds from the proceeds from the Offering and Debentures, it has the cash resources necessary to develop and advance its two existing mining projects to full production on schedule by 2010, as currently planned. In the meantime, the Corporation holds its funds in cash and bank-sponsored guaranteed investment certificates. It has no exposure to asset-backed commercial paper.

Operations overview

Ezulwini Mine

The Corporation has substantially re-commissioned the Ezulwini Mine and is now in the process of ramping up underground production. The Ezulwini Mine is located approximately 40 kilometres from Johannesburg on the outskirts of the town of Westonaria in Gauteng Province, South Africa. Construction activities, which involve the refurbishment of the shaft and construction of gold and uranium plants, began in earnest in December 2006, subsequent to the successful completion of the Offering. The Ezulwini Mine is part of the Ezulwini mining right, which includes certain surface and underground assets, acquired by Ezulwini Mining Company (Proprietary) Limited ("EMC").

EMC operates the Ezulwini Mine under a new order mining right as described in detail in the Corporation's Annual Information Form (www.firsturanium.com).

An accelerated schedule for commissioning all modules of the gold and uranium plants is being executed. This will result in an accelerated capital investment profile, which in turn will provide flexibility to significantly increase uranium and gold production sooner than previously planned. EMC is using construction contractors until all phases of the mill and plants are completed.

EMC continues with the main shaft rehabilitation program and refurbishment of the infrastructure in the Middle Elsburg ("ME") uranium and gold section and the Upper Elsburg ("UE") gold only section from which hoisting of ore began in October 2007. Construction of the metallurgical plant is progressing well and is expected to allow for the onsite treatment of gold by April 2008 and uranium by June 2008.

The Corporation estimates that \$271 million of capital will be required for the Ezulwini Mine, \$193 million of which is expected to be invested in the first four years of the project. As of the end of Q2 2008, \$54.8 million has been spent (\$25.7 million in Q2 2008, \$9.8 million in Q1 2008 and \$19.3 million during FY 2007).

Simmer & Jack is presently the registered owner of the Ezulwini mining right. On December 20, 2006, EMC and Simmer & Jack entered into an agreement (the "Ezulwini Mining Right Agreement") pursuant to which Simmer & Jack agreed to take the necessary steps to obtain all ministerial approvals in order to effect the ceding of the Ezulwini mining right from Simmer & Jack to EMC. The Corporation expects the transfer of the Ezulwini mining right to be completed in due course.

Progress on the Ezulwini main shaft refurbishment project:

- phase one of this project, which entails rock consolidation, reinforcing and long anchor support of the Western Areas Formation ("WAF") within the Ezulwini Mine shaft barrel has been successfully completed and installation of the new shaft steelwork to create a floating tower through the WAF zone has progressed well.
- phase two, which involves support of the WAF zone is currently being undertaken from the access provided by the new tower steelwork. The 250,000 tonnes per month double drum Koepe winder has been successfully re-commissioned and hoisting of gold and uranium bearing ore through the newly installed floating tower, has commenced ahead of schedule. During the last week of September 2007, 9,940 tonnes of reef development ore was hoisted to surface, which will be stockpiled for use as the initial feed for the new mill and gold plant that are scheduled to be commissioned in April 2008.
- the underground transfer belt for the gold section has also been commissioned. As a result the Ezulwini Mine has re-established sufficient hoisting capacity to meet its future production hoisting requirements.

The Corporation has continued to develop access to the Ezulwini Mine shaft de-stress cut on the UE gold only horizon on levels 38a and 41. To date 232 meters of raise development has been completed. The raise development material's average gold values are 4.5 grams per tonne over 211 centimetres and 6 grams per tonne over 175 centimetres for the MA and MB reef horizons respectively. Preparatory stoping of the 41 level MB raise has commenced. Stopping grade over a selected de-stress cut is expected to average 8.9 grams per tonne over 120 centimetres and 6.9 grams per tonne over 150 centimetres for the MA and MB raises respectively.

At the ME uranium and gold section stope production in the newly re-established 45 10B stope commenced during October 2007. The average block value for this production area is estimated at 12 grams per tonne. To date, 1,692 metres of stope face sampling has been completed in the ME section and this data is being modeled in order to provide a mineral resource update expected to be completed in November 2007. Further additional stope panel sampling awaits the installation of ventilation controls which are being installed to course the air through old areas to remove Radon gas. A second surface fan was also commissioned recently and this has doubled the underground ventilation air quantity available for opening up of the old areas.

The samples from historic stopes and current reef development were collected in accordance with industry standard practice. An independent laboratory prepared and assayed the samples using industry standard methods.

Based on existing surface stockpiles and anticipated production rates, stockpiles are expected to provide sufficient surface inventory for the uranium and gold plant commissioning.

In late October 2007 third-party toll treatment of the higher grade gold ore from the Ezulwini Mine commenced and will continue until the new gold plant at the Ezulwini Mine is commissioned. Construction of the first 50,000 tonne per month module of the gold plant is scheduled for completion in April 2008 (accelerating the original production schedule by three months) and the first 50,000 tonne per month module of the uranium plant is scheduled for completion in June 2008. Both of these projects are on schedule.

At the end of September 2007, the cleanup process on surface and underground has generated a stockpile in excess of 124,000 tonnes containing an average grade of 1.1 grams per tonne of gold or 2,810 ounces of recoverable gold, assuming an average recovery rate of 64%. This stockpile will be utilised during mill commissioning in April 2008.

Buffelsfontein Tailings Recovery Project

The Buffelsfontein Tailings Recovery Project is a uranium and gold tailings recovery operation with the gold tailings recovery operation already operating. It is located in the western portion of the Witwatersrand Basin approximately 160 kilometres from Johannesburg. Through its subsidiary, First Uranium (Proprietary) Limited ("FUSA"), the Corporation has an agreement to acquire surface tailings from Buffelsfontein Gold Mines Limited ("BGM"), a subsidiary of Simmer & Jack. Please see the Corporation's MD&A in respect of its audited consolidated financial statements for the fiscal year ended March 31, 2007 for a summary of this agreement.

The Corporation originally planned to develop and construct a processing plant at the Buffelsfontein surface tailings site to reprocess these tailings and to recover uranium and gold. However, with the acquisition of MWS, the Corporation acquired an operating gold mine tailings re-processing facility and remains of a historic uranium plant adjacent to and now part of the Buffelsfontein Tailings Recovery Project. By November 2008, the Corporation expects to double the size of the gold recovery plant and commission the first two modules of the uranium recovery plant.

FUSA plans to conduct hydraulic mining of tailings dams on the Buffelsfontein property using high pressure water cannons to slurry the tailings which will then be pumped to a processing plant for the recovery of uranium and gold. The tailings from Buffelsfontein will be transported via the soon to be completed pipeline to the MWS gold plant that will be expanded to replace that originally planned at the Buffelsfontein mine site. The Corporation also proposes to acquire the right to process three small additional tailings dams. A prospecting right for these additional dams has been accepted by the South African Department of Minerals and Energy (the "DME").

The pipeline, originally scheduled to be commissioned during October 2007, has been delayed slightly to November due to excessive rain which resulted in a loss of ten days on earth and civil work at the reclamation sump area and late delivery of pumps.

The MWS operation is hydraulically mining the remnant of its current resource, which is due to be exhausted by December 2007. The operation requires mechanical loading and placement of the remnant material, temporarily increasing the operating cost significantly. The operation produced 10,124 ounces of gold in Q2 2008 and will continue in Q3 2008, with expected production in excess of 9,600 ounces of gold. The Buffelsfontein tailings dams are expected to be brought online when the material from the MWS tailings dams is exhausted. This will result in production and average costs reverting to the planned targets as per the Technical Report Preliminary Assessment of the Buffelsfontein Project prepared by Scott Wilson RPA, and last revised on May 22, 2007.

The Corporation is in the process of expanding the existing MWS plant to increase capacity from the planned rate of 500,000 tonnes per month to an average of 630,000 tonnes per month. This expansion project is scheduled for completion by the end of March 2008.

Technical Disclosure Note:

Technical disclosure under the heading "Ezulwini Mine" relating to the samples of historic stopes and current reef development in this MD&A is extracted from studies prepared in accordance with NI 43-101 by Daan Van Heerden, Pr.Eng of South African mining and exploration consultants, Minxcon (Proprietary) Limited and Dexter Ferraira of Lower Quartile Solutions (Proprietary) Limited. Mr. Van Heerden and Mr. Ferreira are Qualified Persons as defined in NI 43-101 and they have reviewed the technical disclosure contained in this MD&A that was extracted from their report.

Technical disclosure under the heading "Ezulwini Mine" relating to the stockpiles sampled in this MD&A is extracted from studies prepared in accordance with NI 43-101 by Warren de Wit who has a Mine Surveyors Certificate of competency, National Diploma for technicians, Registered with PLATO:00051. Mr. de Wit is a Qualified Person as defined in NI 43-101 and he has reviewed the technical disclosure contained in this MD&A that was extracted from his report.

Results of Operations

Revenue

	Q2 2008	Q2 2007	2008 YTD	2007 YTD
Buffelsfontein Tailings Recovery Project				
Tonnes processed (kt)	1,227	—	1,629	—
Ounces of gold sold	10,124	—	13,544	—
Average price per ounce (\$)	618	—	623	—
Average cost per ounce (\$)	527	—	561	—
Average cash cost per ounce (\$)	472	—	497	—
Revenue (\$000s)	6,253	—	8,436	—
Cost of production (\$000s)	(4,780)	—	(6,736)	—
Amortization (\$000s)	(563)	—	(862)	—
Total cost of production (\$000s)	(5,343)	—	(7,598)	—
Profit from mining operations (\$000s)	910	—	838	—

"Cash Costs" are costs directly related to the physical activities of producing gold, and include mining, processing and other plant costs, third-party refining and smelting costs, marketing expense, on-site general and administrative costs, royalties, in-mine drilling expenditures that are related to production and other direct costs. Sales of by-product metals are deducted from the above in computing cash costs. Cash costs exclude depreciation, depletion and amortization, corporate general and administrative expense, exploration, interest, and pre-feasibility costs and accruals for mine reclamation. Cash costs are calculated and presented using the "Gold Institute Production Cost Standard" applied consistently for all periods presented.

Total cash costs per ounce is a non-GAAP measurement and investors are cautioned not to place undue reliance on it and are urged to read all GAAP accounting disclosures presented in the consolidated financial statements and accompanying footnotes.

Revenue for Q2 2008 and the first half of FY 2008 as presented above was generated solely from the processing of MWS tailings material and sale of the related gold at the current MWS operations, which are included as part of the Buffelsfontein Tailings Recovery Project.

Unit costs from June 6, 2007 to the end of Q2 2008 are significantly higher than the long-term expectation of unit costs for this operation as the acquired tailings dams are nearing the end of their productive life. Cleaning up the remaining tailings from MWS tailings dam No. 2 requires mechanical loading and placement near the hydraulic mining operation which reduces tonnages and increases the handling costs relative to a normal reclamation operation. Upon completion of the pipeline from the Buffelsfontein No. 2 tailings dam to the MWS gold plant during November 2007 and when the hydraulic mining of the untouched tailings dams consistently runs at full capacity, First Uranium expects that the cash costs to produce gold at the expanded MWS gold plant will be approximately \$310 per ounce. When the MWS gold plant is expanded in November 2008, unit costs are expected to be reduced from current levels.

The Corporation had no production during FY 2007.

Other income

(thousands of dollars)	Q2 2008	Q2 2007	2008 YTD	2007 YTD
Other income	897	–	897	–

Other income primarily includes fees for sludge pumping services to a third party and hostel rental income at the Ezulwini Mine. There was no such income during the same period last year.

Expenditures

(thousands of dollars)	Q2 2008	Q2 2007	2008 YTD	2007 YTD
General, consulting and administrative expenditures	(2,520)	(5)	(4,490)	(1,377)
Stock-based compensation	(663)	–	(1,434)	–
Pumping, feasibility and rehabilitation costs	(721)	263	(1,068)	(1,274)
Amortization of property, plant and equipment	(69)	–	(97)	–
Total expenditures	(3,973)	258	(7,089)	(2,651)
Operating income (loss)	(2,166)	258	(5,354)	(2,651)

General, consulting and administrative expenditures included \$1.7 million and \$3.2 million for Q2 2008 and the first half of FY 2008, respectively, in respect of employee compensation costs, consulting and professional fees, as well as fees paid to Simmer & Jack for services provided pursuant to the Shared Services Agreement (see "Related Party Transactions") of \$0.3 million and \$0.6 million for Q2 2008 and the first half of FY 2008, respectively. During Q2 2008, \$0.1 million (\$0.4 million in the first half of FY 2008) in fees paid to Simmer & Jack, representing costs directly related to mine development activities were capitalized. For Q2 2007 and the first half of FY 2007 the employee compensation costs, consulting and professional fees were \$1.3 million for both periods, inclusive of \$0.8 million fees paid to Simmer & Jack. Shared services fees of \$0.3 million that were expensed in prior periods, were capitalized during Q2 2007 and the first half of FY 2008. This resulted in the lower general, consulting and administrative costs reported in Q1 2007 and the first half of FY 2007.

Higher general, consulting and administrative expenses in Q2 2008 and the first half of FY 2008, primarily reflect the higher project development activities, the costs of corporate offices in Johannesburg and Toronto and other expenses of operating a public company, which were not applicable in Q2 2007 and in the first half of FY 2007.

The Q2 2008 stock-based compensation expense reflects the amortized cost of 1,223,001 stock options granted during FY 2007 and the amortized cost of 116,429 stock options granted during the first half of FY 2008. The fair value of the stock-based compensation was estimated using the Black-Scholes option pricing model.

Pumping costs at the Ezulwini Mine remained relatively unchanged year over year, but feasibility costs decreased. Feasibility assessment activities were higher during the first half of FY 2007, as the Corporation initiated early reviews in respect of re-commissioning of the Ezulwini Mine. Included in the costs for Q2 2008 and first half of FY 2008 are rehabilitation costs incurred at the MWS operations of \$0.4 million. A review of pumping and feasibility costs incurred in May and June 2006 resulted in the transferral of \$0.3 million of these costs to capital in Q2 2007. The capitalization of the pumping and feasibility costs during the first half of FY 2007 of \$5.2 million also resulted in the higher costs compared to the costs in the first half of FY 2008.

Amortization of property, plant and equipment in Q2 2008 and the first half of FY 2008 relate to amortization of non-mining assets such as computer equipment and software, furniture and equipment and motor vehicles. There was no amortization during the same periods of FY 2007.

Non-operating Income and Expenses

(thousands of dollars)	Q2 2008	Q2 2007	2008 YTD	2007 YTD
Operating income (loss)	(2,166)	258	(5,354)	(2,651)
Interest income	4,110	69	8,373	139
Interest expense	(1,502)	(204)	(2,459)	(348)
Accretion expense on the Debentures	(3,307)	-	(4,378)	-
Foreign exchange gains	5,967	663	12,391	1,408
Net income (loss) before income taxes	3,102	786	8,573	(1,452)

Interest income in Q2 2008 and during the first half of FY 2008 represents interest earned on the net proceeds from the Offering and the Debentures. Cash balances have been invested in short-term deposits with the Corporation's bankers until required for capital expenditures or to fund operating costs.

Interest expense in Q2 2008 and the first half of FY 2008 consists of the interest paid and or accrued on the Debentures. The interest expense during the same periods of FY 2007 consisted of the non-capital portion of interest paid by EMC on the loan payable to Simmer & Jack. The accretion expense in Q2 2008 and during the first half of FY 2008 relates to the Debentures. (See Note 11 to the interim financial statements.)

The Corporation's net assets are held in Canadian dollars ("Cdn\$") and South African Rand ("ZAR"), while its accounts are presented in US dollars. During the reporting periods for FY 2008 and FY 2007, the Canadian dollar and South African Rand both appreciated relative to the value of the US dollar. The translation of the stronger currency assets (Cdn\$ and ZAR) into US dollars for reporting purposes resulted in the foreign exchange translation gain in the second quarter and the first half of both FY 2008 and FY 2007. The larger foreign exchange translation gain in Q2 2008 and in the first half of FY 2008 reflects the significant weakening of the US dollar, particularly with respect to the Cdn\$, but also relative to the ZAR.

Net income

Net income in Q2 2008 and the first half of FY 2008 increased year over year primarily as a result of the net foreign exchange translation gains and interest income earned, net of operating expenses. The net loss in the first half of FY 2007 reflects expenditures in connection with preparing its two uranium and gold projects for production.

Use of Proceeds

Offering

Pursuant to the Offering in December 2006, First Uranium raised total net proceeds of \$177.7 million of which \$72.8 million had been expended as at September 30, 2007 leaving a balance on hand at that date of \$104.9 million:

(millions of dollars)	Use of net proceeds			
	To September 30, 2007	During Q2 2008	During Q1 2008	During FY 2007
Development of the Ezulwini Mine	(54.8)	(25.7)	(9.8)	(19.3)
Development of the Buffelsfontein Tailings Recovery Project	(7.6)	(5.4)	(0.7)	(1.5)
Repayment of indebtedness owed by EMC to Simmer & Jack	(14.1)	–	–	(14.1)
Purchase of the Ezulwini Mine infrastructure	(8.9)	–	–	(8.9)
Working capital and general corporate purposes	12.6	0.6	3.4	8.6
Total	(72.8)	(30.5)	(7.1)	(35.2)

While First Uranium intends to apply the net proceeds of the Offering approximately as disclosed in the Corporation's MD&A in respect of its audited consolidated financial statements for the fiscal year ended March 31, 2007, such uses are by definition, based on estimates and assumptions and are subject to variance. In addition, there may be circumstances where, for sound business reasons, a re-allocation of the funds may be necessary or advisable.

Debentures

The Corporation intends to use the net proceeds from the issue of the Debentures to: fund the Ezulwini Expansion Program which is designed to determine the potential for a possible expansion of the Ezulwini Mine; and together with the balance of the net proceeds of the Offering, fund the development of the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project; and for general corporate purposes. The net proceeds of \$130.6 million from the issue of the Debentures are currently held in Canadian dollar denominated short-term deposits bearing interest at 4.75% per annum. The approval of the South African Reserve Bank ("SARB") pursuant to the issue of the Debentures includes a condition that the Corporation transfers the net Debenture proceeds to bank accounts of the Corporation in South Africa and convert the funds to South African rand by May 3, 2008.

First Uranium believes that the net Debenture proceeds and the unused portion of the net proceeds of the Offering, are sufficient to fund its plans for the near-term development of the Ezulwini Mine, the Ezulwini Expansion Program and the Buffelsfontein Tailings Recovery Project expenditures, as adjusted to reflect changed project capital with the acquisition of MWS.

Cash flows

Quarterly Cash Flow

(thousands of dollars)	Q2 2008	Q2 2007
Cash flows (utilized in) generated from operating activities	(455)	4,577
Cash flows utilized on investing activities	(26,892)	(4,629)
Cash flows from financing activities	342	–
Net effect of exchange rates on cash held in foreign currencies	6,103	–
Net decrease in cash and cash equivalents for the period	(20,902)	(52)
Cash and cash equivalents at beginning of period	275,234	1,210
Cash and cash equivalents at end of period	254,332	1,158

The cash utilized by operating activities in Q2 2008 reflects net operating expenses offset by net interest received during the quarter. The cash generated from operating activities in Q2 2007 was mainly the result of a reduction in net receivables from related parties and increased accruals.

Investing activities used \$26.9 million in Q2 2008, inclusive of capital expenditures of \$20.1 million on the Ezulwini Mine and \$5.6 million on the Buffelsfontein Tailings Recovery Project. The cash utilized on investing activities in Q2 2007 were primarily represented by capitalized pumping costs at the Ezulwini Mine (capitalized as part of mine development expenditures).

Cash generated from financing activities in Q2 2008 is the result of 51,095 share options exercised during the quarter.

The net effect of exchange rates on cash held in foreign currencies (Cdn\$ and ZAR) in Q2 2008 is primarily the result of the Debenture proceeds held in cash and the debt portion of the Debentures translated to US dollars at the exchange rate in effect at the end of the quarter, whilst the equity portion of the Debentures was translated to US dollars at the rate in effect on the date that the Debentures were issued.

First Half Cash Flow

(thousands of dollars)	2008 YTD	2007 YTD
Cash flows from operating activities	14,897	5,089
Cash flows utilized on investing activities	(40,704)	(5,219)
Cash flows from financing activities	130,903	728
Net effect of exchange rates on cash held in foreign currencies	10,322	–
Net increase in cash and cash equivalents for the period	115,418	598
Cash and cash equivalents at beginning of period	138,914	560
Cash and cash equivalents at end of period	254,332	1,158

The cash generated from operating activities in the first half of FY 2008 was derived from net interest received and the payment during Q1 2008 of the amounts receivable from related parties (\$5.1 million and \$1.7 million, respectively from Simmer & Jack and FUSA), offset by increases in accounts receivable (mainly value-added tax recoverable). The cash generated from operating activities in the first half of FY 2007 was mainly the result of a reduction in net receivables from related parties and an increase in accrued liabilities.

The cash utilized on investing activities in the first half of FY 2008 relates primarily to capital expenditures of \$35.5 million at the Ezulwini Mine and \$6.2 million on the Buffelsfontein Tailings Recovery Project. The cash utilized for investing activities in the first half of FY 2007 relates to capitalized pumping costs at the Ezulwini Mine.

The cash generated from financing activities was attributable to the proceeds of \$130.6 million raised from the issue of the Debentures on May 3, 2007.

The net effect of exchange rates on cash held in foreign currencies (Cdn\$ and ZAR) during the first half of FY 2008 are primarily the result of the Debenture proceeds held in cash and the debt portion of the Debentures translated to US dollars at the exchange rate in effect at the end of the quarter, whilst the equity portion of the Debentures was translated to US dollars at the rate in effect on the date that the Debentures were issued.

Financial Position and Liquidity

Assets

Cash and cash equivalents increased by \$115.4 million during the first half of FY 2008 to \$254.3 million. The increase is primarily the result of the \$130.6 million of Debenture net proceeds, cash from operating activities and translation gains on cash held in currencies other than the US dollars, partially offset by capital expenditures of \$35.5 million at the Ezulwini Mine and \$6.1 million at the Buffelsfontein Tailings Recovery Project.

Accounts receivable of \$8.2 million at September 30, 2007 (FY 2007: \$1.7 million) were comprised primarily of value-added tax and goods and services tax recoverable of \$6.2 million relating to capital expenditures on the two uranium and gold projects.

Inventories of \$2.9 million at September 30, 2007 (FY 2007: \$0.3 million) mainly consisted of the \$1.3 million gold work-in-progress from the MWS operations. At the end of the quarter the Corporation also included stockpiles at the Ezulwini Mine that were on surface, measured and valued at \$0.9 million.

Non-current assets increased to \$124.1 million at September 30, 2007 (FY 2007: \$33.7 million), reflecting expenditures on property, plant and equipment at the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project (\$35.5 million and \$6.1 million respectively) and the property, plant and equipment of \$41.1 million acquired with the MWS purchase.

The increase in asset retirement funds to \$5.1 million (FY 2007: \$2.8 million) is primarily the result of the \$2.0 million environmental rehabilitation trust fund assumed by the Corporation on the acquisition of the MWS operations on June 6, 2007.

Investing activities

During Q2 2007, investing activities were represented primarily by pumping costs incurred and capitalized to mine development expenditures.

Liabilities

As of September 30, 2007, total liabilities were \$130.7 million (FY 2007: \$11.1 million), consisting mainly of the debt portion of the Debentures of \$99.0 million, accounts payable and accrued liabilities of \$13.1 million (FY 2007: \$5.7 million), the future tax liability in the amount of \$10.4 million, arising from the MWS acquisition and the asset retirement obligation of \$7.9 million (FY 2007: \$5.3 million) relating to the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project.

The increase in accounts payable and accrued liabilities at September 30, 2007 reflects payables in respect of capital costs of \$6.8 million for the Ezulwini Mine, trade payables of \$2.5 million related to the MWS operations and accrued interest on the Debentures of \$1.5 million.

The payable to a related party of \$0.3 million (FY 2007: Nil) consists of the shared services fee payable to Simmer & Jack pursuant to the terms of the Shared Services Agreement.

Liquidity and Capital Resources

At September 30, 2007, First Uranium had working capital of \$252.1 million (FY 2007: \$142.0 million). The significant increase in working capital is mainly attributable to the inclusion of \$130.6 million net proceeds from the issue of the Debentures during Q1 2008 partially offset by the \$40.7 million cash utilized in investing activities during the first half of FY 2008.

First Uranium anticipates that future capital requirements relating to development of the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project, as currently planned, will be funded from existing cash resources (a combination of the proceeds from the Offering and the Debentures) and from internal cash flow.

Capital investments of \$148.0 million and \$270.6 million are planned to complete the construction of the Buffelsfontein Tailings Recovery Project and the Ezulwini Mine, respectively, for which \$34.8 million (FY 2007: \$5.2 million) of current commitments exist. As at September 30, 2007, cumulative expenditures for property, plant and equipment in Q2 2008 were \$62.4 million (\$31.1 million in Q2 2008, \$10.5 million in Q1 2008 and \$20.8 million in FY 2007).

Exploration budgets of \$30 million for the Ezulwini Mine and \$10 million for the contiguous properties to the north-east and south-east of the Ezulwini Mine have been approved by the Board of Directors. The extent to which the budgeted amounts are spent depends on the ongoing exploration results. No exploration costs were incurred during the first half of FY 2008, although current commitments of \$0.3 million existed as at September 30, 2007. The exploration expenditures are expected to be funded from available working capital.

First Uranium had executed a mandate letter and term sheet with Investec Bank Limited ("Investec") in respect of potential debt financing, which was originally planned to be used towards the development of the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project. The need for this facility as originally contemplated was eliminated as a result of the Debenture issue. The Corporation is, however, continuing with the process of satisfying certain conditions precedent and is in discussions with Investec to establish a general corporate credit facility, which would be available as required to fund short-term cash needs.

As at September 30, 2007, First Uranium had the following contractual obligations:

	Payments due by date				Total \$000
	Less than 1 year \$000	1-3 Years \$000	4-5 Years \$000	After 5 Years \$000	
(millions of dollars)					
Operating leases	13	12	-	-	25
Purchase obligations	34,748	-	-	-	34,748
Capital lease obligations	87	268	68	-	423
Asset retirement obligations	-	-	-	7,941	7,941
Senior unsecured convertible debentures	-	-	135,060	-	135,060
Total contractual obligations	34,848	280	135,128	7,941	178,197

Summary of Quarterly Results

The table below sets out selected financial data for the periods indicated (as derived from First Uranium's consolidated financial statements):

Fiscal Quarters Ended (thousands of dollars, except per share amounts)	Total Assets	Net Income/(Loss)	Basic and Diluted Earnings/(Loss) per Share	Long Term Liabilities
September 30, 2007	389,554	3,051	0.02	117,349
June 30, 2007	373,549	5,471	0.04	118,900
March 31, 2007 (audited)	181,427	(2,689)	(0.02)	5,377
December 31, 2006	195,374	(3,787)	(0.04)	Nil
September 30, 2006	8,839	786	0.01	Nil
June 30, 2006	4,120	(2,238)	(0.03)	Nil
March 31, 2006 (audited)	3,433	(4,656)	(0.05)	Nil
December 31, 2005	4,519	(2,201)	(0.03)	Nil
September 30, 2005	n/a	n/a	n/a	n/a

Outlook

In November 2007, the Corporation will finalize the integration of MWS into the Buffelsfontein Tailings Recovery Project by completing the pipeline from the Buffelsfontein tailings dams to the MWS gold plant. Upon completion of the pipeline, hydraulic mining of the Buffelsfontein tailings dams is expected to commence, increasing gold production in respect of the Buffelsfontein Tailings Recovery Project from an annualized rate of 38,000 ounces to an annualized rate of 54,000 ounces. Average cash costs per ounce of gold produced are expected to decrease from the current average cash cost of \$497 per ounce for the first half of FY 2008 to approximately \$310 per ounce.

In addition, the Corporation expects to complete the full feasibility study for the Buffelsfontein Tailings Recovery Project's new gold and uranium plant modules. The MWS assets include an operating gold plant. The second module of the gold plant and the first two modules of the uranium plant are expected to be commissioned in November 2008.

In October, 2007, third-party toll treatment of higher grade gold ore from the Ezulwini Mine commenced. The current plan is for the Ezulwini Mine to process gold and uranium at its own plants by April and June 2008, respectively.

In Q3 2008, the Corporation expects to process 1.4 million tonnes of tailings through its MWS gold plant, with expected production in excess of 9,600 ounces of gold.

The spot price for uranium rose to \$136 per pound at the end of June, softened to \$75 per pound and has recently risen to \$90 per pound. Management believes that the \$50 per pound assumption upon which the project economics were based remains reasonable and conservative. The Corporation has not yet signed any contracts that have defined commitments to supply uranium.

First Uranium has entered into an agreement with Nufcor pursuant to which Nufcor will calcine the yellowcake from First Uranium to produce uranium oxide for dispatch to converters beginning January 2009. The Corporation has also entered into an off-take agreement with Nufcor, for the period from startup of the uranium plant at the Ezulwini Mine in June 2008 to January 2009, to purchase First Uranium's yellowcake production at rates based on the then prevailing spot prices.

The Corporation has no plans to hedge the price it receives for its gold production at this time.

The spot price for gold was \$832 per ounce as of November 9, 2007. Management believes that the \$500 per ounce assumption upon which the project economics were based remains reasonable and conservative.

Offsetting the higher price assumptions, mine construction costs have risen for labour, reflecting higher negotiated wage settlements across the sector, and for materials, such as steel and concrete. First Uranium has included assumptions for higher costs into its revised technical reports and into planning assumptions for the future.

Based on the most recent technical reports published for each project in May 2007, the co-product costs for the Ezulwini Mine are expected to be \$297 (down from \$315) per ounce for gold and \$30 (up from \$25) per pound for uranium and for the Buffelsfontein Tailings Recovery Project co-product costs are expected to be \$220 (down from \$235) per ounce for gold and \$22 (up from \$19) per pound for uranium.

The development and production of both of the Corporation's current projects continues on schedule and on budget. At the Ezulwini Mine, construction is well underway to commission a gold plant in April 2008 and a uranium plant in June 2008. In November 2007, the Corporation expects to complete a feasibility study and begin the construction at the Buffelsfontein Tailings Recovery Project to double the gold plant capacity and commission the first two modules of the uranium plant by November 2008.

First Uranium is confident that the combination of the net proceeds from First Uranium's earlier equity and debenture offerings and internal cash flow, given current prices for uranium and gold, will be sufficient to fully fund the development of the Corporation's two projects and to advance them to full production by 2010.

Related Party Transactions

On December 20, 2006, First Uranium and Simmer & Jack entered into a shared services agreement (the "Shared Services Agreement"). For a description of the shared services agreement, see the Corporation's MD&A in respect of its audited consolidated financial statements for the fiscal year ended March 31, 2007. During Q2 2008 the Corporation paid \$0.5 million for shared services to Simmer & Jack (\$1.0 million in the first half of FY 2008) pursuant to the terms of the Shared Services Agreement. During Q2 2007, the Corporation paid \$0.4 million for shared services relating to the operations to Simmer & Jack (\$0.8 million in the first half of FY 2007).

Prior to December 2006, the Corporation shared its premises with other companies that had common directors and reimbursed the related companies for its proportional share of expenses or was reimbursed by the related companies for their proportional share of expenses. During Q2 2007, the Corporation was charged \$0.6 million for consulting services provided by related directors, officers and consultants of the Corporation.

First Uranium has agreed to reimburse Simmer & Jack for 50% of the fees (to a maximum of ZAR125,000 per month) that Simmer & Jack is required to pay to an empowerment company for consulting. During Q2 2008 and the first half of FY 2008, the Corporation paid \$0.06 million and \$0.1 million, respectively, to Simmer & Jack in connection with such services.

The \$0.3 million amount payable at the end of Q2 2008 by First Uranium to Simmer & Jack are as a result of transactions pursuant to the Shared Services Agreement and are in the normal course of business.

Waterpan Mining Consortium ("Waterpan") currently holds a 10% shareholding in EMC. On December 20, 2006, Waterpan, First Uranium Limited ("FUL") and the Corporation entered into a purchase agreement (the "Waterpan Purchase Agreement") pursuant to which Waterpan agreed to sell its shares in EMC to FUL and as consideration for such sale, First Uranium will issue 6,141,009 common shares of First Uranium to Waterpan (the "Waterpan Shares"). The closing of the transaction is subject to approval of SARB. Certain shareholders of Waterpan are officers or employees of First Uranium or directors of its subsidiaries.

On September 27, 2007, the Board approved a housing loan in the amount of Cdn\$1 million to the President and Chief Executive Officer of First Uranium for the purpose of facilitating the relocation of his family to Toronto, where the corporate office is located. The loan carries interest at 4% payable monthly in arrears, is for a term of six years from date of closing of the purchase of a family residence and is unsecured. The loan was advanced on October 17, 2007.

Critical Accounting Policies and Estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amount of assets and liabilities and disclosure of contingent liabilities at the date of the financial statements, and reported amounts of revenues and expenditures during the reporting period. Note 2 of the interim financial statements describes all of the Corporation's significant accounting policies.

Changes in accounting policies

Effective April 1, 2007, the Corporation adopted the Canadian Institute of Chartered Accountants ("CICA") Handbook Sections 1530 – Comprehensive Income, Section 3855 – Financial Instruments – Recognition and Measurement and Section 3865 – Hedges. The adoption of these new standards resulted in changes in the accounting for financial instruments and hedges, as well as the recognition of certain transition adjustments. As provided under the standards, the comparative consolidated financial statements have not been restated.

The adoption of these Sections is done retroactively without restatement of the consolidated financial statements of prior periods. There was no impact on the consolidated balance sheet of as at April 1, 2007.

The effect of these changes in the accounting policies on net income for Q1 2008 is not significant.

Effective April 1, 2007, the Corporation adopted the revised Section 1506 – Accounting Changes relating to changes in accounting policies, changes in accounting estimates, and errors. Adoption of these recommendations had no effect on the consolidated financial statements for the Q1 2008, except for the disclosure of accounting changes that have been issued by the CICA but have not yet been adopted by the Corporation because they are not effective until a future date (refer to Future accounting standards below).

Future accounting standards

In February 2007, the CICA issued the following pronouncements:

Section 1535, Capital Disclosures, which is effective for the Corporation for the fiscal year beginning April 1, 2008. This standard requires disclosure of information that enables users of its financial statements to evaluate the entity's objectives, policies and processes for managing capital. The adoption is not expected to have a significant effect on the Corporation's financial statements.

Section 3862, Financial Instruments – Disclosures and Section 3863, Financial Instruments – Presentation, which are effective for the Corporation for the fiscal year beginning April 1, 2008. The objective of Section 3862 is to provide financial statement disclosure to enable users to evaluate the significance of financial instruments for the Corporation's financial position and performance and the nature and extent of risks arising from financial instruments that the Corporation is exposed to during the reporting period and the balance sheet date and how the Corporation is managing those risks. The purpose of Section 3863 is to enhance the financial statement user's understanding of the significance of financial instruments to the Corporation's financial position, performance and cash flows.

In March 2007, CICA approved Handbook Section 3031 – Inventories, which replaces the existing Section 3030 – Inventories. This standard is effective for the Corporation for interim and annual financial statements relating to the fiscal year beginning April 1, 2008. The standard provides more guidance on the measurement and disclosure requirements for inventories.

The Corporation is currently assessing the impact of these new accounting standards on its financial statements.

Outstanding Share Data

	Q2 2008	Q2 2007	2008 YTD	2007 YTD
Common shares outstanding at beginning of period	124,780,027	88,336,047	121,686,147	87,536,047
Share issued	51,095	–	3,145,075	800,000
Common shares outstanding at end of period	124,831,222	88,336,047	123,831,222	88,336,047
Unexercised stock options outstanding at end of period	1,259,763	–	1,259,763	–
Average strike price of outstanding options (Cdn\$)	7.67	–	7.67	–

As at November 9, 2007, First Uranium had 124,831,222 common shares outstanding and there were 1,259,763 unexercised stock options outstanding, at an average strike price of Cdn\$7.67 per share.

As at September 30, 2007 and November 9, 2007, First Uranium also had \$135.1 million (Cdn\$150 million) principal amount of Debentures outstanding which are convertible into 60.9013 common shares of First Uranium for each Cdn\$1,000 principal amount of Debentures, representing 9,135,195 common shares.

Risks and Uncertainties

Uncertainties

There are a number of uncertainties in the mining business of First Uranium that are beyond First Uranium's control, including:

- demand and prices for the Corporation's future production of uranium and gold
- government legislation regarding mining companies in South Africa
- securities regulation regarding public listed companies in Canada and South Africa
- foreign exchange rates
- interest rates
- the decisions and activities of the Corporation's competitors in the uranium and gold mining business, which impact the supply of uranium and the demand for available services, construction materials, labour and the rights for prospecting and mining
- the continued endorsement of nuclear power as a preferred source for the world's energy needs
- the decisions of investors to continue to buy and hold the securities of the Corporation
- natural disasters, war or random occurrences or acts that could result in a material change to economic and market performance, business conditions or operations

Risks

In addition, First Uranium is in the development stage and is subject to the risks and challenges similar to other companies in a comparable stage of development. The risks include, but are not limited to, certain business, operational and market risks. For a discussion of the Corporation's risks please refer to the Corporation's MD&A in respect of its audited consolidated financial statements for the fiscal year ended March 31, 2007, the 2007 Annual Information Form and other filings, which are available on the Corporation's website www.firsturanium.com and on www.sedar.com or upon request from the Corporation.

Construction costs

First Uranium is in the development stage and is building its gold and uranium plants. To complete the construction of these plants requires steel, concrete and construction tradespeople. With the vast amount of construction underway in South Africa, materials and construction tradespeople are difficult to acquire and retain, particularly in light of the upcoming World Cup of soccer in South Africa in 2010 and the high metal prices, which has driven the demand for new mines and plants around the world. As a result of this high demand, structural steel prices, for example, have risen by over 30% in the last 18 months.

To mitigate this risk, First Uranium has secured its supply of materials and tradespeople for the construction of the mills and the gold and uranium plants for the planned modules of the Ezulwini Mine.

For the Buffelsfontein Tailings Recovery Project, the required materials to expand the gold plant and build the uranium plant have not yet been secured. To mitigate the impact of rising costs, the Corporation has decided to skip the pre-feasibility step and accelerate the project's final feasibility study for completion by the end of November 2007, thus enabling orders for the required materials to be placed as soon as possible.

Labour

A trend that could increase risk for the Corporation would be the heightened labour unrest in South Africa. Workers at various South African mining operations have been demanding, through their unions, higher compensation as a result of increased revenues in the mining sector being driven by heightened mineral prices. Strikes have been threatened during some of the negotiations. First Uranium has mitigated the threat of work stoppages by negotiating recent settlements with unions represented at its operations.

Similarly, workers in other industries have been demanding higher compensation and threatening strike action. One such example is the strike by petroleum workers in early August which limited the supply of petrol. Strikes in the public sector and service industries, if protracted, have the potential to disrupt the development of the Corporation's two projects. No material delays have been experienced to date and the projects are on track for their scheduled completion dates.

Additional Information

Additional information relating to First Uranium is included in the Corporation's Annual Information Form dated June 13, 2007 and it is available on SEDAR at www.sedar.com.

Forward-looking Information

This MD&A and consolidated financial statements for the period ended September 30, 2007 contain certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the price of uranium and gold, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, government regulation of mining operations, environmental risks, unanticipated reclamation expenses and title disputes or claims and limitations on insurance coverage. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at the date of this MD&A; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this MD&A, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) approvals to transfer or grant, as the case may be, mining rights or prospecting rights will be obtained; (ii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iii) mineral resource estimates are accurate; (iv) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (v) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vi) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (vii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

Form 52-109F2 - Certification of Interim Filings

I, Gordon Miller, President and Chief Executive Officer of First Uranium Corporation, certify that:

1. I have reviewed the interim filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of First Uranium Corporation (the "issuer") for the period ending September 30, 2007;
2. Based on my knowledge, the interim filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the interim filings;
3. Based on my knowledge, the interim financial statements together with the other financial information included in the interim filings fairly present in all material respects the financial condition, results of operations and cash flows of the issuer, as of the date and for the periods presented in the interim filings;
4. The issuer's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures and internal control over financial reporting for the issuer, and we have:
 - (a) designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which the interim filings are being prepared;
 - (b) designed such internal control over financial reporting, or caused it to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer's GAAP; and
5. I have caused the issuer to disclose in the interim MD&A any change in the issuer's internal control over financial reporting that occurred during the issuer's most recent interim period that has materially affected, or is reasonably likely to materially affect, the issuer's internal control over financial reporting.

DATED this 9th day of November, 2007

"Gordon T. Miller" (signed)

Form 52-109F2 - Certification of Interim Filings

I, Emma Oosthuizen, Senior Vice President and Chief Financial Officer of First Uranium Corporation, certify that:

1. I have reviewed the interim filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of First Uranium Corporation (the "issuer") for the period ending September 30, 2007;
2. Based on my knowledge, the interim filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the interim filings;
3. Based on my knowledge, the interim financial statements together with the other financial information included in the interim filings fairly present in all material respects the financial condition, results of operations and cash flows of the issuer, as of the date and for the periods presented in the interim filings;
4. The issuer's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures and internal control over financial reporting for the issuer, and we have:
 - (a) designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which the interim filings are being prepared;
 - (b) designed such internal control over financial reporting, or caused it to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer's GAAP; and
5. I have caused the issuer to disclose in the interim MD&A any change in the issuer's internal control over financial reporting that occurred during the issuer's most recent interim period that has materially affected, or is reasonably likely to materially affect, the issuer's internal control over financial reporting.

DATED this 9th day of November, 2007

Cash and cash equivalents at end of the period		275,234	1,210

See accompanying notes to the Consolidated Financial Statements

1. NATURE OF OPERATIONS AND BASIS OF PRESENTATION

First Uranium Corporation ("First Uranium" or "the Corporation") is a Canadian corporation with a primary listing on the Toronto Stock Exchange ("TSX") and a secondary listing on the Johannesburg Stock Exchange ("JSE"). First Uranium is a resource company focused on the development of uranium and gold projects in southern Africa and beyond, see Note 7 "Property, Plant and Equipment" for a description of the projects. First Uranium owns 100% of First Uranium Limited ("FUL"), which in turn holds 100% of First Uranium (Proprietary) Limited ("FUSA") and 90% of Ezulwini Mining Company (Proprietary) Limited ("EMC"). During the quarter, First Uranium, through FUSA, acquired all the issued and outstanding shares of Mine Waste Solutions (Proprietary) Limited and its subsidiary, Chemwes (Proprietary) Limited (collectively "MWS"), see Note 4 "Business Acquisitions". As at June 30, 2007, Simmer and Jack Mines, Limited ("Simmer & Jack") owned 65.5% of First Uranium's common shares.

2. SIGNIFICANT ACCOUNTING POLICIES

The unaudited interim consolidated financial statements have been prepared by First Uranium in accordance with Canadian generally accepted accounting principles ("Canadian GAAP"). The preparation of the unaudited interim consolidated financial statements is based on the same accounting policies and practices as those disclosed in note 1 "Nature of operations" and note 2 "Significant accounting policies" to the Corporation's audited consolidated financial statements for the year ended March 31, 2007, except for changes as described below and in note 3 "Changes in accounting policies".

The unaudited interim consolidated financial statements should be read in conjunction with the Corporation's audited consolidated financial statements for the year ended March 31, 2007.

2.1 Goodwill

Goodwill represents the excess purchase price over the fair value of identifiable assets and liabilities acquired in business combinations. Goodwill is not amortized but is assessed for impairment annually, or more frequently as events occur that may indicate impairment. Impairment is assessed by comparing the fair value of each reporting unit to the book value of the reporting unit. If the fair value of the reporting unit is less than the book value then impairment of goodwill is measured by deducting the fair value of the reporting unit's individual assets and liabilities from the fair value of the reporting unit to determine the implied fair value of goodwill. This is compared to the amount of the book value of the reporting unit's goodwill. Any excess of the book value of goodwill over the implied fair value of goodwill is the impairment amount.

2.2 Financial instruments

Transaction costs for financial assets and liabilities

For a financial asset or financial liability classified other than as held for trading, the Corporation has added the transaction costs that are directly attributable to the acquisition or issue of a financial asset or financial liability to the fair value of the asset or liability established at the recognition of the asset or liability.

2.3 Revenue recognition

Revenue from sales is recognized when significant risks and rewards of title and ownership of the goods are transferred upon delivery to the final refiner.

Interest income is recognized on a time proportion basis, taking account of the principal outstanding and the effective rate over the period of maturity, when it is determined that such income will accrue to the Corporation.

2.4 Earnings or loss per share

Basic earnings or loss per share is computed by dividing earnings or loss available to common shareholders by the weighted average number of common shares outstanding during the period. The treasury stock method is used to

calculate diluted earnings or loss per share. Diluted earnings or loss per share is similar to basic earnings or loss per share, except that the denominator is increased to include the number of additional common shares that would have been outstanding assuming that options with an average market price for the period greater than their exercise price are exercised and the proceeds used to repurchase common shares. In applying the treasury stock method, options with an exercise price greater than the average quoted market price of the common shares are not included in the calculation of diluted earnings per share, as the effect is anti-dilutive.

3. CHANGES IN ACCOUNTING POLICIES

Effective April 1, 2007, the Corporation adopted two new accounting standards that were issued by the Canadian Institute of Chartered Accountants ("CICA"):

- Handbook Section 1530 – Comprehensive Income
- Handbook Section 3855 – Financial Instruments – Recognition and Measurement

As provided under the standards, the comparative interim consolidated financial statements have not been restated, but any transitional effects have been recorded as an adjustment to deficit as at April 1, 2007.

Section 1530 – Comprehensive income

This section describes the reporting and disclosure standards with respect to comprehensive income and its components. Comprehensive income is composed of net income and other comprehensive income. The components of comprehensive income are disclosed in the consolidated statement of comprehensive income. The Corporation's had no other comprehensive income during the period ending June 30, 2007.

Section 3855 – Financial instruments – recognition and measurement

This section establishes standards for recognizing and measuring financial assets, financial liabilities and non-financial derivatives. It requires that financial assets and liabilities including derivatives be recognized on the balance sheet when the Corporation becomes a party to the contractual provisions of the financial instrument or a non-financial derivative contract. All financial instruments should be measured at fair value on initial recognition except for certain related party transactions. Fair value is the amount at which an item could be exchanged between willing parties. Measurement in subsequent periods depends on whether the financial instruments have been classified as held for trading, available-for-sale, held-to-maturity, loans and receivables, or other liabilities.

The Corporation designated certain financial assets and liabilities and adopted the following new accounting policies:

Cash and cash equivalents

Cash and cash equivalents are classified as "assets available-for-sale" and are measured at fair value at each balance sheet date. Any changes in fair value are recognized in net income in the period in which the change arise. Fair value is calculated using published price quotations in an active market, where applicable. The carrying values for cash and cash equivalents at March 31 2007 approximated their fair values because of their short terms of maturity; no adjustments were made to the opening values.

Accounts receivable and amount receivable from related party

These assets are classified as "loans and receivables" and are recorded at amortized cost, which upon its initial measurement is equal to its fair value. Subsequent measurements are recorded at amortized cost using the effective interest rate method. The carrying values for these assets at March 31 2007 approximated their fair values because of their short terms of maturity; no adjustments were made to the opening values.

Asset retirement fund

The asset retirement funds are classified as "assets available-for-sale" and are measured at fair value at each balance sheet date. Any changes in fair value are recognized in net income in the period in which the change arises. Fair value is calculated using the quoted prices of South African equities in an active market, with interest and dividends recognized in net income; unrealized gains or losses are recognized in Other Comprehensive Income. Any equities without market quotes are carried using the cost method. The carrying values for the asset retirement funds at March 31 2007 approximated their fair values; no adjustments were made to the opening values.

Accounts payable and accrued liabilities and amount payable to related party

These liabilities are classified as "other financial liabilities" and are initially measured at their fair values. Subsequent measurements are recorded at amortized cost using the effective interest rate method. The carrying values for these liabilities at March 31 2007 approximated their fair values; no adjustments were made to the opening values.

Senior unsecured convertible debentures

The sum of the carrying amounts assigned to the liability and equity components of the convertible debenture on initial recognition is always equal to the carrying amount that would be ascribed to the instrument as a whole. No gain or loss arises from recognizing and presenting the components of the instrument separately. The relative fair value method is used to determine the value of the option directly either by reference to the fair value of a similar option, if one exists, or by using an option pricing model. The value determined for each component is then adjusted on a pro rata basis to the extent necessary to ensure that the sum of the carrying amounts assigned to the components equals the amount of the consideration received for the convertible debenture.

4. BUSINESS ACQUISITION

Acquisition of Mine Waste Solutions (Proprietary) Limited

First Uranium, through its wholly-owned subsidiary FUSA, acquired all of the issued and outstanding shares of MWS. MWS owns and operates an existing gold mine tailings and re-processing facility adjacent to First Uranium's Buffelsfontein Tailings Recovery Project in South Africa.

The MWS acquisition closed on June 6, 2007 (effective date of acquisition), at which point First Uranium assumed management control of MWS. For accounting purposes, net income from MWS operations of \$2,100,772 for the period from April 1, 2007 to June 6, 2007 has been applied to reduce the cost of the MWS acquisition.

A total consideration of US\$32,201,377 was paid for the MWS acquisition in the form of an issuance of 3,093,980 First Uranium common shares valued at US\$31,557,061 and US\$644,316 in cash for transaction costs.

The table below sets out the preliminary allocation of the purchase price to the assets acquired and liabilities assumed, based on preliminary estimates of fair value. Final valuations of the assets and liabilities listed below have not been completed. The future income tax assets and liabilities are not yet complete due to the inherent complexity associated with these valuations. The purchase price allocation is only preliminary and is subject to adjustments.

The acquisition was accounted for by the purchase method of accounting and the estimated allocation of fair value to the assets acquired and liabilities assumed as at June 6, 2007 was:

	US\$'000
Current assets	4,608
Property, plant and equipment	41,729
Asset retirement fund	1,950
Total assets acquired	48,287
Current liabilities	1,476
Asset retirement obligation	3,493
Lease obligations	28
Future tax liability	11,089
Total liabilities assumed	16,086
Net assets acquired	32,201

Current assets include cash and cash equivalents of US\$1,309,519 (net of transaction costs) (see Note 18.4).

Although the estimated allocation of fair value to the assets acquired and liabilities assumed is subject to changes as additional information becomes available, the final allocation is not expected to differ materially from the estimated allocation.

The goodwill was assigned to the MWS operating unit.

ACCOUNTS RECEIVABLE

	June 30, 2007	March 31, 2007
	US\$'000	US\$'000
Trade receivables	273	99
Value Added Tax and Goods and Services Tax	3,347	1,463
Prepayments and advances	142	144
Deposits and guarantees	10	7
	3,772	1,713

6. INVENTORIES

	June 30, 2007	March 31, 2007
	US\$'000	US\$'000
Spares and consumables	694	292
Gold work-in-progress	651	-
	1,345	292

7. PROPERTY, PLANT AND EQUIPMENT

	Cost US\$'000	Accumulated amortization US\$'000	Net carrying amount US\$'000
June 30, 2007			
Land and buildings	863	-	863
Mine infrastructure	6,982	-	6,982
Mining assets	26,612	-	26,612
Tailings for processing	24,228	-	24,228
Mining rights	13	-	13
Plant and equipment	28,591	(294)	28,297
Motor vehicles	202	(18)	184
Office furniture and equipment	66	(4)	62
Computer equipment and software	216	(24)	192
Total	87,773	(340)	87,433

	Cost US\$'000	Accumulated amortization US\$'000	Net carrying amount US\$'000
March 31, 2007			
Land and buildings	863	-	863
Mine infrastructure	3,710	-	3,710
Mining assets	16,942	-	16,942
Mining rights	13	-	13
Plant and equipment	9,000	-	9,000
Motor vehicles	179	(8)	171
Office furniture and equipment	56	(1)	55
Computer equipment and software	205	(5)	200
Total	30,968	(14)	30,954

Included in the above are mining related assets with a net carrying value of US\$44.6 million (March 31, 2007: US\$29.0 million) related to the Ezulwini Mine and US\$39.3 million (March 31, 2007: US\$0.8 million) related to the Buffelsfontein Tailings Recovery Project.

As at June 30, 2007, all property, plant and equipment were owned by the Corporation, except for motor vehicles with a net carrying value of US\$21,217 which are held under lease contracts.

As at March 31, 2007, all property, plant and equipment were owned by the Corporation.

Ezulwini Mine

The Ezulwini Mine involves the re-commissioning of an underground uranium and gold mining operation located on the outskirts of the town of Westonaria in Gauteng Province, South Africa. The mine, previously on care and maintenance, is being readied for production. The mine was constructed in the 1960s. In 2001, mine production at Ezulwini was ceased primarily as a result of capital constraints compounded by a weak gold and uranium market environment. The geology of the Ezulwini property includes a number of reef packages, with the Upper Elsburg and Middle Elsburg reefs being the primary focus of First Uranium's mine reopening plans at the Ezulwini Mine. The development of the Ezulwini Mine includes the rehabilitation and re-engineering of the main mine shaft through the installation of a floating steel tower, de-stressing the area where the shaft pillar intersects the shaft barrel, and the construction of uranium and gold processing facilities.

On October 19, 2006, EMC entered into an agreement with Randfontein Estates Limited ("REL"), a wholly-owned subsidiary of Harmony Gold Mining Company Limited ("Harmony"), in respect of the purchase of certain surface and underground assets relating to the Ezulwini Mine, including two shaft headgears and four winders, fans, compressors, generators and underground equipment as well as the necessary surface freehold required to operate the mine. A total consideration of US\$7.8 million was paid to REL. The effective date of the transaction was December 22, 2006.

As part of the Ezulwini acquisition, the related environmental rehabilitation trust fund amounting to US\$2.7 million (see Note 8 - Asset retirement funds) was transferred into the Ezulwini trust fund and EMC took over the related environmental rehabilitation provision of US\$5.1 million (see Note 13 - Asset retirement obligation) as determined by the South African Department of Minerals and Energy (the "DME"). The difference of US\$2.4 million between the environmental rehabilitation trust fund and the environmental rehabilitation provision has been capitalised as part of mining infrastructure.

On December 8, 2006 the Ezulwini mining right was awarded to Simmer & Jack. On December 20, 2006, EMC and Simmer & Jack entered into an agreement (the "Ezulwini Mining Right Agreement") pursuant to which Simmer & Jack agreed to take all necessary steps to obtain all ministerial approvals in order to effect the transfer of the Ezulwini mining right from Simmer & Jack to EMC.

The Ezulwini Mine shaft stabilization is expected to be completed by September 2007. The Corporation expects to commence hoisting ore in October 2007, with the first gold plant module scheduled for completion in April 2008 (accelerating the previously disclosed planned dates for production by three months) and the first uranium plant module scheduled for completion in June 2008. The Corporation is in discussions with third parties to toll treat the ore prior to the commissioning of the gold plant.

The Corporation is commencing the development to access the shaft distress cut and have accessed most of the Upper Elsburg horizon.

Buffelsfontein Tailings Recovery Project

The Buffelsfontein Tailings Recovery Project is a uranium and gold tailings recovery operation located in the western portion of the Witwatersrand Basin. Hydraulic mining of the tailings dams on the Buffelsfontein property will be conducted using high pressure water cannons to slurry the tailings which will then be pumped to processing plants for the recovery of uranium and gold. Following the MWS acquisition (see Note 4), First Uranium will conduct hydraulic mining of two tailings dams on the MWS property. The Corporation will construct a pipeline between the MWS property and the Buffelsfontein property and expand the plant facilities on the MWS property.

In October 2005, Simmer & Jack purchased Buffelsfontein Gold Mines Limited ("BGM"), consisting of the Buffelsfontein and Hartebeesfontein underground gold mines and mill (the "BGM Underground Mine"), out of provisional liquidation (the "Buffelsfontein Liquidation Acquisition").

BGM holds an old order mining right in respect of mining gold at the BGM Underground Mine but not for the recovery of the uranium in the tailings dams at Buffelsfontein. On June 4, 2007 the DME granted to BGM a prospecting right with respect to uranium and other minerals in the Buffelsfontein property and tailings dams subject to certain conditions which are expected to be satisfied in due course. BGM has also filed with the DME an application to convert its old order mining right for BGM into a new order mining right. If and when this conversion application is approved, BGM intends to file with the DME one or more applications (which, together with the foregoing conversion application, are collectively referred to herein as the "Buffelsfontein Conversion Application") to: (i) amend, with effect from the date of conversion, the new order mining right to include the authority to mine for uranium underground and for gold, uranium and other minerals in respect of the tailings; (ii) divide the new order mining right, if granted, into separate new order mining rights — one in respect of the mining for gold, uranium and other minerals at the BGM Underground Mine and the other, the Buffelsfontein Tailings Mining Right, in respect of the mining of the gold, uranium and other minerals in the Buffelsfontein tailings dams; and (iii) cede the Buffelsfontein Tailings Mining Right, if granted, to MWS, a wholly-owned subsidiary of FUSA. The recognition of the BGM transaction will only take effect when the above stated conditions precedent are met.

On December 20, 2006, FUSA, BGM and Simmer & Jack entered into an agreement (the "Buffelsfontein Tailings and Rights Agreement") pursuant to which, among other things: (i) BGM agreed to take all necessary steps to obtain all ministerial approvals required for the items requested in the Buffelsfontein Conversion Application in order to effect the transfer of the Buffelsfontein Tailings Mining Right to FUSA as soon as possible; (ii) BGM agreed to sell to FUSA upon FUSA's receipt of the Buffelsfontein Tailings Mining Right, the Buffelsfontein tailings dams as well as certain property required for construction of the proposed processing plants, and grant to FUSA a right to the tailings arising from BGM's ongoing mining operations at its underground Buffelsfontein mine; and (iii) BGM agreed to grant a servitude to FUSA for access and egress to BGM's property to enable FUSA, its employees, consultants, agents and subcontractors access for purposes of constructing, servicing and operating the uranium and gold processing plants and tailings pipelines to be built by FUSA.

The underground mines that were purchased by Simmer & Jack pursuant to the Buffelsfontein Liquidation Acquisition will not form part of First Uranium's assets at the Buffelsfontein Tailings Recovery Project.

8. ASSET RETIREMENT FUNDS

	June 30, 2007 US\$'000	March 31, 2007 US\$'000
Opening balance	2,791	-
Trust fund obtained on acquisition of Ezulwini mine	-	2,686
Trust fund obtained on acquisition of MWS (see Note 4)	1,950	-
Investment income	140	82
Contributions in respect of guarantee	-	103
Costs incurred	(105)	(80)
Foreign exchange differences	99	-
Closing balance	4,875	2,791

The asset retirement funds consisting of environmental rehabilitation trust funds are under the Corporation's control and are to be used to fund the respective mining operation's rehabilitation liabilities. Funds in the trust consist of primarily cash held in interest bearing accounts, together with investments in South African equities. An accredited South African financial institution manages the trust funds under the direction of the trustees. The trust deed limits the trustees' investments to institutions and investment vehicles as referred to in section 37A of the South African Income Tax Act.

GUARANTEES

The following guarantees have been issued:

To	Regarding	Guarantee value US\$'000
DME	Ezulwini environmental rehabilitation provision	5,309
Murray and Roberts Cementation (Pty) Ltd	Ezulwini shaft rehabilitation project	1,413
Eskom Holdings Ltd	Electricity accounts	1,201

The Ezulwini rehabilitation trust funds included in the asset retirement funds (see Note 8) have been pledged as security against the guarantees.

10. ACCOUNTS PAYABLE AND ACCRUED LIABILITIES

	June 30, 2007 US\$'000	March 31, 2007 US\$'000
Trade payables	8,404	5,302
Accruals	946	400
	9,350	5,702

The trade payables primarily relate to committed purchases for capital expansion at the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project.

11. LEASE OBLIGATIONS

	June 30, 2007 US\$'000	March 31, 2007 US\$'000
Present value of finance lease obligations payable within 1 year	13	-
- Minimum lease payments	16	-
- Finance charges	(3)	-
Present value of finance lease obligations payable within 2 to 5 years	15	-
- Minimum lease payments	16	-
- Finance charges	(1)	-
Payable in:	28	-
2007	5	-
2008	23	-
Total debt	28	-
Current portion of lease obligations	13	-
Non-current portion of lease obligations	15	-

Finance leases were obtained for the purchase of motor vehicles. The average monthly instalments payable are US\$1,618 and interest is charged at the South African prime rate minus 1%.

SENIOR UNSECURED CONVERTIBLE DEBENTURES

On May 3, 2007 First Uranium issued senior unsecured convertible debentures (the "Debentures") in denominations of Cdn \$1,000 in the principal amount of US\$135,060,000 (Cdn\$150,000,000). The interest rate on the Debentures is 4.25% per annum. The Debentures pay interest semi-annually in arrears on June 30th and December 31st and have a maturity date of June 30, 2012. The Debentures are convertible at the option of the holder into common shares at any time prior to the maturity date at an exchange price of Cdn\$16.42 per share.

The Debentures may not be redeemed by the Corporation prior to June 30, 2010. On or after June 30, 2010 and prior to the maturity date, the Debentures may be redeemed by the Corporation, in whole or in part from time to time, provided that the weighted average trading price of the Common Shares on the TSX for the 20 consecutive trading days ending five trading days prior to the date on which notice of redemption is provided is at least 130% of the exchange price of Cdn\$16.42.

First Uranium has the option, subject to regulatory approval, to satisfy its obligations to repay the principal amount of the Debentures upon redemption or at maturity by issuing and delivering that number of freely tradable Common Shares obtained by dividing the principal amount of the Debentures by 95% of the weighted average trading price of the Common Shares on the TSX for the twenty consecutive trading days ending five trading days before the date fixed for the redemption or maturity.

The equity component of the Debentures was valued on issuance at US\$46,503,825 which is recorded as a separate component of shareholders' equity. The conversion option was valued using the Black-Scholes pricing model with the following assumptions: Expected dividend yield 0%, expected volatility 56%, risk free interest rate 4.2% and expected life of five years.

The liability component of the Debentures is being accreted such that the liability at maturity will equal the gross proceeds of US\$135,060,000 (Cdn\$150,000,000) less conversions. The amount accreted in the quarter ended June 30, 2007 was US\$1,070,402. The cost of issuing the Debentures amounted to US\$4,498,778.

As at June 30, 2007, no portion of the Debenture had been converted. Interest paid on the Debentures for the period ended June 30, 2007 amounted to US\$956,679.

13. ASSET RETIREMENT OBLIGATIONS

	June 30, 2007 US\$'000	March 31, 2007 US\$'000
Opening balance	5,377	-
Provision taken over with acquisition of the Ezulwini Mine	-	5,133
Provision taken over with acquisition of MWS (see Note 4)	3,500	-
Accretion expense	-	244
Foreign exchange differences	134	-
Total obligation	9,011	5,377

The environmental rehabilitation provision taken over by EMC as part of the acquisition of the Ezulwini assets was determined by the DME as at November 2006. During March 2007 an independent review was performed by Johan Fourie & Associates on the Ezulwini assets relating to environmental rehabilitation provision.

The environmental rehabilitation provision taken over as part of the MWS acquisition is to be partly funded by its rehabilitation trust fund (see Note 8). The balance of the provision is in respect of post cessation of operations expenditure and will be financed out of the proceeds from the sale of plant and equipment following cessation of the respective operations.

14. SHARE CAPITAL

	Number of shares		June 30, 2007 US\$'000	March 31, 2007 US\$'000

Shares issued in public or private offering	-	33,350	-	201,795
Shares issued in respect of acquisition (see Note 4)	3,094	-	31,557	-
Exercise of stock options	-	800	-	728
Contributed surplus relating to stock options exercised	-	-	-	27
	124,780	121,686	238,283	206,726
Less: Share issue costs	-	-	(24,053)	(24,053)
Balance, closing of period	124,780	121,686	214,230	182,673

Authorized

The authorized share capital of First Uranium consists of an unlimited number of common shares.

Issued and outstanding

In December 2005 and January 2006 First Uranium raised US\$4.2 million through the private placement issues of 4,875,000 shares at Cdn\$1 per share. US\$3 million of the capital raised was used to acquire the 20% interest in FUSA.

On June 1, 2006, 800,000 stock options were exercised for proceeds of US\$728,480.

As part of the First Uranium reorganization (the "Reorganization") and initial public offering (the "Offering") in December 2006:

- the 5,675,001 issued and outstanding shares of First Uranium were split resulting in an increase in the issued and outstanding shares to 6,613,394. This split was determined based on the initial public offering issue price of Cdn\$7 per share and the agreed valuation of the assets, which was supported by a valuation assessment provided by an independent valuator;
- First Uranium issued to Simmer & Jack 26,416,295 shares valued at US\$187,495,878 for 1,196 FUL shares relating to the 80% FUSA shares previously owned by Simmer & Jack;
- First Uranium issued to Simmer & Jack 55,306,358 shares valued at US\$391,732,461 for 2,504 FUL shares relating to the 90% EMC shares previously owned by Simmer & Jack;
- First Uranium issued 33.35 million shares to the public at Cdn\$7 per share for gross proceeds of US\$201.8 million;

Under continuity of interest, the shares issued to Simmer & Jack for EMC and FUSA are deemed to have always been outstanding.

On June 6, 2007, First Uranium issued 3,093,980 shares valued at US\$31,557,061 relating to the acquisition of MWS (see Note 4).

15. CONTRIBUTED SURPLUS – STOCK-BASED COMPENSATION

The stock-option plan (the "Option Plan") for employees, officers, directors and certain consultants provides ongoing support to First Uranium and its subsidiaries. Under the Option Plan, options typically are granted for a period of up to ten years following the date of grant. The amounts granted usually reflect the level of responsibility of the particular optionee and his or her contributions to First Uranium.

The Board of Directors has the discretion to set the terms of any vesting schedule of each option granted. Except in specified circumstances, options are not assignable and non-transferable, and terminate 90 days after the optionee ceases to be employed or associated with First Uranium.

The terms of the Option Plan further provide that the price at which shares may be issued under the Option Plan shall not be less than the volume weighted average trading price of the shares on the TSX for the five trading days immediately preceding the day the option is granted.

The following table details the movements of contributed surplus during the period:

	June 30, 2007 US\$'000	March 31, 2007 US\$'000
Balance, beginning of period	2,460	27
Transfer to share capital surplus relating to stock options exercised	-	(27)
Stock options granted during the period	770	2,460
Balance, end of period	3,230	2,460

Assumptions

The fair value of shares used to calculate the compensation expense was determined as the share price on the grant date adjusted by the probability of the recipients remaining employed or associated with the Corporation until the vesting date.

For purposes of stock-based compensation, the fair values of these stock options were estimated using the Black-Scholes option pricing model with the assumptions used for the grants as follows:

	June 30, 2007	March 31, 2007
Expected dividend yield	0%	0%
Expected volatility of the Corporation's share price	56%	85%
Risk free interest rate – Canadian rates	4.81%	3.9%
Expected life	3 years	3 years

Due to the short history of First Uranium trading on the TSX, changes in the subjective input assumptions can materially affect the fair value estimate, and therefore, the existing model does not necessarily provide a reliable measure of the fair value of First Uranium's stock options.

During the 2007 fiscal year, 1,223,001 stock options were granted for a period of 10 years following the date of the grant and are subject to vesting within 2 years from the date of grant.

During the quarter ending June 30, 2007, 60,000 stock options were granted for a period of 10 years following the date of the grant and are subject to vesting within 2 years from the date of grant.

The following table is a summary of the Corporation's options granted under its stock-based compensation plan:

	Number of options		Weighted average exercise price (Cdn\$)	
	June 30, 2007	March 31, 2007	June 30, 2007	March 31, 2007
Outstanding options at beginning of period	1,223,001	800,000	7.30	1.00
Granted during the period	60,000	1,223,001	12.87	7.30
Exercised during the period	-	(800,000)	-	(1.00)
Outstanding options at end of period	1,283,001	1,223,001	7.56	7.30

The stock-based compensation expense recognized in the statements of operations and deficit is US\$770,094 for the quarter (June 30, 2006: US\$nil). As at June 30, 2007, the aggregate unexpensed fair value of unvested stock options granted amounted to US\$2,366,912 (March 31, 2007: US\$2,858,354).

The following table summarizes information about the First Uranium's outstanding stock options at June 30, 2007:

Exercise price ranges Cdn\$	Options outstanding			Options exercisable		
	Number outstanding at June 30, 2007	Weighted average remaining life (years)	Weighted average exercise price (Cdn\$)	Number outstanding at June 30, 2007	Weighted average remaining life (years)	Weighted average exercise price (Cdn\$)
7.00 to 8.99	1,127,144	9.48	7.04	339,051	9.48	7.04
9.00 to 11.99	95,857	9.68	10.37	31,952	9.68	10.37
12.00 to 13.99	60,000	9.91	12.87	20,000	9.91	12.87
	1,283,001	9.51	7.56	391,003	9.51	7.61

16. FOREIGN EXCHANGE GAINS

	June 30, 2007 US\$'000	June 30, 2006 US\$'000
Foreign exchange gains	6,425	746

The foreign exchange gains of \$6.4 million during the three months ending June 30, 2007 are the combined result of the fact that the Corporation reports in US dollars, while the majority of its cash funds are held in Canadian dollar ("Cdn\$") and in South African rand ("ZAR"), each of which have strengthened against the US dollar ("US\$") during the quarter ending June 30, 2007. The increase in value of the Canadian dollar versus the US dollar during the quarter ending June 30, 2007 was partially offset by the Corporation having Canadian dollar denominated debt with the issue of the Debentures.

The net proceeds from the Offering were held in South African rand during the quarter ending June 30, 2007. At the beginning of the quarter the US\$/ZAR exchange rate was 7.305, while at the end of the quarter the US\$/ZAR exchange rate was 7.076.

On May 3, 2007, when First Uranium received the net proceeds from the issue of the Debentures (the majority of the Corporation's Canadian funds held during the quarter ending June 30, 2007), the Cdn\$/US\$ exchange rate was 0.900. At June 30, 2007, the Cdn\$/US\$ exchange rate was 0.944.

17. BASIC AND DILUTED EARNINGS (LOSS) PER SHARE

	June 30, 2007	June 30, 2006
Basic earnings (loss) per share of (US\$)	0.04	(0.03)
is calculated based on net income (loss) for the period of (US\$'000)	5,471	(2,238)
and a weighted average number of shares outstanding of ('000)	122,502	87,602
Diluted earnings (loss) per share of (US\$)	0.04	(0.03)
is calculated based on net income (loss) for the period of (US\$'000)	5,471	(2,238)
and a diluted weighted average number of shares outstanding of ('000)	122,989	87,602

The impact of the debentures issued on May 3, 2007, has been excluded from the diluted shares computation because it was anti-dilutive for earnings per share purposes.

18. NOTES TO THE CASH FLOW STATEMENT

18.1 Non-cash interest income

	June 30, 2007 US\$'000	June 30, 2006 US\$'000
Total interest income	(4,366)	(70)
Add back: Cash interest income	4,169	-
	(197)	(70)

(Increase)/decrease in net amounts receivable from related parties

	June 30, 2007 US\$'000	June 30, 2006 US\$'000
Decrease in amounts receivable from related parties	5,873	594
Increase in amounts payable to related parties	156	1,725
Add back:		
- Interest income accrued on amounts receivable	57	70
- Interest expense accrued on amounts payable	-	(144)
	6,086	2,245

18.3 Additions to property, plant and equipment

	June 30, 2007 US\$'000	June 30, 2006 US\$'000
Total additions to property, plant and equipment	(15,075)	(590)
Add back:		
- Accrued capital expenditure	5,263	-
	(9,812)	(590)

18.4 Net cash movement on acquisition of MWS

	June 30, 2007 US\$'000	June 30, 2006 US\$'000
Cash and cash equivalents taken over on date of acquisition	1,954	-
Less: Expenses related to MWS acquisition	(644)	-
	1,310	-

19. COMMITMENTS AND CONTINGENCIES**Commitments**

	June 30, 2007 US\$'000	March 31, 2007 US\$'000
Capital commitments – Ezulwini Mine	26,100	14,836
Capital commitments – Buffelsfontein Tailings Recovery Project	3,841	-
Total contractual obligations	29,941	14,836

The capital commitments are payable within one year.

Contingencies

A loan agreement (the "Aberdeen Loan Agreement") was entered into by Simmer & Jack with Aberdeen International Inc. ("Aberdeen") dated March 30, 2006 pursuant to which Aberdeen provided to Simmer & Jack a loan facility in the amount of US\$10 million in respect of the financing of Simmer & Jack's acquisition of BGM and the BGM Underground Mine. As part of the consideration for the facility, Simmer & Jack granted to Aberdeen a net smelter royalty on all of the gold assets held by Simmer & Jack through BGM. The royalty as determined in the Aberdeen Loan Agreement will be applicable to any gold produced by FUSA from tailings acquired from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement (see Note 7) and will continue until the loan is repaid to Aberdeen, which is expected to occur by December 31, 2008 (unless extended by Simmer & Jack to December 31, 2010). In addition, pursuant to the Aberdeen Loan Agreement, Aberdeen has the sole option, at any time following the one year anniversary of the first advance there under to convert the amount of the facility outstanding at that time into ordinary shares of Simmer & Jack at a conversion rate of ZAR0.80, subject to the approval of Simmer & Jack's shareholders. In the event that such shareholder approval is not obtained within a reasonable period of time, Aberdeen will be entitled to a 1.0% net smelter royalty in perpetuity on gold produced by properties held by BGM, including the Buffelsfontein Tailings Recovery Project.

On December 20, 2006, FUSA, Simmer & Jack and Aberdeen entered into an arrangement agreement (the "Aberdeen Arrangement Agreement") pursuant to which (i) Simmer & Jack confirmed that it will pay to Aberdeen the amount of any royalty owing to Aberdeen under the Aberdeen Loan Agreement in respect of gold produced from the tailings to be acquired by FUSA from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement, and (ii) FUSA confirmed that it will pay to Simmer & Jack, immediately prior to any payment contemplated in (i) above, an amount equal to the amount of any royalty payment to be made by Simmer & Jack to Aberdeen in respect of gold produced from the tailings to be acquired by FUSA from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement.

Pursuant to the Buffelsfontein Tailings and Rights Agreement dated December 20, 2006 among BGM, Simmer & Jack and FUSA, in consideration for the cession of the Buffelsfontein Tailings and Mining Right from BGM to FUSA as well as certain servitudes, and the right to the tailings arising from future underground mining operations by BGM at the BGM Underground Mine, FUSA agreed to pay to BGM a royalty of 1% plus value added tax of the gross revenue earned by FUSA from the sale of uranium, gold, sulphur and other minerals recovered from the processing of tailings acquired by FUSA from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement.

In summary, as and when there is production from the tailings acquired from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement, FUSA will become liable to pay: (i) to Simmer & Jack, under the Aberdeen Arrangement Agreement, an amount equal to the royalty payable by Simmer & Jack to Aberdeen pursuant to the Aberdeen Loan Agreement in respect of the tailings to be acquired from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement, and (ii) to BGM the above-mentioned 1% royalty pursuant to the terms of the Buffelsfontein Tailings and Rights Agreement.

20. FINANCIAL INSTRUMENTS

Financial risk factors

The Corporation's activities expose it to a variety of financial risks, including the effects of changes in debt and equity market prices, foreign currency exchange rates and interest rates. The Corporation's overall risk management program focuses on the unpredictability of financial markets and seeks to minimize potential adverse effects on the financial performance of the Corporation. The Corporation does not hedge its exposure to foreign currency exchange risk.

Risk management carried out by the Corporation is approved by the Board of Directors.

(i) Foreign exchange and commodity price risk

The Corporation does not hedge its exposure to foreign currency exchange risk nor does it hedge its exposure to commodity price fluctuation risk.

(ii) Interest rate risk

The Corporation does not hedge its exposure to interest rate risk. Deposits attract interest at rates that vary with prime. The Corporation's policy is to manage interest rate risk so that fluctuations in variable rates do not have a material impact on the statement of operations and deficit.

(iii) Credit risk

The Corporation has no significant concentrations of credit risk. The Corporation has policies in place to ensure that sales of products and services are made to customers with an appropriate credit history. The Corporation has policies that limit the amount of credit exposure to any one financial institution.

(iv) Liquidity risk

Prudent liquidity risk management implies maintaining sufficient cash and marketable securities, the availability of funding through an adequate amount of credit facilities and the ability to close out market positions. The Corporation manages liquidity risk through an ongoing review of future commitments and credit facilities. Cash flow forecasts are prepared and adequate utilized borrowing facilities are monitored.

Fair value estimation

The fair value of publicly traded derivatives and trading securities is based on quoted market prices at the balance sheet date.

In assessing the fair value of other financial instruments, the Corporation uses a variety of methods and makes assumptions that are based on market conditions existing at each balance sheet date. Option pricing models and estimated discounted value of future cash flows, are used to determine fair value for the remaining financial instruments.

The face value less any estimated credit adjustments for financial assets and liabilities with a maturity of less than one year are assumed to approximate their fair values. The fair value of financial liabilities for disclosure purposes is estimated by discounting the future contractual cash flows at the current market interest rate available to the Corporation for similar financial instruments.

The actual disclosed values of the financial instruments all approximate the fair values of these instruments.

21. RELATED PARTY TRANSACTIONS AND COMMITMENTS

	As at June 30, 2007 US\$'000	As at March 31, 2007 US\$'000
Related party balances		
FUSA amount (payable to)/receivable from Simmer & Jack	(156)	5,079
First Uranium amount receivable from Simmer & Jack	890	1,684

	Three months to June 30, 2007 US\$'000	Three months to June 30, 2006 US\$'000
Related party transactions		
Shared services fees paid to Simmer & Jack	(528)	(445)
Fees paid to empowerment company	(53)	-
Interest paid to Simmer & Jack by EMC	-	(144)
Interest received from Simmer & Jack by FUSA	57	70

On December 20, 2006 First Uranium and Simmer & Jack entered into a shared services agreement (the "Shared Services Agreement").

Pursuant to the terms of the Shared Services Agreement, First Uranium may retain certain services to be provided by Simmer & Jack, including project management and technical services, cash management and investment services, accounting, treasury and financial services, corporate secretarial services and human resources and staffing services, including payroll and benefits administration, and such other services as may be required by First Uranium and which Simmer & Jack is able and willing to provide. Subsequent to entering into the agreement, the Corporation hired eight senior executives, including Mr. Miller, President and Chief Executive Officer, Mr. Fisher, Executive Vice President and Chief Operating Officer and Ms. Emma Oosthuizen, Senior Vice President and Chief Financial Officer, and other staff, resulting in certain of these services being no longer required to be provided by Simmer & Jack. The 2007 expense relates to such services received, together with those provided prior to December 2006.

During the three months ending June 30, 2007, \$527,881 shared services fees were charged by Simmer & Jack of which \$467,910 were capitalized, representing services provided in respect of technical services for the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project.

Prior to December 2006, the Corporation shared its premises with other companies, including Simmer & Jack, which had common management and directors and reimbursed the related companies for its proportional share of expenses or was reimbursed by the related companies for their proportional expenses. During the three months ending June 30, 2007, the Corporation was charged \$303,306 for consulting services provided by related directors, officers and consultants of the Corporation.

In addition, First Uranium has agreed to reimburse Simmer & Jack with respect to 50% of fees (to a maximum of ZAR125,000 per month) that Simmer & Jack is required to pay to an empowerment company for consulting services regarding transformation, human resources and occupational health and safety. BJ Njenje, AX Sisulu and SLB Mapisa, shareholders of the empowerment company, are also directors of Simmer & Jack.

Waterpan Mining Consortium ("Waterpan") currently holds a 10% shareholding in EMC. On December 20, 2006, Waterpan, FUL and the Corporation entered into a purchase agreement (the "Waterpan Purchase Agreement") pursuant to which Waterpan agreed to sell its shares in EMC to FUL and as consideration for such sale, First Uranium will issue 6,141,009 common shares of First Uranium to Waterpan (the "Waterpan Shares"). The closing of the transaction is subject to approval of the South African Reserve Bank. Pursuant to the Waterpan Purchase Agreement, Waterpan has agreed not to sell or transfer 90% of the Waterpan Shares for a period of two years from the date of issuance. One shareholder of Waterpan is a director of EMC, two other shareholders of Waterpan are officers and/or employees of First Uranium and EMC.

22. SEGMENTED INFORMATION

Segmented information is presented in respect of the Corporation's business and geographical segments. The primary format business segments, is based on the Corporation's management and internal reporting structure. Inter-segment reporting is determined on an arm's length basis.

Segment results, assets and liabilities include items directly attributable to a segment as well as those that can be allocated on a reasonable basis. Unallocated items comprise mainly income earning assets and revenue, interest-bearing loans, borrowing and expenses, and corporate assets and expenses. Segment capital expenditure is the total cost incurred during the period to acquire segment assets that are expected to be used for more than one period.

FIRST URANIUM CORPORATION

MANAGEMENT DISCUSSION AND ANALYSIS

For the three months ended
June 30, 2007 and June 30, 2006

Management's Discussion and Analysis of The Unaudited Consolidated Financial Condition and Results of Operations

for the three months ended June 30, 2007 and June 30, 2006

Set out below is a review of the activities, unaudited consolidated results of operations and financial condition of First Uranium Corporation and its subsidiaries ("First Uranium" or the "Corporation") for the three months ended June 30, 2007 ("Q1 2008") and June 30, 2006 ("Q1 2007"), together with certain trends and factors that are expected to have an impact in the future. This management's discussion and analysis of the consolidated financial position and results of operations ("MD&A") is intended to supplement and complement the unaudited consolidated financial statements and notes thereto for Q1 2008 and Q1 2007 (collectively the "Financial Statements") which have been prepared in accordance with Canadian generally accepted accounting principles ("Canadian GAAP"). The MD&A should be read in conjunction with the Financial Statements and First Uranium's audited consolidated financial statements for the fiscal year ended March 31, 2007 ("FY 2007") and the notes thereto and the related management's discussion and analysis. Information contained in this MD&A is based on information available as at August 10, 2007, unless otherwise indicated.

The reporting currency for the Corporation is the US dollar, and all amounts in the following discussion are in US dollars ("\$"), except where otherwise indicated.

This MD&A includes certain forward-looking statements. Please read the cautionary note at the end of this document.

Overall Performance

Highlights

During Q1 2008, First Uranium:

- Raised gross proceeds of Cdn\$150 million through an issue of 4.25% senior unsecured convertible debentures (the "Debentures").
- Filed revised technical reports for each of the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project, which indicated improvement to their respective NPVs and IRRs, reflecting the accelerated timetables for both projects.
- Accelerated capital investment at the Ezulwini Mine to advance the plant commissioning and production startup by three months.
- Acquired, effective June 6, 2007, 100% of the equity and management control of Mine Waste Solutions (Proprietary) Limited and its subsidiary Chemwes (Proprietary) Limited (collectively, "MWS") to advance the Buffelsfontein Tailings Recovery Project, following which First Uranium has commenced to record for its account, gold production from the MWS plant.
- The South African Department of Minerals and Energy (the "DME") acknowledged receipt of the Corporation's prospecting permit application on incremental ground contiguous to the Ezulwini Mine.

Subsequent to Q1 2008:

- First Uranium defined initial underground and surface drilling targets related to the possible expansion of the existing Ezulwini underground uranium (" U_3O_8 ") and gold ("Au") mine (the "Ezulwini Expansion Program").

In the second quarter of fiscal year 2008 ending September 30, 2007, the Corporation plans to process 1.5 million tonnes of tailings through its MWS gold plant, with expected production of over 12,000 ounces of gold.

Overview

First Uranium is a Canadian resource company focused on the development of uranium and gold projects in South Africa. The Corporation's goal is to become a significant producer of uranium and gold through the re-opening and development of the Ezulwini underground uranium and gold mine (the "Ezulwini Mine") and the construction of the Buffelsfontein tailings recovery project to recover uranium and gold from the existing surface tailings and future tailings, at the Buffelsfontein mine (the "Buffelsfontein Tailings Recovery Project"). To expand its production profile, First Uranium plans to continue to identify and acquire additional uranium and gold projects in southern Africa and beyond.

The common shares of First Uranium are listed on the Toronto Stock Exchange (the "TSX") and the Johannesburg Stock Exchange (the "JSE"). Simmer and Jack Mines, Limited ("Simmer & Jack") owns approximately 65.5% of the common shares of First Uranium. Simmer & Jack's shareholding was diluted from 67.2% during Q1 2008 as a result of the issuance by First Uranium of 3,093,980 common shares as consideration for the June 6, 2007 acquisition of Mine Waste Solutions (Proprietary) Limited and its subsidiary Chemwes (Proprietary) Limited (collectively, "MWS").

Through its subsidiary, First Uranium (Proprietary) Limited ("FUSA"), First Uranium has an agreement to acquire surface tailings from Buffelsfontein Gold Mines Limited ("BGM"), a subsidiary of Simmer & Jack. The Corporation originally planned to develop and construct a processing plant at the Buffelsfontein surface tailings site to reprocess these tailings to recover uranium and gold. However, with the acquisition of MWS, the Corporation acquired an operating gold mine tailings re-processing facility adjacent to Buffelsfontein. The Corporation intends to construct a pipeline to the MWS plant for processing the Buffelsfontein surface tailings as well as the tailings from the ongoing gold mining operations at BGM's underground gold mine. The Corporation also intends to expand the MWS plant to replace the plant originally planned at the Buffelsfontein mine site.

In December 2006, First Uranium completed a public offering of 33,350,000 common shares at Cdn\$7.00 per share for gross proceeds of \$201.8 million (the "Offering"). The proceeds of the Offering, net of underwriting fees and expenses, were \$177.7 million. The funds raised from the Offering and a portion of the net proceeds from the May 3, 2007 issuance of \$130.6 million of 4.25% senior unsecured convertible debentures due June 30, 2012 (the "Debentures"), net of underwriting fees and expenses, are being used to: (i) reopen, develop and rebuild the Ezulwini Mine and (ii) to develop the Buffelsfontein Tailings Recovery Project.

Financial Overview

First Uranium is a development stage company. The Corporation generated revenue of \$2.2 million during Q1 2008 from the operations of the MWS gold plant, which the Corporation assumed ownership of on June 6, 2007.

General, consulting and administrative expenditures fees as well as development activities at its two uranium and gold projects resulted in an operating loss of \$3.3 million in Q1 2008 (Q1 2007: \$2.9 million).

The net income of \$5.5 million in Q1 2008 is primarily the result of foreign exchange gains and net interest income earned, partially offset by operating losses. The Corporation incurred a net loss of \$2.2 million in Q1 2007 primarily from expenditures in connection with preparing its two uranium and gold projects for production.

As at June 30, 2007, the Corporation had cash and cash equivalents of \$275.2 million (June 30, 2006: \$1.2 million). With these funds and anticipated revenue from future sales of uranium and gold, the Corporation currently believes that it is fully funded and will be able to develop its two existing mining projects and advance them to full production as currently planned by 2010.

As at June 30, 2007, First Uranium had total assets of \$373.5 million, total liabilities of \$118.9 million and shareholders' equity of \$254.6 million.

Ezulwini Mine

The Corporation is in the process of re-commissioning the Ezulwini Mine located approximately 40 kilometres from Johannesburg on the outskirts of the town of Westonaria in Gauteng Province, South Africa. Re-commissioning activities, which involve the refurbishment of the shaft and construction of gold and uranium plants, began in earnest in December 2006, subsequent to the successful completion of the Offering. The Ezulwini Mine is part of the Ezulwini mining right, which includes certain surface and underground assets, acquired by Ezulwini Mining Company (Proprietary) Limited ("EMC") from Randfontein Estates Limited ("REL"), a wholly-owned subsidiary of Harmony Gold Mining Company Limited, including two shaft headgears, four hoists, fans, compressors, generators, a complete sub-vertical shaft infrastructure down to 2,100 metres below surface and underground equipment as well as the necessary surface freehold required to operate the mine.

Simmer & Jack is presently the registered owner of the Ezulwini mining right. On December 20, 2006, EMC and Simmer & Jack entered into an agreement (the "Ezulwini Mining Right Agreement") pursuant to which Simmer & Jack agreed to take all necessary steps to obtain all ministerial approvals in order to effect the ceding of the Ezulwini mining right from Simmer & Jack to EMC. The Corporation expects the transfer of the Ezulwini mining right to be completed in due course. EMC continues with the ongoing water pumping required to keep the Ezulwini Mine dry and to enable the shaft rehabilitation program and refurbishment of the infrastructure in the Middle Elsburg section, which will, in turn, allow hoisting of ore by October 2007. Construction of the metallurgical plant has started to allow the onsite treatment for gold by April 2008 and uranium by June 2008.

As previously reported, Scott Wilson Roscoe Postle Associates Inc. ("Scott Wilson RPA") prepared a preliminary economic assessment of the Ezulwini Mine for First Uranium in connection with the Offering. The assessment was subsequently updated in a May 9, 2007 technical report (the "Ezulwini Report"), which incorporates the latest developments in respect of permitting/mining rights, changes to the mineral resource estimate, ongoing process selection and capital and operating forecasts. As a result, the net present value ("NPV") of the Ezulwini Mine improved by 29% (\$74 million), from \$258 million to \$332 million and the internal rate of return ("IRR") improved from 26% to 32%. Although these improvements are primarily a reflection of the increase in the long-term price assumption for uranium from \$40 per pound to \$50 per pound, the NPV of the Ezulwini Mine also increased due to the investment of pre-production capital at a faster rate than originally planned, which results in an accelerated schedule for planned uranium and gold production. The improved NPV assumes the original discount rate of 8% and a gold price of \$500 per ounce and excludes sunken capital costs.

The Ezulwini Report also projects a \$24.2 million increase in metallurgical plant costs from \$88.6 million to \$112.8 million, due to higher than expected increases in the cost of steel and cement resulting from an industry-wide construction boom. The project contingency has been reduced by \$13.1 million from \$44.1 million to \$31.0 million due to confirmation of firm pricing for most of the major capital items, thus increasing the level of confidence in the capital estimates.

An accelerated schedule for commissioning all modules of the gold and uranium plants is also planned, resulting in an accelerated capital investment profile, which will provide flexibility to significantly increase uranium production quicker, as market pricing dictates. EMC is using construction contractors until all phases of the mill and plants are completed. The Corporation estimates that \$271 million of capital will be required for the Ezulwini Mine, \$193 million of which is expected to be invested in the first four years of the project. As of the end of Q1 2008, \$29.1 million has been spent.

The Ezulwini Mine shaft floating tower installation is currently on schedule to be completed by September 2007. The Corporation expects to commence hoisting ore in October 2007, with the first module of the gold plant scheduled for completion in April 2008 (accelerating the previously disclosed planned date for production by three months) and the first module of the

uranium plant scheduled for completion in June 2008. The Corporation is in discussions with third parties to toll treat the ore prior to the commissioning of the gold plant.

Also at the Ezulwini Mine, the Corporation has commenced the development to access the shaft distress cut and has accessed the Upper Elsburg horizon on levels 38a and 41. Development on both of these levels has started. The Company plans to collect chip samples at six metre intervals from the reef horizon. Chip sampling in two sections six metres apart on both levels has indicated a reef horizon that is 2.4 metres thick. Samples averaged 11.2 grams per tonne gold and 4.7 grams per tonne gold on levels 38a and 41, respectively.

Opening up of the Middle Elsburg reef is well underway with 76 panels sampled and 24 panels selected for development, giving a face length of 568 metres with an average grade of 6.76 grams per tonne gold and 660 grams per tonne uranium.

The samples were collected in accordance with industry standard practice. An independent laboratory prepared and assayed the samples using industry standard methods.

The clean up process to date on surface and underground has generated a stockpile in excess of 70,000 tonnes containing more than 88 kilograms of recoverable gold.

The following table depicts the planned production at Ezulwini from April 2007 through to March 2015.

From April To March	2007 2008	2008 2009	2009 2010	2010 2011	2011 2012	2012 2013	2013 2014	2014 2015
Gold ore 000s tonnes	93	196	736	1,186	1,243	1,091	759	806
Uranium ore 000s tonnes	-	410	725	784	943	1,077	981	951
Recovered gold 000s oz	17.8	98.6	242.9	341.3	370.5	334.1	247.2	246.9
Recovered uranium 000s lbs	-	335.5	602.6	652.3	793.4	929.1	893.2	895.8

The average annual production at Ezulwini for the life of the project (2007-2024) is expected to be 290,000 ounces of gold and 888,000 pounds of uranium.

The above economic analysis is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as mineral reserves. There is no certainty that the reserves development, production and economic forecasts on which this preliminary assessment is based, will be realized.

Ezulwini Expansion Program

First Uranium has defined initial underground and surface drilling targets related to the possible expansion of the existing Ezulwini Mine. Detailed studies completed by Minxcon (Proprietary) Limited ("Minxcon"), an independent South African mining and exploration consulting company, have utilized historical face sampling information on the E9EC reef, to project higher grade pay-shoot trends which have resulted in the definition of six drill target areas, some of which are accessible from existing underground workings.

The outputs of this work have been compared to historical grades as delivered to the old Ezulwini plant for a period of 14 years from 1982 to 1995. This analysis resulted in a mine recovery factor of 74% for gold and 65% for uranium. These mine recovery factors were used to define potential and expected plant delivery grades from each of the six drilling target areas. The table below summarizes the expected plant delivery grades from the defined drilling target areas and has been derived by Minxcon using a Bayesian approach.

Drill Target Area	Au		U ₃ O ₈		Au Equivalent	U ₃ O ₈ Equivalent
	In-Stope Grade	Plant Delivery Grade	In Stope Grade	Plant Delivery Grade		
	g/t	g/t	Kg/t	Kg/t		
1 ²	8.93	6.61	0.970	0.630	10.93	1.589
2	10.2	7.54	0.800	0.520	11.10	1.614
3	6.66	4.93	0.128	0.830	10.68	1.552
4	7.11	5.26	0.560	0.360	7.76	1.127
5	4.13	3.05	0.580	0.520	5.65	0.821
6	6.69	4.95	0.800	0.450	8.53	1.239

Notes:

- 1) Mine recovery factor is the combination of dilution and loss factors applied to convert "in stope" sampling grades to plant delivery grades.
- 2) Table derived using population statistics on face sampling data; geo-statistics has been applied to pay-shoot 1 only, resulting in a lower Au plant delivery grade of 5.9g/t (versus 6.61g/t) and a higher U₃O₈ plant delivery grade of 0.642 Kg/t (versus 0.630Kg/t).
- 3) Au and U₃O₈ equivalents have been calculated using First Uranium's stated long term pricing assumptions of \$500 per ounce for Au and \$50 per pound for U₃O₈. By example, a grade of 1kg U₃O₈ per tonne equates to 6.88 grams per tonne of Au.

Based upon an internal concept evaluation, the combined Phase 1 drilling target areas have the potential to delineate a substantial portion of measured and indicated resources which would be required to justify the construction of a new 250,000 tonne-per-month shaft and a related mill expansion, that would have the potential to triple production capacity from the uranium bearing Middle Elsburg ore body. The conceptual evaluation excludes any potential contribution from the UE1A reef. Approximately 16,000 metres will need to be drilled in order to complete Phase 1. Drilling results and associated resource estimation can be expected towards the end of 2008. Additional Phase 2 target areas will be defined for the UE1A reef once historical face sampling information has been validated.

The expansion program excludes any prospecting that is expected to take place on contiguous properties to the north-east and south-east of the Ezulwini lease area covered by the prospecting application submitted to and accepted by the DME on April 16, 2007.

Buffelsfontein Tailings Recovery Project

The Buffelsfontein Tailings Recovery Project is a proposed uranium and gold tailings recovery operation located in the western portion of the Witwatersrand Basin approximately 160 kilometres from Johannesburg. FUSA plans to conduct hydraulic mining of tailings dams on the Buffelsfontein property using high pressure water cannons to slurry the tailings which will then be pumped to a processing plant for the recovery of uranium and gold. FUSA had planned to process the tailings from the ongoing mining operations at a plant to be located at the nearby Buffelsfontein underground mine owned and operated by Buffelsfontein Gold Mines Limited ("BGM"), a subsidiary of Simmer & Jack. As discussed above, the MWS acquisition, includes an operating gold mine tailings and re-processing facility, adjacent to First Uranium's Buffelsfontein Tailings Recovery Project. With this acquisition, the mined tailings from Buffelsfontein will be transported via a new pipeline to the MWS plant that will be expanded to replace the plant originally planned at the Buffelsfontein mine site. As well, the Corporation proposes to acquire the right to process three small additional tailings dams (the "Additional Dams Acquisition"). A prospecting right for these additional dams has been submitted to the DME.

The building of the pipeline between the Buffelsfontein site and MWS has commenced and is expected to be completed by October 2007, while hydraulic mining of the Buffelsfontein tailings dumps is expected to commence in November 2007. The MWS operation is mining the remnant of its current resource, due to be exhausted by December 2007. The operation requires mechanical cleaning of the floor material, temporarily increasing the operating cost significantly. The mechanical cleaning will continue in Q2 2008, with expected production of over 12,000 ounces of gold. The mechanical cleaning will stop as the Buffelsfontein tailings dams are brought online, and it is expected that production and average cost will then revert to the planned targets as per the May 22, 2007 revised technical report by Scott Wilson RPA.

BGM held an old order mining right in respect of mining gold at the BGM underground mine, which did not cover the recovery of the uranium in the tailings dams at Buffelsfontein. On June 4, 2007, the DME granted to BGM a prospecting right with respect to uranium and other minerals in the Buffelsfontein property and tailings dumps, subject to certain conditions which BGM expects to satisfy in due course. BGM has also filed with the DME an application to convert its old order mining right for BGM into a new order mining right. If and when this conversion application is approved, BGM intends to file with the DME one or more applications (which, together with the foregoing conversion application, are collectively referred to herein as the "Buffelsfontein Conversion Application") to: (i) amend, with effect from the date of conversion, the new order mining right to include the authority to mine for uranium underground and for gold, uranium and other minerals in respect of the tailings; (ii) divide the new order mining right, if granted, into two separate new order mining rights — one in respect of the mining for gold, uranium and other minerals at the BGM underground mine and the other, the Buffelsfontein Tailings Mining Right, in respect of the mining of the gold and uranium in the Buffelsfontein tailings dams; and (iii) cede the Buffelsfontein Tailings Mining Right, if granted, to MWS, a subsidiary of FUSA.

On December 20, 2006, FUSA, BGM and Simmer & Jack entered into an agreement (the "Buffelsfontein Tailings and Rights Agreement") pursuant to which, among other things: (i) BGM agreed to take all necessary steps to obtain all ministerial approvals required for the items requested in the Buffelsfontein Conversion Application in order to effect the transfer of the Buffelsfontein Tailings Mining Right to FUSA as soon as possible; and (ii) BGM agreed to sell to FUSA upon FUSA's receipt of the Buffelsfontein Tailings Mining Right, the Buffelsfontein tailings dams as well as certain property required for construction of the proposed processing plants, and grant to FUSA a right to the tailings arising from BGM's ongoing mining operations at its Buffelsfontein underground mine. In exchange for the above mentioned rights, FUSA will be required to (i) pay a nominal consideration of \$13.50 to BGM; (ii) assume the rehabilitation obligation relating to the dams; and (iii) pay to BGM, a 1% royalty plus value-added tax of the gross revenue accrued by FUSA from the sale of uranium, gold and any other minerals recovered from the Buffelsfontein tailings. In addition, FUSA will be responsible for making payments to BGM in respect of a net smelter royalty on all gold produced from the Buffelsfontein Tailings Recovery Project on a graduated

basis with reference to the price of gold. For a more detailed discussion of these arrangements, reference should be made to the Corporation's Annual Information Form.

Scott Wilson RPA prepared a preliminary economic assessment of the Buffelsfontein Tailings Recovery Project for First Uranium in connection with the Offering which was revised in January 2007 to incorporate the results of ongoing process selection work and to demonstrate the impact of this work on the preliminary economic assessment. The results of the preliminary assessment as revised are contained in a technical report dated January 31, 2007 (the "Prior Buffels Report"). The Prior Buffels Report was subsequently revised, incorporating the MWS Acquisition and the Additional Dams Acquisition, and indicated in a technical report dated May 22, 2007 (the "Revised Buffels Report"). In addition, to better reflect the current uranium pricing environment, the assumed price per pound of uranium has been increased from \$40 to \$50 from the assumption in the Prior Buffels Report.

According to the Revised Buffels Report, the projected NPV of the Buffelsfontein Tailings Recovery Project (assuming the completion of the Additional Dams Acquisition and a discount rate of 8%) is \$295 million with a projected IRR of 69% (as compared to \$211 million and 39%, respectively, as disclosed in the Prior Buffels Report). The incorporation of the MWS Acquisition and the Additional Dams Acquisition into the Buffelsfontein Tailings Recovery Project accounted for an increase in the projected NPV and IRR to \$237 million and 57% respectively as compared to the Prior Buffels Report. In addition, according to the Revised Buffels Report, the increase in the uranium price assumption resulted in an increase in the projected NPV from \$237 million to \$295 million and in the projected IRR from 57% to 69%.

With the MWS resources included and better defined, the life of the Buffelsfontein Tailings Recovery Project is presently estimated to be 16 years.

As the Corporation allocates the Buffelsfontein Tailings Recovery Project's projected cash costs in proportion to the projected revenue contribution from each product and the Corporation is assuming higher uranium prices and revenues, the Corporation expects that on a co-product basis, the cash cost of gold should be \$220 per ounce and the cash cost of uranium should be \$22 per pound.

Uranium production from the first two of three uranium plant modules is scheduled to commence in November 2008. The average annual production for the life of the Buffelsfontein Tailings Recovery Project (March 2007 to April 2023) is expected to be 128,000 ounces of gold and 922,000 pounds of uranium.

The preparation of a pre-feasibility study for the Buffelsfontein Tailings Recovery Project and detailed test work is ongoing to firmly identify the design and operating parameters.

The above economic analysis is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as mineral reserves. There is no certainty that the reserves development, production and economic forecasts, on which this preliminary assessment is based, will be realized.

Technical Disclosure

With the exception of paragraphs seven through ten under the heading "Ezulwini Mine" in this MD&A, the technical disclosure relating to the Ezulwini Mine is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa" originally submitted on November 8, 2006 and December 5, 2006 and revised on May 9, 2007, prepared in accordance with NI 43-101 by Wayne Valliant, P.Geol. and R. Dennis Bergen, P.Eng. of Scott Wilson Roscoe Postle Associates Inc. ("Scott Wilson RPA").

Technical disclosure under the heading "Ezulwini Expansion Program" in this MD&A is extracted from studies prepared in accordance with NI 43-101 by Daan Van Heerden, Pr.Eng of South African mining and exploration consultants, Minxcon (Proprietary) Limited.

Technical disclosure under the heading "Buffelsfontein Tailings Recovery Project" in this MD&A is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Buffelsfontein Project,

Northwest Province, Republic of South Africa" (the "Buffelsfontein Technical Report") originally submitted on November 8, 2006, revised on December 5, 2006, revised on January 31, 2007 and further revised on May 22, 2007.

Messrs. Bergen, Valliant and Van Heerden are each a "qualified person" under NI 43-101 and are independent of First Uranium. The technical disclosure contained in this MD&A relevant to their respective contributions has been reviewed and approved by Messrs. Bergen, Valliant and Van Heerden.

Results of Operations

Revenue

Revenue was generated from the processing of 401,621 tonnes of tailings material and sales of 3,395 ounces from the processing of gold at the current MWS operations at an average sales price of \$643 per ounce. Revenue from the MWS gold plant is included as of June 6, 2006, the effective date of the MWS acquisition for accounting purposes.

Total costs from June 6, 2007 to the end of the quarter were \$664 per ounce, as the acquired tailings dams are nearing the end of their productive life, which resulted in the requirement to load and haul tailings for mechanical placement near the hydraulic mining operation and, thus reduced the tonnes being processed and increased the handling costs.

There was no production attributable to First Uranium during Q1 2007.

Expenditures

Expenditures for Q1 2008 were \$3.2 million (Q1 2007: \$2.9 million). The expenditures for Q1 2008 included \$1.1 million (Q1 2007: \$0.9 million) of employee compensation costs, consulting and professional fees, as well as the non-capitalized portion of \$0.5 million (Q1 2007: \$0.4 million) for shared services fees paid to the majority shareholder, Simmer & Jack, for services provided pursuant to the Shared Services Agreement (see "Related Party Transactions") with First Uranium. Also included were general and administrative expenses of \$0.4 million during Q1 2008 (Q1 2007: Nil). The higher expenditures in Q1 2008 resulted primarily from an increase in services required to support the development of the projects, the costs of corporate offices in Johannesburg and Toronto and other expenses of operating a public company, which were not applicable in Q1 2007.

First Uranium also recognized a stock-based compensation expense of \$0.8 million during Q1 2008 (Q1 2007: Nil). This expense relates to the amortized cost of 1,223,001 stock options granted to directors, officers, employees and consultants during FY 2007 and the amortised cost of 60,000 stock options granted to directors and employees during Q1 2008. The fair value of the stock-based compensation was estimated using the Black-Scholes option pricing model.

Expenditures also include pumping and feasibility costs of \$0.3 million during Q1 2008 (Q1 2007: \$1.5 million). These costs related to the ongoing care and maintenance of the Ezulwini Mine. The decrease in costs is primarily the result of pumping and feasibility costs being capitalized, as part of mine infrastructure costs, since the end of May 2006, when the DME granted the mining right to Simmer & Jack, EMC's 90% shareholder at that time.

The Corporation earned interest income of \$4.4 million during Q1 2008 (Q1 2007: Nil). The interest income was primarily earned on the net proceeds raised from the Offering and the Debentures.

The interest expense of \$1.0 million during Q1 2008 consists of the interest paid on the Debentures at the end of the quarter. The interest expense of \$0.1 million during Q1 2007 consists of the non-capital portion of interest paid by EMC on the loan payable to Simmer & Jack. The accretion expense of \$1.1 million during Q1 2008 relates to the Debentures.

The foreign exchange gains of \$6.4 million during Q1 2008 (Q1 2007: \$0.8 million) are the combined result of the fact that the Corporation reports in US dollars, while the majority of its cash funds are held in Canadian dollars ("Cdn\$") and in South African rand ("ZAR"), each

of which have strengthened against the US dollar ("US\$"). The increase in the value of the Canadian dollar versus the US dollar during the quarter was partially offset by the Corporation having Canadian dollar denominated debt with the issue of the Debentures.

The net proceeds of the Offering were held in South African rand during Q1 2008. At the beginning of the quarter the US\$/ZAR exchange rate was 7.305, while at the end of the quarter the US\$/ZAR exchange rate was 7.076.

On May 3, 2007, when First Uranium received the net proceeds from the issue of the Debentures (the majority of the Corporation's Canadian funds held during Q1 2008), the Cdn\$/US\$ exchange rate was 0.900. At June 30, 2007, the Cdn\$/US\$ exchange rate was 0.944.

Net income

First Uranium generated net income of \$5.5 million during Q1 2008 (Q1 2007: incurred a loss of \$2.2 million), primarily as a result of the foreign exchange gains and net interest income earned, offset by operating losses incurred in Q1 2008. The Corporation incurred a net loss of \$2.2 million in Q1 2007 primarily from expenditures in connection with preparing its two uranium and gold projects for production.

Use of Proceeds

Offering

In the final prospectus dated December 12, 2006 filed by First Uranium in connection with the Offering (the "Final Prospectus"), First Uranium provided the following disclosure as to the anticipated uses of the estimated \$162.6 million of net proceeds from the sale of 29 million common shares by First Uranium to the public pursuant to the Offering:

- Development of the Ezulwini Mine - \$77.2 million
- Development of the Buffelsfontein Tailings Recovery Project - \$53.6 million
- Repayment of indebtedness owed by EMC to Simmer & Jack - \$18.3 million
- Repayment of the purchase price for the Ezulwini Mine assets under the REL Purchase Agreement - \$7.7 million
- Decrease in working capital plus general corporate costs - \$5.8 million

The estimated \$162.6 million net proceeds from the Offering and the above estimated uses of such proceeds as disclosed in First Uranium's Final Prospectus specifically did not include any proceeds received by First Uranium from the exercise of the over-allotment option granted to the underwriters. On December 29, 2006, the underwriters exercised the over-allotment option in full in respect of the sale of an additional 4.35 million shares of First Uranium and First Uranium received additional net proceeds of approximately \$24.7 million.

Of the total net proceeds of \$177.7 million received by First Uranium pursuant to the Offering, \$42.3 million had been expended as at June 30, 2007 as follows (resulting in \$135.4 million of the net proceeds on hand as at June 30, 2007):

Use of Net Proceeds Since The Offering (amounts in millions of dollars)	Used up to June 30, 2007	Used in the quarter ended June 30, 2007	Used up to March 31, 2007
Development of the Ezulwini Mine	(29.1)	(9.8)	(19.3)
Development of the Buffelsfontein Tailings Recovery Project	(2.2)	(0.7)	(1.5)
Repayment of indebtedness owed by EMC to Simmer & Jack	(14.1)	-	(14.1)
Payment of the REL Purchase Agreement purchase price	(8.9)	-	(8.9)
Working capital and general corporate purposes	12.0	3.4	8.6
Total	(42.3)	(7.1)	(35.2)

While First Uranium intends to apply the net proceeds of the Offering approximately as disclosed above, such uses are by definition based on estimates and assumptions and are subject to variance. In addition, there may be circumstances where, for sound business reasons, a re-allocation of the funds may be necessary or advisable.

Debentures

The Corporation intends to use the net proceeds from the issue of the Debentures to: fund the Ezulwini Expansion Program, a drilling program and feasibility study which are designed to determine the potential for a possible expansion of the Ezulwini Mine; together with the net proceeds of the Offering to fund the development of the Buffelsfontein Tailings Recovery Project; and for general corporate purposes. The net proceeds of \$130.6 million from the issue of the Debentures are currently held by the Corporation in Canadian dollars in a Canadian bank account. The approval of the South African Reserve Bank ("SARB") to the issue of the Debentures includes a condition that the Corporation transfer the net proceeds from the issue of the Debentures to bank accounts of the Corporation in South Africa and convert the funds to South African rand by May 3, 2008.

First Uranium believes that the net proceeds of the issue of the Debentures, in addition to the unused portion of the net proceeds of the Offering, are sufficient to fund its plans for the near-term development of the Ezulwini Mine, the Ezulwini Expansion Program and the Buffelsfontein Tailings Recovery Project as adjusted as a result of the acquisition of MWS.

Cash flows

Cash generated from operating activities of \$10.1 million during Q1 2008 (Q1 2007: \$0.5 million) was mainly as a result of the net interest earned and the payment by Simmer & Jack of an outstanding receivable.

During Q1 2008, Simmer & Jack transferred \$5.9 million of cash it held on behalf of First Uranium and its subsidiaries at the beginning of Q1 2008 into newly opened bank accounts of First Uranium and its subsidiaries, which resulted in the decrease in amounts receivable from related parties.

Investing activities utilized \$8.5 million during Q1 2008 (Q1 2007: \$0.6 million), consisting mainly of additions to property, plant and equipment relating to the Ezulwini Mine of \$9.2 million (Q1 2007: \$0.6 million).

On May 3, 2007, First Uranium raised net cash of \$130.6 million (Q1 2007: \$0.7 million) through the private placement of \$135.1 million (Cdn\$150 million) aggregate principal amount of Debentures due June 30, 2012. The Debentures bear interest at a rate of 4.25% per annum payable semi-annually and are convertible into common shares of First Uranium at Cdn\$16.42 per share.

Financial Position and Liquidity

Cash and non-cash assets

Cash and cash equivalent balances available at June 30, 2007 increased by \$136.3 million to \$275.2 million (FY 2007: \$138.9 million), primarily as a result of the inclusion of the net proceeds from the issue of the Debentures.

Accounts receivable of \$3.8 million at June 30, 2007 (FY 2007: \$1.7 million) was comprised primarily of value-added tax and goods and services tax refunds.

During Q1 2008, First Uranium set up separate bank accounts for itself and its subsidiaries and the cash previously held on its behalf by Simmer & Jack was transferred into these bank accounts. The transfer of such amounts resulted in a decrease in accounts receivable of \$5.9 million to \$0.9 million (FY 2007: \$6.8 million).

Non-current assets increased to \$92.3 million at June 30, 2007 (FY 2007: \$33.7 million), mainly as a result of the additions to property, plant and equipment by EMC of \$14.5 million and the fair value allocation of \$35.8 million to plant and equipment and tailings for processing as a result of the acquisition of MWS. The additional costs also include capitalized pumping costs and costs relating to mining assets, mining infrastructure and plant and equipment.

Investing activities

On June 6, 2007, First Uranium, through its wholly-owned subsidiary FUSA, acquired a 100% equity interest in MWS in consideration for 3,093,980 common shares of First Uranium.

Total Liabilities

As of June 30, 2007, First Uranium had total liabilities of \$118.9 million (FY 2007: \$11.1 million), consisting mainly of the debt portion of the Debentures of \$89.3 million, accounts payable and accrued liabilities of \$9.4 million (FY 2007: \$5.7 million) and the future tax liability arising from the MWS acquisition of \$11.1 million.

The increase in accounts payable and accrued liabilities at June 30, 2007 is primarily the result of capital costs incurred by EMC and normal trade payables related to the operations of MWS.

The amount payable to a related party of \$0.2 million (FY 2007: Nil) consists of the shared services fee payable by FUSA to Simmer & Jack pursuant to the terms of the Shared Services Agreement between First Uranium and Simmer & Jack.

Liquidity and Capital Resources

At June 30, 2007, First Uranium had working capital of \$271.7 million (FY 2007: \$142.0 million). The significant increase in working capital is attributable to the inclusion of net proceeds of \$130.6 million from the issue of the Debentures.

First Uranium anticipates that future capital requirements relating to its development of the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project will be funded through a combination of the proceeds of the Offering and the Debentures and from internal cash flow.

Capital expenditures of \$148.0 million and \$270.6 million will be required to complete the currently planned construction of the Buffelsfontein Tailings Recovery Project and the Ezulwini Mine, respectively, for which \$29.9 million (FY 2007: \$14.8 million) of current commitments exist.

Exploration budgets for the Ezulwini Mine and on the contiguous properties to the north-east and south-east of the Ezulwini Mine of \$30 million and \$10 million, respectively, have been approved by the Board of Directors. The extent to which the budgeted amounts are spent depends on the ongoing exploration results. The exploration expenditures will be funded out of available working capital.

First Uranium had executed a mandate letter and term sheet with Investec Bank Limited ("Investec") in respect of potential debt financing, which was originally planned to be used towards the development of the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project, but the original need for this facility was eliminated as a result of the Debenture issue. The Corporation is, however, continuing with the process of satisfying certain conditions precedent and is in discussions with Investec to modify the proposed facility to a corporate facility.

As at June 30, 2007, First Uranium had the following contractual obligations:

Contractual Obligations	Payments due by Date				Total \$000
	Less than 1 year \$000	1-3 Years \$000	4-5 Years \$000	After 5 Years \$000	
Operating Leases	13	15	-	-	28
Purchase Obligations	29,941	-	-	-	29,941
Capital Lease Obligations	36	115	40	-	191
Asset Retirement Obligations	-	-	-	8,186	8,186
Senior Unsecured Convertible Debentures	-	-	135,060	-	135,060
Total Contractual Obligations	29,990	130	135,100	8,186	173,406

Summary of Quarterly Results

The table below sets out selected financial data for the periods indicated. The financial data presented is derived from First Uranium's consolidated financial statements, which are prepared in accordance with Canadian GAAP.

Fiscal Quarters Ended	Total Assets \$000	Net Income/(Loss) \$000	Basic and Diluted Earnings/ (Loss) per Share \$	Long Term Liabilities \$000
June 30, 2007	373,549	5,471	0.04	118,900
March 31, 2007 (audited)	181,427	(2,689)	(0.02)	5,377
December 31, 2006	195,374	(3,787)	(0.04)	Nil
September 30, 2006	3,619	786	0.01	Nil
June 30, 2006	3,522	(2,238)	(0.03)	Nil
March 31, 2006 (audited)	3,433	(4,656)	(0.05)	Nil
December 31, 2005	4,519	(2,201)	(0.03)	Nil
September 30, 2005	n/a	n/a	n/a	n/a
June 30, 2005	n/a	n/a	n/a	n/a

Outlook

The Corporation will take the following steps to integrate MWS into the Buffelsfontein Tailings Recovery Project. The Corporation is preparing to undertake a pre-feasibility study for the project's new gold and uranium plant modules. The MWS assets include a gold plant. The second gold module and the first two uranium modules are expected to be commissioned in November 2008. The Corporation has commenced construction of a pipeline from the Buffelsfontein site to the MWS site, which is expected to be completed in October 2007 with hydraulic mining of the Buffelsfontein tailings dams to commence in November 2007.

Gold production at the Ezulwini Mine is expected to commence by the end of October 2007 using a gold toll milling operation. First Uranium is in negotiation with third parties regarding the tolling arrangement. The current plan is for the Ezulwini Mine to process gold and uranium at its own plants by April and June 2008, respectively.

In the second quarter of fiscal year 2008 ending September 30, 2007, the Corporation expects to process 1.5 million tonnes of tailings through its MWS gold plant, with expected production of over 12,000 ounces of gold.

Although the spot price for uranium, which reached \$136 per pound at the end of June, had recently softened to \$110 per pound, this is still well above the \$50 per pound, upon which First Uranium has based its project economics for the next 20 years. As concerns persist that the supply of uranium might not meet near- to mid-term demand, the Corporation raised its expectations for the average price of uranium for the life of its projects from \$40 per pound to \$50 per pound. The Corporation has not yet signed any contracts to supply uranium and does not expect to do so until it is nearer production in June 2008.

Offsetting the higher price assumptions, mining cost expectations have also increased. Mine construction costs have risen for labour, reflecting higher negotiated wage settlements across the sector, and for materials, such as steel and concrete. First Uranium has included consideration for higher costs into its revised technical reports and planning for the future.

Based on the most recent technical reports published in May 2007 for each project the co-product costs for the Ezulwini Mine are expected to be \$297 (down from \$315) per ounce for gold and \$30 (up from \$25) per pound for uranium and at the Buffelsfontein Tailings Recovery Project co-product costs are expected to be \$220 (down from \$235) per ounce and \$22 (up from \$19) per pound.

Related Party Transactions

On December 20, 2006, First Uranium and Simmer & Jack entered into a shared services agreement (the "Shared Services Agreement").

Pursuant to the terms of the Shared Services Agreement, First Uranium is entitled to certain services to be provided by Simmer & Jack, including project management and technical services, cash management and investment services, accounting, treasury and financial services, corporate secretarial services and human resources and staffing services, including payroll and benefits administration, and such other services as may be required by First Uranium and which Simmer & Jack is able and willing to provide. Subsequent to entering into the agreement, the Corporation hired eight senior executives, including Mr. Miller, President and Chief Executive Officer, Mr. Fisher, Executive Vice President and Chief Operating Officer and Ms. Emma Oosthuizen, Senior Vice President and Chief Financial Officer, and other staff, resulting in certain of these services being no longer required to be provided by Simmer & Jack.

During Q1 2008 the Corporation paid \$527,881 shared services fees to Simmer & Jack pursuant to the terms of the Shared Services Agreement.

Prior to December 2006, the Corporation shared its premises with other companies that had common directors and reimbursed the related companies for its proportional share of expenses or was reimbursed by the related companies for their proportional share of expenses. During Q1 2007, the Corporation was charged \$303,306 for consulting services provided by related directors, officers and consultants of the Corporation.

First Uranium has agreed to reimburse Simmer & Jack with respect to 50% of fees (to a maximum of ZAR125,000 per month) that Simmer & Jack is required to pay to an empowerment company for consulting services regarding transformation, human resources and occupational health and safety. BJ Njenje, AX Sisulu and SLB Mapisa, shareholders of the empowerment company, are also directors of Simmer & Jack. During Q1 2008 the Corporation paid \$57,000 to Simmer & Jack in connection with such services.

The amounts payable by First Uranium to Simmer & Jack are as a result of transactions pursuant to the Shared Services Agreement and are in the normal course of business.

Waterpan Mining Consortium ("Waterpan") currently holds a 10% shareholding in EMC. On December 20, 2006, Waterpan, First Uranium Limited ("FUL") and the Corporation entered into a purchase agreement (the "Waterpan Purchase Agreement") pursuant to which Waterpan agreed to sell its shares in EMC to FUL and as consideration for such sale, First

Uranium will issue 6,141,009 common shares of First Uranium to Waterpan (the "Waterpan Shares"). The closing of the transaction is subject to approval of SARB. Pursuant to the Waterpan Purchase Agreement, Waterpan has agreed not to sell or transfer 90% of the Waterpan Shares for a period of two years from the date of issuance. One shareholder of Waterpan is a director of EMC; two other shareholders of Waterpan are officers and/or employees of First Uranium and EMC.

Critical Accounting Policies and Estimates

The preparation of these unaudited consolidated interim financial statements in accordance with Canadian generally accepted accounting practice requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amount of revenues and expenses during the reporting period.

Significant areas requiring the use of management estimates relate to the determination of impairment of capital assets, goodwill estimation of future site restoration costs, stock-based compensation and future income taxes, classification of current portion of long-term debt, and the valuation of the equity component of convertible debentures. Financial results as determined by actual events could differ from those estimated.

Foreign currency translation

The Corporation considers the United States dollar ("US\$") to be the functional and reporting currency. The translated amounts are of a foreign entity where its subsidiaries are accounted for as integrated foreign operations and as such, the translation to US dollar was made using the temporal method. Monetary assets and liabilities denominated in foreign currencies are translated in United States dollars at the period-end exchange rates, while non-monetary items are translated at the exchange rate in effect at the transaction date. Revenue and expense items are translated at the exchange rates in effect on the date of the transaction. Exchange gains and losses resulting from the translation of these amounts are included in the consolidated statements of operations.

Property, plant and equipment

The application of the Corporation's accounting policies for these assets has a material impact on its financial statements. Property, plant and equipment and related capitalized expenditures are recorded at cost. Amortization expense is based on the estimated useful lives of these assets. The carrying values of mining properties and property, plant and equipment are reviewed for impairment when events or changes in circumstances indicate that the carrying amounts may not be recoverable. Impairment assessments are based on estimates of future cash flows, which include: the quantity of mineral reserves; future metal prices and future operating and capital costs to mine and process the Corporation's reserves.

The variability of these factors depends on a number of conditions, including the uncertainty of future events, and as a result, accounting estimates may change from one period to another. Asset balances could be materially impacted if other assumptions and estimates had been used. In addition, future operating results could be impacted if different assumptions and estimates are applied in future periods.

Asset retirement obligations

Mining, development and exploration activities are subject to various laws and regulations governing the protection of the environment. The Corporation has recorded a liability for future costs related to these regulations with a corresponding adjustment to the carrying amount of the related assets.

Significant judgments and estimates are made when determining the nature and costs associated with asset retirement obligations. Changes in the underlying assumptions used to estimate the obligation as well as changes to environmental laws and regulations could

cause material changes in the expected cost and the fair value of asset retirement obligations.

Stock-based compensation

The Corporation accounts for all stock-based payments under the fair value based method. Under the fair value based method, compensation cost is measured at fair value at the grant date using the Black Scholes option pricing model that takes into account the exercise price, the expected life of the options, expected volatility of the underlying shares, expected dividend yield and the risk free interest rate for the term of the option.

Convertible debentures

The Corporation determines the equity component of the convertible debenture by using the fair value based method. Under the fair value based method, the equity component is measured at fair value at the date the convertible debentures were issued using the Black Scholes option pricing model that takes into account the exercise price, the expected life of the convertible debentures, expected volatility of the underlying shares, expected dividend yield and the risk free interest rate for the term of the convertible debentures.

Changes in accounting policies

Effective April 1, 2007, the Corporation adopted the Canadian Institute of Chartered Accountants ("CICA") Handbook Sections 1530 – Comprehensive Income, Section 3855 – Financial Instruments – Recognition and Measurement and Section 3865 – Hedges. The adoption of these new standards resulted in changes in the accounting for financial instruments and hedges, as well as the recognition of certain transition adjustments. As provided under the standards, the comparative consolidated financial statements have not been restated.

The adoption of these Sections is done retroactively without restatement of the consolidated financial statements of prior periods. There was no impact on the consolidated balance sheet of as at April 1, 2007.

The effect of these changes in the accounting policies on net income for Q1 2008 is not significant.

Effective April 1, 2007, the Corporation adopted the revised Section 1506 – Accounting Changes relating to changes in accounting policies, changes in accounting estimates, and errors. Adoption of these recommendations had no effect on the consolidated financial statements for the Q1 2008, except for the disclosure of accounting changes that have been issued by the CICA but have not yet been adopted by the Corporation because they are not effective until a future date (refer to Future accounting standards below).

Future accounting standards

In February 2007, the CICA issued the following pronouncements:

- (i) Section 1535, Capital Disclosures, which is effective for fiscal years beginning on or after October 1, 2007. This standard requires disclosure of information that enables users of its financial statements to evaluate the entity's objectives, policies and processes for managing capital. The adoption is not expected to have a significant effect on the Corporation's financial statements.
- (ii) Section 3862, Financial Instruments – Disclosures and Section 3863, Financial Instruments – Presentation, which are effective for fiscal years beginning on or after October 1, 2007. The objective of Section 3862 is to provide financial statement disclosure to enable users to evaluate the significance of financial instruments for the Corporation's financial position and performance and the nature and extent of risks arising from financial instruments that the Corporation is exposed to during the reporting period and the balance sheet date and how the Corporation is managing

those risks. The purpose of Section 3863 is to enhance the financial statement user's understanding of the significance of financial instruments to the Corporation's financial position, performance and cash flows.

In March 2007, CICA approved Handbook Section 3031 – Inventories, which replaces the existing Section 3030 – Inventories. This standard is effective for interim and annual financial statements relating to fiscal years beginning on or after January 1, 2008, with earlier application encouraged. The standard provides more guidance on the measurement and disclosure requirements for inventories.

The Corporation is currently assessing the impact of these new accounting standards on its financial statements.

Outstanding Share Data

As at June 30, 2007 and August 10, 2007, First Uranium had 124,780,027 and 124,818,122 issued and outstanding common shares, respectively. As at June 30, 2007 there were 1,283,001 unexercised stock options outstanding, exercisable at an average strike price of Cdn\$7.56 per share. As at August 10, 2007 there were 1,301,334 unexercised stock options outstanding, exercisable at an average strike price of Cdn\$7.85 per share.

As at June 30, 2007 and August 10, 2007, First Uranium also had \$135.1 million (Cdn\$150 million) principal amount of Debentures outstanding which are convertible into 60.9013 common shares of First Uranium for each Cdn\$1,000 principal amount of Debentures, representing 9,135,195 common shares.

Disclosure Controls and Procedures

Disclosure controls and procedures are designed to provide reasonable assurance that all relevant information is gathered and reported on a timely basis to senior management, including the Corporation's President and Chief Executive Officer and the Chief Financial Officer, so that appropriate decisions can be made regarding public disclosure. As at the end of the period covered by this MD&A, management of First Uranium, by the direction of the President and Chief Executive Officer and the Chief Financial Officer, evaluated the effectiveness of the Corporation's disclosure controls and procedures as required by Canadian securities laws.

Based on the evaluation, the President and Chief Executive Officer and the Chief Financial Officer have concluded that as of the end of the period covered by this MD&A, the disclosure controls and procedures were effective to provide reasonable assurance that information required to be disclosed in First Uranium's annual filings and interim filings (as such terms are defined under Multilateral Instrument 52-109 – Certification of Disclosure in Issuers' Annual and Interim Filings) and other reports filed or submitted under Canadian securities laws is recorded, processed, summarized and reported within the time periods specified by those laws, and that material information is accumulated and communicated to management of First Uranium, including the President and Chief Executive Officer and the Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

During the most recent quarter there were no changes in the Corporation's internal controls over financial reporting that materially affected, or are reasonably likely to materially affect, the Corporation's internal control over financial reporting.

Risks and Uncertainties

Uncertainties

There are a number of uncertainties in the mining business of First Uranium that are beyond First Uranium's control, including:

- Demand and prices for the Corporation's future production of uranium and gold
- Government legislation regarding mining companies in South Africa
- Securities regulation regarding public listed companies in Canada and South Africa
- Foreign exchange rates
- Interest rates
- The decisions and activities of the Corporation's competitors in the uranium and gold mining business, which impact the supply of uranium and the demand for available services, construction materials, labour and the rights for prospecting and mining
- The continued endorsement of nuclear power as a preferred source for the world's energy needs
- The decisions of investors to continue to buy and hold the securities of the Corporation
- Natural disasters, war or random occurrences or acts that could result in a material change to economic and market performance, business conditions or operations.

Risks

In addition, First Uranium is in the development stage and is subject to the risks and challenges similar to other companies in a comparable stage of development. The risks include, but are not limited to, certain business, operational and market risks. For a discussion of the Corporation's risks please refer to the Corporation's Annual MD&A, the 2007 Annual Information Form and other filings, which are available on the Corporation's website www.firsturanium.com and on www.sedar.com or upon request from the Corporation.

A trend that could increase risk for the Corporation would be the heightened labour unrest in South Africa. Workers at various South African mining operations have been demanding, through their unions, higher compensation as a result of increased revenues in the mining sector being driven by heightened mineral prices. Strikes have been threatened during some of the negotiations. First Uranium has mitigated the threat of work stoppages by negotiating recent settlements with unions represented at its operations.

Similarly, workers in other industries have been demanding higher compensation and threatening strike action. One such example is the strike by petroleum workers in early August which limited the supply of petrol. Strikes in the public sector and service industries, if protracted, have the potential to disrupt the development of the Corporation's two projects. No material delays have been experienced to date and the projects are on track for their scheduled completion dates.

Additional Information

Additional information relating to First Uranium is included in the Corporation's Annual Information Form dated June 13, 2007 and it is available on SEDAR at www.sedar.com.

Forward-looking Information

This MD&A and consolidated financial statements for the period ended June 30, 2007 contain certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the price of uranium and gold, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and

other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at the date of this MD&A; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this MD&A, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) approvals to transfer or grant, as the case may be, mining rights or prospecting rights will be obtained; (ii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iii) mineral resource estimates are accurate; (iv) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (v) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vi) that outstanding approvals for the completion of an acquisition, the transfer of mining rights and the approval of mining rights will be granted; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024; and (ix) the completion of the Additional Dams Acquisition.

MANAGEMENT DISCUSSION AND ANALYSIS

For the three months ended
June 30, 2007 and June 30, 2006

Management's Discussion and Analysis of The Unaudited Consolidated Financial Condition and Results of Operations

for the three months ended June 30, 2007 and June 30, 2006

Set out below is a review of the activities, unaudited consolidated results of operations and financial condition of First Uranium Corporation and its subsidiaries ("First Uranium" or the "Corporation") for the three months ended June 30, 2007 ("Q1 2008") and June 30, 2006 ("Q1 2007"), together with certain trends and factors that are expected to have an impact in the future. This management's discussion and analysis of the consolidated financial position and results of operations ("MD&A") is intended to supplement and complement the unaudited consolidated financial statements and notes thereto for Q1 2008 and Q1 2007 (collectively the "Financial Statements") which have been prepared in accordance with Canadian generally accepted accounting principles ("Canadian GAAP"). The MD&A should be read in conjunction with the Financial Statements and First Uranium's audited consolidated financial statements for the fiscal year ended March 31, 2007 ("FY 2007") and the notes thereto and the related management's discussion and analysis. Information contained in this MD&A is based on information available as at August 10, 2007, unless otherwise indicated.

The reporting currency for the Corporation is the US dollar, and all amounts in the following discussion are in US dollars ("\$\$"), except where otherwise indicated.

This MD&A includes certain forward-looking statements. Please read the cautionary note at the end of this document.

Overall Performance

Highlights

During Q1 2008, First Uranium:

- Raised gross proceeds of Cdn\$150 million through an issue of 4.25% senior unsecured convertible debentures (the "Debentures").
- Filed revised technical reports for each of the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project, which indicated improvement to their respective NPVs and IRRs, reflecting the accelerated timetables for both projects.
- Accelerated capital investment at the Ezulwini Mine to advance the plant commissioning and production startup by three months.
- Acquired, effective June 6, 2007, 100% of the equity and management control of Mine Waste Solutions (Proprietary) Limited and its subsidiary Chemwes (Proprietary) Limited (collectively, "MWS") to advance the Buffelsfontein Tailings Recovery Project, following which First Uranium has commenced to record for its account, gold production from the MWS plant.
- The South African Department of Minerals and Energy (the "DME") acknowledged receipt of the Corporation's prospecting permit application on incremental ground contiguous to the Ezulwini Mine.

Subsequent to Q1 2008:

- First Uranium defined initial underground and surface drilling targets related to the possible expansion of the existing Ezulwini underground uranium ("U₃O₈") and gold ("Au") mine (the "Ezulwini Expansion Program").

In the second quarter of fiscal year 2008 ending September 30, 2007, the Corporation plans to process 1.5 million tonnes of tailings through its MWS gold plant, with expected production of over 12,000 ounces of gold.

Overview

First Uranium is a Canadian resource company focused on the development of uranium and gold projects in South Africa. The Corporation's goal is to become a significant producer of uranium and gold through the re-opening and development of the Ezulwini underground uranium and gold mine (the "Ezulwini Mine") and the construction of the Buffelsfontein tailings recovery project to recover uranium and gold from the existing surface tailings and future tailings, at the Buffelsfontein mine (the "Buffelsfontein Tailings Recovery Project"). To expand its production profile, First Uranium plans to continue to identify and acquire additional uranium and gold projects in southern Africa and beyond.

The common shares of First Uranium are listed on the Toronto Stock Exchange (the "TSX") and the Johannesburg Stock Exchange (the "JSE"). Simmer and Jack Mines, Limited ("Simmer & Jack") owns approximately 65.5% of the common shares of First Uranium. Simmer & Jack's shareholding was diluted from 67.2% during Q1 2008 as a result of the issuance by First Uranium of 3,093,980 common shares as consideration for the June 6, 2007 acquisition of Mine Waste Solutions (Proprietary) Limited and its subsidiary Chemwes (Proprietary) Limited (collectively, "MWS").

Through its subsidiary, First Uranium (Proprietary) Limited ("FUSA"), First Uranium has an agreement to acquire surface tailings from Buffelsfontein Gold Mines Limited ("BGM"), a subsidiary of Simmer & Jack. The Corporation originally planned to develop and construct a processing plant at the Buffelsfontein surface tailings site to reprocess these tailings to recover uranium and gold. However, with the acquisition of MWS, the Corporation acquired an operating gold mine tailings re-processing facility adjacent to Buffelsfontein. The Corporation intends to construct a pipeline to the MWS plant for processing the Buffelsfontein surface tailings as well as the tailings from the ongoing gold mining operations at BGM's underground gold mine. The Corporation also intends to expand the MWS plant to replace the plant originally planned at the Buffelsfontein mine site.

In December 2006, First Uranium completed a public offering of 33,350,000 common shares at Cdn\$7.00 per share for gross proceeds of \$201.8 million (the "Offering"). The proceeds of the Offering, net of underwriting fees and expenses, were \$177.7 million. The funds raised from the Offering and a portion of the net proceeds from the May 3, 2007 issuance of \$130.6 million of 4.25% senior unsecured convertible debentures due June 30, 2012 (the "Debentures"), net of underwriting fees and expenses, are being used to: (i) reopen, develop and rebuild the Ezulwini Mine and (ii) to develop the Buffelsfontein Tailings Recovery Project.

Financial Overview

First Uranium is a development stage company. The Corporation generated revenue of \$2.2 million during Q1 2008 from the operations of the MWS gold plant, which the Corporation assumed ownership of on June 6, 2007.

General, consulting and administrative expenditures fees as well as development activities at its two uranium and gold projects resulted in an operating loss of \$3.3 million in Q1 2008 (Q1 2007: \$2.9 million).

The net income of \$5.5 million in Q1 2008 is primarily the result of foreign exchange gains and net interest income earned, partially offset by operating losses. The Corporation incurred a net loss of \$2.2 million in Q1 2007 primarily from expenditures in connection with preparing its two uranium and gold projects for production.

As at June 30, 2007, the Corporation had cash and cash equivalents of \$275.2 million (June 30, 2006: \$1.2 million). With these funds and anticipated revenue from future sales of uranium and gold, the Corporation currently believes that it is fully funded and will be able to develop its two existing mining projects and advance them to full production as currently planned by 2010.

As at June 30, 2007, First Uranium had total assets of \$373.5 million, total liabilities of \$118.9 million and shareholders' equity of \$254.6 million.

Ezulwini Mine

The Corporation is in the process of re-commissioning the Ezulwini Mine located approximately 40 kilometres from Johannesburg on the outskirts of the town of Westonaria in Gauteng Province, South Africa. Re-commissioning activities, which involve the refurbishment of the shaft and construction of gold and uranium plants, began in earnest in December 2006, subsequent to the successful completion of the Offering. The Ezulwini Mine is part of the Ezulwini mining right, which includes certain surface and underground assets, acquired by Ezulwini Mining Company (Proprietary) Limited ("EMC") from Randfontein Estates Limited ("REL"), a wholly-owned subsidiary of Harmony Gold Mining Company Limited, including two shaft headgears, four hoists, fans, compressors, generators, a complete sub-vertical shaft infrastructure down to 2,100 metres below surface and underground equipment as well as the necessary surface freehold required to operate the mine.

Simmer & Jack is presently the registered owner of the Ezulwini mining right. On December 20, 2006, EMC and Simmer & Jack entered into an agreement (the "Ezulwini Mining Right Agreement") pursuant to which Simmer & Jack agreed to take all necessary steps to obtain all ministerial approvals in order to effect the ceding of the Ezulwini mining right from Simmer & Jack to EMC. The Corporation expects the transfer of the Ezulwini mining right to be completed in due course. EMC continues with the ongoing water pumping required to keep the Ezulwini Mine dry and to enable the shaft rehabilitation program and refurbishment of the infrastructure in the Middle Elsburg section, which will, in turn, allow hoisting of ore by October 2007. Construction of the metallurgical plant has started to allow the onsite treatment for gold by April 2008 and uranium by June 2008.

As previously reported, Scott Wilson Roscoe Postle Associates Inc. ("Scott Wilson RPA") prepared a preliminary economic assessment of the Ezulwini Mine for First Uranium in connection with the Offering. The assessment was subsequently updated in a May 9, 2007 technical report (the "Ezulwini Report"), which incorporates the latest developments in respect of permitting/mining rights, changes to the mineral resource estimate, ongoing process selection and capital and operating forecasts. As a result, the net present value ("NPV") of the Ezulwini Mine improved by 29% (\$74 million), from \$258 million to \$332 million and the internal rate of return ("IRR") improved from 26% to 32%. Although these improvements are primarily a reflection of the increase in the long-term price assumption for uranium from \$40 per pound to \$50 per pound, the NPV of the Ezulwini Mine also increased due to the investment of pre-production capital at a faster rate than originally planned, which results in an accelerated schedule for planned uranium and gold production. The improved NPV assumes the original discount rate of 8% and a gold price of \$500 per ounce and excludes sunken capital costs.

The Ezulwini Report also projects a \$24.2 million increase in metallurgical plant costs from \$88.6 million to \$112.8 million, due to higher than expected increases in the cost of steel and cement resulting from an industry-wide construction boom. The project contingency has been reduced by \$13.1 million from \$44.1 million to \$31.0 million due to confirmation of firm pricing for most of the major capital items, thus increasing the level of confidence in the capital estimates.

An accelerated schedule for commissioning all modules of the gold and uranium plants is also planned, resulting in an accelerated capital investment profile, which will provide flexibility to significantly increase uranium production quicker, as market pricing dictates. EMC is using construction contractors until all phases of the mill and plants are completed. The Corporation estimates that \$271 million of capital will be required for the Ezulwini Mine, \$193 million of which is expected to be invested in the first four years of the project. As of the end of Q1 2008, \$29.1 million has been spent.

The Ezulwini Mine shaft floating tower installation is currently on schedule to be completed by September 2007. The Corporation expects to commence hoisting ore in October 2007, with the first module of the gold plant scheduled for completion in April 2008 (accelerating the previously disclosed planned date for production by three months) and the first module of the

uranium plant scheduled for completion in June 2008. The Corporation is in discussions with third parties to toll treat the ore prior to the commissioning of the gold plant.

Also at the Ezulwini Mine, the Corporation has commenced the development to access the shaft distress cut and has accessed the Upper Elsburg horizon on levels 38a and 41. Development on both of these levels has started. The Company plans to collect chip samples at six metre intervals from the reef horizon. Chip sampling in two sections six metres apart on both levels has indicated a reef horizon that is 2.4 metres thick. Samples averaged 11.2 grams per tonne gold and 4.7 grams per tonne gold on levels 38a and 41, respectively.

Opening up of the Middle Elsburg reef is well underway with 76 panels sampled and 24 panels selected for development, giving a face length of 568 metres with an average grade of 6.76 grams per tonne gold and 660 grams per tonne uranium.

The samples were collected in accordance with industry standard practice. An independent laboratory prepared and assayed the samples using industry standard methods.

The clean up process to date on surface and underground has generated a stockpile in excess of 70,000 tonnes containing more than 88 kilograms of recoverable gold.

The following table depicts the planned production at Ezulwini from April 2007 through to March 2015.

From April To March	2007 2008	2008 2009	2009 2010	2010 2011	2011 2012	2012 2013	2013 2014	2014 2015
Gold ore 000s tonnes	93	196	736	1,186	1,243	1,091	759	806
Uranium ore 000s tonnes	-	410	725	784	943	1,077	981	951
Recovered gold 000s oz	17.8	98.6	242.9	341.3	370.5	334.1	247.2	246.9
Recovered uranium 000s lbs	-	335.5	602.6	652.3	793.4	929.1	893.2	895.8

The average annual production at Ezulwini for the life of the project (2007-2024) is expected to be 290,000 ounces of gold and 888,000 pounds of uranium.

The above economic analysis is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as mineral reserves. There is no certainty that the reserves development, production and economic forecasts on which this preliminary assessment is based, will be realized.

Ezulwini Expansion Program

First Uranium has defined initial underground and surface drilling targets related to the possible expansion of the existing Ezulwini Mine. Detailed studies completed by Minxcon (Proprietary) Limited ("Minxcon"), an independent South African mining and exploration consulting company, have utilized historical face sampling information on the E9EC reef, to project higher grade pay-shoot trends which have resulted in the definition of six drill target areas, some of which are accessible from existing underground workings.

The outputs of this work have been compared to historical grades as delivered to the old Ezulwini plant for a period of 14 years from 1982 to 1995. This analysis resulted in a mine recovery factor of 74% for gold and 65% for uranium. These mine recovery factors were used to define potential and expected plant delivery grades from each of the six drilling target areas. The table below summarizes the expected plant delivery grades from the defined drilling target areas and has been derived by Minxcon using a Bayesian approach.

Drill Target Area	Au		U ₃ O ₈		Au Equivalent g/t	U ₃ O ₈ Equivalent Kg/t
	In-Stope Grade	Plant Delivery Grade	In Stope Grade	Plant Delivery Grade		
	g/t	g/t	Kg/t	Kg/t		
1 ²	8.93	6.61	0.970	0.630	10.93	1.589
2	10.2	7.54	0.800	0.520	11.10	1.614
3	6.66	4.93	0.128	0.830	10.68	1.552
4	7.11	5.26	0.560	0.360	7.76	1.127
5	4.13	3.05	0.580	0.520	5.65	0.821
6	6.69	4.95	0.800	0.450	8.53	1.239

Notes:

- 1) Mine recovery factor is the combination of dilution and loss factors applied to convert "in stope" sampling grades to plant delivery grades.
- 2) Table derived using population statistics on face sampling data; geo-statistics has been applied to pay-shoot 1 only, resulting in a lower Au plant delivery grade of 5.9g/t (versus 6.61g/t) and a higher U₃O₈ plant delivery grade of 0.642 Kg/t (versus 0.630Kg/t).
- 3) Au and U₃O₈ equivalents have been calculated using First Uranium's stated long term pricing assumptions of \$500 per ounce for Au and \$50 per pound for U₃O₈. By example, a grade of 1kg U₃O₈ per tonne equates to 6.88 grams per tonne of Au.

Based upon an internal concept evaluation, the combined Phase 1 drilling target areas have the potential to delineate a substantial portion of measured and indicated resources which would be required to justify the construction of a new 250,000 tonne-per-month shaft and a related mill expansion, that would have the potential to triple production capacity from the uranium bearing Middle Elsburg ore body. The conceptual evaluation excludes any potential contribution from the UE1A reef. Approximately 16,000 metres will need to be drilled in order to complete Phase 1. Drilling results and associated resource estimation can be expected towards the end of 2008. Additional Phase 2 target areas will be defined for the UE1A reef once historical face sampling information has been validated.

The expansion program excludes any prospecting that is expected to take place on contiguous properties to the north-east and south-east of the Ezulwini lease area covered by the prospecting application submitted to and accepted by the DME on April 16, 2007.

Buffelsfontein Tailings Recovery Project

The Buffelsfontein Tailings Recovery Project is a proposed uranium and gold tailings recovery operation located in the western portion of the Witwatersrand Basin approximately 160 kilometres from Johannesburg. FUSA plans to conduct hydraulic mining of tailings dams on the Buffelsfontein property using high pressure water cannons to slurry the tailings which will then be pumped to a processing plant for the recovery of uranium and gold. FUSA had planned to process the tailings from the ongoing mining operations at a plant to be located at the nearby Buffelsfontein underground mine owned and operated by Buffelsfontein Gold Mines Limited ("BGM"), a subsidiary of Simmer & Jack. As discussed above, the MWS acquisition, includes an operating gold mine tailings and re-processing facility, adjacent to First Uranium's Buffelsfontein Tailings Recovery Project. With this acquisition, the mined tailings from Buffelsfontein will be transported via a new pipeline to the MWS plant that will be expanded to replace the plant originally planned at the Buffelsfontein mine site. As well, the Corporation proposes to acquire the right to process three small additional tailings dams (the "Additional Dams Acquisition"). A prospecting right for these additional dams has been submitted to the DME.

The building of the pipeline between the Buffelsfontein site and MWS has commenced and is expected to be completed by October 2007, while hydraulic mining of the Buffelsfontein tailings dumps is expected to commence in November 2007. The MWS operation is mining the remnant of its current resource, due to be exhausted by December 2007. The operation requires mechanical cleaning of the floor material, temporarily increasing the operating cost significantly. The mechanical cleaning will continue in Q2 2008, with expected production of over 12,000 ounces of gold. The mechanical cleaning will stop as the Buffelsfontein tailings dams are brought online, and it is expected that production and average cost will then revert to the planned targets as per the May 22, 2007 revised technical report by Scott Wilson RPA.

BGM held an old order mining right in respect of mining gold at the BGM underground mine, which did not cover the recovery of the uranium in the tailings dams at Buffelsfontein. On June 4, 2007, the DME granted to BGM a prospecting right with respect to uranium and other minerals in the Buffelsfontein property and tailings dumps, subject to certain conditions which BGM expects to satisfy in due course. BGM has also filed with the DME an application to convert its old order mining right for BGM into a new order mining right. If and when this conversion application is approved, BGM intends to file with the DME one or more applications (which, together with the foregoing conversion application, are collectively referred to herein as the "Buffelsfontein Conversion Application") to: (i) amend, with effect from the date of conversion, the new order mining right to include the authority to mine for uranium underground and for gold, uranium and other minerals in respect of the tailings; (ii) divide the new order mining right, if granted, into two separate new order mining rights — one in respect of the mining for gold, uranium and other minerals at the BGM underground mine and the other, the Buffelsfontein Tailings Mining Right, in respect of the mining of the gold and uranium in the Buffelsfontein tailings dams; and (iii) cede the Buffelsfontein Tailings Mining Right, if granted, to MWS, a subsidiary of FUSA.

On December 20, 2006, FUSA, BGM and Simmer & Jack entered into an agreement (the "Buffelsfontein Tailings and Rights Agreement") pursuant to which, among other things: (i) BGM agreed to take all necessary steps to obtain all ministerial approvals required for the items requested in the Buffelsfontein Conversion Application in order to effect the transfer of the Buffelsfontein Tailings Mining Right to FUSA as soon as possible; and (ii) BGM agreed to sell to FUSA upon FUSA's receipt of the Buffelsfontein Tailings Mining Right, the Buffelsfontein tailings dams as well as certain property required for construction of the proposed processing plants, and grant to FUSA a right to the tailings arising from BGM's ongoing mining operations at its Buffelsfontein underground mine. In exchange for the above mentioned rights, FUSA will be required to (i) pay a nominal consideration of \$13.50 to BGM; (ii) assume the rehabilitation obligation relating to the dams; and (iii) pay to BGM, a 1% royalty plus value-added tax of the gross revenue accrued by FUSA from the sale of uranium, gold and any other minerals recovered from the Buffelsfontein tailings. In addition, FUSA will be responsible for making payments to BGM in respect of a net smelter royalty on all gold produced from the Buffelsfontein Tailings Recovery Project on a graduated

basis with reference to the price of gold. For a more detailed discussion of these arrangements, reference should be made to the Corporation's Annual Information Form.

Scott Wilson RPA prepared a preliminary economic assessment of the Buffelsfontein Tailings Recovery Project for First Uranium in connection with the Offering which was revised in January 2007 to incorporate the results of ongoing process selection work and to demonstrate the impact of this work on the preliminary economic assessment. The results of the preliminary assessment as revised are contained in a technical report dated January 31, 2007 (the "Prior Buffels Report"). The Prior Buffels Report was subsequently revised, incorporating the MWS Acquisition and the Additional Dams Acquisition, and indicated in a technical report dated May 22, 2007 (the "Revised Buffels Report"). In addition, to better reflect the current uranium pricing environment, the assumed price per pound of uranium has been increased from \$40 to \$50 from the assumption in the Prior Buffels Report.

According to the Revised Buffels Report, the projected NPV of the Buffelsfontein Tailings Recovery Project (assuming the completion of the Additional Dams Acquisition and a discount rate of 8%) is \$295 million with a projected IRR of 69% (as compared to \$211 million and 39%, respectively, as disclosed in the Prior Buffels Report). The incorporation of the MWS Acquisition and the Additional Dams Acquisition into the Buffelsfontein Tailings Recovery Project accounted for an increase in the projected NPV and IRR to \$237 million and 57% respectively as compared to the Prior Buffels Report. In addition, according to the Revised Buffels Report, the increase in the uranium price assumption resulted in an increase in the projected NPV from \$237 million to \$295 million and in the projected IRR from 57% to 69%.

With the MWS resources included and better defined, the life of the Buffelsfontein Tailings Recovery Project is presently estimated to be 16 years.

As the Corporation allocates the Buffelsfontein Tailings Recovery Project's projected cash costs in proportion to the projected revenue contribution from each product and the Corporation is assuming higher uranium prices and revenues, the Corporation expects that on a co-product basis, the cash cost of gold should be \$220 per ounce and the cash cost of uranium should be \$22 per pound.

Uranium production from the first two of three uranium plant modules is scheduled to commence in November 2008. The average annual production for the life of the Buffelsfontein Tailings Recovery Project (March 2007 to April 2023) is expected to be 128,000 ounces of gold and 922,000 pounds of uranium.

The preparation of a pre-feasibility study for the Buffelsfontein Tailings Recovery Project and detailed test work is ongoing to firmly identify the design and operating parameters.

The above economic analysis is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as mineral reserves. There is no certainty that the reserves development, production and economic forecasts, on which this preliminary assessment is based, will be realized.

Technical Disclosure

With the exception of paragraphs seven through ten under the heading "Ezulwini Mine" in this MD&A, the technical disclosure relating to the Ezulwini Mine is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa" originally submitted on November 8, 2006 and December 5, 2006 and revised on May 9, 2007, prepared in accordance with NI 43-101 by Wayne Valliant, P.Geol. and R. Dennis Bergen, P.Eng. of Scott Wilson Roscoe Postle Associates Inc. ("Scott Wilson RPA").

Technical disclosure under the heading "Ezulwini Expansion Program" in this MD&A is extracted from studies prepared in accordance with NI 43-101 by Daan Van Heerden, Pr.Eng of South African mining and exploration consultants, Minxcon (Proprietary) Limited.

Technical disclosure under the heading "Buffelsfontein Tailings Recovery Project" in this MD&A is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Buffelsfontein Project,

Northwest Province, Republic of South Africa" (the "Buffelsfontein Technical Report") originally submitted on November 8, 2006, revised on December 5, 2006, revised on January 31, 2007 and further revised on May 22, 2007.

Messrs. Bergen, Valliant and Van Heerden are each a "qualified person" under NI 43-101 and are independent of First Uranium. The technical disclosure contained in this MD&A relevant to their respective contributions has been reviewed and approved by Messrs. Bergen, Valliant and Van Heerden.

Results of Operations

Revenue

Revenue was generated from the processing of 401,621 tonnes of tailings material and sales of 3,395 ounces from the processing of gold at the current MWS operations at an average sales price of \$643 per ounce. Revenue from the MWS gold plant is included as of June 6, 2006, the effective date of the MWS acquisition for accounting purposes.

Total costs from June 6, 2007 to the end of the quarter were \$664 per ounce, as the acquired tailings dams are nearing the end of their productive life, which resulted in the requirement to load and haul tailings for mechanical placement near the hydraulic mining operation and, thus reduced the tonnes being processed and increased the handling costs.

There was no production attributable to First Uranium during Q1 2007.

Expenditures

Expenditures for Q1 2008 were \$3.2 million (Q1 2007: \$2.9 million). The expenditures for Q1 2008 included \$1.1 million (Q1 2007: \$0.9 million) of employee compensation costs, consulting and professional fees, as well as the non-capitalized portion of \$0.5 million (Q1 2007: \$0.4 million) for shared services fees paid to the majority shareholder, Simmer & Jack, for services provided pursuant to the Shared Services Agreement (see "Related Party Transactions") with First Uranium. Also included were general and administrative expenses of \$0.4 million during Q1 2008 (Q1 2007: Nil). The higher expenditures in Q1 2008 resulted primarily from an increase in services required to support the development of the projects, the costs of corporate offices in Johannesburg and Toronto and other expenses of operating a public company, which were not applicable in Q1 2007.

First Uranium also recognized a stock-based compensation expense of \$0.8 million during Q1 2008 (Q1 2007: Nil). This expense relates to the amortized cost of 1,223,001 stock options granted to directors, officers, employees and consultants during FY 2007 and the amortised cost of 60,000 stock options granted to directors and employees during Q1 2008. The fair value of the stock-based compensation was estimated using the Black-Scholes option pricing model.

Expenditures also include pumping and feasibility costs of \$0.3 million during Q1 2008 (Q1 2007: \$1.5 million). These costs related to the ongoing care and maintenance of the Ezulwini Mine. The decrease in costs is primarily the result of pumping and feasibility costs being capitalized, as part of mine infrastructure costs, since the end of May 2006, when the DME granted the mining right to Simmer & Jack, EMC's 90% shareholder at that time.

The Corporation earned interest income of \$4.4 million during Q1 2008 (Q1 2007: Nil). The interest income was primarily earned on the net proceeds raised from the Offering and the Debentures.

The interest expense of \$1.0 million during Q1 2008 consists of the interest paid on the Debentures at the end of the quarter. The interest expense of \$0.1 million during Q1 2007 consists of the non-capital portion of interest paid by EMC on the loan payable to Simmer & Jack. The accretion expense of \$1.1 million during Q1 2008 relates to the Debentures.

The foreign exchange gains of \$6.4 million during Q1 2008 (Q1 2007: \$0.8 million) are the combined result of the fact that the Corporation reports in US dollars, while the majority of its cash funds are held in Canadian dollars ("Cdn\$") and in South African rand ("ZAR"), each

of which have strengthened against the US dollar ("US\$"). The increase in the value of the Canadian dollar versus the US dollar during the quarter was partially offset by the Corporation having Canadian dollar denominated debt with the issue of the Debentures.

The net proceeds of the Offering were held in South African rand during Q1 2008. At the beginning of the quarter the US\$/ZAR exchange rate was 7.305, while at the end of the quarter the US\$/ZAR exchange rate was 7.076.

On May 3, 2007, when First Uranium received the net proceeds from the issue of the Debentures (the majority of the Corporation's Canadian funds held during Q1 2008), the Cdn\$/US\$ exchange rate was 0.900. At June 30, 2007, the Cdn\$/US\$ exchange rate was 0.944.

Net income

First Uranium generated net income of \$5.5 million during Q1 2008 (Q1 2007: incurred a loss of \$2.2 million), primarily as a result of the foreign exchange gains and net interest income earned, offset by operating losses incurred in Q1 2008. The Corporation incurred a net loss of \$2.2 million in Q1 2007 primarily from expenditures in connection with preparing its two uranium and gold projects for production.

Use of Proceeds

Offering

In the final prospectus dated December 12, 2006 filed by First Uranium in connection with the Offering (the "Final Prospectus"), First Uranium provided the following disclosure as to the anticipated uses of the estimated \$162.6 million of net proceeds from the sale of 29 million common shares by First Uranium to the public pursuant to the Offering:

- Development of the Ezulwini Mine - \$77.2 million
- Development of the Buffelsfontein Tailings Recovery Project - \$53.6 million
- Repayment of indebtedness owed by EMC to Simmer & Jack - \$18.3 million
- Repayment of the purchase price for the Ezulwini Mine assets under the REL Purchase Agreement - \$7.7 million
- Decrease in working capital plus general corporate costs - \$5.8 million

The estimated \$162.6 million net proceeds from the Offering and the above estimated uses of such proceeds as disclosed in First Uranium's Final Prospectus specifically did not include any proceeds received by First Uranium from the exercise of the over-allotment option granted to the underwriters. On December 29, 2006, the underwriters exercised the over-allotment option in full in respect of the sale of an additional 4.35 million shares of First Uranium and First Uranium received additional net proceeds of approximately \$24.7 million.

Of the total net proceeds of \$177.7 million received by First Uranium pursuant to the Offering, \$42.3 million had been expended as at June 30, 2007 as follows (resulting in \$135.4 million of the net proceeds on hand as at June 30, 2007):

Use of Net Proceeds Since The Offering (amounts in millions of dollars)	Used up to June 30, 2007	Used in the quarter ended June 30, 2007	Used up to March 31, 2007
Development of the Ezulwini Mine	(29.1)	(9.8)	(19.3)
Development of the Buffelsfontein Tailings Recovery Project	(2.2)	(0.7)	(1.5)
Repayment of indebtedness owed by EMC to Simmer & Jack	(14.1)	-	(14.1)
Payment of the REL Purchase Agreement purchase price	(8.9)	-	(8.9)
Working capital and general corporate purposes	12.0	3.4	8.6
Total	(42.3)	(7.1)	(35.2)

While First Uranium intends to apply the net proceeds of the Offering approximately as disclosed above, such uses are by definition based on estimates and assumptions and are subject to variance. In addition, there may be circumstances where, for sound business reasons, a re-allocation of the funds may be necessary or advisable.

Debentures

The Corporation intends to use the net proceeds from the issue of the Debentures to: fund the Ezulwini Expansion Program, a drilling program and feasibility study which are designed to determine the potential for a possible expansion of the Ezulwini Mine; together with the net proceeds of the Offering to fund the development of the Buffelsfontein Tailings Recovery Project; and for general corporate purposes. The net proceeds of \$130.6 million from the issue of the Debentures are currently held by the Corporation in Canadian dollars in a Canadian bank account. The approval of the South African Reserve Bank ("SARB") to the issue of the Debentures includes a condition that the Corporation transfer the net proceeds from the issue of the Debentures to bank accounts of the Corporation in South Africa and convert the funds to South African rand by May 3, 2008.

First Uranium believes that the net proceeds of the issue of the Debentures, in addition to the unused portion of the net proceeds of the Offering, are sufficient to fund its plans for the near-term development of the Ezulwini Mine, the Ezulwini Expansion Program and the Buffelsfontein Tailings Recovery Project as adjusted as a result of the acquisition of MWS.

Cash flows

Cash generated from operating activities of \$10.1 million during Q1 2008 (Q1 2007: \$0.5 million) was mainly as a result of the net interest earned and the payment by Simmer & Jack of an outstanding receivable.

During Q1 2008, Simmer & Jack transferred \$5.9 million of cash it held on behalf of First Uranium and its subsidiaries at the beginning of Q1 2008 into newly opened bank accounts of First Uranium and its subsidiaries, which resulted in the decrease in amounts receivable from related parties.

Investing activities utilized \$8.5 million during Q1 2008 (Q1 2007: \$0.6 million), consisting mainly of additions to property, plant and equipment relating to the Ezulwini Mine of \$9.2 million (Q1 2007: \$0.6 million).

On May 3, 2007, First Uranium raised net cash of \$130.6 million (Q1 2007: \$0.7 million) through the private placement of \$135.1 million (Cdn\$150 million) aggregate principal amount of Debentures due June 30, 2012. The Debentures bear interest at a rate of 4.25% per annum payable semi-annually and are convertible into common shares of First Uranium at Cdn\$16.42 per share.

Financial Position and Liquidity

Cash and non-cash assets

Cash and cash equivalent balances available at June 30, 2007 increased by \$136.3 million to \$275.2 million (FY 2007: \$138.9 million), primarily as a result of the inclusion of the net proceeds from the issue of the Debentures.

Accounts receivable of \$3.8 million at June 30, 2007 (FY 2007: \$1.7 million) was comprised primarily of value-added tax and goods and services tax refunds.

During Q1 2008, First Uranium set up separate bank accounts for itself and its subsidiaries and the cash previously held on its behalf by Simmer & Jack was transferred into these bank accounts. The transfer of such amounts resulted in a decrease in accounts receivable of \$5.9 million to \$0.9 million (FY 2007: \$6.8 million).

Non-current assets increased to \$92.3 million at June 30, 2007 (FY 2007: \$33.7 million), mainly as a result of the additions to property, plant and equipment by EMC of \$14.5 million and the fair value allocation of \$35.8 million to plant and equipment and tailings for processing as a result of the acquisition of MWS. The additional costs also include capitalized pumping costs and costs relating to mining assets, mining infrastructure and plant and equipment.

Investing activities

On June 6, 2007, First Uranium, through its wholly-owned subsidiary FUSA, acquired a 100% equity interest in MWS in consideration for 3,093,980 common shares of First Uranium.

Total Liabilities

As of June 30, 2007, First Uranium had total liabilities of \$118.9 million (FY 2007: \$11.1 million), consisting mainly of the debt portion of the Debentures of \$89.3 million, accounts payable and accrued liabilities of \$9.4 million (FY 2007: \$5.7 million) and the future tax liability arising from the MWS acquisition of \$11.1 million.

The increase in accounts payable and accrued liabilities at June 30, 2007 is primarily the result of capital costs incurred by EMC and normal trade payables related to the operations of MWS.

The amount payable to a related party of \$0.2 million (FY 2007: Nil) consists of the shared services fee payable by FUSA to Simmer & Jack pursuant to the terms of the Shared Services Agreement between First Uranium and Simmer & Jack.

Liquidity and Capital Resources

At June 30, 2007, First Uranium had working capital of \$271.7 million (FY 2007: \$142.0 million). The significant increase in working capital is attributable to the inclusion of net proceeds of \$130.6 million from the issue of the Debentures.

First Uranium anticipates that future capital requirements relating to its development of the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project will be funded through a combination of the proceeds of the Offering and the Debentures and from internal cash flow.

Capital expenditures of \$148.0 million and \$270.6 million will be required to complete the currently planned construction of the Buffelsfontein Tailings Recovery Project and the Ezulwini Mine, respectively, for which \$29.9 million (FY 2007: \$14.8 million) of current commitments exist.

Exploration budgets for the Ezulwini Mine and on the contiguous properties to the north-east and south-east of the Ezulwini Mine of \$30 million and \$10 million, respectively, have been approved by the Board of Directors. The extent to which the budgeted amounts are spent depends on the ongoing exploration results. The exploration expenditures will be funded out of available working capital.

First Uranium had executed a mandate letter and term sheet with Investec Bank Limited ("Investec") in respect of potential debt financing, which was originally planned to be used towards the development of the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project, but the original need for this facility was eliminated as a result of the Debenture issue. The Corporation is, however, continuing with the process of satisfying certain conditions precedent and is in discussions with Investec to modify the proposed facility to a corporate facility.

As at June 30, 2007, First Uranium had the following contractual obligations:

Contractual Obligations	Payments due by Date				
	Less than 1 year \$000	1-3 Years \$000	4-5 Years \$000	After 5 Years \$000	Total \$000
Operating Leases	13	15	-	-	28
Purchase Obligations	29,941	-	-	-	29,941
Capital Lease Obligations	36	115	40	-	191
Asset Retirement Obligations	-	-	-	8,186	8,186
Senior Unsecured Convertible Debentures	-	-	135,060	-	135,060
Total Contractual Obligations	29,990	130	135,100	8,186	173,406

Summary of Quarterly Results

The table below sets out selected financial data for the periods indicated. The financial data presented is derived from First Uranium's consolidated financial statements, which are prepared in accordance with Canadian GAAP.

Fiscal Quarters Ended	Total Assets \$000	Net Income/(Loss) \$000	Basic and Diluted Earnings/ (Loss) per Share \$	Long Term Liabilities \$000
June 30, 2007	373,549	5,471	0.04	118,900
March 31, 2007 (audited)	181,427	(2,689)	(0.02)	5,377
December 31, 2006	195,374	(3,787)	(0.04)	Nil
September 30, 2006	3,619	786	0.01	Nil
June 30, 2006	3,522	(2,238)	(0.03)	Nil
March 31, 2006 (audited)	3,433	(4,656)	(0.05)	Nil
December 31, 2005	4,519	(2,201)	(0.03)	Nil
September 30, 2005	n/a	n/a	n/a	n/a
June 30, 2005	n/a	n/a	n/a	n/a

Outlook

The Corporation will take the following steps to integrate MWS into the Buffelsfontein Tailings Recovery Project. The Corporation is preparing to undertake a pre-feasibility study for the project's new gold and uranium plant modules. The MWS assets include a gold plant. The second gold module and the first two uranium modules are expected to be commissioned in November 2008. The Corporation has commenced construction of a pipeline from the Buffelsfontein site to the MWS site, which is expected to be completed in October 2007 with hydraulic mining of the Buffelsfontein tailings dams to commence in November 2007.

Gold production at the Ezulwini Mine is expected to commence by the end of October 2007 using a gold toll milling operation. First Uranium is in negotiation with third parties regarding the tolling arrangement. The current plan is for the Ezulwini Mine to process gold and uranium at its own plants by April and June 2008, respectively.

In the second quarter of fiscal year 2008 ending September 30, 2007, the Corporation expects to process 1.5 million tonnes of tailings through its MWS gold plant, with expected production of over 12,000 ounces of gold.

Although the spot price for uranium, which reached \$136 per pound at the end of June, had recently softened to \$110 per pound, this is still well above the \$50 per pound, upon which First Uranium has based its project economics for the next 20 years. As concerns persist that the supply of uranium might not meet near- to mid-term demand, the Corporation raised its expectations for the average price of uranium for the life of its projects from \$40 per pound to \$50 per pound. The Corporation has not yet signed any contracts to supply uranium and does not expect to do so until it is nearer production in June 2008.

Offsetting the higher price assumptions, mining cost expectations have also increased. Mine construction costs have risen for labour, reflecting higher negotiated wage settlements across the sector, and for materials, such as steel and concrete. First Uranium has included consideration for higher costs into its revised technical reports and planning for the future.

Based on the most recent technical reports published in May 2007 for each project the co-product costs for the Ezulwini Mine are expected to be \$297 (down from \$315) per ounce for gold and \$30 (up from \$25) per pound for uranium and at the Buffelsfontein Tailings Recovery Project co-product costs are expected to be \$220 (down from \$235) per ounce and \$22 (up from \$19) per pound.

Related Party Transactions

On December 20, 2006, First Uranium and Simmer & Jack entered into a shared services agreement (the "Shared Services Agreement").

Pursuant to the terms of the Shared Services Agreement, First Uranium is entitled to certain services to be provided by Simmer & Jack, including project management and technical services, cash management and investment services, accounting, treasury and financial services, corporate secretarial services and human resources and staffing services, including payroll and benefits administration, and such other services as may be required by First Uranium and which Simmer & Jack is able and willing to provide. Subsequent to entering into the agreement, the Corporation hired eight senior executives, including Mr. Miller, President and Chief Executive Officer, Mr. Fisher, Executive Vice President and Chief Operating Officer and Ms. Emma Oosthuizen, Senior Vice President and Chief Financial Officer, and other staff, resulting in certain of these services being no longer required to be provided by Simmer & Jack.

During Q1 2008 the Corporation paid \$527,881 shared services fees to Simmer & Jack pursuant to the terms of the Shared Services Agreement.

Prior to December 2006, the Corporation shared its premises with other companies that had common directors and reimbursed the related companies for its proportional share of expenses or was reimbursed by the related companies for their proportional share of expenses. During Q1 2007, the Corporation was charged \$303,306 for consulting services provided by related directors, officers and consultants of the Corporation.

First Uranium has agreed to reimburse Simmer & Jack with respect to 50% of fees (to a maximum of ZAR125,000 per month) that Simmer & Jack is required to pay to an empowerment company for consulting services regarding transformation, human resources and occupational health and safety. BJ Njenje, AX Sisulu and SLB Mapisa, shareholders of the empowerment company, are also directors of Simmer & Jack. During Q1 2008 the Corporation paid \$57,000 to Simmer & Jack in connection with such services.

The amounts payable by First Uranium to Simmer & Jack are as a result of transactions pursuant to the Shared Services Agreement and are in the normal course of business.

Waterpan Mining Consortium ("Waterpan") currently holds a 10% shareholding in EMC. On December 20, 2006, Waterpan, First Uranium Limited ("FUL") and the Corporation entered into a purchase agreement (the "Waterpan Purchase Agreement") pursuant to which Waterpan agreed to sell its shares in EMC to FUL and as consideration for such sale, First

Uranium will issue 6,141,009 common shares of First Uranium to Waterpan (the "Waterpan Shares"). The closing of the transaction is subject to approval of SARB. Pursuant to the Waterpan Purchase Agreement, Waterpan has agreed not to sell or transfer 90% of the Waterpan Shares for a period of two years from the date of issuance. One shareholder of Waterpan is a director of EMC; two other shareholders of Waterpan are officers and/or employees of First Uranium and EMC.

Critical Accounting Policies and Estimates

The preparation of these unaudited consolidated interim financial statements in accordance with Canadian generally accepted accounting practice requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amount of revenues and expenses during the reporting period.

Significant areas requiring the use of management estimates relate to the determination of impairment of capital assets, goodwill estimation of future site restoration costs, stock-based compensation and future income taxes, classification of current portion of long-term debt, and the valuation of the equity component of convertible debentures. Financial results as determined by actual events could differ from those estimated.

Foreign currency translation

The Corporation considers the United States dollar ("US\$") to be the functional and reporting currency. The translated amounts are of a foreign entity where its subsidiaries are accounted for as integrated foreign operations and as such, the translation to US dollar was made using the temporal method. Monetary assets and liabilities denominated in foreign currencies are translated in United States dollars at the period-end exchange rates, while non-monetary items are translated at the exchange rate in effect at the transaction date. Revenue and expense items are translated at the exchange rates in effect on the date of the transaction. Exchange gains and losses resulting from the translation of these amounts are included in the consolidated statements of operations.

Property, plant and equipment

The application of the Corporation's accounting policies for these assets has a material impact on its financial statements. Property, plant and equipment and related capitalized expenditures are recorded at cost. Amortization expense is based on the estimated useful lives of these assets. The carrying values of mining properties and property, plant and equipment are reviewed for impairment when events or changes in circumstances indicate that the carrying amounts may not be recoverable. Impairment assessments are based on estimates of future cash flows, which include: the quantity of mineral reserves; future metal prices and future operating and capital costs to mine and process the Corporation's reserves.

The variability of these factors depends on a number of conditions, including the uncertainty of future events, and as a result, accounting estimates may change from one period to another. Asset balances could be materially impacted if other assumptions and estimates had been used. In addition, future operating results could be impacted if different assumptions and estimates are applied in future periods.

Asset retirement obligations

Mining, development and exploration activities are subject to various laws and regulations governing the protection of the environment. The Corporation has recorded a liability for future costs related to these regulations with a corresponding adjustment to the carrying amount of the related assets.

Significant judgments and estimates are made when determining the nature and costs associated with asset retirement obligations. Changes in the underlying assumptions used to estimate the obligation as well as changes to environmental laws and regulations could

cause material changes in the expected cost and the fair value of asset retirement obligations.

Stock-based compensation

The Corporation accounts for all stock-based payments under the fair value based method. Under the fair value based method, compensation cost is measured at fair value at the grant date using the Black Scholes option pricing model that takes into account the exercise price, the expected life of the options, expected volatility of the underlying shares, expected dividend yield and the risk free interest rate for the term of the option.

Convertible debentures

The Corporation determines the equity component of the convertible debenture by using the fair value based method. Under the fair value based method, the equity component is measured at fair value at the date the convertible debentures were issued using the Black Scholes option pricing model that takes into account the exercise price, the expected life of the convertible debentures, expected volatility of the underlying shares, expected dividend yield and the risk free interest rate for the term of the convertible debentures.

Changes in accounting policies

Effective April 1, 2007, the Corporation adopted the Canadian Institute of Chartered Accountants ("CICA") Handbook Sections 1530 – Comprehensive Income, Section 3855 – Financial Instruments – Recognition and Measurement and Section 3865 – Hedges. The adoption of these new standards resulted in changes in the accounting for financial instruments and hedges, as well as the recognition of certain transition adjustments. As provided under the standards, the comparative consolidated financial statements have not been restated.

The adoption of these Sections is done retroactively without restatement of the consolidated financial statements of prior periods. There was no impact on the consolidated balance sheet of as at April 1, 2007.

The effect of these changes in the accounting policies on net income for Q1 2008 is not significant.

Effective April 1, 2007, the Corporation adopted the revised Section 1506 – Accounting Changes relating to changes in accounting policies, changes in accounting estimates, and errors. Adoption of these recommendations had no effect on the consolidated financial statements for the Q1 2008, except for the disclosure of accounting changes that have been issued by the CICA but have not yet been adopted by the Corporation because they are not effective until a future date (refer to Future accounting standards below).

Future accounting standards

In February 2007, the CICA issued the following pronouncements:

- (i) Section 1535, Capital Disclosures, which is effective for fiscal years beginning on or after October 1, 2007. This standard requires disclosure of information that enables users of its financial statements to evaluate the entity's objectives, policies and processes for managing capital. The adoption is not expected to have a significant effect on the Corporation's financial statements.
- (ii) Section 3862, Financial Instruments – Disclosures and Section 3863, Financial Instruments – Presentation, which are effective for fiscal years beginning on or after October 1, 2007. The objective of Section 3862 is to provide financial statement disclosure to enable users to evaluate the significance of financial instruments for the Corporation's financial position and performance and the nature and extent of risks arising from financial instruments that the Corporation is exposed to during the reporting period and the balance sheet date and how the Corporation is managing

those risks. The purpose of Section 3863 is to enhance the financial statement user's understanding of the significance of financial instruments to the Corporation's financial position, performance and cash flows.

In March 2007, CICA approved Handbook Section 3031 – Inventories, which replaces the existing Section 3030 – Inventories. This standard is effective for interim and annual financial statements relating to fiscal years beginning on or after January 1, 2008, with earlier application encouraged. The standard provides more guidance on the measurement and disclosure requirements for inventories.

The Corporation is currently assessing the impact of these new accounting standards on its financial statements.

Outstanding Share Data

As at June 30, 2007 and August 10, 2007, First Uranium had 124,780,027 and 124,818,122 issued and outstanding common shares, respectively. As at June 30, 2007 there were 1,283,001 unexercised stock options outstanding, exercisable at an average strike price of Cdn\$7.56 per share. As at August 10, 2007 there were 1,301,334 unexercised stock options outstanding, exercisable at an average strike price of Cdn\$7.85 per share.

As at June 30, 2007 and August 10, 2007, First Uranium also had \$135.1 million (Cdn\$150 million) principal amount of Debentures outstanding which are convertible into 60.9013 common shares of First Uranium for each Cdn\$1,000 principal amount of Debentures, representing 9,135,195 common shares.

Disclosure Controls and Procedures

Disclosure controls and procedures are designed to provide reasonable assurance that all relevant information is gathered and reported on a timely basis to senior management, including the Corporation's President and Chief Executive Officer and the Chief Financial Officer, so that appropriate decisions can be made regarding public disclosure. As at the end of the period covered by this MD&A, management of First Uranium, by the direction of the President and Chief Executive Officer and the Chief Financial Officer, evaluated the effectiveness of the Corporation's disclosure controls and procedures as required by Canadian securities laws.

Based on the evaluation, the President and Chief Executive Officer and the Chief Financial Officer have concluded that as of the end of the period covered by this MD&A, the disclosure controls and procedures were effective to provide reasonable assurance that information required to be disclosed in First Uranium's annual filings and interim filings (as such terms are defined under Multilateral Instrument 52-109 – Certification of Disclosure in Issuers' Annual and Interim Filings) and other reports filed or submitted under Canadian securities laws is recorded, processed, summarized and reported within the time periods specified by those laws, and that material information is accumulated and communicated to management of First Uranium, including the President and Chief Executive Officer and the Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

During the most recent quarter there were no changes in the Corporation's internal controls over financial reporting that materially affected, or are reasonably likely to materially affect, the Corporation's internal control over financial reporting.

Risks and Uncertainties

Uncertainties

There are a number of uncertainties in the mining business of First Uranium that are beyond First Uranium's control, including:

- Demand and prices for the Corporation's future production of uranium and gold
- Government legislation regarding mining companies in South Africa
- Securities regulation regarding public listed companies in Canada and South Africa
- Foreign exchange rates
- Interest rates
- The decisions and activities of the Corporation's competitors in the uranium and gold mining business, which impact the supply of uranium and the demand for available services, construction materials, labour and the rights for prospecting and mining
- The continued endorsement of nuclear power as a preferred source for the world's energy needs
- The decisions of investors to continue to buy and hold the securities of the Corporation
- Natural disasters, war or random occurrences or acts that could result in a material change to economic and market performance, business conditions or operations.

Risks

In addition, First Uranium is in the development stage and is subject to the risks and challenges similar to other companies in a comparable stage of development. The risks include, but are not limited to, certain business, operational and market risks. For a discussion of the Corporation's risks please refer to the Corporation's Annual MD&A, the 2007 Annual Information Form and other filings, which are available on the Corporation's website www.firsturanium.com and on www.sedar.com or upon request from the Corporation.

A trend that could increase risk for the Corporation would be the heightened labour unrest in South Africa. Workers at various South African mining operations have been demanding, through their unions, higher compensation as a result of increased revenues in the mining sector being driven by heightened mineral prices. Strikes have been threatened during some of the negotiations. First Uranium has mitigated the threat of work stoppages by negotiating recent settlements with unions represented at its operations.

Similarly, workers in other industries have been demanding higher compensation and threatening strike action. One such example is the strike by petroleum workers in early August which limited the supply of petrol. Strikes in the public sector and service industries, if protracted, have the potential to disrupt the development of the Corporation's two projects. No material delays have been experienced to date and the projects are on track for their scheduled completion dates.

Additional Information

Additional information relating to First Uranium is included in the Corporation's Annual Information Form dated June 13, 2007 and it is available on SEDAR at www.sedar.com.

Forward-looking Information

This MD&A and consolidated financial statements for the period ended June 30, 2007 contain certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the price of uranium and gold, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and

other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at the date of this MD&A; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this MD&A, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) approvals to transfer or grant, as the case may be, mining rights or prospecting rights will be obtained; (ii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iii) mineral resource estimates are accurate; (iv) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (v) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vi) that outstanding approvals for the completion of an acquisition, the transfer of mining rights and the approval of mining rights will be granted; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024; and (ix) the completion of the Additional Dams Acquisition.

Form 52-109F2 - Certification of Interim Filings

I, Gordon Miller, President and Chief Executive Officer of First Uranium Corporation, certify that:

1. I have reviewed the interim filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of First Uranium Corporation (the "issuer") for the period ending June 30, 2007;
2. Based on my knowledge, the interim filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the interim filings;
3. Based on my knowledge, the interim financial statements together with the other financial information included in the interim filings fairly present in all material respects the financial condition, results of operations and cash flows of the issuer, as of the date and for the periods presented in the interim filings;
4. The issuer's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures and internal control over financial reporting for the issuer, and we have:
 - (a) designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which the interim filings are being prepared;
 - (b) designed such internal control over financial reporting, or caused it to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer's GAAP; and
5. I have caused the issuer to disclose in the interim MD&A any change in the issuer's internal control over financial reporting that occurred during the issuer's most recent interim period that has materially affected, or is reasonably likely to materially affect, the issuer's internal control over financial reporting.

DATED this ~~13th~~ day of August, 2007

Gordon T. Miller
President and Chief Executive Officer

Form 52-109F2 - Certification of Interim Filings

I, Emma Oosthuizen, Senior Vice President and Chief Financial Officer of First Uranium Corporation, certify that:

1. I have reviewed the interim filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of First Uranium Corporation (the "issuer") for the period ending June 30, 2007;
2. Based on my knowledge, the interim filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the interim filings;
3. Based on my knowledge, the interim financial statements together with the other financial information included in the interim filings fairly present in all material respects the financial condition, results of operations and cash flows of the issuer, as of the date and for the periods presented in the interim filings;
4. The issuer's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures and internal control over financial reporting for the issuer, and we have:
 - (a) designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which the interim filings are being prepared;
 - (b) designed such internal control over financial reporting, or caused it to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer's GAAP; and
5. I have caused the issuer to disclose in the interim MD&A any change in the issuer's internal control over financial reporting that occurred during the issuer's most recent interim period that has materially affected, or is reasonably likely to materially affect, the issuer's internal control over financial reporting.

DATED this 13th day of August, 2007

Emma Oosthuizen
Senior Vice President and Chief Financial Officer

First Uranium Corporation
Notes to the Unaudited Interim Consolidated Financial Statements
December 31, 2006

1. NATURE OF OPERATIONS AND BASIS OF PRESENTATION

These interim consolidated financial statements have been prepared by First Uranium Corporation ("First Uranium") in accordance with Canadian generally accepted accounting principles ("Canadian GAAP"). These financial statements have not been reviewed or audited by First Uranium's independent auditors. The preparation of the financial statements is based on accounting policies and practices consistent with those used in the preparation of the audited annual consolidated financial statements. The unaudited interim consolidated financial statements reflect all normal and recurring adjustments, which are, in the opinion of management, necessary for a fair presentation of the interim period presented.

First Uranium is a Canadian company listed on the Toronto Stock Exchange ("TSX"). First Uranium is a resource company focused on the development of uranium and gold projects in Southern Africa. First Uranium owns 100% of First Uranium Limited ("FUL"), which in turn holds 100% of First Uranium (Proprietary) Limited ("FUSA") and 90% of Ezulwini Mining Company (Proprietary) Limited ("EMC").

The conditions of the approval of the South African Reserve Bank ("SARB") to the transfer by Simmer and Jack Mines, Limited ("Simmer & Jack") of its ownership in FUSA and EMC to First Uranium included the requirement that First Uranium must complete a secondary listing on the Johannesburg Stock Exchange ("JSE") within 12 months of receipt of SARB approval. The SARB approval was received on November 16, 2006. First Uranium is in the process of applying for a secondary listing of its common shares on the JSE.

1.1 Investment in subsidiaries

Group financial statements

The acquisition by First Uranium of shareholdings in FUSA and EMC have been accounted for as a continuity of interests. Certain adjustments have been reflected in the financial statements to reflect the reorganization in terms of which First Uranium acquired 100% of FUSA and 90% of EMC as if the share exchange had been effective for the period from inception to 31 December 2006.

Unless otherwise stated, all amounts are reported in United States Dollars ("\$").

Acquisition from entities under common control

A business combination involving entities or businesses under common control is a business combination in which all of the combining entities or businesses are ultimately controlled by the same party or parties both before and after the business combination, and that control is not transitory. The assets and liabilities acquired in a business combination under common control are recognized at the carrying amounts recognized previously in the group's controlling shareholder's consolidated financial statements.

2. RELATED PARTY TRANSACTIONS

At December 31, 2006 Simmer & Jack, which is a 67.16% shareholder of First Uranium, owes FUSA \$16.4 million (March 31, 2006: \$2.7 million). At December 31, 2006 EMC owes Simmer & Jack \$12.7 million (March 31, 2006: \$5.3 million). For the period from inception to December 31, 2006, FUSA and EMC did not have their own respective bank accounts and as a result their cash were held by Simmer & Jack on their behalf.

All of the above transactions are in the normal course of operations and are measured at the exchange amount established and agreed to by the related parties.

First Uranium Corporation
Notes to the Unaudited Interim Consolidated Financial Statements
December 31, 2006

2. RELATED PARTY TRANSACTIONS (continued)

Simmer & Jack performs management services to EMC and FUSA. Simmer & Jack charged total management fees of \$0.9 million for the quarter ending December 31, 2006 and \$1.8 million for the nine months ending December 31, 2006.

3. GUARANTEES AND PREPAID EXPENSES

The guarantees and prepaid expenses for the nine months ending December 31, 2006 include a guarantee of \$4.5 million placed with the Department of Minerals and Energy ("DME") for the environmental rehabilitation of the Ezulwini Mine.

4. DEFERRED PROPERTY COSTS

EMC has expensed feasibility and costs on property since acquisition in 2005. During May 2006, EMC determined that future production was feasible, and accordingly, amounts incurred from May 2006 have been capitalized. Costs capitalized for the nine months ending December 31, 2006 amounted to \$9.1 million.

EMC entered into an agreement with Randfontein Estates Limited ("REL") in respect of the purchase by EMC of certain surface and underground assets relating to the Ezulwini Mine. In terms of the agreement a total consideration of \$7.8 million is payable to REL. The effective date of the transaction was December 22, 2006. \$0.7 million was still outstanding at December 31, 2006.

5. SHARE CAPITAL

Authorized

The authorized capital of First Uranium consists of an unlimited number of common shares.

Issued and outstanding

In December 2005 and January 2006 First Uranium raised a total of \$4.2 million through private placement issues of 4,875,000 shares at Cdn \$1 per share. \$3 million of the capital raised was used to acquire the 20% interest in FUSA. There were share issue costs of \$0.2 million for the period.

On February 1, 2006 First Uranium granted 475,000 stock options to directors, officers, and consultants of the company at Cdn \$1 per share. On March 1, 2006, a further 325,000 stock options were granted to directors, officers and consultants of First Uranium at Cdn \$1 per share. On June 1, 2006 800,000 stock options were exercised for proceeds of \$0.7 million.

First Uranium Corporation
Notes to the Unaudited Interim Consolidated Financial Statements
December 31, 2006

5. SHARE CAPITAL (continued)

As part of the First Uranium reorganization and initial public offering in December 2006:

- the 5,675,001 issued and outstanding shares of First Uranium were split resulting in an increase in the issued and outstanding shares to 6,613,394. This split was determined based on the initial public offering issue price of Cdn \$7 per share and the agreed valuation of the assets, which was supported by a valuation assessment provided by an independent valuation;
- First Uranium issued to Simmer & Jack 26,416,295 shares valued at \$187.4 million for 1,196 FUL shares relating to the 80% FUSA shares previously owned by Simmer & Jack;
- First Uranium issued to Simmer & Jack 55,306,358 shares valued at \$391.6 million for 2,504 FUL shares relating to the 90% EMC shares previously owned by Simmer & Jack;
- First Uranium issued 29 million shares to the public at Cdn \$7 per share for gross proceeds of \$175.5 million;
- First Uranium issued an additional 4.35 million shares at Cdn \$7 per share due to an over-allotment option granted for gross proceeds of \$26.2 million.

	Number of shares		Value of shares	
	Dec 31, 2006 '000	Mar 31, 2006 '000	Dec 31, 2006 \$'000	Mar 31, 2006 \$'000
Ordinary shares

Closing balance of shares in issue	121,686	4,875	191,172	4,176

6. CONTRIBUTED SURPLUS – STOCK-BASED COMPENSATION

The stock-option plan (the "Option Plan") is for employees, officers, directors and consultants that provide ongoing support to First Uranium and its subsidiaries. Under the Option Plan, options typically are granted for a period of up to ten years following the date of grant. The amounts granted usually reflect the level of responsibility of the particular optionee and his or her contributions to First Uranium.

The Board of Directors has the complete discretion to set the terms of any vesting schedule of each option granted. Except in specified circumstances, options are not assignable and non-transferable, and terminate upon the optionee ceasing to be employed or associated with First Uranium.

The terms of the Option Plan further provide that the price at which shares may be issued under the Option Plan cannot be less than the fair value of the shares when the relevant options are granted.

First Uranium Corporation
Notes to the Unaudited Interim Consolidated Financial Statements
 December 31, 2006

6. CONTRIBUTED SURPLUS – STOCK-BASED COMPENSATION
 (continued)

Contributed surplus	Dec 31, 2006 \$'000	Mar 31, 2006 \$'000
Balance at beginning of period	27	-
Amortized share option cost	519	27
Balance at end of period	546	27

Unamortized share option cost	Dec 31, 2006 \$'000	Mar 31, 2006 \$'000
Balance at beginning of period	-	-
Fair value of stock options granted during the period	1,556	27
Amortized share option cost	(519)	(27)
Balance at end of period	1,037	-

On February 1, 2006 First Uranium granted 475,000 stock options to directors, officers, and consultants of First Uranium at Cdn \$1 per share. On March 1, 2006 a further 325,000 stock options were granted to directors, officers, and consultants of First Uranium at Cdn \$1 per share. The options fully vested on the date of grant. For purposes of stock-based compensation, the fair values of the stock options were estimated using the Black-Scholes option pricing model with the assumptions used for the grants as follows:

- dividend yield of 0.0%
- expected volatility of 0.0%
- risk free interest rate of 4.1%
- expected life of one year

On June 1, 2006, the total 800,000 stock options were exercised for proceeds of \$0.7 million.

On December 20, 2006 First Uranium granted 1,115,715 stock options at an exercise price of Cdn \$7 per share to directors, officers, and consultants of First Uranium. These options are granted for a period of 10 years following the date of the grant and are subject to the following vesting schedule:

- a. One-third immediately;
- b. One-third on or after one year from the date of grant; and
- c. One-third on or after two years from the date of grant.

For purposes of stock-based compensation, the fair values of the stock options granted in December 2006 were estimated using the Black-Scholes option pricing model with the assumptions used for the grants as follows:

- dividend yield of 0.0%
- expected volatility of 35%
- risk free interest rate of 4.092%
- expected life of 2 years

Due to the short history of First Uranium trading on the TSX, changes in the subjective input assumptions can materially affect the fair value estimate, and therefore, the existing model does not necessarily provide a reliable measure of the fair value of First Uranium's stock options.

First Uranium Corporation

December 31, 2006

7. BASIC LOSS PER SHARE

	9 months to Dec 31, 2006	9 months to Dec 31, 2005	3 months to Dec 31, 2006	3 months to Dec 31, 2005
Basic loss per share of (\$)	(0.96)	(0.00)	(0.69)	(0.00)
is calculated based on net loss for the period of (\$'000)	(5,156)	(2,201)	(3,704)	(2,201)
and a weighted average number of shares outstanding of ('000)	5,344	-	5,344	-

Stock options are anti-dilutive and hence not considered in a loss position.

8. COMMITMENTS

In December 2006 FUSA entered into the Buffelsfontein Tailings and Rights Agreement with Simmer & Jack and Buffelsfontein Gold Mines Limited ("BGM"), a subsidiary of Simmer & Jack, pursuant to which, among other things: (i) BGM has covenanted to take all necessary steps to obtain all ministerial approvals required for the items requested in the Buffelsfontein Conversion Application in order to effect the transfer of the Buffelsfontein Tailings Mining Right to FUSA as soon as possible; (ii) BGM has agreed to sell to FUSA upon FUSA's receipt of the Buffelsfontein Tailings Mining Right, the Buffelsfontein tailings dumps as well as certain property required for construction of the proposed processing plants, and grant to FUSA a right to the tailings arising from BGM's ongoing mining operations at its underground Buffelsfontein Mine; and (iii) BGM will grant a servitude to FUSA for access and egress to BGM's property to enable FUSA, its employees, consultants, agents and subcontractors access for purposes of constructing, servicing and operating the uranium and gold processing plants and tailings pipelines to be built by FUSA.

9. SUBSEQUENT EVENTS

First Uranium has executed a mandate letter and term sheet with Investec Bank Limited in respect of potential debt financing for the Ezulwini and Buffelsfontein Projects. Pursuant to the mandate letter and term sheet which is subject to a number of conditions precedent, FUSA and EMC intend to enter into debt facilities (the "Debt Facilities") with Investec Bank Limited and/or Investec Bank (Mauritius) Limited, as the arranging bank and a syndicate of banks (collectively, the "Lenders"), consisting of two term loan facilities, one to FUSA of ZAR 450 million and a term loan to EMC of ZAR 400 million. The term sheet in respect of the Debt Facilities contemplates a number of conditions precedent including, among others, receipt of final credit and documentary approvals by the Lenders, the completion of satisfactory technical and legal due diligence by the Lenders, the completion of an equity offering to raise project funding of ZAR 950 million and the existence of material contracts, permits, licenses and consents (including off-take arrangements) acceptable to the Lenders. Subject to the achievement of the conditions precedent, First Uranium does not expect to be in a position to enter into definitive agreements in respect of the Debt Facilities before March 2007, at the earliest.

First Uranium Corporation
Notes to the Unaudited Interim Consolidated Financial Statements
December 31, 2006

9. SUBSEQUENT EVENTS (continued)

On February 2, 2007 a news release titled "New Developments at First Uranium's South African Projects" was published on TSX providing updated information on the Buffelsfontein and Ezulwini Projects. For the Buffelsfontein Project an evaluation to determine the optimal uranium recovery was completed. The results of this study of recovery processes, suggested the most viable flowsheet would involve pressure leaching. This could result in an estimated 27% reduction in uranium plant operating costs and more importantly increases the NPV of the project by 15% and reduces uranium cash cost of production by an estimated 9%. At the Ezulwini Mine, the underground development was successfully initiated by the first blast a full two months ahead of schedule. The first gold from the Ezulwini Mine is expected to be produced by October 2007. Uranium production is expected to begin in June 2008.

All technical disclosure in this document relating to the Buffelsfontein Project is extracted from a technical report entitled "Technical Report – Preliminary Assessment of the Buffelsfontein Project, Northwest Province, Republic of South Africa" (the "Technical Report") originally submitted on November 8, 2006, revised on December 5, 2006 and further revised on January 31, 2007 prepared in accordance with National Instrument 43-101 ("NI 43-101") by R. Dennis Bergen, P. Eng and Wayne Valliant, P. Geo of Scott Wilson Roscoe Postle Associates Inc. each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium. The disclosure contained in this document has been reviewed and approved by Mr. Valliant.

FIRST URANIUM CORPORATION

**MANAGEMENT'S DISCUSSION
AND
ANALYSIS OF FINANCIAL CONDITION
AND
RESULTS OF OPERATIONS**

Management's Discussion and Analysis of Financial Condition and Results of Operations

for the quarter ended December 31, 2006

Set out below is a review of the activities, results of operations and financial condition of First Uranium Corporation and its subsidiaries ("First Uranium" or the "Company") for the three and nine months ended December 31, 2006, together with certain trends and factors that are expected to have an impact in the remainder of the 2007 financial year. This information is presented as of February 14, 2007.

First Uranium's consolidated financial statements and the financial data set out below have been prepared in accordance with Canadian generally accepted accounting principles ("Canadian GAAP"). The consolidated financial statements for the quarter ending December 31, 2006 and December 31, 2005 and the consolidated financial statements for the nine months ending December 31, 2006 and December 31, 2005 have not been audited or reviewed by the Company's independent auditors.

All amounts in this report are in United States Dollars ("\$"), except where otherwise indicated.

First Uranium is a Canadian resource company focused on the development of uranium and gold projects in South Africa. The Company's goal is to become a significant producer of uranium and gold through the re-opening and development of the Ezulwini underground mine and the construction of the Buffelsfontein tailings recovery facility. To expand its production profile, First Uranium plans to continue to identify and acquire additional uranium projects, primarily in Southern Africa.

The common shares of First Uranium are listed on the Toronto Stock Exchange (the "TSX").

The conditions of the approval of the South African Reserve Bank ("SARB") to the transfer by Simmer and Jack Mines, Limited ("Simmer & Jack") of its ownership in First Uranium (Proprietary) Limited ("FUSA") and Ezulwini Mining Company (Proprietary) Limited ("EMC") to First Uranium included the requirement that First Uranium must complete a secondary listing on the Johannesburg Stock Exchange ("JSE") within 12 months of receipt of SARB approval. The SARB approval was received on November 16, 2006. First Uranium is in the process of applying for a secondary listing of its common shares on the JSE.

General

First Uranium was incorporated on September 22, 2005 under the *Business Corporations Act* (Ontario) and on December 15, 2006 was continued under the *Business Corporations Act* (British Columbia).

In December 2006, First Uranium acquired from Simmer & Jack certain assets relating to two proposed uranium and gold projects in South Africa. First Uranium raised funds from the public offering of 33,350,000 common shares at Cdn \$7 per share for gross proceeds of \$201.7m (the "Offering"). The net proceeds after share issue costs were \$186.3m. The balance of the funds raised from the Offering and the funds expected to be available under the Debt Facilities (see "Subsequent Events") will be utilized to: (i) reopen, develop and rebuild a previously operating underground uranium and gold mine near Westonaria (the "Ezulwini Project"), and (ii) develop and construct a facility for processing the uranium and gold contained in surface tailings at Buffelsfontein as well as the tailings from Simmer & Jack's ongoing gold mining operations at its Buffelsfontein underground gold mine (the "Buffelsfontein Project"). First Uranium also intends to seek additional uranium opportunities in Southern Africa.

As at December 31, 2006, First Uranium had cash of \$154.6m. First Uranium has not yet generated revenue from the sale of metals and incurred a net loss of approximately \$5.2m during the nine months ending December 31, 2006. As at December 31, 2006 First Uranium had total assets of \$195.4m and total liabilities of \$15.7m.

Concurrently with the Offering, FUSA, a wholly owned subsidiary of the Company, entered into an agreement (the "Buffelsfontein Tailings and Rights Agreement") with Buffelsfontein Gold Mines Limited ("BGM") and Simmer & Jack pursuant whereby, among other things:

- BGM has covenanted to take all necessary steps to obtain all ministerial approvals required for the items requested in the Buffelsfontein Conversion Application (as defined in the "Outlook" section) in order to effect the transfer of the Buffelsfontein Tailings Mining Right to FUSA as soon as possible;
- BGM has agreed to sell to FUSA upon FUSA's receipt of the Buffelsfontein Tailings Mining Right, the Buffelsfontein and Hartebeesfontein tailings dumps as well as certain property required for construction of the proposed processing plants, and grant to FUSA a right to the tailings arising from BGM's ongoing mining operations at the Buffelsfontein underground gold mine and mill (the "BGM Underground Mine"); and
- BGM will grant a servitude to FUSA for access and egress to BGM's Buffelsfontein property to enable FUSA, its employees, consultants, agents and subcontractors access for purposes of constructing, servicing and operating the uranium and gold processing plants and tailings pipelines to be built on the property by FUSA.

Selected Financial Information

The following table sets out selected financial information relating to First Uranium's quarter and nine months ended December 31, 2006. This financial data is derived from the unaudited consolidated financial statements, which are prepared in accordance with Canadian GAAP.

	3 months ended December 31, 2006 \$'000	3 months ended December 31, 2005 \$'000	9 months ended December 31, 2006 \$'000	9 months ended December 31, 2005 \$'000
Statement of Operations and Deficit

Contributed capital			(546)	(27)
Deficit			12,013	6,857

Results of Operations

Revenue

First Uranium is in a capital project development phase and did not generate any revenues from inception to December 31, 2006.

Expenditure

First Uranium entered into consulting contract arrangements with persons and legal entities for providing various officers, management and employee roles as well as feasibility studies, resulting in consulting and management fees incurred of \$0.7m for the quarter ended December 31, 2006 and \$3.3m for the nine months ended December 31, 2006. These expenses were in the normal course of operations.

First Uranium incurred pumping costs of \$0.3m for the quarter ended December 31, 2006 and \$0.3m for the nine months ended December 31, 2006 relating to its 90% owned subsidiary company, EMC.

In anticipation of the Offering, the consulting contracts were terminated effective November 2006. Since then, First Uranium has filled a number of key management positions, including President and Chief Executive Officer, Chief Operating Officer, Chief Financial Officer, Vice President Legal and Secretary and Vice President, Investor Relations and is in the process of hiring additional officers and employees to manage and operate the Company's operations.

In addition to consulting and management fees, First Uranium incurred expenses for general and office expenses of \$0.04m for the quarter ended December 31, 2006 and \$0.1m for the nine months ended December 31, 2006.

First Uranium recognized a stock-based compensation expense of \$0.5m for the quarter ended December 31, 2006 and \$0.5m for the nine months ended December 31, 2006. The expense relates to the grant of 1,115,715 stock options to the directors and officers. The fair value of the stock-based compensation was estimated using the Black-Scholes option pricing model.

Operating loss

First Uranium incurred a net loss of \$3.7m for the quarter ended December 31, 2006 and net loss for the nine months ended December 31, 2006 of \$5.2m. The loss is a result of not realizing any revenue for the period while incurring expenses relating to the acquisition of First Uranium's interest in FUSA and advancing its goal to become a producer of uranium and gold.

Discussion of Cash flows

Cash outflow from operating activities was \$7.5m for the quarter ended December 31, 2006 and \$8.6m for the nine months ended December 31, 2006. The cash outflow is mainly as a result of consulting and management fees paid during the nine months.

In December, 2006 First Uranium issued a total of 33,350,000 common shares at Cdn \$7 per share to the public, raising gross proceeds of \$201.7m. The net proceeds after share issue costs were \$186.3m.

Subsequent to the Offering, \$33.7m of the proceeds were advanced to Simmer & Jack in relation to additional shares issued in First Uranium's newly acquired subsidiaries, FUSA and EMC, increasing the amount receivable from Simmer & Jack relating to FUSA by \$17.3m and decreasing the amount payable to Simmer & Jack relating to EMC by \$16.4m.

The proceeds are held by Simmer & Jack for the beneficial interest of FUSA and EMC until the banking facilities for the two subsidiaries are in place.

Discussion of Financial Position and Liquidity

Cash and non-cash assets

Cash balances available at December 31, 2006 increased to \$154.6m (March 31, 2006: \$0.6m), primarily due to increased capital raising activities.

Accounts receivable increased to \$1.8m at December 31, 2006 (March 31, 2006: \$0.1m). The increase is mainly the result of sludge pumping costs charged to third parties by EMC and outstanding at December 31, 2006.

Guarantees and prepaid expenses increased to \$5.6m at December 31, 2006 (March 31, 2006: \$0.001m) mainly as a result of a guarantee placed at the Department of Minerals and Energy ("DME") for the environmental rehabilitation of the Ezulwini Mine.

The amount receivable from Simmer & Jack relating to FUSA increased to \$16.4m at December 31, 2006 (March 31, 2006: \$2.7m). The increase is as a result of proceeds from the issue of FUSA shares in December 2006, which were advanced to Simmer & Jack to invest on behalf of FUSA. FUSA is in the process of establishing its own banking facilities.

Non-current assets increased to \$16.9m at December 31, 2006 (March 31, 2006: \$Nil), mainly as a result of the deferred property costs incurred by EMC. The costs include pumping costs capitalised of \$9.1m and the acquisition of certain surface and underground assets of \$7.8m.

Investing activities

Prior to the completion of the Offering, First Uranium owned 20% of the shares of FUSA. First Uranium Limited ("FUL") was incorporated under the laws of Cyprus and is a wholly-owned subsidiary of First Uranium. First Uranium transferred its direct interest in FUSA to FUL. The balance of the shares of FUSA (80%) was acquired by FUL from Simmer & Jack.

FUL also acquired 90% of EMC from Simmer & Jack.

Total Liabilities

As of December 31, 2006, First Uranium had total liabilities of \$15.7m (March 31, 2006: \$6.1m), consisting of accounts payable and accrued charges of \$2.9m (March 31, 2006: \$0.8m) and an amount payable to Simmer & Jack, its controlling shareholder, of \$12.7m (March 31, 2006: \$5.3m).

The increase in accounts payable and accrued charges is mainly the result of capital costs incurred at EMC and outstanding at December 31, 2006.

The amount payable to Simmer & Jack relating to EMC increased as a result of capital costs paid by Simmer & Jack on behalf of EMC.

Shareholders' equity

Shareholders' equity increased to \$191.2m at December 31, 2006 (March 31, 2006: \$4.2m). The increase is mainly the result of the 33.35 million common shares issued to the public under the Offering.

Liquidity and Capital Resources

In December 2005 and January 2006, First Uranium raised aggregate gross proceeds of \$4.2m by way of five private placements of common shares at an issue price of Cdn \$1 per share. First Uranium also received \$0.7m through the exercise of 800,000 stock options at Cdn \$1 per share in June 2006. The proceeds were mainly utilised to fund the acquisition costs of \$3.3m for a 20% interest in FUSA.

In December 2006, First Uranium completed the Offering of 33.35 million common shares at an issue price of Cdn \$7 per share for net proceeds of \$186.3m. First Uranium anticipates that future capital requirements relating to its acquisition and development of the Ezulwini and Buffelsfontein Projects will be funded through the proceeds of the Offering and a combination of internal cash flow and external debt (see Debt Facilities under "Subsequent Events").

At December 31, 2006, First Uranium had working capital of \$162.8m.

The Company incurred deferred property costs of a capital nature of \$16.9m in the nine months ended December 31, 2006. Of this amount, \$9.1m of the deferred property costs relate to pumping cost capitalized from May 2006 when the Ezulwini mining right was granted to Simmer & Jack and the balance of \$7.8m relates to the acquisition of certain surface and underground assets.

Contractual Obligations

As at December 31, 2006, First Uranium had no contractual obligations towards suppliers and financiers.

Summary of Interim Information

The table below sets out selected financial data for the periods indicated. The financial data presented is derived from First Uranium's unaudited consolidated financial statements, which are prepared in accordance with Canadian GAAP.

Period	Revenue \$'000	Total Assets \$'000	Net Loss \$'000	Basic Net Loss per Share \$	Long Term Liabilities \$'000
Quarter end December 31, 2006	Nil	195,374	(3,704)	(0.69)	Nil
Quarter end September 30, 2006	Nil	3,619	786	0.15	Nil
Quarter end June 30, 2006	Nil	3,522	(2,238)	(0.42)	Nil
Quarter end March 31, 2006	Nil	3,433	(4,656)	(0.87)	Nil

Quarter end March 31, 2005	N/A	N/A	N/A	N/A	N/A
Quarter end December 31, 2004	N/A	N/A	N/A	N/A	N/A

Outlook

In December 2006, First Uranium acquired from Simmer & Jack certain assets relating to two proposed uranium and gold projects in South Africa. First Uranium intends, that the funds available from the Offering and the funds expected to be available under the Debt Facilities will be utilized to: (i) reopen and develop the Ezulwini Mine, a previously operating underground uranium gold mine near Westonaria, and (ii) construct a facility for processing the uranium and gold contained in surface tailings at Buffelsfontein as well as tailings from Simmer & Jack's ongoing gold mining operations at its Buffelsfontein underground gold mine.

Ezulwini Project

The Ezulwini Project involves the recommissioning of an underground uranium and gold mining operation located approximately 40 kilometres from Johannesburg on the outskirts of the town of Westonaria in Gauteng Province, South Africa. The mine previously on care and maintenance is being readied for production. The mine was constructed in the 1960s and reached production of 200,000 tpm in the same decade. In 2001, mine production at Ezulwini was ceased primarily as a result of capital constraints compounded by a weak gold and uranium market environment. The geology of the Ezulwini property includes a number of reef packages, with the Upper Elsburg and Middle Elsburg reefs being the primary focus of First Uranium's mine reopening plans at the Ezulwini Project. First Uranium's plans for the development of the Ezulwini Project include the rehabilitation and re-engineering of the main mine shaft through the installation of a floating steel tower, de-stressing the area where the shaft pillar intersects the shaft barrel, and the construction of uranium and gold processing facilities.

First Uranium believes that the rectification programme will enable the Ezulwini Project to reach a production output of approximately 130,000 tpm by 2009 and 180,000 tpm by 2012 as both the Upper Elsburg shaft pillar is developed and the Middle Elsburg uranium and gold section stopes are opened and expanded. The life of the current mine plan for the Ezulwini Project is 19 years.

EMC entered into an agreement with Randfontein Estates Limited and Simmer & Jack on October 19, 2006 in respect of the purchase by EMC of certain surface and underground assets relating to the Ezulwini Mine, including two shaft headgears and four winders, fans, compressors, generators and underground equipment as well as the necessary surface freehold required to operate the mine. The effective date of the transaction was December 22, 2006.

Buffelsfontein Project

In October 2005, Simmer & Jack purchased BGM (formerly DRD Gold's North West Operations), consisting of the Buffelsfontein and Hartebeesfontein underground mines, out of provisional liquidation. BGM had been placed in provisional liquidation by its former owners on March 22, 2005. The total acquisition cost was approximately ZAR 100 million, consisting of a purchase price of ZAR 45 million, ZAR 30 million in re-start costs, as well as holding costs of ZAR 30 million incurred while operating as the preferred bidder on behalf of the provisional liquidators. While the underground mines that were purchased by Simmer & Jack pursuant to the Buffelsfontein liquidation acquisition will not form part of First Uranium's assets at the Buffelsfontein Project, the tailings dumps and the old order mining right obtained in connection with that acquisition are fundamental to the proposed Buffelsfontein Project, along with the future tailings from the underground mines.

In September 2005, Simmer & Jack formed FUSA to serve as an investment vehicle for its investments in the Buffelsfontein Project. In December 2005, Simmer & Jack entered into an agreement with First Uranium pursuant to which First Uranium purchased a 30% shareholding interest in FUSA (and an indirect interest in the Buffelsfontein Project) for US\$3 million. The US\$3 million was applied by Simmer & Jack to fund a study to determine the viability of extracting uranium and gold from the surface tailings at Buffelsfontein. On October 11, 2006, Simmer & Jack, FUSA and First Uranium entered into a shareholders' agreement which, among other things, amended Simmer & Jack's and First Uranium's holdings in FUSA to 80% and 20%, respectively. The shareholders' agreement terminated upon the listing of the First Uranium common shares on the Toronto Stock Exchange.

The Buffelsfontein Project is a proposed uranium and gold tailings recovery operation located in the Western portion of the Witwatersrand Basin approximately 160 km from Johannesburg. First Uranium is conducting hydraulic mining of nine tailings dumps on the Buffelsfontein property using high pressure water cannons to slurry the tailings which are then pumped to processing plants for the recovery of uranium and gold. First Uranium is also entitled to the tailings from the ongoing mining operations at the nearby BGM Underground Mine operated by BGM, a subsidiary of Simmer & Jack. First Uranium's current mine plan for the Buffelsfontein Project is based on the construction of a gold plant with a 1.8 million tpm nominal ultimate capacity and a uranium plant with a nominal ultimate capacity of 200,000 tpm. It is currently intended that the Buffelsfontein Project will commence as a 20,000 tpd tailings recovery operation which will grow in stages to be a 60,000 tpd operation by 2010, producing an average of 145,500 oz per year of gold and 998,800 lbs per year of U₃O₈. The life of the current mine plan for the Buffelsfontein Project is estimated at 14 years.

BGM currently holds an old order mining right in respect of mining gold at the BGM Underground Mine but not for the mining of the gold and uranium in the tailings dumps at Buffelsfontein. BGM has already filed with the DME the Prospecting Right Application for a prospecting right with respect to uranium and other minerals in the Buffelsfontein property and tailings dumps in order to secure its priority to such a right.

The application has been accepted, and is currently being reviewed, by the DME. BGM has also filed with the DME an application to convert its old order mining right for BGM into a new order mining right. If and when this conversion application is approved, BGM intends to file with the DME one or more applications (which, together with the foregoing conversion application, are collectively referred to herein as the "Buffelsfontein Conversion Application") to: (i) amend, with effect from the date of conversion, the new order mining right to include the authority to mine for uranium underground and for gold, uranium and other minerals in respect of the tailings; (ii) divide the new order mining right, if granted, into two separate new order mining rights — one in respect of the mining for gold, uranium and other minerals at the BGM Underground Mine and the other, the Buffelsfontein Tailings Mining Right, in respect of the mining of the gold and uranium in the Buffelsfontein tailings dumps; and (iii) cede the Buffelsfontein Tailings Mining Right, if granted, to FUSA. If and when the Buffelsfontein Conversion Application is approved in full, BGM plans to withdraw its Prospecting Right Application as it would at that point be no longer necessary.

Although First Uranium has no set policy, it may use financial instruments or hedging to reduce corporate risk in certain situations. First Uranium currently has no hedges or similar financial instruments in place.

Critical Accounting Policies and Estimates

The preparation of financial statements in conformity with Canadian GAAP requires management to make estimates and assumptions that effect amounts reported in the financial statements and accompanying notes. During the period presented, management made estimates and valuation assumptions primarily in respect of its equity accounted investment subject to significant influence and stock-based compensation expensed the fair value of which was estimated using the Black-Scholes option pricing model.

Risks and Uncertainties

First Uranium's business risks remain substantially unchanged since December 12, 2006. For a more detailed discussion of risk factors, reference should be made to First Uranium's prospectus dated December 12, 2006. See also "Additional information" below.

Related Party Transactions

At December 31, 2006, Simmer & Jack was the majority shareholder of First Uranium. The net proceeds of the Offering have been utilised by First Uranium, in part, for the repayment of the amount payable by EMC to Simmer & Jack.

At December 31, 2006, First Uranium, through its subsidiaries, had a \$12.7m amount payable to Simmer & Jack relating to EMC and a \$16.4m amount receivable from Simmer & Jack relating to FUSA.

At December 31, 2006, the bank accounts for EMC and FUSA were in the process of being established and the funds were held on behalf of EMC and FUSA by Simmer & Jack.

Simmer & Jack performs management services to EMC and FUSA. Simmer & Jack charged total management fees of \$0.9m for the quarter ending December 31, 2006 and \$1.8m for the nine months ending December 31, 2006.

The President and Chief Executive Officer of First Uranium will continue to serve as the Chief Executive Officer of Simmer & Jack and will allocate 50% of his time to each of First Uranium and Simmer & Jack. The current Chief Financial Officer of First Uranium is also the Chief Financial Officer of Simmer & Jack and divides his time between the two companies.

Subsequent events

First Uranium has executed a mandate letter and term sheet with Investec Bank Limited in respect of potential debt financing for the Ezulwini and Buffelsfontein Projects. Pursuant to the mandate letter and term sheet which is subject to a number of conditions precedent, FUSA and EMC intend to enter into debt facilities (the "Debt Facilities") with Investec Bank Limited and/or Investec Bank (Mauritius) Limited, as the arranging bank and a syndicate of banks (collectively, the "Lenders"), consisting of two term loan facilities, one to FUSA of ZAR 450 million and a term loan to EMC of ZAR 400 million. The term sheet in respect of the Debt Facilities contemplates a number of conditions precedent including, among others, receipt of final credit and documentary approvals by the Lenders, the completion of satisfactory technical and legal due diligence by the Lenders, the completion of an equity offering to raise project funding of ZAR 950 million and the existence of material contracts, permits, licenses and consents (including off-take arrangements) acceptable to the Lenders. Subject to the achievement of the conditions precedent, First Uranium does not expect to be in a position to enter into definitive agreements in respect of the Debt Facilities before March 2007, at the earliest.

On February 2, 2007 a news release titled "New Developments at First Uranium's South African Projects" was published on TSX providing updated information on the Buffelsfontein and Ezulwini Projects. For the Buffelsfontein Project an evaluation to determine the optimal uranium recovery was completed. The results of this study of recovery processes suggested the most viable flowsheet would involve pressure leaching. This could result in an estimated 27% reduction in uranium plant operating costs, increases the NPV of the project by 15% and reduces uranium cash cost of production by an estimated 9%. At the Ezulwini Mine, the underground development was successfully initiated by the first blast a full two months ahead of schedule. The first gold from the Ezulwini Mine is expected to be produced by October 2007. Uranium production is expected to begin in June 2008.

All technical disclosure in this management discussion and analysis relating to the Buffelsfontein Project is extracted from a technical report entitled "Technical Report – Preliminary Assessment of the Buffelsfontein Project. Northwest Province, Republic of South Africa" (the "Technical Report") originally submitted on November 8, 2006, revised on December 5, 2006 and further revised on January 31, 2007 prepared in accordance with National Instrument 43-101 ("NI 43-101") by R. Dennis Bergen, P. Eng and Wayne Valliant, P. Geo of Scott Wilson Roscoe Postle Associates Inc. each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium. The disclosure contained in this management discussion and analysis has been reviewed and approved by Mr. Valliant.

The economic analysis contained in this management's discussion and analysis is contained in the Technical Report and is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserves development, production and economic forecasts on which the preliminary assessment contained in the Technical Report is based, will be realized.

Outstanding Share Data

As at December 31, 2006, First Uranium had 121,686,047 issued and outstanding common shares. There were 1,115,715 unexercised stock options outstanding as of December 31, 2006. As at February 14, 2007 First Uranium had 121,686,047 issued and outstanding common shares and there were 1,143,715 unexercised stock options outstanding.

Additional Information

Additional information relating to First Uranium, including First Uranium's most recent annual information is available on SEDAR at www.sedar.com.

This Management's Discussion and Analysis of Financial Condition and Results of Operations and Interim Financial Statements for the period ended December 31, 2006 contain certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the price of uranium and gold, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (1) unless otherwise indicated, forward-looking statements indicate the Company's expectations as at February 14, 2007; (2) actual results may differ materially from the Company's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (3) the Company cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (4) the Company disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

Form 52-109F2-Certification of Interim Filings

I, Gordon T. Miller, President and Chief Executive Officer of First Uranium Corporation, certify that:

1. I have reviewed the interim filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of First Uranium Corporation, (the Issuer) for the interim period ending December 31, 2006;
2. Based on my knowledge, the interim filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the interim filings; and
3. Based on my knowledge, the interim financial statements together with the other financial information included in the interim filings fairly present in all material respects the financial condition, results of operations and cash flows of the Issuer, as of the date and for the periods presented in the interim filings; and
4. The Issuer's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures for the Issuer, and we have designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the Issuer, including consolidated subsidiaries, is made known to us by others within those entities particularly during the period in which the interim filings are being prepared.

Date: February 14, 2007

"Gordon T. Miller" (signed)

President and Chief Executive Officer

Form 52-109F2-Certification of Interim Filings

I, Gerhardus J. Jacobs, Chief Financial Officer of First Uranium Corporation, certify that:

1. I have reviewed the interim filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of First Uranium Corporation, (the Issuer) for the interim period ending December 31, 2006;
2. Based on my knowledge, the interim filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the interim filings; and
3. Based on my knowledge, the interim financial statements together with the other financial information included in the interim filings fairly present in all material respects the financial condition, results of operations and cash flows of the Issuer, as of the date and for the periods presented in the interim filings
4. The Issuer's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures for the Issuer, and we have designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the Issuer, including consolidated subsidiaries, is made known to us by others within those entities particularly during the period in which the interim filings are being prepared..

FIRST URANIUM CORPORATION

NOTICE OF ANNUAL MEETING OF SHAREHOLDERS SEPTEMBER 10, 2008

Notice is hereby given that the annual meeting of shareholders (the "Meeting") of First Uranium Corporation (the "Corporation") will be held at the St. Andrews Club and Conference Centre, 150 King Street West at University Avenue, 27th Floor, Toronto, Ontario, Canada on September 10, 2008, at 4:00 p.m. (local time) for the following purposes:

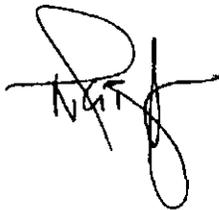

1. to receive the audited consolidated financial statements of the Corporation for the year ended March 31, 2008 (the "Financial Statements") and the report of the auditors thereon;
2. to elect directors of the Corporation for the ensuing year;
3. to consider and, if thought fit, approve the re-appointment of PricewaterhouseCoopers LLP, Chartered Accountants, as auditors for the Corporation, and to authorize the directors of the Corporation to fix their remuneration;
4. to transact such further or other business as may properly come before the Meeting or any adjournments or postponements thereof.

A copy of the Financial Statements to be submitted to the Meeting, together with the Management Information Circular and form of Proxy with respect to the matters to be dealt with at the Meeting, are included herewith.

By resolution of the Board of Directors of the Corporation, shareholders of record at the close of business on August 6, 2008, will be entitled to notice and to vote at the Meeting in person or by proxy.

DATED the 8th day of August, 2008.

BY ORDER OF THE BOARD OF DIRECTORS

Nigel R.G. Brunette
Chairman

Note: Shareholders who are unable to attend the Meeting in person are requested to complete, date, sign and return the enclosed form of proxy. All forms of proxy must be deposited with Computershare Investor Services Inc. or Computershare Investor Services 2004 (Pty) no later than 4:00 p.m. (Toronto time) on September 8, 2008 or with the Chairman of the Meeting on the day of the Meeting, or any adjournment or postponement thereof, or in any manner permitted by law.

RECEIVED
2008 OCT - 8 P 12:17

FIRST URANIUM CORPORATION

**NOTICE OF ANNUAL MEETING OF SHAREHOLDERS
SEPTEMBER 10, 2008**

Notice is hereby given that the annual meeting of shareholders (the "Meeting") of First Uranium Corporation (the "Corporation") will be held at the St. Andrews Club and Conference Centre, 150 King Street West at University Avenue, 27th Floor, Toronto, Ontario, Canada on September 10, 2008, at 4:00 p.m. (local time) for the following purposes:

1. to receive the audited consolidated financial statements of the Corporation for the year ended March 31, 2008 (the "Financial Statements") and the report of the auditors thereon;
2. to elect directors of the Corporation for the ensuing year;
3. to consider and, if thought fit, approve the re-appointment of PricewaterhouseCoopers LLP, Chartered Accountants, as auditors for the Corporation, and to authorize the directors of the Corporation to fix their remuneration;

FIRST URANIUM CORPORATION
MANAGEMENT INFORMATION CIRCULAR

VOTING INFORMATION

Solicitation of Proxies

This management information circular (the "Circular") is furnished in connection with the solicitation of proxies by the management of First Uranium Corporation ("First Uranium" or the "Corporation") to be used at the Annual Meeting of Shareholders (the "Meeting") of the Corporation to be held at the time, place and for the purposes indicated in the enclosed Notice of Annual Meeting of Shareholders (the "Notice") and any adjournment or postponement thereof. This solicitation of proxies will be done primarily by mail but proxies may also be solicited personally, by facsimile or by telephone by officers, directors or regular employees of the Corporation for which no additional compensation will be paid. The cost of the solicitation will be borne by the Corporation.

Shareholders unable to attend the Meeting in person are requested to complete the enclosed proxy form and to forward it to Computershare Investor Services Inc., Proxy Department, 100 University Avenue, 9th Floor, Toronto, Ontario M5J 2Y1 or Computershare Investor Services 2004 (Pty), Proxy Department, 70 Marshall Street, Johannesburg, 2000 (P.O. Box 61051, Marshalltown, South Africa, 2107). If the shareholder is a corporation, an officer's signature on the said proxy form must be duly authorized in writing.

Appointment of Proxy

The persons named in the enclosed proxy form are directors and/or officers of the Corporation and are the proxyholders nominated by the board of directors of the Corporation (the "Board"). A shareholder has the right to appoint a person to attend and act on his or her behalf at the Meeting other than the persons named in the enclosed proxy. To exercise this right, a shareholder must insert the name of his or her nominee in the blank space provided on the proxy. A person appointed as proxyholder need not be a shareholder of the Corporation.

Revocation of Proxy

A shareholder executing the enclosed form of proxy has the right to revoke the proxy by instrument in writing, including another completed form of proxy, executed by the shareholder or his or her agent duly authorized in writing or, if the shareholder is a corporation, by an officer thereof duly authorized in writing, and deposited at the executive office of the Corporation in Toronto or with Computershare Investor Services Inc., Proxy Department, 100 University Avenue, 9th Floor, Toronto, Ontario M5J 2Y1 or Computershare Investor Services 2004 (Pty), Proxy Department, 70 Marshall Street, Johannesburg, 2000 (P.O. Box 61051, Marshalltown, South Africa, 2107) no later than September 8, 2008 or with the Chairman of the Meeting on the day of the Meeting or any adjournment or postponement thereof or in any other manner permitted by law.

Use of Discretionary Power Conferred by Proxy

The common shares (the "Common Shares") of the Corporation represented by the enclosed proxy will be voted or withheld from voting on any motion, by ballot or otherwise, in accordance with any indicated instructions. **In the absence of such direction, such Common Shares will be voted FOR the resolutions referred to in the form of proxy.**

If any amendment or variation to the matters identified in the Notice is proposed at the Meeting or any adjournment or postponement thereof, or if any other matters properly come before the Meeting or any adjournment or postponement thereof, the enclosed proxy confers discretionary authority to vote on such amendments or variations or such other matters according to the best judgment of the appointed proxyholder. At the time of printing this Circular, management of the Corporation knows of no such amendments, variations or other matters to come before the Meeting other than the matters referred to in the Notice.

Voting of Shares

A holder of Common Shares may own such shares in one or both of the following ways. If a shareholder is in possession of a physical share certificate, such shareholder is a "registered" shareholder and his or her name and address are maintained by the Corporation through its transfer agent, Computershare Investor Services Inc. and Computershare Investor Services 2004 (Pty). If a shareholder owns shares through a bank, broker or other nominee, such shareholder is a "beneficial" shareholder and he or she will not have a physical share certificate. Such shareholder will have an account statement from his or her bank or broker as evidence of his or her share ownership.

A registered shareholder may vote a proxy in his or her own name in accordance with the instructions appearing on the enclosed form of proxy and/or a registered shareholder may attend the Meeting and vote in person. Because a registered shareholder is known to the Corporation and its transfer agent, his or her account can be confirmed and his or her vote recorded or changed if such registered shareholder has previously voted. This procedure prevents a shareholder from voting his or her shares more than once. Only the registered shareholder's latest dated proxy will be valid.

Most shareholders are "beneficial owners" and are non-registered shareholders. Their Common Shares are registered in the name of an intermediary, such as a securities broker, financial institution, trustee, custodian or other nominee who holds the shares on their behalf, or in the name of a clearing agency in which the intermediary is a participant (such as The Canadian Depository for Securities Limited). Intermediaries have obligations to forward meeting materials to non-registered holders, unless otherwise instructed by the holder (and are required to do so in some cases despite such instructions).

Only registered shareholders or their duly appointed proxyholders are permitted to vote at the Meeting. Non-registered holders should follow the directions of intermediaries with respect to the procedures to be followed for voting. Generally, intermediaries will provide non-registered holders with either: (a) a voting instruction form for completion and execution by the non-registered holder, or (b) a proxy form, executed by the intermediary and restricted to the number of shares owned by the non-registered holder, but otherwise uncompleted. These are procedures to permit the non-registered holders to direct the voting of the Common Shares which they beneficially own.

If non-registered holders wish to attend and vote in person at the Meeting, they must insert their own name in the space provided for the appointment of a proxyholder on the voting instruction form or proxy form, provided by the intermediary and carefully follow the intermediary's instructions for return of the executed form or other method of response.

Interest of Certain Persons or Companies in matters to be Acted Upon

At the date hereof, no director or officer of the Corporation, or an associate or affiliate thereof or, to the knowledge of the Corporation, any holder of over 10% of the voting securities of the Corporation or any associate or affiliate thereof, has any material interest by way of beneficial ownership of securities or otherwise, in any matter to be acted upon.

Voting Securities and Principal Holders of Voting Securities

The holders of Common Shares whose names appear on the list of shareholders prepared as of the close of business, Toronto time, on August 6, 2008 (the "Record Date") will be entitled to vote at the Meeting and any adjournment or postponement thereof if present or represented by proxy thereat. The list of shareholders will be available for inspection during usual business hours at the offices of the Corporation in Toronto, Ontario.

At the close of business on August 6, 2008, there were 131,074,037 Common Shares outstanding. Each Common Share entitles its duly registered holder to one vote.

As at August 6, 2008, Simmer and Jack Mines, Limited ("Simmer & Jack") holds 81,722,653 Common Shares or approximately 62.3 percent of the Common Shares outstanding. To the knowledge of the directors and officers of the Corporation, no other person beneficially owns, directly or indirectly, or exercises control or direction over, voting securities of the Corporation carrying more than 10 percent of the voting rights attached to the voting securities of the Corporation.

Messrs. Nigel R.G. Brunette and Gordon T. Miller, each a director, and the Chairman and the President and Chief Executive Officer of the Corporation, respectively, are also directors, and the Chairman and Chief Executive Officer of Simmer & Jack, respectively.

BUSINESS OF THE MEETING

Presentation of Financial Statements (Item No. 1 of the Notice)

The audited consolidated financial statements of the Corporation for the financial year ended March 31, 2008 (the "Financial Statements") and the auditors' report thereon will be placed before the Meeting.

Election of Directors (Item No. 2 of the Notice)

The business of the Corporation is managed by a board of directors (the "Directors") composed of a minimum of three (3) pursuant to and in accordance with the Corporation's Articles. The number of Directors may be fixed from time to time by ordinary resolution of shareholders, subject to increase pursuant to the terms of the Articles of the Corporation. At the Meeting, shareholders will be asked to elect eight (8) Directors for the current year. The eight nominees proposed for election as Directors are listed on page 5. All eight nominees are currently Directors.

It is not anticipated that any of the nominees will be unable to serve as Directors, but if that should occur for any reason prior to the Meeting, or any adjournment or postponement thereof, the persons named in the enclosed form of proxy shall be entitled to vote for any other nominee(s) in their discretion.

The term of office of each Director elected at the Meeting will end at the date of the next annual meeting following his election unless he resigns or his office becomes vacant through death or any other reason in accordance with the Articles of the Corporation. A complete list of nominees for election as Directors of the Corporation and their biographies follows in the section "Nominees for

Election to the Board of Directors.” Directors’ record of attendance at Board and Committee meetings is set forth in the section “Board of Directors Meetings Held and Attendance of Directors.”

If you complete and return the attached form of proxy, your representatives at the Meeting, or any adjournment or postponement thereof, will vote your Common Shares FOR the election of each of the nominees set out herein unless you specifically direct that your vote be withheld.

It is intended that the Common Shares represented by proxies solicited hereby, unless otherwise indicated, will be voted FOR the election of each individual nominated by the Board and management as Directors of the Corporation.

Appointment of Auditors (Item No. 3 of the Notice)

The Board and management propose that the firm of PricewaterhouseCoopers LLP, Chartered Accountants (“PWC”) be re-appointed as the auditors of the Corporation to hold office until the next annual meeting of shareholders and that the Directors be authorized to fix the auditors’ remuneration. PWC were first appointed as auditors of the Corporation in December 2006.

One or more representatives of PWC will be present at the Meeting and will be available to respond to appropriate questions.

The aggregate fees billed by PWC for the fiscal year ended March 31, 2008: (i) for professional services that are normally provided by the external auditors in connection with statutory and regulatory filings or engagements for that year were Cdn\$178,862 (ii) for assurance and related services rendered by it that are reasonably related to the performance of the audit or review of the Corporation’s financial statements engagements for that year were Cdn\$92,579 and (iii) for professional services rendered by it for tax compliance, tax advice, tax planning and other services were Cdn\$60,596. Tax services provided included advice in connection with structuring of transactions and review of tax provisions.

It is intended that the Common Shares represented by proxies solicited hereby, unless otherwise indicated, will be voted FOR the re-appointment of PWC as auditors of the Corporation until the next annual meeting of shareholders and to authorize the Directors to fix their remuneration. The re-appointment of PWC as the Corporation’s auditors must be approved by at least a majority of the votes cast at the Meeting by shareholders who vote in respect of the appointment of the auditors (present in person or represented by proxy).

Other Matters (Item No. 4 of the Notice)

At the time of printing this Circular, management of the Corporation knows of no other matter to come before the Meeting other than the matters referred to in the Notice. **If any amendment or variation to the matters identified in the Notice is proposed at the Meeting or any adjournment or postponement thereof, or if any other matters properly come before the Meeting or any adjournment or postponement thereof, the enclosed proxy confers discretionary authority to vote on such amendments or variations or such other matters according to the best judgment of the appointed proxyholder.**

NOMINEES FOR ELECTION TO THE BOARD OF DIRECTORS

Management has been informed that each of such nominees would be willing to serve as a Director, if elected. However, in the event that any such nominee is unable or unwilling to serve as a Director because of death or any other unexpected occurrence, proxies will be voted in favour of the remaining nominees and for such other substitute nominee as the Board may designate.

It is intended that the Common Shares represented by proxies solicited hereby, unless otherwise indicated, will be voted FOR the election of the individuals nominated by the Board and management as Directors of the Corporation.

The following table sets forth the name and municipality of residence of each nominee, his position held with the Corporation, his principal occupation, the date upon which he became a Director of the Corporation and the number of Common Shares beneficially owned, directly or indirectly, or over which control or discretion is exercised by him as of August 8, 2008:

Name, Municipality of Residence and Position Held With the Corporation	Principal Occupation	Director Since	Number of Shares Beneficially Owned Directly or Indirectly or Controlled
Nigel R.G. Brunette ¹ Chairman Adelaide, South Africa	Self-employed Businessman	December 2006	13,000
Patrick C. Evans ^{1,2,3} Director Scottsdale, Arizona, USA	President and Chief Executive Officer of Mountain Province Diamonds Inc. and Chief Executive Officer of Norsemont Mining Inc.	December 2006	36,000
James P.W. Fisher Director, Executive Vice President, Corporate Development Oakville, Ontario	Executive Vice President, Corporate Development of the Corporation	December 2006	5,000
Robert M. Franklin ^{2,3,4} Lead Independent Director Toronto, Ontario	President and Chief Executive Officer of Signalta Capital Corporation	December 2006	48,000
John W.W. Hick ^{2,3,4} Director Toronto, Ontario	Independent Consultant and Corporate Director	December 2006	7,000
Wayne S. Hill ⁴ Director Toronto, Ontario	Executive Vice President of Toromont Industries Ltd.	May 2007	15,000
Gordon T. Miller ¹ Director, President & Chief Executive Officer Toronto, Ontario	President and Chief Executive Officer of the Corporation and Chief Executive Officer of Simmer & Jack	December 2006	164,738
Graham P. Wanblad Director Johannesburg, South Africa	Independent Consultant	June 2008	119,000

¹ Member of the Environmental, Health and Safety Committee.

² Member of the Human Resources and Compensation Committee.

³ Member of the Corporate Governance and Nominating Committee.

⁴ Member of the Audit Committee

The information with respect to Common Shares beneficially owned, directly or indirectly, or over which control or direction is exercised, not being within the knowledge of First Uranium, has been furnished by the respective Directors individually.

Nigel R. G. Brunette has served as an independent director of Simmer & Jack since October 2005 and as the non-executive Chairman since January 2006. Mr. Brunette held various positions with Rand Merchant Bank from 1983 to 1997, including General Manager, Corporate Finance. Mr. Brunette has been a self-employed businessman since 1997. Mr. Brunette has law degrees from the University of Zimbabwe and Cambridge University (United Kingdom) and a higher diploma in company law from the University of Witwatersrand (South Africa).

Patrick C. Evans has served as the President, Chief Executive Officer and a director of Mountain Province Diamonds Inc., a Canadian diamond exploration and development company, since November 2005 and as Chief Executive Officer and a director of Norsemont Mining Inc., a Canadian base and precious metals exploration and development company, since June 2007. From September 2005 to May 2006, Mr. Evans served as the President, Chief Executive Officer and a director of Weda Bay Minerals Inc., a nickel exploration and development company, until its acquisition by Eramet S.A. Mr. Evans served as the President and Chief Executive Officer and a director of SouthernEra Diamonds Inc. from March 2001 to August 2005 and as President and Chief Executive Officer and a director of Southern Platinum Corp. from August 2004 to May 2005. He also previously served as the Chief Executive Officer of Messina Limited, a company listed on the JSE. Prior to that Mr. Evans held various senior executive positions with Placer Dome Inc. from January 1999 to March 2001 and served as a Member of the Executive Committee of the South African Chamber of Mines. Mr. Evans holds a Bachelor of Arts and Bachelor of Science from the University of Cape Town (South Africa).

James P. W. Fisher serves as the Corporation's Executive Vice President, Corporate Development. Prior to February 2008, Mr. Fisher was Executive Vice President and Chief Operating Officer of the Corporation. Based in South Africa, Mr. Fisher had responsibility for the development of the Corporation's two projects, the Ezulwini Mine and the Mine Waste Solutions tailings recovery project ("MWS Project"), as well as business development. With significant progress in advancing the Ezulwini Mine and the MWS Project by the end of the December 2007, the Corporation focused greater attention on business development, and as scope of the opportunities being pursued broadened, and in particular to North America, Mr. Fisher was appointed Executive Vice President, Corporate Development and transferred to the Corporation's office in Toronto, Canada. Mr. Fisher has 29 years' experience in the Southern African mining industry, including nine years on the Zambian copper belt and the rest in South Africa. Since February 2006 Mr. Fisher held various senior positions within the Simmer & Jack group, including serving as Chief Executive Officer of First Uranium (Proprietary) Limited, a subsidiary of the Corporation. From September 2001 to February 2006, Mr. Fisher provided consulting services on a number of mining and other projects, including metallurgical consulting services to Simmer & Jack. From April 1999 to September 2001, Mr. Fisher served as the Business Manager for the South Deep joint venture between Placer Dome South Africa (Proprietary) Limited and Western Areas Limited where his duties encompassed strategy and organizational development, corporate and public relations as well as the definition of and implementation of the information technology and remuneration strategy. Mr. Fisher ran the Cooke uranium plant from 1987 to 1989 as well as the Western Areas North Shaft (now the Ezulwini Mine) from 1991 to 1994. Mr. Fisher is a Chartered Engineer, a fellow of The Institute of Materials, Minerals and Mining, a member of the South African Institute of Mining and Metallurgy, and a member and past President of the Mine Metallurgical Managers Association of South Africa.

Robert M. Franklin serves as the Lead Independent Director of the Board. Mr. Franklin brings more than 36 years of executive and director experience. Mr. Franklin served as a director of Placer Dome Inc. since 1987 and as the non-executive Chairman of the board of directors of Placer Dome Inc. from 1993 until the acquisition of Placer Dome Inc. by Barrick Gold Corporation in 2006. Mr. Franklin is currently the President of Signalta Capital Corporation, a private investment company. He also serves as a director of a number of public companies including, Barrick Gold Corporation, Canadian Tire Corporation Limited, Resolve Business Outsourcing Income Fund and Toromont

Industries Ltd. Mr. Franklin was the Chairman of Clublink Corporation from 1994 to 2003. Mr. Franklin received a Bachelor of Arts, Business Administration from Hillsdale College.

John W.W. Hick serves as non-executive Chairman and a director of Silver Eagle Mines Inc. From December 1, 2004 to January 1, 2006, Mr. Hick served as Chief Executive Officer of Rio Narcea Gold Mines Ltd., of which he was a director from 1997 to June 2006. Prior to the acquisition of Defiance Mining Corp. by Rio Narcea in 2004, Mr. Hick was the President and Chief Executive officer of Defiance and its predecessor company, Geomaque Explorations Ltd. Mr. Hick has held various senior positions with other mining companies including President and later Vice Chairman of TVX Gold Inc. between 1993 and 1997, Senior Vice President, Corporate of Placer Dome Inc. between 1987 and 1990 and Vice President and General Counsel of the Dome Mines Group of Companies between 1981 and 1987. In addition, Mr. Hick serves as a director of Carpathian Gold Inc., Hudson Resources Inc., Marengo Mining Limited, Revett Minerals Inc. and Tamaya Resources Ltd. of which he is also non-executive Chairman. Mr. Hick holds a Bachelor of Arts from the University of Toronto, a Bachelor of Laws from the University of Ottawa and was called to the Bar of Ontario in 1978.

Wayne S. Hill has served as Executive Vice President of Toromont Industries Ltd., a TSX listed company that supplies and services mobile equipment and designs, builds and services compression systems, since 2005. Prior to that, Mr. Hill served as Chief Financial Officer of Toromont Industries Ltd. from 1985 to 2005. Mr. Hill has also served as a director of Toromont Industries Ltd. since 1988. Mr. Hill served as a director of Enerflex Systems Ltd., a gas compression packager, from 1993 to 1998 and served in senior roles with other Canadian public companies, including a communications and publishing company (1983 to 1985) and an international heavy equipment and engine manufacturer (1979 to 1983). Mr. Hill received a Bachelor of Commerce (Honours) from Queen's University. He is also a Chartered Accountant (Canada) and was employed with an international firm of Chartered Accountants from 1969 to 1979.

Gordon T. Miller serves as the Corporation's President and Chief Executive Officer. Mr. Miller has 25 years' experience in the gold mining industry and has served as the Chief Executive Officer and director of Simmer & Jack since November 2004. Mr. Miller served in various positions with the Placer Dome group from 2000 to 2003, including from November 2002 to August 2003 as Vice President and Chief Operating Officer of Kalgoorlie (a subsidiary of Placer Dome Inc.) where he led the integration of four separate mining and exploration businesses. In addition, from February 2001 to November 2002 Mr. Miller served as Vice President of Business Development for Placer Dome Inc. where he was responsible for the development of and execution of the Platinum Group Metals' worldwide growth strategy. Mr. Miller was the Chief Operating Officer of Western Areas Limited from January 1999 to February 2000. During this time he also acted as Chairman of JCI Services (Proprietary) Limited. From November 2003 to May 2005 Mr. Miller served as a director of Western Areas Limited, Randgold & Exploration Company Limited and Stilfontein Gold Mining Company Limited. Mr. Miller has a national higher diploma in metalliferous mining and is a registered professional mining engineer. He is also a member of the South African Institute of Mining and Metallurgy. Mr. Miller also holds mine overseers and mine managers certificates of competency granted by the South African Department of Mineral and Energy Affairs.

Graham P. Wanblad was appointed to the Board on June 1, 2008. Mr. Wanblad has more than 48 years of experience in the mining industry, mainly in the fields of mining and process project development and operational experience that included the management of multi-disciplined technical teams. From 2005 to May 2008, Mr. Wanblad served as Executive Technical Director of Simmer & Jack, and was a director of the Simmer & Jack in 2005 and 2006. Prior to joining Simmer & Jack, Mr. Wanblad served as an independent technical consultant from January 2001 to December 2004. From June 1995 to January 2001, Mr. Wanblad was Chairman and Chief Executive Officer of JCI Projects (Pty) Ltd., project development and project execution company. During this period he gained considerable international experience with the development of phased feasibility studies for 12 projects in 10 countries. Prior to this, he served on the Board of

Johannesburg Consolidated Investments Ltd as Executive Technical Director and held directorships at six listed mining companies. Mr. Wanblad received a government certificate in mechanical engineering and a higher national diploma in mechanical engineering from the Witwatersrand Technical College (now Technikon Witwatersrand). He is also a member of the Institute of Certified Mechanical and Electrical Engineers.

Additional Disclosure Relating to Directors

Other than as disclosed below, no person nominated for election as a Director:

- a) is, as at the date of this Circular, or has been within 10 years before the date of this Circular, a director or executive officer of any company (including the Corporation) that, while that person was acting in that capacity,
 - (i) was the subject of a cease trade or similar order or an order that denied the relevant company access to any exemption under securities legislation, for a period of more than 30 consecutive days;
 - (ii) was subject to an event that resulted, after the director or executive officer ceased to be a director or executive officer, in the company being the subject of a cease trade or similar order or an order that denied the relevant company access to any exemption under securities legislation, for a period of more than 30 consecutive days;
 - (iii) or within a year of that person ceasing to act in that capacity, became bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency or was subject to or instituted any proceedings, arrangement or compromise with creditors or had a receiver, receiver manager or trustee appointed to hold its assets;
- b) has, within 10 years before the date of this Circular, become bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency, or become subject to or instituted any proceedings, arrangement or compromise with creditors, or had a receiver, receiver manager or trustee appointed to hold its assets; or
- c) has been subject to any other penalties or sanctions imposed by a court, or regulatory body that would likely be considered important to a reasonable securityholder in deciding whether to vote for a proposed Director.

Gordon Miller previously served as a director of a South African company, Stilfontein Gold Mining Company Limited ("SGM"). While serving as a director of SGM, SGM was ordered by the High Court of South Africa to comply with a directive from the South African Department of Water Affairs and Forestry to pay for a proportion of the cost of the pumping operation in respect of neighbouring mines that were in provisional liquidation. When SGM did not make any such payments, due to it having limited resources, the Court found SGM and its directors (including Mr. Miller), to be in contempt and ordered them to pay a fine of ZAR15,000 (by which time Mr. Miller and the other directors had resigned). The Court granted the directors leave to appeal the judgment of the Court. The appeal was heard on August 23, 2007 and in a decision delivered on September 21, 2007, the Supreme Court of Appeal of South Africa granted the appeal and ordered that the order of the lower court be dismissed with costs.

On April 3, 2007, Patrick Evans, a director of Eurasia Gold Inc. ("Eurasia") until March 26, 2007, along with the remaining directors, officers and insiders of Eurasia (collectively, the "Management") were subject to a cease trade order issued by the Ontario Securities Commission ("OSC"), which required that all trading in and all acquisitions of securities of Eurasia by Management cease for a period of 15 days. The cease trade order was made because Eurasia failed to file its audited financial statements for the year ended December 31, 2006, management's

discussion and analysis relating to the audited annual financial statements for the year ended December 31, 2006, and annual information form for the year ended December 31, 2006 (collectively, the "Year-End Financial Documents"). At a hearing held before the OSC on April 16, 2007, it was further ordered that all trading in and acquisitions of securities of Eurasia by any of the Management cease until Year-End Financial Documents were filed with the OSC. The cease trade order expired on April 25, 2007 when the Year-End Financial Documents were filed pursuant to Ontario securities legislation. Prior to the issuance of the cease trade order, Mr. Evans had resigned as at March 26, 2007 as a director of Eurasia and is no longer involved with Eurasia in any capacity.

DIRECTORS' ATTENDANCE AND COMPENSATION

Meetings Held and Attendance of Directors in Fiscal 2008

Mr. Hill joined the Board on May 29, 2007, two months into the fiscal year. Mr. Wanblad joined the Board on June 1, 2008.

Compensation of Directors

The non-executive Directors receive remuneration for attendance at Board meetings and Committee meetings and the travel time required to attend such meetings. Directors who are executive officers of the Corporation or its subsidiaries do not receive Directors' fees. Directors are reimbursed for all related travel and out-of-pocket expenses. For Fiscal 2008, the Corporation paid the non-executive Directors an aggregate of Cdn\$529,100 for annual retainers and attendance at meetings of the Board and Committees and for Board and Committee work. The Directors were remunerated by the Corporation in their capacity as Directors as noted below:

- Non-executive Director retainer is Cdn\$20,000 per annum;
- For acting as a Chairman of a Committee there is an additional retainer of Cdn\$5,000 per annum;
- In lieu of the foregoing the Chairman receives a retainer of Cdn\$100,000 per annum and the Lead Independent Director receives a retainer of Cdn\$75,000 per annum;
- Retainers were pro rated for any partial year served;
- Board and Committee meeting fee of Cdn\$1,500 per meeting attended;
- Board and Committee work Cdn\$1,500 per day; and
- Travel fee of Cdn\$1,500 per trip to and from meeting destination (Cdn\$3,000 round trip).

The Board considers, from time to time, the granting of stock options to the non-executive Directors and to newly appointed Directors. See also "Incentive Plans - Stock Option Plan".

Directors' Shareholding Requirement

The current Directors are required by May 2011 to own Cdn\$100,000 worth of Common Shares of the Corporation based on the market price of such Common Shares on the Toronto Stock Exchange (the "TSX") at the time such ownership level is attained; provided that if the value of such owned shares as a result of changes in the market price thereof, shall become less than Cdn\$100,000 after that level is attained, there shall be no requirement to "top up" the shares to such value. New directors will be expected to meet this ownership target within three years of his or her election or appointment to the Board.

REPORT OF THE HUMAN RESOURCES AND COMPENSATION COMMITTEE ON EXECUTIVE COMPENSATION

Composition of the Human Resources and Compensation Committee

The Human Resources and Compensation Committee (the "HRC Committee") has three members, Messrs. John W.W. Hick, Patrick C. Evans and Robert M. Franklin, each of whom is independent pursuant to National Instrument 58-101 - *Disclosure of Corporate Governance Practices* ("NI 58-101"). The HRC Committee was constituted and the members were appointed on December 20, 2006 and subsequently reappointed following the meeting of shareholders held on September 10, 2007. No member is currently, or was during the financial year ended March 31, 2008 ("Fiscal 2008"), an officer or employee of the Corporation. No member of the HRC Committee is, or during Fiscal 2008, indebted to the Corporation or any of its subsidiaries, or to any other entity where such debt is supported by a guarantee, support agreement, letter of credit or other similar arrangement or understanding, provided by the Corporation or its subsidiaries. No member of the HRC Committee has, or had during Fiscal 2008, any material interest in any transaction that has materially affected or would materially affect the Corporation.

Mandate of the Human Resources and Compensation Committee

The HRC Committee was established by the Board to assist it in fulfilling its responsibilities relating to human resources and compensation issues and to establish a plan of continuity for executive officers and other members of senior management ("Executive Management"). The HRC Committee ensures that the Corporation has an executive compensation plan that is both motivational and competitive so that it will attract, retain and inspire the performance of the Executive Management of a quality and nature that will allow for and enhance the sustainable development, growth and ultimate profitability of the Corporation. As part of its mandate, the HRC Committee assists the Board in fulfilling the following responsibilities:

- Considering the Corporation's overall remuneration strategy and, where information is available, verifying the appropriateness of existing remuneration levels using external sources for comparison;
- Comparing the nature and amount of the Corporation's directors' and executive officers' compensation to performance against goals set for the year while considering relevant comparative information, independent expert advice and the financial position of the Corporation;
- Making recommendations to the Board in respect of director and executive officer remuneration matters, with the overall objective of ensuring maximum shareholder benefit from the retention of high quality board and executive team members;
- Meet with management to establish corporate objectives, and subsequently meet independently of management to assess the progress in relation to these objectives;
- Periodically review the organizational structure and the succession plans, including specific development plans, methods of achieving recommended action; and
- Career planning for potential successors.

Salary Compensation

The Corporation's executive compensation policy includes the following objectives and considers the following factors in determining the compensation of each executive of the Corporation:

- Executive Management compensation should be related to the Corporation's performance both on an absolute and relative basis;
- Executive Management compensation should be related to the experience and contribution of the individual employee;
- Executive Management's interests should be aligned as closely as possible to the interests of the shareholders of the Corporation; and
- Executive Management compensation should be competitive with "peer" companies in the mining industry.

To ensure that the Corporation provides a competitive and appropriate executive compensation package, the HRC Committee formally or informally surveys the compensation packages of the other executives in the mining industry of like sized companies. It has the authority to engage outside consultants and advisors as it deems necessary. No outside advisors were engaged in Fiscal 2008.

Incentive Compensation

Members of Executive Management are eligible for cash bonuses and stock option awards.

Cash Bonus Plan

Bonuses are intended to reflect shorter term (usually annual) accomplishments while stock option awards are intended to provide an incentive to, and compensate Executive Management for, the attainment of longer term objectives related to the growth and performance of the Corporation, which are reflected in the share price and therefore closely related to the enhancement of shareholder value.

Cash bonuses were paid to executives and management in Fiscal 2008 in recognition of their contribution to the successful completion of the initial public offering of the Corporation.

Early in Fiscal 2008, the HRC Committee adopted a structured bonus plan (the "Cash Bonus Plan"), whereby, at the beginning of the fiscal year, each member of the Executive Management, on the recommendation of the HRC Committee and as approved by the Board, was provided a formula for the maximum potential bonus stated as a percentage of base salary, as well as individual criteria and weighting of such criteria, which would be used in determining the bonus of the individual subsequent to the end of that fiscal year. The criteria and weighting may vary depending on the individual's specific role in the Corporation; the overall criteria will generally include a combination of goals related to the financial performance of the Corporation, the achievement of specific pre-agreed goals for that individual and an element of discretion by the HRC Committee and Board. For Fiscal 2008, a set of standards was developed in consultation with each member of Executive Management against which the HRC Committee can measure the individual's absolute and relative performance and the relative and absolute performance of the Corporation. In setting the amount, weighting of the components and defining the criteria of the Cash Bonus Plan, input from the CEO was taken into account and the input of an independent compensation consultant was also considered. The HRC Committee reviewed these performance measures and they were reviewed and approved by the Board. Subsequent the end of Fiscal 2008, the HRC Committee met with the CEO and others to review their report on the performance of each executive pursuant to that person's individual Cash Bonus Plan criteria and to make recommendations to the Board as to the bonus to be paid.

Options

Options to purchase Common Shares are a very common compensation tool in the mining industry and are a method of linking the compensation of the Executive Management and Directors with the performance of the Corporation and the enhancement of shareholder value through the appreciation of the share price. In determining the number of options to be granted consideration is given to a number of factors, including information as to option grants by other mining companies. See also "Incentive Plans – Stock Option Plan."

CEO Compensation

The HRC Committee met four times in Fiscal 2008 and has met twice since the end of Fiscal 2008 to consider compensation matters in general, including the compensation of Mr. Gordon Miller, President and Chief Executive Officer of the Corporation. Considering the responsibilities of Mr. Miller during this development and growth stage of the Corporation, market data for CEOs of peer companies, the salary paid to Mr. Miller by Simmer & Jack and Mr. Miller's performance in Fiscal 2007 the HRC Committee recommended an annual base salary of Cdn\$325,000 (approximately US\$307,000 at that point in time) per annum for one-half of his working time as President and Chief Executive Officer of First Uranium during Fiscal 2008. Mr. Miller is also Chief Executive Officer of Simmer & Jack and allots one-half of his time to Simmer & Jack. No adjustment to this base salary was made in respect of Fiscal 2008.

Mr. Miller also participated in the Corporation's Cash Bonus Plan, described above in respect of Fiscal 2008. In accordance with the Plan and as approved by the Board early in Fiscal 2008, Mr. Miller's potential bonus under the Plan was 100% of his base salary. The bonus was divided into the following criteria by percentage: Maximize shareholder value: 30%; Increase the value of reserves and resources: 20%; Development of Ezulwini Mine and MWS: 20%; Succession planning: 5%; and Discretion of the HRC Committee and Board: 25%. Based on an analysis of the specific criteria and a thorough review and consideration of both his performance and the Corporation's performance relative to its goals and objectives for Fiscal 2008, the HRC Committee recommended and the Board approved a cash bonus of 85% of base salary (out of a possible 100%), which amount was CDN\$274,625. During Fiscal 2008, in accordance with the Corporation's strategy as approved by the Board, Mr. Miller re-located his family and principal residence to Toronto, where the Corporation's corporate office and its primary securities market is located. To assist with this move, the Corporation provided him with a housing relocation loan of CDN\$1 million (see a discussion of this loan under "Indebtedness of Directors, Officers and Employees" in this Circular). He was also reimbursed for the cost of an automobile during his time in Toronto.

Mr. Miller was granted a stock option in Fiscal 2008 entitling him to purchase 185,714 common shares of the Corporation, at an exercise price per share of Cdn\$8.81, for a term of 10 years. For a description of the Stock Option Plan see "Incentive Plans – Stock Option Plan".

During Fiscal 2008, a written contract was entered into with Mr. Miller with an effective date of January 1, 2007. For a description of the material terms of the contract see "Termination of Employment, Change of Responsibilities and Employment Contracts."

The foregoing report has been provided by the Human Resources and Compensation Committee.

John W.W. Hick (Chairman), Patrick C. Evans and Robert M. Franklin

EXECUTIVE COMPENSATION

The following table sets forth information concerning compensation earned during the fiscal years ended March 31, 2006 ("Fiscal 2006"), 2007 ("Fiscal 2007") and 2008 ("Fiscal 2008") by Gordon T. Miller, President and Chief Executive Officer, James P.W. Fisher, Executive Vice President, Corporate Development, Emmerentia Oosthuizen, Senior Vice President and Chief Financial Officer, Scot R. Sobey, Vice President, Business Development, and Mary D. Batoff, Vice President, Legal and Secretary, the "Named Executive Officers" of the Corporation, as that term is defined by applicable securities legislation, for Fiscal 2008.

Summary Compensation Table

¹ The Corporation completed an initial public offering (the "Offering") on December 20, 2006 (the "Offering Date"). Compensation disclosed is not for a full year. Mr. Miller was appointed President and CEO of the Corporation on the Offering Date. Mr. Miller serves as senior officer of both the Corporation and Simmer & Jack and allots approximately one-half of his working time to the affairs of the Corporation and one-half of his working time to the affairs of Simmer & Jack. Mr. Fisher was appointed EVP and COO on the Offering Date and on February 11, 2008 was appointed EVP Corporate Development. Ms. Oosthuizen was appointed CFO effective April 1, 2007. Mr. Sobey and Ms. Batoff were appointed on February 1, 2007 and February 8, 2007, respectively.

² Prior to being employed by the Corporation each of Messrs. Miller and Fisher and Ms. Oosthuizen were employed by Simmer & Jack. In Fiscal 2008, Mr. Miller received from Simmer & Jack \$278,836 salary and a bonus of \$63,432 will be paid. In Fiscal 2007, Simmer & Jack paid to: Mr. Miller \$411,904 salary and \$25,650 bonus; Mr. Fisher \$140,314 salary and \$21,072 bonus; Ms. Oosthuizen \$119,445 salary and \$12,755 bonus. In Fiscal 2006, Simmer & Jack paid to: Mr. Miller \$506,275 salary, Mr. Fisher \$33,647; and Ms. Oosthuizen \$117,800 salary. Such compensation is not included in the compensation reported in the table.

³ Bonuses were in respect of performance in Fiscal 2008 and were paid following the end of Fiscal 2008.

⁴ Mr. Sobey received a payment of \$5,600 for his work on the Offering as a consultant prior to his employment with the Corporation. Such compensation is not included in the compensation reported in the table.

Stock Options Granted During Fiscal 2008

The following table sets forth the options to purchase securities of the Corporation granted during the Fiscal 2008 to the Named Executive Officers of the Corporation.

Name	Securities Under Options Granted (#)	% of Total Options Granted in the Fiscal Year	Exercise Price (Cdn\$/Security)	Market Value of Securities Underlying Options on Date of Grant (Cdn\$/security)	Expiration Date
Gordon T. Miller President & CEO	185,714	7.3	\$8.81	\$8.81	February 25, 2018
James P.W. Fisher EVP, Corporate Development	110,714	4.3	\$8.81	\$8.81	February 25, 2018
Emmerentia Oosthuizen SVP & CFO	107,143	4.2	\$8.81	\$8.81	February 25, 2018
Scot R. Sobey VP Business Development	57,143	2.2	\$8.81	\$8.81	February 25, 2018
Mary D. Batoff VP Legal & Secretary	42,858	1.7	\$8.81	\$8.81	February 25, 2018

Aggregate Option Exercises During Fiscal 2008 and Financial Year-End Option Values

The following table sets forth certain information regarding options to purchase Common Shares of the Corporation by the Named Executive Officers outstanding as at the end of Fiscal 2008 and exercised during Fiscal 2008.

Name	Securities Acquired on Exercise (#)	Aggregate Value Realized (Cdn\$)	Unexercised Options at March 31, 2008 (#)		Value of Unexercised in-the-money Options at March 31, 2008 (Cdn\$)	
			Exercisable	Unexercisable	Exercisable	Unexercisable
Gordon T. Miller President & CEO	38,095	136,761	100,000	161,905	23,620	23,620
James P.W. Fisher EVP, Corporate Development	-	-	113,095	111,905	47,240	23,620
Emmerentia Oosthuizen SVP & CFO	-	-	64,285	85,715	-	-
Scot R. Sobey VP Business Development	-	-	47,620	52,380	17,715	8,857
Mary D. Batoff VP Legal & Secretary	-	-	52,381	47,620	23,619	11,810

¹ The price per common share at the close of business on the Toronto Stock Exchange on March 31, 2008 (the last trading day of Fiscal 2008) was Cdn\$7.62.

TERMINATION OF EMPLOYMENT, CHANGE IN RESPONSIBILITIES AND EMPLOYMENT CONTRACTS

The Corporation has entered into a written contract with each Named Executive Officer. Each Named Executive Officer is entitled to participate in such incentive plans or cash bonus plans of the Corporation as the Board and/or the HRC Committee may implement from time to time, including the Cash Bonus Plan and Stock Option Plan. Each contract also provides for vacation, benefits and perquisites as are customary for the executive's respective experience, position and responsibilities.

Mr. Miller's base salary for Fiscal 2008 was Cdn\$325,000 per annum for one-half of his working time in respect of employment as President and Chief Executive Officer of the Corporation. Mr. Miller is also Chief Executive Officer of Simmer & Jack and allots one-half of his working time to Simmer & Jack.

Mr. Fisher's base salary for Fiscal 2008 was Cdn\$300,000 per annum.

Under the terms of the contract with each of Mr. Miller and Mr. Fisher, the Corporation may terminate his employment without cause, in which case he will receive a lump sum amount equal to 12 months, or in the case of termination without cause within 12 twelve months on a change of control, he will receive a lump sum equal to 24 months (in either case the "Notice Period") of his base salary payable as at the date of termination. Benefits will continue during the Notice Period. The executive is entitled to terminate his employment within six months of a change of control, in which case, he will receive a lump sum amount equal to 24 months of his base salary. In the event of a termination by the Corporation without cause or termination by the executive within 6 months of a change of control, any unvested options previously granted to him shall vest immediately as of the termination date.

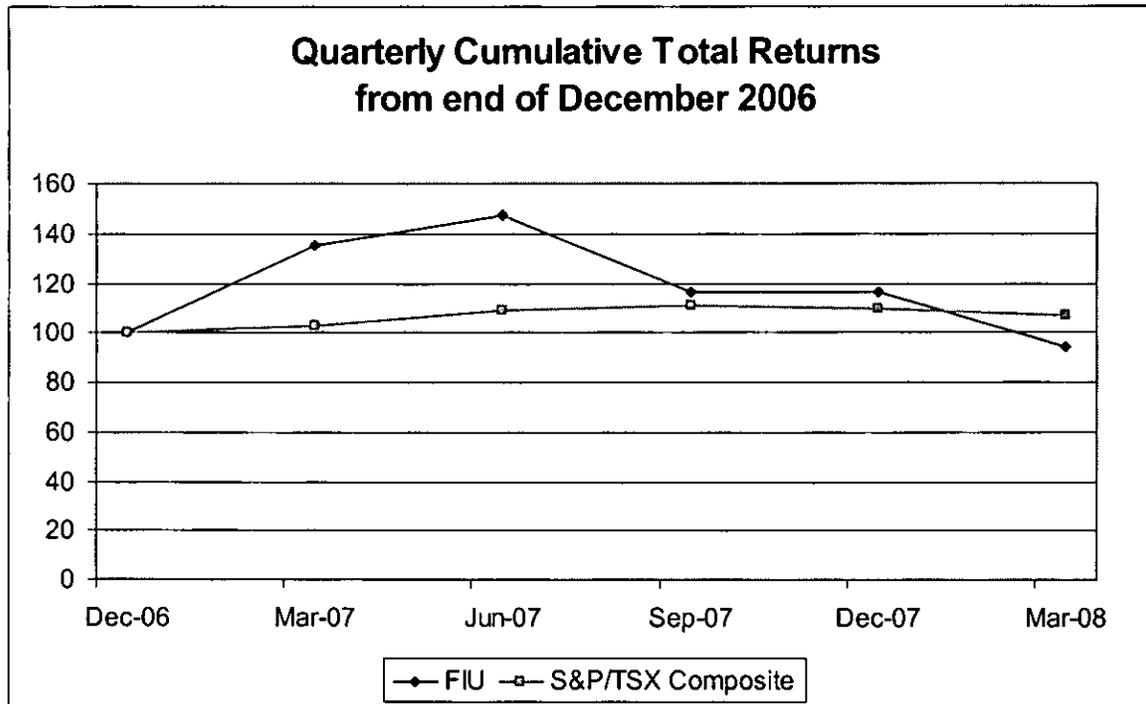

For Fiscal 2008, Ms. Oosthuizen's base salary was Cdn\$225,000 per annum, Ms. Batoff's base salary was Cdn\$200,000 per annum and Mr. Sobey's base salary was ZAR1,400,000. Under the terms of the contract with each of Ms. Oosthuizen, Ms. Batoff and Mr. Sobey, the Corporation may terminate his or her employment without cause, in which case he or she will receive a lump sum amount equal to 12 months (the "Notice Period") of his or her base salary payable as at the date of termination. Benefits will continue during the Notice Period. In the event of a termination by the Corporation without cause within 6 months of a change of control, any unvested options previously granted to him or her shall vest immediately as of the termination date.

MANAGEMENT CONTRACT

The Corporation and Simmer & Jack entered into a shared services agreement (the "Shared Services Agreement") to permit the Corporation to obtain access to certain services to be provided by Simmer & Jack, including project management and technical services, cash management and investment services, accounting, treasury and financial services, corporate secretarial services and human resource and staffing services, including payroll and benefits administration, and such other services as may be required by the Corporation and which Simmer & Jack is able and willing to provide. The Corporation is required to reimburse Simmer & Jack for any costs incurred by it in connection with the provision of the services contemplated under the Shared Services Agreement. As a result of hiring nine senior executives, including the Named Executive Officers, and other staffing of the Corporation, certain of these services are no longer required to be provided by Simmer & Jack. Currently all of the executive management is employed directly by the Corporation with the exception of the project management which is provided by Simmer & Jack.

PERFORMANCE GRAPH

The following graph shows the quarterly percentage change in the cumulative shareholder return of the Common Shares compared to the cumulative total return of the Standard & Poor/Toronto Stock Exchange Composite Index. The Corporation completed the Offering and listed on the Toronto Stock Exchange on December 20, 2006. The Offering price was Cdn\$7.00 per share. The fixed investment as at December 29, 2006 (the last trading day in the month that the Corporation listed on the TSX) is Cdn\$100 at a price per share of Cdn\$8.12. The Corporation's share price at the close of business on March 31, 2008 (the last trading day of Fiscal 2008) was Cdn\$7.62.

	Dec 31-06	Mar 30-07	Jun 29-07	Sep 28-07	Dec 31-07	Mar 31-08

INCENTIVE PLANS

Equity Compensation Plan Information (at March 31, 2008)

Plan Category	(a) Number of securities to be issued upon exercise of outstanding options, warrants and rights	(b) Weighted-average exercise price of outstanding options, warrants and rights	(c) Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in column (a))
Equity compensation plans approved by securityholders - Stock Option Plan	3,434,194	Cdn\$8.58	8,734,410
Equity compensation plans not approved by securityholders	N/A	N/A	N/A
Total	3,434,194		8,734,410

The Stock Option Plan was established in order to provide incentive compensation to directors, officers, employees and consultants of the Corporation and its subsidiaries as well as to assist the Corporation and its subsidiaries in attracting, motivating and retaining qualified directors, management personnel and consultants. The purpose of the Stock Option Plan is to provide additional incentive for participants' efforts to promote the growth and success of the business of the Corporation.

Stock Option Plan

Directors, officers, employees, or consultants of the Corporation or its affiliates (each an "Eligible Person") are eligible to be granted stock options under the Stock Option Plan.

The Stock Option Plan is administered by the HRC Committee, which will designate, from time to time, the recipients of grants and the terms and conditions of each grant, in each case in accordance with applicable securities laws and stock exchange requirements, subject to approval by the Board in respect of options in excess of 50,000 or options granted to Directors or officers of the Corporation. Stock options granted under the plan are non-transferable other than in accordance with the plan, and must be exercised no later than 10 years after the date of the grant or such shorter period as determined by the HRC Committee and approved by any applicable regulatory authority. All options will terminate on the earlier of the expiry of their term and the date of termination of an optionee's employment, engagement or position, if terminated for cause; otherwise, 90 days following termination.

Unless the HRC Committee determines otherwise, stock options issued by the Corporation are subject to a vesting schedule as follows: 1/3 upon grant; 1/3 upon the first anniversary of grant; and 1/3 upon the second anniversary of grant. The exercise price of an option shall not be less than the volume weighted average trading price of the Common Shares on the TSX, or another stock exchange where the majority of the trading volume and value of the Common Shares occurs, for the five trading days immediately preceding the day the option is granted. The maximum number of Common Shares to be reserved for issuance to insiders of the Corporation upon the exercise of stock options granted under the plan may not exceed 10% of the number of outstanding Common Shares at any given time. The maximum number of Common Shares that may be granted to any individual within a twelve month period cannot exceed 5% of the number of outstanding Common Shares. The number of Common Shares available for issuance upon the exercise of stock options granted under the plan will be equal to 10% of the number of issued and outstanding Common Shares at a given time.

Currently, options to acquire 3,138,196 Common Shares (approximately 2.4% of the Common Shares outstanding) are outstanding. Common Shares that are subject to options which lapse or expire become available under the Stock Option Plan. During the Fiscal 2008, 153,001 Common Shares were issued on exercise of options under the Stock Option Plan.

The following table sets forth certain information regarding the options granted to directors, officers, employees and consultants of the Corporation and its affiliates that are outstanding as of the date hereof.

Position	Securities Under Options Granted (#)	Exercise Price (Cdn\$/Security)	Expiration Date

INDEBTEDNESS OF DIRECTORS, OFFICERS AND EMPLOYEES

Since the beginning of the Corporation's last completed financial year, no director or officer, nor any of their respective associates, has been indebted, or is presently indebted to the Corporation other than as described below.

Aggregate Indebtedness Cdn(\$)		
Purpose	To the Company or its Subsidiaries	To Another Entity
Share purchases	Nil	Nil
Other	1,000,000	Nil

Indebtedness of Directors and Executive Officers under Securities Purchase and Other Programs						
Name and Principal Position	Involvement of Company or Subsidiary	Largest Amount Outstanding During 2008 (Cdn\$)	Amount Outstanding as at August 8, 2008 (Cdn\$)	Financially Assisted Securities Purchases During 2008 (#)	Security for Indebtedness	Amount Forgiven During 2008 (Cdn\$)
Securities Purchase Programs						
None	-	-	-	-	-	-
Other Programs						
Gordon T. Miller	Lender	1,000,000	1,000,000	-	-	-

The Corporation loaned to Mr. Miller Cdn\$1 million for the purpose of facilitating his purchase of a family home. The loan is for a term of six years, is unsecured and bears interest at 4% per annum payable monthly in arrears. The loan was advanced on October 17, 2007. In the event that Mr. Miller ceases to be an employee of the Corporation for any reason, including in the case of a change of control of the Corporation, the loan shall become immediately due and payable.

DIRECTORS' AND OFFICERS' LIABILITY INSURANCE

The Directors and officers of First Uranium and its subsidiaries are covered by a directors' and officers' liability policy in the name of Simmer & Jack. The policy has a limit of GBP 50 million.

INTERESTS OF INFORMED PERSONS IN MATERIAL TRANSACTIONS

The following describes the interests of the informed persons (as defined in National Instrument 51-102 – Continuous Disclosure Obligations) of the Corporation in certain material transactions from March 31, 2007 to the date hereof.

As previously disclosed in the management information circular dated August 10, 2007, the Corporation entered into an agreement on December 20, 2006 with Desert Charm Trading 221 (Proprietary) Limited (trading as Waterpan Mining Consortium) (“Waterpan”) for the purchase of the remaining 10% of the shares of Ezulwini Mining Company (Proprietary) Limited (“EMC”) in consideration for 6.1 million common shares of the Corporation. On December 14, 2007, EMC obtained a bridging loan from a South African banking institution to purchase Waterpan's 10% shareholding in EMC. Waterpan used the proceeds to partially fund the purchase of 6.1 million common shares (the “Waterpan Shares”) of the Corporation for a consideration of \$42.4 million. The Corporation used the proceeds from the sale of the Waterpan Shares to repay the bridging loan to the South African banking institution and to pay the taxes resulting from the purchase of the EMC shares. Concurrent with the closing of this transaction, one million of the Waterpan Shares were sold by way of a private placement. Waterpan has a contractual agreement to retain its remaining Waterpan Shares until April 1, 2009. Certain shareholders of Waterpan are officers or employees of the Corporation or directors of its subsidiaries. The Waterpan transaction had no net impact on the cash flow of the Corporation's group of companies.

STATEMENT OF CORPORATE GOVERNANCE PRACTICES

The following statement of corporate governance practices has been prepared by the Corporation's Corporate Governance and Nominating Committee and describes the Corporation's approach to corporate governance as required pursuant to National Instrument 58-101 - *Disclosure of Corporate Governance Practices* (“NI 58-101”).

1. **Board of Directors**
Independence from Management and Significant Shareholder

The Board currently consists of eight Directors. The Board is responsible for determining whether or not each Director is “independent” for the purposes of NI 58-101 and has determined that four of the current Directors are independent. Prior to Mr. Wanblad's appointment to the Board on June 1, 2008, there were seven Directors, four of whom were independent under NI 58-101.

Mr. Brunette is Chairman of the Board and is a non-independent director due to his role as Chairman of Simmer & Jack, a significant shareholder of the Corporation. Simmer & Jack owns approximately 62.3% of the Common Shares outstanding.

Messrs. Evans, Franklin, Hick and Hill are independent directors under NI 58-101.

Messrs. Miller and Fisher, are employees of the Corporation, and are not independent. Mr. Miller also serves as Chief Executive Officer of Simmer & Jack.

Prior to June 2008, Mr. Wanblad was the Executive Technical Director of Simmer & Jack and is considered to be a non-independent director under NI 58-101 as three years have not elapsed since Mr. Wanblad ceased to be a senior officer of Simmer

& Jack.

The role of the Chairman is to effectively manage and provide leadership to the Board. The role of Chairman is separate from that of the President and CEO. To further foster the independence, the Board has appointed Mr. Robert Franklin as Lead Independent Director. The Board promotes independence by the composition of its committees, its committee chairman appointments, and providing Directors with an opportunity to recommend agenda items for consideration at Board meetings.

The Board also fosters independence from management by regularly excusing management from Board meetings to facilitate open and candid discussions. In addition, the independent Directors also meet at regularly scheduled meetings of the Board. In Fiscal 2008, the Board held four sessions with Directors only and four sessions with non-executive Directors only and seven sessions with independent Directors only.

In Fiscal 2008, the Directors also traveled to the Ezulwini Mine and the MWS Project to view the progress of the projects and to meet with mine site personnel.

Attendance

See "Directors' Attendance and Compensation – Meetings Held and Directors Attendance"

Other Directorships

Messrs. Brunette and Miller are directors of Simmer & Jack.

Mr. Evans is President, Chief Executive Officer and a director of Mountain Province Diamonds Inc. and Chief Executive Officer and a director of Norsemont Mining Inc.

Mr. Hick is Chairman and a director of Silver Eagle Mines Inc. and he is a director of Carpathian Gold Inc., Hudson Resources Inc., Marengo Mining Limited, Revett Minerals Inc. and Tamaya Resources Ltd.

Mr. Hill is Executive Vice President and a director of Toromont Industries Ltd.

Mr. Franklin is a director of Barrick Gold Corporation, Canadian Tire Corporation Limited, Resolve Business Outsourcing Income Fund and Toromont Industries Ltd.

The Board has adopted a practice that Directors declare, in advance, changes in their employment or other directorships with the intent to identify and avoid potential conflicts of interest.

Mandatory Retirement

The Board has adopted a policy that any director of the Corporation, attaining the age of 70 years shall no longer be eligible to be nominated for election as a director of the Corporation at the next subsequent shareholders meeting of the Corporation where directors are being elected and, having attained such age, shall retire as a director of the Corporation no later than the date of such next subsequent shareholders meeting.

2. **Mandate of the Board of Directors**

The Board's mandate is to supervise the management of the business and affairs of the Corporation and to act with a view to the best interests of the Corporation. In fulfilling its mandate, the Board among other matters is responsible for reviewing the Corporation's overall business strategies and its annual business plan; identifying principal risks and implementation of systems to manage those risks; assessing management's performance against approved business plans and industry standards; appointing senior management and reviewing succession planning; the development of the communication policy for the Corporation's shareholders; and the integrity of internal control and management information systems. A copy of the mandate is attached as Schedule A.

The frequency of meetings and the nature of the agenda items may change from year to year, depending on the activities of the Corporation. However, Board meetings are held at least quarterly, and at each meeting there is a review of the business of the Corporation. In Fiscal 2008 the Board held 12 meetings.

3. **Position Descriptions**

The Board has approved written descriptions of the duties of each of the Chairman of the Board, the Lead Independent Director and the CEO.

The Board has approved written charters for each Committee. There is not a position description for the Chairman of each Committee. The Chairman of each Committee presides at all meetings of the Committee, is responsible for ensuring that the work of the Committee is well organized and proceeds in a timely fashion and reports on the activities of the Committee to the Board.

4. **Orientation and Continuing Education**

The Board and the Corporate Governance and Nominating Committee are responsible for ensuring that new members are provided with the necessary information about the Corporation, its business and the factors which affect its performance, and the Board and the Committee reviews and monitors the orientation of new Board members.

5. **Ethical Business Conduct**

The Board has adopted a written code of business ethics and conduct (the "Code") for its directors, officers and employees. Under the Code individuals must report in writing any situation or transaction which is or may conflict with the Code. A copy of the Code is posted on the Corporation's website at www.firsturanium.com. Concerns or complaints regarding accounting, internal controls, auditing matters, questionable accounting or auditing matters, and any other concerns regarding a breach of the Code (collectively, "Concerns") may be reported to the Vice President, Legal of the Corporation via email, fax, mail or delivery. An individual may also contact the Chairman of the Audit Committee or the Chairman of the Corporate Governance and Nominating Committee directly via email, fax, post or delivery. Concerns may also be reported to the Corporation's Ethics Hotline on a confidential and anonymous basis, if desired. The 24 hour Ethics Hotline is administered by KPMG Services (Pty) Limited. The Vice President Legal is required to report Concerns regarding accounting/internal controls and auditing matters to the Chairman of the Audit Committee and other Concerns to the Chairman of the Corporate Governance and Nominating Committee. Subject to the

authority of the Chairman of the appropriate Committee, the Vice President, Legal of the Corporation is responsible for oversight of the investigation and resolution of any such complaint or concern and reporting thereon to such Committee. The Audit Committee and the Corporate Governance and Nominating Committee will report to the Board at least quarterly.

The Board promotes a culture of ethical business conduct by promoting compliance with applicable laws, rules and regulations and directors, officers and employees are encouraged to discuss the application of the Code to specific circumstances with the President and Chief Executive Officer and the Vice President Legal and Corporate Secretary. Any uncertainty on the part of the Chief Executive Officer will be discussed with Chairman of the Corporate Governance and Nominating Committee.

To ensure that the Directors exercise independent judgment in considering transactions and agreements in respect of which a Director or executive officer has a material interest, the Director in question complies with laws and corporate policies applicable in such circumstances and refrains from participating in deliberations on the matter, and may excuse himself from the room during such deliberations. The independent Directors discuss the matter in camera, and if circumstances warrant, an independent committee of the Board is constituted to oversee the transaction and outside independent advisors are retained if necessary or desirable.

6. **Nomination of Directors**

The Corporate Governance and Nominating Committee is comprised of three independent directors, Messrs. Franklin (Chairman), Evans and Hick. The responsibilities of the Committee include considering nominees for independent directors of First Uranium and planning for the succession of Directors and executive officers of the Corporation. In Fiscal 2008 the Committee considered the collective skills, qualifications and experience of the Board and determined that the Board would benefit from the addition of a mining engineer with project and operational experience. The Committee identified Mr. Wanblad as an excellent candidate with his qualifications as a mechanical engineer and his vast experience in design, construction and project management, including most recently, as Executive Technical Director of Simmer & Jack, he was extensively involved in the development and construction of the Corporation's projects. Mr. Wanblad was appointed to the Board on June 1, 2008.

7. **Compensation**

The Human Resources and Compensation Committee is comprised of three independent directors, Messrs. Hick (Chairman), Evans and Franklin. The Committee oversees the remuneration policies and practices of the Corporation. For a description of the mandate of the HRC Committee see the "Report of the Human Resources and Compensation Committee on Executive Compensation". The Committee also administers the Stock Option Plan. The Committee met four times during the Fiscal 2008.

8. **Board Committees**

Committees of the Board are an integral part of the Corporation's governance structure. Four committees have been established with a view to allocating expertise and resources to particular areas and to enhance the quality of discussion at the Board meetings. The Committees facilitate Board decision-making by providing recommendations to the Board on matters within their respective responsibilities. The Board has the following committees: Audit, Human Resources and Compensation, Corporate Governance and Nominating, and Environmental, Health and Safety. In addition, the Board will establish a Technical Committee. The duties and responsibilities of the Human Resources and Compensation Committee are described in the "Report of the Human Resources and Compensation Committee on Executive Compensation". The duties and responsibilities of the Audit Committee, Governance and Nominating Committee and the Environmental, Health and Safety Committee are described below.

Audit Committee

The Audit Committee is comprised of three directors, Messrs. Hill (Chairman), Franklin and Hick. Each member is independent as such term is defined in Multilateral Instrument 52-110 – Audit Committees ("MI 52-110"). Each member is financially literate within the meaning of MI 52-110. The Committee has adopted a charter, which has been ratified by the Board, which provides specific roles and responsibilities to the members of the Committee. The Committee met 12 times during the Fiscal 2008.

The Audit Committee oversees the accounting and financial reporting practices and procedures of First Uranium, and the audits of the Corporation's financial

statements. The principal responsibilities of the Audit Committee include: (i) overseeing the quality and integrity of the internal controls and accounting procedures of First Uranium, including reviewing the Corporation's procedures for internal control with the Corporation's auditor and chief financial officer; (ii) reviewing and assessing the quality and integrity of the Corporation's annual and quarterly financial statements and related management discussion and analysis, as well as all other material continuous disclosure documents, such as the Corporation's annual information form; (iii) monitoring compliance with legal and regulatory requirements related to financial reporting; (iv) reviewing and approving the engagement of the independent auditor of the Corporation and the related audit fees for all audit and non-audit related services provided by the independent auditor; (v) reviewing the qualifications, performance and independence of the external auditor of the Corporation, considering the auditor's recommendations and managing the relationship with the auditor, including meeting with the auditor as required in connection with the audit services provided by the Corporation; (vi) selecting and appointing the internal auditor, reporting relationship, planned activities and results of the internal audit; (vii) assessing the Corporation's financial and accounting personnel; (ix) reviewing the Corporation's risk management procedures; (x) reviewing any significant transactions outside the Corporation's ordinary course of business and any pending litigation involving the Corporation; and (xi) examining improprieties or suspected improprieties with respect to accounting and other matters that affect financial reporting.

Corporate Governance and Nominating Committee

The Corporate Governance and Nominating Committee is comprised of three independent directors, Messrs. Franklin (Chairman), Evans and Hick. The Committee oversees the Corporation's approach to corporate governance matters. The principal responsibilities of the Corporate Governance and Nominating Committee include: (i) monitoring and overseeing the quality and effectiveness of the corporate governance practices and policies of First Uranium; (ii) considering nominees for independent directors of First Uranium; (iii) adopting and implementing corporate communications policies and ensuring the effectiveness and integrity of communication and reporting to First Uranium's shareholders and the public generally; (iv) planning for the succession of directors and executive officers of the Company, including appointing, training and monitoring senior management to ensure that the Board and management have appropriate skill and experience; and (v) administering the Board's relationship with the management of First Uranium. The Governance and Nominating Committee met four times during the Fiscal 2008.

Environmental, Health and Safety Committee

The Environmental, Health and Safety Committee has three members, Messrs. Evans (Chairman), Brunette and Miller. Mr. Evans is an independent director. The Committee acts as adviser to management and the Board on matters concerning the environment, health and safety.

The Committee's responsibilities with respect to safety and health matters shall include: (i) reviewing and making recommendations, as appropriate, in regard to the Corporation's safety and health programs, including corporate occupational health and safety policies and procedures; (ii) reviewing and making recommendations, as appropriate, in regard to safety and health compliance issues, if any; (iii) satisfying itself that management of the Corporation monitors trends and reviews current and emerging issues in the safety and health field and evaluates

the impact on the Corporation; and (iv) reviewing the Corporation's safety and health performance. The Committee's responsibilities with respect to environmental matters shall include: (i) reviewing and making recommendations, as appropriate, in regard to the Corporation's environmental management program, including corporate environmental policies and procedures, and the status of the Corporation's financial provisions for statutory or other requirements to effect environmental rehabilitation arising out of its operations; (ii) reviewing and making recommendations, as appropriate, in regard to environmental compliance issues, if any; (iii) satisfying itself that management of the Corporation monitors trends and reviews current and emerging issues in the environmental field, and evaluates their impact on the Corporation; (iv) reviewing incident reports to assess whether environmental management procedures were effective in such incidents, and to make recommendations for improvement, where appropriate; (v) reviewing the scope of potential environmental liabilities and the adequacy of the environmental management system to manage these liabilities; and (vi) reviewing the status of the Corporation's financial provisions for statutory or other requirements to effect environmental rehabilitation arising out of its operations.

The Committee met twice during Fiscal 2008.

Technical Committee

A Technical Committee will be established with Mr. Wanblad as Chairman. The Committee will act as adviser to management and the Board on technical issues facing the Corporation.

9.

Assessments

An annual assessment of the Board and its Committees and individual self-assessments is provided by each individual Director. The responses are summarized by the Chairman of the Corporate Governance and Nominating Committee and reported to the Committee and subsequently to the Board. The responses are discussed, and matters or concerns, if any, are addressed.

ADDITIONAL INFORMATION

Additional information relating to the Corporation is available on SEDAR at www.sedar.com.

Copies of the Corporation's Financial Statements and related management discussion and analysis of operating and financial results may be obtained upon request from the Corporate Secretary of the Corporation. The Corporation may require the payment of a reasonable charge if the request is made by a person who is not a shareholder of the Corporation.

Additional information relating to the Audit Committee of the Corporation is contained on pages 90 to 92 of the Corporation's annual information form, dated June 24, 2008, filed on SEDAR.

CURRENCY OF INFORMATION CONTAINED IN CIRCULAR

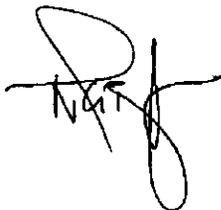

The currency of the information provided herein is as of August 8, 2008 unless otherwise stated.

DIRECTORS' APPROVAL

The contents of this Circular and the sending thereof to shareholders of the Corporation have been approved by the Board of Directors.

DATED this 8th day of August, 2008.

BY ORDER OF THE BOARD OF DIRECTORS

A handwritten signature in black ink, appearing to read 'Nigel R.G. Brunette', with a large, stylized flourish at the end.

Nigel R.G. Brunette
Chairman

SCHEDULE A

FIRST URANIUM CORPORATION

CHARTER OF THE BOARD OF DIRECTORS

1. Purpose

Subject to the articles and by-laws of First Uranium Corporation (the “**Company**”) and applicable laws, the principal role of the board of directors of the Company (the “**Board**”) is stewardship of the Company with the creation of shareholder value, including the protection and enhancement of the value of its assets, as the fundamental objective. The Board must assess and ensure that systems are in place to manage the risks of the Company’s business with the objective of preserving the Company’s assets.

2. Composition

The Board shall be elected annually by the Company’s shareholders. While the election of directors is ultimately determined by the shareholders, it is the policy of the Board that a majority of the directors be independent of management and unrelated to the Company (as determined under applicable stock exchange rules and securities laws). Before each annual general meeting of the Company’s shareholders, the Board shall recommend nominees to the shareholders for election as directors for the ensuing year.

3. Chair and Lead Independent Director

The Chair of the Board and the Lead Independent Director shall be selected by the other directors of the Board immediately following the annual general meeting of the Company’s shareholders.

4. Meetings

The Board shall meet at least six times a year, including at least once every quarter, and more frequently as the Chair and the Lead Independent Director may determine or as required to comply with applicable corporate and securities laws and stock exchange rules.

Notice of meetings shall be given to each member not less than 48 hours before the time of the meeting, provided that meetings of the Board may be held without formal notice if all of the members of the Board are present and do not object to notice not having been given, or if those absent waive notice in any manner before or after the meeting. Notice of meeting may be given verbally or delivered personally, given by mail, facsimile or other electronic means of communication and need not be accompanied by an agenda or any other material. The notice shall however specify the purpose or purposes for which the meeting is being held.

Decisions or recommendations of the Board shall be evidenced by resolutions passed at meetings of the Board and recorded in the minutes of such meetings or by an instrument in writing signed by all directors of the Board. A copy of the draft minutes of each meeting of the Board and any written resolutions evidencing decisions or recommendations of the Board shall be transmitted promptly by the Secretary to each director for adoption at the next meeting.

The Corporate Secretary shall attend all meetings of the Board and shareholders of the Company and shall prepare and maintain minutes and records of all such meetings.

5. Roles and Responsibilities

Subject to the articles and by-laws of the Company and applicable laws, the Board's primary responsibilities are as follows:

- supervision and management of the Company's business and affairs;
- to adopt a strategic planning process and to approve, on at least an annual basis, a strategic plan that takes into account, among other things, the opportunities and risks of the Company's business;
- to approve the Company's corporate strategies and goals;
- to satisfy itself as to the integrity of the senior officers of the Company and that such officers create a culture of integrity throughout the Company;
- to manage the Company's succession management plan. The Board must also ensure that processes are in place to enable it to monitor and measure management's, and in particular, the Chief Executive Officer's, performance in achieving the Company's stated objectives. These processes should include appropriate training and development;
- to establish policies appropriate for the business of the Company;
- to have an understanding of the principal risks associated with the Company's businesses, and to ensure that appropriate systems are in place which effectively monitor and manage those risks;
- to ensure that the necessary internal controls are in place that effectively monitor the Company's operations and ensure compliance with applicable laws, regulations and policies;
- to ensure that the Company has a communications policy in place which ensures that the Company effectively communicates with and receives feedback from the Company's shareholders. The Board must also ensure that the Company has appropriate processes in place to effectively communicate with employees, government authorities, other stakeholders and the public;
- to establish procedures for identifying, recruiting and appointing new directors of the Company; and
- to develop the Company's approach to corporate governance.

The Board shall appoint the Chief Executive Officer of the Company and establish the duties and responsibilities of such officer. On the recommendation of the Chief Executive Officer, the Board shall, from time to time, appoint officers of the Company and approve the management structure of the Company.

The management of the business and affairs of the Company is delegated by the Board to the Chief Executive Officer. The Board will give direction and guidance through the Chief Executive Officer to management, assign responsibility to management for achievement of the corporate direction and goals, define executive limitations, and monitor performance against those objectives and executive limitations. The Chief Executive Officer will keep management informed of the Board's evaluation of the officers in achieving and complying with established goals and policies.

The Board shall delegate certain responsibility and/or tasks to certain Committees of the Board. Immediately following each annual general meeting of the Company's shareholders, the Board shall appoint the members of the Company's Audit Committee, Human Resources and Compensation Committee, Corporate Governance and Nominating Committee and the Environmental, Health and Safety Committee. The Board, and the respective Committee thereof, shall also approve the mandate, duties and responsibilities of each Committee of the Board from time to time.

In addition to the various responsibilities discussed above, the following list is non-exhaustive but typifies the specific responsibilities of the Board and the matters generally to be considered by the Board:

- review and recommend to the Company's shareholders changes to the Company's capital structure;
- delegate to the Chief Executive Officer the authority to manage and supervise the business of the Company, including making of all decisions regarding the Company's operations that are not specifically reserved to the Board under the terms of that delegation of authority;
- approve, monitor and provide guidance on the strategic planning process of the Company. The Chief Executive Officer and senior management team will have direct responsibility for the ongoing strategic planning process and the establishment of long term goals for the Company, which are to be reviewed and approved not less than annually by the Board and the Board will provide guidance to the Chief Executive Officer and management team on the Company's ongoing strategic plan. The Board will establish annual performance objectives against which to measure corporate, executive and individual (director) performance;
- take reasonable steps to ensure the Company has management of the highest caliber. The Board will assess, on an ongoing basis, the Chief Executive Officer's performance against criteria and objectives established by the board from time to time. The Board will also use reasonable steps to ensure that the Chief Executive Officer has in place adequate programs to recruit, retain, develop and assess the performance of management;
- keep in place adequate and effective succession plans for the Chief Executive Officer and management and review these on an annual basis;
- identify the principal risks of the Company's business and use reasonable steps to ensure the implementation of appropriate systems to manage these risks; attempt to achieve a proper balance between the risk incurred and the potential return to shareholders;
- approve the Company's long term strategy and the annual capital expenditure plan and budget of the Company;
- approve banking, borrowing, financing and investment policies and plans;
- approve the Company's financial statements and MD&A as well as any press releases, reports or other disclosure documents that contain financial information, on the recommendation of the Company's Audit Committee, in addition to any other material disclosure documents;
- approve the holding, location and date of meetings of shareholders;
- determine the number of directors and recommend nominees for election by the shareholders of the Company;
- as applicable, approve the establishment and/or amendments to employee, director and officer compensation plans;
- approve the acquisition or disposition of certain corporate assets;
- appoint the Company's transfer agent and registrar;
- require that the Board be kept informed of the Company's activities and performance and take appropriate action to correct inadequate performance;
- develop the Company's communications policy;
- develop the Company's code of business conduct and ethics (as per National Policy 58-201); and
- serve and safeguard the best interests of the Company.

Form of Proxy - Annual Meeting to be held on September 10, 2008

This Form of Proxy is solicited by and on behalf of Management.

Notes to proxy

1. Every holder has the right to appoint some other person or company of their choice, who need not be a holder, to attend and act on their behalf at the meeting. If you wish to appoint a person or company other than the persons whose names are printed herein, please insert the name of your chosen proxyholder in the space provided (see reverse).
2. If securities are registered in the name of more than one owner (for example, joint ownership, trustees, executors, etc.), then all those registered should sign this proxy. If you are voting on behalf of a corporation or another individual you may be required to provide documentation evidencing your power to sign this proxy with signing capacity stated.
3. This proxy should be signed in the exact manner as the name appears on the proxy.
4. If this proxy is not dated, it will be deemed to bear the date on which it is mailed by Management to the holder.
5. The securities represented by this proxy will be voted as directed by the holder, however, if such a direction is not made in respect of any matter, this proxy will be voted as recommended by Management.
6. The securities represented by this proxy will be voted or withheld from voting, in accordance with the instructions of the holder, on any ballot that may be called for and, if the holder has specified a choice with respect to any matter to be acted on, the securities will be voted accordingly.
7. This proxy confers discretionary authority in respect of amendments to matters identified in the Notice of Meeting or other matters that may properly come before the meeting.
8. This proxy should be read in conjunction with the accompanying documentation provided by Management.

Proxies submitted must be received by 4:00 pm, Eastern Time, on September 8, 2008.

FIRST URANIUM CORPORATION

REPORT ON VOTING RESULTS

In accordance with section 11.3 of National Instrument 51-102 – Continuous Disclosure Obligations, we hereby advise of the results of voting on the matters submitted to the annual meeting (the “Meeting”) of the shareholders (the “Shareholders”) of First Uranium Corporation (the “Corporation”) held on September 10, 2008. At the Meeting, Shareholders were asked to consider certain annual general meeting matters.

The matters voted upon at the Meeting and the results of the voting were as follows:

Item 1: Election of Directors

By a vote by way of show of hands, the number of directors was fixed at eight and the following directors were elected to hold office for a term to expire immediately following the next annual meeting of Shareholders:

Nigel R.G. Brunette
Patrick C. Evans
James P.W. Fisher
Robert M. Franklin
John W.W. Hick
Wayne S. Hill
Gordon T. Miller
Graham P. Wanblad

Item 2: Appointment of Auditors

By a vote by way of show of hands, PricewaterhouseCoopers LLP, Chartered Accountants were re-appointed auditors of the Corporation to hold office until the close of the next annual meeting of the Shareholders or until their successors are appointed, and the directors of the Corporation were authorized to fix the remuneration of the auditors.

Dated this 12th day of September, 2008.

FIRST URANIUM CORPORATION

NOTICE OF ANNUAL AND SPECIAL MEETING OF SHAREHOLDERS SEPTEMBER 10, 2007

Notice is hereby given that the annual and special meeting of shareholders (the "Meeting") of First Uranium Corporation (the "Corporation") will be held at The National Club, 303 Bay Street, Toronto, Ontario, Canada on September 10, 2007, at 4:00 p.m. (local time) for the following purposes:

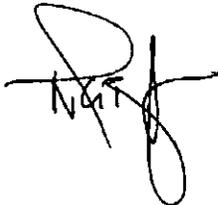

1. to receive the audited consolidated financial statements of the Corporation for the year ended March 31, 2007 (the "Annual Financial Statements") and the report of the auditors thereon;
2. to elect directors of the Corporation for the ensuing year;
3. to consider and, if thought fit, approve the appointment of PricewaterhouseCoopers LLP, Chartered Accountants, as auditors for the Corporation, and to authorize the directors of the Corporation to fix their remuneration;
4. to consider and, if thought fit, approve an ordinary resolution to ratify, confirm and approve the Corporation's Stock Option Plan; and
5. to transact such further or other business as may properly come before the Meeting or any adjournments or postponements thereof.

A copy of the Annual Financial Statements to be submitted to the Meeting, together with the Management Information Circular and form of Proxy with respect to the matters to be dealt with at the Meeting, are included herewith.

By resolution of the Board of Directors of the Corporation, shareholders of record at the close of business on August 8, 2007, will be entitled to notice and to vote at the Meeting in person or by proxy.

DATED the 10th day of August, 2007.

BY ORDER OF THE BOARD OF DIRECTORS

Nigel R.G. Brunette
Chairman

Note: Shareholders who are unable to attend the Meeting in person are requested to complete, date, sign and return the enclosed form of proxy. All forms of proxy must be deposited with Computershare Investor Services Inc. or Computershare Investor Services 2004 (Pty) no later than 5:00 p.m. (Toronto time) on September 7, 2007 or with the Chairman of the Meeting on the day of the Meeting, or any adjournment or postponement thereof, or in any manner permitted by law.

**NOTICE OF ANNUAL AND SPECIAL MEETING OF SHAREHOLDERS
SEPTEMBER 10, 2007**

Notice is hereby given that the annual and special meeting of shareholders (the "Meeting") of First Uranium Corporation (the "Corporation") will be held at The National Club, 303 Bay Street, Toronto, Ontario, Canada on September 10, 2007, at 4:00 p.m. (local time) for the following purposes:

1. to receive the audited consolidated financial statements of the Corporation for the year ended March 31, 2007 (the "Annual Financial Statements") and the report of the auditors thereon;
2. to elect directors of the Corporation for the ensuing year;
3. to consider and, if thought fit, approve the appointment of PricewaterhouseCoopers LLP, Chartered Accountants, as auditors for the Corporation, and to authorize the directors of the Corporation to fix their remuneration;
4. to consider and, if thought fit, approve an ordinary resolution to ratify, confirm and approve the Corporation's Stock Option Plan; and
5. to transact such further or other business as may properly come before the Meeting or any adjournments or postponements thereof.

A copy of the Annual Financial Statements to be submitted to the Meeting, together with the Management Information Circular and form of Proxy with respect to the matters to be dealt with at the Meeting, are included herewith.

By resolution of the Board of Directors of the Corporation, shareholders of record at the close of business on August 8, 2007, will be entitled to notice and to vote at the Meeting in person or by proxy.

DATED the 10th day of August, 2007.

BY ORDER OF THE BOARD OF DIRECTORS

Nigel R.G. Brunette
Chairman

Note: Shareholders who are unable to attend the Meeting in person are requested to complete, date, sign and return the enclosed form of proxy. All forms of proxy must be deposited with Computershare Investor Services Inc. or Computershare Investor Services 2004 (Pty) no later than 5:00 p.m. (Toronto time) on September 7, 2007 or with the Chairman of the Meeting on the day of the Meeting, or any adjournment or postponement thereof, or in any manner permitted by law.

RECORDED
008 OCT -8 P 12:17

FIRST URANIUM CORPORATION
MANAGEMENT INFORMATION CIRCULAR

This management information circular (the "Circular") is furnished in connection with the solicitation of proxies by the management of First Uranium Corporation ("First Uranium" or the "Corporation") to be used at the Annual and Special Meeting (the "Meeting") of the Corporation to be held at the time, place and for the purposes indicated in the enclosed Notice of Annual and Special Meeting (the "Notice") and any adjournment or postponement thereof. This solicitation of proxies will be done primarily by mail but proxies may also be solicited personally, by facsimile or by telephone by officers, directors or regular employees of the Corporation for which no additional compensation will be paid. The cost of the solicitation will be borne by the Corporation.

Shareholders unable to attend the Meeting in person are requested to complete the enclosed proxy form and to forward it to Computershare Investor Services Inc., Proxy Department, 100 University Avenue, 9th Floor, Toronto, Ontario M5J 2Y1 or Computershare Investor Services 2004 (Pty), Proxy Department, 70 Marshall Street, Johannesburg, 2000 (P.O. Box 61051, Marshalltown, South Africa, 2107). If the shareholder is a corporation, an officer's signature on the said proxy form must be duly authorized in writing.

APPOINTMENT OF PROXY

The persons named in the enclosed proxy form are directors and/or officers of the Corporation and are the proxyholders nominated by the board of directors of the Corporation (the "Board"). A shareholder has the right to appoint a person to attend and act on his or her behalf at the Meeting other than the persons named in the enclosed proxy. To exercise this right, a shareholder must strike out the names of the nominees of management named in the instrument of proxy the shareholder is signing and insert the name of his or her nominee in the blank space provided on the proxy. A person appointed as proxyholder need not be a shareholder of the Corporation.

REVOCATION OF PROXY

A shareholder executing the enclosed form of proxy has the right to revoke the proxy by instrument in writing, including another completed form of proxy, executed by the shareholder or his or her agent duly authorized in writing or, if the shareholder is a corporation, by an officer thereof duly authorized in writing, and deposited at the executive office of the Corporation in Toronto or with Computershare Investor Services Inc., Proxy Department, 100 University Avenue, 9th Floor, Toronto, Ontario M5J 2Y1 or Computershare Investor Services 2004 (Pty), Proxy Department, 70 Marshall Street, Johannesburg, 2000 (P.O. Box 61051, Marshalltown, South Africa, 2107) no later than September 7, 2007 or with the Chairman of the Meeting on the day of the Meeting or any adjournment or postponement thereof or in any other manner permitted by law.

USE OF DISCRETIONARY POWER CONFERRED BY PROXY

The common shares (the "Common Shares") of the Corporation represented by the enclosed proxy will be voted or withheld from voting on any motion, by ballot or otherwise, in accordance with any indicated instructions. **In the absence of such direction, such Common Shares will be voted FOR the resolutions referred to in the form of proxy.**

If any amendment or variation to the matters identified in the Notice is proposed at the Meeting or any adjournment or postponement thereof, or if any other matters properly come before the Meeting or any adjournment or postponement thereof, the enclosed proxy confers discretionary authority to vote on such amendments or variations or such other matters according to the best judgment of the appointed proxyholder. At the time of printing this Circular, management of the Corporation knows of no such amendments, variations or other matters to come before the Meeting other than the matters referred to in the Notice.

VOTING OF SHARES

A holder of Common Shares may own such shares in one or both of the following ways. If a shareholder is in possession of a physical share certificate, such shareholder is a "registered" shareholder and his or her name and address are maintained by the Corporation through its transfer agent, Computershare Investor Services Inc. If a shareholder owns shares through a bank, broker or other nominee, such shareholder is a "beneficial" shareholder and he or she will not have a physical share certificate. Such shareholder will have an account statement from his or her bank or broker as evidence of his or her share ownership.

A registered shareholder may vote a proxy in his or her own name in accordance with the instructions appearing on the enclosed form of proxy and/or a registered shareholder may attend the Meeting and vote in person. Because a registered shareholder is known to the Corporation and its transfer agent, his or her account can be confirmed and his or her vote recorded or changed if such registered shareholder has previously voted. This procedure prevents a shareholder from voting his or her shares more than once. Only the registered shareholder's latest dated proxy will be valid.

Most shareholders are "beneficial owners", who are not registered shareholders. Their Common Shares are registered in the name of an intermediary, such as a securities broker, financial institution, trustee, custodian or other nominee who holds the shares on their behalf, or in the name of a clearing agency in which the intermediary is a participant (such as The Canadian Depository for Securities Limited). Intermediaries have obligations to forward meeting materials to non-registered holders, unless otherwise instructed by the holder (and are required to do so in some cases despite such instructions).

Only registered shareholders or their duly appointed proxyholders are permitted to vote at the Meeting. Non-registered holders should follow the directions of intermediaries with respect to the procedures to be followed for voting. Generally, intermediaries will provide non-registered holders with either: (a) a voting instruction form for completion and execution by the non-registered holder, or (b) a proxy form, executed by the intermediary and restricted to the number of shares owned by the non-registered holder, but otherwise uncompleted. These are procedures to permit the non-registered holders to direct the voting of the Common Shares which they beneficially own.

If non-registered holders wish to attend and vote in person at the Meeting, they must insert their own name in the space provided for the appointment of a proxyholder on the voting instruction form or proxy form, provided by the intermediary and carefully follow the intermediary's instructions for return of the executed form or other method of response.

INTEREST OF CERTAIN PERSONS OR COMPANIES IN MATTERS TO BE ACTED UPON

At the date hereof, no director or officer of the Corporation, or an associate or affiliate thereof or, to the knowledge of the Corporation, any holder of over 10% of the voting securities of the Corporation or any associate or affiliate thereof, has any material interest by way of beneficial ownership of securities or otherwise, in any matter to be acted upon, other than the approval of the Stock Option Plan (Item 4 of the Notice).

VOTING SECURITIES AND PRINCIPAL HOLDERS OF VOTING SECURITIES

The holders of Common Shares whose names appear on the list of shareholders prepared as of the close of business, Toronto time, on August 8, 2007 (the "Record Date") will be entitled to vote at the Meeting and any adjournment or postponement thereof if present or represented by proxy thereat. The list of shareholders will be available for inspection during usual business hours at the offices of the Corporation in Toronto, Ontario.

At the close of business on August 8, 2007, there were 124,818,122 Common Shares outstanding. Each Common Share entitles its duly registered holder to one vote.

As at August 8, 2007, Simmer and Jack Mines, Limited ("Simmer & Jack") holds 81,722,653 Common Shares or approximately 65.5 percent of the Common Shares outstanding. To the knowledge of the directors and officers of the Corporation, no other person beneficially owns, directly or indirectly, or exercises control or direction over, voting securities of the Corporation carrying more than 10 percent of the voting rights attached to the voting securities of the Corporation.

Messrs. Nigel R.G. Brunette and Gordon T. Miller, each a director, and the Chairman and the President and Chief Executive Officer of the Corporation, respectively, are also directors, and the Chairman and Chief Executive Officer of Simmer & Jack, respectively.

BUSINESS OF THE MEETING

Presentation of Financial Statements (Item No. 1 of the Notice)

The audited consolidated financial statements of the Corporation for the financial years ended March 31, 2007 and 2006 (the "Financial Statements") and the auditors' report thereon will be placed before the Meeting.

Election of Directors (Item No. 2 of the Notice)

The business of the Corporation is managed by a board of directors (the "Directors") composed of a minimum of three (3) pursuant to and in accordance with the Corporation's articles. The number of Directors may be fixed from time to time by ordinary resolution of shareholders, subject to increase pursuant to the terms of the Articles of the Corporation. At the Meeting, shareholders will be asked to elect seven (7) Directors for the current year. The seven nominees proposed for election as Directors are listed on page 5. All seven nominees are currently Directors.

It is not anticipated that any of the nominees will be unable to serve as Directors, but if that should occur for any reason prior to the Meeting, or any adjournment or postponement thereof, the persons named in the enclosed form of proxy shall be entitled to vote for any other nominee(s) in their discretion.

The term of office of each Director elected at the Meeting will end at the date of the next annual meeting following his election unless he resigns or his office becomes vacant through death or any other reason in accordance with the Articles of the Corporation. A complete list of nominees for election as Directors of the Corporation and their biographies follows in the section "Nominees for Election to the Board of Directors." Directors' record of attendance at Board and Committee meetings is set forth in the section "Board of Directors Meetings Held and Attendance of Directors."

If you complete and return the attached form of proxy, your representatives at the Meeting, or any adjournment or postponement thereof, will vote your Common Shares FOR the election of each of the nominees set out herein unless you specifically direct that your vote be withheld.

It is intended that the Common Shares represented by proxies solicited hereby, unless otherwise indicated, will be voted FOR the election of each individual nominated by the Board and management as directors of the Corporation.

Appointment of Auditors (Item No. 3 of the Notice)

The Board and management propose that the firm of PricewaterhouseCoopers LLP, Chartered Accountants ("PWC") be re-appointed as the auditors of the Corporation to hold office until the next annual meeting of shareholders and that the Board be authorized to fix the auditors' remuneration. PWC were first appointed as auditors of the Corporation in December 2006.

One or more representatives of PWC will be present at the Meeting and will be available to respond to appropriate questions.

The aggregate fees billed by PWC for the fiscal year ended March 31, 2007: (i) for professional services that are normally provided by the external auditors in connection with statutory and regulatory filings or engagements for that year were Cdn\$115,800; (ii) for assurance and related services rendered by it that are reasonably related to the performance of the audit or review of the Corporation's financial statements engagements for that year were Cdn\$208,600 and (iii) for professional services rendered by it for tax compliance, tax advice, tax planning and other services were Cdn\$311,100. Tax services provided included advice in connection with structuring of transactions and review of tax provisions.

It is intended that the Common Shares represented by proxies solicited hereby, unless otherwise indicated, will be voted FOR the appointment of PWC as auditors of the Corporation until the next annual meeting of shareholders and to authorize the Directors to fix their remuneration. The appointment of PWC as the Corporation's auditors must be approved by at least a majority of the votes cast at the Meeting by shareholders who vote in respect of the appointment of the auditors (present in person or represented by proxy).

Approval of the Corporation's Stock Option Plan (Item No. 4 of the Notice)

The Corporation's Stock Option Plan became effective on December 11, 2006 subject to shareholder approval at the next annual meeting of shareholders of the Corporation. The Stock Option Plan was approved by the then existing shareholders of the Corporation on December 19, 2006. The Corporation is seeking the approval of the Stock Option Plan by its current shareholders at the Meeting. The Stock Option Plan is described under "Incentive Plans – Stock Option Plan". Shareholders will be asked to consider, and if deemed advisable, approve with or without variation a resolution approving the adoption of the Stock Option Plan as described under "Special Business". **It is intended that the Common Shares represented by proxies solicited hereby, unless otherwise indicated, will be voted FOR the resolution approving the Stock Option Plan.** The Stock Option Plan must be approved by a majority of the votes cast at the Meeting.

Other Matters (Item No. 5 of the Notice)

At the time of printing this Circular, management of the Corporation knows of no other matter to come before the Meeting other than the matters referred to in the Notice. **If any amendment or variation to the matters identified in the Notice is proposed at the Meeting or any adjournment or postponement thereof, or if any other matters properly come before the Meeting or any adjournment or postponement thereof, the enclosed proxy confers discretionary authority to vote on such amendments or variations or such other matters according to the best judgment of the appointed proxyholder.**

NOMINEES FOR ELECTION TO THE BOARD OF DIRECTORS

Management has been informed that each of such nominees would be willing to serve as a director, if elected. However, in the event that any such nominee is unable or unwilling to serve as a director because of death or any other unexpected occurrence, proxies will be voted in favour of the remaining nominees and for such other substitute nominee as the Board may designate.

It is intended that the Common Shares represented by proxies solicited hereby, unless otherwise indicated, will be voted FOR the election of the individuals nominated by the Board and management as Directors of the Corporation.

The following table sets forth the name and municipality of residence of each nominee, his position held with the Corporation, his principal occupation, the date upon which he became a Director of the Corporation and the number of Common Shares beneficially owned, directly or indirectly, or over which control or discretion is exercised by him as of August 8, 2007:

Name, Municipality of Residence and Position Held With the Corporation	Principal Occupation	Director Since	Number of Shares Beneficially Owned Directly or Indirectly or Controlled
Nigel R.G. Brunette ¹ Chairman Adelaide, South Africa	Self-employed Businessman	December 2006	-
Patrick C. Evans ^{1,2,3} Director Scottsdale, Arizona, USA	President and Chief Executive Officer of Mountain Province Diamonds Inc.	December 2006	36,000
James P.W. Fisher Director, Executive Vice President and Chief Operating Officer Johannesburg, South Africa	Executive Vice President and Chief Operating Officer of the Corporation	December 2006	-
Robert M. Franklin ^{2,3,4} Lead Independent Director Toronto, Ontario	President and Chief Executive Officer of Signalta Capital Corporation	December 2006	38,000
John W.W. Hick ^{2,3,4} Director Toronto, Ontario	Independent Consultant and Corporate Director	December 2006	7,000
Wayne S. Hill ⁴ Director Toronto, Ontario	Executive Vice President of Toromont Industries Ltd.	May 2007	-
Gordon T. Miller ¹ Director, President & Chief Executive Officer Johannesburg, South Africa	President and Chief Executive Officer of the Corporation and Chief Executive Officer of Simmer & Jack	December 2006	157,238

¹ Member of the Environmental, Health and Safety Committee.

² Member of the Human Resources and Compensation Committee.

³ Member of the Corporate Governance and Nominating Committee.

⁴ Member of the Audit Committee

The information with respect to Common Shares beneficially owned, directly or indirectly, or over which control or direction is exercised, not being within the knowledge of First Uranium, has been furnished by the respective directors individually.

Nigel R. G. Brunette has served as an independent director of Simmer & Jack since October 2005 and as the non-executive Chairman since January 2006. Mr. Brunette held various positions with Rand Merchant Bank from 1983 to 1997, including General Manager, Corporate Finance. Mr. Brunette also currently serves on the board of directors of East Cape Agricultural Cooperative Ltd. Mr. Brunette has been self-employed since 1997, farming sheep and cattle in the Eastern Cape region of South Africa. Mr. Brunette has law degrees from the University of Zimbabwe and Cambridge University (United Kingdom) and a higher diploma in company law from the University of Witwatersrand (South Africa).

Patrick C. Evans has served as the President, Chief Executive Officer and a director of Mountain Province Diamonds Inc., a company listed on the Toronto and American stock exchanges, since November 2005. From September 2005 to May 2006, Mr. Evans served as the President, Chief Executive Officer and a director of Weda Bay Minerals Inc., a TSX listed nickel exploration and development company, until its acquisition by Eramet S.A. Mr. Evans served as the President and Chief Executive Officer and a director of SouthernEra Diamonds Inc. from March 2001 to August 2005 and as President and Chief Executive Officer and a director of Southern Platinum Corp. from August 2004 to May 2005. He also previously served as the Chief Executive Officer of Messina Limited, a company listed on the JSE. Prior to that Mr. Evans held various senior executive positions with Placer Dome Inc. from January 1999 to March 2001 and served as a Member of the Executive Committee of the South African Chamber of Mines. Mr. Evans holds a BA and BSc from the University of Cape Town (South Africa).

James P. W. Fisher serves as the Corporation's Executive Vice President and Chief Operating Officer. Mr. Fisher has 28 years' experience in the Southern African mining industry, including nine years on the Zambian copper belt and the rest in South Africa. Since February 2006 Mr. Fisher held various senior positions within the Simmer & Jack group, including serving as Chief Executive Officer of First Uranium (Proprietary) Limited, a subsidiary of the Corporation. From September 2001 to February 2006, Mr. Fisher provided consulting services on a number of mining and other projects, including metallurgical consulting services to Simmer & Jack. From April 1999 to September 2001, Mr. Fisher served as the Business Manager for the South Deep joint venture between Placer Dome South Africa (Proprietary) Limited and Western Areas Limited where his duties encompassed strategy and organizational development, corporate and public relations as well as the definition of and implementation of the information technology and remuneration strategy. Mr. Fisher ran the Cooke uranium plant from 1987 to 1989 as well as the Western Areas North Shaft (now the Ezulwini Mine) from 1991 to 1994. Mr. Fisher is a Chartered Engineer, a fellow of The Institute of Materials, Minerals and Mining, a member of the South African Institute of Mining and Metallurgy, and a member and past President of the Mine Metallurgical Managers Association of South Africa.

Robert M. Franklin serves as the Lead Independent Director of the Board. Mr. Franklin brings more than 35 years of executive and director experience. Mr. Franklin served as a director of Placer Dome Inc. since 1987 and as the non-executive Chairman of the board of directors of Placer Dome Inc. from 1993 until the acquisition of Placer Dome Inc. by Barrick Gold Corporation in 2006. Mr. Franklin is currently the President of Signalta Capital Corporation, a private investment company. He also serves as a director of a number of public companies including, Barrick Gold Corporation, Canadian Tire Corporation Limited, Resolve Business Outsourcing Income Fund and Toromont Industries Ltd. Mr. Franklin was the Chairman of Clublink Corporation from 1994 to 2003.

John W.W. Hick serves as President of John W.W. Hick Consultants Inc. He has been actively involved in the mining business for 26 years, serving variously as an officer and/or director of numerous companies. From December 1, 2004 to January 1, 2006, Mr. Hick served as Chief Executive Officer of Rio Narcea Gold Mines Ltd., of which he was a director from 1997 to June 2006. Mr. Hick also currently serves as Chairman and a director of Silver Eagle Mines Inc. In addition, Mr. Hick serves as a director of Carpathian Gold Inc., Hudson Resources Inc., Revett Minerals Inc. and Western Keltic Mines Inc. Prior to the acquisition of Defiance Mining Corp. by Rio Narcea in 2004, Mr. Hick was the President and Chief Executive officer of Defiance and its predecessor company, Geomaque Explorations Ltd. Mr. Hick has held various senior positions with other mining companies including President and later Vice Chairman of TVX Gold Inc. between 1993 and 1997, Senior Vice President, Corporate of Placer Dome Inc. between 1987 and 1990 and Vice President and General Counsel of the Dome Mines Group of Companies between 1981 and 1987. Mr. Hick holds a BA from the University of Toronto, an LLB from the University of Ottawa and was called to the Bar of Ontario in 1978.

Wayne S. Hill has served as Executive Vice President of Toromont Industries Ltd., a company listed on the Toronto Stock Exchange, since 2005. Prior to that, Mr. Hill served as Chief Financial Officer of Toromont from 1985 to 2005. Mr. Hill has also served as a director of Toromont since 1988. Mr. Hill served as a director of Enerflex Systems Ltd., a gas compression packager listed on the TSX, from 1993 to 1998 and served in senior roles with other Canadian public companies, including a communications and publishing company (1983 to 1985) and an international heavy equipment and engine manufacturer (1979 to 1983). Mr. Hill received a Bachelor of Commerce (Honours) from Queen's University. He is also a Chartered Accountant and was employed in public accounting with a major accounting firm from 1969 to 1979.

Gordon T. Miller serves as the Corporation's President and Chief Executive Officer. Mr. Miller has 24 years' experience in the gold mining industry and has served as the Chief Executive Officer and director of Simmer & Jack since November 2004. Mr. Miller served in various positions with the Placer Dome group from 2000 to 2003, including from November 2002 to August 2003 as Vice President and Chief Operating Officer of Kalgoorlie (a subsidiary of Placer Dome Inc.) where he led the integration of four separate mining and exploration businesses. In addition, from February 2001 to November 2002 Mr. Miller served as Vice President of Business Development for Placer Dome Inc. where he was responsible for the development of and execution of the Platinum Group Metals' worldwide growth strategy. Mr. Miller was the Chief Operating Officer of Western Areas Limited from January 1999 to February 2000. During this time he also acted as Chairman of JCI Services (Proprietary) Limited. From November 2003 to May 2005 Mr. Miller served as a director of Western Areas Limited, Randgold & Exploration Company Limited and Stilfontein Gold Mining Company Limited. Mr. Miller has a national higher diploma in metalliferous mining and is a registered professional mining engineer. He is also a member of the South African Institute of Mining and Metallurgy. Mr. Miller also holds mine overseers and mine managers certificates of competency granted by the South African Department of Mineral and Energy Affairs.

Additional Disclosure Relating to Directors

Other than as disclosed below, no person nominated for election as a Director:

- a) is, as at the date of this Circular, or has been within 10 years before the date of this Circular, a director or executive officer of any company (including the Corporation) that, while that person was acting in that capacity,
 - (i) was the subject of a cease trade or similar order or an order that denied the relevant company access to any exemption under securities legislation, for a period of more than 30 consecutive days;
 - (ii) was subject to an event that resulted, after the director or executive officer ceased to be a director or executive officer, in the company being the subject of a cease trade or similar order or an order that denied the relevant company access to any exemption under securities legislation, for a period of more than 30 consecutive days;
 - (iii) or within a year of that person ceasing to act in that capacity, became bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency or was subject to or instituted any proceedings, arrangement or compromise with creditors or had a receiver, receiver manager or trustee appointed to hold its assets;
- b) has, within 10 years before the date of this Circular, become bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency, or become subject to or instituted any proceedings, arrangement or compromise with creditors, or had a receiver, receiver manager or trustee appointed to hold its assets; or
- c) has been subject to any other penalties or sanctions imposed by a court, or regulatory body that would likely be considered important to a reasonable securityholder in deciding whether to vote for a proposed Director.

Gordon Miller previously served as a director of a South African company, Stilfontein Gold Mining Company Limited ("SGM"). While serving as a director of SGM, SGM was ordered by the High Court of South Africa to comply with a directive from the South African Department of Water Affairs and Forestry to pay for a proportion of the cost of the pumping operation in respect of neighbouring mines that were in liquidation. When SGM did not make any such payments, due to it having limited resources, the Court found SGM and its directors (including Mr. Miller), to be in contempt and ordered them to pay a fine of ZAR15,000 (by which time Mr. Miller and the other directors had resigned). The Court has granted the directors leave to appeal the judgment of the Court. The appeal has been set for August 23, 2007.

On April 3, 2007, Patrick Evans, a director of Eurasia Gold Inc. ("Eurasia") up until March 26, 2007, along with the remaining directors, officers and insiders of Eurasia (collectively, the "Management") were subject to a cease trade order issued by the Ontario Securities Commission ("OSC"), which required all trading in and all acquisitions of securities of Eurasia by Management cease for a period of 15 days. The cease trade order was made because Eurasia failed to file its audited financial statements for the year ended December 31, 2006, management's discussion and analysis relating to the audited annual financial statements for the year ended December 31, 2006, and annual information form for the year ended December 31, 2006 (collectively, the "Year-End Financial Documents"). At a hearing held before the OSC on April 16, 2007, it was further ordered that all trading in and acquisitions of securities of Eurasia by any of the Management cease until Year-End Financial Documents were filed with the OSC. The cease trade order expired on April 25, 2007 when the Year-End Financial Documents were filed pursuant to Ontario securities legislation. Prior to the issuance of the cease trade order, Patrick Evans had resigned as a director of Eurasia and is no longer involved with Eurasia in any capacity as at March 26, 2007.

DIRECTORS' COMPENSATION

Meetings Held and Attendance of Directors

Director	Board Meetings Attended	Committee Meetings Attended			
		Audit	Human Resources & Compensation	Corporate Governance & Nominating	Environmental, Health & Safety
Nigel Brunette	3 of 4	N/A	N/A	N/A	-
Patrick Evans	4 of 4	N/A	2 of 2	-	-
James Fisher	4 of 4	N/A	N/A	N/A	N/A

Gordon Miller	4 of 4	N/A	N/A	N/A	-

Due to the short period between the date the Corporation became a reporting issuer in December 2006 and the end of the fiscal year on March 31, 2007 ("Fiscal 2007") there were no formal meetings of the Corporate Governance and Nominating Committee in Fiscal 2007. Following year-end there were four meetings of the Corporate Governance and Nominating Committee, each attended by all of the Committee members. The Environmental, Health and Safety Committee was constituted in February 2007 and the mandate formalized in March 2007.

Mr. Hill joined the Board on May 29, 2007 and was appointed a member of the Audit Committee.

Compensation of Directors

The non-executive directors receive remuneration for attendance at Board meetings and Committee meetings and the travel time required to attend such meetings. Directors who are executive officers of the Corporation or its subsidiaries do not receive Directors' fees. Directors are reimbursed for all related travel and out-of-pocket expenses. For Fiscal 2007, the Corporation paid the non-executive Directors an aggregate of Cdn\$155,250 for annual retainers and attendance at meetings of the Board and Committees since the Corporation became a reporting issuer in December 2006. The Directors were remunerated by the Corporation in their capacity as Directors as noted below:

- Non-executive Director retainer is Cdn\$20,000 per annum;
- For acting as a Chairman of a Committee there is an additional retainer of Cdn\$5,000 per annum;
- In lieu of the foregoing the Chairman receives a retainer of Cdn\$100,000 per annum and the Lead Independent Director receives a retainer of Cdn\$75,000 per annum;
- Retainers were pro rated for the partial year served;
- Board and Committee meeting fee of Cdn\$1,500 per meeting attended; and
- Travel fee of Cdn\$1,500 per day traveled to and from meeting.

The Board considers, from time to time, the granting of stock options to the non-executive Directors and to newly appointed Directors. See also "Incentive Plans – Stock Option Plan".

COMPOSITION OF THE HUMAN RESOURCES AND COMPENSATION COMMITTEE

The Human Resources and Compensation Committee (the "HRC Committee") has three members, Messrs. John W.W. Hick, Patrick C. Evans and Robert M. Franklin, each of whom is independent pursuant to National Instrument 58-101 - *Disclosure of Corporate Governance Practices* ("NI 58-101"). The HRC Committee was constituted and the members were appointed on December 20, 2006. None of the members is currently, or was during the financial year ended March 31, 2007, an officer or employee of the Corporation. No member of the HRC Committee is, or during the financial year ended March 31, 2007, indebted to the Corporation or any of its subsidiaries, or to

any other entity where such debt is supported by a guarantee, support agreement, letter of credit or other similar arrangement or understanding, provided by the Corporation of its subsidiaries. No member of the HRC Committee has, or had during the financial year ended March 31, 2007, any material interest in any transaction that has materially affected or would materially affect the Corporation.

REPORT ON EXECUTIVE COMPENSATION

Mandate of the Human Resources and Compensation Committee

The HRC Committee was established by the Board to assist it in fulfilling its responsibilities relating to human resources and compensation issues and to establish a plan of continuity for executive officers and other members of senior management ("Executive Management"). The HRC Committee ensures that the Corporation has an executive compensation plan that is both motivational and competitive so that it will attract, retain and inspire the performance of the Executive Management of a quality and nature that will allow for and enhance the sustainable development, growth and ultimate profitability of the Corporation. As part of its mandate, the HRC Committee assists the Board in fulfilling the following responsibilities:

- To review and make recommendations to the Board with respect to salary and incentive compensation, including bonuses and stock option awards and other benefits, direct or indirect, and any employment agreements and/or change of control packages for Executive Management, as well as compensation for the Directors;
- To make recommendations to the Board with respect to the general salary guidelines for the Corporation;
- To administer the Corporation's compensation plans, including stock option plans, and outside Director compensation plans, as adopted by the Board from time to time;
- To review the Corporation's policies in respect of other benefits and perquisites;
- To ensure that the Corporation's compensation practice and philosophies are consistent with the objective of enhancing shareholder value and attracting and retaining qualified senior executives for the Corporation; and
- To oversee the administration of succession planning.

Salary Compensation

The Corporation's executive compensation policy includes the following objectives and considers the following factors in determining the compensation of each executive of the Corporation:

- Executive Management compensation should be related to the Corporation's performance both on an absolute and relative basis;
- Executive Management compensation should be related to the experience and contribution of the individual employee;
- Executive Management's interests should be aligned as closely as possible to the interests of the shareholders of the Corporation; and
- Executive Management compensation should be competitive with "peer" companies in the mining industry.

To ensure that the Corporation provides a competitive and appropriate executive compensation package, the HRC Committee formally or informally surveys the compensation packages of the other executives in the mining industry of like sized companies. It has the authority to engage outside consultants and advisors as it deems necessary. No outside advisors were engaged in the fiscal year ended March 31, 2007 ("Fiscal 2007").

Incentive Compensation

Members of Executive Management are eligible for cash bonuses and stock option awards.

Cash Bonus Plan

Bonuses are intended to reflect shorter term (usually annual) accomplishments while stock option awards are intended to provide an incentive to, and compensate Executive Management for, the attainment of longer term objectives related to the growth and performance of the Corporation, which are reflected in the share price and therefore closely related to the enhancement of shareholder value.

Cash bonuses were paid to executives and management in Fiscal 2007 in recognition of their contribution to the successful completion of the initial public offering of the Corporation.

Subsequent to the end of Fiscal 2007, the HRC Committee adopted a structured bonus plan (the "Cash Bonus Plan"), whereby, at the beginning of the fiscal year, each member of the Executive Management, on the recommendation of the HRC Committee and as approved by the Board, was provided a formula for the maximum potential bonus stated as a percentage of base salary, as well as individual criteria and weighting of such criteria, which would be used in determining the bonus of the individual subsequent to the end of that fiscal year. The criteria and weighting may vary depending on the individual's specific role in the Corporation; the overall criteria will generally include a combination of goals related to the financial performance of the Corporation, the achievement of specific pre-agreed goals for that individual and an element of discretion by the HRC Committee and Board. For the year ended March 31, 2008, a set of standards has been developed in consultation with each member of Executive Management against which the HRC Committee can measure the individual's absolute and relative performance and the relative and absolute performance of the Corporation. In setting the amount, weighting of the components and defining the criteria of the Cash Bonus Plan, the input of an independent compensation consultant was considered. The HRC Committee has reviewed these performance measures and they have been reviewed and approved by the Board.

Options

Options to purchase Common Shares are a very common compensation tool in the mining industry and are a method of linking the compensation of the Executive Management and Directors with the performance of the Corporation and the enhancement of shareholder value through the appreciation of the share price. In determining the number of options to be granted consideration is given to a number of factors, including information as to option grants by other mining companies.

CEO Compensation

The HRC Committee met twice in Fiscal 2007 and has met twice since year-end to consider compensation matters in general, including the compensation of Mr. Gordon Miller, President and Chief Executive Officer of the Corporation. Considering the responsibilities of Mr. Miller during this development and growth stage of the Corporation, market data for CEOs of peer companies, the salary paid to Mr. Miller by Simmer & Jack and Mr. Miller's performance in Fiscal 2007 the HRC Committee recommended an annual base salary of approximately US\$307,000

(Cdn\$325,000) per annum for one-half of his working time as President and Chief Executive Officer of First Uranium. Mr. Miller is also Chief Executive Officer of Simmer & Jack and allots one-half of his time to Simmer & Jack.

Subsequent to year-end a written contract was entered into with Mr. Miller with an effective date of January 1, 2007. For a description of the material terms of the contract see "Termination of Employment, Change of Responsibilities and Employment Contracts."

The foregoing report has been provided by the Human Resources and Compensation Committee.

John W.W. Hick (Chairman)
Patrick C. Evans
Robert M. Franklin

EXECUTIVE COMPENSATION

The following table sets forth information concerning compensation earned during the fiscal years ended March 31, 2006 ("Fiscal 2006") and 2007 ("Fiscal 2007") by Gordon T. Miller, President and Chief Executive Officer and Gerhard J. Jacobs, former Chief Financial Officer, the "Named Executive Officers" of the Corporation, as that term is defined by applicable securities legislation, for Fiscal 2007.

Summary Compensation Table

Name and Principal Position	Year	Annual Compensation			Long Term Compensation			
		Salary (US\$)	Bonus (US\$)	Other Annual Compensation (US\$)	Awards		Payouts	All Other Compensation (US\$)
					Securities Under Options/SAR Granted (#)	Restricted Shares or Restricted Share Units (US\$)	LTIP Payouts (US\$)	
Gordon T. Miller President & CEO	F2007	74,315 ¹	25,352	Nil	114,286	Nil	Nil	Nil
	F2006	Nil	Nil	Nil	Nil	Nil	Nil	Nil
Gerhard J. Jacobs Former CFO	F2007	Nil ²	Nil	Nil	57,143	Nil	Nil	Nil
	F2006	Nil	Nil	Nil	Nil	Nil	Nil	Nil

¹ The Corporation completed an initial public offering (the "Offering") on December 20, 2006 (the "Offering Date"). Compensation disclosed is not for a full year as Mr. Miller was appointed President and CEO of the Corporation on the Offering Date. Mr. Miller serves as senior officer of both the Corporation and Simmer & Jack and allots one-half of his working time to the affairs of the Corporation and one-half of his working time to the affairs of Simmer & Jack. Mr. Miller's base salary for the time allotted to the Corporation is US\$307,000 (Cdn\$325,000).

² Mr. Jacobs' services were provided pursuant to a shared services agreement between the Corporation and Simmer & Jack (see "Management Contract"). Mr. Jacobs agreed to act as Chief Financial Officer effective the Offering Date on an interim basis. Mr. Jacobs was replaced as Chief Financial Officer of the Corporation by Emma Oosthuizen effective April 1, 2007.

Stock Options Granted During Fiscal 2007

The following table sets forth the options to purchase securities of the Corporation granted during the Fiscal 2007 to the Named Executive Officers of the Corporation.

Name	Securities Under Options Granted (#)	% of Total Options Granted in the Fiscal Year	Exercise Price (\$/Security)	Market Value of Securities Underlying Options on Date of Grant (\$/security)	Expiration Date
Gordon T. Miller President & CEO	114,286	9%	Cdn\$7.00	Cdn\$7.00	December 20, 2016
Gerhard J. Jacobs Former CFO	57,143	5%	Cdn\$7.00	Cdn\$7.00	December 20, 2016

Aggregate Option Exercises During Fiscal 2007 and Financial Year-End Option Values

The following table sets forth certain information regarding options to purchase Common Shares of the Corporation by the Named Executive Officers outstanding as at the end of Fiscal 2007 and exercised during Fiscal 2007.

Name	Securities Acquired on Exercise (#)	Aggregate Value Realized (Cdn\$)	Unexercised Options at March 31, 2007 (#)		Value of Unexercised in-the- money Options at Mar. 31, 2007 (Cdn\$)	
			Exercisable	Unexercisable	Exercisable	Unexercisable
			Gordon T. Miller President & CEO	Nil	Nil	38,095
Gerhard J. Jacobs Former CFO	Nil	Nil	19,047	38,096	75,236	150,479

¹ The price per common share at the close of business on the Toronto Stock Exchange on March 30, 2007 (the last trading day of Fiscal 2007) was Cdn\$10.95.

TERMINATION OF EMPLOYMENT, CHANGE IN RESPONSIBILITIES AND EMPLOYMENT CONTRACTS

Subsequent to year-end a written contract was entered into with Mr. Miller with an effective date of January 1, 2007. Under the terms of the employment contract Mr. Miller is paid a base salary of Cdn\$325,000 per annum for one-half of his working time in respect of employment as President and Chief Executive Officer of the Corporation. Mr. Miller is also Chief Executive Officer of Simmer & Jack and allots one-half of his working time to Simmer & Jack.

Mr. Miller is entitled to participate in such incentive plans or cash bonus plans of the Corporation as the Board and/or the HRC Committee may implement from time to time, including the Cash Bonus Plan and Stock Option Plan. The contract also provides for vacation, benefits and perquisites as are customary for an executive with Mr. Miller's experience, position and responsibilities.

Mr. Miller's contract provides that the Corporation may terminate Mr. Miller's employment without cause, in which case he will receive a lump sum amount equal to 12 months, or in the case of termination without cause within 12 twelve months on a change of control, he will receive a lump sum equal to 24 months (in either case the "Notice Period") of his base salary payable as at the date of termination. Benefits will continue during the Notice Period. Mr. Miller is entitled to

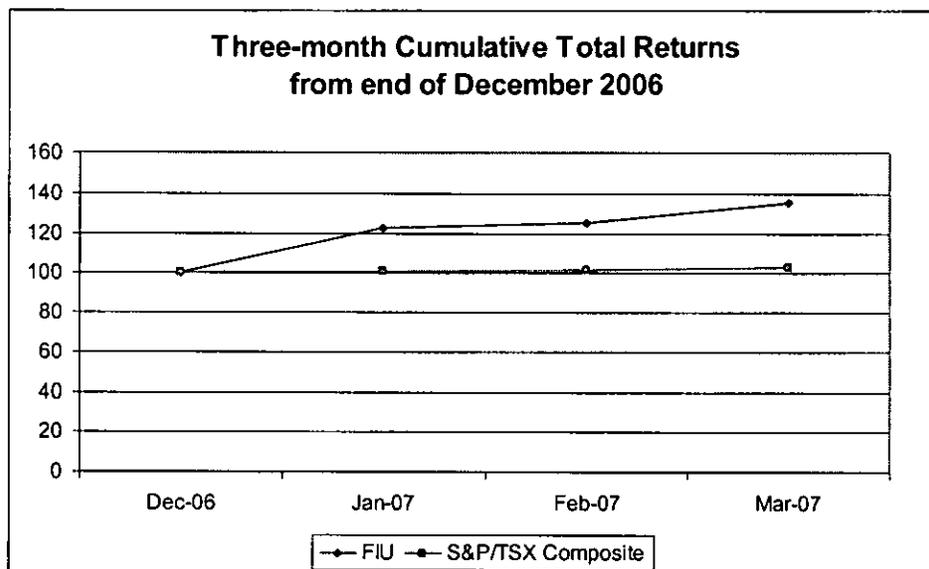

terminate his employment within six months of a change of control, in which case, he will receive a lump sum amount equal to 24 months of his base salary. In the event of a termination by the Corporation without cause or termination by Mr. Miller within 6 months of a change of control, any unvested options previously granted to Mr. Miller shall vest immediately as of the termination date.

MANAGEMENT CONTRACT

The Corporation and Simmer & Jack entered into a shared services agreement (the "Shared Services Agreement") to permit the Corporation to obtain access to certain services to be provided by Simmer & Jack, including project management and technical services, cash management and investment services, accounting, treasury and financial services, corporate secretarial services and human resource and staffing services, including payroll and benefits administration, and such other services as may be required by the Corporation and which Simmer & Jack is able and willing to provide. The Corporation is required to reimburse Simmer & Jack for any costs incurred by it in connection with the provision of the services contemplated under the Shared Services Agreement. As a result of hiring eight senior executives, including Mr. Miller, President and Chief Executive Officer, Mr. Fisher, Executive Vice President and Chief Operating Officer and Ms. Emma Oosthuizen, Senior Vice President and Chief Financial Officer, and other staffing of the Corporation, certain of these services are no longer required to be provided by Simmer & Jack.

PERFORMANCE GRAPH

The following graph shows the monthly percentage change in the cumulative shareholder return on the Common Shares compared to the cumulative total return of the Standard & Poor/Toronto Stock Exchange Composite Index. The Corporation completed the Offering and listed on the Toronto Stock Exchange on December 20, 2006. The Offering price was Cdn\$7.00 per share. The fixed investment as at December 29, 2006 (the last trading day in the month that the Corporation listed on the TSX) is Cdn\$100 at a price per share of Cdn\$8.12. The Corporation's share price at the close of business on March 30, 2007 (the last trading day of Fiscal 2007) was Cdn\$10.95.

	Dec 31-06	Jan 31-07	Feb 28-07	Mar 31-07

Total	1,223,001		10,945,603

The Corporation has a stock option plan (the "Stock Option Plan") which was approved by the then existing shareholders of the Corporation on December 19, 2006. The Corporation is seeking the approval of the Stock Option Plan by its current shareholders at the Meeting.

The Stock Option Plan was established in order to provide incentive compensation to directors, officers, employees and consultants of the Corporation and its subsidiaries as well as to assist the Corporation and its subsidiaries in attracting, motivating and retaining qualified directors, management personnel and consultants. The purpose of the Stock Option Plan is to provide additional incentive for participants' efforts to promote the growth and success of the business of the Corporation.

Stock Option Plan

Directors, officers, employees, or consultants of the Corporation or its affiliates (each an "Eligible Person") are eligible to be granted stock options under the Stock Option Plan.

The Stock Option Plan is administered by the HRC Committee, which will designate, from time to time, the recipients of grants and the terms and conditions of each grant, in each case in accordance with applicable securities laws and stock exchange requirements, subject to approval by the Board in respect of options in excess of 50,000 or options granted to Directors or officers of the Corporation. Stock options granted under the plan are non-transferable other than in accordance with the plan, and must be exercised no later than 10 years after the date of the grant or such shorter period as determined by the HRC Committee and approved by any applicable regulatory authority. All options will terminate on the earlier of the expiry of their term and the date of termination of an optionee's employment, engagement or position, if terminated for cause; otherwise, 90 days following termination.

Unless the HRC Committee determines otherwise, stock options issued by the Corporation are subject to a vesting schedule as follows: 1/3 upon grant; 1/3 upon the first anniversary of grant; and 1/3 upon the second anniversary of grant. The exercise price of an option shall not be less than the volume weighted average trading price of the Common Shares on the TSX, or another stock exchange where the majority of the trading volume and value of the Common Shares occurs, for the five trading days immediately preceding the day the option is granted. The maximum number of Common Shares to be reserved for issuance to insiders of the Corporation upon the exercise of stock options granted under the plan may not exceed 10% of the number of outstanding Common Shares at any given time. The maximum number of Common Shares that may be granted to any individual within a twelve month period cannot exceed 5% of the number of outstanding Common

Shares. The number of Common Shares available for issuance upon the exercise of stock options granted under the plan will be equal to 10% of the number of issued and outstanding Common Shares at a given time.

The Stock Option Plan provides for amendments to the Stock Option Plan and options granted thereunder. Subject to the requisite shareholder and regulatory approvals under paragraphs (a) and (b) below, the Board may from time to time amend or revise the terms of the Stock Option Plan or may discontinue the Stock Option Plan at any time provided however that no such amendment or revision may, without the consent of the optionee, in any manner adversely affect his or her rights under any option theretofore granted under the Stock Option Plan.

- (a) The Board may, subject to receipt of requisite shareholder and regulatory approval, make the following amendments to the Stock Option Plan:
- (i) any amendment to the number of securities issuable under the Stock Option Plan, including an increase to a fixed maximum number of securities or a change from a fixed maximum number of securities to a fixed maximum percentage. A change to a fixed maximum percentage which was previously approved by shareholders will not require additional shareholder approval;
 - (ii) any change to the definition of the eligible participants which would have the potential of broadening or increasing insider participation;
 - (iii) the addition of any form of financial assistance;
 - (iv) any amendment to a financial assistance provision which is more favourable to participants;
 - (v) any addition of a cashless exercise feature, payable in cash or securities which does not provide for a full deduction of the number of underlying securities from the Stock Option Plan reserve;
 - (vi) the addition of a deferred or restricted share unit or any other provision which results in participants receiving securities while no cash consideration is received by the Corporation;
 - (vii) a discontinuance of the Stock Option Plan; and
 - (viii) any other amendments that may lead to significant or unreasonable dilution in the Corporation's outstanding securities or may provide additional benefits to eligible participants, especially insiders of the Corporation's, at the expense of the Corporation and its existing shareholders.
- (b) The Board may, subject to receipt of requisite regulatory approval, where required, in its sole discretion make all other amendments to the Stock Option Plan that are not of the type contemplated in paragraph (a) above including, without limitation:
- (i) amendments of a "housekeeping" nature;
 - (ii) a change to the vesting provisions of a security or the Stock Option Plan;
 - (iii) a change to the termination provisions of a security or the Stock Option Plan which does not entail an extension beyond the original expiry date; and
 - (iv) the addition of a cashless exercise feature, payable in cash or securities, which provides for a full deduction of the number of underlying securities from the Stock Option Plan reserve.

Notwithstanding the provisions of paragraph (b), the Corporation shall additionally obtain requisite shareholder approval in respect of amendments to the Stock Option Plan that are contemplated pursuant to paragraph (b), to the extent such approval is required by any applicable laws or regulations.

A copy of the Stock Option Plan is attached as Schedule A.

Currently, options to acquire 1,301,334 Common Shares (approximately 1% of the Common Shares outstanding) are outstanding. Common Shares that are subject to options which lapse or expire become available under the Stock Option Plan.

During the Fiscal 2007, no Common Shares were issued on exercise of options under the Stock Option Plan. Following year-end, options to purchase 38,095 common shares were exercised.

The following table sets forth certain information regarding the options granted to directors, officers, employees and consultants of the Corporation and its affiliates that are outstanding as of the date hereof.

Position	Securities Under Options Granted (#)	Exercise Price (Cdn\$/Security)	Expiration Date
Directors	214,285	7.00	December 2016
	42,857	12.88	May 2017
Executive Directors	190,477	7.00	December 2016
Officers	242,857	7.00	December 2016
	40,000	8.09	January 2017
	42,857	10.22	April 2017
Employees and Consultants	401,429	7.00	December 2016
	28,000	10.41	February 2017
	25,000	10.57	March 2017
	17,143	12.86	May 2017
	56,429	9.25	August 2017

INDEBTEDNESS OF DIRECTORS, EXECUTIVE OFFICERS AND SENIOR OFFICERS

Since the beginning of the Corporation's last completed financial year, no director or officer, nor any of their respective associates, has been indebted, or is presently indebted to the Corporation.

DIRECTORS' AND OFFICERS' LIABILITY INSURANCE

The Directors and officers of First Uranium and its subsidiaries are covered by a directors' and officers' liability policy in the name of Simmer & Jack. The policy has a limit of GBP 25 million.

INTERESTS OF INFORMED PERSONS IN MATERIAL TRANSACTIONS

The following describes the interests of the informed persons (as defined in National Instrument 51-102 – Continuous Disclosure Obligations) of the Corporation in certain material transactions from March 31, 2006 to the date hereof.

Pursuant to the reorganization (the "Reorganization") in connection with the Offering of the Corporation in December 2006, First Uranium, through its wholly-owned subsidiary First Uranium Limited, acquired (i) an 80% equity interest in First Uranium Proprietary Limited ("FUSA") from Simmer & Jack in exchange for 26.4 million common shares of First Uranium and (ii) a 90% equity interest in Ezulwini Mining Corporation Proprietary Limited ("EMC") from Simmer & Jack in exchange for 55.3 million common shares of First Uranium.

Immediately subsequent to the completion of the Reorganization and the Offering in December 2006, Simmer & Jack had a 67.16% shareholding in First Uranium. Prior to the Reorganization, First Uranium held 20% in FUSA and Simmer & Jack held directly 80% in FUSA and 90% in EMC. Simmer & Jack currently has a 65.5% shareholding in First Uranium. Messrs. Brunette and Miller are directors of Simmer & Jack and are the Chairman and Chief Executive Officer, respectively, of Simmer & Jack.

Simmer & Jack is the registered owner of the Ezulwini mining right. On December 20, 2006, EMC and Simmer & Jack entered into an agreement (the "Ezulwini Mining Right Agreement") pursuant to which Simmer & Jack agreed to take all necessary steps to obtain all ministerial approval in order to effect the ceding of the Ezulwini mining right from Simmer & Jack to EMC.

On December 20, 2006, FUSA, Simmer & Jack, and its subsidiary, Buffelsfontein Gold Mines Limited ("BGM"), entered into an agreement (the "Buffelsfontein Tailings and Rights Agreement") pursuant to which, among other things: (i) BGM agreed to take all necessary steps to obtain all ministerial approvals required in order to effect the transfer of the Buffelsfontein Tailings Mining Right to FUSA as soon as possible; and (ii) BGM agreed to sell to FUSA upon FUSA's receipt of the Buffelsfontein Tailings Mining Right, the Buffelsfontein tailings dams as well as certain property required for construction of the proposed processing plants, and grant to FUSA a right to the tailings arising from BGM's ongoing mining operations at its Buffelsfontein underground mine. In exchange for the above mentioned rights, FUSA will be required to (i) pay a nominal consideration of \$13.50 to BGM; (ii) assume the rehabilitation obligation relating to the dams; and (iii) pay to BGM, a 1% royalty plus value-added tax of the gross revenue accrued by FUSA from the sale of uranium, gold and any other minerals recovered from the tailings.

A loan agreement (the "Aberdeen Loan Agreement") was entered into by Simmer & Jack with Aberdeen International Inc. ("Aberdeen") dated March 30, 2006 pursuant to which Aberdeen provided to Simmer & Jack a loan facility in the amount of US\$10 million in respect of the financing of Simmer & Jack's acquisition of BGM and BGM's underground mine. As part of the consideration for the facility, Simmer & Jack granted to Aberdeen a net smelter royalty on all of the gold assets held by Simmer & Jack through BGM. The royalty as determined in the Aberdeen Loan Agreement will be applicable to any gold produced by FUSA from tailings acquired from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement and will continue until the loan is repaid by Simmer & Jack to Aberdeen, which is expected to occur by December 31, 2008 (unless extended by Simmer & Jack to December 31, 2010). In addition, pursuant to the Aberdeen Loan Agreement, Aberdeen has the sole option, at any time following the one year anniversary of the first advance thereunder to convert the amount of the facility outstanding at that time into ordinary shares of Simmer & Jack at a conversion rate of ZAR0.80, subject to approval of Simmer & Jack's shareholders. In the event that such shareholder approval is not obtained within a reasonable period of time, Aberdeen will be entitled to a 1.0% net smelter royalty in perpetuity on gold produced by properties held by BGM, including the Buffelsfontein Tailings Recovery Project.

On December 20, 2006, FUSA, Simmer & Jack and Aberdeen entered into an arrangement agreement (the "Aberdeen Arrangement Agreement") pursuant to which (i) Simmer & Jack confirmed that it will pay to Aberdeen the amount of any royalty owing to Aberdeen under the Aberdeen Loan Agreement in respect of gold produced from the tailings to be acquired by FUSA from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement, and (ii) FUSA confirmed that it will pay to Simmer & Jack, immediately prior to any payment contemplated in (i) above, an amount equal to the amount of any royalty payment to be made by Simmer & Jack to Aberdeen in respect of gold produced from tailings to be acquired by FUSA from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement. George D. Faught a Director of the Corporation is also a director, President and Chief Executive Officer of Aberdeen.

On December 20, 2006, First Uranium and Simmer & Jack also entered into a corporate opportunity agreement (the "Corporate Opportunity Agreement"), a maintenance agreement (the "Maintenance Agreement") and a shared services agreement (the "Shared Services Agreement" – see "Management Agreements").

The purpose of the Corporate Opportunity Agreement is to minimize conflicts with respect to the pursuit and development of new mineral projects in Southern Africa. It was the intention of the parties entering the agreement that opportunities (each an "Opportunity" and collectively, "Opportunities") to acquire an interest in a mineral property or project in Southern Africa

(collectively, a "Project") be referred to the party (the "Entitled Party") that is likely in the best position to advance the Opportunity. First Uranium and Simmer & Jack therefore have agreed in the Corporate Opportunity Agreement that: (i) all Opportunities available to First Uranium with respect to the acquisition of a predominantly non-uranium Project in Southern Africa will be referred to Simmer & Jack; and (ii) all Opportunities available to Simmer & Jack with respect to the acquisition of a predominantly uranium Project in Southern Africa will be referred to First Uranium. In assessing a Project and in making the determination as to whether or not a Project is required to be referred to the other party, each of First Uranium and Simmer & Jack agreed in the Corporate Opportunity Agreement to act reasonably and in good faith.

Where either First Uranium or Simmer & Jack (the "Originating Party") incurs expenditures in respect of a Project which it subsequently determines is more appropriately for the account of the other party and thereafter refers the Project to the Entitled Party, and where the Entitled Party has provided notice to the Originating Party that it wishes to pursue such Project, then the Entitled Party will reimburse the Originating Party for all expenditures incurred in respect of the Project. Notwithstanding the foregoing, where the Originating Party has incurred expenditures on a Project in excess of \$1,000,000 prior to determining the Project is more appropriately for the account of the other party, then such other party will be entitled to participate in a joint venture arrangement with the Originating Party in respect of the Project on terms which must be approved by each of the independent directors of both Simmer & Jack and First Uranium.

Under the terms of the Maintenance Agreement, Simmer & Jack was granted the right (the "Maintenance Right"), subject to applicable law, to participate in future offerings of other issuances of common shares of First Uranium or securities convertible into common shares of First Uranium (collectively, "Triggering Events") (subject to certain exceptions). In the event of a Triggering Event, Simmer & Jack will be entitled to purchase that number of securities, on the same terms and conditions as those issuable in connection with the Triggering Event, which will, when added to the common shares beneficially owned by Simmer & Jack immediately prior to the Triggering Event, result in Simmer & Jack beneficially owning the same percentage of First Uranium common shares as it held prior to the Triggering Event, after giving effect to the issue of all common shares to be issued or issuable in connection with the Triggering Event.

In addition, First Uranium has agreed to reimburse Simmer & Jack with respect to 50% of the fees (to a maximum of ZAR125,000 per month) that Simmer & Jack is required to pay to an empowerment company for consulting services regarding transformation, human resources and occupational health and safety. BJ Njenje, AX Sisulu and SLB Mapisa, shareholders of the empowerment company, are also directors of Simmer & Jack.

Waterpan Mining Consortium ("Waterpan") currently holds a 10% shareholding in EMC. On December 20, 2006, Waterpan, FUL and the Corporation entered into a purchase agreement (the "Waterpan Purchase Agreement") pursuant to which Waterpan agreed to sell its shares in EMC to FUL and as consideration for such sale, First Uranium will issue 6,141,009 common shares of First Uranium to Waterpan (the "Waterpan Shares"). The closing of the transaction is subject to approval of SARB. Pursuant to the Waterpan Purchase Agreement, Waterpan has agreed not to sell or transfer 90% of the Waterpan Shares for a period of two years from the date of issuance. One shareholder of Waterpan is a director of EMC, two other shareholders of Waterpan are officers and/or employees of First Uranium and EMC.

For a more detailed description of these agreements please see the Corporation's Annual Information Form filed on SEDAR.

STATEMENT OF CORPORATE GOVERNANCE PRACTICES

The following statement of corporate governance practices has been prepared by the Corporation's Corporate Governance and Nominating Committee and describes the Corporation's approach to corporate governance as required pursuant to National Instrument 58-101 - *Disclosure of Corporate Governance Practices* ("NI 58-101").

1. **Board of Directors**
Independence from Management and Significant Shareholder

The Board currently consists of eight Directors. The Board is responsible for determining whether or not each Director is "independent" for the purposes of NI 58-101 and has determined that four of the current Directors are independent. Prior to Mr. Hill's appointment to the Board on May 29, 2007, there were seven Directors, three of whom were independent under NI 58-101.

Mr. Brunette is Chairman of the Board and is a non-independent director due to his role as Chairman of Simmer & Jack, a significant shareholder of the Corporation. Simmer & Jack owns approximately 65.5% of the Common Shares outstanding.

Messrs. Evans, Franklin, Hick and Hill are independent directors under NI 58-101.

Messrs. Miller and Fisher, are employees of the Corporation, and are not independent. Mr. Miller also serves as Chief Executive Officer of Simmer & Jack.

Prior to December 2006, Mr. Faught was the President and Chief Executive Officer of the Corporation and is considered to be a non-independent director under NI 58-101 as three years have not elapsed since Mr. Faught ceased to be a senior officer of the Corporation. Mr. Faught will not be standing for re-election at the Meeting.

The role of the Chairman is to effectively manage and provide leadership to the Board. The role of Chairman is separate from that of the President and CEO. To further foster the independence, the Board has appointed Mr. Franklin as Lead Independent Director. The Board promotes independence by the composition of its committees, its committee chairman appointments, and providing Directors with an opportunity to recommend agenda items for consideration at Board meetings.

The Board also fosters independence from management by regularly excusing management from Board meetings to facilitate open and candid discussions. In Fiscal 2007, the Board held three sessions with Directors only and one session with non-executive Directors only. In addition, the independent Directors also meet at regularly scheduled meetings of the Board.

In Fiscal 2007, the Directors also traveled to the Ezulwini Mine and met with mine site personnel, and viewed the site for the Buffelsfontein Tailing Recovery Project.

Attendance

See "Directors' Compensation – Meetings Held and Directors Attendance"

Other Directorships

Mr. Brunette and Miller are directors of Simmer & Jack.

Mr. Evans is President, Chief Executive Officer and a director of Mountain

Province Diamonds Inc. and a director of Norsemont Mining Inc., Southern Era Diamonds Inc. and Camphor Ventures Inc.

Mr. Faught is a director and President, Chief Executive Officer of Aberdeen International and a director of Beartooth Platinum Corporation and Marathon PGM Corporation.

Mr. Hick is a director of Carpathian Gold Inc., Hudson Resources Inc., Revett Minerals Inc., Silver Eagle Mines Inc. and Western Keltic Mines Inc.

Mr. Hill is Executive Vice President and a director of Toromont Industries Ltd.

Mr. Franklin is a director of Barrick Gold Corporation, Canadian Tire Corporation Limited, Resolve Business Outsourcing Income Fund and Toromont Industries Ltd.

2. **Mandate of the Board of Directors**

The Board's mandate is to supervise the management of the business and affairs of the Corporation and to act with a view to the best interests of the Corporation. In fulfilling its mandate, the Board among other matters is responsible for reviewing the Corporation's overall business strategies and its annual business plan; identifying principal risks and implementation of systems to manage those risks; assessing management's performance against approved business plans and industry standards; appointing senior management and reviewing succession planning; the development of the communication policy for the Corporation's shareholders; and the integrity of internal control and management information systems. The Board has a written charter (attached as Schedule B) and charters for each of its Committees.

The frequency of meetings and the nature of the agenda items may change from year to year, depending on the activities of the Corporation. However, Board meetings are held at least quarterly, and at each meeting there is a review of the business of the Corporation. From the Offering Date to the end of Fiscal 2007 the Board held four meetings.

3. **Position Descriptions**

The Board has approved written descriptions of the duties of each of the Chairman of the Board, the Lead Independent Director and the CEO.

The Board has approved written charters for each Committee. There is not a position description for the Chairman of each Committee. The Chairman of each Committee presides at all meetings of the Committee, is responsible for ensuring that the work of the Committee is well organized and proceeds in a timely fashion and reports on the activities of the Committee to the Board.

4. **Orientation and Continuing Education**

The Board and the Corporate Governance and Nominating Committee is responsible for ensuring that new members are provided with the necessary information about the Corporation, its business and the factors which affect its performance, and the Board and the Committee reviews and monitors the orientation of new Board members.

5. **Ethical Business Conduct**

The Board has adopted a written code of business ethics and conduct (the "Code") for its directors, officers and employees. Under the Code individuals must report in writing any situation or transaction which is or may conflict with the Code. Concerns or complaints regarding accounting, internal controls, auditing matters, questionable accounting or auditing matters, and any other concerns regarding a breach of the Code (collectively, "Concerns") may be reported to the Vice President, Legal of the Corporation via email, fax, mail or delivery. An individual may also contact the Chairman of the Audit Committee or the Chairman of the Corporate Governance and Nominating Committee directly via email, fax, post or delivery. The Vice President Legal is required to report Concerns regarding accounting/internal controls and auditing matters to the Chairman of the Audit Committee and other Concerns to the Chairman of the Corporate Governance and Nominating Committee. Subject to the authority of the Chairman of the appropriate Committee, the Vice President, Legal of the Corporation is responsible for oversight of the investigation and resolution of any such complaint or concern and reporting thereon to such Committee. The Audit Committee and the Corporate Governance and Nominating Committee will report to the Board at least quarterly.

The Board promotes a culture of ethical business conduct by promoting compliance with applicable laws, rules and regulations and directors, officers and employees are encouraged to discuss the application of the Code to specific circumstances with the President and Chief Executive Officer and the Vice President Legal and Corporate Secretary. Any uncertainty on the part of the Chief Executive Officer will be discussed with Chairman of the Corporate Governance and Nominating Committee.

6. **Nomination of Directors**

The Corporate Governance and Nominating Committee is comprised of three independent directors, Messrs. Evans (Chairman), Franklin and Hick. The responsibilities of the Committee include considering nominees for independent directors of First Uranium and planning for the succession of Directors and executive officers of the Corporation. In Fiscal 2007 the Committee considered the collective skills, qualifications and experience of the Board and determined that the Board would benefit from the addition of a Director with financial and accounting qualifications and experience. The Committee identified Mr. Hill as a candidate with the requisite qualifications and experience and recommended to the Board his appointment as a Director. Mr. Hill was appointed to the Board on May 29, 2007.

7. **Compensation**

The Human Resources and Compensation Committee is comprised of three independent directors, Messrs. Hick (Chairman), Evans and Franklin. The Committee oversees the remuneration policies and practices of the Corporation. For a description of the mandate of the HRC Committee see the "Report on Executive Compensation". The Committee also administers the Stock Option Plan. The Committee met twice during the Fiscal 2007.

8.

Board Committees

The Board has the following committees: Audit, Human Resources and Compensation, Corporate Governance and Nominating and Environmental, Health and Safety. The duties and responsibilities of the Human Resources and Compensation Committee are described in the "Report on Executive Compensation". The duties and responsibilities of the Audit Committee, Governance and Nominating Committee and the Environmental, Health and Safety Committee are described below.

Audit Committee

The Audit Committee is comprised of four directors, Messrs. Franklin (Chairman), Faught, Hick and Hill. Mr. Hill was appointed to the Committee on May 29, 2007. Each member is independent as such term is defined in Multilateral Instrument 52-110 – Audit Committees ("MI 52-110"), with the exception of Mr. Faught who is relying on the independence exemption set out in section 3.2(2) of MI 52-110. Each member is financially literate within the meaning of MI 52-110. The Committee has adopted a charter, which has been ratified by the Board, which provides specific roles and responsibilities to the members of the Committee. The Committee met twice during the Fiscal 2007.

The Committee oversees the accounting and financial reporting practices and procedures of the Corporation, and the audits of the Corporation's financial statements. The principal responsibilities of the Committee include: (i) overseeing the quality and integrity of the internal controls and accounting procedures of the Corporation, including reviewing the Corporation's procedures for internal control with the Company's auditor and chief financial officer; (ii) reviewing and assessing the quality and integrity of the Corporation's annual and quarterly financial statements and related management discussion and analysis, as well as all other material continuous disclosure documents, such as the Company's annual information form; (iii) monitoring compliance with legal and regulatory requirements related to financial reporting; (iv) reviewing and approving the engagement of the auditor of the Corporation and independent audit fees; (v) reviewing the qualifications, performance and independence of the auditor of the Corporation, considering the auditor's recommendations and managing the relationship with the auditor, including meeting with the auditor as required in connection with the audit services provided by the Corporation; (vi) assessing the Corporation's financial and accounting personnel; (viii) reviewing the Corporation's risk management procedures; (ix) reviewing any significant transactions outside the Corporation's ordinary course of business and any pending litigation involving the Corporation; and (x) examining improprieties or suspected improprieties with respect to accounting and other matters that affect financial reporting.

Corporate Governance and Nominating Committee

The Corporate Governance and Nominating Committee is comprised of three independent directors, Messrs. Evans (Chairman), Franklin and Hick. The Committee oversees the Corporation's approach to corporate governance matters. The principal responsibilities of the Corporate Governance and Nominating Committee include: (i) monitoring and overseeing the quality and effectiveness of the corporate governance practices and policies of First Uranium; (ii) considering nominees for independent directors of First Uranium; (iii) adopting and

implementing corporate communications policies and ensuring the effectiveness and integrity of communication and reporting to First Uranium's shareholders and the public generally; (iv) planning for the succession of directors and executive officers of the Company, including appointing, training and monitoring senior management to ensure that the Board and management have appropriate skill and experience; and (v) administering the Board's relationship with the management of First Uranium. The Governance and Nominating Committee did not meet formally during the Fiscal 2007, however, four meetings were held following year-end.

Environmental, Health and Safety Committee

The Environmental, Health and Safety Committee has three members, Messrs. Evans (Chairman), Brunette and Miller. Mr. Evans is an independent director. The Committee acts as adviser to management and the Board on matters concerning the environment, health and safety.

The Committee's responsibilities with respect to safety and health matters shall include: (i) reviewing and making recommendations, as appropriate, in regard to the Corporation's safety and health programs, including corporate occupational health and safety policies and procedures; (ii) reviewing and making recommendations, as appropriate, in regard to safety and health compliance issues, if any; (iii) satisfying itself that management of the Corporation monitors trends and reviews current and emerging issues in the safety and health field and evaluates the impact on the Corporation; and (iv) reviewing the Corporation's safety and health performance. The Committee's responsibilities with respect to environmental matters shall include: (i) reviewing and making recommendations, as appropriate, in regard to the Corporation's environmental management program, including corporate environmental policies and procedures, and the status of the Corporation's financial provisions for statutory or other requirements to effect environmental rehabilitation arising out of its operations; (ii) reviewing and making recommendations, as appropriate, in regard to environmental compliance issues, if any; (iii) satisfying itself that management of the Corporation monitors trends and reviews current and emerging issues in the environmental field, and evaluates their impact on the Corporation; (iv) reviewing incident reports to assess whether environmental management procedures were effective in such incidents, and to make recommendations for improvement, where appropriate; and (v) reviewing the scope of potential environmental liabilities and the adequacy of the environmental management system to manage these liabilities.

Due to the short period between the Offering Date and the end of Fiscal 2007, and the Corporation's projects being in the development stage, no formal meetings of the Committee were held prior to the end of Fiscal 2007.

9.

Assessments

An annual assessment of the Board and its Committees and individual self-assessments will be provided by each individual Director.

SPECIAL BUSINESS

On December 11, 2006 the Board approved the Stock Option Plan. The Stock Option Plan is effective as of December 11, 2006 subject to approval of shareholders at next annual meeting of the Corporation. Shareholders will be asked at the Meeting to consider and, if thought fit, approve by a majority of the votes cast at the Meeting, an ordinary resolution, the text of which is set forth below, to ratify, confirm and approve the Stock Option Plan.

Recommendation of the Board of Directors

The Board has determined that the Stock Option Plan is in the best interests of the Corporation and its shareholders. The Board unanimously recommends that shareholders vote in favour of the resolution to ratify, confirm and approve the Stock Option Plan.

BE IT RESOLVED THAT:

1. the Corporation's Stock Option Plan, attached hereto as Schedule A, is hereby ratified, confirmed and approved; and
2. any director or officer of the Corporation is hereby authorized, for and on behalf of the Corporation, to execute and deliver such documents and instruments and to take such other actions as such person may determine to be necessary or advisable to implement this resolution and the matters authorized hereby, such determination to be conclusively evidenced by the execution and delivery of any such document and instrument and the taking of such action.

ADDITIONAL INFORMATION

Additional information relating to the Corporation is available on SEDAR at www.sedar.com. Copies of the Corporation's latest financial statements and management discussion and analysis of operating and financial results ("MD&A") may be obtained upon request from the Corporate Secretary of the Corporation. Financial information is provided in the Corporation's comparative financial statements and MD&A for its most recently completed financial year. The Corporation may require the payment of a reasonable charge if the request is made by a person who is not a shareholder of the Corporation.

Additional information relating to the Audit Committee of the Corporation is contained in the Corporation's annual information form dated June 13, 2007.

CURRENCY OF INFORMATION CONTAINED IN CIRCULAR

The currency of the information provided herein is as of August 8, 2007 unless otherwise stated.

DIRECTORS' APPROVAL

The contents of this Circular and the sending thereof to shareholders of the Corporation have been approved by the Board of Directors.

DATED this 10th day of August, 2007.

BY ORDER OF THE BOARD OF DIRECTORS

A handwritten signature in black ink, appearing to be 'Nigel R.G. Brunette', written in a cursive style.

Nigel R.G. Brunette
Chairman

SCHEDULE A
FIRST URANIUM CORPORATION
2006 INCENTIVE STOCK OPTION PLAN

ARTICLE 1
GENERAL

1.1 Purpose

The purpose of this Plan is to advance the interests of First Uranium Corporation (the “**Company**”) by (i) providing Eligible Persons with additional incentive; (ii) encouraging stock ownership by Eligible Persons; (iii) increasing the proprietary interest of Eligible Persons in the success of the Company; (iv) encouraging Eligible Persons to remain with the Company or its Affiliates; and (v) attracting new employees, officers, directors and Consultants to the Company or its Affiliates.

1.2 Administration

- (a) This Plan will be administered by the Board or a committee of the Board duly appointed for this purpose by the Board and consisting of not less than three directors. If a committee is appointed for this purpose, all references to the term “**Board**” will be deemed to be references to the committee.
- (b) Subject to the limitations of this Plan, the Board has the authority: (i) to grant Options to purchase Shares to Eligible Persons; (ii) to determine the terms, including the limitations, restrictions and conditions, if any, upon such grants; (iii) to interpret this Plan and to adopt, amend and rescind such administrative guidelines and other rules and Regulations relating to this Plan as it may from time to time deem advisable, subject to required prior approval by any applicable regulatory authority; and (iv) to make all other determinations and to take all other actions in connection with the implementation and administration of this Plan as it may deem necessary or advisable. The Board’s guidelines, rules, Regulations, interpretations and determinations will be conclusive and binding upon all parties.

1.3 Interpretation

For the purposes of this Plan, the following terms will have the following meanings unless otherwise defined elsewhere in this Plan:

“**Affiliate**” means any corporation that is an affiliate of the Company as defined in the *Securities Act* (Ontario);

“Affiliated Entity” means with respect to the Company, a person or company that controls or is controlled by the Company or that is controlled by the same person or company that controls the Company;

“Associate”, where used to indicate a relationship with any person or company, means: (i) any company of which such person or company beneficially owns, directly or indirectly, voting securities carrying more than 10 per cent of the voting rights attached to all voting securities of the company for the time being outstanding; (ii) any partner of that person or company; (iii) any trust or estate in which such person or company has a substantial beneficial interest or as to which such person or company serves as trustee or in a similar capacity; (iv) any relative of that person who resides in the same home as that person; (v) any person who resides in the same home as that person and to whom that person is married, or any person of the opposite sex or the same sex who resides in the same home as that person and with whom that person is living in a conjugal relationship outside marriage; or (vi) any relative of a person mentioned in clause (v) who has the same home as that person;

“Board” means the Board of Directors of the Company or a committee thereof appointed in accordance with the Plan;

“Change of Control” means the occurrence of any one or more of the following events:

- (i) a consolidation, merger, amalgamation, arrangement or other reorganization or acquisition involving the Company or any of its Affiliates and another corporation or other entity, as a result of which the holders of Shares prior to the completion of the transaction hold less than 50% of the outstanding shares of the successor corporation after completion of the transaction;
- (ii) the sale, lease, exchange or other disposition, in a single transaction or a series of related transactions, of assets, rights or properties of the Company and/or any of its Subsidiaries which have an aggregate book value greater than 30% of the book value of the assets, rights and properties of the Company and its Subsidiaries on a consolidated basis to any other person or entity, other than a disposition to a wholly-owned subsidiary of the Company in the course of a reorganization of the assets of the Company and its subsidiaries;
- (iii) a resolution is adopted to wind-up, dissolve or liquidate the Company;
- (iv) any person, entity or group of persons or entities acting jointly or in concert (an **“Acquiror”**) acquires or acquires control (including, without limitation, the right to vote or direct the voting) of Voting Securities of the Company which, when added to the Voting Securities owned of record or beneficially by the Acquiror or which the Acquiror has the right to vote or in respect of which the Acquiror has the right to direct the voting, would entitle the Acquiror and/or associates and/or affiliates of the Acquiror (as such terms are defined in the Act) to cast or to direct the casting of 20% or

more of the votes attached to all of the Company's outstanding Voting Securities which may be cast to elect directors of the Company or the successor corporation (regardless of whether a meeting has been called to elect directors);

- (v) as a result of or in connection with: (A) a contested election of directors, or; (B) a consolidation, merger, amalgamation, arrangement or other reorganization or acquisitions involving the Company or any of its affiliates and another corporation or other entity, the nominees named in the most recent Management Information Circular of the Company for election to the Board shall not constitute a majority of the Board; or
- (vi) the Board adopts a resolution to the effect that a Change of Control as defined herein has occurred or is imminent.

For the purposes of the foregoing, "**Voting Securities**" means Shares and any other shares entitled to vote for the election of directors and shall include any security, whether or not issued by the Company, which are not shares entitled to vote for the election of directors but are convertible into or exchangeable for shares which are entitled to vote for the election of directors including any options or rights to purchase such shares or securities;

"**Consultants**" means individuals, including advisors, other than employees and officers and directors of the Company or an Affiliated Entity that are engaged to provide consulting, technical, management or other services to the Company or any Affiliated Entity under a written contract between the Company or the Affiliated Entity and the individual or a company of which the individual consultant is an employee or shareholder or a partnership of which the individual consultant is an employee or partner;

"**Company**" means First Uranium Corporation;

"**Eligible Person**" means, subject to the Regulations and to all applicable law, any employee, officer, director, or Consultant of (i) the Company or (ii) any Affiliated Entity (and includes any such person who is on a leave of absence authorized by the Board or the board of directors of any Affiliated Entity);

"**Holding Company**" means a holding company wholly owned and controlled by an Eligible Person;

"**Insider**" means: (i) an insider as defined in the *Securities Act* (Ontario) other than a person who is an Insider solely by virtue of being a director or senior officer of a Subsidiary of the Company; and (ii) an Associate of any person who is an insider by virtue of (i);

"**Option**" means a right granted to an Eligible Person to purchase Shares pursuant to the terms of this Plan;

"**Participant**" means an Eligible Person to whom or to whose RRSP or to whose Holding Company an Option has been granted;

“Plan” means the Company’s 2006 Incentive Stock Option Plan, as same may be amended from time to time;

“Regulations” means the regulations made pursuant to this Plan, as same may be amended from time to time;

“Retirement” in respect of a Participant means the Participant ceasing to be an employee, officer, director or Consultant of the Company or an Affiliated Entity after attaining a stipulated age in accordance with the Company’s normal retirement policy or earlier with the Company’s consent;

“Retirement Date” means the date that a Participant ceases to be an employee, officer, director or Consultant of the Company or an Affiliated Entity due to the Retirement of the Participant;

“RRSP” means a registered retirement savings plan;

“Shares” means the common shares in the capital of the Company;

“Subsidiary” means a corporation which is a subsidiary of the Company as defined under the *Securities Act* (Ontario);

“Termination” means: (i) in the case of an employee, the termination of the employment of the employee with or without cause by the Company or an Affiliated Entity or cessation of employment of the employee with the Company or an Affiliated Entity as a result of resignation or otherwise other than the Retirement of the employee; (ii) in the case of an officer or director, the removal of or failure to re-elect or re-appoint the individual as an officer or director of the Company or an Affiliated Entity (other than through the Retirement of an officer); and (iii) in the case of a Consultant, the termination of the services of a Consultant by the Company or an Affiliated Entity (other than through the Retirement of a Consultant);

“Termination Date” means the date on which a Participant ceases to be an Eligible Person due to the Termination of the Participant;

“Transfer” includes any sale, exchange, assignment, gift, bequest, disposition, mortgage, charge, pledge, encumbrance, grant of security interest or other arrangement by which possession, legal title or beneficial ownership passes from one person to another, or to the same person in a different capacity, whether or not voluntary and whether or not for value, and any agreement to effect any of the foregoing; and

“TSX” means the Toronto Stock Exchange.

Words importing the singular number include the plural and vice versa and words importing the masculine gender include the feminine.

This Plan is to be governed by and interpreted in accordance with the laws of the Province of Ontario.

1.4 Shares Reserved under the Share Option Plan

- (a) The aggregate maximum number of Shares available for issuance from treasury under this Plan and all of the Company's other security based compensation arrangements is 10% of the Company's issued and outstanding Shares as at the date of grant of an Option under the Plan, subject to adjustment or increase of such number pursuant to Section 3.2. Any Shares subject to an Option which has been granted under the Plan and which have been cancelled or terminated in accordance with the terms of the Plan without having been exercised will again be available under the Plan.
- (b) The aggregate number of Shares reserved for issuance pursuant to Options granted to Insiders at any given time shall not exceed 10% of the total number of Shares then outstanding. The aggregate number of Shares reserved for issuance pursuant to Options granted to any one person or entity within any one year period shall not exceed 5% of the total number of shares then outstanding. For purposes of this Section 1.4, the number of Shares then outstanding shall mean the number of Shares outstanding on a non-diluted basis immediately prior to the proposed grant of the applicable Option.

**ARTICLE 2
OPTION GRANTS AND TERMS OF OPTIONS**

2.1 Grants

Subject to this Plan, the Board will have the authority to determine the limitations, restrictions and conditions, if any, in addition to those set out in this Plan, applicable to the exercise of an Option, including, without limitation, the nature and duration of the restrictions, if any, to be imposed upon the sale or other disposition of Shares acquired upon exercise of the Option, and the nature of the events, if any, and the duration of the period in which any Participant's rights in respect of Shares acquired upon exercise of an Option may be forfeited. An Eligible Person, an Eligible Person's RRSP and an Eligible Person's Holding Company may receive Options on more than one occasion under this Plan and may receive separate Options on any one occasion.

2.2 Exercise of Options

- (a) Options granted must be exercised no later than 10 years after the date of grant or such lesser period as the applicable grant or Regulations may require.
- (b) The Board may determine when any Option will become exercisable and may determine that the Option will be exercisable in instalments or pursuant to a vesting schedule. Notwithstanding the foregoing, unless the Board determines otherwise, and subject to the other provisions of this Plan, Options issued pursuant to this Plan are subject to a vesting schedule as follows:
 - (i) $\frac{1}{3}$ upon grant;

- (ii) $\frac{1}{3}$ upon the first anniversary of grant; and
 - (iii) $\frac{1}{3}$ upon the second anniversary of grant.
- (c) No fractional Shares may be issued and the Board may determine the manner in which fractional Share value will be treated.
 - (d) A minimum of 100 Shares must be purchased by a Participant upon exercise of Options at any one time, except where the remainder of Shares available for purchase pursuant to Options granted to such Participant totals less than 100.

2.3 Option Price

The Board will establish the exercise price of an Option at the time each Option is granted provided that such price shall not be less than the volume weighted average trading price of the Shares on the TSX, or another stock exchange where the majority of the trading volume and value of the Shares occurs, for the five trading days immediately preceding the day the option is granted.

2.4 Grant to Participant's RRSP or Holding Company

Upon written notice from an Eligible Person, any Option that might otherwise be granted to that Eligible Person, will be granted, in whole or in part, to an RRSP or a Holding Company established by and for the sole benefit of the Eligible Person.

2.5 Termination, Retirement or Death

- (a) In the event of the Termination with cause of a Participant, each Option held by the Participant, the Participant's RRSP or the Participant's Holding Company will cease to be exercised on the earlier of the expiry of its term and the Termination Date, or such longer period as determined by the Board. In the event of the Termination or Retirement of a Participant, each Option held by the Participant, the Participant's RRSP or the Participant's Holding Company will cease to be exercisable within a period of 90 days after the Termination Date or Retirement Date, as the case may be, or such longer period as determined by the Board. For greater certainty, such determination of a longer period may be made at any time subsequent to the date of grant of the Options, provided that no Option shall remain outstanding for any period which exceeds the earlier of: (i) the expiry date of such Option; and (ii) 36 months following the Termination Date or Retirement Date, as the case may be, of the Participants. The Board may delegate authority to the Chief Executive Officer, of the Company to make any determination with respect to the expiry or termination date of Options held by any departing Participant, other than a departing non-management director or the Chief Executive Officer. If any portion of an Option has not vested on the Termination Date or Retirement Date, as the case may be, the Participant, the Participant's RRSP or the Participant's Holding Company may not, after the Termination Date or Retirement Date, as the case may be, exercise such portion of the Option which has not vested, provided that the Board may determine at any time, including for

greater certainty at any time subsequent to the date of grant of the Options, that such portion of the Option vests automatically or pursuant to a vesting schedule determined by the Board. The Board may delegate authority to the Chief Executive Officer to make any determination with respect to vesting of Options or any portion thereof held by any departing Participant, other than a departing non-management director or the Chief Executive Officer. Without limitation, and for greater certainty only, this subsection (a) will apply regardless of whether the Participant was dismissed with or without cause and regardless of whether the Participant received compensation in respect of dismissal or was entitled to a period of notice of termination which would otherwise have permitted a greater portion of the Option to vest.

- (b) If a Participant dies, the legal representatives of the Participant may exercise the Options held by the Participant, the Participant's RRSP and the Participant's Holding Company within a period after the date of the Participant's death as determined by the Board, for greater certainty such determination may be made at any time subsequent to the date of grant of the Options, provided that no Option shall remain outstanding for any period which exceeds the earlier of (i) the expiry date of such Option; and (ii) 12 months following the date of death of the Participant, but only to the extent the Options were by their terms exercisable on the date of death. The Board may determine at any time, including for greater certainty at any time subsequent to the date of grant of the Options, that such portion of the Option vests automatically or pursuant to a vesting schedule determined by the Board. The Board may delegate authority to the Chief Executive Officer to make any determination with respect to the expiry or termination date of Options or vesting of Options or any portion thereof held by any deceased Participant, other than a departing non-management director or the Chief Executive Officer. If the legal representative of a Participant who has died exercises the Option of the Participant or the Participant's RRSP or the Participant's Holding Company in accordance with the terms of this Plan, the Company will have no obligation to issue the Shares until evidence satisfactory to the Company has been provided by the legal representative that the legal representative is entitled to act on behalf of the Participant, the Participant's RRSP or the Participant's Holding Company to purchase the Shares under this Plan.

2.6 Option Agreements

Each Option must be confirmed, and will be governed, by an agreement in a form determined by the Board and signed by the Company and the Participant or an RRSP of which the Participant is an annuitant or the Participant's Holding Company.

2.7 Payment of Option Price

The exercise price of each Share purchased under an Option must be paid in full by bank draft or certified cheque at the time of exercise, and upon receipt of payment in full, but subject to the terms of this Plan, the number of Shares in respect of which the Option is exercised

will be duly issued as fully paid and non-assessable. Share certificates representing the number of Shares in respect of which the Option has been exercised will be issued only upon payment in full of the relevant exercise price to the Company.

2.8 Acceleration on Change of Control

In the event of a Change of Control, all Options outstanding shall be immediately exercisable, notwithstanding any determination of the Board pursuant to Section 2.2 hereof, if applicable.

2.9 Amendment of Option Terms

Subject to the prior approval of any applicable regulatory authorities (as required) and the consent of the Participant affected thereby, the Board may amend or modify any outstanding Option in any manner to the extent that the Board would have had the authority to initially grant the Option as so modified or amended, including without limitation, to change the date or dates as of which, or the price at which, an Option becomes exercisable, provided however, that the consent of the Participant shall not be required where the rights of the Participant are not adversely affected.

ARTICLE 3 MISCELLANEOUS

3.1 Prohibition on Transfer of Options

Options are personal to each Eligible Person. Without the permission of the Company, no Eligible Person or RRSP or Holding Company of an Eligible Person may deal with any Options or any interest in them or Transfer any Options now or hereafter held by the Eligible Person or RRSP or Holding Company. If a Participant's Holding Company ceases to be wholly-owned and controlled by the Participant, such Participant will be deemed to have Transferred any Options held by such Holding Company. A purported Transfer of any Options without the permission of the Company will not be valid and the Company will not issue any Share upon the attempted exercise of improperly Transferred Options.

3.2 Capital Adjustments

If there is any change in the outstanding Shares by reason of a stock dividend or split, recapitalization, consolidation, combination or exchange of shares, or other fundamental corporate change, the Board will make, subject to any prior approval required of relevant stock exchanges or other applicable regulatory authorities, if any, an appropriate substitution or adjustment in (i) the exercise price of any unexercised Options under this Plan; (ii) the number or kind of shares or other securities reserved for issuance pursuant to this Plan; and (iii) the number and kind of shares subject to unexercised Options theretofore granted under this Plan; provided, however, that no substitution or adjustment will obligate the Company to issue or sell fractional shares. In the event of the reorganization of the Company or the amalgamation or consolidation of the Company with another corporation, the Board may make such provision for the protection of the rights of Eligible Persons, Participants, their RRSPs and their Holding Companies as the

Board in its discretion deems appropriate. The determination of the Board, as to any adjustment or as to there being no need for adjustment, will be final and binding on all parties.

3.3 Non-Exclusivity

Nothing contained herein will prevent the Board from adopting other or additional compensation arrangements for the benefit of any Eligible Person or Participant, subject to any required regulatory or shareholder approval.

3.4 Amendment and Termination

Subject to the requisite shareholder and regulatory approvals set forth under subparagraphs 3.4(a) and (b) below, the Board may from time to time amend or revise the terms of the Plan or may discontinue the Plan at any time provided however that no such amendment or revision may, without the consent of the Optionee, in any manner adversely affect his rights under any Option theretofore granted under the Plan.

- (a) The Board may, subject to receipt of requisite shareholder and regulatory approval, make the following amendments to the Plan:
 - (i) any amendment to the number of securities issuable under the Plan, including an increase to a fixed maximum number of securities or a change from a fixed maximum number of securities to a fixed maximum percentage. A change to a fixed maximum percentage which was previously approved by shareholders will not require additional shareholder approval;
 - (ii) any change to the definition of the eligible participants which would have the potential of broadening or increasing insider participation;
 - (iii) the addition of any form of financial assistance;
 - (iv) any amendment to a financial assistance provision which is more favourable to participants;
 - (v) any addition of a cashless exercise feature, payable in cash or securities which does not provide for a full deduction of the number of underlying securities from the Plan reserve;
 - (vi) the addition of a deferred or restricted share unit or any other provision which results in participants receiving securities while no cash consideration is received by the Company;
 - (vii) a discontinuance of the Plan; and
 - (viii) any other amendments that may lead to significant or unreasonable dilution in the Company's outstanding securities or may provide

additional benefits to eligible participants, especially insiders of the Company, at the expense of the Company and its existing shareholders.

- (b) The Board may, subject to receipt of requisite regulatory approval, where required, in its sole discretion make all other amendments to the Plan that are not of the type contemplated in subparagraph 3.4(a) above including, without limitation:
 - (i) amendments of a "housekeeping" nature;
 - (ii) a change to the vesting provisions of a security or the Plan;
 - (iii) a change to the termination provisions of a security or the Plan which does not entail an extension beyond the original expiry date; and
 - (iv) the addition of a cashless exercise feature, payable in cash or securities, which provides for a full deduction of the number of underlying securities from the Plan reserve.
- (c) Notwithstanding the provisions of subparagraph 3.4(b), the Company shall additionally obtain requisite shareholder approval in respect of amendments to the Plan that are contemplated pursuant to section subparagraph 3.4(b), to the extent such approval is required by any applicable laws or regulations.

3.5 Compliance with Legislation

The Board may postpone or adjust any exercise of any Option or the issue of any Shares pursuant to this Plan as the Board in its discretion may deem necessary in order to permit the Company to effect or maintain registration of this Plan or the Shares issuable pursuant thereto under the securities laws of any applicable jurisdiction, or to determine that the Shares and this Plan are exempt from such registration. The Company is not obligated by any provision of this Plan or any grant hereunder to sell or issue Shares in violation of any applicable law. In addition, if the Shares are listed on a stock exchange, the Company will have no obligation to issue any Shares pursuant to this Plan unless the Shares have been duly listed, upon official notice of issuance, on a stock exchange on which the Shares are listed for trading.

3.6 Effective Date

This Plan shall be effective on December 11, 2006, subject to shareholder approval by ordinary resolution at the Company's next annual meeting of shareholders.

SCHEDULE B

FIRST URANIUM CORPORATION

CHARTER OF THE BOARD OF DIRECTORS

1. Purpose

Subject to the articles and by-laws of First Uranium Corporation (the “**Company**”) and applicable laws, the principal role of the board of directors of the Company (the “**Board**”) is stewardship of the Company with the creation of shareholder value, including the protection and enhancement of the value of its assets, as the fundamental objective. The Board must assess and ensure that systems are in place to manage the risks of the Company’s business with the objective of preserving the Company’s assets.

2. Composition

The Board shall be elected annually by the Company’s shareholders. While the election of directors is ultimately determined by the shareholders, it is the policy of the Board that a majority of the directors be independent of management and unrelated to the Company (as determined under applicable stock exchange rules and securities laws). Before each annual general meeting of the Company’s shareholders, the Board shall recommend nominees to the shareholders for election as directors for the ensuing year.

3. Chair and Lead Independent Director

The Chair of the Board and the Lead Independent Director shall be selected by the other directors of the Board immediately following the annual general meeting of the Company’s shareholders.

4. Meetings

The Board shall meet at least six times a year, including at least once every quarter, and more frequently as the Chair and the Lead Independent Director may determine or as required to comply with applicable corporate and securities laws and stock exchange rules.

Notice of meetings shall be given to each member not less than 48 hours before the time of the meeting, provided that meetings of the Board may be held without formal notice if all of the members of the Board are present and do not object to notice not having been given, or if those absent waive notice in any manner before or after the meeting. Notice of meeting may be given verbally or delivered personally, given by mail, facsimile or other electronic means of communication and need not be accompanied by an agenda or any other material. The notice shall however specify the purpose or purposes for which the meeting is being held.

Decisions or recommendations of the Board shall be evidenced by resolutions passed at meetings of the Board and recorded in the minutes of such meetings or by an instrument in writing signed by all directors of the Board. A copy of the draft minutes of each meeting of the Board and any

written resolutions evidencing decisions or recommendations of the Board shall be transmitted promptly by the Secretary to each director for adoption at the next meeting.

The Corporate Secretary shall attend all meetings of the Board and shareholders of the Company and shall prepare and maintain minutes and records of all such meetings.

5. Roles and Responsibilities

Subject to the articles and by-laws of the Company and applicable laws, the Board's primary responsibilities are as follows:

- supervision and management of the Company's business and affairs;
- to adopt a strategic planning process and to approve, on at least an annual basis, a strategic plan that takes into account, among other things, the opportunities and risks of the Company's business;
- to approve the Company's corporate strategies and goals;
- to satisfy itself as to the integrity of the senior officers of the Company and that such officers create a culture of integrity throughout the Company;
- to manage the Company's succession management plan. The Board must also ensure that processes are in place to enable it to monitor and measure management's, and in particular, the Chief Executive Officer's, performance in achieving the Company's stated objectives. These processes should include appropriate training and development;
- to establish policies appropriate for the business of the Company;
- to have an understanding of the principal risks associated with the Company's businesses, and to ensure that appropriate systems are in place which effectively monitor and manage those risks;
- to ensure that the necessary internal controls are in place that effectively monitor the Company's operations and ensure compliance with applicable laws, regulations and policies;
- to ensure that the Company has a communications policy in place which ensures that the Company effectively communicates with and receives feedback from the Company's shareholders. The Board must also ensure that the Company has appropriate processes in place to effectively communicate with employees, government authorities, other stakeholders and the public;
- to establish procedures for identifying, recruiting and appointing new directors of the Company; and

- to develop the Company's approach to corporate governance.

The Board shall appoint the Chief Executive Officer of the Company and establish the duties and responsibilities of such officer. On the recommendation of the Chief Executive Officer, the Board shall, from time to time, appoint officers of the Company and approve the management structure of the Company.

The management of the business and affairs of the Company is delegated by the Board to the Chief Executive Officer. The Board will give direction and guidance through the Chief Executive Officer to management, assign responsibility to management for achievement of the corporate direction and goals, define executive limitations, and monitor performance against those objectives and executive limitations. The Chief Executive Officer will keep management informed of the Board's evaluation of the officers in achieving and complying with established goals and policies.

The Board shall delegate certain responsibility and/or tasks to certain Committees of the Board. Immediately following each annual general meeting of the Company's shareholders, the Board shall appoint the members of the Company's Audit Committee, Human Resources and Compensation Committee, Corporate Governance and Nominating Committee and the Environmental, Health and Safety Committee. The Board, and the respective Committee thereof, shall also approve the mandate, duties and responsibilities of each Committee of the Board from time to time.

In addition to the various responsibilities discussed above, the following list is non-exhaustive but typifies the specific responsibilities of the Board and the matters generally to be considered by the Board:

- review and recommend to the Company's shareholders changes to the Company's capital structure;
- delegate to the Chief Executive Officer the authority to manage and supervise the business of the Company, including making of all decisions regarding the Company's operations that are not specifically reserved to the Board under the terms of that delegation of authority;
- approve, monitor and provide guidance on the strategic planning process of the Company. The Chief Executive Officer and senior management team will have direct responsibility for the ongoing strategic planning process and the establishment of long term goals for the Company, which are to be reviewed and approved not less than annually by the Board and the Board will provide guidance to the Chief Executive Officer and management team on the Company's ongoing strategic plan. The Board will establish annual performance objectives against which to measure corporate, executive and individual (director) performance;
- take reasonable steps to ensure the Company has management of the highest caliber. The Board will assess, on an ongoing basis, the Chief Executive Officer's

- performance against criteria and objectives established by the board from time to time. The Board will also use reasonable steps to ensure that the Chief Executive Officer has in place adequate programs to recruit, retain, develop and assess the performance of management;
- keep in place adequate and effective succession plans for the Chief Executive Officer and management and review these on an annual basis;
 - identify the principal risks of the Company's business and use reasonable steps to ensure the implementation of appropriate systems to manage these risks; attempt to achieve a proper balance between the risk incurred and the potential return to shareholders;
 - approve the Company's long term strategy and the annual capital expenditure plan and budget of the Company;
 - approve banking, borrowing, financing and investment policies and plans;
 - approve the Company's financial statements and MD&A as well as any press releases, reports or other disclosure documents that contain financial information, on the recommendation of the Company's Audit Committee, in addition to any other material disclosure documents;
 - approve the holding, location and date of meetings of shareholders;
 - determine the number of directors and recommend nominees for election by the shareholders of the Company;
 - as applicable, approve the establishment and/or amendments to employee, director and officer compensation plans;
 - approve the acquisition or disposition of certain corporate assets;
 - appoint the Company's transfer agent and registrar;
 - require that the Board be kept informed of the Company's activities and performance and take appropriate action to correct inadequate performance;
 - develop the Company's communications policy;
 - develop the Company's code of business conduct and ethics (as per National Policy 58-201); and
 - serve and safeguard the best interests of the Company.

Holder Account Number

Form of Proxy - Annual and Special Meeting to be held on September 10, 2007

This Form of Proxy is solicited by and on behalf of Management.

Notes to proxy

1. Every holder has the right to appoint some other person or company of their choice, who need not be a holder, to attend and act on their behalf at the meeting. If you wish to appoint a person or company other than the persons whose names are printed herein, please insert the name of your chosen proxyholder in the space provided (see reverse).
2. If securities are registered in the name of more than one owner (for example, joint ownership, trustees, executors, etc.), then all those registered should sign this proxy. If you are voting on behalf of a corporation or another individual you may be required to provide documentation evidencing your power to sign this proxy with signing capacity stated.
3. This proxy should be signed in the exact manner as the name appears on the proxy.
4. If this proxy is not dated, it will be deemed to bear the date on which it is mailed by Management to the holder.
5. The securities represented by this proxy will be voted as directed by the holder, however, if such a direction is not made in respect of any matter, this proxy will be voted as recommended by Management.
6. The securities represented by this proxy will be voted or withheld from voting, in accordance with the instructions of the holder, on any ballot that may be called for and, if the holder has specified a choice with respect to any matter to be acted on, the securities will be voted accordingly.
7. This proxy confers discretionary authority in respect of amendments to matters identified in the Notice of Meeting or other matters that may properly come before the meeting.
8. This proxy should be read in conjunction with the accompanying documentation provided by Management.

Proxies submitted must be received by 5:00 p.m., Eastern Time, on September 7, 2007.

VOTE USING THE TELEPHONE OR INTERNET 24 HOURS A DAY 7 DAYS A WEEK!

To Vote Using the Telephone

- Call the number listed BELOW from a touch tone telephone.

1-866-732-VOTE (8683) Toll Free

To Vote Using the Internet

- Go to the following web site:
www.investorvote.com

If you vote by telephone or the Internet, DO NOT mail back this proxy.

Voting by mail may be the only method for securities held in the name of a corporation or securities being voted on behalf of another individual.

Voting by mail or by Internet are the only methods by which a holder may appoint a person as proxyholder other than the Management nominees named on the reverse of this proxy. Instead of mailing this proxy, you may choose one of the two voting methods outlined above to vote this proxy.

To vote by telephone or the Internet, you will need to provide your CONTROL NUMBER, HOLDER ACCOUNT NUMBER and ACCESS NUMBER listed below.

FIRST URANIUM CORPORATION

REPORT ON VOTING RESULTS

In accordance with section 11.3 of National Instrument 51-102 – Continuous Disclosure Obligations, we hereby advise of the results of voting on the matters submitted to the annual and special meeting (the “Meeting”) of the shareholders (the “Shareholders”) of First Uranium Corporation (the “Corporation”) held on September 10, 2007. At the Meeting, Shareholders were asked to consider certain annual general meeting matters and other special business.

The matters voted upon at the Meeting and the results of the voting were as follows:

Item 1: Election of Directors

By a vote by way of show of hands, the number of directors was fixed at seven and the following directors were elected to hold office for a term to expire immediately following the next annual meeting of Shareholders:

Nigel R.G. Brunette
Patrick C. Evans
James P.W. Fisher
Robert M. Franklin
John W.W. Hick
Wayne S. Hill
Gordon T. Miller

Item 2: Appointment of Auditors

By a vote by way of show of hands, PricewaterhouseCoopers LLP, Chartered Accountants were appointed auditors of the Corporation to hold office until the close of the next annual meeting of the Shareholders or until their successors are appointed, and the directors of the Corporation were authorized to fix the remuneration of the auditors.

Item 3: Stock Option Plan

By a vote by way of show of hands, the Shareholders approved an ordinary resolution to ratify, confirm and approve the Stock Option Plan of the Corporation, a copy of which was attached to the Management Information Circular as Schedule A.

Dated this 19th day of September, 2007.

First Uranium Corporation

NEWS RELEASE – April 4, 2007

NOT FOR DISSEMINATION IN THE UNITED STATES OR FOR
DISTRIBUTION TO U.S. NEWSWIRE SERVICES

FIRST URANIUM ACQUIRES MINE WASTE SOLUTIONS (PROPRIETARY) LIMITED TO COMPLEMENT THE BUFFELSFONTEIN TAILINGS RECOVERY PROJECT IN SOUTH AFRICA

Toronto, Ontario – First Uranium Corporation (FIU:TSX, FUM:JSE, CA33744R1029:ISIN) (“First Uranium” or “the Company”) today announced that the Company, through its wholly-owned subsidiary, First Uranium (Proprietary) Limited, had entered into a binding agreement to acquire Mine Waste Solutions (Proprietary) Limited (“MWS”) and its subsidiary Chemwes (Proprietary) Limited (“Chemwes”), which owns and operates an existing gold mine tailings and re-processing facility adjacent to the Company’s Buffelsfontein Project in South Africa.

First Uranium has agreed to acquire all MWS shares for the equivalent of 200 million South African Rand (approximately US\$27.5 million) in First Uranium shares. The acquisition is subject to a number of conditions including, among others, the satisfactory completion by the Company of a due diligence review of MWS (which is expected to be completed by April 13, 2007) and the receipt of required approvals from South African competition authorities, the Toronto Stock Exchange, the JSE Limited, the investment committee of the Industrial Development Corporation of South Africa Limited, the South African Reserve Bank and the South African Department of Minerals and Energy. Subject to completion of the due diligence and receipt of the requisite approvals, the transaction is expected to close no later than August 31, 2007 with effect as of April 1, 2007. The number of First Uranium shares to be issued will be approximately 3.2 million at CDN\$10.20, the fifteen trading day volume weighted average price of First Uranium’s shares traded on the TSX up to and including March 30, 2007.

All shareholders of MWS have agreed to tender their MWS shares to the offer. On closing of the acquisition, First Uranium will assume management control of MWS and its wholly-owned subsidiary, Chemwes.

The MWS assets to be acquired include:

- a gold plant which, based on its actual operating performance over the last three years, has a proven capacity for processing 570,000 tonnes per month;
- three tailings dams from which gold and uranium can be recovered, one of which is actively being depleted and another with sufficient disposal area for several years of tailings deposition; and
- rock dumps.

The acquisition of the MWS gold plant will eliminate the necessity of building the first gold plant planned for the Buffelsfontein Project, reducing both the time and capital required to begin gold production. The combination of the reduction in capital, the changes to the production schedule and the additional cash flow from re-processing of MWS tailings will increase the total Buffelsfontein Project net present value ("NPV") to US\$240 million, an accretive NPV improvement of US\$29 million from the US\$211 million originally planned. In addition, the Buffelsfontein Project's internal rate of return will improve from 39% to 59%. The accretion analysis is based upon commercial metrics of US\$500 per ounce gold, US\$40 per pound uranium, an exchange rate of 7.4 South African Rand to the U.S. dollar and a discount rate of 8%.

"This acquisition is very positive for our Buffelsfontein Project as we will be able to begin a significant amount of our gold production one year ahead of schedule, establish a lower cost for our first gold plant module, and begin the first phase of uranium production at twice the rate previously contemplated, thus achieving peak uranium production eight months ahead of schedule," said Gordon Miller, President and Chief Executive Officer of First Uranium. "This fits exactly into our strategy of bringing our two near-term projects into production as quickly as possible."

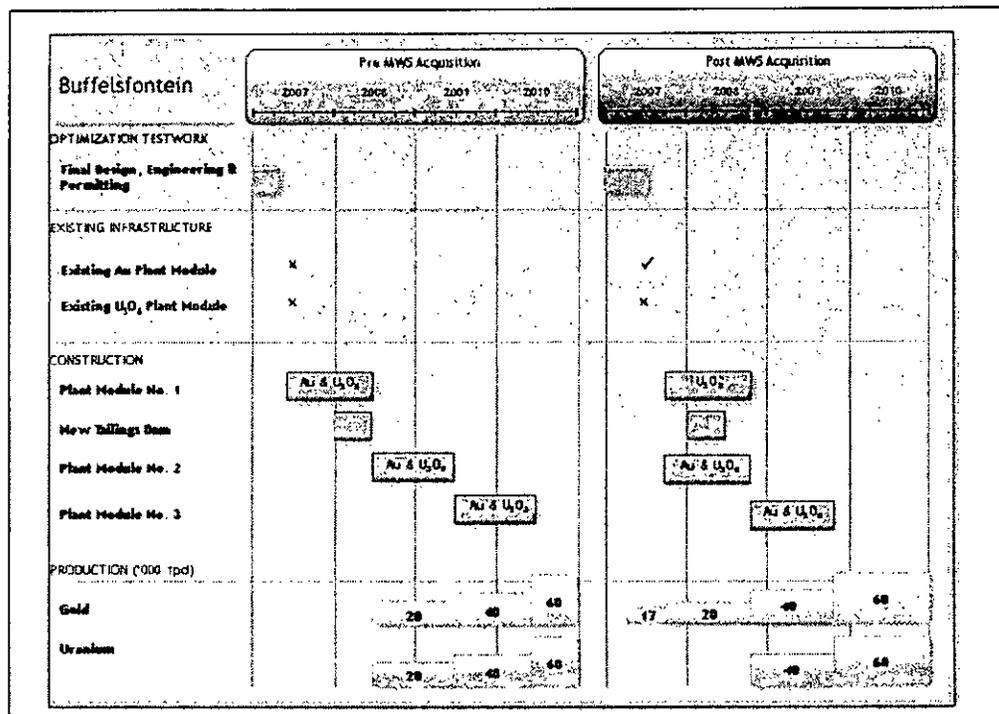

Revised Project Development and Production Schedule

With regard to gold production, the acquisition of MWS will enable First Uranium to begin to process approximately 500,000 tonnes per month, slightly lower than the plant's designed capacity due to restrictions to the rate of tailings deposition. In the first year the Company expects to recover approximately 43,000 ounces of gold at a cash cost of \$317 per ounce including royalties. First Uranium intends to process MWS tailings with the highest gold grade first. By the end of 2007, the Company also expects to complete a pipeline from the Buffelsfontein site to the MWS gold plant to process tailings with the highest gold grade available from select areas of the Buffelsfontein site. First Uranium expects to increase the gold plant's average monthly processing capacity to 1,200,000 tonnes per month by November 2008, with the construction of a 600,000 tonnes per month plant module.

With regard to uranium production, the Company's original plan had been to build a uranium plant at the Buffelsfontein site by June 2008. With this acquisition, the Company now plans to build a uranium plant by November 2008 with twice the previously contemplated capacity beside the MWS gold plant. The addition of MWS tailings deposition capacity will enable First Uranium to process 40,000 tonnes of tailings per day immediately upon completion of the uranium plant compared to its original plan of processing 20,000 tonnes per day until June 2009 and then increasing its processing to 40,000 tonnes per day. The acquisition will also allow the Company to move forward by eight months the construction of the third plant module, which is designed to increase processing to 60,000 tonnes per day.

The acquisition of MWS is expected to increase the life of the Buffelsfontein Project by 3 years from 14 to 17 years.

The figure below depicts the revised planned production as a result of the MWS acquisition:

The resource table below reflects the contribution of MWS resources to the Buffelsfontein Project.

	Tonnes (t 000s)	Gold Grade (g/t)	Uranium Grade (%)	Cont. Gold (oz 000s)	Cont. Uranium (lb 000s)
Buffelsfontein Measured	115,064	0.31	0.0083	1,144	21,130
Buffelsfontein Indicated	165,953	0.31	0.0059	1,628	21,603
Total Measured & Indicated	281,017	0.31	0.0069	2,772	42,733
Inferred					
Buffelsfontein	1,740	0.54	0.0243	30	932
MWS	18,128	0.32	0.0120	188	4,786
Combined	19,868	0.34	0.0131	218	5,718

Notes:

1. CIM definitions were followed for mineral resources.
2. Mineral resources that are not mineral reserves do not have demonstrated economic viability.
3. A zero grade cutoff was used.
4. Rows and columns may not add exactly due to rounding.
5. MWS resources reflected in this table include all of Dam 2 and the lower portion of Dam 4, as the top 12 metres of Dam 4 contains an uneconomic gold grades, which the Company will remove.

Review of Technical Disclosure

All technical disclosure in this news release relating to the Buffelsfontein Project and the MWS acquisition has been reviewed and approved by R. Dennis Bergen, P.Eng and Wayne Valliant P.Geo of Scott Wilson Roscoe Postle Associates Inc. ("Scott Wilson RPA"), each of whom is a "qualified person" under National Instrument 43-101 ("NI 43-101") and is independent of First Uranium. In accordance with NI 43-101, the Company will file a revised technical report for the Buffelsfontein Project, reflecting the impact of the MWS acquisition, within 45 calendar days of this release.

The MWS resources disclosed in this news release are from MWS Dams 2 and 4. Scott Wilson RPA has reviewed the MWS production records and mineral resource reconciliation for Dam 2 and considers the remaining tailings reported by MWS as inferred mineral resources as per NI 43-101.

Scott Wilson RPA has reviewed an internal mineral resource report by MWS on Dam 4. The mineral resource estimate was based on appropriately spaced drill holes and used a computerized block model methodology. In the opinion of Scott Wilson RPA the data density and methodology was suitable for the mineral resource estimate of the tailings. However, based on the requirement for additional data verification, the Dam 4 mineral resources have been classified as inferred as per NI 43-101.

MWS also has Dam 5, which has not been analyzed sufficiently for use in the technical analysis disclosed in this news release and which currently serves as a tailings deposit area. If and when the Company is able to complete

sufficient work to categorize Dam 5 as a resource pursuant to NI 43-101, the Company expects the conversion of Dam 5 to resources would result a further extension of the life of the Buffelsfontein Project an additional 3 years from 17 to 20 years.

The economic analysis contained in this news release is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserves development, production and economic forecasts contained in this news release and which will be the subject of a preliminary assessment, will be realized.

Update on other Strategic Discussions

First Uranium's primary goal continues to be to bring its two uranium and gold projects, Buffelsfontein and Ezulwini, into production. The acquisition of MWS complements this goal by bringing the Buffelsfontein Project's production forward and adds value to the Company and its shareholders. In addition, the Company continually evaluates further acquisitions, joint ventures and/or development opportunities relating to strategically located uranium prospects and properties in Southern Africa, which have the potential to add additional growth. One such potential opportunity could be Harmony Gold Mining Company Limited's Randfontein gold mine, which is adjacent to First Uranium's Ezulwini underground mine project, in respect of which some preliminary discussions have been held. There can be no assurance that any agreement or transaction might be completed with Harmony.

It was reported in the South African media on March 30, 2007 that the Company could be a possible takeover target for other producers. Neither the Company nor its 67% shareholder, Simmer and Jack Mines, Limited, is in any discussions with third parties regarding any possible takeover transaction with respect to First Uranium.

Cautionary Language regarding Forward-Looking Information

This news release contains and refers to forward-looking information based on current expectations. All other statements other than statements of historical fact included in this release including, without limitation, statements regarding potential production rates and operating costs, processing and development plans, estimated net present values and future plans and objectives of First Uranium are forward-looking statements (or forward-looking information) that involve various risks and uncertainties. There can be no assurance that such statements will prove to be accurate, such statements are subject to significant risks and uncertainties, and actual results and future events could differ materially from those anticipated in such statements.

In making the forward-looking statements in this news release, the Company has applied several material assumptions, including but not limited to, the assumption that:

- the integrated operation of the Buffelsfontein Project and the MWS gold processing plant is viable operationally and economically;
- metal prices, exchange rates and discount rates applied in the accretion analysis are achieved;
- regulatory approvals will be obtained within the expected time frame; and
- production capacity and mineral resource estimates are accurate.

Important factors could cause actual results to differ materially from First Uranium's expectations. Such factors include, among others: the actual results of the planned feasibility studies on First Uranium's projects; the actual results of additional exploration and development activities at First Uranium's projects; the timing and amount of estimated future production and the costs thereof; capital expenditures; the costs and timing of the development of First Uranium's projects; the availability of any additional capital required to bring future projects into production; conclusions of economic evaluations; changes in project parameters as plans continue to be refined; future prices of commodities; the failure of plant, equipment or processes to operate as anticipated; accidents; labour disputes; delays in obtaining governmental approvals, permits or financing or in the completion of development or construction activities; delays in closing the MWS acquisition; delays or complications relating to the re-engineering at the MWS site and the integration of the MWS assets into First Uranium's development plans; the actual recovery rates of the MWS gold plant; currency fluctuations, as well as those factors discussed under "Risk Factors" in First Uranium's final prospectus dated December 12, 2006 as filed with securities regulatory authorities in Canada. Although First Uranium has attempted to identify important factors that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated or intended.

These forward-looking statements are made as of the date hereof and there can be no assurance that such forward-looking statements will prove to be accurate as actual and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements that are included herein, except in accordance with applicable securities laws.

Conference Call

An investor conference call with regard to the acquisition of MWS has been set up for Wednesday, April 4 at 10h00 (16h00 in South Africa). The following numbers have been set up for participants on this conference call:

Toronto	416 644 3420
Toll free	1 800 594 3615
South Africa	09 800 0022 8228

A replay of this call will be available for one week at the following numbers:

Toronto	416 640 1917
Toll free	1 877 289 8525

A passcode of 21225860# is required to access the replay.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine,

and the construction of the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

First Uranium Corporation

NEWS RELEASE – April 16, 2007

**NOT FOR DISSEMINATION IN THE UNITED STATES OR FOR
DISTRIBUTION TO U.S. NEWSWIRE SERVICES**

FIRST URANIUM'S EZULWINI PROSPECTING RIGHTS APPLICATION ACCEPTED BY SOUTH AFRICAN DEPARTMENT OF MINERALS AND ENERGY

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) ("First Uranium" or "the Company") today announced that the South African Department of Minerals and Energy ("DME") has accepted for consideration the Company's application in respect of a Prospecting Work Program (the "Program") on contiguous properties to the north-east and south-east of First Uranium's Ezulwini underground uranium and gold mining project in South Africa.

The initial stages of the Program will test the strike extent of the Middle Elsburg Reef in an area east of the Ezulwini project. The Program will include surface diamond drill exploration with drill hole depths of up to 2,000 metres. Previous exploration drilling conducted in the area by Gencor confirmed the presence of mineralization along the approximately 20 kilometres of strike within the prospecting area included in the Program (see map).

The Ezulwini project and the properties which are the subject of the Program are located in the Witwatersand Basin, which is the largest known gold province in the world, with deposits having been mined for well over 100 years. Several groups of reefs have been identified in the area, including the Livingstone Reefs, the South Reef, the Kimberley Reefs, the Bird Reefs, the Mondeor Reefs, the Ventersdorp Contact Reef and the Black Reef, as well as the Elsburg Reefs associated with the Ezulwini project. Within these reefs, a total of nine economic reef horizons have been mined at depths below surface of between 600 metres and 1,260 metres.

Acceptance by the DME implies that no other parties have made prior application for the prospecting rights, and that, subject to the Company complying with all the requirements of the DME, the rights will in due course be granted. However,

the Company must submit the following to the DME to obtain their approval for the grant of the rights prior to commencing the Program:

- the results of a notification and consultation with the surface owners of the land overlying the Program area by May 13, 2007;
- an acceptable Environmental Management Plan by June 12, 2007; and
- confirmation of the Company's qualifying Black Economic Empowerment credentials.

The Program fits within the Company's strategy to focus its exploration on or near its current projects in order to leverage the infrastructure of those projects. For instance, at Ezulwini the Company is currently working on re-commissioning the Ezulwini mine with the intention to start hoisting uranium ore and gold production in October 2007 and is scheduled to complete construction of new uranium and gold plants by June 2008.

Cautionary Language regarding Forward-Looking Information

This news release contains and refers to forward-looking information based on current expectations. All other statements other than statements of historical fact included in this release including, without limitation, statements regarding processing and development plans and future plans and objectives of First Uranium are forward-looking statements (or forward-looking information) that involve various risks and uncertainties. These forward-looking statements are made as of the date hereof and there can be no assurance that such statements will prove to be accurate, such statements are subject to significant risks and uncertainties, and actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements that are included herein, except in accordance with applicable securities laws.

Important factors could cause actual results to differ materially from First Uranium's expectations. Such factors include, among others: the actual results of the planned feasibility studies on First Uranium's projects; the actual results of additional exploration and development activities at First Uranium's projects; the timing and amount of estimated future production and the costs thereof; capital expenditures; the costs and timing of the development of First Uranium's projects; the availability of any additional capital required to bring future projects into production; conclusions of economic evaluations; changes in project parameters as plans continue to be refined; future prices of commodities; the failure of plant, equipment or processes to operate as anticipated; accidents; labour disputes; delays in obtaining governmental approvals, permits or financing or in the completion of development or construction activities; currency fluctuations, as well as those factors discussed under "Risk Factors" in First Uranium's final prospectus dated December 12, 2006 as filed with securities regulatory authorities in Canada. Although First Uranium has attempted to identify important factors that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated or intended.

First Uranium Corporation

NEWS RELEASE – April 16, 2007

**NOT FOR DISSEMINATION IN THE UNITED STATES OR FOR
DISTRIBUTION TO U.S. NEWSWIRE SERVICES**

**FIRST URANIUM ANNOUNCES CDN\$130 MILLION OFFERING OF
UNSECURED CONVERTIBLE DEBENTURES**

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) ("First Uranium" or "the Company") today announced that the Company has engaged a syndicate of investment banks led by RBC Capital Markets for a private placement offering of unsecured convertible debentures ("Debentures") in the aggregate principal amount of CDN\$130 million (the "Offering") to be marketed on a best efforts basis.

The terms of the Offering are expected to be finalized on or about April 18, 2007. The Offering is subject to certain conditions including the approval of the Toronto Stock Exchange and the Johannesburg Stock Exchange.

The Company intends to use the net proceeds from the Offering:

- to fund a drilling program and feasibility study in respect of the possible expansion of its Ezulwini underground uranium and gold mine project in South Africa;
- together with the net proceeds of the December 2006 initial public offering to fund the development of the Company's Ezulwini underground mining project and its Buffelsfontein tailings recovery project, also in South Africa; and
- for general corporate purposes.

The Company is currently working on re-commissioning the Ezulwini project with the intention to start hoisting uranium ore and gold production in October 2007 and is scheduled to complete construction of new uranium and gold plants by June 2008. As noted above, a portion of the net proceeds of the Offering will be used to fund an exploration program and a feasibility study in respect of the possible expansion of the Ezulwini project. In particular, the exploratory work is intended to confirm whether sufficient inferred uranium and gold resources at Ezulwini can be converted to the measured and indicated categories to justify:

- the construction of a new 250,000-tonne per month shaft to increase the amount of ore that could be hoisted to the surface and provide easier access to future extensions of the underground operation; and
- an expansion of the capacity of the planned uranium plant from 100,000 to 350,000 tonnes per month.

In conjunction with the Offering, Simmer & Jack Mines, Limited ("Simmers"), the holder of approximately 67.2% of the issued and outstanding common shares of First Uranium, has agreed to enter into a securities lending arrangement with RBC Capital Markets. Simmers has no current intention to sell any of its shareholding interest in First Uranium and has agreed to enter into the securities lending arrangement solely for purposes of increasing the liquidity of First Uranium's common shares.

This news release does not constitute an offer to sell or a solicitation of an offer to buy any of the securities in the United States. The securities have not been and will not be registered under the United States Securities Act of 1933, as amended (the "U.S. Securities Act") or any state securities laws and may not be offered or sold within the United States or to U.S. Persons unless registered under the U.S. Securities Act and applicable state securities laws or an exemption from such registration is available.

First Uranium Corporation

NEWS RELEASE – April 19, 2007

**NOT FOR DISSEMINATION IN THE UNITED STATES OR FOR
DISTRIBUTION TO U.S. NEWSWIRE SERVICES**

**FIRST URANIUM ANNOUNCES PRICING OF CDN\$150 MILLION OFFERING
OF SENIOR UNSECURED CONVERTIBLE DEBENTURES**

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) (“First Uranium” or “the Company”) today announced the pricing of its private placement of 4.25% senior unsecured convertible debentures (the “Debentures”) due June 30, 2012 and an increase in the aggregate principal amount of Debentures to be sold to CDN\$150 million. The sale of the Debentures is expected to close on May 3, 2007.

The Debentures will bear interest at a rate of 4.25% per annum payable semi-annually and will be convertible into common shares of the Company at CDN\$16.42 per share representing a conversion premium of approximately 37.5% to the closing price of the shares on the Toronto Stock Exchange (the “TSX”) on April 18, 2007.

The closing of the transaction is subject to certain conditions including the approval of the TSX and the Johannesburg Stock Exchange.

The syndicate for the offering of Debentures is being led by RBC Capital Markets and includes Canaccord Capital Corporation, National Bank Financial Inc., GMP Securities L.P., Cormark Securities Inc., Orion Securities and Raymond James.

The Company intends to use the net proceeds from the sale of the Debentures:

- to fund a drilling program and feasibility study in respect of the possible expansion of its Ezulwini underground uranium and gold project in South Africa;
- together with the net proceeds of the December 2006 initial public offering to fund the development of the Company's Ezulwini underground mining project and its Buffelsfontein tailings recovery project, also in South Africa; and
- for general corporate purposes.

FIRST URANIUM SIGNS FORMAL AGREEMENT FOR THE ACQUISITION OF MINE WASTE SOLUTIONS (PROPRIETARY) LIMITED

Toronto, Ontario – First Uranium Corporation (TSX:FIU, JSE:FUM, CA33744R1029:ISIN) (“First Uranium” or the “Company”) today announced that the Company, through its wholly-owned subsidiary, First Uranium (Proprietary) Limited, has entered into a definitive agreement in connection with the previously announced acquisition of Mine Waste Solutions (Proprietary) Limited (“MWS”) and its subsidiary Chemwes (Proprietary) Limited. MWS owns and operates an existing gold mine tailings and re-processing facility adjacent to First Uranium’s Buffelsfontein tailings recovery project in South Africa.

First Uranium has agreed to issue to the current shareholders of MWS 3,093,980 common shares of the Company as consideration for all of the shares of MWS.

The closing of the transaction is subject to a number of conditions including, the receipt of required approvals from the South African competition authorities, the Toronto Stock Exchange, the Johannesburg Stock Exchange, the South African Reserve Bank and the South African Department of Minerals and Energy. Subject to receipt of the requisite approvals, the transaction is expected to close no later than August 31, 2007 with effect as of April 1, 2007.

First Uranium Corporation

NEWS RELEASE – May 9, 2007

**NOT FOR DISSEMINATION IN THE UNITED STATES OR FOR
DISTRIBUTION TO U.S. NEWSWIRE SERVICES**

FIRST URANIUM FILES REVISED EZULWINI TECHNICAL REPORT REFLECTING AN ACCELERATED SCHEDULE AND IMPROVED NPV

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (CA33744R1029:ISIN) (“First Uranium” or “the Company”) today announced that the Company has filed a revised technical report on its Ezulwini Mining Company (Proprietary) Limited (“EMC”) underground uranium and gold mine. *(All dollar amounts are in U.S. dollars.)*

The preliminary assessment within the technical report generally confirms the previous technical report for the Ezulwini mine project, with some revisions. Those revisions include:

- A 29% or \$74 million improvement in NPV, from \$258 million to \$332 million. A 6% improvement in IRR, from 26% to 32%. Although these improvements reflect the increase in the long-term price assumptions for uranium from \$40 per pound to \$50 per pound, they have also improved due to the investment of pre-production capital at a faster rate than originally planned, which results in an accelerated schedule for planned uranium and gold production. The improved NPV assumes the original discount rate of 8% and a gold price of \$500 per ounce and excludes sunk capital costs.
- A \$24.2 million increase in projected metallurgical plant costs from \$88.6 million to \$112.8 million, due to higher than expected increases in the cost of steel and cement caused by an industry-wide construction boom. The contingency has been reduced by \$13.1 million from \$44.1 million to \$31.0 million due to confirmation of firm pricing, thus increasing the level of confidence in the capital estimates.
- An accelerated schedule for mining the Middle Elsburg uranium and gold reef at EMC, due to the excellent condition of the stopes. The increased uranium production rate will also enable EMC to leverage the strong uranium pricing fundamentals.
- An accelerated schedule for commissioning of all modules of the gold and uranium plants, resulting in an accelerated capital investment profile, which will provide the flexibility sooner to significantly increase uranium production

when market pricing dictates. The Company will use construction contractors until all phases of the mill and plants are completed.

- A net 122,000 ounce decrease in the shaft pillar gold resource in the Upper Elsburg reef, which will not have an impact on the project economics as the mill feed can be made up from other resource areas.
- A recommendation for an additional exploration program focused on areas of the Middle Elsburg reef to confirm the inferred resource estimate in support of the possible expansion of the Ezulwini operations, (ref. April 16, 2007 news releases).

“Our primary objective is to put both of our mining projects into production at the earliest opportunity, while remaining diligent about creating a safe environment and achieving the best return on our investment,” said Gordon Miller, President and Chief Executive Officer. “The revised technical report for Ezulwini shows that better than expected mining conditions have allowed us to accelerate our original plans in key areas of the project. We are on track to meet our revised production deadlines and consequently we expect a better than planned return on this project.”

The first of the two following tables shows the original mineral resource statement and the second table shows the revised mineral resource statement at Ezulwini as at January 2007, based on the results of an additional 22 drill holes in the shaft pillar area of the Upper Elsburg reef.

ORIGINAL RESOURCE STATEMENT (as of July 2006)

	Tonnes	Grade		Content

Total	201,460	5.0	n/a	32,148	218,319

Notes:

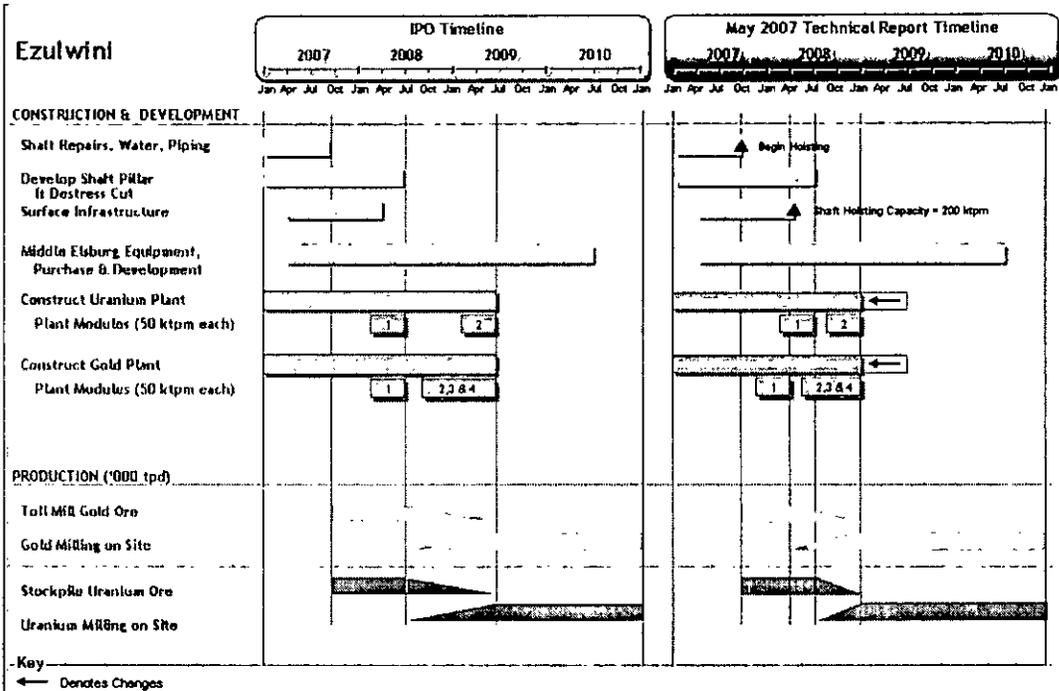

1. CIM definitions were followed for mineral resources.
2. Mineral resources in the Upper Elsburg shaft pillar are estimated at a 4.0 g/t Au cut-off grade
3. Mineral resources are estimated using an average long-term gold price of US\$500 per ounce, and a US\$/R exchange rate of 7.0.
4. A minimum mining width of 1.53 m was used.
5. Rows and columns may not add exactly due to rounding.
6. Mineral resources that are not mineral reserves do not have demonstrated economic viability.

The following figure illustrates the revised capital investment schedule by quarter through to the end of 2009:

The following graph shows the impact of the changes to the capital investment schedule on the development program for Ezulwini. The program on the left was disclosed in a 2006 technical report filed on SEDAR on December 5, 2006. The program on the right illustrates the changes in the timelines as a result of the acceleration of the capital investment.

Development Program

The following table depicts the revised planned production from April 2007 through to March 2015:

	From April	2007	2008	2009	2010	2011	2012	2013	2014	2015

Mining at the Ezulwini underground mine is planned to commence in October 2007, the first gold plant module is scheduled for completion in April 2008 (three months earlier than planned) and the first uranium plant module is scheduled for June 2008. The average annual production at Ezulwini for the life of the project (2007-2024) is expected to be 290,000 ounces of gold and 888,000 pounds of uranium (U₃O₈).

All technical disclosure in this news release relating to the Ezulwini underground mine project is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa" (the "Technical Report") originally submitted on November 8, 2006, revised on December 5, 2006 and January 31, 2007 and further revised on May 9, 2007 prepared in accordance with National instrument 43-101 ("NI 43-101") by R. Dennis Bergen, P.Eng and Wayne Valliant P. Geo of Scott Wilson Roscoe Postle Associates Inc., each of whom is a "qualified person" under NI 43-

101 and is independent of First Uranium. The disclosure contained in this news release has been reviewed and approved by Mr. Bergen and Mr. Valliant.

The economic analysis contained in this news release is contained in the Technical Report and is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserves development, production and economic forecasts on which the preliminary assessment contained in the Technical Report is based, will be realized.

Cautionary Language regarding Forward-Looking Information

This news release contains and refers to forward-looking information based on current expectations. All other statements other than statements of historical fact included in this release including, without limitation, statements regarding potential production rates and operating costs, processing and development plans, estimated net present values and future plans and objectives of First Uranium are forward-looking statements (or forward-looking information) that involve various risks and uncertainties. These forward-looking statements are made as of the date hereof and there can be no assurance that such statements will prove to be accurate, such statements are subject to significant risks and uncertainties, and actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements that are included herein, except in accordance with applicable securities laws.

Important factors could cause actual results to differ materially from First Uranium's expectations. Such factors include, among others: the actual results of the planned feasibility studies on First Uranium's projects; the actual results of additional exploration and development activities at First Uranium's projects; the timing and amount of estimated future production and the costs thereof; capital expenditures; the costs and timing of the development of First Uranium's projects; the availability of any additional capital required to bring future projects into production; conclusions of economic evaluations; changes in project parameters as plans continue to be refined; future prices of commodities; the failure of plant, equipment or processes to operate as anticipated; accidents; labour disputes; delays in obtaining governmental approvals, permits or financing or in the completion of development or construction activities; currency fluctuations, as well as those factors discussed under "Risk Factors" in First Uranium's final prospectus dated December 12, 2006 as filed with securities regulatory authorities in Canada. Although First Uranium has attempted to identify important factors that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated or intended.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine, and the construction of the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

First Uranium Corporation

NEWS RELEASE – May 22, 2007

**NOT FOR DISSEMINATION IN THE UNITED STATES OR FOR
DISTRIBUTION TO U.S. NEWSWIRE SERVICES**

FIRST URANIUM FILES REVISED BUFFELSFONTEIN TECHNICAL REPORT

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (CA33744R1029:ISIN) (“First Uranium” or “the Company”) today announced that the Company has filed a revised technical report (the “Revised Report”) on its Buffelsfontein uranium and gold tailings recovery project (“Buffels”) in South Africa. The Revised Report prepared by Scott Wilson Roscoe Postle Associates Inc. (“Scott Wilson RPA”) reflects the previously announced proposed acquisition (the “MWS Acquisition”) by First Uranium of Mine Waste Solutions (Proprietary) Limited (“MWS”) which owns and operates an existing gold mining tailings and reprocessing facility adjacent to Buffels. The Revised Report also incorporates the proposed acquisition by First Uranium of three additional small tailings dams from an affiliated company (the “Additional Dams Acquisition”). In addition, to better reflect the current uranium pricing environment, the assumed price per pound of uranium has been increased by US\$10 to US\$50 from the assumption in the January 31, 2007 Buffels technical report (the “Prior Buffels Report”).

According to the Revised Report, the projected net present value (“NPV”) of the Buffels project (assuming the completion of the MWS Acquisition, the Additional Dams Acquisition and a discount rate of 8%) is US\$295 million with a projected internal rate of return (“IRR”) of 69% (as compared to US\$211 million and 39%, respectively, as disclosed in the Prior Buffels Report). The incorporation of the MWS Acquisition and the Additional Dams Acquisition into the Buffels project accounted for an increase in the projected NPV and IRR to US\$237 million and 57% respectively as compared to the Prior Buffels Report. In addition, according to the Revised Report, the increase in the uranium price assumption accounted for an increase in the projected NPV from US\$237 million to US\$295 million and in the projected IRR from 57% to 69%.

“Our primary objective is to bring our mining projects into production as soon as possible while keeping all of our stakeholders informed and engaged in our progress,” said Gordon Miller, President and Chief Executive Officer. “We have upheld our commitment to publish a revised technical report for our Buffelsfontein tailings recovery project this month. The revised report reflects our better understanding of the benefit of the pending Mine Waste Solutions acquisition, our higher long-term price expectations for uranium and more confidence in our plans to accelerate higher production levels for uranium.”

The first of the following two tables reflects the original mineral resource statement for Buffels as of April 2006, excluding the proposed MWS Acquisition and the Additional Dams Acquisition.

The second table reflects the revised mineral resource statement for Buffels as at May 22 2007, adjusted for the MWS Acquisition and the Additional Dams Acquisition. The second table includes certain adjustments from the table set out in First Uranium's April 4, 2007 news release. First, the MWS Dam 2 and Dam 4 resources have been converted from inferred to measured and indicated as a result of further work and verification. In addition, the MWS Dam 2 resources has been reduced as approximately 1.1 million tonnes of tailings have been used by MWS to run its gold plant since the resources were previously measured. As well, the Company has included the MWS Dam 5 resource in the resource statement in the inferred category.

ORIGINAL RESOURCE STATEMENT (as of April 2006)

	Tonnes	Grade		Content

Harties – Ellaton	1,500	0.52	0.0087	25	288
Harties – NKGE	680	0.41	0.0158	9	237
MWS 5	60,700	0.29	0.0093	566	12,442
Total Inferred	64,663	0.30	0.0098	631	13,920

Notes:

1. CIM definitions were followed for mineral resources.
2. A zero grade cutoff grade was used.
3. Rows and columns may not add exactly due to rounding.
4. Preliminary metallurgical test results indicate that recoveries will be approximately 27% for uranium and 68% for gold.
5. Mineral resources that are not mineral reserves do not have demonstrated economic viability.
6. Harties - Flanagan, Harties - Ellaton and Harties - NKGE are the three tailings dams proposed to be acquired by First Uranium pursuant to the Additional Dams Acquisition.

While the MWS Dam 5 resource is included in the revised Buffels resource statement, it has not been included in the economic analysis on the Buffels project. However, the Company anticipates that MWS Dam 5 would add another three years to Buffels' mine life.

With the MWS resources better defined, the Buffels' mine life is now estimated, assuming the completion of the MWS Acquisition, to be 16 years, not 17 as originally announced on April 4, 2007.

As the Company allocates Buffels' projected cash costs in proportion to the projected revenue contribution from each product and the Company is assuming higher uranium prices and revenues, the Company expects that on a co-product basis the cash cost of gold should be \$220 per ounce and the cash cost of uranium should be \$22.05 per pound.

Gold production at MWS continues and will be credited to First Uranium as of April 1, 2007 assuming completion of the acquisition. Uranium production from the first two of three uranium plant modules is scheduled to commence in November 2008. The average annual production for Buffels (assuming completion of the MWS Acquisition) for the life of the project (March 2007 to April 2023) is expected to be 128,000 ounces of gold and 922,000 pounds of uranium.

The Company expects to continue the work with preparation of a pre-feasibility study for Buffels commencing immediately.

All technical disclosure in this news release relating to the Buffelsfontein tailings recovery project is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Buffelsfontein Project, North West Province, Republic of South Africa" (the "Buffels Technical Report") originally submitted on November 8, 2006, revised on December 5, 2006 and January 31, 2007 and further revised on May 22, 2007 prepared in accordance with National instrument 43-101 ("NI 43-101") by R. Dennis Bergen, P.Eng and Wayne Valliant P. Geo of Scott Wilson RPA, each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium. The disclosure contained in this news release has been reviewed and approved by Mr. Bergen and Mr. Valliant.

In addition, the disclosure in this news release and the Buffels Technical Report assumes the completion of the MWS Acquisition and the Additional Dams Acquisition by First Uranium. The MWS Acquisition is subject to a number of conditions including, among others, the receipt of required approvals from South African competition authorities, the Toronto Stock Exchange, the South African Reserve Bank and the South African Department of Minerals and Energy. Subject to receipt of the requisite approvals, the MWS Acquisition is expected to close no later than August 31, 2007 with effect as of April 1, 2007.

The economic analysis contained in this news release is contained in the Buffels Technical Report and is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserves development, production and economic forecasts on which the preliminary assessment contained in the Buffels Technical Report is based, will be realized.

Cautionary Language Regarding Forward-Looking Information

This news release contains and refers to forward-looking information based on current expectations. All other statements other than statements of historical fact included in this release including, without limitation, statements regarding potential production rates and operating costs, processing and development plans, estimated net present values and future plans and objectives of First Uranium are forward-looking statements (or forward-looking information) that involve various risks and uncertainties. These forward-looking statements are made as of the date hereof and there can be no assurance that such statements will prove to be accurate, such statements are subject to significant risks and uncertainties, and actual results and future events could differ materially from those

anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements that are included herein, except in accordance with applicable securities laws.

Important factors could cause actual results to differ materially from First Uranium's expectations. Such factors include, among others: the timely completion of the MWS Acquisition and the Additional Dams Acquisition, the actual results of the planned feasibility studies on First Uranium's projects; the actual results of additional exploration and development activities at First Uranium's projects; the timing and amount of estimated future production and the costs thereof; capital expenditures; the costs and timing of the development of First Uranium's projects; the availability of any additional capital required to bring future projects into production; conclusions of economic evaluations; changes in project parameters as plans continue to be refined; future prices of commodities; the failure of plant, equipment or processes to operate as anticipated; accidents; labour disputes; delays in obtaining governmental approvals, permits or financing or in the completion of development or construction activities; currency fluctuations, as well as those factors discussed under "Risk Factors" in First Uranium's final prospectus dated December 12, 2006 as filed with securities regulatory authorities in Canada. Although First Uranium has attempted to identify important factors that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated or intended.

FIRST URANIUM APPOINTS NEW DIRECTOR TO THE BOARD

Toronto, Ontario – First Uranium Corporation (TSX:FIU, JSE:FUM, CA33744R1029:ISIN) (“First Uranium” or the “Company”) is pleased to announce that Wayne S. Hill has joined the Board of First Uranium effective May 29, 2007.

Mr. Hill has more than 35 years of experience in public company financial management and reporting, treasury, business development, mergers and acquisitions, risk management and corporate governance. He has been a senior officer with Toromont Industries, a TSX-listed company since 1985. He is currently the Executive Vice President and served as Toromont’s Chief Financial Officer for 20 years until 2005. Mr. Hill has served in senior roles at a number of public companies and has been a Director of Toromont since 1988.

Mr Hill holds Bachelor of Commerce (Honours) from Queen’s University in Kingston and is a Chartered Accountant.

“Mr. Hill brings a wealth of business experience and additional financial and accounting acumen to the Board,” said Nigel Brunette, Chairman of First Uranium. “We are very pleased that he will be joining us, and believe that he will make a very positive contribution.”

FIRST URANIUM COMPLETES ACQUISITION OF MINE WASTE SOLUTIONS (PROPRIETARY) LIMITED

Toronto, Ontario – First Uranium Corporation (TSX:FIU, JSE:FUM, CA33744R1029:ISIN) (“First Uranium” or the “Company”) today announced that its wholly-owned subsidiary, First Uranium (Proprietary) Limited, has completed the acquisition of Mine Waste Solutions (Proprietary) Limited (“MWS”) and its wholly-owned subsidiary Chemwes (Proprietary) Limited (“Chemwes”). With this closing, First Uranium will issue, in full consideration of the purchase price, 3,093,980 common shares to the vendors, namely Fraser Alexander Tailings (Pty) Ltd., Nedbank Capital, Industrial Development Corporation of South Africa Limited and the current MWS management.

The MWS assets acquired include:

- a gold plant with proven capacity for processing 570,000 tonnes per month and
- three tailings dams from which uranium and gold can be recovered.

“We welcome the Mine Waste Solutions operating team into First Uranium, where they will join our Buffelsfontein operations led by Jacob Mtonga,” said Gordon Miller, President and CEO of First Uranium. “The acquisition facilitates the Buffelsfontein tailings recovery project reaching peak production sooner, improving its overall economics and extending the life of the project. We are pleased to have this acquisition completed ahead of schedule and appreciate the prompt attention given to our transaction by the South African Reserve Bank and the Competition Commission of South Africa to approve this transaction.”

The acquisition of MWS benefits the Buffelsfontein tailings recovery project by providing:

- immediate financial benefit from gold production, 15 months ahead of schedule;
- an accelerated schedule (by eight months) to achieve peak uranium and gold production;

- a tailings deposition area;
- an increase to the measured and indicated resource of the project by 172,000 ounces of gold and 4.9 million pounds of uranium;
- an increase to the inferred resource of the project by 566,000 ounces of gold and 12.4 million pounds of uranium;
- the life of the project from 14 to 16 years and
- an improved NPV.

For more details about how the acquisition of MWS impacts the Buffelsfontein tailings recovery project reference should be made to the following documents on First Uranium's website, www.firsturanium.com:

- news release of April 4, 2007 "First Uranium acquires Mine Waste Solutions (Proprietary) Limited to complement the Buffelsfontein Tailings Recovery Project in South Africa";
- news release of May 2, 2007 "First Uranium signs formal agreement for the acquisition of Mine Waste Solutions (Proprietary) Limited;
- news release of May 22, 2007 "First Uranium files revised Buffelsfontein technical report"; and
- technical report of May 22, 2007 "Preliminary Assessment of the Buffelsfontein Project, North West Province, Republic of South Africa."

All technical disclosure in this news release relating to the Buffelsfontein tailings recovery project is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Buffelsfontein Project, North West Province, Republic of South Africa" (the "Buffels Technical Report") originally submitted on November 8, 2006, revised on December 5, 2006 and January 31, 2007 and further revised on May 22, 2007 prepared in accordance with National instrument 43-101 ("NI 43-101") by R. Dennis Bergen, P.Eng and Wayne Valliant P.Geo of Scott Wilson RPA, each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium. The disclosure contained in this news release has been reviewed and approved by Mr. Bergen and Mr. Valliant.

The economic analysis contained in this news release is contained in the Buffels Technical Report and is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserves development, production and economic forecasts on which the preliminary assessment contained in the Buffels Technical Report is based, will be realized.

Cautionary Language Regarding Forward-Looking Information

This news release contains and refers to forward-looking information based on current expectations. All other statements other than statements of historical fact included in this release including, without limitation, statements regarding potential production rates and operating costs, processing and development plans, estimated net present values and future plans and objectives of First Uranium are forward-looking statements (or forward-looking information) that involve various risks and uncertainties. These forward-looking statements are made as of the date hereof and there can be no assurance that such statements will prove to be accurate, such statements are subject to significant risks and uncertainties, and actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements that are included herein, except in accordance with applicable securities laws.

Important factors could cause actual results to differ materially from First Uranium's expectations. Such factors include, among others: the actual results of the planned feasibility studies on First Uranium's projects; the actual results of additional exploration and development activities at First Uranium's projects; the timing and amount of estimated future production and the costs thereof; capital expenditures; the costs and timing of the development of First Uranium's projects; the availability of any additional capital required to bring future projects into production; conclusions of economic evaluations; changes in project parameters as plans continue to be refined; future prices of commodities; the failure of plant, equipment or processes to operate as anticipated; accidents; labour disputes; delays in obtaining governmental approvals, permits or financing or in the completion of development or construction activities; currency fluctuations, as well as those factors discussed under "Risk Factors" in First Uranium's final prospectus dated December 12, 2006 as filed with securities regulatory authorities in Canada. Although First Uranium has attempted to identify important factors that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated or intended.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine, and the construction of the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

First Uranium Corporation

NEWS RELEASE – June 14, 2007

**NOT FOR DISSEMINATION IN THE UNITED STATES OR FOR
DISTRIBUTION TO U.S. NEWSWIRE SERVICES**

FIRST URANIUM REPORTS RESULTS FOR YEAR ENDED MARCH 31, 2007

All amounts are in US Dollars unless otherwise noted.

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (CA33744R1029:ISIN) (“First Uranium” or “the Company”) today announced its financial results for the year ended March 31, 2007 (“Fiscal 2007”) as compared to the year ended March 31, 2006 (“Fiscal 2006”) and provided a progress update on its Ezulwini Mine and Buffelsfontein tailings recovery project (the “Current Projects”) in South Africa.

Highlights

During Fiscal 2007, First Uranium:

- Completed the Company’s initial public offering in December 2006 on the Toronto Stock Exchange, raising gross proceeds of \$201.8 million
- Commenced underground development at the Ezulwini Mine in February 2007 (two months ahead of schedule)
- Completed an evaluation to optimize uranium recovery using pressure leaching at the Buffelsfontein tailings recovery project
- Ended Fiscal 2007 with cash and cash equivalents of \$138.9 million
- Incurred a net loss of \$7.9 million
- Invested \$24.3 million to develop the Current Projects
- Completed a secondary listing on the Johannesburg Stock Exchange

Subsequent to the end of Fiscal 2007, First Uranium:

- Raised gross proceeds of Cdn\$150 million through an issue of senior unsecured convertible debentures
- Filed revised technical reports for each of the Current Projects, which improved their NPV and IRR reflecting the accelerated timetables of both projects
- Accelerated capital investment at the Ezulwini Mine to advance by three months plant commissioning and production startup

- Acquired Mine Waste Solutions (Proprietary) Limited to advance the Buffelsfontein tailings recovery project
- Received acceptance by the South African Department of Mines and Energy for a prospecting permit application on incremental ground contiguous to the Ezulwini Mine
- Added a Chief Financial Officer and an Executive Vice-President, Compliance to round out the executive management team

Overview

First Uranium recorded a net loss of \$7.9 million during Fiscal 2007 as compared to a loss of \$6.9 million during Fiscal 2006. On a per share basis the Company recorded a net loss of \$0.08 in Fiscal 2007 as compared to a loss of \$0.08 in Fiscal 2006, based on the weighted number of average common shares outstanding of 97.5 million and 84.2 million respectively. During both Fiscal 2006 and Fiscal 2007, the Company was still in the development phase and, accordingly, had no operating revenue in either period.

"We have made good progress on the development of our two South African uranium and gold projects, the Ezulwini underground mine and the Buffelsfontein tailings recovery project," said Gordon Miller, President and Chief Executive Officer of First Uranium.

"We have taken significant strides to advance production at both projects by accelerating the construction schedule at Ezulwini and completing the acquisition of an existing gold plant adjacent to Buffelsfontein," continued Mr. Miller. "By advancing production at both projects in an environment of high uranium demand and prices, we expect that the near-term revenue contribution from Ezulwini and Buffelsfontein will be much higher than we originally anticipated. The combined proceeds of the initial public offering and the recent convertible debenture offering, as well as the prospect for higher than planned revenue, gives us confidence that we are well funded to advance our current projects to full production."

Expenses

Expenses during the last two fiscal years reflected normal costs associated with the start-up of a new company and the development of new mining projects, including:

- Consulting and management fees, which increased in Fiscal 2007 compared to Fiscal 2006 by 49% to \$2.2 million, principally due to the costs associated with its initial public offering and listing on the Toronto Stock Exchange (the "TSX") and expenditures in connection with the management of the timely development of the Current Projects
- General and administrative expenses increased in Fiscal 2007 as new employees were hired and the Johannesburg and Toronto offices were established

- Stock-based compensation costs of \$2.5 million in Fiscal 2007, principally related to the granting of stock options to management and the new Board of Directors. Comparable costs in Fiscal 2006 were insignificant
- Pumping and feasibility costs of \$0.8 million related to the Current Projects, decreased from \$5.1 million in Fiscal 2006, as such costs were capitalized in Fiscal 2007 based on the planned development of the Current Projects
- A foreign exchange loss of \$4.6 million in Fiscal 2007, which was primarily related to the conversion of the net Canadian dollar denominated proceeds from the initial public offering in December 2006 to South African rand in accordance with the requirements of the South African Reserve Bank

All of the above expenses were partially offset in Fiscal 2007 by \$3.4 million of interest income from the proceeds of the Company's initial public offering, which net of underwriting fees, raised \$189 million.

Cash and Capital Expenditures

First Uranium ended Fiscal 2007 with cash and cash equivalents of \$138.9 million (\$0.6 million at the end of Fiscal 2006), which reflects the net proceeds of the initial public offering less the cost of certain assets acquired from the Company's controlling shareholder Simmer and Jack Mines, Limited, cash utilized in operations and capital invested for additions to property, plant and equipment.

Including cash, the Company had \$181.4 million of assets at the end of Fiscal 2007. During Fiscal 2007 the Company has invested \$24.3 million of cash in property, plant and equipment, comprised primarily of the mining and plant assets at Ezulwini.

Production Forecast

At the Ezulwini Mine, gold production is planned to commence in October 2007 and uranium production is expected to begin in June 2008 to achieve an average annual production of 290,000 ounces of gold and 888,000 pounds of uranium over the 18-year life of the mine. With the acquisition of MWS, the Company's Buffelsfontein tailings recovery project is producing gold and is expected to commence uranium production in November 2008 to achieve an average annual production of 128,000 ounces of gold and 922,000 pounds of uranium over the 16-year life of the project.

Management Appointment

Effective June 1, 2007 John Berry has joined the First Uranium management team as Executive Vice-President, Compliance to oversee, among other things, the Corporation's applications process for mining and prospecting rights and environmental permits. Mr. Berry has been involved in the mining industry since

1977 and is an Executive Director with Simmer and Jack Mines, Limited. He will divide his time evenly between the two companies.

Third Quarter Restatement

First Uranium has restated the consolidated interim financial statements for the three months ended December 31, 2006 to reflect additional costs relating to the Offering. These additional costs include fees payable to Investec Bank Limited of South Africa, in respect of various advisory and regulatory services provided in connection with the Offering, as well as advisory fees payable to a number of technical consultants.

Technical Disclosure

All technical disclosure in this news release relating to the Ezulwini project is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa" originally submitted on November 8, 2006 and December 5, 2006 and revised on May 9, 2007 prepared in accordance with NI 43-101 by Wayne Valliant, P.Geo. and R. Dennis Bergen, P.Eng of Scott Wilson Roscoe Postle Associates Inc. ("Scott Wilson RPA"). All technical disclosure in this news release relating to the Buffelsfontein tailings recovery project is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Buffelsfontein Project, Northwest Province, Republic of South Africa" originally submitted on November 8, 2006, revised on December 5, 2006 and January 31, 2007 and further revised on May 22, 2007 prepared in accordance with National Instrument 43-101 ("NI 43-101") by R. Dennis Bergen, P.Eng and Wayne Valliant, P.Geo. of Scott Wilson RPA. Each of Mr. Valliant and Mr. Bergen is a "qualified person" under NI 43-101 and is independent of First Uranium. The technical disclosure contained in this news release has been reviewed and approved by Mr. Bergen and Mr. Valliant.

The economic analysis contained in this news release is contained in the technical reports mentioned above and is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserves development, production and economic forecasts on which the preliminary assessment contained in the technical reports are based, will be realized.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the price of uranium and gold, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at June 13, 2007; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) approvals to transfer or grant, as the case may be, mining rights will be obtained; (ii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iii) mineral resource estimates are accurate; (iv) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (v) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vi) that outstanding approvals for the completion of an acquisition, the transfer of mining rights and the approval of mining rights will be granted; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini Mine, and the construction of the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

First Uranium Corporation

NEWS RELEASE – July 26, 2007

FIRST URANIUM IDENTIFIES INITIAL DRILL TARGETS WHICH MAY LEAD TO A SIGNIFICANT INCREASE IN URANIUM AND GOLD PRODUCTION FROM A NEW 250,000 TONNE-PER-MONTH SHAFT AT THE EZULWINI MINE

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM, CA33744R1029:ISIN) (“First Uranium” or “the Company”) today announced that the Company has defined initial underground and surface drilling targets related to the possible expansion of the Ezulwini underground uranium (“U₃O₈”) and gold (“Au”) mine (the “Expansion Program”), located approximately 40 kilometres south-west of Johannesburg in the Witwatersrand Basin of South Africa. The Expansion Program is on track and the drilling program to test the newly defined drill targets is an integral part of the Expansion Program to justify the capital required for the sinking of an additional shaft, which would be used to access and mine the uranium and gold resource over and above the existing mine plan from the existing main shaft.

“While we remain focussed on near-term uranium and gold production at our two South African projects, we recognize how important it is to our shareholders for us to have additional avenues of growth,” said Gordon Miller, President and Chief Executive Officer of First Uranium. “This Expansion Program has the potential to significantly increase production beyond levels currently planned and thereby extend the current 19-year mine plan, which only consumes 20% of the significant resource area at this site.”

According to First Uranium’s mine plan for Ezulwini, as disclosed in the technical report filed on May 9, 2007, the Company expects to commence hoisting in October 2007, with the first gold plant module scheduled for completion in April 2008 and the first uranium plant module scheduled for completion in June 2008. According to the existing mine plan, the average annual production at Ezulwini for the life of the project (2007-2024) is expected to be 290,000 ounces of gold and 888,000 pounds of uranium.

The Ezulwini mine began operation in the 1960s, producing gold until 2001, when the mine was placed on care and maintenance. Uranium was mined from the separate Middle Elsburg ore body, which was developed twenty years after development of the Upper Elsburg ore body, during the period from 1982 to 1997.

Detailed studies for the Expansion Program have been completed by Minxcon (Pty) Limited, independent South African mining and exploration consultants engaged by the Company to validate and capture historic mine sampling and mill data which has been recovered from archives that were somewhat in disarray. Recent in stope face sampling procedures have been conducted to verify some of this historic data. Minxcon has utilised this historical face sampling information to project higher grade pay-shoot trends for the purposes of defining drill target areas. The attached plan depicts the pay-shoot trends identified and illustrates these trends in relation to existing mine development. Due to the existing development, it will be possible to drill some of these target areas from existing underground excavations.

The outputs of this work have been compared to historical grades as delivered to the plant for a period of 14 years during the period 1982 to 1995: This recent and comprehensive analysis resulted in the derivation of a mine recovery factor² of 74% for gold and 65% for uranium for the entire historic reporting period. These mine recovery factors have been used to define potential expected plant delivery grades from six respective drilling target areas. The table below summarizes the expected plant delivery grades from the conceptual mining areas of each identified target zone based upon a Bayesian approach.

Drill Target Area	Drilling Access From:	Au			U ₃ O ₈		
		Assumed Cut Off Grade	Actual In Stope Grade	Assumed Plant Delivery Grade	Assumed Cut Off Grade	Actual In Stope Grade	Assumed Plant Delivery Grade
		g/t	g/t	g/t	kg/t	kg/t	kg/t
1 ¹	Surface	4.46	8.93	6.61	0.566	0.970	0.630
2	Underground	2.85	10.2	7.54	0.436	0.800	0.520
3	Underground	2.61	6.66	4.93	0.564	0.128	0.830
4	Underground	2.49	7.11	5.26	0.264	0.560	0.360
5	Underground	1.34	4.13	3.05	0.290	0.580	0.520
6	Underground	2.99	6.69	4.95	0.410	0.800	0.450

- Notes: 1) This table has been derived using population statistics on face sampling data; geo-statistics have been applied to pay shoot 1 only, resulting in a lower Au plant delivery grade of 5.9g/t (versus 6.61g/t) and a higher U₃O₈ plant delivery grade of 0.642kg/t (versus 0.630kg/t)
- 2) Mine Recovery Factor is the combination of dilution and loss factors applied to convert "in stope" sampling grade to a plant delivery grade
- 3) Grades depicted are based upon face sample averages within mining areas adjacent to drill target areas
- 4) Cut off grades per pay-shoot area were determined using grade tonnage curves derived from a historical mining extraction of 65%
- 5) Average stope mining width was 180 centimetres

The surface area for each of the respective drill target areas, as shown in the table below, has been defined by assuming that historical geological pay-shoot continuity exists such that a metal content per available mining square metre can be ascribed to these areas.

Drill Target Area	Plant Delivery Grade		Square Metres m ²	Au Equivalent g/m ²	U ₃ O ₈ Equivalent kg/m ²	Width cm
	Au Equivalent	U ₃ O ₈ Equivalent				
	g/t	kg/t				
1	10.93	1.589	1,044,742	54.72	7.95	180
2	11.10	1.614	381,582	55.57	8.08	180
3	10.68	1.552	104,213	53.42	7.76	180
4	7.76	1.127	226,526	38.81	5.64	180
5	5.65	0.821	168,506	28.26	4.11	180
6	8.53	1.239	202,589	42.67	6.20	180

1) Au and U₃O₈ equivalents have been calculated using only First Uranium's stated long-term pricing assumptions of US\$500 per ounce for Au and US\$50 per pound for U₃O₈.

2) By example, a grade of 1Kg U₃O₈ per tonne equates to 6.88 grams per tonne of Au.

Based upon an internal concept evaluation, the combined Phase 1 drill target areas have the potential to delineate a substantial portion of the measured and indicated resources required to justify the construction of a new 250,000 tonne-per-month shaft and mill expansion, which could effectively triple production capacity from the uranium-bearing Middle Elsburg ore body. The conceptual evaluation excludes any potential contribution from lower-grade areas known to exist between pay shoots, and excludes any potential contribution from the UE1a Reef. The Company expects that it will need to drill approximately 16,000 metres to complete Phase 1 of the Expansion Program.

The Phase 2 target areas, which are significantly larger in area, have been less explored in the past since mining activity was concentrated in the northern section of the property. New drill target areas will be defined in Phase 2 once the face sampling information from historic mining in these areas has been validated for the UE1A Reef. Based on very limited information, gathered from three previous surface drill holes, it is apparent that a zone of thicker width gold and uranium mineralisation exists where the E9EC and UE1A Reefs sub outcrop against each other. This zone which varies in thickness, from 7 to 26 metres, has been intersected at three points along a three-kilometre section of strike stretching from the northern boundary of the property and is open ended to the southern boundary. This zone has been mined extensively on the property to the north of Ezulwini, where mechanised mining methods were used to successfully extract gold over mining widths of up to 25 metres.

First Uranium will continue to define additional drill target areas to add to the findings of the existing Expansion Program and expects to disclose the complete drill results and resource estimation by the end of 2008.

The Expansion Program excludes any prospecting that will take place on contiguous properties to the north-east and south-east of the Ezulwini lease area covered by the prospecting application submitted to and accepted by, the South

African Department of Minerals and Energy, as disclosed in First Uranium's news release dated on April 16, 2007.

All technical disclosure in this news release relating to the Expansion Program is extracted from studies prepared in accordance with National instrument 43-101 ("NI 43-101") by Daan Van Heerden, Pr.Eng of South African mining and exploration consultants, Minxcon (Pty) Limited, who is a "qualified person" under NI 43-101 and is independent of First Uranium. The disclosure contained in this news release has been reviewed and approved by Mr. Van Heerden.

The life of mine estimate, projected average annual production and inferred resource grades in this news release relating to the Ezulwini underground mine project is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa" (the "Technical Report") originally submitted on November 8, 2006, revised on December 5, 2006 and January 31, 2007 and further revised on May 9, 2007 prepared in accordance with National instrument 43-101 ("NI 43-101") by R. Dennis Bergen, P.Eng and Wayne Valliant, P.Geo of Scott Wilson Roscoe Postle Associates Inc., each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium. The disclosure in this news release related to the RPA technical report has been reviewed and approved by Mr. Bergen and Mr. Valliant.

The economic analysis contained in this news release is contained in the Technical Report and is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserves development, production and economic forecasts on which the preliminary assessment contained in the Technical Report is based, will be realized.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the price of uranium and gold, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as

anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at the data of this news release; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumptions referred to in this news release and assumption that: (i) approvals to transfer or grant, as the case may be, mining rights will be obtained; (ii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iii) mineral resource estimates are accurate; (iv) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (v) labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vi) outstanding approvals for the completion of an acquisition, the transfer of mining rights and the approval of mining rights will be granted; (vii) black economic empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (viii) the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

First Uranium Corporation

NEWS RELEASE – August 13, 2007

FIRST URANIUM REPORTS RESULTS FOR THE THREE MONTHS ENDED JUNE 30, 2007

All amounts are in US dollars unless otherwise noted.

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (CA33744R1029:ISIN) (“First Uranium” or “the Corporation”) today announced that it recorded a net profit of US \$5.5 million for the three months ended June 30, 2007 (“Q1 2008”) compared to a net loss of US\$2.2 million recorded for Q1 2007, primarily as a result of foreign exchange gains and net interest income offset by operating losses incurred in the quarter under review.

Highlights

During Q1 2008, First Uranium:

- Raised gross proceeds of Cdn\$150 million through an issue of 4.25% senior unsecured convertible debentures (the “Debentures”).
- Filed revised technical reports for each of the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project, which indicated improvement to their respective NPVs and IRRs, reflecting the accelerated timetables for both projects.
- Accelerated capital investment at the Ezulwini Mine to advance the plant commissioning and production startup by three months.
- Acquired effective June 6, 2007 100% of the equity interest and management control of Mine Waste Solutions (Proprietary) Limited and its subsidiary Chemwes (Proprietary) Limited (collectively “MWS”) to advance the Buffelsfontein Tailings Recovery Project, following which First Uranium has commenced to record for its account gold production from the MWS plant.
- The South African Department of Minerals and Energy acknowledged receipt of the Corporation’s prospecting permit application on incremental ground contiguous to the Ezulwini Mine.

Subsequent to Q1 2008, First Uranium defined initial underground and surface drilling targets related to the possible expansion of the existing Ezulwini underground uranium and gold mine (the “Ezulwini Expansion Program”).

In the second quarter of fiscal year 2008 ending September 30, 2007, the Corporation plans to process 1.5 million tonnes of tailings through its MWS gold plant, with expected production of over 12,000 ounces of gold.

"While we are actively pursuing additional avenues of growth through the Ezulwini Expansion Program, our focus remains on advancing production at our two uranium and gold projects, the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project," said Gordon Miller, President and Chief Executive Officer of First Uranium.

"To this end we've accelerated the construction schedule at Ezulwini and, with the completion of the acquisition of MWS, which included a gold plant, tailings and a tailings deposition area, we are in the process of integrating these facilities into the Buffelsfontein Tailings Recovery Project, which will accelerate production from the Corporation's Buffelsfontein tailings," continued Mr. Miller. "With the combined capital resources of cash and cash equivalents, the net proceeds from the Debentures and anticipated revenue from future sales of gold and uranium, we believe we are fully-funded to develop our existing mining projects as currently planned and advance them to full production by 2010."

Although spot prices for uranium, which reached \$136 per pound at the end of June, have recently softened to \$110 per pound, this is still above the \$50 per pound, upon which First Uranium has based its project economics for the next 20 years. Concerns about the supply of uranium not being able to meet near- to mid-term demand persist in the market. The Corporation has not yet signed any contracts to supply uranium and does not expect to do so until it is nearer production in June 2008.

Revenue

First Uranium generated revenue of \$2.2 million during Q1 2008 from the operation of the MWS gold plant, which the Corporation assumed ownership of on June 6, 2007.

Expenditures

Expenses during Q1 2008 reflect normal costs associated with a development-phase company that, with the exception of the newly acquired MWS operations, was not yet in production.

Operating losses of \$3.3 million in Q1 2008 reflect an increase from the \$2.9 million loss in Q1 2007, primarily as a result of:

- An increase in services required to support the development of the projects and establishing corporate offices including an increase in employee compensation costs, consulting and professional fees to support a growing infrastructure including the establishment of offices in Johannesburg and Toronto, which were not in existence in Q1 2007.

- Stock-based compensation costs of \$0.8 million relating to the amortized cost of stock options granted to directors, officers, employees and consultants. The fair value of the stock-based compensation was estimated using the Black-Scholes option pricing model.
- The decrease in pumping and feasibility costs to \$0.3 million in Q1 2008 (versus \$1.5 million in Q1 2007), reflect the fact that these costs are being capitalized in Q1 2008 as part of the mine infrastructure costs as compared to being expensed as care and maintenance costs for the Ezulwini Mine in Q1 2007, prior to commencement of development activities.
- Interest of \$1.0 million was paid on the Debentures at the end of the quarter.
- The accretion expense of \$1.1 million also relates to the Debentures.

The above expenses were partially offset during Q1 2008 by \$4.4 million of interest income from the \$177.7 million of net proceeds from the Corporation's initial public offering (the "Offering") and the net proceeds from the issue of the Debentures.

The Corporation also benefited from foreign exchange gains of \$6.4 million during Q1 2008 (Q1 2007: \$0.8 million), which result from the Corporation reporting in US dollars, while the majority of its cash funds are held in Canadian dollars and in South African rand, each of which have strengthened against the US dollar.

Cash and Capital Expenditures

First Uranium ended Q1 2008 with cash and cash equivalents of \$275.2 million as compared to \$138.9 million at the fiscal year ended March 31, 2007. This position reflects the net proceeds of both the Offering and the Debentures, less the cost of certain assets acquired from Simmer & Jack, cash utilized in operations and capital invested for additions to property, plant and equipment.

Including cash and cash equivalents, the Corporation had \$373.5 million of assets at the end of Q1 2008. Total liabilities at the end of Q1 2008 of \$118.9 million included \$89.3 million for the debt portion of the Debentures and an \$11.1 million future tax liability arising from the MWS acquisition. Shareholders' equity amounted to \$254.6 million.

Production Overview

To date, US\$29.1 million has been spent on re-opening and re-furbishing the Ezulwini Mine. The shaft stabilization is on track for completion in September 2007 and the Corporation expects to commence hoisting ore in October 2007. The first gold plant module is scheduled for completion in April 2008, three months ahead of the previously disclosed schedule; and, the first uranium plant

module is on track for completion in June 2008 to achieve an average annual production of 290,000 ounces of gold and 888,000 pounds of uranium over the 18-year life of the mine.

The accelerated schedule for commissioning all modules of the gold and uranium plants results in an accelerated capital investment profile, which will provide the flexibility sooner to significantly increase uranium production if and when market pricing dictates.

Also at the Ezulwini Mine, the Corporation has commenced the development to access the shaft distress cut and has accessed the Upper Elsburg horizon on levels 38a and 41. Development on both of these levels has started. The Company plans to collect chip samples at six metre intervals from the reef horizon. Chip sampling in two sections six metres apart on both levels has indicated a reef horizon that is 2.4 metres thick. Samples averaged 11.2 grams per tonne gold and 4.7 grams per tonne gold on levels 38a and 41, respectively.

Opening up of the Middle Elsburg reef is well underway with 76 panels sampled and 24 panels selected for development, giving a face length of 568 metres with an average grade of 6.76 grams per tonne gold and 660 grams per tonne uranium.

The samples were collected in accordance with industry standard practice. An independent laboratory prepared and assayed the samples using industry standard methods.

The clean up process to date on surface and underground has generated a stockpile in excess of 70,000 tonnes containing more than 88 kilograms of recoverable gold.

In addition, First Uranium has identified initial drill targets which may justify the development of a new 250,000 tonne-per-month shaft at the Ezulwini Mine, which would allow a significant increase in uranium and gold production. This expansion program has the potential to significantly increase production beyond levels currently planned and thereby extend the current 19-year mine plan, which only consumes 20% of the significant resource area at this site.

The Corporation's Buffelsfontein Tailings Recovery Project began producing gold from June 6, 2007 as a result of the acquisition of MWS. A total of 401,621 tonnes of tailings material was processed in the period under review, resulting in gold sales of 3,395 ounces at a total cost of \$664 per ounce. The MWS operation is mining the remnant of its current resource, due to be exhausted by December 2007. The operation requires mechanical cleaning of the floor material, temporarily increasing the operating cost significantly. The mechanical cleaning will continue in Q2 2008, with expected production of over 12,000 ounces of gold at a cash cost of \$520 per ounce. The mechanical cleaning will stop as the new

Buffelsfontein tailings dams are brought online, when it is expected that the production and average cost will then revert to the planned targets of \$360 per ounce as per the May 22, 2007 revised technical report by Scott Wilson Roscoe Postle Associates. The average sale price was \$643 per ounce. Uranium production is expected to commence in November 2008 to achieve an average annual production of 128,000 ounces of gold and 922,000 pounds of uranium over the 16-year life of the project.

Technical Disclosure

With the exception of the third, fourth, fifth and sixth paragraphs under the heading "Production Overview" in this news release, the technical disclosure relating to the Ezulwini Mine is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa" originally submitted on November 8, 2006 and December 5, 2006 and revised on May 9, 2007, prepared in accordance with NI 43-101 by Wayne Valliant, P.Geo. and R. Dennis Bergen, P.Eng. of Scott Wilson Roscoe Postle Associates Inc. ("Scott Wilson RPA").

Technical disclosure under the same heading relating to the Buffelsfontein Tailings Recovery Project is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Buffelsfontein Project, Northwest Province, Republic of South Africa" originally submitted on November 8, 2006, revised on December 5, 2006 and January 31, 2007 and further revised on May 22, 2007, prepared in accordance with National Instrument 43-101 ("NI 43-101") by R. Dennis Bergen, P.Eng. and Wayne Valliant, P.Geo. of Scott Wilson RPA. Each of Mr. Valliant and Mr. Bergen is a "qualified person" under NI 43-101 and is independent of First Uranium. The technical disclosure contained in this news release has been reviewed and approved by Messrs. Bergen and Valliant.

Messrs. Bergen and Valliant are each a "qualified person" under NI 43-101 and are independent of First Uranium. The technical disclosure contained in this news release relevant to their respective contributions has been reviewed and approved by Messrs. Bergen and Valliant.

The economic analysis contained in this news release is contained in the technical reports mentioned above and is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserves development, production and economic forecasts on which the preliminary assessment contained in the technical reports are based, will be realized.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the price of uranium and gold, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and

phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at June 13, 2007; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) approvals to transfer or grant, as the case may be, mining rights will be obtained; (ii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iii) mineral resource estimates are accurate; (iv) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (v) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vi) that outstanding approvals for the completion of an acquisition, the transfer of mining rights and the approval of mining rights will be granted; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

Conference Call

First Uranium will conduct a conference call with investors to discuss the Corporation's first quarter results and related matters at 11:00 a.m. local Toronto time or 5:00 p.m. local Johannesburg time on Monday, August 13, 2007. The conference call will be available simultaneously to all interested investors and the news media at (416) 644-3424 or 1 (800) 594 3790 (toll free) or +09 (800) 2288 3501 (toll free from South Africa) or through a webcast at

<http://www.newswire.ca/en/webcast/viewEvent.cgi?eventID=1972960>

The call will be available through replay at this website for one month.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini Mine, and the

construction of the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

FIRST URANIUM CORPORATION

NEWS RELEASE – November 5, 2007

FIRST URANIUM BEGINS TOLL TREATING GOLD ORE FROM ITS EZULWINI MINE

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) ("First Uranium" or "the Corporation") announced that the Corporation commenced transporting gold ore from the Ezulwini Mine for toll treatment at the Randfontein Estates Limited ("REL") Doornkop gold plant at the end of October 2007.

Based on Ezulwini Mine start-up schedules for mining uranium and gold, the Corporation expects to ship approximately 5,000 tonnes of ore for toll treatment in November 2007 and steadily increase the quantity to about 25,000 tonnes per month by April 2008, when the Ezulwini Mine's own gold plant is scheduled to be commissioned. For the next six months mill feed grades are expected to range between 6.5 grams per tonne and 8.0 grams per tonne, although the average gold grade is initially expected to be lower since development ore will be processed first.

"Now that we are shipping ore from the Ezulwini Mine, both of our projects are now in gold production and are contributing to our cash flow", said Gordon Miller, First Uranium's President and Chief Executive Officer. "To see the Ezulwini Mine come into production on schedule is particularly gratifying and confirms the confidence we have in the ability of our experienced operating team at this site to meet future milestones on time and on budget. To this end, they are on track with the start-up milestones for the completion of our own gold plant next April and our uranium plant in June."

First Uranium's Ezulwini Mine is an underground uranium and gold mine located 40 kilometres southwest of Johannesburg, South Africa.

REL is located adjacent to the north-west boundary of the Ezulwini Mine and is a wholly-owned subsidiary of Harmony Gold Mining Company.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or

achievement expressed or implied by the forward-looking statements. Risks and uncertainties include, among others, the actual results of the planned feasibility study for the Buffelsfontein Tailings Recovery Project, the actual results of additional exploration and development activities, the timing and amount of estimated future production and the cost thereof, the conclusions of economic evaluations, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at the date hereof; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason. In addition, First Uranium is in the development stage and is subject to the risks and challenges similar to other companies in a comparable stage of development. The risks include, but are not limited to, certain business, operational and market risks. For a discussion of the Corporation's risks please refer to the Corporation's Annual MD&A, the 2007 Annual Information Form and other filings, which are available on the Corporation's website www.firsturanium.com and on www.sedar.com or upon request from the Corporation.

MINERAL
DEPARTMENT

First Uranium Corporation

NEWS RELEASE – November 8, 2007

FIRST URANIUM'S EZULWINI PROSPECTING RIGHTS APPLICATION RECEIVES CONDITIONAL APPROVAL BY SOUTH AFRICAN DEPARTMENT OF MINERALS AND ENERGY

Toronto, Ontario – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) ("First Uranium" or "the Corporation") today announced that the South African Department of Minerals and Energy ("DME") has granted conditional approval for the Corporation's application in respect of a Prospecting Work Program (the "Program") on properties contiguous to the north-east and south-east of First Uranium's Ezulwini Mine property in South Africa. The Ezulwini Mine is an underground uranium and gold mining project, with mining rights covering an area of 3,717 hectares. The Program covers 6,843 hectares of property known to contain uranium and gold mineralization adjacent to the Ezulwini mining rights.

Final approval by the Regional Manager of the DME is subject to the approval of the relevant Environmental Management Plan ("EMP") for the exploration drilling from surface. First Uranium must submit further required materials to the DME by the middle of November, with approval of the EMP, if satisfactory, expected to occur on or before December 11, 2007.

Previous exploration drilling conducted in the area by Gencor Limited, Anglovaal Mining Limited and JCI Limited confirmed the presence of uranium and gold mineralization along the approximately 20 kilometres of strike within the prospecting area included in the Program. Based on the results of the historical drill data, the Corporation plans to immediately proceed with the Program to explore this prospecting area and will use the historical information to guide the placement of new drill holes. Qualified geologists are currently reviewing the historical data.

The initial stages of the Program will test the strike extent of the known pay shoots for uranium and gold on the Middle Elsburg Reef in an area east of the Ezulwini Mine. The Ezulwini Mine and the properties which are subject to the Program are located in the Witwatersrand Basin, which is the largest known gold province in the world with deposits having been mined for well over 100 years. In the past, there were also four uranium plants in production in this area. The first

of the three attachments to this news release shows the location of the properties which are subject to the Program and neighbouring mines surrounding the Ezulwini Mine, which is located approximately 40 kilometres southwest of Johannesburg. (See map entitled 'Ezulwini Locality Plan'.)

Several groups of reefs have been identified in the area, including the Livingstone Reefs, the South Reef, the Kimberley Reefs, the Bird Reefs, the Mondeor Reefs, the Ventersdorp Contact Reef and the Black Reef, as well as the Elsburg Reefs associated with the Ezulwini Mine. Within these reefs, a total of nine reef horizons have been mined for uranium and gold at depths of between 600 metres and 1,260 metres below surface. The second attachment to this news release shows a map of the Ezulwini Mine and its shafts, as well as the three Cooke shafts on the property adjacent to the western boundary of the Ezulwini prospecting area. This map shows the location of 11 historical bore holes drilled in the prospecting rights area on which gold and uranium payshoots were defined. (See map entitled 'Ezulwini Prospecting Right'.) On the map, the 'A-B' line that intersects with the payshoots marks a cross-section of the area discussed below.

The third attachment to this news release shows the cross-section of the historical target area, including the layer of dolomites which overlay much of the mineralized reefs in the Witwatersrand Basin. The properties which are subject to the Program, are shown to the right of this cross-section at depths of between 800 metres and 1,200 metres below surface. (See cross-section entitled 'Section A-B Looking North'.)

During the years 1961 to 2001, the Ezulwini Mine produced 8.4 million pounds of uranium and 12.7 million ounces of gold. The Cooke section has also been mined extensively on the property north of the Ezulwini Mine and immediately west of the target area, and has produced 23 million pounds of uranium and 51 million ounces of gold.

The Program is planned to include analysis of existing drill-hole data for uranium and gold mineralization followed up by surface diamond drill exploration with drill hole depths of up to 2,000 metres.

"The Prospecting Work Program fits with the Corporation's strategy of focusing its exploration on or near its current uranium and gold projects in order to leverage the infrastructure of those projects," said Gordon Miller, First Uranium's President and Chief Executive Officer. "We have set aside US\$10 million for this exploration program, which has the potential to add to the known uranium and gold resources available to the Ezulwini Mine."

The Ezulwini Mine is already hoisting ore and toll treating ore at a neighbouring third-party gold plant. The Corporation is on schedule to commission its own gold plant in April 2008 and its own uranium plant in June 2008. Based on the

currently defined measured and indicated resources, the average annual production for the 18-year life of this project, the Ezulwini Mine is expected to be 290,000 ounces of gold and 888,000 pounds of uranium.

"In the meantime, we are on schedule to bring the Ezulwini Mine into full production for uranium and gold," continued Mr. Miller. "Our current mine plan is based on only 20% of the resource inventory of the existing mining rights, including a significant inferred uranium resource. In a separate initiative, the Ezulwini Expansion Program, we plan to convert part of those inferred resources to measured and indicated. The intent of this initiative, announced in July 2007, is to justify the capital required for the sinking of an additional shaft, which would be used to access and mine the uranium and gold resource at an accelerated rate, over and above the existing mine plan from the existing main shaft. We recently acquired the use of a surface drilling rig and expect to begin our drilling program on the Ezulwini Mine property on November 9, 2007."

Technical Disclosure Notes

The life of mine estimate and projected average annual production in this news release relating to the Ezulwini underground mine project is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa" (the "Technical Report") originally submitted on November 8, 2006, revised on December 5, 2006 and January 31, 2007 and further revised on May 9, 2007 prepared in accordance with National instrument 43-101 ("NI 43-101") by R. Dennis Bergen, P.Eng and Wayne Valliant, P.Geo of Scott Wilson Roscoe Postle Associates Inc., each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium. The disclosure in this news release related to the RPA technical report has been reviewed and approved by Mr. Bergen and Mr. Valliant.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, timing of development of new deposits, success of exploration activities, permitting time lines and government regulation of mining operations. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "will", "expects", "is expected", "budget", "scheduled", "estimates", "intends", "projected", "goal" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify

important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at the date of this news release; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumptions referred to in this news release and assumption that: (i) approvals to transfer or grant, as the case may be, mining rights will be obtained; (ii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iii) mineral resource estimates are accurate; (iv) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (v) labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vi) outstanding approvals for the completion of an acquisition, the transfer of mining rights and the approval of mining rights will be granted; (vii) black economic empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (viii) the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

Subsequent to the end of Q2 2008, First Uranium:

- completed an interim off-take agreement with Nufcor pursuant to which Nufcor will purchase yellowcake from First Uranium from June 2008 until January 2009 at rates based on the then prevailing spot prices
- pending completion of the Ezulwini Mine gold plant (expected in April 2008), commenced third-party toll-milling of the hoisted development material and gold ore from the Ezulwini Mine
- was granted a conditional prospecting right over an area of 6,843 hectares of property known to contain gold and uranium minerals adjacent to the Corporation's Ezulwini mining rights, which are comprised of 3,717 hectares

During Q3 2008, First Uranium plans to:

- hoist 30,000 tonnes of gold and uranium bearing ore at the Ezulwini Mine
- toll treat the 30,000 tonnes of ore at a yield of approximately 5.5 to 6.0 grams of gold per tonne, producing in excess of 5,500 ounces of gold
- process approximately 1.4 million tonnes of tailings through its MWS gold plant, with expected production in excess of 9,600 ounces of gold
- complete the hydraulic mining and clean up of the remnant of MWS No. 2 tailings dam
- complete the construction of the pipeline to the MWS gold plant in November, whereafter hydraulic mining of the mineral resources in the Buffelsfontein tailings dams will commence
- commence the MWS gold plant upgrade to increase planned capacity from 500,000 tonnes per month to 630,000 tonnes per month with completion scheduled in Q4 2008.
- complete a feasibility study for the further expansion of the MWS gold plant, which is targeted for completion in November 2008. The expansion will involve the construction of two additional gold plant modules and three uranium plant modules

"Gold is now being produced at both of First Uranium's properties: at the MWS plant at our Buffelsfontein Tailings Recovery Project and in a toll milling arrangement for the ore being hoisted at our Ezulwini Mine," said Gordon Miller, President and Chief Executive Officer of First Uranium. "With the spot price for gold currently over \$800 per ounce, that production is expected to make a solid contribution to our cash flow."

"Our focus remains on advancing uranium and gold production at both of our projects," continued Mr. Miller. "Construction is well underway and we are on schedule to commission our own gold plant at the Ezulwini Mine in April 2008 and the uranium plant in June 2008. At the Buffelsfontein Tailings Recovery Project we expect to begin construction this month to both double our gold plant capacity and commission the first two modules of our uranium plant by November 2008."

The spot price for uranium rose to \$136 per pound at the end of June, softened to \$75 per pound and has recently risen to \$90 per pound. Management believes that the \$50 per pound assumption upon which the project economics were based remains reasonable and conservative. The Corporation has not yet signed any contracts that have defined commitments to supply uranium.

Mr. Miller added, "With rising prices for uranium and gold, and the net proceeds from our equity and debenture offerings, we are confident that we are fully-funded to develop our existing mining projects as currently planned and advance them to full production by 2010."

Financial Highlights

<i>(thousands of dollars)</i>	Q2 2008	Q2 2007	2008 YTD	2007 YTD
Revenue	6,253	-	8,436	-
Operating income (loss)	(2,166)	258	(5,354)	(2,651)
Non-operating income and expenses	5,268	528	13,927	1,199
Net income (loss) for the period	3,051	786	8,522	(1,452)
Cash and cash equivalents at end of period	254,332	1,158	254,332	1,158

Revenue

First Uranium generated revenue during Q2 2008 and the first half of FY 2008 solely from the processing of MWS tailings material and sale of gold from the MWS gold plant.

Operating income (loss)

Operating income (loss) includes the following:

- cost of sales for the gold production in the first half of FY 2008 reflects significantly higher unit costs than the long-term expectation of costs for this operation as the acquired tailings dams are nearing the end of their productive life and the hydraulic mining operation was subject to additional costs for mechanical loading and placement of tailings material
- employee compensation costs, consulting and professional fees, as well as shared services fees paid to the Corporation's majority shareholder, Simmer & Jack
- higher general, consulting and administrative expenses were primarily from an increase in services required to support the development of the projects, the costs of corporate offices in Johannesburg and Toronto and other expenses of operating a public company, which were not applicable in FY 2007
- stock-based compensation related to the amortized cost of stock options granted to directors, officers, employees and consultants
- pumping and feasibility costs in connection with the maintenance, assessment commencement and re-commissioning of the Ezulwini Mine

Non-operating income and expenses

Non-operating income and expenses for the periods reported included:

- interest income that was primarily earned on the net proceeds raised from First Uranium's offerings of equity issued in December 2006 and senior unsecured convertible debentures issued in May, 2007
- interest expense paid and accrued on the debentures and accretion expense related to the debentures
- foreign exchange translation gains that reflect that the Corporation holds the majority of its net assets in Canadian dollars and in South African rand, which have both strengthened against the Corporation's reporting currency of US dollars

Cash and Capital Expenditures

Cash and cash equivalents at the end of the first half of 2008 increased by \$115.4 million to \$254.3 million from the end of FY 2007, primarily as a result of the \$130.6 million net proceeds raised through the issuance of debentures, cash from operating activities and translation gains on cash held in currencies other than US dollars offset by capital expenditures of \$35.5 million at the Ezulwini Mine.

Capital investments of \$148 million and \$271 million are planned to complete the construction of the Buffelsfontein Tailings Recovery Project and the Ezulwini Mine, for which \$34.8 million of current commitments exist. Capital investments for property plant and equipment in were \$31.1 million in Q2 2008, \$10.5 million in Q1 2008 and \$20.8 million in FY 2007, totaling \$62.4 million invested to date.

First Uranium anticipates that future capital requirements relating to its development of the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project will be funded through a combination of current cash and cash equivalents and internal cash flow.

The Corporation holds its funds in cash and bank-sponsored guaranteed investment certificates. It has no exposure to asset-backed commercial paper.

Production Overview

During the last week of September 2007, 9,940 tonnes of reef development ore was hoisted to surface, which will be stockpiled for use as the initial feed for the new mill and gold plant that are scheduled to be commissioned in April 2008.

Subsequent to the end of Q2 2008, in October the Ezulwini Mine began to toll treat higher grade gold bearing ore at a neighbouring gold plant, which will continue until the new gold plant is commissioned.

At the Ezulwini Mine the gold plant currently under construction is expected to be commissioned in April 2008 and the uranium plant is expected to be commissioned in June 2008. Annual average production at the Ezulwini Mine is

expected to be 888,000 pounds of uranium and 290,000 ounces of gold over the estimated 18-year life of the project.

The Corporation's Buffelsfontein Tailings Recovery Project began producing gold from June 6, 2007 as a result of the acquisition of MWS. A total of 1.6 million tonnes of tailings material was processed in the first half of 2008, resulting in gold sales of 13,544 ounces at an average cash cost of \$497 per ounce. The average sale price for gold during the first half of FY 2008 was \$623 per ounce.

The average total cost per ounce during the first half of 2008 was \$561 per ounce, significantly higher than the Corporation's long-term outlook for cash costs at this operation, as the acquired MWS tailings are nearing the end of their productive life. Cleaning up the remaining tailings from MWS tailings dam No. 2, which requires mechanical loading and placement near the hydraulic mining operation, reduces tonnages and increases handling costs relative to a normal reclamation operation. More efficient hydraulic reclamation operations at Buffelsfontein dam No. 2 are expected to commence during November 2007.

The Corporation is in the process of expanding the existing MWS plant to increase the plant capacity from the planned rate of 500,000 tonnes per month to 630,000 tonnes per month. The expansion project is planned for completion by the end of March 2008. Uranium production at the Buffelsfontein Tailings Recovery Project is expected to commence in November 2008 to achieve an average annual production of 922,000 pounds of uranium along with 128,000 ounces of gold over the 16-year life of the project.

Technical Disclosure

Technical disclosure under the heading "Production Overview" in this news release relating to the Ezulwini Mine is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa" originally submitted on November 8, 2006 and December 5, 2006 and revised on May 9, 2007, prepared in accordance with NI 43-101 by Wayne Valliant, P.Geo. and R. Dennis Bergen, P.Eng. of Scott Wilson Roscoe Postle Associates Inc. ("Scott Wilson RPA"). Technical disclosure under the same heading relating to the Buffelsfontein Tailings Recovery Project is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Buffelsfontein Project, Northwest Province, Republic of South Africa" originally submitted on November 8, 2006, revised on December 5, 2006 and January 31, 2007 and further revised on May 22, 2007, prepared in accordance with National Instrument 43-101 ("NI 43-101") by R. Dennis Bergen, P.Eng. and Wayne Valliant, P.Geo. of Scott Wilson RPA. Each of Mr. Valliant and Mr. Bergen is a "qualified person" under NI 43-101 and is independent of First Uranium. The technical disclosure contained in this news release has been reviewed and approved by Messrs. Bergen and Valliant.

and is independent of First Uranium. The technical disclosure contained in this news release has been reviewed and approved by Messrs. Bergen and Valliant.

Messrs. Bergen and Valliant are each a "qualified person" under NI 43-101 and are independent of First Uranium. The technical disclosure contained in this MD&A relevant to their respective contributions has been reviewed and approved by Messrs. Bergen and Valliant.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the price of uranium and gold, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at November 9, 2007; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) approvals to transfer or grant, as the case may be, mining rights will be obtained; (ii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iii) mineral resource estimates are accurate; (iv) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (v) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vi) that outstanding approvals for the completion of an acquisition, the transfer of mining rights and the approval of mining rights will be granted; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (viii) that the innovative work on

stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

Conference Call

First Uranium will conduct a conference call with investors to discuss the Corporation's first quarter results and related matters at 10:00 a.m. local Toronto time or 5:00 p.m. local Johannesburg time on Tuesday, November 13, 2007. The conference call will be available simultaneously to all interested investors and the news media at (416) 644-3430 or 1 (800) 588-4942 (toll free) or 09 800 2288 3501 (toll free from South Africa) or through a webcast at <http://www.newswire.ca/en/webcast/viewEvent.cgi?eventID=2089340>. A replay of the conference call will be available on this site until the end of November.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini Mine, and the construction of the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

First Uranium Corporation

NEWS RELEASE – December 19, 2007

FIRST URANIUM ANNOUNCES RESULTS OF PRE-FEASIBILITY STUDY FOR THE BUFFELSFONTEIN TAILINGS RECOVERY PROJECT

All amounts are in US dollars unless otherwise noted.

NPV increases by 71% to \$505 million – IRR increases from 69% to 151%

Toronto, Ontario – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) (“First Uranium” or “the Corporation”) today announced the results of its pre-feasibility study (the “Buffels Report”) on its Buffelsfontein Tailings Recovery Project (the “Project”) in South Africa. Based on the Buffels Report, which was prepared by Minxcon Pty. Ltd., First Uranium intends to immediately start construction for the expansion of the existing gold plant and the initial modules of a new uranium plant at the Project, with commissioning expected in November 2008.

The most significant changes identified in the Buffels Report from the previously announced May 22, 2007 preliminary assessment report for the Project, in order of their impact on the economics of the Project, are:

- a decision to increase price assumptions for gold and uranium (see Table 1);
- an increase in the capital investment in the Project due to the escalation in the cost of construction materials and the expanded scope of the Project;
- a decision to implement an atmospheric leach process in the initial year of operation and a subsequent change to a pressure leach process that is expected to yield higher recovery rates and boost production;
- an increase in the recovery rate of uranium in the flotation process;
- the conversion of the Project’s mineral resources to mineral reserves (see Tables 3,4 and 5);

The impact of these changes is summarized below (see Table 2).

Table 1: CHANGES TO PROJECT ASSUMPTIONS

Years ending		Unit	Mar 2009	Mar 2010	Mar 2011	Mar 2012	Beyond Mar 2012
Previous May 2007	Gold price	(\$/oz.)	\$500	\$500	\$500	\$500	\$500
	Uranium price	(\$/lb.)	\$50	\$50	\$50	\$50	\$50
	Exchange rate	(ZAR/\$)	7.4	7.4	7.4	7.4	7.4
Current Dec 2007	Gold price	(\$/oz.)	\$737	\$734	\$683	\$627	\$635
	Uranium price	(\$/lb.)	\$104	\$104	\$91	\$78	\$45
	Exchange rate	(ZAR/\$)	7.4	7.4	7.4	7.4	7.4

Note:

The current real term commodity price assumptions are based on the consensus of the nominal forecasts by the investment research analysts at 13 North American-based brokerage firms, adjusted downward by the US inflation rate for the period covering the construction of the Project.

Table 2: SUMMARY OF CHANGES TO BUFFELS PROJECT

	Units of measure	Previous May 2007	Current Dec 2007	Change
Gold Plant				
Design capacity of gold plant:				
Module 1	Tonnes per month	600,000	633,000	6%
Module 2		600,000	650,000	8%
Module 3		600,000	650,000	8%
Total		1,800,000	1,933,000	7%
Average annual gold production	000 oz.	128	126	-2%
Peak annual gold production	000 oz.	165	182	10%
Total LOM ¹ gold production	000 oz.	2,054	2,024	-1%
Average LOM ¹ gold recovery	%	67.2%	66.0%	-120 bps
Uranium Plant				
Design capacity of uranium plant ² :				
Module 1	Tonnes per month	60,000	63,000	5%
Module 2		60,000	65,000	8%
Module 3		60,000	65,000	8%
Total		180,000	193,000	7%
Average annual uranium production	000 lb.	922	1,339	45%
Peak annual uranium production	000 lb.	1,595	2,231	44%
Total LOM ¹ uranium production	000 lb.	14,748	20,078	36%
Average LOM ¹ uranium recovery	%	28.8%	33.0%	420 bps
Financial Measures				
Net present value (NPV) ³	\$millions	295	505	71%
Internal rate of return (IRR)	%	69%	151%	8200 bps
Capital investment	\$ millions	148	260	76%
Peak funding	\$ millions	83	67	-19%
Life of Mine	Years	16	16	-
Cash cost – gold	\$/ oz.	220	264	20%
Cash cost – uranium	\$/ lb.	22	24	9%
Total operating cost	\$/ tonne	2.55	3.10	22%

Notes:

1. LOM is the abbreviation of 'life of mine'.
2. The tonnes to be processed in the uranium plant are included in, not additional to, the tonnes to be processed in the gold plant.
3. NPV is calculated using an 8% real discount rate.

Schedule for construction

With the acquisition of Mine Waste Solutions ("MWS") effective June 6, 2007, the Project effectively was in operation with a design capacity to process 500,000 tonnes of tailings per month through the gold plant. In September 2007, the Corporation's Board of Directors approved an expansion of the capacity of the gold plant to process 633,000 tonnes of tailings per month. This expansion is expected to be completed by January 2008.

Also in September 2007, the Board of Directors approved the construction of a monitoring station and pipelines to transport the tailings that would be hydraulically mined from the Buffels and Harties tailings dams. The monitoring station and pipelines are now in production.

The further expansion of the MWS gold plant to double its capacity and the construction of the first two modules of the Project's uranium plant are to begin immediately, for commissioning in November 2008. The third and final modules of the gold plant and the uranium plant are to be commissioned in November 2009.

Increase in uranium recovery from the flotation process

First Uranium believes that the effective recovery rate from mill feed to uranium production for the Project will be better than previously determined due to the expected results of further test work. The effective recovery rate is the combination of recoveries in the flotation process and in the plant. The preliminary assessment for the Project published in May 2007, reported a 30% recovery in the flotation process and a 90% recovery in the plant for a blended recovery rate of 27%.

Recent tests lead the Corporation to expect a 36.8% recovery from the flotation process. Plant recovery rates, however, will initially be less than the previously reported 90% rate as management has decided to refine the pressure leach process and intends to commission the first two modules of the uranium plant as planned in November 2008 with an atmospheric leach process. Initially the plant is expected to achieve a yield of 75% using an atmospheric leach process. The economic model in the Buffels Report is based on the assumption that by November 2009 the Corporation will have completed sufficient testing in advance of the implementation of a pressure leach process. Although still in the pre-feasibility stage, the pressure leach process is expected to increase the plant recovery rate back to 90% for an effective recovery rate of 33% and, hence, yield a higher uranium production. The pressure leach process will also contribute an acid by-product for the gold circuit to improve gold recovery.

Earlier plans for the Project to currently be at the feasibility stage are being postponed until further testing of the pressure leach process is completed and land optioning for the farms covering the preferred site for the new tailings dam are concluded.

Conversion of resources to reserves

Recent geological work at the Project, which included drilling 66 new bore holes on the tailings dams and the remodelling of all the dams, increased the level of confidence in the mineral resources. The subsequent conversion of most of the Project's mineral resources to proven and probable reserves resulted in a reduction in the number of tonnes, ounces and pounds on some tailings dams, but this was more than offset by the confirmation of a portion of the Mine Waste Solutions ("MWS") No.5 dam as a proven reserve. Although it was hoped that the conversion of the MWS No. 5 dam would extend the life of the Project, the life of the Project will remain at approximately 16 years due to the higher monthly feed capacity of the gold plant and the changes between the previously stated resources (see Table 3) and the mineral reserves (see Table 5).

Table 3: RESOURCE ESTIMATE (as per the May 22 technical report)

Resource Category		Gold			Uranium	
Place	Dam	Tonnes (millions)	Grade (g/t)	Content (oz 000s)	Tonnes (kg/t)	Content (Mlb)
Measured						
Buffels	2	23.7	0.40	301	0.087	4.54
Buffels	3	29.4	0.35	335	0.103	6.67
Buffels	4	16.4	0.38	202	0.102	3.68
Total Measured		69.5	0.38	838	0.097	14.90
Indicated						
Buffels	5	45.6	0.21	306	0.062	6.23
Harties	1	92.6	0.32	941	0.061	12.45
Harties	2	35.6	0.31	354	0.058	4.56
Harties	5	23.1	0.31	228	0.053	2.70
Harties	6	14.6	0.22	105	0.059	1.90
MWS	2	2.6	0.45	38	0.080	0.46
MWS	4	14.4	0.29	134	0.140	4.45
Total Indicated		228.6	0.29	2,106	0.065	32.74
Total Meas. & Indicated		298.0	0.31	2,944	0.073	47.64
Inferred						
Harties	7	1.7	0.54	30	0.243	0.93
Harties	Flanagan	0.04	0.80	1	0.229	0.02
Harties	Ellaton	1.5	0.52	25	0.087	0.29
Harties	NKGE	0.7	0.41	9	0.158	0.24
MWS	5	60.7	0.29	566	0.093	12.44
Total Inferred		64.7	0.30	631	0.098	13.92

Notes:

- 1 CIM definitions were followed for mineral resources.
- 2 A zero grade cutoff grade was used.
- 3 Rows and columns may not add exactly due to rounding.
- 4 Preliminary metallurgical test results indicated that recoveries would be approximately 27% for uranium and 68% for gold.
- 5 Mineral resources that are not mineral reserves do not have demonstrated economic viability.

The Buffels Report includes a new mineral resource estimate that includes mineral reserves as shown below (see Table 4). Unlike underground mines, virtually all of the resources in a tailings recovery operation sit above ground and there is a greater certainty of what can or can not be categorized as reserves.

Table 4: MINERAL RESOURCE ESTIMATE 2007 (includes mineral reserves)

Resource Category		Gold			Uranium	
Place	Dam	Tonnes (millions)	Grade (g/t)	Content (oz 000s)	Tonnes (kg/t)	Content (Mlb)

Total Proven & Probable		326.9	0.28	2,958	0.076	54.85

Notes:

1. Mineral reserves are quoted as fully diluted delivered to mill estimates.
2. Effective date: November 1, 2007.
3. Based on assumptions of a gold price of \$635 per ounce, a uranium price of \$45 per pound and ZAR/\$ exchange rate of 7.40.
4. A reserve cutoff grade of 0.28 grams per tonne gold equivalent was used, uranium grades were converted to gold equivalent using a conversion factor of 1 gram per tonne, which equals 0.503 kilograms per tonne on an extracted metal basis.
5. Rows and columns may not add exactly due to rounding.
6. The gold recovery applied was 66%.
7. The uranium recovery used was based on an atmospheric leach process of 27%.
8. Table reflects depletion of 1.5 million tonnes from July through October 2007 for MWS No. 2 Dam.

Location of a new tailings dam site is being finalized

Discussions are being concluded towards securing land access to locate a new tailings dam that is intended to contain all the processed tailings that will be discharged during the life of the Project. Due to new environmental requirements regarding the placement of any new tailings dams and the negotiations required with land owners, the new dam is likely to be located significantly further from the Project than originally planned. Once established, the resulting tailings dam would have less uranium, sulphur and pyrite and a superior design that mitigates erosion and, therefore, would be expected to have a significantly less environmental impact than the existing tailings that are about to be hydraulically mined at the Project.

"As a result of the all the technical work conducted during the past year, the overall confidence in the project has improved significantly," said Gordon Miller, President and Chief Executive Officer of First Uranium. "We will further refine the work done to date to determine the optimum NPV for the pressure leach

process and to finalize the location for a new tailings dam, but we won't let any of this interfere with our priority to meet our delivery deadlines and ensure that the Project remains on track."

First Uranium intends to file the new technical report in respect of the pre-feasibility study within 45 days from the date of this release.

Technical Disclosure

All technical disclosure in this news release relating to the Buffelsfontein tailings recovery project has been prepared in accordance with National instrument 43-101 ("NI 43-101") by Daan van Heerden, B.Sc., M.Comm., Charles Muller, B.Sc, Pr.Sci.Nat, and Johan Odendaal, B.Sc., M.Sc., Pr.Sci.Nat all of Minxcon Pty Ltd., Treavor Pearton, B.Sc Eng PhD, FGSA and Mike Valenta, Pr Eng, B.Sc., of Metallicon Process Consulting (Pty) Ltd. each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium.

Historical technical disclosure in this new release relating to the Project is extracted from a technical report entitled "Technical Report – Preliminary Assessment of the Buffelsfontein Project, North West Province, Republic of South Africa" originally submitted on November 8, 2006, revised on December 5, 2006, January 31, 2007 and May 22, 2007 prepared in accordance with NI 43-101 by R.Dennis Bergen, P.Eng and Wayne Valliant, P.Geo of Scott Wilson RPA, each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium.

The disclosure contained in this news release relevant to their respective contributions has been reviewed and approved by Messrs. Bergen, van Heerden, Muller, Odendaal, Pearton, Valliant and Valenta.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the price of uranium and gold, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, government regulation of mining operations, environmental risks, unanticipated reclamation expenses and title disputes or claims and limitations on insurance coverage. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", "likely" or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (ii) the Corporation cannot guarantee that any forward-looking statement will

materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iii) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) approvals to transfer or grant, as the case may be, mining rights will be obtained; (ii) metal prices, exchange rates and discount rates applied in the pre-feasibility study or the preliminary economic assessment, as the case may be, are achieved; (iii) mineral resource and reserve estimates are accurate; (iv) the results of the testing of the pressure leach process will be positive and the process will be implemented; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that outstanding approvals for the completion of an acquisition, the transfer of mining rights and the approval of mining rights will be granted; (viii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (ix) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine, and the construction of the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

FIRST URANIUM CORPORATION

NEWS RELEASE – January 21, 2007

**FIRST URANIUM PRODUCTION UPDATE FOR THE THIRD QUARTER
ENDED DECEMBER 31, 2007**

Toronto, Ontario – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) (“First Uranium” or “the Corporation”) today announced its production results for the fiscal quarter ended December 31, 2007 (“Q3 2008”). First Uranium began production at its tailings recovery project at Mine Waste Solutions (“MWS”) and its underground Ezulwini Mine (“Ezulwini”) in June 2007 and October 2007 respectively. During the Corporation’s third quarter which ended December 31, 2007 the Corporation processed 28,000 tonnes of underground ore from Ezulwini and 832,000 tonnes of reclaimed tailings from MWS to produce a total of 12,412 ounces of gold.

“Our mine plan development program entered a new phase during the quarter when we started producing gold from Ezulwini and started up the initial long-life tailings reclamation installation at MWS,” said Gordon Miller, President and Chief Executive Officer of First Uranium. “Both of our operations are now mining gold and uranium and the recovery of uranium from ore is on schedule to start at Ezulwini in June 2008 and at MWS in November 2008.”

Ezulwini Mine

Production summary

	Plan	Actual
Ore toll-treated (tonnes)	30,000	28,000
Average recovery grade (grams/tonne)	6.3	5.6
Gold produced (ounces)	6,076	5,055
Ore stockpiled at end of period (tonnes)		142,504

Although the build-up of production at Ezulwini during the first two months of the quarter was negatively influenced by lower than planned grades. This was more than offset in December, when Ezulwini’s production exceeded the planned rate due to higher than expected grades. The gold production ramp up is expected to continue as previously forecasted for the coming quarter.

Mine Waste Solutions tailings recovery project ("MWS")

Production Summary

	Plan	Actual
Tailings reclaimed (tonnes per day)	16,304	9,043
Average recovery grade (grams/tonne)	0.234	0.275
Gold produced (ounces)	11,284	7,357

Production for the quarter was negatively affected at MWS by the transition of tailings reclamation from the depleted Stilfontein No. 2 tailings dam due to the commissioning of the production infrastructure at the Buffelsfontein No. 2 tailings dam. The project to construct the initial long-life pump station and 10.5-kilometre pipeline was initiated in June 2007 and was originally scheduled to be completed by the end of October 2007. The project was delayed due to late delivery of slurry pumps and the heavy rains that fell during October that made construction difficult. The new production facility was commissioned on December 18, 2007 and is planned to have a production life of 18 years based on current reserves.

The initial train of pumps located at Buffelsfontein No. 2 tailings dam is achieving designed performance throughput, despite having a low utilization of 75% during the quarter while the second train of standby pumps was being installed. Once the second train of standby pumps is commissioned during February 2008, the utilization is expected to increase to 95%, which will sustain production at or better than the planned 20,800 tonnes per day production rate. Despite lower than planned utilization, production rates are currently being sustained at 20,000 tonnes per day.

The initial grades mined from the Buffelsfontein No.2 tailings dam are in line with the resource estimates for the initial mining benches and the gold plant is achieving slightly better than planned recoveries for production from this newly commissioned resource.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine, and the construction of the Buffelsfontein tailings recovery facility. This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", "likely", "believes" or "goal" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (ii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iii) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) approvals to transfer or grant, as the case may be, mining rights will be obtained; (ii) mineral resource and reserve estimates are accurate; (iii) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (iv) that labour, materials and equipment will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (v) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (vi) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

All of the forward-looking statements made in this news release are qualified by these cautionary statements, those made in the "Risks and Uncertainties" section of our Management's Discussion and Analysis, and those made in the "Risk Factors" section of our most recent Annual Information Form and other filings with the securities regulators of Canada.

FIRST URANIUM CORPORATION

NEWS RELEASE – January 30, 2008

FIRST URANIUM REGAINS PERMISSION TO USE 80% OF ITS NEAR-TERM POWER REQUIREMENTS

Toronto, Ontario and Johannesburg, South Africa – (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) (“First Uranium” or “the Company”) was today advised by Eskom, South Africa’s national power utility that, effective immediately, energy usage at all mining operations could be resumed to a maximum of 80% of their average power load requirements. The restriction, imposed as part of the current phase of dealing with the national energy crisis which began on January 25, is expected to be relaxed to allow use of 90% of the Company’s power load requirements on Thursday, January 31, 2008. To ensure the continued safety of our miners, operating activities will be gradually ramped up to the permitted levels.

The Company’s Ezulwini Mine, an underground uranium and gold mine, is the only First Uranium operation impacted as a result of this phase of the power crisis. Given its relatively low power requirements, the tailings recovery operation at Mine Waste Solutions (“formerly Buffelsfontein Tailings Recovery Project) have been unaffected by the power cuts.

At the Ezulwini Mine, which is in a relatively early stage of development, normal weekly operations are comprised of three days of mining and four days of shaft rehabilitation. In the interests of health and safety, the Company temporarily suspended mining operations.

First Uranium estimates that during the quarter, every day of operations being shut down would result in the loss of approximately 888 tonnes of ore processed or approximately 170 ounces of gold production. Thus far, only three days of production have been lost. Rehabilitation of the Ezulwini Mine shaft has not been interrupted. The Company believes that this lost production can be made up once the shaft rehabilitation work is complete.

The neighbouring third-party plant that toll-mills gold ore for First Uranium has suspended toll milling for the Ezulwini Mine as a result of its energy usage restrictions, and it is not clear when this will resume, if at all. Should the toll-milling plant’s energy reduction plan cause toll milling to be suspended

indefinitely, the Ezulwini Mine would stockpile ore until its own gold plant is commissioned in April 2008.

About First Uranium Corporation

First Uranium is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine, and the construction of the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

FIRST URANIUM CORPORATION

NEWS RELEASE – February 1, 2008

90% OF TOTAL POWER CONSUMPTION RESTORED TO FIRST URANIUM'S OPERATIONS

Toronto, Ontario and Johannesburg, South Africa – (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) ("First Uranium" or "the Company") confirmed that South Africa's national power utility, Eskom, has authorized the Company to immediately increase electricity load at its operations from 80% to 90% in a gradual ramp up. Eskom also informed the Company that this authorization could be withdrawn at a later date, as national electricity supply is still tight.

An update regarding the effect of the power constraints on the Company's operations will be issued as soon as more information becomes available.

MONTREAL

First Uranium Corporation

NEWS RELEASE – February 13, 2008

FIRST URANIUM REPORTS RESULTS FOR THE THREE AND NINE MONTHS ENDED DECEMBER 31, 2007

All amounts are in US dollars unless otherwise noted.

First Uranium commits to commissioning Uranium production despite electrical power supply issues

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) (“First Uranium” or “the Company”) today announced that it recorded a net loss of \$4.1 million for the three months ended December 31, 2007 (“Q3 2008”) (Q3 2007: \$3.8 million), which was primarily the result of ongoing expenditures incurred in preparation of the uranium and gold projects for production, along with general and administrative expenses. Net income for the nine months ending December 31, 2008 (“2008 YTD”) was \$4.5 million (2007 YTD: \$5.2 million) primarily the result of foreign exchange gains on translation of net assets held in Canadian dollars and South African rand into US dollars offset by ongoing expenditures. As the Ezulwini Mine is still in a ramp-up phase and has not yet achieved commercial levels of production, the revenue less cost of production from its mining operations of \$2.4 million during both Q3 2008 and 2008 YTD has been capitalized against Mine infrastructure costs in Property, Plant and Equipment.

Recent Highlights

During Q3 2008, First Uranium:

- toll-treated 27,951 tonnes of ore from the Ezulwini Mine (see Definitions 2) at a recovered grade of 5.6 grams of gold per tonne, producing 5,055 ounces of gold at a Cash Cost (see Definitions 1) of \$348 per ounce
- started drilling specific targets related to the possible expansion of the existing Ezulwini Mine (the “Ezulwini Expansion Program”)
- completed construction of the pump station at MWS (see Definitions 2) and the 10.5-kilometre pipeline to the MWS gold plant at a total cost of \$11.7 million

- completed the clean up and processing of the remaining tailings of the MWS No.2 tailings dam and commenced hydraulic mining and pumping of material from the Buffelsfontein No.2 dam to the MWS gold plant for processing during mid-December
- processed a total of 832,208 tonnes of tailings through the MWS gold plant at a recovered grade of 0.275 grams of gold per tonne, producing a total of 7,357 ounces of gold at a Cash Cost of \$674 per ounce
- completed a pre-feasibility study of MWS incorporating higher average uranium and gold price assumptions and increased capital investment, which projected the project's expected net present value ("NPV") increasing by 71% to \$505 million and its internal rate of return ("IRR") increasing from 69% to 151%
- entered into an interim off-take agreement with a third party pursuant to which the third party will purchase yellowcake from First Uranium from June 2008 until January 2009 at rates based upon the then prevailing spot prices
- issued 6.1 million First Uranium shares to Waterpan Mining Consortium ("Waterpan") in connection with the acquisition of the remaining 10% interest in Ezulwini Mining Company (Proprietary) Limited ("EMC") which owns and operates the Ezulwini Mine, resulting in EMC becoming wholly-owned by First Uranium (the "Waterpan Transaction")
- ended the period with \$215.2 million in cash and cash equivalents

Subsequent to the end of Q3 2008, First Uranium:

- was granted an unconditional prospecting right for 6,843 hectares of additional property adjacent to the Company's Ezulwini Mine
- filed the technical report for the pre-feasibility study of MWS, as announced on December 19, 2007
- due to the significantly reduced supply of electrical power currently available in South Africa, its national power utility ("Eskom") developed concerns about its ability to supply power in the short and medium term. As a result, First Uranium has had to impose voluntary shut-downs of mine development and hoisting activity at the Ezulwini Mine. Most recently, Eskom has implemented compulsory cut-backs of power consumption on businesses and mining companies generally. The specific effects of these measures mandated by Eskom on First Uranium's operations and development projects and any modifications thereto (the "Power Situation") have been and continue to be analyzed. (see 'Preliminary Assessment of the Impact of the Power Situation')

During Q4 2008, and prior to the Power Situation, First Uranium had planned to:

- commence the upgrading of the MWS gold plant to increase the design capacity from 500,000 tonnes per month to 630,000 tonnes per month, with completion scheduled in Q4 2008
- upgrade MWS No.5 tailings dam to enable a deposition rate of 630,000 tonnes of material per month. The upgrade is expected to be completed during Q4 2008.
- start on-site preparation for the construction of the additional gold plant module and the two uranium plant modules at MWS

Gordon Miller, President and Chief Executive Officer of First Uranium said, "We have, so far, been able to accomplish all the significant objectives we have set out to do. While power supply reductions threaten our ability to continue to do that, we have several alternatives to adjust our uses and sources of power with the intent to start uranium production as close to plan as the Power Situation will allow."

Preliminary Assessment of the Impact of the Power Situation

After a preliminary review of the feasibility of the Corporation generating its own power, First Uranium's Board has concluded that the Corporation's two projects are sufficiently robust to continue development as planned based on the addition of power generation capacity.

The initial impact of this decision is as follows:

For the Ezulwini Mine:

- given the uncertainty of power supply at a third-party gold plant to toll-treat the Corporation's ore, the Board has decided to postpone the ramp-up of the underground production and to accelerate the shaft refurbishment program
- the weekly operating plan to date has been to focus on mine development and hoisting for three days and on shaft rehabilitation for four days; henceforth the intention is to focus entirely on shaft refurbishment until the operation's gold plant is commissioned in April 2008
- the first 50,000 tonne per month module of the gold plant is on schedule for commissioning in April 2008 using existing generator capacity; should Eskom power not be forthcoming, the Ezulwini Mine has existing generator capacity of 13 MVA ("1 Megavolt Ampere = 1 Mega Watt") which will be utilized
- the first 50,000 tonne per month module of the uranium plant remains on schedule for commissioning in June 2008; a feasibility study of power generation options is underway to reduce power reliance on Eskom
- commissioning of the remaining modules of the gold and uranium plant will be deferred by approximately a year to January 2010 to coincide with the corresponding mine development plan

For MWS:

- the current MWS operation is at present unaffected by the Power Situation as it has been drawing additional power from Buffelsfontein Gold Mines Limited ("BGM")
- upgrading of the MWS gold plant to increase the design capacity to 630,000 tonnes per month remains on schedule for completion in Q4 2008
- the expansion of the current operations, however, will require additional power; a power generation feasibility study has been initiated with the expected result that the expansion will be delayed by approximately three months

The decision to invest in generating our own power is a temporary measure until the Power Situation has normalized which may take several years. It is expected that the Corporation will be able to monetize a significant portion of its investment in owner generated power at that time.

Financial Highlights

<i>(thousands of dollars)</i>	Q3 2008	Q3 2007	2008 YTD	2007 YTD
Revenue	6,623	-	15,069	-
Operating loss	(4,484)	(1,575)	(9,838)	(4,225)
Net income (loss) for the period	(3,998)	(3,787)	4,524	(5,239)

Revenue

During Q3 2008, a total of 12,412 ounces of gold were produced and sold from the Ezulwini Mine and MWS, at an average price of \$873 per ounce. Combined production during 2008 YTD totaled 25,956 ounces of gold, which were sold at an average price of \$742 per ounce.

Revenue during Q3 2008 and 2008 YTD as presented above was generated from the processing of MWS tailings material and sale of the related gold.

As the Ezulwini Mine is still in a ramp-up phase and has not yet achieved commercial levels of production, the revenue less cost of production from its mining operations of \$2.4 million has been capitalized against Mine infrastructure costs in Property, Plant and Equipment.

Operating loss

Operating loss includes the following:

- in Q3 2008, gold was produced at average Cash Costs of \$348 and \$674 per ounce at the Ezulwini Mine and MWS, respectively. The relatively high average cash costs at MWS can be attributed to the diminishing resources taken from the MWS No. 2 tailings dam, which necessitated a low-volume, high-cost mechanical load and placement operation.
- for Q3 2007 and 2007 YTD, employee compensation costs, consulting and professional fees were \$0.6 million and \$2.6 million, respectively

- higher general, consulting and administrative expenses in Q3 2008 and 2008 YTD primarily reflect the higher project development activities, the costs of corporate offices in Johannesburg and Toronto and other expenses of operating a public company, which were not applicable in Q3 2007 and 2007 YTD.
- the Q3 2008 stock-based compensation expense reflects the amortized cost of 1,223,001 stock options granted during FY 2007 and the amortized cost of 325,715 stock options granted during 2008 YTD
- during Q3 2008, pumping costs not capitalized at the Ezulwini Mine were included in expenditures until hoisting commenced at the end of October 2007. As of November 2007, pumping costs are included in the cost of production, which has been capitalized to Mine infrastructure costs in Property, Plant and Equipment

Non-operating income and expenses

Non-operating income and expenses for the periods reported included:

- interest income in Q3 2008 and 2008 YTD represents interest earned on the net proceeds from the Offering and the Debentures.
- interest expense in Q3 2008 and 2008 YTD consists of the interest paid on the Debentures.
- foreign exchange gains on translation in Q3 2008 and for 2008 YTD reflect the strengthening of the Canadian dollar and the South African Rand against the US dollar

Cash and Capital Expenditures

Cash and cash equivalents at the end of Q3 2008 were \$215.2 million as compared with \$154.6 million at the end of Q3 2007. The increase in cash was primarily attributable to the net proceeds of \$130.6 million received from the sale of the Debentures in May 2007, offset by \$28.0 million and \$76.4 million of cash utilized for capital expenditure at the Company's two mining operations during Q3 2008 and 2008 YTD, respectively.

The Company currently holds its funds in cash and bank-sponsored guaranteed investment certificates. It has no exposure to asset-backed commercial paper.

Production Overview

The build-up of production at the Ezulwini Mine during Q3 2008 resulted in the toll-treatment of 27,951 tonnes of ore at a yield of 5.6 grams of gold per tonne, producing 5,055 ounces of gold at a cash cost of \$348 per ounce. Production during the first two months of Q3 2008 was negatively influenced by the lower than planned grades, but this was more than offset in December, when Ezulwini's production exceeded the planned rate due to higher than expected grades. During Q3 2008, 247.5 metres were developed, bringing the total metres developed in the shaft pillar to 833 metres. Progressive grades encountered on the MA and MB raises in the shaft pillar to date were 5.09 and 5.81 grams of gold per tonne, respectively.

Stoping for de-stressing of the 41 level MB raise has resulted in an area of 712 square metres being mined at an in-situ stope grade of 4.74 grams per tonne. In the Middle Elsburg ("ME") uranium and gold section, stope production in the newly re-established 45 10B stope commenced in Q3 2008 and has resulted in an area of 1,059 square metres being mined at an in-situ stope grade of 25.78 grams of gold per tonne.

As of the end of December 2007, the clean-up process on surface and underground has generated a stockpile in excess of 124,000 tonnes containing an average grade of 1.1 grams per tonne of gold or approximately 2,800 ounces of recoverable gold, assuming an average recovery rate of 64%. This stockpile is expected to be utilized during mill commissioning, which is currently scheduled for April 2008.

At MWS, production activities during Q3 2008 were limited to hydraulic mining using high pressure water cannons to slurry the tailings, clean up and processing of material from the MWS No.2 tailings dam. As a result of the late commissioning of the production infrastructure at the Buffelsfontein No.2 tailings dam it was necessary to continue hydraulic mining MWS No. 2 tailings dam until December rather than October, as previously anticipated.

The project to construct the initial long-life pump station and 10.5-kilometre pipeline was initiated in June 2007 and, while it was delayed due to late delivery of slurry pumps and heavy rains that fell during October making construction difficult, these new production facilities were commissioned in mid-December.

As the resources in the MWS No.2 tailings dam neared exhaustion during Q3 2008, it was necessary to use mechanical loading and placement of the remnant material, in addition to hydraulic mining, which resulted in increased handling costs relative to a normal reclamation operation in addition to the reduced tonnages. As a result, only 770,436 tonnes of tailings (0.4 million tonnes in Q1 2008 and 1.2 million tonnes in Q2 2008) were reclaimed from the MWS No.2 tailings dam during Q3 2008.

The pump station and the pipeline between the Buffelsfontein property and the MWS gold plant were completed and commenced operation during December 2007 which enabled the Company to stop mining from the MWS No.2 tailings dam and to initiate the hydraulic mining of the Buffelsfontein No.2 tailings dam on the Buffelsfontein property. The material from the Buffelsfontein No.2 tailings dam is being transported via the pipeline to the MWS gold plant for processing. Full commissioning of the introduction of the material from Buffelsfontein No. 2 tailings dam to the plant is ongoing.

The high pressure pump train located at Buffelsfontein No.2 tailings dam is performing as designed, despite having a low utilization of 75% during the quarter. Once the second train of standby pumps is, the utilization is expected to increase to 95%, which will sustain production at or better than the planned rate of 20,800 tonnes per day. In the meantime, production rates have reached 20,000 tonnes per day.

During December, 61,772 tonnes of material from the Buffelsfontein No.2 tailings dam were processed through the MWS gold plant. The initial lower daily tonnages at the start of the hydraulic mining of the Buffelsfontein No.2 tailings dam were the result of vegetation restricting the flow of material to the pump station. By the end of December, the vegetation was sufficiently removed to allow the daily tonnages to exceed 17,000 tonnes per day.

To date, the achieved grade of 0.36 grams of gold per tonne mined from the Buffelsfontein No.2 tailings dam is in line with the resource estimates for the initial mining benches, although lower than the planned 0.40 grams of gold per tonne. The grade is expected to improve as the lower portion of the dam is mined resulting in higher grade material being treated.

Definitions

1. "Cash Costs" are costs directly related to the physical activities of producing gold, and include mining, processing and other plant costs, third-party refining and smelting costs, marketing expense, on-site general and administrative costs, royalties, in-mine drilling expenditures that are related to production and other direct costs. Sales of by-product metals are deducted from the above in computing cash costs. Cash costs exclude depreciation, depletion and amortization, corporate general and administrative expense, exploration, interest, and pre-feasibility costs and accruals for mine reclamation. Cash costs are calculated and presented using the "Gold Institute Production Cost Standard" applied consistently for all periods presented. Total cash costs per ounce is a non-GAAP measurement and investors are cautioned not to place undue reliance on it and are urged to read all GAAP accounting disclosures presented in the consolidated financial statements and accompanying footnotes.
2. First Uranium is currently focused on the rehabilitation and bringing into production of the Ezulwini underground uranium and gold mine (the "Ezulwini Mine") and the recovery of uranium and gold from the existing and future surface tailings at the Buffelsfontein mine through gold and uranium plants originally planned to be constructed near the tailings at the Buffelsfontein mine (the "Buffelsfontein Tailings Recovery Project"). In June 2007, the Company acquired Mine Waste Solutions (Proprietary) Limited ("MWS"), an existing tailings treatment company which had an operating gold recovery plant in place. As a result of the MWS purchase, First Uranium changed its plans for the Buffelsfontein Tailings Recovery Project so that the historical and future tailings from the Buffelsfontein mine (the "Buffelsfontein Tailings") will now be transported by pipeline to the MWS site and processed through MWS's existing gold plant and, subject to their completion, through the new uranium recovery plant and additional gold recovery facilities which are currently being constructed at the MWS site. For greater clarity, the Buffelsfontein Tailings Recovery Project, as enhanced and modified by the addition of MWS, will henceforth be referred to as MWS.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the availability of electrical power, the possible addition of owner-operated power generation, price of uranium and gold, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "goal", "objective", "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Company's expectations as at November 9, 2007; (ii) actual results may differ materially from the Company's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Company cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Company disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) consistent supply of sufficient power will be available to develop and operate the projects as planned; (ii) approvals to transfer or grant, as the case may be, mining rights will be obtained; (iii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iv) mineral resource estimates are accurate; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Company and their investment in the Company's common shares to a sufficient level to continue to support the Company's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini Mine, and the construction of the Mine Waste Solutions tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

First Uranium Corporation

CORPORATE COMMUNICATIONS

FIRST URANIUM CORPORATION

NEWS RELEASE – February 14, 2008

MANAGEMENT CHANGES TO POSITION FIRST URANIUM FOR FUTURE GROWTH

Toronto, Ontario and Johannesburg, South Africa – (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) First Uranium Corporation (“First Uranium” or “the Company”) today announced several management changes and new appointments that it believes will best allocate the experience and strengths of its management team and position the Company for future growth.

- Jim Fisher, moves to Executive Vice President, Corporate Development in the Company’s Toronto office from his current position as Chief Operating Officer
- Syd Caddy, joins the Company from Simmer and Jack Mines Limited as Executive Vice President and Chief Operating Officer, responsible for all of the Company’s operating and exploration activities
- Wouter de Vos joins the Company as General Manager of the Ezulwini Mine, an underground uranium and gold mine
- John Gould, joins the Company as Vice President Exploration and Business Development responsible for all of the Company’s exploration, technical services and growth projects and will report to Syd Caddy
- Scot Sobey, VP Business Development will continue to focus on the Company’s South African and global growth initiatives, working closely with Jim Fisher
- Barry Smit, joins the Company as Consulting Mining Engineer and will focus on the Company’s expansion project at the Ezulwini Mine

“It has always been part of First Uranium’s vision to grow production by pursuing acquisition and joint venture opportunities,” said Gordon Miller, President and CEO of First Uranium. “While there is still plenty of opportunity to grow the number and scope of our projects within southern Africa, some of the world’s best mines with the lowest operational risks have been developed in the Americas. This move puts Jim Fisher and all of his experience in the optimum locale to find those kinds of projects for our shareholders.”

Mr. Miller added, “We are fortunate to have quality individuals such as Syd Caddy, Wouter de Vos, John Gould and Barry Smit join the Company and lend their vast experience to our project development and future strategies.”

In a separate development, Chopper Van der Bijl, age 61, has retired from his position as General Manager, Ezulwini Mining Company. Of Mr. Van der Bijl, Gordon Miller said, "I am greatly indebted to his contributions to the building of the Ezulwini Mine as an operation of great substance. I am obviously disappointed to lose someone of Chopper's experience and abilities, but respect his decision to leave First Uranium at this point in his life." Wouter de Vos, will assume the role of General Manager of the Ezulwini Mine effective February 25, 2008.

About First Uranium Corporation

First Uranium is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine, and the construction of the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

This document may contain or refer to forward-looking information based on current expectations. Forward-looking statements are subject to significant risks and uncertainties, and other factors that could cause actual results to differ materially from expected results. These forward-looking statements are made as of the date hereof and we assume no responsibility to update or revise them to reflect new events or circumstances.

First Uranium management affected by recent changes:

Jim Fisher serves as First Uranium's Executive Vice President, Corporate Development and Chief Operating Officer and as a director of the First Uranium Board. Mr. Fisher has 28 years' experience in the Southern African mining industry, including nine years on the Zambian copper belt and the rest in South Africa. Since February 2006 Mr. Fisher held various senior positions within First Uranium, including serving as the Company's initial Chief Operating Officer until February 2008 and prior to that as Chief Executive Officer of FUSA. From September 2001 to February 2006, Mr. Fisher provided consulting services on a number of mining and other projects, including metallurgical consulting services to Simmer and Jack Mines Limited. From April 1999 to September 2001, Mr. Fisher served as the Business Manager for the PDWA JV where his duties encompassed strategy and organizational development, corporate and public relations as well as the definition of and implementation of the information technology and remuneration strategy. Mr. Fisher ran the Cooke uranium plant from 1987 to 1989 as well as the Western Areas North Shaft (now Ezulwini) from 1991 to 1994. Mr. Fisher is a Chartered Engineer, a fellow of The Institute of Materials, Minerals and Mining, a member of the South African Institute of Mining and Metallurgy, a member and past President of the Mine Metallurgical Managers Association of South Africa.

Syd Caddy serves as First Uranium's Executive Vice President and Chief Operating Officer. He has over 31 years' experience in the mining industry having managed his first mine at the age of 25 when he was appointed mine manager of Union Tin Mines. He was also instrumental in the start-up commissioning and running of Black Mountain Minerals for seven years. This was followed by a career on some of South Africa's best-known gold mines including general manager of Kloof Gold Mine where he oversaw the design and construction of the new Number 4 Shaft complex. Mr. Caddy also managed West Driefontein Gold Mine between 1992 and 1995, before joining JCI Limited in 1996 as consulting engineer responsible for management and control of HJ Joel Gold Mining Company, Western Areas, Randfontein Estates and Prestea Gold Mining Company. He served as Executive New Business for Simmer and Jack Mines Limited from October 2007 until March 2008. A Registered Professional Engineer with the Engineering Council of South Africa and a Fellow of the South African Institute of Mining and Metallurgy and the Australian Institute of Mining and Metallurgy, he is also Past President of the Association of Mine Managers of South Africa.

Wouter de Vos serves as General Manager at First Uranium's Ezulwini Mine. Mr. de Vos brings 30 years of mining experience to this position. From March 2006 to February 2008, Mr. de Vos was the General Manager of the Buffelsfontein Gold Mine owned and operated by Simmer and Jack Gold Mines. Previously he worked for consulting engineers and project managers Read, Swatman and Voigt (Pty) Ltd as Project Manager from 2005 to 2006 and as Construction Manager from 2002 to 2003. Mr. de Vos has held positions of increasing responsibility at several mining companies throughout his career including Messina Platinum Mines Limited (S.P.C.) from 2003 to 2005, Placer Dome Western Areas Joint Venture from 1989 to 2001; Consolidated Modderfontein Mine Ltd from 1988 to 1989; and Durban Roodepoort Deep Ltd from 1978 to 1988.

John Gould serves as First Uranium's Vice President, Exploration and Business Development. He has been involved in Witwatersrand-type and Bushveld-type mining operations in South Africa with experience in all aspects of mining including deep and shallow level gold mining operations (Venterspost, East Driefontein, Randfontein Estates, Joel Gold Mine, ERPM, Grootvlei Gold Mine, Harmony and Virginia Gold Mines) as well as experience in the platinum mines (Rustenburg Platinum Mines – Amandelbult Section). Mr. Gould held the positions of Mine Geologist through to Technical Services Manager (including geology, rock mechanics, ventilation, survey, mining, mine planning and sampling), Mine Manager, and Executive Member of local mining companies and until October 2007, Managing Director for a developing junior. He has been involved with Gold Fields of South Africa, Johannesburg Consolidated Investment Company, Harmony Gold Mine and finally Platinum Group Metals Limited. Until October 2007, John Gould headed up the South African operations for Platinum Group Metals and was

responsible for the development, market position and technical performance of the company. Mr. Gould has also played a leading role in the development and support of South Africa's Mineral Resources and Petroleum Development Act. He was invited to accompany the Honorable Minister Sonjica on her world tour to the major institutions throughout the USA, Canada, Europe and Britain.

Scot Sobey serves as First Uranium's Vice President, Business Development. Mr. Sobey's background lies in management consulting and project management, having spent 4 years with Gemini Consulting, followed by 2 years with PSP Icon. Mr. Sobey has developed extensive expertise in large-scale turnaround and transformation projects spanning the financial services, courier and freight, telecommunications, electricity and mining industries. From October 2005, Mr. Sobey jointly project managed (in conjunction with key leadership from Simmer and Jack Mines Limited) the start up of the Buffelsfontein Gold Mine formerly known as DRD Gold's North West Operations. Most recently, Mr Sobey formed an integral part of First Uranium's Offering team.

Barry Smit serves as First Uranium's Consulting Mining Engineer for the Corporation's Ezulwini Mine. He has 28 years of experience in the platinum, gold and construction industries, where he was responsible for design, construction, project management and operations. Mr. Smit is a mining engineer, with further studies in project management as well as in environmental and business risk management. He has led several technical forums for the mining industry at CSIR Miningtek, developing technical solutions for the South African mining industry.

First Uranium Corporation

NEWS RELEASE – April 21, 2008

FIRST URANIUM TO BUILD ACID PLANT TO SECURE FUTURE SUPPLY OF SULPHURIC ACID FOR ITS URANIUM PLANTS AT REDUCED COSTS

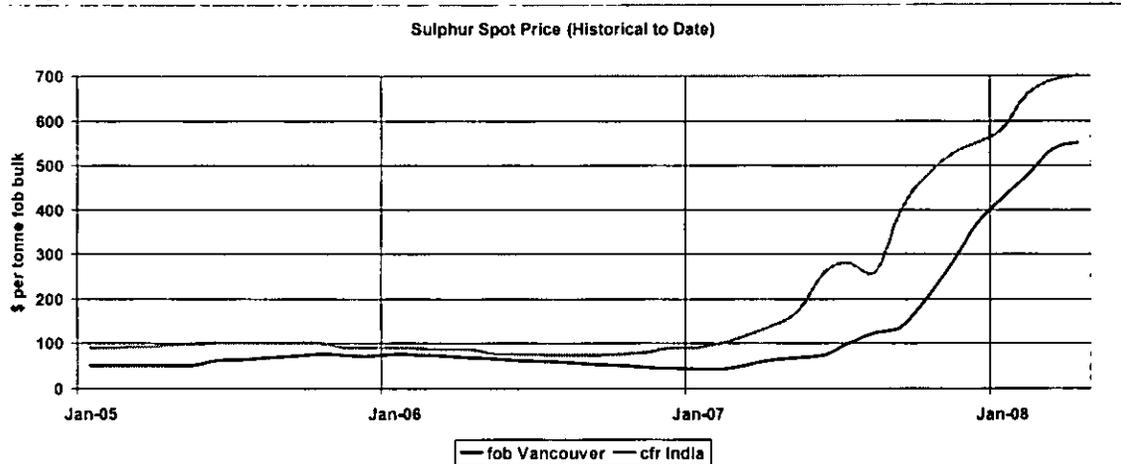

All amounts are in US dollars unless otherwise noted.

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) (“First Uranium” or “the Company”) today announced that, it will purchase and install an “off the shelf” acid plant to produce sulphuric acid to reduce the future costs and secure supply of acid required for its two uranium and gold mining projects in South Africa, the underground Ezulwini Mine (“Ezulwini”) and the Mine Waste Solutions tailings recovery project (“MWS”). At a projected cost of \$124 million, the acid plant will be installed at MWS, located in the Western portion of the Witwatersrand Basin approximately 160 kilometres South-West of Johannesburg. Based on an analysis of pyrite feed-stock potential from the MWS tailings dams, a preliminary technical assessment and a recent market analysis, the Company expects that it will take 19 months to procure and commission the acid plant with anticipated production beginning in January 2010. The company has secured its initial requirements for sulphuric acid in a market where acid supplies remain very tight. The company anticipates significant acid price increases that are expected to continue in the medium term, as acid prices are closely related to the market for sulphur which is also indicating tight supply and significant price increases.

RATIONALE

Reduced availability of electrical power in South Africa has caused cutbacks in the operation of smelters and other facilities that produce sulphuric acid as a byproduct. The reduced supply of acid, increases in the cost of elemental sulphur (which is used to produce acid) and increased demand for acid in the base metal sector and for fertilizer production have led to rapidly increasing global acid prices. The Company has assessed and confirmed the economic viability of constructing an acid plant to provide the required sulphuric acid for its operations to mitigate the effects of supply constraints and rapidly rising costs for acid.

Graph 1: SULPHUR SPOT PRICE COMPARISON

Notes for the Graph 1 and Tables 1 and 2:

- 1) 'fob' means "free on board" and indicates that the quoted price includes the cost of loading the goods into transport vessels at the specified location
- 2) 'cfr' means "cost and freight" and indicates that the cost of the goods and freight charges are included in the quoted price; while the buyer arranges for and pays insurance
- 3) as South Africa is a net importer of sulphur, local suppliers practice import parity pricing with industry recognized benchmark prices as shown

The long-term global outlook for the sulphuric acid ("H₂SO₄") market is based upon information from sulphur industry research and is primarily driven by the spot price for sulphur.

Table 1: INTERNATIONAL ACID PRICE FORECAST

	2008 \$/tonne	2009e \$/tonne	2010 – 2015e \$/tonne	2015-2020e \$/tonne
Tampa (cfr) consumer	250	175	80	80
Houston (fob)	260	175	80	80
Average H ₂ SO ₄ price	265	175	80	80

The forecast acid prices exclude the \$90 per tonne cost of transport from the South African port of entry to the Company's mining operations. Due to new uranium mining activity in this region, there is increasing local demand for sulphuric acid. This demand can only begin to normalize once additional acid plants have been commissioned.

Table 2: DELIVERED ACID PRICE FORECAST

Forecast	2008 \$/tonne	2009e \$/tonne	2010 – 2014e \$/tonne	2014-2020e \$/tonne
Average international H ₂ SO ₄ price -- fob Richards Bay, South Africa	260	175	80	80
Transport	90 ¹	90 ¹	90 ¹	15 ²
Total cost modeled	350	265	170	95

Notes:

- 1) Transport costs ex Richards Bay, South Africa
- 2) Assumes that enough local acid production will have started up by 2014 to reduce transport costs

Future price projections in South Africa, which indicate sulphuric acid costs ranging between US\$330 and US\$600 per tonne, have not taken into consideration acid demand at new mining projects, such as MWS, which will come on stream in the near term and approximately represent an additional 15% of current market acid supply.

Even assuming more conservative increases in acid costs, the Company expects that its investment of \$124 million in an acid plant, on its own, will have an internal rate of return ("IRR") of 6%, an NPV of \$28 million and a payback of 11 years. The low-cost acid produced by this plant will improve NPV at Ezulwini and MWS as sulphur will be sourced from current operations at no cost.

THE ACID PLANT BUSINESS MODEL

Once the acid plant is completed, the Company will direct all of the pyrite currently produced as waste at the MWS tailings plant to the acid plant for the production of sulphuric acid, which will eliminate the need to source acid from third-party vendors. Since the planned production of the acid would be more than sufficient to supply both Ezulwini's and MWS's projected acid requirements, excess acid could be sold into the market at the then prevailing market rates. In addition, as the production of acid in the plant will be an exothermic reaction, there is the opportunity to generate a by-product of approximately four megawatts of power, which will be available to augment the power supply to Ezulwini and MWS.

"We are in a fortunate position to have access to pyrite which is currently being discarded as a waste product after we have removed the gold from the pyrite flotation concentrate at MWS," added Gordon Miller, President and CEO of First Uranium. "While we believe that we have dealt with the current electrical power supply issues in a satisfactory way, it is but one of the important issues facing mining companies today. Consistent and reasonably priced acid supply is a fundamental requirement for our operations and the decision to build an acid plant will not only secure supply and protect us from rampant acid price inflation, it will also assist with future power requirements,"

ACID PLANT

The technical parameters used for this economic assessment are based upon test work and a preliminary assessment that has been conducted by MDM Engineering (Pty) Ltd during the past five months. The specification and procurement study is expected to be concluded within eight weeks. Of potential benefit to the installation of an acid plant is the fact that Simmer & Jack Mines, Limited, First Uranium's parent company, holds an existing license to produce acid at their Buffelsfontein Gold Mine under their Old Order Mining Right, which is in the process of being converted to a New Order Mining Right.

Table 3: PROJECT SPECIFICATIONS AND ECONOMICS FOR A 600 TONNE-PER-DAY ACID PLANT

Description	Amount	Unit
Tonnes of sulphur required per month	6,200	tonnes per month
Tonnes of tailings concentrate (pyrite) required per month	24,000	tonnes per month
Tonnes of acid produced per month	18,000	tonnes per month
Total capital	124	\$ millions
Total capital cost per total tonne of acid produced	31	\$/tonne
Operating cost of acid plant per tonne of acid produced	14	\$/tonne
Revenue per tonne of acid charged to Ezulwini and MWS	51	\$/tonne
IRR	6%	%
Long-term acid market price assumed for acid plant economics	95	\$/tonne
Payback	11	years
NPV	28	\$ millions

A standard plant with a sulphuric acid capacity of 600 tonnes per day has been chosen as the preferred size specification, which is more than sufficient to meet the Company's planned acid requirements. In addition, the plant would have the flexibility to adjust the process to achieve the desired sulphuric acid production regardless of the pyrite content in the tailings, which will allow the Company to fulfill its sulphuric acid requirements despite variances in the pyrite content from one tailings dam to the next.

The Company expects there to be a healthy market into which it should be able to sell any excess acid production.

Based on the current price projections for sulphuric acid, the Company expects the acid plant to operate at an incremental cost of approximately \$14 per tonne of acid, which will be reduced by credits received for the plant's by-product of electrical power discussed on page 3. The financial impact of the acid plant has been factored in the cash flow analysis below.

BENEFIT TO THE COMPANY'S MWS AND EZULWINI PROJECTS

The incremental benefits to the Company's MWS and Ezulwini projects are tabled below and also reflect the required investment in electrical power generation (announced in a separate release dated April 18, 2008), the rising costs of Eskom-supplied power in future years, the construction of an acid plant, the Company's current assumptions for the projects prices of uranium and gold and the projected currency exchange rate of the South African rand and the US dollar.

Table 4: ACID PRICES AT MWS

Description	MWS			
	November 2007 ¹	April 2008 Power & Own Acid	April 2008 Acid Exposed Conservative case	April 2008 Acid Market Downside case
Average H ₂ SO ₄ price (\$/tonne)	60	73.4 ²	114.6 ³	168.3 ⁴
Operating cost (\$/tonne)	2.5	2.9	3.2	3.4
NPV (\$ millions)	505	419	375	347

Notes:

- 1) The source of the November 2007 data was the 'Technical Report on the Pre-Feasibility of the Buffelsfontein Tailings Recovery Project, located at Stilfontein, North West Province, South Africa'
- 2) H₂SO₄ : Yr1 \$266 / tonne; Yr2 \$266 / tonne; Yr3 and beyond \$34.2 / tonne
- 3) H₂SO₄ : Yr1 \$266 / tonne; Yr2 \$266 / tonne; Yr3 –Yr6 \$170 / tonne ; Yr6 and beyond \$95 / tonne
- 4) H₂SO₄ : Yr1 \$266 / tonne; Yr2 \$266 / tonne; Yr3 and beyond \$200 / tonne
- 5) Average life of mine rate to exchange Rand to US dollars = 7.53
- 6) Average acid input cost of total operating cost for MWS = 23%
- 7) Average H₂SO₄ costs are a blend of the cost of contracted acid supply and the cost of the planned acid plant

Table 5: ACID PRICES AT EZULWINI

Description	EZULWINI MINE			
	May 2007 ¹	April 2008 Power & Own Acid	April 2008 Acid Exposed Conservative case	April 2008 Acid Market Downside case
Average H ₂ SO ₄ price (\$/tonne)	60	105 ²	168 ³	240.5 ⁴
Operating cost (\$/tonne)	55.6	73.35	74.3	75.4
NPV (\$ millions)	332	667	655	643

Notes :

- 1) The source of the May 2007 data was the 'Technical Report on the Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa'
- 2) H₂SO₄ : Yr1 \$565 / tonne; Yr2 \$565 / tonne; Yr3 and beyond \$47.5 / tonne
- 3) H₂SO₄ : Yr1 \$565 / tonne; Yr2 \$565 / tonne; Yr3 –Yr6 \$ 170 / tonne ; Yr6 and beyond \$95 / tonne
- 4) H₂SO₄ : Yr1 \$565 / tonne; Yr2 \$565 / tonne; Yr3 and beyond \$200 / tonne
- 5) Average life of mine rate to exchange Rand to US dollars = 7.53
- 6) Average acid input cost of total operating cost for Ezulwini = 2.5%
- 7) Average H₂SO₄ costs are a blend of the cost of contracted acid supply and the cost of the planned acid plant

Table 6: ACID PLANT ECONOMIC ASSUMPTIONS AND VALUATION

ECONOMIC ASSUMPTIONS	Unit	Mar 2011	Mar 2012	Mar 2013	Mar 2014	Beyond Mar 2014
Currency exchange rate	(ZAR/\$US)	7.50	7.45	7.57	7.57	7.57
Sulphuric acid price (Market Outlook)	\$/tonne	170	170	170	170	95
Sulphuric acid price (Market High Case)	\$/tonne	200	200	200	200	200
PRELIMINARY ASSESSMENT VALUATION				Unit	Market Outlook	Market High Case
NPV				\$ millions	28	75
IRR				%	6%	13%

"We decided, with the full support of our Board, that, given our uranium price, gold price and exchange rate assumptions, our Ezulwini Mine and Mine Waste Solutions were robust enough projects to support our decision to supply our own electrical power generating capacity and invest in the business of producing sulphuric acid," added Mr. Miller. "Our analysis of our peak funding requirements, taking into account the construction of new acid and power plants suggests that we would be required to draw down on a credit facility, on a short-term basis, from April 2009, until sales of gold and uranium increase to completely offset our capital needs. With gold prices at or above \$900 per ounce, revenue from our near- to medium-term gold production may mitigate any needs to raise any other forms of capital."

Technical Disclosure

Historical technical disclosure in this new release relating to the Mine Waste Solutions tailings recovery project ("MWS" and formerly named the Buffelsfontein tailings recovery project) was extracted from a technical report entitled "Technical Report – Pre-Feasibility of the Buffelsfontein Tailings Recovery Project, located in Stilfontein, North West Province, Republic of South Africa" submitted on November 1, 2007, and was prepared by Daan van Heerden, B.Sc., M.Comm., Charles Muller, B.Sc, Pr.Sci.Nat, and Johan Odendaal, B.Sc., M.Sc., Pr.Sci.Nat all of Minxcon Pty Ltd. ("Minxcon"), Treavor Pearton, B.Sc Eng PhD, FGSA and Mike Valenta, Pr Eng, B.Sc., of Metallicon Process Consulting (Pty) Ltd. ("Metallicon") each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium.

Historical technical information in this news release relating to the Ezulwini Mine is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa" originally submitted on November 8, 2006, revised on December 5, 2006, January 31, 2007 and May 9, 2007 prepared in accordance with NI 43-101 by R. Dennis Bergen, P.Eng and Wayne Valliant P.Geo of Scott Wilson Roscoe Postle Associates Inc. ("Scott Wilson RPA") each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium.

The disclosure contained in this news release relevant to their respective contributions to Ezulwini, MWS and the acid plant has been reviewed and approved by Messrs. Bergen, van Heerden, Muller, Odendaal, Pearton, Valliant and Valenta.

The economic analysis contained in this news release is contained in the above technical reports and is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no

certainty that the reserves development, production and economic forecasts on which the preliminary assessment contained in the technical reports is based, will be realized.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the availability of electrical power, the planned addition of owner-operated power generation, price of electrical power and sulphuric acid, the estimation of mineral resources and reserves, the realization of estimated pyrite content in the MWS tailings dams, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, availability of financing on acceptable terms, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "goal", "objective", "plans", "expects" or "does not expect", "is expected", "projected", "assumed", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, availability of equipment, materials and fuel, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold, to price of electrical power and sulphuric acid. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Company's expectations as of the date of this news release; (ii) actual results may differ materially from the Company's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Company cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Company disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) consistent supply of sufficient power will be available to develop and operate the projects as planned; (ii) approvals to transfer or grant, as the case may be, mining rights will be obtained; (iii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iv) mineral resource estimates are accurate; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Company and their investment in the Company's common shares to a sufficient level to continue to support the Company's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

Conference Call

First Uranium will conduct a conference call with investors to discuss the information in this news release at 10:00 a.m. local Toronto time and 4:00 p.m. local Johannesburg time on Monday, April 21, 2007. The conference call will be available simultaneously to all interested investors and news media.

Callers may dial 1 800 319-4610 (Canada and the US) or 0800 200 648 (South Africa). Callers from other international locations may call +1 604 638-5340 (Canada) or +27 11 535 3600 (South Africa). The call will be webcast at <http://services.choruscall.com/links/firsturanium080421.html> and an archive will be available through the same link shortly after the live event for 90 days.

A replay of the conference call will be available for 30 days. To access the replay, callers may dial 1 800 319-6413 (Canada and the US). Callers from other international locations may access the replay by dialing +27 11 305 2030 (South Africa) or +1 604 638-9010 (Canada). Access to the replay will require the code 2128, followed by #.

About First Uranium Corporation

First Uranium Corporation (TSX:FIU, JSE:FUM) is focused on the development of its South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and underground development of the Ezulwini Mine and the expansion of the Mine Waste Solutions tailings recovery facility. First Uranium also plans to grow production by pursuing value-enhancing acquisition and joint venture opportunities in South Africa and elsewhere.

FIRST URANIUM CORPORATION

NEWS RELEASE – April 21, 2008

FIRST URANIUM TO MEET FUTURE PRODUCTION GROWTH PLANS AT ITS SOUTH AFRICAN OPERATIONS BY INSTALLING POWER PLANTS AND A SULPHURIC ACID PLANT

All amounts are in US dollars unless otherwise noted.

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) (“First Uranium” or “the Company”) today confirmed its decision, previously announced on February 13, 2008, to generate a portion of its future electrical power requirements at its underground Ezulwini Mine (“Ezulwini”) and the Mine Waste Solutions tailings recovery project (“MWS”) in South Africa. While these arrangements to generate additional power to supplement that supplied by South Africa’s national power utility, Eskom, will increase the projected capital and operating costs of the Company’s two operations, this investment in power is justified by securing supply of electrical power and it will have been more than offset by the increased realized price for gold and the decline in the value of the South African rand against the US dollar.

Taking into consideration the capital and operating costs of generating additional power, revised acid price assumptions and a revaluation of metal price and exchange rate assumptions (each of which is described in further detail in this news release), the revised net present value (“NPV” at an 8% discount rate) is expected to be \$667 million for Ezulwini and \$420 million for MWS and the internal rates of return (“IRR”) for the projects are expected to be 336% for Ezulwini and 75% for MWS.

In a separate news release, also dated April 18, 2008, the Company announced that it will establish a separate business unit to build and operate an acid plant to supply sulphuric acid to Ezulwini and MWS.

RATIONALE FOR THE COMPANY TO GENERATE ITS OWN POWER

The Company conducted a study assessing the economic viability of First Uranium generating its own power at Ezulwini and MWS for the next five years, as a result of the significantly reduced supply of electrical power currently available in South Africa and Eskom’s concerns about its ability to supply power to the country’s mining industry in the short and medium term. On January 24, 2008, Eskom communicated to the mining industry that the utility could not

guarantee power availability and asked the industry to operate at electrical power levels below historical load requirements until 2012 (the "Power Situation"). While Eskom has announced plans to increase the supply of power incrementally in the years leading up to 2012, Eskom also reports that full power availability cannot be guaranteed until then.

At both Ezulwini and MWS, based on the positive economic results of each study, the Company plans to initially lease diesel generators for a term of up to five years. In addition, the Company plans to purchase and install 30 megawatts ("MW") of electrical power generating capacity at a cost of approximately \$20 million. The Company expects to power its generators using a combination of diesel fuel and heavy fuel oil for approximately five years and to recover approximately 50% of its investment by selling the power generators when they are no longer needed.

"First Uranium is determined to start up its uranium recovery plants at its Ezulwini Mine and MWS on schedule," said Gordon Miller, President and CEO of First Uranium. "We have adjusted our uses and sources of electrical power to enable us to fulfill our production commitments to our investors. We do not intend to let the Power Situation nor the ongoing increases in the cost of sulphur and sulphuric acid threaten our business or use them as an excuse to miss our project milestones. Given that we are mining uranium and gold at both projects we are confident that the project economics are robust enough, assuming our forecast metal prices, to allow us to overcome the electrical power shortages and rapidly increasing acid prices that are prevalent in South Africa."

IMPACT ASSESSMENT BY PROJECT

Based on the positive results of the studies of the impact of generating power and the impact of building and operating the acid plant, the Company, with the full support of its Board, will proceed with the full development of its two projects and acid plant as follows:

For the Ezulwini Mine:

- given the uncertainty of power supply, since January 24 2008, at a third-party gold plant to toll-treat the Company's ore, the Company reduced mine development and hoisting ore to surface during February and March, 2008, and focused on shaft refurbishment until the operation's gold plant commences commissioning at the end of April 2008, when mine development and hoisting ore are expected to resume at planned rates
- the Company expects to recover any interim production shortfalls arising from the reduction of mine development as the processing plant has available milling capacity to accommodate additional throughput for the next 12 months
- the first 50,000 tonne per month module of the gold plant remains on schedule for commissioning commencing in April 2008 using Eskom power (as available) augmented by existing installed diesel generator capacity if necessary
- the first 50,000 tonne per month module of the uranium plant remains on schedule for commissioning commencing in June 2008 using the Company's new power generation capacity. Current mine production from the gold section and uranium section will be stockpiled separately on surface in the interim

- the Company does not expect any material adjustment to previously reported production forecasts
- full operation of Ezulwini is expected to require a maximum demand of 56 MW of power, of which Eskom has amended its committed supply to 32 MW, requiring the Company to generate 24 MW, 10 MW more than its existing generator capacity of 14 MW
- prior to the Power Situation, electrical power costs were expected to represent about 9% of the operating costs. The impact of additional operating costs for power generation are estimated to be an additional \$3.59 (a 12% overall increase) per pound for uranium and an additional \$35.50 (an 8% overall increase) per ounce for gold over the five-year period of self power generation.

Expected costs to generate additional power over the life of the mine at Ezulwini subsequent to the Power Situation and to purchase Eskom power at higher rates are listed in the table below and are expected to result in average annual operating costs, on a co-product basis, of \$0.86 per pound for uranium and \$8.62 per ounce for gold.

Table 1: Operating Cost Impact of Electrical Power at the Ezulwini Mine

Fiscal year ending March 31	Additional operating cost (\$ millions)	Additional unit cost (\$ per tonne)	Additional power cost as a % of operating costs
2009	8.6	14.24	20%
2010	18.3	12.51	21%
2011	16.8	8.53	17%
2012	8.80	4.00	11%
2013	5.89	2.67	10%
Life of mine	58.35	1.19	18%

For MWS:

- the current MWS operation remains unaffected by the Power Situation as it is drawing additional power from Buffelsfontein Gold Mines Limited ("BGM")
- upgrading of the MWS gold plant to increase the design capacity to 633,000 tonnes per month was completed on schedule
- although announced on February 13 that a three-month delay was expected to complete a feasibility study for the additional power requirements, the Company now expects to start commissioning the second gold plant module and the first two modules of the uranium plant in December 2008
- the construction schedule for the third modules of its gold and uranium plants will be completed by December 2009
- full operation of MWS is expected to require a maximum demand of 43 MW of power by February 2010, of which Eskom has committed to supply 29 MW by this date, requiring the Company to generate 14 MW
- prior to the Power Situation, electrical power costs were expected to represent about 9% of the operating costs. The impact of additional operating costs for power generation are estimated to be an additional \$2.49 (a 10% overall increase) per pound for uranium and an additional \$44.70 (a 13% overall increase) per ounce for gold over the five-year period of self power generation.

Expected costs to generate additional power over the life of the mine at MWS subsequent to the Power Situation and to purchase Eskom power at higher rates are listed in the table below and are expected to result in average annual

operating costs, on a co-product basis, of \$1.04 per pound for uranium and \$17.00 per ounce for gold.

Table 2: Operating Cost Impact of Electrical Power at MWS

Fiscal year ending March 31	Additional operating cost (\$ millions)	Additional unit cost (\$ per tonne)	Additional power cost as a % of operating costs
2009	3.41	0.98	11%
2010	18.58	1.06	23%
2011	22.13	0.95	21%
2012	6.28	0.27	8%
2013	0.45	0.02	1%
Life of mine	50.89	0.56	13%

Technical reports for both projects are expected to be completed by June 2, 2008.

ECONOMIC AND COMMODITY PRICE ASSUMPTIONS

To assess the financial impact of the costs of generating additional power and revised cost of sulphuric acid, the following tables show the Company's commodity price assumptions for May 2007 (the date of the previous technical report for Ezulwini), November 2007 (the date of the previous technical report for MWS and April 2008 (the most recent survey of assumptions). The November 2007 and April 2008 assumptions are based on an average nominal consensus forecast from the investment research analysts at 13 North American-based brokerage firms, adjusted downward by the US inflation rate for the period covering the construction of the projects.

Table 3: NOVEMBER 2007 ECONOMIC AND COMMODITY PRICE ASSUMPTIONS

	Unit	Mar 2009	Mar 2010	Mar 2011	Mar 2012	Beyond Mar 2012
Gold price	\$/ounce	737	734	683	627	635
Uranium price	\$/pound	104	104	91	78	45
Currency exchange rate	ZAR/\$US	7.40	7.40	7.40	7.40	7.40
Market sulphuric acid price (incl. transport)	\$/tonne	60	60	60	60	60
Project sulphuric acid price (MWS)	\$/tonne	60	60	60	60	60
Project sulphuric acid price (Ezulwini)	\$/tonne	60	60	60	60	60

Table 4: APRIL 2008 ECONOMIC AND COMMODITY PRICE ASSUMPTIONS

	Unit	Mar 2009	Mar 2010	Mar 2011	Mar 2012	Beyond Mar 2012
Gold price	(\$/oz.)	890	907	874	797	711
Uranium price	(\$/lb.)	96	92	79	75	50
Currency exchange rate	(ZAR/\$US)	7.27	7.36	7.50	7.45	7.57
Market sulphuric acid price (incl. transport)	\$/tonne	350	265	170	95	95
Project sulphuric acid price (MWS)	\$/tonne	266	266	34.2	34.2	34.2
Project sulphuric acid price (Ezulwini)	\$/tonne	565	565	47.5	47.5	47.5

REVISED PROJECT ECONOMICS

The following tables summarize the impact of the power supply and acid cost changes at Ezulwini and MWS. More details of the project economics from the financial models upon which the information in Tables 5 and 6 are based, will be posted to the Company's web site (www.firsturanium.com) in due course.

Table 5: REVISED PROJECT ECONOMICS FOR THE EZULWINI MINE

	From May 2007 technical report	April 2008 with May 2007 assumptions	April 2008 with April 2008 assumptions
Uranium price (\$ per pound)	50	50	see April 2008 assumptions
Gold price (\$ per ounce)	500	500	See April 2008 assumptions
Electrical power required	56MW	56MW	56MW
Eskom commitment	80MW	32MW	32MW
Self-generated power	-	24MW	24MW
Life-of-mine average co-product operating costs			
Operating cost per tonne milled (\$/tonne)	56.87	71.82	71.82
Uranium cash cost (\$/pound)	29	41	33
Gold cash cost (\$/ounce)	297	385	376
Capital expenditures	\$271 million	\$220 million	\$220 million
Average annual life-of-mine production			
Uranium (pounds)	888,000	951,000	951,000
Gold (ounces)	290,000	306,000	306,000
Production milestones			
Gold plant commissioning commences	April 2008	April 2008	April 2008
1 st 50,000 tpm mill	April 2008	April 2008	April 2008
Uranium plant commissioning commences	June 2008	June 2008	June 2008
2 nd 50,000 tpm mill	Sep 2008	Sep 2008	Sep 2008
3 rd 50,000 tpm mill	Jan 2009	Jan 2009	Jan 2009
4 th 50,000 tpm mill	Jan 2009	Jan 2009	Jan 2009
NPV ₈	\$332 million	\$191 million	\$667 million
IRR	32%	34%	336%

Notes:

1. The assumed exchange rate for South African rand for all dates in the table above is as shown in the table above.
2. Co-product costs assume that operating cash costs are split in proportion to the revenue earned from each product.
3. NPV is calculated using a nominal discount rate of 8%

Table 6: REVISED PROJECT ECONOMICS FOR MWS

	From November 2007 Technical Report	April 2008 with November 2007 assumptions	April 2008 with April 2008 assumptions
Uranium price (\$ per pound)	see November 2007 assumptions	see November 2007 assumptions	see April 2008 assumptions
Gold price (\$ per ounce)	See November 2007 assumptions	See November 2007 assumptions	See April 2008 assumptions
Electrical power required	43 MW	43 MW	43 MW
Eskom commitment	43 MW	29 MW	29 MW
Self-generated power	-	14 MW	14 MW
Life-of-mine average co-product operating costs			
Gold operating cost per tonne reclaimed (\$/tonne)	1.93	2.16	2.12
Uranium operating cost per concentrate tonne (\$/tonne)	8.09	10.00	9.82
Uranium cash cost (\$/pound)	24	22	22
Gold cash cost (\$/ounce)	264	353	347
Capital expenditures	\$260 million	\$264 million	\$241 million
Average annual life-of-mine production			
Uranium (pounds)	1,339,000	1,317,000	1,317,000
Gold (ounces)	126,000	130,000	130,000
Production milestones			
1 st module of gold plant	June 2007	June 2007	June 2007
2 nd module of gold plant	Nov. 2008	Dec. 2008	Dec. 2008
3 rd module of gold plant	Nov. 2009	Dec. 2009	Dec. 2009
1 st module of uranium plant	Nov. 2008	Dec. 2008	Dec. 2008
2 nd module of uranium plant	Nov. 2008	Dec. 2008	Dec. 2008
3 rd module of uranium plant	Nov. 2009	Dec. 2009	Dec. 2009
NPV ₈	\$505 million	\$133 million	\$419 million
IRR	151%	22%	75%

Notes:

1. This table differs from the November 2007 model in that the Company's fiscal year 2008, which ended on March 31, 2008, has not been considered in the above calculations.
2. The assumed exchange rate for South African rand for all dates in the table above is as shown in the table above.
3. Co-product costs assume that operating cash costs are split in proportion to the revenue earned from each product.
4. NPV is calculated using a real discount rate of 8%
5. The first gold plant module became operational with the acquisition of the Chemwes gold plant in June 2007.

“With Eskom being unable to meet the power demands of the country, we knew that we had no choice but to generate our own power,” said Mr. Miller. “The real task was to find a way to minimize the upfront capital costs of acquiring this additional power generating capacity. We were able to do that and also design power-savings solutions into the plant construction that would reduce the dependence on self-generated power. Fortunately, the rising price for the gold we are producing is expected to more than offset the additional costs of our own power generation. Rapidly increasing prices of sulphur have also had a very positive impact on the economic assessment of our large

above ground source of sulphur which is contained in pyrite in the tailings dams at MWS.”

Technical Disclosure

All technical disclosure in this news release relating to the Mine Waste Solutions tailings recovery project (“MWS” and formerly named the Buffelsfontein tailings recovery project) has been prepared in accordance with National Instrument 43-101 (“NI 43-101”) by Daan van Heerden, B.Sc., M.Comm., Charles Muller, B.Sc, Pr.Sci.Nat, and Johan Odendaal, B.Sc., M.Sc., Pr.Sci.Nat all of Minxcon Pty Ltd. (“Minxcon”), Treavor Pearton, B.Sc Eng PhD, FGSA and Mike Valenta, Pr Eng, B.Sc., of Metallicon Process Consulting (Pty) Ltd. (“Metallicon”) each of whom is a “qualified person” under NI 43-101 and is independent of First Uranium.

Historical technical disclosure in this new release relating to MWS is extracted from a technical report entitled “Technical Report – Pre-Feasibility of the Buffelsfontein Tailings Recovery Project, located in Stilfontein, North West Province, Republic of South Africa” submitted on November 1, 2007, and prepared by Messrs. van Heerden, Muller, Odendaal, Pearton and Valenta. The disclosure contained in this news release relevant to their respective contributions has been reviewed and approved by Messrs. van Heerden, Muller, Odendaal, Pearton and Valenta.

All technical disclosure in this news release relating to the Ezulwini Mine has been prepared in accordance with NI 43-101 by R. Dennis Bergen, P.Eng and Wayne Valliant P.Geo of Scott Wilson Roscoe Postle Associates Inc. (“Scott Wilson RPA”) each of whom is a “qualified person” under NI 43-101 and is independent of First Uranium.

Historical technical information in this news release relating to the Ezulwini Mine is extracted from a technical report entitled “Technical Report - Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa” originally submitted on November 8, 2006, revised on December 5, 2006, January 31, 2007 and May 9, 2007 prepared in accordance with NI 43-101 by Messrs. Bergen and Valliant, who have also reviewed and approved the disclosure in this news release.

The economic analysis contained in this news release is contained in the above technical reports and is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserves development, production and economic forecasts on which the preliminary assessment contained in the technical reports is based, will be realized.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the availability of electrical power, the planned addition of owner-operated power generation, price of uranium and gold, price of electrical power and sulphuric acid, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, availability of financing on acceptable terms, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as “goal”, “objective”, “plans”, “expects” or “does not expect”, “is expected”, “projected”, “assumed”, “budget”, “scheduled”, “estimates”, “forecasts”, “intends”, “anticipates”, or “does not anticipate”, or “believes” or variations of such words and phrases, or state that certain actions, events or results “may”, “could”, “would”, “might” or “will” be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current

exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, availability of equipment, materials and fuel, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold, to price of electrical power and sulphuric acid. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Company's expectations as of the date of this news release; (ii) actual results may differ materially from the Company's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Company cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Company disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) consistent supply of sufficient power will be available to develop and operate the projects as planned; (ii) approvals to transfer or grant, as the case may be, mining rights will be obtained; (iii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iv) mineral resource estimates are accurate; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Company and their investment in the Company's common shares to a sufficient level to continue to support the Company's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

Conference Call

First Uranium will conduct a conference call with investors to discuss the information in this news release at 10:00 a.m. local Toronto time and 4:00 p.m. local Johannesburg time on Monday, April 21, 2007. The conference call will be available simultaneously to all interested investors and news media.

Callers may dial 1 800 319-4610 (Canada and the US) or 0800 200 648 (South Africa). Callers from other international locations may call +1 604 638-5340 (Canada) or +27 11 535 3600 (South Africa). The call will be webcast at <http://services.choruscall.com/links/firsturanium080421.html> and an archive will be available through the same link shortly after the live event for 90 days.

A replay of the conference call will be available for 30 days. To access the replay, callers may dial 1 800 319-6413 (Canada and the US). Callers from other international locations may access the replay by dialing +27 11 305 2030 (South Africa) or +1 604 638-9010 (Canada). Access to the replay will require the code 2128, followed by #.

About First Uranium Corporation

First Uranium Corporation (TSX:FIU, JSE:FUM) is focused on the development of its South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and underground development of the Ezulwini Mine and the expansion of the Mine Waste

Solutions tailings recovery facility. First Uranium also plans to grow production by pursuing value-enhancing acquisition and joint venture opportunities in South Africa and elsewhere.

First Uranium Corporation

NEWS RELEASE – May 21, 2008

FIRST URANIUM PROVIDES PRODUCTION AND PROJECT DEVELOPMENT UPDATE FOR QUARTER ENDED MARCH 31, 2008

All amounts are in US dollars unless otherwise noted.

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) (“First Uranium” or “the Company”) today announced its production results for the fiscal quarter ended March 31, 2008 (“Q4 2008”), during which the Company processed 1,592,242 tonnes of reclaimed tailings at its Mine Waste Solutions tailings recovery project (“MWS”) and 18,669 tonnes of underground gold ore from its Ezulwini Mine (“Ezulwini”) through a toll treatment arrangement. Gold production totaled 9,725 ounces for the period. Subsequent to March 31, 2008, the Company commenced production of uranium and gold ore at Ezulwini, which is currently being stockpiled on surface. The Company’s uranium plants are on schedule to begin to be commissioned in June 2008 at Ezulwini and in December 2008 at MWS.

In mid-June 2008 First Uranium expects to announce its annual audited financial results for the year ended March 31, 2008

Highlights for Q4 2008

Mine Waste Solutions tailings recovery project (“MWS”)

- gold plant feed capacity upgraded from 6.0 to 7.6 million tonnes of processing per annum (“MTPA”)
- approximately 1.6 million tonnes of tailings were processed, producing 7,030 ounces of gold
- first 7.8 MTPA pump station completed at Buffelsfontein tailings dam complex
- commissioning of gold plant upgrades and a new mining and processing system scheduled for completion in July 2008
- 30-megawatt power plant for expansion sourced
- preliminary assessment for construction of a Company-owned sulphuric acid plant was completed, with completion of a specification and procurement study scheduled for July 2008

- construction of new 7.8 MTPA uranium and pyrite flotation plant on track to commence commissioning during December 2008 (part of "Phase 1B" of the MWS project)
- construction of new 7.8 MTPA gold plant and 1.5 MTPA uranium plant on track to commence commissioning during December 2008 (also part of "Phase 1B" of the MWS project)

Ezulwini Mine ("Ezulwini")

- toll treated 18,669 tonnes of underground ore to produce 2,695 ounces of gold
- the third party toll treating gold ore from Ezulwini suspended this operation due to the power shortage and, as a result, the Company postponed the ramp-up of the underground development and accelerated the shaft refurbishment program
- underground development and hoisting of ore started again in April and uranium and gold ore is being stockpiled on surface
- 2.4 MTPA gold plant commissioning commenced during April 2008 (3 months earlier than anticipated at the time of the Company's initial public offering in December 2006) and on schedule for production of gold on carbon in June and gold bullion in July 2008
- first of four 0.6 MTPA mills is being commissioned, with the second mill due to commence commissioning in September 2008
- underground stope availability is on schedule in the Middle Elsburg (uranium and gold) section but somewhat behind schedule in the Upper Elsburg (gold) section, which is not expected to affect the planned production profile
- standby diesel generated power connected into new plant
- 1.2 MTPA uranium plant construction on track to commence commissioning in July 2008 for uranium concentrate (yellow cake, ammonium diuranate, or "ADU") production in August 2008

Affecting both projects, First Uranium also disclosed the results of updated technical reports on April 21, 2008 which detail the Company's proactive approach to reducing future operating costs and securing sufficient power and sulphuric acid to run its operations as planned. Summary cash flow models related to these technical reports have been posted to the Company's website (www.firsturanium.com) and provide revised estimates for production, capital and operating costs. The full technical reports are scheduled to be filed on SEDAR and posted to the website by early June.

Mine Waste Solutions

Buffelsfontein No. 2 Dam Commissioning

Commissioning of the gold plant expansion from 6 MTPA to 7.6 MTPA and the installation of the pumping system to bring tailings from the Buffelsfontein dam complex has progressed on schedule and within budget.

As expected, the transition of mining from the Stilfontein dam complex to the Buffelsfontein dam complex has resulted in a reduction in unit cash costs for gold production and it is expected that planned life of project unit costs will be achieved when final commissioning is completed by mid-2008.

Results from the mining of Buffelsfontein No. 2 Dam to date have confirmed the mineral resource estimates for gold and uranium, as well as the estimated sulphur content. Minor modifications to the hydraulic mining system to improve throughput and to the carbon-in-leach ("CIL") plant flow sheet to improve recovery are being implemented and are expected to be completed in July 2008; after which the commissioning of the first phase of the transition to the Buffelsfontein complex of dams should be complete. These modifications include:

- installation of a slime re-pulping system to break up clay lumps and improve hydraulic mining rates to 1.9 million tonnes per quarter and to stabilize pulp densities pumped to the plant
- completion of the current work to re-route flotation tailings from the tailings disposal line to the CIL gold circuit to reduce float tails grades and increase overall gold recovery rates to expected levels
- installation of high shear oxygen reactors to improve gold recovery grades to 0.19 grams per tonne in the expanded CIL circuit

MWS Quarterly Production Results

	Q3 2008	Q4 2008
Tonnes processed	832, 208	1, 592, 242
Grade of gold recovered (grams/tonne)	0.27	0.14
Gold recovered (kilograms)	229	219
Gold recovered (ounces)	7,357	7,030

Construction

Sourcing of the additional power plant required to commission the Phase 1B expansion (which includes a 7.8 MTPA uranium and pyrite flotation plant, a 7.8 MTPA gold plant and a 1.5 MTPA uranium plant) has progressed according to schedule. Construction of the Phase 1B complex is progressing according to budget and is on schedule to commence commissioning in December 2008.

Ezulwini Mine

Upper Elsburg ("UE") and Shaft Re-engineering Project

The Company has completed the installation of the safety support systems to prevent future impact on the main shaft from possible ground movement within the weak Western Areas Formation ("WAF") where it intersects the shaft. Additional support installation above and below this area is 85% complete. Support through the WAF zone in the ventilation shaft is 66% complete and support above and below the WAF zone in the ventilation shaft is 60% complete.

While development work on the UE reef horizon (gold) which is being undertaken to provide access to the shaft de-stress cut in order to relieve possible future pressure on the main shaft is behind schedule (about 74% complete), the delay is not expected to impact the operation's production profile as the opening up of previously un-mined portions of the UE ore body outside of the shaft pillar area is ahead of schedule.

The ore loading system at the shaft bottom has been replaced and now exceeds current mining requirements. The final commissioning of the new hanging tower steel work in the main shaft is expected to be completed by March 2009. This new system will allow for a long-life low-maintenance shaft system. Once the shaft is de-stressed, mining in the shaft de-stress cut area is expected to continue for a further six years.

Results from development sampling, stope sampling and run of mine belt sampling continue to provide positive reconciliations to the gold grades estimated in the current UE mineral resource block model.

Surface stockpiling of production from the UE development and stoping operations has commenced.

Middle Elsburg ("ME") Project

As disclosed in the Company's news release dated February 13, 2008, mining in the ME uranium and gold section of the Ezulwini Mine was curtailed during the quarter due to the power shortage situation. Production has since recommenced as has hoisting and stockpiling of uranium and gold bearing ore on surface.

The opening up, sampling and preparation of new stopes has resulted in sufficient mining areas being available to meet start up production requirements. It is anticipated that commercial production rates from the ME uranium and gold ore-body will be achieved during the year ending March 2009, as scheduled.

Results from development sampling, stope sampling and run of mine belt sampling continue to provide positive reconciliations to the gold and uranium grades estimated in the current ME mineral resource block model.

Ezulwini Quarterly Production Results

	Q3	Q4
Gold tonnes toll-treated	27,951	18,669
Grade of gold recovered (grams/tonne)	5.6	4.5
Gold recovered (kilograms)	157	84
Gold recovered (ounces)	5,055	2,695

Ezulwini Surface Stockpile Status (as at May 16, 2006)

Source	Tonnes	Gold grade (grams/tonne)*	U ₃ O ₈ grade grams/tonne*
Clean up and development	127,500	1.1	-
Upper Elsburg stopes	4,338	4.7	-
Middle Elsburg stopes	2,501	3.6	800

*Sampled belt grades

Gold and Uranium Plant Commissioning

In the event that Eskom experiences difficulties in supplying the additional power that it agreed to do in line with its binding agreement with Ezulwini Mining Company, the Company has installed the switchgear necessary to utilize the existing standby diesel generators at site should they be required to start up the new plant. Commissioning of the 2.4 MTPA gold plant commenced on schedule and on budget during April 2008. The first 0.6 MTPA milling unit is currently being commissioned and it is anticipated that first gold will be loaded onto carbon during June with gold bullion produced in July 2008. The commissioning of the second 0.6 MTPA mill is scheduled for September 2008 at which point milling capacity will be utilized to consume existing stockpiles while mining rates ramp up as per plan. The civil engineering work required for the final two mills is complete and installation and the start of the commissioning of these mills are on schedule for February 2009.

The construction of the 1.2 MTPA uranium plant is on budget and on schedule for commissioning to commence during June of 2008. The first ADU shipments are anticipated to be ready for dispatch during August 2008.

Mineral Resource Update

The verification of historic sampling data, the gathering of new sampling results and the addition of new properties is expected to result in a significant increase in the amount of verified data available to perform an update of the previous mineral resource estimate. In addition, results from new surface and underground drilling continue to be added to the geological data base. It is anticipated that a revised mineral resource estimate and updated technical report will be completed early in the Company's fiscal second quarter (July – September).

Sulphuric Acid Plant

As disclosed on April 21, 2008, the Company is proceeding with plans to construct its own sulphuric acid manufacturing plant, which will utilize the Company's significant stores of sulphur bearing pyrite to secure a long-life low-cost source of supply of sulphuric acid. A preliminary Company assessment has been completed and it is anticipated that the detailed specification and procurement study for a standard 600 tonne per day sulphuric acid plant will be completed by the end of July 2008. The Company anticipates that the environmental impact assessment process necessary to secure an operating

license for the acid plant will be concluded by July 2009 and has engaged the services of reputable consulting firms who are well experienced in the design, permitting and construction of pyrite burning acid plants in Southern Africa. First Uranium is evaluating options for financing the acid business as a stand alone entity and discussions are underway.

"Our near-term objectives are to expand our gold production, commission our uranium plants and generate cash," said Gordon Miller, President and Chief Executive Officer of First Uranium. "Our long-term objective is to become one of the world's lowest cost uranium producers and we have met or exceeded almost all of our target dates for project milestones along the way and, most importantly, we have started to commission our plants on schedule. We have also taken significant risk out of our projects by re-engineering the shaft at Ezulwini, acquiring generators to meet our power requirements and made plans to build an acid plant to provide a low-cost secure supply of sulphuric acid."

Technical Disclosure

Technical disclosure in this news release relating to the tonnage of the stockpiles has been prepared by Warren de Witt, who is a "qualified person" under NI 43-101 and is independent of First Uranium. Mr. de Witt has reviewed and approved the disclosure in this news release.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the availability of electrical power, the planned addition of owner-operated power generation, price of electrical power and sulphuric acid, the estimation of mineral resources and reserves, the realization of estimated pyrite content in the MWS tailings dams, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, availability of financing on acceptable terms, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "goal", "objective", "plans", "expects" or "does not expect", "is expected", "projected", "assumed", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "should", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, availability of equipment, materials and fuel, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold, to price of electrical power and sulphuric acid. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Company's expectations as of

the date of this news release; (ii) actual results may differ materially from the Company's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Company cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Company disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) consistent supply of sufficient power will be available to develop and operate the projects as planned; (ii) approvals to transfer or grant, as the case may be, mining rights will be obtained; (iii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iv) mineral resource estimates are accurate; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Company and their investment in the Company's common shares to a sufficient level to continue to support the Company's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

About First Uranium Corporation

First Uranium Corporation (TSX:FIU, JSE:FUM) is focused on the development of its South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and underground development of the Ezulwini Mine and the expansion of the Mine Waste Solutions tailings recovery facility. First Uranium also plans to grow production by pursuing value-enhancing acquisition and joint venture opportunities in South Africa and elsewhere.

First Uranium Corporation

NEWS RELEASE – June 11, 2008

FIRST URANIUM REPORTS RESULTS FOR YEAR ENDED MARCH 31, 2008

All amounts are in US dollars unless otherwise noted.

For a full discussion of results, the Financial Statements and Management Discussion & Analysis, please see the Company's website, www.firsturanium.com under "Regulatory Filings"

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) ("First Uranium" or "the Company") today announced its financial results for the year ended March 31, 2008 ("FY 2008"). First Uranium is currently focused on the rehabilitation and bringing into production of the Ezulwini underground uranium and gold mine (the "Ezulwini Mine") and the expansion of Mine Waste Solutions ("MWS"), which recovers gold, and upon full commissioning of the uranium plant scheduled for completion by the end of February 2009, uranium by reprocessing surface tailings from the Buffelsfontein mine.

References to "FY 2007" refer to the Company's financial year ended March 31, 2007. References to "Q4 2008" and "Q4 2007" refer to the Company's three months ending March 31, 2008 and March 31, 2007, respectively. References to "Q1 2009" refer to the Company's three-month period ending June 30, 2008.

Highlights

During Q4 2008, First Uranium:

- produced and sold a total of 9,995 ounces of gold from the Ezulwini Mine and MWS at an average selling price of \$888 per ounce
- generated revenue of \$6.4 million from MWS, resulting in \$2.8 million gross profit, net of total cost of sales (see table "Summary of Operating Results")
- on March 20, 2008, the South African Department of Minerals and Energy consented to an application from Simmer and Jack Mines, Limited ("Simmer & Jack") to cede the Ezulwini mining rights from Simmer & Jack to the Company's subsidiary, the Ezulwini Mining Company (Pty) Limited ("EMC")

During FY 2008, First Uranium:

- produced and sold a total of 35,927 ounces of gold from the Ezulwini Mine and MWS at an average selling price of \$784 per ounce
- generated revenue of \$21.4 million from MWS, resulting in \$4.8 million gross profit, net of total cost of sales (see table "Summary of Operating Results")
- ended FY 2008 with \$164.7 million of cash and cash equivalents on hand
- toll-treated 46,271 tonnes of ore from the Ezulwini Mine at a recovered grade of 5.2 grams of gold per tonne, producing 7,735 ounces of gold

- treated a total of 4.1 million tonnes of tailings through the MWS gold plant at a recovered grade of 0.22 grams of gold per tonne, producing a total of 28,192 ounces of gold at a cash cost of \$533 per ounce (see note (b) to the table "Summary of Operating Results")

Subsequent to the end of Q4 2008, First Uranium:

- approved a plan and entered into agreements to supplement the power supplied by the South African national power utility, Eskom, by obtaining and installing diesel-fired generators and a power plant to secure a steady supply of electrical power with a total capacity of 54 megawatts ("MW"), inclusive of existing stand-by units, to the two operations until Eskom could be expected to restore a steady, reliable supply of electrical power
- approved, subject to financing, a plan to build an acid plant at MWS to secure a low-cost supply of sulphuric acid, a necessary reagent for the production of uranium, from the sulphur contained in the pyritic material within the tailings dams, which are already being processed for gold
- commenced wet commissioning of the Ezulwini 200,000 tonne per month gold plant during May 2008
- completed the upgrading of the MWS gold plant to increase the design capacity from 500,000 tonnes per month to 633,000 tonnes per month during May 2008
- on June 9, 2008, the Company was notified by Eskom that it will be able to increase its supply of power to the Ezulwini Mine from 40 MW to 55 MW, which is expected to reduce the Company's requirement and cost to generate its own power. Further updates will be provided in due course.

During Q1 2009, First Uranium plans to:

- hoist and stockpile 30,000 tonnes of ore, of which 18,000 tonnes would come from gold and uranium bearing ore in the ME reef horizon and 12,000 tonnes would come from gold bearing ore in the UE reef horizon, resulting in a stockpiled inventory of 157,500 tonnes containing:
 - 2,800 ounces of gold from the existing stockpile of 127,500 tonnes at an average recoverable grade of 0.7 grams per tonne
 - an additional 5,600 ounces of gold from the newly stockpiled 30,000 tonnes at an average recovery grade of 5.8 grams per tonne
 - 23,760 pounds of uranium from the newly stockpiled 18,000 tonnes of ME ore at an average recovery grade of 0.6 kilograms per tonne
- continue commissioning the Ezulwini Mine's gold plant, with the first 50,000 tonne per month module on schedule for production of gold on carbon in June 2008 and gold bullion in July 2008
- commence final commissioning of the Ezulwini Mine's uranium plant in June 2008
- process 1.7 million tonnes of tailings through the MWS gold plant at a yield of approximately 0.15 grams of gold per tonne, with expected production in excess of 8,100 ounces of gold

"By mining industry standards, we have accomplished a lot in a very short time," said Gordon Miller, President and Chief Executive Officer of First Uranium. "At MWS we accelerated our gold production by a year with the acquisition of a gold plant in June 2007. At the Ezulwini Mine we accelerated by three months our target to begin

commissioning the gold plant, met that target and are on plan to begin to commission the uranium plant this month. Meeting our production deadlines sets us apart from many of our competitors and is noteworthy given the scarcity for steel and cement for construction, sulphuric acid for uranium production and, in South Africa, electrical power.

"Risk mitigation has also been a high priority and is designed to ensure that we meet our future production targets. For example, we have now completed the majority of the work to stabilize our main shaft against movement of the surrounding rock in the Western Area Formation, acquired generators to reduce exposure to any further power shortages in South Africa and, subject to financing, we are planning to build an acid plant to secure a low-cost supply of sulphuric acid, which is needed to produce uranium. We believe that by taking this risk adverse approach, investors will be assured that we can continue to achieve our goals and be good stewards of their investment in First Uranium."

Summary of Operating Results

	Q4 2008	Q4 2007	FY 2008	FY 2007
Gold ounces produced and sold at MWS	7,315	-	28,192	-
Gold ounces produced and sold at Ezulwini Mine	2,680	-	7,735	-
Average realized gold price per ounce ^(a)	888	-	784	-
Cash cost per ounce ^(b)	455	-	533	-
<i>(millions of dollars, except per share amounts)</i>				
Revenue ^(c)	6.4	-	21.4	-
Cost of sales (excluding amortization) ^(b)	(3.3)	-	(15.0)	-
Amortization	(0.3)	-	(1.6)	-
Loss for the period	(26.9)	(2.7)	(22.3)	(7.9)
Basic and diluted loss per share	(0.21)	(0.02)	(0.18)	(0.08)
Cash flows utilized by operations	(23.8)	(15.7)	(1.7)	(15.7)
<p>(a) The average realized gold price per ounce has been calculated on total revenue generated from both MWS and the Ezulwini Mine divided by the total ounces sold by both operations.</p> <p>(b) Cash cost per ounce is the cost directly related to the physical activities of producing gold, and include mining, processing and other plant costs, third-party refining and smelting costs, marketing expense, on-site general and administrative costs, royalties, in-mine drilling expenditures that are related to production and other direct costs. Sales of by-product metals are deducted from the above in computing cash costs. Cash costs exclude depreciation, depletion and amortization, corporate general and administrative expense, exploration, interest, and pre-feasibility costs and accruals for mine reclamation. Cash costs are calculated and presented using the "Gold Institute Production Cost Standard" applied consistently for all periods presented. The cash costs per ounce stated above only include costs relating to MWS.</p> <p>(c) Revenue excludes revenue of \$2.5 million for Q4 2008 and \$6.7 million for FY 2008 generated from the Ezulwini Mine that has been credited against mine infrastructure costs as the mine is still in a ramp-up phase and has not yet achieved commercial levels of production.</p>				

With the acquisition in June 2007 of MWS, an existing tailings treatment company, First Uranium commenced gold production one year ahead of the original schedule established at the time of the Company's initial public offering (the "IPO") in December 2006. MWS sold a total of 7,315 ounces of gold during Q4 2008 and 28,192 ounces during FY 2008 at an average selling price of \$875 per ounce and \$759 per ounce, respectively.

During FY 2008, MWS processed 1.7 million tonnes of material from its tailings dams through the MWS gold plant at a cash cost of \$533 per ounce, including 1.6 million tonnes reclaimed during Q4 2008 at a cash cost of \$455 per ounce. The relatively high average cash costs at MWS are primarily due to the diminishing

resources taken from the tailings dams acquired with the purchase of MWS, which necessitated a low-volume, high-cost mechanical load and placement operation. In December 2007, the Company completed the construction of a pipeline from the tailings dams at the Buffelsfontein mine (the "Buffelsfontein Tailings") to the MWS gold plant. With the transition to the high-volume, low-cost operations associated with the hydraulic mining of the Buffelsfontein Tailings, the average cash costs started to decrease and are expected to decrease further as the throughput to the MWS gold plant increases.

The Ezulwini Mine sold 2,680 ounces of gold during Q4 2008 and 7,735 ounces of gold during FY 2008 at an average selling price of \$884 per ounce and \$869 per ounce, respectively. As the Ezulwini Mine is still in a ramp-up phase and has not yet achieved commercial levels of production, the \$2.5 million of revenue in Q4 2008 and the \$6.7 million of revenue in FY 2008 from the sale of its ore has been credited against mine infrastructure costs at the Ezulwini Mine, in Property, Plant and Equipment in accordance with Canadian GAAP.

The Company had no revenue in FY 2007 as it was developing and preparing the mining projects for production.

The Company incurred a loss of \$22.3 million in FY 2008 compared to a loss of \$7.9 million in FY 2007. The increase in expenditures year over year reflects the ramp-up of activities, ongoing project activities, the costs of corporate offices in Johannesburg and Toronto and other expenses of operating a public company, which were not applicable for most of FY 2007.

The cash flows utilized in operating activities during FY 2008 was primarily used to fund the ongoing expenditures incurred by the Company during the year that more than offset the gross profit from gold sales. The cash flows utilized in operating activities during FY 2007 was mainly the result of a reduction in net receivables from related parties and an increase in accounts payable and accrued liabilities. The \$23.8 million cash flows utilized in operating activities during Q4 2008 was the result of increased ongoing expenditures during the quarter as well as the foreign exchange translation losses incurred during the quarter.

At the end of FY 2008, First Uranium had total assets of \$387.7 million, total liabilities of \$155.3 million and shareholders' equity of \$232.4 million. It had cash and cash equivalents on hand of \$164.7 million, compared to \$138.9 million at the end of FY 2007. The Company currently holds its funds in cash and bank-sponsored guaranteed investment certificates. It has no exposure to asset-backed commercial paper. The increase in cash and cash equivalents from the end of FY 2007 was primarily attributable to the net proceeds of \$130.6 million received from the sale of the senior unsecured convertible debentures in May 2007, offset by \$112.7 million of cash utilized for capital expenditure at the Company's two mining projects during FY 2008.

Outlook

On January 24, 2008, Eskom communicated to the South African mining industry that the utility could not guarantee power availability and asked the industry to operate at electrical power levels below historical load requirements until 2012 (the "Power Situation"). While Eskom has announced plans to increase the supply of power incrementally in the years leading up to 2012, Eskom also reported that full power availability cannot be guaranteed until then.

The Company conducted studies to assess the economic viability of First Uranium generating its own power at the Ezulwini Mine and MWS for the next five years to supplement the power supply from Eskom.

Based on the positive results of the economic studies, the Company entered into an agreement to purchase a 30 MW power plant (comprised of twelve 2.5 MW generating sets) that is expected to arrive in South Africa during July 2008, with construction, installation and commissioning to be completed during December 2008. The Company also agreed to lease diesel generating sets (1 MW each) with a combined capacity of 10 MW that will be delivered to the Ezulwini Mine over a three-month period with the first four generating sets arriving during July 2008, with commissioning by the end of that month. At the Ezulwini Mine, the Company has also made provision to utilize the existing 14 MW of installed diesel generating capacity should the need arise.

Reduced availability of electrical power in South Africa has also caused cutbacks in the operation of smelters and other facilities that produce sulphuric acid as a byproduct exacerbating an acid market that was already experiencing tight supplies. In late 2007, the Company commenced test work and a preliminary technical assessment of the economic viability of constructing an acid plant to provide the required sulphuric acid for its operations. Based on the positive results of the assessment, the Company announced in April 2008 plans, subject to financing, to purchase and install at the MWS facility an "off the shelf" acid plant to produce sulphuric acid to reduce future costs and secure the supply of acid required for its two uranium and gold mining projects.

The projected cost of the acid plant is approximately \$124 million. Based on an analysis of pyrite feed-stock potential from the MWS tailings dams, the technical assessment and a recent market analysis, the Company expects that it will take 19 months to procure and commission the acid plant with anticipated production beginning in January 2010. A specification and procurement study has been initiated and is expected to be completed in August 2008. To date the Company has not made any capital commitments with regards to the acid plant.

Until the Company can produce its own acid, it has secured its initial requirements for sulphuric acid in a market where acid supplies remain very tight. The Company anticipates that significant acid price increases will continue in the medium term as acid prices are closely related to the market for sulphur, which is also indicating tight supply and significant price increases.

Once the acid plant is completed, the Company plans to direct all of the pyrite currently produced as waste at the MWS tailings plant to the acid plant for the production of sulphuric acid, which should eliminate the need to source acid from third-party vendors. Since the planned production of the acid would be more than sufficient to supply the projected acid requirements of both the Ezulwini Mine and MWS, excess acid could be sold into the market at the then prevailing market rates. In addition, as the production of acid in the plant would be an exothermic reaction, there is the opportunity to generate a by-product of approximately 4 MW of power, which would be available to augment the power supply to MWS.

The Ezulwini Mine terminated the third-party gold toll-treatment arrangement at the end of March 2008 in order to start building a stockpile to be used during the commissioning of the gold plant. The full commissioning of each of the gold and uranium plants are the next major milestones for the Ezulwini Mine. The full commissioning of the first 50,000 tonne per month module of the 200,000 tonne per month gold plant is on schedule for June 2008. Production of gold bullion is expected in July 2008, three months ahead of the original schedule at the time of the IPO. The 100,000 tonne per month uranium plant is on schedule for commissioning in June 2008 and the delivery of its first shipment of ammonium diuranate ("yellowcake") is expected in August 2008. Current mine production from the UE section and the ME section is being stockpiled separately on surface to feed the plants during their commissioning phases.

The Company has a toll-treatment agreement with a third party to calcine the yellowcake, commencing January 2009, to produce uranium oxide for dispatch to the converters. The Company also entered into an interim off-take agreement with the third party, for the period from the planned startup of the uranium plant at the Ezulwini Mine in June 2008 until January 2009, pursuant to which the third party would purchase First Uranium's yellowcake production at rates based on the then prevailing spot prices.

At MWS, commissioning of the introduction of the new material from the Buffelsfontein tailings to the MWS gold plant is ongoing, with upgrades to re-pulping of the tailings, the pumping and the plant processes expected to improve volume, recoveries and costs in the MWS plant.

An upgrade to accommodate a deposition rate of 1.3 million tonnes of material per month on the MWS No.5 tailings dam is planned in advance of the commissioning of the second module of the MWS gold plant and the first two modules of the uranium plant,

First Uranium anticipates that the estimated \$471 million of capital required (exclusive of the proposed acid plant) over the remaining life of the Ezulwini Mine and MWS (including sustaining capital) as well as \$40 million approved for the long-term Ezulwini Expansion Program can be funded from existing cash and cash equivalents of \$164.7 million and from internally generated cash flow from future sales of gold and uranium at current price assumptions, along with funds that may be available under a proposed mandate letter and term sheet with a financial institution for a credit facility. Discussions in respect of the credit facility and

potential lines of credit are ongoing. The Company plans to fund the proposed acid plant through a separate project and/or end-user financing arrangement.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the availability of electrical power, the addition of owner-operated power generation, prices for uranium and gold, prices for power, availability and prices for sulphuric acid, the estimation of mineral resources and reserves, the realization of estimated pyrite content in the MWS tailings, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, availability of financing on acceptable terms, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "goals", "targets", "plans", "expects", "is expected", "deadlines", "anticipates", or "believes" or variations of such words and phrases, or state that certain actions, events or results "could", "would", "should" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Company's expectations as at the date of this news release; (ii) actual results may differ materially from the Company's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Company cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Company disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) consistent supply of sufficient power will be available to develop and operate the projects as planned; (ii) approvals to transfer or grant, as the case may be, mining rights will be obtained; (iii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iv) mineral resource estimates are accurate; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Company and their investment in the Company's common shares to a sufficient level to continue to support the Company's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

Review by Board of Directors

The First Uranium Board of Directors, on the recommendation of its Audit Committee, has approved the contents of this disclosure.

Conference Call

First Uranium will conduct a conference call with investors to discuss the information in this news release at 10:00 a.m. local Toronto time and 4:00 p.m. local Johannesburg time on Wednesday, June 11, 2008. The conference call will be available simultaneously to all interested investors and news media.

Callers may dial 1 800 319-4610 (Canada and the US) or 0800 200 648 (South Africa). Callers from other international locations may call +1 604 638-5340 (Canada) or +27 11 535 3600 (South Africa). The call will be webcast at <http://services.choruscall.com/links/firsturanium080611.html> and an archive will be available through the same link shortly after the live event for 90 days.

A replay of the conference call will be available for 30 days. To access the replay, callers may dial 1 800 319-6413 (Canada and the US). Callers from other international locations may access the replay by dialing +1 604 638-9010 (Canada). Access to the replay will require the code 2128, followed by #.

About First Uranium Corporation

First Uranium Corporation (TSX:FIU, JSE:FUM) is focused on the development of its South African uranium and gold mines with the goal of becoming a significant low-cost producer through the re-opening and underground development of the Ezulwini Mine and the expansion of the Mine Waste Solutions tailings recovery facility. First Uranium also plans to grow production by pursuing value-enhancing acquisition and joint venture opportunities in South Africa and elsewhere.

First Uranium Corporation

NEWS RELEASE – July 24, 2008

FIRST URANIUM PROVIDES PRODUCTION AND PROJECT DEVELOPMENT UPDATE FOR THE FIRST FISCAL QUARTER ENDED JUNE 30, 2008

All amounts are in US dollars unless otherwise noted.

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) (“First Uranium” or “the Company”) today announced its production results for the fiscal quarter ended June 30, 2008 (“Q1 2009”), during which the Company stockpiled 24,238 tonnes of ore on surface at its Ezulwini Mine and processed 1,664,537 tonnes of reclaimed tailings at its Mine Waste Solutions tailings recovery project (“MWS”). Gold production from MWS totaled 8,530 ounces of gold for the quarter. In anticipation of the commissioning of its gold and uranium plants at the Ezulwini Mine 11,543 tonnes of gold ore and 12,695 tonnes of uranium ore had been stockpiled as at July 2, 2008.

Highlights

Ezulwini Mine

- underground stope development and ore grades in the stopes were in line with expectations
- surface gold and uranium stockpile grades are in line with expectations
- the initial uranium and gold mill was commissioned
- on-site gold production commenced
- commissioning of the uranium plant and uranium production were delayed from August 2008 to October 2008, due to late delivery of certain equipment caused by the EPCM contractor, but is not expected to impact uranium shipping volumes for FY2009
- refurbishment of both the main and ventilation shafts continues on schedule for completion by the end of FY2009
- finalized agreements to obtain 10 megawatt (“MW”) diesel generators to supplement the power supplied by the South African national power utility, Eskom, and secure a steady supply of owner-generated electrical power with a total capacity of 24 MW, inclusive of 14 MW of existing stand-by units at the mine
- filed an updated independent technical report on June 5, 2008 taking into consideration the capital and operating costs of generating additional power,

- revised acid price assumptions and a revaluation of metal price and exchange rate assumptions, resulting in a revised NPV of \$667 million and IRR of 336%
- on June 9, 2008 Eskom agreed to increase its power commitment to the Ezulwini Mine from 40 MW to 55 MW

MWS

- commissioning of the Phase 1A gold plant expansion to 7.6 million tonnes per annum ("MTPA") was completed
- gold production and costs are running at planned levels
- construction of the 1.5 MTPA uranium plant and the expansion of the gold plant by 7.8 MTPA is on schedule
- to supplement the power supplied by Eskom, agreements have been finalized to purchase and install a power plant which will secure 30 MW of electrical power until such time as Eskom can restore a steady, reliable supply to meet MWS's total electrical power requirements
- filed an updated independent technical report on June 5, 2008, taking into consideration the capital and operating costs of generating additional power, revised acid price assumptions and a revaluation of metal price and exchange rate assumptions, resulting in a revised NPV of \$413 million and IRR of 70%
- completed the upgrade to the MWS gold plant to increase the design capacity from 500,000 to 633,000 tonnes per month
- upgraded MWS No.5 tailings dam to enable a deposition rate of 633,000 tonnes of material per month
- approved, subject to financing, a plan to build an acid plant at MWS to secure a long-term low-cost supply of sulphuric acid

"We are delighted that MWS's first phase expansion is now operating at planned output and costs and that the Ezulwini Mine is again producing gold and stockpiling uranium ore for processing in the short term," said Gordon Miller, President and Chief Executive Officer of First Uranium. "Our near-term objectives are to expand our gold production, commission our two new uranium plants and start generating cash from our operations. Although uranium plant processing at the Ezulwini Mine has been delayed, we anticipate having sufficient plant capacity to process all the ore available from the underground development in this fiscal year. We remain on track to achieve our long-term objective to become one of the world's lowest cost uranium producers."

Ezulwini Mine

Gold and Uranium Plant Commissioning

The commissioning of the 2.4 MTPA gold plant and the first 0.6 MTPA milling unit commenced on schedule during Q1 2009. Subsequent to the end of Q1 2009 the Ezulwini Mine began gold production at its gold plant in July 2008, as planned.

The commissioning of portions of the 1.2 MTPA uranium plant began on schedule during June 2008. Due to late deliveries of certain equipment caused

by the EPCM contractor, however, the first ADU recovery will be delayed from August 2008 until October 2008. The delay will not affect the Company's uranium shipments for the year ended March 31, 2009 ("FY2009"), as the capacity of the mills and the uranium plant exceed the total of the ore currently stockpiled and ore planned to be hoisted from underground development during the remainder of FY2009.

The commissioning of the second 0.6 MTPA mill is scheduled during Q2 2009; at which point milling capacity will be utilized to consume existing stockpiles while mining rates ramp up as per plan. The civil engineering work required for the commissioning of the remaining milling capacity is on schedule for completion during Q4 2009.

Upper Elsburg ("UE") and Shaft Re-engineering Project

Although there is still some work still to do, the Company has completed the installation of resin injection, bolts and screens to prevent future impact on the main shaft from possible ground movement within the weak Western Areas Formation ("WAF") where it is intersected by the main shaft and vent shaft. For the vent shaft, support is 60% complete above and below the WAF zone.

In the main shaft, the installation of loading boxes on the Koepe winder and repairs to the common orepass are complete. The ore loading system at the shaft bottom has been replaced and now exceeds current mining requirements. The shaft support in the WAF zone is 96% complete.

Fabrication of the main shaft hanging tower is complete and 45% installed. The final commissioning of the hanging tower steel work in the main shaft is expected to be completed by March 2009. This new system will allow for a long-life low-maintenance shaft system. Once the shaft is de-stressed, mining in the shaft de-stress cut area is expected to continue for a further six years.

Surface stockpiling of ore from the UE development and stoping operations continued in Q1 2009.

Middle Elsburg ("ME") Project

Hoisting from underground and surface stockpiling of uranium and gold bearing ore from the ME continued during Q1 2009.

The opening up, sampling and preparation of new stopes has resulted in sufficient mining areas being available to meet start up production requirements. It is anticipated that commercial production rates from the ME uranium and gold ore-body will be achieved during the latter part of FY2009 as scheduled.

Results from development sampling, stope sampling and run of mine belt sampling continue to provide positive reconciliations to the gold and uranium grades estimated in the current ME mineral resource block model.

Ezulwini Mine Surface Stockpile Status (as at July 2, 2008)

Source	Tonnes	Gold grade (grams/tonne)*	U ₃ O ₈ grade (%)*
Clean up and development	127,500	1.11	-
Upper Elsburg stopes	11,543	4.64	-
Middle Elsburg stopes	12,695	3.89	0.045

*Sampled belt grades

MWS

Commissioning of Buffelsfontein Tailings

Commissioning of the Phase 1A gold plant expansion from 6.0 MTPA to 7.6 MTPA and the installation of the pumping system to bring tailings from the new Buffelsfontein tailings complex has progressed well, and the Phase 1A designed plant throughput is now being consistently achieved. Minor modifications to the hydraulic mining system to improve throughput and to the carbon-in-leach ("CIL") plant flow sheet to improve recovery are being implemented. Modifications completed to date include:

- installation of high shear oxygen reactors to improve gold recovery grades to 0.19 grams per tonne in the expanded CIL circuit
- flotation tailings from the tailings disposal line have been re-routed to the CIL gold circuit to reduce float tails grades and increase overall gold recovery rates to expected levels
- pump station modifications, including the installation rubber-lined piping and transfer pumps, were completed during a planned five-day plant shutdown during June 2008
- two track-mounted water cannons for the hydraulic mining of the tailings dams were installed in July 2008

Based on its performance during the first three weeks of July 2008, the MWS Phase 1A gold plant is now producing gold at designed rates and at planned costs. The remaining modifications for the commissioning of Phase 1A to transition operations to the Buffelsfontein complex of dams are expected to be completed in Q2 2009. These modifications include:

- installation of a slime re-pulping system to break up clay lumps and improve hydraulic mining rates to 1.9 million tonnes per quarter and to stabilize pulp densities pumped to the plant
- the installation of an additional track-mounted water cannon

MWS Quarterly Production Results

	Q3 2008	Q4 2008	Q1 2009
Tonnes processed	832,208	1,592,242	1,664,537
Head grade	0.455	0.370	0.369
Recovery %	60%	38%	43%
Gold recovered (kilograms)	229	219	265
Gold recovered (ounces)	7,357	7,030	8,530

Construction

The construction of a 7.8 MTPA uranium and pyrite flotation plant, a 7.8 MTPA gold plant and a 1.5 MTPA uranium plant has progressed according to schedule. All excavation work and blasting of Dolomite outcrops has been completed. Several of the foundations for tanks and other sections of these plants were in place by the end of the quarter. Project engineering and procurement are on schedule for the completion of the commissioning of these plant modules at the end of Q4 2009.

Mineral Resource Update for the Ezulwini Mine

The verification of historic sampling data, the results of the new sampling and the addition of new properties is expected to result in a significant increase in the amount of verified data available to update the previous mineral resource estimate for the Ezulwini Mine. In addition, results from new surface and underground drilling continue to be added to the geological data base. A revised mineral resource estimate and updated technical report are expected to be published during Q2 2009.

Sulphuric Acid Plant Update

As disclosed on April 21, 2008, subject to financing, the Company is proceeding with plans to install its own sulphuric acid manufacturing plant, which will utilize the Company's significant stores of sulphur bearing pyrite in the MWS tailings to secure a long-life low-cost source of supply of sulphuric acid, a necessary reagent for the production of uranium. Based on a preliminary assessment the Company anticipated that it would construct a standard 600 tonne per day sulphuric acid plant for an estimated \$124 million. The Company is also verifying the sulphide sulphur content of the tailings and assessing the benefits of installing a smaller, 'fit for purpose' acid plant which would be of sufficient size to supply the Company's requirement of approximately 300 tonnes of acid per day. If a smaller plant is to be installed or the Company can procure a second-hand acid plant, less capital will be required. The Company is planning to use project financing, end-user financing or corporate debt to procure the acid plant.

Power Update

During Q1 2009, the electrical power requirements of both MWS and the Ezulwini Mine were supplied by South Africa's national power utility, Eskom, without any interruptions that plagued the country in the previous quarters. As a backup plan to secure a continual supply of electrical power at the Ezulwini Mine, however,

the Company has connected the existing 14 megawatts ("MW") of standby diesel generated power to the new plant and has proceeded with its order to secure diesel generators with a further capacity of 10 MW on a lease basis. At MWS, the Company is in the process of shipping the 30 MW power plant that it recently acquired to secure sufficient power to start up the uranium and add-on gold plant modules planned for commissioning in Q4 2009. On June 9, 2008, Eskom agreed to increase its power commitment at the Ezulwini Mine from 40 MW to 55 MW, which is expected to reduce the projected requirement and cost of owner-generated power until 2011. The Company will, however, have its own secure alternative source of power in the event of any further unexpected power disruptions.

Technical Disclosure

Technical disclosure in this news release relating to the tonnage of the stockpiles has been prepared by Warren de Witt, who is a "qualified person" under NI 43-101 and is independent of First Uranium. Mr. de Witt has reviewed and approved the disclosure in this news release.

Financial Results: Release and Conference Call

For its first fiscal quarter ended June 30, 2008, First Uranium expects to release its financial results on Monday, August 11, 2008. A conference call for the benefit of investors is planned for Tuesday, August 12, 2008 at 10:00 am (Toronto and New York) and 4:00 pm in South Africa.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the availability of electrical power, the planned addition of owner-operated power generation, price of electrical power and sulphuric acid, the estimation of mineral resources and reserves, the realization of estimated pyrite content in the MWS tailings dams, expected dates of commissioning or commencement of production, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, availability of financing on acceptable terms, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "goal", "objective", "plans", "continues", "expects" or "does not expect", "is expected", "projected", "assumed", "budget", "design", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "should", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, availability of equipment, materials and fuel, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold, to price of electrical power and sulphuric acid. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-

looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Company's expectations as of the date of this news release; (ii) actual results may differ materially from the Company's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Company cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Company disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) consistent supply of sufficient power will be available to develop and operate the projects as planned; (ii) approvals to transfer or grant, as the case may be, mining rights will be obtained; (iii) metal prices, exchange rates and discount rates applied in the pre-feasibility study and preliminary economic assessment are achieved; (iv) mineral resource estimates are accurate; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Company and their investment in the Company's common shares to a sufficient level to continue to support the Company's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

About First Uranium Corporation

First Uranium Corporation (TSX:FIU, JSE:FUM) is focused on the development of its South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and underground development of the Ezulwini Mine and the expansion of the Mine Waste Solutions tailings recovery facility. First Uranium also plans to grow production by pursuing value-enhancing acquisition and joint venture opportunities in South Africa and elsewhere.

First Uranium Corporation

NEWS RELEASE – August 11, 2008

FIRST URANIUM REPORTS RESULTS FOR FIRST QUARTER ENDED JUNE 30, 2008

All amounts are in US dollars unless otherwise noted.

For a full discussion of results, the Financial Statements and Management Discussion & Analysis, please see the Company's website, www.firsturanium.com under "Regulatory Filings"

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) ("First Uranium" or "the Company") today announced its financial results for the fiscal quarter ended June 30, 2008 ("Q1 2009"). At the Ezulwini underground uranium and gold mine (the "Ezulwini Mine"), First Uranium is continuing the ramp up of gold production through its newly commissioned gold plant and by the end of October 2008, expects to commence uranium production as well. The rehabilitation of the main shaft at the Ezulwini Mine is also progressing as planned. At Mine Waste Solutions ("MWS"), where gold production has been recognized since a gold plant was acquired in June 2007, construction is continuing on the next phase of the plants that are designed to double MWS's current gold production capacity and commence processing of uranium by the end of the fiscal year ending March 31, 2009 ("FY2009").

References to "Q1 2008" refer to the Company's three-month fiscal period ending June 30, 2007. References to "Q2 2009" and "Q3 2009" refer to the Company's three-month fiscal periods ending September 30, 2008 and December 31, 2008, respectively.

Highlights

During Q1 2009, First Uranium:

- ended the quarter with \$102.1 million cash and cash equivalents on hand
- hoisted 24,238 tonnes of ore at the Ezulwini Mine, which resulted in a stockpiled inventory of 12,695 tonnes of gold and uranium bearing ore from the Middle Elsberg ("ME") reef horizon and 11,543 tonnes of gold bearing ore from the Upper Elsberg ("UE") reef horizon, estimated to contain in the aggregate:
 - 3,164 ounces of gold from the 11,543 tonnes at an average grade of 4.64 grams of gold per tonne and the 12,695 tonnes at an average grade of 3.89 grams of gold per tonne
 - 10,060 pounds of uranium from the stockpiled 12,695 tonnes of ME ore at an average grade of 0.45 kilograms per tonne

- reclaimed 1.7 million tonnes of tailings through the MWS gold plant at a yield of 0.16 grams of gold per tonne, producing 8,530 ounces of gold at a Cash Cost (as defined in the 'Summary of Operating Results') of \$464 per ounce
- completed the upgrading of the MWS gold plant to increase the design capacity from 500,000 tonnes per month to 633,000 tonnes per month during May 2008
- upgraded MWS No.5 tailings dam during May 2008 to enable a deposition rate of 633,000 tonnes of material per month
- approved, subject to financing, a plan to build an acid plant at MWS to secure a low-cost supply of sulphuric acid, a necessary reagent for the production of uranium, from the sulphur contained in the pyritic material within the tailings dams, which are already being processed for gold at MWS
- entered into agreements to supplement the power supplied to the Ezulwini Mine and MWS by the South African national power utility ("Eskom") by obtaining diesel-fired generators and a power plant to secure a steady supply of electrical power, which will provide total incremental capacity of 54 megawatts ("MW"), inclusive of existing standby units, until Eskom could be expected to restore a steady, reliable supply of electrical power
- filed updated independent technical reports on June 5, 2008 on both the Ezulwini Mine and MWS, taking into consideration the capital and operating costs of generating additional power, revised acid price assumptions and a revaluation of metal price and exchange rate assumptions, for which projected revised net present values are \$667 million for the Ezulwini Mine and \$413 million for MWS and the projected internal rates of return are 336% for the Ezulwini Mine and 70% for MWS
- received notification on June 9, 2008, that Eskom will be able to increase its supply of power to the Ezulwini Mine from 40 MW to 55 MW, which is expected to reduce the Company's requirement to generate its own additional power and the costs thereof

Subsequent to the end of Q1 2009, First Uranium:

- continued commissioning the Ezulwini Mine's 200,000 tonne per month gold plant with the first 50,000 tonne per month module commencing production of gold bullion in July 2008
- continued commissioning the Ezulwini Mine's 100,000 tonne per month uranium plant, which had been scheduled for production of ammonium diuranate ("yellowcake") in August 2008 and is now scheduled for October 2008
- finalized and implemented two-year agreements with the National Union of Mineworkers ("NUM") at both the Ezulwini Mine and MWS
- resolved previously disclosed issues of handling clay content in tailings at MWS, with the result that the MWS gold plant throughput and recovery rates are at, and sometimes slightly above, design specifications

During Q2 2009, First Uranium plans to:

- hoist approximately 83,300 tonnes of ore at the Ezulwini Mine, of which approximately 65,500 tonnes would comprise gold and uranium bearing ore from the ME reef horizon and approximately 17,800 tonnes would comprise gold bearing ore from the UE reef horizon
- process approximately 17,200 tonnes of gold bearing ore through the newly commissioned gold plant at the Ezulwini Mine

- commission the second 50,000 tonne per month mill module of the gold plant at the Ezulwini Mine during September 2008
- publish an updated technical report for the Ezulwini Mine
- reclaim 1.9 million tonnes of tailings through the MWS gold plant at a yield of approximately 0.2 grams of gold per tonne with expected production of approximately 12,000 ounces of gold

"Our first quarter of 2009 was highlighted by the commissioning of our Ezulwini Mine gold plant and the production of gold in July as planned," said Gordon Miller, President and Chief Executive Officer of First Uranium. "Although the final commissioning stages of the uranium plant at the Ezulwini Mine have been delayed until October 2008 as a result of the late delivery of certain equipment, we believe that this will not affect our planned production for the fiscal year as the capacity of the mills and the uranium plant will exceed the planned near-term capability of the mine to produce ore.

"At MWS we made significant operational improvements during Q1 2009, which enhanced gold production. During Q2 2009, we expect to operate the MWS gold plant at designed throughput and recovery rates. Uranium production is expected in Q3 2009 at the Ezulwini Mine and Q4 2009 at MWS."

Summary of Operating Results

	Q1 2009	Q1 2008
Ezulwini Mine		
Tonnes hoisted (000s) ^(a)	24,238	—
MWS		
Tonnes reclaimed (000s)	1,665	402
Average gold recovery grade (grams/tonne)	0.16	0.27
Total ounces of gold reclaimed	8,530	3,420
Total ounces of gold sold	7,741	3,395
Average selling price per ounce (\$)	879	643
Average cost per ounce reclaimed (\$)	482	669
Average Cash Cost per ounce reclaimed (\$) ^(b)	464	581
<i>(in thousands of dollars, except per share amounts)</i>		
Revenue ^(c)	6,805	2,183
Cost of sales (excluding amortization) ^(c)	(3,340)	(1,956)
Amortization ^(c)	(189)	(299)
Operating loss ^(d)	(3,902)	(3,292)
Gross profit (loss)	3,276	(72)
(Loss) income for the period	(5,795)	5,471
Basic and diluted (loss) income per share	(0.04)	0.04
Cash flow (utilized by) generated from operations	(19,610)	9,979
Cash outflow from investing activities	(44,080)	(8,397)

Notes:

- (a) There was no recovery of gold or uranium concentrates from processing facilities located at the Ezulwini Mine during Q1 2009 or Q1 2008.
- (b) Cash cost per ounce is defined as cost of sales divided by ounces of gold sold. Total cash costs exclude amortization expense and inventory purchase accounting adjustments. For further information on this non-GAAP performance measure see page 5 of the Company's MD&A.
- (c) Revenue, cost of sales (including amortization) relate to the sale of gold from the MWS operations. For Q1 2008 only the results of MWS for the month of June 2007 were included in the Company's consolidated results as the effective date of acquisition of MWS was June 6, 2007.
- (d) This is a non-GAAP measurement. Operating loss is loss before interest income, interest expenses, accretion expenses, foreign exchange (losses) gains and income tax charges.

During Q1 2009, a total of 8,530 ounces of gold were reclaimed at MWS at an average Cash Cost of \$464 per ounce compared to 3,420 ounces of gold reclaimed during Q1 2008 at an average Cash Cost of \$581 per ounce. MWS generated \$6.8

million of revenue from 7,741 ounces of gold sold at an average selling price of \$879 per ounce compared to \$2.2 million from 3,395 ounces of gold sold at an average selling price of \$643 per ounce in Q1 2008.

The relatively high average Cash Costs at MWS for Q1 2008 can be attributed primarily to the diminishing resources taken from the MWS No.2 tailings dam, which necessitated a high-cost mechanical load and placement operation. With the transition during December 2007 to the high-volume, low-cost operations associated with the mining of the tailings from Buffelsfontein Gold Mines Limited (“BGM”), the average Cash Costs started to decrease. As throughput and gold production increase, average Cash Costs are expected to decrease further.

The Company incurred an operating loss of \$3.8 million in Q1 2009 (Q1 2008: \$3.3 million) that reflects increased revenues which were more than offset by increased expenditures as a result of the ongoing and increasing scope of activities, including the progression of work at the Ezulwini Mine and MWS, the costs of corporate offices in Johannesburg and Toronto, other expenses of operating a public company and in Q1 2009 royalties and related payments made to BGM and Simmer & Jack Mines, Limited (“Simmer & Jack”) in respect of revenues from production at MWS.

The loss of \$5.8 million in Q1 2009 was primarily the result of the ongoing expenditures mentioned above and foreign exchange losses on translation of Canadian and South African assets, liabilities, revenues and expenses converted to the US dollar. The Company reported net income of \$5.5 million in Q1 2008 that was primarily the result of foreign exchange translation gains and net interest income earned, partially offset by operating losses.

The cash utilized in operating activities during Q1 2009 was primarily used to fund the ongoing expenditures in excess of the cash generated from gold sales. The cash generated from operating activities during Q1 2008 was mainly the result of the net interest earned on cash balances during the quarter and the payment by Simmer & Jack of an outstanding receivable.

At the end of Q1 2009, First Uranium had total assets of \$394.4 million, total liabilities of \$166.1 million and shareholders' equity of \$228.3 million. It had cash and cash equivalents of \$102.1 million (excluding \$9.7 million of restricted cash on deposit) compared to \$164.7 million at the end of FY 2008. The decrease in cash and cash equivalents from the end of FY 2008 was primarily attributable to \$34.2 million of cash utilized during Q1 2009 for capital expenditures for the development of the Company's two mining operations and increased working capital.

Outlook

The next major milestone for the Ezulwini Mine is the completion of the commissioning of the 100,000 tonne per month uranium plant which is scheduled to deliver its first shipment of yellowcake in October 2008. Current mine production from the ME section of the Ezulwini Mine is being stockpiled separately on surface to feed the uranium plant during its commissioning phase. The Ezulwini Mine also plans to commission the second 50,000 tonne per month mill module during September 2008.

First Uranium has not yet signed any long-term contracts to sell uranium, although the Company does have the option to use a take and pay agreement with Nufcor. As long-term uranium supply contracts are currently all tending to be of a fixed delivery nature, First Uranium wants to complete the commissioning of at least one of its uranium plants prior to entering into any such uranium contracts.

It is expected that all four holes being drilled under the Ezulwini exploration program will have intersected the E9EC reef horizon by the end of the September 2008. Deflections from these four existing boreholes will provide supplemental borehole valuation data. The Phase 2 drilling project is expected to start in Q3 2009. The final holes of the Phase 1 drilling project and the first reef intersections of the Phase 2 drilling project are expected to begin during Q4 2009.

The current and planned capital projects at MWS include:

- construction of the second gold module and the first two uranium modules that are scheduled for commencement of commissioning in January 2009 and completion in April 2009
- construction of the third gold module and the third uranium module that are scheduled for commissioning in December 2009, increasing plant capacity to 1.9 million tonnes per month
- the establishment of a single large tailings dam that will accommodate all future production tailings as well as tailings from processing the ore from BGM for uranium
- permitting for additional tailings deposition facilities

An upgrade to accommodate a deposition rate of 1.3 million tonnes of material per month on the MWS No.5 tailings dam is planned in advance of the commissioning of the second module of the MWS gold plant and the first two modules of the uranium plant. In the event that the MWS No.5 tailings dam is found to be insufficient, additional tailings dam locations have been identified.

As previously reported, a specification and procurement study for a sulphuric acid plant has been initiated and is expected to be completed in October 2008.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the availability of electrical power, the addition of owner-operated power generation, prices for uranium and gold, prices for power, availability and prices for sulphuric acid, the estimation of mineral resources and reserves, the realization of estimated pyrite content in the MWS tailings, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, availability of financing on acceptable terms, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "goals", "targets", "plans", "expects", "is expected", "deadlines", "anticipates", or "believes" or variations of such words and phrases, or state that certain actions, events or results "could", "would", "should" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Company's expectations as at the date of this news release; (ii) actual results may differ materially from the Company's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Company cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-

looking statements; and (iv) the Company disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) consistent supply of sufficient power will be available to develop and operate the projects as planned; (ii) approvals to transfer or grant, as the case may be, mining rights will be obtained; (iii) metal prices, exchange rates and discount rates applied in the prefeasibility study and the preliminary economic assessment for the respective projects are achieved; (iv) mineral resource estimates are accurate; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Company and their investment in the Company's common shares to a sufficient level to continue to support the Company's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

Review by Board of Directors

The First Uranium Board of Directors, on the recommendation of its Audit Committee, has approved the contents of this disclosure.

Conference Call

First Uranium will conduct a conference call with investors to discuss the information in this news release at 10:00 a.m. local Toronto time and 4:00 p.m. local Johannesburg time on Tuesday, August 12, 2008. The conference call will be available simultaneously to all interested investors and news media.

Callers may dial 1 800 319-4610 (Canada and the US) or 0800 981 705 (South Africa). Callers from other international locations may call +1 604 638-5340. The call will be webcast at <http://services.choruscall.com/links/firsturanium080812.html> and available for replay shortly after the call for 90 days.

A telephone replay of the conference call will be available for 30 days. To access the replay, callers may dial 1 800 319-6413 (Canada and the US). Callers from other international locations may access the replay by dialing +1 604 638-9010 (Canada). Access to the replay will require the code 2128, followed by #.

About First Uranium Corporation

First Uranium Corporation (TSX:FIU, JSE:FUM) is focused on the development of its South African uranium and gold mines with the goal of becoming a significant low-cost producer through the re-opening and underground development of the Ezulwini Mine and the expansion of the Mine Waste Solutions tailings recovery facility. First Uranium also plans to grow production by pursuing value-enhancing acquisition and joint venture opportunities in South Africa and elsewhere.

MATERIAL CHANGE REPORT

RECEIVED

2008 OCT -3 P 12:21

Item 1. Name and Address of Company

First Uranium Corporation
155 University Avenue, Suite 1240
Toronto, Ontario M5H 3B7

Item 2. Date of Material Change

July 24, 2008.

Item 3. News Release

A news release was disseminated over CNW news wire service on July 24, 2008.

Item 4. Summary of Material Change

First Uranium Corporation ("First Uranium" or "the Company") announced its production results for the fiscal quarter ended June 30, 2008 ("Q1 2009"), and provided an update on the progress of its projects. During Q1 2009 the Company stockpiled 24,238 tonnes of ore on surface at its Ezulwini Mine and processed 1,664,537 tonnes of reclaimed tailings at its Mine Waste Solutions tailings recovery project ("MWS"). Gold production from MWS totalled 8,530 ounces of gold for the quarter. In anticipation of the commissioning of its gold and uranium plants at the Ezulwini Mine 11,543 tonnes of gold ore and 12,695 tonnes of uranium ore had been stockpiled as at July 2, 2008.

Ezulwini Mine

At the Ezulwini Mine the commissioning of the 2.4 million tonnes per annum ("MTPA") gold plant and the first 0.6 MTPA milling unit commenced on schedule during Q1 2009. Subsequent to the end of Q1 2009 the Ezulwini Mine began gold production at its gold plant in July 2008, as planned.

The commissioning of portions of the 1.2 MTPA uranium plant began on schedule during June 2008. Due to late deliveries of certain equipment caused by the EPCM contractor, however, the first ADU recovery will be delayed from August 2008 until October 2008. The delay will not affect the Company's uranium shipments for the year ended March 31, 2009 ("FY2009"), as the capacity of the mills and the uranium plant exceed the total of the ore currently stockpiled and ore planned to be hoisted from underground development during the remainder of FY2009.

MWS

At MWS commissioning of the Phase 1A gold plant expansion from 6.0 MTPA to 7.6 MTPA and the installation of the pumping system to bring tailings from the new Buffelsfontein tailings complex has progressed well, and the Phase 1A designed plant throughput is now being consistently achieved. Minor modifications to the hydraulic

mining system to improve throughput and to the carbon-in-leach ("CIL") plant flow sheet to improve recovery are being implemented. Modifications completed to date include:

- installation of high shear oxygen reactors to improve gold recovery grades to 0.19 grams per tonne in the expanded CIL circuit
- flotation tailings from the tailings disposal line have been re-routed to the CIL gold circuit to reduce float tails grades and increase overall gold recovery rates to expected levels
- pump station modifications, including the installation rubber-lined piping and transfer pumps, were completed during a planned five-day plant shutdown during June 2008
- two track-mounted water cannons for the hydraulic mining of the tailings dams were installed in July 2008

Based on its performance during the first three weeks of July 2008, the MWS Phase 1A gold plant is now producing gold at designed rates and at planned costs. The remaining modifications for the commissioning of Phase 1A to transition operations to the Buffelsfontein complex of dams are expected to be completed in Q2 2009. These modifications include:

- installation of a slime re-pulping system to break up clay lumps and improve hydraulic mining rates to 1.9 million tonnes per quarter and to stabilize pulp densities pumped to the plant
- the installation of an additional track-mounted water cannon

Item 5. Full Description of Material Change

5.1 Full Description of Material Change

See attached news release.

5.2 Disclosure for Restructuring Transactions

Not applicable.

Item 6. Reliance on Subsection 7.1(2) or (3) of National Instrument 51-102

N/A

Item 7. Omitted Information

N/A

Item 8. Executive Officer

Item 9. Date of Report

August 6, 2008

First Uranium Corporation

NEWS RELEASE – July 24, 2008

FIRST URANIUM PROVIDES PRODUCTION AND PROJECT DEVELOPMENT UPDATE FOR THE FIRST FISCAL QUARTER ENDED JUNE 30, 2008

All amounts are in US dollars unless otherwise noted.

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) (“First Uranium” or “the Company”) today announced its production results for the fiscal quarter ended June 30, 2008 (“Q1 2009”), during which the Company stockpiled 24,238 tonnes of ore on surface at its Ezulwini Mine and processed 1,664,537 tonnes of reclaimed tailings at its Mine Waste Solutions tailings recovery project (“MWS”). Gold production from MWS totaled 8,530 ounces of gold for the quarter. In anticipation of the commissioning of its gold and uranium plants at the Ezulwini Mine 11,543 tonnes of gold ore and 12,695 tonnes of uranium ore had been stockpiled as at July 2, 2008.

Highlights

Ezulwini Mine

- underground stope development and ore grades in the stopes were in line with expectations
- surface gold and uranium stockpile grades are in line with expectations
- the initial uranium and gold mill was commissioned
- on-site gold production commenced
- commissioning of the uranium plant and uranium production were delayed from August 2008 to October 2008, due to late delivery of certain equipment caused by the EPCM contractor, but is not expected to impact uranium shipping volumes for FY2009
- refurbishment of both the main and ventilation shafts continues on schedule for completion by the end of FY2009
- finalized agreements to obtain 10 megawatt (“MW”) diesel generators to supplement the power supplied by the South African national power utility, Eskom, and secure a steady supply of owner-generated electrical power with a total capacity of 24 MW, inclusive of 14 MW of existing stand-by units at the mine
- filed an updated independent technical report on June 5, 2008 taking into consideration the capital and operating costs of generating additional power,

revised acid price assumptions and a revaluation of metal price and exchange rate assumptions, resulting in a revised NPV of \$667 million and IRR of 336%

- on June 9, 2008 Eskom agreed to increase its power commitment to the Ezulwini Mine from 40 MW to 55 MW

MWS

- commissioning of the Phase 1A gold plant expansion to 7.6 million tonnes per annum ("MTPA") was completed
- gold production and costs are running at planned levels
- construction of the 1.5 MTPA uranium plant and the expansion of the gold plant by 7.8 MTPA is on schedule
- to supplement the power supplied by Eskom, agreements have been finalized to purchase and install a power plant which will secure 30 MW of electrical power until such time as Eskom can restore a steady, reliable supply to meet MWS's total electrical power requirements
- filed an updated independent technical report on June 5, 2008, taking into consideration the capital and operating costs of generating additional power, revised acid price assumptions and a revaluation of metal price and exchange rate assumptions, resulting in a revised NPV of \$413 million and IRR of 70%
- completed the upgrade to the MWS gold plant to increase the design capacity from 500,000 to 633,000 tonnes per month
- upgraded MWS No.5 tailings dam to enable a deposition rate of 633,000 tonnes of material per month
- approved, subject to financing, a plan to build an acid plant at MWS to secure a long-term low-cost supply of sulphuric acid

"We are delighted that MWS's first phase expansion is now operating at planned output and costs and that the Ezulwini Mine is again producing gold and stockpiling uranium ore for processing in the short term," said Gordon Miller, President and Chief Executive Officer of First Uranium. "Our near-term objectives are to expand our gold production, commission our two new uranium plants and start generating cash from our operations. Although uranium plant processing at the Ezulwini Mine has been delayed, we anticipate having sufficient plant capacity to process all the ore available from the underground development in this fiscal year. We remain on track to achieve our long-term objective to become one of the world's lowest cost uranium producers."

Ezulwini Mine

Gold and Uranium Plant Commissioning

The commissioning of the 2.4 MTPA gold plant and the first 0.6 MTPA milling unit commenced on schedule during Q1 2009. Subsequent to the end of Q1 2009 the Ezulwini Mine began gold production at its gold plant in July 2008, as planned.

The commissioning of portions of the 1.2 MTPA uranium plant began on schedule during June 2008. Due to late deliveries of certain equipment caused

by the EPCM contractor, however, the first ADU recovery will be delayed from August 2008 until October 2008. The delay will not affect the Company's uranium shipments for the year ended March 31, 2009 ("FY2009"), as the capacity of the mills and the uranium plant exceed the total of the ore currently stockpiled and ore planned to be hoisted from underground development during the remainder of FY2009.

The commissioning of the second 0.6 MTPA mill is scheduled during Q2 2009; at which point milling capacity will be utilized to consume existing stockpiles while mining rates ramp up as per plan. The civil engineering work required for the commissioning of the remaining milling capacity is on schedule for completion during Q4 2009.

Upper Elsburg ("UE") and Shaft Re-engineering Project

Although there is still some work still to do, the Company has completed the installation of resin injection, bolts and screens to prevent future impact on the main shaft from possible ground movement within the weak Western Areas Formation ("WAF") where it is intersected by the main shaft and vent shaft. For the vent shaft, support is 60% complete above and below the WAF zone.

In the main shaft, the installation of loading boxes on the Koepe winder and repairs to the common orepass are complete. The ore loading system at the shaft bottom has been replaced and now exceeds current mining requirements. The shaft support in the WAF zone is 96% complete.

Fabrication of the main shaft hanging tower is complete and 45% installed. The final commissioning of the hanging tower steel work in the main shaft is expected to be completed by March 2009. This new system will allow for a long-life low-maintenance shaft system. Once the shaft is de-stressed, mining in the shaft de-stress cut area is expected to continue for a further six years.

Surface stockpiling of ore from the UE development and stoping operations continued in Q1 2009.

Middle Elsburg ("ME") Project

Hoisting from underground and surface stockpiling of uranium and gold bearing ore from the ME continued during Q1 2009.

The opening up, sampling and preparation of new stopes has resulted in sufficient mining areas being available to meet start up production requirements. It is anticipated that commercial production rates from the ME uranium and gold ore-body will be achieved during the latter part of FY2009 as scheduled.

Results from development sampling, stope sampling and run of mine belt sampling continue to provide positive reconciliations to the gold and uranium grades estimated in the current ME mineral resource block model.

Ezulwini Mine Surface Stockpile Status (as at July 2, 2008)

Source	Tonnes	Gold grade (grams/tonne)*	U ₃ O ₈ grade (%)*
Clean up and development	127,500	1.11	-
Upper Elsburg stopes	11,543	4.64	-
Middle Elsburg stopes	12,695	3.89	0.045

*Sampled belt grades

MWS

Commissioning of Buffelsfontein Tailings

Commissioning of the Phase 1A gold plant expansion from 6.0 MTPA to 7.6 MTPA and the installation of the pumping system to bring tailings from the new Buffelsfontein tailings complex has progressed well, and the Phase 1A designed plant throughput is now being consistently achieved. Minor modifications to the hydraulic mining system to improve throughput and to the carbon-in-leach ("CIL") plant flow sheet to improve recovery are being implemented. Modifications completed to date include:

- installation of high shear oxygen reactors to improve gold recovery grades to 0.19 grams per tonne in the expanded CIL circuit
- flotation tailings from the tailings disposal line have been re-routed to the CIL gold circuit to reduce float tails grades and increase overall gold recovery rates to expected levels
- pump station modifications, including the installation rubber-lined piping and transfer pumps, were completed during a planned five-day plant shutdown during June 2008
- two track-mounted water cannons for the hydraulic mining of the tailings dams were installed in July 2008

Based on its performance during the first three weeks of July 2008, the MWS Phase 1A gold plant is now producing gold at designed rates and at planned costs. The remaining modifications for the commissioning of Phase 1A to transition operations to the Buffelsfontein complex of dams are expected to be completed in Q2 2009. These modifications include:

- installation of a slime re-pulping system to break up clay lumps and improve hydraulic mining rates to 1.9 million tonnes per quarter and to stabilize pulp densities pumped to the plant
- the installation of an additional track-mounted water cannon

MWS Quarterly Production Results

	Q3 2008	Q4 2008	Q1 2009
Tonnes processed	832,208	1,592,242	1,664,537
Head grade	0.455	0.370	0.369
Recovery %	60%	38%	43%
Gold recovered (kilograms)	229	219	265
Gold recovered (ounces)	7,357	7,030	8,530

Construction

The construction of a 7.8 MTPA uranium and pyrite flotation plant, a 7.8 MTPA gold plant and a 1.5 MTPA uranium plant has progressed according to schedule. All excavation work and blasting of Dolomite outcrops has been completed. Several of the foundations for tanks and other sections of these plants were in place by the end of the quarter. Project engineering and procurement are on schedule for the completion of the commissioning of these plant modules at the end of Q4 2009.

Mineral Resource Update for the Ezulwini Mine

The verification of historic sampling data, the results of the new sampling and the addition of new properties is expected to result in a significant increase in the amount of verified data available to update the previous mineral resource estimate for the Ezulwini Mine. In addition, results from new surface and underground drilling continue to be added to the geological data base. A revised mineral resource estimate and updated technical report are expected to be published during Q2 2009.

Sulphuric Acid Plant Update

As disclosed on April 21, 2008, subject to financing, the Company is proceeding with plans to install its own sulphuric acid manufacturing plant, which will utilize the Company's significant stores of sulphur bearing pyrite in the MWS tailings to secure a long-life low-cost source of supply of sulphuric acid, a necessary reagent for the production of uranium. Based on a preliminary assessment the Company anticipated that it would construct a standard 600 tonne per day sulphuric acid plant for an estimated \$124 million. The Company is also verifying the sulphide sulphur content of the tailings and assessing the benefits of installing a smaller, 'fit for purpose' acid plant which would be of sufficient size to supply the Company's requirement of approximately 300 tonnes of acid per day. If a smaller plant is to be installed or the Company can procure a second-hand acid plant, less capital will be required. The Company is planning to use project financing, end-user financing or corporate debt to procure the acid plant.

Power Update

During Q1 2009, the electrical power requirements of both MWS and the Ezulwini Mine were supplied by South Africa's national power utility, Eskom, without any interruptions that plagued the country in the previous quarters. As a backup plan to secure a continual supply of electrical power at the Ezulwini Mine, however,

the Company has connected the existing 14 megawatts ("MW") of standby diesel generated power to the new plant and has proceeded with its order to secure diesel generators with a further capacity of 10 MW on a lease basis. At MWS, the Company is in the process of shipping the 30 MW power plant that it recently acquired to secure sufficient power to start up the uranium and add-on gold plant modules planned for commissioning in Q4 2009. On June 9, 2008, Eskom agreed to increase its power commitment at the Ezulwini Mine from 40 MW to 55 MW, which is expected to reduce the projected requirement and cost of owner-generated power until 2011. The Company will, however, have its own secure alternative source of power in the event of any further unexpected power disruptions.

Technical Disclosure

Technical disclosure in this news release relating to the tonnage of the stockpiles has been prepared by Warren de Witt, who is a "qualified person" under NI 43-101 and is independent of First Uranium. Mr. de Witt has reviewed and approved the disclosure in this news release.

Financial Results: Release and Conference Call

For its first fiscal quarter ended June 30, 2008, First Uranium expects to release its financial results on Monday, August 11, 2008. A conference call for the benefit of investors is planned for Tuesday, August 12, 2008 at 10:00 am (Toronto and New York) and 4:00 pm in South Africa.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the availability of electrical power, the planned addition of owner-operated power generation, price of electrical power and sulphuric acid, the estimation of mineral resources and reserves, the realization of estimated pyrite content in the MWS tailings dams, expected dates of commissioning or commencement of production, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, availability of financing on acceptable terms, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "goal", "objective", "plans", "continues", "expects" or "does not expect", "is expected", "projected", "assumed", "budget", "design", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "should", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, availability of equipment, materials and fuel, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold, to price of electrical power and sulphuric acid. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-

looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Company's expectations as of the date of this news release; (ii) actual results may differ materially from the Company's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Company cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Company disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) consistent supply of sufficient power will be available to develop and operate the projects as planned; (ii) approvals to transfer or grant, as the case may be, mining rights will be obtained; (iii) metal prices, exchange rates and discount rates applied in the pre-feasibility study and preliminary economic assessment are achieved; (iv) mineral resource estimates are accurate; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Company and their investment in the Company's common shares to a sufficient level to continue to support the Company's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

About First Uranium Corporation

First Uranium Corporation (TSX:FIU, JSE:FUM) is focused on the development of its South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and underground development of the Ezulwini Mine and the expansion of the Mine Waste Solutions tailings recovery facility. First Uranium also plans to grow production by pursuing value-enhancing acquisition and joint venture opportunities in South Africa and elsewhere.

MATERIAL CHANGE REPORT

RECEIVED
27 OCT -8 P 12:21

Item 1. Name and Address of Company

First Uranium Corporation
155 University Avenue, Suite 1240
Toronto, Ontario M5H 3B7

Item 2. Date of Material Change

May 21, 2008.

Item 3. News Release

A news release was disseminated over CNW news wire service on May 21, 2008.

Item 4. Summary of Material Change

First Uranium Corporation ("First Uranium" or "the Company") announced its production results for the fiscal quarter ended March 31, 2008 ("Q4 2008"), during which the Company processed 1,592,242 tonnes of reclaimed tailings at its Mine Waste Solutions tailings recovery project ("MWS") and 18,669 tonnes of underground gold ore from its Ezulwini Mine ("Ezulwini") through a toll treatment arrangement. Gold production totaled 9,725 ounces for the period. Subsequent to March 31, 2008, the Company commenced production of uranium and gold ore at Ezulwini, which is currently being stockpiled on surface. The Company's uranium plants are on schedule to begin to be commissioned in June 2008 at Ezulwini and in December 2008 at MWS.

Item 5. Full Description of Material Change

5.1 Full Description of Material Change

See attached news release.

5.2 Disclosure for Restructuring Transactions

Not applicable.

Item 6. Reliance on Subsection 7.1(2) or (3) of National Instrument 51-102

N/A

Item 7. Omitted Information

N/A

First Uranium Corporation

NEWS RELEASE – May 21, 2008

FIRST URANIUM PROVIDES PRODUCTION AND PROJECT DEVELOPMENT UPDATE FOR QUARTER ENDED MARCH 31, 2008

All amounts are in US dollars unless otherwise noted.

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) (“First Uranium” or “the Company”) today announced its production results for the fiscal quarter ended March 31, 2008 (“Q4 2008”), during which the Company processed 1,592,242 tonnes of reclaimed tailings at its Mine Waste Solutions tailings recovery project (“MWS”) and 18,669 tonnes of underground gold ore from its Ezulwini Mine (“Ezulwini”) through a toll treatment arrangement. Gold production totaled 9,725 ounces for the period. Subsequent to March 31, 2008, the Company commenced production of uranium and gold ore at Ezulwini, which is currently being stockpiled on surface. The Company’s uranium plants are on schedule to begin to be commissioned in June 2008 at Ezulwini and in December 2008 at MWS.

In mid-June 2008 First Uranium expects to announce its annual audited financial results for the year ended March 31, 2008

Highlights for Q4 2008

Mine Waste Solutions tailings recovery project (“MWS”)

- gold plant feed capacity upgraded from 6.0 to 7.6 million tonnes of processing per annum (“MTPA”)
- approximately 1.6 million tonnes of tailings were processed, producing 7,030 ounces of gold
- first 7.8 MTPA pump station completed at Buffelsfontein tailings dam complex
- commissioning of gold plant upgrades and a new mining and processing system scheduled for completion in July 2008
- 30-megawatt power plant for expansion sourced
- preliminary assessment for construction of a Company-owned sulphuric acid plant was completed, with completion of a specification and procurement study scheduled for July 2008

- construction of new 7.8 MTPA uranium and pyrite flotation plant on track to commence commissioning during December 2008 (part of "Phase 1B" of the MWS project)
- construction of new 7.8 MTPA gold plant and 1.5 MTPA uranium plant on track to commence commissioning during December 2008 (also part of "Phase 1B" of the MWS project)

Ezulwini Mine ("Ezulwini")

- toll treated 18,669 tonnes of underground ore to produce 2,695 ounces of gold
- the third party toll treating gold ore from Ezulwini suspended this operation due to the power shortage and, as a result, the Company postponed the ramp-up of the underground development and accelerated the shaft refurbishment program
- underground development and hoisting of ore started again in April and uranium and gold ore is being stockpiled on surface
- 2.4 MTPA gold plant commissioning commenced during April 2008 (3 months earlier than anticipated at the time of the Company's initial public offering in December 2006) and on schedule for production of gold on carbon in June and gold bullion in July 2008
- first of four 0.6 MTPA mills is being commissioned, with the second mill due to commence commissioning in September 2008
- underground stope availability is on schedule in the Middle Eslburg (uranium and gold) section but somewhat behind schedule in the Upper Eslburg (gold) section, which is not expected to affect the planned production profile
- standby diesel generated power connected into new plant
- 1.2 MTPA uranium plant construction on track to commence commissioning in July 2008 for uranium concentrate (yellow cake, ammonium diuranate, or "ADU") production in August 2008

Affecting both projects, First Uranium also disclosed the results of updated technical reports on April 21, 2008 which detail the Company's proactive approach to reducing future operating costs and securing sufficient power and sulphuric acid to run its operations as planned. Summary cash flow models related to these technical reports have been posted to the Company's website (www.firsturanium.com) and provide revised estimates for production, capital and operating costs. The full technical reports are scheduled to be filed on SEDAR and posted to the website by early June.

Mine Waste Solutions

Buffelsfontein No. 2 Dam Commissioning

Commissioning of the gold plant expansion from 6 MTPA to 7.6 MTPA and the installation of the pumping system to bring tailings from the Buffelsfontein dam complex has progressed on schedule and within budget.

As expected, the transition of mining from the Stilfontein dam complex to the Buffelsfontein dam complex has resulted in a reduction in unit cash costs for gold production and it is expected that planned life of project unit costs will be achieved when final commissioning is completed by mid-2008.

Results from the mining of Buffelsfontein No. 2 Dam to date have confirmed the mineral resource estimates for gold and uranium, as well as the estimated sulphur content. Minor modifications to the hydraulic mining system to improve throughput and to the carbon-in-leach ("CIL") plant flow sheet to improve recovery are being implemented and are expected to be completed in July 2008; after which the commissioning of the first phase of the transition to the Buffelsfontein complex of dams should be complete. These modifications include:

- installation of a slime re-pulping system to break up clay lumps and improve hydraulic mining rates to 1.9 million tonnes per quarter and to stabilize pulp densities pumped to the plant
- completion of the current work to re-route flotation tailings from the tailings disposal line to the CIL gold circuit to reduce float tails grades and increase overall gold recovery rates to expected levels
- installation of high shear oxygen reactors to improve gold recovery grades to 0.19 grams per tonne in the expanded CIL circuit

MWS Quarterly Production Results

	Q3 2008	Q4 2008
Tonnes processed	832, 208	1, 592, 242
Grade of gold recovered (grams/tonne)	0.27	0.14
Gold recovered (kilograms)	229	219
Gold recovered (ounces)	7,357	7,030

Construction

Sourcing of the additional power plant required to commission the Phase 1B expansion (which includes a 7.8 MTPA uranium and pyrite flotation plant, a 7.8 MTPA gold plant and a 1.5 MTPA uranium plant) has progressed according to schedule. Construction of the Phase 1B complex is progressing according to budget and is on schedule to commence commissioning in December 2008.

Ezulwini Mine

Upper Elsburg ("UE") and Shaft Re-engineering Project

The Company has completed the installation of the safety support systems to prevent future impact on the main shaft from possible ground movement within the weak Western Areas Formation ("WAF") where it intersects the shaft. Additional support installation above and below this area is 85% complete. Support through the WAF zone in the ventilation shaft is 66% complete and support above and below the WAF zone in the ventilation shaft is 60% complete.

While development work on the UE reef horizon (gold) which is being undertaken to provide access to the shaft de-stress cut in order to relieve possible future pressure on the main shaft is behind schedule (about 74% complete), the delay is not expected to impact the operation's production profile as the opening up of previously un-mined portions of the UE ore body outside of the shaft pillar area is ahead of schedule.

The ore loading system at the shaft bottom has been replaced and now exceeds current mining requirements. The final commissioning of the new hanging tower steel work in the main shaft is expected to be completed by March 2009. This new system will allow for a long-life low-maintenance shaft system. Once the shaft is de-stressed, mining in the shaft de-stress cut area is expected to continue for a further six years.

Results from development sampling, stope sampling and run of mine belt sampling continue to provide positive reconciliations to the gold grades estimated in the current UE mineral resource block model.

Surface stockpiling of production from the UE development and stoping operations has commenced.

Middle Elsburg ("ME") Project

As disclosed in the Company's news release dated February 13, 2008, mining in the ME uranium and gold section of the Ezulwini Mine was curtailed during the quarter due to the power shortage situation. Production has since recommenced as has hoisting and stockpiling of uranium and gold bearing ore on surface.

The opening up, sampling and preparation of new stopes has resulted in sufficient mining areas being available to meet start up production requirements. It is anticipated that commercial production rates from the ME uranium and gold ore-body will be achieved during the year ending March 2009, as scheduled.

Results from development sampling, stope sampling and run of mine belt sampling continue to provide positive reconciliations to the gold and uranium grades estimated in the current ME mineral resource block model.

Ezulwini Quarterly Production Results

	Q3	Q4
Gold tonnes toll-treated	27,951	18,669
Grade of gold recovered (grams/tonne)	5.6	4.5
Gold recovered (kilograms)	157	84
Gold recovered (ounces)	5,055	2,695

Ezulwini Surface Stockpile Status (as at May 16, 2006)

Source	Tonnes	Gold grade (grams/tonne)*	U ₃ O ₈ grade grams/tonne*
Clean up and development	127,500	1.1	-
Upper Elsburg stopes	4, 338	4.7	-
Middle Elsburg stopes	2,501	3.6	800

*Sampled belt grades

Gold and Uranium Plant Commissioning

In the event that Eskom experiences difficulties in supplying the additional power that it agreed to do in line with its binding agreement with Ezulwini Mining Company, the Company has installed the switchgear necessary to utilize the existing standby diesel generators at site should they be required to start up the new plant. Commissioning of the 2.4 MTPA gold plant commenced on schedule and on budget during April 2008. The first 0.6 MTPA milling unit is currently being commissioned and it is anticipated that first gold will be loaded onto carbon during June with gold bullion produced in July 2008. The commissioning of the second 0.6 MTPA mill is scheduled for September 2008 at which point milling capacity will be utilized to consume existing stockpiles while mining rates ramp up as per plan. The civil engineering work required for the final two mills is complete and installation and the start of the commissioning of these mills are on schedule for February 2009.

The construction of the 1.2 MTPA uranium plant is on budget and on schedule for commissioning to commence during June of 2008. The first ADU shipments are anticipated to be ready for dispatch during August 2008.

Mineral Resource Update

The verification of historic sampling data, the gathering of new sampling results and the addition of new properties is expected to result in a significant increase in the amount of verified data available to perform an update of the previous mineral resource estimate. In addition, results from new surface and underground drilling continue to be added to the geological data base. It is anticipated that a revised mineral resource estimate and updated technical report will be completed early in the Company's fiscal second quarter (July – September).

Sulphuric Acid Plant

As disclosed on April 21, 2008, the Company is proceeding with plans to construct its own sulphuric acid manufacturing plant, which will utilize the Company's significant stores of sulphur bearing pyrite to secure a long-life low-cost source of supply of sulphuric acid. A preliminary Company assessment has been completed and it is anticipated that the detailed specification and procurement study for a standard 600 tonne per day sulphuric acid plant will be completed by the end of July 2008. The Company anticipates that the environmental impact assessment process necessary to secure an operating

license for the acid plant will be concluded by July 2009 and has engaged the services of reputable consulting firms who are well experienced in the design, permitting and construction of pyrite burning acid plants in Southern Africa. First Uranium is evaluating options for financing the acid business as a stand alone entity and discussions are underway.

"Our near-term objectives are to expand our gold production, commission our uranium plants and generate cash," said Gordon Miller, President and Chief Executive Officer of First Uranium. "Our long-term objective is to become one of the world's lowest cost uranium producers and we have met or exceeded almost all of our target dates for project milestones along the way and, most importantly, we have started to commission our plants on schedule. We have also taken significant risk out of our projects by re-engineering the shaft at Ezulwini, acquiring generators to meet our power requirements and made plans to build an acid plant to provide a low-cost secure supply of sulphuric acid."

Technical Disclosure

Technical disclosure in this news release relating to the tonnage of the stockpiles has been prepared by Warren de Witt, who is a "qualified person" under NI 43-101 and is independent of First Uranium. Mr. de Witt has reviewed and approved the disclosure in this news release.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the availability of electrical power, the planned addition of owner-operated power generation, price of electrical power and sulphuric acid, the estimation of mineral resources and reserves, the realization of estimated pyrite content in the MWS tailings dams, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, availability of financing on acceptable terms, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "goal", "objective", "plans", "expects" or "does not expect", "is expected", "projected", "assumed", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "should", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, availability of equipment, materials and fuel, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold, to price of electrical power and sulphuric acid. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Company's expectations as of

the date of this news release; (ii) actual results may differ materially from the Company's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Company cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Company disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) consistent supply of sufficient power will be available to develop and operate the projects as planned; (ii) approvals to transfer or grant, as the case may be, mining rights will be obtained; (iii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iv) mineral resource estimates are accurate; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Company and their investment in the Company's common shares to a sufficient level to continue to support the Company's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

About First Uranium Corporation

First Uranium Corporation (TSX:FIU, JSE:FUM) is focused on the development of its South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and underground development of the Ezulwini Mine and the expansion of the Mine Waste Solutions tailings recovery facility. First Uranium also plans to grow production by pursuing value-enhancing acquisition and joint venture opportunities in South Africa and elsewhere.

First Uranium Corporation

MATERIAL CHANGE REPORT

RECEIVED
2008 OCT -8 P 12:21
STANDARD TIME

Item 1. Name and Address of Company

First Uranium Corporation
155 University Avenue, Suite 1240
Toronto, Ontario M5H 3B7

Item 2. Date of Material Change

April 21, 2008.

Item 3. News Release

A news release was disseminated over CNW news wire service on April 21, 2008.

Item 4. Summary of Material Change

First Uranium Corporation ("First Uranium" or "the Company") confirmed its decision, previously announced on February 13, 2008, to generate a portion of its future electrical power requirements at its underground Ezulwini Mine ("Ezulwini") and the Mine Waste Solutions tailings recovery project ("MWS") in South Africa. While these arrangements to generate additional power to supplement that supplied by South Africa's national power utility, Eskom, will increase the projected capital and operating costs of the Company's two operations, this investment in power is justified by securing supply of electrical power and it will have been more than offset by the increased realized price for gold and the decline in the value of the South African rand against the US dollar.

Taking into consideration the capital and operating costs of generating additional power, revised acid price assumptions and a revaluation of metal price and exchange rate assumptions (each of which is described in further detail in this news release), the revised net present value ("NPV" at an 8% discount rate) is expected to be \$667 million for Ezulwini and \$419 million for MWS and the internal rates of return ("IRR") for the projects are expected to be 336% for Ezulwini and 75% for MWS.

Item 5. Full Description of Material Change

5.1 Full Description of Material Change

See attached news release.

The Company subsequently announced on the same day a correction to Table 1. In the last line of Table 1 in the column titled "Additional Unit Cost", 1.19 should be 1.63.

5.2 Disclosure for Restructuring Transactions

Not applicable.

Item 6. Reliance on Subsection 7.1(2) or (3) of National Instrument 51-102

N/A

Item 7. Omitted Information

N/A

Item 8. Executive Officer

For further information:

First Uranium Corporation:

Gordon T. Miller
President & Chief Executive Officer
Tel.: 416-342-5640

Bob Tait
VP Investor Relations
Tel: 416-558-3858

Item 9. Date of Report

April 29, 2008

FIRST URANIUM CORPORATION

NEWS RELEASE – April 21, 2008

FIRST URANIUM TO MEET FUTURE PRODUCTION GROWTH PLANS AT ITS SOUTH AFRICAN OPERATIONS BY INSTALLING POWER PLANTS AND A SULPHURIC ACID PLANT

All amounts are in US dollars unless otherwise noted.

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) (“First Uranium” or “the Company”) today confirmed its decision, previously announced on February 13, 2008, to generate a portion of its future electrical power requirements at its underground Ezulwini Mine (“Ezulwini”) and the Mine Waste Solutions tailings recovery project (“MWS”) in South Africa. While these arrangements to generate additional power to supplement that supplied by South Africa’s national power utility, Eskom, will increase the projected capital and operating costs of the Company’s two operations, this investment in power is justified by securing supply of electrical power and it will have been more than offset by the increased realized price for gold and the decline in the value of the South African rand against the US dollar.

Taking into consideration the capital and operating costs of generating additional power, revised acid price assumptions and a revaluation of metal price and exchange rate assumptions (each of which is described in further detail in this news release), the revised net present value (“NPV” at an 8% discount rate) is expected to be \$667 million for Ezulwini and \$420 million for MWS and the internal rates of return (“IRR”) for the projects are expected to be 336% for Ezulwini and 75% for MWS.

In a separate news release, also dated April 18, 2008, the Company announced that it will establish a separate business unit to build and operate an acid plant to supply sulphuric acid to Ezulwini and MWS.

RATIONALE FOR THE COMPANY TO GENERATE ITS OWN POWER

The Company conducted a study assessing the economic viability of First Uranium generating its own power at Ezulwini and MWS for the next five years, as a result of the significantly reduced supply of electrical power currently available in South Africa and Eskom’s concerns about its ability to supply power to the country’s mining industry in the short and medium term. On January 24, 2008, Eskom communicated to the mining industry that the utility could not

guarantee power availability and asked the industry to operate at electrical power levels below historical load requirements until 2012 (the "Power Situation"). While Eskom has announced plans to increase the supply of power incrementally in the years leading up to 2012, Eskom also reports that full power availability cannot be guaranteed until then.

At both Ezulwini and MWS, based on the positive economic results of each study, the Company plans to initially lease diesel generators for a term of up to five years. In addition, the Company plans to purchase and install 30 megawatts ("MW") of electrical power generating capacity at a cost of approximately \$20 million. The Company expects to power its generators using a combination of diesel fuel and heavy fuel oil for approximately five years and to recover approximately 50% of its investment by selling the power generators when they are no longer needed.

"First Uranium is determined to start up its uranium recovery plants at its Ezulwini Mine and MWS on schedule," said Gordon Miller, President and CEO of First Uranium. "We have adjusted our uses and sources of electrical power to enable us to fulfill our production commitments to our investors. We do not intend to let the Power Situation nor the ongoing increases in the cost of sulphur and sulphuric acid threaten our business or use them as an excuse to miss our project milestones. Given that we are mining uranium and gold at both projects we are confident that the project economics are robust enough, assuming our forecast metal prices, to allow us to overcome the electrical power shortages and rapidly increasing acid prices that are prevalent in South Africa."

IMPACT ASSESSMENT BY PROJECT

Based on the positive results of the studies of the impact of generating power and the impact of building and operating the acid plant, the Company, with the full support of its Board, will proceed with the full development of its two projects and acid plant as follows:

For the Ezulwini Mine:

- given the uncertainty of power supply, since January 24 2008, at a third-party gold plant to toll-treat the Company's ore, the Company reduced mine development and hoisting ore to surface during February and March, 2008, and focused on shaft refurbishment until the operation's gold plant commences commissioning at the end of April 2008, when mine development and hoisting ore are expected to resume at planned rates
- the Company expects to recover any interim production shortfalls arising from the reduction of mine development as the processing plant has available milling capacity to accommodate additional throughput for the next 12 months
- the first 50,000 tonne per month module of the gold plant remains on schedule for commissioning commencing in April 2008 using Eskom power (as available) augmented by existing installed diesel generator capacity if necessary
- the first 50,000 tonne per month module of the uranium plant remains on schedule for commissioning commencing in June 2008 using the Company's new power generation capacity. Current mine production from the gold section and uranium section will be stockpiled separately on surface in the interim

- the Company does not expect any material adjustment to previously reported production forecasts
- full operation of Ezulwini is expected to require a maximum demand of 56 MW of power, of which Eskom has amended its committed supply to 32 MW, requiring the Company to generate 24 MW, 10 MW more than its existing generator capacity of 14 MW
- prior to the Power Situation, electrical power costs were expected to represent about 9% of the operating costs. The impact of additional operating costs for power generation are estimated to be an additional \$3.59 (a 12% overall increase) per pound for uranium and an additional \$35.50 (an 8% overall increase) per ounce for gold over the five-year period of self power generation.

Expected costs to generate additional power over the life of the mine at Ezulwini subsequent to the Power Situation and to purchase Eskom power at higher rates are listed in the table below and are expected to result in average annual operating costs, on a co-product basis, of \$0.86 per pound for uranium and \$8.62 per ounce for gold.

Table 1: Operating Cost Impact of Electrical Power at the Ezulwini Mine

Fiscal year ending March 31	Additional operating cost (\$ millions)	Additional unit cost (\$ per tonne)	Additional power cost as a % of operating costs
2009	8.6	14.24	20%
2010	18.3	12.51	21%
2011	16.8	8.53	17%
2012	8.80	4.00	11%
2013	5.89	2.67	10%
Life of mine	58.35	1.19	18%

For MWS:

- the current MWS operation remains unaffected by the Power Situation as it is drawing additional power from Buffelsfontein Gold Mines Limited ("BGM")
- upgrading of the MWS gold plant to increase the design capacity to 633,000 tonnes per month was completed on schedule
- although announced on February 13 that a three-month delay was expected to complete a feasibility study for the additional power requirements, the Company now expects to start commissioning the second gold plant module and the first two modules of the uranium plant in December 2008
- the construction schedule for the third modules of its gold and uranium plants will be completed by December 2009
- full operation of MWS is expected to require a maximum demand of 43 MW of power by February 2010, of which Eskom has committed to supply 29 MW by this date, requiring the Company to generate 14 MW
- prior to the Power Situation, electrical power costs were expected to represent about 9% of the operating costs. The impact of additional operating costs for power generation are estimated to be an additional \$2.49 (a 10% overall increase) per pound for uranium and an additional \$44.70 (a 13% overall increase) per ounce for gold over the five-year period of self power generation.

Expected costs to generate additional power over the life of the mine at MWS subsequent to the Power Situation and to purchase Eskom power at higher rates are listed in the table below and are expected to result in average annual

operating costs, on a co-product basis, of \$1.04 per pound for uranium and \$17.00 per ounce for gold.

Table 2: Operating Cost Impact of Electrical Power at MWS

Fiscal year ending March 31	Additional operating cost (\$ millions)	Additional unit cost (\$ per tonne)	Additional power cost as a % of operating costs
2009	3.41	0.98	11%
2010	18.58	1.06	23%
2011	22.13	0.95	21%
2012	6.28	0.27	8%
2013	0.45	0.02	1%
Life of mine	50.89	0.56	13%

Technical reports for both projects are expected to be completed by June 2, 2008.

ECONOMIC AND COMMODITY PRICE ASSUMPTIONS

To assess the financial impact of the costs of generating additional power and revised cost of sulphuric acid, the following tables show the Company's commodity price assumptions for May 2007 (the date of the previous technical report for Ezulwini), November 2007 (the date of the previous technical report for MWS and April 2008 (the most recent survey of assumptions). The November 2007 and April 2008 assumptions are based on an average nominal consensus forecast from the investment research analysts at 13 North American-based brokerage firms, adjusted downward by the US inflation rate for the period covering the construction of the projects.

Table 3: NOVEMBER 2007 ECONOMIC AND COMMODITY PRICE ASSUMPTIONS

	Unit	Mar 2009	Mar 2010	Mar 2011	Mar 2012	Beyond Mar 2012
Gold price	\$/ounce	737	734	683	627	635
Uranium price	\$/pound	104	104	91	78	45
Currency exchange rate	ZAR/\$US	7.40	7.40	7.40	7.40	7.40
Market sulphuric acid price (incl. transport)	\$/tonne	60	60	60	60	60
Project sulphuric acid price (MWS)	\$/tonne	60	60	60	60	60
Project sulphuric acid price (Ezulwini)	\$/tonne	60	60	60	60	60

Table 4: APRIL 2008 ECONOMIC AND COMMODITY PRICE ASSUMPTIONS

	Unit	Mar 2009	Mar 2010	Mar 2011	Mar 2012	Beyond Mar 2012
Gold price	(\$/oz.)	890	907	874	797	711
Uranium price	(\$/lb.)	96	92	79	75	50
Currency exchange rate	(ZAR/\$US)	7.27	7.36	7.50	7.45	7.57
Market sulphuric acid price (incl. transport)	\$/tonne	350	265	170	95	95
Project sulphuric acid price (MWS)	\$/tonne	266	266	34.2	34.2	34.2
Project sulphuric acid price (Ezulwini)	\$/tonne	565	565	47.5	47.5	47.5

REVISED PROJECT ECONOMICS

The following tables summarize the impact of the power supply and acid cost changes at Ezulwini and MWS. More details of the project economics from the financial models upon which the information in Tables 5 and 6 are based, will be posted to the Company's web site (www.firsturanium.com) in due course.

Table 5: REVISED PROJECT ECONOMICS FOR THE EZULWINI MINE

	From May 2007 technical report	April 2008 with May 2007 assumptions	April 2008 with April 2008 assumptions
Uranium price (\$ per pound)	50	50	see April 2008 assumptions
Gold price (\$ per ounce)	500	500	See April 2008 assumptions
Electrical power required	56MW	56MW	56MW
Eskom commitment	80MW	32MW	32MW
Self-generated power	-	24MW	24MW
Life-of-mine average co-product operating costs			
Operating cost per tonne milled (\$/tonne)	56.87	71.82	71.82
Uranium cash cost (\$/pound)	29	41	33
Gold cash cost (\$/ounce)	297	385	376
Capital expenditures	\$271 million	\$220 million	\$220 million
Average annual life-of-mine production			
Uranium (pounds)	888,000	951,000	951,000
Gold (ounces)	290,000	306,000	306,000
Production milestones			
Gold plant commissioning commences	April 2008	April 2008	April 2008
1 st 50,000 tpm mill	April 2008	April 2008	April 2008
Uranium plant commissioning commences	June 2008	June 2008	June 2008
2 nd 50,000 tpm mill	Sep 2008	Sep 2008	Sep 2008
3 rd 50,000 tpm mill	Jan 2009	Jan 2009	Jan 2009
4 th 50,000 tpm mill	Jan 2009	Jan 2009	Jan 2009
NPV ₈	\$332 million	\$191 million	\$667 million
IRR	32%	34%	336%

Notes:

1. The assumed exchange rate for South African rand for all dates in the table above is as shown in the table above.
2. Co-product costs assume that operating cash costs are split in proportion to the revenue earned from each product.
3. NPV is calculated using a nominal discount rate of 8%

Table 6: REVISED PROJECT ECONOMICS FOR MWS

	From November 2007 Technical Report	April 2008 with November 2007 assumptions	April 2008 with April 2008 assumptions
Uranium price (\$ per pound)	see November 2007 assumptions	see November 2007 assumptions	see April 2008 assumptions
Gold price (\$ per ounce)	See November 2007 assumptions	See November 2007 assumptions	See April 2008 assumptions
Electrical power required	43 MW	43 MW	43 MW
Eskom commitment	43 MW	29 MW	29 MW
Self-generated power	-	14 MW	14 MW
Life-of-mine average co-product operating costs			
Gold operating cost per tonne reclaimed (\$/tonne)	1.93	2.16	2.12
Uranium operating cost per concentrate tonne (\$/tonne)	8.09	10.00	9.82
Uranium cash cost (\$/pound)	24	22	22
Gold cash cost (\$/ounce)	264	353	347
Capital expenditures	\$260 million	\$264 million	\$241 million
Average annual life-of-mine production			
Uranium (pounds)	1,339,000	1,317,000	1,317,000
Gold (ounces)	126,000	130,000	130,000
Production milestones			
1 st module of gold plant	June 2007	June 2007	June 2007
2 nd module of gold plant	Nov. 2008	Dec. 2008	Dec. 2008
3 rd module of gold plant	Nov. 2009	Dec. 2009	Dec. 2009
1 st module of uranium plant	Nov. 2008	Dec. 2008	Dec. 2008
2 nd module of uranium plant	Nov. 2008	Dec. 2008	Dec. 2008
3 rd module of uranium plant	Nov. 2009	Dec. 2009	Dec. 2009
NPV _B	\$505 million	\$133 million	\$419 million
IRR	151%	22%	75%

Notes:

1. This table differs from the November 2007 model in that the Company's fiscal year 2008, which ended on March 31, 2008, has not been considered in the above calculations.
2. The assumed exchange rate for South African rand for all dates in the table above is as shown in the table above.
3. Co-product costs assume that operating cash costs are split in proportion to the revenue earned from each product.
4. NPV is calculated using a real discount rate of 8%
5. The first gold plant module became operational with the acquisition of the Chemwes gold plant in June 2007.

“With Eskom being unable to meet the power demands of the country, we knew that we had no choice but to generate our own power,” said Mr. Miller. “The real task was to find a way to minimize the upfront capital costs of acquiring this additional power generating capacity. We were able to do that and also design power-savings solutions into the plant construction that would reduce the dependence on self-generated power. Fortunately, the rising price for the gold we are producing is expected to more than offset the additional costs of our own power generation. Rapidly increasing prices of sulphur have also had a very positive impact on the economic assessment of our large

above ground source of sulphur which is contained in pyrite in the tailings dams at MWS.”

Technical Disclosure

All technical disclosure in this news release relating to the Mine Waste Solutions tailings recovery project (“MWS” and formerly named the Buffelsfontein tailings recovery project) has been prepared in accordance with National Instrument 43-101 (“NI 43-101”) by Daan van Heerden, B.Sc., M.Comm., Charles Muller, B.Sc, Pr.Sci.Nat, and Johan Odendaal, B.Sc., M.Sc., Pr.Sci.Nat all of Minxcon Pty Ltd. (“Minxcon”), Treavor Pearton, B.Sc Eng PhD, FGSA and Mike Valenta, Pr Eng, B.Sc., of Metallicon Process Consulting (Pty) Ltd. (“Metallicon”) each of whom is a “qualified person” under NI 43-101 and is independent of First Uranium.

Historical technical disclosure in this new release relating to MWS is extracted from a technical report entitled “Technical Report – Pre-Feasibility of the Buffelsfontein Tailings Recovery Project, located in Stilfontein, North West Province, Republic of South Africa” submitted on November 1, 2007, and prepared by Messrs. van Heerden, Muller, Odendaal, Pearton and Valenta. The disclosure contained in this news release relevant to their respective contributions has been reviewed and approved by Messrs. van Heerden, Muller, Odendaal, Pearton and Valenta.

All technical disclosure in this news release relating to the Ezulwini Mine has been prepared in accordance with NI 43-101 by R. Dennis Bergen, P.Eng and Wayne Valliant P.Geo of Scott Wilson Roscoe Postle Associates Inc. (“Scott Wilson RPA”) each of whom is a “qualified person” under NI 43-101 and is independent of First Uranium.

Historical technical information in this news release relating to the Ezulwini Mine is extracted from a technical report entitled “Technical Report - Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa” originally submitted on November 8, 2006, revised on December 5, 2006, January 31, 2007 and May 9, 2007 prepared in accordance with NI 43-101 by Messrs. Bergen and Valliant, who have also reviewed and approved the disclosure in this news release.

The economic analysis contained in this news release is contained in the above technical reports and is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserves development, production and economic forecasts on which the preliminary assessment contained in the technical reports is based, will be realized.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the availability of electrical power, the planned addition of owner-operated power generation, price of uranium and gold, price of electrical power and sulphuric acid, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, availability of financing on acceptable terms, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as “goal”, “objective”, “plans”, “expects” or “does not expect”, “is expected”, “projected”, “assumed”, “budget”, “scheduled”, “estimates”, “forecasts”, “intends”, “anticipates”, or “does not anticipate”, or “believes” or variations of such words and phrases, or state that certain actions, events or results “may”, “could”, “would”, “might” or “will” be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current

exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, availability of equipment, materials and fuel, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold, to price of electrical power and sulphuric acid. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Company's expectations as of the date of this news release; (ii) actual results may differ materially from the Company's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Company cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Company disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) consistent supply of sufficient power will be available to develop and operate the projects as planned; (ii) approvals to transfer or grant, as the case may be, mining rights will be obtained; (iii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iv) mineral resource estimates are accurate; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Company and their investment in the Company's common shares to a sufficient level to continue to support the Company's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

Conference Call

First Uranium will conduct a conference call with investors to discuss the information in this news release at 10:00 a.m. local Toronto time and 4:00 p.m. local Johannesburg time on Monday, April 21, 2007. The conference call will be available simultaneously to all interested investors and news media.

Callers may dial 1 800 319-4610 (Canada and the US) or 0800 200 648 (South Africa). Callers from other international locations may call +1 604 638-5340 (Canada) or +27 11 535 3600 (South Africa). The call will be webcast at <http://services.choruscall.com/links/firsturanium080421.html> and an archive will be available through the same link shortly after the live event for 90 days.

A replay of the conference call will be available for 30 days. To access the replay, callers may dial 1 800 319-6413 (Canada and the US). Callers from other international locations may access the replay by dialing +27 11 305 2030 (South Africa) or +1 604 638-9010 (Canada). Access to the replay will require the code 2128, followed by #.

About First Uranium Corporation

First Uranium Corporation (TSX:FIU, JSE:FUM) is focused on the development of its South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and underground development of the Ezulwini Mine and the expansion of the Mine Waste

Solutions tailings recovery facility. First Uranium also plans to grow production by pursuing value-enhancing acquisition and joint venture opportunities in South Africa and elsewhere.

Item 3. News Release

A news release was disseminated over CNW news wire service on April 21, 2008.

Item 4. Summary of Material Change

First Uranium Corporation ("First Uranium" or "the Company") announced that, it will purchase and install an "off the shelf" acid plant to produce sulphuric acid to reduce the future costs and secure supply of acid required for its two uranium and gold mining projects in South Africa, the underground Ezulwini Mine ("Ezulwini") and the Mine Waste Solutions tailings recovery project ("MWS"). At a projected cost of \$124 million, the acid plant will be installed at MWS, located in the Western portion of the Witwatersrand Basin approximately 160 kilometres South-West of Johannesburg. Based on an analysis of pyrite feed-stock potential from the MWS tailings dams, a preliminary technical assessment and a recent market analysis, the Company expects that it will take 19 months to procure and commission the acid plant with anticipated production beginning in January 2010. The company has secured its initial requirements for sulphuric acid in a market where acid supplies remain very tight. The company anticipates significant acid price increases that are expected to continue in the medium term, as acid prices are closely related to the market for sulphur which is also indicating tight supply and significant price increases.

Item 9. Date of Report

April 29, 2008

First Uranium Corporation

NEWS RELEASE – April 21, 2008

FIRST URANIUM TO BUILD ACID PLANT TO SECURE FUTURE SUPPLY OF SULPHURIC ACID FOR ITS URANIUM PLANTS AT REDUCED COSTS

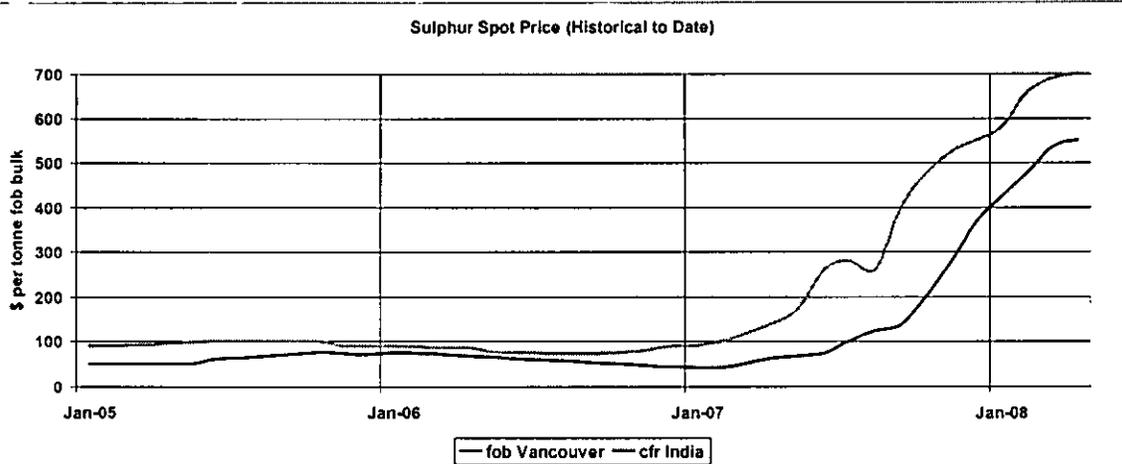

All amounts are in US dollars unless otherwise noted.

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) (“First Uranium” or “the Company”) today announced that, it will purchase and install an “off the shelf” acid plant to produce sulphuric acid to reduce the future costs and secure supply of acid required for its two uranium and gold mining projects in South Africa, the underground Ezulwini Mine (“Ezulwini”) and the Mine Waste Solutions tailings recovery project (“MWS”). At a projected cost of \$124 million, the acid plant will be installed at MWS, located in the Western portion of the Witwatersrand Basin approximately 160 kilometres South-West of Johannesburg. Based on an analysis of pyrite feed-stock potential from the MWS tailings dams, a preliminary technical assessment and a recent market analysis, the Company expects that it will take 19 months to procure and commission the acid plant with anticipated production beginning in January 2010. The company has secured its initial requirements for sulphuric acid in a market where acid supplies remain very tight. The company anticipates significant acid price increases that are expected to continue in the medium term, as acid prices are closely related to the market for sulphur which is also indicating tight supply and significant price increases.

RATIONALE

Reduced availability of electrical power in South Africa has caused cutbacks in the operation of smelters and other facilities that produce sulphuric acid as a byproduct. The reduced supply of acid, increases in the cost of elemental sulphur (which is used to produce acid) and increased demand for acid in the base metal sector and for fertilizer production have led to rapidly increasing global acid prices. The Company has assessed and confirmed the economic viability of constructing an acid plant to provide the required sulphuric acid for its operations to mitigate the effects of supply constraints and rapidly rising costs for acid.

Graph 1: SULPHUR SPOT PRICE COMPARISON

Notes for the Graph 1 and Tables 1 and 2:

- 1) 'fob' means "free on board" and indicates that the quoted price includes the cost of loading the goods into transport vessels at the specified location
- 2) 'cfr' means "cost and freight" and indicates that the cost of the goods and freight charges are included in the quoted price; while the buyer arranges for and pays insurance
- 3) as South Africa is a net importer of sulphur, local suppliers practice import parity pricing with industry recognized benchmark prices as shown

The long-term global outlook for the sulphuric acid ("H₂SO₄") market is based upon information from sulphur industry research and is primarily driven by the spot price for sulphur.

Table 1: INTERNATIONAL ACID PRICE FORECAST

	2008 \$/tonne	2009e \$/tonne	2010 – 2015e \$/tonne	2015-2020e \$/tonne
Tampa (cfr) consumer	250	175	80	80
Houston (fob)	260	175	80	80
Average H ₂ SO ₄ price	265	175	80	80

The forecast acid prices exclude the \$90 per tonne cost of transport from the South African port of entry to the Company's mining operations. Due to new uranium mining activity in this region, there is increasing local demand for sulphuric acid. This demand can only begin to normalize once additional acid plants have been commissioned.

Table 2: DELIVERED ACID PRICE FORECAST

Forecast	2008 \$/tonne	2009e \$/tonne	2010 – 2014e \$/tonne	2014-2020e \$/tonne
Average international H ₂ SO ₄ price -- fob Richards Bay, South Africa	260	175	80	80
Transport	90 ¹	90 ¹	90 ¹	15 ²
Total cost modeled	350	265	170	95

Notes:

- 1) Transport costs ex Richards Bay, South Africa
- 2) Assumes that enough local acid production will have started up by 2014 to reduce transport costs

Future price projections in South Africa, which indicate sulphuric acid costs ranging between US\$330 and US\$600 per tonne, have not taken into consideration acid demand at new mining projects, such as MWS, which will come on stream in the near term and approximately represent an additional 15% of current market acid supply.

Even assuming more conservative increases in acid costs, the Company expects that its investment of \$124 million in an acid plant, on its own, will have an internal rate of return ("IRR") of 6%, an NPV of \$28 million and a payback of 11 years. The low-cost acid produced by this plant will improve NPV at Ezulwini and MWS as sulphur will be sourced from current operations at no cost.

THE ACID PLANT BUSINESS MODEL

Once the acid plant is completed, the Company will direct all of the pyrite currently produced as waste at the MWS tailings plant to the acid plant for the production of sulphuric acid, which will eliminate the need to source acid from third-party vendors. Since the planned production of the acid would be more than sufficient to supply both Ezulwini's and MWS's projected acid requirements, excess acid could be sold into the market at the then prevailing market rates. In addition, as the production of acid in the plant will be an exothermic reaction, there is the opportunity to generate a by-product of approximately four megawatts of power, which will be available to augment the power supply to Ezulwini and MWS.

"We are in a fortunate position to have access to pyrite which is currently being discarded as a waste product after we have removed the gold from the pyrite flotation concentrate at MWS," added Gordon Miller, President and CEO of First Uranium. "While we believe that we have dealt with the current electrical power supply issues in a satisfactory way, it is but one of the important issues facing mining companies today. Consistent and reasonably priced acid supply is a fundamental requirement for our operations and the decision to build an acid plant will not only secure supply and protect us from rampant acid price inflation, it will also assist with future power requirements,"

ACID PLANT

The technical parameters used for this economic assessment are based upon test work and a preliminary assessment that has been conducted by MDM Engineering (Pty) Ltd during the past five months. The specification and procurement study is expected to be concluded within eight weeks. Of potential benefit to the installation of an acid plant is the fact that Simmer & Jack Mines, Limited, First Uranium's parent company, holds an existing license to produce acid at their Buffelsfontein Gold Mine under their Old Order Mining Right, which is in the process of being converted to a New Order Mining Right.

Table 3: PROJECT SPECIFICATIONS AND ECONOMICS FOR A 600 TONNE-PER-DAY ACID PLANT

Description	Amount	Unit
Tonnes of sulphur required per month	6,200	tonnes per month
Tonnes of tailings concentrate (pyrite) required per month	24,000	tonnes per month
Tonnes of acid produced per month	18,000	tonnes per month
Total capital	124	\$ millions
Total capital cost per total tonne of acid produced	31	\$/tonne
Operating cost of acid plant per tonne of acid produced	14	\$/tonne
Revenue per tonne of acid charged to Ezulwini and MWS	51	\$/tonne
IRR	6%	%
Long-term acid market price assumed for acid plant economics	95	\$/tonne
Payback	11	years
NPV	28	\$ millions

A standard plant with a sulphuric acid capacity of 600 tonnes per day has been chosen as the preferred size specification, which is more than sufficient to meet the Company's planned acid requirements. In addition, the plant would have the flexibility to adjust the process to achieve the desired sulphuric acid production regardless of the pyrite content in the tailings, which will allow the Company to fulfill its sulphuric acid requirements despite variances in the pyrite content from one tailings dam to the next.

The Company expects there to be a healthy market into which it should be able to sell any excess acid production.

Based on the current price projections for sulphuric acid, the Company expects the acid plant to operate at an incremental cost of approximately \$14 per tonne of acid, which will be reduced by credits received for the plant's by-product of electrical power discussed on page 3. The financial impact of the acid plant has been factored in the cash flow analysis below.

BENEFIT TO THE COMPANY'S MWS AND EZULWINI PROJECTS

The incremental benefits to the Company's MWS and Ezulwini projects are tabled below and also reflect the required investment in electrical power generation (announced in a separate release dated April 18, 2008), the rising costs of Eskom-supplied power in future years, the construction of an acid plant, the Company's current assumptions for the projects prices of uranium and gold and the projected currency exchange rate of the South African rand and the US dollar.

Table 4: ACID PRICES AT MWS

Description	MWS			
	November 2007 ¹	April 2008 Power & Own Acid	April 2008 Acid Exposed Conservative case	April 2008 Acid Market Downside case
Average H ₂ SO ₄ price (\$/tonne)	60	73.4 ²	114.6 ³	168.3 ⁴
Operating cost (\$/tonne)	2.5	2.9	3.2	3.4
NPV (\$ millions)	505	419	375	347

Notes:

- 1) The source of the November 2007 data was the 'Technical Report on the Pre-Feasibility of the Buffelsfontein Tailings Recovery Project, located at Stilfontein, North West Province, South Africa'
- 2) H₂SO₄ : Yr1 \$266 / tonne; Yr2 \$266 / tonne; Yr3 and beyond \$34.2 / tonne
- 3) H₂SO₄ : Yr1 \$266 / tonne; Yr2 \$266 / tonne; Yr3 –Yr6 \$170 / tonne ; Yr6 and beyond \$95 / tonne
- 4) H₂SO₄ : Yr1 \$266 / tonne; Yr2 \$266 / tonne; Yr3 and beyond \$200 / tonne
- 5) Average life of mine rate to exchange Rand to US dollars = 7.53
- 6) Average acid input cost of total operating cost for MWS = 23%
- 7) Average H₂SO₄ costs are a blend of the cost of contracted acid supply and the cost of the planned acid plant

Table 5: ACID PRICES AT EZULWINI

Description	EZULWINI MINE			
	May 2007 ¹	April 2008 Power & Own Acid	April 2008 Acid Exposed Conservative case	April 2008 Acid Market Downside case
Average H ₂ SO ₄ price (\$/tonne)	60	105 ²	168 ³	240.5 ⁴
Operating cost (\$/tonne)	55.6	73.35	74.3	75.4
NPV (\$ millions)	332	667	655	643

Notes :

- 1) The source of the May 2007 data was the 'Technical Report on the Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa'
- 2) H₂SO₄ : Yr1 \$565 / tonne; Yr2 \$565 / tonne; Yr3 and beyond \$47.5 / tonne
- 3) H₂SO₄ : Yr1 \$565 / tonne; Yr2 \$565 / tonne; Yr3 –Yr6 \$ 170 / tonne ; Yr6 and beyond \$95 / tonne
- 4) H₂SO₄ : Yr1 \$565 / tonne; Yr2 \$565 / tonne; Yr3 and beyond \$200 / tonne
- 5) Average life of mine rate to exchange Rand to US dollars = 7.53
- 6) Average acid input cost of total operating cost for Ezulwini = 2.5%
- 7) Average H₂SO₄ costs are a blend of the cost of contracted acid supply and the cost of the planned acid plant

Table 6: ACID PLANT ECONOMIC ASSUMPTIONS AND VALUATION

ECONOMIC ASSUMPTIONS	Unit	Mar 2011	Mar 2012	Mar 2013	Mar 2014	Beyond Mar 2014
Currency exchange rate	(ZAR/\$US)	7.50	7.45	7.57	7.57	7.57
Sulphuric acid price (Market Outlook)	\$/tonne	170	170	170	170	95
Sulphuric acid price (Market High Case)	\$/tonne	200	200	200	200	200
PRELIMINARY ASSESSMENT VALUATION				Unit	Market Outlook	Market High Case
NPV				\$ millions	28	75
IRR				%	6%	13%

"We decided, with the full support of our Board, that, given our uranium price, gold price and exchange rate assumptions, our Ezulwini Mine and Mine Waste Solutions were robust enough projects to support our decision to supply our own electrical power generating capacity and invest in the business of producing sulphuric acid," added Mr. Miller. "Our analysis of our peak funding requirements, taking into account the construction of new acid and power plants suggests that we would be required to draw down on a credit facility, on a short-term basis, from April 2009, until sales of gold and uranium increase to completely offset our capital needs. With gold prices at or above \$900 per ounce, revenue from our near- to medium-term gold production may mitigate any needs to raise any other forms of capital."

Technical Disclosure

Historical technical disclosure in this new release relating to the Mine Waste Solutions tailings recovery project ("MWS" and formerly named the Buffelsfontein tailings recovery project) was extracted from a technical report entitled "Technical Report – Pre-Feasibility of the Buffelsfontein Tailings Recovery Project, located in Stilfontein, North West Province, Republic of South Africa" submitted on November 1, 2007, and was prepared by Daan van Heerden, B.Sc., M.Comm., Charles Muller, B.Sc, Pr.Sci.Nat, and Johan Odendaal, B.Sc., M.Sc., Pr.Sci.Nat all of Minxcon Pty Ltd. ("Minxcon"), Treavor Pearton, B.Sc Eng PhD, FGSA and Mike Valenta, Pr Eng, B.Sc., of Metallicon Process Consulting (Pty) Ltd. ("Metallicon") each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium.

Historical technical information in this news release relating to the Ezulwini Mine is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa" originally submitted on November 8, 2006, revised on December 5, 2006, January 31, 2007 and May 9, 2007 prepared in accordance with NI 43-101 by R. Dennis Bergen, P.Eng and Wayne Valliant P.Geo of Scott Wilson Roscoe Postle Associates Inc. ("Scott Wilson RPA") each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium.

The disclosure contained in this news release relevant to their respective contributions to Ezulwini, MWS and the acid plant has been reviewed and approved by Messrs. Bergen, van Heerden, Muller, Odendaal, Pearton, Valliant and Valenta.

The economic analysis contained in this news release is contained in the above technical reports and is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no

certainty that the reserves development, production and economic forecasts on which the preliminary assessment contained in the technical reports is based, will be realized.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the availability of electrical power, the planned addition of owner-operated power generation, price of electrical power and sulphuric acid, the estimation of mineral resources and reserves, the realization of estimated pyrite content in the MWS tailings dams, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, availability of financing on acceptable terms, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "goal", "objective", "plans", "expects" or "does not expect", "is expected", "projected", "assumed", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, availability of equipment, materials and fuel, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold, to price of electrical power and sulphuric acid. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Company's expectations as of the date of this news release; (ii) actual results may differ materially from the Company's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Company cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Company disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) consistent supply of sufficient power will be available to develop and operate the projects as planned; (ii) approvals to transfer or grant, as the case may be, mining rights will be obtained; (iii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iv) mineral resource estimates are accurate; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Company and their investment in the Company's common shares to a sufficient level to continue to support the Company's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

Conference Call

First Uranium will conduct a conference call with investors to discuss the information in this news release at 10:00 a.m. local Toronto time and 4:00 p.m. local Johannesburg time on Monday, April 21, 2007. The conference call will be available simultaneously to all interested investors and news media.

Callers may dial 1 800 319-4610 (Canada and the US) or 0800 200 648 (South Africa). Callers from other international locations may call +1 604 638-5340 (Canada) or +27 11 535 3600 (South Africa). The call will be webcast at <http://services.choruscall.com/links/firsturanium080421.html> and an archive will be available through the same link shortly after the live event for 90 days.

A replay of the conference call will be available for 30 days. To access the replay, callers may dial 1 800 319-6413 (Canada and the US). Callers from other international locations may access the replay by dialing +27 11 305 2030 (South Africa) or +1 604 638-9010 (Canada). Access to the replay will require the code 2128, followed by #.

About First Uranium Corporation

First Uranium Corporation (TSX:FIU, JSE:FUM) is focused on the development of its South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and underground development of the Ezulwini Mine and the expansion of the Mine Waste Solutions tailings recovery facility. First Uranium also plans to grow production by pursuing value-enhancing acquisition and joint venture opportunities in South Africa and elsewhere.

FIRST URANIUM CORPORATION

NEWS RELEASE – February 14, 2008

MANAGEMENT CHANGES TO POSITION FIRST URANIUM FOR FUTURE GROWTH

Toronto, Ontario and Johannesburg, South Africa – (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) First Uranium Corporation (“First Uranium” or “the Company”) today announced several management changes and new appointments that it believes will best allocate the experience and strengths of its management team and position the Company for future growth.

- Jim Fisher, moves to Executive Vice President, Corporate Development in the Company's Toronto office from his current position as Chief Operating Officer
- Syd Caddy, joins the Company from Simmer and Jack Mines Limited as Executive Vice President and Chief Operating Officer, responsible for all of the Company's operating and exploration activities
- Wouter de Vos joins the Company as General Manager of the Ezulwini Mine, an underground uranium and gold mine
- John Gould, joins the Company as Vice President Exploration and Business Development responsible for all of the Company's exploration, technical services and growth projects and will report to Syd Caddy
- Scot Sobey, VP Business Development will continue to focus on the Company's South African and global growth initiatives, working closely with Jim Fisher
- Barry Smit, joins the Company as Consulting Mining Engineer and will focus on the Company's expansion project at the Ezulwini Mine

“It has always been part of First Uranium's vision to grow production by pursuing acquisition and joint venture opportunities,” said Gordon Miller, President and CEO of First Uranium. “While there is still plenty of opportunity to grow the number and scope of our projects within southern Africa, some of the world's best mines with the lowest operational risks have been developed in the Americas. This move puts Jim Fisher and all of his experience in the optimum locale to find those kinds of projects for our shareholders.”

Mr. Miller added, “We are fortunate to have quality individuals such as Syd Caddy, Wouter de Vos, John Gould and Barry Smit join the Company and lend their vast experience to our project development and future strategies.”

In a separate development, Chopper Van der Bijl, age 61, has retired from his position as General Manager, Ezulwini Mining Company. Of Mr. Van der Bijl, Gordon Miller said, "I am greatly indebted to his contributions to the building of the Ezulwini Mine as an operation of great substance. I am obviously disappointed to lose someone of Chopper's experience and abilities, but respect his decision to leave First Uranium at this point in his life." Wouter de Vos, will assume the role of General Manager of the Ezulwini Mine effective February 25, 2008.

About First Uranium Corporation

First Uranium is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine, and the construction of the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

This document may contain or refer to forward-looking information based on current expectations. Forward-looking statements are subject to significant risks and uncertainties, and other factors that could cause actual results to differ materially from expected results. These forward-looking statements are made as of the date hereof and we assume no responsibility to update or revise them to reflect new events or circumstances.

First Uranium management affected by recent changes:

Jim Fisher serves as First Uranium's Executive Vice President, Corporate Development and Chief Operating Officer and as a director of the First Uranium Board. Mr. Fisher has 28 years' experience in the Southern African mining industry, including nine years on the Zambian copper belt and the rest in South Africa. Since February 2006 Mr. Fisher held various senior positions within First Uranium, including serving as the Company's initial Chief Operating Officer until February 2008 and prior to that as Chief Executive Officer of FUSA. From September 2001 to February 2006, Mr. Fisher provided consulting services on a number of mining and other projects, including metallurgical consulting services to Simmer and Jack Mines Limited. From April 1999 to September 2001, Mr. Fisher served as the Business Manager for the PDWA JV where his duties encompassed strategy and organizational development, corporate and public relations as well as the definition of and implementation of the information technology and remuneration strategy. Mr. Fisher ran the Cooke uranium plant from 1987 to 1989 as well as the Western Areas North Shaft (now Ezulwini) from 1991 to 1994. Mr. Fisher is a Chartered Engineer, a fellow of The Institute of Materials, Minerals and Mining, a member of the South African Institute of Mining and Metallurgy, a member and past President of the Mine Metallurgical Managers Association of South Africa.

Syd Caddy serves as First Uranium's Executive Vice President and Chief Operating Officer. He has over 31 years' experience in the mining industry having managed his first mine at the age of 25 when he was appointed mine manager of Union Tin Mines. He was also instrumental in the start-up commissioning and running of Black Mountain Minerals for seven years. This was followed by a career on some of South Africa's best-known gold mines including general manager of Kloof Gold Mine where he oversaw the design and construction of the new Number 4 Shaft complex. Mr. Caddy also managed West Driefontein Gold Mine between 1992 and 1995, before joining JCI Limited in 1996 as consulting engineer responsible for management and control of HJ Joel Gold Mining Company, Western Areas, Randfontein Estates and Prestea Gold Mining Company. He served as Executive New Business for Simmer and Jack Mines Limited from October 2007 until March 2008. A Registered Professional Engineer with the Engineering Council of South Africa and a Fellow of the South African Institute of Mining and Metallurgy and the Australian Institute of Mining and Metallurgy, he is also Past President of the Association of Mine Managers of South Africa.

Wouter de Vos serves as General Manager at First Uranium's Ezulwini Mine. Mr. de Vos brings 30 years of mining experience to this position. From March 2006 to February 2008, Mr. de Vos was the General Manager of the Buffelsfontein Gold Mine owned and operated by Simmer and Jack Gold Mines. Previously he worked for consulting engineers and project managers Read, Swatman and Voigt (Pty) Ltd as Project Manager from 2005 to 2006 and as Construction Manager from 2002 to 2003. Mr. de Vos has held positions of increasing responsibility at several mining companies throughout his career including Messina Platinum Mines Limited (S.P.C.) from 2003 to 2005, Placer Dome Western Areas Joint Venture from 1989 to 2001; Consolidated Modderfontein Mine Ltd from 1988 to 1989; and Durban Roodepoort Deep Ltd from 1978 to 1988.

John Gould serves as First Uranium's Vice President, Exploration and Business Development. He has been involved in Witwatersrand-type and Bushveld-type mining operations in South Africa with experience in all aspects of mining including deep and shallow level gold mining operations (Venterspost, East Driefontein, Randfontein Estates, Joel Gold Mine, ERPM, Grootvlei Gold Mine, Harmony and Virginia Gold Mines) as well as experience in the platinum mines (Rustenburg Platinum Mines – Amandelbult Section). Mr. Gould held the positions of Mine Geologist through to Technical Services Manager (including geology, rock mechanics, ventilation, survey, mining, mine planning and sampling), Mine Manager, and Executive Member of local mining companies and until October 2007, Managing Director for a developing junior. He has been involved with Gold Fields of South Africa, Johannesburg Consolidated Investment Company, Harmony Gold Mine and finally Platinum Group Metals Limited. Until October 2007, John Gould headed up the South African operations for Platinum Group Metals and was

responsible for the development, market position and technical performance of the company. Mr. Gould has also played a leading role in the development and support of South Africa's Mineral Resources and Petroleum Development Act. He was invited to accompany the Honorable Minister Sonjica on her world tour to the major institutions throughout the USA, Canada, Europe and Britain.

Scot Sobey serves as First Uranium's Vice President, Business Development. Mr. Sobey's background lies in management consulting and project management, having spent 4 years with Gemini Consulting, followed by 2 years with PSP Icon. Mr. Sobey has developed extensive expertise in large-scale turnaround and transformation projects spanning the financial services, courier and freight, telecommunications, electricity and mining industries. From October 2005, Mr. Sobey jointly project managed (in conjunction with key leadership from Simmer and Jack Mines Limited) the start up of the Buffelsfontein Gold Mine formerly known as DRD Gold's North West Operations. Most recently, Mr Sobey formed an integral part of First Uranium's Offering team.

Barry Smit serves as First Uranium's Consulting Mining Engineer for the Corporation's Ezulwini Mine. He has 28 years of experience in the platinum, gold and construction industries, where he was responsible for design, construction, project management and operations. Mr. Smit is a mining engineer, with further studies in project management as well as in environmental and business risk management. He has led several technical forums for the mining industry at CSIR Miningtek, developing technical solutions for the South African mining industry.

MATERIAL CHANGE REPORT

2008 OCT -8 P 12:21
SECRETARIAT

Item 1. Name and Address of Company

First Uranium Corporation
155 University Avenue, Suite 1240
Toronto, Ontario M5H 3B7

Item 2. Date of Material Change

February 1, 2008.

Item 3. News Release

A news release was disseminated over CNW news wire service on February 1, 2008.

Item 4. Summary of Material Change

First Uranium Corporation (the "Company") confirmed that South Africa's national power utility, Eskom, has authorized the Company to immediately increase electricity load at its operations from 80% to 90% in a gradual ramp up. Eskom also informed the Company that this authorization could be withdrawn at a later date, as national electricity supply is still tight.

Item 5. Full Description of Material Change

5.1 Full Description of Material Change

The Company confirmed that South Africa's national power utility, Eskom, has authorized the Company to immediately increase electricity load at its operations from 80% to 90% in a gradual ramp up. Eskom also informed the Company that this authorization could be withdrawn at a later date, as national electricity supply is still tight.

An update regarding the effect of the power constraints on the Company's operations will be issued as soon as more information becomes available.

5.2 Disclosure for Restructuring Transactions

Not applicable.

Item 2. Date of Material Change

January 30, 2008.

Item 3. News Release

A news release was disseminated over CNW news wire service on January 30, 2008.

Item 4. Summary of Material Change

First Uranium Corporation ("First Uranium" or "the Company") was today advised by Eskom, South Africa's national power utility that, effective immediately, energy usage at all mining operations could be resumed to a maximum of 80% of their average power load requirements. The restriction, imposed as part of the current phase of dealing with the national energy crisis which began on January 25, is expected to be relaxed to allow use of 90% of the Company's power load requirements on Thursday, January 31, 2008. To ensure the continued safety of our miners, operating activities will be gradually ramped up to the permitted levels.

The Company's Ezulwini Mine, an underground uranium and gold mine, is the only First Uranium operation impacted as a result of this phase of the power crisis. Given its relatively low power requirements, the tailings recovery operation at Mine Waste Solutions ("formerly Buffelsfontein Tailings Recovery Project) have been unaffected by the power cuts.

Item 5. Full Description of Material Change

5.1 Full Description of Material Change

The Company was today advised by Eskom, South Africa's national power utility that, effective immediately, energy usage at all mining operations could be resumed to a maximum of 80% of their average power load requirements. The restriction, imposed as part of the current phase of dealing with the national energy crisis which began on January 25, is expected to be relaxed to allow use of 90% of the Company's power load requirements on Thursday, January 31, 2008. To ensure the continued safety of our miners, operating activities will be gradually ramped up to the permitted levels.

The Company's Ezulwini Mine, an underground uranium and gold mine, is the only First Uranium operation impacted as a result of this phase of the power crisis. Given its relatively low power requirements, the tailings recovery operation at Mine Waste Solutions ("formerly Buffelsfontein Tailings Recovery Project) have been unaffected by the power cuts.

At the Ezulwini Mine, which is in a relatively early stage of development, normal weekly operations are comprised of three days of mining and four days of shaft rehabilitation. In the interests of health and safety, the Company temporarily suspended mining operations.

First Uranium estimates that during the quarter, every day of operations being shut down would result in the loss of approximately 888 tonnes of ore processed or approximately 170 ounces of gold production. Thus far, only three days of production have been lost. Rehabilitation of the Ezulwini Mine shaft has not been interrupted. The Company believes that this lost production can be made up once the shaft rehabilitation work is complete.

The neighbouring third-party plant that toll-mills gold ore for First Uranium has suspended toll milling for the Ezulwini Mine as a result of its energy usage restrictions, and it is not clear when this will resume, if at all. Should the toll-milling plant's energy reduction plan cause toll milling to be suspended indefinitely, the Ezulwini Mine would stockpile ore until its own gold plant is commissioned in April 2008.

First Uranium Corporation
155 University Avenue, Suite 1240
Toronto, Ontario M5H 3B7

Item 2. Date of Material Change

January 25, 2008.

Item 3. News Release

A news release was disseminated over CNW news wire service on January 28, 2008.

Item 4. Summary of Material Change

First Uranium Corporation ("First Uranium" or "the Company") was advised on Friday, January 25, 2008 by South Africa's national power utility that electric power could not be guaranteed to any of South Africa's mining operations.

In the interests of health and safety, the Company temporarily suspended operations at the Ezulwini Mine. Limited operations (shaft rehabilitation, ventilation and water pumping) at Ezulwini were continued through the suspension period and are expected to be ongoing. At this startup stage for the Ezulwini Mine, it is estimated that for every operation day lost during the quarter ending March 31, 2008, First Uranium would expect to lose an average of 888 tonnes of ore processed and approximately 170 ounces of gold produced. Given their relatively low power requirements, the tailings recovery operations at Mine Waste Solutions have been unaffected by the power cuts.

Item 5. Full Description of Material Change

5.1 Full Description of Material Change

The Company was advised on Friday, January 25, 2008 by South Africa's national power utility that electric power could not be guaranteed to any of South Africa's mining operations.

In the interests of health and safety, the Company temporarily suspended operations at the Ezulwini Mine. Limited operations (shaft rehabilitation, ventilation and water pumping) at Ezulwini were continued through the suspension period and are expected to be ongoing. At this startup stage for the Ezulwini Mine, it is estimated that for every operation day lost during the quarter ending March 31, 2008, First Uranium would expect to lose an average of 888 tonnes of ore processed and approximately 170 ounces of gold produced. Given their relatively low power requirements, the tailings recovery operations at Mine Waste Solutions have been unaffected by the power cuts.

President and CEO of First Uranium, Gordon Miller said, "First Uranium, together with the mining industry, is currently working with South Africa's national power utility to minimize the long-term impact of the power cuts on its South African operations. Indications are that the power disruptions are temporary and that normal supplies may resume in the near future."

FIRST URANIUM CORPORATION

NEWS RELEASE – January 21, 2007

**FIRST URANIUM PRODUCTION UPDATE FOR THE THIRD QUARTER
ENDED DECEMBER 31, 2007**

Toronto, Ontario – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) ("First Uranium" or "the Corporation") today announced its production results for the fiscal quarter ended December 31, 2007 ("Q3 2008"). First Uranium began production at its tailings recovery project at Mine Waste Solutions ("MWS") and its underground Ezulwini Mine ("Ezulwini") in June 2007 and October 2007 respectively. During the Corporation's third quarter which ended December 31, 2007 the Corporation processed 28,000 tonnes of underground ore from Ezulwini and 832,000 tonnes of reclaimed tailings from MWS to produce a total of 12,412 ounces of gold.

"Our mine plan development program entered a new phase during the quarter when we started producing gold from Ezulwini and started up the initial long-life tailings reclamation installation at MWS," said Gordon Miller, President and Chief Executive Officer of First Uranium. "Both of our operations are now mining gold and uranium and the recovery of uranium from ore is on schedule to start at Ezulwini in June 2008 and at MWS in November 2008."

Ezulwini Mine

Production summary

	Plan	Actual
Ore toll-treated (tonnes)	30,000	28,000
Average recovery grade (grams/tonne)	6.3	5.6
Gold produced (ounces)	6,076	5,055
Ore stockpiled at end of period (tonnes)		142,504

Although the build-up of production at Ezulwini during the first two months of the quarter was negatively influenced by lower than planned grades. This was more than offset in December, when Ezulwini's production exceeded the planned rate due to higher than expected grades. The gold production ramp up is expected to continue as previously forecasted for the coming quarter.

Mine Waste Solutions tailings recovery project ("MWS")

Production Summary

	Plan	Actual
Tailings reclaimed (tonnes per day)	16,304	9,043
Average recovery grade (grams/tonne)	0.234	0.275
Gold produced (ounces)	11,284	7,357

Production for the quarter was negatively affected at MWS by the transition of tailings reclamation from the depleted Stilfontein No. 2 tailings dam due to the commissioning of the production infrastructure at the Buffelsfontein No. 2 tailings dam. The project to construct the initial long-life pump station and 10.5-kilometre pipeline was initiated in June 2007 and was originally scheduled to be completed by the end of October 2007. The project was delayed due to late delivery of slurry pumps and the heavy rains that fell during October that made construction difficult. The new production facility was commissioned on December 18, 2007 and is planned to have a production life of 18 years based on current reserves.

The initial train of pumps located at Buffelsfontein No. 2 tailings dam is achieving designed performance throughput, despite having a low utilization of 75% during the quarter while the second train of standby pumps was being installed. Once the second train of standby pumps is commissioned during February 2008, the utilization is expected to increase to 95%, which will sustain production at or better than the planned 20,800 tonnes per day production rate. Despite lower than planned utilization, production rates are currently being sustained at 20,000 tonnes per day.

The initial grades mined from the Buffelsfontein No.2 tailings dam are in line with the resource estimates for the initial mining benches and the gold plant is achieving slightly better than planned recoveries for production from this newly commissioned resource.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine, and the construction of the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", "likely", "believes" or "goal" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (ii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iii) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) approvals to transfer or grant, as the case may be, mining rights will be obtained; (ii) mineral resource and reserve estimates are accurate; (iii) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (iv) that labour, materials and equipment will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (v) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (vi) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

All of the forward-looking statements made in this news release are qualified by these cautionary statements, those made in the "Risks and Uncertainties" section of our Management's Discussion and Analysis, and those made in the "Risk Factors" section of our most recent Annual Information Form and other filings with the securities regulators of Canada.

Item 2. Date of Material Change

December 19, 2007.

Item 3. News Release

A news release attached hereto was disseminated over through CNW news wire service on December 19, 2007.

Item 4. Summary of Material Change

First Uranium Corporation ("the Corporation") announced the results of its pre-feasibility study (the "Buffels Report") on its Buffelsfontein Tailings Recovery Project (the "Project") in South Africa. Based on the Buffels Report, which was prepared by Minxcon Pty. Ltd., First Uranium intends to immediately start construction for the expansion of the existing gold plant and the initial modules of a new uranium plant at the Project, with commissioning expected in November 2008.

The most significant changes identified in the Buffels Report from the previously announced May 22, 2007 preliminary assessment report for the Project, in order of their impact on the economics of the Project, are:

- a decision to increase price assumptions for gold and uranium;
- an increase in the capital investment in the Project due to the escalation in the cost of construction materials and the expanded scope of the Project;
- a decision to implement an atmospheric leach process in the initial year of operation and a subsequent change to a pressure leach process that is expected to yield higher recovery rates and boost production;
- an increase in the recovery rate of uranium in the flotation process;
- the conversion of the Project's mineral resources to mineral reserves.

More detailed information and the impact of the changes is summarized in the attached news release.

First Uranium Corporation

NEWS RELEASE – December 19, 2007

FIRST URANIUM ANNOUNCES RESULTS OF PRE-FEASIBILITY STUDY FOR THE BUFFELSFONTEIN TAILINGS RECOVERY PROJECT

All amounts are in US dollars unless otherwise noted.

NPV increases by 71% to \$505 million – IRR increases from 69% to 151%

Toronto, Ontario – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) ("First Uranium" or "the Corporation") today announced the results of its pre-feasibility study (the "Buffels Report") on its Buffelsfontein Tailings Recovery Project (the "Project") in South Africa. Based on the Buffels Report, which was prepared by Minxcon Pty. Ltd., First Uranium intends to immediately start construction for the expansion of the existing gold plant and the initial modules of a new uranium plant at the Project, with commissioning expected in November 2008.

The most significant changes identified in the Buffels Report from the previously announced May 22, 2007 preliminary assessment report for the Project, in order of their impact on the economics of the Project, are:

- a decision to increase price assumptions for gold and uranium (see Table 1);
- an increase in the capital investment in the Project due to the escalation in the cost of construction materials and the expanded scope of the Project;
- a decision to implement an atmospheric leach process in the initial year of operation and a subsequent change to a pressure leach process that is expected to yield higher recovery rates and boost production;
- an increase in the recovery rate of uranium in the flotation process;
- the conversion of the Project's mineral resources to mineral reserves (see Tables 3,4 and 5);

The impact of these changes is summarized below (see Table 2).

Table 1: CHANGES TO PROJECT ASSUMPTIONS

Years ending		Unit	Mar 2009	Mar 2010	Mar 2011	Mar 2012	Beyond Mar 2012
Previous May 2007	Gold price	(\$/oz.)	\$500	\$500	\$500	\$500	\$500
	Uranium price	(\$/lb.)	\$50	\$50	\$50	\$50	\$50
	Exchange rate	(ZAR/\$)	7.4	7.4	7.4	7.4	7.4
Current Dec 2007	Gold price	(\$/oz.)	\$737	\$734	\$683	\$627	\$635
	Uranium price	(\$/lb.)	\$104	\$104	\$91	\$78	\$45
	Exchange rate	(ZAR/\$)	7.4	7.4	7.4	7.4	7.4

Note:

The current real term commodity price assumptions are based on the consensus of the nominal forecasts by the investment research analysts at 13 North American-based brokerage firms, adjusted downward by the US inflation rate for the period covering the construction of the Project.

Table 2: SUMMARY OF CHANGES TO BUFFELS PROJECT

	Units of measure	Previous May 2007	Current Dec 2007	Change
Gold Plant				
Design capacity of gold plant:				
Module 1	Tonnes per month	600,000	633,000	6%
Module 2		600,000	650,000	8%
Module 3		600,000	650,000	8%
Total		1,800,000	1,933,000	7%
Average annual gold production	000 oz.	128	126	-2%
Peak annual gold production	000 oz.	165	182	10%
Total LOM ¹ gold production	000 oz.	2,054	2,024	-1%
Average LOM ¹ gold recovery	%	67.2%	66.0%	-120 bps
Uranium Plant				
Design capacity of uranium plant ² :				
Module 1	Tonnes per month	60,000	63,000	5%
Module 2		60,000	65,000	8%
Module 3		60,000	65,000	8%
Total		180,000	193,000	7%
Average annual uranium production	000 lb.	922	1,339	45%
Peak annual uranium production	000 lb.	1,595	2,231	44%
Total LOM ¹ uranium production	000 lb.	14,748	20,078	36%
Average LOM ¹ uranium recovery	%	28.8%	33.0%	420 bps
Financial Measures				
Net present value (NPV) ³	\$millions	295	505	71%
Internal rate of return (IRR)	%	69%	151%	8200 bps
Capital investment	\$ millions	148	260	76%
Peak funding	\$ millions	83	67	-19%
Life of Mine	Years	16	16	-
Cash cost – gold	\$ / oz.	220	264	20%
Cash cost – uranium	\$ / lb.	22	24	9%
Total operating cost	\$ / tonne	2.55	3.10	22%

Notes:

1. LOM is the abbreviation of 'life of mine'.
2. The tonnes to be processed in the uranium plant are included in, not additional to, the tonnes to be processed in the gold plant.
3. NPV is calculated using an 8% real discount rate.

Schedule for construction

With the acquisition of Mine Waste Solutions ("MWS") effective June 6, 2007, the Project effectively was in operation with a design capacity to process 500,000 tonnes of tailings per month through the gold plant. In September 2007, the Corporation's Board of Directors approved an expansion of the capacity of the gold plant to process 633,000 tonnes of tailings per month. This expansion is expected to be completed by January 2008.

Also in September 2007, the Board of Directors approved the construction of a monitoring station and pipelines to transport the tailings that would be hydraulically mined from the Buffels and Harties tailings dams. The monitoring station and pipelines are now in production.

The further expansion of the MWS gold plant to double its capacity and the construction of the first two modules of the Project's uranium plant are to begin immediately, for commissioning in November 2008. The third and final modules of the gold plant and the uranium plant are to be commissioned in November 2009.

Increase in uranium recovery from the flotation process

First Uranium believes that the effective recovery rate from mill feed to uranium production for the Project will be better than previously determined due to the expected results of further test work. The effective recovery rate is the combination of recoveries in the flotation process and in the plant. The preliminary assessment for the Project published in May 2007, reported a 30% recovery in the flotation process and a 90% recovery in the plant for a blended recovery rate of 27%.

Recent tests lead the Corporation to expect a 36.8% recovery from the flotation process. Plant recovery rates, however, will initially be less than the previously reported 90% rate as management has decided to refine the pressure leach process and intends to commission the first two modules of the uranium plant as planned in November 2008 with an atmospheric leach process. Initially the plant is expected to achieve a yield of 75% using an atmospheric leach process. The economic model in the Buffels Report is based on the assumption that by November 2009 the Corporation will have completed sufficient testing in advance of the implementation of a pressure leach process. Although still in the pre-feasibility stage, the pressure leach process is expected to increase the plant recovery rate back to 90% for an effective recovery rate of 33% and, hence, yield a higher uranium production. The pressure leach process will also contribute an acid by-product for the gold circuit to improve gold recovery.

Earlier plans for the Project to currently be at the feasibility stage are being postponed until further testing of the pressure leach process is completed and land optioning for the farms covering the preferred site for the new tailings dam are concluded.

Conversion of resources to reserves

Recent geological work at the Project, which included drilling 66 new bore holes on the tailings dams and the remodelling of all the dams, increased the level of confidence in the mineral resources. The subsequent conversion of most of the Project's mineral resources to proven and probable reserves resulted in a reduction in the number of tonnes, ounces and pounds on some tailings dams, but this was more than offset by the confirmation of a portion of the Mine Waste Solutions ("MWS") No.5 dam as a proven reserve. Although it was hoped that the conversion of the MWS No. 5 dam would extend the life of the Project, the life of the Project will remain at approximately 16 years due to the higher monthly feed capacity of the gold plant and the changes between the previously stated resources (see Table 3) and the mineral reserves (see Table 5).

Table 3: RESOURCE ESTIMATE (as per the May 22 technical report)

Resource Category		Gold			Uranium	
Place	Dam	Tonnes (millions)	Grade (g/t)	Content (oz 000s)	Tonnes (kg/t)	Content (Mlb)
Measured						
Buffels	2	23.7	0.40	301	0.087	4.54

Total Inferred		64.7	0.30	631	0.098	13.92

Notes:

- 1 CIM definitions were followed for mineral resources.
- 2 A zero grade cutoff grade was used.
- 3 Rows and columns may not add exactly due to rounding.
- 4 Preliminary metallurgical test results indicated that recoveries would be approximately 27% for uranium and 68% for gold.
- 5 Mineral resources that are not mineral reserves do not have demonstrated economic viability.

The Buffels Report includes a new mineral resource estimate that includes mineral reserves as shown below (see Table 4). Unlike underground mines, virtually all of the resources in a tailings recovery operation sit above ground and there is a greater certainty of what can or can not be categorized as reserves.

Table 4: MINERAL RESOURCE ESTIMATE 2007 (includes mineral reserves)

Resource Category		Gold			Uranium	
Place	Dam	Tonnes (millions)	Grade (g/t)	Content (oz 000s)	Tonnes (kg/t)	Content (Mlb)

MWS	5 Indicated	40.3	0.31	402	0.088	7.81
Total Probable		226.6	0.27	1,950	0.073	36.55
Total Proven & Probable		326.9	0.28	2,958	0.076	54.85

Notes:

1. Mineral reserves are quoted as fully diluted delivered to mill estimates.
2. Effective date: November 1, 2007.
3. Based on assumptions of a gold price of \$635 per ounce, a uranium price of \$45 per pound and ZAR/\$ exchange rate of 7.40.
4. A reserve cutoff grade of 0.28 grams per tonne gold equivalent was used, uranium grades were converted to gold equivalent using a conversion factor of 1 gram per tonne, which equals 0.503 kilograms per tonne on an extracted metal basis.
5. Rows and columns may not add exactly due to rounding.
6. The gold recovery applied was 66%.
7. The uranium recovery used was based on an atmospheric leach process of 27%.
8. Table reflects depletion of 1.5 million tonnes from July through October 2007 for MWS No. 2 Dam.

Location of a new tailings dam site is being finalized

Discussions are being concluded towards securing land access to locate a new tailings dam that is intended to contain all the processed tailings that will be discharged during the life of the Project. Due to new environmental requirements regarding the placement of any new tailings dams and the negotiations required with land owners, the new dam is likely to be located significantly further from the Project than originally planned. Once established, the resulting tailings dam would have less uranium, sulphur and pyrite and a superior design that mitigates erosion and, therefore, would be expected to have a significantly less environmental impact than the existing tailings that are about to be hydraulically mined at the Project.

“As a result of the all the technical work conducted during the past year, the overall confidence in the project has improved significantly,” said Gordon Miller, President and Chief Executive Officer of First Uranium. “We will further refine the work done to date to determine the optimum NPV for the pressure leach

process and to finalize the location for a new tailings dam, but we won't let any of this interfere with our priority to meet our delivery deadlines and ensure that the Project remains on track."

First Uranium intends to file the new technical report in respect of the pre-feasibility study within 45 days from the date of this release.

Technical Disclosure

All technical disclosure in this news release relating to the Buffelsfontein tailings recovery project has been prepared in accordance with National instrument 43-101 ("NI 43-101") by Daan van Heerden, B.Sc., M.Comm., Charles Muller, B.Sc, Pr.Sci.Nat, and Johan Odendaal, B.Sc., M.Sc., Pr.Sci.Nat all of Minxcon Pty Ltd., Treavor Pearton, B.Sc Eng PhD, FGSA and Mike Valenta, Pr Eng, B.Sc., of Metallicon Process Consulting (Pty) Ltd. each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium.

Historical technical disclosure in this new release relating to the Project is extracted from a technical report entitled "Technical Report – Preliminary Assessment of the Buffelsfontein Project, North West Province, Republic of South Africa" originally submitted on November 8, 2006, revised on December 5, 2006, January 31, 2007 and May 22, 2007 prepared in accordance with NI 43-101 by R.Dennis Bergen, P.Eng and Wayne Valliant, P.Geo of Scott Wilson RPA, each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium.

The disclosure contained in this news release relevant to their respective contributions has been reviewed and approved by Messrs. Bergen, van Heerden, Muller, Odendaal, Pearton, Valliant and Valenta.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the price of uranium and gold, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, government regulation of mining operations, environmental risks, unanticipated reclamation expenses and title disputes or claims and limitations on insurance coverage. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", "likely" or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (ii) the Corporation cannot guarantee that any forward-looking statement will

materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iii) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) approvals to transfer or grant, as the case may be, mining rights will be obtained; (ii) metal prices, exchange rates and discount rates applied in the pre-feasibility study or the preliminary economic assessment, as the case may be, are achieved; (iii) mineral resource and reserve estimates are accurate; (iv) the results of the testing of the pressure leach process will be positive and the process will be implemented; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that outstanding approvals for the completion of an acquisition, the transfer of mining rights and the approval of mining rights will be granted; (viii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (ix) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine, and the construction of the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

FIRST URANIUM CORPORATION

NEWS RELEASE – December 14, 2007

FIRST URANIUM ACQUIRES THE REMAINING 10% OF ITS EZULWINI URANIUM AND GOLD MINE

Toronto, Ontario – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) ("First Uranium" or "the Corporation") today announced that it has issued 6,141,009 common shares (the "Waterpan Shares") to Waterpan Mining Consortium ("Waterpan") in connection with the acquisition of the remaining 10% ownership in Ezulwini Mining Company (Proprietary) Limited ("EMC"), the Corporation's subsidiary which owns and operates the Ezulwini Mine.

In the Corporation's December 12, 2006 initial public offering prospectus, the Corporation disclosed that it had entered into an agreement with Waterpan which provided that their minority interest in EMC would be purchased by the Corporation for the Waterpan Shares after the secondary listing of First Uranium's common shares on the Johannesburg Stock Exchange (the "JSE"), which was completed on March 30, 2007. Concurrent with the closing of today's transaction, one million of the Waterpan Shares were sold by way of a private placement. Waterpan has a contractual agreement to retain the remaining Waterpan Shares until April 1, 2009, two years after the date of the JSE listing. The remaining 5,141,009 million Waterpan Shares represent 3.9% of the 130,986,417 common shares of First Uranium outstanding at the closing of today's transaction.

The Ezulwini Mine, located 40 kilometres south-west of Johannesburg, is an underground uranium and gold mine that operated from the early 1960s to 2001. First Uranium has reopened and rehabilitated the mine and is currently hoisting and toll milling ore for gold production at a neighbouring gold plant, while construction of its own gold and uranium plants are expected to be completed and commissioned in April and June of 2008, respectively.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine, and the construction of the Buffelsfontein tailings recovery facility. First

Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

Item 3. News Release

A news release attached hereto was disseminated over through CNW news wire service on November 5, 2007.

Item 4. Summary of Material Change

First Uranium Corporation (the "Corporation") announced that the Corporation commenced transporting gold ore from the Ezulwini Mine for toll treatment at the Randfontein Estates Limited Doornkop gold plant at the end of October 2007.

Based on the Ezulwini Mine start-up schedules for mining uranium and gold, the Corporation expects to ship approximately 5,000 tonnes of ore for toll treatment in November 2007 and steadily increase the quantity to about 25,000 tonnes per month by April 2008, with the Ezulwini Mine's own gold plant is scheduled to be commissioned. For the next six months mill feed grades are expected to range between 6.5 grams per tonne and 8.0 grams per tonne, although the average gold grade is initially expected to be lower since development ore will be processed first.

FIRST URANIUM CORPORATION

NEWS RELEASE – November 5, 2007

FIRST URANIUM BEGINS TOLL TREATING GOLD ORE FROM ITS EZULWINI MINE

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) ("First Uranium" or "the Corporation") announced that the Corporation commenced transporting gold ore from the Ezulwini Mine for toll treatment at the Randfontein Estates Limited ("REL") Doornkop gold plant at the end of October 2007.

Based on Ezulwini Mine start-up schedules for mining uranium and gold, the Corporation expects to ship approximately 5,000 tonnes of ore for toll treatment in November 2007 and steadily increase the quantity to about 25,000 tonnes per month by April 2008, when the Ezulwini Mine's own gold plant is scheduled to be commissioned. For the next six months mill feed grades are expected to range between 6.5 grams per tonne and 8.0 grams per tonne, although the average gold grade is initially expected to be lower since development ore will be processed first.

"Now that we are shipping ore from the Ezulwini Mine, both of our projects are now in gold production and are contributing to our cash flow", said Gordon Miller, First Uranium's President and Chief Executive Officer. "To see the Ezulwini Mine come into production on schedule is particularly gratifying and confirms the confidence we have in the ability of our experienced operating team at this site to meet future milestones on time and on budget. To this end, they are on track with the start-up milestones for the completion of our own gold plant next April and our uranium plant in June."

First Uranium's Ezulwini Mine is an underground uranium and gold mine located 40 kilometres southwest of Johannesburg, South Africa.

REL is located adjacent to the north-west boundary of the Ezulwini Mine and is a wholly-owned subsidiary of Harmony Gold Mining Company.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or

achievement expressed or implied by the forward-looking statements. Risks and uncertainties include, among others, the actual results of the planned feasibility study for the Buffelsfontein Tailings Recovery Project, the actual results of additional exploration and development activities, the timing and amount of estimated future production and the cost thereof, the conclusions of economic evaluations, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at the date hereof; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason. In addition, First Uranium is in the development stage and is subject to the risks and challenges similar to other companies in a comparable stage of development. The risks include, but are not limited to, certain business, operational and market risks. For a discussion of the Corporation's risks please refer to the Corporation's Annual MD&A, the 2007 Annual Information Form and other filings, which are available on the Corporation's website www.firsturanium.com and on www.sedar.com or upon request from the Corporation.

Item 3. News Release

A news release attached hereto was disseminated over through CNW news wire service on November 8, 2007.

Item 4. Summary of Material Change

First Uranium Corporation (the "Corporation") announced that the South African Department of Minerals and Energy ("DME") has granted conditional approval from the Corporation's application in respect of a Prospecting Work Program (the "Program") on properties contiguous to the north-east and south-east of the Corporation's Ezulwini Mine property in South Africa. The Ezulwini Mine is an underground uranium and gold project, with mining rights covering an area of 3,717 hectares. The Program covers 6,843 hectares of property known to contain uranium and gold mineralization adjacent to the Ezulwini mining rights.

Final approval by the Regional Manager of the DME is subject to approval of the relevant Environmental Management Plan ("EMP") for the exploration drilling from surface. First Uranium must submit further required materials to the DME by the middle of November, with approval of the EMP, if satisfactory, expected to occur on or before December 11, 2007.

First Uranium Corporation

NEWS RELEASE – November 8, 2007

FIRST URANIUM'S EZULWINI PROSPECTING RIGHTS APPLICATION RECEIVES CONDITIONAL APPROVAL BY SOUTH AFRICAN DEPARTMENT OF MINERALS AND ENERGY

Toronto, Ontario – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) ("First Uranium" or "the Corporation") today announced that the South African Department of Minerals and Energy ("DME") has granted conditional approval for the Corporation's application in respect of a Prospecting Work Program (the "Program") on properties contiguous to the north-east and south-east of First Uranium's Ezulwini Mine property in South Africa. The Ezulwini Mine is an underground uranium and gold mining project, with mining rights covering an area of 3,717 hectares. The Program covers 6,843 hectares of property known to contain uranium and gold mineralization adjacent to the Ezulwini mining rights.

Final approval by the Regional Manager of the DME is subject to the approval of the relevant Environmental Management Plan ("EMP") for the exploration drilling from surface. First Uranium must submit further required materials to the DME by the middle of November, with approval of the EMP, if satisfactory, expected to occur on or before December 11, 2007.

Previous exploration drilling conducted in the area by Gencor Limited, Anglovaal Mining Limited and JCI Limited confirmed the presence of uranium and gold mineralization along the approximately 20 kilometres of strike within the prospecting area included in the Program. Based on the results of the historical drill data, the Corporation plans to immediately proceed with the Program to explore this prospecting area and will use the historical information to guide the placement of new drill holes. Qualified geologists are currently reviewing the historical data.

The initial stages of the Program will test the strike extent of the known pay shoots for uranium and gold on the Middle Elsburg Reef in an area east of the Ezulwini Mine. The Ezulwini Mine and the properties which are subject to the Program are located in the Witwatersrand Basin, which is the largest known gold province in the world with deposits having been mined for well over 100 years. In the past, there were also four uranium plants in production in this area. The first

of the three attachments to this news release shows the location of the properties which are subject to the Program and neighbouring mines surrounding the Ezulwini Mine, which is located approximately 40 kilometres southwest of Johannesburg. (See map entitled 'Ezulwini Locality Plan'.)

Several groups of reefs have been identified in the area, including the Livingstone Reefs, the South Reef, the Kimberley Reefs, the Bird Reefs, the Mondeor Reefs, the Ventersdorp Contact Reef and the Black Reef, as well as the Elsburg Reefs associated with the Ezulwini Mine. Within these reefs, a total of nine reef horizons have been mined for uranium and gold at depths of between 600 metres and 1,260 metres below surface. The second attachment to this news release shows a map of the Ezulwini Mine and its shafts, as well as the three Cooke shafts on the property adjacent to the western boundary of the Ezulwini prospecting area. This map shows the location of 11 historical bore holes drilled in the prospecting rights area on which gold and uranium payshoots were defined. (See map entitled 'Ezulwini Prospecting Right'.) On the map, the 'A-B' line that intersects with the payshoots marks a cross-section of the area discussed below.

The third attachment to this news release shows the cross-section of the historical target area, including the layer of dolomites which overlay much of the mineralized reefs in the Witwatersrand Basin. The properties which are subject to the Program, are shown to the right of this cross-section at depths of between 800 metres and 1,200 metres below surface. (See cross-section entitled 'Section A-B Looking North'.)

During the years 1961 to 2001, the Ezulwini Mine produced 8.4 million pounds of uranium and 12.7 million ounces of gold. The Cooke section has also been mined extensively on the property north of the Ezulwini Mine and immediately west of the target area, and has produced 23 million pounds of uranium and 51 million ounces of gold.

The Program is planned to include analysis of existing drill-hole data for uranium and gold mineralization followed up by surface diamond drill exploration with drill hole depths of up to 2,000 metres.

"The Prospecting Work Program fits with the Corporation's strategy of focusing its exploration on or near its current uranium and gold projects in order to leverage the infrastructure of those projects," said Gordon Miller, First Uranium's President and Chief Executive Officer. "We have set aside US\$10 million for this exploration program, which has the potential to add to the known uranium and gold resources available to the Ezulwini Mine."

The Ezulwini Mine is already hoisting ore and toll treating ore at a neighbouring third-party gold plant. The Corporation is on schedule to commission its own gold plant in April 2008 and its own uranium plant in June 2008. Based on the

currently defined measured and indicated resources, the average annual production for the 18-year life of this project, the Ezulwini Mine is expected to be 290,000 ounces of gold and 888,000 pounds of uranium.

"In the meantime, we are on schedule to bring the Ezulwini Mine into full production for uranium and gold," continued Mr. Miller. "Our current mine plan is based on only 20% of the resource inventory of the existing mining rights, including a significant inferred uranium resource. In a separate initiative, the Ezulwini Expansion Program, we plan to convert part of those inferred resources to measured and indicated. The intent of this initiative, announced in July 2007, is to justify the capital required for the sinking of an additional shaft, which would be used to access and mine the uranium and gold resource at an accelerated rate, over and above the existing mine plan from the existing main shaft. We recently acquired the use of a surface drilling rig and expect to begin our drilling program on the Ezulwini Mine property on November 9, 2007."

Technical Disclosure Notes

The life of mine estimate and projected average annual production in this news release relating to the Ezulwini underground mine project is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa" (the "Technical Report") originally submitted on November 8, 2006, revised on December 5, 2006 and January 31, 2007 and further revised on May 9, 2007 prepared in accordance with National instrument 43-101 ("NI 43-101") by R. Dennis Bergen, P.Eng and Wayne Valliant, P.Geo of Scott Wilson Roscoe Postle Associates Inc., each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium. The disclosure in this news release related to the RPA technical report has been reviewed and approved by Mr. Bergen and Mr. Valliant.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, timing of development of new deposits, success of exploration activities, permitting time lines and government regulation of mining operations. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "will", "expects", "is expected", "budget", "scheduled", "estimates", "intends", "projected", "goal" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify

important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at the date of this news release; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumptions referred to in this news release and assumption that: (i) approvals to transfer or grant, as the case may be, mining rights will be obtained; (ii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iii) mineral resource estimates are accurate; (iv) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (v) labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vi) outstanding approvals for the completion of an acquisition, the transfer of mining rights and the approval of mining rights will be granted; (vii) black economic empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (viii) the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine, and the construction of the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

MATERIAL CHANGE REPORT

RECEIVED

2009 OCT -8 P 12:22

OFFICE OF INTERNATIONAL
CORPORATE FINANCE

Item 1. Name and Address of Company

First Uranium Corporation
155 University Avenue, Suite 1240
Toronto, Ontario M5H 3B7

Item 2. Date of Material Change

July 26, 2007.

Item 3. News Release

A news release attached hereto was disseminated over through CNW news wire service on July 26, 2007.

Item 4. Summary of Material Change

First Uranium Corporation (the "Company") announced that the Company has defined initial underground and surface drilling targets related to the possible expansion of the Ezulwini underground uranium and gold mine (the "Expansion Program"), located approximately 40 kilometres south-west of Johannesburg in the Witwatersrand Basin of South Africa. The Expansion Program is on track and the drilling program to test the newly defined drill targets is an integral part of the Expansion Program to justify the capital required for the sinking of an additional shaft, which would be used to access and mine the uranium and gold resource over and above the existing mine plan from the existing main shaft.

Item 5. Full Description of Material Change

5.1 Full Description of Material Change

The material change is fully described in the press release attached hereto.

5.2 Disclosure for Restructuring Transactions

Not applicable.

Item 9. Date of Report

August 7, 2007.

First Uranium Corporation

NEWS RELEASE – July 26, 2007

FIRST URANIUM IDENTIFIES INITIAL DRILL TARGETS WHICH MAY LEAD TO A SIGNIFICANT INCREASE IN URANIUM AND GOLD PRODUCTION FROM A NEW 250,000 TONNE-PER-MONTH SHAFT AT THE EZULWINI MINE

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM, CA33744R1029:ISIN) (“First Uranium” or “the Company”) today announced that the Company has defined initial underground and surface drilling targets related to the possible expansion of the Ezulwini underground uranium (“U₃O₈”) and gold (“Au”) mine (the “Expansion Program”), located approximately 40 kilometres south-west of Johannesburg in the Witwatersrand Basin of South Africa. The Expansion Program is on track and the drilling program to test the newly defined drill targets is an integral part of the Expansion Program to justify the capital required for the sinking of an additional shaft, which would be used to access and mine the uranium and gold resource over and above the existing mine plan from the existing main shaft.

“While we remain focussed on near-term uranium and gold production at our two South African projects, we recognize how important it is to our shareholders for us to have additional avenues of growth,” said Gordon Miller, President and Chief Executive Officer of First Uranium. “This Expansion Program has the potential to significantly increase production beyond levels currently planned and thereby extend the current 19-year mine plan, which only consumes 20% of the significant resource area at this site.”

According to First Uranium’s mine plan for Ezulwini, as disclosed in the technical report filed on May 9, 2007, the Company expects to commence hoisting in October 2007, with the first gold plant module scheduled for completion in April 2008 and the first uranium plant module scheduled for completion in June 2008. According to the existing mine plan, the average annual production at Ezulwini for the life of the project (2007-2024) is expected to be 290,000 ounces of gold and 888,000 pounds of uranium.

The Ezulwini mine began operation in the 1960s, producing gold until 2001, when the mine was placed on care and maintenance. Uranium was mined from the separate Middle Elsburg ore body, which was developed twenty years after development of the Upper Elsburg ore body, during the period from 1982 to 1997.

Detailed studies for the Expansion Program have been completed by Minxcon (Pty) Limited, independent South African mining and exploration consultants engaged by the Company to validate and capture historic mine sampling and mill data which has been recovered from archives that were somewhat in disarray. Recent in stope face sampling procedures have been conducted to verify some of this historic data. Minxcon has utilised this historical face sampling information to project higher grade pay-shoot trends for the purposes of defining drill target areas. The attached plan depicts the pay-shoot trends identified and illustrates these trends in relation to existing mine development. Due to the existing development, it will be possible to drill some of these target areas from existing underground excavations.

The outputs of this work have been compared to historical grades as delivered to the plant for a period of 14 years during the period 1982 to 1995: This recent and comprehensive analysis resulted in the derivation of a mine recovery factor² of 74% for gold and 65% for uranium for the entire historic reporting period. These mine recovery factors have been used to define potential expected plant delivery grades from six respective drilling target areas. The table below summarizes the expected plant delivery grades from the conceptual mining areas of each identified target zone based upon a Bayesian approach.

Drill Target Area	Drilling Access From:	Au			U ₃ O ₈		
		Assumed Cut Off Grade	Actual In Stope Grade	Assumed Plant Delivery Grade	Assumed Cut Off Grade	Actual In Stope Grade	Assumed Plant Delivery Grade
		g/t	g/t	g/t	kg/t	kg/t	kg/t
1 ¹	Surface	4.46	8.93	6.61	0.566	0.970	0.630
2	Underground	2.85	10.2	7.54	0.436	0.800	0.520
3	Underground	2.61	6.66	4.93	0.564	0.128	0.830
4	Underground	2.49	7.11	5.26	0.264	0.560	0.360
5	Underground	1.34	4.13	3.05	0.290	0.580	0.520
6	Underground	2.99	6.69	4.95	0.410	0.800	0.450

- Notes: 1) This table has been derived using population statistics on face sampling data; geo-statistics have been applied to pay shoot 1 only, resulting in a lower Au plant delivery grade of 5.9g/t (versus 6.61g/t) and a higher U₃O₈ plant delivery grade of 0.642kg/t (versus 0.630kg/t)
- 2) Mine Recovery Factor is the combination of dilution and loss factors applied to convert "in stope" sampling grade to a plant delivery grade
- 3) Grades depicted are based upon face sample averages within mining areas adjacent to drill target areas
- 4) Cut off grades per pay-shoot area were determined using grade tonnage curves derived from a historical mining extraction of 65%
- 5) Average stope mining width was 180 centimetres

The surface area for each of the respective drill target areas, as shown in the table below, has been defined by assuming that historical geological pay-shoot continuity exists such that a metal content per available mining square metre can be ascribed to these areas.

Drill Target Area	Plant Delivery Grade		Square Metres m ²	Au Equivalent g/m ²	U ₃ O ₈ Equivalent kg/m ²	Width cm
	Au Equivalent	U ₃ O ₈ Equivalent				
	g/t	kg/t				
1	10.93	1.589	1,044,742	54.72	7.95	180
2	11.10	1.614	381,582	55.57	8.08	180
3	10.68	1.552	104,213	53.42	7.76	180
4	7.76	1.127	226,526	38.81	5.64	180
5	5.65	0.821	168,506	28.26	4.11	180
6	8.53	1.239	202,589	42.67	6.20	180

1) Au and U₃O₈ equivalents have been calculated using only First Uranium's stated long-term pricing assumptions of US\$500 per ounce for Au and US\$50 per pound for U₃O₈.

2) By example, a grade of 1Kg U₃O₈ per tonne equates to 6.88 grams per tonne of Au.

Based upon an internal concept evaluation, the combined Phase 1 drill target areas have the potential to delineate a substantial portion of the measured and indicated resources required to justify the construction of a new 250,000 tonne-per-month shaft and mill expansion, which could effectively triple production capacity from the uranium-bearing Middle Elsburg ore body. The conceptual evaluation excludes any potential contribution from lower-grade areas known to exist between pay shoots, and excludes any potential contribution from the UE1a Reef. The Company expects that it will need to drill approximately 16,000 metres to complete Phase 1 of the Expansion Program.

The Phase 2 target areas, which are significantly larger in area, have been less explored in the past since mining activity was concentrated in the northern section of the property. New drill target areas will be defined in Phase 2 once the face sampling information from historic mining in these areas has been validated for the UE1A Reef. Based on very limited information, gathered from three previous surface drill holes, it is apparent that a zone of thicker width gold and uranium mineralisation exists where the E9EC and UE1A Reefs sub outcrop against each other. This zone which varies in thickness, from 7 to 26 metres, has been intersected at three points along a three-kilometre section of strike stretching from the northern boundary of the property and is open ended to the southern boundary. This zone has been mined extensively on the property to the north of Ezulwini, where mechanised mining methods were used to successfully extract gold over mining widths of up to 25 metres.

First Uranium will continue to define additional drill target areas to add to the findings of the existing Expansion Program and expects to disclose the complete drill results and resource estimation by the end of 2008.

The Expansion Program excludes any prospecting that will take place on contiguous properties to the north-east and south-east of the Ezulwini lease area covered by the prospecting application submitted to and accepted by, the South

African Department of Minerals and Energy, as disclosed in First Uranium's news release dated on April 16, 2007.

All technical disclosure in this news release relating to the Expansion Program is extracted from studies prepared in accordance with National instrument 43-101 ("NI 43-101) by Daan Van Heerden, Pr.Eng of South African mining and exploration consultants, Minxcon (Pty) Limited, who is a "qualified person" under NI 43-101 and is independent of First Uranium. The disclosure contained in this news release has been reviewed and approved by Mr. Van Heerden.

The life of mine estimate, projected average annual production and inferred resource grades in this news release relating to the Ezulwini underground mine project is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa" (the "Technical Report") originally submitted on November 8, 2006, revised on December 5, 2006 and January 31, 2007 and further revised on May 9, 2007 prepared in accordance with National instrument 43-101 ("NI 43-101) by R. Dennis Bergen, P.Eng and Wayne Valliant, P.Geo of Scott Wilson Roscoe Postle Associates Inc., each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium. The disclosure in this news release related to the RPA technical report has been reviewed and approved by Mr. Bergen and Mr. Valliant.

The economic analysis contained in this news release is contained in the Technical Report and is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserves development, production and economic forecasts on which the preliminary assessment contained in the Technical Report is based, will be realized.

Cautionary Language Regarding Forward-Looking Information

This news release contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the price of uranium and gold, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as

anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at the data of this news release; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this news release, First Uranium has made several material assumptions, including but not limited to, the assumptions referred to in this news release and assumption that: (i) approvals to transfer or grant, as the case may be, mining rights will be obtained; (ii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iii) mineral resource estimates are accurate; (iv) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (v) labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vi) outstanding approvals for the completion of an acquisition, the transfer of mining rights and the approval of mining rights will be granted; (vii) black economic empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (viii) the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini Mine, and the construction of the Buffelsfontein tailings recovery facility. Item 2 - Date of Material Change:

June 6, 2007.

Item 3 – News Release:

The news release attached hereto as Schedule “A” was disseminated over CNW Group on June 7, 2007.

Item 4 – Summary of Material Change:

First Uranium Corporation (the “Company”) announced that it, through its wholly-owned subsidiary, First Uranium (Proprietary) Limited, had completed the acquisition of Mine Waste Solutions (Proprietary) Limited (“MWS”) and MWS’s wholly-owned subsidiary, Chemwes (Proprietary) Limited. The Company issued, in full consideration of the purchase price, 3,093,980 common shares to the MWS vendors, namely Fraser Alexander Tailings (Pty) Ltd., Nedbank Capital, Industrial Development Corporation of South Africa Limited and the current MWS management. The MWS assets acquired include a gold plant with proven capacity for processing 570,000 tonnes per month and three tailings dams from which uranium and gold can be recovered.

Item 5 – Full Description of Material Change:

SCHEDULE "A"

FIRST URANIUM CORPORATION

NEWS RELEASE – June 7, 2007

**NOT FOR DISSEMINATION IN THE UNITED STATES OR FOR
DISTRIBUTION TO U.S. NEWSWIRE SERVICES**

**FIRST URANIUM COMPLETES ACQUISITION OF MINE WASTE SOLUTIONS
(PROPRIETARY) LIMITED**

Toronto, Ontario – First Uranium Corporation (TSX:FIU, JSE:FUM, CA33744R1029:ISIN) ("First Uranium" or the "Company") today announced that its wholly-owned subsidiary, First Uranium (Proprietary) Limited, has completed the acquisition of Mine Waste Solutions (Proprietary) Limited ("MWS") and its wholly-owned subsidiary Chemwes (Proprietary) Limited ("Chemwes"). With this closing, First Uranium will issue, in full consideration of the purchase price, 3,093,980 common shares to the vendors, namely Fraser Alexander Tailings (Pty) Ltd., Nedbank Capital, Industrial Development Corporation of South Africa Limited and the current MWS management.

The MWS assets acquired include:

- a gold plant with proven capacity for processing 570,000 tonnes per month and
- three tailings dams from which uranium and gold can be recovered.

"We welcome the Mine Waste Solutions operating team into First Uranium, where they will join our Buffelsfontein operations led by Jacob Mtonga," said Gordon Miller, President and CEO of First Uranium. "The acquisition facilitates the Buffelsfontein tailings recovery project reaching peak production sooner, improving its overall economics and extending the life of the project. We are pleased to have this acquisition completed ahead of schedule and appreciate the prompt attention given to our transaction by the South African Reserve Bank and the Competition Commission of South Africa to approve this transaction."

The acquisition of MWS benefits the Buffelsfontein tailings recovery project by providing:

- immediate financial benefit from gold production, 15 months ahead of schedule;

- an accelerated schedule (by eight months) to achieve peak uranium and gold production;
- a tailings deposition area;
- an increase to the measured and indicated resource of the project by 172,000 ounces of gold and 4.9 million pounds of uranium;
- an increase to the inferred resource of the project by 566,000 ounces of gold and 12.4 million pounds of uranium;
- the life of the project from 14 to 16 years and
- an improved NPV.

For more details about how the acquisition of MWS impacts the Buffelsfontein tailings recovery project reference should be made to the following documents on First Uranium's website, www.firsturanium.com.

- news release of April 4, 2007 "First Uranium acquires Mine Waste Solutions (Proprietary) Limited to complement the Buffelsfontein Tailings Recovery Project in South Africa";
- news release of May 2, 2007 "First Uranium signs formal agreement for the acquisition of Mine Waste Solutions (Proprietary) Limited;
- news release of May 22, 2007 "First Uranium files revised Buffelsfontein technical report"; and
- technical report of May 22, 2007 "Preliminary Assessment of the Buffelsfontein Project, North West Province, Republic of South Africa."

All technical disclosure in this news release relating to the Buffelsfontein tailings recovery project is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Buffelsfontein Project, North West Province, Republic of South Africa" (the "Buffels Technical Report") originally submitted on November 8, 2006, revised on December 5, 2006 and January 31, 2007 and further revised on May 22, 2007 prepared in accordance with National instrument 43-101 ("NI 43-101") by R. Dennis Bergen, P.Eng and Wayne Valliant P.Geo of Scott Wilson RPA, each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium. The disclosure contained in this news release has been reviewed and approved by Mr. Bergen and Mr. Valliant.

The economic analysis contained in this news release is contained in the Buffels Technical Report and is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserves development, production and economic forecasts on which the preliminary assessment contained in the Buffels Technical Report is based, will be realized.

Cautionary Language Regarding Forward-Looking Information

This news release contains and refers to forward-looking information based on current expectations. All other statements other than statements of historical fact included in this release including, without limitation, statements regarding potential production rates and operating costs, processing and development plans, estimated net present values and future plans and objectives of First Uranium are forward-looking statements (or forward-looking information) that involve various risks and uncertainties. These forward-looking statements are made as of the date hereof and there can be no assurance that such statements will prove to be accurate, such statements are subject to significant risks and uncertainties, and actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements that are included herein, except in accordance with applicable securities laws.

Important factors could cause actual results to differ materially from First Uranium's expectations. Such factors include, among others: the actual results of the planned feasibility studies on First Uranium's projects; the actual results of additional exploration and development activities at First Uranium's projects; the timing and amount of estimated future production and the costs thereof; capital expenditures; the costs and timing of the development of First Uranium's projects; the availability of any additional capital required to bring future projects into production; conclusions of economic evaluations; changes in project parameters as plans continue to be refined; future prices of commodities; the failure of plant, equipment or processes to operate as anticipated; accidents; labour disputes; delays in obtaining governmental approvals, permits or financing or in the completion of development or construction activities; currency fluctuations, as well as those factors discussed under "Risk Factors" in First Uranium's final prospectus dated December 12, 2006 as filed with securities regulatory authorities in Canada. Although First Uranium has attempted to identify important factors that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated or intended.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine, and the construction of the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

MATERIAL CHANGE REPORT

RECEIVED
2008 OCT -8 P 12:22
OFFICE OF INTERNATIONAL
CORPORATE INVESTMENT

Item 1 – Name and Address of Company:

First Uranium Corporation
155 University Avenue, 12th Floor
Toronto, Ontario
M5H 3B7

Item 2 - Date of Material Change:

May 22, 2007.

Item 3 – News Release:

The news release attached hereto as Schedule “A” was disseminated over CNW Group on May 23, 2007.

Item 4 – Summary of Material Change:

First Uranium Corporation (“the Company”) announced that the Company has filed a revised technical report (the “Revised Report”) on its Buffelsfontein uranium and gold tailings recovery project (“Buffels”) in South Africa. The Revised Report prepared by Scott Wilson Roscoe Postle Associates Inc. reflects the previously announced proposed acquisition by the Company of Mine Waste Solutions (Proprietary) Limited which owns and operates an existing gold mining tailings and reprocessing facility adjacent to Buffels. The Revised Report also incorporates the proposed acquisition by the Company of three additional small tailings dams from an affiliated company.

Item 5 – Full Description of Material Change:

The material change is fully described in the press release attached hereto.

Item 6 – Reliance on subsection 7.1(2) or (3) of National Instrument 51-102:

Not applicable.

Item 7 - Omitted Information:

Not applicable.

FIRST URANIUM CORPORATION

NEWS RELEASE – May 22, 2007

**NOT FOR DISSEMINATION IN THE UNITED STATES OR FOR
DISTRIBUTION TO U.S. NEWSWIRE SERVICES**

FIRST URANIUM FILES REVISED BUFFELSFONTEIN TECHNICAL REPORT

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (CA33744R1029:ISIN) ("First Uranium" or "the Company") today announced that the Company has filed a revised technical report (the "Revised Report") on its Buffelsfontein uranium and gold tailings recovery project ("Buffels") in South Africa. The Revised Report prepared by Scott Wilson Roscoe Postle Associates Inc. ("Scott Wilson RPA") reflects the previously announced proposed acquisition (the "MWS Acquisition") by First Uranium of Mine Waste Solutions (Proprietary) Limited ("MWS") which owns and operates an existing gold mining tailings and reprocessing facility adjacent to Buffels. The Revised Report also incorporates the proposed acquisition by First Uranium of three additional small tailings dams from an affiliated company (the "Additional Dams Acquisition"). In addition, to better reflect the current uranium pricing environment, the assumed price per pound of uranium has been increased by US\$10 to US\$50 from the assumption in the January 31, 2007 Buffels technical report (the "Prior Buffels Report").

According to the Revised Report, the projected net present value ("NPV") of the Buffels project (assuming the completion of the MWS Acquisition, the Additional Dams Acquisition and a discount rate of 8%) is US\$295 million with a projected internal rate of return ("IRR") of 69% (as compared to US\$211 million and 39%, respectively, as disclosed in the Prior Buffels Report). The incorporation of the MWS Acquisition and the Additional Dams Acquisition into the Buffels project accounted for an increase in the projected NPV and IRR to US\$237 million and 57% respectively as compared to the Prior Buffels Report. In addition, according to the Revised Report, the increase in the uranium price assumption accounted for an increase in the projected NPV from US\$237 million to US\$295 million and in the projected IRR from 57% to 69%.

"Our primary objective is to bring our mining projects into production as soon as possible while keeping all of our stakeholders informed and engaged in our progress," said Gordon Miller, President and Chief Executive Officer. "We have

upheld our commitment to publish a revised technical report for our Buffelsfontein tailings recovery project this month. The revised report reflects our better understanding of the benefit of the pending Mine Waste Solutions acquisition, our higher long-term price expectations for uranium and more confidence in our plans to accelerate higher production levels for uranium.”

The first of the following two tables reflects the original mineral resource statement for Buffels as of April 2006, excluding the proposed MWS Acquisition and the Additional Dams Acquisition.

The second table reflects the revised mineral resource statement for Buffels as at May 22 2007, adjusted for the MWS Acquisition and the Additional Dams Acquisition. The second table includes certain adjustments from the table set out in First Uranium’s April 4, 2007 news release. First, the MWS Dam 2 and Dam 4 resources have been converted from inferred to measured and indicated as a result of further work and verification. In addition, the MWS Dam 2 resources has been reduced as approximately 1.1 million tonnes of tailings have been used by MWS to run its gold plant since the resources were previously measured. As well, the Company has included the MWS Dam 5 resource in the resource statement in the inferred category.

ORIGINAL RESOURCE STATEMENT (as of April 2006)

	Tonnes	Grade		Content	
		Gold	U ₃ O ₈	Gold	U ₃ O ₈
	(000s)	(g/t)	(%)	(oz 000s)	(lb 000s)
Measured					
Buffels 2	23,700	0.40	0.0087	301	4,544
Buffels 3	29,400	0.35	0.0103	335	6,674
Buffels 4	16,380	0.38	0.0102	202	3,682
Buffels 5	45,584	0.21	0.0062	306	6,229
Total Measured	115,064	0.31	0.0083	1,144	21,130
Indicated					
Harties 1	92,576	0.32	0.0061	941	12,446
Harties 2	35,640	0.31	0.0058	354	4,556
Harties 5	23,133	0.31	0.0053	228	2,702
Harties 6	14,604	0.22	0.0059	105	1,899
Total Indicated	165,953	0.31	0.0059	1,628	21,603
Total Meas. & Indicated	281,017	0.31	0.0069	2,772	42,733
Inferred					
Harties 7	1,740	0.54	0.0243	30	932
Total Inferred	1,740	0.54	0.0243	30	932

Notes:

1. CIM definitions were followed for mineral resources.
2. A zero grade cutoff grade was used.
3. Rows and columns may not add exactly due to rounding.
4. Preliminary metallurgical test results indicate that recoveries will be approximately 27% for uranium and 68% for gold.
5. Mineral resources that are not mineral reserves do not have demonstrated economic viability.

REVISED RESOURCE STATEMENT (as per the Revised Report)

	Tonnes	Grade		Content	
		Gold	U ₃ O ₈	Gold	U ₃ O ₈
Measured	(000s)	(g/t)	(%)	(oz 000s)	(lb 000s)

Total Indicated	228,560	0.29	0.0065	2,106	32,741
Total Meas. & Indicated	298,040	0.31	0.0073	2,944	47,642

Inferred

Harties 7	1,740	0.54	0.0243	30	932
Harties - Flanagan	43	0.80	0.0229	1	22
Harties - Ellaton	1,500	0.52	0.0087	25	288
Harties - NKGE	680	0.41	0.0158	9	237
MWS 5	60,700	0.29	0.0093	566	12,442
Total Inferred	64,663	0.30	0.0098	631	13,920

Notes:

1. CIM definitions were followed for mineral resources.
2. A zero grade cutoff grade was used.
3. Rows and columns may not add exactly due to rounding.
4. Preliminary metallurgical test results indicate that recoveries will be approximately 27% for uranium and 68% for gold.
5. Mineral resources that are not mineral reserves do not have demonstrated economic viability.
6. Harties - Flanagan, Harties - Ellaton and Harties - NKGE are the three tailings dams proposed to be acquired by First Uranium pursuant to the Additional Dams Acquisition.

While the MWS Dam 5 resource is included in the revised Buffels resource statement, it has not been included in the economic analysis on the Buffels project. However, the Company anticipates that MWS Dam 5 would add another three years to Buffels' mine life.

With the MWS resources better defined, the Buffels' mine life is now estimated, assuming the completion of the MWS Acquisition, to be 16 years, not 17 as originally announced on April 4, 2007.

As the Company allocates Buffels' projected cash costs in proportion to the projected revenue contribution from each product and the Company is assuming higher uranium prices and revenues, the Company expects that on a co-product

basis the cash cost of gold should be \$220 per ounce and the cash cost of uranium should be \$22.05 per pound.

Gold production at MWS continues and will be credited to First Uranium as of April 1, 2007 assuming completion of the acquisition. Uranium production from the first two of three uranium plant modules is scheduled to commence in November 2008. The average annual production for Buffels (assuming completion of the MWS Acquisition) for the life of the project (March 2007 to April 2023) is expected to be 128,000 ounces of gold and 922,000 pounds of uranium.

The Company expects to continue the work with preparation of a pre-feasibility study for Buffels commencing immediately.

All technical disclosure in this news release relating to the Buffelsfontein tailings recovery project is extracted from a technical report entitled "Technical Report - Preliminary Assessment of the Buffelsfontein Project, North West Province, Republic of South Africa" (the "Buffels Technical Report") originally submitted on November 8, 2006, revised on December 5, 2006 and January 31, 2007 and further revised on May 22, 2007 prepared in accordance with National instrument 43-101 ("NI 43-101") by R. Dennis Bergen, P.Eng and Wayne Valliant P.Geo of Scott Wilson RPA, each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium. The disclosure contained in this news release has been reviewed and approved by Mr. Bergen and Mr. Valliant.

In addition, the disclosure in this news release and the Buffels Technical Report assumes the completion of the MWS Acquisition and the Additional Dams Acquisition by First Uranium. The MWS Acquisition is subject to a number of conditions including, among others, the receipt of required approvals from South African competition authorities, the Toronto Stock Exchange, the South African Reserve Bank and the South African Department of Minerals and Energy. Subject to receipt of the requisite approvals, the MWS Acquisition is expected to close no later than August 31, 2007 with effect as of April 1, 2007.

The economic analysis contained in this news release is contained in the Buffels Technical Report and is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserves development, production and economic forecasts on which the preliminary assessment contained in the Buffels Technical Report is based, will be realized.

Cautionary Language Regarding Forward-Looking Information

This news release contains and refers to forward-looking information based on current expectations. All other statements other than statements of historical fact included in this release including, without limitation, statements regarding potential production rates and operating costs, processing and development plans, estimated net present values and future plans and objectives of First Uranium are forward-looking statements (or forward-looking information) that involve various risks and uncertainties. These forward-looking statements are made as of the date hereof and there can be no assurance that such statements will prove to be accurate, such statements are subject to significant risks and uncertainties, and actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements that are included herein, except in accordance with applicable securities laws.

Important factors could cause actual results to differ materially from First Uranium's expectations. Such factors include, among others: the timely completion of the MWS Acquisition and the Additional Dams Acquisition, the actual results of the planned feasibility studies on First Uranium's projects; the actual results of additional exploration and development activities at First Uranium's projects; the timing and amount of estimated future production and the costs thereof; capital expenditures; the costs and timing of the development of First Uranium's projects; the availability of any additional capital required to bring future projects into production; conclusions of economic evaluations; changes in project parameters as plans continue to be refined; future prices of commodities; the failure of plant, equipment or processes to operate as anticipated; accidents; labour disputes; delays in obtaining governmental approvals, permits or financing or in the completion of development or construction activities; currency fluctuations, as well as those factors discussed under "Risk Factors" in First Uranium's final prospectus dated December 12, 2006 as filed with securities regulatory authorities in Canada. Although First Uranium has attempted to identify important factors that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated or intended.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine, and the construction of the Buffelsfontein tailings recovery facility. FIRST URANIUM CORPORATION

NEWS RELEASE – MAY 3, 2007

**NOT FOR DISSEMINATION IN THE UNITED STATES OR FOR
DISTRIBUTION TO U.S. NEWSWIRE SERVICES**

**FIRST URANIUM ANNOUNCES COMPLETION OF CDN\$150 MILLION SENIOR
UNSECURED CONVERTIBLE DEBENTURE OFFERING**

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) ("First Uranium" or "the Company") today reported the completion of its previously announced private placement of CDN\$150 million aggregate principal amount of 4.25% senior unsecured convertible debentures (the "Debentures") due June 30, 2012.

The Debentures will bear interest at a rate of 4.25% per annum payable semi-annually and will be convertible into common shares of the Company at CDN\$16.42 per share representing a conversion premium of approximately 37.5% to the closing price of the shares on the Toronto Stock Exchange (the "TSX") on April 18, 2007.

The syndicate for the offering of Debentures was led by RBC Capital Markets and included Canaccord Capital Corporation, National Bank Financial Inc., GMP Securities L.P., Cormark Securities Inc., Orion Securities Inc. and Raymond James Ltd.

The Company intends to use the net proceeds from the sale of the Debentures:

- to fund a drilling program and feasibility study in respect of the possible expansion of its Ezulwini underground uranium and gold project in South Africa;
- together with the net proceeds of the December 2006 initial public offering to fund the development of the Company's Ezulwini underground mining project and its Buffelsfontein tailings recovery project, also in South Africa; and
- for general corporate purposes.

The TSX has conditionally approved the listing of the Debentures subject to standard listing conditions. It is expected that trading of the Debentures on the TSX will commence on or about September 4, 2007.

This news release does not constitute an offer to sell or a solicitation of an offer to buy any of the Company's securities in the United States. The Company's securities have not been and will not be registered under the United States Securities Act of 1933, as amended (the "U.S. Securities Act") or any state securities laws and may not be offered or sold within the United States or to U.S. Persons unless registered under the U.S. Securities Act and applicable state securities laws or an exemption from such registration is available.

FIRST URANIUM CORPORATION

NEWS RELEASE – April 16, 2007

**NOT FOR DISSEMINATION IN THE UNITED STATES OR FOR
DISTRIBUTION TO U.S. NEWSWIRE SERVICES**

**FIRST URANIUM'S EZULWINI PROSPECTING RIGHTS APPLICATION ACCEPTED
BY SOUTH AFRICAN DEPARTMENT OF MINERALS AND ENERGY**

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) ("First Uranium" or "the Company") today announced that the South African Department of Minerals and Energy ("DME") has accepted for consideration the Company's application in respect of a Prospecting Work Program (the "Program") on contiguous properties to the north-east and south-east of First Uranium's Ezulwini underground uranium and gold mining project in South Africa.

The initial stages of the Program will test the strike extent of the Middle Elsburg Reef in an area east of the Ezulwini project. The Program will include surface diamond drill exploration with drill hole depths of up to 2,000 metres. Previous exploration drilling conducted in the area by Gencor confirmed the presence of mineralization along the approximately 20 kilometres of strike within the prospecting area included in the Program (see map).

The Ezulwini project and the properties which are the subject of the Program are located in the Witwatersand Basin, which is the largest known gold province in the world, with deposits having been mined for well over 100 years. Several groups of reefs have been identified in the area, including the Livingstone Reefs, the South Reef, the Kimberley Reefs, the Bird Reefs, the Mondeor Reefs, the Ventersdorp Contact Reef and the Black Reef, as well as the Elsburg Reefs associated with the Ezulwini project. Within these reefs, a total of nine economic reef horizons have been mined at depths below surface of between 600 metres and 1,260 metres.

Acceptance by the DME implies that no other parties have made prior application for the prospecting rights, and that, subject to the Company complying with all the requirements of the DME, the rights will in due course be granted. However, the Company must submit the following to the DME to obtain their approval for the grant of the rights prior to commencing the Program:

- the results of a notification and consultation with the surface owners of the land overlying the Program area by May 13, 2007;
- an acceptable Environmental Management Plan by June 12, 2007; and
- confirmation of the Company's qualifying Black Economic Empowerment credentials.

The Program fits within the Company's strategy to focus its exploration on or near its current projects in order to leverage the infrastructure of those projects. For instance, at Ezulwini the Company is currently working on re-commissioning the Ezulwini mine with the intention to start hoisting uranium ore and gold production in October 2007 and is scheduled to complete construction of new uranium and gold plants by June 2008.

Cautionary Language regarding Forward-Looking Information

This news release contains and refers to forward-looking information based on current expectations. All other statements other than statements of historical fact included in this release including, without limitation, statements regarding processing and development plans and future plans and objectives of First Uranium are forward-looking statements (or forward-looking information) that involve various risks and uncertainties. These forward-looking statements are made as of the date hereof and there can be no assurance that such statements will prove to be accurate, such statements are subject to significant risks and uncertainties, and actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements that are included herein, except in accordance with applicable securities laws.

Important factors could cause actual results to differ materially from First Uranium's expectations. Such factors include, among others: the actual results of the planned feasibility studies on First Uranium's projects; the actual results of additional exploration and development activities at First Uranium's projects; the timing and amount of estimated future production and the costs thereof; capital expenditures; the costs and timing of the development of First Uranium's projects; the availability of any additional capital required to bring future projects into production; conclusions of economic evaluations; changes in project parameters as plans continue to be refined; future prices of commodities; the failure of plant, equipment or processes to operate as anticipated; accidents; labour disputes; delays in obtaining governmental approvals, permits or financing or in the completion of development or construction activities; currency fluctuations, as well as those factors discussed under "Risk Factors" in First Uranium's final prospectus dated December 12, 2006 as filed with securities regulatory authorities in Canada. Although First Uranium has attempted to identify important factors that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated or intended.

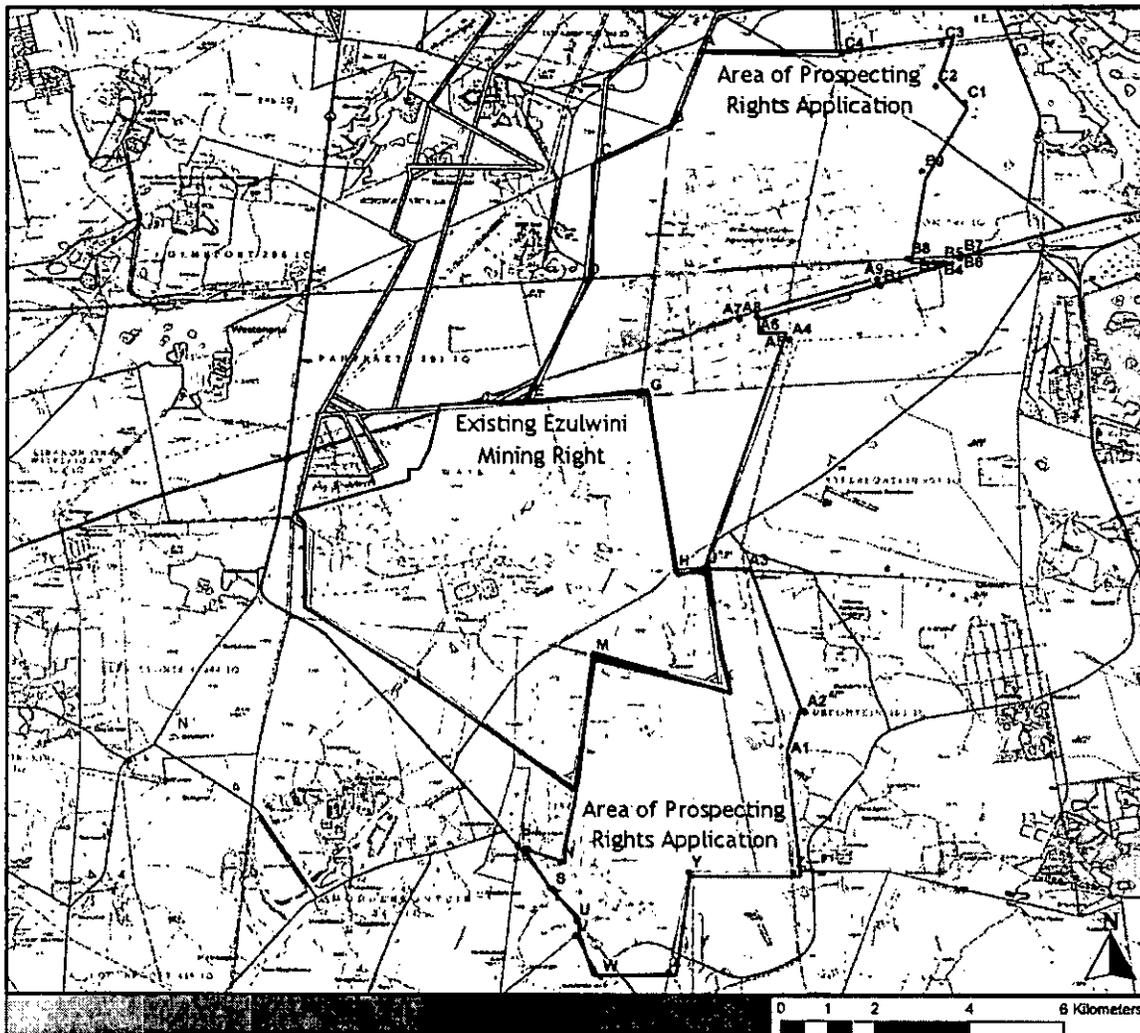

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine, and the construction of

the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

Item 3 – News Release:

The news release attached hereto as Schedule “A” was disseminated over CNW Group on April 16, 2007.

Item 4 – Summary of Material Change:

First Uranium Corporation (the “Company”) announced that the Company has engaged a syndicate of investment banks led by RBC Capital Markets for a private placement offering of unsecured convertible debentures in the aggregate principal amount of C\$130 million (the “Offering”) to be marketed on a best efforts basis. The Offering is subject to certain conditions including the approval of the Toronto Stock Exchange the Johannesburg Stock Exchange.

The Company intends to use the net proceeds of the Offering to fund a drilling program and feasibility study in respect of the possible expansion of the Ezulwini underground uranium and gold mine project in South Africa; together with the net proceeds from the December 2006 initial public offering to fund the development of the Company’s Ezulwini underground mining project and its Buffelsfontein tailings recovery project, also in South Africa; and for general corporate purposes.

In connection with the Offering, Simmer & Jack Mines, Limited, a majority shareholder holding approximately 67.2% of the Company’s issued and outstanding shares, has agreed to enter into a securities lending arrangement with RBC Capital Markets solely for the purpose of increasing the liquidity of the Company’s common shares.

SCHEDULE "A"

FIRST URANIUM CORPORATION

NEWS RELEASE – April 16, 2007

**NOT FOR DISSEMINATION IN THE UNITED STATES OR FOR
DISTRIBUTION TO U.S. NEWSWIRE SERVICES**

**FIRST URANIUM ANNOUNCES CDN\$130 MILLION OFFERING OF UNSECURED
CONVERTIBLE DEBENTURES**

Toronto and Johannesburg – First Uranium Corporation (TSX:FIU, JSE:FUM) (ISIN:CA33744R1029) ("First Uranium" or "the Company") today announced that the Company has engaged a syndicate of investment banks led by RBC Capital Markets for a private placement offering of unsecured convertible debentures ("Debentures") in the aggregate principal amount of CDN\$130 million (the "Offering") to be marketed on a best efforts basis.

The terms of the Offering are expected to be finalized on or about April 18, 2007. The Offering is subject to certain conditions including the approval of the Toronto Stock Exchange and the Johannesburg Stock Exchange.

The Company intends to use the net proceeds from the Offering:

- to fund a drilling program and feasibility study in respect of the possible expansion of its Ezulwini underground uranium and gold mine project in South Africa;
- together with the net proceeds of the December 2006 initial public offering to fund the development of the Company's Ezulwini underground mining project and its Buffelsfontein tailings recovery project, also in South Africa; and
- for general corporate purposes.

The Company is currently working on re-commissioning the Ezulwini project with the intention to start hoisting uranium ore and gold production in October 2007 and is scheduled to complete construction of new uranium and gold plants by June 2008. As

noted above, a portion of the net proceeds of the Offering will be used to fund an exploration program and a feasibility study in respect of the possible expansion of the Ezulwini project. In particular, the exploratory work is intended to confirm whether sufficient inferred uranium and gold resources at Ezulwini can be converted to the measured and indicated categories to justify:

- the construction of a new 250,000-tonne per month shaft to increase the amount of ore that could be hoisted to the surface and provide easier access to future extensions of the underground operation; and
- an expansion of the capacity of the planned uranium plant from 100,000 to 350,000 tonnes per month.

In conjunction with the Offering, Simmer & Jack Mines, Limited ("Simmers"), the holder of approximately 67.2% of the issued and outstanding common shares of First Uranium, has agreed to enter into a securities lending arrangement with RBC Capital Markets. Simmers has no current intention to sell any of its shareholding interest in First Uranium and has agreed to enter into the securities lending arrangement solely for purposes of increasing the liquidity of First Uranium's common shares.

This news release does not constitute an offer to sell or a solicitation of an offer to buy any of the securities in the United States. The securities have not been and will not be registered under the United States Securities Act of 1933, as amended (the "U.S. Securities Act") or any state securities laws and may not be offered or sold within the United States or to U.S. Persons unless registered under the U.S. Securities Act and applicable state securities laws or an exemption from such registration is available.

Cautionary Language regarding Forward-Looking Information

This news release contains and refers to forward-looking information based on current expectations. All other statements other than statements of historical fact included in this release including, without limitation, statements regarding processing and development plans and future plans and objectives of First Uranium are forward-looking statements (or forward-looking information) that involve various risks and uncertainties. FIRST URANIUM CORPORATION

First Uranium Announces JSE Secondary Listing

NOT FOR DISSEMINATION IN THE UNITED STATES OR FOR DISTRIBUTION TO U.S. NEWSWIRE SERVICES AND DOES NOT CONSTITUTE AN OFFER OF THE SECURITIES DESCRIBED HEREIN.

JOHANNESBURG, South Africa, March 29 /CNW/ - First Uranium Corporation (FIU:TSX and FUM:JSE) ("First Uranium" or "the Company") today announced that the Company has obtained a secondary listing of its Common Shares by JSE Limited (the "JSE"), known as the Johannesburg Stock Exchange. With this secondary listing, scheduled for Friday, March 30, the Company will not be issuing any additional shares. As a result of this event, all of the same shares that are listed on the Toronto Stock Exchange ("TSX") will also be listed for trading on the JSE.

In connection with the secondary listing, First Uranium prepared and submitted a Pre-listing Statement with the JSE. In addition, the Company received approval of the South African Reserve Bank ("SARB") to obtain a JSE listing. The Common Shares will trade on the JSE under the share code "FUM".

"Most importantly, we see this listing as an opportunity for South Africans to directly invest in a South African growth company," said Gordon Miller, President and Chief Executive Officer of First Uranium. "This listing also fulfills our commitment to SARB to list our Common Shares on the JSE within one year of our TSX listing."

"We view the JSE listing as the best way to facilitate the maintenance of our BEE share ownership," continued Mr. Miller. "The listing will increase awareness of First Uranium in South Africa and enlarge our potential investor base, which should lead to increased liquidity in our shares and more direct investment by residents of South Africa."

The forward-looking statements in this news release are made as of the

date hereof and there can be no assurance that such forward-looking statements will prove to be accurate as actual and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements that are included herein, except in accordance with applicable securities laws.

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine, and the construction of the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

Item 3 – News Release:

The news release attached hereto as Schedule “A” was disseminated over CNW Group on April 4, 2007.

Item 4 – Summary of Material Change:

First Uranium Corporation (the “Company”) announced that the Company, through its wholly-owned subsidiary, First Uranium (Proprietary), Limited, had entered into a binding agreement to acquire Mine Waste Solutions (Proprietary) Limited (“MWS”) and its subsidiary Chemwes (Proprietary) Limited (“Chemwes”) which owns and operates an existing gold mine tailings and reprocessing facility adjacent to the Company’s Buffelsfontein Project in South Africa.

The Company will acquire all MWS shares for approximately 200 million South African Rand (approximately Cdn\$32 million or US\$27.5 million) which will be paid by way of the issuance to the shareholders of MWS of an aggregate of approximately 3.2 million common shares of the Company at Cdn\$10.20 per share, reflecting the fifteen trading day volume weighted average price of the Company’s shares traded on the Toronto Stock Exchange up to and including March 30, 2007. The acquisition is subject to a number of conditions including, among others, the satisfactory completion by the Company of a due diligence review of MWS and the receipt of the required approvals from South African competition authorities, the Toronto Stock Exchange, the JSE Limited, the investment committee of the Industrial Development Corporation of South Africa Limited, the South African Reserve Bank and the South African Department of Minerals and Energy.

All MWS shareholders have agreed to tender their MWS shares to the offer. On closing of the acquisition, the Company will assume management control of MWS and its wholly-owned subsidiary, Chemwes.

SCHEDULE "A"

FIRST URANIUM CORPORATION

NEWS RELEASE – April 4, 2007

**NOT FOR DISSEMINATION IN THE UNITED STATES OR FOR
DISTRIBUTION TO U.S. NEWSWIRE SERVICES**

**FIRST URANIUM ACQUIRES MINE WASTE SOLUTIONS (PROPRIETARY) LIMITED
TO COMPLEMENT THE BUFFELSFONTEIN TAILINGS RECOVERY PROJECT IN
SOUTH AFRICA**

Toronto, Ontario – First Uranium Corporation (FIU:TSX, FUM:JSE, CA33744R1029:ISIN) ("First Uranium" or "the Company") today announced that the Company, through its wholly-owned subsidiary, First Uranium (Proprietary) Limited, had entered into a binding agreement to acquire Mine Waste Solutions (Proprietary) Limited ("MWS") and its subsidiary Chemwes (Proprietary) Limited ("Chemwes"), which owns and operates an existing gold mine tailings and re-processing facility adjacent to the Company's Buffelsfontein Project in South Africa.

First Uranium has agreed to acquire all MWS shares for the equivalent of 200 million South African Rand (approximately US\$27.5 million) in First Uranium shares. The acquisition is subject to a number of conditions including, among others, the satisfactory completion by the Company of a due diligence review of MWS (which is expected to be completed by April 13, 2007) and the receipt of required approvals from South African competition authorities, the Toronto Stock Exchange, the JSE Limited, the investment committee of the Industrial Development Corporation of South Africa Limited, the South African Reserve Bank and the South African Department of Minerals and Energy. Subject to completion of the due diligence and receipt of the requisite approvals, the transaction is expected to close no later than August 31, 2007 with effect as of April 1, 2007. The number of First Uranium shares to be issued will be approximately 3.2 million at CDN\$10.20, the fifteen trading day volume weighted average price of First Uranium's shares traded on the TSX up to and including March 30, 2007.

All shareholders of MWS have agreed to tender their MWS shares to the offer. On closing of the acquisition, First Uranium will assume management control of MWS and its wholly-owned subsidiary, Chemwes.

The MWS assets to be acquired include:

- a gold plant which, based on its actual operating performance over the last three years, has a proven capacity for processing 570,000 tonnes per month;
- three tailings dams from which gold and uranium can be recovered, one of which is actively being depleted and another with sufficient disposal area for several years of tailings deposition; and
- rock dumps.

The acquisition of the MWS gold plant will eliminate the necessity of building the first gold plant planned for the Buffelsfontein Project, reducing both the time and capital required to begin gold production. The combination of the reduction in capital, the changes to the production schedule and the additional cash flow from re-processing of MWS tailings will increase the total Buffelsfontein Project net present value ("NPV") to US\$240 million, an accretive NPV improvement of US\$29 million from the US\$211 million originally planned. In addition, the Buffelsfontein Project's internal rate of return will improve from 39% to 59%. The accretion analysis is based upon commercial metrics of US\$500 per ounce gold, US\$40 per pound uranium, an exchange rate of 7.4 South African Rand to the U.S. dollar and a discount rate of 8%.

"This acquisition is very positive for our Buffelsfontein Project as we will be able to begin a significant amount of our gold production one year ahead of schedule, establish a lower cost for our first gold plant module, and begin the first phase of uranium production at twice the rate previously contemplated, thus achieving peak uranium production eight months ahead of schedule," said Gordon Miller, President and Chief Executive Officer of First Uranium. "This fits exactly into our strategy of bringing our two near-term projects into production as quickly as possible."

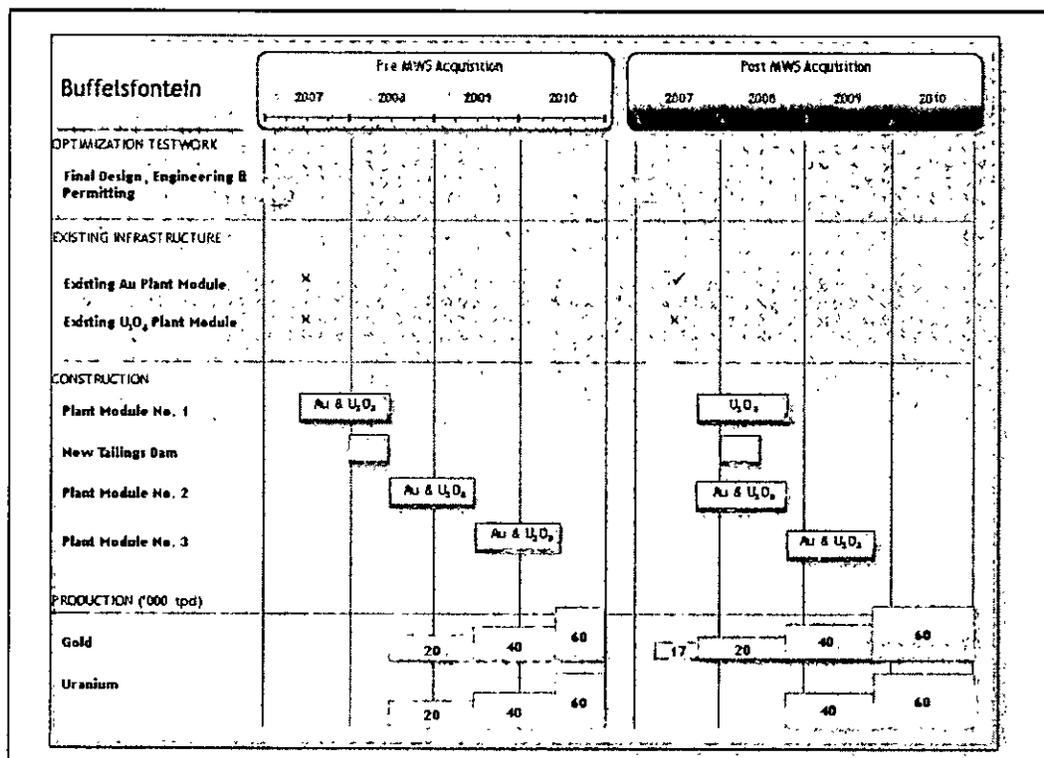

Revised Project Development and Production Schedule

With regard to gold production, the acquisition of MWS will enable First Uranium to begin to process approximately 500,000 tonnes per month, slightly lower than the plant's designed capacity due to restrictions to the rate of tailings deposition. In the first year the Company expects to recover approximately 43,000 ounces of gold at a cash cost of \$317 per ounce including royalties. First Uranium intends to process MWS tailings with the highest gold grade first. By the end of 2007, the Company also expects to complete a pipeline from the Buffelsfontein site to the MWS gold plant to process tailings with the highest gold grade available from select areas of the Buffelsfontein site. First Uranium expects to increase the gold plant's average monthly processing capacity to 1,200,000 tonnes per month by November 2008, with the construction of a 600,000 tonnes per month plant module.

With regard to uranium production, the Company's original plan had been to build a uranium plant at the Buffelsfontein site by June 2008. With this acquisition, the Company now plans to build a uranium plant by November 2008 with twice the previously contemplated capacity beside the MWS gold plant. The addition of MWS tailings deposition capacity will enable First Uranium to process 40,000 tonnes of tailings per day immediately upon completion of the uranium plant compared to its original plan of processing 20,000 tonnes per day until June 2009 and then increasing its processing to 40,000 tonnes per day. The acquisition will also allow the Company to move forward by eight months the construction of the third plant module, which is designed to increase processing to 60,000 tonnes per day.

The acquisition of MWS is expected to increase the life of the Buffelsfontein Project by 3 years from 14 to 17 years.

The figure below depicts the revised planned production as a result of the MWS acquisition:

The resource table below reflects the contribution of MWS resources to the Buffelsfontein Project.

	Tonnes (t 000s)	Gold Grade (g/t)	Uranium Grade (%)	Cont. Gold (oz 000s)	Cont. Uranium (lb 000s)
Buffelsfontein Measured	115,064	0.31	0.0083	1,144	21,130
Buffelsfontein Indicated	165,953	0.31	0.0059	1,628	21,603
Total Measured & Indicated	281,017	0.31	0.0069	2,772	42,733
Inferred					
Buffelsfontein	1,740	0.54	0.0243	30	932
MWS	18,128	0.32	0.0120	188	4,786
Combined	19,868	0.34	0.0131	218	5,718

Notes:

1. CIM definitions were followed for mineral resources.
2. Mineral resources that are not mineral reserves do not have demonstrated economic viability.
3. A zero grade cutoff was used.
4. Rows and columns may not add exactly due to rounding.
5. MWS resources reflected in this table include all of Dam 2 and the lower portion of Dam 4, as the top 12 metres of Dam 4 contains an uneconomic gold grades, which the Company will remove.

Review of Technical Disclosure

All technical disclosure in this news release relating to the Buffelsfontein Project and the MWS acquisition has been reviewed and approved by R. Dennis Bergen, P.Eng and Wayne Valliant P.Geo of Scott Wilson Roscoe Postle Associates Inc. ("Scott Wilson RPA"), each of whom is a "qualified person" under National Instrument 43-101 ("NI 43-101") and is independent of First Uranium. In accordance with NI 43-101, the Company will file a revised technical report for the Buffelsfontein Project, reflecting the impact of the MWS acquisition, within 45 calendar days of this release.

The MWS resources disclosed in this news release are from MWS Dams 2 and 4. Scott Wilson RPA has reviewed the MWS production records and mineral resource reconciliation for Dam 2 and considers the remaining tailings reported by MWS as inferred mineral resources as per NI 43-101.

Scott Wilson RPA has reviewed an internal mineral resource report by MWS on Dam 4. The mineral resource estimate was based on appropriately spaced drill holes and used a computerized block model methodology. In the opinion of Scott Wilson RPA the data density and methodology was suitable for the mineral resource estimate of the tailings. However, based on the requirement for additional data verification, the Dam 4 mineral resources have been classified as inferred as per NI 43-101.

MWS also has Dam 5, which has not been analyzed sufficiently for use in the technical analysis disclosed in this news release and which currently serves as a tailings deposit area. If and when the Company is able to complete sufficient work to categorize Dam 5 as a resource pursuant to NI 43-101, the Company expects the

conversion of Dam 5 to resources would result a further extension of the life of the Buffelsfontein Project an additional 3 years from 17 to 20 years.

The economic analysis contained in this news release is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserves development, production and economic forecasts contained in this news release and which will be the subject of a preliminary assessment, will be realized.

Update on other Strategic Discussions

First Uranium's primary goal continues to be to bring its two uranium and gold projects, Buffelsfontein and Ezulwini, into production. The acquisition of MWS complements this goal by bringing the Buffelsfontein Project's production forward and adds value to the Company and its shareholders. In addition, the Company continually evaluates further acquisitions, joint ventures and/or development opportunities relating to strategically located uranium prospects and properties in Southern Africa, which have the potential to add additional growth. One such potential opportunity could be Harmony Gold Mining Company Limited's Randfontein gold mine, which is adjacent to First Uranium's Ezulwini underground mine project, in respect of which some preliminary discussions have been held. There can be no assurance that any agreement or transaction might be completed with Harmony.

It was reported in the South African media on March 30, 2007 that the Company could be a possible takeover target for other producers. Neither the Company nor its 67% shareholder, Simmer and Jack Mines, Limited, is in any discussions with third parties regarding any possible takeover transaction with respect to First Uranium.

Cautionary Language regarding Forward-Looking Information

This news release contains and refers to forward-looking information based on current expectations. All other statements other than statements of historical fact included in this release including, without limitation, statements regarding potential production rates and operating costs, processing and development plans, estimated net present values and future plans and objectives of First Uranium are forward-looking statements (or forward-looking information) that involve various risks and uncertainties. There can be no assurance that such statements will prove to be accurate, such statements are subject to significant risks and uncertainties, and actual results and future events could differ materially from those anticipated in such statements.

In making the forward-looking statements in this news release, the Company has applied several material assumptions, including but not limited to, the assumption that:

- the integrated operation of the Buffelsfontein Project and the MWS gold processing plant is viable operationally and economically;

- metal prices, exchange rates and discount rates applied in the accretion analysis are achieved;
- regulatory approvals will be obtained within the expected time frame; and
- production capacity and mineral resource estimates are accurate.

Important factors could cause actual results to differ materially from First Uranium's expectations. Such factors include, among others: the actual results of the planned feasibility studies on First Uranium's projects; the actual results of additional exploration and development activities at First Uranium's projects; the timing and amount of estimated future production and the costs thereof; capital expenditures; the costs and timing of the development of First Uranium's projects; the availability of any additional capital required to bring future projects into production; conclusions of economic evaluations; changes in project parameters as plans continue to be refined; future prices of commodities; the failure of plant, equipment or processes to operate as anticipated; accidents; labour disputes; delays in obtaining governmental approvals, permits or financing or in the completion of development or construction activities; delays in closing the MWS acquisition; delays or complications relating to the re-engineering at the MWS site and the integration of the MWS assets into First Uranium's development plans; the actual recovery rates of the MWS gold plant; currency fluctuations, as well as those factors discussed under "Risk Factors" in First Uranium's final prospectus dated December 12, 2006 as filed with securities regulatory authorities in Canada. Although First Uranium has attempted to identify important factors that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated or intended.

These forward-looking statements are made as of the date hereof and there can be no assurance that such forward-looking statements will prove to be accurate as actual and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements that are included herein, except in accordance with applicable securities laws.

Conference Call

An investor conference call with regard to the acquisition of MWS has been set up for Wednesday, April 4 at 10h00 (16h00 in South Africa). The following numbers have been set up for participants on this conference call:

Toronto	416 644 3420
Toll free	1 800 594 3615
South Africa	09 800 0022 8228

A replay of this call will be available for one week at the following numbers:

Toronto	416 640 1917
Toll free	1 877 289 8525

A passcode of 21225860# is required to access the replay.

About First Uranium Corporation

First Uranium Corporation is focused on the development of South African uranium and gold mines with the goal of becoming a significant producer through the re-opening and development of the Ezulwini underground mine, and the construction of the Buffelsfontein tailings recovery facility. First Uranium also plans to grow production by pursuing acquisition and joint venture opportunities.

(Signed) Gordon Miller

Gordon Miller

President and Chief Executive Officer

FORM 45-102F1
NOTICE OF INTENTION TO DISTRIBUTE SECURITIES UNDER SECTION 2.8 OF
NI 45-102 RESALE OF SECURITIES

Reporting issuer

1. Name of reporting issuer:

First Uranium Corporation (the "Issuer")

Selling security holder

2. Your name:

Simmer & Jack Mines, Limited ("Simmers")

3. The offices or positions you hold in the reporting issuer:

None. Simmers holds approximately 67.2% of the Issuer's issued and outstanding common shares.

4. Are you selling securities as a lender, pledgee, mortgagee or other encumbrancer?

No. Simmers has agreed to enter into a securities lending arrangement with Investec Bank Limited ("Investec") pursuant to which it will lend up to 2.5 million common shares of the Issuer to Investec. Simmers has no current intention to sell any of its shareholding interest in the Issuer at this time and has agreed to enter into the securities lending arrangement solely for purposes of increasing the liquidity of the Issuer's common shares in order to facilitate trading of the Issuer's common shares on the Johannesburg Stock Exchange.

5. Number and class of securities of the reporting issuer you beneficially own:

81,722,653 common shares.

Distribution

6. Number and class of securities you propose to lend:

Simmers proposes to lend up to 2.5 million common shares of the Issuer to Investec pursuant to the securities lending arrangement described in item 4 above.

7. Will you sell the securities privately or on an exchange or market? If on an exchange or market, provide the name.

Simmers has agreed to enter into a private securities lending arrangement with Investec as described in item 4 above.

Warning

It is an offence to submit information that, in a material respect and in light of the circumstances in which it is submitted, is misleading or untrue.

EARLY WARNING REPORT

**SECTION 101 OF THE SECURITIES ACT (ONTARIO)
SECTION 111 OF THE SECURITIES ACT (BRITISH COLUMBIA)
SECTION 176 OF THE SECURITIES ACT (ALBERTA)
SECTION 92 OF THE SECURITIES ACT (MANITOBA)
SECTION 147.11 OF THE SECURITIES ACT (QUEBEC)
NATIONAL INSTRUMENT 62-103**

(1) Name and address of the offeror

Simmer & Jack Mines, Limited (the "offeror")
5 Press Avenue
Selby, Johannesburg
2025

(2) Designation and number or principal amount of securities and the offeror's securityholding percentage in the class of securities of which the offeror acquired ownership or control in the transaction or occurrence giving rise to the obligation to file the news release, and whether it was ownership or control that was acquired

Immediately following the closing of the initial public offering of First Uranium Corporation ("FIU"), including the related over-allotment option, in December 2006, the offeror owned 81,722,653 common shares in the capital of FIU, representing approximately 67.2% of the issued and outstanding common shares of FIU. The offeror has entered into a securities lending agreement (the "SLA") with Investec Bank Limited ("Investec") under the terms of which the offeror has agreed to make available to Investec up to 7.5 million common shares of FIU, representing approximately 6.2% of the issued and outstanding common shares of FIU. Excluding the 7.5 million common shares that will be available to loan under the SLA, Simmers will continue to hold approximately 61% of the issued and outstanding common shares of FIU. The offeror has no current intention to sell any of its shareholding interest in FIU and has entered into the SLA with Investec solely for purposes of increasing the liquidity of FIU's common shares on the Toronto Stock Exchange and the Johannesburg Stock Exchange.

(3) Designation and number or principal amount of securities and the offeror's securityholding percentage in the class of securities immediately after the transaction or occurrence giving rise to the obligation to file the news release

Pursuant to the SLA, the offeror has agreed to lend to Investec up to 7.5 million common shares in the capital of FIU, representing approximately 6.1% of FIU's issued and outstanding common shares.

(4) Designation and number or principal amount of securities and the percentage of outstanding securities of the class of securities referred to in paragraph (3) over which

(i) the offeror, either alone or together with any joint actors, have ownership and control

See (2) and (3) above.

(ii) the offeror, either alone or together with any joint actors, has ownership but control is held by other persons or companies other than the offeror or any joint actor

Not applicable.

(iii) the offeror, either alone or together with any joint actors, has exclusive or shared control but do not have ownership

Not applicable.

(5) Name of the market in which the transaction or occurrence that gave rise to the news release took place

Not applicable.

(6) Purpose of the offeror and any joint actors in effecting the transaction or occurrence that gave rise to the news release, including any future intention to acquire ownership of, or control over, additional securities of the reporting issuer

The purpose of entering into the SLA is to increase the liquidity of FIU's common shares on the Toronto Stock Exchange and the Johannesburg Stock Exchange.

(7) General nature and material terms of any agreement, other than lending arrangements, with respect to securities of the reporting issuer entered into by the offeror, or any joint actor, and the issuer of the securities or any other entity in connection with the transaction or occurrence giving rise to the news release, including agreements with respect to the acquisition, holding, disposition or voting of any of the securities

Not applicable.

- (8) **Names of any joint actors in connection with the disclosure required by this report**

Not applicable.

- (9) **In the case of a transaction or occurrence that did not take place on a stock exchange or other market that represents a published market for the securities, including an issuance from treasury, the nature and value of the consideration paid by the offeror**

See (2) above.

- (10) **If applicable, a description of any change in any material fact set out in a previous report by the entity under the early warning requirements or Part 4 of National Instrument 62-103 in respect of the reporting issuer's securities**

Not applicable.

DATED this 2nd day of May, 2007.

THIS INDENTURE dated as of May 3, 2007

B E T W E E N:

FIRST URANIUM CORPORATION, a corporation
continued under the laws of British Columbia.

(hereinafter called the "**Company**")

and

COMPUTERSHARE TRUST COMPANY OF CANADA, a
trust company incorporated under the laws of Canada.

(hereinafter called the "**Indenture Trustee**")

WHEREAS:

- A. The Company desires to provide for the creation and issue of senior unsecured convertible debentures with the designation of "4.25% Senior Unsecured Convertible Debentures due June 30, 2012" (the "**Debentures**"), all upon the terms and conditions set forth in this Indenture (as hereinafter defined);
- B. All necessary acts and proceedings have been done and taken and all necessary resolutions have been passed to authorize the execution and delivery of this Indenture by the Company, to make the same effective and binding upon the Company, and to make the Debentures, when certified by the Indenture Trustee and issued as provided in this Indenture, valid, binding and legal obligations of the Company with the benefit and subject to the terms of this Indenture;
- C. All necessary acts and proceedings have been done and taken and all necessary resolutions have been passed to authorize the issuance of the Common Shares (as hereinafter defined) that may be issued upon conversion, redemption or maturity of the Debentures; and
- D. The foregoing recitals are made as representations and statements of fact by the Company and not by the Indenture Trustee;

NOW, THEREFORE, THIS INDENTURE WITNESSES, and it is hereby agreed and declared, as follows:

ARTICLE 1 INTERPRETATION

1.1 Definitions

In this Indenture and in the Debentures, unless there is something in the subject matter or context inconsistent therewith, the following expressions shall have the following meanings:

“**1933 Act**” means the United States Securities Act of 1933, as amended from time to time;

“**1934 Act**” means the United States Securities Exchange Act of 1934, as amended from time to time;

“**Act**” or “**Act of Holder(s)**”, when used with respect to any Holder(s), shall have the meaning specified in section 1.12.1;

“**Additional Amounts**” has the meaning ascribed thereto in subsection 2.15.1;

“**Additional Shares**” has the meaning ascribed thereto in subsection 3.9.7;

“**Affiliate**” shall have the meaning ascribed thereto in the *Securities Act* (Ontario), as amended from time to time;

“**Agent**” means a Person appointed to act on behalf of another Person;

“**Applicable Law**” shall mean, at any time, with respect to any Person, property, transaction, event or other matter, as applicable, all laws, rules, statutes, regulations, treaties, orders, judgments and decrees, and all official requests, directives, rules, guidelines, orders, policies, practices and other requirements of any Governmental Authority relating or applicable at such time to such Person, property, transaction, event or other matter, and shall also include any interpretation thereof by any Person having jurisdiction over it or charged with its administration or interpretation;

“**Applicable Securities Law**” shall mean any Applicable Law in any jurisdiction regulating, or regulating disclosure with respect to, any sale or distribution of securities in, or to residents of, such jurisdiction;

“**Applicants**” has the meaning ascribed thereto in subsection 2.18.1;

“**Beneficial Holder**” means a Person being the beneficial owner of a Debenture, as shown on a list maintained by a Participant or the Depository;

“**Board of Directors**” shall mean either the board of directors of the Company, or any committee of that board duly authorized to make a decision on the matter in question;

"Board Resolution" shall mean a copy of a resolution certified by the Chairman, President and Chief Executive Officer or any Vice-President or the Secretary or an Assistant Secretary of the Company to have been duly adopted by the Board of Directors and to be in full force and effect and unamended on the date of such certification;

"Book-Based System" shall mean, in relation to the Global Debenture, the debt clearing, record entry, transfer and pledge systems and services established and operated by or on behalf of the Depository for the Debentures (including where applicable pursuant to one or more agreements between such Depository and its Participants establishing the rules and procedures for such systems and services) or any successor systems or services thereof;

"Book-Entry Only Debentures" means Debentures issued pursuant to the Book-Based System of the Depository;

"Business Day" shall mean any day of the week, other than Saturday, Sunday or a statutory holiday in the Province of Ontario, on which banking institutions are open for business in the City of Toronto, Province of Ontario;

"Canadian Dollar" or **"Dollar"** or **"\$"** shall mean lawful currency of Canada;

"Canadian generally accepted accounting principles" shall mean generally accepted accounting principles established from time to time by the Canadian Institute of Chartered Accountants;

"Canadian Government Obligations" means securities that are (i) direct obligations of Canada for the payment of which its full faith and credit is pledged or (ii) obligations of a Person controlled or supervised by and acting as an agency or instrumentality of Canada, the payment of which is unconditionally guaranteed as a full faith and credit obligation by Canada, and shall also include a depository receipt issued by a bank or trust corporation as custodian with respect to any such Canadian Government Obligation or a specific payment of interest on or principal of any such Canadian Government Obligation held by such custodian for the account of the holder of a depository receipt, provided that (except as required by law) such custodian is not authorized to make any deduction from the amount payable to the holder of such depository receipt from any amount removed by the custodian in respect of the Canadian Government Obligation or the specific payment of interest on or principal of the Canadian Government Obligation evidenced by such depository receipt;

"Capital Reorganization" has the meaning ascribed thereto in subsection 6.1.5;

"Cash Transaction" means a transaction in respect of which the consideration for Common Shares is received wholly or Partially in Cash;

"CDS" shall mean The Canadian Depository for Securities Limited, together with its successors from time to time;

“Certificate of the Company” shall mean a certificate signed by a Responsible Officer of the Company;

“Change of Control” means the acquisition of voting control or direction over 50.1% or more of the aggregate voting rights attached to the issued share capital of the Company then outstanding;

“Common Shares” means the Common Shares in the capital of the Company;

“Common Share Bid Request” means a request for bids to purchase Common Shares (to be issued by the Company on the Common Share Delivery Date) made by the Indenture Trustee in accordance with the Common Share Interest Payment Election Notice;

“Common Share Delivery Date” means a date, not more than 90 days and not less than seven Business Days prior to the applicable Interest Payment Date, upon which Common Shares are issued by the Company and delivered to the Indenture Trustee for sale pursuant to Common Share Purchase Agreements;

“Common Share Interest Payment Election” means an election by the Company to issue and deliver Common Shares to the Indenture Trustee for sale in the open market or pursuant to acceptable bids obtained pursuant to the Common Share Bid Requests in order to satisfy all or a part of an Interest Obligation in the manner described in the Common Share Interest Payment Election Notice;

“Common Share Interest Payment Election Amount” means the aggregate net proceeds resulting from the sale of Common Shares on or about the Common Share Delivery Date on the open market or pursuant to acceptable bids obtained pursuant to the Common Share Bid Requests;

“Common Share Interest Payment Election Notice” means a written notice made by the Company to the Indenture Trustee specifying:

- (a) the Interest Obligation to which the election relates;
- (b) the amount of proceeds which the Company wishes to raise;
- (c) the investment banks, brokers or dealers through which the Indenture Trustee shall seek bids to purchase the Common Shares and the conditions of such bids, which may include the minimum number of Common Shares, minimum price per Common Share, timing for closing for bids and such other matters as the Company may specify; and
- (d) that the Indenture Trustee shall either sell on the open market or solicit and accept through the investment banks, brokers or dealers selected by the Company only those bids which comply with such notice;

"Common Share Proceeds Investment" has the meaning ascribed thereto in subsection 7.1.10;

"Common Share Price" means the per Common Share consideration paid to holders of Common Shares in respect of the Cash Transaction;

"Common Share Purchase Agreement" means an agreement in customary form among the Company, the Indenture Trustee and the Persons making acceptable bids pursuant to a Common Share Bid Request, which complies with all Applicable Laws and the rules and regulations of any Recognized Stock Exchange;

"Common Share Reorganization" has the meaning ascribed thereto in subsection 6.1.2;

"Company" shall mean First Uranium Corporation, until a successor corporation shall have become such pursuant to the applicable provisions of this Indenture, and thereafter, **"Company"** shall mean such successor corporation;

"Company Request" or **"Company Order"** shall mean a written request or order signed in the name of the Company by any Responsible Officer of the Company and delivered to the Indenture Trustee;

"Conversion Date" has the meaning ascribed thereto in subsection 4.1.2;

"Conversion Notice" has the meaning ascribed thereto in subsection 4.1.2;

"Conversion Number", as of the applicable Conversion Date, means the number obtained when dividing \$1,000 principal amount of Debentures by the Conversion Price, and rounding to four decimal places;

"Conversion Price" means \$16.42 per Common Share, subject to adjustment from time to time pursuant to Article 6;

"Conversion Value" means, for each \$1,000 principal amount of Debentures, the amount equal to the Conversion Number multiplied by the Current Market Price;

"Corporate Trust Office" shall mean the principal office or offices of the Indenture Trustee in the City of Toronto, Province of Ontario, at which at any particular time its corporate trust business shall be administered;

"Counsel" shall mean, in the case of Counsel to the Indenture Trustee, any barrister, solicitor or other lawyer or firm of barristers, solicitors or other lawyers retained or employed by the Indenture Trustee (who may, except as otherwise expressly provided in this Indenture, also be Counsel to the Company) and, in the case of Counsel to the Company, any barrister, solicitor or other lawyer or firm of barristers, solicitors or other lawyers retained or employed by the Company;

"Current Market Price" means, in respect of the Common Shares on any Date of Determination, except as otherwise provided, an amount equal to the Weighted Average

Trading Price of such shares on the TSX, or if the Common Shares are not listed on the TSX, on another Recognized Stock Exchange, for 20 consecutive Trading Days ending five Trading Days prior to such Date of Determination, provided that if the Common Shares are not listed on the TSX and are listed on more than one Recognized Stock Exchange, the Current Market Price shall be calculated on the Recognized Stock Exchange on which the volume of transactions on the Common Shares was the highest during such 20 consecutive Trading Days, or if the Common Shares are not listed on any Recognized Stock Exchange, then on the over-the-counter market;

"Date of Determination" means, as applicable, the Conversion Date, the Redemption Date, the Payment Date or the Maturity Date;

"Debentureholder(s)" or **"Holder(s)"** means the registered holder(s) of Debentures for the time being, and including, for greater certainty, in the case of any Global Debenture, the Depository or its nominee in whose name such Registered Global Debenture is registered, as the case may be;

"Debentures" means the 4.25% senior unsecured convertible debentures due June 30, 2012 issued under this Indenture and certified pursuant to this Indenture;

"Definitive Debentures" means Debentures in the form of individual certificates in definitive fully registered form issued pursuant to section 2.2 and substantially in the form of Schedule "A";

"Depository", in respect of the Book-Entry Only Debentures, means CDS and includes any successor corporation or any other depository subsequently appointed by the Company as the depository in respect of Book-Entry Only Debentures;

"Dividends Paid in the Ordinary Course" means dividends paid on the Common Shares in any financial year of the Company, whether in (i) cash, (ii) shares of the Company, or (iii) rights, options or warrants to purchase any shares, property or other assets of the Company (but excluding rights, options or warrants referred to in subsections 6.1.2(c) or (d)), in each case to the extent that the amount or value of such dividends paid in such financial year in the aggregate does not exceed the greater of:

- (a) 150% of the aggregate amount or value of dividends paid by the Company on the Common Shares in its immediately preceding financial year; and
- (b) 100% of the consolidated net income of the Company (before extraordinary items but after dividends payable on all shares ranking prior to or on a parity with the Common Shares with respect to the payment of dividends) for its immediately preceding financial year, determined in accordance with Canadian generally accepted accounting principles,

and for the purpose of the foregoing where any dividend is paid otherwise than in cash, any securities so distributed by way of dividend shall be valued at the Fair Market Value of such securities;

“Effective Date” means the date that the Cash Transaction has become or been declared unconditional in all respects and the Company becomes aware that the right to cast more than 50.1% of the votes which may ordinarily be cast on a poll at a general meeting of the shareholders has or will become unconditionally vested in the offeror and/or any associate(s) of the offeror.

“Event of Default” shall mean any of the events identified in section 10.1.1 as being an Event of Default;

“Extraordinary Resolution” means a resolution at a meeting of Holders of Debentures duly convened and held in accordance with the provisions of Article 13 passed by the favourable votes of the Holders of not less than $66\frac{2}{3}\%$ of the principal amount of Outstanding Debentures represented in person or by proxy at such meeting or signed in the manner contemplated by section 13.8;

“Fair Market Value”, as at any date, means:

- (a) with respect to a security listed and posted for trading on a stock exchange, the Weighted Average Trading Price of such security on such stock exchange for the 20 consecutive Trading Days immediately preceding such date on the stock exchange on which the greatest volume of trading in the security occurred during such 20 Trading Day period;
- (b) with respect to a security not listed and posted for trading on a stock exchange but traded in an over-the-counter market, the Weighted Average Trading Price of such security on such over-the-counter market for the 20 consecutive Trading Days immediately preceding such date;
- (c) with respect to a security not listed and posted for trading on a stock exchange and not traded in an over-the-counter market, the fair market value thereof at such date as determined by the Board of Directors; or
- (d) for any other security or property, the fair market value thereof at such date as determined by the Board of Directors or an independent member of the Investment Dealers Association of Canada selected from time to time by the Board of Directors for such purpose;

“Freely Tradeable” means, in respect of shares of any class in the capital of any corporation, shares which (i) are issuable by a corporation without the necessity of filing a prospectus or any other similar offering document (other than such prospectus or similar offering document that has already been filed) under Applicable Securities Laws and such issue does not constitute a distribution (other than a distribution already qualified by prospectus or similar offering document) or constitutes an exempt distribution under Applicable Securities Laws; and (ii) can be traded by the holder thereof without any restriction under Applicable Securities Laws, such as hold periods, except in the case of a “control distribution” as defined under Applicable Securities Laws and except in respect of Common Shares required to carry legends on the certificates

representing such Common Shares pursuant to sections 2.19, 3.7.10 and 4.5 hereto and subject to resale restrictions imposed by the 1933 Act and applicable state securities laws;

“Global Debenture” means one or more fully registered global Debentures as described in subsection 2.11.1;

“Governmental Authority” shall mean, when used with respect to any Person, any government, parliament, legislature, regulatory authority, agency, tribunal, department, commission, board, instrumentality, court, arbitration board or arbitrator or other law, regulation or rule-making entity (including a Minister of the Crown, any central bank, Superintendent of Financial Institutions, Recognized Stock Exchange, or other comparable authority or agency) having or purporting to have jurisdiction on behalf of, or pursuant to the laws of, Canada or any country in which such Person is residing, incorporated, continued, amalgamated, merged or otherwise created or established or in which such Person carries on business or holds property, or any province, territory, state, municipality, district or political subdivision of any such country or of any such province, territory or state of such country;

“Indenture” means or refers to this Indenture as amended or supplemented by any indenture, deed or instrument supplemental or ancillary thereto;

“Indenture Trustee” shall mean Computershare Trust Company of Canada until a successor Indenture Trustee shall have become such pursuant to the applicable provisions of this Indenture, and thereafter, **“Indenture Trustee”** shall mean or include each Person who is then an Indenture Trustee hereunder;

“Independent Member of the Investment Dealers Association of Canada” means a member firm of the Investment Dealers Association of Canada that, in the determination of the Board of Directors acting reasonably, is independent of the Company and the issuer of any securities that are the subject matter of the engagement, having regard to, among other things, the considerations set out in National Instrument 33-105 *Underwriting Conflicts* or any successor instrument;

“Interest Obligation” means the obligation of the Company to pay interest on the Debentures, as and when the same becomes due;

“Interest Payment Date” means June 30 and December 31 in each year until all interest has been paid, the first Interest Payment Date being June 30, 2007 and the last Interest Payment Date being June 30, 2012;

“Issue Date” means the date on which the Debentures are issued by the Company pursuant to this Indenture;

“Legended Debentures” means Debentures bearing the U.S. Legend;

“Maturity” shall mean the date on which principal becomes due and payable under the Debentures;

"Maturity Date" means June 30, 2012 or such other date on which the Debentures become due and payable;

"Maturity Notice" has the meaning attributed thereto in subsection 5.2.1;

"Notice" shall mean any notice, document or other communication required or permitted to be given under this Indenture;

"Offer to Purchase" means an offer to purchase in cash Debentures by the Company from the Debentureholders commenced by mailing a notice to the Indenture Trustee and the Indenture Trustee mailing a notice to and each Debentureholder specifying the material terms of the Offer to Purchase and any other information required in such notice by the Indenture;

"Office" or **"Agency"** shall mean an office or agency of the Company, the Indenture Trustee, the Transfer Agent or the paying agent, as the case may be, maintained or designated in the Place of Payment pursuant to this Indenture or any other office or agency of the Company, the Indenture Trustee, the Transfer Agent or the paying agent, as the case may be, maintained or designated pursuant to this Indenture;

"Officer's Certificate" shall mean a written certificate signed by any Responsible Officer of the Company, and delivered to the Indenture Trustee;

"Opinion of Counsel" shall mean a written opinion addressed to the Indenture Trustee (among other addressees) by Counsel who shall be reasonably satisfactory to the Indenture Trustee;

"Outstanding" when used with respect to Debentures shall mean, as of the date of determination, all Debentures theretofore certified and delivered by the Indenture Trustee under this Indenture, except:

- (a) Debentures theretofore cancelled by the Indenture Trustee or delivered to the Indenture Trustee for cancellation;
- (b) Debentures for whose payment, purchase, repurchase or redemption money in the necessary amount has been theretofore deposited with the Indenture Trustee under gratuitous deposit or set aside and segregated in trust by the Company (if the Company shall act as its own paying agent) for the Holders of such Debentures; provided, however, that if such Debentures are to be redeemed, notice of such redemption has been duly given pursuant to this Indenture or provision therefor satisfactory to the Indenture Trustee has been made; and
- (c) Debentures that have been surrendered to the Indenture Trustee pursuant to section 2.16 or in exchange for or in lieu of which other Debentures have been certified and delivered pursuant to this Indenture, other than any such Debentures in respect of which there shall have been presented to the Indenture Trustee proof satisfactory to it that such Debentures are held by a *bona fide* purchaser in whose hands such Debentures are valid obligations of the Company;

provided, however, that in determining whether the Holders of the requisite principal amount of Debentures then Outstanding have taken any Act of Holders hereunder, Debentures owned by the Company or any Affiliate of the Company shall be disregarded and deemed not to be then Outstanding; provided further that, in determining whether the Indenture Trustee shall be protected in acting and relying upon such Act of Holders, only Debentures of which the Indenture Trustee has actual notice that they are so owned shall be so disregarded; and provided further that Debentures so owned that have been pledged in good faith may be regarded as Outstanding if the pledgee establishes to the satisfaction of the Indenture Trustee the pledgee's right to act with respect to such Debentures and that the pledgee is not the Company or any Affiliate of the Company;

"Partially in Cash" means in respect of consideration received for Common Shares, consideration which includes (i) cash, (ii) other property or (iii) equity securities that are not traded or scheduled to be traded immediately following such transaction on a Recognized Stock Exchange where the fair market value of such cash, other property or equities is 10% or more of the aggregate fair market value of the consideration;

"Participant" shall mean, in relation to a Depository, a broker, dealer, bank or other financial institution or other Person on whose behalf such Depository or its nominee holds Debentures pursuant to a Book-Based System operated by such Depository;

"Payment Date" has the meaning ascribed thereto in subsection 3.9.1;

"Permitted Indebtedness" shall include (i) the principal of, the premium (if any) and interest and other obligations of the Company (including without limitation any indebtedness of any subsidiaries of the Company, the payment of performance of which is guaranteed by the Company), other than the obligations of the Company under the Debentures, which, presently or in the future: (A) is secured; (B) is owed to a bank or other financial institution, whether or not secured, including, without limitation and for greater certainty, any obligations under any master agreement, confirmation, schedule or other agreement entered into or to be entered into by the Company for the purpose of hedging interest rate liabilities and/or any exchange rate risks in relation to the Offering, or (C) is Project Finance Indebtedness, and (ii) renewals, extensions and refundings of any of the foregoing indebtedness, unless, in any of the foregoing specified cases, it is provided by the terms of the instrument creating or evidencing renewals, extensions and refundings of any such indebtedness that such indebtedness ranks equally and rateably in right of payment with the Debentures;

"Person" shall mean any natural person, corporation, firm, partnership, joint venture, trustee, executor, liquidator of a succession, administrator, legal representative or other unincorporated association, trust, unincorporated organization, government or Governmental Authority and pronouns relating thereto have a similar extended meaning;

"Place of Payment" shall mean the place or places where the principal of and any premium, if any, interest and other amounts on Debentures are payable;

"Proceeding" shall mean any suit, action or other judicial or administrative proceeding;

"Project Finance Indebtedness" shall mean any present or future indebtedness incurred to finance the ownership, acquisition, construction, creation, development, maintenance and/or operation of an asset (whether or not an asset of the Company or any of its Subsidiaries), or any associated rehabilitation works, in respect of which the person or persons to whom any such indebtedness is or may be owed by the relevant borrower (whether or not the Company or any of its Subsidiaries) has or have no recourse whatsoever to the Company or any of its Subsidiaries for the repayment thereof other than: (i) recourse for amounts limited to the cash flow or net cash flow (other than historic cash flow or historic net cash flow) from such asset or the business of owning, acquiring, constructing, developing, maintaining and/or operating such asset; and/or (ii) (A) recourse for the purpose only of enabling amounts to be claimed in respect of such indebtedness in an enforcement of any encumbrance given over such asset (and/or any other assets primarily used in the business of owning, acquiring, constructing, creating, developing, maintaining and/or operating such asset) or the income, cash flow or other proceeds deriving therefrom (or given over shares or the like in the capital of the borrower or owner of the asset or any Subsidiary described in paragraph (iv)) to secure such indebtedness, provided that (aa) the extent of such recourse is limited solely to the amount of any recoveries made on any such enforcement and (bb) such person or persons is/are not entitled, by virtue of any right or claim arising out of or in connection with such indebtedness, to commence proceedings for the winding up or dissolution of the Company or any of its Subsidiaries (other than a Subsidiary described in paragraph (iv)) or to appoint or procure the appointment of any receiver, trustee or similar person or officer in respect of the Company or any of its Subsidiaries (other than a Subsidiary described in paragraph (iv)) or any of its assets (save for the assets the subject of such encumbrance); and/or (B) recourse against the assets, income, cashflow, proceeds or shares or the like subject to an encumbrance referred to in this paragraph (ii); and/or (iii) recourse under any form of assurance, undertakings or support, which recourse is limited to a claim for damages (other than liquidated damages and damages required to be calculated in a specified way) or under an indemnity for breach of an obligation or representation (not being a payment obligation or an obligation to procure payment by another or an indemnity in respect thereof or any obligation to comply or to procure compliance by another with any financial ratios or other tests of financial condition other than costs to complete tests or project completion tests) of the Company or any of its Subsidiaries; and/or (iv) recourse against (aa) any Subsidiary, or the assets of any Subsidiary, whose principal business comprises the ownership, acquisition, construction, creation, development, maintenance and/or operation of the asset concerned; or (bb) any Subsidiary, or the assets of any Subsidiary, whose principal business comprises the ownership or financing, directly or indirectly, of any Subsidiary described in paragraph (iv)(aa); and/or (v) recourse under any guarantee and/or indemnity of such indebtedness or completion of construction or development of an asset, provided that in any such case the guarantee and/or indemnity is (to the extent not permitted by any of the foregoing paragraphs) released or discharged if completion of the relevant construction or development occurs on or prior to the agreed date for completion referred to in or in connection with the guarantee and/or indemnity and no default under or in connection with such indebtedness, guarantee or indemnity or any agreement relating thereto is then subsisting.

“Property” shall mean any asset, revenue or any other property or property right or interest, whether tangible or intangible, real or personal, including, without limitation, any right to receive income;

“Property Account” means a segregated trust account with a “financial institution” as that term is defined in the *Bank Act* (Canada);

“Recognized Stock Exchange” means the TSX or if the Common Shares are not listed on the TSX, any other stock exchange on which the Common Shares are then listed and posted for trading;

“Redemption Amount” has the meaning ascribed thereto in section 3.4;

“Redemption Date” means the later of (i) June 30, 2010 and (ii) the date selected by the Company for redemption pursuant to section 3.1;

“Redemption Notice” has the meaning ascribed thereto in section 3.4;

“Redemption Price” shall mean, when used with respect to any Debenture to be redeemed, the price at which it is to be redeemed;

“Regular Interest Record Date” means, with respect to an Interest Payment Date, the date determined as the record date for the determination of the Holders to which interest on Debentures is payable on such Interest Payment Date, which date shall be the 15th Business Day of the month immediately preceding the first day of the month in which such Interest Payment Date occurs for Definitive Debentures;

“Regulation S Resale” has the meaning ascribed thereto in subsection 2.14.2;

“Responsible Officer of the Company” means the Chairman, the President, the Chief Executive Officer, the Chief Financial Officer, the Chief Operating Officer, any Vice-President, the Secretary, any Assistant Secretary, or any other officer of the Company customarily performing functions similar to those performed by any of the above designated officers;

“Rights Period” and **“Rights Offering”** have the meanings ascribed thereto in subsection 6.1.3;

“Rights Offering Price” has the meaning ascribed thereto in subsection 6.1.6;

“Rule 144 Sale” has the meaning ascribed thereto in subsection 2.14.2;

“Security” shall mean any mortgage, pledge, hypothec, lien, security interest, charge or other encumbrance of any kind;

“Share Redemption Right” has the meaning ascribed thereto in subsection 3.7.1;

“Share Repayment Right” has the meaning ascribed thereto in subsection 5.2.1;

“**Special Distribution**” has the meaning ascribed thereto in subsection 6.1.4;

“**Stated Maturity**” shall mean, with respect to any principal of or accrued interest on a Debenture, the fixed date or dates specified on which such principal or interest is due and payable;

“**Subsidiary**” in relation to any body corporate, shall mean a corporation a majority of the outstanding voting securities of which are beneficially owned, directly or indirectly, by or for such body corporate and/or by or for any corporation in like relation to such body corporate and includes any corporation in like relation to a Subsidiary and, for purposes of this definition, “voting securities” means securities having under all circumstances voting power to elect at least a majority of the board of directors, provided that, securities which only carry the right to vote conditionally on the happening of an event shall not be considered to be voting securities nor shall any securities be deemed to cease to be voting securities solely by reason of a right to vote accruing to shares of another class or classes by reason of the happening of such event;

“**Successor Company**” shall have the meaning ascribed thereto in subsection 14.1.1(a);

“**Supplemental Indenture**” shall have the meaning ascribed thereto in section 16.1.1;

“**Taxes**” has the meaning ascribed thereto in section 2.15;

“**Trading Day**” means, with respect to any Recognized Stock Exchange or any other market for securities, any day on which such exchange or market is open for trading or quotation;

“**Transfer Agent**” shall mean Computershare Investor Services Inc. or other Person or Persons appointed as the transfer agent for the Common Shares, in such capacity, together with such Persons’ or Person’s successor from time to time in such capacity;

“**TSX**” means the Toronto Stock Exchange;

“**United States**” has the meaning ascribed to that term in Regulation S under the 1933 Act;

“**U.S. Legend**” has the meaning attributed thereto in subsection 2.19.1;

“**Voting Shares**” means a share conferring a right to vote in all circumstances or by reason of an event which occurred or is occurring, and includes a security convertible into such a share, as well as an option or a right which may be exercised to acquire such a share or security and in particular the Common Shares of the Company;

“**Weighted Average Trading Price**” means, with respect to any security on a stock exchange or quotation service during a specified period, the quotient obtained by dividing (i) the aggregate sale price of all such securities sold on such stock exchange or quotation service during such period by (ii) the total number of such securities sold on such stock exchange or quotation service during such period, as determined from time to time by the

Board of Directors, or upon request of the Board of Directors, as determined by an Independent Member of the Investment Dealers Association of Canada for such purpose;

“Wholly-Owned Subsidiary” means any corporation of which the Company beneficially owns, directly or indirectly, all the Voting Shares and equity shares and a corporation shall be deemed to beneficially own Voting Shares and equity shares beneficially owned by a Wholly-Owned Subsidiary and so on indefinitely;

“Written Order” or **“Written Request”** means a written order or request, respectively, signed in the name of the Company by Responsible Officer or director of the Company; and

all other terms which are used herein but not otherwise defined herein, and that are defined in the *Securities Act* (Ontario), either directly or by reference therein, shall have the meanings assigned to them therein.

1.2 Interpretation

1.2.1 Words importing the singular number shall include the plural and vice versa and words importing gender shall include the masculine, feminine and neuter genders.

1.2.2 The words **“hereto”**, **“herein”**, **“hereof”**, **“hereby”**, **“hereunder”**, and other words of similar import refer to this Indenture as a whole and not to any particular article, section, subsection, paragraph, clause or other part of this Indenture.

1.2.3 Except as otherwise provided herein, any reference in this Indenture to any act, statute, regulation, policy statement, instrument, agreement, or section hereof shall be deemed to be a reference to such act, statute, regulation, policy statement, instrument, agreement or section thereof as amended, re-enacted or replaced from time to time.

1.3 Accounting Terms

As used in this Indenture and in any certificate or other document made or delivered pursuant to this Indenture, accounting terms not defined in this Indenture, or in any such certificate or other document, and accounting terms partly defined in this Indenture or in any such certificate or other document to the extent not defined, shall have the respective meanings given to them under Canadian generally accepted accounting principles. To the extent that the definitions of accounting terms in this Indenture, or in any such certificate or other document are inconsistent with the meanings of such terms under Canadian generally accepted accounting principles, the definitions contained in this Indenture, or in any such certificate or other document shall prevail.

1.4 Headings and Table of Contents

The division of this Indenture, or any related document, into articles, sections, subsections, paragraphs, clauses and other subdivisions, the provision of a table of contents and the insertion of headings are for convenience of reference only and shall not affect the construction or interpretation of this Indenture or any such related document.

1.5 Section and Schedule References

Unless something in the subject matter or context is inconsistent therewith, references in this Indenture to articles, sections, subsections, paragraphs, clauses, other subdivisions, exhibits, appendices or schedules are to articles, sections, subsections, paragraphs, clauses, other subdivisions, exhibits, appendices or schedules of or to this Indenture.

1.6 Governing Law

This Indenture and each Debenture issued hereunder shall be governed by, and construed with, the laws of the Province of Ontario and the federal laws of Canada applicable therein and shall be treated in all respects as Ontario contracts.

1.7 Currency

Unless expressly provided to the contrary in this Indenture or in any Debenture, all monetary amounts in this Indenture or in such Debenture refer to Canadian Dollars.

1.8 Non-Business Days

Unless expressly provided to the contrary in this Indenture or in any Debenture, whenever any payment shall be due, any period of time shall begin or end, any calculation is to be made or any other action is to be taken on, or as of, or from a period ending on, a day other than a Business Day, such payment shall be made, such period of time shall begin or end, such calculation shall be made and such other actions shall be taken, as the case may be, on, or as of, or from a period ending on, the next succeeding Business Day.

1.9 Time

Unless otherwise expressly stated in this Indenture or in any Debenture, all references to a time will mean Eastern Standard Time. Time shall be of the essence in this Indenture.

1.10 Independence of Covenants

Each covenant contained in this Indenture shall be construed (absent an express provision to the contrary) as being independent of each other covenant, so that compliance with any one covenant shall not (absent such an express contrary provision) be deemed to excuse compliance with any other covenant.

1.11 Form of Documents Delivered to Indenture Trustee

1.11.1 In any case where several matters are required to be certified by, or covered by an opinion of, any specified Person, it is not necessary that all such matters be certified by, or covered by the opinion of, only one such Person, or that they be so certified or covered by only one document, but one such Person may certify or give an opinion with respect to some matters and one or more other such Persons as to other matters, and any such Person may certify or give an opinion as to such matters in one or several documents.

1.11.2 Where any Person is required to make, give or execute two or more applications, requests, consents, certificates, statements, opinions or other instruments under this Indenture, they may, but need not, be consolidated and form one instrument.

1.12 Acts of Holders

1.12.1 Any request, demand, authorization, direction, notice, consent, waiver or other action provided by this Indenture to be given or taken by Holders may be embodied in and evidenced by one or more instruments of substantially similar tenor signed by such Holders in person or by agents duly appointed in writing. Any request, demand, authorization, direction, notice, consent, waiver or other action provided by this Indenture to be given or taken by Holders may, alternatively, be embodied in and evidenced by the record of Holders of Debentures voting in favour thereof, either in person or by proxies duly appointed in writing, at any meeting of Holders of Debentures duly called and held in accordance with the provisions of article 14, or a combination of such instruments and any such record. Except as herein otherwise expressly provided, such action shall become effective when such requisite instrument or instruments are delivered to the Indenture Trustee and, where it is hereby expressly required, to the Company. Such instrument or instruments (and the action embodied therein and evidenced thereby) are herein sometimes referred to as the "Act of Holders" or the "Act" of the Holders signing such instrument or instruments. Proof of execution of any such instrument or of a writing appointing any such agent shall be sufficient for any purpose of this Indenture and, subject to subsection 12.1.1, conclusive in favour of the Indenture Trustee and the Company, if made in the manner provided in this section 1.12. The record of any meeting of Holders of Debentures shall be provided in the manner specified in section 13.7.

1.12.2 The fact and date of the execution by any Person of any such instrument or writing may be proved by the affidavit of a witness of such execution or by a certificate of a notary public or other officer authorized by law to take acknowledgements of deeds, certifying that the individual signing such instrument or writing acknowledged to such notary public or other officer the execution thereof. Where such execution is by a signer acting in a capacity, other than such signer's individual capacity, such certificate or affidavit shall also constitute sufficient proof of such signer's authority. The fact and date of the execution of any such instrument or writing, or the authority of the Person executing the same, may also be proved in any manner that the Indenture Trustee deems sufficient.

1.12.3 If the Company or the Indenture Trustee shall solicit from the Holders of Debentures any Act, the Company or the Indenture Trustee, as the case may be, may, at its option, fix in advance a record date for the determination of Holders of Debentures entitled to take such Act, but the Company or the Indenture Trustee, as the case may be, shall have no obligation to do so. Any such record date shall be fixed at the Company's or the Indenture Trustee's discretion, as the case may be, provided that such record date shall be fixed on a date not more than 60 days prior to the Act. If such a record date is fixed, such Act may be sought or taken before or after the record date, but only the Holders of Debentures of record at the close of business on such record date shall be deemed to be Holders of Debentures for the purpose of determining whether Holders of the requisite proportion of Debentures Outstanding have authorized or agreed or consented to such Act, and for that purpose the Debentures Outstanding shall be computed as of such record date.

1.12.4 Any Act of the Holder of any Debenture shall bind every future holder of the same Debenture and the Holder of every Debenture issued upon the registration of transfer thereof or in exchange therefor or in lieu thereof in respect of anything done, suffered or omitted by the Indenture Trustee or the Company in reliance thereon, whether or not notation of such action is made upon such Debenture.

1.13 Interest Payments and Calculations

1.13.1 All interest payments to be made under this Indenture or any Debenture shall be paid without allowance or deduction for deemed re-investment or otherwise, both before and after Maturity and before and after default and/or judgment, if any, until payment of the amount on which such interest is accruing, and, to the extent permitted by Applicable Law, interest will accrue on overdue interest.

1.13.2 For the purposes of the *Interest Act* (Canada), if in this Indenture or in any Debenture a rate of interest is or is to be calculated on the basis of a period which is less than a full calendar year, the yearly rate of interest to which such rate is equivalent is such rate multiplied by the actual number of days in the calendar year for which such calculation is made and divided by 365 days.

1.13.3 The rate of interest stipulated in this Indenture or in any Debenture will be calculated using the nominal rate method of calculation, and will not be calculated using the effective rate method of calculation or on any other basis that gives effect to the principle of deemed re-investment of interest.

1.13.4 In calculating interest under this Indenture or under a Debenture for any period, unless otherwise specifically stated, the first day of such period shall be included and the last day of such period shall be excluded.

1.14 English Language

The Company, the Indenture Trustee and, by their acceptance of Debentures and the benefits of this Indenture, the Holders acknowledge that this Indenture, each Debenture and each document related hereto and thereto has been drawn up in English at the express will of such Persons.

1.15 Successors and Assigns

All covenants and agreements in this Indenture by the Company shall bind its successors and assigns, whether expressed or not.

1.16 Severability Clause

If any provision in this Indenture or in the Debentures shall be invalid, illegal or unenforceable, the validity, legality and enforceability of the remaining provisions shall not in any way be affected or impaired thereby.

1.17 Benefits of Indenture

Nothing in this Indenture and in the Debentures, express or implied, shall give to any Person, other than the parties hereto and their successors hereunder, any paying agent, any registrar and the Holders, any benefit or any legal or equitable right, remedy or claim under this Indenture.

1.18 Unclaimed Debentures

Subject to Applicable Law, all Debentures together with any interest thereon which remain unclaimed after a period of three calendar years from the date on which they are redeemed or mature shall be forfeited and shall revert to the Company.

1.19 Schedules

The following Schedules form part of this Indenture:

- Schedule "A" - Form of Debenture
- Schedule "B" - Form of Redemption Notice
- Schedule "C 1" - Form of Conversion Notice
- Schedule "C 2" - Form of Maturity Notice
- Schedule "D" - Principal Amount Grid
- Schedule "E" - Form of Declaration for Removal of U.S. Legend
- Schedule "F" - Table for Determining the Number of Additional Shares in the Event of a Cash Transaction

1.20 Benefits of Indenture through Indenture Trustee

For greater certainty, this Indenture is being entered into with the Indenture Trustee for the benefit of the Holders and the Indenture Trustee declares that it holds all rights, benefits and interests of this Indenture on behalf of the Holders and each such person who becomes a Holder of the Debentures from time to time.

**ARTICLE 2
THE DEBENTURES**

2.1 Limit of Issue and Designation of Debentures

The Debentures authorized to be issued hereunder shall consist of, and be limited to no more than \$150 million aggregate principal amount and shall be designated as "4.25% Senior Unsecured Convertible Debentures due June 30, 2012."

2.2 Form and Terms of Debentures

The Debentures shall be dated as of the Issue Date. The Debentures shall bear interest from and including the Issue Date at the rate of 4.25% per annum (after as well as before Maturity, default and judgment, with interest on overdue interest at the said rate), payable in equal semi-annual instalments in arrears on each Interest Payment Date, subject to section 2.3, and the Debentures shall mature on the Maturity Date.

Subject to the Share Redemption Right pursuant to subsection 3.7.1 and the Share Repayment Right pursuant to subsection 5.2.1, the principal of the Debentures will be payable on the Maturity Date in lawful money of Canada against surrender thereof by the Holder at the Corporate Trust Office or at such place or places as may be designated by the Company for that purpose.

The Debentures shall be issued as fully registered Debentures in denominations of \$1,000 and integral multiples of \$1,000, or as a Global Debenture, shall be redeemable as provided for in Article 3 and shall be convertible as provided for in Article 4.

The Debentures and the certificate of the Indenture Trustee endorsed thereon shall be substantially in the form set forth in Schedule "A" hereto, provided that if a Debenture is issued as a Global Debenture in accordance with section 2.11, it shall have appended thereto a principal amount grid in the form of Schedule "D" which shall be appropriately adjusted at such times as Debentures are converted, redeemed or repurchased in accordance with the terms hereof.

2.3 Interest

Each Debenture issued hereunder, whether issued originally or in exchange for another Debenture, shall bear interest from and including the Issue Date or from and including the last Interest Payment Date on which interest shall have been paid or made available for payment on the Debentures then Outstanding, whichever shall be the later, to but excluding the earlier of:

- (a) the following Interest Payment Date;
- (b) if called for redemption pursuant to section 3.1, the Redemption Date;
- (c) if purchased in accordance with section 3.8, the date of payment;
- (d) if repurchased in accordance with section 3.9, the Payment Date;
- (e) if converted in accordance with section 4.1, the Conversion Date; and
- (f) the Maturity Date;

as the case may be (the "Interest Period"); unless such payment is improperly withheld or refused, upon due presentation and surrender thereof for payment on or after the appropriate date. The first Interest Payment Date shall be June 30, 2007 and the interest payment payable on

such Interest Payment Date will amount to \$6.637 per \$1,000 principal amount of Debenture. For greater certainty, interest for the first Interest Payment Date shall be calculated daily from May 3, 2007 to and including June 29, 2007. Each subsequent payment on an Interest Payment Date will amount to \$21.25 per \$1,000 principal amount of Debenture. The interest payable per \$1,000 principal amount of Debentures in respect of an Interest Period other than an Interest Period that ends on an Interest Payment Date shall be calculated by multiplying \$1,000 by the interest rate of 4.25% per annum, dividing the product so obtained by 365 days and multiplying the quotient by the actual number of days in the said Interest Period.

2.4 Prescription

The right of the Debentureholders to exercise their rights under this Indenture shall become void unless the Debentures are presented for payment within a period of three years from the Maturity Date, after which payment thereof shall be governed by the provisions of Article 11 hereof. The Company shall have satisfied its obligations under the Debentures upon remittance to the Indenture Trustee for the account of the Debentureholders, upon redemption, repurchase, conversion or at the Maturity Date, of any and all consideration due hereunder in cash or by the delivery of Freely Tradeable Common Shares, subject to and in accordance with the provisions of this Indenture, and such remittance shall for all purposes be deemed a payment to the Debentureholders, and to that extent such Debentures shall thereafter not be considered as Outstanding and the Debentureholders shall have no right, except to receive payment out of the moneys so paid and deposited or Freely Tradeable Common Shares deposited upon surrender of its Debentures.

2.5 Issue of Debentures

Debentures in such aggregate principal amounts as the Board of Directors shall determine and in lawful money of Canada shall be executed by the Company from time to time and, forthwith after such execution, shall be delivered to the Indenture Trustee and shall be certified by the Indenture Trustee and delivered to the Company in accordance with the terms of section 2.7. Other than as contemplated by section 2.8.2, the Indenture Trustee shall receive no consideration for the certification of Debentures.

2.6 Execution

2.6.1 The Debentures shall be executed on behalf of the Company by any two Responsible Officers of the Company. The Debentures may, but need not, be under the corporate seal of the Company or a reproduction thereof (which reproduction shall for such purposes be deemed to be the corporate seal of the Company). The signature of any of these officers on the Debentures may be manual or facsimile. Debentures bearing the manual or facsimile signatures of individuals who were at any time the proper officers of the Company shall bind the Company, notwithstanding that such individuals or any of them have ceased to hold such offices prior to the authentication and delivery of such Debentures.

2.6.2 If Debentures are issued as Definitive Debentures, the Company shall provide to the Indenture Trustee a supply of certificates to evidence such Definitive Debentures in such

form, in such amounts, bearing such distinguishing letters and numbers, and as at such times as are necessary to enable the Indenture Trustee to fulfil its responsibilities under this Indenture.

2.7 Certification by Indenture Trustee

2.7.1 At any time and from time to time after the execution and delivery of this Indenture, the Company may deliver Debentures executed on behalf of the Company to the Indenture Trustee for certification, pursuant to a Company Order applicable thereto and evidence of compliance, if requested by the Indenture Trustee, in accordance with section 12.4.1 and Applicable Law. Upon receipt by the Indenture Trustee of a Company Order applicable to such Debentures and such evidence of compliance, the Indenture Trustee shall certify and deliver such Debentures in the manner specified in such Company Order, without receiving any consideration for such certification and delivery.

2.7.2 No Holder shall be entitled to any right or benefit under this Indenture with respect to a Debenture, and such Debenture shall not be valid or binding for any purpose, unless such Debenture has been certified by the Indenture Trustee, as evidenced by the manual signature of an authorized officer of the Indenture Trustee. Such certification upon any Debenture shall be conclusive evidence, and the only evidence, that such Debenture has been issued under this Indenture.

2.7.3 Debentures bearing the manual signature of an individual who was, at the time that such signature was affixed, an authorized signing officer of the Indenture Trustee, shall be valid and binding on the Indenture Trustee notwithstanding that such individual ceased to be an authorized signing officer of the Indenture Trustee prior to the delivery of such Debentures.

2.7.4 The certification by the Indenture Trustee on the Debentures shall not be construed as a representation or warranty by the Indenture Trustee as to the validity of this Indenture or of the Debentures (except in respect of the due certification thereof and any other warranties implied by law) or as to the performance by the Company of its obligations under this Indenture and the Indenture Trustee shall in no respect be liable or answerable for the use made of the Debentures or any of them or of the proceeds thereof.

2.8 Registration of Exchanges

2.8.1 Debentures may be exchanged for one or more Debentures in an equal aggregate principal amount upon surrender of the Debentures to be exchanged at the specified office of the Indenture Trustee; provided, however, that each Debenture issued in exchange for such original Debenture shall have a principal amount in an authorized denomination as provided for herein.

2.8.2 The Indenture Trustee may make a charge to reimburse itself for any stamp taxes or governmental charges required to be paid and a reasonable charge for their services and a reasonable sum per Debenture created and issued upon any exchange or transfer of Debentures effected by them. Payment of such charges will be made by the Person requesting the exchange or transfer as a condition precedent to such exchange or transfer.

2.9 Persons Entitled to Payment

2.9.1 Prior to due presentment for registration of transfer of any Debenture, the Company, the Indenture Trustee and any other Person, as the case may be, may treat the Person, as the case may be, in whose name any Debenture is registered in the applicable register (including in the case of a Global Debenture, the Depository or the nominee of such Depository in whose name such Global Debenture is registered) as the absolute and sole owner of such Debenture for all purposes including receiving payment of the principal of, and any premium, if any, interest or other amount on such Debenture, receiving any notice to be given to the Holder of such Debenture, and taking any Act of Holders with respect to such Debenture, whether or not any payment with respect to such Debenture shall be overdue, and none of the Company, the Indenture Trustee or any other Person, as the case may be, shall be affected by notice to the contrary.

2.9.2 Delivery of a Debenture to the Indenture Trustee by or on behalf of the Holder thereof shall, upon payment of such Debenture, be a valid discharge to the Company of all obligations evidenced by such Debenture. None of the Company, the Indenture Trustee or any other Person shall be bound to inquire into the title of any such Holder.

2.9.3 In the case of the death of one or more joint registered Holders of a Debenture, the principal of, and premium, if any, interest and any other amounts on such Debenture may be paid to the survivor or survivors of such registered Holders whose receipt of such payment, accompanied by the delivery of such Debenture, shall constitute a valid discharge to the Company and the Indenture Trustee.

2.10 Payment of Principal and Interest on Definitive Debentures

2.10.1 Subject to early redemption, repurchase or conversion pursuant to the terms hereof, as payments in respect of interest on the Definitive Debentures become due, interest payable on the Definitive Debentures on an Interest Payment Date will be payable by the Company to the Holders thereof in whose names the Debentures are registered at the close of business on the Regular Interest Record Date with respect to the applicable Interest Payment Date. No later than 12:00 p.m. (Toronto time) on the day that is three Business Days preceding each Interest Payment Date, the Company shall deliver sufficient funds by way of money order, certified cheque, bank draft or wire transfer to the Indenture Trustee to enable it to forward or cause to be forwarded by prepaid post, to the Holder in whose name any Debenture is registered at the close of business on the Regular Interest Record Date with respect to the applicable Interest Payment Date, at his or her last address appearing on the relevant register, or in the case of joint Holders, to any (or all) Holder(s) whose name(s) appear(s) on such register, on the Interest Payment Date (or the first Business Day thereafter if the Interest Payment Date is not a Business Day) a cheque for such interest (less any withholding or other tax required by law to be deducted) payable to the order of such Holder or Holders and negotiable at par at any branch in Canada of such bank or banks as may be acceptable to the Indenture Trustee in its absolute discretion. The forwarding of such funds by the Company to the Indenture Trustee and the subsequent delivery of such funds by the Indenture Trustee to the Holders by cheque shall satisfy and discharge the Company's liability for payment of the interest on the Debentures to the extent of the sums represented thereby, plus the amount of any withholding or other tax deducted as

aforesaid, unless such cheque is not paid at par on presentation; provided that in the event of the non-receipt of such cheque by the Holder, or the loss or destruction thereof, the Indenture Trustee on being furnished with reasonable evidence of such non-receipt, loss or destruction and indemnity reasonably satisfactory to it shall issue to such Holder a replacement cheque for the amount of such cheque. Notwithstanding the foregoing, if the Company is prevented by circumstances beyond its control (including, without limitation, any interruption in mail service) from making payment of any interest due on each Debenture in the manner provided above, the Company may make payment of such interest or make such interest available for payment in any other manner acceptable to the Indenture Trustee with the same effect as though payment had been made in the manner provided above.

2.10.2 If a Debenture or a portion thereof is called or presented for redemption, repurchase or conversion and the Redemption Date, Payment Date or Conversion Date is subsequent to a Regular Interest Record Date but prior to the related Interest Payment Date, interest accrued on such Debenture will be paid upon presentation and surrender of such Debenture to the Corporate Trust Office up to but excluding the Redemption Date, the Payment Date or the Conversion Date.

2.10.3 Subject to the foregoing provisions of this section, each Debenture delivered upon the transfer of or in exchange for or in lieu of any other Debenture shall carry the rights to interest accrued and unpaid, and to accrue, that were carried by such other Debenture.

2.11 Book-Based System

2.11.1 The Debentures shall be issued as Book-Entry Only Debentures and shall be represented by one or more fully-registered permanent global security certificates in the form of the certificate set out in Schedule "A" hereto together with the legend provided for in subsection 2.11.2 and subsection 2.19, as applicable (the "Global Debenture(s)"). The Global Debenture(s) shall be held by, or on behalf of, the Depository as depository of the Participants in the Book-Based System and shall be registered in the name of "CDS & Co." (or such other name as the Depository may use from time to time as its nominee for the purposes of the Book-Based System). No Beneficial Holder will receive Definitive Debentures representing their beneficial ownership in Debentures unless the Company determines to terminate the Book-Entry Only Debentures.

2.11.2 The Global Debenture(s) shall bear a legend in substantially the following form subject to modification as required by the Depository:

"UNLESS THIS CERTIFICATE IS PRESENTED BY AN AUTHORIZED REPRESENTATIVE OF CDS CLEARING AND DEPOSITORY SERVICES INC. ("CDS") TO FIRST URANIUM CORPORATION (THE "ISSUER") OR ITS AGENT FOR REGISTRATION OF TRANSFER, EXCHANGE OR PAYMENT, AND ANY CERTIFICATE ISSUED IN RESPECT THEREOF IS REGISTERED IN THE NAME OF CDS & CO., OR IN SUCH OTHER NAME AS IS REQUESTED BY AN AUTHORIZED REPRESENTATIVE OF CDS (AND ANY PAYMENT IS MADE TO CDS & CO. OR TO SUCH OTHER ENTITY AS IS REQUESTED BY AN AUTHORIZED REPRESENTATIVE OF

CDS), ANY TRANSFER, PLEDGE OR OTHER USE HEREOF FOR VALUE OR OTHERWISE BY OR TO ANY PERSON IS WRONGFUL SINCE THE REGISTERED HOLDER HEREOF, CDS & CO., HAS AN INTEREST HEREIN. THIS CERTIFICATE IS ISSUED PURSUANT TO A MASTER LETTER OF REPRESENTATIONS OF THE ISSUER TO CDS, AS SUCH LETTER MAY BE REPLACED OR AMENDED FROM TIME TO TIME.”

2.12 Payments of Principal and Interest for Book-Entry Only Debentures

2.12.1 Subject to sections 3.7.4 and 3.9 and Article 5, as payments in respect of principal and interest on the Debentures represented by the Global Debenture(s) become due, the Company shall (except in cases of payments on Maturity, redemption, repurchase or conversion which shall be made only upon presentation and surrender of the Global Debenture(s)), no later than on the applicable Interest Payment Date or on the Maturity Date, as the case may be, at the option of the Company:

- (a) deliver or cause to be delivered to the office of the Indenture Trustee at the Corporate Trust Office at or before 10:00 a.m. three Business Days before such Interest Payment Date or Maturity Date, a certified cheque for the amount of such payment payable on such Interest Payment Date or Maturity Date, as the case may be, to the order of the Indenture Trustee and negotiable at par, or
- (b) provide to the Indenture Trustee such payment by electronic funds transfer to an account designated by the Indenture Trustee, at or before 10:00 a.m. on the Business Day preceding such Interest Payment Date or Maturity Date, as the case may be,

for all amounts due in respect of such principal and interest on the Debentures represented by the Global Debenture(s) to enable the Indenture Trustee to forward or cause to be forwarded such funds to the Depository for credit by the Depository to Participants' accounts. Neither the Company nor the Indenture Trustee for any Debenture issued as a Global Debenture will be liable or responsible to any Person for any aspect of the records related to or payments made on account of beneficial interests in any Global Debenture as for maintaining, reviewing or supervising any records relating to such beneficial interests.

The Indenture Trustee shall only forward cheques or effect an electronic funds transfer to a Debentureholder with respect to an Interest Payment Date upon receipt of funds from the Company.

2.13 Rank and Subordination

The Debentures certified and issued under this Indenture rank *pari passu* with one another, in accordance with their tenor without discrimination, preference or priority. The payment of the principal of and interest on the Debentures is expressly subordinated to the prior payment in full of Permitted Indebtedness, as provided in Article 8.

2.14 Register and Transfer

2.14.1 The Company shall cause to be kept by and at the principal office of the Indenture Trustee in the City of Toronto, Province of Ontario, a register, and in such other place or places by the Indenture Trustee, if any, as the Company with the approval of the Indenture Trustee may designate, branch registers, in which shall be entered the names and latest known addresses of the Holders of Debentures and the other particulars prescribed by law of the Debentures held by them respectively and all transfers of Debentures. Such registration shall be noted on the Debentures by the Indenture Trustee. No transfer of a Debenture shall be effective as against the Company unless made on one of the appropriate registers by the registered Holder or his executors or administrators or other legal representatives or his or their attorney duly appointed by an instrument in writing in form and execution satisfactory to the Indenture Trustee, upon compliance with such requirements as the Indenture Trustee may prescribe, and unless such transfer shall have been duly noted on such Debenture by the Indenture Trustee.

2.14.2 With respect to Debentures issued as Book-Entry Only Debentures, the Company shall cause to be kept by and at the principal office of the Indenture Trustee in the City of Toronto, Province of Ontario, a central register in which shall be entered the name(s) and latest known address(es) of the Holder(s) of each Global Debenture (being the Depository, or its nominee, for such Global Debenture) and the other particulars prescribed by law of the Debentures held by it (them) and all transfers of Debentures. Global Debenture certificates representing Debentures originally offered or sold in the United States will be identified by a CUSIP number different from the CUSIP number that identifies the Debentures originally offered or sold outside the United States. Beneficial interest in a Global Debenture shall be represented through book-entry accounts, to be established and maintained by CDS or its nominee for Participants acting on behalf of Beneficial Holders. If (i) beneficial interests in a Global Debenture bearing a U.S. Legend are being sold (a) outside the United States in accordance with Rule 904 of Regulation S under the 1933 Act at a time when the Company is a "foreign issuer" (as that term is defined in Regulation S under the 1933 Act) (a "Regulation S Resale") or (b) inside the United States in accordance with Rule 144 of the 1933 Act (a "Rule 144 Sale") and (ii) the transferor has provided the opinion of counsel or other evidence contemplated by section 2.19.1, such opinion or evidence being reasonably satisfactory to the Company, the Indenture Trustee and CDS, and to the effect that the U.S. Legend is no longer required under applicable requirements of the 1933 Act or state securities laws, the Indenture Trustee shall reduce the number of Debentures represented by the CUSIP number designated for the Debentures originally offered or sold in the United States by the number of Debentures sold in a Regulation S Resale or Rule 144 Sale, as applicable, and increase the number of Debentures represented by the CUSIP number designated for Debentures sold outside the United States by the same number of Debentures. Notwithstanding any other provision of this Indenture, a Global Debenture may not be transferred by the registered holder thereof except through records maintained by CDS or its nominee in the following circumstances or as otherwise specified in a Board Resolution or Written Order:

- (a) the Global Debenture may be transferred by a Depository to a nominee of such Depository or by a nominee of a Depository to such Depository or to another nominee of such Depository or by a Depository or its nominee to a successor Depository or its nominee;

- (b) the Global Debenture may be transferred at any time after the Depository for such Global Debenture (i) has notified the Company that it is unwilling or unable to continue as Depository for such Global Debenture or (ii) ceases to be eligible to be a Depository provided that at the time of such transfer the Company has not appointed a successor Depository for such Global Debenture;
- (c) the Global Debenture may be transferred at any time after the Company has determined, in its sole discretion, to terminate the Book-Based System in respect of such Global Debenture and has communicated such determination to the Indenture Trustee in writing; and
- (d) the Global Debenture may be transferred at any time after the Indenture Trustee has determined that an Event of Default has occurred and is continuing with respect to the Debentures issued as a Global Debenture, provided that at the time of such transfer the Indenture Trustee has not waived the Event of Default pursuant to article 11.

2.14.3 Debentures and Common Shares issued pursuant to the Debentures represented by certificates bearing a U.S. Legend may be offered, sold or otherwise transferred only pursuant to an exemption or exclusion from the registration requirements of the 1933 Act and applicable state securities laws, and prior to any such transfer, the transferee shall have provided an opinion of counsel of recognized standing or other evidence reasonably satisfactory to the Company, the Indenture Trustee or the Transfer Agent, as applicable, and, if such securities are represented by a Global Debenture, CDS, to the effect that the transfer does not require registration under the 1933 Act or applicable state securities laws.

2.15 Additional Amount

2.15.1 Any payments made by or on behalf of the Company under or with respect to the Debentures will be made free and clear of and without withholding or deduction for or on account of any present or future tax, duty, levy, impost, assessment or other governmental charge imposed or levied by or on behalf of the Government of Canada or of any province or territory of Canada or by any authority or agency thereof or therein having power to tax (collectively, "Taxes"), unless the Company or any other payor is required to withhold or deduct Taxes by Applicable Law or by the interpretation or administration thereof by the relevant Governmental Authority. If the Company is so required to withhold or deduct any amount for or on account of Taxes from any payment made under or with respect to the Debentures, the Indenture Trustee will make such withholding or deduction and will remit the full amount withheld or deducted to the relevant Governmental Authority as and when required by Applicable Law and the Company will pay to the Indenture Trustee such additional amounts ("**Additional Amounts**") as may be necessary so that the net amount received by each Holder of Debentures (including Additional Amounts) after such withholding or deduction will not be less than the amount such Holder would have received if such Taxes had not been withheld or deducted; provided, however, that no Additional Amounts will be payable with respect to any payment to a Holder (an "**Excluded Holder**") in respect of a Beneficial Holder who is liable for such Taxes in respect of such Debentures (i) by reason of such Holder or Beneficial Holder being a Person with whom the Company is not dealing at arm's length for the purposes of the **Income Tax Act** (Canada) at the

time of making such payment, or (ii) by reason of the existence of any present or former connection between such Holder or Beneficial Holder and Canada or any province or territory thereof other than solely by reason of the Holder's activity in connection with purchasing the Debentures, the mere holding, deemed holding, use or ownership of the Debentures, or receiving payments under or enforcing any rights in respect of such Debentures as a non-resident or deemed non-resident of Canada or any province or territory thereof.

2.15.2 Within 90 days after the date the payment of any Taxes is due pursuant to Applicable Law, the Indenture Trustee will furnish to the Company copies of tax receipts evidencing such payment by the Indenture Trustee.

2.15.3 At least 30 days prior to each date on which any payment under or with respect to the Debentures is due and payable, if the Company to its knowledge will be obligated to pay Additional Amounts with respect to such payment, the Company will deliver to the Indenture Trustee an Officer's Certificate stating the fact that such Additional Amounts will be payable and the amounts so payable and will set forth such other information necessary to enable the Indenture Trustee to pay such Additional Amounts to Holders on the date payment is due.

2.15.4 Whenever in the Indenture or in any Debenture there is mentioned, in any context, the payment of principal (and premium, if any), Redemption Amount, a purchase price pursuant to an Offer to Purchase, interest or any other amount payable under or with respect to any Debenture, such mention shall be deemed to include mention of the payment of Additional Amounts to the extent that, in such context, Additional Amounts are, were or would be payable in respect thereof.

2.15.5 The Company will indemnify and hold harmless each Holder of Debentures (other than an Excluded Holder) and upon written request reimburse each of the Holders for the amount of (i) any Canadian Taxes so levied or imposed and paid by the Holder as a result of payments made under or with respect to the Debentures, (ii) any liability (including penalties and interest) arising therefrom or with respect thereto paid by the Holder as a result of payments made under or with respect to the Debentures, and (iii) any Canadian Taxes levied or imposed and paid by the Holder with respect to reimbursement under (i) and (ii) above, but excluding any Canadian Taxes on such Holder's net income or capital.

2.16 Cancellation of Debentures

2.16.1 All Debentures surrendered for payment of the final amount required to be paid thereon or that have been redeemed as contemplated by Article 3, or that have been surrendered to the Indenture Trustee for registration of exchange or transfer, shall be promptly cancelled by the Indenture Trustee on receipt. The Indenture Trustee shall give prompt written notice to the Company of the particulars of any Debentures cancelled by it.

2.16.2 The Company may, in its discretion at any time, deliver to the Indenture Trustee for cancellation any Debentures which the Company has purchased as provided for in this Indenture, and all such Debentures so delivered shall be cancelled by the Indenture Trustee.

2.17 Mutilated, Lost, Stolen or Destroyed Debentures

2.17.1 If any Debenture has been mutilated or defaced or has or has been alleged to have been lost, stolen or destroyed, then, on application by the applicable Holder to the Indenture Trustee, the Company may, in its discretion, execute, and upon such execution the Indenture Trustee shall certify and deliver, a new Debenture of the same date and amount as the defaced, mutilated, lost, stolen or destroyed Debenture in exchange for and in place of the defaced or mutilated Debenture, and in lieu of and in substitution for the lost, stolen or destroyed Debenture. Notwithstanding the foregoing, no Debenture shall be delivered as a replacement for any Debenture which has been mutilated or defaced otherwise than upon surrender of the mutilated or defaced Debenture, and no Debenture shall be delivered as a replacement for any Debenture which has been lost, stolen or destroyed unless the applicant for the replacement Debenture has furnished to the Company and the Indenture Trustee evidence, satisfactory in form and substance to the Company and the Indenture Trustee, of its ownership of, and of such loss, theft or destruction of, such Debenture and has provided such a surety bond and indemnity to the Company and the Indenture Trustee in amount, form and substance satisfactory to each of them, in their respective discretion. Any instructions by the Company to the Indenture Trustee under this section shall include such indemnity for the protection of the Indenture Trustee as the Indenture Trustee may reasonably require.

2.17.2 If any mutilated, defaced, lost, stolen or destroyed Debenture has become or is about to become due and payable, the Company, in its discretion, may, instead of executing a replacement Debenture, pay to the Holder thereof the full amount outstanding on such mutilated, defaced, lost, stolen or destroyed Debenture.

2.17.3 Upon the issuance of a replacement Debenture, the Company may require the applicant for such replacement Debenture to pay a sum sufficient to cover any tax or other governmental charge that may be imposed in relation to such issuance and any other expenses (including the fees and expenses of the Indenture Trustee and the Company) connected with such issuance.

2.17.4 Each replacement Debenture shall bear a unique serial number and be in a form otherwise identical to the Debenture it replaces and shall be entitled to the benefits of this Indenture to the same extent and in the same manner as the Debenture it replaces.

2.18 Access to Lists of Holders

2.18.1 If any Beneficial Holder or group of Beneficial Holders of Debentures, or such one or more Holders as may be permitted by Applicable Law (in each case, the "Applicants") apply to the Indenture Trustee (with a copy to the Company), then the Indenture Trustee, after having been funded and indemnified to its reasonable satisfaction by such Applicants for its related costs and expenses, shall afford or shall cause the Company to afford the Applicants the most recent list of Holders of Debentures within 10 Business Days after the receipt of such application by the Indenture Trustee. Such list shall be as of a date no more than 10 days (or such other date as may be mandated by Applicable Law) prior to the date of receipt of the Applicants' request.

2.19 Legends on Debentures and Common Shares

2.19.1 Each certificate representing the Debentures originally offered or sold in the United States, the Common Shares issuable upon conversion, redemption, repurchase or maturity of such Debentures and each certificate issued in exchange therefor or in substitution therefor shall bear the following U.S. legend ("U.S. Legend"), as applicable, unless such legend is no longer required under applicable requirements of the 1933 Act or applicable state securities laws or unless otherwise directed by the Company:

"THE SECURITIES REPRESENTED HEREBY HAVE NOT BEEN REGISTERED UNDER THE UNITED STATES SECURITIES ACT OF 1933, AS AMENDED (THE "U.S. SECURITIES ACT"). THE HOLDER HEREOF, BY PURCHASING SUCH SECURITIES, AGREES FOR THE BENEFIT OF THE FIRST URANIUM CORPORATION (THE "CORPORATION") THAT SUCH SECURITIES MAY BE OFFERED, SOLD, PLEDGED OR OTHERWISE TRANSFERRED ONLY (A) TO THE CORPORATION, (B) OUTSIDE THE UNITED STATES IN ACCORDANCE WITH RULE 904 OF REGULATIONS UNDER THE U.S. SECURITIES ACT OR (C) WITHIN THE UNITED STATES (I) IN ACCORDANCE WITH RULE 144A UNDER THE U.S. SECURITIES ACT OR (II) IN A TRANSACTION THAT DOES NOT REQUIRE REGISTRATION UNDER THE U.S. SECURITIES ACT OR ANY APPLICABLE STATE SECURITIES LAWS, AND IN THE CASE OF TRANSFERS PURSUANT TO CLAUSE (C)(II), THE SELLER HAS FURNISHED TO THE CORPORATION AN OPINION TO SUCH EFFECT FROM COUNSEL OF RECOGNIZED STANDING REASONABLY SATISFACTORY TO THE CORPORATION PRIOR TO SUCH TRANSFER. DELIVERY OF THIS CERTIFICATE MAY NOT CONSTITUTE "GOOD DELIVERY" IN SETTLEMENT OF TRANSACTIONS ON STOCK EXCHANGES IN CANADA. PROVIDED THAT THE CORPORATION IS A "FOREIGN ISSUER" WITHIN THE MEANING OF REGULATIONS AT THE TIME OF SALE, A NEW CERTIFICATE BEARING NO LEGEND MAY BE OBTAINED FROM THE CORPORATION'S [INDENTURE TRUSTEE/TRANSFER AGENT] UPON DELIVERY OF THIS CERTIFICATE AND A DULY EXECUTED DECLARATION, IN A FORM SATISFACTORY TO THE [INDENTURE TRUSTEE/TRANSFER AGENT] AND THE CORPORATION TO THE EFFECT THAT SUCH SALE IS BEING MADE IN ACCORDANCE WITH RULE 904 OF REGULATIONS UNDER THE U.S. SECURITIES ACT.";

provided that, if Debentures or Common Shares issuable under the Debentures are being sold outside the United States in accordance with Rule 904 of Regulation S under the 1933 Act, and provided that the Company is a "foreign issuer" within the meaning of Regulation S under the 1933 Act at the time of sale, the U.S. Legend may be removed by providing a declaration to the Company's Indenture Trustee or Transfer Agent, as applicable, to the effect set forth in Schedule "E" hereto (or as the Corporation may prescribe from time to time); provided, further, that, if any Debentures or Common Shares issuable pursuant to the Debentures are being sold pursuant to Rule 144 under the 1933 Act, the U.S. Legend may be removed by delivery to the Company's

Indenture Trustee or Transfer Agent, as applicable, of an opinion of counsel, of recognized standing reasonably satisfactory to the Company, to the effect that such legend is no longer required under applicable requirements of the 1933 Act or state securities laws.

2.19.2 Prior to the issuance of Debentures, the Company shall notify the Indenture Trustee and CDS in writing, concerning which Debentures are to bear the legend in subsection 2.19.1. Global Debenture certificates representing Debentures originally sold in the United States will be identified by a CUSIP number different from the CUSIP number that identifies the Debentures originally sold outside the United States. The Indenture Trustee and CDS will thereafter maintain the list of all registered Holders of Debentures bearing the U.S. Legend and the list of all registered Holders of Debentures bearing no U.S. Legend.

2.19.3 Each certificate representing the Debentures (and the Common Shares issuable under the Debentures if issued before the date that is four months and one day after the Issue Date) (and any replacement certificate issued prior to the expiration of the applicable hold period) or ownership statements issued under a direct registration system or other electronic book-entry system will bear, as of the Issue Date, a legend substantially in the following form:

“UNLESS PERMITTED UNDER SECURITIES LEGISLATION, THE HOLDER OF THIS SECURITY MUST NOT TRADE THE SECURITY BEFORE <INSERT DATE THAT IS FOUR (4) MONTHS AND ONE (1) DAY AFTER CLOSING DATE>.”

2.19.4 Each certificate representing the Common Shares issuable under the Debentures, (and any replacement certificate issued prior to the expiration of the applicable hold period) or ownership statements issued under a direct registration system or other electronic book-entry system, if issued before the date that is four months and one day after the Issue Date, will bear a legend substantially in the following form:

“THE SECURITIES REPRESENTED BY THIS CERTIFICATE ARE LISTED ON THE TORONTO STOCK EXCHANGE; HOWEVER, THE SAID SECURITIES CAN NOT BE TRADED THROUGH THE FACILITIES OF THE TSX SINCE THEY ARE NOT FREELY TRANSFERABLE, AND CONSEQUENTLY ANY CERTIFICATE REPRESENTING SUCH SECURITIES IS NOT ‘GOOD DELIVERY’ IN SETTLEMENT OF TRANSACTIONS ON THE TSX.”

ARTICLE 3
REDEMPTION, REPURCHASE AND CANCELLATION OF DEBENTURES

3.1 Optional Redemption of Debentures

3.1.1 The Debentures are not redeemable prior to June 30, 2010. The Company shall have the right at its option to redeem the Debentures, in whole at any time or in part from time to time, on or after June 30, 2010, on not more than 60 days and not less than 30 days prior notice to the Holders at a redemption price equal to the principal amount of the Debentures to be redeemed, plus accrued and unpaid interest thereon, if any, up to but excluding the Redemption Date, provided that the Weighted Average Trading Price of the Common Shares on a Recognized Stock Exchange for the 20 consecutive Trading Days ending five Trading Days prior to the date on which the Redemption Notice is given is at least 130% of the Conversion Price.

3.1.2 Concurrently with providing the Redemption Notice, the Company shall provide the Indenture Trustee with an Officer's Certificate setting forth the details of any redemption contemplated by this section 3.1 (including the Current Market Price, the eligibility and interest calculations, if necessary) which the Indenture Trustee may rely upon without any independent obligation to verify the accuracy of information set out therein.

3.2 Partial Redemption of Debentures

If less than all the Outstanding Debentures are to be redeemed pursuant to section 3.1, the Company shall in each such case, at least 15 days before the date upon which the Redemption Notice is to be given, notify the Indenture Trustee by a Company Order of its intention to redeem such Debentures and of the aggregate principal amount of Debentures to be redeemed. At any time prior to the date upon which the Redemption Notice is to be given, the Company may revoke such Company Order by delivering a second Company Order to the Indenture Trustee stating that the Company no longer intends to make a partial redemption of the Debentures.

The Debentures to be so redeemed shall:

- (a) in the case of Book-Entry Only Debentures, be redeemed on a *pro rata* basis to the nearest multiple of \$1,000 in accordance with the principal amount of the Debentures Outstanding; or
- (b) in the case of Definitive Debentures, be selected by the Indenture Trustee (i) on a *pro rata* basis to the nearest multiple of \$1,000 in accordance with the principal amount of the Debentures registered in the name of each Holder, (ii) by lot in such manner as the Indenture Trustee may deem equitable, or (iii) in such other manner as the Indenture Trustee may deem equitable.

Debentures in denominations in excess of \$1,000 may be selected and called for redemption in part only (such part being \$1,000 or an integral multiple thereof) and, unless the context otherwise requires, references to Debentures in this Article 3 shall be deemed to include any such part of the principal amount of Debentures which shall have been so selected and called for redemption. The Holder of any Debenture called for redemption in part only, upon surrender

of such Debenture for payment, shall be entitled to receive, without expense to such Holder, a new Debenture for the unredeemed part of the Debenture so surrendered, and the Company shall execute and the Indenture Trustee shall certify and deliver, at the expense of the Company, such new Debenture upon receipt of the Debenture so surrendered.

3.3 Places of Payment

The Redemption Amount will be payable upon presentation and surrender of the Debentures called for redemption at the Corporate Trust Office or at any other places specified in the Redemption Notice.

3.4 Notice of Redemption

Notice of redemption of the Debentures (the "**Redemption Notice**") shall be given by the Company to the Indenture Trustee and Holders in the form set forth in Schedule "B" hereof and in the manner provided in sections 15.2 and 15.3. Every such notice shall specify the aggregate principal amount of Debentures called for redemption, the redemption amount relating thereto determined in accordance with the foregoing (the "**Redemption Amount**"), the Redemption Date, the places of payment and any right of the Holders to convert such Debentures as provided in Article 4 and shall state that interest upon the principal amount of Debentures called for redemption shall cease to be payable from and after the Redemption Date.

3.5 Debentures Due on Redemption Date

Upon a Redemption Notice being given in accordance with section 3.4, the Redemption Amount shall be and become due and payable on the Redemption Date specified in such Redemption Notice and with the same effect as if it were the Maturity Date of such Debentures, the provisions hereof or of any such Debentures notwithstanding, and, from and after such Redemption Date, interest shall cease, unless payment of the Redemption Amount shall not be made on presentation for surrender of such Debentures at any of the places specified in section 3.4 on or after the Redemption Date.

3.6 Deposit of Redemption Moneys

Upon the Debentures being called for redemption as provided for in section 3.4, but subject to section 3.7, the Company shall deposit with the Indenture Trustee or for the account of the Indenture Trustee, one Business Day prior to the Redemption Date specified in the Redemption Notice, such sums as are sufficient to pay the Redemption Amount of the Debentures. From the sums so deposited, the Indenture Trustee shall pay or cause to be paid to the Holders, upon surrender of the Debentures, the Redemption Amount thereof.

3.7 Right to Repay the Redemption Amount in Common Shares on Redemption

3.7.1 Provided that the Company is entitled to redeem the Debentures pursuant to section 3.1 and that no Event of Default shall have occurred and be continuing, the Company, subject to receiving all applicable regulatory approvals, shall have the right, in respect of a Redemption Date, to elect to satisfy its obligation to pay the Redemption Amount by issuing and delivering to Holders on the Redemption Date, for each \$1,000 principal amount of Debentures,

that number of Freely Tradeable, fully paid and non-assessable Common Shares obtained by dividing such principal amount by 95% of the Current Market Price of the Common Shares on the Redemption Date (the "Share Redemption Right").

3.7.2 The Company shall exercise the Share Redemption Right by so specifying in the Redemption Notice not less than 40 days and not more than 60 days prior to the Redemption Date.

3.7.3 The Company's right to exercise the Share Redemption Right shall be conditional upon the following conditions being met on the Business Day preceding the Redemption Date:

- (a) the Common Shares to be issued on exercise of the Share Redemption Right shall be issued from treasury of the Company and shall be Freely Tradeable and fully paid and non-assessable;
- (b) the listing or quoting of such additional Common Shares on each Recognized Stock Exchange;
- (c) the Company being a reporting issuer or equivalent in good standing or equivalent under Applicable Securities Laws in the Provinces of Canada in which the Company is a reporting issuer;
- (d) no Event of Default shall have occurred and be continuing;
- (e) the receipt by the Indenture Trustee of an Officer's Certificate stating that conditions (a), (b), (c) and (d) above have been satisfied and setting forth the number of Common Shares to be delivered for each \$1,000 principal amount of Debentures and the Current Market Price of the Common Shares on the Redemption Date; and
- (f) the receipt by the Indenture Trustee of an Opinion of Counsel to the effect that such Common Shares have been duly authorized and, when issued and delivered pursuant to the terms of this Indenture in payment of the Redemption Amount of the Debentures outstanding, will be validly issued as fully paid and non-assessable, that conditions (a) and (b) above have been satisfied and that, relying exclusively on certificates of good standing or no default issued by the relevant securities regulatory authorities, condition (c) above is satisfied, except that the opinion in respect of condition (c) need not be expressed with respect to those provinces where such certificates are not issued.

If the foregoing conditions are not satisfied prior to the close of business on the Business Day preceding the Redemption Date, the Company shall pay in cash the Redemption Amount that would otherwise have been satisfied in Common Shares, unless such Debentureholder waives the conditions which are not satisfied or extends the time by which the Company is to satisfy such conditions.

3.7.4 In the event that the Company exercises its Share Redemption Right, the Company shall on the Redemption Date deliver to the Indenture Trustee for delivery to and on

account of the Holders, certificates representing the Freely Tradeable Common Shares to which such Holders are entitled and a cheque representing accrued and unpaid interest. Upon presentation and surrender of the Debentures by a Holder at the Corporate Trust Office or any other place specified in the Redemption Notice, the Indenture Trustee shall deliver the certificates representing such Common Shares and any such interest payment to the Holder.

3.7.5 No fractional Common Shares shall be delivered upon the exercise of the Share Redemption Right but, in lieu thereof, if such a fraction shall become owing, the Company shall pay to the Indenture Trustee for the account of the Holders, at the time contemplated in subsection 3.7.4, the cash equivalent thereof determined on the basis of the Current Market Price of the Common Shares on the Redemption Date.

3.7.6 A Holder shall be treated as the shareholder of record of the Common Shares issued on due exercise by the Company of its Share Redemption Right effective immediately after the close of business on the Redemption Date, and shall be entitled to all substitutions therefor, all income earned thereon or accretions thereto and all dividends or distributions (including stock dividends and dividends or distributions in kind) thereon and arising thereafter, and in the event that the Indenture Trustee receives the same, it shall hold the same under gratuitous deposit for the benefit of such Holder.

3.7.7 The Company shall at all times reserve and keep available out of its authorized Common Shares (if the number thereof becomes limited) solely for the purpose of issue and delivery upon the exercise of the Share Redemption Right as provided herein, and shall issue to Debentureholders to whom Common Shares will be issued pursuant to the exercise of the Share Redemption Right, such number of Common Shares as shall be issuable in such event.

3.7.8 The Company shall comply with all Applicable Securities Laws regulating the issue and delivery of Freely Tradeable Common Shares upon exercise of the Share Redemption Right, shall obtain any regulatory approval in respect thereof as may be required pursuant to Applicable Securities Laws and shall cause to be listed and posted for trading such Common Shares on each Recognized Stock Exchange.

3.7.9 If the Company elects to satisfy its obligation to pay the Redemption Amount by issuing Common Shares in accordance with this section 3.7 and if the Redemption Amount (or any portion thereof) to which a Holder is entitled is subject to withholding taxes, the Company shall satisfy the payment of such withholding taxes pursuant to section 2.15.

3.7.10 Each certificate representing Common Shares issued in payment of the Redemption Amount of Legended Debentures, as well as all certificates issued in exchange for or in substitution of the foregoing Common Shares, shall bear the U.S. Legend, provided that, if Debentures or Common Shares issuable under the Debentures are being sold outside the United States in accordance with Rule 904 of Regulation S under the 1933 Act, and provided that the Company is a "foreign issuer" within the meaning of Regulation S under the 1933 Act at the time of sale, the U.S. Legend may be removed by providing a declaration to the Company's Indenture Trustee or Transfer Agent, as applicable, to the effect set forth in Schedule "E" hereto (or as the Company may prescribe from time to time); provided, further, that, if any Debentures or Common Shares issuable pursuant to the Debentures are being sold pursuant to Rule 144

under the 1933 Act, the U.S. Legend may be removed by delivery to the Company's Indenture Trustee or Transfer Agent, as applicable, of an opinion of counsel, of recognized standing reasonably satisfactory to the Company, to the effect that such legend is no longer required under applicable requirements of the 1933 Act or state securities laws. Provided that the Indenture Trustee or Transfer Agent, as applicable, for such securities obtains confirmation from the Company that such opinion or other documentation is satisfactory to the Company, it shall be entitled to rely and act on such opinion of counsel or other documentation without further inquiry.

3.8 Purchase of Debentures

Provided that no Event of Default has occurred and is continuing, the Company may purchase all or any of the Debentures in the open market (which shall include purchase from or through an investment dealer or a firm holding membership on a Recognized Stock Exchange) or by tender or by private contract at any price, subject to compliance with Applicable Securities Laws. If an Event of Default has occurred and is continuing, the Company may purchase all or any of the Debentures as aforesaid with the exception of by private contract.

If, upon an invitation for tenders, more Debentures than the Company is prepared to accept are tendered at the same lowest price, the Debentures to be purchased by the Company will be selected by the Indenture Trustee in such manner (which may include pro rata) as the Indenture Trustee may deem equitable, from the Debentures tendered by each tendering Debentureholder who tendered at such lowest price. For this purpose, the Indenture Trustee may make, and from time to time amend, regulations with respect to the manner in which Debentures may be so selected and regulations so made shall be valid and binding upon all Debentureholders and, notwithstanding the fact that, as a result thereof, one or more of such Debentures become subject to purchase in part only. The Holder of any Debenture of which a part only is purchased, upon surrender of such Debenture for payment, shall be entitled to receive, without expense to such Holder, a replacement Debenture for and evidencing the same obligation as the unpurchased part so surrendered and the Indenture Trustee shall certify and deliver such replacement Debenture upon receipt of the Debenture so surrendered.

3.9 Repurchase of Debentures upon a Change of Control

3.9.1 The Company must commence, within 30 days of the occurrence of a Change of Control, an offer to purchase (the "**Offer to Purchase**") for all Debentures then Outstanding. The Offer to Purchase shall be made at a purchase price equal to 100% of the principal amount thereof, plus accrued and unpaid interest thereon (if any) up to but excluding the date of purchase (the "**Payment Date**"). An Offer to Purchase shall be open for 30 days and the Payment Date shall be the 30th day following the mailing of the Offer to Purchase to the Indenture Trustee.

3.9.2 An Offer to Purchase shall be commenced by the Company mailing said Offer to Purchase to the Indenture Trustee and by the Indenture Trustee mailing a notice to each Debentureholder, which notice shall specify: (i) the covenant contained herein pursuant to which the offer is being made and that all Debentures validly tendered will be accepted for payment; (ii) the purchase price and the Payment Date; (iii) that any Debenture not tendered will continue to accrue interest pursuant to its terms; (iv) that, unless the Company defaults on the payment of

the purchase price, any Debenture accepted for payment pursuant to the Offer to Purchase shall cease to accrue interest on and after the Payment Date; (v) that Holders electing to have a Debenture purchased pursuant to the Offer to Purchase will be required to surrender the Debenture to the Indenture Trustee at the Corporate Trust Office or such other address specified in the notice prior to the close of business on the Business Day immediately preceding the Payment Date; (vi) that Holders will be entitled to withdraw their election if the Indenture Trustee receives, not later than the close of business on the third Business Day immediately preceding the Payment Date, a facsimile transmission or letter setting forth the name of such Holder, the principal amount of Debentures delivered for purchase and a statement that such Holder is withdrawing his election to have such Debentures purchased; and (vii) that Holders whose Debentures are being purchased only in part will be issued replacement Debentures equal in principal amount to and as evidence of the same underlying indebtedness as was evidenced by the unpurchased portion of the Debentures surrendered; provided that each Debenture purchased and each replacement Debenture issued shall be in a principal amount of \$1,000 or integral multiples thereof.

3.9.3 On the Payment Date, the Company shall (i) accept for payment Debentures or portions thereof tendered pursuant to the Offer to Purchase; (ii) deposit with the Indenture Trustee money sufficient to pay the purchase price of all Debentures or portions thereof so accepted; and (iii) deliver, or cause to be delivered, to the Indenture Trustee all Debentures or portions thereof so accepted together with an Officer's Certificate specifying the Debentures or portions thereof accepted for payment by the Company.

3.9.4 The Indenture Trustee shall as soon as practicable mail to the Holders of Debentures who have so accepted payment in an amount equal to the purchase price, and shall as soon as practicable authenticate and mail to such Holders a replacement Debenture equal in principal amount to any unpurchased portion of the Debenture surrendered; provided that each Debenture purchased and each replacement Debenture issued shall be in a principal amount of \$1,000 or integral multiples thereof.

3.9.5 The Company will publicly announce the results of an Offer to Purchase as soon as practicable after the Payment Date.

3.9.6 The Company will comply with all Applicable Securities Laws in the event that the Company is required to repurchase the Debentures pursuant to an Offer to Purchase in connection with a Change of Control.

3.9.7 If a Change of Control that is a Cash Transaction occurs, the Company shall give written notice to the Indenture Trustee and all Debentureholders at least 20 days prior to the anticipated Effective Date of such Cash Transaction. In that event, each Debentureholder converting any Debenture pursuant to Article 4 at anytime prior to the Effective Date shall be entitled to receive, in addition to the number of Common Shares such Debentureholder would otherwise have been entitled to receive pursuant to Article 4, an additional number of Common Shares ("**Additional Shares**") as set forth below:

- (a) the number of Additional Shares to which the Debentureholder shall be entitled for every \$1,000 of principal amount of the Debentures being converted shall be

determined by reference to the table set out in Schedule "F" hereto, based on the Effective Date of the Cash Transaction and the Common Share Price;

- (b) if holders of Common Shares receive only cash in the transaction, the Common Share Price shall be the cash amount paid per Common Share. Otherwise, the Common Share Price shall be equal to the Current Market Price of the Common Shares immediately preceding the Effective Date.
- (c) if the Common Share Price is in excess of \$40.00 per Common Share or if the Common Share Price is less than \$11.94 per Common Share on the Effective Date, no Additional Shares shall be issued upon conversion;
- (d) if the Common Share Price is between two Common Share Price amounts in the table set out in Schedule "F" or the Effective Date is between two dates in said table, the number of Additional Shares shall be determined by a straight-line interpolation between the number of Additional Shares set forth for the higher and lower Common Share Price amounts and the two dates, as applicable, based on a 365-day year;
- (e) the Common Share Prices set forth in the first row of the table in Schedule "F" hereto shall be adjusted as of any date on which the Conversion Number is adjusted pursuant to Article 6. The adjusted Common Share Price shall equal the Common Share Price applicable immediately prior to such adjustment, multiplied by a fraction, the numerator of which is the Conversion Number immediately prior to the adjustment giving rise to the Common Share Price adjustment and the denominator of which is the Conversion Number as so adjusted. The Company's obligation to deliver Additional Shares shall be subject to adjustment in the same manner as the Conversion Number as set forth in Article 6;

and the Company shall provide the Indenture Trustee with an Officer's Certificate calculating the Additional Shares issuable, upon which the Indenture Trustee may rely.

3.10 Cancellation of Purchased Debentures

All Debentures redeemed, purchased or repurchased in whole or in part pursuant to this Article 3 shall be forthwith delivered to and cancelled by the Indenture Trustee and may not be reissued or resold and no Debentures shall be issued in substitution therefor.

ARTICLE 4 CONVERSION

4.1 Conversion Right

4.1.1 Each Holder shall have the right at any time prior to the close of business on the earlier of (i) the Business Day immediately preceding the Maturity Date or, (ii) if called for redemption under section 3.4, the Business Day immediately preceding the Redemption Date or, (iii) if called for repurchase pursuant to section 3.9, the Business Day immediately preceding the Payment Date, at his option to convert each \$1,000 principal amount of his Debentures into that

number of Common Shares equal to the Conversion Number, all on the terms and subject to the conditions provided in this Article 4, provided that the only shares issuable on conversion of the Debentures shall be shares that are "prescribed securities" as defined in Regulation 6208 of the *Income Tax Act* (Canada).

4.1.2 In order to exercise his option to convert provided pursuant to subsection 4.1.1, a Holder will be required to deliver to the Indenture Trustee at the Corporate Trust Office or any other place specified in the Maturity Notice or the Redemption Notice or the Offer to Purchase, as the case may be, on or prior to the Business Day immediately preceding the Maturity Date, the Redemption Date or the Payment Date, as the case may be, a conversion notice substantially in the form set forth in Schedule "C1" (the "Conversion Notice") (with a copy to the Company), duly completed and executed by the Holder or his executors or administrators or other legal representatives or his or their attorney duly appointed by instrument in form and execution satisfactory to the Indenture Trustee, together with the related Debentures. The Conversion Notice shall specify the date of conversion (the "Conversion Date") of the Debentures, which Conversion Date shall not be earlier than the date the Conversion Notice is delivered to the Indenture Trustee and shall not be later than the close of business on the Business Day immediately preceding the Maturity Date, the Redemption Date or the Payment Date.

4.1.3 Upon receipt of a Conversion Notice from the Holder, the Company shall ensure that the following conditions are met:

- (a) the Common Shares to be issued on conversion by the Holder shall be issued from treasury of the Company and shall be Freely Tradeable and fully paid and non-assessable Common Shares;
- (b) the listing or quoting of such additional Common Shares on each Recognized Stock Exchange;
- (c) the Company being a reporting issuer or equivalent in good standing or equivalent under Applicable Securities Laws in the Provinces of Canada in which the Company is a reporting issuer;
- (d) no Event of Default shall have occurred and be continuing;
- (e) the receipt by the Indenture Trustee of an Officer's Certificate stating that conditions (a), (b), (c) and (d) above have been satisfied and setting forth the number of Common Shares to be delivered for each \$1,000 principal amount of Debentures, plus the accrued and unpaid interest thereon, and the calculation of the Conversion Number; and
- (f) the receipt by the Indenture Trustee of an Opinion of Counsel to the effect that such Common Shares have been duly authorized and, when issued and delivered pursuant to the terms of this Indenture in payment of the Conversion Value of the Debentures outstanding, will be validly issued as fully paid and non-assessable, that conditions (a) and (b) above have been satisfied and that, relying exclusively on certificates of good standing or no default issued by the relevant securities regulatory authorities, condition (c) above is satisfied, except that the opinion in

respect of condition (c) need not be expressed with respect to those provinces where such certificates are not issued.

If the foregoing conditions are not satisfied prior to the close of business on the Business Day preceding the Conversion Date, the Company shall pay in cash the Conversion Value of the Debentures in lieu of delivery of the Conversion Number of Common Shares, unless such Debentureholder waives the conditions which are not satisfied or extends the time by which the Company is to satisfy such conditions.

4.2 Completion of Conversion

4.2.1 Subject to section 4.1, within five Business Days of the Conversion Date, the Company shall deliver to the Indenture Trustee on account of the Holder for delivery to each Holder who has elected to convert his Debentures pursuant to section 4.1, for each \$1,000 principal amount of Debentures which the Holder has elected to convert: (a) certificates for the Common Shares to which the Holder is entitled; (b) a certified cheque or bank draft in the amount of the value of a fractional Common Share, if any; (c) a certified cheque or bank draft in the amount of the accrued and unpaid interest thereon, and (d) if the Holder has elected to convert a principal amount of Debentures, together with the accrued and unpaid interest thereon (the "**exercised amount**"), which is less than the principal amount of all Debentures of which such person is the Holder immediately prior to such exercise (the "**registered amount**"), Debenture(s) registered in the name of such Holder in an aggregate principal amount equal to the amount by which the registered amount exceeds the exercised amount.

4.2.2 All Debentures converted in whole or in part pursuant to this Article 4 shall be forthwith delivered to and cancelled by the Indenture Trustee and the Indenture Trustee shall amend the register maintained by it accordingly.

4.2.3 The Company shall provide to the Indenture Trustee the certificates for the Common Shares and for the Debentures to be delivered pursuant to subsection 4.2.1, if any, and pay to the Indenture Trustee sufficient funds, by certified cheque or bank draft, in a timely manner, to permit the Indenture Trustee, on behalf of the Company, to make the delivery required by subsection 4.2.1 and any other payments, if any, required by section 4.3. Except as provided herein, Debentures which have been converted may not be reissued or resold.

4.2.4 The Indenture Trustee shall not be liable for the failure of the Company to deliver any Common Share certificates and/or funds pursuant to this section 4.2.

4.3 Fractional Shares

No fractional Common Shares shall be delivered upon the conversion of Debentures but, in lieu thereof, if such a fraction shall become owing, the Company shall pay to the Holders, or to the Indenture Trustee on account of the Holders if necessary, at the time contemplated in subsection 4.2.1, the cash equivalent thereof determined on the basis of the Current Market Price of Common Shares as at the Conversion Date.

4.4 Relating to the Issue of Common Shares

4.4.1 A Holder shall be treated as the shareholder of record of the Common Shares issued on due conversion of his Debentures and the issuance of Common Shares shall be deemed to have occurred, for all purposes, effective immediately after the close of business on the Conversion Date; such Holder shall be entitled to all substitutions therefor, all income earned thereon or accretions thereto and all dividends or distributions (including stock dividends and dividends or distributions in kind) thereon and arising thereafter and in the event that the Indenture Trustee receives the same, it shall hold the same under gratuitous deposit for the benefit of such Holder.

4.4.2 The Company shall at all times reserve and keep available out of its authorized Common Shares (if the number thereof is or becomes limited) solely for the purpose of issue and delivery upon the conversion of Debentures, and shall issue to Debentureholders who may exercise their conversion rights hereunder such number of Common Shares as shall be issuable in such events.

4.4.3 The Company shall comply with all Applicable Securities Laws regulating the issue and delivery of Freely Tradeable Common Shares upon conversion of Debentures, shall obtain any regulatory approval in respect thereof as may be required pursuant to Applicable Securities Laws and shall cause to be listed and posted for trading such Common Shares on each Recognized Stock Exchange.

4.5 Legends on Common Shares

Each certificate representing Common Shares issued upon conversion or payment thereof of Legended Debentures pursuant to this Article 4 or Article 5 below, as well as all certificates issued in exchange for or in substitution of the foregoing Common Shares, shall bear the U.S. Legend; provided that, if Debentures or Common Shares issuable under the Debentures are being sold outside the United States in accordance with Rule 904 of Regulation S under the 1933 Act, and provided that the Company is a "foreign issuer" within the meaning of Regulation S under the 1933 Act at the time of sale, the U.S. Legend may be removed by providing a declaration to the Company's Indenture Trustee or Transfer Agent, as applicable, to the effect set forth in Schedule "E" hereto (or as the Company may prescribe from time to time); provided, further, that, if any Debentures or Common Shares issuable pursuant to the Debentures are being sold pursuant to Rule 144 under the 1933 Act, the U.S. Legend may be removed by delivery to the Company's Indenture Trustee or Transfer Agent, as applicable, of an opinion of counsel, of recognized standing reasonably satisfactory to the Company, to the effect that such legend is no longer required under applicable requirements of the 1933 Act or state securities laws. Provided that the Indenture Trustee or Transfer Agent, as applicable, for such securities obtains confirmation from the Company that such opinion or other documentation is satisfactory to the Company, it shall be entitled to rely and act on such opinion of counsel or other documentation without further inquiry.

ARTICLE 5 MATURITY

5.1 Payment of Principal and Interest at Maturity

On the Maturity Date, the Company shall pay to the Holders of Debentures all the principal thereon and all accrued and unpaid interest thereto, up to but excluding the Maturity Date. Subject to section 5.2, payment of principal and accrued and unpaid interest shall be made in cash or by cheque to the Holders in the manner contemplated by section 2.10 or 2.12, as the case may be.

5.2 Right to Repay Principal Amount in Common Shares at Maturity

5.2.1 The Company may, at its option and subject to receiving all applicable regulatory approvals, elect to satisfy its obligation to repay on the Maturity Date the principal amount of all, but not less than all, of the Debentures by delivering to the Holders and the Indenture Trustee not less than 40 days and not more than 60 days prior to the Maturity Date a maturity notice substantially in the form of Schedule "C 2" (the "**Maturity Notice**") and, on the Maturity Date, for each \$1,000 principal amount of Debentures, by issuing and delivering to Holders that number of Freely Tradeable, fully paid and non-assessable Common Shares obtained by dividing each \$1,000 principal amount of Debentures by 95% of the Current Market Price of the Common Shares on the Maturity Date (the "**Share Repayment Right**").

5.2.2 The Company shall be required to provide the Maturity Notice only if it elects to exercise the Share Repayment Right.

5.2.3 The Company's right to exercise the Share Repayment Right shall be conditional upon the following conditions being met on the Business Day immediately preceding the Maturity Date:

- (a) the Common Shares to be issued on exercise of the Share Repayment Right shall be issued from treasury of the Company and shall be Freely Tradeable and fully paid and non-assessable;
- (b) the listing or quoting of such additional Common Shares on each Recognized Stock Exchange;
- (c) the Company being a reporting issuer or equivalent in good standing or equivalent under Applicable Securities Laws in the Provinces of Canada in which the Company is a reporting issuer on Maturity;
- (d) no Event of Default shall have occurred and be continuing;
- (e) the receipt by the Indenture Trustee of an Officer's Certificate stating that conditions (a), (b), (c) and (d) above have been satisfied and setting forth the number of Common Shares to be delivered for each \$1,000 principal amount of Debentures and the Current Market Price of Common Shares on the Maturity Date; and

- (f) the receipt by the Indenture Trustee of an Opinion of Counsel to the effect that such Common Shares have been duly authorized and, when issued and delivered pursuant to the terms of this Indenture in payment of the principal amount of the Debentures outstanding, will be validly issued as fully paid and non-assessable, that conditions (a) and (b) above have been satisfied and that, relying exclusively on certificates of good standing issued by the relevant securities regulatory authorities, condition (c) above is satisfied, except that the opinion in respect of condition (c) need not be expressed with respect to those provinces where such certificates are not issued.

If the foregoing conditions are not satisfied by the close of business on the Business Day preceding the Maturity Date, the Company shall pay in cash 100% of the principal amount of the Debentures that would otherwise have been satisfied in Common Shares, unless the Debentureholder waives the conditions which are not satisfied or extends the time by which the Company is to satisfy such conditions.

5.2.4 In the event that the Company exercises its Share Repayment Right, the Company shall on the Maturity Date deliver to the Indenture Trustee for delivery to and on account of the Holders, certificates representing the Freely Tradeable Common Shares to which such Holders are entitled and a cheque representing all of the accrued and unpaid interest up to but excluding the Maturity Date. Upon presentation and surrender of the Debentures by a Holder for payment at Maturity at the Corporate Trust Office or any other place specified in the Maturity Notice, the Indenture Trustee shall deliver the certificates representing such Common Shares and the cheque representing all the accrued and unpaid interest and the cash equivalent representing the value of fractional shares, if any.
