5.2.5 No fractional Common Shares shall be delivered upon the exercise of the Share Repayment Right but, in lieu thereof, if such a fraction shall become owing, the Company shall pay to the Indenture Trustee for the account of the Holders, at the time contemplated in subsection 5.2.4, the cash equivalent thereof determined on the basis of the Current Market Price of the Common Shares on the Maturity Date.

5.2.6 A Holder shall be treated as the shareholder of record of the Common Shares issued on due exercise by the Company of its Share Repayment Right effective immediately after the close of business on the Maturity Date, and shall be entitled to all substitutions therefor, all income earned thereon or accretions thereto and all dividends or distributions (including stock dividends and dividends or distributions in kind) thereon and arising thereafter, and in the event that the Indenture Trustee receives the same, it shall hold the same under gratuitous deposit for the benefit of such Holder.

5.2.7 The Company shall at all times reserve and keep available out of its authorized Common Shares (if the number thereof is or becomes limited) solely for the purpose of issue and delivery upon the exercise of the Share Repayment Right as provided herein, and shall issue to Debentureholders to whom Common Shares will be issued pursuant to the exercise of the Share Repayment Right, such number of Common Shares as shall be issuable in such event.

5.2.8 The Company shall comply with all Applicable Securities Laws regulating the issue and delivery of Freely Tradeable Common Shares upon exercise of the Share Repayment Right, shall obtain any regulatory approval in respect thereof as may be required pursuant to Applicable Securities Laws and shall cause to be listed and posted for trading such Common Shares on each Recognized Stock Exchange.

5.2.9 If the Company elects to satisfy its obligation to pay the principal amount of the Debentures by issuing Common Shares pursuant to the Share Repayment Right and the delivery of Common Shares to which a Holder is entitled is subject to withholding taxes, the Company shall satisfy the payment of such withholding taxes pursuant to section 2.15.

ARTICLE 6 ADJUSTMENTS

6.1 Adjustment of Conversion Price

6.1.1 The Conversion Price in effect at any date will be subject to adjustment from time to time in the events and in the manner provided as follows.

6.1.2 If and whenever at any time after the date hereof and prior to the Maturity Date, the Company:

- (a) subdivides its outstanding Common Shares into a greater number of Common Shares; or
- (b) reduces, combines or consolidates its outstanding Common Shares into a smaller number of Common Shares;
- (c) issues Common Shares or securities convertible into or exchangeable for Common Shares to the holders of all or substantially all of the outstanding Common Shares as a stock dividend or otherwise (other than an issue of Common Shares or securities convertible into or exchangeable for Common Shares to holders of Common Shares pursuant to a right granted to such holders to receive such Common Shares in lieu of Dividends Paid in the Ordinary Course);
- (d) makes a distribution on its outstanding Common Shares to the holders of all or substantially all of the outstanding Common Shares payable in Common Shares or securities convertible into or exchangeable for Common Shares (other than an issue of Common Shares to holders of Common Shares pursuant to a right granted to such holders to receive such Common Shares in lieu of Dividends Paid in the Ordinary Course);

(any of such events in subsections (a), (b), (c) and (d), and being called a "**Common Share Reorganization**") then the Conversion Price then in effect will be adjusted effective immediately on the effective date or record date for the happening of a Common Share Reorganization, as the case may be, at which the holders of Common Shares are determined for the purpose of the Common Share Reorganization, so that it shall equal the price determined by multiplying the Conversion Price in effect immediately prior to such effective date or record date

by a fraction, the numerator of which will be the total number of Common Shares outstanding on such effective date or record date before giving effect to such Common Share Reorganization and the denominator of which will be the total number of Common Shares outstanding immediately after giving effect to such Common Share Reorganization (including, in the case where securities exchangeable for or convertible into Common Shares are distributed, the number of Common Shares that would have been outstanding had all such securities been exchanged for or converted into Common Shares on such effective date or record date).

6.1.3 If and whenever at any time after the date hereof and prior to the Maturity Date, the Company fixes a record date for the issue of rights, options or warrants to the holders of all or substantially all of the outstanding Common Shares under which such holders are entitled, during a period expiring not more than 45 days after the record date for such issue (the "**Rights Period**"). to subscribe for or purchase Common Shares or securities exchangeable for or convertible into Common Shares at a price per share to the holder (or at an exchange price or conversion price per share during the Rights Period to the holder in the case of securities exchangeable for or convertible into Common Shares) which is less than 95% of the Current Market Price for the Common Shares on such record date (any of such events being called a "**Rights Offering**"), then the Conversion Price will be adjusted effective immediately after the end of the Rights Period so that it shall equal the price determined by multiplying the Conversion Price in effect immediately prior to the end of the Rights Period by a fraction:

- (a) the numerator of which will be the aggregate of:
 - (i) the total number of Common Shares outstanding as of the record date for the commencement of the Rights Offering, and
 - (ii) a number determined by dividing (A) either (x) the product of the number of Common Shares issued or subscribed for during the Rights Period upon the exercise of the rights, warrants or options under the Rights Offering and the price at which such Common Shares are offered for such issue or subscription, or, as the case may be, (y) the product of the exchange price or conversion price of such securities exchangeable for or convertible into Common Shares and the number of Common Shares for or into which the securities so offered pursuant to the Rights Offering could have been exchanged or converted during the Rights Period, by (B) the Current Market Price of the Common Shares as of the record date for the commencement of the Rights Offering, and
- (b) the denominator of which will be the number of Common Shares outstanding, or the number of Common Shares which would be outstanding if all the exchangeable or convertible securities were exchanged for or converted into Common Shares during the Rights Period, after giving effect to the Rights Offering and including the number of Common Shares actually issued or subscribed for during the Rights Period upon exercise of the rights, warrants or options under the Rights Offering.

Any Debentureholder who has exercised the right to convert to Common Shares in accordance with Article 4 during the period beginning immediately after the record date for a Rights Offering and ending on the last day of the Rights Period for the Rights Offering will, in addition to the Common Shares to which that holder would otherwise be entitled upon such conversion, be entitled to that number of additional Common Shares equal to the result obtained when the difference, if any, between the Conversion Price in effect immediately prior to the end of such Rights Offering and the Conversion Price as adjusted for such Rights Offering pursuant to this subsection is multiplied by the number of Common Shares received upon the conversion of the Debentures held by such Holder during such period, and the resulting product is divided by the Conversion Price as adjusted for such Rights Offering pursuant to this subsection; provided that the provisions of section 4.3 will be applicable to any fractional interest in a Common Share to which such Holder might otherwise be entitled under the foregoing provisions of this subsection. Such additional Common Shares will be deemed to have been issued to the Debentureholder immediately following the end of the Rights Period and a certificate for such additional Common Shares will be delivered to such Holder within 15 Business Days following the end of the Rights Period. To the extent that any such rights, options or warrants are not so exercised on or before the expiry thereof, the Conversion Price will be readjusted to the Conversion Price which would then be in effect based on the number of Common Shares (or the securities convertible into or exchangeable for Common Shares) actually delivered on the exercise of such rights, options or warrants.

6.1.4 If and whenever at any time after the date hereof and prior to the Maturity Date, the Company fixes a record date for the issue or the distribution to the holders of all or substantially all of the outstanding Common Shares of (i) securities of the Company, including rights, options or warrants to acquire securities of the Company or any of its property or assets and including cash and evidences of indebtedness; or (ii) any property or other assets, including cash and evidences of indebtedness, and if such issuance or distribution does not constitute a Dividend Paid in the Ordinary Course, a Common Share Reorganization, a Rights Offering or a distribution contemplated by subsection 6.1.3 (any of such non-excluded events being called a "Special Distribution"), then the Conversion Price will be adjusted effective immediately after such record date so that it shall equal the price determined by multiplying the Conversion Price in effect on such record date by a fraction:

- (a) the numerator of which will be:
 - (i) the product of the number of Common Shares outstanding on such record date and the Current Market Price of the Common Shares on such record date; less
 - (ii) the fair market value, as determined by action by the Board of Directors (whose determination, subject to the consent of a Recognized Stock Exchange, will be conclusive), to the holders of Common Shares of such securities or property or other assets so issued or distributed in the Special Distribution; and

- (b) the denominator of which will be the product of the number of Common Shares outstanding on such record date and the Current Market Price of the Common Shares on such record date.

To the extent that any Special Distribution is not so made, the Conversion Price will be readjusted effective immediately to the Conversion Price which would then be in effect based upon such securities or property or other assets as actually distributed.

6.1.5 If and whenever at any time after the date hereof and prior to the Maturity Date, there is a reclassification of the Common Shares at any time outstanding or change of the Common Shares into other shares or into other securities or other capital reorganization (other than a Common Share Reorganization), or a consolidation, amalgamation or merger of, or an arrangement involving, the Company with or into any other corporation or other entity (other than a vertical short-form amalgamation with one or more of its Wholly-Owned Subsidiaries pursuant to the Canada Business Corporations Act), or a transfer of the undertaking or assets of the Company as an entirety or substantially as an entirety to another corporation or other entity in which the holders of Common Shares are entitled to receive shares, other securities or other property (any of such events being called a "**Capital Reorganization**"), any Holder of Debentures who exercises the right to convert Debentures into Common Shares pursuant to Debentures then held after the effective date of such Capital Reorganization will be entitled to receive, and will accept for the same aggregate consideration in lieu of the number of Common Shares to which such Holder was previously entitled upon such conversion, the aggregate number of shares, other securities or other property which such holder would have been entitled to receive as a result of such Capital Reorganization if, on the effective date thereof, the holder had been the registered holder of the number of Common Shares to which such holder was previously entitled upon conversion provided, however, that the consideration into which the Debentures will be convertible will be limited to the Common Shares or other prescribed securities (as defined by Regulation 6208 to the *Income Tax Act* (Canada)) of the Company as specified by the board of directors of the Company. The Company will take all steps necessary to ensure that, on a Capital Reorganization, the Holders of Debentures will receive the aggregate number of shares, other securities or other property to which they are entitled as a result of the Capital Reorganization and that such shares or securities will be prescribed securities as defined in Regulation 6208 of the *Income Tax Act* (Canada), which includes shares or securities not redeemable by the holder thereof within 5 years from the issue date of the Debentures. Appropriate adjustments will be made as a result of any such Capital Reorganization in the application of the provisions set forth in this Article 6 with respect to the rights and interests thereafter of Holders of Debentures to the end that the provisions set forth in this Article 6 will thereafter correspondingly be made applicable as nearly as may reasonably be in relation to any shares, other securities or other property thereafter deliverable upon the conversion of any Debenture. Prior to or concurrent with effecting a Capital Reorganization, the Company will enter into an indenture supplemental hereto approved by action of the Board of Directors and by the Indenture Trustee, which will set forth an appropriate adjustment to give effect to this subsection, in which event such adjustment will for all purposes be conclusively deemed to be an appropriate adjustment, subject to the prior written consent of a Recognized Stock Exchange.

6.1.6 If the purchase price provided for in any rights, options or warrants (the "**Rights Offering Price**") referred to in subsections 6.1.3 or 6.1.4 is decreased, the Conversion Price will

forthwith be changed so as to decrease the Conversion Price to the Conversion Price that would have been obtained if the adjustment to the Conversion Price made under subsection 6.1.3 or 6.1.4, as the case may be, with respect to such rights, options or warrants had been made on the basis of the Rights Offering Price as so decreased, provided that the terms of this subsection will not apply to any decrease in the Rights Offering Price resulting from terms in any such rights, options or warrants designed to prevent dilution except to the extent that the resulting decrease in the Conversion Price under this subsection would be greater than the decrease, if any, in the Conversion Price to be made under the terms of this section by virtue of the occurrence of the event giving rise to such decrease in the Rights Offering Price.

6.1.7 In any case in which this section 6.1 shall require that an adjustment shall become effective immediately after a record date for an event referred to herein, the Company may defer, until the occurrence of such event, issuing to the Holder of any Debenture converted after such record date and before the occurrence of such event the additional Common Shares issuable upon such conversion by reason of the adjustment required by such event, provided, however, that the Company shall deliver to such Holder an appropriate instrument evidencing such Holder's right to receive such additional Common Shares upon the occurrence of such event and the right to receive any distributions made on such additional Common Shares declared in favour of holders of record of Common Shares on and after the date of conversion or such later date on which such Holder would, but for the provisions of this subsection 6.1.7, have become the holder of record of such additional Common Shares. Such additional Common Shares so issued shall be prescribed securities as defined in Regulation 6208 of the *Income Tax Act* (Canada).

6.2 Other Adjustment of Conversion Price

If the Company shall take any action affecting the Common Shares, other than an action described in subsections 6.1.2, 6.1.3, 6.1.4 or 6.1.6 but including an action under subsection 6.1.5, which results in a Holder of Debentures being unable, for any period of time, to exercise conversion privileges that it would otherwise be permitted to exercise due to requirements necessary to ensure that the Debentures will be and will remain exempt from Canadian withholding tax, the Conversion Price may be adjusted in such manner and at such time, or such other adjustment to the conversion privilege may be made, as the Board of Directors determine to be equitable in the circumstances, subject to the prior written consent of a Recognized Stock Exchange. Failure of the Board of Directors to take any such action shall be conclusive evidence that the Board of Directors has determined that it is equitable to make no adjustment in the circumstances.

6.3 Rules Regarding Calculation of Adjustment of Conversion Price

For the purposes of sections 6.1 and 6.2:

6.3.1 The adjustments provided for in sections 6.1 and 6.2 are cumulative and will be computed to the nearest one-tenth of one cent and will be made successively whenever an event referred to therein occurs, subject to the following subsections of this section.

6.3.2 No adjustment in the Conversion Price will be required unless the cumulative effect of such adjustment would result in a change of at least 1% in the prevailing Conversion

Price; provided, however, that any adjustments which, except for the provisions of this subsection would otherwise have been required to be made, will be carried forward and taken into account in any subsequent adjustment.

6.3.3 No adjustment in the Conversion Price will be required upon the issuance from time to time of Common Shares pursuant to the Company's stock option plans or share purchase plan, or any dividend reinvestment plan, or any similar plan, if any, as such plans may be replaced, supplemented or further amended from time to time. In addition, for greater certainty, no adjustment in the Conversion Price upon an event referred to in subsection 6.1.4 will be required upon the distribution from time to time of Common Shares by way of private placement or prospectus which is made to the public in general.

6.3.4 No adjustment in the Conversion Price will be made in respect of subsections 6.1.2(c) or (d), 6.1.3 or 6.1.4, if Debentureholders are entitled to participate in such event on the same terms, *mutatis mutandis*, as if they had converted their Debentures prior to or on the effective date or record date of such event. Any such participation will be subject to any required prior consent of a Recognized Stock Exchange.

6.3.5 If at any time a dispute arises with respect to adjustments provided for in section 6.1, such dispute will be conclusively determined, subject to the consent of a Recognized Stock Exchange, by the Company's auditors, or if they are unable or unwilling to act, by such other firm of independent chartered accountants as may be selected by action of the Board of Directors and any such determination will be binding upon the Company, the Indenture Trustee, the Debentureholders and shareholders of the Company; such auditors or accountants will be given access to all necessary records of the Company. If any such determination is made, the Company will deliver an Officer's Certificate to the Indenture Trustee describing such determination, and the Indenture Trustee shall be entitled to act and rely upon such Officer's Certificate.

6.3.6 If the Company sets a record date to determine the holders of Common Shares for the purpose of entitling them to receive any dividend or distribution or sets a record date to take any other action and thereafter and before the distribution to such shareholders of any such dividend or distribution or the taking of any other action, legally abandons its plan to pay or deliver such dividend or distribution or take such other action, then no adjustment in the Conversion Price shall be made.

6.3.7 In the absence of a resolution of the Board of Directors fixing a record date for a Special Distribution or Rights Offering, the Company will be deemed to have fixed as the record date therefor the date on which the Special Distribution or Rights Offering is effected.

For greater certainty, Debentureholders shall have no right to convert Debentures into any security other than Common Shares unless an appropriate adjustment is made by and set forth in an indenture supplemental hereto.

6.4 Certificate as to Adjustment

The Company shall from time to time, immediately after the occurrence of any event which requires an adjustment or readjustment as provided in section 6.1 and 6.2, deliver an

Officer's Certificate to the Indenture Trustee specifying the nature of the event requiring the same and the amount of the adjustment or readjustment necessitated thereby and setting forth in reasonable detail the method of calculation and the facts upon which such calculation is based, and the Indenture Trustee shall be entitled to act and rely upon such Officer's Certificate. Such Officer's Certificate and the amount of the adjustment specified therein shall be conclusive and binding on all parties in interest. Until such Officer's Certificate is received by the Indenture Trustee, the Indenture Trustee may act and be protected in acting on the presumption that no adjustment has been made or is required. Except in respect of any subdivision, reduction, combination or consolidation of the Common Shares contemplated by subsections 6.1.2(a) and 6.1.2(b), the Company shall forthwith give notice to the Debentureholders specifying the event requiring such adjustment or readjustment and the amount thereof, including the resulting Conversion Price; provided that if the Company has given notice under section 6.5 covering all the relevant facts in respect of such event, no such notice need be given under this section 6.4.

6.5 Notice of Special Matters

The Company covenants that, so long as any Debentures remain Outstanding, it will give notice to the Indenture Trustee on account for the Debentureholders of its intention to fix a record date for any event referred to in subsections 6.1.2, 6.1.3, 6.1.4 or 6.1.5 (other than the subdivision, reduction, combination or consolidation of Common Shares contemplated by subsections 6.1.2(a) and 6.1.2(b)) or a cash dividend (other than a Dividend Paid in the Ordinary Course) which may give rise to an adjustment in the Conversion Price, or other adjustment, and such notice shall specify the particulars of such event and the record date and the effective date for such event; provided that the Company shall only be required to specify in such notice such particulars of such event as shall have been fixed and determined on the date on which such notice is given. Such notice shall be given not less than 14 days and not more than 60 days prior to the applicable record date in the case of an event referred to in subsections 6.1.2, 6.1.3 or 6.1.4 and not less than 21 days and not more than 60 days prior to the applicable record date in the case of an event referred to in subsection 6.1.5.

6.6 Notice of Expiry of Conversion Right

The Company covenants that, so long as any Debentures remain Outstanding, it will give notice to the Indenture Trustee on account for the Debentureholders in the manner provided in Article 15, not less than 21 days prior to the Maturity Date, the Redemption Date or the Payment Date, as the case may be, of the expiry of the right of the Holders of the Debentures to convert their Debentures pursuant to subsection 4.1.1.

6.7 Protection of Trustee

The Indenture Trustee shall not at any time be under any duty or responsibility to any Debentureholder to determine whether any facts exist which may require any adjustment in the Conversion Price, or with respect to the nature or extent of any such adjustment when made, or with respect to the method employed in making the same; and shall not be accountable with respect to the validity or value (or the kind or amount) of any Common Shares or of any shares or other securities or other property which may at any time be issued or delivered upon the conversion of any Debenture; and the Indenture Trustee, except to the extent that there has been

a failure by the Indenture Trustee or its employees or agents to act honestly and in good faith or where the Indenture Trustee or its employees or agents have acted negligently or in wilful disregard of their obligations hereunder or shall not have complied with Article 12, shall not be responsible for any failure of the Company to make any cash payment or to issue, transfer or deliver Common Shares or share certificates upon the surrender of any Debenture for the purpose of conversion, or to comply with any of the covenants contained in this Article 6.

ARTICLE 7 COMMON SHARE INTEREST PAYMENT ELECTION

7.1 Common Share Interest Payment Election

7.1.1 Provided that no Event of Default has occurred and is continuing under this Indenture and that all applicable regulatory approvals have been obtained (including any required approval of any Recognized Stock Exchange) in respect of any matter relating to this Article 7, the Company shall have the irrevocable right, from time to time, to make a Common Share Interest Payment Election in respect of all or any part of any Interest Obligation by delivering a Common Share Interest Payment Election Notice to the Indenture Trustee by no later than the earlier of: (i) the date required by Applicable Law or the rules of any Recognized Stock Exchange on which the Common Shares are then listed, or (ii) the day which is not less than 40 days and not more than 60 days prior to the Interest Payment Date to which the Common Share Interest Payment Election relates.

7.1.2 Upon receipt of a Common Share Interest Payment Election Notice, the Indenture Trustee shall, provided that all applicable regulatory approvals have been obtained and in accordance with this Article 7 and such Common Share Interest Payment Election Notice, deliver Common Share Bid Requests, in a form to be provided by the Company and satisfactory to the Indenture Trustee and its counsel acting reasonably, to the investment banks, brokers or dealers identified by the Company in its absolute discretion or sell Common Shares in the open market on a Recognized Stock Exchange, as specified in the Common Share Interest Payment Election Notice. In connection with the Common Share Interest Payment Election, the Indenture Trustee shall have the power to: (i) accept delivery of the Common Shares from the Company and process the Common Shares in accordance with the Common Share Interest Payment Election Notice, (ii) accept bids with respect to, and consummate sales of, such Common Shares, each as the Company shall direct in its absolute discretion, through the investment banks, brokers or dealers identified by the Company in the Common Share Interest Payment Election Notice, (iii) sell Common Shares in the open market on a Recognized Stock Exchange, (iv) invest the proceeds of such sales on the direction of the Company in Canadian Government Obligations which mature at least three Business Days prior to an applicable Interest Payment Date and/or use such proceeds to pay all or part of the Interest Obligation in respect of which the Common Share Interest Payment Election was made and (v) perform any other action necessarily incidental thereto.

7.1.3 The Indenture Trustee shall not incur any liability or be in any way responsible for the consequences of any loss caused by the investment referred to in section 7.1.2(iv) and the Company indemnifies and saves harmless the Indenture Trustee and its officers, directors, employees and agents from and against any and all liabilities, losses, costs, claims, actions,

expenses or demands whatsoever which may be brought against the Indenture Trustee or which it may suffer or incur as a result of performing its obligations set out in section 7.1.2.

7.1.4 The Common Share Interest Payment Election Notice shall provide for, and all bids shall be subject to, the right of the Company, by delivering written notice to the Indenture Trustee at any time prior to the consummation of such delivery and sale of the Common Shares on the Common Share Delivery Date, to withdraw the Common Share Interest Payment Election (which shall have the effect of withdrawing each related Common Share Bid Request), whereupon the Company shall be obliged to pay in cash the Interest Obligation in respect of which the Common Share Interest Payment Election Notice has been delivered. The Indenture Trustee shall be fully indemnified by the Company in respect of any withdrawal of a Common Share Interest Payment Election or any termination of bids or contracts for the issuance or sales of Common Shares entered into by the Indenture Trustee on behalf of the Company.

7.1.5 Any sale of Common Shares pursuant to this Article 7 may be made to one or more Persons whose bids are solicited, but all such sales with respect to a particular Common Share Interest Payment Election shall take place concurrently on the Common Share Delivery Date.

7.1.6 The amount received by a Holder of a Debenture in respect of the Interest Obligation will not be affected by whether or not the Company elects to satisfy the Interest Obligation pursuant to a Common Share Interest Payment Election.

7.1.7 The Indenture Trustee shall inform the Company promptly following receipt of any bid or bids for Common Shares solicited pursuant to the Common Share Bid Requests. The Indenture Trustee shall accept such bid or bids as the Company (in its absolute discretion) shall direct by Written Order. In connection with any bids so accepted, the Company, the Indenture Trustee (if required by the Company in its absolute discretion) and the applicable bidders shall, not later than the Common Share Delivery Date, enter into Common Share Purchase Agreements in a form to be provided by the Company and satisfactory to the Indenture Trustee and its counsel acting reasonably, and shall comply with all Applicable Securities Laws, including the securities rules and regulations of any Recognized Stock Exchange on which the Common Shares are then listed. The Company shall deliver to the Indenture Trustee an Opinion of Counsel that such Common Share Purchase Agreements so comply with such Applicable Securities Laws or regulations of any Recognized Stock Exchange. The Company shall pay all fees and expenses in connection with the Common Share Purchase Agreements including the fees and commissions charged by the investment banks, brokers and dealers and the standard fees of the Indenture Trustee generally charged for this service.

7.1.8 Provided that (i) all conditions specified in each Common Share Purchase Agreement to the closing of all sales thereunder have been satisfied, other than the delivery of the Common Shares to be sold thereunder against payment of the purchase price thereof, and (ii) the purchasers under each Common Share Purchase Agreement shall be ready, willing and able to perform thereunder, in each case on the Common Share Delivery Date, the Company shall, on the Common Share Delivery Date, deliver to the Indenture Trustee the Common Shares to be sold on such date, an amount in cash equal to the difference between the applicable Interest Obligation and the anticipated net proceeds of the Common Shares to be sold and an Officer's

Certificate, upon which the Indenture Trustee may act and rely absolutely without any further enquiry, to the effect that all conditions precedent to such sales, including those set forth in this Indenture and in each Common Share Purchase Agreement, have been satisfied. Upon such deliveries, the Indenture Trustee shall consummate such sales on such Common Share Delivery Date by the delivery of the Common Shares to such purchasers against payment to the Indenture Trustee in immediately available funds of the purchase price therefor.

7.1.9 The Company agrees that any Common Shares issued pursuant to this Article 7 shall be issued for an amount equal to the sale price of such Common Shares realized by the Trustee, with the effect that the Trustee will neither realize a gain or loss with respect to the sale of such Common Shares.

7.1.10 The Indenture Trustee shall, on the Common Share Delivery Date, use the sale proceeds of the Common Shares (together with any cash received from the Company) to purchase, on the direction of the Company in writing, Canadian Government Obligations which mature at least three Business Days prior to the applicable Interest Payment Date and which the Indenture Trustee is required to hold until maturity (the "Common Share Proceeds Investment") and shall, on such date, deposit the balance, if any, of such sale proceeds in the Property Account for such Debentures. At least one Business Day prior to the Interest Payment Date, the Indenture Trustee shall deposit amounts from the proceeds of the Common Share Proceeds Investment in the Property Account to bring the balance of the Property Account to the Common Share Interest Payment Election Amount to the extent that the Indenture Trustee has been provided sufficient funds to do so. On the Interest Payment Date, the Indenture Trustee shall pay the funds held in the Property Account to the Holders in accordance with section 2.10 or 2.12. The Indenture Trustee shall remit amounts, if any, in respect of income earned on the Common Share Proceeds Investment or otherwise in excess of the Common Share Interest Payment Election Amount to the Company.

7.1.11 Neither the making of a Common Share Interest Payment Election nor the consummation of sales of Common Shares on a Common Share Delivery Date will (i) result in the Holders of the Debentures not being entitled to receive on the applicable Interest Payment Date cash in an aggregate amount equal to the Interest Obligation payable on such date, or (ii) entitle such Holders to receive any Common Shares in satisfaction of such Interest Obligation.

ARTICLE 8 SUBORDINATION OF DEBENTURES

8.1 Agreement to Subordinate

The Company covenants and agrees, and each Debentureholder, by his acceptance thereof, likewise agrees, that the payment of the principal of, the premium, if any, and of any interest on the Debentures is hereby expressly subordinated, to the extent and in the manner hereinafter set forth, in right of payment to the prior payment in full of all Permitted Indebtedness whether outstanding on the date of this Indenture or thereafter incurred, notwithstanding that no express written subordination agreement may have been entered into between the holders of Permitted Indebtedness and the Indenture Trustee or the Debentureholders. Notwithstanding the provisions of this section 8.1, the Company shall

continue to make payments on account of interest on the Debentures as they come due unless and until default or an event of default (as defined in any Permitted Indebtedness or any instrument evidencing the same and permitting, by the lapse of time or giving of notice, the holders thereof to accelerate the maturity thereof), has occurred and is continuing and in respect of which notice has been given by or on behalf of the holders of Permitted Indebtedness to the Company.

8.2 Distribution on Insolvency or Winding-up

In the event of any insolvency or bankruptcy proceedings, or any receivership, liquidation, reorganization or other similar proceedings relative to the Company, or to its property or assets, or in the event of any proceedings for voluntary liquidation, dissolution or other winding-up of the Company, whether or not involving solvency or bankruptcy:

8.2.1 The holders of all Permitted Indebtedness will first be entitled to receive payment in full of the principal thereof, premium (or any other amount payable under such Permitted Indebtedness), if any, and interest due thereon, before the Debentureholders will be entitled to receive any payment or distribution of any kind or character, whether in cash, property or securities, which may be payable or deliverable in any such event in respect of any of the Debentures.

8.2.2 Any payment by, or distribution of assets of, the Company of any kind or character, whether in cash, property or securities (other than securities of the Company or any other corporation provided for by a plan of reorganization or readjustment the payment of which is subordinate, at least to the extent provided in this Article 8 with respect to the Debentures, to the payment of all Permitted Indebtedness, provided that (i) the Permitted Indebtedness is assumed by the new corporation, if any, resulting from such reorganization or readjustment, and (ii) without prejudice to the rights of such holders with respect to any such plan (including without limitation as to whether or not to approve same and on what conditions to do so), the rights of the holders of Permitted Indebtedness are not altered adversely by such reorganization or readjustment) to which the Debentureholders or the Indenture Trustee would be entitled, except for the provisions of this Article 8, will be paid or delivered by the Person making such payment or distribution, whether a trustee in bankruptcy, a receiver, a receiver-manager, a liquidator or otherwise, directly to the holders of Permitted Indebtedness or their representative or representatives or to the trustee or trustees under any indenture under which any instruments evidencing any of such Permitted Indebtedness may have been issued, rateably according to the aggregate amounts remaining unpaid on account of the Permitted Indebtedness held or represented by each, to the extent necessary to make payment in full of all Permitted Indebtedness remaining unpaid after giving effect to any concurrent payment or distribution (or provision therefor) to the holders of such Permitted Indebtedness.

8.2.3 Subject to section 8.6, if, notwithstanding the foregoing, any payment by, or distribution of assets of, the Company of any kind or character, whether in cash, property or securities (other than securities of the Company as reorganized or readjusted or securities of the Company or any other corporation provided for by a plan of reorganization or readjustment the payment of which is subordinate, at least to the extent provided in this section 8.2.3 with respect to the Debentures, to the payment of all Permitted Indebtedness, provided that (i) the Permitted Indebtedness is assumed by the new corporation, if any, resulting from such reorganization or

readjustment and (ii) without prejudice to the rights of such holders with respect to any such plan (including without limitation as to whether or not to approve same and on what conditions to do so), the rights of the holders of Permitted Indebtedness are not altered adversely by such reorganization or readjustment), is received by the Indenture Trustee or the Debentureholders before all Permitted Indebtedness is paid in full, such payment or distribution will be held in trust for the benefit of, and will be paid over to the holders of such Permitted Indebtedness or their representative or representatives or to the Indenture Trustee or trustees under any indenture under which any instruments evidencing any of such Permitted Indebtedness may have been issued, rateably as aforesaid, for application to the payment of all Permitted Indebtedness remaining unpaid until such Permitted Indebtedness has been paid in full, after giving effect to any concurrent payment or distribution (or provision therefor) to the holders of such Permitted Indebtedness.

8.3 Subrogation of Debentures

Subject to the payment in full of all Permitted Indebtedness, the Debentureholders shall be subrogated to the rights of the holders of Permitted Indebtedness to receive payments and distributions of assets of the Company in respect of and on account of Permitted Indebtedness, to the extent of the application thereto of moneys or other assets which would have been received by the Debentureholders, but for the provisions of this Article 8, until the principal of, premium, if any, and interest on the Debentures shall be paid in full. No payment or distribution of assets of the Company to the Debentureholders which would be payable or distributable to the holders of Permitted Indebtedness pursuant to this Article 8 shall, as between the Company, its creditors (other than the holders of Permitted Indebtedness) and the Debentureholders, be deemed to be a payment by the Company to or on account of the Debentureholders, it being understood that the provisions of this Article 8 are, and are intended, solely for the purpose of defining the relative rights of the Debentureholders, on the one hand, and the holders of the Permitted Indebtedness, on the other hand. Nothing contained in this Article 8 or elsewhere in this Indenture or in the Debentures is intended to or shall impair, as between the Company and its creditors (other than the holders of Permitted Indebtedness and the Debentureholders), the obligation of the Company, which is unconditional and absolute, to pay to the Debentureholders the principal of and interest on the Debentures, as and when the same shall become due and payable in accordance with their terms, or to affect the relative rights of the Debentureholders and the creditors of the Company, other than the holders of the Permitted Indebtedness, nor shall anything herein or therein prevent the Indenture Trustee or the Holder of any Debentures from exercising all remedies otherwise permitted by applicable law upon default under this Indenture, subject to the rights, if any, under this Article 8, of the holders of Permitted Indebtedness upon the exercise of any such remedy.

8.4 No Payment to Debentureholders if Event of Default under the Permitted Indebtedness

8.4.1 Upon the maturity of any Permitted Indebtedness by lapse of time, acceleration or otherwise, then, except as hereinafter otherwise provided in subsection 8.4.3, all principal of and premium or penalty (or any other amounts payable under such Permitted Indebtedness), if any, and interest on all such matured Permitted Indebtedness shall first be paid in full, or shall first have been duly provided for, before any payment on account of principal of, premium, if any,

and interest on the Debentures is made, including the Redemption Price, any amount owed upon a Change of Control or on the Maturity Date.

8.4.2 Except as hereinafter otherwise provided in subsection 8.4.3, the Company shall not make any payment, and the Debentureholders shall not be entitled to demand, institute proceedings for the collection of, or receive any payment or benefit (including without limitation by compensation, set-off, combination of accounts or realization of security or otherwise in any manner whatsoever) on account of the indebtedness represented by the Debentures (other than pursuant to section 4.1) (i) in a manner inconsistent with the terms (as they exist on the date hereof) of this Indenture or of the Debentures, or (ii) at any time when a default or an event of default, as defined in any Permitted Indebtedness or any instrument evidencing the same and permitting, by the lapse of time or giving of notice, the holders thereof to accelerate the maturity thereof, has occurred under Permitted Indebtedness and is continuing and notice of such default or event of default has been given by or on behalf of the holders of Permitted Indebtedness to the Company, unless and until such Permitted Indebtedness have been paid and satisfied in full, or unless and until such default or event of default shall have been cured or waived in writing or shall have ceased to exist in accordance with the provisions of such Permitted Indebtedness.

8.4.3 For greater certainty but without limiting the generality of the foregoing, this section 8.4 shall not be construed so as to prevent the Indenture Trustee from receiving and retaining any payments on account of Debentures which are made (i) in a manner that is consistent with the terms of this Indenture or of the Debentures, and (ii) at any time when no default or event of default (as defined in any Permitted Indebtedness or any instrument evidencing the same and permitting, by the lapse of time or giving of notice, the holders thereof to accelerate the maturity thereof) has occurred and is continuing and in respect of which notice has not been given by or on behalf of the holders of Permitted Indebtedness to the Company.

8.5 Authorization of Debentureholders to Trustee to Effect Subordination

Each Holder of Debentures, by his acceptance thereof, authorizes and directs the Indenture Trustee, on its behalf, to execute and deliver any such subordination agreements with the Company and the holders, or representatives or trustees thereof, of Permitted Indebtedness, whether outstanding or hereafter incurred, which Counsel shall advise contains the subordination provisions hereof and as may be necessary in the Opinion of Counsel or appropriate to effect the subordination provided for in this Article 8 and appoints the Indenture Trustee his attorney-in-fact for any and all such purposes.

8.6 Knowledge of Trustee

Notwithstanding the provisions of this Article 8, the Indenture Trustee will not be charged with knowledge of the existence of any facts that would prohibit the making of any payment of moneys to or by the Indenture Trustee, or the taking of any other action by the Indenture Trustee, unless and until the Indenture Trustee has received written notice thereof from the Company, any Debentureholder or any holder or representative of any class of Permitted Indebtedness.

8.7 Trustee May Hold Permitted Indebtedness

The Indenture Trustee is entitled to all the rights set forth in this Article 8 with respect to any Permitted Indebtedness at the time held by it, to the same extent as any other holder of Permitted Indebtedness, and nothing in this Indenture deprives the Indenture Trustee of any of its rights as such holder.

8.8 Rights of Holders of Permitted Indebtedness Not Impaired

No right of any present or future holder of any Permitted Indebtedness to enforce the subordination herein will at any time or in any way be prejudiced or impaired by any act or failure to act on the part of the Company or by any non-compliance by the Company with the terms, provisions and covenants of this Indenture, regardless of any knowledge thereof which any such holder may have or be otherwise charged with.

8.9 Altering the Permitted Indebtedness

The holders of the Permitted Indebtedness have the right to extend, renew, modify or amend the terms of the Permitted Indebtedness or any security therefor and to release, sell or exchange such security and otherwise to deal freely with the Company, all without notice to or consent of the Debentureholders or the Indenture Trustee and without affecting the liabilities and obligations of the parties to this Indenture or the Debentureholders or the Indenture Trustee.

8.10 Additional Indebtedness

This Indenture does not restrict the Company or its Affiliates from incurring additional indebtedness for borrowed money (including additional Permitted Indebtedness or indebtedness ranking pari passu with any Debentures), the issuance or repurchase of securities by the Company or its Affiliates or otherwise from hypothecating or charging its property to secure any indebtedness, provided, however, that the Company shall not incur any additional indebtedness, other than Permitted Indebtedness, unless the Debentures shall rank at least pari passu to such additional indebtedness.

8.11 Right of Debentureholder to Convert Not Impaired

The subordination of the Debentures to the Permitted Indebtedness and the provisions of this Article 8 do not impair in any way the right of a Debentureholder to convert its Debentures pursuant to section 4.1.

**ARTICLE 9
COVENANTS OF THE COMPANY .**

9.1 Payment of Principal, Premium and Interest

The Company covenants and agrees with the Indenture Trustee and for the benefit of the Holders of each Debenture that it will duly and punctually pay the principal of (and premium, if any) and interest on the Debentures in accordance with their terms and this Indenture.

9.2 Corporate Existence; Books of Account

9.2.1 The Company covenants and agrees with the Indenture Trustee for the benefit of each Holder that:

- (a) it will at all times maintain its corporate existence; and
- (b) it will keep or cause to be kept proper books of account in accordance with Canadian generally accepted accounting principles.

9.3 Compliance Certificate

9.3.1 The Company shall deliver to the Indenture Trustee within 140 days after the end of each fiscal year of the Company (and at any other reasonable time upon demand by the Indenture Trustee) an Officer's Certificate stating that the Company has complied with all requirements of the Company contained in this Indenture that, if not complied with, would, with the giving of notice, lapse of time, or otherwise, constitute an Event of Default. If an Event of Default shall have occurred, the certificate shall describe the nature and particulars of the Event of Default and its current status and steps taken or proposed to be taken to eliminate such circumstances and remedy such Event of Default, as the case may be.

9.4 Notice of Default

9.4.1 The Company will promptly notify the Indenture Trustee upon becoming aware of the occurrence of any Event of Default.

9.5 Securities Laws

9.5.1 The Company covenants and agrees with the Indenture Trustee for the benefit of the Holders that:

- (a) it will take all reasonable steps and actions and do all such acts and things as may be required to: (i) obtain a listing of the Debentures on a Recognized Stock Exchange, (ii) as long as it meets the minimum listing requirements of such institutions, maintain the listing and posting for trading of the Debentures, if applicable, and the Common Shares on a Recognized Stock Exchange, and (iii) maintain its status as a reporting issuer or equivalent in good standing or equivalent under the Applicable Securities Laws in the Provinces of Canada in which the Company is currently a reporting issuer or equivalent; and
- (b) it will, at the relevant times and upon exercise of the relevant rights or elections, comply and take all measures necessary to comply at all times with subsections 3.7.3, 4.1.3 and 5.2.3 including, without limitation, make application for any order, ruling, registration or filing or give any notice required under Applicable Securities Laws.

9.5.2 The Indenture Trustee shall have no obligation to verify information relating to the Company's compliance with this section 9.5 and may act and rely upon all information provided by the Company with respect to such compliance, without independent inquiry.

9.6 Performance of Covenants by Indenture Trustee

9.6.1 If the Company fails to perform any of its covenants contained in this Indenture, the Indenture Trustee may itself perform any of such covenants capable of being performed by it, but will be under no obligation to do so. All sums expended or advanced by the Indenture Trustee for such purpose will be repayable as provided in section 9.7 of the Indenture. No such performance or advance by the Indenture Trustee shall relieve the Company of any default hereunder or its continuing obligations hereunder.

9.7 Payment of Indenture Trustee's Remuneration

The Company will pay on demand the Indenture Trustee's reasonable remuneration for its services as Indenture Trustee hereunder (including reimbursement for distributions which include legal services) and will repay to the Indenture Trustee on demand all moneys which shall have been paid by the Indenture Trustee out of its own funds in and about the execution of the trusts hereby created with interest at such reasonable rate as shall have been agreed to by the Trustee from time to time, from the date of expenditure until repayment, with a reasonable rate of interest to be charged by the Indenture Trustee on any overdue accounts of the Company. The said remuneration shall continue to be payable until the trusts hereof are finally wound up and whether or not the trusts of this Indenture shall be in course of administration by or under the direction of the court. This Section 9.7 shall survive the resignation of the Indenture Trustee or the termination of this Agreement. Notwithstanding the foregoing, the Company need not pay or reimburse the Indenture Trustee for expenses, disbursements or advances if the Indenture Trustee incurred such expenses, disbursements or advances as a result of its dishonesty, bad faith, wilful misconduct, negligence or reckless disregard of a right, duty or obligation by the Indenture Trustee.

ARTICLE 10 EVENTS OF DEFAULT AND REMEDIES

10.1 Events of Default and Enforcement

10.1.1 If and when any one or more of the following events (herein called an "Event of Default") shall happen with respect to the Debentures, namely:

- (a) a default in payment of principal (and premium, if any) on any Debentures when due;
- (b) a default in payment of interest on any Debentures when due and payable and the continuance of such default for 30 days;
- (c) a default in the observance of the covenant contained in subsection 9.5.1 and the continuance of such default for 10 Business Days;

- (d) a material default in performing or observing any of the other covenants, agreements or obligations of the Company as described herein and the continuance of such default for 60 days after written notice to the Company by the Indenture Trustee or by the Holders of not less than 25% in principal amount of Outstanding Debentures requiring the same to be remedied, or such longer period of time as the Indenture Trustee (having regard to the subject matter of neglect or non-observance) shall agree to;
- (e) the failure to make an Offer to Purchase upon a Change of Control;
- (f) a decree, judgment, or order by a court having jurisdiction in the premises shall have been entered adjudging the Company bankrupt or insolvent or approving as properly filed a petition seeking reorganization, readjustment, arrangement, composition or similar relief for the Company, under the Bankruptcy and Insolvency Act (Canada) or any other bankruptcy, insolvency or analogous applicable law of Canada or any province thereof, and such decree, judgment or order of a court having jurisdiction in the premises for the appointment of a receiver or liquidator or trustee or assignee in bankruptcy or insolvency of the Company or of a substantial part of its property, or for the winding up or liquidation of its affairs, shall have remained in force for a period of 30 consecutive days; or any substantial part of the property of the Company shall be sequestered or attached and shall not be returned to the possession of the Company or released from such attachment, as the case may be, whether by filing of a bond, or stay or otherwise, within 30 consecutive days thereafter;
- (g) the Company shall institute proceedings to be adjudicated a voluntary bankrupt, or shall consent to the filing of a bankruptcy proceeding against it, or shall file a petition or answer or consent seeking reorganization, readjustment, arrangement, composition or similar relief under the Bankruptcy and Insolvency Act (Canada) or any other bankruptcy, insolvency or analogous applicable law of Canada or any province thereof or shall consent to the filing of any such petition, or shall consent to the appointment of a receiver or liquidator or trustee or assignee in bankruptcy or insolvency for it or of a substantial part of its property, or shall make an assignment for the benefit of creditors, or shall be unable, or admit in writing its inability, to pay its debts generally as they become due, or corporate action shall be taken by the Company in furtherance of any of the aforesaid actions; or
- (h) a default under the terms of any Permitted Indebtedness of the Company, whether such debt now exists or shall hereafter be created, which default results in such debt being declared due and payable prior to the date on which it would otherwise become or be due and payable and such acceleration is not rescinded or annulled within 10 days after the date of such acceleration unless the Company shall, in good faith, be contesting such acceleration or unless such default is cured or waived pursuant to the terms of the Permitted Indebtedness;

then, and in each and every such case which has happened and is continuing, the Indenture Trustee may, in its discretion, and shall, upon the written request of the Holders of not less than

50% in principal amount of the Outstanding Debentures at such time (or, if there is a Global Debenture Outstanding, a written request of the Participants having received instructions from the Beneficial Holders holding at least 50% of the Outstanding Debentures), declare the principal of (and premium, if any) together with accrued interest on all such Debentures to be due and payable immediately, by a Notice in writing to the Company (and to the Indenture Trustee if given by the Holders), and upon any such declaration such principal amount and premium, if any, together with accrued interest thereon, shall become immediately due and payable. If the Indenture Trustee fails to notify in writing the Company pursuant to the terms hereof, the Holders of Debentures having provided the written request to the Indenture Trustee may do so.

10.2 Notice of Event of Default

10.2.1 The Indenture Trustee shall give to the Holders within five days after the Indenture Trustee becomes aware by way of written Notice of the occurrence of an Event of Default, Notice of every Event of Default so occurring and continuing at the time the Notice is given, unless the Indenture Trustee reasonably and in good faith determines that the withholding of such Notice is in the best interests of the Holders and gives written Notice of such determination to the Company. When a Notice of the occurrence of an Event of Default is given by the Indenture Trustee pursuant to this subsection 10.2.1 and the Event of Default is thereafter cured, the Indenture Trustee shall give Notice that the Event of Default is no longer outstanding to all Holders to whom Notice of the occurrence of the Event of Default was given within 5 days after the Indenture Trustee becomes aware, by written Notice given by the Company to the Indenture Trustee, that the Event of Default has been cured and is no longer outstanding.

10.3 Waiver of Declaration

10.3.1 At any time after a declaration of acceleration with respect to the Debentures has been made pursuant to section 10.1 and before a judgment or decree for payment of the money due has been obtained by the Indenture Trustee as hereinafter provided, the Holders of not less than 50% in principal amount of Outstanding Debentures, by written Notice to the Company and the Indenture Trustee, may thereupon rescind and annul such declaration and its consequences if the Company has paid or deposited with the Indenture Trustee a sum sufficient to pay:

- (a) all overdue interest on all Debentures;
- (b) the principal of (and premium, if any) any of the Debentures which have become due otherwise than by such declaration of acceleration, and interest thereon at the rate or rates prescribed therefor in such Debentures; and
- (c) to the extent that payment of such interest is lawful and applicable, interest upon overdue instalments of interest at the rate or rates prescribed therefor in such Debentures; and

all Events of Default with respect to the Debentures, other than the non-payment of the principal of (and premium, if any), and interest on, such Debentures which have become due solely by such declaration of acceleration, have been cured or waived in accordance with the provisions of this Indenture.

10.4 Waiver

10.4.1 The Holders of not less than 50% in aggregate principal amount of the Outstanding Debentures may on behalf of the Holders of all Debentures waive any past default hereunder and its consequences, except a default:

- (a) in the payment of the principal of (or premium, if any) or interest on any Debentures; or
- (b) in respect of a covenant or provision hereof that under Article 16 cannot be modified or amended without an Extraordinary Resolution passed by the Holders.

10.4.2 Upon any such waiver, such default shall cease to exist, and any Event of Default arising therefrom shall be deemed to have been cured, for every purpose of this Indenture. No such waiver shall extend to any subsequent or other default or impair any right consequent thereon.

10.5 Other Remedies

10.5.1 If an Event of Default occurs and is continuing, the Indenture Trustee may pursue any available remedy to collect the payment of principal of (and premium, if any) or interest on Debentures or to enforce the performance of any term of the Debentures or this Indenture.

10.5.2 The Indenture Trustee may maintain a Proceeding even if it does not possess any Debentures or does not produce any of them in the Proceeding. A delay or omission by the Indenture Trustee or any Holder in exercising any right or remedy accruing upon an Event of Default shall not impair the right or remedy or constitute a waiver of or acquiescence in the Event of Default.

10.6 Application of Money Collected

Any money collected by the Indenture Trustee pursuant to this article in respect of Debentures shall (subject to any claims having priority under Applicable Law) be applied in the following order, at the dates fixed by the Indenture Trustee and, in case of the distribution of such money on account of principal of (and premium, if any) or interest, upon presentation of Debentures and the notation thereon of the payment (if only partially paid) and upon surrender thereof (if fully paid):

- (a) first, to the payment of all amounts due to the Indenture Trustee under this Indenture with respect to such Debentures;
- (b) second, to the payment of accrued interest on such Debentures;
- (c) third, to the payment of the principal of (and premium, if any) on such Debentures;
- (d) fourth, to the payment of any other amounts with respect to such Debentures; and

- (e) fifth, to whomever may be lawfully entitled to receive the balance of such money.

10.7 Control by Holders

10.7.1 The Holders of at least 25% in principal amount of the Outstanding Debentures may:

- (a) direct the time, method and place in the Province of Ontario of conducting any Proceeding for any remedy available to the Indenture Trustee or exercising any trust or power conferred on it with respect to the Debentures; and
- (b) take any other action authorized to be taken by or on behalf of the Holders of any specified aggregate principal amount of Debentures under any provisions of this Indenture or under Applicable Law.

The Indenture Trustee may refuse, however, to follow any direction that conflicts with law or this Indenture.

10.8 Limitation on Suits

10.8.1 No Holder of any Debenture will have any right to pursue any remedy (including any action, suit or proceeding authorized or permitted by this Indenture or pursuant to Applicable Law) with respect to this Indenture or the Debentures unless: (i) the Holder gives to the Indenture Trustee notice of a continuing Event of Default; (ii) the Holders of at least 25% in principal amount of the then Outstanding Debentures make a request in writing to the Indenture Trustee to pursue the remedy; (iii) such Holder or Holders offer or provide to the Indenture Trustee security and indemnity in form satisfactory to the Indenture Trustee against any loss, liability or expense; (iv) the Indenture Trustee does not comply with the request within 30 days after receipt of such request and indemnity; and (v) during such 30-day period the Holders of a majority in principal amount of Outstanding Debentures do not give the Indenture Trustee a direction inconsistent with the request.

10.8.2 Holders may not use this Indenture to prejudice the rights of another Holder or to obtain a preference or priority over another Holder.

10.9 Collection Suit by Indenture Trustee

11.9.1 If an Event of Default specified in clause (a), (b), (c), (d) or (h) of section 10.1 occurs and is continuing, the Indenture Trustee may recover judgment in its own name and as trustee against the Company for the whole amount of principal (and premium, if any) and interest remaining unpaid.

10.10 Indenture Trustee May File Proofs of Claim

10.10.1 The Indenture Trustee may file such proofs of claim and other papers--or documents as may be necessary or advisable in order to have the claims of the Indenture Trustee and the Holders lodged or allowed in any judicial proceedings relative to the Company, its creditors or its property.

10.11 Undertaking for Costs

10.11.1 In any suit for the enforcement of any right or remedy under this Indenture or in any suit against the Indenture Trustee for any action taken or omitted by it as Indenture Trustee, a court in its discretion may require the filing by any party litigant in the suit of an undertaking to pay the costs of the suit, and the court in its discretion may assess reasonable costs, including reasonable attorneys' fees, against any party litigant in the suit, having due regard to the merits and good faith of the claims or defences made by the party litigant. This subsection 10.11.1 does not apply to a suit by the Indenture Trustee, a suit by a Holder pursuant to section 10.8, or a suit by any Holder or group of Holders of more than 50% in principal amount of the Outstanding Debentures.

10.12 Delay or Omission Not Waiver

10.12.1 No delay or omission of the Indenture Trustee or of any Holder of any Debenture to exercise any right or remedy accruing upon any Event of Default shall impair any such right or remedy or constitute a waiver of any such Event of Default or an acquiescence therein. Every right and remedy given by this article or by law to the Indenture Trustee or to the Holders may be exercised from time to time, and as often as may be deemed expedient, by the Indenture Trustee or by the Holders, as the case may be.

10.13 Remedies Cumulative

10.13.1 No remedy herein conferred upon or reserved to the Indenture Trustee or upon or to the Holders is intended to be exclusive of any other remedy, but each remedy shall be cumulative and shall be in addition to every other remedy given hereunder or now existing or hereafter to exist by law or statute.

10.14 Judgment Against the Company

10.14.1 The Company covenants and agrees with the Indenture Trustee that, in case of any Proceeding to obtain judgment for payment of the principal of, premium, if any, or interest, if any, on the Debentures, judgment may be rendered against it in favour of the Holders or in favour of the Indenture Trustee, as holder of a power of attorney for the Holders, for the amount which may remain due in respect of the Debentures and the interest and premium, if any, thereon.

**ARTICLE 11
SATISFACTION AND DISCHARGE**

11.1 Non-Presentation of Debentures

If any Debentureholder fails to present any Debentures for payment on the date on which the principal of, premium, if any, or interest thereon, becomes payable, whether on a Redemption Date, Payment Date, Maturity Date or any other repayment date, or shall not accept payment on account thereof and give such receipt therefor, if any, as the Indenture Trustee may require:

- (a) the Company shall thereafter be entitled to pay or deliver to the Indenture Trustee and direct the Indenture Trustee to set aside;
- (b) in respect of moneys or Common Shares in the hands of the Indenture Trustee which may or should be applied to the payment of the Debentures, the Company shall thereafter be entitled to direct the Indenture Trustee to set aside; or
- (c) if the redemption was made pursuant to any Notice given by the Indenture Trustee, the Indenture Trustee may itself thereafter set aside,

the principal of, premium, if any, and interest on such Holder's Debentures, in trust to be paid to such Debentureholder upon due presentation or surrender of such Debentures in accordance with the provisions of this Indenture; and thereupon the principal of, premium, if any, and interest payable on each Debenture in respect whereof such moneys and, if permitted hereunder, Common Shares have been set aside shall be deemed to have been paid and the Holder thereof shall thereafter have no right in respect thereof except to receive delivery and payment of the moneys or Common Shares, if applicable, so set aside by the Indenture Trustee upon due presentation and surrender thereof, subject to the provisions of subsection 2.4. For greater certainty, the provisions of Article 6 shall not prevent the application of moneys received by the Trustee pursuant to this subsection 11.1 to the payment of principal, premium, if any, and interest on such Holder's Debentures.

11.2 Discharge

The Indenture Trustee shall at the written request of the Company release and discharge this Indenture and execute and deliver such instruments as it shall be advised by Counsel are requisite for that purpose and release the Company from its covenants herein contained (other than the provisions relating to the indemnification of the Indenture Trustee), upon proof being given to the reasonable satisfaction of the Indenture Trustee that the principal of, premium, if any, and interest on (including interest on amounts in default, if any) all of the Debentures and all other moneys payable hereunder have been paid or satisfied or that, all of the Debentures having matured or having been duly called for redemption, payment of the principal of, premium, if any, and interest (including interest on amounts in default, if any) on such Debentures and all other moneys payable hereunder have been duly and effectually provided for in accordance with the provisions hereof.

ARTICLE 12 THE INDENTURE TRUSTEE

12.1 Duties of Indenture Trustee

12.1.1 In the exercise of its rights, duties and obligations prescribed or conferred by this Indenture, the Indenture Trustee shall act honestly and in good faith and shall exercise that degree of care, diligence and skill that a reasonably prudent corporate trustee would exercise in comparable circumstances. Subject to the foregoing, the Indenture Trustee shall be liable only for an act or failure to act arising from or in connection with dishonesty, bad faith, wilful misconduct, negligence or reckless disregard of a right, duty or obligation by the Indenture Trustee. The Indenture Trustee shall not be liable for any act or default on the part of any agent

employed by it or for permitting any agent or co-trustee to receive and retain any moneys payable to the Indenture Trustee under this Indenture, except as aforesaid.

12.2 Employ Agents

12.2.1 The Indenture Trustee may, but is not required to, employ (at the expense of the Company) such Counsel, agents and other assistants as it may reasonably require for the proper determination and discharge of its duties under this Indenture, and shall not be responsible for any negligence or misconduct on the part of any such Counsel, agent or other assistant or for any liability incurred by any Person as a result of not employing such Counsel, agent or other assistant, and may pay reasonable remuneration for all services performed for it with respect to this Indenture, and shall be entitled to receive reimbursement for all reasonable disbursements, costs, liabilities and expenses made or incurred by it with respect to this Indenture. All such disbursements, costs, liabilities and expenses in relation to this Indenture and all expenses incidental to the preparation, execution, creation and issuance of the Debentures, whether done or incurred at the request of the Indenture Trustee or the Company, shall bear interest at the posted annual rate of interest charged by the Indenture Trustee from time to time to its corporate trust customers from the date which is 30 days following receipt by the Company of an invoice from the Indenture Trustee with respect to such expenses until the date of reimbursement and shall (together with such interest) be paid by the Company immediately upon receipt of such invoice.

12.3 Reliance on Evidence of Compliance

12.3.1 In the exercise of its rights, duties and obligations under this Indenture, the Indenture Trustee may, if it is acting in good faith, act and rely, as to the truth of the statements and the accuracy of the opinions expressed therein, upon statutory declarations, Opinions of Counsel, reports, directions, orders, certificates and Certificates of the Company required by the Indenture Trustee to be furnished to it in the exercise of its rights, duties and obligations under this Indenture, if the Indenture Trustee examines such statutory declarations, Opinions of Counsel, reports, directions, orders, certificates or Certificates of the Company and determines that they indicate compliance with the applicable requirements of this Indenture.

12.4 Provision of Evidence of Compliance to Indenture Trustee

12.4.1 In addition to any other provisions of this Indenture, the Indenture Trustee may, at any time any action is taken which relates to any of paragraphs (a) through (c) below, and acting in good faith, require evidence of compliance with the conditions precedent provided for in this Indenture relating to:

- (a) the certification pursuant to section 2.7 and delivery of Debentures;
- (b) the satisfaction and discharge of this Indenture; or
- (c) the taking of any other action or step to be taken by the Indenture Trustee at the request, or on the application, of the Company.

12.5 Contents of Evidence of Compliance

12.5.1 Evidence of compliance required by section 12.4 shall consist of:

- (a) a Certificate of the Company that the conditions precedent referred to in such Certificate have been complied with in accordance with the terms of this Indenture;
- (b) in the case of conditions precedent compliance with which are, pursuant to this Indenture, made subject to review or examination by Counsel, an Opinion of Counsel to the Company that such conditions precedent have been complied with in accordance with the terms of this Indenture; and
- (c) in the case of conditions precedent compliance with which are subject to the review or examination by auditors or appraisers, an opinion or report of a chartered accountant or appraiser, as the case may be, approved by the Indenture Trustee acting reasonably, that such conditions precedent have been complied with in accordance with the terms of this Indenture.

12.5.2 Whenever such evidence relates to a matter other than the satisfaction and discharge of this Indenture, and except as otherwise specifically provided herein, such evidence may consist of a report or opinion of any solicitor, auditor, accountant, engineer or appraiser or any other person whose qualifications give authority to a statement made by him, provided that if such report or opinion is furnished by a director, officer or employee of the Company it shall be in the form of a statutory declaration. Such evidence shall be, so far as appropriate, in accordance with the immediately following paragraph of this Section.

12.5.3 Each statutory declaration, certificate, opinion or report with respect to compliance with a condition precedent provided for in the Indenture shall include (i) a statement by the person giving the evidence that he has read and is familiar with those provisions of this Indenture relating to the condition precedent in question, (ii) a brief statement of the nature and scope of the examination or investigation upon which the statements or opinions contained in such evidence are based, (iii) a statement that, in the belief of the person giving such evidence, he has made such examination or investigation as is necessary to enable him to make the statements or give the opinions contained or expressed therein, and (iv) a statement whether in the opinion of such person the conditions precedent in question have been complied with or satisfied.

12.6 Advice of Experts

12.6.1 The Indenture Trustee may act or not act and rely or not rely, and shall be protected in acting or not acting and relying or not relying in good faith, on the opinion, advice or information (including the Opinion of Counsel) obtained from any counsel, auditor, valuer, engineer, surveyor or other expert, whether obtained by the Indenture Trustee or by the Company, and, if acting in good faith, may rely as to the truth of the statements and the accuracy of the opinions expressed in any report or opinion furnished by such Person and may obtain such assistance as may be necessary to the proper determination and discharge of its duties and may

pay proper and reasonable compensation for all such legal and other advice or assistance as aforesaid, including the disbursements of any legal or other advisor or assistants.

12.7 Indenture Trustee May Deal in Debentures

12.7.1 In its personal capacity or any other capacity, the Indenture Trustee, and each Affiliate of the Indenture Trustee, may buy, sell, lend upon, become a pledgee of and deal in the Debentures and generally contract and enter into financial transactions with the Company and any Affiliate of the Company without being liable to account for any profits made thereby.

12.8 Conditions Precedent to Indenture Trustee's Obligation to Act

12.8.1 The Indenture Trustee shall not be bound to give any notice, or to do, observe or perform or see to the observance or performance by the Company of any of the obligations imposed under the Indenture or to supervise or interfere with any of the activities of the Company, or to do or take any act, action or Proceeding by virtue of the powers conferred on it by this Indenture, unless and until it shall have been required to do so under the terms of this Indenture; nor shall the Indenture Trustee be required to take notice of any default or Event of Default, other than in payment of any moneys required by this Indenture to be paid to the Indenture Trustee, unless and until notified in writing of such default or Event of Default by the Company or by any Holder, which notice shall distinctly specify default or Event of Default, and in the absence of any such notice the Indenture Trustee may conclusively assume that no default or Event of Default has occurred. Any such notice or requisition shall in no way limit any discretion given to the Indenture Trustee in this Indenture to determine whether or not to take action with respect to any default or Event of Default or with respect to any such requisition.

12.8.2 The obligation of the Indenture Trustee to do any of the actions referred to in subsection 12.8.1, including to commence or to continue any Proceeding or any right of the Indenture Trustee or the Holders, shall be conditional upon the Holders furnishing, when required by notice in writing by the Indenture Trustee, sufficient funds to commence or continue such action and an indemnity satisfactory to the Indenture Trustee to protect and hold harmless the Indenture Trustee against the costs, charges, expenses and liabilities which may result from such action and any loss and damage the Indenture Trustee may suffer by reason of such action.

12.8.3 Before commencing or at any time during the continuance of any Proceeding, the Indenture Trustee may require the Holders on whose behalf it is acting to deposit with the Indenture Trustee the Debentures held by them, and the Indenture Trustee shall issue receipts for such Debentures.

12.9 Indenture Trustee Not Required to Give Security

12.9.1 The Indenture Trustee shall not be required to give Security for its conduct or administration under this Indenture.

12.10 Resignation or Removal of Indenture Trustee; Conflict of Interest

12.10.1 The Indenture Trustee represents and warrants to the Company that at the time of the execution and delivery of this Indenture no material conflict of interest exists with respect to the Indenture Trustee's role as a fiduciary hereunder.

12.10.2 The Indenture Trustee may resign as trustee hereunder by giving not less than 60 days notice in writing to the Company or such shorter notice as the Company may accept as sufficient. The Indenture Trustee shall resign if a material conflict of interest arises with respect to its role as trustee under this Indenture that is not eliminated within 90 days after the Indenture Trustee becomes aware of such conflict of interest. Immediately after the Indenture Trustee becomes aware that it has a material conflict of interest it shall provide the Company with written notice of the nature of that conflict. Upon any such resignation, the Indenture Trustee shall be discharged from all further duties and liabilities under this Indenture. None of the validity and enforceability of this Indenture or the Debentures shall be affected in any manner whatsoever by reason only of the existence of a material conflict of interest on the part of the Indenture Trustee (whether arising prior to or after the date of this Indenture). If the Indenture Trustee does not comply with this section, any Holder or the Company may apply to the Ontario Superior Court of Justice in the judicial district of Toronto for an order that the Indenture Trustee be replaced as trustee under this Indenture.

12.10.3 In the event of the Indenture Trustee resigning or being removed by the Holders by Extraordinary Resolution or by the Company or being dissolved, becoming insolvent or bankrupt, going into liquidation or otherwise becoming incapable of acting as trustee under this Indenture, the Company shall immediately appoint a successor Indenture Trustee unless a successor Indenture Trustee has already been appointed by the Holders; failing such appointment by the Company, the retiring Indenture Trustee or any other Holder may apply to a judge of the Ontario Superior Court of Justice in the judicial district of Toronto, on such notice as such judge may direct, for the appointment of a successor Indenture Trustee. The successor Indenture Trustee so appointed by the Company or by such court shall be subject to removal by the Holders by way of an Act of Holders. Any successor Indenture Trustee appointed under any provision of this section shall be a corporation authorized to carry on the business of a trust corporation in Canada or the Province of Ontario. On any appointment of the successor Indenture Trustee, the successor Indenture Trustee shall be vested with the same powers, rights, duties and responsibilities as if it had been originally named in this Indenture as Indenture Trustee. The expenses of all acts, documents and Proceedings required under this section will be paid by the Company in the same manner as if the amount thereof were fees payable to the Indenture Trustee under this Indenture.

12.10.4 Any successor Indenture Trustee shall, immediately upon appointment, become vested with all the estates, properties, rights, powers and trusts of its predecessor in the trusts under this Indenture, with like effect as if originally named as Indenture Trustee hereunder. Nevertheless, upon the written request of the successor Indenture Trustee or of the Company and upon payment of all outstanding fees and expenses, the Indenture Trustee ceasing to act shall execute and deliver a document assigning and transferring to such successor Indenture Trustee, upon the trusts expressed in this Indenture, all the rights, powers and trusts of the Indenture Trustee so ceasing to act, and shall duly assign, transfer and deliver all property (including

money) held by such Indenture Trustee to the successor Indenture Trustee in its place. Should any deed, conveyance or other document in writing from the Company be required by any successor Indenture Trustee for more fully and certainly vesting in and confirming to it such estates, properties, rights, powers and trusts, then any and all such deeds, conveyances and other documents in writing shall, on the request of the successor Indenture Trustee, be made, executed, acknowledged and delivered by the Company.

12.10.5 Any corporation into which the Indenture Trustee is amalgamated or with which it is consolidated or to which all or substantially all of its corporate trust business is sold or is otherwise transferred or any corporation resulting from any consolidation or amalgamation to which the Indenture Trustee is a party shall be a successor Indenture Trustee under this Indenture, without the execution of any document or any further act; provided that such successor Indenture Trustee is a corporation qualified to carry on the business of a trust corporation in Canada or the Province of Ontario and shall not have a material conflict of interest in its role as a fiduciary under this Indenture.

12.11 Authority to Carry on Business; Resignation

12.11.1 The Indenture Trustee represents and warrants to the Company that at the date of execution and delivery by it of this Indenture it is authorized to carry on the business of a trust corporation in Canada. If the Indenture Trustee ceases to be so authorized to carry on business, the validity and enforceability of this Indenture and the Debentures issued hereunder shall not be affected in any manner by reason only of such event but the Indenture Trustee shall, within 90 days after ceasing to be authorized to carry on the business of a trust corporation in Canada, either become so authorized or resign in the manner and with the effect specified in section 12.10.

12.12 Protection of Indenture Trustee

12.12.1 By way of supplement to any Applicable Law from time to time relating to trustees and in addition to any other provision of this Indenture for the relief of the Indenture Trustee, it is expressly agreed that:

- (a) the Indenture Trustee shall not be liable for or by reason of any statements of fact or recitals in this Indenture or in the Debentures (except the representations and warranties contained in the last sentence of subsection 2.7.4 and in subsection 12.10.1 and sections 12.1 and 12.13 which are being given by the Indenture Trustee in its personal capacity) or required to verify the same, but all such statements or recitals are and shall be deemed to be made by the Company;
- (b) the Indenture Trustee shall not be bound to give to any Person notice of the execution of this Indenture unless and until an Event of Default and a declaration of acceleration has occurred, and the Indenture Trustee has determined or become obliged to enforce the same;
- (c) the Indenture Trustee shall not incur any liability or be in any way responsible for the consequence of any breach on the part of the Company of any of the

covenants contained in this Indenture or of any acts of the agents or servants of the Company;

- (d) the Company indemnifies and saves harmless the Indenture Trustee and its officers, directors and employees and agents from and against any and all liabilities, losses, costs, claims, actions, expenses (including legal fees and disbursements on a solicitor and client basis) or demands whatsoever which may be brought against the Indenture Trustee or which it may suffer or incur as a result of or arising out of the performance of its duties and obligations under this Indenture, including those arising out of or related to actions taken or omitted to be taken by the Indenture Trustee contemplated by this Indenture, and including legal fees and disbursements on a solicitor and client basis and costs and expenses incurred in connection with the enforcement of this indemnity, which the Indenture Trustee may suffer or incur, whether at law or in equity, in any way caused by or arising, directly or indirectly, in respect of any act, deed, matter or thing whatsoever made, done, acquiesced in or omitted in or about or in relation to the execution of its duties as Indenture Trustee, save only in the event of the negligence or reckless disregard in acting or failing to act, or the wilful misconduct, dishonesty or bad faith of the Indenture Trustee. It is understood and agreed that this indemnification shall survive the termination or discharge of this Indenture or the resignation or removal of the Indenture Trustee;
- (e) without limiting the generality of section 12.12.1(d), the Company will indemnify and hold harmless the Indenture Trustee and upon written request reimburse the Indenture Trustee for the amount of (i) any taxes levied or imposed and paid by the Indenture Trustee as a result of payments made under or with respect to the Debentures, (ii) any liability (including penalties and interest) arising therefrom or with respect thereto paid by the Indenture Trustee as a result of payments made under or with respect to the Debentures, (iii) any liability (including penalties and interest) arising from a Common Share Interest Payment Election, and (iv) any taxes levied or imposed and paid by the Indenture Trustee with respect to reimbursement under (i), (ii) and (iii) above, but excluding any taxes on the Indenture Trustee's net income arising from fees for acting as the trustee hereunder or in respect of the Indenture Trustee's capital.
- (f) the Indenture Trustee shall not be liable by reason of the statements or implications of fact or law contained in or arising out of anything contained in this Indenture or in the Debentures or be required to verify the same, but all statements or implications shall be deemed to have been made by the Company only;
- (g) the Indenture Trustee may, in the exercise of all or any of the trusts, powers and discretion vested in it under this Indenture, act by the responsible officers of the Indenture Trustee; the Indenture Trustee may delegate to any Person the performance of any of the trusts and powers vested in it by this Indenture, and any delegation may be made upon such terms and conditions and subject to such

regulations as the Indenture Trustee may think to be in the best interest of the Holders;

- (h) the Indenture Trustee shall not be required to take notice or be deemed to have notice or actual knowledge of any matter under this Indenture, unless the Indenture Trustee shall have received from the Company or a Holder written notice stating the matter in respect of which the Indenture Trustee should have notice or actual knowledge;
- (i) the Indenture Trustee shall not be bound to act in accordance with any direction or request of the Company until an executed copy of the document containing the direction or request has been delivered to the Indenture Trustee, and the Indenture Trustee shall be fully empowered to act and shall be fully protected from all liability in acting upon any document purporting to be a Debenture and believed by the Indenture Trustee to be genuine; and
- (j) the Indenture Trustee shall not be responsible for any error made or act done by it resulting from reliance upon the signature of any Person on behalf of the Company or of any Person on whose signature the Indenture Trustee may be called upon to act or refrain from acting under this Indenture.

12.13 Additional Representations and Warranties of Indenture Trustee

12.13.1 The Indenture Trustee represents and warrants to the Company that:

- (a) the Indenture Trustee is a trust corporation validly existing under the laws of its jurisdiction of incorporation;
- (b) the Indenture Trustee has full power, authority and right to execute and deliver and perform its obligations under this Indenture, and has taken all necessary action to authorize the execution, delivery and performance by it of this Indenture; and
- (c) this Indenture has been duly executed and delivered by the Indenture Trustee.

12.14 Third Party Interests

12.14.1 The Company hereby represents to the Indenture Trustee that any account to be opened by, or interest to held by, the Indenture Trustee in connection with this Indenture for or to the credit of the Company, either: (i) is not intended to be used by or on behalf of any third party; or (ii) is intended to be used by or on behalf of a third party, in which case the Company agrees to complete and execute forthwith a declaration in the Indenture Trustee's prescribed form as to the particulars of such third party.

12.15 Indenture Trustee Not Bound to Act

12.15.1 The Indenture Trustee shall retain the right not to act and shall not be liable for refusing to act if, due to a lack of information or for any other reason whatsoever, the Indenture

Trustee, in its sole judgment, determines that such act might cause it to be in non-compliance with any applicable anti-money laundering or anti-terrorist legislation, regulation or guideline. Further, should the Indenture Trustee, in its sole judgment, determine at any time that its acting under this Indenture has resulted in its being in non-compliance with any applicable anti-money laundering or anti-terrorist legislation, regulation or guideline, then it shall have the right to resign on 10 days written notice to the Company, or any shorter period of time as agreed to by the Company, notwithstanding the provisions of Section 12.10 of this Indenture, provided: (i) that the Indenture Trustee's written notice shall describe the circumstances of such non-compliance; and (ii) that if such circumstances are rectified to the Indenture Trustee's satisfaction within such 10-day period, then such resignation shall not be effective.

12.16 Compliance with Privacy Laws

12.16.1 The parties acknowledge that federal and/or provincial legislation that addresses the protection of individuals' personal information (collectively, the "Privacy Laws") applies to obligations and activities under this Indenture. Despite any other provision of this Indenture, neither party shall take or direct any action that would contravene, or cause the other to contravene, applicable Privacy Laws. The Company shall, prior to transferring or causing to be transferred personal information to the Indenture Trustee, obtain and retain required consents of the relevant individuals to the collection, use and disclosure of their personal information, or shall have determined that such consents either have previously been given upon which the parties can rely or are not required under the Privacy Laws. The Indenture Trustee shall use commercially reasonable efforts to ensure that its services hereunder comply with Privacy Laws. Specifically, the Indenture Trustee agrees: (a) to have a designated chief privacy officer; (b) to maintain policies and procedures to protect personal information and to receive and respond to any privacy complaint or inquiry; (c) to use personal information solely for the purposes of providing its services under or ancillary to this Indenture and not to use it for any other purpose except with the consent of or direction from the Company or the individual involved; (d) not to sell or otherwise improperly disclose personal information to any third party; and (e) to employ administrative, physical and technological safeguards to reasonably secure and protect personal information against loss, theft, or unauthorized access, use or modification.

ARTICLE 13 MEETINGS OF HOLDERS OF DEBENTURES

13.1 Purposes for Which Meetings May be Called

13.1.1 A meeting of Holders of Debentures may be called at any time and from time to time pursuant to this article to make, give or take any Act provided by this Indenture to be made, given or taken by Holders of Debentures.

13.2 Call, Notice and Place of Meetings

13.2.1 The Indenture Trustee may at any time and from time to time and shall, on receipt of a Company Request or a requisition in writing made by the Holders of at least 5% in principal amount of the Outstanding Debentures and upon being indemnified and funded to its reasonable satisfaction by the Company or upon being funded and indemnified to its reasonable satisfaction

by the Holders making such requisition, as the case may be, against the costs which may be incurred in connection with the calling and holding of such meeting, call a meeting of Holders of Debentures for any purpose specified in section 13.1, to be held at such time and at such place in the City of Toronto, Province of Ontario, as the Indenture Trustee shall determine. Notice of every meeting of Holders of Debentures, setting forth the time and place of such meeting and in general terms the action proposed to be taken at such meeting, shall be given, in the manner provided in section 15.2, not less than 21 or more than 60 days prior to the date fixed for the meeting.

13.2.2 If at any time the Company, pursuant to a Board Resolution, or the Holders of at least 5% in principal amount of the Outstanding Debentures shall have requested the Indenture Trustee to call a meeting of the Holders of Debentures for any purpose specified in section 13.1, by written request setting forth in reasonable detail the action proposed to be taken at the meeting, and the Indenture Trustee shall not have made the first publication, or mailing, as the case may be, of the notice of such meeting within 30 days after receipt of such request, funding and indemnity or shall not thereafter proceed to cause the meeting to be held as provided herein, then the Company or the Holders of Debentures in the amount above specified, as the case may be, may determine the time and the place in the City of Toronto, Province of Ontario, for such meeting and may call such meeting for such purposes by giving notice thereof as provided in subsection 13.2.1.

13.3 Proxies

A Debentureholder may be present and vote at any meeting of Debentureholders, and may sign written resolutions and other instruments in writing in lieu of a meeting as contemplated in section 13.8, by an authorized representative. The Company with the approval of the Indenture Trustee may, from time to time, make and vary regulations as it shall think fit providing for and governing any or all the following matters for the purpose of enabling the Debentureholders to vote at any such meeting by proxy:

- (a) the form of the instrument appointing a proxy, which shall be in writing, and the manner in which the same shall be executed and the production of the authority of any person signing on behalf of a Debentureholder;
- (b) the deposit of instruments appointing proxies at such place as the Indenture Trustee, the Company or the Debentureholder convening the meeting, as the case may be, may in the notice convening the meeting, direct and the time, if before the holding of the meeting or any adjournment thereof by which the same must be deposited; and
- (c) the deposit of instruments appointing proxies at some approved place or places other than the place at which the meeting is to be held and enabling particulars of such instruments appointing proxies to be mailed, faxed, or sent by other electronic communication before the meeting to the Company or to the Indenture Trustee at the place where the same is to be held and for the voting of proxies so deposited as though the instruments themselves were produced at the meeting.

13.4 Persons Entitled to Vote at Meetings

13.4.1 To be entitled to vote at any meeting of Holders of Debentures, a Person shall be: (i) a Holder of one or more Outstanding Debentures; or (ii) a Person appointed by an instrument in writing as proxy for a Holder or Holders of one or more Outstanding Debentures by such Holder or Holders. The only persons who shall be entitled to be present or to speak at any meeting of Holders of Debentures shall be the Persons entitled to vote at such meeting and their counsel, any representatives of the Indenture Trustee and its Counsel and any representatives of the Company and its Counsel.

13.5 Quorum; Action

13.5.1 Persons entitled to vote 25% in principal amount of Outstanding Debentures shall constitute a quorum for a meeting of Holders of Debentures. In the absence of a quorum within 30 minutes of the time appointed for any such meeting, the meeting shall, if convened at the request of Holders of Debentures, be dissolved. In the absence of a quorum in any other case the meeting may be adjourned for a period of not less than 10 days as determined by the chairman of the meeting prior to the adjournment of such meeting. In the absence of a quorum at any such adjourned meeting, the Holders of Debentures present or represented at such adjourned meeting shall constitute the quorum and the business for which the meeting was adjourned may be transacted. Notice of the reconvening of any adjourned meeting shall be given as provided in subsection 13.2.1, except that such notice need be given only once not less than five days prior to the date on which the meeting is scheduled to be reconvened.

13.5.2 Except as limited by subsection 16.1.2, any resolution presented to a meeting or adjourned meeting duly reconvened at which a quorum is present as aforesaid may be adopted only by the affirmative vote of a majority in principal amount of the Holders of Debentures present or represented by proxy at such meeting or adjourned meeting; provided, however, that, except as limited by subsection 16.1.2, any resolution with respect to any Act that this Indenture expressly provides may be made, given or taken by the Holders of a specified percentage, which is less than a majority, in principal amount of Outstanding Debentures may be adopted at a meeting or an adjourned meeting duly reconvened and at which a quorum is present as aforesaid by the affirmative vote of the Holders of such specified percentage in principal amount of Outstanding Debentures.

13.5.3 Any resolution passed or decision taken at any meeting of Holders of Debentures duly held in accordance with this section 13.5 will be binding on all Holders of Debentures, whether or not present or represented at the meeting.

13.6 Determination of Voting Rights; Chairman; Conduct and Adjournment of Meetings

13.6.1 Notwithstanding any other provisions of this Indenture, the Indenture Trustee or the Company, with the approval of the Indenture Trustee, may make and from time to time may vary such reasonable regulations as it may deem advisable for any meeting of Holders of Debentures in regard to proof of the holding of Debentures and the appointment of proxies and in regard to the appointment and duties of scrutineers of votes, the submission and examination of

proxies, certificates and other evidence of the right to vote, and such other matters concerning the conduct of the meeting as it shall deem appropriate. Except as otherwise permitted by any such regulations, the holding of Debentures shall be proved in the manner specified in section 1.12 and the appointment of any proxy shall be proved in the manner specified in section 1.12. Such regulations may provide that written instruments appointing proxies, regular on their face, may be presumed valid and genuine without the proof specified in section 1.12 or other proof.

13.6.2 The Indenture Trustee shall, by an instrument in writing, appoint a chairman and secretary of the meeting, unless the meeting shall have been called by the Company or by Holders of Debentures as provided in subsection 13.2.2, in which case the Company or the Holders of Debentures calling the meeting, as the case may be, shall in like manner appoint a chairman and secretary.

13.6.3 At any meeting of Holders of Debentures, each Holder of a Debenture or proxy shall be entitled to one vote for each one thousand Dollars (\$1,000) principal amount of Debentures held or represented by such Holder; provided, however, that no vote shall be cast or counted at any meeting in respect of any Debenture challenged as not Outstanding and ruled by the chairman of the meeting to be not Outstanding. The chairman of the meeting shall have no right to vote, except as a Holder of a Debenture or proxy.

13.6.4 Any meeting of Holders of Debentures duly called pursuant to subsection 13.2.2 at which a quorum is present may be adjourned from time to time by Persons entitled to vote a majority in principal amount of Outstanding Debentures represented at the meeting; and the meeting may be held as so adjourned without further notice.

13.7 Counting Votes and Recording Action of Meetings

13.7.1 The vote upon any resolution submitted to any meeting of Holders of Debentures shall be by written ballots on which shall be inscribed the signatures of the Holders of Debentures or of their representatives by proxy and the principal amounts and serial numbers of Outstanding Debentures held or represented by them. The chairman of the meeting shall appoint two scrutineers of votes who shall count all votes cast at the meeting for or against any resolution and who shall make and file with the secretary of the meeting their verified written reports in triplicate of all votes cast at the meeting. A record, at least in triplicate, of the proceedings of each meeting of Holders of Debentures shall be prepared by the secretary of the meeting and there shall be attached to said record the original reports of the scrutineers of votes on any vote by ballot taken thereat and affidavits by one or more persons having knowledge of the facts setting forth a copy of the notice of the meeting and showing that said notice was given as provided in section 13.2 and, if applicable, section 13.5. Each copy shall be signed and verified by the affidavits of the chairman and secretary of the meeting and one such copy shall be delivered to the Company, and another to the Indenture Trustee to be preserved by the Indenture Trustee, the latter to have attached thereto the ballots voted at the meeting. Any record so signed and verified shall be conclusive evidence of the matters therein stated.

13.8 Instruments in Writing

13.8.1 All actions which may be taken and all powers which may be exercised by the Holders at a meeting held as hereinbefore in this Article 13 may also be taken and exercised (i) by the Holders of a majority in principal amount of Outstanding Debentures by an instrument in writing signed in one or more counterparts by such Holders or their duly appointed proxies or agents with respect to resolutions which are not Extraordinary Resolutions and (ii) by the Holders of not less than 66²/₃% in principal amount of Outstanding Debentures by an instrument in writing signed in one or more counterparts by such Holders or their duly appointed proxies or agents with respect to resolutions which are Extraordinary Resolutions and the expression "Extraordinary Resolution" when used in this Indenture shall include an instrument so signed.

13.9 Holdings by the Company Disregarded

13.9.1 In determining whether Holders holding Debentures evidencing the required number of Debentures are present at a meeting of Holders for the purpose of determining a quorum or for the purpose of determining whether Holders have concurred in any consent, waiver, resolution or other action under this Indenture, the Debentures owned legally or beneficially by the Company shall be disregarded.

ARTICLE 14

AMALGAMATION, CONSOLIDATION, CONVEYANCE, TRANSFER OR LEASE

14.1 Amalgamation and Consolidations of Company and Conveyances Permitted Subject to Certain Conditions

14.1.1 The Company will not amalgamate with any other corporation or enter into any reorganization or arrangement or effect any conveyance, sale, transfer or lease of all or substantially all of its assets, unless in any such case:

- (a) either the Company shall be the continuing corporation, or the successor corporation (or the Person that leases or that acquires by conveyance, sale or transfer all or substantially all of the Company's assets) (such corporation or Person being referred to as the "Successor Company") shall expressly assume the due and punctual payment of the principal of, the premium, if any, and interest on all Outstanding Debentures, according to their tenor, and the due and punctual performance and observance of all the covenants and conditions of this Indenture to be performed by the Company by supplemental indenture satisfactory to the Indenture Trustee, executed and delivered to the Indenture Trustee by such corporation;
- (b) the Debentures will be valid and binding obligations of the Successor Company entitling the Holders thereof, as against the Successor Company, to all the rights of Debentureholders under this Indenture;
- (c) the Company or such Successor Company, as the case may be, shall not immediately thereafter be in default under this Indenture or the Debentures; and

- (d) in the case of a Person constituted or organized under the laws of a province, territory, state or jurisdiction other than the laws of the Province of Ontario, such Person shall attorn to the jurisdiction of the courts of the Province of Ontario in the event of any dispute, conflict or litigation relating to, arising out of or based on this Indenture or the Debentures.

14.2 Rights and Duties of Successor Company

14.2.1 In case of any such amalgamation, reorganization, arrangement, conveyance, sale, transfer or lease and upon any such assumption by the Successor Company, such Successor Company shall agree to be bound by the terms of this Indenture as principal obligor in place of the Company, with the same effect as if it had been named herein as the Company. Such Successor Company thereupon may cause to be signed, and may issue either in its own name or in the name of the Company, any or all Debentures which theretofore shall not have been signed by the Company and delivered to the Indenture Trustee. All Debentures so issued shall in all respects have the same legal rank and benefit under this Indenture as Debentures theretofore or thereafter issued in accordance with the terms of this Indenture as though all of such Debentures have been issued at the date of the execution hereof.

14.2.2 In the case of any such amalgamation, reorganization, arrangement, conveyance, sale, transfer or lease, such changes in phraseology and form (but not in substance) may be made in Debentures thereafter to be issued as may be appropriate.

14.3 Officer's Certificate and Opinion of Counsel

The Indenture Trustee must receive an Officer's Certificate and an Opinion of Counsel as conclusive evidence that any such amalgamation, reorganization, arrangement, lease, transfer, sale or conveyance, and any such assumption, comply with the provisions of this Article 14.

ARTICLE 15 NOTICES

15.1 Notice to Company

15.1.1 Any Notice to the Company shall be in writing and shall be valid and effective if delivered, sent by facsimile transmission (with receipt confirmed), or mailed to the Company, at:

FIRST URANIUM CORPORATION
1240-155 University Avenue
Toronto, Ontario, M5H 3B7

Attention: Chief Executive Officer
Facsimile No.: (416) 342-5632

and such Notice shall be deemed to have been received by the Company, where given by delivery, on the day of delivery, where sent by facsimile transmission (with receipt confirmed), on the day of transmittal of such Notice if sent before 5:00 p.m. (Eastern Standard Time) on a Business Day and on the next succeeding Business Day if not sent before 5:00 p.m. (Eastern

Standard Time) on a Business Day, and, where mailed, on the fifth Business Day following the mailing date, but only if sent by first class mail from a destination within Canada, or only airmail, postage prepaid, if sent from a destination outside Canada. The Company may from time to time notify the Indenture Trustee of a change in address or facsimile number by Notice given as provided in section 15.3.

15.2 Notice to Holders

15.2.1 Any Notice to Holders of Debentures may be effectively given if delivered or mailed, in each case at post office address appearing in the relevant register and such Notice shall be deemed to have been received by a Holder of Debentures, where given by delivery, on the day of delivery, and, where mailed, on the fifth Business Day following the mailing date, but only if sent by first class mail to a destination within Canada, or only by airmail, postage prepaid, if sent to a destination outside Canada.

15.2.2 If the regular mail service is suspended or for any other reason it shall be impracticable to give Notice to Holders of Debentures by mail, then such notification to Holders of Debentures may be given by the publication of the Notice once in a daily newspaper with national circulation in Canada or in any other manner approved by the Indenture Trustee, and it shall constitute sufficient Notice to such Holders for every purpose hereunder. In any case where Notice to Holders of Debentures is given by mail, neither the failure to mail such Notice nor any defect in any Notice so mailed to any particular Holder of a Debenture shall affect the sufficiency of such Notice with respect to other Holders of Debentures.

15.2.3 Any Notice sent to the Holders of Debentures as provided above shall be effective notwithstanding that any such Notice has accidentally or inadvertently not been delivered or mailed to one or more such Holders.

15.3 Notice to Indenture Trustee

15.3.1 Any Notice to the Indenture Trustee shall be in writing and shall be valid and effective if delivered, sent by facsimile transmission (with receipt confirmed), or mailed to the Indenture Trustee, at:

COMPUTERSHARE TRUST COMPANY OF CANADA

100 University Avenue
9th Floor, North Tower
Toronto, Ontario, M5J 2Y1

Attention: Manager, Corporate Trust
Facsimile No.: (416) 981-9777

and such Notice shall be deemed to have been received by the Indenture Trustee, where given by delivery, on the day of delivery, where sent by facsimile transmission (with receipt confirmed), on the day of transmittal of such Notice if sent before 5:00 p.m. (Eastern Standard Time) on a Business Day and on the next succeeding Business Day if not sent before 5:00 p.m. (Eastern Standard Time) on a Business Day, and, where mailed, on the fifth Business Day following the

mailing date, but only if sent by first class mail from a destination within Canada, or only by airmail, postage prepaid, if sent from a destination outside Canada. The Indenture Trustee may from time to time notify the Company of a change in address or facsimile number by Notice given as provided in subsection 15.1.1.

ARTICLE 16
SUPPLEMENTAL INDENTURES AND AMENDMENTS

16.1 Supplemental Indentures

16.1.1 Without the consent of any Holders, the Company, when authorized by a Board Resolution, and the Indenture Trustee may, subject to the provisions of this Indenture, and the Indenture Trustee shall, upon the receipt of a Company Request or when so directed by this Indenture, make, execute, acknowledge and deliver deeds or indentures supplemental to this Indenture (each such deed or indenture a "**Supplemental Indenture**") for any one or more of the following purposes:

- (a) adding to the covenants of the Company contained in this Indenture for the benefit of the Holders or surrendering any right or power herein conferred upon the Company;
- (b) adding any additional Events of Default;
- (c) changing or eliminating any restrictions on the payment of principal, the premium, if any, of Debentures provided that Counsel to the Indenture Trustee shall be of the opinion that such provisions do not individually or in the aggregate adversely affect the interests of the Holders;
- (d) giving effect to any Act or any other direction from the Holders permitted to be given under this Indenture, and to any other Act made, given to or taken by the Holders in accordance with this Indenture;
- (e) making such provisions, not substantially inconsistent with this Indenture, as may be necessary or desirable with respect to matters arising under this Indenture which, in the opinion of the Indenture Trustee, are expedient to make; provided that the Indenture Trustee or Counsel to the Indenture Trustee shall be of the opinion that such provisions do not individually or in the aggregate materially adversely affect the interests of the Holders or the Indenture Trustee;
- (f) without limiting article 15, evidencing the succession, or successive successions, of any Successor Company to the Company and the covenants and obligations of the Company under this Indenture assumed by any such Successor Company;
- (g) providing for altering this Indenture in respect of the exchange or transfer of Debentures, provided that any such action shall not adversely affect the interests of the Holders of Debentures;

- (h) making any addition to, or modification, amendment or elimination of any of the terms of, this Indenture which, in the Opinion of Counsel, is necessary or advisable in order to incorporate, reflect or comply with any Applicable Law or requirement of any Governmental Authority, the provisions of which apply to the Company, the Indenture Trustee or this Indenture;
- (i) making any changes or corrections in this Indenture which Counsel to the Company shall have advised the Company and the Indenture Trustee are non-substantive corrections or changes or are required for the purpose of curing or correcting any ambiguity or defective or inconsistent provisions or any clerical omission or mistake or manifest error contained in this Indenture or in any deed, or indenture supplemental hereto or thereto;
- (j) evidencing and providing for the acceptance of appointment hereunder by a successor trustee with respect to the Debentures, and adding to or changing any of the provisions of this Indenture as shall be necessary to provide for or facilitate the administration of the trusts hereunder by more than one Indenture Trustee; and
- (k) any other purposes considered appropriate by the Indenture Trustee which, in the opinion of the Indenture Trustee, do not individually or in the aggregate adversely affect the interests of the Holders.

16.1.2 With the consent of the Holders of not less than a majority in principal amount of Outstanding Debentures, by Act of said Holders delivered to the Company and the Indenture Trustee, the Company, when authorized by a Board Resolution, and the Indenture Trustee may enter into an indenture or indentures supplemental hereto for the purpose of adding any provisions to or changing in any manner or eliminating any of the provisions of this Indenture or of modifying in any manner the rights of the said Holders under this Indenture of such Debentures provided, however, that no such Supplemental Indenture shall be entered into by the Indenture Trustee in connection with the following, without an Extraordinary Resolution passed by the Holders of Debentures:

- (a) change the Stated Maturity date of the principal of, or any instalment of interest on, any Debenture, or reduce the principal amount thereof or the interest thereon or any premium payable upon redemption thereof, or change the currency in which any Debenture or interest thereon is payable, or impair the right to institute suit for the enforcement of any such payment on or after the Stated Maturity date thereof (or, in the case of redemption, on or after the Redemption Date);
- (b) reduce the percentage in principal amount of the Outstanding Debentures, the consent of whose Holders is required for any such supplemental indenture, or the consent of whose Holders is required for any waiver of compliance with certain provisions of this Indenture or certain defaults hereunder and their consequences provided for in this Indenture, or reduce the requirements of section 13.5 for quorum or subsections 13.6.1 to 13.6.4 for voting;

- (c) change the Conversion Price or the method of calculating the number of Additional Shares issuable in the event of a Change of Control under this Indenture; or
- (d) modify any of the provisions of this section 16.1, or section 10.4.1, except to increase any such percentage or to provide that certain other provisions of this Indenture cannot be modified or waived without the consent of the Holders of Debentures expressed by Extraordinary Resolution.

16.1.3 It shall not be necessary for any Act of Holders under subsection 16.1.2 to approve the particular form of any proposed Supplemental Indenture, but it shall be sufficient if such Act of Holders shall approve the substance thereof.

16.2 Execution of Supplemental Indentures

16.2.1 In executing, or accepting the additional trusts created by, any Supplemental Indenture permitted by this Article 16 or the modifications thereby of the trusts created by this Indenture, the Indenture Trustee shall be entitled to receive, and subject to section 12.1, shall be fully protected in acting and relying upon, an Opinion of Counsel stating that the execution of such Supplemental Indenture is authorized or permitted by this Indenture, is not inconsistent herewith, is a valid and binding obligation of the Company, enforceable in accordance with its terms, subject to enforceability being limited by bankruptcy, insolvency or other laws affecting the enforcement of creditor's rights generally and equitable remedies including the remedies of specific performance and injunction being granted only in the discretion of a court of competent jurisdiction and, in connection with a Supplemental Indenture executed pursuant to this subsection 16.2.1, that the Indenture Trustee is authorized to execute and deliver such Supplemental Indenture without the consent of the Holders and, in connection with a Supplemental Indenture executed pursuant to subsection 16.1.2, that the requisite consents of the Holders have been validly obtained in accordance with subsection 16.1.2 hereof. The Indenture Trustee may, but shall not be obligated to, enter into any such Supplemental Indenture that affects the Indenture Trustee's own rights, duties or immunities under this Indenture or otherwise.

16.3 Effect of Supplemental Indentures

16.3.1 Upon the execution of any Supplemental Indenture under this Article 16, this Indenture shall be modified in accordance therewith, and such Supplemental Indenture shall form a part of this Indenture for all purposes, unless otherwise so specified; and every Holder of Debentures theretofore or thereafter certified and delivered under this Indenture shall be bound by the Supplemental Indenture.

16.4 Reference in Debentures to Supplemental Indentures

16.4.1 Debentures certified and delivered after the execution of any Supplemental Indenture pursuant to this Article 16 may, and shall if required by the Indenture Trustee, bear a notation in form approved by the Indenture Trustee as to any matter provided for in such Supplemental Indenture. If the Company shall so determine, new Debentures so modified as to conform, in the opinion of the Indenture Trustee and the Board of Directors, to any such

Supplemental Indenture may be prepared and executed by the Company and certified and delivered by the Indenture Trustee in exchange for Outstanding Debentures.

16.5 Prior Approval of Recognized Stock Exchange

16.5.1 Notwithstanding anything to the contrary in this Indenture, no supplement or amendment to the terms of the Debentures or to this Indenture may be made without the prior consent of a Recognized Stock Exchange.

**ARTICLE 17
MISCELLANEOUS PROVISIONS**

17.1 Acceptance of Trusts

The Company and the Indenture Trustee hereby specifically acknowledge and agree that the Indenture Trustee is acting hereunder on behalf of the Holders for the purposes of this Indenture and in conformity with and subject to the terms and conditions of this Indenture. Each Holder of Debentures, by its acceptance thereof, accepts and confirms the appointment of the Indenture Trustee for the purposes of this Indenture and in conformity with and subject to the terms and conditions of this Indenture.

17.2 Protection of Trustee

The Indenture Trustee shall not be obligated under any circumstances whatsoever in the fulfilment of any of the circumstances and obligations hereunder, to expend or risk its funds or otherwise incur financial liability.

17.2.1 Counterparts and Formal Date

This Indenture may be executed in any number of counterparts, each of which so executed shall be deemed to be an original, but all of which shall together constitute one and the same instrument and notwithstanding their date of execution shall be deemed to bear a date as of the date hereof.

[Execution on next page]

SCHEDULE "A"
FORM OF DEBENTURE

[If a certificate representing Debentures is required to bear the CDS legend set forth in subsection 2.11.2 of the Indenture:

"UNLESS THIS CERTIFICATE IS PRESENTED BY AN AUTHORIZED REPRESENTATIVE OF CDS CLEARING AND DEPOSITORY SERVICES INC. ("CDS") TO FIRST URANIUM CORPORATION (THE "ISSUER") OR ITS AGENT FOR REGISTRATION OF TRANSFER, EXCHANGE OR PAYMENT, AND ANY CERTIFICATE ISSUED IN RESPECT THEREOF IS REGISTERED IN THE NAME OF CDS & CO., OR IN SUCH OTHER NAME AS IS REQUESTED BY AN AUTHORIZED REPRESENTATIVE OF CDS (AND ANY PAYMENT IS MADE TO CDS & CO. OR TO SUCH OTHER ENTITY AS IS REQUESTED BY AN AUTHORIZED REPRESENTATIVE OF CDS), ANY TRANSFER, PLEDGE OR OTHER USE HEREOF FOR VALUE OR OTHERWISE BY OR TO ANY PERSON IS WRONGFUL SINCE THE REGISTERED HOLDER HEREOF, CDS & CO., HAS AN INTEREST HEREIN. THIS CERTIFICATE IS ISSUED PURSUANT TO A MASTER LETTER OF REPRESENTATIONS OF THE ISSUER TO CDS, AS SUCH LETTER MAY BE REPLACED OR AMENDED FROM TIME TO TIME."]

No. •

CUSIP

FIRST URANIUM CORPORATION

(A corporation continued pursuant to the laws of British Columbia)

4.25% Senior Unsecured Convertible Debenture Due June 30, 2012

Date of Initial Issue: , 2007

Maturity Date: June 30, 2012

Registered Holder:

"UNLESS PERMITTED UNDER SECURITIES LEGISLATION, THE HOLDER OF THIS SECURITY MUST NOT TRADE THE SECURITY BEFORE <INSERT DATE THAT IS FOUR (4) MONTHS AND ONE (1) DAY AFTER CLOSING DATE>."

[If a certificate representing Debentures is required to bear the U.S. Legend set forth in subsection 2.19.1 of the Indenture:

“THE SECURITIES REPRESENTED HEREBY HAVE NOT BEEN REGISTERED UNDER THE UNITED STATES SECURITIES ACT OF 1933, AS AMENDED (THE “U.S. SECURITIES ACT”). THE HOLDER HEREOF, BY PURCHASING SUCH SECURITIES, AGREES FOR THE BENEFIT OF THE FIRST URANIUM CORPORATION (THE “CORPORATION”) THAT SUCH SECURITIES MAY BE OFFERED, SOLD, PLEDGED OR OTHERWISE TRANSFERRED ONLY (A) TO THE CORPORATION, (B) OUTSIDE THE UNITED STATES IN ACCORDANCE WITH RULE 904 OF REGULATIONS UNDER THE U.S. SECURITIES ACT OR (C) WITHIN THE UNITED STATES (I) IN ACCORDANCE WITH RULE 144A UNDER THE U.S. SECURITIES ACT OR (II) IN A TRANSACTION THAT DOES NOT REQUIRE REGISTRATION UNDER THE U.S. SECURITIES ACT OR ANY APPLICABLE STATE SECURITIES LAWS, AND IN THE CASE OF TRANSFERS PURSUANT TO CLAUSE (C)(II), THE SELLER HAS FURNISHED TO THE CORPORATION AN OPINION TO SUCH EFFECT FROM COUNSEL OF RECOGNIZED STANDING REASONABLY SATISFACTORY TO THE CORPORATION PRIOR TO SUCH TRANSFER. DELIVERY OF THIS CERTIFICATE MAY NOT CONSTITUTE “GOOD DELIVERY” IN SETTLEMENT OF TRANSACTIONS ON STOCK EXCHANGES IN CANADA. PROVIDED THAT THE CORPORATION IS A “FOREIGN ISSUER” WITHIN THE MEANING OF REGULATIONS AT THE TIME OF SALE, A NEW CERTIFICATE BEARING NO LEGEND MAY BE OBTAINED FROM THE CORPORATION’S [INDENTURE TRUSTEE/TRANSFER AGENT] UPON DELIVERY OF THIS CERTIFICATE AND A DULY EXECUTED DECLARATION, IN A FORM SATISFACTORY TO THE [INDENTURE TRUSTEE/TRANSFER AGENT] AND THE CORPORATION TO THE EFFECT THAT SUCH SALE IS BEING MADE IN ACCORDANCE WITH RULE 904 OF REGULATIONS UNDER THE U.S. SECURITIES ACT.”]

First Uranium Corporation (the “**Company**”), for value received, hereby acknowledges itself indebted and promises to pay to the order of the registered holder on June 30, 2012 (the “**Maturity Date**”), or on such earlier date as the principal amount hereof may become due in accordance with the provisions of the Indenture hereinafter mentioned, the principal sum of

[insert amount]

in lawful money of Canada, on presentation and surrender of this Debenture at the principal office of the Indenture Trustee (defined below) in the manner specified in the Indenture (defined below), in the City of Toronto, Province of Ontario, and to pay interest on the principal amount hereof at the rate of 4.25% per annum from the Issue Date or from the most recent Interest Payment Date to which interest has been paid or made available for payment on the Debentures then outstanding, whichever is later, in like money in equal semi-annual instalments in arrears on

June 30 and December 31 in each year (each such date an “**Interest Payment Date**”), commencing June 30, 2007 with overdue interest, if any, at the same rate after as well as before maturity and after as well as before default in payment of principal or interest. The June 30, 2007 interest payment will represent accrued interest from the Issue Date to but excluding June 30, 2007.

As interest on this Debenture becomes due, the Company (subject to early redemption, repurchase or conversion pursuant to the terms of the Indenture (as defined below)) shall forward or cause to be forwarded by courier or ordinary post to the registered address of the registered Holder of the Debenture for the time being, or in the case of joint Holders to the registered address of one of such joint Holders, or in accordance with the procedures established by CDS if this is a Book-Entry Only Debenture, a cheque or electronic funds transfer for such interest, payable to the order of such Holder or Holders. The forwarding of such cheque or electronic funds transfer shall satisfy and discharge the liability for interest on this Debenture to the extent of the sum represented thereby, unless such cheque, if any, be not paid on presentation.

This Debenture is one of the 4.25% Senior Unsecured Convertible Debentures due June 30, 2012 (the “**Debentures**”) in the aggregate principal amount of up to \$150 million in lawful money of Canada created and issued under a Trust Indenture (the “**Indenture**”) dated as of May 3, 2007 made between the Company and Computershare Trust Company of Canada, as trustee (the “**Indenture Trustee**”). Reference is hereby made to the Indenture for a description of the rights of the Holders of the Debentures, the Company and the Indenture Trustee and of the terms and conditions upon which the Debentures are issued and held, all to the same effect as if the provisions of the Indenture were herein set forth, to all of which provisions the Holder of this Debenture, by acceptance hereof, agrees. **To the extent that the terms and conditions stated in this Debenture conflict with the terms and conditions of the Indenture, the latter shall prevail.** All capitalized terms used herein have the meaning ascribed thereto in the Indenture unless otherwise indicated.

The Debentures are issuable as fully registered Debentures in denominations of \$1,000 and integral multiples of \$1,000. The Debentures of any authorized denomination may be exchanged, as provided in the Indenture, for Debentures in equal aggregate principal amount.

This Debenture and all other Debentures certified and issued under the Indenture rank *pari passu* with one another, in accordance to their tenor without discrimination, preference or priority. The payment of the principal and, if an event of default has occurred and is continuing under any Permitted Indebtedness, interest on the Debentures is subordinated to the prior payment in full of Permitted Indebtedness. The Indenture does not contain any financial covenants or restrictions on the Company’s ability to pay dividends, incur Permitted Indebtedness or issue or repurchase securities.

Subject to regulatory approval, the Company may, at its option, upon not less than 40 days and not more than 60 days prior notice, repay the principal amount of the outstanding Debentures at Maturity or upon redemption for any reason (except in the event of a Change of Control) by issuing and delivering, for each \$1,000 principal amount of Debentures, that number of Freely Tradeable Common Shares equal to the number obtained by dividing such principal amount of Debentures by 95% of the Current Market Price of the Common Shares on the

Maturity Date or the Redemption Date, provided, however, that no Event of Default shall have occurred and be continuing. No fractional Common Shares will be delivered to the Holders of Debentures upon such share redemption, but in lieu thereof, if such a fraction shall become owing, the Company will make an equivalent cash payment.

Each \$1,000 principal amount of Debentures is convertible at any time and from time to time prior to the close of business on the Business Day immediately preceding Maturity, or, if called for redemption, the Business Day immediately preceding the Redemption Date or the Payment Date, at the option of the Holder, into that number of Common Shares obtained by dividing \$1,000 by the conversion price of \$16.42 per Common Share, subject to adjustment upon the occurrence of certain events specified in the Indenture. No fractional Common Shares will be delivered to the Holders of Debentures upon conversion, but in lieu thereof, if such a fraction shall become owing, the Company will make an equivalent cash payment. The accrued and unpaid interest on any Debentures so converted shall be paid in cash.

Upon the giving of notice by the Indenture Trustee of the occurrence of an Event of Default in accordance with the Indenture, the Debentures will become immediately due and payable, subject to the provisions for subordination.

Subject to the immediately following paragraph, the Debentures are not redeemable prior to June 30, 2010. At any time on and after June 30, 2010, upon not less than 30 days and not more than 60 days prior notice, the Company has the right to redeem the Debentures in whole at any time or in part from time to time, at a price equal to the principal amount of the Debentures to be redeemed, plus accrued and unpaid interest, if any, (the "**Redemption Amount**") to but excluding the Redemption Date, provided that the Weighted Average Trading Price of the Common Shares on a Recognized Stock Exchange for the 20 Trading Days ending five Trading Days prior to the date on which the Redemption Notice is given is at least 130% of the Conversion Price.

- The Company must commence, within 30 days of the occurrence of a Change of Control, an Offer to Purchase for all Debentures then Outstanding. The Offer to Purchase shall be made at a purchase price equal to 100% of the principal amount thereof, plus accrued and unpaid interest thereon, if any, to but excluding the Payment Date. An Offer to Purchase shall be opened for 30 days and the Payment Date shall be the 30th day following the mailing of the Offer to Purchase to the Indenture Trustee.

If 10% or more of the fair market value of the consideration for Common Shares in a Change of Control transaction consists of the fair market value of (i) cash, (ii) other property, or (iii) equities that are not traded or scheduled to be traded immediately following such transaction on the TSX (a "**Cash Transaction**"), Debentureholders may, prior to the effective date of such transaction (the "**Effective Date**"), elect to convert their Debentures in which case they shall be entitled to receive, in addition to the number of Common Shares to which they would otherwise have been entitled on conversion, an additional number of Common Shares ("**Additional Shares**") determined by reference to the table set out in Schedule "F" to the Indenture based on the Effective Date of the Cash Transaction and the Common Share Price

Any payments made by or on behalf of the Company under or with respect to the Debentures will be made free and clear of and without withholding or deduction for or on account of any Taxes, unless the Company or any other payor is required to withhold or deduct Taxes by Applicable Law or by the interpretation or administration thereof by the relevant Governmental Authority. If the Company is so required to withhold or deduct any amount for or on account of Taxes from any payment made under or with respect to the Debentures, the Company will cause the Indenture Trustee to make such withholding or deduction and will remit the full amount withheld or deducted to the relevant Governmental Authority as and when required by Applicable Law and the Company will pay such Additional Amounts as may be necessary so that the net amount received by each Holder of Debentures (including Additional Amounts) after such withholding or deduction will not be less than the amount such Holder would have received if such Taxes had not been withheld or deducted; provided, however, that no Additional Amounts will be payable with respect to any payment to an Excluded Holder.

Subject to receiving applicable regulatory approvals, the Company shall have the right to elect, from time to time, to issue and deliver Common Shares to the Indenture Trustee for sale in the open market or deliver Common Share bid requests to the investment banks, brokers or dealers identified by the Company in its absolute discretion to satisfy its Interest Obligation on each Interest Payment Date. Unless an Event of Default has occurred and is continuing, upon such election by the Company, the Indenture Trustee shall have the power to (i) accept delivery of Common Shares from the Company, (ii) accept bids with respect to, and consummate sales of, such Common Shares, each as the Company shall direct in its absolute discretion, (iii) sell common shares in an open market, (iv) invest the proceeds of such sales on behalf of and for the account of the Company in short-term Canadian Government Obligations which mature prior to an applicable Interest Payment Date and/or use such proceeds to satisfy the Interest Obligation in whole or in part in respect of which the Share Interest Payment Election was made and (v) perform any other action necessarily incidental thereto. The amount received by a Holder in respect of the Interest Obligation will not be affected by whether or not the Company elects to satisfy the Interest Obligation pursuant to a Common Share Interest Payment Election.

The Indenture contains provisions for the holding of meetings of Debentureholders and rendering certain resolutions passed at such meetings by, or by instruments in writing signed by, the Holders of the majority in aggregate principal amount of the Debentures Outstanding binding upon all Debentureholders, subject to the provisions of the Indenture.

This Debenture may only be transferred upon compliance with the conditions precedent in the Indenture on the register kept at the principal office of the Indenture Trustee and at such other place or places, if any, and/or by such other registrar or registrars, if any, as the Company with the approval of the Indenture Trustee may designate, and may be exchanged at any such place, by the Holder hereof or his executors or administrators or other legal representatives or his or their attorney duly appointed by an instrument in writing in form and execution satisfactory to the Indenture Trustee, and upon compliance with such reasonable requirements as the Indenture Trustee and/or registrar may prescribe, and such transfer shall be duly noted thereon by the Indenture Trustee or other registrar.

This Debenture shall not become obligatory for any purpose until it shall have been certified by the Indenture Trustee for the time being under the Indenture.

This Debenture shall be governed by and construed in accordance with the laws of the Province of Ontario and the federal laws of Canada applicable thereto.

The Holder of this Debenture, by receiving and holding same, hereby accepts and agrees to be bound by the terms, and to be entitled to the benefits of this Debenture and of the Indenture and confirms the appointment of the Indenture Trustee and of the Indenture, the whole in accordance with and subject to the respective provisions thereof.

IN WITNESS WHEREOF FIRST URANIUM CORPORATION has caused this Debenture to be signed by its duly authorized officers.

FORM OF ASSIGNMENT

FOR VALUE RECEIVED, the undersigned hereby sells, assigns and transfers unto _____, whose address and social insurance number, if applicable, are set forth below, this Debenture (or \$ _____ principal amount hereof*) of **FIRST URANIUM CORPORATION**. (the "**Company**") standing in the name(s) of the undersigned in the register maintained by the registrar appointed by the Company with respect to such Debenture and does hereby irrevocably authorize and direct the Indenture Trustee to transfer such Debenture in such register, with full power of substitution in the premises.

Dated: _____

Address of Transferee: _____

(Street Address, City, Province and Postal Code)

Social Insurance Number of Transferee, if applicable: _____

*If less than the full principal amount of the within Debenture is to be transferred, indicate in the space provided above the principal amount (which must be \$1,000 or an integral multiple thereof) to be transferred.

The signature(s) to this assignment must correspond with the name(s) as written upon the face of this Debenture in every particular without alteration or any change whatsoever. The signature(s) on this form must be guaranteed by one of the following methods:

Canada and the USA: A Medallion Signature Guarantee obtained from a member of an acceptable Medallion Signature Guarantee Program (STAMP, SEMP, MSP). Many commercial banks, savings banks, credit unions, and all broker dealers participate in a Medallion Signature Guarantee Program. The Guarantor must affix a stamp bearing the actual words "Medallion Guaranteed".

Canada: A Signature Guarantee obtained from a major Canadian Schedule I chartered bank. The Guarantor must affix a stamp bearing the actual words "Signature Guaranteed". Signature Guarantees are not accepted from Treasury Branches, Credit Unions or Caisses Populaires unless they are members of a Medallion Signature Guarantee Program.

Outside North America: For holders located outside North America, present the certificate(s) and/or document(s) that require a guarantee to a local financial institution that has a corresponding Canadian or American affiliate which is a member of an acceptable Medallion Signature Guarantee Program. The corresponding affiliate will arrange for the signature to be over-guaranteed.

The registered Holder of this Debenture is responsible for the payment of any documentary, stamp or other transfer taxes that may be payable in respect of the transfer of this Debenture.

Debentures bearing the U.S. Legend set forth in section 2.19 of the Indenture may be transferred only in accordance with such U.S. Legend and subsection 2.14.3 of the Indenture.

SCHEDULE "B"

FORM OF REDEMPTION NOTICE

FIRST URANIUM CORPORATION

4.25% SENIOR UNSECURED CONVERTIBLE DEBENTURES DUE JUNE 30, 2012

REDEMPTION NOTICE

To: Holders of 4.25% Senior Unsecured Convertible Debentures due June 30, 2012 (the "**Debentures**") of **First Uranium Corporation** (the "**Company**")

Note: All capitalized terms used herein have the meaning ascribed thereto in the Indenture mentioned below, unless otherwise indicated.

Notice is hereby given pursuant to section 3.4 of the Indenture dated as of May 3, 2007 (the "**Indenture**") made between the Company and **Computershare Trust Company of Canada**, as trustee (the "**Indenture Trustee**"), that \$~~500,000~~ principal amount of Debentures outstanding will be redeemed as of ~~5/31/12~~ (the "**Redemption Date**"), upon payment of a redemption amount of \$~~500,000~~ for each \$1,000 principal amount of Debentures, being equal to the aggregate of (i) \$1,000 and (ii) all accrued and unpaid interest thereon to but excluding the Redemption Date (collectively, the "**Redemption Amount**").

The Redemption Amount will be payable upon presentation and surrender of the Debentures called for redemption at the following corporate trust office:

Computershare Trust Company of Canada
100 University Avenue
9th Floor, North Tower
Toronto, Ontario
M5J 2Y1

Attention: Manager, Corporate Trust

The interest upon the principal amount of Debentures called for redemption shall cease to be payable from and after the Redemption Date, unless payment of the Redemption Amount shall not be made on presentation for surrender of such Debentures at the above-mentioned corporate trust office on or after the Redemption Date or prior to the setting aside of the Redemption Amount pursuant to the Indenture.

Holders of Debentures are reminded that they have the right to convert their Debentures pursuant to Article 4 of the Indenture prior to the close of business on the Business Day immediately preceding the Redemption Date by duly completing the Conversion Notice and delivering same at the place of business of Computershare Trust Company of Canada indicate above.

(If payment of the Redemption Price is made in Common Shares:

Pursuant to section 3.7 of the Indenture, the Company hereby irrevocably elects to satisfy its obligation to pay to Holders of Debentures the principal amount of the Debentures by issuing and delivering to the Holders that number of Freely Tradeable Common Shares obtained by dividing (i) the principal amount of the Debentures by (ii) 95% of the Current Market Price of the Common Shares on the Redemption Date. The Current Market Price of the Common Shares as of the Redemption Date will be the Weighted Average Trading Price of such Common Shares on a Recognized Stock Exchange for the 20 consecutive Trading Days ending five Trading Days prior to the Redemption Date.

No fractional Common Shares shall be delivered upon the exercise by the Company of the above-mentioned redemption right but, in lieu thereof, if such a fraction shall become owing, the Company shall pay the cash equivalent thereof determined on the basis of the Current Market Price of the Common Shares on the Redemption Date (less any Tax required to be deducted, if any).

In this connection, upon presentation and surrender of the Debentures for payment on the Redemption Date, the Company shall, on the Redemption Date, make the delivery to the Indenture Trustee, at the above-mentioned corporate trust office, for delivery to and on account of the Holders, of certificates representing the Common Shares to which Holders are entitled together with, the cash equivalent in lieu of fractional Common Shares, if such a fraction shall become owing.

Until the legend is no longer required under applicable requirements of the 1933 Act or applicable state securities laws or unless otherwise directed by the Company, any shares of the Company issuable upon redemption of the Debentures originally offered or sold in the United States, will bear the appropriate legend set forth in section 2.19 of the Indenture and will be subject to the restrictions on resale imposed by the 1933 Act and state securities laws as described in section 2.19 of the of the Indenture.

SCHEDULE "C-2"

FORM OF MATURITY NOTICE

FIRST URANIUM CORPORATION

4.25% SENIOR UNSECURED CONVERTIBLE DEBENTURES DUE JUNE 30, 2012

MATURITY NOTICE

To: Holders of 4.25% Senior Unsecured Convertible Debentures due June 30, 2012 (the "Debentures") of First Uranium Corporation (the "Company")

Note: All capitalized terms used herein have the meaning ascribed thereto in the Indenture mentioned below, unless otherwise indicated.

Notice is hereby given pursuant to section 5.2 of the Indenture dated as of May 3, 2007 (the "Indenture") made between the Company and Computershare Trust Company of Canada, as trustee (the "Indenture Trustee"), that the Debentures will become due and payable as of June 30, 2012 (the "Maturity Date") and that each \$1,000 principal amount of Debentures remains convertible, at the option of the holder thereof, into Common Shares at the Conversion Price then in effect.

Pursuant to section 5.2 of the Indenture, the Company hereby advises the Holders of Debentures that it will deliver to Holders of Debentures who have not elected to convert their Debentures into Common Shares prior to the Maturity Date that number of Freely Tradeable Common Shares equal to the number obtained by dividing the principal amount of such Debentures by 95% of the Current Market Price of the Common Shares on the Maturity Date. The Current Market Price as at the Maturity Date shall be the Weighted Average Trading Price of the Common Shares on a Recognized Stock Exchange for the 20 consecutive Trading Days ending five Trading Days prior to such date. In the event that the Company elects to issue and deliver Common Shares as aforesaid, upon presentation and surrender of the Debentures, the Company shall pay or cause to be paid in cash to the Holder all accrued and unpaid interest to the Maturity Date, together with the cash equivalent representing fractional Common Shares, and shall, on the Maturity Date, send to the Indenture Trustee certificates representing the Common Shares to which the Holder is entitled. Until the legend is no longer required under applicable requirements of the 1933 Act or applicable state securities laws or unless otherwise directed by the Company, any shares of the Company issuable upon Maturity of the Debentures sold in the United States, its territories or possessions, will bear the appropriate legend set forth in section 2.19 of the Indenture.

FORM OF DECLARATION FOR REMOVAL OF LEGEND

TO: _____, [as indenture trustee for the
Debentures/registrar and transfer agent for the Common Shares of First Uranium
Corporation]

The undersigned (a) acknowledges that the sale of the securities of First Uranium Corporation (the "Corporation") to which this declaration relates is being made in reliance on Rule 904 of Regulation S under the United States Securities Act of 1933, as amended (the "U.S. Securities Act"), and (b) certifies that (1) the undersigned is not an "affiliate" of the Corporation as that term is defined in Rule 405 under the U.S. Securities Act, (2) the offer of such securities was not made to a person in the United States and either (A) at the time the buy order was originated, the buyer was outside the United States, or the seller and any person acting on its behalf reasonably believed that the buyer was outside the United States, or (B) the transaction was executed in, on or through the facilities of a Designated Offshore Securities Market as defined in Regulation S under the U.S. Securities Act and neither the seller nor any person acting on its behalf knows that the transaction has been prearranged with a buyer in the United States, (3) neither the seller nor any affiliate of the seller nor any person acting on any of their behalf, has engaged or will engage in any "directed selling efforts" in connection with the offer and sale of such securities, (4) the sale is bona fide and not for the purpose of "washing off" the resale restrictions imposed because the securities are "restricted securities" (as such term is defined in Rule 144(a)(3) under the U.S. Securities Act), (5) the seller does not intend to replace the securities sold in reliance on Rule 904 of Regulation S with fungible unrestricted securities, and (6) the contemplated sale is not a transaction, or part of a series of transactions which, although in technical compliance with Regulation S, is part of a plan or scheme to evade the registration provisions of the U.S. Securities Act. Terms used herein have the meanings given to them by Regulation S under the U.S. Securities Act unless otherwise indicated.

AGENCY AGREEMENT

RECEIVED

2008 OCT -8 P 12: 23

OFFICE OF INTERNATIONAL
CORPORATE FINANCE

May 3, 2007

First Uranium Corporation
Suite 1240
155 University Avenue
Toronto
Ontario M5H 3B7
Canada

Attention: Mr. Gordon Miller

Dear Sirs:

RBC Dominion Securities Inc., the lead agent and sole bookrunner, ("RBC") and Canaccord Capital Corporation, National Bank Financial Inc., GMP Securities L.P., Cormark Securities Inc., Orion Securities Inc. and Raymond James Ltd. (together with RBC, the "Agents" and individually, an "Agent") understand that First Uranium Corporation ("First Uranium"), a British Columbia corporation, proposes to create, issue and sell by way of private placement an aggregate principal amount of Cdn\$150,000,000 4.25% senior unsecured convertible debentures due June 30, 2012 (the "Debentures"), the terms and conditions of which are to be governed by a trust indenture dated the date hereof (the "Trust Indenture") between First Uranium and Computershare Trust Company of Canada (the "Trustee"), to "accredited investors", as defined in Section 1.1 of National Instrument 45-106, - Prospectus and Registration Exemptions ("NI 45-106"), in Canada, to Institutional Accredited Investors (defined below), in the United States pursuant to Schedule B hereto, to such persons who fall within Articles 19(5) and 49(2) of the Financial Services and Markets Act 2000 (Financial Promotions) Order 2005 ("Order"), in the United Kingdom, and to such other purchasers as may be agreed to between First Uranium and the Agents.

First Uranium hereby appoints the Agents to act as the sole and exclusive agents of First Uranium to solicit offers to purchase Debentures in all of the Provinces of Canada, in the United States and in the United Kingdom and the Agents hereby agree to act as exclusive agents for such purpose and to use their best efforts to effect the sale of the Debentures on behalf of First Uranium, subject to the terms and conditions contained herein. The Agents shall be entitled, in their sole discretion, to engage sub-agents to act on their behalf and the fee payable to such sub-agents shall be to the account of the Agents. The parties to this Agency Agreement acknowledge and agree that the Agents shall, however, not at any time be obligated to engage any sub-agents or to purchase any Debentures.

In consideration for their services hereunder, the Agents shall be entitled to the Agents' Fee provided for in accordance with Section 9 hereof. For greater certainty, the

services provided by the Agents in connection herewith will not be subject to the goods and services tax provided for in the *Excise Tax Act* (Canada) and any taxable supplies provided will be incidental to the exempt financial services provided.

Subject to applicable law and the terms of this Agency Agreement, the Debentures may also be distributed outside Canada, the United States and the United Kingdom, in each jurisdiction where they may be lawfully sold by the Agents without (i) giving rise to any requirement under the laws of such jurisdiction to prepare and/or file a prospectus or document having similar effect and (ii) creating any ongoing compliance obligation for First Uranium pursuant to the laws of such jurisdiction.

The offering of the Debentures by First Uranium is hereinafter referred to as the “Offering”.

The Agents and First Uranium acknowledge that the following terms and conditions form a part of this Agency Agreement:

TERM AND CONDITIONS

Section 1 - Definitions and Interpretation

(1) In this Agency Agreement:

“**affiliate**” means an affiliated entity for purposes of Ontario Securities Commission Rule 45-501 under the *Securities Act* (Ontario), as constituted at the date hereof;

“**Buffelsfontein Project**” means a uranium and gold tailings recovery operation located in the Western portion of the Witwatersrand Basin approximately 160 kilometres from Johannesburg, South Africa;

“**Business Day**” means any day other than a Saturday, Sunday or statutory or civic holiday in the cities of Toronto, Ontario, London, England and Johannesburg, South Africa;

“**Canadian Securities Laws**” means, collectively, all applicable securities laws of each of the Qualifying Jurisdictions and the respective rules and regulations under such laws, together with applicable published policy statements, notices and orders of the securities regulatory authorities in such Qualifying Jurisdictions;

“**Closing Date**” means May 3, 2007 or any earlier or later date as may be agreed to by First Uranium and the Agents, each acting reasonably, but will in any event not be later than May 30, 2007;

“**Common Shares**” means the common shares in the capital of First Uranium;

“**Conversion Shares**” means the Common Shares issuable upon conversion of the Debentures;

"Cyprus Holdco" means First Uranium Limited, the subsidiary of First Uranium incorporated under the laws of Cyprus;

"Development Subsidiaries" means the entities set out in Schedule "A" in which First Uranium directly or indirectly holds the types and percentages of securities or other ownership interests therein set forth;

"distribution" means distribution or distribution to the public, as the case may be, for the purposes of Canadian Securities Laws or any of them;

"Ezulwini Project" means the recommissioning of an underground uranium and gold mining operation located approximately 40 kilometres from Johannesburg on the outskirts of the town of Westonaria in Gauteng Province, South Africa.

"Financial Information" means the financial statements of First Uranium in the Public Record;

"Indemnified Party" has the meaning given to that term in Section 12 of this Agency Agreement;

"Institutional Accredited Investors" means institutions that are "accredited investors" as specified in Rule 501(a)(1)(2)(3) and (7) of Regulation D;

"JSE" means the Johannesburg Stock Exchange;

"Liens" means any encumbrance or title defect of whatever kind or nature, regardless of form, whether or not registered or registrable and whether or not consensual or arising by law (statutory or otherwise), including any mortgage, lien, charge, pledge or security interest, whether fixed or floating, or any assignment, lease, option, right of pre-emption, privilege, encumbrance, easement, servitude, right of way, restrictive covenant, right of use or any other right or claim of any kind or nature whatever which affects ownership or possession of, or title to, any interest in, or the right to use or occupy such property or assets;

"Maintenance Agreement" means the maintenance agreement entered into between Simmers and First Uranium dated as of December 20, 2006;

"Material Adverse Effect" means any event, change, fact, or state of being which could reasonably be expected to have a significant and adverse effect on the business, affairs, capital, operation, properties, permits, contractual arrangements, assets, business prospects, liabilities (absolute, accrued, contingent or otherwise) or condition (financial or otherwise) of First Uranium and the Development Subsidiaries considered on a consolidated basis;

"material change" means a material change for the purposes of Canadian Securities Laws or any of them or where undefined under the applicable Canadian Securities Laws of a Qualifying Jurisdiction means a change in the business, operations, assets, financial condition or capital of First Uranium and the Development Subsidiaries on

a consolidated basis that would reasonably be expected to have a significant effect on the market price of the Debentures, and includes a decision to implement such a change made by the directors of First Uranium and/or the Development Subsidiaries, as the case may be;

“**material fact**” means a material fact for the purposes of Canadian Securities Laws or any of them, or where undefined under the applicable Canadian Securities Laws of a Qualifying Jurisdiction means a fact that would reasonably be expected to have a significant effect on the market price or value of the Debentures;

“**Mine Waste**” means Mine Waste Solutions (Proprietary) Limited, a company incorporated pursuant to the laws of South Africa;

“**Mining Rights**” means the mining rights set out in Schedule C hereto;

“**misrepresentation**” means a misrepresentation for the purposes of Canadian Securities Laws or any of them, or where undefined under the applicable Canadian Securities Laws of a Qualifying Jurisdiction means: (i) an untrue statement of a material fact, or (ii) an omission to state a material fact that is required to be stated or that is necessary to make a statement not misleading in light of the circumstances in which it was made;

“**Public Record**” means the information about First Uranium and its subsidiaries filed on www.sedar.com;

“**Purchasers**” means the purchasers of the Debentures;

“**Qualifying Jurisdictions**” means, collectively, the territories and each of the ten provinces of Canada;

“**Regulation D**” means Regulation D under the U.S. Securities Act;

“**Securities Commissions**” means the applicable securities commission or regulatory authority in each of the Qualifying Jurisdictions;

“**Standard Listing Conditions**” has the meaning given to that term in Section 5(11) of this Agency Agreement;

“**Subscription Agreements**” means the subscription agreements entered into or to be entered into between First Uranium, RBC (or an affiliate thereof), on behalf of the Agents, and the Purchasers in connection with the Offering;

“**subsidiary**” means a subsidiary for purposes of Ontario Securities Commission Rule 45-501 under the *Securities Act* (Ontario), as constituted at the date of this Agency Agreement;

“**Term Sheet**” means the term sheet describing the terms of the Debentures attached as Schedule “A” to the Subscription Agreements;

"Time of Closing" means 8:30 a.m. (Toronto time) on the Closing Date, or any other time on the Closing Date as may be agreed to by First Uranium and the Agents;

"TSX" means the Toronto Stock Exchange Inc.;

"United States" means the United States of America, its territories and possessions, any state of the United States and the District of Columbia;

"U.S. Affiliates" means the United States broker-dealer affiliates of the Agents;

"U.S. Exchange Act" means the *United States Securities Exchange Act of 1934*, as amended;

"U.S. Securities Act" means the *United States Securities Act of 1933*, as amended;

"U.S. Securities Laws" means the applicable blue sky or securities legislation in the United States, together with the U.S. Exchange Act and the U.S. Securities Act;

"ZAR" means the lawful currency of the Republic of South Africa.

- (2) *Headings, etc.* The division of this Agency Agreement into sections, subsections, paragraphs and other subdivisions and the insertion of headings are for convenience of reference only and shall not affect the construction or interpretation of this Agency Agreement. Unless something in the subject matter or context is inconsistent therewith, references herein to sections, subsections, paragraphs and other subdivisions are to sections, subsections, paragraphs and other subdivisions of this Agency Agreement.
- (3) *Currency.* Except as otherwise indicated, all amounts expressed herein in terms of money refer to lawful currency of Canada and all payments to be made hereunder shall be made in such currency.
- (4) *Knowledge.* In this Agency Agreement, any reference to the "knowledge" of First Uranium, means to the best knowledge of Gordon Miller, Emma Oosthuizen or Jim Fisher, after due inquiry. However, for greater certainty, the use of such term will not create personal liability for the individuals named above.

Section 2 - Nature of the Offering

- (1) The Offering is to be effected in a manner exempt from any prospectus filing or delivery requirements under the Canadian Securities Laws and the laws of any other jurisdictions in which Purchasers reside, without the necessity of obtaining any order or ruling of any Securities Commission or similar authority in any such other jurisdictions. Accordingly, each Purchaser shall purchase Debentures from First Uranium under prospectus exemptions as more fully described in the Subscription Agreements.

- (2) First Uranium shall at its expense comply with all applicable regulatory requirements in connection with the Offering, including the filing of any required reports and the payment of applicable fees relating thereto.
- (3) The Agents shall conduct its activities in connection with the Offering in compliance with all applicable laws and regulatory requirements, including the Canadian Securities Laws and the laws of any other jurisdictions in which the Purchasers reside and, without limiting the foregoing, each Agent represents, warrants and covenants that:
 - (a) in the Qualifying Jurisdictions:
 - (i) all solicitation, offering and other selling efforts carried out by it in connection with the Offering have been and will be made in a manner such that no prospectus need be filed or delivered by First Uranium in connection with the Offering; and
 - (ii) no advertising of the Debentures has been or will be made by it in any media whatsoever (except as may be permitted under the Canadian Securities Laws) and no document or material that would constitute an offering memorandum as defined under the Canadian Securities Laws has been provided or made available to prospective Purchasers;
 - (b) any offer or sales of Debentures in the United States will be made in accordance with the terms and conditions set out in Schedule "B" to this Agreement. The terms and conditions and the representations, warranties and covenants of the parties contained in Schedule "B" form part of this Agency Agreement.
 - (c) in the United Kingdom, the offer of the Debentures will not be approved by an authorised person pursuant to Section 21 of the Financial Services and Markets Act 2000 ("FSMA") and accordingly, it will be only communicated in the United Kingdom to persons to whom the offer may be communicated without contravening the financial prohibition of Section 21 of FSMA, including those persons who fall within Articles 19(5) and 49(2) of the Order; and
 - (d) it has good and sufficient right and authority to enter into this Agency Agreement and complete its transactions contemplated under this Agency Agreement on the terms and conditions set forth herein.
- (4) The Agents shall obtain from each Purchaser a completed and executed Subscription Agreement and (if applicable) other forms prescribed by the TSX or required under the Canadian Securities Laws or by First Uranium in connection with the Offering. In order to facilitate organization of the closing of the Offering, the Agent will use its reasonable best efforts to provide copies of such documents to First Uranium's counsel not less than 48 hours prior to the Closing Date, provided that provision of such documents shall not constitute a delivery thereof for purposes of Section 5.

- (5) The representations and warranties of each of the Agents contained in this Agency Agreement shall be true at the Time of Closing as though they were made at the Time of Closing and they shall not survive the completion of the transactions contemplated under this Agency Agreement but shall terminate on the completion of the distribution of the Debentures.

Section 3 - Material Changes During the Distribution of the Debentures

- (1) First Uranium will promptly inform the Agents in writing during the period prior to the completion of the distribution of the Debentures of the full particulars of any material change (whether actual, anticipated, threatened, contemplated, or proposed by, to, or against) (whether financial or otherwise) in the assets, liabilities (contingent or otherwise), business, affairs, operations, or capital of First Uranium and the Development Subsidiaries, considered as a whole, provided that First Uranium shall in good faith discuss with the Agents any changes contemplated, anticipated, threatened or proposed above which is of such a nature that there may be reasonable doubt as to whether notice thereof should be given to the Agents.

Section 4 - Due Diligence

Prior to the Time of Closing, the Agents, their legal counsel and technical consultants will be provided with timely access to all information required to permit them to conduct a full due diligence investigation of First Uranium and the Development Subsidiaries and the business conducted by First Uranium and the Development Subsidiaries. In particular, the Agents shall be permitted to conduct a due diligence exercise that they, in their sole discretion, consider desirable in order to fulfil their obligations under applicable securities legislation, and in that regard, First Uranium will make available to the Agents, their legal counsel and technical consultants, on a timely basis, all corporate and operating records, material contracts, reserve reports, technical reports, financial information, budgets, key officers, and other relevant information necessary in order to complete the due diligence investigation of First Uranium and the Development Subsidiaries and the business conducted by First Uranium and the Development Subsidiaries, as well as provide reasonable access to their respective directors, officers and employees for this purpose. All information requested by the Agents, their counsel and technical consultants in connection with the due diligence investigations of the Agents will be treated by the Agents, their counsel and technical consultants as confidential and will only be used in connection with the Offering.

Section 5 - Conditions of Closing

The Agents' obligations under this Agency Agreement are conditional upon and subject to:

- (1) the Agents receiving at the Time of Closing favourable legal opinions from Fasken Martineau DuMoulin LLP, Canadian counsel to First Uranium (who may rely, to the extent appropriate in the circumstances, on the opinions of local counsel acceptable to counsel to the Agents as to the qualification of the Debentures for sale on a private placement basis and as to other matters governed by the laws of jurisdictions in

Canada other than the provinces in which they are qualified to practice and may rely, to the extent appropriate in the circumstances, as to matters of fact on certificates of officers, public and exchange officials or of the auditor or transfer agent of First Uranium), to the effect set forth below:

- (a) First Uranium being a corporation continued and existing under the laws of British Columbia;
- (b) First Uranium having the corporate capacity and power to own and lease its properties and assets and to conduct its business as described in the Public Record, to execute and deliver this Agency Agreement, and to carry out the Offering and transactions contemplated hereby under the laws of its jurisdiction of continuance;
- (c) all necessary corporate action having been taken by First Uranium to authorize the execution and delivery of each of the Agency Agreement, the Trust Indenture and the Subscription Agreements and the performance of its obligations thereunder, and that each of the Agency Agreement, the Trust Indenture and the Subscription Agreements having been duly executed and delivered by First Uranium and constituting a legal, valid and binding obligation of, and is enforceable against, First Uranium in accordance with its terms (subject to bankruptcy, insolvency or other laws affecting the rights of creditors generally, general equitable principles including the availability of equitable remedies and the qualification that no opinion need be expressed as to rights to indemnity, contribution and waiver of contribution) and the execution and delivery by First Uranium of the Agency Agreement, the Trust Indenture and the Subscription Agreements, the fulfilment of the terms thereof by First Uranium and the issue, sale and delivery on the Closing Date of the Debentures as contemplated herein do not constitute or result in a breach of or a default under, and do not create a state of facts which, after notice or lapse of time or both, will constitute or result in a breach of, and will not conflict with, any of the terms, conditions or provisions of the constating documents of First Uranium;
- (d) as at the Closing Date, the authorised capital of First Uranium consisting of an unlimited number of Common Shares of which 121,686,047 Common Shares were issued and outstanding;
- (e) the Global Certificates are in the form required by the Trust Indenture and, when duly and validly authenticated by the Trustee in the manner contemplated in the Trust Indenture and delivered to and paid for by the purchasers thereof, the Debentures represented by the Global Certificates shall be validly issued and entitled to the benefits provided in the Trust Indenture;
- (f) the Conversion Shares have been validly authorised, allotted and reserved for issuance and, when issued on conversion of the Debentures in accordance

with the terms of the Trust Indenture, shall be issued as fully paid and non-assessable shares in the capital of First Uranium;

- (g) no registration, filing or recording of the Trust Indenture under the laws of Canada or any province thereof is necessary in order to preserve or protect the validity or enforceability of the Trust Indenture or the Debentures except as shall have been made on or before the Time of Closing and including the filing of the Trust Indenture under First Uranium's profile on the System for Electronic Document Analysis and Retrieval;
- (h) the offering, issuance and sale of the Debentures to the Purchasers in accordance with the terms and conditions of the Subscription Agreements and the Agency Agreement have been effected in such a manner as to be exempt from the prospectus requirements of the Canadian Securities Laws, and no prospectus or other document is required to be filed, no proceedings are required to be taken and no approvals, permits, consents, orders or authorizations of any regulatory authority are required to be obtained by First Uranium under the Canadian Securities Laws to permit such offering, issuance and sale. We note that First Uranium is required to file within 10 days after the date of the distribution, a report with the securities regulator in each of the Qualifying Jurisdictions on Form 45-106F1 prepared and executed in accordance with NI 45-106, together with the fees prescribed by the applicable Canadian Securities Laws, if any, and, in the case of British Columbia, the prescribed fee checklist;
- (i) that the first trade in the Debentures by a holder resident in the Qualifying Jurisdictions (other than a trade which is otherwise exempt under applicable Canadian Securities Laws) will be a distribution pursuant to Canadian Securities Laws unless, at the time of such trade:
 - (i) First Uranium is and has been a "reporting issuer" under the securities laws of a Qualifying Jurisdiction for the four months immediately preceding the trade;
 - (ii) at least four months have elapsed from the "distribution date" (as such term is defined in National Instrument 45-102 ("NI 45-102") of the Debentures;
 - (iii) the certificates or ownership statements representing the Debentures carry the legend required by section 2.5(2)3(a) of NI 45-102;
 - (iv) the trade is not a "control distribution" within the meaning of NI 45-102;
 - (v) no unusual effort is made to prepare the market or to create a demand for the Debentures;

- (vi) no extraordinary commission or consideration is paid to a person or a company in respect of the trade; and
 - (vii) if the selling security holder is an insider or officer of First Uranium, the selling security holder has no reasonable grounds to believe that First Uranium is in default of applicable securities legislation.
- (j) The issuance of the Conversion Shares to the Purchasers in accordance with the terms and conditions of the Trust Indenture is exempt from the prospectus and registration requirements of the Canadian Securities Laws and no prospectus or other document is required to be filed, no proceedings are required to be taken and no approvals, permits, consents, orders or authorizations of any regulatory authority are required to be obtained by First Uranium under the Canadian Securities Laws to permit such issuance;
- (k) that the first trade in Conversion Shares by a holder resident in the Qualifying Jurisdictions (other than a trade which is otherwise exempt under applicable Canadian Securities Laws) will be a distribution pursuant to Canadian Securities Laws unless, at the time of such trade:
- (i) First Uranium is and has been a “reporting issuer” under the securities laws of a Qualifying Jurisdiction for the four months immediately preceding the trade;
 - (ii) at least four months have elapsed from the “distribution date” (as such term is defined in NI 45-102) of the Debentures;
 - (iii) the certificates or ownership statements representing the Conversion Shares carry the legend required by section 2.5(2)3(a) of NI 45-102, if the Conversion Shares are issued prior to the date that is four months and a day after the “distribution date” (as such term is defined in NI 45-102) of the Debentures;
 - (iv) the trade is not a “control distribution” within the meaning of NI 45-102;
 - (v) no unusual effort is made to prepare the market or to create a demand for the Conversion Shares;
 - (vi) no extraordinary commission or consideration is paid to a person or a company in respect of the trade; and
 - (vii) if the selling security holder is an insider or officer of First Uranium, the selling security holder has no reasonable grounds to believe that First Uranium is in default of applicable securities legislation;
- (l) The Trustee has been duly appointed as the trustee for the Debentures; and

- (m) to such other matters as may be reasonably requested by the Agents no less than 48 hours prior to the Time of Closing.

in a form acceptable to counsel to the Agents, Stikeman Elliott LLP, acting reasonably;

- (2) the Agents receiving at the Time of Closing a favourable legal opinion from South African legal counsel to First Uranium, to the effect that all documents required to be filed, proceedings taken or approvals, permits, consents, orders or authorizations of any governmental entity or regulatory authority in South Africa required to be obtained under South African law (including, without limitation, the requirements of the South African Reserve Bank) in connection with the Offering having been obtained;
- (3) the Agents receiving at the Time of Closing a favourable legal opinion from South African legal counsel to Simmers, to the effect that, (i) assuming the scorecard rating of DECTI Rating Agency (Pty) Ltd. ("DECTI") delivered on December 7, 2006 relating to the BEE status of each of Simmers, Buffelsfontein Gold Mines Limited and Ezulwini Mining Company (Proprietary) Limited is still correct, then Simmers, Buffelsfontein Gold Mines Limited and Ezulwini Mining Company (Proprietary) Limited will, at the Time of Closing, have the requisite BEE ownership for purposes of qualifying for grants of mining rights under the Broad-Based Socio-Economic Empowerment Charter for the South African Mining Industry with respect to compliance with broad based socio-economic empowerment of the mining industry;
- (4) if any Debentures are sold to purchasers in the United States, the Agents receiving at the Time of Closing a favourable legal opinion from Dorsey & Whitney LLP, special U.S. counsel to First Uranium, in a form acceptable to counsel to the Agents, Stikeman Elliott LLP, acting reasonably, to the effect that the offer and sale of the Debentures, and the issuance of the Conversion Shares, in the United States will not be required to be registered under the 1933 Act;
- (5) the Agents receiving at the Time of Closing opinions from legal counsel(s) to First Uranium acceptable to the Agents, regarding the right to or ownership of the material mining properties of the Development Subsidiaries, including, without limitation, the tailings dumps of the Buffelsfontein Project and the Ezulwini Project in a form acceptable to counsel to the Agents, Stikeman Elliott LLP, acting reasonably;
- (6) the Agents receiving at the Time of Closing favourable legal opinions from legal counsel(s) to First Uranium acceptable to the Agents, regarding the Development Subsidiaries in a form acceptable to counsel to the Agents, Stikeman Elliott LLP, acting reasonably, to the effect set out below:
 - (a) each Development Subsidiary having been incorporated and existing under its jurisdiction of incorporation;

- (b) each Development Subsidiary having the corporate capacity and power to own and lease its properties and assets and to conduct its business as described in the Public Record; and
 - (c) as to the authorized and issued share capital of each Development Subsidiary and to the ownership thereof;
- (7) First Uranium complying with all of its covenants and obligations under this Agency Agreement required to be satisfied at or prior to the Time of Closing;
- (8) the Agents having received certificates dated the Closing Date signed by two senior officers of First Uranium as may be acceptable to the Agents, acting reasonably, in form and content satisfactory to the Agents, acting reasonably, with respect to:
 - (a) the constating documents of First Uranium;
 - (b) the resolutions of the directors of First Uranium relevant to the issue (or reservation for issue) and sale of the Debentures and, as applicable, the authorization of this Agency Agreement, the Trust Indenture and the Subscription Agreements and the other agreements and transactions contemplated by this Agency Agreement; and
 - (c) the incumbency and signatures of signing officers of First Uranium;
- (9) Certificates of status and/or compliance, where issuable under applicable law, for First Uranium and each of the Development Subsidiaries, each dated within two (2) days prior to the Closing Date;
- (10) First Uranium having delivered to the Agents, at the Time of Closing, a certificate dated the Closing Date addressed to the Agents and signed by two senior officers of First Uranium as may be acceptable to the Agents acting reasonably, certifying, for and on behalf of First Uranium, and not in their personal capacities, after having made due inquiries, with respect to the following matters:
 - (a) First Uranium having complied with all the covenants and satisfied all the terms and conditions of this Agency Agreement on its part to be complied with and satisfied at or prior to the Time of Closing; and
 - (b) the representations and warranties of First Uranium contained in this Agency Agreement and in any certificates of First Uranium delivered pursuant to or in connection with this Agency Agreement, being true and correct as at the Time of Closing, with the same force and effect as if made on and as at the Time of Closing, after giving effect to the transactions contemplated by this Agency Agreement;
- (11) First Uranium having delivered to the Agents evidence satisfactory to the Agents of the approval (or conditional approval) of the listing and posting for trading on the TSX of the Conversion Shares, subject only to satisfaction by First Uranium of

customary post-closing conditions imposed by the TSX in similar circumstances (the "Standard Listing Conditions");

- (12) First Uranium having delivered to the Agents a certificate of Computershare Investor Services Inc., as registrar and transfer agent of the Common Shares, which certifies the number of Common Shares issued and outstanding on the date prior to the Closing Date;
- (13) the Agents not having exercised any rights of termination set forth in Section 11;
- (14) the Agent having received a fully executed copy of the Trust Indenture; and
- (15) the Agents having received at the Time of Closing such further certificates, opinions of counsel and other documentation from First Uranium as may be contemplated herein or as the Agents or their counsel may reasonably require, provided, however, that the Agents or their counsel shall request any such certificate or document within a reasonable period prior to the Time of Closing that is sufficient for First Uranium to obtain and deliver such certificate, opinion or document, and in any event, at least 48 hours prior to the Time of Closing.

Section 6 - Representations and Warranties of First Uranium

- (1) First Uranium hereby represents and warrants to the Agents, intending that the same may be relied upon by the Agents that:
 - (a) *Good Standing of First Uranium.* First Uranium is a corporation continued and existing under the laws of British Columbia, is current and up-to-date with all material filings required to be made, and has the corporate power and authority to own, lease and operate its properties and to conduct its business as now carried on by it, and to enter into, deliver and perform its obligations under this Agency Agreement, the Subscription Agreements and the Trust Indenture;
 - (b) *Good Standing of Development Subsidiaries.* First Uranium's only subsidiaries are the Development Subsidiaries listed in Schedule "A" hereto, which schedule is true, complete and accurate in all respects. Each of the Development Subsidiaries is a corporation incorporated, organized and existing under the laws of the jurisdiction of incorporation set out in such schedule, is current and up-to-date with all material filings required to be made and has the requisite corporate power and capacity to own, lease and operate its properties and to conduct its business as now carried on by it or proposed to be carried on by it, and is duly qualified to transact business and is in good standing in each jurisdiction in which such qualification is required, whether by reason of the ownership or leasing of property or the conduct of business, except where the failure to be so would not reasonably be expected to result in a Material Adverse Effect. All of the issued and outstanding shares in the capital of each Development Subsidiary have been duly authorized and validly issued, are fully paid and, except as otherwise

noted in Schedule "A", are directly or indirectly beneficially owned by First Uranium, free and clear of any Lien; and none of the outstanding shares of the capital stock of any Development Subsidiary was issued in violation of the pre-emptive or similar rights of any security holder of such subsidiary. There exist no options, warrants, purchase rights, or other contracts or commitments that could require First Uranium to sell, transfer or otherwise dispose of any capital stock of any Development Subsidiary. No act or proceeding has been taken by or against the Development Subsidiaries in connection with their liquidation, winding-up or bankruptcy;

- (c) *Share Capital of Development Subsidiaries.* The share capital of the Development Subsidiaries as set forth in Schedule "A" hereto is true and correct;
- (d) *Share Capital of First Uranium.* At the Time of Closing, the issued and outstanding share capital of First Uranium will consist of 121,686,047 Common Shares and no preferred shares;
- (e) *Listed Securities.* The Common Shares are listed on the TSX and the JSE and the TSX has or will have prior to the Time of Closing conditionally approved the listing of the Conversion Shares;
- (f) *Authorization and Description of Conversion Shares.* The Conversion Shares have been validly authorised, allotted and reserved for issuance and when on conversion or redemption of the Debentures in accordance with the terms of the Trust Indenture, shall be issued as fully paid and non-assessable shares;
- (g) *Absence of Rights.* No person has any right, agreement or option, present or future, contingent or absolute, or any right capable of becoming a right, agreement or option, for the issue or allotment of any unissued shares of First Uranium or any other agreement or option, for the issue or allotment of any unissued shares of First Uranium or any other security convertible into or exchangeable for any such shares or to require First Uranium to purchase, redeem or otherwise acquire any of the issued and outstanding shares of First Uranium except as otherwise disclosed in the Public Record;
- (h) *Continuous Disclosure.* The information and statements in First Uranium's Public Record are and were true and correct and contained no untrue statement of a material fact and did not omit to state a material fact that was required to be stated or omit to state a material fact that was necessary to be stated in order for the statement not to be misleading or that was necessary to prevent a statement that was made from being false or misleading in the circumstances in which it was made, the whole as of the respective dates of such information and statements;
- (i) *Financial Statements.* The Financial Information and the notes thereto,

- (i) present fairly, in all material respects, the financial position of First Uranium, First Uranium (Proprietary) Limited, and Ezulwini Mining Company (Proprietary) Limited and the statements of operations, retained earnings, cash flow from operations and changes in financial information of First Uranium, First Uranium (Proprietary) Limited, and Ezulwini Mining Company (Proprietary) Limited for the periods specified in such Financial Information;
- (ii) have been prepared in conformity with generally accepted accounting principles in Canada ("Canadian GAAP") applied on a consistent basis throughout the periods involved; and
- (iii) do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the Financial Information;
- (j) *Corporate Actions.* First Uranium has taken all necessary corporate action to authorize the execution, delivery and performance of this Agency Agreement, the Trust Indenture and the Subscription Agreements;
- (k) *Global Certificate.* Two global certificates representing the Debentures will have been duly executed by First Uranium, duly certified by the Trustee and delivered to the Agents, and will be legal, valid and binding obligations of First Uranium enforceable against First Uranium by the holder thereof and will be entitled to the benefits of and subject to the terms of the Trust Indenture;
- (l) *Trust Indenture.* At the Time of Closing, all of the conditions precedent provided for in the Trust Indenture relating to the creation, issuance, certification and delivery of the Debentures shall have been satisfied and no Event of Default (as defined in the Trust Debenture) or event, which, with notice or lapse of time would constitute an Event of Default (as defined in the Trust Indenture), shall have occurred and be continuing;
- (m) *Debentures.* The Debentures have been duly created, and the rights, privileges, restrictions and conditions evidenced by the Debentures are accurately summarized in all material respects in the Trust Indenture and when issued, delivered and paid for in full, will be validly issued as fully paid securities of First Uranium and will not have been issued in violation of or subject to any pre-emptive rights or contractual rights to purchase securities issued by First Uranium, other than pursuant to the Maintenance Agreement;
- (n) *Liabilities.* Neither First Uranium, nor to the knowledge of First Uranium or the Development Subsidiaries, has any liabilities, obligations, indebtedness or commitments, whether accrued, absolute, contingent or otherwise, which

are not disclosed or referred to in the Financial Information or referred to or disclosed herein, other than liabilities, obligations, or indebtedness or commitments (i) incurred in the normal course of business; or (ii) which would not have a Material Adverse Effect;

- (o) *Independent Accountants.* The accountants who reported on and certified the Financial Information, are independent with respect to First Uranium within the meaning of Canadian Securities Laws;
- (p) *Accounting Controls.* First Uranium and each of its Development Subsidiaries maintains, and will maintain, a system of internal accounting controls sufficient to provide reasonable assurance that (i) transactions are executed in accordance with management's general or specific authorizations, (ii) transactions are recorded as necessary to permit preparation of financial statements in conformity with generally accepted accounting principles in Canada and to maintain asset accountability, (iii) access to assets is permitted only in accordance with management's general or specific authorization, and (iv) the recorded accountability for assets is compared with the existing assets at reasonable intervals and appropriate action is taken with respect to any differences;
- (q) *Assets.* First Uranium and the Development Subsidiaries, as the case may be, have the right in respect of all assets described in the Public Record as owned by them or over which they have rights free and clear of all Liens, save and except as disclosed in the Public Record;
- (r) *Mining Rights.* The Mining Rights are in good standing, are valid and enforceable, are free and clear of any material Liens or charges and no material royalty is payable in respect of any of them, except as set out in the Public Record. Except as set out in the Public Record, no other property rights are necessary for the conduct of First Uranium's or the Development Subsidiaries' business; and there are no material restrictions on the ability of First Uranium or the Development Subsidiaries to use, transfer or otherwise exploit any such property rights except as set out in the Public Record. Except as disclosed in the Public Record, Simmers is the holder of Mining Rights necessary to carry on the proposed activities of First Uranium and the Development Subsidiaries. Except as disclosed in the Public Record, Mining Rights held by Simmers cover the areas required by First Uranium and the Development Subsidiaries for such purposes;
- (s) *Mineral Information.* The information set forth in the Technical Reports in the Public Record relating to the estimates of the mineral resources of the Development Subsidiaries has been reviewed and verified by Scott Wilson Roscoe Postle Associates Inc. and, in all cases, the resource information has been prepared in accordance with Canadian industry standards set forth in National Instrument 43-101 - *Standards of Disclosure for Mineral Projects*, and the method of estimating the resources has been verified by mining experience and the information upon which the estimates of resources were

based, was, at the time of delivery thereof, complete and accurate in all material respects and there have been no material adverse changes to such information since the date of delivery or preparation thereof;

- (t) *Environmental Laws.* Except as described in the Public Record, with respect to the Buffelsfontein Project and the Ezulwini Project, (a) neither First Uranium nor any of the Development Subsidiaries is in violation of any federal, provincial, state, local, municipal or foreign statute, law, rule, regulation, ordinance, code, policy or any judicial or administrative interpretation thereof, including any judicial or administrative order, consent decree or judgment, relating to pollution or protection of human health, the environment (including, without limitation, ambient air, surface water, groundwater, land surface or subsurface strata) or wildlife, including, without limitation, laws and regulations relating to the release or threatened release of chemicals, pollutants, contaminants, wastes, toxic substances, hazardous substances, petroleum or petroleum products (collectively, "**Hazardous Materials**") or to the manufacture, processing, distribution, use, treatment, storage, disposal, transport or handling of Hazardous Materials (collectively, "**Environmental Laws**"), except where the violation would not reasonably be expected, on an individual or aggregate basis, to have a Material Adverse Effect, (b) First Uranium and the Development Subsidiaries have all permits, authorizations and approvals required under any applicable Environmental Laws and are each in compliance with their requirements, except where the failure to have such permits, authorizations and approvals would not reasonably be expected, on an individual or aggregate basis, to have a Material Adverse Effect, and (c) there are no pending or threatened administrative, regulatory or judicial actions, suits, demands, demand letters, claims, liens, notices of non-compliance or violation, investigation or proceedings relating to any Environmental Laws against First Uranium or any of the Development Subsidiaries, which if determined adversely, would reasonably be expected to have a Material Adverse Effect;
- (u) *Possession of Licenses and Permits.* Except as disclosed in the Public Record, First Uranium and the Development Subsidiaries possess such permits, certificates, licenses, approvals, consents and other authorizations (collectively, "**Governmental Licenses**") issued by the appropriate federal, provincial, state, local or foreign regulatory agencies or bodies necessary to own, lease, exploit, use, stake or maintain the Mining Rights and to conduct the business now operated by them, or where the failure to possess such permits, certificates, licenses, approvals, consents or authorizations would not reasonably be expected to have a Material Adverse Effect. First Uranium and the Development Subsidiaries are in compliance with the terms and conditions of all such Governmental Licenses except where such non-compliance would not reasonably be expected to have a Material Adverse Effect. All of the Governmental Licenses are valid and in full force and effect. Neither First Uranium nor any of the Development Subsidiaries have

received any notice of proceedings relating to the revocation or modification of any such Governmental Licenses;

- (v) *Insurance.* Except as disclosed in the Public Record, First Uranium and the Development Subsidiaries maintain, or will maintain, insurance against loss of, or damage to, their assets by all insurable risks on a replacement cost basis in accordance with industry standards, and all of the policies in respect of such insurance coverage are in good standing in all respects and not in default except in each case as could not reasonably be expected to have a Material Adverse Effect;
- (w) *Material Contracts.* All of the material contracts and agreements of First Uranium and of the Development Subsidiaries not made in the ordinary course of business (collectively the "Material Contracts") have been disclosed in the Public Record. Neither First Uranium nor any Development Subsidiary has received notification from any party claiming that First Uranium or any Development Subsidiary is in breach or default under any Material Contract;
- (x) *No Material Adverse Effect.* Since December 31, 2006, (a) there has been no change in the condition (financial or otherwise), or in the properties, capital, affairs, prospects, operations, assets or liabilities of First Uranium and the Development Subsidiaries considered as one enterprise, whether or not arising in the ordinary course of business which would give rise to a Material Adverse Effect, and (b) there have been no transactions entered into by First Uranium or any of the Development Subsidiaries, other than those in the ordinary course of business, which are material with respect to First Uranium and the Development Subsidiaries considered as one enterprise, in each case, except as disclosed in the Public Record;
- (y) *Absence of Proceedings.* There is no action, suit, proceeding, inquiry or investigation before or brought by any court or governmental agency, governmental instrumentality or body, domestic or foreign, now pending or, to the knowledge of First Uranium, threatened against or affecting First Uranium or any Development Subsidiary, which is required to be disclosed in the Public Record and which is not so disclosed, or which if determined adversely, would have a Material Adverse Effect, or which if determined adversely would materially and adversely affect the consummation of the transactions contemplated in this Agency Agreement or the performance by First Uranium of its obligations hereunder. The aggregate of all pending legal or governmental proceedings to which First Uranium or any Development Subsidiary is a party or of which any of their respective property or assets is subject, which are not described in the Public Record include only ordinary routine litigation incidental to the business, properties and assets of First Uranium and the Development Subsidiaries and would not reasonably be expected to result in a Material Adverse Effect;

- (z) *Absence of Defaults and Conflicts.* Neither First Uranium nor any of the Development Subsidiaries is in violation of its charter or by-laws or in default in the performance or observance of any obligation, agreement, covenant or condition contained in any contract, indenture, mortgage, deed of trust, loan or credit agreement, note, lease, license or other agreement or instrument to which First Uranium or any of the Development Subsidiaries is a party or by which it or any of them may be bound, or to which any of the property or assets of First Uranium or any Development Subsidiary is subject (collectively, "**Agreements and Instruments**"), except where such default, breach or conflict would not reasonably be expected to have a Material Adverse Effect. The execution, delivery and performance of this Agency Agreement, the Trust Indenture and the Subscription Agreements and the consummation of the transactions contemplated herein and therein (including the authorization, issuance, sale and delivery of the Debentures and the use of the proceeds from the sale of the Debentures as described in the Term Sheet under the caption "**Use of Proceeds**") and compliance by First Uranium with its obligations hereunder, have been duly authorized by all necessary corporate action, and do not and will not, whether with or without the giving of notice or passage of time or both, conflict with or constitute a breach of, or default or Repayment Event (as defined below) under, or result in the creation or imposition of any Lien upon any property or assets of First Uranium, or any Development Subsidiary pursuant to the Agreements and Instruments, nor will such action result in any violation or conflict with the provisions of the charter or by-laws of First Uranium, or any Development Subsidiary or any existing applicable law, statute, rule, regulation, judgment, order, writ or decree of any government, government instrumentality or court, domestic or foreign, having jurisdiction over First Uranium, or any Development Subsidiary or any of their assets, properties or operations, except for such violations or conflicts that would not, singly or in the aggregate, have a Material Adverse Effect. As used herein, a "**Repayment Event**" means any event or condition which gives the holder of any note, debenture or other evidence of indebtedness (or any person acting on such holder's behalf) the right to require the repurchase, redemption or repayment of all or a portion of such indebtedness by First Uranium or any Development Subsidiary;
- (aa) *Labour.* No material labour dispute with the employees of First Uranium or any Development Subsidiary, exists or, to the knowledge of First Uranium, and the Development Subsidiaries, is imminent. Neither First Uranium nor any Development Subsidiary is a party to any collective bargaining agreement and no action has been taken or is contemplated to organize any employees of First Uranium or any Development Subsidiary;
- (bb) *Trustee.* Computershare Trust Company of Canada at its offices in Toronto, Ontario has been duly appointed as trustee for the Debentures;

- (cc) *Transfer Agent.* Computershare Investor Services Inc. at its offices in Toronto, Ontario has been duly appointed as the transfer agent and registrar for the Common Shares of First Uranium, including the Conversion Shares;
- (dd) *Absence of Further Requirements.* No filing with, or authorization, approval, consent, license, order, registration, qualification or decree of any court or governmental authority or agency is necessary or required for the performance by First Uranium of its obligations hereunder, in connection with the proposed distribution, issuance or sale of the Debentures hereunder, or the consummation of the transactions contemplated by this Agency Agreement, except such as have been obtained under South African law, Canadian Securities Laws or U.S. Securities Laws other than the reports on Form 45-106F1 prepared and executed in accordance with NI 45-106;
- (ee) *Taxes.* All material tax returns, reports, elections, remittances and payments of First Uranium and the Development Subsidiaries required by applicable law to have been filed or made in any applicable jurisdiction, have been filed or made (as the case may be), other than for taxes being contested in good faith, and are substantially true, complete and correct and all taxes of First Uranium and of the Development Subsidiaries have been paid or accrued in the Financial Information;
- (ff) *Unlawful Payment.* Neither First Uranium nor any of the Development Subsidiaries nor any employee or agent of First Uranium or any Development Subsidiary, has made any unlawful contribution or other payment to any official of, or candidate for, any South African, Canadian or United States federal, state, provincial or municipal office or any similar office of any other country, or failed to disclose fully any contribution, in violation of any law, or made any payment to any federal, provincial, state or municipal governmental officer or official, or other person charged with similar public or quasi-public duties, other than payments required or permitted by applicable laws;
- (gg) *Brokerage Fees.* Other than the Agents, there is no person, firm or corporation acting or, to the knowledge of First Uranium, purporting to act at the request of First Uranium, who is entitled to any brokerage or finder's fees in connection with the Offering contemplated herein;
- (hh) *Status in the U.S.* First Uranium makes the representations, warranties and covenants applicable to it in Schedule "B" hereto and acknowledges that the terms and conditions of the representations, warranties and covenants of the parties contained in Schedule "B" form part of this Agency Agreement;
- (ii) *Agency Agreement.* This Agency Agreement, the Trust Indenture and the Subscription Agreements have been duly authorized, executed and delivered by First Uranium and are legal, valid and binding obligations of, and are enforceable against, First Uranium in accordance with their terms (subject to bankruptcy, insolvency or other laws affecting the rights of creditors

generally, the availability of equitable remedies and the qualification that rights to indemnity and waiver of contribution may be contrary to public policy); and

- (jj) *Compliance with Laws.* First Uranium has fully complied with all relevant statutory and regulatory requirements required to be complied with prior to the Time of Closing in connection with the Offering.

Section 7 - Additional Covenants of First Uranium

In addition to any other covenant of First Uranium set forth in this Agency Agreement, First Uranium covenants with the Agents that:

- (a) *Filings.* First Uranium will make all necessary filings with and obtain all necessary approvals, consents and acceptances of all applicable regulatory authorities required to be made or obtained in order to permit First Uranium to distribute the Debentures on a basis exempt from the registration and prospectus requirements under the Canadian Securities Laws and any laws of any other jurisdictions in which Purchasers reside and to permit the holders of the Debentures to be able to resell the Debentures and the Conversion Shares through registered dealers or brokers after the expiry of the four-month hold period relating thereto without the requirement of filing a prospectus or other document, taking any proceeding or obtaining any approval, permit, consent or authorization under the Canadian Securities Laws, and any laws of any other jurisdictions in which Purchasers reside, subject to the absence of any orders restricting trades in such Debentures, no unusual effort being made to prepare the market or to create a demand for the Debentures that are subject of the trade, no extraordinary commission or consideration being paid to a person or entity in respect of the trade, and general restrictions applicable to holders thereof who are insiders or officers of First Uranium or who are "control persons" as contemplated by the Securities Laws;
- (b) *Listing.* First Uranium will use its commercially reasonable efforts to obtain, prior to the Closing Date, all necessary acceptances and approvals of the TSX and of the JSE for the listing of the Conversion Shares, subject only to the filing of the customary documents and the payment of additional listing fees;
- (c) *Press Releases.* Subject to compliance with applicable law, any press release of First Uranium relating to the Offering will be provided in advance to RBC on behalf of the Agents, and First Uranium will use its reasonable commercial efforts to agree to the form and content thereof with RBC on behalf of the Agents, prior to the release thereof; and
- (d) *Use of Proceeds.* First Uranium agrees to use the net proceeds from the purchase and sale of the Debentures materially in accordance with the descriptions set forth under the heading "Use of Proceeds" in the Term Sheet. The Agents acknowledge that there may be circumstances where, for

sound business reasons and upon approval of First Uranium's Board of Directors, a re-allocation of funds may be necessary or advisable.

Section 8 - Closing

- (1) *Location of Closing.* The Offering will be completed at the offices of Fasken Martineau DuMoulin LLP in Toronto, Ontario at the Time of Closing on the Closing Date.
- (2) *Delivery of Subscription Agreements.* The Agents shall deliver to First Uranium original or facsimile copies of the Subscription Agreements completed and executed by the Purchasers.
- (3) *Subscription Agreements.* Subject to rejection or allotment by First Uranium, acting reasonably, and after consultation with the Agents in the event the Offering is oversubscribed, First Uranium shall accept each Subscription Agreement properly completed and duly executed by the Purchasers, by the execution thereof by First Uranium's duly authorised officers and shall deliver a duly executed copy of each Subscription Agreement to the Agents to be held by the Agents on behalf of the Purchasers.
- (4) *Certificate.* At the Time of Closing, subject to the terms and conditions contained in this Agency Agreement, First Uranium shall deliver to the Agents a certificate or certificates representing the Debentures against payment to First Uranium of the purchase price by wire transfer at the Time of Closing. First Uranium will, at the Time of Closing and upon such payment of the purchase price to First Uranium, make payment in full of the Agents' Fee which shall be made by First Uranium directing RBC to withhold the Agents' Fee from the payment of the purchase price.
- (5) *Denomination; Registration of Certificate.* At the Time of Closing, First Uranium shall deliver to the Agent a global certificate for the Debentures which shall be in such denomination as the Agents may request in writing at least two (2) Business Days before the Time of Closing and registered in the name of CDS & Co., and if there are sales of Debentures in the United States in accordance with Schedule "B" a global certificate for such Debentures (with a second CUSIP number) which shall be in such denomination as the Agents may request in writing at least two (2) Business Days before the Time of Closing and registered in the name of CDS & Co.

Section 9 - Agents' Fee

- (1) *Agents' Fee on Purchased Debentures.* First Uranium shall pay to RBC, on behalf of the Agents, a fee (the "Agents' Fee") at the Time of Closing equal to 3% of the aggregate principal amount of Debentures sold pursuant to the terms of this Agency Agreement in consideration of the services to be rendered by the Agents in connection with the Offering. Such services shall include, without limitation: (i) acting as financial advisors to First Uranium in the preparation of documentation relating to the sale of the Debentures; (ii) forming and managing banking, selling and other groups for the sale of the Debentures; (iii) distributing the Debentures directly and through other registered dealers and brokers; (iv) assisting First

Uranium in connection with the preparation and finalization of the Term Sheet; (v) performing administrative work in connection with these matters; and (vi) all other services arising out of this Agency Agreement.

Section 10 - Restriction on Further Issuances of Securities

- (1) First Uranium hereby covenants and agrees with the Agents that it will not directly or indirectly, without the prior consent of RBC, such consent not to be unreasonably withheld, offer to sell, grant any option for the sale of, or otherwise dispose of, or announce any intention to do so, in a public offering or by way of private placement or otherwise, any common shares of First Uranium or any securities convertible or exchangeable into common shares of First Uranium for a period of 120 days after the Closing Date except: (i) shares issuable pursuant to existing options; (ii) options issued under First Uranium's stock option plan; (iii) shares issuable in connection with the proposed acquisition of Mine Waste, (iv) 6,141,009 Common Shares issuable in connection with First Uranium's acquisition of the 10% shareholding in Ezulwini Mining Company (Proprietary) limited held by Waterpan Mining Consortium, and (v) the common share purchase warrants (and shares issuable thereunder) that may be granted to Investec Bank Limited (and/or an affiliated company) pursuant to the terms of the mandate letter executed by Investec on October 31, 2006 and accepted by First Uranium on November 6, 2006.

Section 11 - Termination Rights

- (1) All terms and conditions set out in this Agency Agreement shall be construed as conditions and any breach or failure by First Uranium to comply with any such conditions in favour of the Agents shall entitle the Agents to terminate their obligation under this Agency Agreement by written notice to that effect given to First Uranium prior to the Time of Closing on the Closing Date. First Uranium shall use its best efforts to cause all conditions in this Agency Agreement to be satisfied. It is understood that the Agents may waive in whole or in part, or extend the time for compliance with, any of such terms and conditions without prejudice to their rights in respect of any subsequent breach or non-compliance, provided that to be binding on the Agents, any such waiver or extension must be in writing.
- (2) In addition to any other remedies which may be available to the Agents in respect of any default, act or failure to act, or non-compliance by First Uranium, the Agents shall be entitled, at their option, to terminate and cancel, without any liability on the part of the Agents, their obligations under this Agency Agreement by giving written notice to First Uranium at any time at or prior to the Time of Closing on the Closing Date (or any Option Closing Date, as the case may be):
 - (a) if a general moratorium on commercial banking activities in Toronto, New York or London should be declared by the relevant authorities, or if, in relation to First Uranium, any inquiry, investigation or other proceeding (whether formal or informal) is commenced, threatened or announced, or any order or ruling is issued by any exchange or market, or any other regulatory authority in Canada or the United States, or if any law or regulation under or

pursuant to any statute of Canada or of any province thereof or of the United States or any state or territory thereof is promulgated or changed which, in the reasonable opinion of the Agents (or any of them), operates to prevent or materially restrict trading of the Common Shares or the distribution of the Common Shares or could reasonably be expected to have a Material Adverse Effect, including as to the market price or value of the Debentures or Common Shares;

- (b) if there is an inquiry or investigation (whether formal or informal) by any competent regulatory authority in relation to First Uranium or any one of its officers or directors which in the reasonable opinion of the Agents operates or would operate to prevent or materially restrict trading of the Common Shares or the distribution of the Common Shares or could reasonably be expected to have a Material Adverse Effect, including as to the market price of the Debentures or the Common Shares;
 - (c) if there is, in the reasonable opinion of the Agents (or any of them), a material change or a change in any material fact or a new material fact arises that could reasonably be expected to have a Material Adverse Effect, including as to the market price of the Debentures or the Common Shares;
 - (d) if there should develop, occur or come into effect or existence any event, action, state, condition or major financial occurrence of national or international consequence, including without limiting the generality of the foregoing, any military conflict, civil insurrection, or any terrorist action (whether or not in connection with such conflict or insurrection), which, in the Agents' reasonable opinion (or any one of them), materially adversely affects or involves, or will materially adversely affect or involve, the Canadian or United States financial markets and/or prevent or materially restrict the trading of the Common Shares or the distribution of the Common Shares, or may result in a Material Adverse Effect;
 - (e) the state of the financial markets in general, or the industry or state of the markets in which First Uranium operates such that, in the reasonable opinion of the Agents, it would be impractical or unprofitable to offer or continue to offer the Debentures for sale; or
 - (f) if First Uranium is in material breach of any term, condition or covenant of this Agency Agreement, or any representation or warranty given by First Uranium in this Agency Agreement becomes or is materially false.
- (3) If the obligations of the Agents are terminated under this Agency Agreement pursuant to these termination rights, the liability of First Uranium to the Agents shall be limited to the obligations under Sections 12, 13, and 14.

Section 12 - Indemnity

- (1) First Uranium (for the purposes of this Section 12, the "Indemnifiers") covenants and agrees to protect, indemnify, and save harmless, each of the Agents and their respective U.S. broker-dealer affiliates, and each of their respective directors, officers, employees, affiliates and agents and each person, if any, who controls any Agent or its U.S. broker-dealer affiliates (individually, an "Indemnified Party" and collectively, the "Indemnified Parties"), against all losses (other than loss of profits), claims, damages, suits, liabilities, costs, damages, or expenses caused or incurred, whether directly or indirectly, by reason of:
 - (a) any statement (except for statements relating solely to the Agents) contained in the Public Record in connection with the proposed distribution under Canadian Securities Laws, which at the time and in the light of the circumstances under which it was made contains or is alleged to contain a misrepresentation (as such term is defined in the *Securities Act* (Ontario)) or any misstatement of a material fact;
 - (b) the omission or alleged omission to state in the Public Record any material fact (other than a material fact relating solely to the Agents) required to be stated therein or necessary to make any statement therein not misleading;
 - (c) any order made, or inquiry, investigation or proceeding commenced by any securities regulatory authority or other competent authority based upon any untrue statement or omission or alleged untrue statement or omission in the Public Record (except for information and statements relating solely to the Agents) that prevents or restricts the trading in any of First Uranium's securities or the distribution or distribution to the public, as the case may be, of any of the Debentures in any of the Qualifying Jurisdictions;
 - (d) First Uranium not complying with any requirement of Canadian Securities Laws or U.S. Securities Laws in connection with the transactions herein contemplated including First Uranium's non-compliance with any statutory requirement to make any document available for inspection; or
 - (e) any breach of a representation or warranty of First Uranium contained in this Agency Agreement, the Trust Indenture or in the Subscription Agreements or the failure of First Uranium to comply with any of its obligations hereunder.
- (2) If any matter or thing contemplated by this section shall be asserted against any Indemnified Party in respect of which indemnification is or might reasonably be considered to be provided, such Indemnified Party will notify the Indemnifiers as soon as possible of the nature of such claim (provided that omission to so notify the Indemnifiers will not relieve the Indemnifiers of any liability that it may otherwise have to the Indemnified Party hereunder, except to the extent the Indemnifiers are materially prejudiced by such omission) and the Indemnifiers shall be entitled (but not required) to assume the defence of any suit brought to enforce such claim; provided, however, that the defence shall be through legal counsel reasonably

acceptable to such Indemnified Party and that no settlement may be made by the Indemnifiers or such Indemnified Party without the prior written consent of the other, such consent not to be unreasonably withheld.

- (3) In any such claim, such Indemnified Party shall have the right to retain other legal counsel to act on such Indemnified Party's behalf, provided that the fees and disbursements of such other legal counsel shall be paid by such Indemnified Party, unless: (i) the Indemnifiers and such Indemnified Party mutually agree to retain other legal counsel; or (ii) the representation of the Indemnifiers and such Indemnified Party by the same legal counsel would, in the opinion of such counsel, be inappropriate due to actual or potential differing interests, in which event such fees and disbursements shall be paid by the Indemnifiers to the extent that they have been reasonably incurred, provided that in no circumstances will the Indemnifiers be required to pay the fees and expenses of more than one set of legal counsel for all Indemnified Parties.
- (4) To the extent that any Indemnified Party is not a party to this Agreement, the Agents shall obtain and hold the right and benefit of this section in trust for and on behalf of such Indemnified Party.
- (5) The Indemnifiers hereby consents to personal jurisdiction, service and venue in any court in which any claim that is subject to indemnification hereunder is brought against the Agents or any Indemnified Party and to the assignment of the benefit of this section to any Indemnified Party for the purpose of enforcement provided that nothing herein shall limit First Uranium's right or ability to contest the appropriate jurisdiction or forum for the determination of any such claims.

Section 13 - Contribution

In the event that the indemnity provided for in Section 12 is declared by a court of competent jurisdiction to be illegal or unenforceable as being contrary to public policy or for any other reason, the Agents and the Indemnifiers shall contribute to the aggregate of all losses, claims, costs, damages, expenses or liabilities of the nature provided for above such that each Agent shall be responsible for that portion represented by the percentage that the portion of the Agents' Fee payable by First Uranium to such Agent bears to the gross proceeds realized by First Uranium from the distribution, whether or not the Agents have been sued together or separately, and the Indemnifiers shall be responsible for the balance, provided that, in no event, shall an Agent be responsible for any amount in excess of the portion of the Agents' Fee actually received by such Agent. In the event that the Indemnifiers, or any of them may be held to be entitled to contribution from the Agents under the provisions of any statute or law, the indemnifiers shall be limited to contribution in an amount not exceeding the lesser of: (a) the portion of the full amount of losses, claims, costs, damages, expenses, and liabilities giving rise to such contribution for which such Agent is responsible; and (b) the amount of the Agents' Fee actually received by any Agent. Notwithstanding the foregoing, a person guilty of fraud or fraudulent misrepresentation shall not be entitled to contribution from any other party. Any party entitled to contribution will, promptly after receiving notice of commencement of any claim, action, suit or proceeding against such party in respect of which a claim for contribution may be made

against another party or parties under this section, notify such party or parties from whom contribution may be sought, but the omission to so notify such party shall not relieve the party from whom contribution may be sought from any obligation it may have otherwise under this section, except to the extent that the party from whom contribution may be sought is materially prejudiced by such omission. The right to contribution provided herein shall be in addition and not in derogation of any other right to contribution which the Agents may have by statute or otherwise by law.

Section 14 - Expenses

First Uranium shall, whether or not the Offering closes, reimburse the Agents for all reasonable out-of-pocket expenses incurred by the Agents in performing the services described herein, including the reasonable fees and disbursements of legal counsel to the Agents subject to the following sentence. The obligation of First Uranium to pay or reimburse, as the case may be, the reasonable fees of Agents' counsel shall be limited to \$100,000. The Agents will obtain written or verbal authorization from First Uranium to undertake a single expense or a series of related expenses aggregating greater than \$10,000. The Agents shall provide First Uranium with all receipts or other documentation evidencing reasonable out-of-pocket expenses for which the Agents are seeking reimbursement.

Section 15 - Action by Agents

All steps which must or may be taken by the Agents in connection with this Agency Agreement, with the exception of the matters relating to termination contemplated by Section 11, may be taken by RBC on behalf of themselves and the other Agents, and the execution of this Agency Agreement by First Uranium shall constitute First Uranium's authority for accepting notification of any such steps from, and for delivering the definitive documents constituting the Debentures to, or to the order of, RBC.

Section 16 - Governing Law

This Agency Agreement shall be governed by and construed in accordance with the laws of the Province of Ontario and the laws of Canada applicable therein.

Section 17 - Survival of Warranties, Representations, Covenants and Agreements

Except as expressly provided for in this Agency Agreement, all warranties, representations, covenants and agreements of First Uranium herein contained, or contained in, documents submitted or required to be submitted pursuant to this Agency Agreement, shall survive the purchase by the Agents of the Debentures and shall continue in full force and effect, regardless of the closing of the sale of the Debentures and regardless of any investigation which may be carried on by the Agents, or on their behalf, for a period of two years following the Closing Date. Without limitation of the foregoing, the provisions contained in this Agency Agreement in any way related to the indemnification or the contribution obligations shall survive and continue in full force and effect, indefinitely, subject only to the limitation requirements of applicable law.

Section 18 - Notices

All notices or other communications by the terms hereof required or permitted to be given by one party to another shall be given in writing by personal delivery or by facsimile delivered or facsimile to such other party as follows:

or at such other address or facsimile number as may be given by either of them to the other in writing from time to time and such notices or other communications shall be deemed to have been received when delivered or, if facsimile, on the next business day after such notice or other communication has been facsimile (with receipt confirmed).

Section 19 - Counterpart Signature

This Agency Agreement may be executed in one or more counterparts (including counterparts by facsimile), which together shall constitute an original copy hereof as of the date first noted above.

Section 20 - Time of the Essence

Time shall be of the essence in this Agency Agreement.

Section 21 - Severability

If any provision of this Agency Agreement is determined to be void or unenforceable, in whole or in part, such void or unenforceable provision shall not affect or impair the validity of any other provision of this Agency Agreement and shall be severable from this Agency Agreement.

Section 22 - Entire Agreement

This Agency Agreement constitutes the entire agreement between the Agents and First Uranium relating to the subject matter hereof and supersedes all prior agreements between the Agents and First Uranium.

Section 23 - General

The parties have expressly required this Agency Agreement and all other documents required or permitted to be given or entered into pursuant hereto to be drawn up in the English language only. Les parties ont expressément demandé que la présente convention

ainsi que tout autre document à être ou pouvant être donné ou conclu en vertu des dispositions des présentes, soient rédigés en langue anglaise seulement.

Acceptance

If this agreement accurately reflects the terms of the transaction which we are to enter into and if such terms are agreed to by First Uranium, please communicate your acceptance by executing where indicated below and returning by facsimile one copy and returning by courier six (6) originally executed copies to RBC Capital Markets (Attention: Gary Sugar).

SCHEDULE "A"

DEVELOPMENT SUBSIDIARIES

Name	Jurisdiction of Incorporation	Par Value per Share	Authorized Share Capital	Issued and Outstanding Shares
First Uranium (Proprietary) Limited	South Africa	R1.00	4 000 ordinary shares	1,520 ordinary shares held by First Uranium Limited
Ezulwini Mining Company (Proprietary) Limited	South Africa	R1.00	1 000 ordinary shares	121 ordinary shares (109 held by First Uranium Limited and 12 held by Waterpan Mining Consortium (Proprietary) Limited)
First Uranium Limited	Cyprus	C£1.00	10,000 ordinary shares divided into 9,000 Class A shares and 1,000 Class B shares	4,039 Class A shares and 1,000 Class B shares held by First Uranium Corporation

SCHEDULE "B"

TERMS AND CONDITIONS FOR UNITED STATES OFFERS AND SALES

This is Schedule "B" to the Agency Agreement among First Uranium Corporation and RBC Dominion Securities Inc., Canaccord Capital Corporation, National Bank Financial Inc., GMP Securities L.P., Cormark Securities Inc., Orion Securities Inc. and Raymond James Ltd. dated May 3, 2007.

As used in this Schedule "B", capitalized terms used herein and not defined herein shall have the meanings ascribed thereto in the Agency Agreement to which this Schedule is annexed and the following terms shall have the meanings indicated:

"**Directed Selling Efforts**" means directed selling efforts as that term is defined in Regulation S. Without limiting the foregoing, but for greater clarity in this Schedule, it means, subject to the exclusions from the definition of directed selling efforts contained in Regulation S, any activity undertaken for the purpose of, or that could reasonably be expected to have the effect of, conditioning the market in the United States for any of the Debentures or Conversion Shares and includes the placement of any advertisement in a publication with a general circulation in the United States that refers to the offering of the Debentures or such Conversion Shares;

"**Institutional Accredited Investor**" means an institutional "accredited investor" as defined in Rule 501(a)(1), (2), (3) or (7) of Regulation D;

"**Offshore Transaction**" means an offshore transaction or that term as defined in Regulation S;

"**Regulation D**" means Regulation D adopted by the SEC under the U.S. Securities Act;

"**Regulation S**" means Regulation S adopted by the SEC under the U.S. Securities Act;

"**Substantial U.S. Market Interest**" means substantial U.S. market interest as that term is defined in Regulation S; and

"**United States**" means the United States of America, its territories and possessions, any state of the United States, and the District of Columbia.

Representations, Warranties and Covenants of the Agents

Each Agent severally but not jointly acknowledges that the Debentures have not been and will not be registered under the U.S. Securities Act and may be offered and sold only in transactions exempt from or not subject to the registration requirements of the U.S. Securities Act.

Each Agent severally but not jointly represents and agrees to and with First Uranium that:

- (1) It acknowledges that the Debentures and the Conversion Shares have not been and will not be registered under the U.S. Securities Act or any state securities laws and may not be offered or sold within the United States except pursuant to an exemption from the registration requirements of the U.S. Securities Act and applicable state securities laws. It has not offered and sold, and will not offer and sell, any Debentures forming part of its allotment except (a) outside the United States in an Offshore Transaction in accordance with Rule 903 of Regulation S or (b) in the United States in accordance with an applicable exemption under the U.S. Securities Act as provided in paragraphs 3 through 10 below.
- (2) It has not entered and will not enter into any contractual arrangement with respect to the distribution of the Debentures and the Conversion Shares, except with its affiliates, any selling group members or with the prior written consent of First Uranium. It shall require each of its U.S. broker-dealer affiliates and each selling group member to agree, for the benefit of First Uranium, to comply with, and shall use its best efforts to ensure that each of its U.S. broker-dealer affiliates and each selling group member complies with, the same provisions of this Schedule as apply to such Agent as if such provisions applied to such U.S. broker-dealer affiliate and selling group member.
- (3) Neither such Agent nor any of its affiliates, nor any persons acting on their behalf, has engaged or will engage, in any Directed Selling Efforts with respect to any of the Debentures or the Conversion Shares.
- (4) All offers and sales of Debentures in the United States shall be made through the Agent's U.S. registered broker-dealer affiliate in compliance with all applicable U.S. broker-dealer requirements. Such broker-dealer affiliate is a duly registered broker-dealer with the SEC, and is a member in good standing with the National Association of Securities Dealers, Inc.
- (5) Offers of Debentures in the United States by the Agent or its U.S. registered broker-dealer affiliate shall not be made by any form of general solicitation or general advertising (as those terms are used in Regulation D) or in any manner involving a public offering within the meaning of Section 4(2) of the U.S. Securities Act.
- (6) Offers to sell and solicitations of offers to buy the Debentures shall be made pursuant to an exemption from the registration requirements of the U.S. Securities Act and applicable state securities laws, only to persons reasonably believed to be Institutional Accredited Investors who will purchase the Debentures directly from First Uranium in compliance with an exemption from the registration requirements of the U.S. Securities Act and applicable state securities laws, which persons each execute and deliver to First Uranium, the Agents and their U.S. registered broker-dealer affiliates a Subscription Agreement.
- (7) Any offer or solicitation of an offer to buy Debentures that has been made or will be made in the United States was or will be made only to Institutional Accredited Investors and all sales of the Debentures made in the United States or to persons who were offered Debentures in the United States shall be made directly by First Uranium pursuant to an exemption from the registration requirements of the U.S. Securities Act.
- (8) At closing, each Agent, together with its U.S. affiliates selling Debentures in the United States will provide a certificate, substantially in the form of Exhibit A to this Schedule

relating to the manner of the offer and sale of the Debentures in the United States, or will be deemed to have represented that neither it nor they offered or sold Debentures in the United States.

- (9) The Agents have not and will not offer the Debentures for sale in any state of the United States where such an offer or sale would be prohibited, and all applicable state securities laws have been and will be complied with in connection with offers and sales of the Debentures in the United States.
- (10) The Agents have not used and will not use any written material, other than a Subscription Agreement, in connection with offers and sales of the Debentures.

Representations, Warranties and Covenants of First Uranium

First Uranium represents, warrants, covenants and agrees that:

- (1) (a) First Uranium is a "foreign issuer" within the meaning of Regulation S and reasonably believes there is no Substantial U.S. Market Interest in its debt securities or the Common Shares; (b) First Uranium is not now and as a result of the sale of Debentures contemplated hereby will not be required to be registered as an "investment company" under the United States Investment Company Act of 1940, as amended; and (c) none of First Uranium any of its affiliates, or any person acting on its or their behalf (other than the Agents, their U.S. affiliates and any person acting on their behalf, as to which no representation is made) has made or will make any Directed Selling Efforts in the United States with respect to the Debentures or the Common Shares or has engaged or will engage in any form of general solicitation or general advertising (as those terms are used in Regulation D), or has otherwise acted in a manner involving a public offering within the meaning of Section 4(2) of the U.S. Securities Act, in connection with the offer or sale of the Debentures in the United States.
- (2) Except with respect to offers and sales in accordance with this Schedule "A" to Institutional Accredited Investors in reliance upon an exemption from registration available under the U.S. Securities Act, none of First Uranium or any of its affiliates or any persons acting on its or their behalf (other than the Agents, their U.S. affiliates and any person acting on their behalf, as to which no representation is made) has offered or sold, or will offer or sell, any of the Debentures or Common Shares in the United States.
- (3) First Uranium has not, within six months before the commencement of the offering of the Debentures, and will not within six months after the Closing Date, offer or sell any securities in a manner that would be integrated with the offer and sale of the Debentures and the Conversion Shares and would cause the applicable exemptions from registration to become unavailable with respect to the offer and sale of the Debentures and the Conversion Shares in the United States or which that cause the exclusion from registration set forth in Rule 903 of Regulation S to become unavailable with respect to the offer and sale of the Debentures and the Conversion Shares outside the United States.
- (4) First Uranium will, within the prescribed time periods, prepare and file any forms or notices required under the U.S. Securities Act or any state securities laws in connection with the sale of Debentures.

- (5) None of First Uranium, its affiliates or any person acting on its or their behalf (other than the Agents, their U.S. affiliates and any person acting on their behalf) has taken or will take any action that would cause the applicable exemptions from registration to become unavailable with respect to the offer and sale of the Debentures and the Conversion Shares in the United States or that would cause the exclusion from registration set forth in Rule 903 of Regulation S to become unavailable with respect to the offer and sale of the Debentures and the Conversion Shares outside the United States.

EXHIBIT A
AGENTS' CERTIFICATE

In connection with the private placement to purchasers in the United States and to purchasers who were offered Debentures (as defined below) in the United States, other than pursuant to an "offshore transaction" as defined in Regulation S under the U.S. Securities Act (the "U.S. Purchasers") of senior unsecured convertible debentures (the "Debentures") of First Uranium Corporation ("First Uranium") pursuant to the Agency Agreement dated as of May 3, 2007 among First Uranium and the Agents named therein (the "Agency Agreement"), each of the undersigned does hereby certify as follows:

- (i) Each of ●, ● and ● is a duly registered broker or dealer under the U.S. Securities Exchange Act of 1934, as amended and is a member of and in good standing with the National Association of Securities Dealers, Inc. on the date hereof, and all offers and sales of the Debentures in the United States will be effected by ●, ● and ● in accordance with all applicable U.S. broker-dealer requirements;
- (ii) all offers of the Debentures by us in the United States were made to Institutional Accredited Investors, and we continue to believe that each U.S. Purchaser is an Institutional Accredited Investor;
- (iii) no form of general solicitation or general advertising (as those terms are used in Regulation D under the U.S. Securities Act) was used by us, including advertisements, articles, notices or other communications published in any newspaper, magazine or similar media or broadcast over radio or television, or any seminar or meeting whose attendees had been invited by general solicitation or general advertising, in connection with the offer or sale of the Debentures in the United States;
- (iv) prior to any sale of Debentures to a U.S. Purchaser we caused the purchaser to sign and deliver a Subscription Agreement; and
- (v) the offering of the Debentures in the United States has been conducted by us in accordance with the terms of the Agency Agreement.

Terms used in this certificate have the meanings given to them in the Agency Agreement unless otherwise defined herein.

1 SUMMARY

EXECUTIVE SUMMARY

INTRODUCTION

Scott Wilson Roscoe Postle Associates Inc. (Scott Wilson RPA) was retained by First Uranium Corporation (First Uranium) to prepare an independent Technical Report on the Ezulwini Project (the Project, or the Ezulwini Mine) located in Gauteng Province, near Johannesburg, Republic of South Africa. The purpose of this report is to update the preliminary economic assessment which was prepared for First Uranium's initial public offering (IPO). The updated report incorporates the latest developments with regard to permitting / mining rights and changes to the resource estimate, ongoing process selection work, and capital and operating forecasts. This Technical Report conforms to NI43-101 Standards of Disclosure for Mineral Projects.

First Uranium is a public Canadian company which completed its IPO and listing on the Toronto Stock Exchange (TSX) on December 20, 2006. In connection with the IPO, an over-allotment option was exercised on December 29, 2006, resulting in combined proceeds net of underwriting fees of US\$189 million. The company completed its secondary listing on the Johannesburg Stock Exchange (JSE) on March 30, 2007. The Common Shares are traded on the TSX as FIU and on the JSE as FUM. The funds raised from the IPO are being used to develop the Ezulwini Project. In addition, on May 3, 2007, First Uranium completed an offering of convertible debentures for gross proceeds of C\$150 million. A portion of the proceeds from the convertible debenture offering will be used to fund the development of the Ezulwini Project.

The Ezulwini Project involves the re-commissioning of an underground uranium and gold mining operation located approximately 40 kilometres from Johannesburg on the outskirts of the town of Westonaria in Gauteng Province, South Africa. Re-commissioning activities involving the refurbishment of the shaft and construction of the gold and uranium plants began in earnest in December 2006 subsequent to the successful completion of the IPO. Prior to re-commissioning, the mine was on a care and

maintenance programme which was initiated in 2001. The mine was constructed in the 1960s and reached production of 200,000 tonnes per month in the same decade. In 2001, mine production at Ezulwini was suspended primarily as a result of capital constraints compounded by a weak gold and uranium market environment.

The geology of the Ezulwini property includes a number of reef packages, with the Upper Elsberg and Middle Elsberg reefs being the primary focus of First Uranium's mine reopening plans. First Uranium's plans for the development of the Ezulwini Project include the rehabilitation and re-engineering of the main mine shaft through the installation of a floating steel tower, de-stressing the area where the shaft pillar intersects the shaft barrel, and the construction of uranium and gold processing facilities.

The Ezulwini Mine is an underground mine previously operated by Harmony Gold Mining Company Limited (Harmony). The Ezulwini Mining Company (Proprietary) Limited (EMC) concluded a purchase agreement with Randfontein Estates Limited (REL), a wholly owned subsidiary of Harmony, which enabled EMC to acquire the surface and underground assets relating to the former operators of the Ezulwini Mine, including two shaft headframes and four hoists, fans, compressors, generators, and underground equipment as well as the necessary surface freehold required to operate the mine. EMC is currently a 90% held subsidiary of First Uranium, with the other 10% being held by Waterpan Mining Consortium (WMC). It is intended that WMC will swap its EMC shareholding for shares in First Uranium resulting in EMC becoming a 100% subsidiary of First Uranium. This share swap is, however, subject to WMC receiving South African Reserve Bank's (SARB) approval to implement same.

The major assets and facilities associated with the Project, acquired by EMC pursuant to the REL Purchase Agreement are:

- Gold resources in the No. 4 shaft pillar within the Upper Elsberg formation; gold resources within the Upper Elsberg formation beyond the shaft pillar; and gold and uranium resources within the Middle Elsberg formation. All of these resources are within the Witwatersrand Basin and have been mined in the past.

- Hoisting and ventilation shafts to surface including the associated facilities and underground shafts to access the resources.
- Mine development to and within the resource areas.
- Mine infrastructure including the hoisting plants, mine dewatering system, compressed air system, and electrical power distribution system.
- Surface infrastructure including the compressor and power house, electrical power supply, offices, and shop buildings.
- Engineering and geological records from the past operations.

This report is considered by Scott Wilson RPA to meet the requirements of a Preliminary Economic Assessment as defined in Canadian NI43-101 regulations. The economic analysis contained in this report is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserve development, production and economic forecasts on which this preliminary assessment is based will be realized.

CONCLUSIONS

Based on the Ezulwini site visit and review of the available data, Scott Wilson RPA offers the following interpretation and conclusions.

- The mineral resources, as presented, are estimated consistent with CIM guidelines.
- Mineral resources that are not mineral reserves do not have demonstrated economic viability.
- Previous production demonstrates there is good continuity on the Upper and Middle Elsburg Reefs. Therefore, there is good potential to upgrade the inferred mineral resources to measured and indicated resources with underground development.
- There is good exploration potential in lateral reef extensions and at depth in reefs that have not yet been exploited.

- Based upon the planning work to date and the assumptions in this initial economic assessment, the Ezulwini mine has the potential to be reopened and to become a producing gold and uranium operation.
- Considering the Project on a stand-alone basis and based upon capital costs of \$271 million, operating costs of \$56.87 per tonne and metal prices of \$500/oz for gold and \$50/lb for uranium concentrates, the Project has an IRR of 32% and an NPV at 8% of \$332 million. The Project would generate some 5.2 million ounces of gold and 16 million pounds of uranium (U₃O₈) in concentrates over an 18 year period.
- The Total Cash Cost is \$234 per ounce of gold including a credit of \$153 per ounce for U₃O₈ revenue. The mine life capital and royalty unit cost is \$52 per ounce, for a Total Production Cost of \$286 per ounce of gold. Average annual gold production during operations is 290,000 ounces per year and the average U₃O₈ production is 888,000 pounds per year.
- The Project economics are most sensitive to gold price, head grade, and metallurgical recovery, followed by exchange rates, operating costs, uranium price and capital costs.
- The planned production includes material from the measured and indicated resources, as well as inferred resources. There is no assurance that inferred resources will be upgraded to become measured and indicated resources or mineral reserves. The initial economic assessment only utilizes approximately 14% of the inferred mineral resource, so there is potential for further production beyond that used in this assessment.
- The mine is located in a major historic gold and uranium production area and has a history of past gold and uranium production. The mine is located immediately adjacent to the South Deep Mine and the mines in this area have tremendous lateral extent along the reefs.
- There is the potential to expand the mine output through the potential utilization of the underutilized shafts in adjacent mines. There are also underutilized concentrators in the vicinity of the Ezulwini Mine.
- An increase in the uranium price could make it more economically feasible to increase production from the Middle Elsburg, decrease production from the Upper Elsburg, and increase the throughput of the uranium plant.
- Further improvements to the Project economics may be realized through the sale of mine water to a local utility and the resultant reduction in mine pumping costs.

RECOMMENDATIONS

Scott Wilson RPA recommends that mine dewatering and shaft refurbishing continue and that planning for the development of the Ezulwini Mine be advanced. The refinement of estimates to prefeasibility study level and the upgrading of inferred resources are recommended so that a production decision can be made. Further, Scott Wilson RPA recommends that First Uranium undertake an exploration program with the objective of upgrading additional resources beyond the planned project to evaluate the potential for further expansion.

The following items are recommended for consideration as part of a prefeasibility study of the Project.

- Review and update, if necessary, the mine production schedule based upon the revised resource estimates in the shaft pillar area.
- As soon as practically possible, rehabilitate the Upper Elsburg section of the Ezulwini Mine to facilitate further exploration and the conversion of inferred resources to measured and/or indicated mineral resources.
- As soon as practically possible, rehabilitate the Middle Elsburg section of the Ezulwini Mine to facilitate further verification of the database in that area.
- Reconcile historic gold and uranium production to that predicted by diamond drilling and channel sampling.
- Continue the plant design process for the gold and uranium processing plants.
- Carry out more detailed work and explanation of the planned uranium recovery rate either through metallurgical testing or more detailed review of past production records.
- Provide further plant details including general arrangements.
- Prepare separate production schedules, with the measured plus indicated resources carried in a separate schedule, and a further economic analysis with the inferred resources added as well.
- Provide additional capital detail for the mine and site infrastructure.
- Re-examine the Project schedule and provide more detail to ensure that critical items are not missed.

- Carry out further work on the sales of uranium concentrate to remain assured that a market is available in South Africa or to determine where concentrates may have to be shipped.
- Provide a clear trail of the changes and factors from the resource estimate through to the Life of Mine plan for all areas including a discussion of the unpay factors and/or pillars that will be required at depth.
- Review the rock mechanics and seismic risk factors associated with the Middle Elsburg deposit to ensure that the mine plan is consistent with the rock mechanics design criteria.
- Review the mine production schedule with regard to the mine production profile to reduce dips in the output over time.
- Ensure that a detailed assessment of the planned production areas has been undertaken to provide evidence to support the assumption that future mine production will be similar to past production.
- Pursue the possible sale of water to a local utility to reduce the mine operating costs.
- Determine the uranium price at which it is more profitable to achieve higher production from the Middle Elsburg Reef, decrease production from the Upper Elsburg, and operate the uranium plant at 200,000 tpm.

The cost of this recommended work is included in the cost estimates within the Preliminary Assessment in this report.

For further exploration beyond the current planned mining area, Scott Wilson RPA recommends:

- Phase 1 of the program includes diamond drilling approximately 30,000 m in 18 holes from surface and approximately 7,200 m from underground. The underground diamond drilling would be collared in rehabilitated headings in the Upper Elsburg workings. The Phase 1 program would drill the target on approximately 400 m by 400 m spacing.
- Contingent on success of the Phase 1 program, the Phase 2 program will comprise approximately 75,000 m of diamond drilling in 42 holes from surface and approximately 16,800 m in 42 holes drilled from underground. Phase 2 would drill the target on approximately 200 m by 200 m spacing, which, considering the generally strong continuity in the Witwatersrand reefs, would likely be sufficient to upgrade a portion of the target to indicated resources.

- Concurrent with the Phase 2 diamond drilling, prefeasibility level studies will be carried out to examine the optimum systems of access, mining, mineral processing, and mineral economics.

The estimated cost of the work program to complete these recommendations is summarized in Table 1-1. The cost of these items is not included in the capital estimates incorporated in the Ezulwini preliminary assessment work.

TABLE 1-1 EXPLORATION PROGRAM - MIDDLE ELSBURG
First Uranium Corporation - Ezulwini Project

Item	Units	Cost/Unit (\$)	Total Cost (\$ 000s)
Phase 1			
Underground Rehabilitation	Lump Sum		1,000
Underground Diamond Drilling	7,200 m	150	1,080
Surface Drilling	30,000 m	150	4,500
Supervision/Technical Support	Lump Sum		300
Assays	16,000	30	480
Sub-Total Phase 1			7,360
Phase 2			
Underground Diamond Drilling	16,800 m	150	2,520
Surface Drilling	75,000 m	150	11,250
Supervision/Technical Support	Lump Sum		300
Assays	35,000	30	1,050
Prefeasibility Study	Lump Sum		300
Sub-Total Phase 2			15,420
Total Phase 1 & 2			22,780

ECONOMIC ANALYSIS

An after-tax Cash Flow Projection has been generated from the Life of Mine production schedule and capital and operating cost estimates, and is summarized in Table 18-12. A summary of the key criteria is provided below.

ECONOMIC CRITERIA

REVENUE

- Up to 200,000 tpm mining from underground.
- Mill recovery of gold of 95.5% and recovery of U₃O₈ of 80%, based upon previous operating history.

- Gold payment is based upon 100% payment less a refining charge of \$120,000 per year plus \$0.50 per ounce.
- Exchange rate US\$1.00 = R7.40.
- Metal price: \$500 per ounce gold and \$50 per pound U₃O₈.
- Revenue is recognized at the time of production.

COSTS

- Pre-production period is approximately 12 months, but full production is attained in the fourth year.
- Mine life: 18 years.
- Life of Mine production plan as summarized in Item 18.
- Mine life capital totals \$271 million including contingency.
- Average operating cost over the mine life is \$56.87 per tonne milled.

CASH FLOW ANALYSIS

Considering the whole Project on a stand-alone basis, the undiscounted after-tax cash flow totals \$818 million over the mine life, and simple payback occurs after approximately 4.4 years.

The Total Cash Cost is \$234 per ounce of gold including a credit of \$153 per ounce for U₃O₈ revenue. The mine life capital and royalty unit cost is \$52 per ounce, for a Total Production Cost of \$286 per ounce of gold. Average annual gold production during operation is 290,000 ounces per year and the average U₃O₈ production is 888,000 pounds per year.

The IRR is 32% and the NPV at discounts rates of 5%, 8%, and 10% is, respectively, \$462, \$332, and \$267 million.

The economic analysis contained in this report is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserve development, production, and economic forecasts on which this preliminary assessment is based will be realized.

SENSITIVITY ANALYSIS

Project risks can be identified in both economic and non-economic terms. Key economic risks were examined by running cash flow sensitivities:

- Metal prices, recovery, and grades (gold and uranium)
- Exchange rate
- Operating costs (Total Cash Cost)
- Pre-production capital costs

IRR sensitivity over the base case has been calculated for -20% to +20% variations except for U₃O₈ where ± 37.5 variations were calculated. The sensitivities are shown in Table 1-2 and Figure 1-1.

Note: The above graph and tables depict (100%) of the Ezulwini Project. First Uranium owns (indirectly) 90% of EMC.

TECHNICAL SUMMARY

PROPERTY LOCATION AND DESCRIPTION

The Ezulwini Mine is located some 40 km from Johannesburg in the Republic of South Africa. The mine is located in the province of Gauteng in the western portion of the Witwatersrand basin. The property consists of some 3,718 ha. The Witwatersrand Basin is a famous gold mining area with a number of producing mines and past producers. Mine suppliers and contractors are available locally, and experienced and general labour is available in the mine area. The site infrastructure includes two shaft headframes and four hoists, fans, compressors, generators, and underground equipment, as well as the necessary surface freehold required to operate the mine.

In May 2005, Simmer & Jack Mines, Limited (Simmers) took its initial steps to acquire the Ezulwini Project by submitting an application for new order mining rights in respect of the Ezulwini mine (formerly No. 4 Shaft Randfontein Estates). In order to maintain access to the underground workings at Ezulwini, approximately 65 megalitres of water needed to be pumped from a depth of approximately 1,300 metres every day, resulting in a cost of approximately \$540,000 to \$675,000 per month. On October 12, 2005 Simmers entered into an interim pumping agreement with REL in relation to the Ezulwini mine pending the outcome of its mining right application.

In May 2006, Simmers received a letter from the South African Department of Minerals and Energy (DME) stating that the Ezulwini mining right was granted to Simmers, subject to complying with certain stated conditions. The Mining Right was granted to Simmers and registered on December 8, 2006. Simmers lodged an application for the consent of the Minister to transfer the Mining Right to Ezulwini on December 12, 2007. Simmers has complied with all the requirements of the Regional Manager of the DME for the transfer and communication is awaited from the Minister's office on the application.

HISTORY

Production at No. 4 Shaft commenced in 1961 under the control of the Western Areas Gold Mining Company. No. 4 Shaft was purchased by REL in 1997. In January 2000, Harmony acquired REL. Harmony continued operations until July 2001, when the mine was closed due to low gold and uranium prices. The mine continued on a care and maintenance basis until December 2006 when First Uranium concluded its IPO and the REL purchase agreement which enabled the commencement of rehabilitation and construction activities at the site.

GEOLOGY

The Project lies within the Witwatersrand Basin, an Archean (approximately 2.7 billion years) sedimentary basin, whose surface expression is an elongate structure that extends longitudinally for approximately 300 km NE-SW by 100 km NW-SE. It contains an approximately six kilometre thick stratigraphic sequence consisting mainly of quartzites and shales, with minor intermittent volcanic units. Gold is hosted by the Upper Elsburg and Middle Elsburg Reefs of the Mondeor Formation. Uranium is found only in the Middle Elsburg Reef.

MINERAL RESOURCES AND MINERAL RESERVES

The current mineral resources are summarized in Table 1-3. There are no mineral reserves as defined by NI43-101.

TABLE 1-3 MINERAL RESOURCES – SUMMARY – JANUARY
2007

First Uranium Corporation - Ezulwini Project

Category	Tonnes (t 000's)	Grade Au (g/t Au)	Grade U ₃ O ₈ (%)	Cont. Au (oz 000's)	Cont. U ₃ O ₈ (lb 000's)
Measured Reef					
UE Shaft Pillar	2,490	7.7	-	615	-
Middle Elsburg	2,450	4.9	0.072	384	3,888
Total	4,940	6.3	n/a	999	3,888
Indicated Reef					
UE Shaft Pillar	3,640	5.8	-	683	-
Middle Elsburg	1,370	5.8	0.095	257	2,880
Total	5,010	5.8	n/a	940	2,880
Meas + Ind Reef					
UE Shaft Pillar	6,130	6.6	-	1,298	-
Middle Elsburg	3,820	5.2	0.08	641	6,768
Total	9,950	6.1	n/a	1,939	6,768
Inferred Reef					
Upper Elsburg	64,550	5.8	-	12,055	-
Middle Elsburg Channel	4,810	2.3	-	351	-
Middle Elsburg	132,100	4.7	0.075	19,742	218,319
Total	201,460	5.0	n/a	32,148	218,319

Notes:

1. CIM definitions were followed for mineral resources.
2. Mineral resources in the Upper Elsburg shaft pillar are estimated at a 4.0 g/t Au cutoff grade
3. Mineral resources are estimated using an average long-term gold price of US\$500 per ounce, and a US\$/R exchange rate of 7.0.
4. A minimum mining width of 1.53 m was used.
5. Rows and columns may not add exactly due to rounding.
6. Mineral resources that are not mineral reserves do not have demonstrated economic viability.

MINING OPERATIONS

The Ezulwini mining will be by conventional breast stoping of the Upper and Middle Elsburg reefs. The ore will be broken in the stopes and moved by slushers to be loaded in rail cars for transportation to the shaft. From the shaft and through the balance of the handling, the gold ores and the gold/uranium ores are kept separate. The ores will be hoisted to surface and processed. In the upper Elsburg, the initial task will be the removal of the shaft pillar to reduce stability problems in the shaft and in the shaft pillar area.

MINERAL PROCESSING

The ore will be crushed and ground and then subjected to gold recovery by gravity and cyanidation. The uranium will be extracted by a hot acidic leaching followed by solvent extraction and precipitation to form a concentrate (yellowcake). The uranium tailings will then be leached for gold recovery. Leaching will occur in a carbon in leach process after which gold will be electrowon and refined into dore bars.

ENVIRONMENTAL CONSIDERATIONS

Simmers' Environmental Management Program was approved by the DME in October 2005. Approval of applications for the water licence and the approval to recover uranium are expected shortly.

CAPITAL AND OPERATING COST

The estimated capital cost is \$271 million and the pre-production period is four years. The operating cost is estimated at \$56.87 per tonne milled.

2 INTRODUCTION AND TERMS OF REFERENCE

Scott Wilson Roscoe Postle Associates Inc. (Scott Wilson RPA) was retained by First Uranium Corporation (First Uranium) to prepare an independent Technical Report on the Ezulwini Project (the Project, or the Ezulwini Mine) located in Gauteng Province, near Johannesburg, Republic of South Africa. The purpose of this report is to update the preliminary economic assessment which was prepared for First Uranium's initial public offering (IPO), the updated report incorporates latest developments with regards to permitting / mining rights and changes to the resource estimate, ongoing process selection work and capital forecasts. This Technical Report conforms to NI43-101 Standards of Disclosure for Mineral Projects.

First Uranium is a public Canadian company which completed its IPO and listing on the Toronto Stock Exchange (TSX) on December 20, 2006. In connection with the IPO, an over-allotment option was exercised on December 29, 2006, resulting in combined proceeds net of underwriting fees of US\$189 million. The company completed its secondary listing on the Johannesburg Stock Exchange (JSE) on March 30, 2007. The Common Shares are traded on the TSX as FIU and on the JSE as FUM. The funds raised from the IPO are being used to develop the Ezulwini Project. In addition, on May 3, 2007, First Uranium completed an offering of convertible debentures for gross proceeds of C\$150 million. A portion of the proceeds from the convertible debenture offering will be used to fund the development of the Ezulwini Project.

The Ezulwini Project involves the re-commissioning of an underground, uranium and gold mining operation located approximately 40 kilometres from Johannesburg on the outskirts of the town of Westonaria in Gauteng Province, South Africa. Re-commissioning activities involving the refurbishment of the shaft and construction of the gold and uranium plants began in earnest in December 2006 subsequent to the successful completion of the IPO. Prior to re-commissioning, the mine was on a care and maintenance programme which was initiated in 2001. The mine was constructed in the

1960s and reached production of 200,000 tonnes per month in the same decade. In 2001, mine production at Ezulwini was suspended primarily as a result of capital constraints compounded by a weak gold and uranium market environment.

The Ezulwini Mine was previously operated by Harmony Gold Mining Company Limited (Harmony). The Ezulwini Mining Company (Proprietary) Limited (EMC) concluded a purchase agreement with Randfontein Estates Limited (REL), a wholly owned subsidiary of Harmony, which enabled EMC to acquire the surface and underground assets relating to the former operators of the Ezulwini Mine, including two shaft headframes and four hoists, fans, compressors, generators, and underground equipment as well as the necessary surface freehold required to operate the mine. EMC is currently a 90% held subsidiary of First Uranium, with the other 10% being held by Waterpan Mining Consortium (WMC). It is intended that WMC will swap its EMC shareholding for shares in First Uranium resulting in EMC becoming a 100% subsidiary of First Uranium. This share swap is however subject to WMC receiving SARB approval to implement same.

The major assets and facilities associated with the Project, acquired by EMC pursuant to the REL Purchase Agreement are:

- Gold resources in the No. 4 shaft pillar within the Upper Elsberg formation; gold resources within the Upper Elsberg formation beyond the shaft pillar; and gold and uranium resources within the Middle Elsberg formation. All of these resources are within the Witwatersrand Basin and have been mined in the past.
- Hoisting and ventilation shafts to surface including the associated facilities and underground shafts to access the resources.
- Mine development to and within the resource areas.
- Mine infrastructure including the hoisting plants, mine dewatering system, compressed air system, and electrical power distribution system.
- Surface infrastructure including the compressor and power house, electrical power supply, offices, and shop buildings.
- Engineering and geological records from the past operations.

The December 2006 Technical Report was the first Scott Wilson RPA involvement with this Project.

This report is considered by Scott Wilson RPA to meet the requirements of a Preliminary Economic Assessment as defined in Canadian NI43-101 regulations. The economic analysis contained in this report is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserve development, production, and economic forecasts on which this preliminary assessment is based will be realized.

SOURCES OF INFORMATION

Site visits were carried out by Mr. Wayne Valliant, P.Geo., Associate Consulting Geologist with Scott Wilson RPA, and Mr. Dennis Bergen, P.Eng., Associate Consulting Engineer with Scott Wilson RPA, from August 22 to 25, 2006. Mr. Wayne Valliant carried out a subsequent site visit from February 20 to 22, 2007.

Discussions were held with personnel from Simmers, First Uranium, and their consultants:

- Jim Fisher, COO of First Uranium; prior to IPO, with Simmer and Jack Mines Ltd.
- Roland Freeman, Group Consulting Engineer, Simmer and Jack Mines Ltd.
- Chopper van der Bijl, COO Ezulwini Mining Company
- Daan Va Heerden, Director, Minxcon
- Johan Odendaal, Director, Minxcon
- Francois Martens, Associate, Minxcon
- Chris McKnight, Principal, Horizon Blue Resources
- Dr. Johan Fourie, Environmental Engineer
- Michel Boylett, Auetal CC, Consulting Metallurgist
- Mike Valenta, Metallicon
- Hennie Bezuidenhout, Project Manager, K'Enyuka
- William Joughin, SRK Consulting
- Rein Koelmans, Read, Swatman & Voight
- Peter Marx, Simmer and Jack Mines Ltd., principal project consultant to Ezulwini Mining Company

Mr. Valliant prepared Items 7 to 15 and 17 and contributed to Items 1, 2, 19, and 20.
Mr. Bergen prepared Items 3 to 6, 16, and 18 and contributed to Items 1, 2, 19, and 20.

The documentation reviewed, and other sources of information, are listed at the end of this report in Item 21 References.

LIST OF ABBREVIATIONS

Units of measurement used in this report conform to the SI (metric) system. All currency in this report is US dollars (US\$) unless otherwise noted.

μ	micron	kPa	kilopascal
°C	degree Celsius	kVA	kilovolt-amperes
°F	degree Fahrenheit	kW	kilowatt
μg	microgram	kWh	kilowatt-hour

3 RELIANCE ON OTHER EXPERTS

This report has been prepared by Scott Wilson Roscoe Postle Associates Inc. (Scott Wilson RPA) for First Uranium Corporation. The information, conclusions, opinions, and estimates contained herein are based on:

- Information available to Scott Wilson RPA at the time of preparation of this report,
- Assumptions, conditions, and qualifications as set forth in this report, and
- Data, reports, and other information supplied by First Uranium, Simmer and Jack Mines Ltd. (Simmers) and other third party sources.

For the purpose of this report, Scott Wilson RPA has relied on ownership information provided by Simmers and First Uranium. Scott Wilson RPA has not researched property title or mineral rights for the Ezulwini Project and expresses no legal opinion as to the ownership status of the property.

4 PROPERTY DESCRIPTION AND LOCATION

PROPERTY DESCRIPTION

The Ezulwini Mine is located some 40 km from Johannesburg in the Republic of South Africa. The mine is located in the province of Gauteng in the western portion of the Witwatersrand basin, as illustrated in Figure 4-1.

LAND TENURE

The immovable property consists of some 3,718 ha on various portions of Farms Jachtfontein 344IQ, Modderfontein 345IQ, and Waterpan 292IQ, as illustrated in Figure 4-2. At the time of the Scott Wilson RPA site visit, the surface property was owned by Harmony. In terms of the REL Purchase Agreement it was agreed that registration of transfer of the immovable property to EMC would be effected by REL's attorneys as soon as reasonably possible after 29 December 2006. REL's attorneys are currently collecting all the documentation required to effect the transfer and it is anticipated that such transfer will be registered shortly.

Certain portions of the immovable property as outlined in Table 4-1 ("Undivided Portions") can not be transferred to and registered in the name of EMC until those portions of the immovable property have been subdivided. In terms of the REL Purchase Agreement, EMC will apply for permission to subdivide the Undivided Portions and they are currently attending to same. Registration of transfer of the Undivided Portions will take place after subdivision. Pending subdivision and transfer of the Undivided Portions, EMC will lease such Undivided Portions from REL in terms of a lease agreement entered into between the parties on 19 October 2006 ("REL Lease Agreement").

TABLE 4-1 AGREED UPON FREEHOLD AREA
First Uranium Corporation - Ezulwini Project

<u>Farm</u>	<u>Portion</u>	<u>Prtn of prtn</u>	<u>Area (ha)</u>	
Waterpan	3		102.1	Peter Wright dam
292 IQ	4	C	30.4	Between village and old training centre
	4	D	19.9	Hostel zone
	13	A	72.3	Waste rock and Delta area
	14		176.9	Tailings dam (Ha to be confirmed)
	24	A	12.9	Around Thabong school
	24	B	49.5	Area North of Link portion of slvge yard, hostels & school
	25	B	52.5	Area South of Link road farmer centre pivot
	26	A	6.8	Portion of shaft area
Modderfontein	27	A	40.2	Area between tailings dam and plants
	24	A	78.5	Magazine zone
345 IQ				
Total			641.8	First Uranium freehold area

In May 2005, Simmers took initial steps towards acquiring the Project by submitting an application for new order mining rights in respect of the Ezulwini Mine. Simmers submitted an Environmental Management Program (EMP), the social and labour plan, and a revised mining works plan on October 10, 2005. In May 2006, Simmers received a letter from the South African Department of Minerals and Energy (DME) stating that the Ezulwini mining right was granted to Simmers, subject to complying with certain stated conditions, including the establishment of an approved rehabilitation fund that would include the transfer of trust funds related to mine closure costs from Harmony to the new fund. Simmers was granted the Mining Right, which was registered on December 8, 2006. The mining right is valid up to November 19, 2036 and is renewable. This mining right covers the same area as was previously held by REL under Mining Licence ML38/39.

There is an approved closure plan in place along with an approved EMP. The DME has also approved EMC's mine operating plan. The Water Licence application has been

submitted to the South African Department of Water Affairs and Forestry, the national office in Pretoria has confirmed receipt of the application and whilst no guarantees can be given have indicated that their response should be expected by June 2007.

An application for a Certificate of Registration (COR) for the operation of a uranium processing plant was submitted to the South African National Nuclear Regulator on 18 July 2006. EMC received a response from the South African National Nuclear Regulator on 15 August 2006 detailing various outstanding information requirements. Whilst most of these requirements have been addressed, there are still several requirements outstanding which require specific radiation protection advisory services. Malepa Holdings has been mandated to provide the necessary radiation protection advisory services and will submit the outstanding information required to the National Nuclear Regulator by end of May 2007.

EMC has commenced the shaft rehabilitation work and the mining of the shaft pillar as planned. Murray and Roberts Cementation Limited (Murray & Roberts) has been awarded the shaft rehabilitation project. This project is scheduled to allow hoisting of the planned production by October 2007 and completion of the shaft repair by February 2008. The gold and uranium plant engineering, procurement and construction management (EPCM) contract has been awarded to MDM Technical Africa (Pty) Ltd. (MDM). The commissioning of the first mill is scheduled for April 2008 and completion by the end of 2008. The first phase will use a reconditioned mill sourced from Buffelsfontein Gold Mine.

A revised Mineral and Petroleum Royalty Bill (the Bill) was recently introduced by the South African government for comment. The Bill provides for a royalty rate of 1.5% on yellowcake and 1.5% on refined gold. The royalties would be tax deductible. The Bill was open for comment until January 31, 2007. The National Treasury of South Africa is currently reviewing comments submitted by interested parties. It is anticipated that royalties to the state would not become payable until 2009.

5 ACCESSIBILITY, CLIMATE, LOCAL RESOURCES, INFRASTRUCTURE AND PHYSIOGRAPHY

ACCESSIBILITY

The Ezulwini property is accessed by paved roads some 40 km to the west of Johannesburg in the Gauteng Province of the Republic of South Africa. It is 5 km south of the Johannesburg – Potchefstroom road (National Road N12). The nearest airport is the international airport in Johannesburg.

CLIMATE

The climate is typical of the Highveld, with hot to warm summers and cold winters. Rainfall occurs predominantly in summer. The diurnal range in winter reflects a particularly harsh climate, the mean difference between daily maximum and daily minimum being almost 20°C. The data for Zuurbekom in WB40 are taken as being representative of the No. 4 Shaft area. Mean annual rainfall given in WB40 (1951 – 1984) is 664 mm.

Rainfall peaks in January. Winters are very dry. The rain season starts in October and ceases at the end of April. Approximately 83% of the mean annual rainfall occurs in those six months. Rainfall is variable; zero rainfall has been recorded in all six “dry” months. Heavy showers of up to 85 mm in 24 hours have been recorded; even in the dry month of July, 41 mm has been recorded in 24 hours.

There are on average 100.5 rain days (with more than 0.1 mm) annually. A large portion of the rainfall occurs as light showers of less than 10 mm, while the remainder occurs as heavy storms.

No record of thunder is available. There are about 30 thunderstorms in the Witwatersrand annually. Not all are accompanied by heavy falls of rain.

Climatic conditions do not impose any special construction restrictions and conditions are such that many plants and grinding facilities have only light structures over top. Older offices do not have central heating facilities.

LOCAL RESOURCES

The Witwatersrand Basin is a famous gold mining area with a number of producing mines and past producers. Mine suppliers and contractors are available locally, and experienced and general labour is available in the mine area.

INFRASTRUCTURE

The surface and underground infrastructure of the Ezulwini Mine acquired by EMC pursuant to the REL Purchase Agreement, included:

- Main shaft (1,518 m deep) from surface to 51A Level (1,408 m below surface) complete with 6.6 kV power cables, compressed air pipelines, and mine dewatering pipelines;
- Internal subvertical shaft from the 50 Level to the 63A Level;
- Underground rock transfer and skip loading facilities;
- 6.0 m diameter Koepe winder for skipping in the main shaft;
- 4.9 m diameter double drum winder (south) for man and material hoisting in the main shaft;
- 4.9 m diameter double drum winder (north) for man and material hoisting in the main shaft;
- 6.7 m diameter concrete lined ventilation shaft to the 41 Level (1,102 m below surface) complete with 6.6 kV power lines, which are separate from those in the main shaft and spare mine dewatering pipelines;
- Mine ventilation fans;
- 3.0 m double drum man winder for the ventilation shaft;
- Underground pumping stations on the 33, 41, and 50A levels, with facilities to handle clear water and slurry.

- Two surface conveyors to move reef (ore) and waste from the head gear bins to a waste silo and to a reef transfer conveyor;
- Workshops including a mechanical shop, boiler shop, and compressor house;
- Electrical power supply from Eskom (the national power supplier) with two independent feeds to the mine site;
- Electrical power distribution system on surface and in the underground mine;
- Emergency power generators with an installed capacity of 13.3 MW;
- Management and engineering offices, fenced storage yards, and employee parking areas;
- A slimes storage dump with a remaining lifespan of approximately 19 years at 150,000 tpm

PHYSIOGRAPHY

The No 4 Shaft is situated on the southern slope of the anticline, between the two most northerly prominent ridges of the Gatsrand on the Transvaal Highveld at an elevation of 1,620 m to 1,695 m amsl. The shaft is located some 25 km south of the subcontinental water shed between the Limpopo and Vaal drainage basins. Quartzitic ridges of the Gatsrand trend roughly east-west and form the most prominent features.

Pre-mining land capability within the mining lease area consists mainly of grazing and arable land. The soils are mainly of the hill wash type and low in fertility.

The area has been classified as Bakenveld. The soils are poor, shallow, acid, stony and sandy. The Western Variation occurs on sandy planes and low rocky ridges, ranging in altitude from 1,350 m to 1,700 m amsl. These areas receive approximately 550 mm to 700 mm of rain during the summer months.

It is rather sparse, sour, strongly tufted veld and, in the nature of its grasses, clearly transitional from Cymbopogon Hemeda veld to sour bushveld. The presence of

Cymbopogon Pluinodis and the general absence of Tristachya Leucothrix distinguish it from the central and eastern variations.

6 HISTORY

The No. 4 shaft of Randfontein Estates Limited was previously concerned with the mining of mineral deposits from which gold and uranium ores were extracted through a metallurgical process.

Activities at the Ezulwini Mine's No. 4 Shaft commenced in 1961 under the control of the then Western Areas Gold Mining Company (WAGMC), which also owned the South Deep Gold Mine (South Deep). South Deep was the subject of a joint venture between Placer Dome South Africa (Proprietary) Limited, a wholly-owned subsidiary of Placer Dome Inc., and Western Areas Limited (the PDWA JV). Subsequently, Barrick Gold Corporation acquired Placer Dome and then entered into an agreement to sell its interest in PDWA JV to Gold Fields Limited. The South Deep Mine and the workings from the No. 4 Shaft were formerly connected on two levels and dewatering of the No. 4 shaft kept the South Deep mine dewatered. No. 4 Shaft was purchased by REL in 1997. In January 2000, Harmony acquired REL.

Harmony continued operations until July 2001 after giving notice to PDWAJV in April of its intention to cease mining and pumping operations. Harmony prepared a closure plan for the No. 4 Shaft and that plan was approved by the DME. PDWAJV took over the pumping operations in March 2003 to allow the completion of the construction of plugs between the two mines and to verify the competency of the barrier pillar, the purpose being that once the dewatering of the No. 4 Shaft operations was stopped, the necessary measures would be in place to ensure the safety and health of the South Deep Mine. The work was completed and PDWAJV gave notice to Harmony that pumping operations would cease on February 8, 2005.

Table 6-1 summarizes the production history from the Ezulwini Mine.

Notes: 1. Results for Upper Elsburg compiled only to 1970. From 1971 production started from the SV1 area which is not part of Ezulwini.

In October 2005, Simmers undertook the pumping operations as part of its purchase agreement with Harmony. Simmers commenced pumping and exploration work to determine the feasibility of reopening the mine.

The mine operated until 2001, producing gold and at times uranium. The uranium recovery circuit was operated from 1982 to 1997. Over the course of mine development

and operation, there was extensive diamond drilling, development in waste and ore, and extraction of ore.

Mineral resources and mineral reserve estimates at the mine were compiled regularly by the owners and, from the 1997 report onwards, the estimates were presented as compliant with the SAMREC guidelines.

Simmers reported SAMREC compliant mineral resources effective July 30, 2006. The mineral resource estimate was prepared by Horizon Blue Resources (HBR) and Minxcon. Scott Wilson RPA reviewed the estimates and reported the mineral resources as NI43-101 compliant in the December 5, 2006 Technical Report entitled Technical Report Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa. The July 30, 2006 mineral resources are summarized in Table 6-2.

First Uranium completed an IPO in December 2006 and has been advancing the mine and plant design and have commenced work on the refurbishing of the Ezulwini shaft. The analysis of the shaft pillar diamond drill program was completed and is summarized in this report.

First Uranium has also submitted a prospecting application for an area adjacent to the Ezulwini site.

Notes:

1. CIM definitions were followed for mineral resources.
2. Mineral resources in the Upper Elsburg shaft pillar are estimated at a 4.0 g/t Au cutoff grade
3. Mineral resources are estimated using an average long-term gold price of US\$500 per ounce, and a US\$/R exchange rate of 7.0.
4. A minimum mining width of 1.53 m was used.
5. Rows and columns may not add exactly due to rounding.
6. Mineral resources that are not mineral reserves do not have demonstrated economic viability.

7 GEOLOGICAL SETTING

REGIONAL GEOLOGY

The Project lies within the Witwatersrand Basin, an Archean (approximately 2.7 billion years) sedimentary basin, whose surface expression is an elongate structure that extends longitudinally for approximately 300 km NE-SW by 100 km NW-SE. It contains an approximately six kilometre thick stratigraphic sequence consisting mainly of quartzites and shales with minor intermittent volcanic units. The first stage of basin development is recorded by rocks of the Dominion Group, composed of fluvial sediments and volcanic rocks. The Witwatersrand Supergroup overlies the Dominion Group and has been subdivided into the lower West Rand Group and the upper Central Rand Group, both of which consist primarily of sandstones, shales, and conglomerates. The Central Rand Group has produced the majority of the gold from the Witwatersrand Basin. The Ventersdorp Supergroup unconformably overlies the Witwatersrand Supergroup and is in turn overlain by the Transvaal and Karoo Sequences.

The differences in the morphology and gold distribution patterns from one reef to the next, and indeed within individual reefs, reflect the different sedimentary processes that prevailed during deposition on erosional surfaces in fluvial and littoral environments. Despite its age, the sedimentary rocks within the Witwatersrand Basin are remarkably well preserved and relatively undeformed. The basin has undergone numerous phases of faulting but has not been subjected to significant metamorphism.

The general geology of the Witwatersrand Basin is illustrated in Figures 7-1 and 7-2.

LOCAL GEOLOGY

The Ezulwini Mine is located in the West Rand Goldfield and the mineralization is hosted by the Central Rand Group, the upper unit of the Witwatersrand Supergroup. This unit has produced the majority of the gold from the Witwatersrand Basin, and is composed predominantly of quartzite with subordinate zones of conglomerate and a single argillite horizon, i.e., the Booyens Shale Formation. Using the central position of the Booyens Shale, the stratigraphy of the Central Rand Group has been historically subdivided into the lower Johannesburg Subgroup and the upper Turffontein Subgroup. Mineralized reefs in the Johannesburg Subgroup tend, on average, to be more laterally extensive and more uniform in thickness and gold content. The principal gold-bearing conglomerate packages in the Johannesburg Subgroup are the Main Reef and Bird Reef. Reefs hosted by the upper Turffontein Subgroup include the Kimberley and Elsburg Reefs and are generally characterized by discrete, and often linear, higher grade zones of gold concentration separated by areas of low grade or barren conglomerate.

The Turffontein Subgroup has been subdivided into the upper Mondeor Formation, middle Elsburg/Elorado Formation, and the basal Kimberley Formation. The Mondeor Formation hosts the Middle Elsburg, Upper Elsburg, and Ventersdorp Contact Reefs of the Ezulwini Mine.

The stratigraphy of the Witwatersrand Subgroup is illustrated in Figure 7-3.

PROPERTY GEOLOGY

The Ezulwini property is underlain by the Timeball Hill and Fountains Formations, and the Malmani Dolomite Formation of the Transvaal Sequence. The Transvaal Sequence is underlain by the Ventersdorp Supergroup. A lower unit of the Ventersdorp includes the Westonaria Formation, which consists of ultramafic lavas and zones of fine-grained tuff, and is responsible locally for poor ground conditions. The basal unit of the Ventersdorp Supergroup is a conglomerate-gritty quartzite band of the Venterspost Formation, often referred to as the Ventersdorp Contact Reef (VCR). The Mondeor Conglomerate Formation (Turffontein Subgroup, Central Rand Group, Witwatersrand Supergroup) lies unconformably below the VCR and hosts the Upper Elsburg and Middle Elsburg Reefs. The Upper Elsburg Reef is further subdivided into the Modderfontein Member and the Waterpan Member.

The Modderfontein Member consists predominantly of medium to small pebble conglomerates and is generally more robust than the underlying conglomerates of the Waterpan Member. The sequence has been traditionally subdivided into two conglomerate packages (the lower MA units and upper MB subzones) separated by a three metres to four metres zone of quartzite with subordinate small pebble conglomerate lenses (MI subzone).

The MB subzone typically ranges from four metres to six metres in thickness and contains up to three bands discrete conglomerate bands hosted by apple-green to light-grey siliceous quartzite. These horizons have varying channel thickness and excellent secondary mineralization. These poorly sorted, polymictic, medium to large pebble conglomerates were probably deposited onto scour surfaces and grade upwards into quartzite. The MB conglomerate(s) are characterised by abundant pyrite, both buckshot and interstitial crystalline forms, and, at the shaft pillar, form the most prospective horizon for gold mineralization. In many cases, boreholes have shown that gold mineralization in the MB horizon is quite erratic in the conglomerate package and is not always bottom loaded. Clast type is predominantly moderately to well-rounded vein

quartz and chert pebbles with scattered shale-like chips. The matrix varies between a light green to khaki coloured coarse-grained quartzite.

The MB conglomerate lies directly on a sandier substrate. The basal contact is often difficult to discern in borehole intersections. The underlying MI subzone consists of a six metre thick cross-bedded pyritic quartzite that becomes more conglomeratic towards the south. The conglomerate lags and multiple thin bands consist of polymictic small to medium gravels with occasional scattered large quartz vein clasts. The interbedded light green, coarse-grained quartzite layers may be up to one metre thick and are often argillaceous, containing numerous small shale clasts and bands of khaki-coloured sericitic shale.

The basal MA subzone is the thickest subzone of the Modderfontein Member and typically ranges from seven metres to nine metres and includes a capping of one metre to three metres of apple green, coarse-grained, immature quartzite with thin bands (<10 cm) of khaki sericitic greywacke. The MA conglomerate can be upward fining and consist of a well-packed, robust polymictic conglomerate with abundant buck-shot pyrite. Clasts are predominately vein quartz with chert, shale-like clasts, and the distinguishable khaki coloured chert pebbles. Thin layers of light greenish grey, fine-grained, siliceous quartzite can be present in the conglomerate sequence.

The Waterpan Member of the Mondeor Conglomerate Formation lies directly below the Modderfontein Member and consists of a number of discreet conglomerate horizons separated by quartzite. The various conglomerates are referred to as the "Individuals" and have been arbitrarily labelled A to D, from bottom to top. The lower EA and EB subzones are not persistent and are of no significant economic importance at the shaft pillar. The EC conglomerate is sporadically developed in channels across the pillar area and may form a number of discreet units. The highest unit of the Waterpan Member is the ED band, which is well-developed as a persistent horizon immediately below the MA subzone of the Modderfontein Member.

The EC subzone consists of light grey but fine-grained siliceous quartzite with a few thin polymictic, matrix supported, small to medium pebble conglomerate lags with distinguishable features such as small square shale-like clasts. The average conglomerate thickness typically ranges from one metre to two metres with very low gold content. Mature quartzite often separates the EC subzone from the overlying ED subzones. The ED subzone is better developed and can attain a thickness of three metres to four metres in places. The ED reef is developed as an upward fining, small to medium pebble, moderately sorted, polymictic conglomerate, dominated by vein quartz pebbles. The matrix is a mature, coarse-grained light to dark grey quartzite with fine pyrite. This conglomerate is characterized by variable grades and channel thickness.

In the area of the shaft pillar, approximately 1,025 m below the shaft collar, the general stratigraphy strikes 220° and dips 17° to the SW. Dips may vary due to channelling and faulting.

The property geology is illustrated on two sections in Figures 7-4 and 7-5.

8 DEPOSIT TYPES

The gold-uranium deposits in the Witwatersrand Basin have a primary sedimentary origin and show great lateral continuity throughout the basin. Local discontinuities in mineralization within the reefs are a result of facies variation, ore formation processes, and structural history. McKnight (2006) proposes the gold is derived from hydrothermal fluids moving preferentially through the more permeable conglomerate packages.

9 MINERALIZATION

UPPER ELSBURG REEF

The mineralization in the Upper Elsburg Reef has been defined around the shaft, at a depth of approximately 1,000 m for a radius of approximately 250 m by the 2006 diamond drilling program and for a further 200 m by historical diamond drilling. The combined thickness of the gold-bearing reef members, i.e., MB, MI, MA, ED, and EC, ranges from 25 m to 50 m. The reef strikes 040° azimuth, dips 17° SW, and exhibits good lateral continuity but is offset by steeply dipping faults and dykes.

Gold in the Upper Elsburg is found in the form of native gold and is associated with sulphide minerals, especially various forms of pyrite. Historically, 30% to 40% of the gold has been recovered by gravity processes, suggesting a high nugget effect. Normally, higher gold values are associated with sulphides, however, there are many instances where extensive sulphide development yields low gold values. Visually, pyrite occurs in a number of forms, e.g., a fine crystalline mass within the matrix and/or as replacement textures within clasts. Pervasive replacement of small clasts is often referred to as “buck shot pyrite”. In places the pyrite distribution within the conglomerate matrix suggests “streaming” of the palaeo-hydrothermal fluid during the mineralizing event. Thin stringers of crystalline pyrite are also present within the altered quartzite horizons. At the base of the serpentinized ultramafic lava, the dominant sulphide is pyrrhotite with minor amounts of nickel and copper. Pyrrhotite also exists to a lesser degree in the sedimentary horizons immediately beneath the lava. Gold has occasionally been found in the lava.

MIDDLE ELSBURG REEF

Mineralization in the Middle Elsburg Reef is confined to the UE1A and E9EC Reefs that lie approximately 400 m below the Upper Elsburg Reef. The UE1A Reef lies approximately 60 m above the E9EC Reef. Both reefs strike 030° azimuth, dip 25° SE, and are interpreted to extend to the property limits. The Middle Elsburg Reef is found in the South Deep Mine to the south and the Doornkorp Mine to the north. The UE1A Reef reaches a maximum thickness of 2.5 m and occasionally pinches out. The E9EC Reef

ranges from one metre to 3.5 m and averages 1.8 m thick. Generally, the reefs are thicker down the paleoslope.

Gold is most commonly associated with pyrite, although some gold occurs in small blebs in arsenopyrite and cobaltite. Uranium is found in the form of uraninite. Mineralization in the Middle Elsburg Reef has less of a nugget effect than the Upper Elsburg Reef.

10 EXPLORATION

Simmer's exploration program was limited to underground diamond drilling as described in Item 11.

The Middle Elsburg reef package, i.e., UE1A and E9EC, hosts approximately 140 million tonnes of inferred mineral resources as described in Section 17 Mineral Resources and Mineral Reserves. An exploration program has been planned with the objective of upgrading a portion of the mineral resources to the indicated category and carrying out a prefeasibility study. The specific Areas of Prospecting Rights Application are illustrated in Figure 10-1.

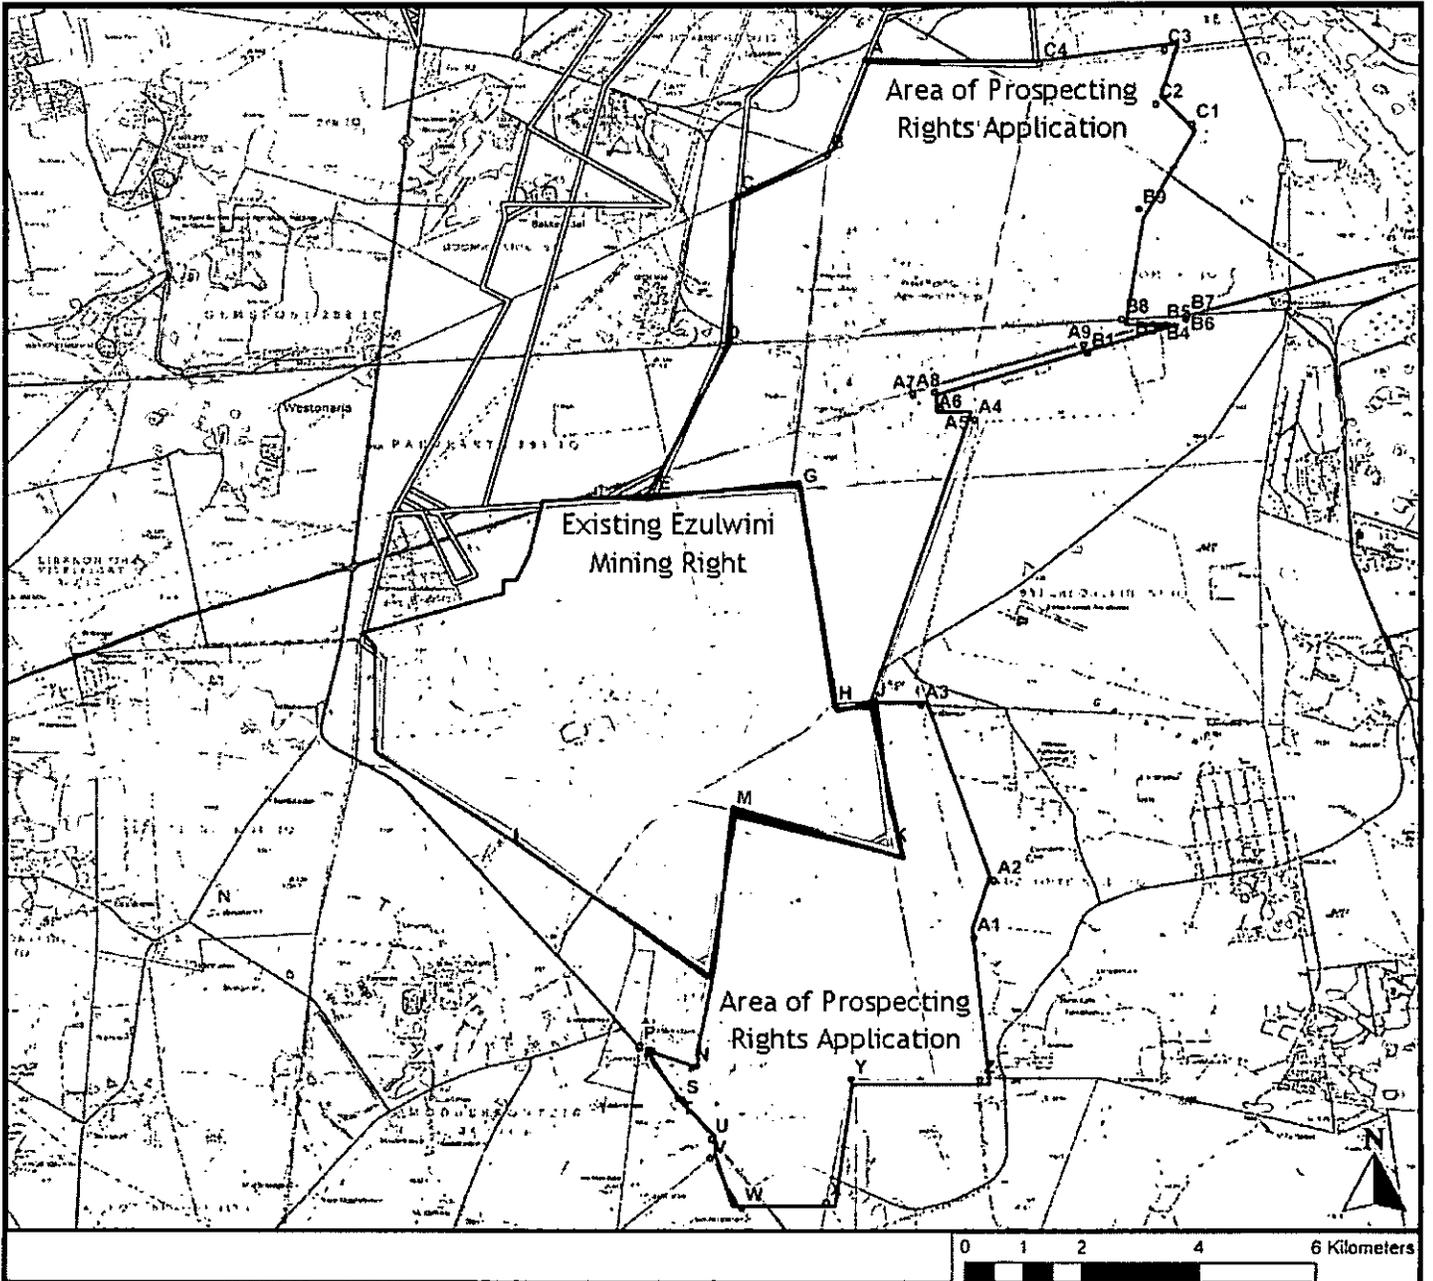

Figure 10-1

First Uranium Corporation

Ezulwini Project
South Africa

**Location of Mining Right and
Area of Prospecting Rights Application**

May 2007

Phase 1 of the program includes diamond drilling approximately 30,000 m in 18 holes from surface and approximately 7,200 m from underground. The underground diamond drilling would be collared in rehabilitated headings in the Upper Elsburg workings. The Phase 1 program would drill the target on approximately 400 m by 400 m spacing.

Contingent on success of the Phase 1 program, the Phase 2 program will comprise approximately 75,000 m of diamond drilling in 42 holes from surface and approximately 16,800 m in 42 holes drilled from underground. Phase 2 would drill the target on approximately 200 m by 200 m spacing, which, considering the generally strong continuity in the Witwatersrand reefs, would likely be sufficient to upgrade a portion of the target to indicated resources.

Concurrent with the Phase 2 diamond drilling, prefeasibility level studies will be carried out to examine the optimum systems of access, mining, mineral processing, and mineral economics. Scott Wilson RPA concurs with the proposed program. The estimated cost of the two-phase program is summarized in Table 10-1.

Prefeasibility Study	Lump Sum		300
Sub-Total Phase 2			15,420
Total Phase 1 & 2			22,780

In March 2007, First Uranium submitted a prospecting application in respect of properties adjacent to the existing Ezulwini Mining Right area. The DME has accepted the application implying that no other parties have made prior application for the prospecting rights, and that, subject to First Uranium complying with all the requirements of the DME, the rights will in due course be granted. However, First Uranium must submit the following to the DME to obtain their approval for the grant of the rights prior to commencing the program:

- Results of a notification and consultation with the surface owners of the land overlying the program area by May 13, 2007;
- An acceptable Environmental Management Plan (EMP) by June 12, 2007;
- Confirmation of First Uranium's qualifying Black Economic Empowerment credentials.

There is no legislated period for the DME to approve or reject the prospecting right application. However, the DME suggests a six month turnaround from the date of the submission of the EMP.

11 DRILLING

UPPER ELSBURG SHAFT PILLAR

Simmers contracted Murray & Roberts to conduct an underground diamond drill project in the Ezulwini shaft pillar. Horizon Blue Resources (Pty) Limited (HBR) planned the program, managed the drill contractors, logged and sampled the core, and prepared the database. The program comprised 3,463 m of HQ (5.08 cm dia.) and N (4.76 cm dia.) size diamond drilling in 50 holes. Forty-seven of the holes were collared below the reef and drilled upwards due to core recovery problems in the unit immediately above the reef. Hole depths ranged from 16 m to 201 m and averaged 78 m. The inclination of the three holes drilled downwards ranged from -65° and -90°, while the up-holes ranged from +40° to +70°. The reef dips at approximately 17° and the holes were intended to cut the reef as closely as possible to normal. Therefore, the true thickness of the reef ranges from 80% to 100% of the mineralized core length.

The diamond drill hole collar locations are illustrated in Figure 11-1. Highlights of the drilling are summarized in Table 11-1.

12 SAMPLING METHOD AND APPROACH

UPPER ELSBURG SHAFT PILLAR

The Ezulwini Shaft Pillar resource estimate is based principally on the results from 50 diamond drill holes, drilled January to October 2006, from various levels below the pillar elevation. Drilling from above was problematic due to poor ground conditions in the Westonia Formation lavas, stratigraphically above the Upper Elsburg Reef. The holes have irregular spacing due to availability of drill sites, and range from approximately 25 m to 100 m. Simmers contracted HBR to log the core, capture the data, and prepare the database. Core logging noted and recorded lithology, including reef members, mineralogy, and structure. Diamond drill core sample intervals were determined by HBR geologists based on lithology (reef member) contacts and mineralization. The nominal sample width was 30 cm and respected lithological contacts.

Core recovery problems were common. In most cases, corrections were made by adjusting the driller-reported depth to the surveyed depth. Two holes were not used in the modelling procedure due to large differences in the driller-reported depth and the surveyed depth.

Intersections selected for sampling were halved with a diamond saw. Half the core was placed in a plastic sample bag with a sample ticket denoting the hole number and sample number. The "from – to" was not indicated on the sample ticket. Samples were delivered to the analytical laboratory by HBR personnel.

In Scott Wilson RPA's opinion, there are no factors of the sampling method and approach that would affect the reliability of the mineral resource estimate.

A summary of the grade and thickness of mineralization intersected in the diamond drilling program is found in Item 11, Drilling.

UPPER ELSBURG INFERRED

The Upper Elsburg inferred mineral resources are the extension of the MB, MI, MA, ED, and EC reef members past the limit of the shaft pillar and are based exclusively on diamond drilling. Diamond drill core was AX (2.5 cm) size. Core was taken to surface where it was halved with a diamond saw under the supervision of a geologist. Logging recorded lithology, mineralization, and sample intervals. Sample intervals were maximum 20 cm and respected lithological and mineralogical contacts.

In Scott Wilson RPA's opinion, there are no factors of the sampling method and approach that would affect the reliability of the mineral resource estimate.

This section of the Upper Elsburg mineral resources were classified as inferred because verification of the diamond drill database was problematic. Historically, mineral resources have been classified as measured and indicated only when verified by development in the reef. This Upper Elsburg inferred mineral resources have high potential for upgrading to indicated and measured resources.

MIDDLE ELSBURG

The Middle Elsburg measured and indicated mineral resources are based on channel sampling by previous owners. The inferred mineral resources are based on diamond drilling. The methodology of channel sampling and diamond drill sampling is described in the 2006 report (Van Heerden et al., 2006) by Minxcon Pty. Ltd (Minxcon), an independent South African geology and mining consulting company. The description is based on documentation of standard operating procedures and interviews with previous sampling supervisors.

Channel samples were taken by trained samplers. Following each six-metre advance, the face was washed and samples were taken with a hammer and chisel. Channels approximately 10 cm wide and 0.5 cm deep were cut beginning at the footwall of the reef

and repeated on maximum 30 cm vertical intervals. The results were recorded on sample sheets and resource block plans.

The Middle Elsburg inferred mineral resources are based on diamond drill data. Diamond drill core was AX (2.5 cm) size. Core was taken to surface where it was halved with a diamond saw under the supervision of a geologist. Logging recorded lithology, mineralization, and sample intervals. Sample intervals were maximum 20 cm and respected lithological and mineralogical contacts.

In Scott Wilson RPA's opinion, there are no factors of the sampling method and approach in the Middle Elsburg Reef measured, indicated, and inferred resources that would affect the reliability of the estimate.

13 SAMPLE PREPARATION, ANALYSES AND SECURITY

UPPER ELSBURG SHAFT PILLAR

Diamond drill core samples were prepared at the Performance Laboratories (Performance) laboratory in Johannesburg, by drying, crushing to 80% minus 6 mm, split to a representative sample of 250 g to 500 g, and pulverizing to 75% minus 75 microns. Analysis for gold was by standard fire assay procedures, using a 30 g or 50 g sample with a gravimetric finish. The detection limit was 0.02 g/t gold. The Performance laboratory is certified by the South African National Accreditation System, an affiliate of the Standards Council of Canada.

Neither Simmers nor First Uranium employees, consultants, or contractors were engaged in the sample preparation or analyses.

Internal Quality Assurance/Quality Control (QA/QC) procedures at the Performance laboratory included assaying one duplicate sample and one standard sample from each batch of 20 samples.

In Scott Wilson RPA's opinion, the sample preparation and analyses methodologies, and QA/QC programs, conform to industry standards and are adequate for resource estimation.

UPPER ELSBURG INFERRED

The Upper Elsburg inferred resources were based on diamond drilling data. Scott Wilson RPA was unable to determine the sample preparation and analytical methods for these data. Minxcon (Van Heerden et al., 2006) reports the data were audited twice during Harmony's ownership.

In Scott Wilson RPA's opinion, the sample preparation and analyses methodologies, and QA/QC programs, conform to industry standards and are adequate for resource estimation.

MIDDLE ELSBURG

The Middle Elsburg measured and indicated resource estimations were based on underground channel samples. The sample preparation and analysis was performed at the Performance laboratory using the same process described for the Shaft Pillar diamond drilling program. In Scott Wilson RPA's opinion, the sample preparation and analyses methodologies, and QA/QC programs conducted for the measured and indicated resources in the Middle Elsburg, conform to industry standards and are adequate for resource estimation.

The Middle Elsburg inferred resources were based on diamond drilling data. Scott Wilson RPA was unable to determine the sample preparation and analytical methods for these data. Minxcon (Van Heerden et al., 2006) reports the data were audited twice during Harmony's ownership.

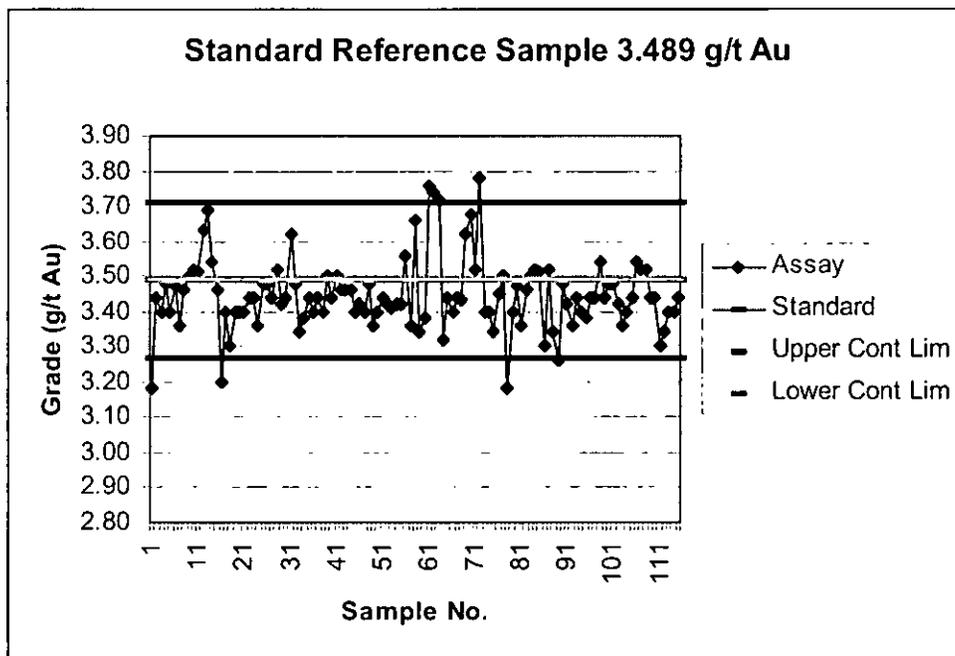

14 DATA VERIFICATION

UPPER ELSBURG SHAFT PILLAR

STANDARD REFERENCE SAMPLES

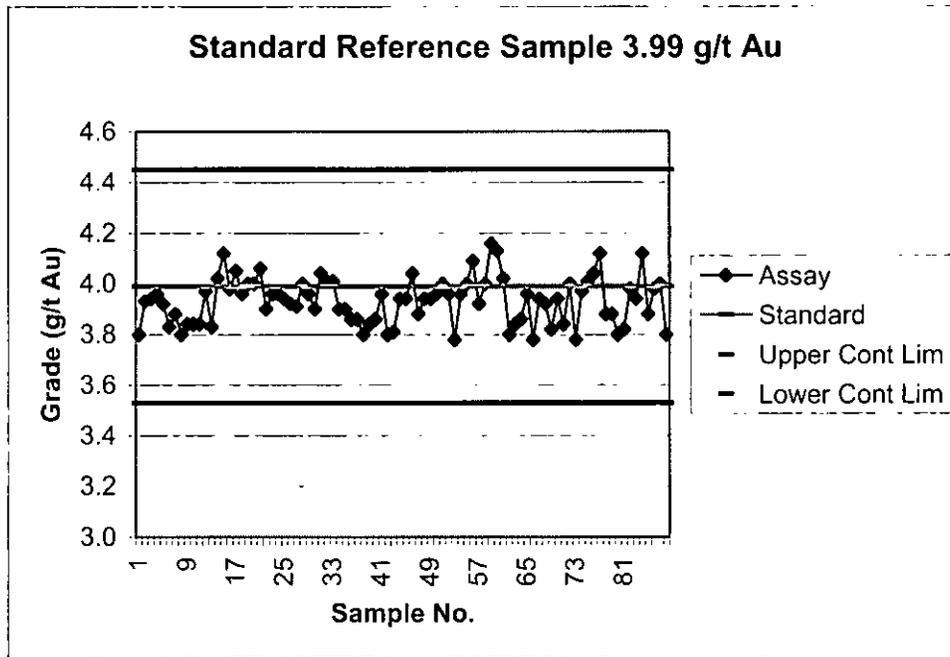

The Upper Elsburg Shaft Pillar measured and indicated mineral resources were based on data from a 2006 diamond drill program. HBR submitted one standard reference sample in each batch of twenty samples to check the accuracy of the Performance laboratory. Three reference standards were used. The lowest of reference standards at 3.489 g/t Au was purchased from Rocklabs in New Zealand. HBR's control limits were \pm two standard deviations, i.e., 0.222 g/t Au. The mean grade of the standards at Performance was 3.45 g/t Au, which was very close to the standard of 3.489. Six of the 115 samples were slightly outside the control limits as illustrated in Figure 14-1. In Scott Wilson RPA's opinion, the results indicate acceptable accuracy in the low grade range.

FIGURE 14-1 STANDARD REFERENCE SAMPLE 3.489 G/T AU

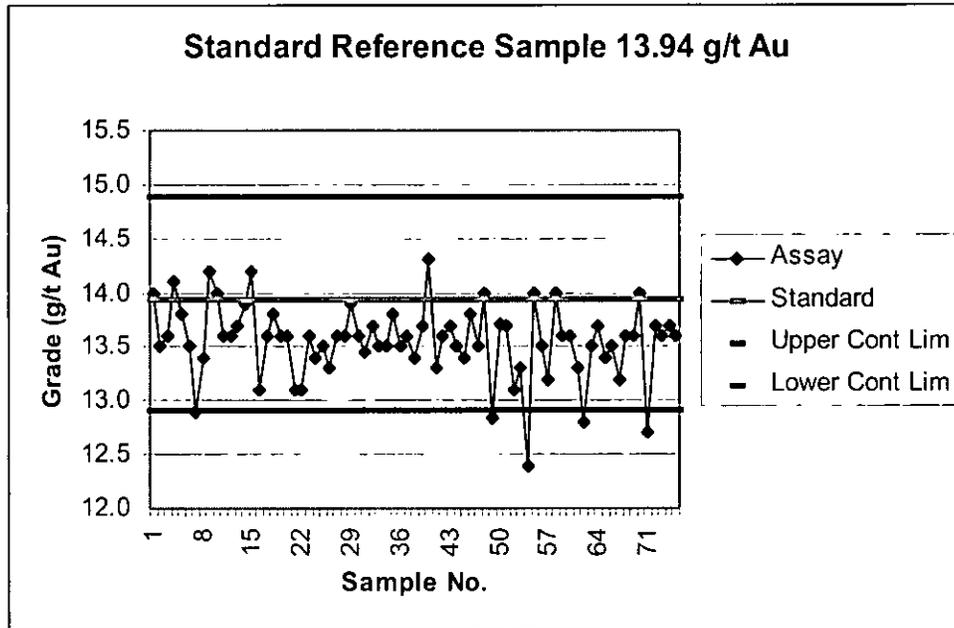

The second reference standard, SARM 99, was certified at 3.99 g/t Au. HBR inserted 88 samples that averaged 3.93 g/t Au. None of the samples returned results outside the acceptable limits as illustrated in Figure 14-2.

FIGURE 14-2 STANDARD REFERENCE SAMPLE 3.99 G/T AU

The highest grade reference standards at 13.94 g/t Au was purchased from ALS Chemex (ALS) in South Africa. HBR's control limits were ± 1.03 g/t Au, as recommended by the supplier. The mean grade of the standards at Performance was 13.55 g/t Au, which was approximately 3% less than the standard. Four of the 75 samples fell slightly outside the control limits. In Scott Wilson RPA's opinion, the results indicate acceptable accuracy in the high grade range.

FIGURE 14-3 STANDARD REFERENCE SAMPLE 13.94 G/T AU

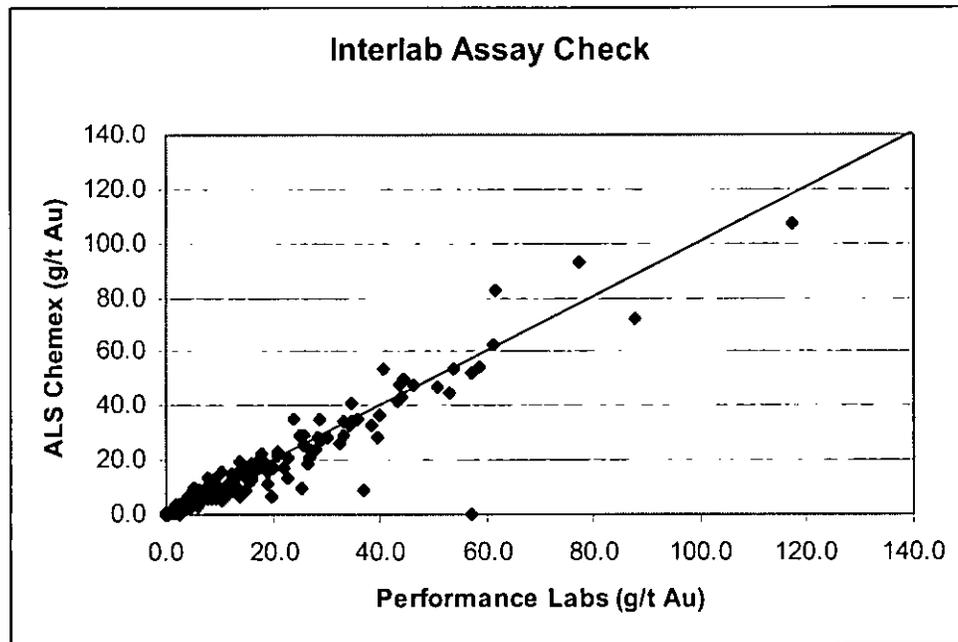

BLANK SAMPLES

HBR inserted 284 blank samples, 4% of the total samples, to check for contamination and drift. Only one sample exceeded the acceptable limit.

INTERLAB CHECKS

HBR submitted 374 pulps, originally assayed at the Performance Lab, for re-assay to ALS in South Africa to test for grade variability. The average grade returned from the ALS was 6% lower than the Performance results. Most of the variability is in the higher grade samples, as the ALS results are 2% lower than the Performance results in samples where the grade is less than 10 g/t Au. Figure 14-4 is a scatterplot comparing the assay results from the two assay laboratories.

FIGURE 14-4 INTERLAB CHECK ASSAYS

**SCOTT WILSON RPA CHECK SAMPLES**

Scott Wilson RPA collected five samples of split core from two diamond drill holes in the Shaft Pillar drilling. The samples were assayed by fire assay at SGS Canada Ltd., Mineral Services. The results, shown in Table 14-1, demonstrate the presence of significant gold values in the Project. Although five samples are not statistically significant, the two sample sets show reasonable agreement, given the high nugget in the Upper Elsburg Reef.

TABLE 14-1 SCOTT WILSON RPA DUPLICATE SAMPLES
First Uranium Corporation - Ezulwini Project

Hole No.	From (m)	To (m)	Original Grade (g/t Au)	Duplicate Grade (g/t Au)

38-06	16.29	16.54	5.00	4.98
38-06	19.74	20.00	15.90	26.60
41-03	21.53	21.80	9.48	10.90
41-03	33.08	33.35	8.69	17.00

UPPER ELSBURG INFERRED

The Upper Elsburg inferred mineral resources were based on historical diamond drilling data. It was not possible for First Uranium or their consultants to verify the data. Consequently, the Upper Elsburg mineralization outside the shaft pillar was classified as inferred resources. During development of the shaft pillar, First Uranium will attempt to verify the historical data by diamond drilling from underground and/or lateral development, thereby upgrading the mineral resources to a higher classification.

MIDDLE ELSBURG

In the area immediately surrounding the previously mined areas, Minxcon checked approximately ten percent of the assays from original assay reports to the assay plans and a similar percentage of survey notes against survey points plotted on plans. Interviews were conducted with previous senior technical personnel, including the Chief Sampler and Chief Surveyor, to verify sample collection and processing procedures. In Minxcon's opinion, the data presented as assay plans were considered as high quality, despite many of the original assay sheets and survey notes having been removed or destroyed. Mr. Valliant, Scott Wilson RPA, inspected a random selection of the assay plans and discussed the sampling and plotting methodology with Mr. Ed Edwards, Harmony's Section Sampler and Surveyor, as well as Ms. Yolanda Welgemoed, the Chief Draftsperson. Scott Wilson RPA concurs that the database is adequate for resource estimation.

15 ADJACENT PROPERTIES

The South Deep Gold Mine lies immediately south of the Ezulwini Mine and began commercial production in 1961. The reef horizons currently being exploited at South Deep include the Ventersdorp Contact Reef and the reef horizons that comprise the Upper Elsburgs. From 2001 to 2005 inclusive, the mine produced an average of 1.61 million tonnes annually at an average grade of 8.84 g/t gold. Western Areas Mines Limited (Annual report 2005) reported the South Deep measured and indicated mineral resources, effective year end 2005, of 289 Mt grading 7.20 g/t gold, containing 67.1 Moz, including proven and probable reserves of 147 Mt grading 6.19 g/t gold containing 0.91 Moz.

The Cooke 1, 2, and 3 Shafts and the Doornkop Mine, owned by Harmony, lie immediately north of the Ezulwini Mine. The main horizons exploited at the Cooke 1, 2, and 3 Shafts are the UE1A, with secondary reefs being the E8 Reef and the Ventersdorp Contact Reef. At the Doornkop Mine, the Kimberley Reefs and the South Reef are being mined. Effective June 2006, Harmony reported (Annual report 2006) underground measured and indicated resources of 104.8 Mt, grading 4.23 g/t gold, containing 14.3 Moz, including proven and probable reserves of 10.8 Mt, grading 6.5 g/t gold, containing 2.3 Moz.

Scott Wilson RPA did not attempt to verify the foregoing information. The mineral resources and reserves reported at the adjacent properties are not necessarily indicative of the mineralization at the Ezulwini Mine.

16 MINERAL PROCESSING AND METALLURGICAL TESTING

GOLD

The Ezulwini Mine has been operated in the past with production from the same areas as scheduled for future development. The metallurgical process selection is based upon the use of the previously existing processes on the site. Therefore, there has been no metallurgical testing of the ores for this study. Further support for the selection of metallurgical parameters based upon historical data is that there is also data available from current and past operations on the same orebody.

There is existing data related to:

- Ore feed size distribution
- Bond Work Index determination
- Power grind relationship
- Gravity separation
- Leach time optimization
- Cyanide and lime addition
- Plant recovery

For the design of the gold recovery plant, MDM Technical Africa (Pty) Ltd. (MDM), a company of South African mineral processing engineers, reviewed the data and concluded that:

- The rock has a medium hardness with a Bond Work Index of 15.6 kWh/t and a Rod Work Index of 20.7 kWh/t.
- Detailed investigation of the Witwatersrand gold field ores has confirmed the power grind relationship of 30.5 kWh/t -75 micron as being the critical design parameter, which would require 24.4 kWh/t to achieve the desired 75% minus 75 micron size. This is confirmed by historical data and neighbouring mines.
- Gravity gold recovery is essential for proper gold recovery of Upper Elsberg ores, with a gravity circuit which can handle 35% to 40% gravity gold being required.

- Witwatersrand ores from the West Rand have not shown any preg-robbing effects.
- Available data shows that milling to 75% minus 75 micron produced significant gold dissolution benefits compared to the coarser grinds of 60% and 70% minus 75 micron.
- Leaching with oxygen has shown no justifiable benefit in previous tests and has been excluded from consideration.
- Plant leach residence time trials identified leach times of at least 36 hours as being required for maximum gold recovery.
- Comparison to other plants treating the same ore shows that the Wilson formula gives conservative recoveries lower by 0.5%. The plant design has related to a recovery of 95.55% which is 1.1% less than the Wilson derived value.
- Sodium cyanide and lime consumptions were chosen higher than historic data indicates due to current experience at South Deep. This is recommended at 0.34 kg/t (100% NaCN) and 1.675 kg/t (100% CaO).

URANIUM

The Project has been operated for the production of uranium in the past, with production from the same areas as slated for future development. The metallurgical process selection is based upon the use of the same processes as previously used on the site. Therefore, there has been no metallurgical testing of the ores for this study.

There is less historical data available related to uranium processing since detailed plant reports were destroyed when the plant was demolished and further reports were lost when offices were relocated. The metallurgical work related to the gold feed size, work index and grinding is expected, however, to be similar to that for the gold ore, as the uranium bearing reef has been in production in the past for uranium and gold and most recently for gold only.

Scott Wilson RPA has reviewed the metallurgical data and is of the opinion that the assumptions are reasonable. If there is any change in the planned processing, it will be necessary to undertake metallurgical testing to determine the expected performance.

17 MINERAL RESOURCE AND MINERAL RESERVE ESTIMATES

MINERAL RESOURCES

The mineral resources at the Ezulwini Mine are currently confined to the Upper Elsberg and Middle Elsberg Reefs. Historic production at Ezulwini and other mines in the Witwatersrand Basin demonstrates that the mineralization in the reefs has very good lateral and down-dip continuity. Currently, measured and indicated mineral resources include only the areas that could be verified by diamond drilling or chip/channel sampling. Extensions beyond the verified data were classified as inferred mineral resources. There is a high likelihood that development and diamond drilling will upgrade a significant portion of the inferred resources to measured and/or indicated resources.

Historically, the depth of many of the reefs in the Witwatersrand Basin has made diamond drilling on a pattern sufficient for measured and indicated resources prohibitive. Additionally, the reefs are developed in mineralization with only minimal development in waste, which makes diamond drilling from underground impractical. Generally, exploration and mining companies have tested the continuity of the reef and estimated inferred mineral resources by wide spaced diamond drilling from surface and upgraded to indicated and measured mineral resources by development and channel sampling. Consequently, most mining operations could only report two or three years of measured plus indicated resources and the ratio of inferred resources to measured plus indicated resources was high. Given the good lateral continuity of the reefs, however, a significant fraction of the inferred mineral resources were normally upgraded and ultimately exploited. For example, in the Upper Elsberg Reef, approximately 60% of the mineral resources originally classified as inferred based on wide spaced diamond drilling were subsequently “payable” and exploited. Given the current gold price and exchange rate, the percentage would have been greater than 60%.

The mineral resources at the Ezulwini Mine can be considered as three discrete sections as follows:

1. The Upper Elsburg Shaft Pillar (UE Shaft Pillar), an approximate 250 m radius around the main shaft, in the Upper Elsburg Reef, defined by recent diamond drilling.
2. Inferred resources in the Upper Elsburg Reef.
3. Resources in the Middle Elsburg Reef.

SUMMARY

Table 17-1 summarizes the mineral resources in the three areas.

TABLE 17-1 MINERAL RESOURCES – SUMMARY – JANUARY 2007

First Uranium Corporation - Ezulwini Project

Category	Tonnes (t 000's)	Grade Au (g/t Au)	Grade U ₃ O ₈ (%)	Cont. Au (oz 000's)	Cont. U ₃ O ₈ (lb 000's)

Total	9,950	6.1	n/a	1,939	6,768
Inferred Reef					
Upper Elsburg	64,550	5.8	-	12,055	-
Middle Elsburg Channel	4,810	2.3	-	351	-
Middle Elsburg	132,100	4.7	0.075	19,742	218,319
Total	201,460	5.0	n/a	32,148	218,319

Notes:

- 1 CIM definitions were followed for mineral resources.
- 2 Mineral resources in the Upper Elsburg shaft pillar are estimated at a 4.0 g/t Au cut-off grade
3. Mineral resources are estimated using an average long-term gold price of US\$500 per ounce, and a US\$/R exchange rate of 7.0.
4. A minimum mining width of 1.53 m was used.
5. Rows and columns may not add exactly due to rounding.
6. Mineral resources that are not mineral reserves do not have demonstrated economic viability.

UPPER ELSBURG REEF - SHAFT PILLAR

First Uranium plans to recover the shaft pillar on the Upper Elsburg Reef as described further in Item 18. In plan view, the shaft pillar is oval, roughly 550 m E-W, 450 N-S, and forms an area of 17.6 ha approximately 1,025 m below the shaft collar, comprising a 25 m to 50 m thick segment of the Upper Elsburg Reef.

The resource estimate is based principally on the results from 50 diamond drill holes, drilled January to October 2006, from various levels below the pillar elevation. Drilling from above was problematic due to poor ground conditions in the Westonario Formation lavas, stratigraphically above the Upper Elsburg Reef. The holes have irregular spacing but range from approximately 25 m to 100 m.

Simmers contracted HBR, under the direction of Mr. Chris McKnight, to log the diamond drill core, compile the database, and estimate the mineral resources in the shaft pillar. Mr. McKnight is a "Competent Person" as defined by the "South African Code for Reporting of Mineral Resources and Mineral Reserves" (SAMREC). HBR subcontracted Lower Quartile Solutions (Pty) Ltd. (LQS) to prepare the solid models, conduct geostatistical evaluations, and classify the mineral resources.

Historical diamond drill data was supplied by Simmers in a Sable database. Verification of historical diamond drill data included:

- Check "From – To" depths for consistency.
- Check collar coordinates, lithologies, and gold assays against original drill logs.

Holes with inconsistent data were corrected according to the diamond drill log or removed from the database.

Separate three-dimensional lithological models were created for the lavas, VCR, and six members of the Upper Elsburg Reef, i.e., MB, MI, MA, ED, EC, EB. Structural blocks were also modeled based on faults and dykes intersected in diamond drilling and development from adjacent levels. Only the MB, MI, MA, ED, and EC models were considered for resources.

Gold grades were composited over 0.25 m. Classical statistical analyses were conducted within the five principal reef members, i.e., MB, MI, MA, ED, and EC. The studies were undertaken independently in the data from the 50 holes within the limits of the shaft pillar and in the data from the 261 holes 200 m peripheral to the shaft pillar. The results indicate that although the average gold grade in individual reef members inside and peripheral to the pillar have a high variance, the weighted average gold grade of the five reef members is approximately the same inside and peripheral to the pillar.

LQS constructed cumulative log probability plots, indicator correlation for lag 1 plots, coefficient of variation plots, and percent metal contained plots for each reef member to determine the suitable level to cut erratic high grade gold values. The analyses indicated that 25 g/t gold was the appropriate cutting level for the 0.25 m composites in the MB, MA, and ED reefs and 20 g/t gold was suitable in the MI and EC reefs. Scott Wilson RPA normally recommends cutting individual assays as opposed to cutting composited data. In this case, however, as the composites are very narrow, the difference between the two practices is likely not material.

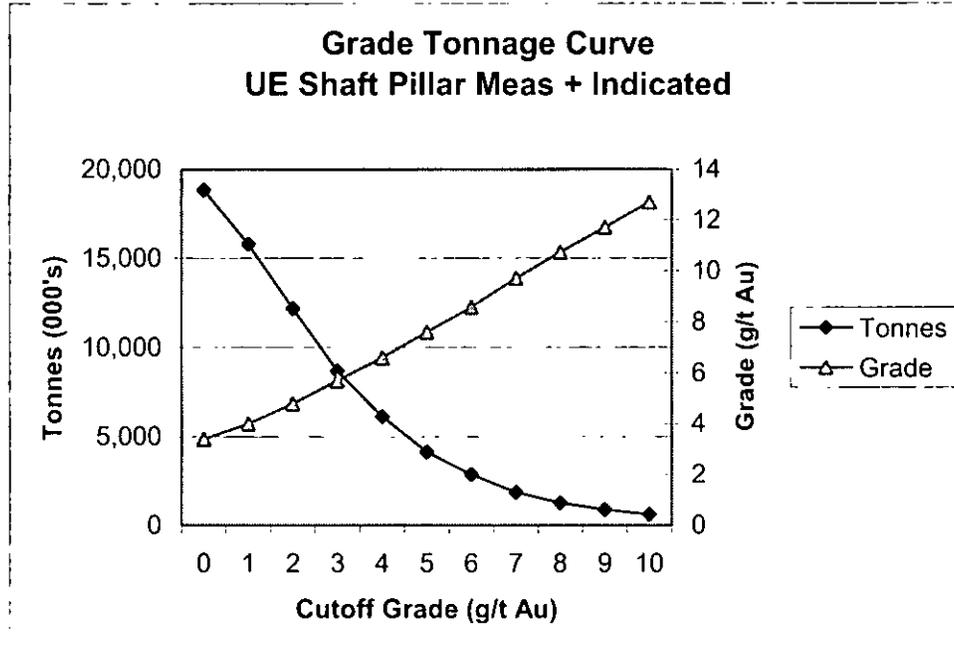

Variography was performed on the 0.25 m composites from each reef member. Ordinary kriging was selected as the estimation method of interpolating grades into a 3D block model. Block sizes were 10 m north by 10 m east by 1.0 m vertically. Search directions and distances were consistent with the variography. The principal search axis in the five reef members ranged from 250 m to 300 m, 90° to 120° azimuth, with a 0° dip. The minor axis ranged from 150 m to 200 m, 170° to 210° azimuth, and -10° to -30° dip. The first estimation run was performed with these search parameters and a second run was performed with a 30 m to 60 m axis in the principal direction and a 30 m to 35 m axis in the minor direction. A minimum of three data points and a maximum of 20 were required for block grade estimation. Searches were confined to hard boundaries defined by the solid model of each reef member.

LQS undertook several validation tests on the block model and, in their opinion, the results adequately represent the grade and grade trends of the mineralization within the shaft pillar.

Measured mineral resources are defined as the total of the blocks estimated by the second of the two runs, i.e., shorter search distances. Indicated resources were defined as the total of the blocks estimated by the first, i.e., longer search distances. Resources were reported in 1.0 g/t gold cut-off increments and by reef member. Table 17-2 summarizes the mineral resources of the MB, MI, MA, ED, and EC reef members at the 4.0 g/t gold cut-off grade.

Figure 17-1 demonstrates the tonnage-grade relationship in the UE Shaft Pillar measured and indicated mineral resources.

FIGURE 17-1 GRADE TONNAGE CURVE

UPPER ELSBURG REEF - INFERRED RESOURCES

The Upper Elsburg inferred mineral resources comprise the mineralization outside the UE Shaft Pillar and are defined by historical drilling where the data could not be physically verified by relogging or resampling diamond drill core. Geological modeling was based on structural interpretation by Harmony. Each reef member was subdivided into blocks where the limits were defined by structures and dykes.

GeoLogix Mineral Resource Consultants (Pty) Ltd. (GeoLogix) estimated the mineral resources in the following manner. The resource estimate is based on the weighted average gold grade from all available surface drill hole data. All the grade-thickness (Cmg/t Au) values and reef thickness (Cm) values were totaled. The sum of the grade-thickness values was divided by the sum of the thickness values to obtain the gold grade. The areas of the blocks were totaled to estimate the area per reef. The area was multiplied by the average reef thickness to estimate volume, then by the 2.72 specific gravity to calculate tonnes. The specific gravity is derived from the historical specific gravity in similar mineralization.

Given that the data could not be verified and the grade and thickness values were not weighted spatially, the mineral resources have been classified as inferred. Scott Wilson RPA concurs with this classification but notes that a significant percentage of the inferred resources will likely be upgraded to measured and/or indicated with additional development. Table 17-3 summarizes the Upper Elsburg inferred resources.

MIDDLE ELSBURG REEF

The mineral resources in the Middle Elsburg Reef were estimated by Minxcon. The project was under the management of Daan Van Heerden, Johan Odendaal, and Francois Martens, all competent persons as defined by SAMREC. Minxcon in turn subcontracted the geostatistics and resource modeling to GeoLogix. Despite the fact that many of the plans and associated data have been removed or destroyed, in Minxcon's opinion, sufficient data was salvaged to undertake an effective audit.

Minxcon checked approximately ten percent of the assays from original assay reports to the assay plans. Interviews were conducted with previous senior technical personnel, including the Chief Sampler and Chief Surveyor, to verify sample collection and processing procedures.

Two of the reef members within the Middle Elsburg Reef, i.e., the E9EC and UE1A members, in the vicinity of the shaft were considered to have sufficient gold and/or uranium grades to meet the requirements for mineral resources.

There is currently no access to the mineralized material due to lack of ventilation and scaling. Therefore, no physical verification, e.g., resampling and resurveying, was possible. The database for the resource estimation was based on 13,133 chip samples

profiles, and surface and underground diamond drilling in the E9EC reef member and 233 in the UE1A reef member. The results were plotted by previous operators on stope plans and 1:1,000 scale development plans. Gold and U_3O_8 assays were available for the E9EC member. Only gold was assayed in the UE1A as recovery of U_3O_8 was not economic at that time.

Geological modeling was based on Harmony's previous interpretation. Discrete structural blocks were created, bounded by faults and dykes. Voids, as a result of previous mining, were removed from the model. The reefs were regarded as tabular two-dimensional shapes, consistent with typical Witwatersrand practice.

The mean thickness in the E9EC and UE1A reefs is 1.84 m and 1.61 m, respectively. The block model is based on grade-thickness, expressed as Cmg/t for gold and CmKg/t for U_3O_8 . The grade-thickness was estimated for each sample point. Variography was performed on the grade-thickness data from each reef member. Tables 17-4 and 17-5 summarize the parameters used to construct the E9EC and UE1A block models.

TABLE 17-4 BLOCK MODEL PARAMETERS - MIDDLE ELSBURG E9EC REEF

First Uranium Corporation - Ezulwini Project

Interpolation Method	Ordinary into two-dimensional block model
Block Size	25 m N x 25 m E
Search Distance/Azimuth	210 m, azimuth 68° and 125 m, azimuth 158°
Minimum Data	15
Maximum Data	40

TABLE 17-5 BLOCK MODEL PARAMETERS - MIDDLE ELSBURG UE1A REEF**First Uranium Corporation - Ezulwini Project**

Interpolation Method	Ordinary into two-dimensional block model
Block Size	25 m N x 25 m E
Search Distance/Azimuth	170 m, azimuth 135° and 50 m, azimuth 45°
Minimum Data	3
Maximum Data	20

Blocks were classified as measured resources if they were located within one-half of the variogram range from a data point. Blocks located one-half to one variogram range from a data point were classified as indicated. Mineralization beyond one variogram range, but within the property limits, was classified as inferred resources. The UE1A Reef hosted 4,810 t grading 2.3 g/t Au, consistent with the kriging parameters for measured and indicated mineral resources. However, given the low gold grade, lack of U₃O₈ assays, and the inability to verify the diamond drill data, the entire UE1A reef was classified as inferred mineral resources.

Mineral resources in the Middle Elsburg Reef are summarized in Tables 17-6 and 17-7.

TABLE 17-6 MEASURED + INDICATED MINERAL RESOURCES - MIDDLE ELSBURG REEF**First Uranium Corporation - Ezulwini Project**

Classification	Tonnes (000's)	Grade (g/t Au)	Cont. Gold (oz. 000's)	Grade U ₃ O ₈ (%)	Cont. U ₃ O ₈ (lbs 000's)
Measured	2,451	4.9	384	0.07	3,903
Indicated	1,372	5.8	257	0.10	2,880
Meas. + Indic.	3,823	5.2	641	0.08	6,783

Notes:

1. CIM definitions were followed for mineral resources.
2. Mineral resources in the Middle Elsburg Reef are estimated using a zero cutoff grade since the mining method does not facilitate selective mining
3. A minimum mining width of 1.53 m was used.
4. Rows and columns may not add exactly due to rounding.

3. A minimum mining width of 1.53 m was used.
4. Rows and columns may not add exactly due to rounding.

MINERAL RESERVES

There are currently no mineral reserves at the Ezulwini Mine as defined by CIM.

18 OTHER RELEVANT DATA AND INFORMATION

The existing infrastructure at the Project is old but appears to have been well maintained and, with some refurbishment, is expected to be ready to be placed back into service. The mine development to the mineralized zones is in place, however, more development is required to provide sufficient stopes for a reasonable production profile. In the Upper Elsburg Reef, the initial task will be the removal of the shaft pillar to reduce stability problems in the shaft and in the shaft pillar area. This is not an uncommon task and mines are now extracting the crown pillars before production commences to reduce later stress related problems.

The Project will be a conventional underground mine with breasting of the Upper and Middle Elsburg reefs. The ore will be broken in the stopes and moved by slushers to be loaded in rail cars for transportation to the shaft. From the shaft and through the balance of the handling, the gold ores and the gold/uranium ores are kept separate. The ores will be hoisted to surface and processed.

The ore will be crushed and ground and then subjected to gold recovery by gravity and cyanidation. The uranium will be extracted by a hot acidic leaching followed by solvent extraction and precipitation to form a concentrate (yellowcake). The uranium tailings will then be leached for gold recovery. Leaching will occur in a carbon in leach process after which gold will be electrowon and refined into dore bars.

Mill tailings will be used for cemented cycloned tailings (CCT) and the balance will be sent to a surface storage area. The mine is dewatered at a rate of 65 million litres per day. This rate is expected to continue for a number of years and EMC is reviewing the potential to sell mine water to a local utility to reduce the pumping costs the mine must carry.

Shaft refurbishing commenced in December 2006 and the Project is progressing according to schedule, with the completion of the stabilization of the shaft and installation of the floating tower expected by October 2007.

MINING OPERATIONS

Mining at Ezulwini will be conventional underground breast mining of the reef. There are three planned mining areas, the Upper Elsburg Shaft Pillar, the Upper Elsburg beyond the shaft pillar, and the Middle Elsburg. All areas are mined by up dip conventional drift and fill mining using CCT for backfill. The method is common and well understood by people in the area. One significant difference at Ezulwini is that the reef in the Upper Elsburg contains several mineralized horizons and, in some cases, these horizons are up to five metres to six metres thick as opposed to other mines in the Witwatersrand Reef where the mineralized horizon is only one metre to two metres thick.

For mining, a drift along the strike (a strike gully) is established, with the necessary ore transport facilities at the lowest point in a block. From this drift, raises are driven up dip, leaving a 6.5 m pillar between the raises, to the top of the block and holing in to a top strike drift.

Once the raises break through, the retreat mining starts downwards at a four metre width advancing 30 m/month using winches and scrapers to move the ore. Primary four metre wide stopes are taken, leaving four metre wide pillars to be recovered after the primary stopes have been filled.

Broken ore is scraped down the raise to the strike gully and then to short ore passes, with chutes to load rail cars for transport to the shaft for hoisting to surface.

The method is development intensive, but this development provides the opportunity for sampling in the proposed stopes as the raises are driven and provides locations for short diamond drill holes to confirm the mining location. The sequence is dictated by

rock mechanics parameters so that in a given area the active face advances at an angle to reduce the risk of seismic activity due to mining. Areas of low grade ("unpay") are left and form random pillars. Other pillars are left to protect infrastructure.

All of the LOM production plans presented include inferred resources, however, there is no certainty that inferred resources will be converted to measured or indicated resources and then to mineral reserves.

CUT-OFF GRADE CALCULATIONS

The cut-off grade for the Upper Elsburg Reef LOM production plan is based upon gold only. The mining cut-off grade calculations for the Upper Elsburg are shown below:

Gold price	\$500/oz
Exchange rate	R7.4=\$1.00
Gold Recovery in plant	95.5%
Operating cost	R434/tonne
Cut off grade at zero profit	3.8 g/t Au.

Assuming a simple 20% operating margin, the cut-off grade becomes 4.6 g/t.

In the Middle Elsburg, there is recovery of both uranium and gold. Based upon the same factors as in the Upper Elsburg, along with uranium prices of \$40.00/lb and mill recovery of 80%, the equivalent gold and uranium grades are:

$$\text{Au eq (g/t)} = \text{Au g/t plus } .00455 \text{ times } \text{U}_3\text{O}_8 \text{ in g/t}$$
$$\text{U}_3\text{O}_8 \text{ eq(g/t)} = \text{U}_3\text{O}_8 \text{ g/t} + 220 \text{ times Au g/t.}$$

On this basis, the 3.8 g/t Au and 4.6 g/t Au cut-off grades would equate to U_3O_8 eq grades of 0.84 kg/t and 1.0 kg/t, respectively.

UPPER ELSBURG SHAFT PILLAR

At the start of mining in 1961, a shaft pillar area was left in the Upper Elsburg area. The shaft pillar is an ellipsoid, approximately 450 m by 550 m, centered on the main and

ventilation shafts. The shaft pillar resources can be accessed from the 33 Level to the 41 Level of the main shaft (880 m to 1,100 m below surface). The shaft pillar ore cuts the shaft barrel at the 38 Level. Subsequent to the extraction of ore from the area beyond the shaft pillar, ground movement problems were encountered in the shaft area as the weak lava unit overlying the ore horizon failed. It was necessary on at least one occasion to cease shaft operations and excavate the lava unit around the shaft and then to reinstall the necessary shaft hardware.

In order to eliminate the ground control problems in the shaft area, it is proposed to mine out the shaft pillar as the first step to restarting the mining operations. This will eliminate the ongoing problems in the shaft, and the risk to the shaft, caused by the failure of the lava unit overlying the reef. The extraction of shaft pillars before the commencement of production has been practiced at other deep mines in South Africa, including the adjacent South Deep Mine. The material within the shaft pillar will be easily accessible as the access drifts are in place and the mining will be in close proximity to the shaft.

A design for the extraction of the shaft pillar was prepared by SRK Consulting (SRK) and Read, Swatman & Voigt (RSV) have designed a steel tower to be placed in the shaft in the area where the shaft pillar cuts the shaft barrel. By first excavating a distress cut through the extent of the 500 m diameter shaft pillar area and then filling that cut with CCT, it will be possible to extract the bulk of the remaining ore while eliminating the stress related issues that have previously led to problems in the shaft (and which could lead to problems in the shaft in the future). Where the ore horizon cuts the shaft barrel, a steel tower will be hung in the shaft to hold the shaft hardware and permit unrestricted shaft operation in the future.

SRK developed a detailed plan and sequence considering the stresses in place and RSV, based on that plan, generated a development and production schedule for the shaft pillar area. SRK designed permanent pillars in the immediate area of the shaft barrels (both the main shaft and the ventilation shaft are within the shaft pillar area), alongside

permanent drives, beside existing major faults, and at the rim of the shaft pillar area where the previously mined area commences. The removal of the shaft pillar before the commencement of production will allow the execution of a detailed plan with a set sequence without the pressures of maintaining full production.

In addition to the mining plan developed by SRK, there is a recommended monitoring plan that will be implemented. In order to determine whether the shafts and critical excavations that could be influenced by mining operations remain stable, SRK recommended that comprehensive monitoring of rock mass deformation in all affected excavations be conducted. This applies to both the static and the dynamic situation and includes a seismic network with monitoring instrumentation to monitor the parameters associated with quasistatic deformations.

Based on the modeling results and underground observations, the following areas need to be monitored:

- Shafts: 33 Level to 41 Level
- 33 Level station areas and pump chamber
- 36 Level station areas
- 38 Level station areas
- 41 Level station areas and pump chamber
- Inner pillar stopes.

Typically monitoring parameters could include:

- Tilt measurements of the shaft barrel in the main shaft
- Vertical strain measurements in both the main and ventilation shaft
- Fracture observations in boreholes to detect possible bedding separation
- Rock mass deformations of the shaft station areas
- Visual inspections of the condition of the shaft lining and steelwork, as well as the condition of installed support
- Closure monitoring in the stopes (inner pillar)

SRK suggested that the monitoring program be implemented before stoping commences. The monitoring equipment as recommended by SRK and detailed above is currently being installed by International Seismic Systems (ISS) and will be commissioned before stoping commences.

There is little preproduction development required as there are a number of levels and headings that exist in the shaft pillar area. However, mining must follow the planned sequence to prevent the build up of stresses in any area with the distress cut preceding all other mining. Production builds up slowly with the smaller distress cut and then builds more rapidly as more areas become available.

There are mineral resources within the shaft pillar and these have been scheduled for production. The production schedule was generated by RSV using the parameters defined by SRK for the extraction sequence and a set of development and production parameters based upon experience in the area. The schedule was generated in the Mine24d software. This software uses the assumed parameters and applies them to the resource area to generate the development and production schedules.

Table 18-1 indicates the mining parameters used by SRK and RSV for this work, and Table 18-2 indicates the advance rates used in the shaft pillar area.

The shaft pillar mining plan and schedule as developed for the December 2006 Technical Report is described below. There were only minor changes made to the schedule as a result of the revised resource estimate. The grade-tonnage tables and curve

(Table 17-4 and Figure 17-1) indicate that there are 4,967 kt, grading 7.4 g/t Au, undiluted, above the cut-off grade of 4.6 g/t Au. First Uranium reports that historical dilution is approximately 3%. Scott Wilson RPA used 5,116 kt, grading 7.2 g/t Au as the millfeed for the base case LOM and economic analysis. Scott Wilson RPA notes that the LOM production grades from the shaft pillar area are lower than the production history from the start of mining operations and there may be opportunities to review and increase the LOM plan grade estimates for the shaft pillar area.

The shaft pillar production schedule is shown in Figure 18-1.

FIGURE 18-1 UPPER ELSBURG PRODUCTION SCHEDULE – SHAFT PILLAR

The shaft pillar area is well serviced by the existing infrastructure for materials handling, dewatering, mine services, and mine ventilation.

For the shaft pillar mining, it will be necessary to purchase rock drills, winches and scrapers, as well as locis and cars for the transportation of rock and materials.

The development and stoping sequence in the shaft pillar is illustrated in Figures 18-2, 18-3, and 18-4.

FIGURE 18-2 SHAFT PILLAR DESTRESS CUT

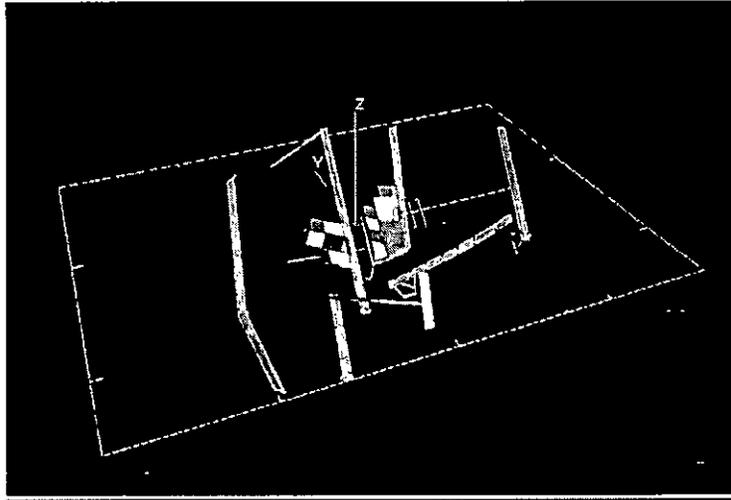

FIGURE 18-3 SHAFT PILLAR INITIAL STOPING

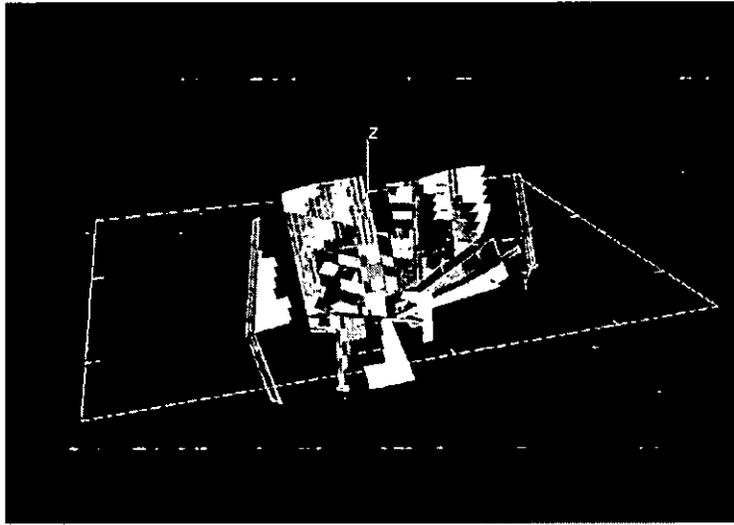

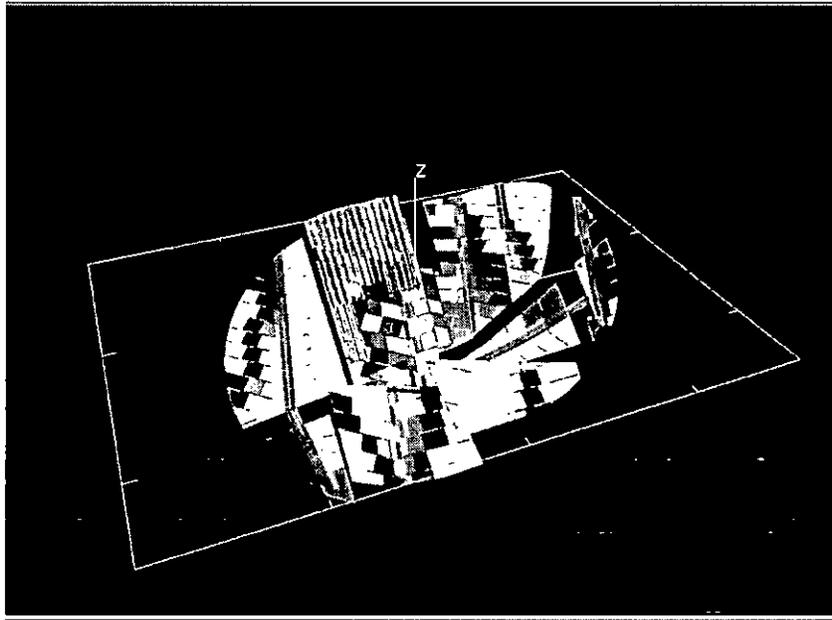

FIGURE 18-4 SHAFT PILLAR – ADVANCED PILLAR EXTRACTION & STOPPING

IMPACT OF CHANGES IN RESOURCE ESTIMATE IN SHAFT PILLAR AREA OF UPPER ELSBURG

The recalculation of the shaft pillar resources, subsequent to the initial technical report, incorporating the additional 50 holes drilled in 2006 has led to a decrease in the resource estimate of both tonnes and grade. While the impact on the shaft pillar resource estimate was a decrease in contained gold of approximately 9%, the bulk of the negative change was in the EC and ED reefs which are smaller and thinner and were expected to contribute less to the total feed. The decrease in contained gold was mainly (94%) due to the reduction in the tonnage.

The change in the grade estimate was minor (about 0.5%) and, therefore, the production grades as previously forecast are not expected to change significantly.

In the overall production schedule for the Upper Elsberg, the shaft pillar will provide 5.1 Mt of a total of 18.1 Mt. A reduction of the shaft pillar resource will be offset by production from the remainder of the Upper Elsberg resources which consist of some

64.5 Mt of inferred resources. The additional tonnage to be drawn from the balance of the Upper Elsburg to offset the reduction in the shaft pillar area amounts to an additional 0.5 Mt to be taken from the 64.5 Mt inferred resource (less than 1%) and raises the dependence upon the inferred resource in the Upper Elsburg from 20.2% to 20.9%.

Therefore, in terms of the overall impact of the change in the resource estimate upon the financial analysis and production forecasts for the preliminary assessment, Scott Wilson RPA considers the resource changes to be minor and has not made any revisions to the production forecasts.

Scott Wilson RPA recommends that Ezulwini review in detail the changes in the resource estimate and incorporate the new resources into the next planned production schedule revisions. Scott Wilson RPA further recommends that revisions to the production schedule be undertaken for use in a prefeasibility study when one is prepared.

UPPER ELSBURG BEYOND THE SHAFT PILLAR

The Upper Elsburg formation has been mined in the past beyond the shaft pillar area. Development was curtailed prior to the cessation of operations. Therefore, while there are inferred resources, mine development must be advanced to prepare further areas for stoping.

The area beyond the shaft pillar contains only inferred resources, however, a LOM plan has been prepared including this material. Planning was based on the historical layouts and productivities.

This material will be mined in the same manner as the shaft pillar except that there is no need for an initial distress cut.

The schedule was generated in the Mine 24D software. This software uses the assumed parameters and applies them to the resource area to generate the development and production schedules.

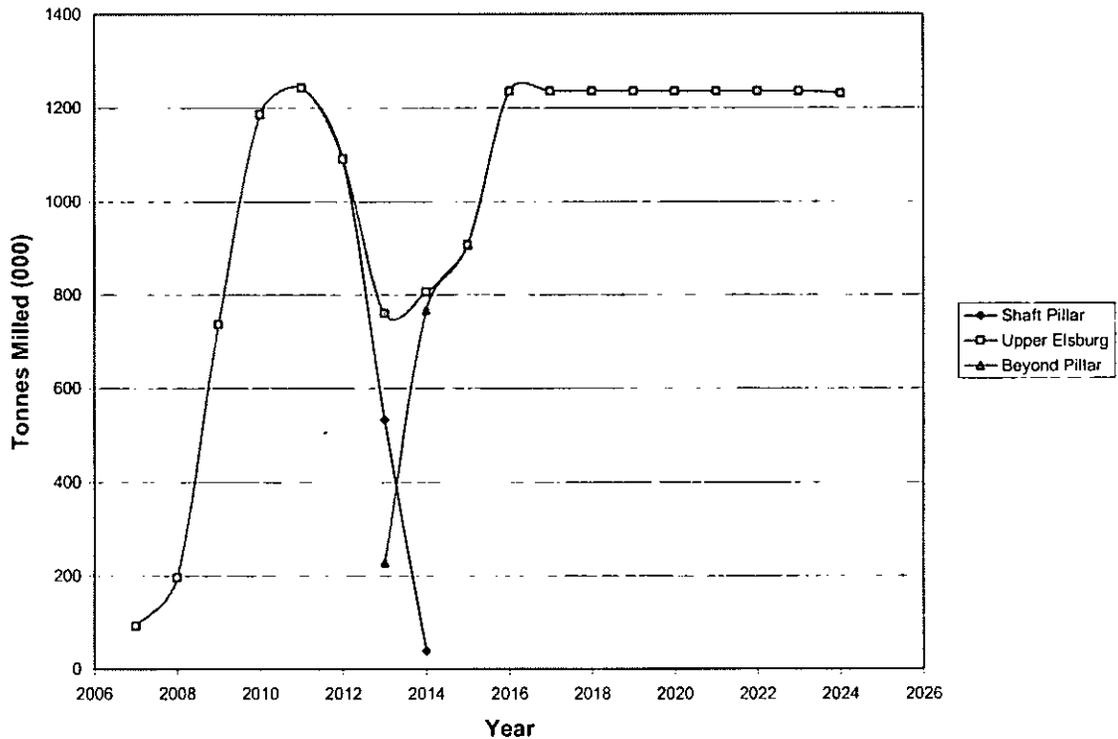

The production schedule for the Upper Elsburg material is shown in Table 18-4.

Total	5,117	6.8	13,021	6.3	18,138	6.5

The production profile for the Upper Elsburg is shown in Figure 18-5.

FIGURE 18-5 UPPER ELSBURG PRODUCTION SCHEDULE

The Upper Elsburg area is serviced by the existing infrastructure for materials handling, dewatering, mine services, and mine ventilation. Prior to mining, it will be necessary to inspect the main levels to determine the ground conditions and to evaluate how much of the services for the drifts will have to be reinstated. Main development headings will need to be extended as the proposed mining area expands.

It will be necessary to purchase rock drills, winches and scrapers, as well as locis and cars for the transportation of rock and materials. Some of the equipment will be common to the shaft pillar material and some of the stoping equipment will be taken from the shaft pillar stopes as those stopes are exhausted and mining activity moves into the area beyond the shaft pillar.

MIDDLE ELSBURG

The Middle Elsburg area targets two reefs, the E9EC and the UE1A, which contain both gold and uranium. The E9EC has been mined much more extensively than the UE1A. The Middle Elsburg area is accessed from the 36 Level to the 50 Level and continues for an additional six levels below the 50 Level. Those areas below the 50 Level would be accessed by a subvertical shaft, however, this is not included within this analysis.

Mining is by conventional breast mining based on the same method that has been successfully used in the past. Access is provided from crosscuts from the level haulage and raises are developed up from one level to the next.

Support will be based upon the use of CCT for backfill, however, grouted cement packs or timber mat packs may be used if necessary. Support pillars have not been considered as a result of geological losses and unpay blocks providing adequate “natural pillars”. Panels are planned at 20 m to 30 m in length, with 10 m face advance planned per month and the stoping width of 100 cm to 180 cm depending upon the reef channel.

PRE-PRODUCTION SCHEDULE

Since the Middle Elsburg area has been mined in the past, there is level development from the shaft to the mining areas, which, however, will have to be extended to provide access to the proposed mining areas. The mine plan was developed using Mine 24D, a CAD based mine design and scheduling software package.

PRODUCTION SCHEDULE

Table 18-5 summarizes the Middle Elsburg Production Schedule.

TABLE 18-5 MIDDLE ELSBURG PRODUCTION SCHEDULE
First Uranium Corporation – Ezulwini Project

Year	Uranium Tonnes ('000s) Apr 2007 Plan	Recovered Au Grade (g/t)	Recovered U ₃ O ₈ Grade (g/t)
2007	71	4.69	355
2008	465	3.38	379
2009	715	3.27	377
2010	754	3.24	378
2011	892	3.15	382
2012	1,077	2.99	392
2013	981	2.56	413
2014	951	2.36	428
2015	1,105	2.35	429
2016	1,158	2.35	429
2017	1,159	2.35	429
2018	1,159	2.35	429
2019	1,159	2.35	429
2020	1,159	2.35	429
2021	1,159	2.35	429
2022	1,159	2.35	429
2023	1,159	2.35	429
2024	1,159	2.35	429

The Middle Elsburg area has been mined in the past, and development out to the mining areas, as well as the infrastructure to support the mining, is in place down to the 50 Level. Material below the 50 Level will require internal shaft access and has not been included in the mine plan at this time. It will be necessary to upgrade and replace some of the ore handling facilities at the shaft, but this would be necessary in any case. All of the infrastructure will have to be extended along with the Middle Elsburg development prior to the commencement of operations. This area will require continuous development to permit the buildup of production over a period of years.

The main drifts to the previously mined areas have been inspected and assessment of the necessary rock work and infrastructure replacement for the drifts has been compiled. Ventilation is the first requirement to reduce the levels of radioactive gases in the areas. During the last quarter of 2006, the Ezulwini project team reconnoitered the available Middle Elsburg panels and found them to be more accessible and in better condition than

anticipated. Therefore, the mining plan has been accelerated in years 2008 and 2009 as it is clear that the production panels can be brought online much faster.

MINE EQUIPMENT

The mining equipment has been removed from the site. To achieve 100,000 tpm will require a significant amount of equipment as shown below in Table 18-6.

TABLE 18-6 MIDDLE ELSBURG MINING EQUIPMENT
First Uranium Corporation – Ezulwini Project

Year	LM 70 Muckers	Loco	Hoppers	Cars	Winches	Mono Winches	Machines	Air Legs

MANPOWER

The mining plan estimates that 2,100 people would be required at steady state production of 100,000 tpm from the Middle Elsburg, and that does not include shaft and surface activities. The Middle Elsburg manpower requirements are summarized in Table 18-7. As of April 26, 2007, EMC has a total of 496 persons working on the rehabilitation project.

TABLE 18-7 MIDDLE ELSBURG MINING MANPOWER REQUIREMENTS

OPPORTUNITIES FOR IMPROVEMENTS

As noted by RSV, the resource grade in the shaft pillar area is lower than the mill head grade in the areas immediately adjacent to the shaft pillar. Further analysis of the information may permit an increase in the estimated ore grade from the shaft pillar. The initial mining of the distress cut will also provide information to improve the accuracy of the forecasted grade from the shaft pillar area.

Scott Wilson RPA notes that the forecast production grade for gold and uranium from the Middle Elsburg areas is lower than the resource grade and Scott Wilson RPA is of the opinion that there may be potential to generate mill grades in excess of those forecast in this study.

Within the mining area, there are opportunities to implement actions to improve the Project. The inferred resource covers a large area and it may be possible to increase production by developing and commencing mining in additional areas. The Ezulwini shaft does not have the capacity for additional hoisting, but it may be possible to gain access to other underutilized shafts in the immediate area. Those shafts are connected to the Project and have in past been used to hoist ore from the Ezulwini Mine. Or, additional hoisting capacity could be obtained through deepening of the ventilation shaft and installation of a skipping hoist, or a complete new shaft could be developed. The

development of a new shaft would have the advantage of bottom access so that it could be bored rather than sunk, decreasing the cost and the time to complete the shaft.

With the recent uranium price increases, there may also be opportunities to improve the project cash flow by re-examining the ratio of gold plant feed to uranium plant feed to maximize cash flow.

MINERAL PROCESSING

Recovery of gold and uranium will be accomplished by processing on site through the construction of facilities similar to those that existed in the past on the same site. The gold plant will, at full capacity, treat 200,000 tons per month of ore and will consist of the following process steps:

- SAG milling of underground ore to 75% -75 µm with four SAG mills grinding all of the mill feed
- Dilute cyclone overflow (20% solids)
- Gravity recovery from cyclone underflow material
- Pre-leach thickening
- Cyanidation in seven tank hybrid carbon-in-leach circuit
- Gold adsorption onto activated carbon and stripping via Zadra elution
- Carbon regeneration in horizontal electric kiln
- Gold electrowinning and smelting
- Tailings disposal to conventional slimes dam

Because of the treatment of the two different ore types, the plant layout has two sets of silos. Two 3,700 tonne silos are dedicated to Upper Elsburg ore and one 7,400 tonne silo is dedicated to Middle Elsburg ore. It is anticipated that two mills will always be dedicated to Middle Elsburg ore, whilst the other two mills may operate on either Upper Elsburg ore or Middle Elsburg ore. This silo configuration provides flexibility in terms of feeding Middle Elsburg ore to two, three or four mills, thus allowing the mine to respond to the expected rise in the price of uranium.

Gold recovery is forecast to be 95.5%, with 30% to 40% of the gold recovery in the gravity circuit.

The Ezulwini uranium plant will, at full capacity, treat 100,000 tonnes per month of ore, and where appropriate it will be designed as two 50,000 tonnes per month modules and will consist of the following process steps:

- Pre-leach filtration
- Agitated, atmospheric, heated, sulphuric acid leaching
- Six stage counter current decantation (CCD) of leached slurry
- Clarification of pregnant leach solution (PLS) from CCD
- Neutralization of CCD tailings and pumping to the gold plant
- Ion exchange (IX) processing of the PLS
- Solvent extraction (SX) of the uranium from the IX eluate
- Precipitation and washing of ammonium di-uranate from the OK liquor from SX

The Middle Elsburg (ME) ore is processed for both gold and uranium in a reverse leach process with uranium leached first and gold second. The U_3O_8 recovery is forecast to be 80%.

The ME ore is ground and thickened in the gold plant and the feed to the uranium plant is received from the pre-leach thickener underflow. This underflow must be further dewatered before feeding to the uranium leach to allow a satisfactory water balance over the whole process. Horizontal belt vacuum filters have been selected for this duty. The horizontal belt filter installation will comprise two modules of 50,000 tonnes per month each.

Test work is scheduled on samples being collected from the Ezulwini ME ore to determine whether the ore is amenable to paste thickening. This may offer a cost advantage of the combination of high rate thickening and filtration.

Minxcon reported that historically the ore mix from the shaft yielded one lb uranium per tonne of ore processed (that is a recovery of 373 g/t). The average recovery factor was 80% and the average head grade was 466 g/t. Scott Wilson RPA notes that from Annual reports spanning the period from 1985 to 1997 (excluding 1987 as no data was found for that year) the recovered grade for uranium ranged from 0.3 to 0.53 kg/t and the average recovered grade of uranium oxide was 0.44 kg/t. The annual reports reviewed by Scott Wilson RPA did not contain head grade information. The processing plant that was previously used to process the ore was dismantled after the mine was placed on care and maintenance in 2002.

Since November 2006 the market has indicated a significant appetite for uranium, which has prompted First Uranium to consider options for increasing the split of production from the Middle Elsburg uranium bearing reef. An option to increase the plant flexibility to accommodate a blend of up to 150 ktpm from the Middle Elsburgs and 50 ktpm from the Pillar (instead of 1:1), was included to allow a higher uranium processing rate option if this proved to be more profitable. The additional 50 ktpm Uranium module that would be required has not been added to the capital costs, but the plant infrastructure changes required to facilitate a seamless addition of this module have increased the capital costs by \$4.18 million.

Existing facilities in the mine infrastructure exist to keep the gold and gold/uranium ores separate from the mine ore passes through to the surface stockpiles. Gold ore will be treated just for gold while the uranium/gold ores will first be treated for the recovery of uranium after which the residue will be leached for gold recovery. This separation reduces the processing costs as not all of the mine tonnage needs to be treated for uranium recovery.

Installation of a primary jaw crusher is included in the plans. The crusher may be installed underground.

There may be an opportunity to generate gold production sooner by toll milling at the nearby Harmony mill. Initial plans were to custom mill gold and uranium ores at underutilized mills in the area. However, MDM estimates that the first portion of the gold plant will be ready in April 2008, so that only minor amounts of custom milling will be necessary. MDM estimates that the uranium plant will be ready by August 2008, thus decreasing the requirement for custom milling.

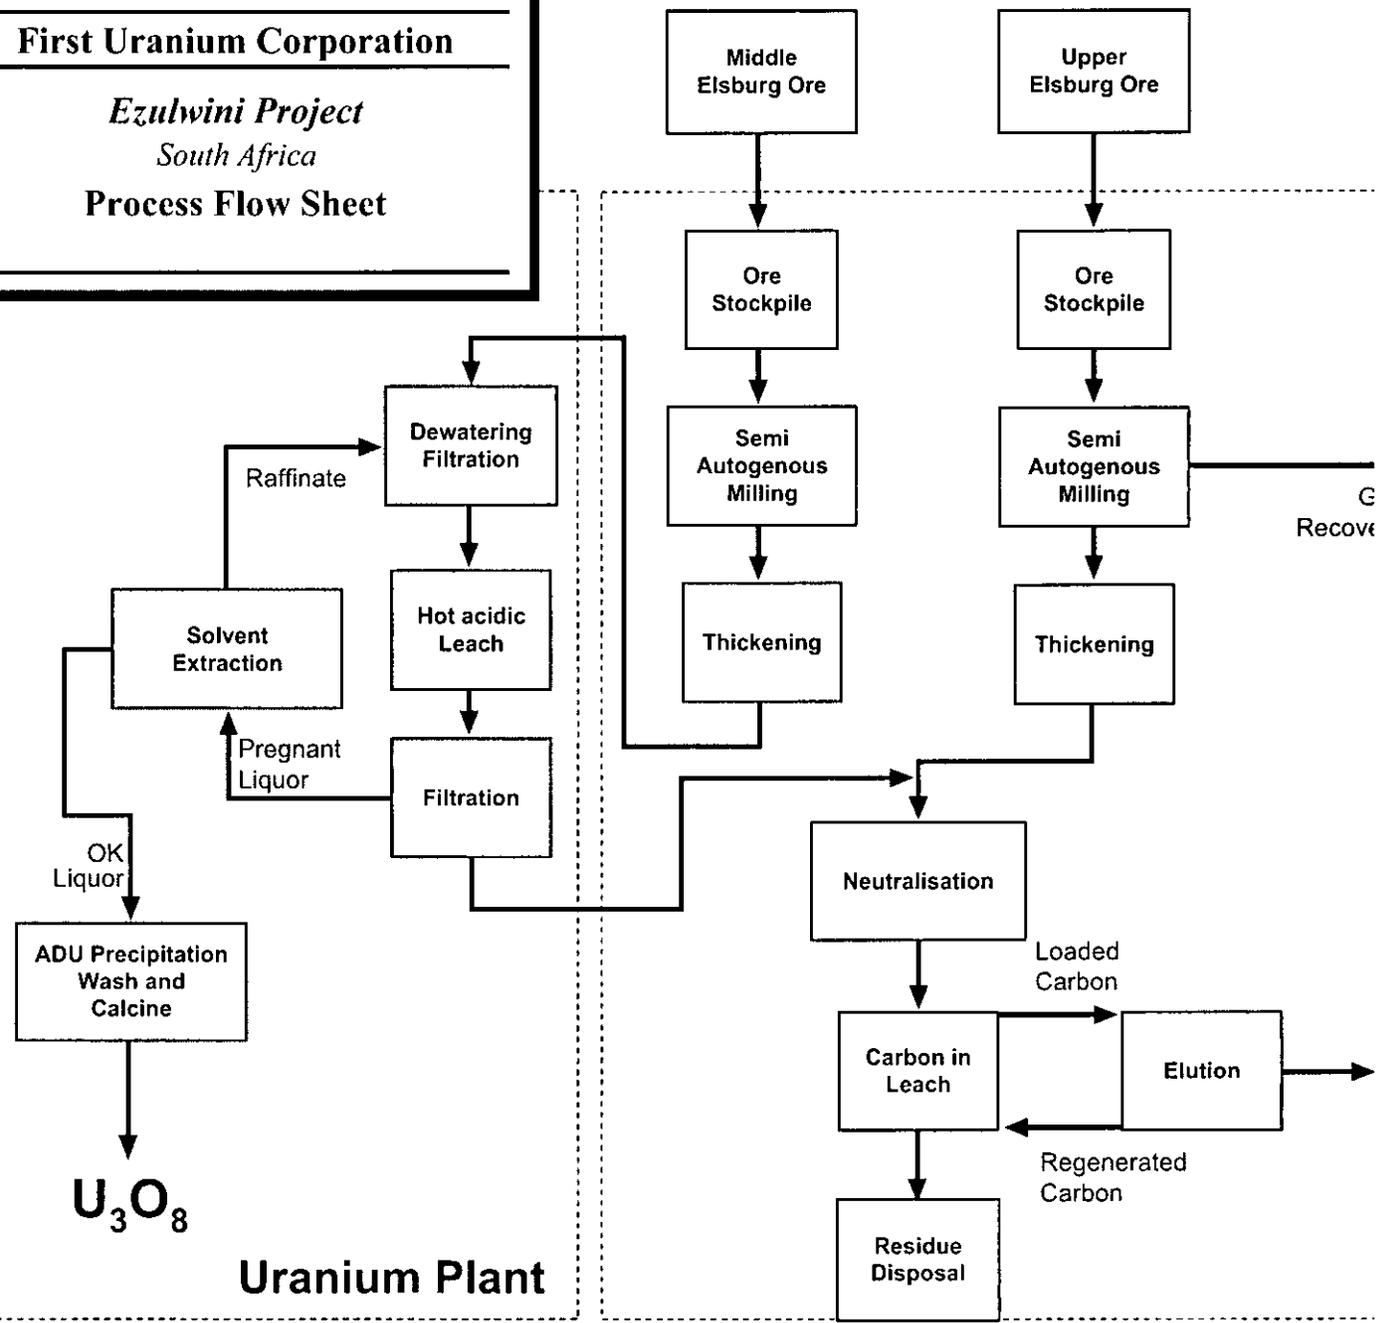

The recovery process is illustrated in Figure 18-6.

Figure 18-6

Ezulwini Project
South Africa
Process Flow Sheet

18-22

OPPORTUNITIES FOR IMPROVEMENT

The plant design is based upon the design and equipment formerly installed at the site. The main changes as a result of additional plant engineering were a change to counter current decantation instead of filtering in the uranium circuit and the inclusion of bins and feeders such that feed from either bin can be fed to either the uranium or the gold circuit. This latter change increases the operational flexibility and allows milling of more of one feed stream or the other depending upon the ore availability and metal prices.

If additional ore could be hoisted it would be necessary to either improve the plant throughput to exceed the design capacity of 200,000 tpm or to enter into agreements with the owners of local under utilized concentrators to process additional ore.

The uranium plant capacity could be increased if the expected uranium and gold prices made treating only Middle Elsburg mineralization more profitable. The production schedule generated for this initial assessment should be reviewed to maximize the project return through an increase in the proportion of the production from the Middle Elsburg through periods of high uranium price. The current trend in uranium prices may favour more emphasis on mining of the Middle Elsburg.

MARKETS

GOLD

Gold is freely traded, at prices that are widely known, so that prospects for sale of any production are assured. Scott Wilson RPA used a gold price of \$500 per ounce for the Base Case. The price of gold on April 30, 2007 as posted on Kitco was \$680.00 per ounce.

URANIUM

Uranium is freely traded but the number of buyers and sellers is much smaller than for gold. The uranium is expected to be sold under contract to a processor. There is a uranium processor operating in South Africa and it has in the past received concentrates from Ezulwini. Discussions between First Uranium and Nuclear Fuels Corporation Limited indicate that concentrate specifications have not changed significantly from those applicable when the plants in question last produced uranium concentrates but there are no contracts in place. There have also been discussions with other uranium processors outside of South Africa. The concentrates that will be produced are generally transported in drums from the mine to a conversion facility, and this transportation does not pose any special problems.

The world wide uranium market was approximately \$5 billion in 2005 compared to the gold market which was \$57 billion. Half of the world's mine production comes from Canada (28%) and Australia (22%). South Africa currently accounts for only 1.8% of the total production. World production of uranium in 2005 was 91,700 M lb (41,609 Kt). The top six uranium producers yield 77% of the world production.

The most common commercial use for uranium is fuel for nuclear power plants. The demand for uranium is directly proportional to the level of electricity generated by nuclear power plants, which in turn is driven by the future global consumption of electricity. According to the Energy Information Administration's International Energy Outlook 2006 (base case), world net energy consumption will more than double before 2030. There are 442 operable, commercial nuclear power plants that currently supply approximately 16% of the world's electricity production. There are another 28 plants under construction, 62 planned, and 160 proposed. The World Nuclear Association (base case) projects that reactor related demand will increase by more than 65% by 2030, up to 110,776 tonnes of required uranium.

In 2005, the uranium consumption exceeded mine supply by about 36%. The deficit is filled from secondary sources including reprocessed spent fuel, government and

civilian stockpiles, and the conversion of highly enriched uranium from nuclear weapons. These secondary supplies accounted for 46% of requirements in 2004.

According to the pricing information published by Ux Consulting Company, from relative highs of more than \$40/lb in the late 1970s, U₃O₈ prices have dipped dramatically reaching a low of \$7/lb at the end of 2000. Since then price levels have more than recovered, surpassing the previous historical high.

There is currently no regulated commodity market underwritten by a market maker for the various components of nuclear fuel. Utilities typically purchase uranium pursuant to contracts with producers on either a medium (less than 5 years) or long term basis with the delivery of the uranium generally commencing two to three years after the date of the contract. Pricing formulas are complicated and generally remain confidential and undisclosed to the public.

Utilities may also purchase uranium through spot and near term purchases from traders and producers. Demand in the spot market was approximately 27 millions pounds of U₃O₈ in 2005. Utilities usually buy fuel through contracts with various supplies at each stage of the uranium processing stages. Depending upon the stage at which the uranium is purchased the utility will be responsible for any remaining processing.

Scott Wilson RPA used a U₃O₈ price of \$50.00 per pound for the base case analysis. On April 23, 2007 the price of U₃O₈ as published by Ux Consulting was \$113.00 per pound.

CURRENCY

Scott Wilson RPA used a currency exchange rate of R:US\$ = 7.4:1 for the base case economic analysis. On April 30, 2007, the exchange rate was R:US\$ = 7.03:1 as reported by the Bank of Canada.

CONTRACTS

There are no contracts in place for mining, concentrating, smelting & refining, transportation & handling or sales. The main contracts in place include:

- Murray & Roberts have the contract for the shaft rehabilitation;
- MDM has the contract for detailed engineering of the gold and uranium plants;

Contracts to be negotiated include:

- EPCM for the gold and uranium plant is being negotiated with MDM;
- A tentative sales agreement for uranium;
- A labour contract for the work force.

ENVIRONMENTAL CONSIDERATIONS

An environmental management program (EMP) was submitted to the DME in October 2005 in respect of the Ezulwini Project. The mining licence is based upon the approval of an EMP which is generated from an EIA. Simmers has received approval of the EMP Report, which includes the previously approved closure plan for the No. 4 Shaft (that approval was obtained by Harmony when it planned to cease pumping and complete the mine closure). First Uranium has applied to the South African Department of Water Affairs and Forestry for the water licence and is awaiting approval. An application for a Certificate of Registration (COR) for the operation of a uranium processing plant was submitted to the South African National Nuclear Regulator on 18 July 2006. EMC received a response from the South African National Nuclear Regulator on 15 August 2006 detailing various outstanding information requirements. Whilst most of these requirements have been addressed, there are still several requirements outstanding which include specific radiation protection advisory services. Malepa Holdings has been mandated to provide the necessary radiation protection advisory services and will submit the outstanding information required to the National Nuclear Regulator by the end of May 2007.

WATER

Dewatering of the No. 4 shaft continues with about 65 million litres per day (Mlpd) pumped from the mine. In 2005, the South Deep Mine completed works to separate the two mines so that dewatering of the No 4 shaft is not necessary for the South Deep Mine operations. The dewatering of the Gemsbokfontein western subcompartment of the Dolomite structures commenced in 1986 to reduce the increase in extraneous water from the dolomites into the underground workings at the No. 4 shaft.

Precautions were taken to safeguard surface ground movement anticipated in 1986. The monitoring program continues with daily monitoring of the status of ground movement in the affected areas.

Dewatering has decreased from 150 Mlpd to the current 65 Mlpd and, should dewatering continue, it is expected to reduce to approximately 48 Mlpd over the next 10 years.

Ingress of water occurs from the workings on the 32, 33, and 41 levels and, to a lesser extent, below the 41 Level. Water is currently pumped from 50A, 41, and 33 levels. As water cascades through the old workings, it is polluted and the salt load increases. The water being pumped is a mixture of clean and polluted waters. It may be possible to separate the clean and polluted waters and generate revenue from the sale of clean water.

The water pumped from the mine is used as follows:

- 10 Mlpd is used to recharge the Gemsbokfontein East Dolomitic Subcompartment as required by an agreement with Rand Water.
- Makeup water of some 5 Mlpd is used for the mining service water circuit.
- 50 Mlpd is discharged to the Kleinwes Rietspruit under licence to DWA&F.

It is this latter component that is destined for treatment to potable standards. The water is planned for sale to Rand Water. These sales would recoup the cost of treatment and pumping from the mine. The latter would improve the return from the mining

operation. No potential benefit from the sale of water is included in this analysis. A similar proposal is currently being negotiated at Stilfontein Gold Mine, which, when concluded, will be used as a model to facilitate First Uranium's own negotiations. As of March 30, 2007, the Stilfontein Gold Mine water deal was still in process. Given the multitude of stakeholders involved, no guarantee can be given as to the expected timing for deal closure.

TAILINGS

There is an existing slimes storage dump on the property and that facility is ready for use. The existing slimes dam has a remaining lifespan of approximately 19 years.

LIABILITIES

As part of the REL Purchase Agreement, EMC assumed all of the liabilities for the areas purchased. EMC has established a new environmental trust fund (Fund) for the rehabilitation of the Ezulwini mining area. EMC is obligated, on an ongoing basis, to contribute to the Fund such amounts (or provide guarantees for such amounts acceptable to the South Africa Minister of Minerals and Energy) as shall be required in order to ensure that the total balance of the Fund (including the amount of any such guarantees) at any point in time shall be not less than the total amount which it is obliged to hold in the Fund at that point in time pursuant to any and all applicable laws and/or regulations and as agreed with the Minister from time to time, in respect of the rehabilitation of the Ezulwini mining area and or the immovable property subject to the REL Purchase Agreement and/or any other related environmental matter. EMC adjusted the closure costs during January 2007 to reflect the necessary inflationary adjustment as required by the DME. The inflationary adjustment increased the closure cost estimate by \$0.4 from \$4,676 to \$5,076 as at March 30, 2007

If the amount of the total balance of the Fund (including the amount of any guarantees) is at any time less than the total obligation, EMC will not be permitted to make any payment or other distribution to its shareholders until such shortfall has been extinguished.

The environmental liability at and post closure of the mine has been estimated as shown in Table 18-8.

TABLE 18-8 CLOSURE AND POST CLOSURE ENVIRONMENTAL LIABILITIES
First Uranium Corporation – Ezulwini Project

Cost Component	Aspects included in costs	Cost \$ '000s
Mining Infrastructure	Mine waste clean up	2,859
	Dewatering	
	Rehabilitation of shaft area	
	Rehabilitation of slimes dam and rock dumps	
	Rehabilitation of surface and buildings	
Rewatering Costs	Monitoring of water quality & ground stability	1,209
	Rehabilitation of sinkholes	
	Underground infrastructure removal	
	Rewatering management fees	
	Further studies on the rewatering	
After Closure Monitoring		608
Total Rehabilitation Costs		4,676
DME advised inflationary adjustment (as at March 30, 2007)		400
Total Rehabilitation Costs (as at March 30, 2007)		5,076

With the completion of the REL Purchase Agreement, REL transferred approximately \$2.6 million into the Fund on March 2, 2007. The remaining \$2.4 million has been provided for through a Bank Guarantee underwritten by Lombard Insurance Company, the Bank Guarantee incepted on January 1, 2007.

Under the REL Purchase Agreement, Simmers entered into a guarantee with REL on 12 December 2006 whereby Simmers irrevocably and unconditionally guaranteed to REL the performance by EMC of all of its obligations under the REL Purchase Agreement and the related REL Lease Agreement.

TAXES

Company taxes under South African legislation are 29% of profits after consideration of the tax shields of unredeemed capital and assessed losses. Scott Wilson RPA has

included these taxes in the economic analysis. The tax calculation assumptions were provided by Simmers.

A revised Mineral and Petroleum Resources Royalty Bill was recently introduced by the South African government for comment. The Bill provides for a royalty rate of 1.5% on yellowcake and 1.5% on refined gold. The royalties will be tax deductible. The Bill was open for comment until January 31, 2007. South African National Treasury is currently considering submissions made by interested parties. It is anticipated that royalties to the State would not become payable until 2009. The new order mining rights do include a provision for the application of royalties if imposed at some future date by the Government. No government royalties are included in the cash flow.

CAPITAL AND OPERATING COST ESTIMATES

The Project is a major project that will extend over a lengthy period. For the purposes of this report, the first four years were taken together to represent the pre-production period as the production exceeds 1.9 Mtpa after the fourth year. The life of mine (LOM) capital is summarized in Table 18-9.

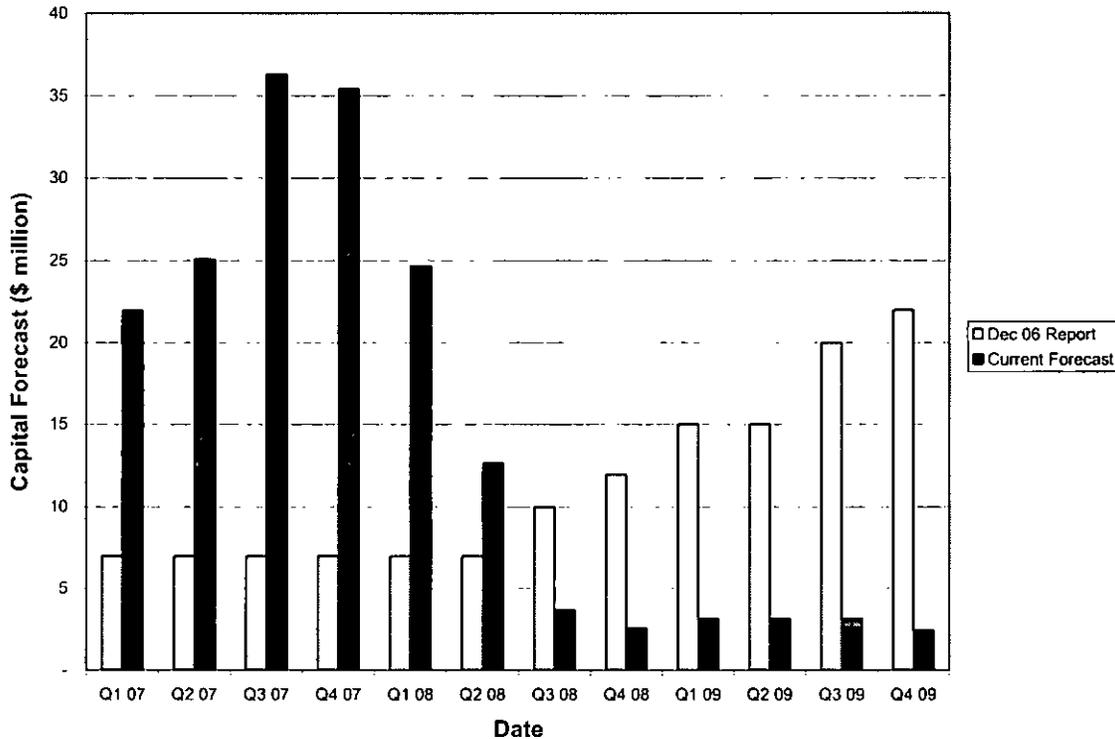

The pre-production capital will be expended over a period of three and one half years. An estimate of the spending by quarters is included below in Figure 18-7. Years are taken as ending in March of each year such that Q4 2006 ends at March 31, 2007. The capital costs are taken from April 1, 2007, and sunk costs are not considered in the analysis. The sunk costs included in the initial technical report total \$31.6 million covering operating costs, capital for the shaft refurbishing, purchase of the infrastructure and repayment of the Simmers debt.

TABLE 18-9 CAPITAL COSTS
First Uranium Corporation - Ezulwini Project

	Life of Mine (\$ million)	Years 1-4 (\$ million)	Year 5 to End (\$ million)
Middle Elsburg	60.6	32.0	28.6
Shaft Pillar	22.5	22.5	0
Upper Elsburg	38.6	0.9	37.7
Water Management	5.1	3.1	2.0
Gold Concentrator	58.7	58.7	0
Uranium Concentrator	51.8	51.8	
First fill reagents	2.3	2.3	
Contingency	31.0	21.3	9.7
Total	270.6	192.6	78.0

The contingency estimate is based upon 5% on the concentrator cost estimates, 5% on the first fills and 20% on the remainder of the estimate. The lower contingency allowance on the concentrators reflects the increased level of engineering supporting the cost estimates and the plan to incorporate a portion of the contingency as an incentive (or penalty) applied to the EPCM contractor's margin.

FIGURE 18-7 PREPRODUCTION CAPITAL BY QUARTER

MINE CAPITAL

The mine capital costs were generated from a listing of the necessary infrastructure upgrades and replacements and mine development from the output of the mine scheduling software that was used for production and development planning. Three metre by three metre level development was included at a cost of \$1,622 per metre. There are capital cost allowances for repairs to the winders, cages, skips, and compressed air plant that total some \$1.65 million and a provision of \$5.34 million for a backfill plant. The \$3.05 million for dewatering covers repairs to pipe columns, electrical lines, the sludge column, and the pump stations. The estimated mine capital related to the shaft pillar has increased by approximately \$ 500,000 as orders are being placed and designs completed. At this stage it is still expected that the amount will not be exceeded. There has been no further engineering work to increase the accuracy of the estimate and therefore the 20% contingency remains unchanged. The cash flow has been adjusted and the late expenditure has been brought forward into the pre-production period.

GOLD CONCENTRATOR CAPITAL

The concentrator capital budget estimate has been completed by MDM and the costs are predominantly based on enquiries issued to the market. MDM considers the cost to be to 5.5% accuracy. The cost estimate for the 200,000 tpm capacity plant is \$58.6 million plus \$0.5 million for first fills. The cost estimate includes EPCM and contractor's margin but no contingency.

Capital costs for the various disciplines were estimated as follows:

Mechanicals

- Supplier quotations for all mechanical equipment ex Johannesburg.

Structural Steel & Plate work

- Supply and fabrication costs are based on steel and platework fabricators' quotations obtained in Johannesburg. Many suitable workshops exist that are capable of producing the fabricated steelwork.
- Tonnages are based on steelwork bill of quantities from preliminary designs and layout drawings.

Electrical

- Costs are based on bills of quantities taken from the layouts and have been priced using vendor quotations from South African suppliers.
- Costs include infrastructure such as HT reticulation lines and power requirements outside the plant fence line.

Piping and Valves

- Costs are based on material takeoffs and valve lists and prices are quoted out of South Africa.

Earthworks and Civils

- Costs are based on bills of quantities taken from layout drawings. Civil rates have been applied to these quantities.
- Costs are based on selected Earthworks and Civil Contractor's Rates with MDM supervision.
- Civil materials will be purchased locally.
- Civil construction tools have been included in the Contractor's Rates.

Transport

- The price is based on all mechanical and electrical equipment, piping, structural steel, piping and valves, and any other equipment being delivered ex works by a transport company.

Construction

- Costs are based on bills of quantities taken from layout drawings, Platework and Steelwork tonnages, Mechanical Lists, Electrical Lists, Pipework and Valve quantities.
- Costs are based on selected Construction Contractor Rates with MDM supervision.
- The Construction Contractor has included all construction tools, cranes and scaffold in the Contractor's Rates.

EPCM

- Prevailing industry rates applied to bills of quantities for the EPCM requirement.

Scott Wilson RPA has applied a 5% contingency to the concentrator capital estimate based upon the detailed level of the estimate and the plan to incorporate a bonus/penalty clause related to the use of contingency and the EPCM contractor's margin.

URANIUM CONCENTRATOR CAPITAL

The uranium concentrator capital budget estimate has been completed by MDM and the costs are predominantly based on enquiries issued to the market. MDM considers the cost to be to 7% accuracy. The cost estimate for the 100,000 tpm capacity plant is \$51.8 million plus \$1.8 million for first fills. The cost estimate includes EPCM and contractor's margin, but no contingency.

Since November 2006, the market has indicated a significant appetite for uranium, which has prompted First Uranium to consider options for increasing the split of production from the Middle Elsburg uranium bearing reef. An option to increase the plant flexibility to accommodate a blend of up to 150 ktpm from the Middle Elsburg and 50 ktpm from the Pillar (instead of 1:1), was included to allow a higher uranium processing rate option if this proved to be more profitable. The additional 50 ktpm

uranium module that would be required has not been added to the capital costs, but the plant infrastructure changes required to facilitate a seamless addition of this module increased the capital costs by \$4.18 million.

Capital costs for the various disciplines were estimated as follows:

Mechanicals

- Supplier quotations for all mechanical equipment ex Johannesburg.

Structural Steel & Plate work

- Supply and fabrication costs are based on steel and platework fabricators' quotations obtained in Johannesburg. Many suitable workshops exist that are capable of producing the fabricated steelwork.
- Tonnages are based on steelwork bill of quantities from preliminary designs and layout drawings.

Electrical

- Costs are based on bills of quantities taken from the layouts and have been priced using vendor quotations from South African suppliers.
- Costs include infrastructure such as HT reticulation lines and power requirements outside the plant fence line.

Piping and Valves

- Costs are based on material takeoffs and valve lists and prices are quoted out of South Africa.

Earthworks and Civils

- Costs are based on bills of quantities taken from layout drawings. Civil rates have been applied to these quantities.
- Costs are based on selected Earthworks and Civil Contractor's Rates with MDM supervision.
- Civil materials will be purchased locally.
- Civil construction tools have been included in the Contractor's Rates.

Transport

- The price is based on all mechanical and electrical equipment, piping, structural steel, piping and valves, and any other equipment being delivered ex works by a transport company.

Construction

- Costs are based on bills of quantities taken from layout drawings, Platework and Steel work tonnages, Mechanical Lists, Electrical Lists, Pipework and Valve quantities.
- Costs are based on selected Construction Contractor Rates with MDM supervision.
- The Construction Contractor has included all construction tools, cranes and scaffold in the Contractor's Rates.

EPCM

- Prevailing industry rates applied to bills of quantities for the EPCM requirement.

Scott Wilson RPA has applied a 5% contingency to the uranium concentrator capital estimate based upon the detailed level of the estimate and the plan to incorporate a bonus/penalty clause related to the use of contingency and the EPCM contractor's margin.

INFRASTRUCTURE CAPITAL

The major infrastructure is in place and in many cases is simply in need of repairs or replacement of components, however, those components will be placed in existing buildings and there is a power supply system in place. In some cases, such as hoist ropes, there are spares on site, but replacement spares will be needed as items are replaced in preparation for production.

SURFACE FACILITIES PURCHASE

The purchase of the surface facilities purchase and the Simmers debt repayment have been completed and are considered part of the sunk costs and are not included in this assessment.

SUSTAINING CAPITAL

The major sustaining capital item is the ongoing capital development of the mine. This development is generated by the mine scheduling program and provides the haulage drives and capital stope development for ongoing production.

A \$12.08 million allowance for infrastructure and concentrator improvements is included in year 11 as the production at that time is forecast to continue at a rate of up to 2.4 Mtpa and many of the facilities will be in need of upgrades and refurbishment. There is a contingency of 20% included in all capital in the plan.

The facilities at Ezulwini appear to be in good condition, but much of the equipment is now 40 years old. Except as noted above, there are no significant sustaining capital allowances for upgrading or replacement of the main mine infrastructure over the Project life.

WORKING CAPITAL

The analysis does not include an estimate of working capital, however, there will be a buildup of gold and uranium within the process plant and, in the case of the uranium, at the refinery. Estimates of the in process inventory and the lag between shipping and payment should be prepared in the next stage of the project evaluation.

OPERATING COSTS

The labour costs, expressed as the cost to the company, from the Buffelsfontein underground mine, a mine in the Simmers group, have been used in the Ezulwini labour cost estimates. Allowances for training and medical examinations and the costs associated with the mine's social and labour plan have also been included.

The mining method is conventional mining and the breakdowns for these costs are well documented and available from operations such as the Buffelsfontein underground gold mine. Table 18-10 shows the makeup of the estimated cost per tonne milled. These

costs are based on the total mine production rate of approximately 200,000 tpm. At significantly lower rates, the unit costs would be expected to be slightly higher.

Plant operating costs were estimated by MDM as part of their plant design work for the gold and uranium plants. The operating costs were estimated to be \$4.32/tonne for the gold plant and \$7.72/tonne for the uranium plant. On a pro-rata basis, the blended treatment plant cost estimate by MDM was \$8.18/tonne compared to \$9.69/tonne in the previous technical report. As the other costs have not been re-examined, the costs were not changed to reflect this favourable difference.

TABLE 18-10 OPERATING COSTS
First Uranium Corporation – Ezulwini Project

Parameter	Shaft Pillar plus Other Areas (\$/t)
Skilled Labour	4.41
Semi Skilled Labour	15.01
HR Development	0.83
Power Costs	1.99
Pumping Costs	2.47
Underground Stores Costs	15.34
Services Stores Costs	1.94
Plant Treatment Costs	9.69
Other Costs	4.29
Overhead & Rehabilitation Provision	0.90
Total Costs	56.87

MANPOWER

The workforce of the Ezulwini Mine (not including processing plants) will grow to about 5,000 employees by year seven. Then there is a decrease as activity shifts in the mine, followed by an increase to about 5,800 employees for the balance of the mine life. Table 18-11 shows the mine manpower levels. Levels are projected to be flat after year 12.

TABLE 18-11 MANPOWER LEVELS

In 1993, the mine employed 1,693 persons on surface and 7,081 underground for a total of 8,774, including 359 persons attributed to the South Deep project (no longer part of this mine).

Simmers has presented a Social and Labour Plan (SLP) as part of their application for the Ezulwini mining rights. The SLP was submitted on the basis of the work planned in the shaft pillar and Middle Elsburg zones. The SLP includes commitments, training, and career progression plans with the objective of having 40% Historically Disadvantaged South Africans (HDSA) in management by 2010. There is a further goal to have 10% women in the mining workforce.

The Ezulwini Mine intends to recruit new employees on the basis of a Living-out Allowance to employees who do not reside in the EMC-sponsored accommodation. It is not the owner's plan to provide on site housing for employees and the mine will discourage the development of unsustainable settlements in the area of the mine.

The objective of the above-stated scheme is to encourage and give the employees who do not want to reside in the company accommodation the option to reside where and with whom they wish, near their place of work, and to act as a housing subsidy for both home-ownership and rental options.

An annual amount of 3.5% of the wage bill will be committed to human resources development initiatives at the Ezulwini Mine. The activities that will be included:

- Technical training;
- Accelerated development of HDSA employees;
- Succession and career path training;
- Organizational development and transformation training;
- Diversity training;
- Mentor training; and,
- ABET (Adult Basic Education and Training).

PROJECT SCHEDULE

The shaft pillar resource estimate has now been completed and shaft refurbishing is underway to provide security of shaft access. Mine dewatering continues. Workings will be reopened and rehabilitated to assess conditions throughout the mine and to permit sampling-to-confirm-resource estimates and access for diamond drilling.

Mining will commence with shaft pillar extraction to generate mill feed and enhance mine stability. Ore will be produced from the Upper Elsburg area starting in October 2007, while ore production from the Middle Elsburg will commence in April 2008.

Design of the gold and uranium plants is underway and MDM estimates that the first portion of the gold plant will commence operations in April 2008, with completion of the first grinding mill. The balance of the gold plant will be completed in the second half of 2008. The first module of the uranium plant will be ready in August 2008 and the second module will be complete in December 2008.

The project milestones are shown in Figure 18-8.

ECONOMIC ANALYSIS

An after-tax Cash Flow Projection has been generated from the Life of Mine production schedule and capital and operating cost estimates, and is summarized in Table 18-12. A summary of the key criteria is provided below.

ECONOMIC CRITERIA

REVENUE

- Up to 200,000 tpm mining from underground.
- Mill recovery of gold of 95.5% and recovery of U₃O₈ of 80%, based upon previous operating history.
- Gold payment is based upon 100% payment less a refining charge of \$120,000 per year plus \$0.50 per ounce.
- Exchange rate US\$1.00 = R7.40.
- Metal price: US\$500 per ounce gold and \$50 per pound U₃O₈.
- Revenue is recognized at the time of production.

COSTS

- Pre-production period is about 12 months, but full production is attained in the fourth year.
- Mine life: 18 years.
- Life of Mine production plan as summarized in Figure 18-5 and Table 18-5.
- Mine life capital totals \$271 million, including a contingency, on all aspects excluding the plants
- Average operating cost over the mine life is \$56.87 per tonne milled.

CASH FLOW ANALYSIS

Considering the Project on a stand-alone basis, the undiscounted after-tax cash flow totals \$818 million over the mine life, and simple payback occurs after approximately 4.4 years.

The IRR is 32% and the NPV at discounts rates of 5%, 8%, and 10% is \$462, \$332, and \$267 million, respectively.

The Total Cash Cost is US\$234 per ounce of gold, including a credit of \$153 per ounce for U₃O₈ revenue. The mine life capital and royalty unit cost is US\$52 per ounce,

for a Total Production Cost of US\$286 per ounce of gold. Average annual gold production during operation is 290,000 ounces per year and the average U₃O₈ production is 888,000 pounds per year.

On a co-product basis, with the capital and operating costs apportioned to the metal production based on the revenue, the operating cost is \$297 per ounce of gold plus the capital cost of \$40 per ounce for a total cost of \$337 per ounce of gold. The U₃O₈ operating cost is \$29.70 per pound plus the capital cost of \$4.00 per pound for a total cost of \$33.70 per pound of U₃O₈.

The economic analysis contained in this report is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserve development, production, and economic forecasts on which this preliminary assessment is based will be realized.

SENSITIVITY ANALYSIS

Project risks can be identified in both economic and non-economic terms. Key economic risks were examined by running cash flow sensitivities:

- Metal prices, metallurgical recovery, and head grade (gold and uranium)
- Exchange rate
- Operating costs (Total Cash Cost)
- Pre-production capital costs

IRR sensitivity over the base case has been calculated for -20% to +20% variations, except for uranium price where a $\pm 37.5\%$ range was used. The revenue for each metal is proportional to the product of price times head grade times metallurgical recovery. Therefore, the sensitivity is shown as a single item where the change in the variable is the sum of the changes to the price, metallurgical recovery, and head grade. The sensitivities are shown in Table 18-13 and Figure 18-9.

FIGURE 18-9 SENSITIVITY ANALYSIS

Note: The above graph and tables depict (100%) of the Ezulwini Project. First Uranium owns (indirectly) 90% of EMC.

19 INTERPRETATION AND CONCLUSIONS

Based on the Ezulwini site visit and review of the available data, Scott Wilson RPA offers the following interpretation and conclusions.

- The mineral resources, as presented, are estimated consistent with CIM guidelines.
- Mineral resources that are not mineral reserves do not have demonstrated economic viability.
- There is good potential to upgrade the inferred mineral resources to measured and indicated resources with underground development.
- There is good exploration potential in lateral reef extensions and at depth in reefs that have not yet been exploited.
- Based upon the planning work to date and the assumptions in this initial economic assessment, the Ezulwini mine has the potential to be reopened and to become a producing gold and uranium operation.
- Considering the Project on a stand-alone basis and based upon capital costs of \$271 million, operating costs of \$56.87 per tonne and metal prices of \$500/oz for gold and \$50/lb for uranium concentrates, the Project has an IRR of 32% and an NPV at 8% of \$332 million. The Project would generate some 5.2 million ounces of gold and 16 million pounds of uranium (U_3O_8) in concentrates over an 18 year period.
- The Total Cash Cost is \$234 per ounce of gold including a credit of \$153 per ounce for U_3O_8 revenue. The mine life capital and royalty unit cost is \$52 per ounce, for a Total Production Cost of \$286 per ounce of gold. Average annual gold production during operations is 290,000 ounces per year and the average U_3O_8 production is 888,000 pounds per year.
- The Project economics are most sensitive to gold price, head grade, and metallurgical recovery, followed by exchange rates, operating costs, uranium price and capital costs.
- The planned production includes material from the measured and indicated resources, as well as inferred resources. There is no assurance that inferred resources will be upgraded to become measured and indicated resources or mineral reserves. The initial economic assessment only utilizes approximately

14% of the inferred mineral resource so there is potential for further production beyond that used in this assessment.

- The mine is located in a major historic gold and uranium production area and has a history of past gold and uranium production. The mine is located immediately adjacent to the South Deep Mine and the mines in this area have tremendous lateral extent along the reefs.
- There is the potential to expand the mine output through the potential utilization of the underutilized shafts in adjacent mines. There are also underutilized concentrators in the vicinity of the Ezulwini Mine.
- An increase in the uranium price could make it more economically feasible to increase production from the Middle Elsburg, decrease production from the Upper Elsburg, and increase the throughput of the uranium plant.
- Further improvements to the Project economics may be realized through the sale of mine water to a local utility and the resultant reduction in mine pumping costs.

20 RECOMMENDATIONS

Scott Wilson RPA recommends that mine dewatering and shaft refurbishing continue and that planning for the development of the Ezulwini Mine be advanced. The refinement of estimates to prefeasibility study level and the upgrading of inferred resources are recommended so that a production decision can be made. Further, Scott Wilson RPA recommends that First Uranium undertake an exploration program with the objective of upgrading additional resources beyond the planned project to evaluate the potential for further expansion.

The following items are recommended for consideration as part of a prefeasibility study of the Project.

- Review and update, if necessary, the mine production schedule based upon the revised resource estimates in the shaft pillar area.
- As soon as practically possible, rehabilitate the Upper Elsburg section of the Ezulwini Mine to facilitate further exploration and the conversion of inferred resources to measured and/or indicated mineral resources.
- As soon as practically possible, rehabilitate the Middle Elsburg section of the Ezulwini Mine to facilitate further verification of the database in that area.
- Reconcile historic gold and uranium production to that predicted by diamond drilling and channel sampling.
- Continue the plant design process for the gold and uranium processing plants.
- Carry out more detailed work and explanation of the planned uranium recovery rate either through metallurgical testing or more detailed review of past production records.
- Include further plant details including general arrangements.
- Prepare separate production schedules, with the measured plus indicated resources carried in a separate schedule, and a further economic analysis with the inferred resources added as well.
- Provide additional capital detail for the mine and site infrastructure.

- Re-examine the Project schedule and provide more detail to ensure that critical items are not missed.
- Carry out further work on the sales of uranium concentrate to remain assured that a market is available in South Africa or to determine where concentrates may have to be shipped.
- Provide a clear trail of the changes and factors from the resource estimate through to the Life of Mine plan for all areas including a discussion of the unpay factors and/or pillars that will be required at depth.
- Review the rock mechanics and seismic risk factors associated with the Middle Elsburg deposit to ensure that the mine plan is consistent with the rock mechanics design criteria.
- Review the mine production schedule with regard to the mine production profile to reduce dips in the output over time.
- Ensure that a detailed assessment of the planned production areas has been undertaken to provide evidence to support the assumption that future mine production will be similar to past production.
- Pursue the possible sale of water to a local utility to reduce the mine operating costs.
- Determine the uranium price at which it is more profitable to achieve higher production from the Middle Elsburg Reef, decrease production from the Upper Elsburg, and operate the uranium plant at 200,000 tpm.

The cost of this recommended work is included in the cost estimates within the Preliminary Assessment in this report.

For further exploration beyond the current planned mining area, Scott Wilson RPA recommends:

- Phase 1 of the program includes diamond drilling approximately 30,000 m in 18 holes from surface and approximately 7,200 m from underground. The underground diamond drilling would be collared in rehabilitated headings in the Upper Elsburg workings. The Phase 1 program would drill the target on approximately 400 m by 400 m spacing.
- Contingent on success of the Phase 1 program, the Phase 2 program will comprise approximately 75,000 m of diamond drilling in 42 holes from

surface and approximately 16,800 m in 42 holes drilled from underground. Phase 2 would drill the target on approximately 200 m by 200 m spacing, which, considering the generally strong continuity in the Witwatersrand reefs, would likely be sufficient to upgrade a portion of the target to indicated resources.

- Concurrent with the Phase 2 diamond drilling, prefeasibility level studies will be carried out to examine the optimum systems of access, mining, mineral processing, and mineral economics.

The estimated cost of the work program to complete these recommendations is summarized in Table 20-1. The cost of these items is not included in the capital estimates incorporated in the Ezulwini preliminary assessment work.

TABLE 20-1 EXPLORATION PROGRAM - MIDDLE ELSBURG
First Uranium Corporation - Ezulwini Project

Item	Units	Cost/Unit (\$)	Total Cost (\$ 000s)
Phase 1			
Underground Rehabilitation	Lump Sum		1,000
Underground Diamond Drilling	7,200 m	150	1,080
Surface Drilling	30,000 m	150	4,500
Supervision/Technical Support	Lump Sum		300
Assays	16,000	30	480
Sub-Total Phase 1			7,360
Phase 2			
Underground Diamond Drilling	16,800 m	150	2,520
Surface Drilling	75,000 m	150	11,250
Supervision/Technical Support	Lump Sum		300
Assays	35,000	30	1,050
Prefeasibility Study	Lump Sum		300
Sub-Total Phase 2			15,420
Total Phase 1 & 2			22,780

23 CERTIFICATE OF QUALIFICATIONS

WAYNE W. VALLIANT

I, Wayne W. Valliant, P.Geo., as an author of this report entitled "Technical Report Preliminary Assessment of The Ezulwini Project, Gauteng Province, Republic of South Africa", prepared for First Uranium Corporation, originally submitted on November 8, 2006 and revised on December 5, 2006, and subsequently revised on May 9, 2007, do hereby certify that:

1. I am an Associate Geologist with Scott Wilson Roscoe Postle Associates Inc. of Suite 501, 55 University Ave Toronto, ON, M5J 2H7.
2. I am a graduate of Carleton University, Ottawa, Ontario, Canada in 1973 with a Bachelor of Science degree in Geology.
3. I am registered as a Professional Geologist with the Association of Professional Geoscientists of Ontario (Reg.# 1175). I have worked as a geologist for a total of 33 years since my graduation. My relevant experience for the purpose of the Technical Report is:
 - Review and report as a consultant on more than thirty mining operations and projects around the world for due diligence and resource/reserve estimation
 - General Manager of Technical Services for corporation with gold mining operations and mine development projects in Canada and Latin America
 - Superintendent of Technical Services at three mines in Canada and Mexico
 - Chief Geologist at three Canadian mines, including two gold mines
4. I have read the definition of "qualified person" set out in National Instrument 43-101 ("NI43-101") and certify that by reason of my education, affiliation with a professional association (as defined in NI43-101) and past relevant work experience, I fulfill the requirements to be a "qualified person" for the purposes of NI43-101.
5. I visited the Ezulwini Project on August 22-25, 2006 and on February 20-21, 2007.
6. I am responsible for Items 7 to 15 and 17 and contributed to Items 1, 2, 19, and 20 of the Technical Report.
7. I am independent of the Issuer applying the test set out in Section 1.4 of National Instrument 43-101.
8. I have had no prior involvement with the property that is the subject of the Technical Report.

9. I have read National Instrument 43-101, and the Technical Report has been prepared in compliance with National Instrument 43-101 and Form 43-101F1.
10. To the best of my knowledge, information, and belief, the Technical Report contains all scientific and technical information that is required to be disclosed to make the technical report not misleading.

Dated this 9th day of May, 2007

R. DENNIS BERGEN

I, Raymond Dennis Bergen, P.Eng., as an author of this report entitled "Technical Report Preliminary Assessment of The Ezulwini Project, Gauteng Province, Republic of South Africa", prepared for First Uranium Corporation, originally submitted on November 8, 2006 and revised on December 5, 2006, and subsequently revised on May 9, 2007, do hereby certify that:

1. I am an Associate Engineer engaged by Scott Wilson Roscoe Postle Associates Inc. of Suite 501, 55 University Ave Toronto, ON, M5J 2H7.
2. I am a graduate of the University of British Columbia, Vancouver, B.C., Canada in 1979 with a Bachelor of Applied Science degree in Mineral Engineering. I am a graduate of the British Columbia Institute Technology in Burnaby, B.C. Canada in 1972 with a Diploma in Mining Technology.
3. I am registered as a Professional Engineer in the Province of British Columbia (Reg.# 16064) and as a Licensee with the Association of professional Engineers, Geologists and Geophysicists of the Northwest Territories (License L1660). I have worked as an engineer for a total of 26 years since my graduation. My relevant experience for the purpose of the Technical Report is:
 - Practice as a mining engineer, production superintendent, mine manager, Vice President of Operations and a consultant in the design, operation and review of mining operations.
 - Review and report, as an employee and as a consultant, on numerous mining operations and projects around the world for due diligence and operational review related to project acquisition and technical report preparation, including:
 - Engineering and operating superintendent at the Con gold mine, a deep underground gold mine, Yellowknife, NWT, Canada
 - Contribute to the Independent Report on the Reopening of the Cantung Mine at Tungsten, NWT, Canada
 - General Manager in Charge of the Reopening of the Cantung Mine, NWT, Canada
 - Detailed diligence review of the ERG Tailings Recovery Project, Ontario, Canada
 - VP Operations in charge of the restart of the Golden Bear Mine, BC, Canada
 - Mining engineer in underground gold and base metal mines.
 - Consulting engineer working on project acquisition and project design.
 - Mine Manager at three different mines with open pit and underground operations
 - Vice President of Operations responsible for an operating gold mine, development of a feasibility study for a project in Costa Rica and project review and evaluation related to project acquisition for numerous projects around the world including the successful acquisition of mines in Mexico and Australia and an interest in a mine in Argentina.

4. I have read the definition of "qualified person" set out in National Instrument 43-101 ("NI43-101") and certify that by reason of my education, affiliation with a professional association (as defined in NI43-101) and past relevant work experience, I fulfill the requirements to be a "qualified person" for the purposes of NI43-101.
5. I visited the Ezulwini Project on August 22-25, 2006.
6. I am responsible for Items 3 to 6, 16, and 18 and contributed to Items 1, 2, 19, and 20 of the Technical Report.
7. I am independent of the Issuer applying the test set out in Section 1.4 of National Instrument 43-101.
8. I have had no prior involvement with the property that is the subject of the Technical Report.
9. I have read National Instrument 43-101, and the Technical Report has been prepared in compliance with National Instrument 43-101 and Form 43-101F1.
10. To the best of my knowledge, information, and belief, the Technical Report contains all scientific and technical information that is required to be disclosed to make the technical report not misleading.

AGREEMENT

1. PARTIES

1.1 The parties to this agreement are -

1.1.1 Fraser Alexander (Proprietary) Limited through its division Fraser Alexander Tailings;

1.1.2 Nedbank Limited;

1.1.3 Industrial Development Corporation of South Africa Limited;

1.1.4 RHA Plaistowe;

1.1.5 KD Bouch;

1.1.6 First Uranium (Proprietary) Limited or its nominee; and

1.1.7 First Uranium Corporation.

1.2 The parties agree as set out below.

2. INTERPRETATION

2.1 In this agreement, unless clearly inconsistent with or otherwise indicated by the context -

Handwritten signatures and initials:
AB
RM
K
HAR

- 2.1.1 "the/this agreement" means the agreement set out in this document between the purchaser and the sellers together with any appendices hereto;
- 2.1.2 "the accounts" means the consolidated audited financial statements to be prepared by the sellers in terms of 10 below;
- 2.1.3 "the Act" means the Companies Act No 61 of 1973 as amended;
- 2.1.4 "Bouch" means Mr K D Bouch, an adult male with Identification Number 640207 5101 081;
- 2.1.5 "the business" means the mine tailings re-treatment business undertaken by Chemwes at Stilfontein;
- 2.1.6 "business day" means any day other than a Saturday, Sunday or official public holiday in the Republic of South Africa;
- 2.1.7 "Chemwes" means Chemwes (Proprietary) Limited (Registration Number 1964/02378/06), a company duly registered according to the company laws of the Republic of South Africa;
- 2.1.8 "the claims" means all claims of whatsoever nature and howsoever arising which the sellers may have against the company and/or Chemwes as at and on the effective date (excluding any amounts owing to Fralex or any of its group companies in respect of administrative services rendered to the Company and/or Chemwes and salaries and wages paid on behalf of the company and/or Chemwes in a maximum aggregate amount of R2 000 000,00 (two million Rand) and any amounts owing to Nedbank in respect of normal banking activities between the company, Chemwes and Nedbank);
- 2.1.9 "the closing date" means the 3rd (third) business day after the last of the conditions has been fulfilled;

MDJ
DAB

MDJ
K
DAB
1

- 2.1.10 "the closing date accounts" means the consolidated unaudited financial statements to be prepared by the sellers in terms of 10 below for the period from 1 March 2007 to the last day of the month prior to the closing date;
- 2.1.11 "the conditions" means the conditions precedent detailed in 4 below;
- 2.1.12 "the company" means Mine Waste Solutions (Proprietary) Limited, (Registration Number 2000/001443/07), a company duly registered according to the company laws of the Republic of South Africa;
- 2.1.13 "the effective date" means 1 April 2007;
- 2.1.14 "FIU" means First Uranium Corporation, a public company continued pursuant to the laws of British Columbia, Canada and whose shares trade on the TSX and JSE of which the purchaser is indirectly a wholly owned subsidiary;
- 2.1.15 "FIU shares" means common shares in the authorised capital of FIU which shares will be listed on the TSX and the JSE;
- 2.1.16 "Fralex" means Fraser Alexander (Proprietary) Limited (Registration Number 2005/028043/07), a company duly registered according to the company laws of the Republic of South Africa, through its Fraser Alexander Tailings Division;
- 2.1.17 "the government" means the Government of the Republic of South Africa;
- 2.1.18 "IDC" means The Industrial Development Corporation of South Africa Limited (Registration Number 1905/014201/06), a company duly registered according to the company laws of the Republic of South Africa;
- 2.1.19 "the JSE" means JSE Limited (Registration Number 2005/022939/06), a company duly registered according to the company laws of the Republic of

South Africa and licensed as an exchange under the Securities Services Act 2004 (Act 36 of 2004);

- 2.1.20 "mining license" means mining license No ML16/2003 granted by the Department of Minerals and Energy Affairs to the company on 8 April 2003 to mine for gold in respect of tailings, a copy of which is attached as Appendix 2.1.20;
- 2.1.21 "Nedbank" means Nedbank Limited (Registration Number 1951/000009/06), a company duly registered according to the company laws of the Republic of South Africa and registered as a bank;
- 2.1.22 "the parties" means the sellers and the purchaser collectively, and "party" shall be either of them as the context requires;
- 2.1.23 "Plaistowe" means Mr R H A Plaistowe, an adult male with Identification Number 500106 5009 105;
- 2.1.24 "the prime rate" means the nominal annual compounded monthly rate of interest from time to time, publicly quoted as such by Standard Bank of South Africa Limited and certified by any manager of that bank, whose appointment as such, it shall not be necessary to prove;
- 2.1.25 "the purchaser" means First Uranium (Proprietary) Limited (Registration Number 2005/033680/07), a company duly registered according to the company laws of the Republic of South Africa or its nominee;
- 2.1.26 "the purchaser's auditors" means PriceWaterhouseCoopers CA (SA);
- 2.1.27 "the sellers" means Fralex, Nedbank, IDC, Bouch and Plaistowe or any of them as the context may indicate;

MPA
AB
MPA
G
K
1

- 2.1.28 "the shares" means 371 429 (three hundred and seventy one thousand four hundred and twenty nine) shares of 0,1 Cent (one tenth of a Cent) each in the share capital of the company held by the sellers constituting the entire issued share capital of the company;
- 2.1.29 "signature date" means the date of last signature of this agreement;
- 2.1.30 "SRP" means the Securities Regulation Panel;
- 2.1.31 "the Tax Act" means the Income Tax Act No 58 of 1962 (as amended);
- 2.1.32 "the transaction" means the proposed purchase of the shares and claims by the purchaser from the sellers as envisaged in this agreement;
- 2.1.33 "TSX" means the Toronto Stock Exchange;
- 2.1.34 any reference to the singular includes the plural and vice versa;
- 2.1.35 any reference to natural persons includes legal persons and vice versa;
- 2.1.36 any reference to a gender includes the other genders;
- 2.2 The terms "holding company" and "subsidiary" shall bear the meaning assigned to them in the Companies Act 63 of 1973 (as amended).
- 2.3 Should any provision in a definition be a substantive provision conferring rights or imposing obligations on any party, then effect shall be given to that provision as if it were a substantive provision in the body of this agreement.

MMG
AB
11/12

- 2.4 Any reference to an enactment, regulation, rule or by-law is that enactment, regulation, rule or by-law as at the signature date, and as amended or replaced from time to time.
- 2.5 Where any number of days is prescribed, such number shall exclude the first and include the last day, unless the last day falls on a Saturday, Sunday or public holiday in the Republic of South Africa, in which case the last day shall be the next succeeding day which is not a Saturday, Sunday or public holiday.
- 2.6 The use of the word "including" followed by a specific example/s shall not be construed as limiting the meaning of the general wording succeeding it and the *eiusdem generis* rule shall not be applied in the interpretation of such general wording or such specific example/s.
- 2.7 The expiration or termination of this agreement shall not affect those provisions of this agreement which expressly provide that they will operate after any such expiration or termination or which of necessity must continue to have effect after such expiration or termination, notwithstanding the fact that the clauses themselves do not expressly provide this.
- 2.8 In its interpretation, the *contra proferentem* rule of construction shall not apply (this agreement being the product of negotiations between the parties) nor shall this agreement be construed in favour of or against any party by reason of the extent to which any party or its professional advisors participated in the preparation of this agreement.
- 2.9 Records shall be binding on the parties and are not merely for information purposes.
- 2.10 The clause headings in this agreement have been inserted for convenience only and shall not be taken into account in its interpretation.

Handwritten signatures and initials at the bottom right of the page, including the letters "AB" and a large scribble.

- 2.11 Words and expressions defined in any sub-clause shall, for the purposes of the clause of which that sub-clause forms part, bear the meaning assigned to such words and expressions in that sub-clause.
- 2.12 All amounts payable in terms of this agreement are exclusive of VAT unless otherwise indicated.
- 2.13 This agreement shall be governed by and construed and interpreted in accordance with the laws of the Republic of South Africa.

3. **INTRODUCTION**

- 3.1 The sellers are the beneficial owners of the shares and the claims and are entitled to dispose of same.
- 3.2 The parties entered into a binding heads of agreement (as amended) on 2 April 2007 pursuant to which the sellers agreed to sell the shares and claims to the purchaser.
- 3.3 In terms of clause 22 of the binding heads of agreement the parties are required to sign a formal agreement pertaining to the sale recorded in the heads of agreement.
- 3.4 The parties wish to enter into this agreement on the terms and conditions set out herein.

4. **CONDITIONS PRECEDENT**

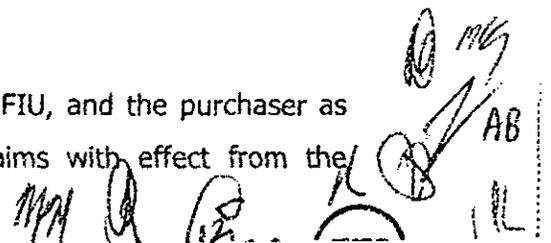

- 4.1 This entire agreement (save in respect of this clause 4 and clauses 25, 29, 30, 31 and 34, which shall be of immediate force and effect) is subject to the fulfilment of the following conditions :

Handwritten signatures and initials:
NAM, G, 100, L, AB, III

- 4.1.1 the approval of the transaction set out in this agreement by the competition authorities of the Republic of South Africa;
- 4.1.2 the approval of the transaction set out in this agreement by the Minister of Minerals and Energy in accordance with section 11 of the Minerals and Petroleum Resources Development Act 28 of 2002 (as amended).
- 4.1.3 the approval, if required, of the transaction set out in this agreement by the Exchange Control Department of the South African Reserve Bank;
- 4.1.4 the necessary approvals of the TSX, SRP and the JSE, to the extent required;
- 4.2 The conditions have been inserted for the benefit of the purchaser and the sellers, and may, where possible, be waived by written agreement between the parties prior to the date for fulfilment of the condition precedent concerned. The conditions are required to be fulfilled by 31 July 2007 or such later date as may be agreed between the parties which shall not be later than 31 August 2007.
- 4.3 The parties acknowledge that the condition referred to 4.1.3 is subject to the provisions of clause 7.3.1.
- 4.4 The parties shall use their reasonable commercial endeavours to procure the fulfilment of the conditions as soon as reasonably possible after the signature date. If the conditions are not fulfilled or waived by the dates stipulated in 4.2 or such later date as may be agreed to in writing between the parties, then (save for this clause 4 and clauses 25, 29, 30, 31 and 34 which shall remain of full force and effect) this agreement shall lapse and be of no further force or effect.

5. **PURCHASE OF THE SHARES AND THE CLAIMS**

The sellers hereby sell to the purchaser as nominee of FIU, and the purchaser as nominee of FIU hereby purchases the shares and claims with effect from the

Handwritten signatures and initials, including 'AB' and 'ML', are present at the bottom right of the page.

effective date. The sale of the shares and claims constitutes an indivisible sale of the shares and the claims.

6. **PURCHASE PRICE**

6.1 The purchase price payable by the purchaser, as a nominee of FIU, to the sellers for the shares and the claims shall be an amount equal to R200 000 000.00 (two hundred million Rand).

6.2 The purchase price shall be allocated as to -

6.2.1 an amount equal to the face value of the claims to the claims; and

6.2.2 the balance to the shares.

7. **PAYMENT OF THE PURCHASE PRICE**

7.1 The purchase price will, subject to 7.2, be settled on the closing date by the delivery to the sellers, each in the proportion of their shareholding in the company, of 3 093 980 (three million ninety three thousand nine hundred and eighty) FIU shares.

7.2 It is recorded that -

7.2.1 the purchaser's ultimate holding company, FIU, is listed on the TSX and that a secondary listing of FIU has occurred on the JSE Limited ("the JSE");

7.2.2 the issue of FIU shares in settlement of the purchase price to certain of or all of the sellers may be subject to the approval of the Exchange Control Department of the South African Reserve Bank for the sellers concerned to hold FIU shares either on the JSE or the TSX;

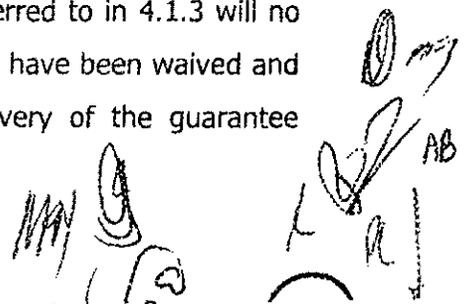

Handwritten signatures and initials:
MAG 10
KOB
AB
JRL

7.2.3 the policy of the Reserve Bank in relation to an inwardly listed company in the nature of FIU is that institutions and individuals may in certain circumstances be issued shares in such inwardly listed company without obtaining the approval of the Reserve Bank but private companies will need to obtain Reserve Bank approval to hold such shares;

7.2.4 arising out of 7.2.3, it may be necessary to obtain Reserve Bank approval for some or all of the sellers to hold FIU shares and some but not all may be granted such approval.

7.3 The parties hereby agree, taking into account the provisions of 7.2, that -

7.3.1 the purchaser shall, to the extent required, use reasonable endeavours to procure the approval of the Exchange Control Department of the South African Reserve Bank for those sellers who require approval to hold FIU shares listed on the JSE, failing which for the sellers to hold FIU shares listed on the TSX by the closing date. The sellers shall, on written request by the purchaser, furnish all such information and sign all such documents and perform all such acts as are reasonably and commercially necessary in order to obtain the approval of the Exchange Control Department of the South African Reserve Bank as contemplated above for any of those sellers concerned. If by 31 August 2007 the approval of the Exchange Control Department of the South African Reserve Bank has not been obtained for those of the sellers who require Reserve Bank approval to hold FIU shares listed on the JSE, and the approval of the Exchange Control Department of the South African Reserve Bank has not been obtained for those of the sellers who require Reserve Bank approval to hold FIU shares listed on the TSX and provided that all of the remaining conditions have been fulfilled then, in such instance, the fulfilment of the condition precedent referred to in 4.1.3 will no longer be necessary and will accordingly be deemed to have been waived and the purchase price shall in such event, against delivery of the guarantee contemplated in 13.5, be paid as follows :

Handwritten initials and signatures at the bottom right of the page, including 'MA', 'G', 'L', 'R', and 'AB'.

- 7.3.1.1 to those of the sellers who do not require Reserve Bank approval and to those of the sellers who require and have obtained the requisite approval ("the approved sellers"), the purchaser will issue to each of the approved sellers concerned, that number of FIU shares to which the approved seller is entitled in terms of clause 7.1; and
- 7.3.1.2 to all of the other sellers other than the approved sellers, their pro rata portion of the purchase price, in cash by electronic funds transfer;
- 7.3.2 if the purchase price is payable by the purchaser to the sellers in cash then such purchase price shall bear interest at the prime rate calculated from the effective date to the date of payment.

8. **CESSION OF CLAIMS**

The sellers hereby cede with effect from the closing date and against payment of the purchase price, the claims to the purchaser, which cession the purchaser accepts.

9. **CLOSING**

On the closing date and against delivery to the Sellers of FIU shares or cash, as the case may be, in accordance with the provisions of 7, the sellers shall deliver to the purchaser:

- 9.1 certificates in respect of the shares together with currently dated transfer forms relating thereto, duly signed by the sellers and in blank as to the transferee;
- 9.2 a written cession of the claims in favour of the purchaser;
- 9.3 the written resignations of all the directors, the secretary and the public officer of the company and Chemwes and the resignation of the trustees of any

[Handwritten signatures and initials]
AB
AG
PL
A. N. B.

environmental rehabilitation trust which has been established by the company and/or the Chemwes;

9.4 the written undertaking of the auditors of the company to resign if so required;

9.5 a certified copy of a resolution of the directors of the company:

9.5.1 approving the transfer of the shares to the purchaser;

9.5.2 noting the cession of the claims;

9.5.3 accepting the resignations of the existing directors, secretary and public officer of the company; and

9.6 all books, documents and records of the company which are in possession of the Sellers.

10. **THE ACCOUNTS AND CLOSING DATE ACCOUNTS**

10.1 The sellers -

10.1.1 have delivered to the purchaser a signed audited set of the accounts for the financial periods-

10.1.1.1 1 March 2004 to 28 February 2005 being the accounts of the company for its financial year ended 28 February 2005;

10.1.1.2 1 March 2005 to 28 February 2006 being the accounts of the company for its financial year ended 28 February 2006;

Handwritten signatures and initials:
MPH
AB
191

- 10.1.2 shall procure that a signed audited set of accounts for the financial period 1 March 2006 to 28 February 2007 being the accounts of the company for its financial year ended 28 February 2007 are prepared and delivered to the purchaser by no later than 31 May 2007;
- 10.1.3 subject to clause 10.2 shall procure that the closing date accounts are prepared and delivered to the purchaser within 14 (fourteen) days of the closing date.
- 10.2 The purchaser shall procure that, after the closing date, the sellers shall be given access to the personnel, offices and books of account and records of the company in order to enable them to comply with clause 10.1.3.

11. **WARRANTIES**

- 11.1 The sellers severally, each in proportion to his/its shareholding in the company, give to the purchaser and FIU the warranties set out in Appendix 11.1 hereto ("the warranties") in respect of the company and Chemwes.
- 11.2 The purchaser and FIU are entering into this agreement relying upon the warranties.
- 11.3 Unless otherwise stated or otherwise required by the context the warranties shall apply as at the signature date, the effective date and the closing date and during the period between those dates.
- 11.4 The sellers' exposure for a breach of any warranty (excluding the indemnity for un-provided tax in terms of 13.4, for which the sellers shall be liable without limitation) will be limited to an aggregate amount of R20 000 000,00 (twenty million Rand).

[Handwritten signatures and initials]
AB
PL

- 11.5 Notwithstanding anything to the contrary contained in this agreement, there shall be no limitation on the liability of a seller in respect of a breach of any warranty arising out of the gross negligence and/or fraud on the part of that seller.
- 11.6 The purchaser and FIU shall have no claim against the sellers in respect of any specific warranty contained in Appendix 11.1 if the claim is less than R1 000 000,00 (one million Rand), provided that the purchaser and FIU shall only be able to institute a warranty claim against the sellers where the aggregate of the first two warranty claims equals or exceeds R2 000 000,00 (two million Rand), whereafter the sellers will be liable to the purchaser for the full Rand amount in respect of each subsequent claim in excess of R1 000 000,00 (one million Rand).
- 11.7 The warranty period in respect of tax matters will be the later of twelve months from the closing date or the period from the closing date to the date upon which the last of the final tax assessments for the financial years from 28 February 2005 up to 28 February 2007 are received by the company. All other warranties will expire twelve months from the closing date.
- 11.8 The purchaser and FIU shall have no claim against the sellers for a breach of any warranty if and to the extent that the facts and/or circumstances giving rise to such breach have been disclosed in writing and delivered to the purchaser, by -
- 11.8.1 hand to Mr John Berry or any of the purchaser's authorised representatives who conducted the due diligence investigation which was completed prior to the signature date and such person/s have acknowledged receipt in writing of such documentation; or
- 11.8.2 telefaxed to the purchaser marked for the attention of Mr John Berry at fax number (011) 837-3840, provided that the telefax shall only be deemed to have been received by the purchaser 1 (one) business day after the date of despatch thereof; or

Handwritten signatures and initials, including "AB" and "19", are present at the bottom right of the page.

11.8.3 transmitted by electronic mail against written acknowledgement of receipt to Mr John Berry at john@simmers.co.za and where receipt of such mail has been acknowledged by Mr John Berry in writing prior to the signature date of this agreement.

11.9 The written due diligence reports furnished to the purchaser by its advisors in respect of the earlier due diligence investigation undertaken by the purchaser, shall, notwithstanding that such written reports shall not have been delivered in the manner provided for in 11.8.1, 11.8.2 or 11.8.3 constitute written disclosure by the sellers to the purchaser of the information therein contained for purposes of this clause 11.

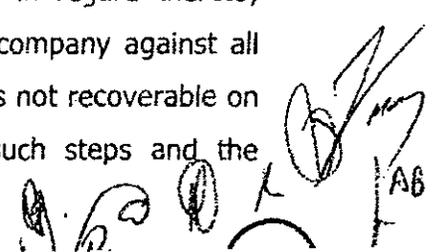

11.10 FIU hereby grants to the sellers such warranties, representations and indemnities in respect of the business and affairs of FIU as detailed in Appendix 11.10 hereto.

12. **INDEMNITIES**

12.1 The sellers severally, each in proportion to his/its shareholding in the company, indemnify the purchaser against all loss, liability, damage or expense which the purchaser may suffer as a result of a breach of any warranty in Appendix 11.1.

12.2 The purchaser shall notify the sellers of any claim which may be made against the company in respect of any of the matters for which the sellers are liable in terms of clause 12.1 within a reasonable time of the purchaser becoming aware thereof, to enable the sellers to take steps to contest such claim.

12.3 The sellers shall be entitled to contest the claim concerned in the name of the company and shall be entitled to control the proceedings in regard thereto; provided that the sellers indemnify the purchaser and the company against all costs (including attorney and client costs and any other costs not recoverable on taxation) which may be incurred as a consequence of such steps and the

Handwritten signatures and initials, including the letters 'AB', are present at the bottom right of the page.

purchaser shall be entitled to require the sellers to give reasonable security against such costs.

12.4 The purchaser shall procure that the company renders reasonable assistance to the sellers (at the reasonable expense of the sellers) in regard to the steps taken by the sellers.

13. **TAX**

13.1 It is recorded that:-

13.1.1 the tax liability of the company and Chemwes has been finally assessed by the South African Revenue Service for the financial year ended 28 February 2005. The sellers shall procure that the company pays to the South African Revenue Service on the due date therefor the amount set out in the final tax assessment for the financial year ended 28 February 2005; and

13.1.2 the tax liability of the company and Chemwes has not yet been assessed by the South African Revenue Service for the financial years ended 28 February 2006 and 28 February 2007.

13.2 The tax affairs of the company and Chemwes have been examined in detail during the due diligence investigation undertaken by the purchaser prior to the signature date of this agreement. The sellers shall procure that KPMG Incorporated, the auditors of the company and Chemwes, shall, on or before the closing date -

13.2.1 assess the tax liability of the company and Chemwes for the financial years contemplated in 13.1.2; and

13.2.2 determine the amount, if any, that the company's and Chemwes' tax liability for the financial years ended 28 February 2006 and 28 February 2007 might

Handwritten signatures and initials at the bottom right of the page, including a large signature and the initials 'AB'.

be understated by, should any aspect of the tax returns to be submitted for these financial years be challenged by the South African Revenue Service.

13.3 The sellers warrant that the possible under-statement of the tax liability referred to in 13.2.2 will be nil. In the event that an un-provided tax liability arises following the tax assessment of the company and Chemwes in respect of the financial years ended 28 February 2006 and 28 February 2007, the sellers are to provide on the closing date the purchaser with a guarantee in the form as contemplated in 13.5 in the amount of R1 200 000,00 (one million two hundred Rand) ("guarantee amount"), which guarantee amount shall be adjusted to the amount as determined by KPMG Incorporated as per 13.2, should such amount exceed the guarantee amount.

13.4 If, however, the company and/or Chemwes should become liable for payment of any tax which has not been provided for in the financial statements contemplated in 13.2 ("the un-provided tax"), the sellers hereby indemnify and hold the company and/or Chemwes harmless against any amount which the company and/or Chemwes may become liable to pay in respect of such un-provided tax, and undertake within 10 (ten) business days of written demand, to reimburse, in proportion to their shareholding in the company, to the company or, as the case may be, to Chemwes, all amounts of un-provided tax, as and when payment thereof is made to the South African Revenue Service.

13.5 On the closing date, the sellers shall deliver to the company, a first demand bank guarantee issued by one of the four largest banks in the Republic of South Africa or other institution approved by the purchaser for an amount not exceeding the amount determined in terms of 13.3, which guarantee shall -

13.5.1 guarantee the payment by the sellers to the company, or, as the case may be, to Chemwes, as and when paid to the South African Revenue Service by the company or Chemwes, of any un-provided assessed tax referred to in 13.2;

[Handwritten signatures and initials]
AB

provide written proof to the sellers that it has lodged all such applications and has furnished such information and paid all such costs and fees as may be necessary to commence the process for fulfilment of the conditions in 4.1.1, 4.1.2, 4.1.3 and 4.1.4, the sellers shall procure that such tender is withdrawn immediately and shall provide the purchaser with written confirmation of such withdrawal.

15. **APPROVALS**

15.1 Within 5 (five) business days after the signature date, the sellers shall procure that their attorneys shall prepare and submit to the Competition Commission a Statement of Merger Information (Form CC 4(2)) in respect of the Company. The purchaser shall procure that its attorneys shall, on or before the said date, prepare and file with the Competition Commission a Merger Notice (Form CC 4(1)) and a Statement of Merger Information (Form CC 4(2)) in respect of the purchaser. Both the sellers and the purchaser undertake to co-operate with each other and to perform all such acts and compile and complete all such documents as is necessary for a joint merger notification in terms of the Competition Act 89 of 1998.

15.2 The purchaser undertakes to use reasonable endeavours to obtain the necessary TSX approval to the transaction contemplated in this agreement.

15.3 The sellers, by their signature hereto, hereby waive all pre-emptive and other analogous rights which they may have in terms of the shareholders' agreement between the Sellers or otherwise.

16. **IAN MATHEWS**

16.1 It is recorded that pursuant to a meeting of the board of directors of the company held on 30 January 2007, the board resolved to pay to Mr Ian Mathews a bonus of R1 000 000,00 (one million Rand) out of the proceeds payable to the sellers in terms of this transaction, which obligation the sellers have agreed to

Handwritten signatures and initials at the bottom right of the page, including the initials 'AB' and several illegible scribbles.

assume.

16.2 The sellers agree and undertake that they shall be liable to pay Mr Ian Mathews the sum of R1 000 000,00 (one million Rand) and that no such liability shall attach to either the company, Chemwes or the purchaser.

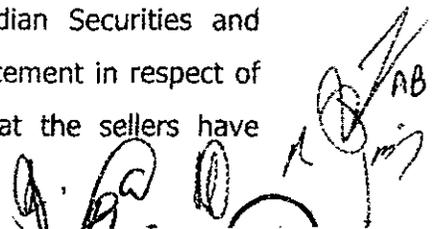

17. **REPORTING**

17.1 The purchaser has concluded a due diligence investigation into the affairs and businesses of the company and Chemwes.

17.2 Notwithstanding the conclusion of the due diligence investigation, the sellers shall, to the extent required by the purchaser, in order to satisfy any technical reporting and financial reporting requirements under applicable corporate and securities legislation effecting the purchaser and its ultimate holding company, procure that the purchaser has access to the company's and Chemwes' facilities, records and documents. The purchaser shall, and shall procure that its ultimate holding company shall, use such information in order to satisfy any technical reporting and financial reporting requirements under applicable corporate and securities legislation affecting the purchaser and its ultimate holding company, and in any event in a manner which is not inimitable with the interest of the company.

18. **PUBLIC DISCLOSURE**

The purchaser and the sellers will and the sellers will procure that the company and Chemwes keep confidential the terms of this agreement and shall not disclose the fact that this agreement has been entered into without the prior written consent of the other parties first being had and obtained, provided that the purchaser shall, in order to comply with its reporting obligations under Canadian Securities and Exchange laws, be entitled to issue a press release or announcement in respect of the transaction contemplated in this agreement provided that the sellers have

approved the content thereof, which approval shall not be unreasonably withheld and which approval shall be provided within 1 (one) business day of request thereof, failing which they will be deemed to have approved such announcement.

19. **CONTRACT AGREEMENT**

Fralex shall procure that the contract agreement between Chemwes and Fralex for the hydraulic re-mining and deposition of tailings as well as for the provision of services relating to the day to day rehabilitation of the mine will be cancelled with effect from the later of the closing date and 1 November 2007 on the basis that Fralex shall have no claims of whatsoever nature against Chemwes arising out of such cancellation. The purchaser agrees to procure that the company and/or Chemwes will negotiate a new contract agreement in good faith between Fralex and Chemwes for the hydraulic re-mining and depositing of tailings processed through the Chemwes plant on reasonable commercial terms prior to 1 November 2007. Should such negotiations fail, the company and/or Chemwes shall go to tender and Fralex shall be permitted to participate in the tender process.

20. **MANAGEMENT CONTROL**

Notwithstanding the closing date, as soon as approval from the Competition authorities is obtained to the transaction set out in this agreement, the sellers shall procure that a director of the purchaser shall be appointed on the board of the company.

21. **CO-OPERATION**

The parties undertake to do all such things, perform all such acts and take all steps to procure the doing of all such things and the performance of all such acts as may reasonably and commercially be necessary or incidental or conducive to giving effect to the terms, conditions and import of this agreement.

[Handwritten signatures and initials]
AB
12/4

22. **ACCESS**

The sellers shall ensure that from the date of acceptance of this agreement up and until the closing date, the purchaser, its nominated contractors or any of their agents and employees, as the case may be, will be granted reasonable access to the facilities of the company and/or Chemwes during normal business hours in order to prepare and finalise such specifications, site drawings and all other documents which may be necessary to enable it to integrate the facilities of the company and/or Chemwes with the existing facilities of the purchaser after the closing date. In this regard, the purchaser shall at all times ensure that every reasonable precaution is taken by the purchaser, its nominated contractors or any of their agents or employees, as the case may be, to minimise any inconvenience or nuisance to the company and/or Chemwes as a result of such access.

23. **OWNERSHIP, BENEFIT AND RISK**

23.1 The benefit in and risk relating to the company shall be deemed to have passed to the purchaser with effect from the effective date.

23.2 The ownership in and to the shares shall pass to the purchaser on the closing date and then only against payment of the amount received in terms of clause 7.

24. **NOMINEE**

24.1 The purchaser shall be entitled to appoint a nominee in its place and stead who shall be a member of the First Uranium group of companies as purchaser in terms of this agreement by giving the sellers written notice of the appointment of such nominee which written notice shall be provided by the purchaser to the seller within 30 (thirty) days of the date of signature.

24.2 The purchaser shall procure that the nominee passes such resolutions and does such things as may be necessary to be bound by and to fulfil the terms of this

[Handwritten signatures and initials, including 'AB', are present at the bottom right of the page.]

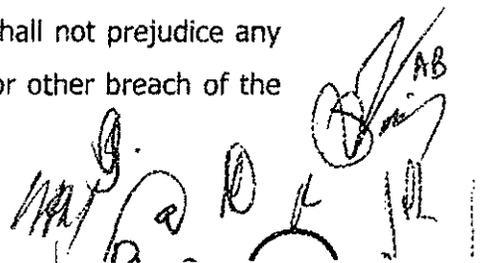

agreement. The purchaser hereby binds itself as surety and co-principal debtor unto and in favour of the sellers for all obligations of the nominee to the sellers in terms of this agreement and hereby waives and renounces the legal benefits and exceptions *non numeratae pecuniae, non causa debiti, revision of accounts, errore calculi, de duobus vel pluribus, reis debendi* and the meaning of which the purchaser agrees it understands and is acquainted with.

25. **BREACH**

Should any party ("the defaulting party") commit a breach of any of the provisions hereof, then the other party ("the aggrieved party") shall be obliged to give the defaulting party 30 days written notice to remedy the breach. If the defaulting party fails to comply with such notice, the aggrieved party shall be entitled to cancel this agreement against the defaulting party or to claim immediate payment and/or performance by the defaulting party of all of the defaulting party's obligations whether or not the due date for payment and/or performance shall have arrived, in either event without prejudice to the aggrieved party's rights to claim damages. The foregoing is without prejudice to such other rights as the aggrieved party may have at law; provided always that, notwithstanding anything to the contrary contained in this agreement, the aggrieved party shall not be entitled to cancel this agreement for any breach by the defaulting party unless such breach is a material breach going to the root of this agreement and is incapable of being remedied by a payment in money, or if it is capable of being remedied by a payment in money, the defaulting party fails to pay the amount concerned within 30 days after such amount has been determined.

26. **PARTIES NOT AFFECTED BY WAIVER**

26.1 The waiver (whether expressed or implied) by any party of any breach of the terms or conditions of this agreement by the other party shall not prejudice any remedy of the waiving party in respect of any continuing or other breach of the terms and conditions hereof.

Handwritten signatures and initials at the bottom right of the page, including the letters 'AB' and 'JL'.

26.2 No failure, delay, relaxation or indulgence on the part of either party in exercising any power or right conferred on such party in terms of this agreement shall operate as a waiver of such power or right nor shall any single or partial exercise of any such power or right preclude any other or further exercises thereof or the exercise of any other power or right under this agreement.

26.3 The expiry or termination of this agreement shall not prejudice the rights of any party in respect of any antecedent breach or non-performance by the other party of any of the terms or conditions hereof.

27. **VARIATIONS NOT EFFECTIVE UNLESS IN WRITING**

No variation, modification or waiver of any provision of this agreement, or consent to any departure therefrom, shall in any way be of any force or effect unless confirmed in writing and signed by the parties and then such variation, modification, waiver or consent shall be effective only in the specific instance and for the purpose and to the extent for which made or given.

28. **ARBITRATION**

28.1 Save as otherwise expressly provided in this agreement, should any dispute arise between any of the parties in regard to : -

28.1.1 the interpretation of;

28.1.2 the effect of;

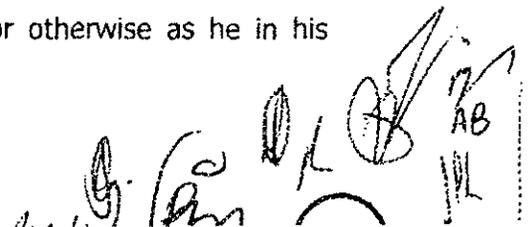

28.1.3 the parties' respective rights or obligations under;

28.1.4 a breach of;

28.1.5 the termination of; or

Handwritten signatures and initials:
M. G. [unclear] [unclear] AB [unclear]

- 28.1.6 any matter arising out of the termination of this agreement, that dispute shall be decided by arbitration in the manner set out in this clause 28.
- 28.2 The arbitrator shall be appointed by the parties, and failing agreement, shall be nominated by the Arbitration Foundation of Southern Africa ["AFSA"]. Should AFSA not be in existence at the time, the nomination shall be by the Chairman for the time being of the Johannesburg Bar Council.
- 28.3 The arbitration shall be held at Johannesburg.
- 28.4 The arbitration shall be held in accordance with the Rules of AFSA, or if AFSA shall not be in existence, in accordance with the formalities and procedures settled by the arbitrator, which shall be in an informal and summary manner, that is, it shall not be necessary to observe or carry out either the usual formalities or procedure or the strict rules of evidence, and otherwise subject as aforesaid of the *Arbitration Act, 1965* of the Republic of South Africa and any statutory modification or re-enactment thereof.
- 28.5 The arbitrator shall be entitled to : -
- 28.5.1 investigate or cause to be investigated any matter, fact or thing which he considers necessary or desirable in connection with any matter referred to him for decision;
- 28.5.2 decide the matters submitted to him according to what he considers just and equitable in all the circumstances, having regard to the purpose of this agreement; and
- 28.5.3 make such award, including an award for specific performance, an interdict, damages or a penalty or the costs of arbitration or otherwise as he in his discretion may deem fit and appropriate.

Handwritten signatures and initials at the bottom right of the page, including the letters 'AB' and 'PL'.

- 28.6 The arbitration shall be held as quickly as possible after it is demanded, with a view to it being completed within thirty days after it has been so demanded and the decision of the arbitrator shall be final and binding on the parties.
- 28.7 This clause is severable from the rest of the agreement and shall therefore remain in effect even if this agreement is terminated.
- 28.8 This clause 28 shall not preclude any party from obtaining interim relief on an urgent basis from a court of competent jurisdiction pending the decision of the arbitrator.
- 28.9 The parties hereby consent to the non exclusive jurisdiction of the High Court of South Africa (Witwatersrand Local Division) in respect of the proceedings in this clause 28 and the above Court shall have jurisdiction to enforce any award made by an arbitrator under this clause 28.

29. **NOTICES AND DOMICILIUM**

29.1 The parties choose as their domicilium citandi et executandi their respective addresses set out in this clause for all purposes arising out of or in connection with this agreement at which addresses all the processes and notices arising out of or in connection with this agreement, its breach or termination may validly be served upon or delivered to the parties.

29.2 For the purpose of this agreement the parties' respective addresses shall be -

29.2.1 as regards Fralex at Marlin Road (off Kelly Road), Jet Park;

facsimile number (011) 397 4607;

or at such other address in the Republic of South Africa not being a post office box
or poste restante, of which the party concerned may notify the others in writing.

29.3 Any notice given in terms of this agreement shall be in writing and shall -

29.3.1 if delivered by hand be deemed to have been duly received by the addressee
on the date of delivery;

29.3.2 if posted by prepaid registered post be deemed to have been received by the
addressee on the 8th (eighth) business day following the date of such posting;

29.3.3 if transmitted by facsimile be deemed to have been received by the addressee
1 (one) business day after despatch.

29.4 Notwithstanding anything to the contrary contained in this agreement, a written
notice or communication actually received by one of the parties from another
including by way of facsimile transmission shall be adequate written notice or
communication to such party.

30. **WHOLE AGREEMENT**

This agreement supercedes the Binding Heads of Agreement concluded between
the parties, and constitutes the whole agreement between the parties as to the
subject-matter hereof and no agreement, representations or warranties between
the parties other than those set out herein are binding on the parties.

[Handwritten signatures and initials]
AB
JR

31. **VARIATION**

No addition to or variation, consensual cancellation or novation of this agreement and no waiver of any right arising from this agreement or its breach or termination shall be of any force or effect unless reduced to writing and signed by all the parties or their duly authorised representatives.

32. **COUNTERPARTS**

This Agreement -

32.1 may be executed in separate counterparts, none of which need contain the signatures of all of the parties, each of which shall be deemed to be an original and all of which taken together constitute one agreement;

32.2 shall be valid and binding upon the Parties thereto, notwithstanding that one or more of the Parties may sign a facsimile copy thereof and whether or not such facsimile copy contains the signature of any other Party.

33. **GOVERNING LAW**

This agreement shall be governed by and construed in accordance with the laws of the Republic of South Africa and the parties hereby submit to the non-exclusive jurisdiction of the Witwatersrand Local Division of the High Court of South Africa.

34. **COSTS**

34.1 Each party shall bear its own costs incurred in relation to the negotiation, drafting, preparation, signature and implementation of this agreement.

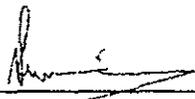

34.2 The purchaser shall pay any stamp duties and marketable securities tax payable in respect of the transfer of the shares to be acquired by any party in terms of this agreement. The professional costs for preparing the Competition Commission

[Handwritten signatures and initials, including 'AB', 'L', and 'A']

submission on behalf of the sellers shall be borne by the sellers and the professional costs for preparing the Competition Commission submission for and on behalf of the purchaser, as well as the fee payable to the Competition Commission in fulfilment of the Condition Precedent set out in 4.1.1 shall be borne by the purchaser.

WARRANTIES

For the purposes of this Appendix 11.1, the warranties shall apply unless qualified or otherwise amended by any disclosures made by the company and Chemwes in writing in the manner and during the due diligence investigation undertaken by the purchaser as read with 11.8 and 11.9 of the agreement, to which these warranties are attached as Appendix 11.1.

The warranties are given by Fralex, Nedbank and IDC to the best of their knowledge and belief, on the basis that, as minority shareholders, none of them exercise management control over the company or Chemwes.

1. STATUS

- 1.1 The company and Chemwes will be duly incorporated in the Republic of South Africa as private companies.
- 1.2 No steps will have been taken and the sellers are not aware of any steps pending or threatened against the company and Chemwes in terms of Section 73 of the Companies Act, No. 61 of 1973, as amended.

2. TITLE

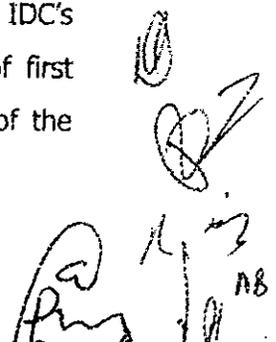

- 2.1 The sellers are the registered and beneficial owners of the shares and are reflected in the register of members of the company as the owners of the shares.
- 2.2 On the closing date, the sellers will be able and entitled validly and effectively to deliver and transfer the shares and the claims to the purchaser or its nominee and the shares and claims will be acquired by the purchaser free from any lien, charge or encumbrance.

Handwritten signatures and initials at the bottom right of the page, including a large signature and the initials 'AB'.

3. CAPITAL STRUCTURE

On the signature date and closing date -

- 3.1 the authorised share capital of the company will be R1 000 (One thousand Rand), divided into 1 000 000.(one million) ordinary shares of 0.1 cent. (one tenth of a cent) each;
- 3.2 the issued share capital of the company will be R371 (three hundred and seventy one Rand), divided into 371 429 (three hundred and seventy one thousand four hundred and twenty nine) ordinary shares of 0.1 cent. (one tenth of a cent) each, fully paid up;
- 3.3 the authorised share capital of Chemwes will be R1 000 000 (one million Rand), divided into 1 000 000 (one million) ordinary shares of R1 (one Rand) each;
- 3.4 the issued share capital of Chemwes will be R2 000 (two thousand Rand), divided into 2 000 (two thousand) ordinary shares of R1 (one Rand) each, fully paid up;
- 3.5 the company and Chemwes are not and will not be under any obligation (whether contingently upon the exercise of any right or otherwise) and no resolution will have been passed requiring the company and Chemwes to increase or reduce their authorised or issued share capital or to vary any of the rights attaching to the shares;
- 3.6 no person other than the existing shareholders and Tukiso Environmental Solutions (Proprietary) Limited (which has a pre-emptive right on the IDC's shares) has or will have any right (including any option or right of first refusal or pre-emption) to acquire any of the issued share capital of the company or Chemwes, present or future;

Handwritten signatures and initials, including a large signature at the bottom left and several initials and marks at the bottom right.

- 3.7 the company and Chemwes are not and will not be obliged nor have any resolutions been passed to alter any of the rights attaching to any of the shares in the capital of the company or Chemwes or to alter their memorandum and articles of association or to create or issue any debentures;
- 3.8 no person has or will have any right to obtain an order for the rectification of the register of members of the company or Chemwes which are and will on the closing date, be true and correct in all respects;
- 3.9 all of the issued shares in the capital of the company and Chemwes are and will be of one class;
- 3.10 the minute books of the company and Chemwes contain and will contain all resolutions passed by their directors and members;
- 3.11 no part of the business of the company or Chemwes is or will be carried on subject to the agreement or consent of a third party;
- 3.12 no bonus or capitalisation shares or bonus debentures have been issued by the company and Chemwes since the date of the shareholders agreement between the current shareholders ("acquisition date"), nor has the company or Chemwes since the acquisition date distributed any of their assets (other than by way of dividend) among any of their shareholders or incurred the obligation to do so;
- 3.13 there have been no reductions in the issued share capital of the company or Chemwes since the acquisition date;
- 3.14 the claims are and at the closing date will be nil;
- 3.15 the company has no subsidiary and/or associate companies other than Chemwes and Chemwes has no subsidiaries;

Handwritten initials and marks: "AK", "AB", and a large "Z" or "7" with a checkmark.

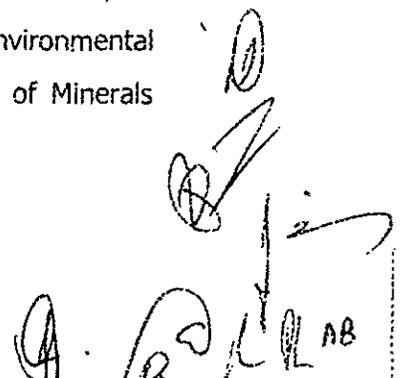

- 3.16 for as long as the sellers have controlled the company and Chemwes, the company's share premium account, if any, has not been reduced in any manner and the company has not transferred any amount from its reserves or undistributed profits to its share capital or its share premium account;
- 3.17 no person other than the sellers and Tukiso Environmental Solutions (Proprietary) Limited (which has a pre-emptive right on the IDC's shares) has any right or option or right of first refusal to acquire any shares in the company or Chemwes, nor to subscribe for or take up any of the unissued shares in the company or Chemwes, nor are any of the shares of the company or Chemwes subject to any lien or other preferential right. In particular, the sellers warrant that the sellers are entitled to dispose of the sale shares to the purchaser and that upon delivery the purchaser will become the beneficial owner of the sale shares to the exclusion of all others;
- 3.18 the company and Chemwes have not declared or paid or undertaken to declare or pay any dividends or to make any other payments to their shareholders in respect of any period of trading prior to the effective date which have not been paid in full and save as otherwise contemplated by this agreement will not declare or pay or undertake to declare or pay any dividends or make any other payments to their shareholders in the period between the signature date and the closing date;
- 3.19 no person is or will be entitled to participate in or to receive a commission on the profits or dividends of the company or Chemwes except as a shareholder thereof or in terms of the subsidiary bonus schemes, details of which are to be disclosed in writing during the due diligence period in the manner contemplated in 11.8 of the agreement to which this schedule is attached as Appendix 11.1;
- 3.20 no person is or will be entitled to an order requiring the company or Chemwes to change their corporate names, their trading style, or to cease

Handwritten initials and marks, including "AB" and a signature, located in the bottom right corner of the page.

using any of the patents, trade marks or designs applied by it to their products.

4. ACCOUNTING AND FINANCIAL STATEMENTS

- 4.1 The accounts and the closing date accounts-
- 4.1.1 have and will be prepared in accordance with South African generally accepted accounting practice (incorporating IFRS from 2006);
- 4.1.2 have been and will give a true and fair view of the financial position and profits of the company and Chemwes at and for the financial years ended on 28 February 2005, 2006 and 2007, respectively, and as at the closing date, and fairly present the state of affairs and business of the company and Chemwes;
- 4.1.3 have no and will contain no qualification;
- 4.1.4 have valued and will value all fixed assets on the basis of past practice, subject to 4.1.1;
- 4.1.5 have depreciated and will depreciate fixed assets on the same basis as in the past, subject to 4.1.1;
- 4.1.6 have made and will make full provision for all unpaid pay, bonuses, long leave pay and the like, whether current or accrued;
- 4.1.7 have made and will make provision for environmental liabilities, in accordance with the minimum requirements set out in the environmental management programme approved of by the Department of Minerals and Energy;

Handwritten signature and initials, possibly 'A. ... LAB', located in the bottom right corner of the page.

- 4.1.8 were and will be prepared on a consistent basis applying the same accounting policies as have been adopted in previous years, subject to 4.1.1;
- 4.1.9 do not and will not reflect any revaluations of assets, subject to 4.1.1;
- 4.1.10 reflect and will reflect all assets owned by the company and Chemwes.
- 4.2 All the books and records of the company and Chemwes have and will have been properly maintained according to law, are and will be correct and will be capable of being written up within a reasonable time so as to record all the transactions of the company and Chemwes.
- 4.3 From the date of signature to the closing date there will have been no material adverse change in the company's financial position or Chemwes' financial position, subject to normal trading and economic factors and conditions prevailing from time to time.

5. CONTRACTS

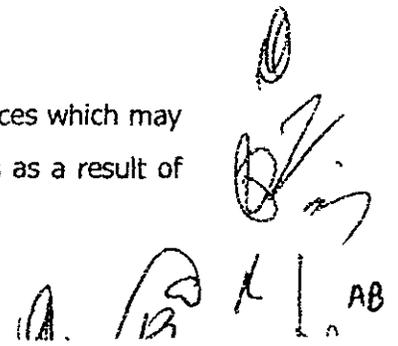

On the signature date and the closing date -

- 5.1 the company and Chemwes are not and will not be party to any agreement which is unusual or of long term which do or may involve obligations other than those arising in the ordinary course of business;
- 5.2 the company and Chemwes are not and will not be in breach of any material obligations undertaken by them under any material contracts to which they are a party including but not limited to the contracts concluded between the company and/or Chemwes and Eskom in respect of the supply of electricity, Stillfontein Municipality in respect of the supply of water, Fraser Alexander Tailings, a division of Fraser Alexander (Proprietary) Limited and the shareholders agreement of the company. The company

Handwritten signatures and initials at the bottom right of the page, including a large signature and the initials 'AB'.

and/or Chemwes are and will be entitled to all benefits and rights under and in terms of such material contracts;

- 5.3 all material contracts are legally binding and enforceable and the sellers are not aware of any reason which might preclude the company and Chemwes from fulfilling any obligations still to be fulfilled by the company and Chemwes in terms of such contracts;
- 5.4 the company and Chemwes are not and will not be bound by any agreements in restraint of trade in terms of which they are restricted from carrying on any activity in any part of the world;
- 5.5 the company and Chemwes are not and will not be under any obligation to pay any royalties or licence fees to any person;
- 5.6 the company and Chemwes are not and will not be party to any agreement for the purchase of shares in any other company or for the purchase of any assets which were entered into other than in the ordinary, normal and regular course of business or which are terminable on more than one month's notice;
- 5.7 the trading methods and style used by the company and Chemwes including any patents, designs, trade marks and the like applied in connection with their business or products do not and will not constitute an infringement of the rights of any other person;
- 5.8 the company and Chemwes are not party to any agreement which have not been entered into on an arms-length basis and on terms which are normal having regard to the nature of the business;
- 5.9 the sellers are not aware of any facts, matters or circumstances which may give rise to the cancellation of any of the material contracts as a result of any breach thereof by the company and Chemwes;

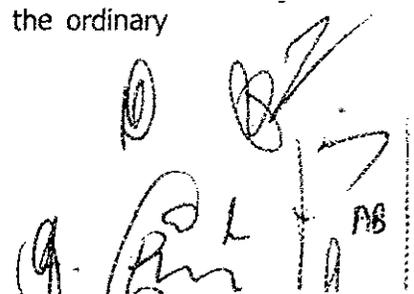

Handwritten initials and signatures, including a large signature at the top right and several initials (A, B, K, AB) at the bottom right.

- 5.10 the company and Chemwes do not use any intellectual property of a third party in the conduct of their business other than in terms of a valid licence agreement. The company and Chemwes have paid all royalties due in respect of such licence agreements and there are no claims which may be made against the company or Chemwes by any licensor arising out of the late payment of any royalties;
- 5.11 the company and Chemwes will not have entered into any transaction save in the ordinary and regular course of conduct of their business. It is recorded that the company and Chemwes are at present conducting a feasibility study on tailings dams numbers 4 and 5 in terms of board approval that could result in specific transactions being entered into to facilitate completion of the study;
- 5.12 the company and Chemwes will not enter into any agreements which were not signed as at the effective date except within the normal course of business.

6. LIABILITIES

As at the signature date and the closing date -

- 6.1 the company and Chemwes are not and will not be liable, whether contingently or otherwise and whether as surety, co-principal debtor, guarantor or indemnitor, for the liabilities of any third party;
- 6.2 the company and Chemwes have and will have no material liabilities, whether actual or contingent, save for those disclosed in the financial statements referred to in 4.1 and the closing date accounts and those incurred between the effective date and the closing date in the ordinary course of conduct of the company's and Chemwes' business;

Handwritten signatures and initials, including a large signature and the initials 'AB'.

6.3 the company and Chemwes have not authorised or incurred any capital expenditure otherwise than in the ordinary, normal and regular course of their business.

7. EMPLOYEE RELATIONS

7.1 No employee or director or former employee or director of the company or Chemwes are or will be entitled to receive from the company or Chemwes any leave privilege, accumulated leave, payment in lieu of leave, any pension or the like (of any exceptional nature).

7.2 There is and will be no unfunded deficit in respect of any future liability of any pension fund of which any of the company's employees or Chemwes' employees, as at the closing date, will be members.

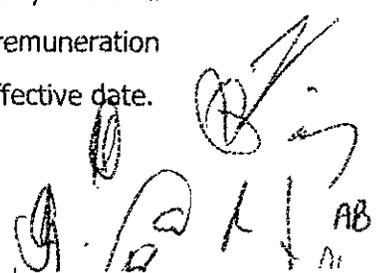

7.3 The company and Chemwes do not have any contract with any director or employee -

7.3.1 which requires more than one month's notice of termination by either party;

7.3.2 in terms of which any director or employee is entitled to participate in or to a commission on their profits and dividends;

7.3.3 for the payment of any pensions or annuities save through the pension or provident funds of which the employees of the company or Chemwes are members.

7.4 Save for market-related annual wage and salary increases, on or prior to the effective date, the company and Chemwes will not in any material respects have improved the terms of employment of or remuneration payable to any of their employees from that prevailing at the effective date.

- 7.5 There are no post-retirement medical aid liabilities in respect of employees employed at the effective date or any past employees, other than as provided for in the annual financial statements.
- 7.6 To the best of the sellers' knowledge and belief there are no valid claims by employees of the company or Chemwes.
- 7.7 No indefinite contracts of employment exists or will be committed to by the company or Chemwes between the effective date and the closing date.
- 7.8 No employee is entitled to a legitimate expectation of continued employment beyond the period stipulated in their employment contracts.

8. TAX

For the purpose of the warranties set out below, the word "tax" shall, unless the context indicates the contrary, mean any tax including, but not limited to, income tax, capital gains tax, Regional Service Council levies, PAYE, value-added tax ("VAT"), sales tax and any duty or levy, including skills development levies, stamp duty and customs duty (including any penalty or interest) imposed by any law administered by the Revenue authorities in the Republic of South Africa. The warranties are-

- 8.1 the company and Chemwes are not party to any tax objection or appeal nor are any such proceedings threatened against or likely to be instituted by or against the company or Chemwes, nor are the sellers aware of any circumstances which may give rise to the institution of any such proceedings;
- 8.2 no queries have been addressed to the company or Chemwes or to any of their representatives by any official administering any tax nor have any objections with regard to any tax been lodged by the company or Chemwes which have not been fully disposed of;

Handwritten signatures and initials:
MAY
R
B
K
H
7
no

- 8.3 the company and Chemwes have paid or will, prior to the closing date, timeously pay all tax due where the due date for payment of the tax arises on or before the closing date; in respect of any tax which is due for payment after the closing date for periods of trading from the effective date, ending prior to the closing date, adequate provision or reserves for the payment of that tax will have been made. This warranty by the sellers is only in respect of the period from the effective date up to the closing date;
- 8.4 the company and Chemwes are not liable to pay any penalty or interest in connection with any claim for tax;
- 8.5 as at the effective date, neither the company nor Chemwes are subject to any liability as a result of the re-opening of any tax assessment;
- 8.6 all necessary or legally required information, notices and returns (all of which are true and accurate and none of which are disputed by the Revenue authorities in the Republic of South Africa have been properly submitted in accordance with extensions for submissions granted by Revenue authorities by the company and Chemwes and there is no reason to suppose that any such information or return will not in due course be accepted as true and accurate by the Revenue authorities in the Republic of South Africa;
- 8.7 the company and Chemwes have timeously deducted tax as required from all payments made to or treated as made to employees or former employees of the company, or any other payment from which tax is required to be deducted in terms of Income Tax Legislation application in the Republic of South Africa and has accounted to the Revenue authorities in the Republic of South Africa for all tax so deducted;
- 8.8 the company and Chemwes have withheld all taxes they are liable to withhold and have timeously paid such taxes to the Revenue authorities in the Republic of South Africa;

[Handwritten signatures and initials]

- 8.9 no notice has been served on the company or Chemwes in terms of which the company or Chemwes have been appointed as a representative taxpayer;
- 8.10 the company and Chemwes have timeously lodged claims for any refund of tax to which they are or may be entitled;
- 8.11 neither the sellers nor the company or Chemwes are party to any agreement with the Revenue authorities in the Republic of South Africa bearing upon or relating to the manner or circumstances in which tax will or might be levied on the company or Chemwes;
- 8.12 no rents, interest, annual payments or other expenditure incurred by the company and Chemwes and claimed as a deduction in the production of income will be disallowed as a deduction wholly or in part from the income of the company or Chemwes;
- 8.13 the company and Chemwes have not made or received any donation on which donations tax can be levied nor have they made any donation at the instance of a third party;
- 8.14 the company and Chemwes have and will have complied with the provisions of the Income Tax Act and all proper tax returns (including PAYE and VAT returns) required to be returned will have been made by them in respect of all periods from the acquisition date to the closing date and all provisional tax has been paid as at the due date thereof in compliance with the provisions of the Income Tax Act and all VAT has been paid as at the due date thereof in compliance with the provisions of the Value Added Tax Act, 1991, as amended ("the VAT Act"). The company and Chemwes will not be liable for any taxation in respect of any assessment including any estimated, revised or additional assessment arising from any transaction, matter, thing, act or omission which took place prior to the closing date and for which provision is not made in the closing date accounts;

Handwritten signatures and initials at the bottom right of the page.

- 8.15 all assessments for taxation which have been raised will have been paid in full or adequate provision for payment thereof will have been made;
- 8.16 the company and Chemwes have and will have complied with the provisions of the Tax Act, the VAT Act and all regulations made thereunder and all returns and declarations required to be furnished will have been furnished by them in respect of such Acts;
- 8.17 there are no notices, suits, proceedings or investigations pending against the company or Chemwes by any tax authority relating to any claim for any additional tax or assessment or any matters under discussion with any tax authority relating to any claim for any tax or assessment nor is there any pending tax objection or appeal;
- 8.18 save as disclosed in writing by the sellers, the company and Chemwes are not and will not be party to any agreement with the South African Revenue Authority bearing upon or relating to the manner or circumstances in which tax will or might be levied on the company or Chemwes.

9. ASSETS

- 9.1 The assets of the company and Chemwes are not and will not be subject to any -
- 9.1.1 hire-purchase agreement; or
- 9.1.2 credit agreement, instalment sale transaction, leasing transaction or credit transaction or
- 9.1.3 credit agreement, instalment, hire-purchase or suspensive sale agreement, lease or any like agreement, whatever its form may be; or
- 9.1.4 pledge, mortgage, lien, notarial bond; or

[Handwritten signatures and initials]

9.1.5 other right in favour of any third person.

9.2 As at the closing date, the company's assets and Chemwes' assets will have continued to be in good order and condition and fully operational, apart from breakdowns, fair wear and tear accepted in the ordinary course of business and apart from any loss, damage or destruction beyond the control of the company or Chemwes.

9.3 No person has or will have any right (including any option or right of first refusal or pre-emption) to purchase any of the assets of the company or Chemwes, other than in the ordinary course of business.

9.4 The company and Chemwes have maintained a register of their assets in accordance with generally accepted accounting practice.

9.5 The company and Chemwes own, lease or have purchased under instalment sale the assets necessary for the conduct of their businesses and have good and marketable title to the assets they own, and that except for agreements entered into in the ordinary course of business no other person has any rights to or in respect of such assets.

9.6 The company and Chemwes are in lawful possession of the assets contemplated by clause 9.5.

9.7 The company and Chemwes have not entered into any transaction with respect to any of the assets owned or used by them in their respective businesses which have given or will give rise to any off-balance sheet liability.

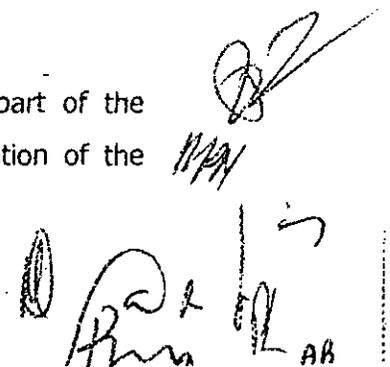

10. MINING

10.1 The company and Chemwes have the capacity to carry on their business, including but not limited to having valid title (where applicable) to perform

Handwritten signature and initials
MAY 10 2007

all mining and mining related functions currently carried on by the company and Chemwes or contemplated in their business plans.

- 10.2 The company and Chemwes are in possession of all consents, permits and licenses necessary for the conduct of their businesses and affairs and the sellers are not aware of any facts which may give rise to the cancellation of, or failure to renew, any such licenses, permits or consents or to their only being renewed subject to the imposition of onerous conditions not presently applicable thereto.
- 10.3 The company and Chemwes have made all contributions which they are obliged to make to the environmental rehabilitation trust in terms of the deed of that trust. Approval for the contributions to be made to such trust has been obtained from SARS and no objection has been received from the Department of Minerals and Energy ("DME") regarding such trust or the contributions payable in terms thereof. A minute book reflecting all resolutions passed by the trust has been kept. No amounts have been or may be withdrawn from the trust other than to make payment in respect of all prescribed rehabilitation costs. The environmental rehabilitation trust has sufficient funds to cover its prescribed rehabilitation costs and the DME is satisfied and has confirmed in writing the adequacy of the funds in the trust.
- 10.4 Each of the sellers warrants that he/it has not, to the best of his/its knowledge and belief, withheld from the purchaser any information, known to that seller and material to the transaction hereby concluded (including with respect to actual or potential environmental liabilities of the company or Chemwes or their businesses.
- 10.5 The sellers are not aware of any act or omission on the part of the company and/or Chemwes which would warrant the cancellation of the mining licence or any annexure.

Handwritten signatures and initials at the bottom right of the page, including a large signature, the initials 'MA', and 'AB'.

10.6 In terms of the agreement concluded between the company and/or Chemwes and Eskom, the company and Chemwes have procured an adequate, secure, reliable and ongoing supply of electrical power in order to enable it to conduct their business.

10.7 The company and Chemwes have at all times complied with the provisions of the Mineral and Petroleum Resources Development Act No 28 of 2002 and all other statutory provisions applicable to it.

10.8 The company has been granted a prospecting licence for Uranium for its Chemwes operations.

11. INSURANCE

11.1 The company and Chemwes are adequately insured in respect of all material assets and which are of an insurable nature against all risks normally insured against by a person carrying on a business similar to that of the company and Chemwes respectfully. Such insurance will continue to be effective for not less than 60 (sixty) days after the closing date and all premiums due in respect of such insurance have been paid.

11.2 The sellers are not aware of any facts, matters or circumstances which may give rise to the cancellation of the policies of insurance referred to in 11.1 or the repudiation of any claims thereunder or to such policies not being renewed in the future or only being renewed subject to the imposition of onerous conditions not presently applicable.

12. LEGAL PROCEEDINGS

12.1 There are no litigation, mediation, arbitration, criminal or expropriation proceedings pending or threatened against the company or Chemwes or their assets or business or to which they might become a party, nor do the sellers know or have any reasonable grounds to know of any basis for any such litigation, arbitration or criminal proceedings.

[Handwritten signatures and initials]
MAY A R K FA AB

12.2 No steps have been taken or are contemplated by the sellers nor, to the best of the sellers' knowledge and belief, by any third party, to apply for the winding up of the company or Chemwes.

12.3 There is no application pending or threatened for the winding-up or judicial management (provisional or final) of the company or Chemwes.

13. PERIOD BETWEEN THE EFFECTIVE DATE AND THE CLOSING DATE

13.1 Between the effective date and the closing date -

13.1.1 the company and Chemwes will have continued to carry on their businesses in the ordinary and regular course;

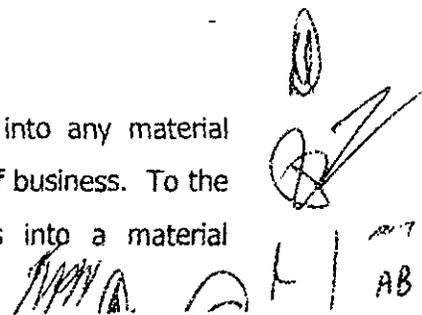

13.1.2 the company and Chemwes will have continued to trade in accordance with the trading style at present adopted by them;

13.1.3 no assets have been acquired and none of the company's assets nor Chemwes' assets will have been sold or otherwise disposed of except in the ordinary course of business;

13.1.4 other than as a result of the normal annual salary review, the company and Chemwes will not have varied the terms of employment of or remuneration payable to any of their directors or officers nor will the company or Chemwes agree to any compensation or other benefits payable on or in connection with the termination of, or retirement from employment or office of, any such persons;

13.1.5 no liabilities have been incurred without adequate value having been received;

13.1.6 the company and Chemwes will not have entered into any material transactions outside the normal and ordinary course of business. To the extent that the company and/or Chemwes enters into a material

Handwritten signatures and initials, including a large signature that appears to be 'MMA' and other initials like 'AB' and 'H'.

transaction during the normal and ordinary course of its business, it shall notify the purchaser in writing thereof. For the purpose of this warranty, a material transaction shall be a transaction with a value in excess of R250 000.00 (two hundred and fifty thousand Rand) or transactions in aggregate in excess of R500 000.00 (five hundred thousand Rand) which is or are not in accordance with the approved budget for the financial year ending 28 February 2008;

13.1.7 there has been and will be no material adverse change in the financial position of the company or Chemwes, save as may result from normal trading and economic conditions .

13.1.8 nothing will be done –

13.1.8.1 to prejudice the continued goodwill of the company or Chemwes;

13.1.8.2 reduce the scope of the business of the company or Chemwes;

13.1.8.3 which will result in any of the business associates or customers of the company or Chemwes ceasing to transact business with the company or Chemwes or vary the terms on which such business associates or customers transact business with the company and Chemwes.

14. STATUTORY REQUIREMENTS AND AUTHORISATIONS

14.1 No work remains to be performed, and no expense remains to be incurred in connection with –

14.1.1 the completion and auditing of the company's and Chemwes' Financial Statements in respect of any of their 2005 and 2006 financial years. It is recorded for the benefit of all parties that the audit in respect of the 2007 financial year must still be conducted;

Handwritten signatures and initials:
M.M. G.
na K 11 AB
msj

- 14.1.2 the submission of the company's and Chemwes' income tax returns in respect of any of their prior financial years; and
- 14.1.3 the submission of any return required by law to have been submitted by the company and Chemwes to any competent authority;
- 14.2 The company and Chemwes have complied in all material respects with all laws and regulations (including laws relating to the protection of the environment) affecting their affairs and business.
- 14.3 At the closing date the share register, books and records of the company and Chemwes will be up to date and have been properly kept according to law and will be capable of being written up within a reasonable time so as to record all of the transactions of the company and Chemwes.

15. DEBTORS

- 15.1 All amounts owing to the company and Chemwes by their debtors at the effective date, less amounts provided for as bad or doubtful debtors in the management accounts of the company and Chemwes for the period 1 March 2007 to the effective date, will be collected in full within 120 (one hundred and twenty) days of the effective date.
- 15.2 Since the effective date no debts due to the company or Chemwes have been written off or treated or regarded as irrecoverable other than in the normal course of business;

16. RESOLUTIONS

No resolutions have been passed by the members or directors of the company or Chemwes, save for –

- 16.1 such resolutions as may be necessary to give effect to this agreement;

Handwritten signatures and initials in the bottom right corner of the page, including a large signature that appears to be 'MAY G.' and other initials like 'AA' and 'LA'.

16.2 such resolutions as have been passed in the ordinary course of business or as shall be approved by the purchaser in writing, which approval may not be unreasonably withheld.

17. GENERAL

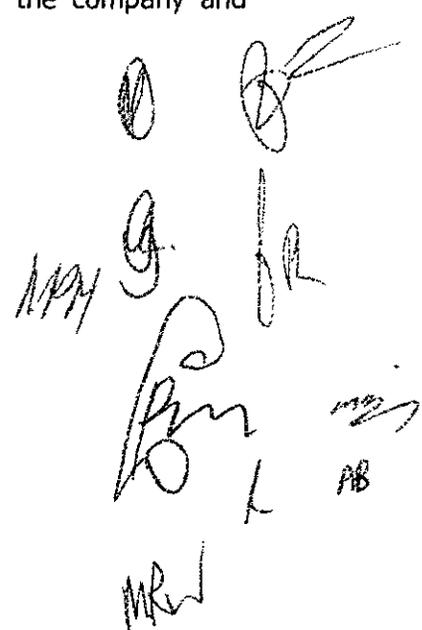

17.1 Neither the company nor Chemwes will have done or omitted to do anything which will have -

17.1.1 materially prejudiced the continued goodwill of the company and Chemwes;

17.1.2 reduced the scope of the company's business or Chemwes' business;

17.1.3 resulted in any business associate of the company or Chemwes ceasing to transact business with the company or Chemwes or to vary the terms upon which it transacts business with the company or Chemwes.

17.2 Save as specifically set out in this Appendix 11.1 or as disclosed in writing to the purchaser in the manner contemplated in 11.8 and 11.9 of the agreement during the due diligence investigation period contemplated in 4.1.5 of the agreement, the sellers give no warranties and make no representation in regard to the business or affairs of the company and Chemwes.

Handwritten signatures and initials, including 'MPH', 'AB', and other illegible marks.

FIU represents and warrants to and in favour of the sellers as follows and acknowledges that the sellers are relying upon same in connection with the transaction recorded in this agreement :

- (a) FIU is a company continued and validly existing under the laws of British Columbia and has the corporate power to carry on its business as now being conducted, to enter into this agreement and to perform its obligations hereunder.
- (b) The authorized share capital of FIU consists of an unlimited number of common shares, of which 121,686,047 (one hundred and twenty one million six hundred and eighty six thousand and forty seven) common shares were issued and outstanding as of 24 April 2007.
- (c) FIU is a reporting issuer under the securities laws in all provinces and territories of Canada and, to the best of its knowledge, is not in default of any requirement of such securities laws, has not been the subject of any investigation by any stock exchange or any other securities regulatory authority or body, is current with all filings required to be made by it under applicable Canadian securities and corporate laws.
- (d) Since December 13, 2006, FIU has filed any and all required forms, reports and documents (collectively, the "**Public Disclosure**") with the applicable Canadian securities regulatory authorities having jurisdiction. None of the Public Disclosure filed by FIU with the applicable Canadian securities regulatory authorities, at the time filed or as subsequently amended, contained any misrepresentation or any untrue statement of a material fact or omitted to state a material fact required to be stated therein or necessary in order to make the

Handwritten signatures and initials:

AB
K
L
M

statements made therein, in light of the circumstances under which they were made, not misleading.

- (e) No securities commission or similar regulatory authority or stock exchange in Canada has issued any order which is currently outstanding preventing or suspending trading in any securities of FIU and, to FIU's knowledge, no such proceeding is pending, contemplated or threatened.
- (f) The outstanding common shares of FIU are listed and posted for trading on the Toronto Stock Exchange.
- (g) The common shares to be issued by FIU pursuant to this agreement will be duly issued as fully paid and non-assessable shares.
- (h) This agreement has been duly authorized, executed and delivered by FIU and is a legal, valid and binding obligation of FIU, enforceable against FIU in accordance with its terms except as enforcement may be limited by bankruptcy, insolvency and other laws affecting the rights of creditors generally and except that equitable remedies may be granted only in the discretion of a court of competent jurisdictions.
- (i) The execution and delivery of this agreement by FIU and the completion of the transaction and the fulfillment and compliance with the terms and provisions hereof do not and will not:
 - (i) result in the breach of, or violate any term or provision of, its constating documents;
 - (ii) conflict with, result in a breach of, constitute a default under, or accelerate or permit the acceleration of the performance required by, any agreement, instrument, licence, permit or authority to which it is a party or by which it is bound and which is material to it, or result in the creation of any

encumbrance upon any of its material assets under any such agreement or instrument, or give to others any material interest or right, including rights of purchase, termination, cancellation or acceleration, under any such agreement, instrument, licence, permit or authority (other than consent of its lenders, if required); or

- (iii) violate or contravene any provision of any law or regulation or any judicial or administrative award, judgment or decree applicable and known to it (after due inquiry);

except to the extent that such breach, violation or contravention could not reasonably be expected to prevent or hinder the consummation of the transactions contemplated by this agreement.

- (j) Other than the consent of RBC Dominion Securities Inc ("RBCDS") pursuant to the underwriting agreement dated 12 December 2006 among, inter alia, FIU and RBCDS (which consent shall be procured by the closing date), no waiver, consent or approval is required to be obtained by FIU from other parties to any loan or credit agreement, bond, debenture, note, mortgage, indenture, guarantee, lease or other contract, commitment, agreement, instrument, obligation, undertaking, permit, concession, franchise, license or legally binding arrangement or understanding to which FIU is a party or bound by or any of its properties or assets are bound by or subject to, the failure of which to obtain would be materially adverse to FIU or would materially impede FIU's ability to complete the transaction;
- (k) No consent, approval, order or authorization of, or registration, or declaration with, any applicable governmental authority with jurisdiction over FIU is required to be obtained by FIU in connection with the execution and delivery of this agreement or the completion of the transaction recorded in this agreement, except for those consents, orders, authorizations, declarations, registrations or approvals which

Handwritten initials and signatures:
AB
msj
K.I.

are contemplated by this agreement or those consents, orders, authorizations, declarations, registrations or approvals that, if not obtained, would not prevent or delay the completion of the transaction or otherwise prevent FIU from performing its obligations under this agreement.

- (l) To the best of its knowledge (after due inquiry), there are no actions, suits, proceedings or investigations commenced, contemplated or threatened against or affecting FIU, at law or in equity, before or by any governmental department, commission, board, bureau, court, agency, arbitrator or instrumentality, domestic, or foreign, of any kind, which would prevent or hinder the consummation of the transaction.
- (m) The board of directors of FIU has unanimously approved a resolution authorising FIU to sign the agreement and to cause the purchaser to enter into this agreement and to consummate the transaction recorded in this agreement.
- (n) There is no fact or circumstance pertaining to the business or affairs of FIU which has not been publicly disclosed by FIU in accordance with applicable corporate and securities legislation and which, if known to the sellers acting as a reasonable man, would be likely to cause the sellers not to enter into this agreement, either on the terms herein set out, or at all.

1 SUMMARY

EXECUTIVE SUMMARY

INTRODUCTION

Scott Wilson Roscoe Postle Associates Inc. (Scott Wilson RPA) was retained by First Uranium Corporation (First Uranium) to revise the January 31, 2007 Technical Report on the proposed Buffelsfontein Tailings Recovery Project (the Project), located near Johannesburg, Republic of South Africa. In January, the report was revised to incorporate the results of the ongoing process selection work and demonstrate the impact of this work on the preliminary economic analysis. The current revision was requested to incorporate the proposed purchase of Mine Waste Solutions (Proprietary) Limited (MWS) into the Technical Report and to demonstrate the impact of the changes in the plan on the preliminary economic analysis. This revised Technical Report conforms to NI 43-101 Standards of Disclosure for Mineral Projects.

First Uranium is a public Canadian company which completed an Initial Public Offering (IPO) and a listing on the Toronto Stock Exchange (TSX) on December 20, 2006. In connection with the IPO, an over-allotment option was exercised on December 29, 2006, resulting in combined net proceeds to the company of \$189 million. First Uranium completed its secondary listing on the Johannesburg Stock Exchange (JSE) on March 30, 2007. The Common Shares are traded on the TSX as FIU and on the JSE as FUM. The funds raised from the IPO are being used to develop the Buffelsfontein Project. In addition, on May 3, 2007, the First Uranium completed an offering of convertible debentures for gross proceeds of C\$150 million. A portion of the proceeds from the convertible debenture offering will be used to fund the development of the Buffelsfontein Project.

Assuming the completion of the MWS acquisition, the Buffelsfontein Project will consist of a uranium and gold recovery plant on the MWS site near the currently operating Buffelsfontein and Hartebeestfontein underground gold mines and mill (collectively, the BGM Underground Mine) to recover gold and uranium from the current

and historic tailings. Simmer & Jack Mines, Limited (Simmers), the owner of the BGM Underground Mine, has entered into an agreement with First Uranium pursuant to which First Uranium may acquire, subject to the satisfaction of certain conditions, the eleven existing tailings dams in the area currently held by Buffelsfontein Gold Mines Limited (BGM), a subsidiary of Simmers, as well as the right to recover uranium and gold from the tailings from the BGM Underground Mine.

On April 4, 2007, First Uranium announced the conditional purchase of MWS, through its wholly owned subsidiary, First Uranium (Proprietary) Limited (FUSA), with payment to be in shares of First Uranium. MWS, through its 100% owned subsidiary Chemwes Limited (Chemwes), operates a 20,000 tpd capacity tailings recovery and gold production plant immediately adjacent to the planned Buffelsfontein operation. Upon closing of the MWS acquisition, First Uranium will become a gold producer effective April 1, 2007, and is revising its plans for the construction of the proposed uranium and gold plants to incorporate the existing MWS facilities and the MWS site. First Uranium will also process tailings obtained in the purchase of MWS. The disclosure in this Technical Report assumes the completion of the MWS acquisition by First Uranium. The MWS acquisition is subject to a number of conditions including, among others, the receipt of required approvals from South African competition authorities, the TSX, the JSE, the South African Reserve Bank, and the South African Department of Minerals and Energy. Subject to the receipt of the requisite approvals, the transaction is expected to close no later than August 31, 2007, with effect as of April 1, 2007. The disclosure in this Technical Report also assumes the completion of the proposed acquisition by First Uranium of the additional small tailings dams, i.e. Harties-Flanagan, Harties-Ellaton, and Harties-NKGE, from an affiliated company.

The Buffelsfontein Project is a proposed uranium and gold tailings recovery operation located in the western portion of the Witwatersrand Basin approximately 160 km from Johannesburg. First Uranium plans to conduct hydraulic mining of thirteen tailings dams on the Buffelsfontein property and two dams on the MWS site, using high pressure water cannons to slurry the tailings which will then be pumped to processing plants for the

recovery of uranium and gold. A third tailings dam on the MWS site, which includes inferred resources, is not included in the production schedule of this assessment. First Uranium will also process the tailings from the ongoing mining operations at the nearby BGM Underground Mine for recovery of uranium and gold. First Uranium's plan for the Buffelsfontein Project is based on the expansion of the MWS gold processing facilities to an ultimate 1.8 million tpm capacity and construction of a uranium recovery plant with an ultimate capacity of 200,000 tpm.

The Project is at the planning stage, with preliminary plans in place. The planned operation will commence as a 600,000 tpm tailings recovery project producing gold from the existing MWS gold plant. An expansion for the gold plant plus the first uranium plant stages will be redesigned to suit the MWS site and the operation will grow in stages to be a nominal 1.8 million tpm tailings recovery project producing an average of 128,000 oz/yr gold and 922,000 lb/yr U₃O₈ in yellowcake over a 16 year production life.

CONCLUSIONS

Based on the Buffelsfontein site visit and review of the available data, Scott Wilson RPA offers the following interpretation and conclusions:

- The mineral resources were estimated using a methodology appropriate for the style of mineralization and in a manner consistent with CIM guidelines. Mineral resources that are not mineral reserves do not have demonstrated economic viability.
- With the closing of the MWS purchase there will be gold production effective April 1, 2007 and the Project has the potential to become a producing gold and uranium operation with a more rapid ramp up of the production rate than previously estimated.
- The selection of pressure leaching is expected to reduce the operating costs in the uranium plant compared to the base case in the December 5, 2006 technical report.
- On a byproduct basis the Total Cash Cost is US\$19 per ounce of gold including a credit of \$359/oz for U₃O₈ revenue. The mine life capital and royalty unit cost is US\$84 per ounce, for a Total Production Cost of US\$103

per ounce of gold. Average annual production during operation is 128,000 ounces of gold and 922,000 pounds of U₃O₈.

- Considering the production as co-products and splitting the costs in proportion to the revenue from each of products, the gold cost is \$220/oz operating plus \$49/oz capital for a total of \$269/oz and the U₃O₈ cost is \$22.10/lb operating and \$4.90/lb capital for a total of \$27.00/lb U₃O₈.
- The Project economics are most sensitive to gold price followed by uranium price, operating costs, and capital costs.
- **The economic analysis contained in this report is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserve development, production and economic forecasts on which this preliminary assessment is based will be realized.**

RECOMMENDATIONS

Scott Wilson RPA recommends that the planning for the development of the Project be advanced. The refinement of estimates in a prefeasibility study is recommended to facilitate a production decision.

The following items are recommended for consideration as part of a prefeasibility study of the Project:

- Additional test drilling to upgrade the inferred mineral resources.
- Detailed review of MWS test work and plant operating data and application of that information to the planned operations.
- More detailed metallurgical testing on material from the various feed sources and the BGM Underground Mine plant tailings. Metallurgical testing should include representative samples of the material to be mined in the initial Project years. The metallurgical testing should also be used to confirm the planned processes and flow sheet selections as well as the assumptions for gold and uranium recovery.
- Complete the detailed analysis of the tailings storage options and selection of a tailings storage area that can handle the scale of operation planned.

- Focus on expediting the construction of the pipeline from the Buffelsfontein dams to the MWS plant site to add extra feed sources as the MWS No. 2 resource is diminishing.
- Review the production schedule with more consideration given to the problems of maintaining a high production rate from some of the smaller feed sources.
- Review the opportunity of increasing the uranium recovery as the uranium price increases. The current sacrifice in recovery is a financial rather than a technical optimization.
- Gold plant expansion and uranium plant design should be advanced together with a more detailed uranium processing plant capital and operating cost estimate.
- A manpower listing with all areas of the operation included.
- The Project schedule should be re-examined and developed in more detail to ensure that critical items are not missed.
- Further work on the sales of uranium concentrate is required to remain assured that a market is available in South Africa or to determine where concentrates may have to be shipped.
- Review the rehabilitation costs to determine whether the current allowance is appropriate:

The estimated cost to complete the recommended work is shown in Table 1-1. The project capital cost estimate includes allowances for engineering work for the Project.

TABLE 1-1 RECOMMENDED WORK PROGRAM COST ESTIMATE
First Uranium Corporation - Buffelsfontein Project

Work item	Cost Estimate \$US
Sampling and analysis to upgrade inferred resources	100,000
Metallurgical testing of representative samples to confirm recovery and flow sheet assumptions	300,000
Complete tailings storage facility selection	50,000
Compilation of prefeasibility study	200,000
Contingency	150,000
TOTAL	750,000

ECONOMIC ANALYSIS

An after-tax Cash Flow Projection has been generated from the Life of Mine production schedule and capital and operating cost estimates, and is summarized in Table 18-6. A summary of the key criteria is provided below.

ECONOMIC CRITERIA

Revenue

- Nominal initial capacity of 20,000 tpd and rising to 60,000 tpd (21.6 million tpa) of reclaimed mine tailings.
- Mill recovery of gold increasing to 68% based upon Mintek leach tests and U₃O₈ recovery of 27% based upon 30% recovery to a flotation concentrate and 90% recovery from the leach concentrate.
- Gold payment is based upon 100% payment less a refining charge of \$120,000 per year plus \$0.50 per ounce.
- Exchange rate US\$1.00 = R7.40.
- Metal price: US\$500 per ounce gold and \$50.00 per pound U₃O₈.
- Revenue is recognized at the time of production.

Costs

- Gold production commences effective April 1, 2007, following the closing of the MWS purchase agreement.
- Mine life: 16 years.
- Life of Mine production plan as summarized in Table 18-1.
- Preproduction capital totals \$151 million including 20% contingency.
- Salvage value of \$6.2 million taken at end of mine life.
- Average operating cost over the mine life is \$2.55 per tonne milled.

CASH FLOW ANALYSIS

Considering the Project on a stand-alone basis, the undiscounted after-tax cash flow totals \$580 million over the mine life, and simple payback occurs at approximately 3.2 years. The LOM production is 2.1 million ounces of gold as doré and 14.7 million pounds of U₃O₈ in yellowcake.

Net Present Value (NPV) at an 8% discount rate is \$295 million and the Internal Rate of Return (IRR) is 69%.

The Total Cash Cost is US\$19 per ounce of gold including a credit of \$359/oz for U₃O₈ revenue. The mine life capital and royalty unit cost is US\$84 per ounce, for a Total Production Cost of US\$103 per ounce of gold. Average annual production during operation is 128,000 ounces of gold and 922,000 pounds of U₃O₈.

Considering the production as co-products and splitting the costs in proportion to the revenue from each of products, the gold cost is \$220/oz operating plus \$49/oz capital for a total of \$269/oz and the U₃O₈ cost is \$22.05/lb operating and \$4.90/lb capital for a total of \$26.95/lb U₃O₈.

The economic analysis contained in this report is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserve development, production and economic forecasts on which this preliminary assessment is based will be realized.

SENSITIVITY ANALYSIS

Project risks can be identified in both economic and non-economic terms. Key economic risks were examined by running cash flow sensitivities to:

- Metal prices, recovery and head grade (gold and uranium)
- Operating costs (Total Cash Cost)

- Preproduction capital costs
- Currency exchange rates

IRR sensitivity over the base case has been calculated for -30% to +30% variations, except for the U_3O_8 price that includes a $\pm 37.5\%$ range. The sensitivities are shown in Figure 1-1 and Table 1-2. The Project is most sensitive to gold grade/price/recovery followed by the exchange rate, then uranium price/grade/recovery, then operating cost, and finally the Project is least sensitive to variations in the capital costs.

The change in the uranium price assumption, increasing from \$40.00 per pound up to \$50.00 per pound resulted in an increase in the IRR from 57% to 69% and increased the 8% NPV from \$237 million to \$295 million.

A case with the MWS No. 5 inferred resource included in the production plan, but with a lower gold recovery reflecting the potential problems in some lower grade areas, added almost three years to the Project life and had an IRR of 68% and an 8% NPV of \$335 million.

TECHNICAL SUMMARY

PROPERTY DESCRIPTION AND LOCATION

The proposed Buffelsfontein Project and the MWS Project are located in the western portion of the Witwatersrand Basin, some 160 km from Johannesburg in the Republic of South Africa. The mine is located in the North West Province approximately eight kilometres from the town of Klerksdorp at Stilfontein.

The Project involves the recovery of gold and uranium from tailings of the BGM operation (the former Buffelsfontein and Hartebeestfontein mines) and the MWS property subsequent to the purchase of MWS by First Uranium. BGM, 100% owned by Simmers, currently holds an old order Mining License ML 4/2001, and includes certain portions of the farms:

1. Mapaiskraal 441 IP
2. Buffelsfontein 443 IP
3. Wildebeestpan 442 IP
4. Stilfontein 401 IP
5. Hartebeestfontein 422 IP
6. Zandpan 423 IP
7. Palmietfontein 403 IP
8. Zuiping 394 IP
9. Grootvaderbosch 470 IP
10. Die Hoek 114 IP
11. Doornkom Oost 447 IP
12. Townlands of Klerksdorp 424 IP

BGM currently holds an old order mining right for the mining of gold at the BGM Underground Mine but not for the mining of the gold and uranium in the tailings dams at Buffelsfontein. BGM filed an application with the South African Department of Minerals and Energy (DME) for a prospecting right (Prospecting Right Application) [Ref No NW 30/5/1/1/2/148] with respect to uranium and other minerals in the Buffelsfontein property and tailings dams in order to secure its priority to such a right. The application was accepted by the DME on 15 November 2006, and is currently being reviewed, by the DME. BGM also filed an application to convert its old order mining right into a new

order mining right on 22 November 2006 [Ref No NW 30/5/1/2/3/2/2/323]. If and when this conversion application is approved, BGM intends to file with the DME one or more applications (which, together with the foregoing conversion application, are collectively referred to herein as the Buffelsfontein Conversion Application) to (i) amend, with effect from the date of conversion, the new order mining right to include the authority to mine for uranium underground and for gold, uranium and other minerals in respect of the tailings; (ii) divide the new order mining right, if granted, into two separate new order mining rights — one in respect of the mining for gold, uranium and other minerals at the BGM Underground Mine and the other, the Buffelsfontein Tailings Mining Right, in respect of the mining of the gold, uranium and other minerals in the Buffelsfontein tailings dams; and (iii) cede the Buffelsfontein Tailings Mining Right, if granted, to First Uranium (Proprietary) Limited (FUSA), a company that is an indirect subsidiary of First Uranium. If and when the Buffelsfontein Conversion Application is approved in full, BGM may withdraw its Prospecting Right Application as it would at that point be superfluous.

FUSA has entered into an agreement (the Buffelsfontein Tailings and Rights Agreement) with BGM pursuant to which, among other things:

- BGM has covenanted to take all necessary steps to obtain all ministerial approvals for the items requested in the Buffelsfontein Conversion Application in order to effect the transfer of the Buffelsfontein Tailings Mining Right to FUSA as soon as possible.
- BGM has agreed to sell to FUSA, upon FUSA's receipt of the Buffelsfontein Tailings Mining Right, the Buffelsfontein and Hartebeestfontein tailings dams and grant to FUSA a right to the tailings arising from BGM's ongoing mining operations at the BGM Underground Mine; and
- BGM will grant a servitude to FUSA for access and egress to BGM's Buffelsfontein property to enable FUSA, its employees, consultants, agents and subcontractors access for purposes of constructing, servicing, and operating the uranium and gold processing plants and tailings pipelines to be built by FUSA.

FUSA and BGM plan to amend the Buffelsfontein Tailings and Mining Right Agreement to include the transfer of three additional tailings dams to FUSA, i.e. Harties-Flanagan, Harties- Ellaton, and Harties-NKGE.

For the above mentioned rights, FUSA will be required to (i) pay a nominal consideration of \$13.50 to BGM (ii) assume the rehabilitation obligation relating to the dams, and (iii) pay to BGM, a 1% royalty plus value-added tax of the gross revenue accrued by FUSA from the sale of uranium, gold, and any other minerals recovered from the tailings. BGM will be responsible for any capital gains tax that may be assessed under the Buffelsfontein Tailings Rights Agreement, up to \$2 million. If such tax exceeds that amount, then BGM will pay any such tax pursuant to the agreement but the royalty will be adjusted accordingly in order that BGM incurs a net capital gains tax cost of no more than \$2 million.

MWS owns 100% of Chemwes, which in turn owns and operates a 20,000 tpd capacity gold recovery plant with the feed for the plant coming from old tailings piles. MWS holds an old order mining licence ML16/2003 valid until February 21, 2008, a Water User Licence [No 23050323] valid until October 20, 2008, and a Certificate of Registration under the National Nuclear Regulator Act, 47 of 1999 ("CoR"). MWS has applied for a prospecting right in respect of uranium, which application was granted on the February 26, 2007, over the Remainder of Portions 15, 21, 48 and 49 of the Farm Stilfontein I.P., and Portion 82 and the Remainder of Portion 24 of the Farm Harteebestfontein 422 I.P. [Ref No NW 30/5/1/1/2/1420]. Certain requirements of the DME remain to be fulfilled before the prospecting may proceed.

The Chemwes property ownership is summarized in Table 1-3.

Scott Wilson RPA has not researched property title or mineral rights for the Project and expresses no opinion as to the ownership status of the property.

There is extensive existing infrastructure in the Project area with a network of roads, electrical power lines, and small towns. The Project will be undertaken on the surface of the current Simmers underground mining and processing operation. There is space for the required works and it may be possible to utilize some of the existing Simmers infrastructure to reduce the costs for the tailings recovery project.

HISTORY

The Buffelsfontein property consists of the Buffelsfontein underground mine and the Hartebeestfontein underground mine. The Buffelsfontein underground mine commenced production in 1954, while production at the Hartebeestfontein underground mine commenced a year later. Randgold & Exploration Company Limited bought the Buffelsfontein Mine from Mining House Gencor and, in September 1997, Durban Roodepoort Deep Group (DRD) was formed when Durban Roodepoort Deep Limited

merged with Blyvooruitzicht Gold Mining Company Limited and Buffelsfontein. In August 1999, DRD bought the Hartebeestfontein mining business from the Anglovaal stable and incorporated it into BGM. DRD's northwest operations (the Buffelsfontein underground mine and the Hartebeestfontein underground mine) were placed under provisional liquidation on March 22, 2005, following continued financial losses and a massive earthquake on March 9, 2005 that caused damage to the No 5 shaft. Simmers acquired the North West Operations in October 2005 and recommenced underground mining operations and the production of gold in the surface concentrator. Both the Buffelsfontein underground mine and the Hartebeestfontein underground mine have produced gold and uranium over periods of the mine life. The uranium plants were closed when the price dropped in the mid 1990s. Both uranium plants have been decommissioned and demolished. BGM has the necessary permits to allow it to mine and produce gold.

The ongoing production activity by BGM and its predecessors has generated a significant amount of underground development and ongoing exploration. The BGM Underground Mine is planned to produce at a rate of approximately 90,000 tpm until approximately 2030 after which only a tail of production is forecast to remain. The surface mineral resources are contained in 12 separate surface tailings dams on the Buffelsfontein property.

MWS was established in 1999 to effect sustainable environmental remediation while, at the same time, reclaiming and reprocessing mine tailings and other waste materials. MWS purchased Chemwes in 2003 as the inaugural project for the reprocessing of tailings. MWS has the surface sources produced by Stilfontein Gold Mine, neighbouring the Buffelsfontein Gold Mine.

From 1979 to 1989, Chemwes operated a uranium plant processing 29.4 M tonnes of tailings and recovering 4,560 tonnes of U_3O_8 . Following the MWS purchase of Chemwes, the plant was converted to a gold tailings treatment plant and commenced operations in 2003, reprocessing tailings from the Stilfontein tailings dams. Up to

December 2006, the Chemwes gold plant had processed 23 million tonnes of tailings and recovered 193,000 ounces of gold with 56.1% recovery of gold from the feed.

GEOLOGY

The Project lies within the Witwatersrand Basin, an Archean (approximately 2.7 billion years) sedimentary basin, whose surface expression is an elongate structure that extends longitudinally for approximately 300 km NE-SW by 100 km NW-SE. It contains an approximately six kilometre thick stratigraphic sequence consisting mainly of quartzites and shales, with minor intermittent volcanic units. The BGM Underground Mine is located in the Klerksdorp Goldfield and the mineralization is hosted by the Central Rand Group, the upper unit of the Witwatersrand Supergroup. This unit has produced the majority of the gold from the Witwatersrand Basin, and is composed predominantly of quartzite with subordinate zones of conglomerate and a single argillite horizon, i.e., the Booyens Shale Formation. Economic gold and uranium mineralization at Buffelsfontein is hosted by the Vaal Reef, an oligomictic, pebbly, quartz arenite bed, deposited approximately 2.5 billion years ago. In the Hartebeestfontein underground mine, dips vary from shallow to 45°. The depth of the Vaal Reef varies between 800 m and 2,500 m due to the displacement by faults and dykes that also cause rock mechanics problems. Structural geological complexity decreases from east to west, as do the gold grades. In the Buffelsfontein underground mine, dips average 25°. The structural geology is complex, with fault displacements of 800 m to 1,000 m. A thrust fault has caused triplication of the reef in the central area of the Buffelsfontein underground mine.

MINERAL RESOURCES AND RESERVES

The mineral resources in the 15 tailings dams have been estimated based on auger hole data sampled on 1.5 m vertical intervals. In Scott Wilson RPA's opinion, the mineral resources were estimated using a methodology appropriate for the style of mineralization and within the CIM guidelines for mineral resource estimation. The mineral resources are summarized in Table 1-4.

TABLE 1-4 MINERAL RESOURCES - TAILINGS DAMS

Notes:

1. CIM definitions were followed for mineral resources.
2. A zero grade cut-off grade was used.
3. Rows and columns may not add exactly due to rounding.
4. Preliminary metallurgical test results indicate that recoveries will be approximately 27% for uranium and 68% for gold.
5. Mineral resources that are not mineral reserves do not have demonstrated economic viability.
6. The MWS mineral resource estimate assumes the completion of the MWS acquisition by First Uranium.
7. Harties-Flanagan, Harties-Ellaton, and Harties-NKGE are proposed to be acquired by First Uranium from BGM pursuant to an amendment to the Buffelsfontein Tailings Rights Agreement.

Experience from other tailings recovery projects in the area indicates that 100% mining recovery is achievable.

There are currently no mineral reserves as defined by NI43-101. First Uranium plans to upgrade the inferred mineral resources to at least indicated mineral resources by conducting additional verification drilling. First Uranium also plans to conduct further metallurgical testwork and capital and operating cost estimates to pre-feasibility accuracy and thereby convert the measured and indicated mineral resources to proven and probable mineral reserves. The estimated date for completion of the foregoing work is the end of July 2007.

In addition to the resources summarized in Table 1-4, tailings from the BGM Underground Mine will also be processed. Current measured and indicated mineral resources at the BGM Underground Mine are 36.2 Mt, grading 9.7 g/t Au and 0.019% U₃O₈. Inferred resources are estimated at 11.4 Mt grading 8.5 g/t Au. The BGM Underground Mine mineral resources were estimated by Geologix MRC (Pty) Ltd. (Geologix) and audited by Minxcon, both independent South African geology and mining consulting companies, using "Competent Persons" as defined by the "South African Code for Reporting of Mineral Resources and Mineral Reserves" (SAMREC). Over the Project life, the BGM plant is expected to produce some 18 million tonnes of tailings (Minxcon). From these tailings the Project will generate 3.3 million tonnes of flotation concentrates to be combined with the flotation concentrate from the slimes and treated for uranium recovery.

MINING OPERATIONS

The slimes will ultimately be recovered at the rate of approximately 60,000 tpd using high pressure water cannons with 4 in. and 6 in. nozzles. The pulp will be screened to remove trash and coarse material at the dam. The screened slurry will then be pumped to the plant. Most of the water required for the process will be used at this stage.

PROCESSING OPERATIONS

Initially the recovery of gold and uranium was forecast based upon laboratory testing. Assuming the completion of the purchase of MWS, the Project will have access to the

historical information related to the performance of the MWS plant for gold recovery. The MWS gold recovery has averaged 56.1% from the start of production to December 31, 2006.

The recovery of gold and U_3O_8 for the Project was estimated based upon laboratory test work carried out by Mintek on a sample from the Buffelsfontein No. 2 dam. Attempts to make a suitable gold flotation concentrate were not successful. The preferred gold recovery process was by cyanidation with 68% recovery from the gold plant feed. The forecast is for 56% recovery from the U_3O_8 flotation tails and a further 12% from the U_3O_8 processing residues, based upon the gold leach tests. There was no specific test work on the BGM Underground Mine tailings.

U_3O_8 will be recovered by flotation of a concentrate from the recovered tailings that will account for 10% of the mass with 30% recovery of U_3O_8 . Leach testing in the Mintek laboratory indicates that 90% recovery of U_3O_8 from the flotation concentrate can be attained. Leaching was tested over a range of feed grades and at atmospheric and pressurized conditions.

The BGM Underground Mine tailings will be subjected to flotation to provide feed for the uranium recovery circuit and, in this case, the concentrate is forecast to be 20% by weight of the BGM Underground Mine tailings with 50% recovery of the uranium in the BGM Underground Mine tailings. These two flotation concentrates will be subjected to pressure leaching for recovery of 90% of the contained U_3O_8 . The U_3O_8 will then be precipitated, dried, and packed for sale. The residue will be partially neutralized by the flotation tails to liberate some of the coated gold and then conditioned for the gold circuit with lime and sent to the gold recovery circuit.

The gold recovery will be by cyanidation in a CIL circuit. The gold will be stripped from the carbon, electronwon and smelted as doré bars for shipment to a refinery.

Tailings from the plant will be directed to a newly constructed tailings storage facility that will be designed to meet the final closure requirements.

ENVIRONMENTAL CONSIDERATIONS

The permits required for mining operation are:

- Mining Right from the South African Department of Minerals and Energy (DME)
- Water Licence from the South African Department of Water Affairs and Forestry
- Certificate of Registration for uranium processing from the South African National Nuclear Regulator

BGM has an old order mining right to mine the area occupied by the old Buffelsfontein underground mine and the Hartebeestfontein underground mine (ML. 4/2001). BGM Underground Mine has an Environmental Management Plan, approved in August 2002 by the DME, that includes retreatment of the tailings dams. In connection with the Buffelsfontein Conversion Application, which is being made as part of an effort to obtain and transfer to First Uranium (indirectly) the necessary mining rights in order to carry out the Project and in part in response to the requirement that BGM faces to convert its old order mineral rights to new order mining rights by 2009 in line with Mineral and Petroleum Resources Development Act (MPRDA) (Act 28 of 2002), resubmission of the Environmental Management Plan will be required.

BGM has been issued a Certificate of Registration (Ref No COR 182B001) in respect of its existing mining operations.

CAPITAL AND OPERATING COSTS

Assuming the completion of the MWS acquisition, the estimated preproduction capital cost of the Project is \$151 million including a 20% contingency. The preproduction period is two years. The operating cost is estimated at \$2.55 per tonne processed.

2 INTRODUCTION AND TERMS OF REFERENCE

Scott Wilson Roscoe Postle Associates Inc. (Scott Wilson RPA) was retained by First Uranium Corporation (First Uranium) to revise the January 31, 2007 Technical Report on the proposed Buffelsfontein Tailings Recovery Project (the Project), located near Johannesburg, Republic of South Africa. The purpose of the revision to the report is to incorporate the proposed purchase of Mine Waste Solutions (MWS) and to demonstrate the impact of the changes in the plan on the preliminary economic assessment. This Technical Report conforms to NI 43-101 Standards of Disclosure for Mineral Projects. Scott Wilson RPA visited the Project from August 23 to 25, 2006 and subsequently from February 20 to 21, 2007.

First Uranium is a public Canadian company which completed an Initial Public Offering (IPO) and a listing on the Toronto Stock Exchange (TSX) on December 20, 2006. In connection with the IPO, an over-allotment option was exercised on December 29, 2006, resulting in combined net proceeds to the company of \$189 million. First Uranium completed its secondary listing on the Johannesburg Stock Exchange (JSE) on March 30, 2007. The Common Shares are traded on the TSX as FIU and on the JSE as FUM. The funds raised from the IPO are being used to develop the Buffelsfontein Project. In addition, on May 3, 2007, First Uranium completed an offering of convertible debentures for gross proceeds of C\$150 million. A portion of the proceeds from the convertible debenture offering will be used to fund the development of the Buffelsfontein Project.

Assuming the completion of the MWS acquisition, the Buffelsfontein Project will consist of a uranium and gold recovery plant adjacent to the currently operating Buffelsfontein and Hartebeestfontein underground gold mines and mill (collectively, the BGM Underground Mine) to recover gold and uranium from the current and historic tailings. Simmer & Jack Mines, Limited (Simmers), the owner of the BGM Underground Mine, has entered into an agreement with First Uranium pursuant to which First Uranium

may acquire, subject to the satisfaction of certain conditions, the eleven existing tailings dams in the area currently held by Buffelsfontein Gold Mines Limited (BGM), a subsidiary of Simmers, as well as the right to recover uranium and gold from the tailings from the BGM Underground Mine. First Uranium has purchased all of the shares of MWS, the owner and operator of a 20,000 tpd capacity tailings recovery and gold production operation. First Uranium will use the gold plant as the first phase of the planned operation and construct an expansion of the gold plant and a uranium production plant on the MWS site.

On April 4, 2007, First Uranium announced the conditional purchase of MWS, through its wholly owned subsidiary, First Uranium (Proprietary) Limited (FUSA), with payment to be in shares of First Uranium. MWS, through its 100% owned subsidiary Chemwes Limited (Chemwes), operates a 20,000 tpd capacity tailings recovery and gold production plant immediately adjacent to the planned Buffelsfontein operation. Upon closing of the MWS acquisition, First Uranium will become a gold producer effective April 1, 2007, and is revising its plans for the construction of the proposed uranium and gold plants to incorporate the existing MWS facilities and the MWS site. First Uranium will also process tailings obtained in the purchase of MWS. The disclosure in this Technical Report assumes the completion of the MWS acquisition by First Uranium. The MWS acquisition is subject to a number of conditions including, among others, the receipt of required approvals from South African competition authorities, the TSX, the JSE, the South African Reserve Bank, and the South African Department of Minerals and Energy. Subject to the receipt of the requisite approvals, the transaction is expected to close no later than August 31, 2007, with effect as of April 1, 2007. The disclosure in this Technical Report also assumes the completion of the proposed acquisition by First Uranium of the additional small tailings dams, i.e. Harties-Flanagan, Harties-Ellaton, and Harties-NKGE, from an affiliated company.

The Buffelsfontein Project is a proposed uranium and gold tailings recovery operation located in the western portion of the Witwatersrand Basin approximately 160 km from Johannesburg. First Uranium plans to conduct hydraulic mining of thirteen tailings dams

on the Buffelsfontein property and two dams on the MWS site, using high pressure water cannons to slurry the tailings which will then be pumped to processing plants for the recovery of uranium and gold. A third tailings dam on the MWS site, which includes inferred resources, is not included in the production schedule of this assessment. First Uranium will also be entitled to the tailings from the ongoing mining operations at the nearby BGM Underground Mine (currently producing at a rate of approximately 90,000 tpm) operated by BGM. The mine plan for the Buffelsfontein Project is based on the construction of a gold plant built in stages to a 1.8 million tpm capacity and a uranium plant with a capacity of 200,000 tpm.

The Project is at the planning stage, with preliminary plans in place. The planned operation will commence as a 600,000 tpm tailings recovery project, with a gold processing plant (the MWS operation) growing in stages to a 1.8 million tpm tailings recovery project producing an average of 130,000 oz/yr gold and 927,000 lb/yr U₃O₈ in yellowcake over a 16 year production life.

Currently, the major assets and facilities associated with the Project are:

- Gold and uranium resource within some 363 million tonnes of tailings contained in historical tailings facilities on the Buffelsfontein and MWS properties. The tailings will be processed to produce gold and uranium for First Uranium's account.
- Uranium and gold available for recovery from the tailings from the BGM Underground Mine.
- An operating 20,000 tpd gold recovery plant reclaiming mine tailings for the production of gold.
- An agreement with Simmers that will permit operations using some of BGM existing infrastructure and provide space on the existing surface of the BGM site for the processing plant and new tailings storage installations. First Uranium will in turn be responsible for the closure of the surface facilities after operations are complete.
- Access roads to the site.
- Additional MWS assets including (assuming the completion of the MWS acquisition):

- Licences and permits for mining, uranium processing, and water use.
- Tailings storage area.
- Unlined return water/evaporation dam.
- Office block and administration buildings.
- Houses west of the plant.
- Associated pipeline, roads power lines.
- Guard house and parking area.
- Portions of land that have been rehabilitated and are at present under care and maintenance.
- Margaret Shaft married quarters.
- Old Stilfontein offices.

First Uranium will utilize funds from its IPO and recent convertible debenture to construct gold and uranium process plants at the Project.

This report is considered by Scott Wilson RPA to meet the requirements of a Preliminary Assessment as defined in Canadian NI43-101 regulations. **The economic analysis contained in this report is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserve development, production, and economic forecasts on which this preliminary assessment is based will be realized.**

SOURCES OF INFORMATION

Site visits were carried out by Wayne W. Valliant, P.Geo., Principal Geologist with Scott Wilson RPA, and R. Dennis Bergen, P.Eng., Associate Mining Engineer with Scott Wilson RPA, from August 23 to 25, 2006. The site visit included the existing process plant facilities and a drive-by of the tailings piles. The site visit also included a tour of the MWS tailings recovery and treatment facility. Wayne W Valliant, P. Geo., subsequently visited the site, including the Buffelsfontein underground mine, from February 21 to 22, 2007.

Discussions were held with personnel from Simmers, their consultants, and the plant manager of an adjacent tailings recovery project:

- Jim Fisher, COO of First Uranium, prior to IPO with Simmer and Jack Mines Ltd.
- Roland Freeman, Group Consulting Engineer, Simmer and Jack Mines Ltd.
- Daan Van Heerden, Director, Minxcon (Pty) Ltd.
- Dr. Johan Fourie, Environmental Engineer
- Michel Boylett, Consulting metallurgist, Auetal CC
- Mike Valenta, Metallicon Process Consulting (Pty) Ltd.
- Hennie Bezuidenhout, Project Manager, RSV MISYM Engineering Services (Pty) (K'Enyuka)
- Rein Koelmans, Read, Swatman & Voigt
- Ian Matthews, Plant Manager, Chemwes (Pty) Limited
- Corné Fourie, LQS

Mr. Valliant prepared Items 7 to 15 and 17 and parts of Items 1, 2, 19, and 20 and Mr. Bergen prepared Items 3 to 6, 16, and 18 and parts of Items 1, 2, 19, and 20.

The documentation reviewed, and other sources of information, are listed at the end of this report in Item 21 References.

3 RELIANCE ON OTHER EXPERTS

This report has been prepared by Scott Wilson Roscoe Postle Associates Inc. (Scott Wilson RPA) for First Uranium Corporation (First Uranium). The information, conclusions, opinions, and estimates contained herein are based on:

- Information available to Scott Wilson RPA at the time of preparation of this report,
- Assumptions, conditions, and qualifications as set forth in this report, and
- Data, reports, and other information supplied First Uranium and other third party sources.

For the purpose of this report, Scott Wilson RPA has relied on ownership information provided by First Uranium. Scott Wilson RPA has not researched property title or mineral rights for the Project and expresses no opinion as to the ownership status of the property.

4 PROPERTY DESCRIPTION AND LOCATION

PROPERTY DESCRIPTION

The Buffelsfontein Project and the MWS project are located in the western portion of the Witwatersrand Basin, some 160 km from Johannesburg in the Republic of South Africa. The mines are located in the North West Province approximately eight kilometres from the town of Klerksdorp at Stilfontein as illustrated in Figures 4-1 and 4-2. The location of the tailings dams proposed for recovery is illustrated in Figure 4-3. The location of the MWS facilities in relation to the Buffelsfontein tailings dams are shown in Figure 4-4.

The MWS operations are located due east of the town of Stilfontein on either side of the N12 highway between Johannesburg and Klerksdorp. The operations are situated on portions of the farms Stilfontein 408IP and Hartebeestfontein 422IP.

The MWS operations involve the hydraulic mining of old tailings dams, pumping the slurry to a CIL plant at a rate of 600,000 tpm, and then depositing the treated tailings onto a new tailings dam. Water for the operations is obtained from Margaret shaft dewatering and from the Midvaal Water Company.

The hydraulic mining and the management of the MWS tailings dam is undertaken by Fraser Alexander Tailings (Proprietary) Limited (Fraser Alexander) on contract to MWS. Fraser Alexander is also responsible for the rehabilitation of the footprint of the mined tailings dams and the closure of the resulting two tailings dams form the retreatment process.

First Uranium will operate on land obtained under agreement with BGM and on a property to be purchased pursuant to the MWS acquisition.

Mining Areas**

LAND TENURE***BUFFELSFONTEIN***

BGM owns the Buffelsfontein Underground Mine and the Hartebeestfontein gold mines. BGM is 100% owned by Simmers.

Simmers meets the Black Economic Empowerment (BEE) criteria of the Mining Charter and the Minerals and Petroleum Resources Development Act of 2002, based upon the decision of the DME to grant new order mining rights to Simmers. Simmers is also in receipt of a rating report ascertaining its BEE status as of December 31, 2006.

There are several additional contracts to be negotiated. They are:

- A marketing agreement where FUSA will appoint a third party to market and sell the uranium produced by the Project;
- A lease agreement whereby BGM will lease land to FUSA to enable FUSA to extract uranium and gold for FUSA's benefit from the tailings

Simmers is party to a loan agreement (the Aberdeen Loan Agreement) with Aberdeen International Inc. (Aberdeen) dated March 30, 2006 pursuant to which Aberdeen provided to Simmers a loan facility in the amount of up to \$10 million in respect of the financing of Simmers' acquisition of BGM and the BGM Underground Mine. As part of the consideration for the facility, Simmers granted to Aberdeen a net smelter royalty on all of the gold assets held by Simmers through BGM, which royalty is calculated on a graduated basis with reference to the price of gold. For instance, assuming a price of gold of \$600, Aberdeen is entitled to a net smelter royalty of 3.25%. This royalty will be applicable to any gold produced by FUSA pursuant to the Buffelsfontein Project and will continue until the loan is repaid to Aberdeen, which is expected to occur by December 31, 2008 (unless extended by Simmers to December 31, 2010). In addition, pursuant to the Aberdeen Loan Agreement, Aberdeen has the sole option, at any time following the one year anniversary of the first advance thereunder, to convert the amount of the facility outstanding at that time into ordinary shares of Simmers at a conversion rate of R0.80, subject to the approval of Simmers' shareholders. In the event that such shareholder approval is not obtained within a reasonable period of time, Aberdeen shall be entitled to a 1.0% net smelter royalty in perpetuity on gold produced by properties held by BGM,

including the Buffelsfontein Project. The economic analysis included in this report assumes no extension by Simmers of the loan facility and, therefore, an ongoing net smelter royalty after 2008 of 1.0% on gold produced from the Buffelsfontein Project.

BGM, 100% owned by Simmers, currently holds an old order Mining Licence ML 4/2001, and includes certain portions of the farms:

1. Mapaiskraal 441 IP
2. Buffelsfontein 443 IP
3. Wildebeestpan 442 IP
4. Stilfontein 401 IP
5. Hartebeestfontein 422 IP
6. Zandpan 423 IP
7. Palmietfontein 403 IP
8. Zuiping 394 IP
9. Grootvaderbosch 470 IP
10. Die Hoek 114 IP
11. Doornkom Oost 447 IP
12. Townlands of Klerksdorp 424 IP

BGM currently holds an old order mining right for the mining of gold at the BGM Underground Mine but not for the mining of the gold and uranium in the tailings dams at Buffelsfontein. BGM filed an application with the DME for a prospecting right (Prospecting Right Application)[Ref No NW 30/5/1/1/2/148] with respect to uranium and other minerals in the Buffelsfontein property and tailings dams in order to secure its priority to such a right. The application was accepted by the DME on November 15, 2006, and is currently being reviewed, by the DME. BGM also filed an application to convert its old order mining right into a new order mining right on November 22, 2006 [Ref No NW 30/5/1/2/3/2/2/323]. If and when this conversion application is approved, BGM intends to file with the DME one or more applications (which, together with the foregoing conversion application, are collectively referred to herein as the Buffelsfontein Conversion Application) to (i) amend, with effect from the date of conversion, the new order mining right to include the authority to mine for uranium underground and for gold, uranium and other minerals in respect of the tailings; (ii) divide the new order mining right, if granted, into two separate new order mining rights — one in respect of the mining for gold, uranium and other minerals at the BGM Underground Mine and the other, the Buffelsfontein Tailings Mining Right, in respect of the mining of the gold,

uranium and other minerals in the Buffelsfontein tailings dams; and (iii) cede the Buffelsfontein Tailings Mining Right, if granted, to FUSA, a company that is an indirect subsidiary of First Uranium. If and when the Buffelsfontein Conversion Application is approved in full, BGM may withdraw its Prospecting Right Application as it would at that point be superfluous.

FUSA has entered into an agreement (the Buffelsfontein Tailings and Rights Agreement) with BGM pursuant to which, among other things:

- BGM has covenanted to take all necessary steps to obtain all ministerial approvals for the items requested in the Buffelsfontein Conversion Application in order to effect the transfer of the Buffelsfontein Tailings Mining Right to FUSA as soon as possible.
- BGM has agreed to sell to FUSA, upon FUSA's receipt of the Buffelsfontein Tailings Mining Right, the Buffelsfontein and Hartebeestfontein tailings dams and grant to FUSA a right to the tailings arising from BGM's ongoing mining operations at the BGM Underground Mine; and
- BGM will grant a servitude to FUSA for access and egress to BGM's Buffelsfontein property to enable FUSA, its employees, consultants, agents and subcontractors access for purposes of constructing, servicing, and operating the uranium and gold processing plants and tailings pipelines to be built by FUSA.

FUSA and BGM plan to amend the Buffelsfontein Tailings and Mining Right Agreement to include the transfer of three additional tailings dams to FUSA, i.e. Harties-Flanagan, Harties- Ellaton, and Harties-NKGE.

For the above mentioned rights, FUSA will be required to (i) pay a nominal consideration of \$13.50 to BGM (ii) assume the rehabilitation obligation relating to the dams, and (iii) pay to BGM, a 1% royalty plus value-added tax of the gross revenue accrued by FUSA from the sale of uranium, gold, and any other minerals recovered from the tailings. BGM will be responsible for any capital gains tax that may be assessed under the Buffelsfontein Tailings Rights Agreement, up to \$2 million. If such tax exceeds that amount, then BGM will pay any such tax pursuant to the agreement but the royalty will be adjusted accordingly in order that BGM incurs a net capital gains tax cost of no more than \$2 million.

As noted above, BGM has an old order mining right to mine the lease area occupied by the old Buffelsfontein underground and the Hartebeestfontein underground mine (ML 4/2001). BGM Underground Mine has an Environmental Management Plan, approved in August 2002 by the DME, that includes retreatment of the tailings dams. In connection with the Buffelsfontein Conversion Application, which is being made as part of an effort to obtain and transfer to First Uranium (indirectly) the necessary mining rights in order to carry out the Project and in part in response to the requirement that BGM faces to convert its old order mineral rights to new order mining rights by 2008 in line with MPRDA, resubmission of the Environmental Management Plan will be required. The conditions set out by the DME for this conversion are currently met by the mine. BGM has been issued a Certificate of Registration (Ref No COR 182B001) in respect of its existing mining operations.

MINE WASTE SOLUTIONS

On April 4, 2007, First Uranium announced the purchase of MWS, through its wholly owned subsidiary, First Uranium (Proprietary) Limited (FUSA), with payment to be in shares of First Uranium. MWS, through its 100% owned subsidiary Chemwes Limited (Chemwes), operates a 20,000 tpd capacity tailings recovery and gold production plant immediately adjacent to the planned Buffelsfontein operation. Upon closing, First Uranium will become a gold producer effective April 1, 2007, and is revising its plans for the construction of the proposed uranium and gold plants to incorporate the existing MWS facilities and the MWS site. First Uranium will also process tailings obtained in the purchase of MWS. The disclosure in this Technical Report assumes the completion of the MWS acquisition by First Uranium. The MWS acquisition is subject to a number of conditions including, among others, the receipt of required approvals from South African competition authorities, the TSX, the JSE, the South African Reserve Bank, and the South African Department of Minerals and Energy. Subject to the receipt of the requisite approvals, the transaction is expected to close no later than August 31, 2007, with effect as of April 1, 2007.

The Chemwes property ownership is summarized in Table 4-1.

TABLE 4-1 CHEMWES PROPERTIES
First Uranium Corporation - Buffelsfontein Project

B. DAMS AND SLIMES DAMS

Dam	Description	Area, ha	Comment
CHARLES DAM	Portion 21 of the Farm Stilfontein No 408 I.P.		
KOEKEMOER DAM	Portion 24 of the Farm Hartebeestfontein No. 422 I.P.		
MARGARET DAM	The Remainder of Portion 30 of the Farm Stilfontein No. 408 I.P.	3.3167	As per descriptions which the land surveyor prepared pursuant to the Trakprops agreement
	The Remainder Portion 24 of the Farm Hartebeestfontein No. 422 I.P.	37.5878	
SCOTT DAM	The Remainder Portion 24 of the Farm Hartebeestfontein No 422 I.P.	18.7838	As per the descriptions which the land surveyor prepared pursuant to the Trakprops agreement
SLIMES DAM	The Remainder Portion 15 of the Farm Stilfontein No. 408 I.P.	65.2511	As per the description which the land surveyor prepared pursuant to the Trakprops agreement
	The Remainder Portion 49 of the Farm Stilfontein No. 408 I.P.	39.2890	
Other	Slimes dams are also present on the Remainder of Portions 10, 31, 46 and 66 of the Farm Stilfontein No. 408 I.P.		

MWS has applied for a prospecting right in respect of uranium, which application was granted on February 26, 2007, over the Remainder of Portions 15, 21, 48 and 49 of the Farm Stilfontein I.P., and Portion 82 and the Remainder of Portion 24 of the Farm Hartebeestfontein 422 I.P [Ref No NW 30/5/1/1/2/1420]. Certain requirements of the DME remain to be fulfilled before the prospecting may proceed.

MWS holds a Water User Licence (No 23050323) for disposing of waste in a manner which may detrimentally impact on a water resource. This licence was issued on 21 October 2002. This licence applies to Portions 48, 49, 66, 67, and remaining extents of portions 10, 15, 21, 24, 30, 31, and 33 of the farm Stilfontein 408 IP. The licence expires on October 20, 2008.

MWS purchases water from Midvaal and Stilfontein Gold Mine Limited (Margaret Shaft), both of which have licences to dispose of water to third party users. A contract is in place between MWS and Stilfontein for the purchase of water, which contract will be the subject of renegotiation once the issue of Stilfontein's liquidation and the Klerksdorp, Orkney, Stilfontein and Hartebeestfontein (KOSH) water forum is finalized. The likely outcome is that the water price to MWS may increase to a rate more aligned to the price of extraction.

CERTIFICATE OF REGISTRATION

A CoR is required to operate a uranium recovery processing operation. MWS has been issued a Certificate of Registration (CoR 36) dated July 3, 2003, which authorizes MWS to operate a nuclear facility (as defined). Fourteen procedures have been identified and the required documentation approved. If an additional plant is built additional procedures will have to be identified and also approved. Application will be made to extend this CoR to include the BGM existing tailings dams and the tailings from the BGM Underground Mine. Concurrently, an application will be made to exclude those areas from the CoR issued to BGM, subject to the extension of the CoR issued to MWS.

ENVIRONMENTAL MANAGEMENT PLAN

Any variations to the existing operations will require an amendment to the existing Environmental Management Plan.

MINING RIGHT

An application for the conversion of the existing old order mining right to a new order right in terms of the MPRDA will be made.

ROYALTY

A revised Mineral and Petroleum Royalty Bill (the Bill) was recently published by the South African government for comment. The Bill was open for comment until January 31, 2007. The National Treasury of South Africa is currently reviewing comments

submitted by interested parties. It is anticipated that royalties to the state would not become payable until 2009. First Uranium has not included an allowance for any royalty in their economic assessments.

Scott Wilson RPA has not researched property title or mineral rights for the Project and expresses no opinion as to the ownership status of the property. The legal due diligence on the documents that describe these rights was not conducted by Scott Wilson RPA.

5 ACCESSIBILITY, CLIMATE, LOCAL RESOURCES, INFRASTRUCTURE AND PHYSIOGRAPHY

ACCESSIBILITY

The Buffelsfontein and MWS properties are accessed by paved roads from Johannesburg. The properties are adjacent to each other and are located near the town of Stilfontein some 160 km to the south west of Johannesburg. The sites are accessed by the N12 highway. The properties are located in the western portion of the Witwatersrand Basin.

CLIMATE

The climate is typical of continental plateaus, with a wide diurnal temperature range which reaches a maximum of 19°C in the dry winter months. Winters are cold, with severe frost, and summers are hot. There are on average 61 days annually with temperatures above 30°C and 41 days with temperatures below 0 °C.

Prevailing winds are northerly, with a mean wind speed (excluding calms) of 20 km/h. There are on average 73 thunderstorms annually. Snow is recorded on average in three years out of 10. Snow falls are light, hail can be heavy.

The rainy season peaks in January. The annual rainfall is 625 mm. Heavy rains have occurred in the past, with 140 mm being recorded on a single day. The 50 and 100 year maximum 24 hour rainfall are 131 mm and 151 mm, respectively.

Climatic conditions do not impose any special construction restrictions and are such that many plants and processing facilities have only light or partial structures over top. Older offices do not have central heating facilities.

LOCAL RESOURCES

The Witwatersrand Basin is a famous gold mining area with a number of producing mines and past producers. Mine suppliers and contractors are available locally, and experienced and general labour is available in the mine area.

INFRASTRUCTURE

There is extensive existing infrastructure in the Project area with a network of roads, electrical power lines, and small towns. The Project will be undertaken on the surface of the current BGM underground mining and processing operation. There is space for the required works and it may be possible to utilize some of the existing BGM infrastructure to reduce the costs for the tailings recovery project.

PHYSIOGRAPHY

The topography is gentle and is characterized by grasses. There are many open spaces and a number of mines in the area with existing tailings impoundments, head gear, and processing facilities.

6 HISTORY

BUFFELSFONTEIN

The Buffelsfontein property consists of the Buffelsfontein Mine (also referred to as the South Division) and the Hartebeestfontein Mine (now known as the North Division). The Buffelsfontein Mine commenced production in 1954, while production at Hartebeestfontein commenced a year later. Randgold & Exploration Company Limited bought Buffelsfontein Mine from Mining House Gencor and, in September 1997, Durban Roodepoort Deep Group (DRD) was formed when Durban Roodepoort Deep Limited merged with Blyvooruitzicht Gold Mining Company Limited and Buffelsfontein Gold Mines Limited. In August 1999, DRD bought the Hartebeestfontein mining business from the Anglovaal stable and incorporated it into BGM.

DRD's northwest operations (Buffelsfontein and Hartebeestfontein) were placed under provisional liquidation on March 22, 2005, following continued financial losses and a massive earthquake on March 9, 2005, which caused damage to the No 5 shaft.

In October 2005, Simmers purchased BGM (formerly DRD Gold's North West Operations), consisting of the Buffelsfontein Mine and Hartebeestfontein underground mines, out of provisional liquidation (the Buffelsfontein Liquidation Acquisition). The total acquisition cost was approximately \$13.5 million, consisting of a purchase price of \$6.1 million, \$4.4 million in restart costs, as well as holding costs of \$4.1 million incurred while operating as the preferred bidder on behalf of the provisional liquidators. Simmers shortly thereafter recommenced mining operations at the BGM Underground Mine and the production of gold in the surface concentrator.

Both of the Buffelsfontein Mine and the Hartebeestfontein Mine have produced gold and uranium over periods of the mine life. The uranium plants were closed when the price dropped in the mid-1990s. Both uranium plants have been decommissioned and demolished.

The ongoing production activity by BGM and its predecessors has generated a significant amount of underground development and ongoing exploration. The BGM Underground Mine is planned to produce at a rate of approximately 90,000 tpm until approximately 2030, after which only a tail of production is forecast to remain. The underground operation is not formally included within the scope of this report. However, as it will contribute tailings to the retreatment plant, it has been given a cursory review.

A 2006 independent audit of the underground and surface mineral resources was prepared by Minxcon (Proprietary) Ltd. (Minxcon), an independent South African geology and mining consulting company, and is described in Item 17 of this report.

The surface mineral resources are contained in 15 separate surface tailings dams on the Buffelsfontein property.

While the Buffelsfontein property has a history of production, it is mostly from primary processing and not from the reclaiming and reprocessing of slimes. However, there have been some successful tailings reprocessing operations in the area including the Chemwes operation (20,000 tpd) on the Stilfontein tailings now under a purchase agreement with First Uranium.

The tailings resources of the Buffelsfontein Project as at April 2006 are shown below in Table 6-1.

TABLE 6-1 MINERAL RESOURCES - TAILINGS DAMS – APRIL 2006
First Uranium Corporation - Buffelsfontein Project

	Tonnes (t 000's)	Gold Grade (g/t)	U ₃ O ₈ Grade (%)	Cont. Gold (oz 000's)	Cont. U ₃ O ₈ (lb 000's)
Measured					
Buffels 2	23,700	0.40	0.0087	301	4,544
Buffels 3	29,400	0.35	0.0103	335	6,674
Buffels 4	16,380	0.38	0.0102	202	3,682
Buffels 5	45,584	0.21	0.0062	306	6,229
Total	115,064	0.31	0.0083	1,144	21,130
Indicated					
Harties 1	92,576	0.32	0.0061	941	12,446
Harties 2	35,640	0.31	0.0058	354	4,556
Harties 5	23,133	0.31	0.0053	228	2,702
Harties 6	14,604	0.22	0.0059	105	1,899
Total	165,953	0.31	0.0059	1,628	21,603
Total Meas + Indic	281,017	0.31	0.0069	2,772	42,733
Inferred					
Harties 7	1,740	0.54	0.0243	30	932

Notes:

1. CIM definitions were followed for mineral resources.
2. A zero grade cut-off grade was used.
3. Rows and columns may not add exactly due to rounding.
4. Preliminary metallurgical test results indicate that recoveries will be approximately 27% for uranium and 68% for gold.
5. Mineral resources that are not mineral reserves do not have demonstrated economic viability.

MINE WASTE SOLUTIONS

MWS was established in 1999 to effect sustainable environmental remediation while, at the same time, reclaiming and reprocessing mine tailings and other waste materials. MWS purchased the shares of Chemwes in 2003 as the inaugural project for the reprocessing of tailings. Chemwes is a wholly owned subsidiary of MWS. MWS has the surface sources produced by Stilfontein Gold Mine, neighbouring the BGM Underground Mine.

The Chemwes operation commenced as a uranium recovery operation based upon the Stilfontein Gold Mines (Stilfontein) tailings. Stilfontein commenced operations as a gold mine in 1952 and had a primary uranium processing operation from 1953 to 1961. The Stilfontein uranium plant was demolished in 1993–1994.

In the 1970s, the price of uranium rose and the recovery of uranium from the Stilfontein tailings (and other tailings in the area) was investigated. Following laboratory test work, the Chemwes uranium plant was commissioned in mid-1979 and operated until 1989, processing 29.4 M tonnes of tailings and recovering 4,560 tonnes of U_3O_8 .

Following the MWS purchase of Chemwes, the plant was converted to a gold tailings treatment plant and commenced operations in 2003. The production statistics compared to the initial feasibility study are shown in Table 6-2.

**TABLE 6-2 PRODUCTION STATISTICS AS AT END DECEMBER 2006 –
ACTUAL VS. ORIGINAL FEASIBILITY STUDY
First Uranium Corporation - Buffelsfontein Project**

Description	Production as at end December 2006	Original Feasibility Study Model	% Variance
Tonnage Reclaimed – Tons	22,953,304	22,664,860	1.27%
Grade Reclaimed – g/t	0.465	0.466	-0.21%
Grade Recovered – g/t	0.261	0.251	3.98%
% Recovery	56.14%	54%	3.96%
Gold Smelted - kg	5,991.53	5,703.39	5.05%

The current Chemwes reclamation and rehabilitation operations related to gold bearing tailings are nearing completion. However, since commencement of operations at Chemwes in April 2003, the price of both gold and uranium has increased significantly, and the remaining Chemwes slimes resources, namely Nos. 4 and 5 slimes dams, have become potentially economically treatable.

First Uranium entered into a conditional purchase agreement in April 2007 in respect of the MWS acquisition to provide a fast track approach for the processing of tailings from the Buffelsfontein and Stilfontein tailings for the recovery of gold and uranium.

7 GEOLOGICAL SETTING

REGIONAL GEOLOGY

The Project lies within the Witwatersrand Basin, an Archean (approximately 2.7 billion years) sedimentary basin, whose surface expression is an elongate structure that extends longitudinally for approximately 300 km NE-SW by 100 km NW-SE. It contains an approximately six kilometre thick stratigraphic sequence consisting mainly of quartzites and shales with minor intermittent volcanic units. The first stage of basin development is recorded by rocks of the Dominion Group, composed of fluvial sediments and volcanic rocks. The Witwatersrand Supergroup overlies the Dominion Group and has been subdivided into the lower West Rand Group and the upper Central Rand Group, both of which consist primarily of sandstones, shales, and conglomerates. The Central Rand Group has produced the majority of the gold from the Witwatersrand Basin. The Ventersdorp Supergroup unconformably overlies the Witwatersrand Supergroup and is in turn overlain by the Transvaal and Karoo Sequences.

The differences in the morphology and gold distribution patterns from one reef to the next, and indeed within individual reefs, reflect the different sedimentary processes that prevailed during deposition on erosional surfaces in fluvial and littoral environments. Despite its age, the sedimentary rocks within the Witwatersrand Basin are remarkably well preserved and relatively undeformed. The basin has undergone numerous phases of faulting but has not been subjected to significant metamorphism.

The general geology of the Witwatersrand Basin is illustrated in Figure 7-1 and a stratigraphic column is provided in Figure 7-2.

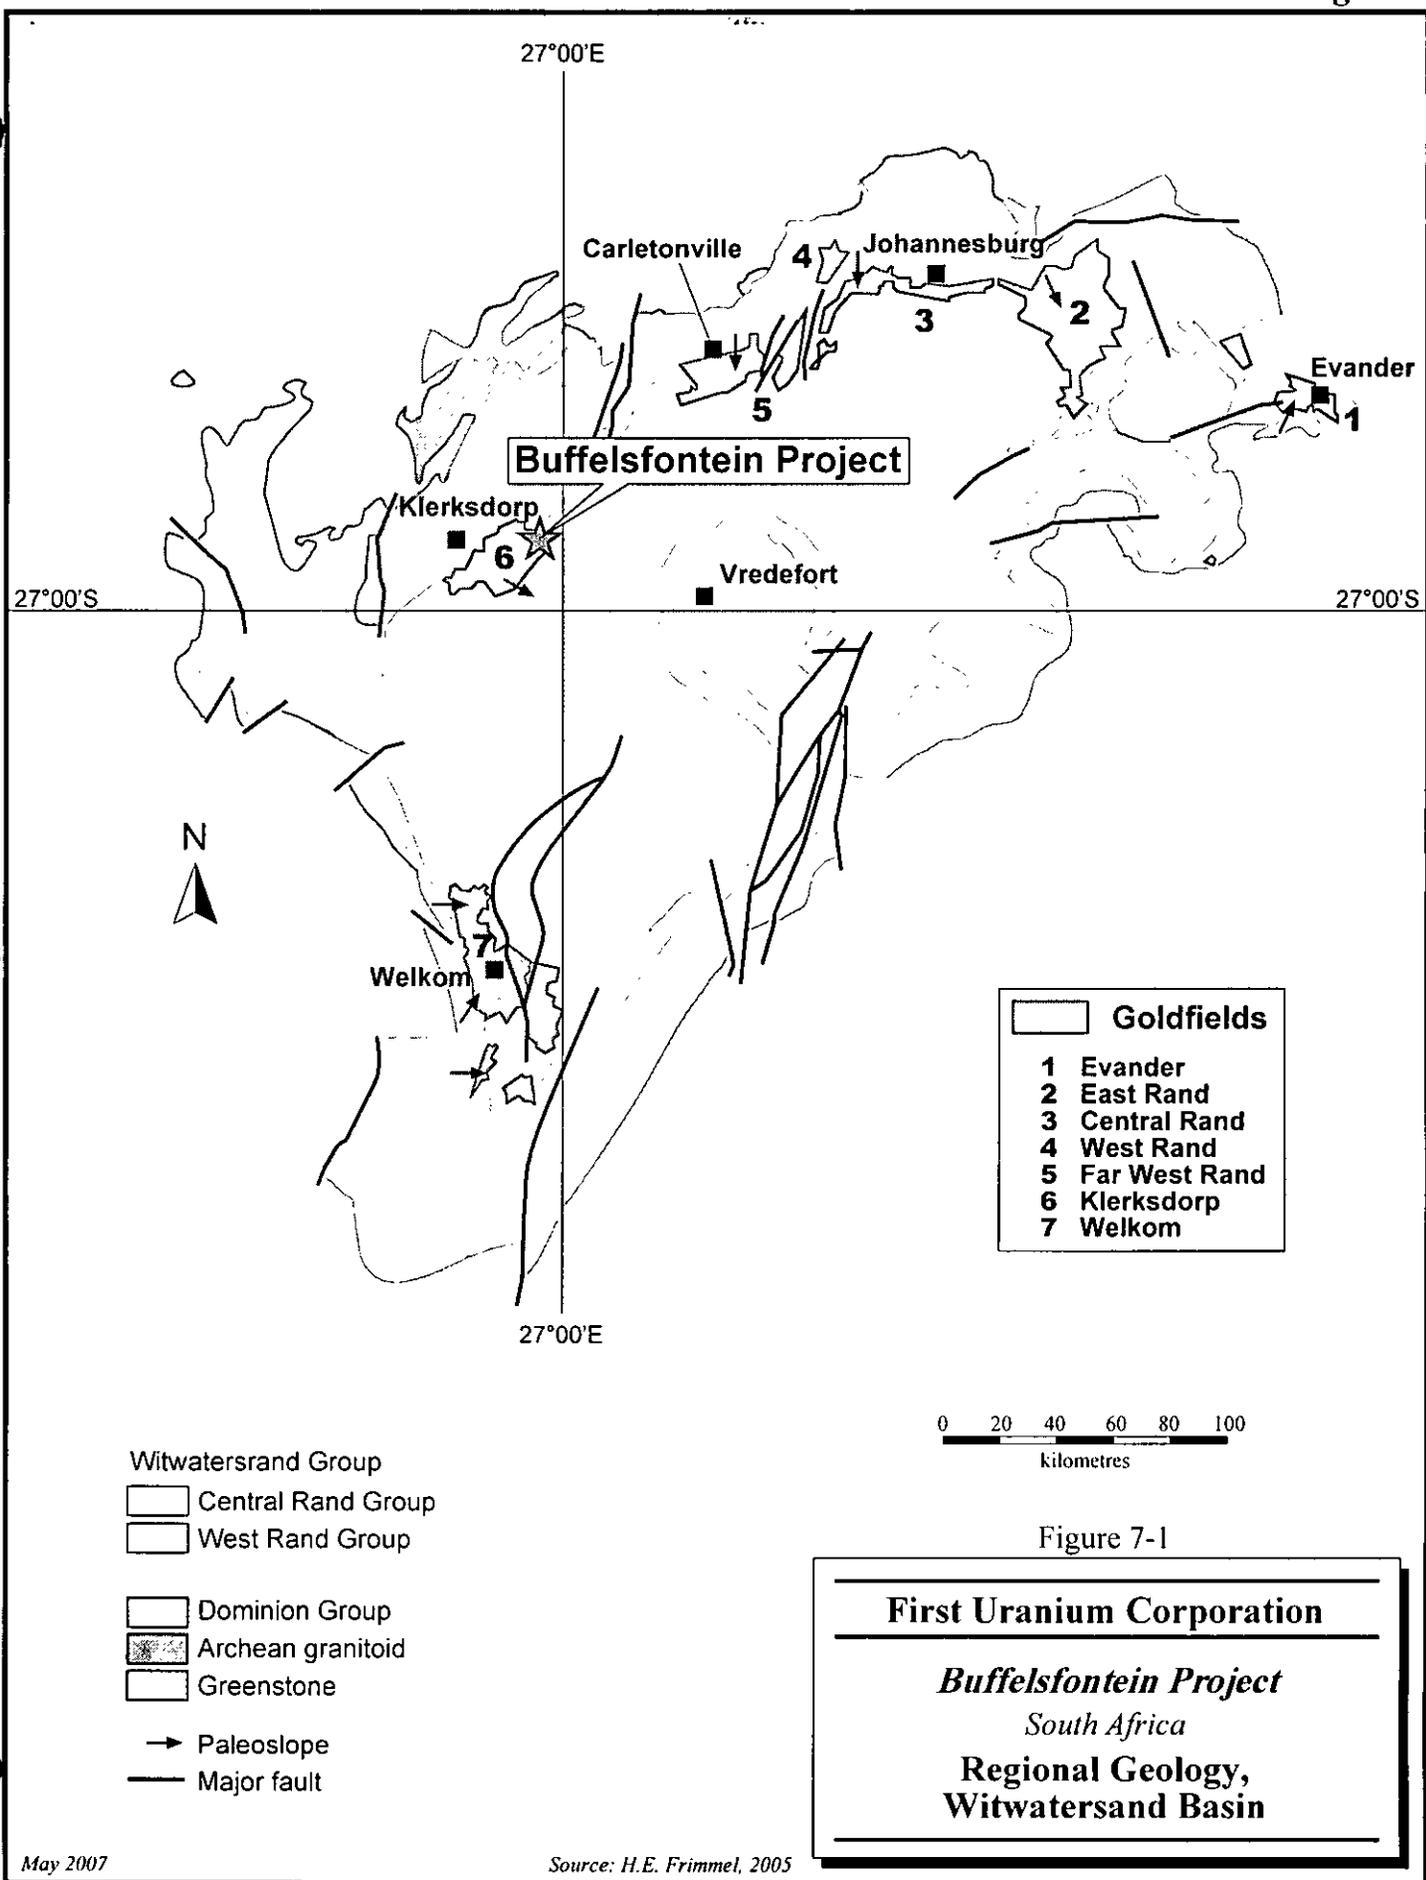

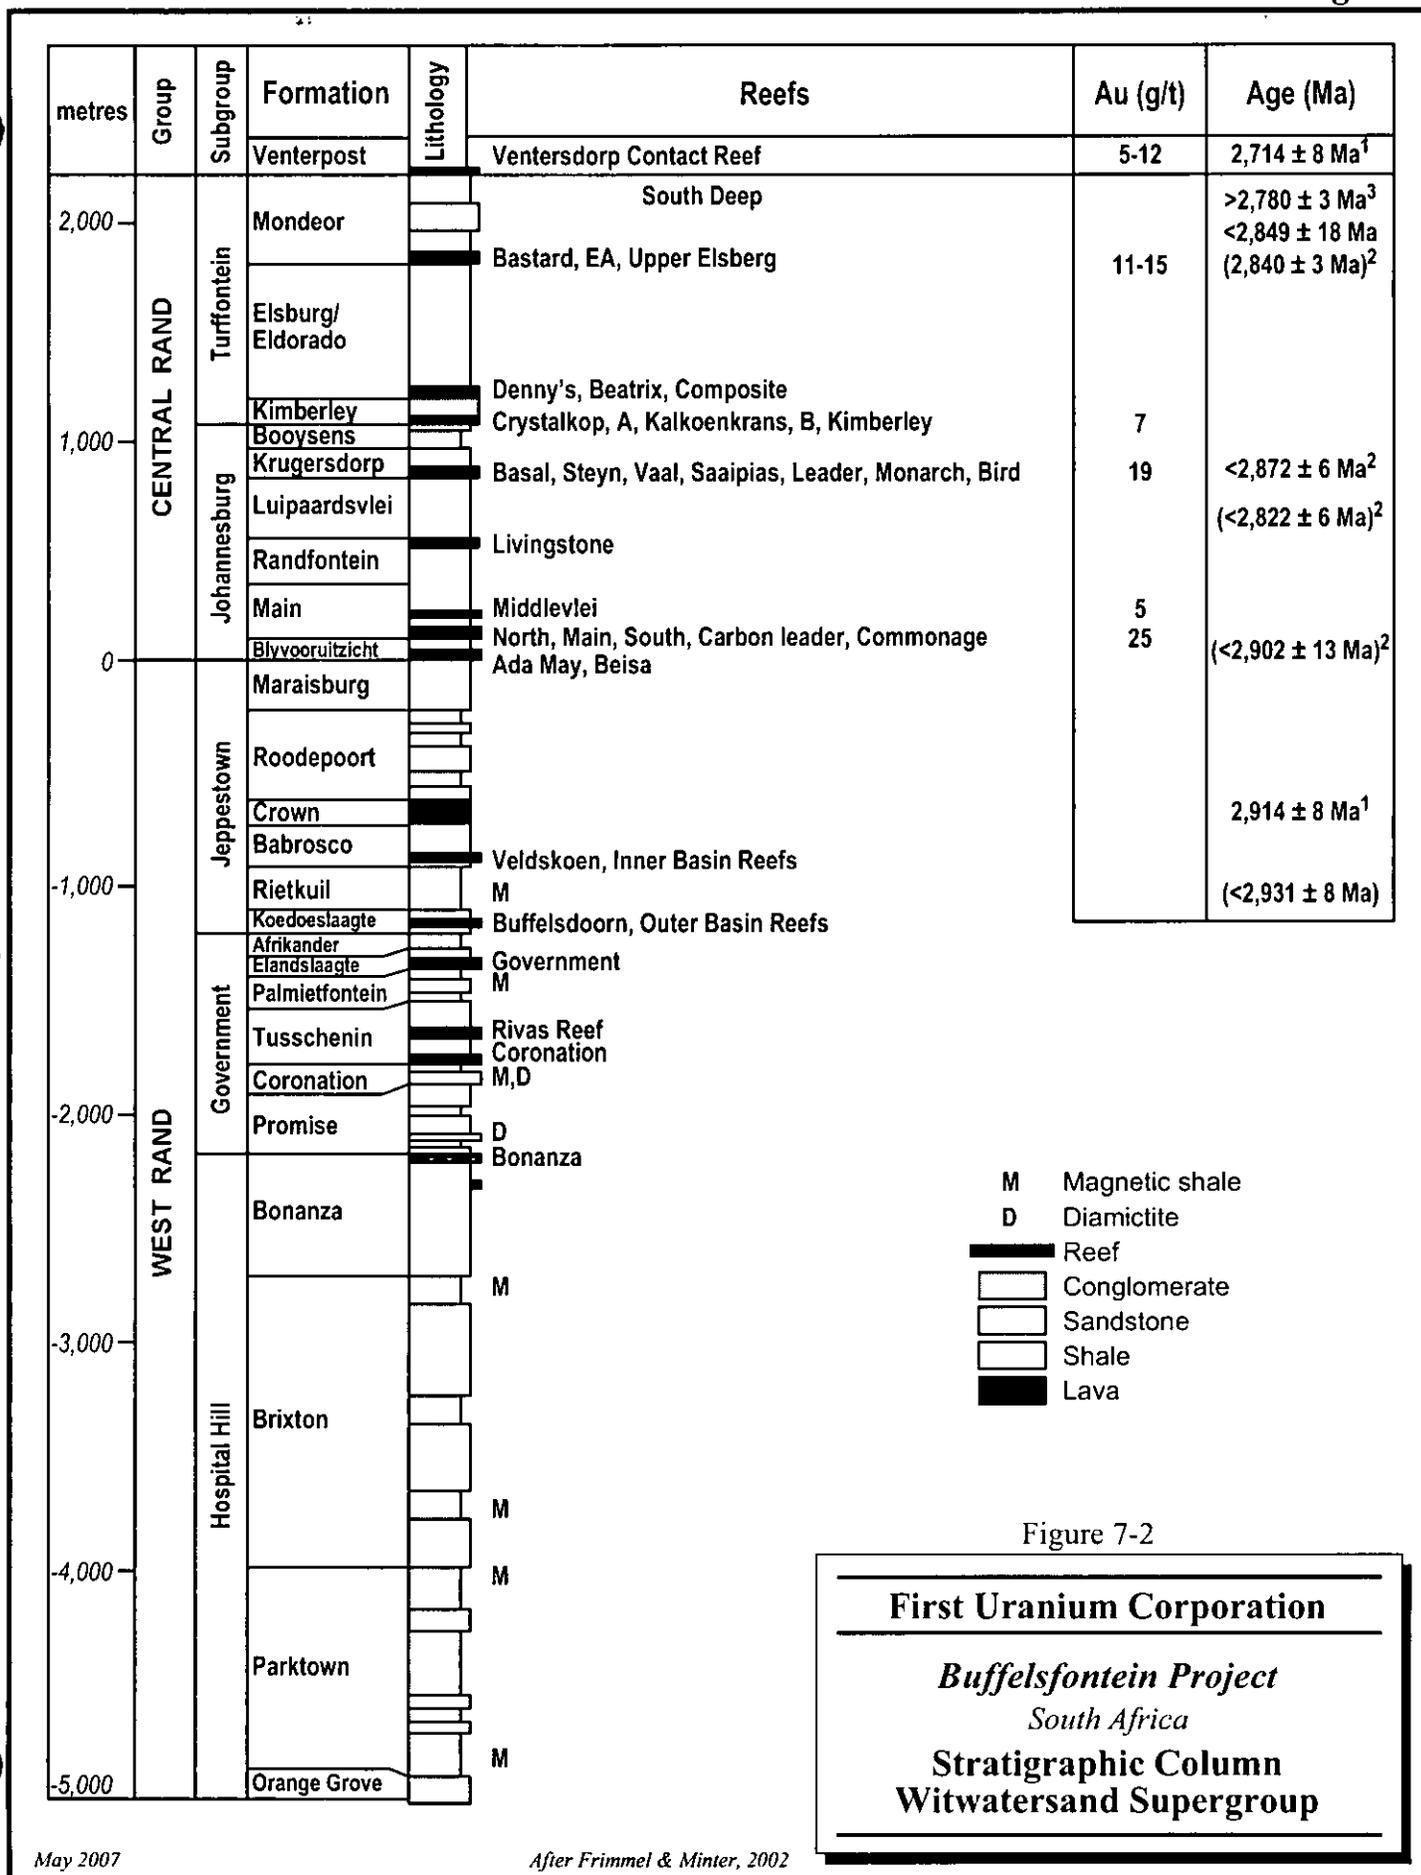

Figure 7-1

Buffelsfontein Project
South Africa

**Regional Geology,
Witwatersand Basin**

LOCAL GEOLOGY

The BGM Underground Mine is located in the Klerksdorp Goldfield and the mineralization is hosted by the Central Rand Group, the upper unit of the Witwatersrand Supergroup. This unit has produced the majority of the gold from the Witwatersrand Basin, and is composed predominantly of quartzite with subordinate zones of conglomerate and a single argillite horizon, i.e., the Booyens Shale Formation. Using the central position of the Booyens Shale, the stratigraphy of the Central Rand Group has been historically subdivided into the lower Johannesburg Subgroup and the upper Turffontein Subgroup. Mineralized reefs in the Johannesburg Subgroup tend, on average, to be more laterally extensive and more uniform in thickness and gold content. The principal gold-bearing conglomerate packages in the Johannesburg Subgroup are the Main Reef and Bird Reef.

The mineralization at Buffelsfontein is hosted by the Johannesburg Subgroup of the Central Group. In the Klerksdorp Goldfield, the Johannesburg Subgroup is represented by a sequence of quartzites, conglomerates, and quartz wackes, approximately 1,100 m thick. The local stratigraphy is illustrated in Figure 7-3.

Age (Ma)	Stratigraphy	
2023	Vredefort impact	
2054-2059	Bushveld Igneous Complex Rooiberg Group	
2250	Transvaal Supergroup	Pretoria Group

PROPERTY GEOLOGY

Economic gold and uranium mineralization at Buffelsfontein is hosted by the Vaal Reef, an oligomictic, pebbly, quartz arenite bed, deposited approximately 2.5 billion years ago.

In the North Division (previously the Hartebeestfontein Mine), dips vary from shallow to 45°. The depth of the Vaal Reef varies between 800 m and 2,500 m due to the displacement by faults and dykes that also cause rock mechanics problems. Structural geological complexity decreases from east to west, as do the gold grades. In the South Division (BGM Underground Mine), dips average 25°. The structural geology is complex, with fault displacements of 800 m to 1,000 m. A thrust fault has caused triplication of the reef in the central area of the South Division.

8 DEPOSIT TYPES

The gold deposits in the Witwatersrand Basin have a primary sedimentary origin and show great lateral continuity throughout the basin. Local discontinuities in mineralization within the reefs are a result of facies variation, ore formation processes, and structural history.

The mineralization planned for exploitation in this Project is the tailings dams generated from operations over the years.

9 MINERALIZATION

Gold and uranium mineralization at the BGM Underground Mine is hosted by the Vaal Reef that strikes along an azimuth of 040° for the entire extent of the property, i.e., five kilometres to seven kilometres. The property was divided into eight separate areas, or geo-zones, based on physical and mineralogical reef characteristics.

The reef thickness varies and ranges from 20 cm to three metres.

10 EXPLORATION

Exploration at the Project has been limited to drilling the tailings dams and is described in Item 11.

11 DRILLING

UNDERGROUND

Simmers has not performed diamond drilling for the current resource estimate. Historic diamond drill data accounts for less than 5% of the mineral resource database.

SURFACE

BUFFELSFONTEIN

Jim Fisher, of Jim Fisher & Associates, previously independent consultants to Simmers, reported there were 12 tailings dams containing approximately 291 million tonnes on the property as a result of processing mineralization from the Buffelsfontein underground mine and the Hartebeestfontein underground mine.

The tonnage is based on the last report submitted to the DME, and was certified by a government certified surveyor.

The grade of the deposits was tested by drilling and sampling of six vertical auger holes per tailings dam. The sampling, sample preparation, and analyses were contracted by Jim Fisher to Performance Laboratories. The drilling was subcontracted to Dump and Dune, a professional dump drilling company. An auger drilling machine extracted 50 mm diameter samples at 1.5 m down-hole intervals.

MWS

MWS contracted the drilling of forty-six 50 mm diameter, auger holes in MWS No. 4 Dams and 54 holes in MWS No. 5 Dam in 2006. The central portion of MWS Dam 5 was inaccessible due to surface water.

First Uranium, using Dump and Dune, a professional dump drilling company, as drill contractors, drilled verification testholes using the same methodology as described above.

Six verification holes were drilled in the MWS No. 4 Dam and three holes were drilled in the MWS No. 5 Dam.

12 SAMPLING METHOD AND APPROACH

UNDERGROUND

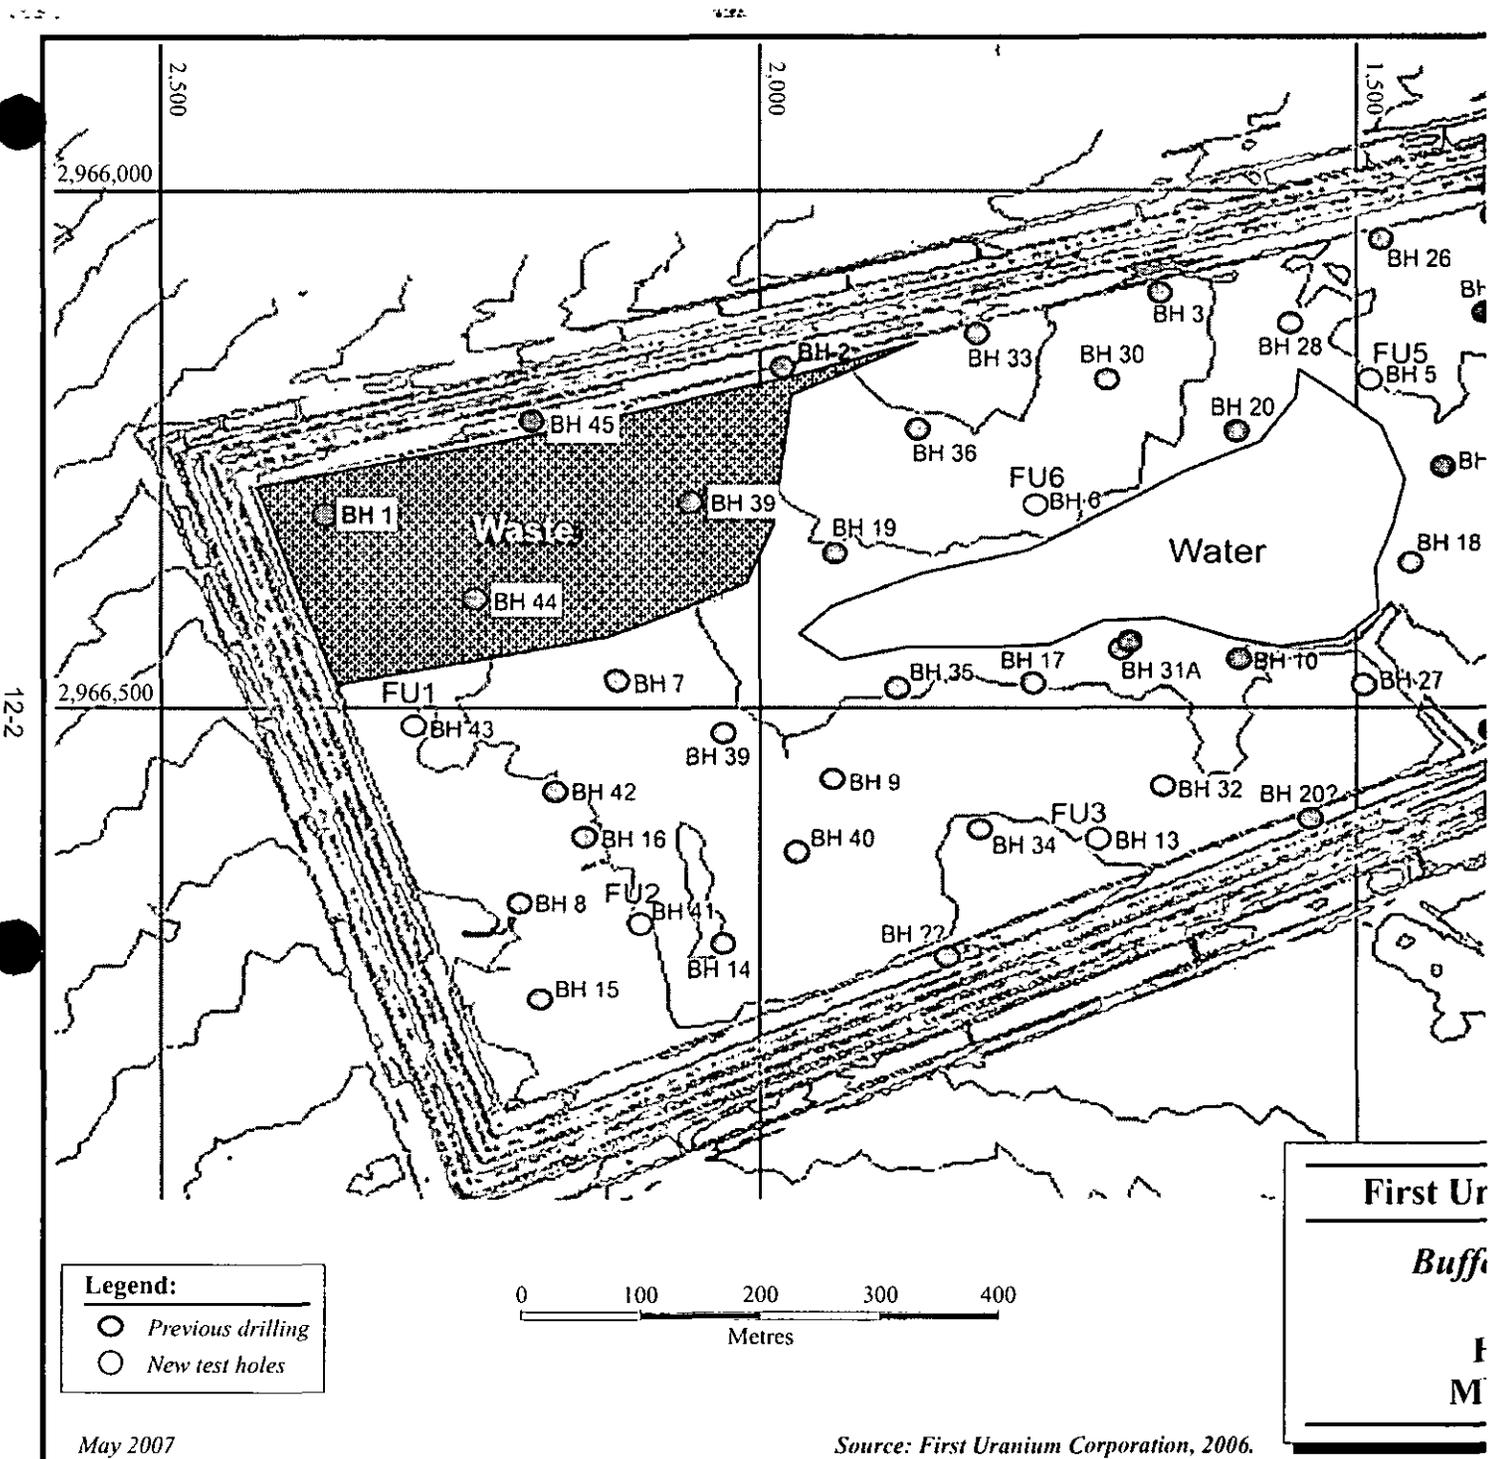

The mineral resource estimate is based for the most part (>95%) on channel samples collected on six metre by three metre intervals. Channel samples, collected with hammer and chisel, are 10 cm wide across the entire width of the reef. Samples are accumulated in synthetic bags and transported to the analytical laboratory by Simmers personnel. The channel sample locations are recorded by digital photography. Sample results are plotted on 1:200 scale operational plans.

SURFACE

Fifty-two holes were drilled in the Buffelsfontein and Harties Dams by Simmers in 2005. The holes spacing was irregular but nominally 50 m. The spacing was chosen to be sufficient to statistically represent the grade of the dams.

MWS drilled the MWS No. 4 Dams on a 120 m by 120 m grid. First Uranium drilled six verification holes spaced regularly throughout the MWS No. 4. The MWS and First Uranium drill locations are illustrated in Figure 12-1.

MWS drilled the MWS No. 5 Dam on a nominal 150 m by 150 m grid where accessible. The central portion of the dam, representing approximately 50% of the surface, was not accessible due to surface water. First Uranium drilled three verification holes in the MWS No. 5 Dam. The hole locations are illustrated in Figure 12-2.

Sampling procedures were consistent for the Buffelsfontein 2-5 Dams, the Harties 1, 2, 5, 6, and 7 Dams, and the verification holes in the MWS No. 4 and No. 5 Dams. Samples were taken on 1.5 m downhole intervals, each sample weighing approximately three kilograms. Samples were collected on plastic sheet to prevent contamination, bagged with a sample ticket, and delivered to Performance Laboratories (Performance) in Randfontein. Original samples in the MWS dams were collected in a similar manner, however, at varying sample lengths.

13 SAMPLE PREPARATION, ANALYSES AND SECURITY

UNDERGROUND

Samples are prepared and analyzed by an on-site laboratory operated by Simmers. Minxcon inspected the laboratory and reported that although the facility is not ISO accredited it is efficiently managed by competent personnel. Minxcon (2006) reported that vessels, crushers, and pulverizers are cleaned regularly by compressed air and water and that contamination was not an issue.

SURFACE

The following procedure describes the sample preparation and analyses for the Buffelsfontein 2-5 Dams, the Harties 1, 2, 5, 6, and 7 Dams, and the verification holes in the MWS No. 4 and No. 5 Dams.

Auger drill samples were prepared at the Performance laboratory in Johannesburg, by drying and pressing through a 1.0 mm screen to break up lumps. Analysis for gold was by standard fire assay procedures, using a 30 g or 50 g sample with a gravimetric finish. The detection limit was 0.02 g/t gold. Results were reported by electronic spreadsheets. Analysis for U_3O_8 was by Aztec, an X-ray instrument using a tungsten tube with a detection limit of 0.01 kg/t U_3O_8 . The Performance laboratory is certified by the South African National Accreditation System, an affiliate of the Standards Council of Canada.

First Uranium employees or consultants were not engaged in the sample preparation or analyses.

Internal Quality Assurance/Quality Control (QA/QC) procedures at the Performance laboratory included assaying one duplicate sample and one standard sample from each batch of 20 samples.

14 DATA VERIFICATION

UNDERGROUND

Scott Wilson RPA was unable to determine the data verification process for underground channel samples.

SURFACE

BUFFELSFONTEIN & HARTIES DAMS

Simmers relied on the QA/QC program at Performance as described in the previous item. Scott Wilson RPA did not collect independent samples as the surface of the dams is covered with water and several of the dams have recently been used by the BGM Underground Mine.

MWS NO. 4 AND NO. 5 DAMS

In April 2007, First Uranium, using Dump and Dune as drill contractors, drilled six verification holes in the MWS No. 4 Dam. GijimaAST analyzed the MWS drilling data and subdivided the dam into two horizontal sections, i.e., above and below the 12 m depth in the dam, based on Au and U₃O₈ grade. Generally, the section above the 12 m depth contained grades of Au and U₃O₈ that were considered too low to have a reasonable chance of being exploited economically and therefore did not qualify as resources. The verification drilling confirmed the sub-economic grades. Table 14-1 compares the grades below the 12 m depth of the MWS data used for the resource estimate and the grades from the First Uranium verification holes. The Au and U₃O₈ grades from the verification drilling are 3.4% higher and 3.6% lower, respectively, than the original MWS grades. In Scott Wilson RPA's opinion this demonstrates good agreement.

**TABLE 14-1 MWS NO. 4 DAM - GRADE
VERIFICATION**
First Uranium Corporation - Buffelsfontein Project

		Au (g/t)	U₃O₈ (%)
MWS Holes	Below 12 m	0.29	0.014
Verification Holes	Below 12 m	0.30	0.135
Difference (%)		+3.4%	-3.6%

First Uranium drilled three verification holes in the MWS No. 5 Dam in April 2007. The grades of the 45 samples in the three holes averaged 0.29 g/t Au and 0.008% U₃O₈, which compares favorably with the estimated resources for the MWS No. 5 Dam. However, the samples are not considered representative of the entire dam and do not provide sufficient verification to consider the resources in the MWS No. 5 Dam as higher than the inferred classification.

15 ADJACENT PROPERTIES

There are no adjacent properties as defined by NI43-101.

16 MINERAL PROCESSING AND METALLURGICAL TESTING

BUFFELSFONTEIN

There have been two phases of uranium and gold recovery testing undertaken for First uranium by Mintek. The first was completed in mid 2006 and the second in May 2007. The preliminary economic analysis is based upon the phase 1 testing. A summary of the second phase is being reported as well as the information became available before publication of the revised technical report.

PHASE 1 MINTEK TESTWORK

Bulk samples were prepared by Performance Laboratories and, after their analyses, Mintek was retained to carry out the metallurgical test work.

The following is an extract from Mintek's reports titled "Laboratory Gold and Uranium Flotation Scoping Studies on Gold Slimes Dams Material" dated 23 May 2006, and "Scoping Studies on the Leaching of the Buffelsfontein Concentrates" dated 28 June 2006. Note that, through this Item 16, Mintek have reported results as U and not U_3O_8 and 1% U is equal to 1.18% U_3O_8 .

TABLE 16-1 DISTRIBUTION OF GOLD AND URANIUM
First Uranium Corporation - Buffelsfontein Project

Size by size Passing size μm	Discrete Mass %	Total Au g/t	Analysis		Distribution		
			Total U ppm	Sulphide S	Total Au %	Total U %	Sulphide S %
-850 to +150	4.18	0.76	49	0.17	7.89	2.85	2.28
-150 to +106	11.27	0.38	30	0.11	10.50	4.71	3.99
-106 to +75	15.95	0.39	37	0.12	15.26	8.21	6.16
-75 to +53	15.11	0.39	52	0.22	14.64	10.93	10.70
-53 to +38	10.14	0.33	78	0.64	8.32	11.01	20.89
-38 to +25	5.52	0.32	91.5	0.72	4.39	7.02	12.78

Head (calc.)		0.40	71.87	0.31			
Head (meas.)		0.42	67	0.28			
Accountability, %		95.83	107.26	111.01			

Notes:

1. The results are reported as total U as opposed to U_3O_8 .
2. 1 ppm U = 1.18 g/t U_3O_8

TABLE 16-2 DIAGNOSTIC LEACH
First Uranium Corporation - Buffelsfontein Project

Grind (% minus 75 micron)	Ore Sample	
	"As Received"	
Association	Gold grade (g/t)	Gold dist'n (%)
Gold available to direct cyanidation	0.184	51.11
Gold that is preg-robbed (CIL)	0.021	5.73
Gold associated with HCl digestible minerals	0.074	20.49
Gold associated with HNO ₃ digestible minerals	0.036	10.13
Gold associated with carbonaceous matter	0.006	1.76
Gold associated with quartz (balance)	0.039	10.78
Total	0.360	100.00

The sample was treated "as received" and had a head grade of 0.360 g/t U. Of the total contained gold, 51.11% (0.184 g/t) was extracted by direct cyanidation. CIL dissolution indicated that 5.73% (0.021 g/t) of the contained gold was preg-robbed by constituents occurring in the ore. Some 56.84% (0.205 g/t) of the gold is therefore expected to be recoverable by carbon-in-leach processing.

The HCl digestion indicated that 20.49% (0.074 g/t) of the contained gold was associated with HCl digestible minerals (calcite, pyrrhotite, etc.), while 10.13% (0.036 g/t) was associated with the more stable sulphides digested with HNO₃ (e.g., pyrite, sulphides, arsenopyrite, etc.).

Of the remaining gold, 1.76% (0.006 g/t) was found to be associated with carbonaceous constituents in the ore and 10.78% (0.039 g/t) of the gold is assumed to be occluded in gangue constituents

BUFFELSFONTEIN DAM 2 MINERALOGICAL ANALYSIS

Brannerite	(U,Ca,Ce)(Ti,Fe) ₂ O ₆
Uraninite	UO ₂
Florencite / Crandalite	(Ca,Ce,Nd,Th,Sr,Ba)Al ₃ (PO ₄) ₂ (OH) ₆

Brannerite is the dominant uranium-bearing phase, but it occurs in very low proportions <0.02 mass%. Some uraninite is also present but the concentration in the sample was too low to be detected. The brannerite content of 0.01 to 0.02 mass percentage accounts for a uranium grade of 38 ppm to 76 ppm. The assayed uranium grade is 67 ppm.

The brannerite occurs mostly as middlings ($\pm 57\%$), with $\pm 29\%$ locked in silicate gangue. Only 14% of the brannerite is liberated, all of it occurring within the <38 μm fractions. The brannerite middlings and locked brannerite are mainly associated with silicate gangue, of which quartz, chlorite, and mica are the dominant phases. Brannerite within the gangue occurs in two forms, either as discreet grains (50 μm) or as fine intergrowths (<1 μm).

TABLE 16-3 BUFFELSFONTEIN DAM 2 MINERALOGICAL ANALYSIS
First Uranium Corporation - Buffelsfontein Project

Size Fraction	Locked (Area %<30)	Middlings (Area %>30<70)	Liberated (Area %>70)	Total
-5 μm	8.59	70.88	20.53	100.00
-20 μm +5 μm	64.41	18.64	16.95	100.00
-38 μm +20 μm	27.77	66.76	5.47	100.00
-75 μm +38 μm	46.73	53.27	-	100.00
+75 μm	100.00	-	-	100.00
Combined	29.35	56.73	13.92	100.00

The discreet brannerite grains contain inclusions of either lead or a REE (Rare Earth Element) phase (florencite / crandalite). The brannerite is occasionally closely associated and intergrown with the REE phase.

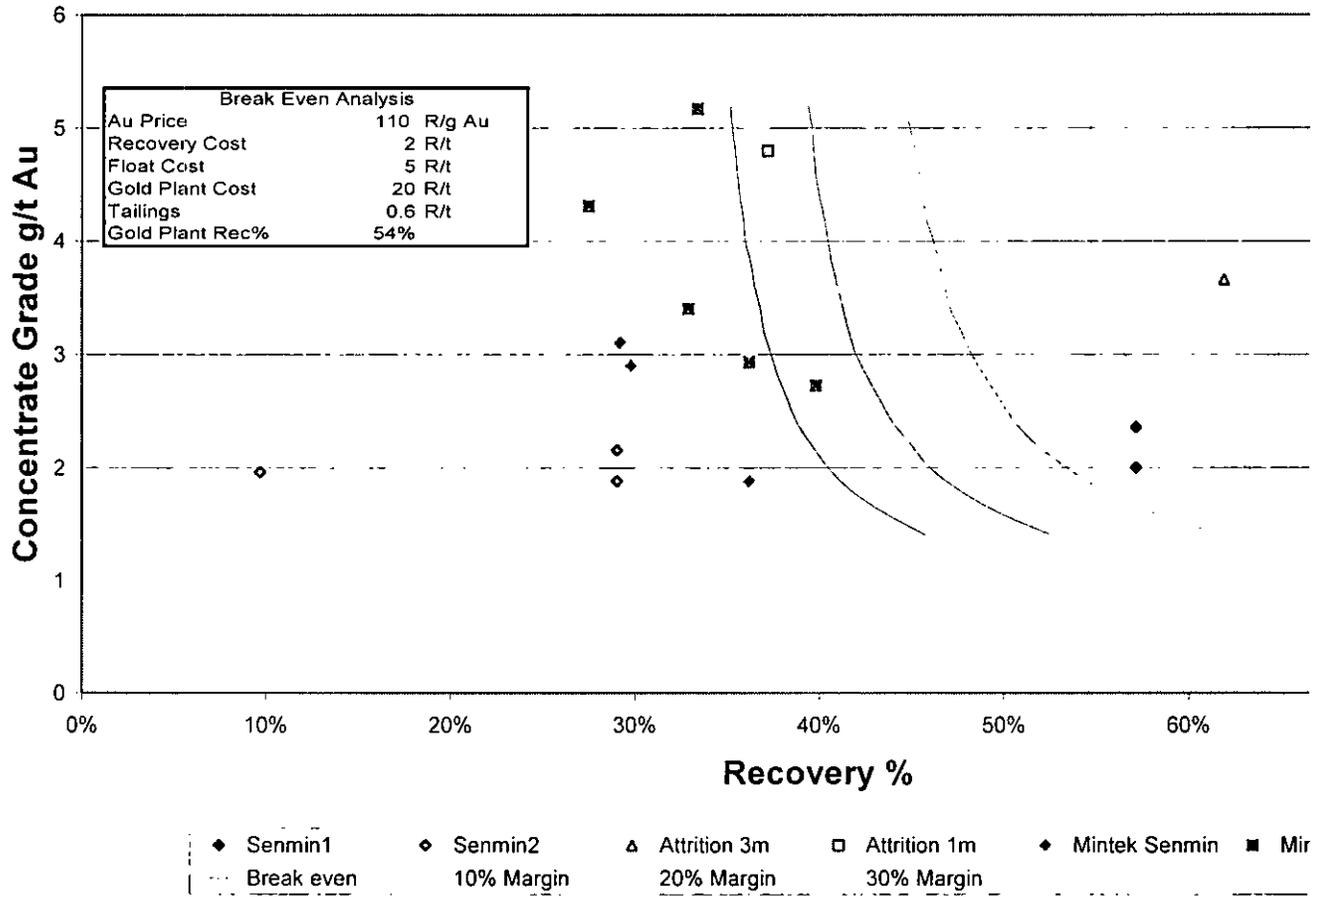

GOLD FLOTATION TEST WORK

Two gold recovery routes were identified. The first was a pre-concentration of the gold using flotation followed by gold recovery from the concentrate. The second was a cyanide leach of the tailings.

A soft start option was identified and would entail the recommissioning of the current flotation plant at BGM's Buffelsfontein plant, treating tailings for gold, until the process and treatment route for uranium has been identified.

The various tests are compared on a grade and recovery curve. To assist with economic evaluation, various margins have been calculated. Figure 16-1 shows the results of each of the trials.

**FIGURE 16-1
Dam 2 Gold Flotation Results**

16-6

Senmin (Pty) Ltd. (Senmin), a reagent supplier to the flotation plant, offered to test the flotation response of Buffelsfontein No. 2 tailings dam mineralization. The initial results were promising, however, the company was deemed not to be impartial and the tests were repeated by Mintek, who were unable to duplicate the Senmin results. Senmin also produced a bulk concentrate sample for cyanidation tests. The concentrate was sent to Performance laboratories for bottle roll tests. The test indicates a 54% recovery of gold from the concentrate, through the Buffelsfontein gold circuit.

This indicated that the soft start would likely just break even, compared to an expected 45% margin indicated for a CIL type of circuit. The soft start would not justify a significant capital spend. The project was halted.

Following a review of gold flotation on the Witwatersrand, Mintek carried out a number of scoping tests.

Most of the tests gave gold recoveries between 30% and 40%. The gold recovery was improved by attrition in a tower mill to above 60%. Attrition milling at the expected tonnage would add significant cost.

URANIUM FLOTATION TEST WORK

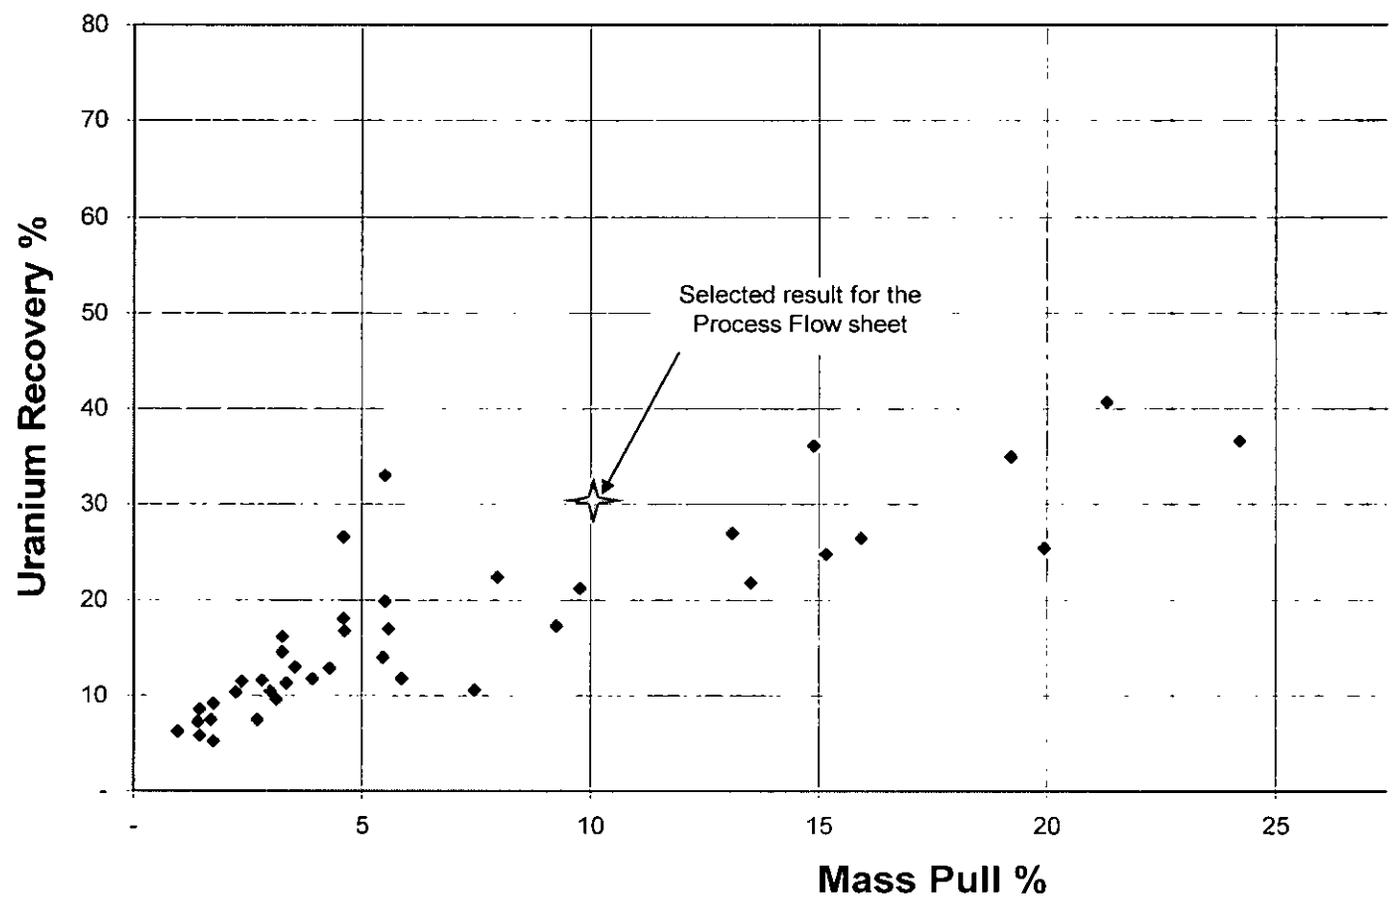

After determining that the gold recovery process would be by CIL, test work was started to determine a recovery route for the uranium. Two flotation strategies were explored. The first aimed at flotation of the sulphides using xanthate collectors, the second aimed at uranium minerals using fatty acid collectors. The latter provided high mass pulls, with high reagent costs. Neither process produced high recoveries with acceptable concentrate grades, however, acceptable concentrate grades were achieved by sacrificing recovery. A preliminary financial optimization suggests that a mass pull between 10% and 20% would be optimal.

The following graphs and table show the results of the preliminary flotation results. Figure 16-2 shows the uranium flotation results with mass pull plotted against recovery. The result selected for the process flow sheet is also shown.

Figure 16-3 shows the gold flotation results with mass pull plotted against recovery. The result selected for the process flow sheet is also shown.

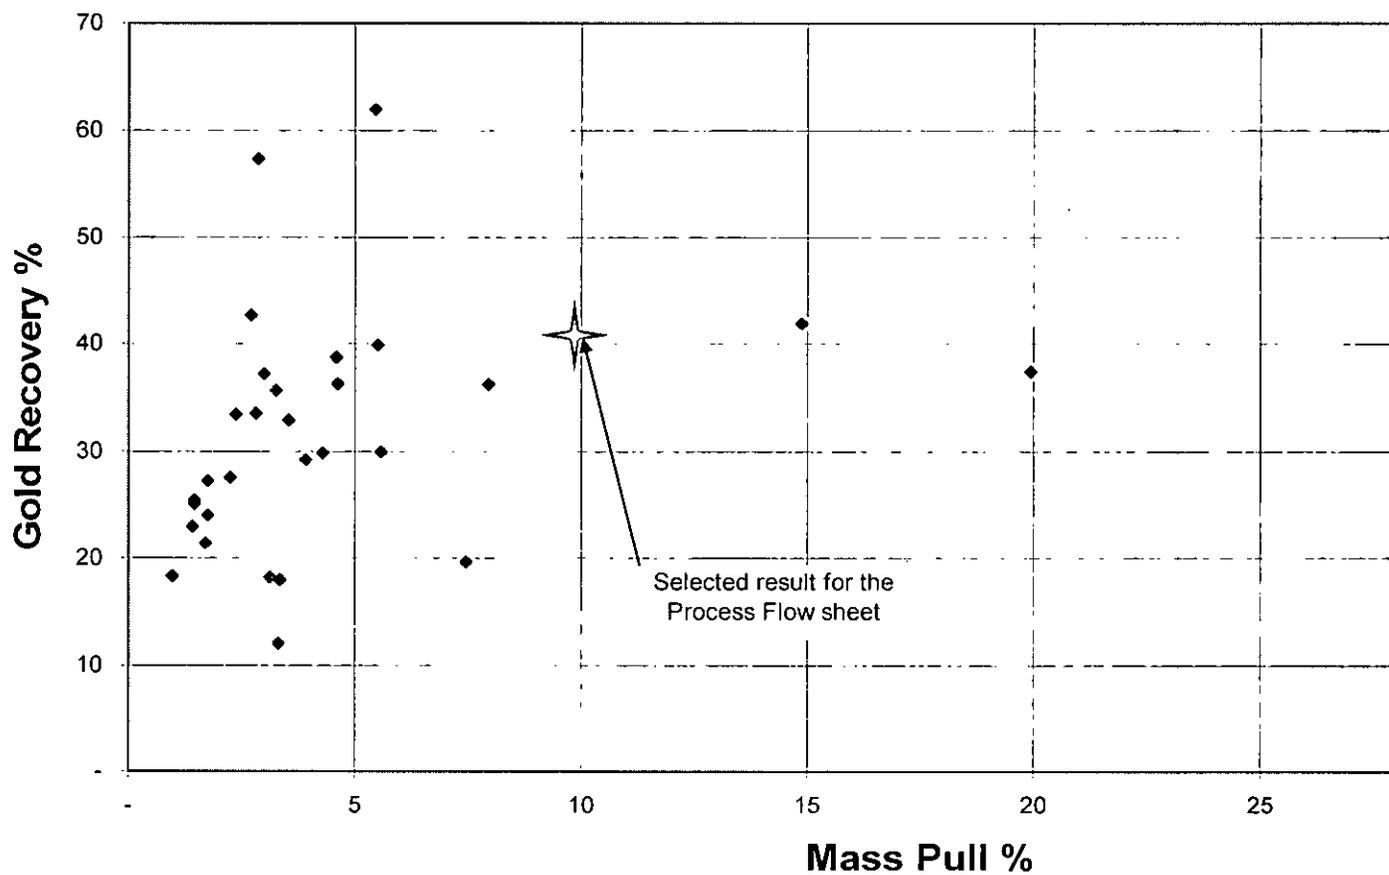

Figure 16-4 shows the uranium recovery versus concentrate grade (in U g/t, not U_3O_8) as well as the result selected for the process flow sheet.

URANIUM LEACH TESTS

A series of flotation concentrates were produced at varying mass pulls and recoveries. (Mintek Scoping Studies on the Leaching of the Buffelsfontein Concentrates dated June 28, 2006).

TABLE 16-5 SUMMARY OF URANIUM LEACH TESTS
First Uranium Corporation - Buffelsfontein Project

Sulphide Conc Type	Mass %	U (g/t)	Au (g/t)	Sulphide S (%)	U Flotation Recovery (%)	Au Flotation Recovery (%)	180°C/3h U-Leach Efficiency (%)	CIL Efficiency from U Leach Residue (%)
Low Grade	8.5	204.0	2.1	6.7	29.3	52.0	91.0	85.2
Med Grade	5.6	296.0	2.7	9.2	21.9	44.5	94.0	74.8
High Grade	2.4	485.0	6.6	21.3	15.3	46.5	88.0	77.6

The results of leaches are given in Tables 16-5 and 16-6. Leaching efficiency is relatively poor for the medium grade sample at 90°C (86% after 24 hrs) compared with what is achievable at higher temperature within three hours (greater than 90%). Although the low grade concentrate and cleaner concentrate seemed to be slower to leach, dissolutions of approximately 90% were obtained within three hours.

The 180°C leaches generated large quantities of acid, while the 130°C leaches generated much less acid. The leach at 90°C consumed acid.

* Calculated from head and residue analyses.

The metallurgical test work has been completed on samples from the Buffelsfontein No. 2 tailings dam. This dam represents 8.3% of the tailings resource and there is no indication of the effort put into making the composite sample representative of the mass. Mintek (2006) reports that it received a 50 kg sample from Buffelsfontein No. 2. The sample had a head grade of 79 g/t U₃O₈ compared to the Buffelsfontein No. 2 slimes dam grade estimate of 87 g/t U₃O₈.

Preliminary results from subsequent flotation tests by Mintek gave uranium recoveries (as U) of 31.5% (37.2% U₃O₈) in 9.8% of the mass (test 16) and 30.6% (36.1% U₃O₈) recovery of uranium in 9% of the mass (test 20).

In Scott Wilson RPA's opinion, there is a need for additional testing and for sampling to ensure that the test work is representative of the entire tailings resource.

A portion of the tailings recovery plant feed will come from the Buffelsfontein tailings stream. Based upon the ore reserve grade of the BGM Underground Mine, this

material will have a feed grade of approximately 120 g/t U₃O₈. This material will be floated to yield a concentrate to be fed to the project. While no test work was conducted on the flotation of this material by First Uranium or Simmers, there is historical data available depicting the floatation of underground ore. The Mintek flotation tests were taken as indicative and it is assumed that a 20% to 22% weight recovery to a flotation concentrate will yield 50% U₃O₈ recovery into a concentrate with a grade of 270 g/t U₃O₈. Additional test work to determine the recovery is recommended by Scott Wilson RPA.

The uranium flotation recovery parameters were based upon initial economic parameters. It is recommended that the opportunity of increasing the uranium recovery as the uranium price increases be reviewed. The current sacrifice in recovery is a financial rather than a technical optimization

PHASE 2 MINTEK TEST WORK

Equal quantities (800 kg each) of material from Buffelsfontein Dumps 2, 3 and 4 were delivered to Mintek and blended into a composite. The composite was subjected to: flotation tests for the recovery of uranium including a mini plant test run, uranium leach tests on the flotation concentrate (atmospheric and pressure leaching); and, gold diagnostic leach and carbon-in-leach test work.

The flotation tests indicated that a mass pull of 15% was required to achieve a U grade of 200 ppm at recovery of approximately 37%. The mini mill plant was able to produce a 210 kg bulk concentrate with a grade of 239.7 pm uranium.

With pressure leaching extractions of 88% to 91% were achieved after two hours of leaching.

Bottle roll leach tests on material that was composed of 84% flotation tails and 16% uranium leaching tails generated gold dissolution of 50% to 70% as a direct CIL while acid pretreatment increased the dissolution to 58.1% to 74.2%.

Scott Wilson RPA notes that the Phase 2 work appears to support the Phase 1 work and the assumptions within the preliminary assessment. Scott Wilson RPA recommends that as part of the next stage of project review the Mintek results be reviewed in detail to determine what additional test work is required and to assess the potential for optimizing the project's operating philosophy to maximize revenue.

Scott Wilson RPA recommends that further detailed testing including filtration, solvent extraction (SX) and ion exchange (IX) be undertaken and used to define the process design criteria.

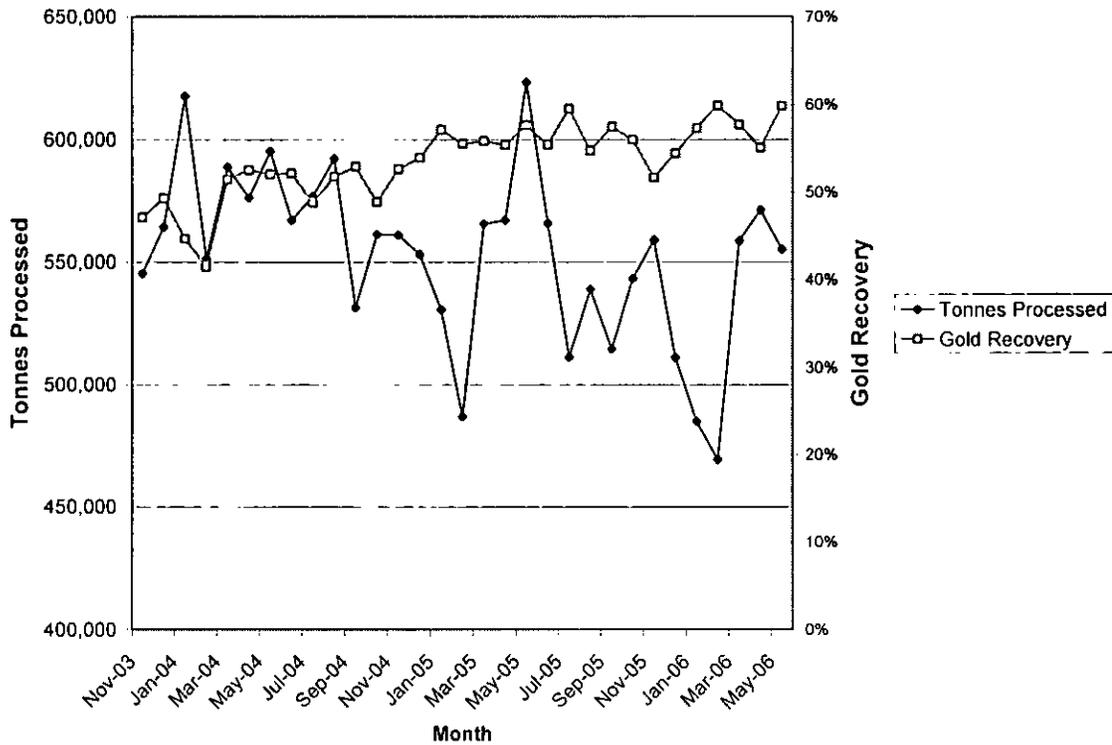

RSV MISYM Engineering Services (Pty) (K'Enyuka) noted that pilot plant flotation and leaching runs will be required to produce the bulk concentrates for the additional test work.

MINE WASTE SOLUTIONS

GOLD PLANT OPERATING DATA

The Chemwes plant operation has over the last 34 months generated extensive historical operational data relating to feed particle size distribution (PSD), slurry densities, head and residue values, flotation mass pull and recoveries, reagent additions and consumptions, and circuit operating parameters. The plant throughput and gold recovery for the period November 2003 to May 2006 are shown in Figure 16-5.

FIGURE 16-5 MWS PLANT THROUGHPUT AND GOLD RECOVERY

GOLD EXTRACTION TEST WORK

MWS conducted laboratory test work on borehole samples from No. 4 dam. The samples were composited on the basis of split area divisions from the borehole plan and a total of sixteen samples were examined and tested by SGS Lakefield laboratories.

PSD analysis and pH determination were done initially, and similarities with the No. 2 dam plant operating data were noted. The samples were then screened to produce fine (minus 75 micron) and coarse (plus 75 micron) fractions. Specific proportions of each fraction were added together to produce simulated CIL feed material and flotation feed material, respectively.

The coarse material was subjected to froth flotation and a pyrite concentrate generated. The concentrate was milled to 83% minus 75 micron and leached under plant conditions. The entire leach batch was then added to the fines sample and the whole leached for 14 hours under current plant conditions. All products including flotation tails

were assayed, and reagent additions and consumptions noted. Final results for the work have not yet been received, but the fines leach achieved an average residue of 0.15 g/t against a head value of 0.29 g/t and the dissolution was 0.14 g/t.

Current plant results show that better recoveries are achieved on the total leach including milled pyrite than on fines only, but current leach residence times are longer than 14 hours.

At the MWS plant, it is an historical fact that extended residence times in the CIL circuit yield lower residues and dissolved losses, and MWS decided to commission Atomaer SA to do test work involving high shear reactors with oxygen injection. It is expected that by subjecting the CIL feed slurry to oxygen injection via high shear static reactors, residue type values can be achieved in the third or fourth CIL tank. This will artificially greatly extend residence time and thus improve dissolution and recovery. Another benefit of high shear reactors is that oxygen and lime consumptions are automatically reduced. A composite sample of No. 4 dam slime was given to Atomaer for test work, but results have not yet been reported.

URANIUM DISSOLUTION TEST WORK

MWS undertook uranium extraction test work as part of its examination of the potential for the recovery of uranium from tailings piles to which it has access. The initial work done at SGS Lakefield in September 2006 showed that an ambient leach achieves recoveries (60% to 65%) somewhat akin to a conventional hot leach.

Because of the low uranium tenor of the resource, it was decided to pursue this option as a possible leach process route, and four composite samples were prepared for further test work. The assayed average head value of the samples is 116 g/t (this was considered low grade and the decrease was attributed to dilution from lower grade samples).

Results indicated that a 16 hour to 24 hour leach achieves U_3O_8 dissolutions of between 74 g/t (63.8%) and 81 g/t (69.83%), with an average of 77 g/t (66.37%).

MWS attributes the low recovery to the low head grade. For the Buffelsfontein Project the plan is to upgrade the uranium leach circuit feed grade by flotation, and thus the planned uranium leach circuit feed grade will be in the order of 300 g/t compared to the 100 g/t to 120 g/t samples tested by MWS. Assuming a relatively constant tailings grade from the leach circuit, the planned recoveries in the Buffelsfontein circuit may exceed the results achieved in the MWS test work.

Scott Wilson RPA recommends that First Uranium review the gold and uranium test work undertaken on behalf of MWS to determine its applicability to the Project and implications for proposed metallurgical testing.

17 MINERAL RESOURCE AND MINERAL RESERVE ESTIMATES

MINERAL RESOURCES

UNDERGROUND

The scope of work in this report does not include the BGM Underground Mine, currently in operation. However, tails from the plant currently processing the BGM Underground Mine mineralization will be processed at the Buffelsfontein recovery plant and are included in the life of mine plan and cashflow analysis for the Buffelsfontein tailings recovery project. Therefore, the underground resources are briefly discussed here with a view towards sustainability of the plant feed in terms of tailings from the BGM Underground Mine. Over the Project life, the BGM plant is expected to produce some 15 million tonnes of tailings (Minxcon). From these tailings the Project will generate 3.17 million tonnes of flotation concentrates to be combined with the flotation concentrate from the slimes and treated for uranium recovery.

The underground mineral resources were estimated by Geologix MRC (Pty) Ltd. (Geologix) and audited by Minxcon, both independent South African geology and mining consulting companies. The authors of the reports are Competent Persons as defined by SAMREC. A summary of the underground mineral resources estimated by Geologix is summarized in Table 17-1. Scott Wilson RPA visited the surface facilities and the underground operation, and conducted a desktop review of the Geologix and Minxcon reports. The reports indicate the database, methodology, and classification criteria are appropriate for the type of mineralization.

**TABLE 17-1 BGM UNDERGROUND MINE MINERAL RESOURCES -
APRIL 2006**
First Uranium Corporation - Buffelsfontein Project

	Tonnes (t 000's)	Grade Au (g/t Au)	Grade U ₃ O ₈ (%)	Cont. Au (oz 000's)	Cont. U ₃ O ₈ (lb 000's)
Measured	22,700	10.3	0.019	7,533	9,720
Indicated	13,450	8.7	0.019	3,764	5,510
Total Meas + Indic	36,150	9.7	0.019	11,298	15,230
Inferred	11,400	8.5	-	3,095	-

Notes:

1. CIM definitions were followed for mineral resources
2. Mineral resources were estimated at a cutoff grade of 2.0 g/t Au
3. A minimum width of 1.3 m was used in the Buffelsfontein and 1.2 m in the Hartebeestfontein underground mines respectively.
4. No metallurgical test work was completed by Simmers or First Uranium. Based on historical data depicting the flotation of underground ore, it is assumed that 20% to 22% weight recovery to a flotation concentrate will yield 50% U₃O₈ recovery into a concentrate with a grade of 270 g/t U₃O₈.
5. The gold resources of the BGM Underground Mine are for the account of BGM. First Uranium will process & extract the tailings from the BGM Underground Mine.
6. Columns and rows may not total exactly due to rounding.
7. Mineral resources that are not mineral reserves do not have demonstrated economic viability.

The BGM Underground Mine material will account for 10% of the uranium circuit feed tonnage and 12% of the uranium feed. The gold in the BGM Underground Mine material accounts for approximately 1.7% of the Project gold feed.

DATABASE

Greater than 95% of the database for the mineral resource estimate was underground channel samples, the remainder being grade control diamond drilling. The raw data, consisting of Au grade (g/t), U₃O₈ grade (kg/t), and reef width (cm), from underground channel sampling and drilling was coded. The data was then converted to grade-widths (Au cm-g/t & U₃O₈ cm-kg/t). The resultant database was regularized into 20 m by 20 m blocks in order to approximate the value of an area at the mining block support size. Regularization, or declustering, effectively reduces the variability inherent in the raw data and reduces the impact of possibly smearing isolated extreme values.

CUTTING OF STATISTICAL OUTLIERS

Although the regularization process reduces the influence of extreme high values, analysis of the regularized data indicates there is still a disproportionate amount of contained metal in the top decile of the grades. Geologix further reduced the grade in each geo-zone by capping the grade-widths to the second standard deviation, thus resulting in a decrease of 3.6% to 4.6%.

METHODOLOGY

Each geo-zone was treated as a discrete domain for modeling purposes. Variography was carried out in each geo-zone using natural, pair-wise relative, spherical semi-variogram models. Ordinary kriging was selected as the appropriate estimation method of interpolating grades into a 2D block model. Block sizes were 20 m x 20 m x reef width. Search directions and distances were consistent with the variography. Volume was converted to tonnes using a specific gravity of 2.76 and is consistent with previous production. Mineral resource estimates used a minimum width of 1.2 m in the North Division and 1.3 m in the South Division. Mineral resources were reported at a 2.0 g/t Au cutoff grade.

CLASSIFICATION

Mineralization transected by a sampled raise was classified as mineral resources. Indicated resources were based on diamond drilling on irregular intervals. Inferred resources are currently under water as well as 5% of the highly faulted areas that would otherwise be classified as indicated resources.

SURFACE

The surface mineral resources comprise 15 tailings dams containing approximately 363 million tonnes on the property as a result of processing mineralization from the Buffelsfontein, Hartebeestfontein, and Stilfontein underground mines. The tonnage is based on the last report submitted to the DME, and was certified by a government certified surveyor. The grade for approximately 80% of the mineral resources was estimated by Jim Fisher and Associates (Fisher 2005), an independent consulting company. The estimate in respect of the MWS dams was completed by GijimaAST, an

independent South African consulting company. The results were audited by Minxcon. Scott Wilson RPA concurs that the database is adequate and the methodology is appropriate for the type of mineralization. The mineral resources contained in the tailings dams are summarized in Table 17-2.

Notes:

1. CIM definitions were followed for mineral resources.
2. A zero grade cut-off grade was used.
3. Rows and columns may not add exactly due to rounding.
4. Preliminary metallurgical test results indicate that recoveries will be approximately 27% for uranium and 68% for gold.
5. Mineral resources that are not mineral reserves do not have demonstrated economic viability.
6. The MWS mineral resource estimate assumes the completion of the MWS acquisition by First Uranium.
7. Harties-Flanagan, Harties-Ellaton, and Harties-NKGE are proposed to be acquired by First Uranium from BGM pursuant to an amendment to the Buffelsfontein Tailings Rights Agreement.

DATABASE

The database for the estimation of the mineral resources in the Buffelsfontein 2-5 and Harties 1,2,5,6, and 7 dams comprised 1,119 auger drill samples collected from 52 holes, spaced irregularly but nominally 50 m apart.

The database for the MWS No. 4 Dam comprised approximately 750 samples from 46 auger holes drilled on a 120 m by 120 m grid. The MWS No. 5 Dam mineral resource estimate is based on approximately 540 samples from 54 auger holes drilled on a 150 m by 150 m grid.

Three other small dams, i.e., Flanagan, Ellaton, and NKGE, have been classified as inferred mineral resources. The tonnages were based on surveys and the grades were based on a combination of auger drilling and historical production records.

METHODOLOGY

Fisher estimated the average grade of the Buffelsfontein 2-5 and Harties 1,2,5,6, and 7 dams by calculating the unweighted mean grade of all the drill samples in the dam. They tested the concept of using the unweighted mean with the Central Limit Theorem that states that "if a random sample is drawn from any population, the sampling mean is approximately normal for a sufficiently large sample size. The larger the sample size, the more closely the sampling distribution of the means will resemble a normal distribution." "If the population is normal then the distribution of the means will be normal for all sample sizes".

Minxcon contracted Geological & Geostatistical Services (GGS) to investigate the applicability of the theorem in one of the dams, i.e., Buffels 5. GGS noted the auger holes were not spaced an equal distance apart and that some holes did not reach the bottom of the dam, thereby possibly causing a clustering issue. GGS declustered the data by separating the surface area into approximately equal area polygons and into 1.5 m vertical slices. They examined the population distribution of the resultant blocks compared to the raw data and found no significant difference in the mean Au and U_3O_8

grades and concluded that the Central Limit Theorem was an acceptable approximation to use.

Regarding the MWS No. 4 Dam mineral resource estimate, GijimaAST prepared histograms of the Au and U₃O₈ assays and found there were two distinct populations. The population of the material below the 12 m depth in the dam was clearly higher grade than the upper 12 m of material. Subsequent stages in the estimation process dealt with the two zones separately. Assay data were composited over 0.2 m lengths as some of the original samples were of varying lengths. No meaningful variography could be established, therefore, the principal search direction was horizontal as it corresponded with the dumping direction. Ordinary kriging was used as the grade estimation method. The MWS No. 4 Dam mineral resources were reviewed by Daan van Heerden, Minxcon, a Competent Person as defined by SAMREC. Based on Minxcon's review, the MWS No. 4 Dam material was classified as indicated mineral resources. Scott Wilson RPA concurs with the opinion.

A similar methodology was employed for the MWS No. 5 Dam except the population was separated at the 9 m depth. The supporting geostatistical report from GijimaAST was not available. Minxcon reviewed the data and remodelled the MWS No. 5 Dam resource estimate based on classical statistics. Scott Wilson RPA agrees with the Minxcon approach.

CLASSIFICATION

Regarding classification of the Buffelsfontein 2-5 and Harties 1, 2, 5, 6, and 7 dams, using the Central Limit Theorem, briefly described in the previous sub-item, Fisher determined confidence limits for each tailings dam. Measured resources included tailings dams where the grade was determined with less than 10% error at the 90% confidence limit. Indicated resources included tailings dams where the error was between 10% and 20% at the 90% confidence limit. Harties 7 dam had only 28 samples and was classified as inferred mineral resources as the distribution of the grades did not demonstrate normal statistical tendencies. Two additional dams were not sampled.

The MWS No. 4 Dam material below the 12 m depth was classified as indicated mineral resources based on the data density and verification by the April 2007 drilling program. The MWS No. 4 Dam above the 12 depth was not considered as a mineral resource as, based on the combined Au and U₃O₈ grade, the material does not present a reasonable expectation of being exploited economically. The MWS No. 5 Dam mineralization is considered a mineral resource, however, as the entire dam cannot be drilled and verified, due to the surface water, the material has been classified as inferred mineral resources.

Three other small dams, i.e., Flanagan, Ellaton, and NKGE, have been classified as inferred mineral resources. The tonnages were based on surveys and the grades were based on a combination of auger drilling and historical production records.

MINERAL RESERVES

There are currently no mineral reserves as defined by NI43-101. First Uranium plans to upgrade the inferred mineral resources to at least indicated mineral resources by conducting additional verification drilling. First Uranium also plans to conduct further metallurgical testwork and capital and operating cost estimates to pre-feasibility accuracy and thereby convert the measured and indicated mineral resources to proven and probable mineral reserves. The estimated date for completion of the foregoing work is the end of July 2007.

18 OTHER RELEVANT DATA AND INFORMATION

With the increase in the price of uranium, an opportunity was identified in the BGM Underground Mine tailings where gold and uranium ore has only been processed for the recovery of gold over a period of years and uranium has been directed to tailings. The Buffelsfontein Project will start with gold production from reprocessed tailings on the MWS and Buffelsfontein sites using the existing MWS gold recovery plant. Assuming the completion of the MWS acquisition, the MWS plant will be modified, expanded and augmented with a uranium recovery plant. The operation will then expand to be a tailings recovery/reprocessing operation recovering gold and uranium from the existing tailings dams. The uranium plant tonnage will consist 90% of material from tailings dams being reprocessed and 10% from the operating BGM gold plant tailings.

The existing tailings dams will be recovered using hydraulic cannons and delivered to the treatment plant by pipeline. Additionally, a uranium flotation concentrate will be generated from the BGM plant tailings and brought to the Project by pipeline for uranium recovery before being sent to tailings impoundments. The BGM Underground Mine material will account for 10% of the uranium circuit feed tonnage and 12% of the uranium feed. The gold in the BGM Underground Mine material accounts for approximately 1.7% of the Project gold feed. The combined slurries will be processed for the recovery of uranium into yellowcake and gold into doré.

The Project is planned to start as the 600,000 tpm gold recovery operation (the existing MWS plant) and expand over a three year period to where it will recover 1.8 million tpm of tailings and will produce gold and uranium. The Project has a forecast life of 16 years. With the purchase of MWS, the Project will be producing gold immediately and the construction will be done at the MWS site rather than on the BGM site as previously proposed.

The life of mine plan excludes approximately 60 million tonnes of inferred mineral resources in the MWS No. 5 dam. First Uranium plans to undertake the necessary drilling, metallurgical studies, and economic analyses to upgrade the resource classification, thereby possibly extending the life of the Buffelsfontein Project by approximately three years.

The tailings slurry from the tailings dam recovery will be processed by floating a uranium concentrate containing the uranium to be recovered and then cyanide leaching of the flotation tails for gold recovery. The uranium will be recovered by pressure leaching followed by precipitation. Finally, the uranium process residues will be neutralized and leached with cyanide for recovery of gold. The acid leaching of the uranium also frees additional gold for subsequent recovery by cyanidation.

Tailings from the process will initially be deposited in the existing permitted MWS tailings dam and then into a new tailings dam that will be built with final slopes appropriate for final closure. In this manner, the Project is planned to achieve two objectives:

- Recovery of uranium and gold.
- Resloping of tailings dams for final closure.

MINING OPERATIONS

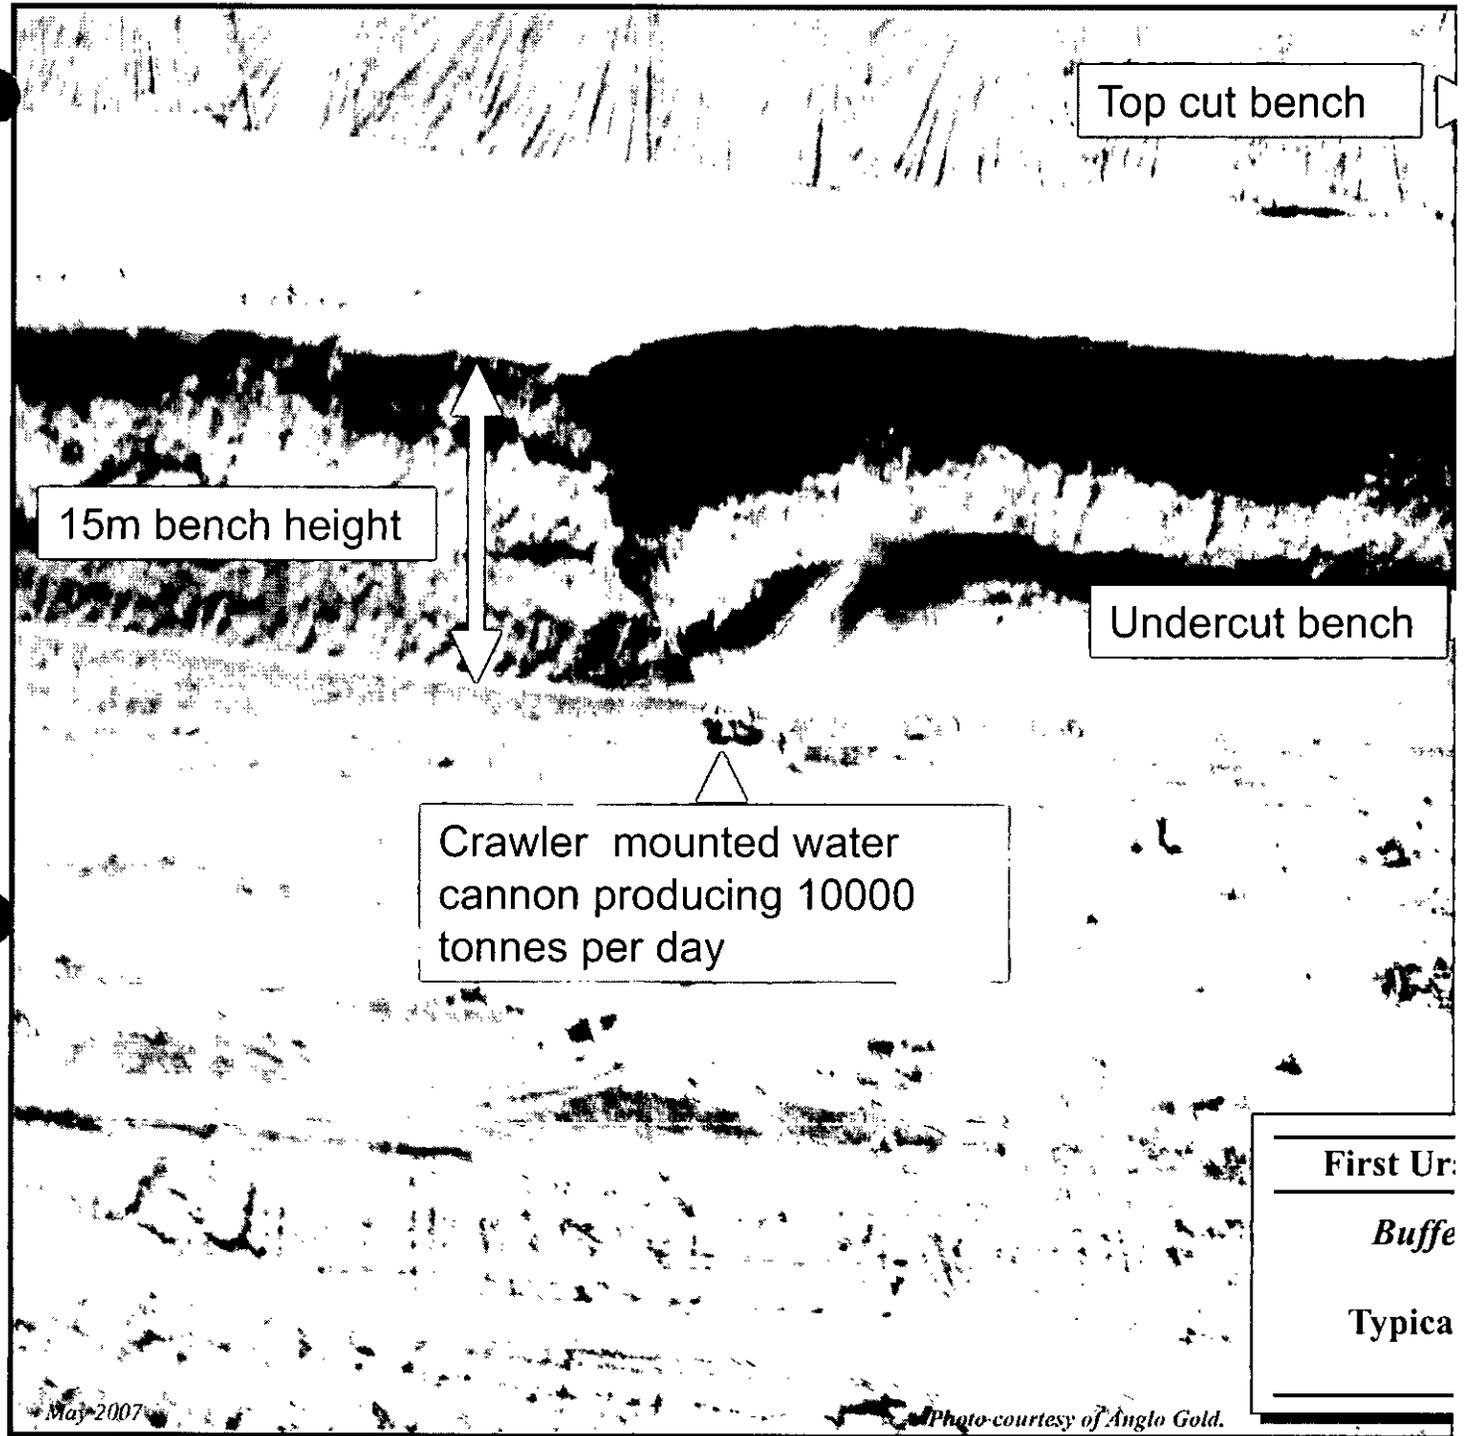

The tailings will be recovered using high pressure water cannons with 4 inch and 6 inch nozzles. The pulp will be screened to remove trash and coarse material at the dam. The screened slurry will then be pumped to the plant. Most of the water required for the process will be used at this stage.

This type of recovery operation is not uncommon. The ERGO project of AngloGold Ashanti Limited operated for 25 years recovering gold and uranium from tailings dams. Immediately adjacent to the Buffelsfontein property is the operation which First Uranium has purchased where Chemwes is operating a 20,000 tpd tailings recovery plant for the

production of gold from tailings dams. The photo in Figure 18-1 illustrates a typical tailings recovery operation.

All of the resources of the combined MWS/Buffelsfontein Project will be recovered and processed except for the MWS No. 4 and MWS No. 5 dams. In the MWS No. 4 dam, the upper 12 m of the dam has been sampled and identified as having too low a grade for recovery and treatment. Therefore, on this dam the plan is to remove the top 12 m hydraulically and move the material to a tailings storage area. The bottom portion of the dam will then be available for recovery and treatment. The MWS No. 5 dam is a large lower grade inferred resource which is not included in the current mining plan but was examined to determine its potential impact on the project economics.

The production for each of the tailings dams is assumed to be the same as the resource grade, except for the MWS No. 4 dam where the top will be removed as waste before processing the balance of the resource. In this case the production grade was reduced by assuming that there will be 10% dilution by material from the lower grade upper portion of the pile and 90% extraction of the lower portion of the dam.

An August 2006 site visit to the operating tailings recovery area of the Chemwes operation highlighted several of the planning considerations such as:

- Planning for recovery incorporating the ground contours to reduce the need for pump stations between the recovery area and the main screen/pump station.
- Planning for the recovery of the final ribs of material that are used for access while recovering tailings.
- The difficulty in maintaining full production at the end of the Project life.

Assuming the completion of the purchase of MWS and the retention of the experienced operating staff, the Buffelsfontein Project will benefit from the exposure of the MWS staff to problems encountered since commencement of their operations. Some of the items noted by MWS are:

- The presence of a non-repulpable layer of very fine underground slimes ("bota") was encountered in May 2003.
- A thick layer of vegetation in the valley area choked the reclamation screens.
- Roots and reeds from evaporation dam material choked the reclamation screens.
- Long, deep and narrow gullies led to production problems.
- Long gullies give flexibility to the Mining Plan.
- Planned face heights were 10 m (max) to 6 m (min), but actual face heights have been 15 m to 10 m.
- High grade calcine production has interfered with floor cleaning operations.
- There were low densities encountered during the No.3 floor cleaning.
- High pH conditions were encountered when material from the No.3 footprint was slurried. A lime addition system was required and installed.
- There was a large void created from the first cut. Catchment paddocks have had to be constructed.

These problems did not stop the MWS operation and the experience gained by MWS will be utilized in the Project. The Project production schedule may also be revised as further experience is gained, so that the feed is a mixture of material from large dams coupled with material from smaller dams and from final clean up at the base of each dam.

The preproduction work for recovery of the Buffelsfontein tailings involves the setup and installation of piping to feed the MWS plant to augment production from the MWS dams with material from the Buffelsfontein dams. The production schedule for the proposed Project is shown in Table 18-1. The LOM plan covers a 16-year production life. The production schedule commences in the larger higher grade tailings dams and generally moves to lower grade smaller dams over time.

The production schedule includes 302 million tonnes. First Uranium notes that gold values have been encountered in the soil immediately below the base of the tailings, however, this material has not been included in the resource estimate. Recovery at the base of the tailings will be carried out with a small monitor to ensure complete recovery of material.

As the tailings are located in 15 separate dams, there will be a number of moves and setups. In fact, in years 3 to 6, the recovery operations will be from four, two, two and three sources, respectively. This may incur additional costs for the setup and teardown of the recovery equipment at each location. It will not be practical to simply reuse all the materials as the production forecast remains constant despite the multiple mill feed locations in a number of years.

The preproduction phase for the mining is relatively short and will include the installation of piping to the plant, collection ditches, water pumping areas, and a screening plant in the area to be reclaimed.

Power is available in the area as this is an industrial area with power lines feeding the various mines and mills. There is an existing network of roads in the area.

The main mine equipment consists of slurry and water piping and cannons for hydraulic mining of the tailings.

In addition to the recovered tailings, there is a tailings stream from the BGM Underground Mine gold plant that will be taken to the tailings recovery plant and treated for the recovery of uranium and gold. The BGM Underground Mine operates at about 90,000 tpm from a number of shafts. The ore is leached for gold recovery, but there is no longer a uranium recovery circuit at the facility. Therefore, the uranium goes to tails. Over the Project life, the BGM plant is planned to produce some 18 million tonnes of tailings (Minxcon). From these tailings the Project will generate 3.4 million tonnes of flotation concentrates to be combined with the flotation concentrate from the slimes and treated for uranium recovery.

The mineral resources of the BGM Underground Mine have been audited by Minxcon and that audit confirmed the presence of uranium in the mill feed. The mine life exceeds that of the planned tailings recovery operation, so there should be a steady stream of feed from that source.

Scott Wilson RPA recommends that First Uranium focus on expediting the construction of the pipeline from the Buffelsfontein dams to the MWS plant site to add extra feed sources as the MWS No. 2 resource is diminishing.

Scott Wilson RPA recommends that First Uranium review the production schedule with more consideration given to the problems of maintaining a high production rate from some of the smaller feed sources.

MINERAL PROCESSING

PROCESS FLOW SHEET

The proposed process is based on the preliminary test work conducted to determine the viability of the process, but not to optimize the process. Test work to confirm the design criteria continues. Initial gold recovery will be from the continued operation of the existing MWS plant which has a production record over the past three years. Engineering work will focus upon expansion of the MWS gold plant to 40,000 tpd and design and construction of a uranium recovery plant with an initial capacity of 4,400 tpd (1.6 M tpa). Both plants will subsequently be expanded to 60,000 tpd for the gold plant and 6,600 tpd for the uranium plant.

In late 2006, K'Enyuka undertook an options study to establish the optimal process plant technology and costs for the recovery of uranium. Metallicon Process Consulting (Pty) Ltd. (Metallicon) assisted K'Enyuka in aspects of the work and provided a summary of the results to First Uranium.

The study was focused on the uranium plant and considered a number of process options for leaching, solid-liquid separation, and uranium extraction. No uranium precipitation options were considered. Capital costs for the common portions of the work were determined from detailed costing of major equipment and factored cost estimates for structural, civil electrical, instrumentation, plate work, and piping. Operating costs were considered for each of the options using a number of parameters such as reagents, labour, maintenance, power, and water. The maintenance cost was calculated as a percentage of the capital cost for each option.

The options were then compared on the basis of the capital and operating costs, technical aspects, and the results of a risk analysis workshop. The risk analysis workshop focused on safety, health, environment, technical aspects, capital costs, and operating costs.

There were 10 flow sheet options generated for Buffelsfontein, essentially representing five flow sheet options with a pressure leach versus atmospheric leach for each scenario. The solid liquid separation choices were filter versus counter current decantation. Two ion exchange technologies were considered in the flow sheets and both are available in a continuous ion exchange configuration.

The NIMCIX process is a continuous ion change process which operates by transferring the uranium in the pregnant solution onto a strong base resin, through a column. The pregnant solution flows up the column fluidizing the bed and is counter current to the resin flow, and leaves as barren solution. The loaded resin is transferred via the transfer vessels, to elution columns (where the resin is eluted with 10% sulphuric acid at ambient temperature) to remove the uranium. The concentrated eluate proceeds through a screen to a storage tank on the solvent extraction plant, and eluted resin is reused in the loading column. The resin is regenerated with 4% caustic soda before being reused in the loading column.

The principle of the IONEX CIX plant, an alternative continuous ion exchange process, is exactly the same as that of the NIMCIX contactor. The difference between the two is the process required to transfer the uranium onto the strong base resin. IONEX consists of a single multi-port valve and thirty resin cells to allow for continuous adsorption and elution of the uranium, as well as regeneration, washing and scrubbing of resin. The resin cells are connected to the IONEX valve with connecting piping.

Additionally, a continuous resin-in-pulp (RIP) technology for ion exchange was considered in the event that suitable solid-liquid separation cannot be demonstrated in the Mintek test work. The RIP circuit consists of a number of stirred tanks. The resin is retained in each stage by screens, while the slurry flows or is pumped to the next stage downstream. The resin is transferred counter current to the slurry through a separate mechanism to minimize resin handling. Resin is continuously transferred from the elution circuit, through the adsorption cascade, and back to elution.

The preferred option for the Buffelsfontein operation was pressure leaching with counter current decantation and NIMCIX/solvent extraction technology. A comparison of the original option and the preferred option in terms of capital and operating costs is shown below in Table 18-2. The options were compared on the basis of a 120,000 tpm uranium processing plant. The capital and operating cost comparisons cover only those items that are common to the process options reviewed and are not the total capital or operating costs.

PROCESS DESCRIPTION

- A. The tailings are mined using high pressure water cannons. The slurry is screened at the reclamation site to remove tramp material and pumped to the plant.
- B. The MWS plant is set up for flotation of a pyrite concentrate from the +75 micron feed, the concentrate is milled and then leached with the flotation tailings in a CIL circuit. Gold is stripped from the carbon and recovered by electrowinning and refining.
- C. When the gold plant expansion and uranium plant are commissioned, the uranium will be concentrated using flotation. The test work shows that a significant amount of gold will follow the uranium. The test work shows that a higher mass pull than initially expected is required to achieve a reasonable recovery. The preliminary results of the further test work indicate that the recovery is more a result of mass pull rather than concentration. The cost of this step is included in the CIL cost but is based on a smaller tonnage.
- D. The uranium concentrate will be pressure leached. This will liberate the gold and produce sulphuric acid and ferric iron required by the uranium leach. The expected sulphur grades and interim results of pressure leach tests indicate a net acid gain of ~80 kg/t. The initial mineralogical examination showed that the uranium is predominantly in brannerite. Brannerite is a more refractory uranium mineral, suggesting that the leach will need higher temperatures, time, or pressures to reach satisfactory recoveries. The diagnostic leach, as well as the further tests currently being undertaken, has indicated that the sulphides are successfully oxidized, which is paramount in terms of going forward. The uranium leach tests indicate a 90% uranium leach recovery is feasible.
- E. The uranium bearing solution (pregnant solution) will be separated from the solids, and the solids washed with raffinate from the ion exchange circuit, by counter current decantation.
- F. The uranium flotation tail will need to be thickened to meet the CIL relative density of 1.45.
- G. The uranium from the current gold plant will be recovered by flotation. The same recovery has been used as the tailings, though historical test work has shown that better results on underground ore is possible. The current underground mine resources and mine plans indicate 90,000 tpm of underground ore at 120 g/t U_3O_8 . Test work is underway to determine these recoveries. For this report, it was assumed that 20,000 tpm of concentrate grading 270 g/t U_3O_8 would be produced and sent to the First Uranium plant for processing.

- H. The uranium in the pregnant liquor will be extracted using ion exchange in a series of fluidized beds using a NIMCIX column. The ion exchange resin will be eluted and the elute purified in a conventional alamine solvent extraction circuit, producing ammonium diuranate as slurry.
- I. The pH of the pulp will need to be raised ahead of the CIL circuit to protect the cyanide. The acidic uranium plant residue will be mixed with the uranium flotation tail. There will be some neutralization and some gold will be liberated as a result. The diagnostic leach suggests that 20.49% of the contained gold was associated with HCl digestible minerals and 1.76% was found to be associated with carbonaceous constituents. In the analysis, half of this additional gold recovery has been accounted for. The lime consumption attributed in the operating cost estimate may be lower than expected since the uranium plant used the gold plant tails to assist neutralization. This circuit can be expected to provide a similar effect.
- J. The neutralized material is then fed to a CIL plant where the gold is leached with cyanide and recovered onto carbon. The diagnostic leach is the basis for the gold recovery. There are three feed routes that will differently impact on the gold recovery. Considering the individual process route recoveries and tonnages, an overall recovery of 68% is expected. CIL leach test on the uranium plant residue confirms the diagnostic leach result.
- K. The carbon is then eluted, regenerated, and returned to the CIL circuit. The gold is electrowon from the eluate and melted to produce doré bullion for onward refining at the rand refinery.
- L. The residue from the CIL plant is then redeposited in an impoundment that has been designed to meet the closure conditions and with acceptable side slopes. In addition, the sulphur in the tailings will be predominantly fixed as calcium sulphate and will reduce the acid drainage risk.

Gold recovery is forecast to be lower with the gold plant operating alone, as the opportunity to recover gold which is unlocked by acid leaching in the uranium dissolution process is not present.

TABLE 18-3 GOLD RECOVERY
First Uranium Corporation - Buffelsfontein Project

	From Diagnostic Leach Test	% CIL Recoverable Gold		Uranium Flotation Tail
		Pyrite Concentrate	Uranium Flotation Concentrate	
Gold available to direct cyanidation	51	51	51	51

Gold associated with HNO ₃ digestible minerals	10	10		
Gold associated with carbonaceous matter	2	2	2	1
Gold associated with quartz	11			
TOTAL	100	89	79	68

RECOVERABILITY

Scott Wilson RPA notes that:

- Gold recovery is set equal to the results of the diagnostic leach and plant operations may not equal the conditions in the diagnostic leach.
- The test work to date for uranium recovery would be best characterized as indicating that there is no fatal flaw, but further testing is required to confirm the process and the size of plant required.
- Further test work is required to obtain results from samples that are representative of the total mass to be processed.

CUT-OFF GRADE CALCULATIONS

A cut-off grade calculation was prepared based upon the revised operating cost and recovery estimates. For gold alone, the cut-off grade parameters used were:

- Operating cost of \$1.76 per tonne of plant feed
- Gold price of US\$500/oz
- Exchange at R7.4:US\$1
- Recovery of gold of 56% (based on gold recovery only)
- Cut-off = $1.76 / (500 / 31.103) / 0.56 = 0.20$ g/t gold.

For uranium, there is a 12% increase in gold recovery related to recovery of gold, liberated in the uranium processing (acid leach), that was factored into the cut-off grade as a credit on the costs. For uranium, the cut-off grade factors were:

- Operating cost of \$6.56/tonne of uranium flotation concentrate
- Uranium price of \$40.00/lb
- Gold price of \$500/oz
- Exchange at R7.4:US\$1
- Additional 12% recovery of gold based on a 0.3 g/t head grade
- Mass pull of 10% of feed to uranium plant
- Gold credit = $0.12 * 0.3 * 500 / 31.103 = \0.58 per tonne of feed
- Cost per feed tonne = $6.56 / 10 - 0.58 = \$0.076$
- Cut-off = $0.076 / 40 / .27 = 0.007$ lb/tonne = 0.003 kg/t.

If the mass pull in the uranium flotation is increased to 20%, the uranium processing costs would double and the cut-off grade would become $(6.56 / 5 - 0.58) / 40 / 0.27 = 0.068$ lb/t = 0.031 kg/t. At a \$50.00 per pound price for U₃O₈ there is not a significant change in the U₃O₈ cut-off grade compared to the values at \$40.00 per pound.

For tailings dams, it is unlikely that specific areas can be identified for recovery and that lower grade areas can be left behind. Therefore, lacking a considerable amount of additional drilling, the cut-off grade will have to be applied to each tailings dam as a whole. The exception to this is the MWS No. 4 dam where a higher grade section in the lower half of the dam has been identified. In this case the upper 12 m of the dam will be removed to provide access to the higher grade material in the lower portion of the dam.

MARKETS

GOLD

Gold is freely traded, at prices that are widely known, so that prospects for sale of any production are assured. Scott Wilson RPA used a gold price of \$500 per ounce for the Base Case. The price of gold on April 30, 2007, closed at \$680.00 per ounce.

URANIUM

Uranium is freely traded, but the number of buyers and sellers is much smaller than for gold. The uranium is expected to be sold under contract to a processor. There is a uranium processor operating in South Africa and it has in the past received concentrates from BGM. Discussions between Simmers and Nuclear Fuels Corporation of South Africa Limited (Nufcor) indicate that concentrate specifications have not changed significantly from those applicable when the plants in question last produced uranium concentrates, but there are no contracts in place. There have also been discussions with other uranium processors outside South Africa. The concentrates that will be produced are generally transported in drums from the mine to a conversion facility, and this transportation does not pose any special problems.

The world wide uranium market was approximately \$5 billion in 2005, compared to the \$57 billion gold market. Half of the world's mine production comes from Canada (28%) and Australia (22%). South Africa currently accounts for only 1.8% of the total production. World production of uranium in 2005 was 91,700 M lb (41,609 Kt). The top six uranium producers yield 77% of the world production.

The most common commercial use for uranium is fuel for nuclear power plants. The demand for uranium is directly proportional to the level of electricity generated by nuclear power plants, which in turn is driven by the future global consumption of electricity. According to the Energy Information Administration's International Energy Outlook 2006 (base case), world net energy consumption will more than double before 2030. There are 442 operable, commercial nuclear power plants that currently supply approximately 16% of the world's electricity production. There are another 28 plants under construction, 62 planned, and 160 proposed. The World Nuclear Association (base case) projects that reactor related demand will increase by more than 65% by 2030, up to 110,776 tonnes of required uranium.

In 2005, the uranium consumption exceeded mine supply by approximately 36%. The deficit is filled from secondary sources including reprocessed spent fuel, government

and civilian stockpiles, and the conversion of highly enriched uranium from nuclear weapons. These secondary supplies accounted for 46% of requirements in 2004.

According to the pricing information published by Ux Consulting Company, from relative highs of more than \$40/lb in the late 1970s, U₃O₈ prices have dipped dramatically reaching a low of \$7/lb at the end of 2000. Since then price levels have more than recovered, surpassing the previous historical high to reach \$60.00/lb on November 7, 2006.

There is currently no regulated commodity market underwritten by a market maker for the various components of nuclear fuel. Utilities typically purchase uranium pursuant to contracts with producers on either a medium (less than five years) or long term basis, with the delivery of the uranium generally commencing two to three years after the date of the contract. Pricing formulas are complicated and generally remain confidential and undisclosed to the public.

Utilities may also purchase uranium through spot and near term purchases from traders and producers. Demand in the spot market was approximately 27 millions pounds of U₃O₈ in 2005. Utilities usually buy fuel through contracts with various supplies at each stage of the uranium processing stages. Depending upon the stage at which the uranium is purchased, the utility will be responsible for any remaining processing.

Scott Wilson RPA used a U₃O₈ price of \$50.00 per pound for the base case analysis. On April 23, 2007, the price of U₃O₈ as published by Ux Consulting was \$113.00/lb.

CURRENCY

Scott Wilson RPA used a currency exchange rate of R:US\$ = 7.4:1 for the base case economic analysis. On April 30, 2007, the exchange rate for R:US\$ was 7.03:1 as published by the Bank of Canada.

CONTRACTS

At the time of the Scott Wilson RPA review, there were no contracts in place for mining, concentrating, smelting and refining, transportation and handling or sales. There are a number of contracts to be finalized before First Uranium could start production activities. These include:

- Closing of the MWS purchase agreement.
- Management agreement with Simmers.
- Negotiation of rates for gold processing for Simmers.
- A tentative sales agreement for uranium. First Uranium has meetings related to uranium sales planned for the near future.
- A labour contract will be necessary for the work force.

ENVIRONMENTAL CONSIDERATIONS

The permits required for mining operation are:

- Mining Right from the South African Department of Minerals and Energy (DME)
- Water Licence from the South African Department of Water Affairs and Forestry
- Certificate of Registration (CoR) for uranium processing from the South African National Nuclear Regulator

As noted above, BGM has an old order mining right to mine the area occupied by the BGM Underground Mine and the Hartebeestfontein Gold Mine (ML. 4/2001). BGM Underground Mine has an Environmental Management Plan, approved in August 2002 by the DME, that includes retreatment of the tailings dams. In connection with the Buffelsfontein Conversion Application, which is being made as part of an effort to obtain and transfer to First Uranium (indirectly) the necessary mining rights in order to carry out the Project and in part in response to the requirement that BGM faces to convert its old order mining rights to new order mining rights by 2009 in line with Mineral and Petroleum Resources Development Act (Act 28 of 2002). This will require resubmission of the Environmental Management Plan. The conditions set out by the DME for this conversion are currently met by the mine.

BGM has been issued a Certificate of Registration (Ref No COR 182B001) in respect of its existing mining operations.

CURRENT TAILINGS MANAGEMENT

Tailings from the MWS plant are produced at a rate of 600,000 tpm and are deposited on the No. 5 tailings dam to the north of the N12 Highway. The current height of the tailings dam is approximately 22 metre and has a top surface area of approximately 149 ha. GCS (Pty) Ltd. (GCS) provided the following assessment of the tailings deposition strategy and the options for future deposition in their review of the MWS operations.

The rate of rise of the tailings dam is currently at 3.3 metre per year and it has been operated at a high rate of rise for the past three years. The accepted save rate of rise for gold tailings dams constructed by means of the Ring-Dike (day wall paddocks) system is between 1.8 m to 2.0 m per year.

According to Fraser Alexander, the tailings dam can be safely operated for the remaining life of the MWS re-mining operations and should then be decommissioned for a period to allow the phreatic surface to normalize.

The following upgrades were done to the Tailings Storage Facility (TSF) in 2003 prior to the tailings deposition from MWS:

- A floating penstock was installed and the old penstock line was sealed, and
- The existing tailings ring feed was upgraded.

The TSF was constructed over an area underlain by very shallow dolomite (soil cover estimated to be between 0 m and 2 m) and no underdrains were installed. High volumes of groundwater seepage are visible on surface at the south and southeast of the TSF between the toe of the TSF and the evaporation dam. The seepage is diverted in a canal towards the Koekemoerspruit.

It is the opinion of GCS, from experience in the area, that the main source of the seepage is the TSF and that the evaporation dam also contributes towards the seepage. The seepage point is at the topographical low of the TSF and also in the area where the supernatant pool is located. The tailings dam has been operated at a high rate of rise that prevents the tailings to consolidate optimally, i.e., increases interstitial water volumes and seepage potential. The thin soil layer overlaying the dolomite rock acts as a preferential flow path in the horizontal direction.

The return water from the TSF is normally diverted directly to the monitoring operation. The option exists to divert return water to the evaporation dam. The water volume returned from the TSF to the process is approximately 20% of the slurry water deposited on the TSF. With better monitoring and management, the return water volume could definitely be increased.

Fraser Alexander supplied GCS with freeboard and piezometer data for the month of May 2006. The freeboard appears to be within the legal requirements. There are seven lines of two piezometers and all the readings for May 2006 show that the piezometers are dry. Additional piezometers should be installed in the basin at each line and also in the area where the groundwater seepage occurs to allow for closer monitoring of the phreatic surface in the TSF.

More data is required to look at trends of the phreatic surface. No stability assessment is available for the tailings dam and it is recommended that the stability be verified to minimize risk of failure at the current deposition rate.

GCS recommends that a new area should be developed for tailings disposal in future for the First Uranium re-mining project. The MWS No. 5 tailings dam can be operated at a lower rate of rise once the stability has been confirmed.

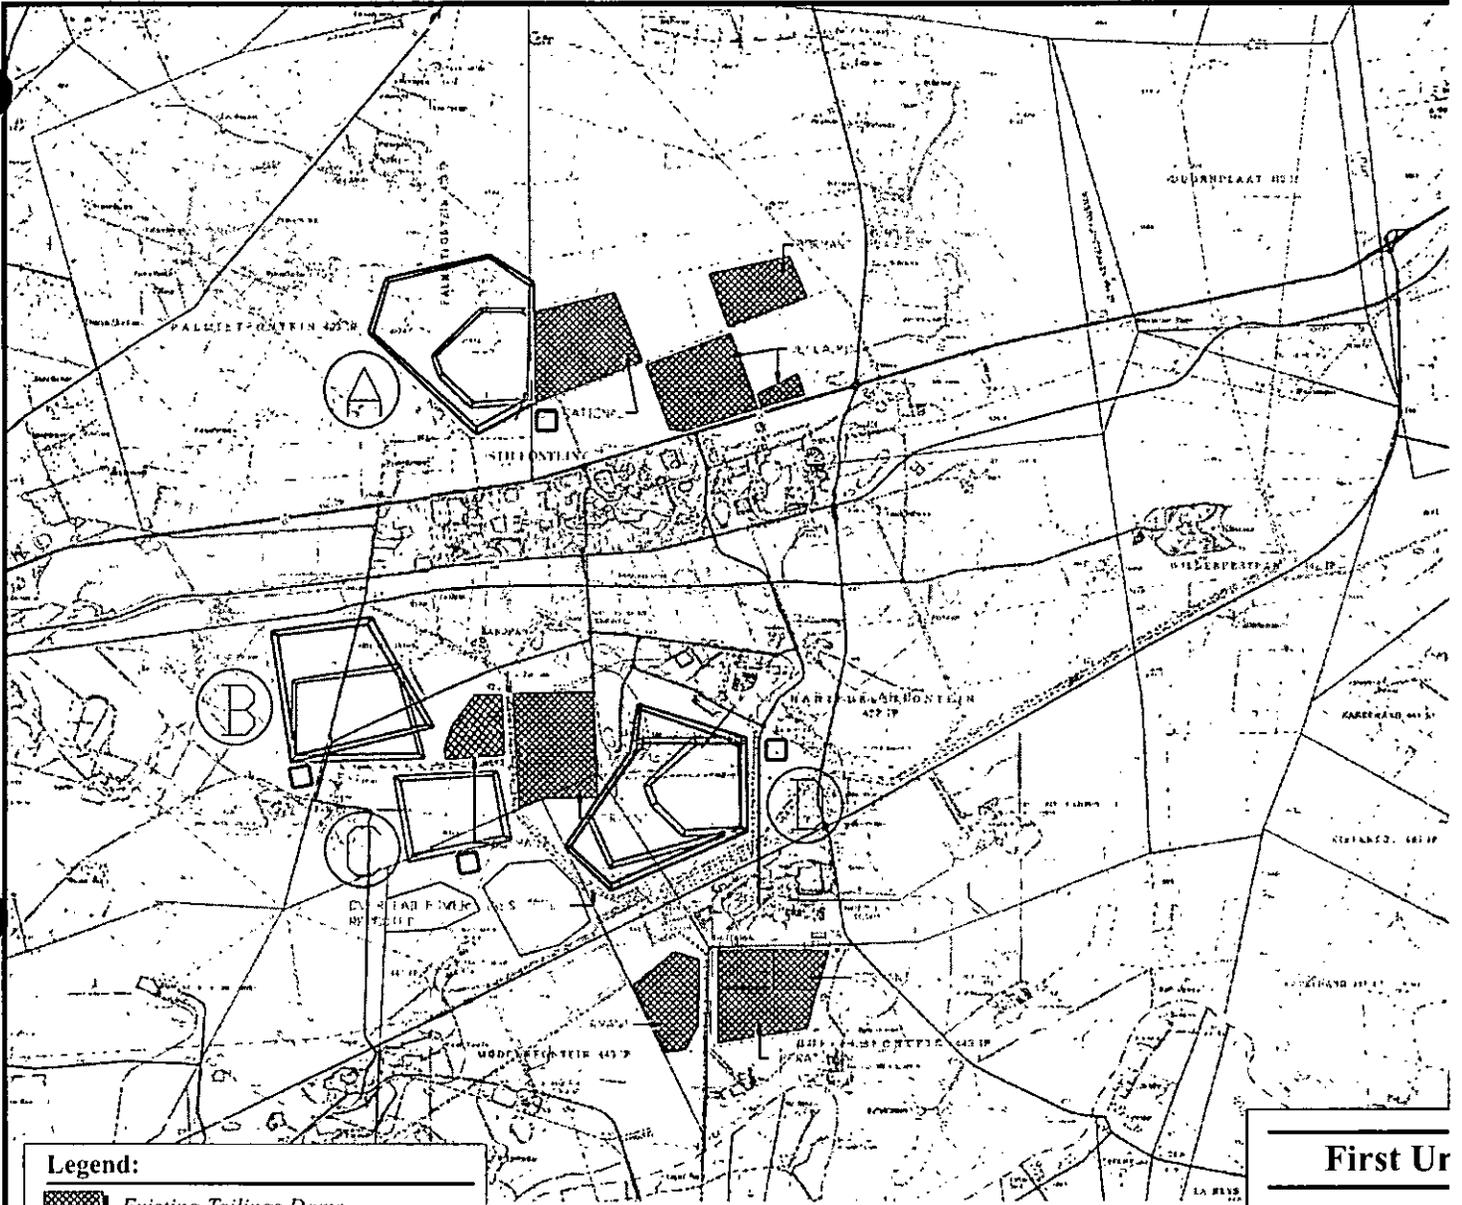

FUTURE TAILINGS MANAGEMENT

The most recent tailings management reviews were based upon the planned re-mining of some 200 million tonnes of tailings from the existing Harties and Buffels tailings dams for the extraction of uranium and gold. This was based on operations at rates of 600 tpm to 1,200 tpm. At 1.2 million tpm, an estimated top surface area of 515 ha and a footprint area of 586 ha is required for a final rate of rise of 2 m/year and overall side slopes of 1:3 (v:h). The current plan is to grow to 1.8 tpm, so that an even larger surface area will be required.

Four areas were considered by CGS for Simmers in the development of TSF options for the re-mining project. Neither First Uranium nor Simmers owns any of the properties considered. The areas are listed below and shown in Figure 18-3:

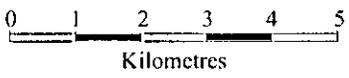

- The area north of the N12 national road, in vicinity of the existing MWS TSF (Referred to as "AREA A").
- Area northwest of the Harties TSF (Referred to as "AREA B").
- Area southwest of the Harties TSF (Referred to as "AREA C").
- Area southeast of the Harties TSF (Referred to as "AREA D").

First Ur

Buffi

New Ta

Re

May 2007

Source: GCS (PTY) Ltd., 2006.

CGS undertook a review of the sites in terms of bedrock geology, structural geology, geohydrology, groundwater flow and site specific conditions. GCS then completed a site specific assessment. From this work GCS concluded

Area A

- There is adequate airspace available for deposition of 1.2 million tpm tailings for the proposed life of the Project.
- The Pilanes dyke is running to the east of tailings dam No. 5. The dyke was mapped from underground mining and the existence on surface will have to be confirmed.
- The surrounding area has been disturbed by historical tailings deposition.

Area B

- The estimated available footprint area for tailings disposal is 560 ha, which is less than the anticipated 586 ha required for deposition of 1.2 million tpm tailings for the proposed life of project.
- This area can only accommodate a new TSF for 600,000 tpm or less.
- A combination of TSFs can be constructed in areas B, C and D.
- This area seems to be an ideal site in terms of structural geology and impacts on groundwater and surface water resources.

Area C

- The estimated available footprint area for tailings disposal is 350 ha, which is less than the anticipated 586 ha required for deposition of 1.2 million tpm tailings for the proposed life of the Project.
- This area can only accommodate a new TSF for 330,000 tpm or less.
- A combination of TSFs can be constructed in areas B, C and D.
- This area seems to be an ideal site in terms of structural geology and impacts on groundwater and surface water resources.

Area D

- The estimated available footprint area for tailings disposal is 415 ha, which is less than the anticipated 586 ha required for deposition of 1.2 million tpm tailings for the proposed life of the Project.
- This area can accommodate a new TSF for 930,000 tpm, 600,000 tpm, 330,000 tpm or less.
- A combination of TSFs can be constructed in area B, C and D.
- Shallow dolomitic bedrock occurs in this area.
- Possible fault system runs to the east of the area.

- Area slopes east towards the Koekemoer Spruit and surface water impacts will have to be minimized through proper design and consultation with DWAF.

There appears to be sufficient space in the Project area for the deposition of tailings at a rate of 1.8 million tpm but the deposition is likely to involve the use of a number of areas to avoid very high rates of rise of the impoundments. Scott Wilson RPA notes that the work to date on the selection and development of tailings deposition areas is preliminary and that more detailed site assessment is required along with selection and acquisition of the best areas followed by permitting of the necessary TSF.

RECLAMATION COSTS AND FUNDING

Under the Buffelsfontein Tailings and Rights Agreement with BGM, First Uranium will be responsible for the reclamation costs for the surface areas of the BGM operation. BGM has not generated a complete review of the cost of the surface reclamation and First Uranium has included a reclamation cost allowance of approximately \$675,000 per year but should confirm that this sum is in fact sufficient.

The Chemwes Rehabilitation Trust has been established in terms of the guidelines given in Government Gazette No. 24134 of December 6, 2002. The trust is between the company as the founder and the beneficiary as Chemwes. The documentation for the trust is all in place and three trustees have been appointed.

An amount of approximately \$1.4 million is in place, but this is less than the estimated rehabilitation obligation of approximately \$4.9 million, details of which will be found in the rehabilitation report prepared by GCS. Furthermore, the salvage value of the MWS plant has been estimated by K'Enyuka for GCS as \$6.2 million. The DME has agreed to the shortfall being funded over a two year period. However, ongoing rehabilitation is being paid out of working costs, so that the shortfall is diminishing month by month. The net impact of the closure costs is estimated to be a cash contribution over the next two years of \$3.5 million to bring the trust up to \$5 million. Then, at the end of the mine life, there would be an expenditure of \$5 million for closure offset by funds from the trust and revenue of \$6.2 million for salvage value.

The closure plan has been approved by the DME and is progressing well with the majority of the Chemwes/MWS freehold being rehabilitated. The outstanding areas are the plant, tailings dams, shaft area, and married quarters. Work is in progress on all of these areas at the moment.

TAXES

Company taxes under South African legislation are 29% of profits after consideration of the tax shields of unredeemed capital and assessed losses. Scott Wilson RPA has included these taxes in the economic analysis. The taxation assumptions were developed by Simmers and First Uranium.

Proposed mining royalties of 1.5% on yellowcake, and 1.5% on refined gold, which could come into effect in 2009, have not been included in the cash flow analysis. The proposed royalties would be tax deductible. Scott Wilson RPA has been advised that:

- There is no schedule of implementation.
- Industry is lobbying to change from a net smelter royalty to a net profits royalty.
- Discussions around the application of the royalties have included consideration of tax changes as well.

The new order mining rights do include a provision for the application of royalties if imposed at some future date by the Government.

There is a 1% net smelter royalty on all gold production from the Buffelsfontein site payable to Aberdeen. This royalty is included in the economic analysis and is applied to all gold production from the operation including gold produced from the MWS tailings reprocessing.

CAPITAL AND OPERATING COST ESTIMATES

PREPRODUCTION CAPITAL

The capital cost estimates for Buffelsfontein tailings recovery are in large part based on order of magnitude estimates and scaled order of magnitude estimates. The capital costs estimate is summarized in Table 18-4.

Fraser Alexander Tailings, the contractor reclaiming tailings at the adjacent Chemwes Operation, provided a quotation for the recovery of the Buffelsfontein No. 2 tailings dam at a rate of 250,000 tpm. The capital cost for this operation was estimated to be \$865,000 for the recovery works. Given that the planned operation is eight times larger and the capital allowance is 11 times larger, the capital cost is considered appropriate. As the Project advances, however, a more detailed cost schedule and estimate will be required including consideration of the different setups for the nine separate dams.

The previous gold plant cost estimate was scaled from a smaller gold plant cost estimate. The previous capital cost was estimated to be \$62.2 million for a 60,000 tpd plant. With the acquisition of the MWS plant, the capital cost for the gold plant has been reduced to \$43.2 million as the existing plant will be used and has a capacity of 20,000 tpd. A contingency of 20% was used in addition to this capital cost.

The \$52.3 million estimate by K'Enyuka for the 200,000 tpm uranium plant is a scaled estimate from an order of magnitude estimate. K'Enyuka appears to have used a scaling factor of 1.62 for the doubling of the plant size, which compares to a factor of 1.52 using the 6/10s rule. Based on the K'Enyuka estimate of \$36.4 million (before contingency), the estimated capital cost for the 200,000 tpm uranium plant was \$59.1 million. For this analysis, a capital cost of \$59.1 million plus \$11.8 million in contingency (20%) has been used.

There are additional capital allowances of \$8.1 million for the new tailings storage facility and \$1.6 million in ongoing capital needs identified by MWS. A 20% contingency was added to the capital in the economic analysis.

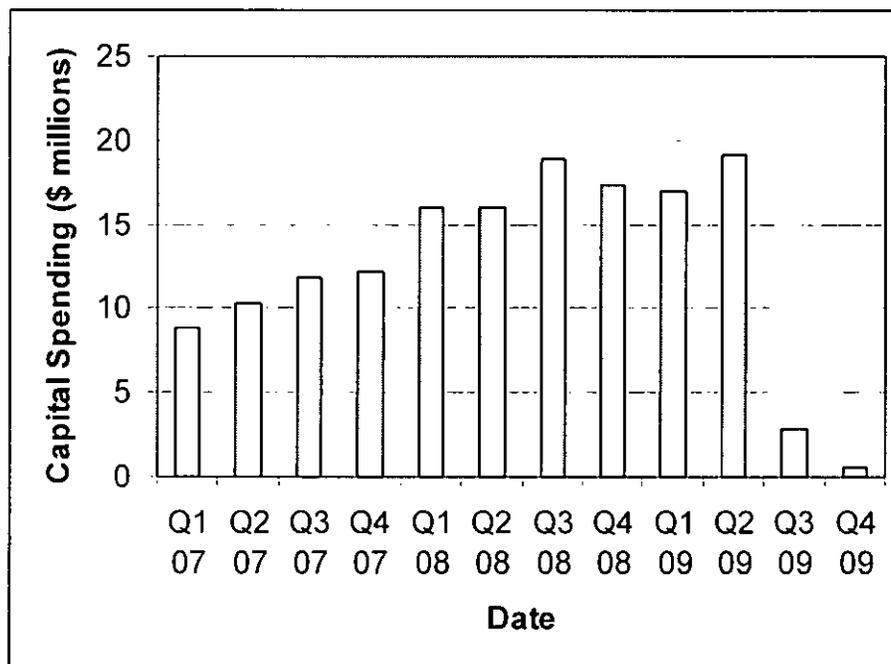

Capital cost allowances for the reclamation trust fund were included for years 1 and 2 and then a salvage value was recovered in the final site reclamation.

The preproduction capital will be expended over a period of just over two years. An estimate of the spending by quarters is included below in Figure 18-4. Years are taken as ending in March of each year such that Q4 2007 ends at March 31, 2008.

TABLE 18-4 CAPITAL EXPENDITURE FORECAST
First Uranium Corporation - Buffelsfontein Project

	2007	2008	2009	Total	
Monitor Stations & Pipelines	3.6	3.6	3.6	10.9	
Gold Plant	8.1	21.6	13.5	43.2	
New tailings dam	4.1	4.1	-	8.1	
Uranium plant	13.1	33.8	12.2	59.1	
Subtotal	28.9	63.1	29.3	121.4	
MWS plant capex	1.6	-	-	1.6	
Reclamation Fund	1.7	1.7	-	3.4	
Total	32.2	64.8	29.3	126.4	
Contingency	20%	6.1	12.6	5.9	24.6
Grand Total	38.3	77.4	35.2	151.0	

FIGURE 18-4 CAPITAL SPENDING BY QUARTER

Based upon the process options study by K'Enyuka and Metallicon in early 2007, there were some minor capital cost reductions envisioned with the proposed pressure leach flow sheet. The potential capital savings of \$2.4 million for a 120,000 tpm plant (or \$3.2 million for the final design capacity of 200,000 tpm) were considered to be within

the order of the estimate and the capital costs were not amended based upon the process options study.

SUSTAINING CAPITAL

A reclamation allowance of \$675,000 per year is included in the cash flow for a total of \$9.5 million. With new plants, there should not be a large sustaining capital requirement. Future planning should include consideration of the cost of the setups for the different tailings areas to ensure that sufficient provisions are in place.

OPERATING COSTS

The forecast operating costs are \$2.55 per tonne milled with a breakdown shown in Table 18-5. Operating costs for the gold plant were estimated from the currently operating Chemwes plant (on the Stilfontein tailings recovery). Gold plants are per tonne milled which includes all of the tonnage recovered plus the material from the BGM operation. The gold plant operating costs include a provision for the extra cost of removing the lower grade, upper portion of the MWS No. 4 dam.

TABLE 18-5 OPERATING COST FORECAST
First Uranium Corporation - Buffelsfontein Project

Gold plant (per total tonne)	1.78
Uranium plant (per tonne through uranium plant)	6.56
Rehabilitation provision (per total tonne)	0.03
Overhead and G&A (per total tonne)	0.03
Total (per total tonne)	2.55

The uranium plant operating costs were generated from 1997 operating cost data for a 50,000 tpm plant, escalated to mid-2006 costs and then scaled up to a 100,000 tpm operation. The costs were determined to be \$260,000 per month plus \$7.62 per tonne milled. This gives an estimated uranium plant operating cost of \$1.28 for fixed costs and a total of \$8.90 per tonne for the 200,000 tpm operation.

As a result of the process selection study, there was a significant operating cost reduction identified. As noted in Table 18-2, the operating costs were estimated to be reduced by \$360,000 per month (\$3.02/tonne of uranium plant feed) for the preferred pressure leaching option. Scott Wilson RPA recommended an additional \$0.68/tonne maintenance cost allowance in light of the conditions expected in the pressure leach circuit, for a net reduction in the operating cost of \$2.34/tonne. The unit costs in this section are based on the uranium processing plant feed tonnage.

MANPOWER

A manpower list has not been developed for this initial technical evaluation, however, the manpower requirements are not expected to be large when compared to an underground mining operation. The Chemwes plant employs some 90 persons in the tailings recovery and 128 in the plant for a 20,000 tpd operation. Therefore, the larger planned operation (60,000 tpd) together with the uranium plant, which is not present at Chemwes, would be expected to have in the order of 240 people at the tailings dams, 160 in the gold plant, and 100 in the uranium plant for a total of approximately 500 people.

PROJECT SCHEDULE

The Project milestones are summarized in Figure 18-5.

FIGURE 18-5 START-UP MILESTONES
First Uranium Corporation - Buffelsfontein Project

	2007	2008	2009
Optimization Testwork

Contingency	\$6.1 M	\$12.6 M	\$5.9 M
Production	20,000 tpd	40,000 tpd	

18-32

ECONOMIC ANALYSIS

An after-tax Cash Flow Projection has been generated from the Life of Mine production schedule and capital and operating cost estimates, and is summarized in Table 18-6. A summary of the key criteria is provided below.

ECONOMIC CRITERIA

REVENUE

- Nominal initial capacity of 20,000 tpd and rising to 60,000 tpd (21.6 million tpa) of reclaimed mine tailings.
- Mill recovery of gold increasing to 68% based upon Mintek leach tests and U₃O₈ recovery of 27% based upon 30% recovery to a flotation concentrate and 90% recovery from the leach concentrate.
- Gold payment is based upon 100% payment less a refining charge of \$120,000 per year plus \$0.50 per ounce.
- Exchange rate US\$1.00 = R7.40.
- Metal price: US\$500 per ounce gold and \$50.00 per pound U₃O₈.
- Revenue is recognized at the time of production.

COSTS

- Gold production will commence effective April 1, 2007, assuming the closing of the MWS purchase agreement.
- Mine life: 16 years.
- Life of Mine production plan as summarized in Table 18-1.
- Preproduction capital totals \$151 million including 20% contingency.
- Salvage value of \$6.2 million taken at end of mine life.
- Average operating cost over the mine life is \$2.55 per tonne milled.

CASH FLOW ANALYSIS

Considering the Project on a stand-alone basis, the undiscounted after-tax cash flow totals \$580 million over the mine life, and simple payback occurs at approximately 3.2 years. The LOM production is 2.1 million ounces of gold as doré and 14.7 million pounds of U₃O₈ in yellowcake.

Net Present Value (NPV) at an 8% discount rate is \$295 million and the Internal Rate of Return (IRR) is 69%.

The Total Cash Cost is US\$19 per ounce of gold including a credit of \$359/oz for U₃O₈ revenue. The mine life capital and royalty unit cost is US\$84 per ounce, for a Total Production Cost of US\$103 per ounce of gold. Average annual production during operation is 128,000 ounces of gold and 922,000 pounds of U₃O₈.

Considering the production as co-products and splitting the costs in proportion to the revenue from each of products, the gold cost is \$220/oz operating plus \$49/oz capital for a total of \$269/oz and the U₃O₈ cost is \$22.05/lb operating and \$4.90/lb capital for a total of \$26.95/lb U₃O₈.

The economic analysis contained in this report is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserve development, production and economic forecasts on which this preliminary assessment is based will be realized.

SENSITIVITY ANALYSIS

Project risks can be identified in both economic and non-economic terms. Key economic risks were examined by running cash flow sensitivities to:

- Metal prices, recovery and head grade (gold and uranium)
- Operating costs (Total Cash Cost)
- Preproduction capital costs
- Currency exchange rates

IRR sensitivity over the base case has been calculated for -30% to +30% variations, except for the U₃O₈ price that includes a ± 37.5% range. The sensitivities are shown in Figure 18-6, Tables 18-7 and 18-8. The Project is most sensitive to gold grade/price/recovery followed by the exchange rate, then uranium price/grade/recovery, then operating cost, and finally the Project is least sensitive to variations in the capital costs.

The change in the uranium price assumption, increasing from \$40.00 per pound up to \$50.00 per pound resulted in an increase in the IRR from 57% to 69% and increased the 8% NPV from \$237 million to \$295 million.

A case with the MWS No. 5 inferred resource included in the production plan but with a lower gold recovery reflecting the potential problems in some lower grade areas added almost three years to the project life, had an IRR of 68% and an 8% NPV of \$335 million.

19 INTERPRETATION AND CONCLUSIONS

Based on the Buffelsfontein site visit and review of the available data, Scott Wilson RPA offers the following interpretation and conclusions:

- The mineral resources were estimated using a methodology appropriate for the style of mineralization and in a manner consistent with CIM guidelines. Mineral resources that are not mineral reserves do not have demonstrated economic viability.
- Assuming the closing of the MWS purchase, there will be gold production effective April 1, 2007 and the Project has the potential to become a producing gold and uranium operation with a more rapid ramp up of the production rate than previously estimated.
- The selection of pressure leaching is expected to reduce the operating costs in the uranium plant compared to the base case in the December 5, 2006 technical report.
- On a byproduct basis the Total Cash Cost is US\$19 per ounce of gold including a credit of \$359/oz for U₃O₈ revenue. The mine life capital and royalty unit cost is US\$84 per ounce, for a Total Production Cost of US\$103 per ounce of gold. Average annual production during operation is 128,000 ounces of gold and 922,000 pounds of U₃O₈.
- Considering the production as co-products and splitting the costs in proportion to the revenue from each of products, the gold cost is \$220/oz operating plus \$49/oz capital for a total of \$269/oz and the U₃O₈ cost is \$22.10/lb operating and \$4.90/lb capital for a total of \$27.00/lb U₃O₈.
- The Project economics are most sensitive to gold price followed by uranium price, operating costs, and capital costs.
- **The economic analysis contained in this report is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserve development, production and economic forecasts on which this preliminary assessment is based, will be realized.**

20 RECOMMENDATIONS

Scott Wilson RPA recommends that the planning for the development of the Project be advanced. The refinement of estimates in a prefeasibility study is recommended to facilitate a production decision.

The following items are recommended for consideration as part of a prefeasibility study of the Project:

- Additional test drilling to upgrade the inferred mineral resources.
- Detailed review of MWS test work and plant operating data and application of that information to the planned operations.
- More detailed metallurgical testing on material from the various feed sources and the BGM Underground Mine plant tailings. Metallurgical testing should include representative samples of the material to be mined in the initial Project years. The metallurgical testing should also be used to confirm the planned processes and flow sheet selections as well as the assumptions for gold and uranium recovery.
- Complete the detailed analysis of the tailings storage options and selection of a tailings storage area that can handle the scale of operation planned.
- Focus on expediting the construction of the pipeline from the Buffelsfontein dams to the MWS plant site to add extra feed sources as the MWS No. 2 resource is diminishing.
- Review the production schedule with more consideration given to the problems of maintaining a high production rate from some of the smaller feed sources.
- Review the opportunity of increasing the uranium recovery as the uranium price increases. The current sacrifice in recovery is a financial rather than a technical optimization.
- Gold plant expansion and uranium plant design should be advanced together with a more detailed uranium processing plant capital and operating cost estimate.
- A manpower listing with all areas of the operation included.

- The Project schedule should be re-examined and developed in more detail to ensure that critical items are not missed.
- Further work on the sales of uranium concentrate is required to remain assured that a market is available in South Africa or to determine where concentrates may have to be shipped.
- Review the rehabilitation costs to determine whether the current allowance is appropriate.

The estimated cost to complete the recommended work is shown in Table 20-1. The project capital cost estimate includes allowances for engineering work for the Project.

TABLE 20-1 RECOMMENDED WORK PROGRAM COST ESTIMATE
First Uranium Corporation - Buffelsfontein Project

Work item	Cost Estimate \$US
Sampling and analysis to upgrade inferred resources	100,000
Metallurgical testing of representative samples to confirm recovery and flow sheet assumptions	300,000
Complete tailings storage facility selection	50,000
Compilation of prefeasibility study	200,000
Contingency	150,000
TOTAL	750,000

23 CERTIFICATE OF QUALIFICATIONS

R. DENNIS BERGEN

I, Raymond Dennis Bergen, P.Eng., as an author of this report entitled "Technical Report Preliminary Assessment of the Buffelsfontein Project, North West Province, Republic of South Africa", prepared for First Uranium Corporation, originally submitted on November 8, 2006, revised on December 5, 2006, January 31, 2007, and subsequently revised on May 22, 2007, do hereby certify that:

1. I am an Associate Engineer with Scott Wilson Roscoe Postle Associates Inc. of Suite 501, 55 University Ave Toronto, ON, M5J 2H7.
2. I am a graduate of the University of British Columbia, Vancouver, B.C., Canada in 1979 with a Bachelor of Applied Science degree in Mineral Engineering. I am a graduate of the British Columbia Institute Technology in Burnaby, B.C. Canada in 1972 with a Diploma in Mining Technology.
3. I am registered as a Professional Engineer in the Province of British Columbia (Reg.# 16064) and as a Licensee with the Association of professional Engineers, Geologists and Geophysicists of the Northwest Territories (Licence L1660). I have worked as an engineer for a total of 26 years since my graduation. My relevant experience for the purpose of the Technical Report is:
 - Practice as a mining engineer, production superintendent, mine manager, Vice President of Operations and a consultant in the design, operation and review of mining operations.
 - Review and report, as an employee and as a consultant, on numerous mining operations and projects around the world for due diligence and operational review related to project acquisition and technical report preparation, including:
 - Engineering and operating superintendent at the Con gold mine, a deep underground gold mine, Yellowknife, NWT, Canada
 - Contribute to the Independent Report on the Reopening of the Cantung Mine at Tungsten, NWT, Canada
 - General Manager in Charge of the Reopening of the Cantung Mine, NWT, Canada
 - Detailed diligence review of the ERG Tailings Recovery Project, Ontario, Canada
 - VP Operations in charge of the restart of the Golden Bear Mine, BC, Canada
 - Mining engineer in underground gold and base metal mines.
 - Consulting engineer working on project acquisition and project design.
 - Mine Manager at three different mines with open pit and underground operations
 - Vice President of Operations responsible for an operating gold mine, development of a feasibility study for a project in Costa Rica and project

review and evaluation related to project acquisition for numerous projects around the world including the successful acquisition of mines in Mexico and Australia and an interest in a mine in Argentina.

4. I have read the definition of "qualified person" set out in National Instrument 43-101 ("NI43-101") and certify that by reason of my education, affiliation with a professional association (as defined in NI43-101) and past relevant work experience, I fulfill the requirements to be a "qualified person" for the purposes of NI43-101.
5. I visited the Buffelsfontein Project and the MWS Project on August 23 to 25, 2006 (but did not visit BGM's underground operation).
6. I am responsible preparation of Items 3 to 6, 16, and 18 and parts of Items 1, 2, 19, and 20 of the Technical Report and for the revisions to Items 1, 2, 4, 16, 18, 19 and 21 of the revised technical report.
7. I am independent of the Issuer applying the test set out in Section 1.4 of National Instrument 43-101.
8. I am an author of a Technical Report of the same name originally submitted on November 8, 2006 and revised on December 5, 2006 and January 31, 2007. Prior to this series of reports, we had had no involvement with the property that is the subject of the Technical Report.
9. I have read National Instrument 43-101, and the Technical Report has been prepared in compliance with National Instrument 43-101 and Form 43-101F1.
10. To the best of my knowledge, information, and belief, the Technical Report contains all scientific and technical information that is required to be disclosed to make the technical report not misleading.

Dated this 22nd day of May, 2007

(Signed & Sealed)

Raymond Dennis Bergen, P. Eng.

WAYNE V. VALLIANT

I, Wayne W. Valliant, P.Geo., as an author of this report entitled "Technical Report Preliminary Economic Assessment of the Buffelsfontein Project, North West Province, Republic of South Africa", prepared for First Uranium Corporation, originally submitted on November 8, 2006, revised on December 5, 2006, January 31, 2007, and subsequently revised on May 22, 2007, do hereby certify that:

1. I am a Principal Geologist with Scott Wilson Roscoe Postle Associates Inc. of Suite 501, 55 University Ave Toronto, ON, M5J 2H7.
2. I am a graduate of Carleton University, Ottawa, Ontario, Canada in 1973 with a Bachelor of Science degree in Geology.
3. I am registered as a Professional Geologist with the Association of Professional Geoscientists of Ontario (Reg.# 1175). I have worked as a geologist for a total of 33 years since my graduation. My relevant experience for the purpose of the Technical Report is:
 - Review and report as a consultant on more than thirty mining operations and projects around the world for due diligence and resource/reserve estimation
 - General Manager of Technical Services for corporation with operations and mine development projects in Canada and Latin America
 - Superintendent of Technical Services at three mines in Canada and Mexico
 - Chief Geologist at three Canadian mines, including two gold mines
4. I have read the definition of "qualified person" set out in National Instrument 43-101 ("NI43-101") and certify that by reason of my education, affiliation with a professional association (as defined in NI43-101) and past relevant work experience, I fulfill the requirements to be a "qualified person" for the purposes of NI43-101.
5. I visited the Buffelsfontein Project on August 23 to 25, 2006, and February 21 to 22, 2007, when I also visited the BGM underground operation.
6. I am responsible for preparation of Items 7 to 15 and 17 and parts of Items 1, 2, 19, and 20 of the Technical Report.
7. I am independent of the Issuer applying the test set out in Section 1.4 of National Instrument 43-101.
8. I am an author of a Technical Report of the same name originally submitted on November 8, 2006 and revised on December 5, 2006 and January 31, 2007. Prior to this series of reports, we had had no involvement with the property that is the subject of the Technical Report.

9. I have read National Instrument 43-101, and the Technical Report has been prepared in compliance with National Instrument 43-101 and Form 43-101F1.
10. To the best of my knowledge, information, and belief, the Technical Report contains all scientific and technical information that is required to be disclosed to make the technical report not misleading.

Dated this 22th day of May, 2007

(Signed & Sealed)

Wayne W. Valliant, P. Geo.

FIRST URANIUM CORPORATION
FORM 51-102F4
BUSINESS ACQUISITION REPORT

RECEIVED
2008 OCT -8 P 12: 25
OFFICE OF INTERNATIONAL
CORPORATE FINANCE

Item 1 IDENTITY OF COMPANY

1.1 Name and Address of Company

First Uranium Corporation ("First Uranium" or "the Corporation")
155 University Avenue, Suite 1240
Toronto, ONTARIO
M5H 3B7, Canada

Registered Office Address:
1075 West Georgia Street, Suite 2100
Vancouver, British Columbia V6E 3G2.

1.2 Executive Officer

For further information about the Acquisition (as defined below) and this Report, please contact the following Officer of First Uranium:

Emma Oosthuizen, Senior Vice President & Chief Financial Officer
Tel: +27 11 830 0390

Item 2 DETAILS OF ACQUISITION

2.1 Nature of Business Acquired

First Uranium, through its wholly-owned subsidiary First Uranium (Proprietary) Limited ("FUSA"), acquired all of the issued and outstanding shares of Mine Waste Solutions (Proprietary) Limited, which includes its wholly-owned subsidiary Chemwes (Proprietary) Limited (collectively "MWS").

MWS owns and operates an existing gold mine tailings and re-processing facility adjacent to First Uranium's Buffelsfontein tailings recovery project (the "Buffelsfontein Tailings Recovery Project") in South Africa. The acquisition date was June 6, 2007.

All monetary amounts are expressed in US dollars ("\$\$") unless otherwise stated.

2.2 Date of Acquisition

The acquisition date was June 6, 2007.

2.3 Consideration

A total consideration of \$32,201,377 was paid for the MWS acquisition in the form of an issuance of 3,093,980 First Uranium common shares valued at \$31,557,061 and \$644,316 in cash for transaction costs.

2.4 Effect of Financial Position

The acquisition of the MWS gold plant will eliminate the necessity for building the first gold plant planned for the Buffelsfontein Tailings Recovery Project, reducing both the time and capital required to begin gold production. The Corporation commenced recording gold production and revenue from MWS from the date of acquisition on June 6, 2007.

Scott Wilson Roscoe Postle Associates Inc. prepared a preliminary economic assessment of the Buffelsfontein Tailings Recovery Project which was revised in January 2007 to incorporate the results of ongoing process selection work and to demonstrate the impact of this work on the preliminary assessment. The results of the preliminary assessment as revised are contained in a technical report dated January 31, 2007 (the "Prior Buffels Report"). The Prior Buffels Report was subsequently revised to incorporate the MWS Acquisition and included in a technical report dated May 22, 2007 (the "Revised Buffels Report"). The combination of the reduction in capital, the changes to the production schedule and the additional cash flow from re-processing the MWS tailings will increase the net present value and internal rate of return of the Buffelsfontein Tailings Recovery Project.

First Uranium's current cash and cash equivalents are sufficient to fund the currently planned capital requirements for the Corporation's existing Ezulwini Mine and Buffelsfontein Tailings Recovery Project, and for the planned MWS capital projects. As a result, no material adverse impact is foreseen on the financial position of the Corporation as result of the acquisition.

MWS's head office was located in Johannesburg, South Africa. First Uranium's head office is located in Toronto, Canada, and it also maintains an executive office in Johannesburg, South Africa. Not all of MWS's management have chosen to join the management of First Uranium's subsidiary, FUSA, in Johannesburg, South Africa and therefore First Uranium will hire additional personnel to supplement its management in Johannesburg.

2.5 Prior Valuations

None

2.6 Parties to Transaction

No informed person, associate or affiliate of First Uranium was a party to the acquisition.

2.7 Date of Report

August 20, 2007

Item 3 FINANCIAL STATEMENTS

The following financial statements are attached and included as part of this Business Acquisition Report:

1. Unaudited pro forma consolidated statements of operations of First Uranium Corporation for the year ended March 31, 2007, and three months ended June 30, 2007;
2. Unaudited interim consolidated financial statements of Mine Waste Solutions (Proprietary) Limited for the three months ended May 31, 2007 attached as Schedule "B"; and
3. Audited consolidated financial statements of Mine Waste Solutions (Proprietary) Limited for the years ended February 28, 2007 and 2006, together with KPMG Inc.'s auditor's report dated May 29, 2007, except as to Note 23 which is of August 20, 2007, attached as Schedule "C".

The following financial statements are incorporated by reference as part of this Business Acquisition Report:

1. Unaudited interim consolidated financial statements of First Uranium Corporation for the three months ended June 30, 2007.

The economic analysis in item 2.4 is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as mineral reserves. There is no certainty that the reserves development, production and economic forecasts on which this preliminary assessment is based, will be realized.

The Prior Buffels Report and Revised Buffels Report were prepared in accordance with National Instrument 43-101 by Wayne Valliant, P.Geol. and R. Dennis Bergen, P.Eng. of Scott Wilson Roscoe Postle Associates Inc. Messrs. Bergen and Valliant are each a "qualified person" under NI 43-101 and are independent of First Uranium. The technical disclosure contained in this report has been reviewed and approved by Messrs. Bergen and Valliant.

Forward-looking Information

This report and financial statements contained herein contain certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the price of uranium and gold, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, government regulation of mining operations, environmental risks, unanticipated reclamation expenses, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (ii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iii) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason.

In making the forward-looking statements in this Business Acquisition Report, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) approvals to transfer or grant, as the case may be, mining rights or prospecting rights will be obtained; (ii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iii) mineral resource estimates are accurate; (iv) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (v) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vi) that outstanding approvals for the completion of an acquisition, the transfer of mining rights and the approval of mining rights will be granted; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

FIRST URANIUM CORPORATION

NOTES TO THE UNAUDITED PRO FORMA CONSOLIDATED STATEMENTS OF OPERATIONS for the year ended March 31, 2007 and three months ended June 30, 2007

1. BASIS OF PREPARATION

The unaudited pro forma consolidated statements of operations of First Uranium Corporation ("First Uranium" or the "Corporation") for the year ended March 31, 2007 and for the three months ended June 30, 2007, have been prepared by management of First Uranium in accordance with Canadian generally accepted accounting principles ("Canadian GAAP") for illustrative purposes only, for the inclusion in the business acquisition report relating to the acquisition of Mine Waste Solutions (Proprietary) Limited ("MWS") by First Uranium on June 6, 2007.

The unaudited pro forma consolidated statements of operations have been compiled from and should be read in conjunction with the:

- Audited consolidated financial statements of First Uranium Corporation for the year ended March 31, 2007;
- Unaudited interim consolidated financial statements of First Uranium Corporation for the three months ended June 30, 2007;
- Audited consolidated financial statements of Mine Waste Solutions (Proprietary) Limited for the year ended February 28, 2007; and
- Unaudited interim consolidated financial statements of Mine Waste Solutions (Proprietary) Limited for the three months ended May 31, 2007.

It is management's opinion that these unaudited pro forma consolidated statements of operations present in all material respects, the transactions, assumptions and adjustments described in Notes 3 and 4, in accordance with Canadian GAAP. These unaudited pro forma consolidated statements of operations are not intended to reflect the results of operations of First Uranium which would have actually resulted had the transactions been effected on the dates indicated. Any potential synergies that may be realized and integration costs that may be incurred have been excluded from the unaudited pro forma financial statement information. Further, the unaudited pro forma financial information is not necessarily indicative of the results of operations that might be obtained in the future.

2. SIGNIFICANT ACCOUNTING POLICIES

The accounting policies used in the preparation of these unaudited pro forma consolidated statements of operations are in accordance with those used in the preparation of First Uranium's audited consolidated financial statements as at and for the year ended March 31, 2007.

In preparing the unaudited pro forma consolidated financial information, a review was undertaken to identify MWS accounting policy differences where the impact was potentially material and could be reasonably estimated. Further accounting policy differences may be identified after consummation and integration of the proposed acquisition.

The significant accounting policies of MWS are believed to conform in all material respects to those of First Uranium, except as noted in Note 4.

Certain elements of the MWS consolidated financial statements have been reclassified to provide a consistent format.

3. BUSINESS ACQUISITION

First Uranium, through its wholly-owned subsidiary First Uranium (Proprietary) Limited ("FUSA"), acquired MWS and its subsidiary Chemwes (Proprietary) Limited (collectively "MWS") on April 1, 2007 ("the MWS Acquisition"). The MWS Acquisition closed on June 6, 2007 (effective date of acquisition), at which point First Uranium assumed management control of MWS.

A total consideration of \$32,201,377 was paid for the MWS acquisition in the form of an issuance of 3,093,980 First Uranium common shares valued at \$31,557,061 based on a date of announcement price of Cdn \$10.20 per share and \$644,316 in cash for transaction costs.

The table below sets out the preliminary allocation of the purchase price to the assets acquired and liabilities assumed, based on preliminary estimates of fair value. Final valuations of the assets and liabilities listed below have not been completed. The future income tax assets and liabilities are not yet determinable due to the inherent complexity associated with these valuations. The purchase price allocation is only preliminary and is subject to adjustments.

The acquisition was accounted for by the purchase method of accounting and the estimated allocation of fair value to the assets acquired and liabilities assumed as at June 6, 2007 was:

	\$000
Current assets	4,608
Property, plant and equipment	41,729
Asset retirement fund	1,950
Total assets acquired	48,287
Current liabilities	1,476
Asset retirement obligation	3,493
Lease obligations	28
Future tax liabilities	11,089
Total liabilities assumed	16,086
Net assets acquired	32,201

Current assets include cash and cash equivalents of US\$1,309,519 (net of transaction costs).

Although the estimated allocation of fair value to the assets acquired and liabilities assumed is subject to changes as additional information becomes available, the final allocation is not expected to differ materially from the estimated allocation.

4. PRO FORMA ASSUMPTIONS AND ADJUSTMENTS

The unaudited pro forma consolidated statements of operations give effect to the acquisition as if it had occurred on April 1, 2006, and the following:

- 4.1 The statements of operations of MWS includes the following adjusted to conform with Canadian GAAP:
 - 4.1.1 Under IFRS, management assumed a residual value for the calculation of amortization of plant and equipment, whilst under Canadian GAAP, the scrap value of plant and equipment has to be taken into account. This resulted in the provision of \$0.2 million additional amortization for the year ended February 28, 2007. No adjustment was necessary for the three months ended May 31, 2007.
 - 4.1.2 Under IFRS, the environmental rehabilitation provision is re-measured using the current market interest rate at each measurement date, whilst under Canadian GAAP, the interest rate that existed when the liability was initially measured is used. The difference of discount rates used resulted in an additional provision of \$0.1 million for the year ended February 28, 2007. No adjustment was necessary for the three months ended May 31, 2007.

- 4.2 First Uranium intends to use the MWS plant and equipment for its Buffelsfontein Tailings Recovery Project, which increases the expected total units of future production of the MWS mine by 302 million tonnes of which 114 million tonnes is planned to be processed through the current plant. The balance of the 302 million tonnes is planned to be processed through additions to the plant. These tonnages were used in the calculation of amortization on the units of production basis. The increased tonnages resulted in the amortization provided for by MWS on the current plant and equipment being reduced by \$3.8 million and \$0.8 million for the year ended March 31, 2007 and the three months ended June 30, 2007, respectively.
- 4.3 As a result of the \$11.6 million increase in the fair value of plant and equipment on acquisition of MWS, additional amortization of \$0.6 million and \$0.1 million had to be provided for the year ended March 31, 2007 and the three months ended June 30, 2007, respectively.
- 4.4 As a result of the \$24.2 million tailings for processing obtained on acquisition of MWS, additional amortization of \$0.5 million and \$0.09 million had to be provided for the year ended March 31, 2007 and the three months ended June 30, 2007, respectively.
- 4.5 The average currency exchange rate for the year ended February 28, 2007 between the South African Rand and US dollars was used to translate MWS's audited consolidated financial statements for the year ended February 28, 2007. This exchange rate was 6.96 Rand per US dollar. The average currency exchange rate for the three months ended May 31, 2007 between the South African Rand and US dollars was used to translate MWS's unaudited consolidated financial statements for the three months ended May 31, 2007. This exchange rate was 7.15 Rand per US dollar.
- 4.6 The results of the MWS operations from June 6, 2007 onward have been consolidated into the unaudited interim consolidated financial statements of First Uranium for the three months ended June 30, 2007, and therefore pro forma adjustments were only done for the period March 1, 2007 to May 31, 2007.

5. PRO FORMA EARNINGS PER SHARE

Pro forma earnings per share for the year ended March 31, 2007 and the three months ended June 30, 2007 are based on the weighted average basic number of shares outstanding of 100,616,054 and 128,248,005 respectively.

Notes to the interim consolidated financial statements (unaudited) May 31, 2007

1 Accounting policies

The unaudited interim consolidated financial statements have been prepared in accordance with International Financial Reporting Standards ("IFRS") and the Companies Act of South Africa. The preparation of the interim consolidated financial statements is based on the same accounting policies and practices as those disclosed in note 1 "Accounting policies" to the audited consolidated financial statements of the company and its subsidiary for the year ended February 28, 2007.

2 Property, plant and equipment

	Cost R	Accumulated depreciation R	Carrying amount R

Balance at end of period	<u>24,962,742</u>	<u>21,212,779</u>

R11,649,524 of the provision is to be funded by the rehabilitation trust fund (refer note 3). A further R2,197,954 was transferred to the rehabilitation trust fund during April 2007. During April 2007, an independent valuation of the rehabilitation provision was done by GCS (Proprietary) Limited, a water environmental engineering and science consultancy company. The provision was based on the estimated net cost for the respective company to rehabilitate the mine. On the assumption that third parties will attend to the rehabilitation of the mines, the cost were estimated at R25 million and the provision was adjusted accordingly.

The subsidiary company entered into a forward gold sale agreement to deliver 105 kg gold per month at a price of R101,400 per kg until March 31, 2007.

Valuation techniques as detailed in note 16 were used in determining a liability of R 5,603,160 as at February 28, 2007.

9 Long-term finance leases

The group entered into finance leases for 3 vehicles. The leases require a payment of R11,255 per month subject to fluctuations in the prime overdraft rate. The lease amount includes interest at prime minus 1% and maintenance on the vehicles. The right, title and interest to the vehicles are pledged as security for the vehicles.

15 Financial instruments

Currency Risk

Gold and silver sales are concluded at US Dollar mid morning spot prices ruling at the day of delivery to Rand Refineries. The Rand equivalent selling price is then determined based on the average Rand/Dollar spot exchange rate of the following day. Other than metal sales, there were no foreign exchange transactions entered into during the current year.

Credit Risk

All metals produced are sold to Rand Refineries. Settlement in respect of metal sold takes place within two working days of delivery date. At balance sheet date Rand Refineries represented a significant element of trade receivables. The maximum exposure to risk is represented by the carrying amount of each financial asset in the balance sheet. The subsidiary company entered into a forward gold sale agreement with Nedbank as per note 8. This agreement ended on March 31, 2007.

Interest rate risk

Interest on liabilities is linked to the prime overdraft rate which varies with macro economic conditions. At balance sheet date the prime overdraft rate was 12.5% (February 28, 2007: 12.5%).

Mine Waste Solutions (Proprietary) Limited

Notes to the interim consolidated financial statements (unaudited)

May 31, 2007

The fair values of financial instruments were as follows:

	Carrying value May 31, 2007	Fair value May 31, 2007
Financial assets		
Rehabilitation trust fund	13,935,685	13,935,685
Trade and other receivables	2,882,115	2,882,115
Cash and cash equivalents	13,960,092	13,960,092
Amount owing by shareholder	5,986	5,986
Financial liabilities		
Long-term finance leases	102,712	102,712
Short-term finance liability	5,603,160	5,603,160
Amounts owing to shareholder	-	-
Trade payables and accrued expenses	10,546,712	10,546,712

16 Related parties

Identity of related parties

During the three months the group companies entered into various transactions with Fraser Alexander (Pty) Ltd (35% shareholder), Nedbank (30% shareholder) and the IDC (30% shareholder). The effect of these transactions is included in the financial performance and results of the group. Terms and conditions are determined on an arm's length basis.

There were no related transactions with key management.

	May 31 2007	February 28 2007
Related party balances		
Financial liabilities	-	5,603,160
Loans from related parties	-	-
Loans to related parties	-	5,986
Related party transactions		
Interest received from related parties	243,496	724,351
Interest paid to related parties	-	4,953,278
Management fees	161,729	256,091
Mining and other services	3,844,650	12,034,971
Hedging payments to Nedbank Ltd	5,726,542	49,231,756

17 Accounting estimates and judgements

The preparation of the financial statements in conformity with IFRS requires the company's management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenues and expenses during the reporting period. Accounting estimates and judgements are reported to the Group Audit Committee.

Estimates and judgements are continually evaluated and are based on historical experience and factors including expectancies of future events that are believed to be reasonable under the circumstances.

17.1 Residual values of property, plant and equipment

Residual values of property, plant and equipment are reviewed at least annually. Adjustments to residual values will affect the depreciation charge for the reporting period. The residual values of plant and equipment were based on the estimated scrap value of plant and equipment of termination of operations. Property values are regarded as immaterial and are not depreciated.

17.2 Financial Instruments

The group has established fair values for financial instruments by valuation techniques including reference to arm's length transactions, option pricing models and discounted cash by techniques relevant to the group's specific circumstances.

Mine Waste Solutions (Proprietary) Limited

Notes to the interim consolidated financial statements (unaudited)

May 31, 2007

17.3 Rehabilitation Obligations

Estimated provisions for environmental rehabilitation comprise estimates of mine closure expenditure and are based on the group's environmental management plans in compliance with current technological, environmental and regulatory requirements. The provision for environmental rehabilitation represents the cost that will arise from rectifying damage caused in constructing the mining assets, after production ceases. Rehabilitation costs are provided for at present value of the expenditures expected to settle the obligation, using estimated cash flows based on current prices. Changes to these decommissioning liabilities shall be added to or deducted from the cost of the related asset in the current period. If a decrease in liability exceeds the carrying amount of the asset, the excess shall be recognised immediately in profit or loss. The estimated future cost of rehabilitation obligations is reviewed annually and adjusted as appropriate for new circumstances or changes in law or technology.

The estimates are discounted at a pre-tax rate that reflects current market assessments of the time value of money.

Expenditure on ongoing rehabilitation is expensed when incurred.

18 Reconciliation between IFRS and Canadian GAAP

Reconciliation of equity at May 31, 2007

	Notes	As reported under IFRS	GAAP adjustment	Canadian GAAP

Profit for the year		11,084,543	-	11,084,543

Mine Waste Solutions (Proprietary) Limited

Notes to the interim consolidated financial statements (unaudited)

March 31, 2007

The consolidated financial statements have been prepared in accordance with IFRS which are substantially the same as accounting practices under Canadian generally accepted accounting principles ("Canadian GAAP") as they affect these financial statements, except for the following:

a) Inventory

Under IFRS, the Company measures its inventory at the lower of cost or net realizable value. Under Canadian GAAP, inventory is measured at the lower of historical cost or net replacement cost. This difference did not result in a material reconciling item.

b) Property, plant and equipment

Section 3061 and IAS 16 are converged except there are significant differences relating to impairment. IAS also permits (i) the revaluation of property, plant and equipment to fair value; (ii) IAS 16 requires the depreciable amount to be the asset cost less its residual value, rather than using the greater of the asset cost less its residual value or asset cost less its salvage value.

Impairment under IAS 36 is determined as the excess of the carrying amount of an asset or group of assets above the recoverable amount (the higher of fair value less costs to sell and the value in use) rather than the difference between carrying amount and fair value; and requires a reversal of an impairment loss when there has been a change in estimates used to determine the recoverable amount.

This difference did not result in a material reconciling item.

c) Impairment of long-lived assets

Under IFRS, the carrying amounts of the Company's assets, other than inventories and deferred tax assets, are reviewed at each balance sheet date to determine whether there is any indication of impairment. If any such indication exists, the assets' recoverable amounts are estimated. An impairment loss is recognized when the carrying amount of an asset exceeds its recoverable amount. Impairment losses, if any, are recognized in the income statement. Under Canadian GAAP, a long-lived asset should be tested for recoverability whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. An impairment loss should be recognized when the carrying amount of a long-lived asset is not recoverable and exceeds its fair value. This difference in accounting policy has no material impact on these financial statements.

Under Canadian GAAP, the carrying amount of a long-lived asset is not recoverable if the carrying amount exceeds the sum of the undiscounted cash flows expected to result from its use and eventual disposition. This assessment is based on the carrying amount of the asset at the date it is tested for recoverability, whether it is in use or under development. Under IFRS, the recoverable amount of the Company's assets is the greater of their net selling price and value in use. An impairment loss may be reversed if there has been a change in the estimates used to determine the recoverable value. An impairment loss is only reversed to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of depreciation or amortization, if no impairment loss had been recognized. A reversal of an impairment is charged to the income statement. Under Canadian GAAP, an impairment loss is not reversed if the fair value subsequently increases. This difference in accounting policy has no material impact on these financial statements.

d) Asset Retirement Obligation

In re-measuring an asset retirement obligation for the passage of time, Canadian GAAP requires re-measurement based on the risk-free rate that existed when the liability was initially measured. IFRS requires the use of current market assessed interest rates in each estimate. This difference did not result in a material reconciling item.

e) Income Taxes

Under IFRS, the Company is not permitted to set up a deferred tax asset or liability relating to: initial recognition (other than in a business combination) of an asset or liability to the extent that neither accounting nor taxable profit is affected on acquisition; and investments in subsidiaries to the extent that they will probably not reverse in the foreseeable future.

Under Canadian GAAP, income taxes are accounted for using the asset and liability method of accounting. Under this method, future income tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases and operating loss and tax credit carryforwards. Future income tax assets and liabilities are measured using substantively enacted tax rates expected to apply to taxable income in the years in which the temporary differences are expected to be recovered or settled. The effect on future income tax assets and liabilities of a change in tax rates is recognized in earnings in the period that includes the date of substantive enactment. The amount of future income tax assets and liabilities is limited to the amount that is more likely than not to be realized.

Mine Waste Solutions (Proprietary) Limited.

Notes to the interim consolidated financial statements (unaudited) May 31, 2007

f) Related party disclosures

Under Canadian GAAP the following additional related party disclosures are required:

	Notes	May 31, 2007 R
<i>Transactions with Related Parties</i>		
Hedging payments to Nedbank Ltd	2	5,726,542
Interest received on Nedbank Ltd Rehabilitation Trust Account	3	243,496
Management Fees - Fraser Alexander (Pty) Ltd	4	161,729
Fraser Alexander (Pty) Ltd - Reclamation of tailings	5	3,759,842
Fraser Alexander (Pty) Ltd - Payments for the year		3,844,650

Notes

1. There were no related party balances outstanding at May 31, 2007.
2. The original financing structure as agreed by the directors of MWS and Chemwes. Agreements supporting the financing structure are in place.
3. The account was opened in terms of legal requirements. The monies are held on deposit.
4. Management fees were paid in accordance with contract between MWS and Fraser Alexander (Pty) Ltd.
5. In terms of contract between Fraser Alexander (Pty) Ltd and Chemwes for the reclamation of the tailings dams.

All related party transactions are identified at period end according to the relations between the parties and the companies in the MWS group (MWS and Chemwes).

Recent Canadian Pronouncements

The following recent Canadian accounting pronouncements from the CICA Handbook are effective for fiscal year beginning on March 1, 2007:

Section 1506, "Accounting Change": Criteria for changing accounting policies and the accounting treatment and disclosure of changes in accounting policies, accounting estimates and correction of errors.

Section 1530, "Comprehensive Income": Standards for reporting and display of comprehensive income. Comprehensive income is composed of the Company's net income and other comprehensive income. Other comprehensive income includes unrealized gains and losses on available-for-sale securities, foreign currency translation gains and losses on the net investment in self-sustaining operations and changes in the fair market value of derivative instruments designated as cash flow hedges, all net of income taxes. The components of comprehensive income are disclosed in the Consolidated Statement of Comprehensive Income. Cumulative changes in other comprehensive income are included in accumulated other comprehensive income which is presented as a new category in shareholders' equity.

Section 3051, "Investments", Standards for accounting for investments subject to significant influence and for measuring and disclosing certain other non-financial instrument investments.

Section 3855, "Financial Instruments – Recognition and Measurement" and Section 3861, Financial Instruments – Disclosure and Presentation. Section 3855 requires all financial instruments be classified as one of the following: held for trading, held to maturity, loans and receivables and available for sale. Financial instruments held for trading are measured at fair value with gains and losses recognized in net income. Financial instruments held to maturity and loans and receivables are measured at amortized cost. Available for sale financial instruments are measured at fair value with unrealized gains and losses recognized in other comprehensive income.

Section 3865, "Hedges": Standards which specify the criteria under which hedge accounting is to be applied for fair value hedges, cash flow hedges, and hedges of net investment in a self-sustaining foreign operation. In hedge accounting, the carrying value of a hedged item is adjusted by gains or losses attributable to the hedged risk and recognized in net income, when it is appropriate to do so. The change in fair value of the hedged item, to the extent the underlying hedging relationship is effective, is offset by changes in fair value of the derivative. The effective portion of the change in the fair value of the hedging derivative will be recognized in "other comprehensive income". The ineffective portion will be recognized in net income.

Schedule C

Audited consolidated financial statements of
Mine Waste Solutions (Proprietary) Limited
for the years ended February 28, 2007
and February 28, 2006

AUDITORS' REPORT TO THE DIRECTORS

We have audited the consolidated balance sheets of Mine Waste Solutions (Pty) Limited as at 28 February 2006 and 28 February 2007 and the consolidated statements of earnings, retained earnings and cash flows for the years then ended. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as at 28 February 2006 and 28 February 2007 and the results of its operations and its cash flows for the years then ended in accordance with International Financial Reporting Standards.

International Financial Reporting Standards vary in certain significant respects from Canadian generally accepted accounting principles. Information relating to the nature and effect of such measurement differences is presented in note 23 to the consolidated financial statements.

Mine Waste Solutions (Proprietary) Limited

Notes to the Annual Financial Statements

for the years ended February 28, 2007 and 2006

1. Reporting entity

Mine Waste Solutions (Proprietary) Limited is a company domiciled in South Africa.

1.1. Basis of preparation

(a) Statement of compliance

The financial statements have been prepared in accordance with International Financial Reporting Standards ("IFRS").

(b) Basis of measurement

The financial statements are prepared using the historic cost convention except for specific financial instruments as set out in the notes to the financial statements, which are stated at fair value.

(c) Functional and presentation currency

These financial statements are presented in South African Rand, which is the group's functional currency.

(d) Use of estimates and judgements

The preparation of financial statements requires management to make judgements, estimates and assumptions that effect the application of accounting policies and the reported amounts of assets, liabilities, income and expenses. Actual results may differ from these estimates.

Estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognized in the period in which the estimate is revised and in any future periods affected.

1.2. Basis of preparation of financial results

The accounting policies set out below have been applied consistently by group entities.

1.3. Basis of consolidation

1.3.1. Subsidiaries

Subsidiaries are entities controlled by the company. Control exists when the company has the power, directly or indirectly, to govern the financial and operating policies of an entity so as to obtain benefits from its activities. In assessing control, potential voting rights that presently are exercisable or convertible are taken into account. The financial results of subsidiaries are consolidated into the group's results from acquisition date until disposal date.

1.4. Foreign currency translation

1.4.1. Foreign currency transactions

Income and expenditure transactions are translated into the functional currency of the entity at the rate of exchange ruling at the transaction date.

Monetary assets and liabilities are translated into the functional currency of the entity at the rate of exchange ruling at the balance sheet date. Foreign exchange gains and losses resulting from the translation and settlement of monetary assets and liabilities are charged to the income statement.

1.5. Financial instruments

1.5.1. Derivative financial instruments

Derivatives are recognized initially at fair value. Attributable transaction costs are recognized in the income statement when incurred. Subsequent recognition, derivatives are measured at fair value, and changes therein are recognized in the income statement.

Mine Waste Solutions (Proprietary) Limited
Notes to the Annual Financial Statements
for the years ended February 28, 2007 and 2006 (continued)

1.5.2. Non-derivative financial instruments

Non-derivative financial instruments comprise trade and other receivables, cash and cash equivalents, loans and borrowings, and trade and other payables. Non-derivative financial instruments are recognized initially at cost. Subsequent to initial recognition non-derivative financial instruments are measured as described below.

A financial instrument is recognized if the group becomes a party to the contractual provisions of the instrument. Financial assets are derecognized if the group's contractual rights to the cash flows from the financial assets expire or if the group transfers the financial asset to another party without retaining control or substantially all risks and rewards of the asset. Regular purchases and sales of financial assets are accounted for at trade date, i.e. the date that the group commits itself to purchase or sell the asset. Financial liabilities are derecognized if the group's obligations specified in the contract expire or are discharged or cancelled.

Cash and cash equivalents comprise cash balances and call deposits. Bank overdrafts that are repayable on demand and from an integral part of the group's cash management are included as a component of cash equivalents for the purpose of the statement of cash flows.

1.6. Property, plant and equipment

Items of property, plant and equipment are measured at cost less accumulated depreciation and impairment. Land is not depreciated.

Cost includes expenditure that is directly attributable to the acquisition of the asset. The cost of self-constructed assets includes the cost of materials and direct labour, any other costs directly attributable to bringing the asset to a working condition for its intended use, and the cost for dismantling and removing the items and restoring the site on which they are located and an allocated proportion in respect of overheads. Cost also includes the estimated costs of dismantling and removing the assets and site rehabilitation costs to the extent that they relate to the construction of the asset.

When plant and equipment comprise major components with different useful lives, these components are accounted for as separate items.

The cost of replacing part of an item of property, plant and equipment is recognized in the carrying amount of the item if it is probable that the future economic benefits embodied within the part will accrue to the company and the cost can be measured reliably. The cost of the day-to-day servicing of property, plant and equipment are recognized in the profit and loss as incurred.

Property, plant and equipment are depreciated to its estimated residual value over its expected useful life. The depreciation methods, estimated remaining useful lives and residual values are reviewed at least annually. The depreciation rates applied are provided in note 2.

1.7. Impairment of non-financial assets

The group's non-financial assets, other than inventories and deferred tax, are reviewed at each reporting date to determine whether there is any indication of impairment. If any such indication exists then the asset's recoverable amount is estimated.

The impairment charged to the income statement is the excess of the carrying value over the recoverable amount. Recoverable amounts are estimated for individual assets or, where an individual asset cannot generate cash flows independently, the recoverable amount is determined for the larger cash generating unit to which the asset belongs.

With the exception of goodwill, a previously recognized impairment will be reversed insofar as estimates change as a result of an event occurring after the impairment was recognized. An impairment is reversed only to the extent that the asset's carrying amount that would have been determined had no impairment been recognized. A reversal of an impairment is charged to the income statement.

Mine Waste Solutions (Proprietary) Limited

Notes to the Annual Financial Statements

for the years ended February 28, 2007 and 2006 (continued)

1.8. Inventories

Inventories are measured at the lower of cost and net realizable value.

Cost includes expenditure incurred in acquiring, manufacturing, an allocated portion of overheads, and transporting the inventory to its present location.

Cost is determined using the first-in, first-out method.

Net realizable value is the estimated selling price in the ordinary course of business, less the cost of completion and selling expenses.

1.9. Trade and other receivables

Trade and other receivables are recognized at fair cost which approximates fair value. An impairment is recognized when there is evidence that an entity will not be able to collect all amounts due according to the original terms of the receivables. The amount of the impairment is charged to the income statement.

1.10. Cash and cash equivalents

Cash and cash equivalents are stated at carrying value which is deemed to be fair value. For cash flow statement purposes bank overdrafts are offset against cash and cash equivalents.

1.11. Share capital

Issued share capital is stated in the changes in equity statement at the amount of the proceeds received less directly attributable issue costs.

1.12. Debt

Debt, which constitutes a financial liability, includes short-term and long-term debt. Debt is initially recognized at fair value, net of transaction costs incurred and is subsequently stated at amortized cost. Debt is classified as short-term unless an entity has an unconditional right to defer settlement of the liability for at least twelve months after the balance sheet date.

1.13. Leases

1.13.1. Finance leases

Leases where the group assumes substantially all the benefits and risks of ownership are classified as finance leases. Finance leases are capitalized as property, plant and equipment at the lower of fair value or the present value of the minimum lease payments at the inception of the lease with an equivalent amount being stated as finance lease liability as part of debt.

The capitalised amount is depreciated over the asset's useful life. Lease payments are allocated between capital repayments and borrowing costs using the effective interest rate method.

1.13.2. Operating leases

Leases of assets under which all the risks and benefits of ownership are effectively retained by the lessor are classified as operating leases. Lease payments under an operating lease are charged to the income statement over the lease term on a basis representative of the pattern of use.

1.14. Provisions

A provision is recognised when the group has a legal or constructive obligation arising from a past event that will probably be settled, and a reliable estimate of the amount can be made.

Long-term provisions are determined by discounting the expected future cash flows to their present value. The increase in discounted long-term provisions as a result of the passage of time is recognized as a borrowing cost in the income statement.

Mine Waste Solutions (Proprietary) Limited

Notes to the Annual Financial Statements

for the years ended February 28, 2007 and 2006 (continued)

1.15. Employee benefits

Short-term employee benefits

The cost of all short-term employee benefits is recognised during the period in which the employee renders the related service.

The provisions for the employee entitlements to wages, salaries and annual leave represent the amount which the group has a present obligation to pay as a result of employees' services provided to the balance sheet date. The provisions have been calculated at the amount required to settle the obligation.

1.16. Taxation

The income tax charge is determined based on net income before tax for the period and includes deferred tax.

Current tax

The current tax charge is the calculated tax payable on the taxable income for the year using substantively enacted tax rates and any adjustments to tax payable in respect of previous years.

Deferred tax

Deferred tax is provided for using the liability method, on all temporary differences between the carrying values of assets and liabilities for accounting purposes and the amount used for tax purposes. No deferred tax is provided on temporary differences relating to:

- The initial recognition (other than in a business combination) of an asset or liability to the extent that neither accounting nor taxable profit is affected on acquisition; and
- Investments in subsidiaries to the extent that they will probably not reverse in the foreseeable future.

The provision for deferred tax is calculated using enacted or substantively enacted tax rates at balance sheet date that are expected to apply when the asset is realised or liability settled. A deferred tax asset is recognized to the extent that it is probable that future taxable profits will be available against which the deferred tax asset can be realized.

The provision for deferred tax assets and liabilities reflects the tax consequences that would follow from the expected recovery or settlement of the carrying amount of its assets and liabilities.

Additional income taxes that arise from the distribution of dividends are recognized at the same time as the liability to pay the related dividend is recognized.

1.17. Trade and other payables

Trade and other payables are stated at cost.

1.18. Revenue

Revenue is recognized to the extent that it is probable that the economic benefits will flow to the group and the revenue can be reliably measured. The sale of mining products is recognized when the significant risks and rewards of ownership of the products are transferred to the buyer.

1.19. Finance income and expenses

Finance income comprises interest income on funds invested and foreign currency gains. Interest income is recognized as it accrues, using the effective interest method. Finance expenses comprise interest expense on borrowings and foreign currency losses. All borrowing costs are recognized in profit or loss using the effective interest method.

The subsidiary company entered into a forward gold sale agreement to deliver 105 kg gold per month at a price of R101 400 per kg until 31 March 2007.

Valuation techniques as detailed in note 22 were used in determining a liability of R 5 603 160 as at 28 February 2007.

10 Long-term finance leases

The group entered into finance leases for 3 vehicles. The leases require a payment of R11 255 per month subject to fluctuations in the prime overdraft rate. The lease amount includes interest at prime minus 1% and maintenance on the vehicles. The right, title and interest to the vehicles are pledged as security for the vehicles.

Current and call accounts	4,986,116	6,582,574

17 Contingent liabilities

The company provided a guarantee on behalf of its subsidiary, as security for obligations arising from the term loan to a value of:

	2007	2006
	R	R
Nedbank (refer note 8)	-	5,106,662
IDC (refer note 8)	-	2,330,376
	-	7,437,038

18 Retirement benefits

The group and the company do not offer retirement benefits to any of their employees. Employees are offered a total cost to company package and are responsible for their own affairs.

19 Securities

Performance of the company in terms of the guarantee mentioned in note 17 was secured by the following:

A pledge of the company's shares in the issued share capital of Chemwes (Proprietary) Limited

Cession of any of the company's claims against Chemwes (Proprietary) Limited

A pledge of the company's and the subsidiary company's right, title and interest in and to and however arising in terms of:

- any property, plant and equipment, resources and rights of the company and the subsidiary company
- any banking asset and/or investment defined in the secured term loan facility agreement and
- insurances and insurance proceeds as defined in the secured term loan facility

20 Financial instruments

Currency Risk

Gold and silver sales are concluded at US Dollar mid morning spot prices ruling at the day of delivery to Rand Refineries. The Rand equivalent selling price is then determined based on the average Rand/Dollar spot exchange rate of the following day. Other than metal sales, there were no foreign exchange transactions entered into during the current year.

Credit Risk

All metals produced are sold to Rand Refineries. Settlement in respect of metal sold takes place within two working days of delivery date. At balance sheet date Rand Refineries represented a significant element of trade receivables. The maximum exposure to risk is represented by the carrying amount of each financial asset in the balance sheet. The subsidiary company entered into a forward gold sale agreement with Nedbank as per note 9.

Interest rate risk

Interest on liabilities is linked to the prime overdraft rate which varies with macro economic conditions. At balance sheet date the prime overdraft rate was 12,5%.

The fair values of financial instruments were as follows:

	Carrying value 2007	Fair value 2007

21 Related parties

Identity of related parties

During the year the group companies entered into various transactions with Fraser Alexander (Pty) Ltd (35% shareholder), Nedbank (30% shareholder) and the IDC (30% shareholder). The effect of these transactions is included in the financial performance and results of the group. Terms and conditions are determined on an arm's length basis.

There were no related transactions with key management.

	2007	2006
	R	R
Material transactions		
Financial liabilities	5,603,160	18,645,103
Loans from related parties	-	64,844,711

Management fees	256,091	283,319
Mining and other services	12,034,971	10,096,071

Directors

Details of directors' remuneration are disclosed in note 13.

22 Accounting estimates and judgements

The preparation of the financial statements in conformity with IFRS requires the company's management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenues and expenses during the reporting period. Accounting estimates and judgements are reported to the Group Audit Committee.

Estimates and judgements are continually evaluated and are based on historical experience and factors including expectancies of future events that are believed to be reasonable under the circumstances.

22.1 Residual values of property, plant and equipment

Residual values of property, plant and equipment are reviewed at least annually. Adjustments to residual values will affect the depreciation charge for the reporting period. The residual values of plant and equipment were based on the estimated scrap value of plant and equipment of termination of operations. Property values are regarded as immaterial and are not depreciated.

22.2 Financial Instruments

The group has established fair values for financial instruments by valuation techniques including reference to arm's length transactions, option pricing models and discounted cash by techniques relevant to the group's specific circumstances.

22.3 Rehabilitation Obligations

Estimated provisions for environmental rehabilitation comprise estimates of mine closure expenditure and are based on the group's environmental management plans in compliance with current technological, environmental and regulatory requirements. The provision for environmental rehabilitation represents the cost that will arise from rectifying damage caused in constructing the mining assets, after production ceases. Rehabilitation costs are provided for at present value of the expenditures expected to settle the obligation, using estimated cash flows based on current prices. Changes to these decommissioning liabilities shall be added to or deducted from the cost of the related asset in the current period. If a decrease in liability exceeds the carrying amount of the asset, the excess shall be recognised immediately in profit or loss. The estimated future cost of rehabilitation obligations is reviewed annually and adjusted as appropriate for new circumstances or changes in law or technology.

The estimates are discounted at a pre-tax rate that reflects current market assessments of the time value of money.

The consolidated financial statements have been prepared in accordance with IFRS which are substantially the same as accounting practices under Canadian generally accepted accounting principles ("Canadian GAAP") as they affect these financial statements, except for the following:

a) Inventory

Under IFRS, the Company measures its inventory at the lower of cost or net realizable value. Under Canadian GAAP, inventory is measured at the lower of historical cost or net replacement cost. This difference did not result in a material reconciling item.

b) Property, plant and equipment

Section 3061 and IAS 16 are converged except there are significant differences relating to impairment. IAS also permits (i) the revaluation of property, plant and equipment to fair value; (ii) IAS 16 requires the depreciable amount to be the asset cost less its residual value, rather than using the greater of the asset cost less its residual value or asset cost less its salvage value.

Impairment under IAS 36 is determined as the excess of the carrying amount of an asset or group of assets above the recoverable amount (the higher of fair value less costs to sell and the value in use) rather than the difference between carrying amount and fair value; and requires a reversal of an impairment loss when there has been a change in estimates used to determine the recoverable amount.

This resulted in an increase in the depreciation charge of R1,313,743.

Mine Waste Solutions (Proprietary) Limited

Notes to the Annual Financial Statements

for the years ended February 28, 2007 and 2006 (continued)

c) Impairment of long-lived assets

Under IFRS, the carrying amounts of the Company's assets, other than inventories and deferred tax assets, are reviewed at each balance sheet date to determine whether there is any indication of impairment. If any such indication exists, the assets' recoverable amounts are estimated. An impairment loss is recognized when the carrying amount of an asset exceeds its recoverable amount. Impairment losses, if any, are recognized in the income statement. Under Canadian GAAP, a long-lived asset should be tested for recoverability whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. An impairment loss should be recognized when the carrying amount of a long-lived asset is not recoverable and exceeds its fair value. This difference in accounting policy has no material impact on these financial statements.

Under Canadian GAAP, the carrying amount of a long-lived asset is not recoverable if the carrying amount exceeds the sum of the undiscounted cash flows expected to result from its use and eventual disposition. This assessment is based on the carrying amount of the asset at the date it is tested for recoverability, whether it is in use or under development. Under IFRS, the recoverable amount of the Company's assets is the greater of their net selling price and value in use. An impairment loss may be reversed if there has been a change in the estimates used to determine the recoverable value. An impairment loss is only reversed to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of depreciation or amortization, if no impairment loss had been recognized. A reversal of an impairment is charged to the income statement. Under Canadian GAAP, an impairment loss is not reversed if the fair value subsequently increases. This difference in accounting policy has no material impact on these financial statements.

d) Asset Retirement Obligation

In re-measuring an asset retirement obligation for the passage of time, Canadian GAAP requires re-measurement based on the risk-free rate that existed when the liability was initially measured. IFRS requires the use of current market assessed interest rates in each estimate. This resulted in the environmental rehabilitation provision increasing with R971,545.

e) Income Taxes

Under IFRS, the Company is not permitted to set up a deferred tax asset or liability relating to:

initial recognition (other than in a business combination) of an asset or liability to the extent that neither accounting nor taxable profit is affected on acquisition; and investments in subsidiaries to the extent that they will probably not reverse in the foreseeable future.

Under Canadian GAAP, income taxes are accounted for using the asset and liability method of accounting. Under this method, future income tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases and operating loss and tax credit carryforwards. Future income tax assets and liabilities are measured using substantively enacted tax rates expected to apply to taxable income in the years in which the temporary differences are expected to be recovered or settled. The effect on future income tax assets and liabilities of a change in tax rates is recognized in earnings in the period that includes the date of substantive enactment. The amount of future income tax assets and liabilities is limited to the amount that is more likely than not to be raised.

The deferred tax asset was calculated and as the amount was considered to be insignificant, no deferred asset and corresponding valuation allowance was raised.

f) Related party disclosures

Under Canadian GAAP the following additional related party disclosures are required:

		2007
	Notes	R
<i>Amounts owing to/(by) Related Parties</i>		
Financial Liabilities - Secured Loans Nedbank Ltd and IDC	1	-
Financial Liabilities - Unsecured Loans Nedbank Ltd and IDC	1	-
Financial Liabilities - Gold Forward Sales Agreement Nedbank Ltd	2	5,603,160
<i>Transactions with Related Parties</i>		
Payment on secured loans		
- Nedbank Ltd	1	5,106,663
- IDC	1	2,480,855
Payment on unsecured loans		
- Nedbank Ltd	1	28,609,898
- IDC	1	28,647,295
Interest paid on secured loans - Nedbank Ltd and IDC	1	36,049
Interest paid to Nedbank Ltd and IDC	1	4,866,614
Hedging payments to Nedbank Ltd	2	49,231,756
Interest received on Nedbank Ltd Rehabilitation Trust Account	3	724,351
Management Fees - Fraser Alexander (Pty) Ltd	4	256,091
Fraser Alexander (Pty) Ltd - Reclamation of tailings	5	12,586,087

Mine Waste Solutions (Proprietary) Limited
Notes to the Annual Financial Statements
for the years ended February 28, 2007 and 2006 (continued)

Notes

1. All loans were settled in 2007

1. The hedging agreement was signed by the directors of MWS and Chemwes as part of the original financing agreement with Nedbank and IDC.

2. The original financing structure as agreed by the directors of MWS and Chemwes. Agreements supporting the financing structure are in place.

3. The account was opened in terms of legal requirements. The monies are held on deposit.

4. Management fees were paid in accordance with contract between MWS and Fraser Alexander (Pty) Ltd.

5. In terms of contract between Fraser Alexander (Pty) Ltd and Chemwes for the reclamation of the tailings dams.

All related party transactions are identified at year end according to the relations between the parties and the companies in the MWS group (MWS and Chemwes).

Recent Canadian Pronouncements

The following recent Canadian accounting pronouncements from the CICA Handbook are effective for fiscal year beginning on March 1, 2007:

Section 1506, "Accounting Change": Criteria for changing accounting policies and the accounting treatment and disclosure of changes in accounting policies, accounting estimates and correction of errors.

Section 1530, "Comprehensive Income": Standards for reporting and display of comprehensive income. Comprehensive income is composed of the Company's net income and other comprehensive income. Other comprehensive income includes unrealized gains and losses on available-for-sale securities, foreign currency translation gains and losses on the net investment in self-sustaining operations and changes in the fair market value of derivative instruments designated as cash flow hedges, all net of income taxes. The components of comprehensive income are disclosed in the Consolidated Statement of Comprehensive Income. Cumulative changes in other comprehensive income are included in accumulated other comprehensive income which is presented as a new category in shareholders' equity.

Section 3051, "Investments", Standards for accounting for investments subject to significant influence and for measuring and disclosing certain other non-financial instrument investments.

Section 3855, "Financial Instruments – Recognition and Measurement" and Section 3861, Financial Instruments – Disclosure and Presentation. Section 3855 requires all financial instruments be classified as one of the following: held for trading, held to maturity, loans and receivables and available for sale. Financial instruments held for trading are measured at fair value with gains and losses recognized in net income. Financial instruments held to maturity and loans and receivables are measured at amortized cost. Available for sale financial instruments are measured at fair value with unrealized gains and losses recognized in other comprehensive income.

Section 3865, "Hedges": Standards which specify the criteria under which hedge accounting is to be applied for fair value hedges, cash flow hedges, and hedges of net investment in a self-sustaining foreign operation. In hedge accounting, the carrying value of a hedged item is adjusted by gains or losses attributable to the hedged risk and recognized in net income, when it is appropriate to do so. The change in fair value of the hedged item, to the extent the underlying hedging relationship is effective, is offset by changes in fair value of the derivative. The effective portion of the change in the fair value of the hedging derivative will be recognized in "other comprehensive income". The ineffective portion will be recognized in net income.

EARLY WARNING REPORT

**SECTION 101 OF THE SECURITIES ACT (ONTARIO)
SECTION 111 OF THE SECURITIES ACT (BRITISH COLUMBIA)
SECTION 176 OF THE SECURITIES ACT (ALBERTA)
SECTION 92 OF THE SECURITIES ACT (MANITOBA)
SECTION 147.11 OF THE SECURITIES ACT (QUEBEC)
NATIONAL INSTRUMENT 62-103**

(1) Name and address of the offeror

Simmer & Jack Mines, Limited (the "offeror")
5 Press Avenue
Selby, Johannesburg
2025

(2) Designation and number or principal amount of securities and the offeror's securityholding percentage in the class of securities of which the offeror acquired ownership or control in the transaction or occurrence giving rise to the obligation to file the news release, and whether it was ownership or control that was acquired

The offeror entered into a securities lending agreement (the "SLA") with Investec Bank Limited ("Investec") dated April 30, 2007 pursuant to which the offeror loaned to Investec up to 7.5 million common shares of First Uranium Corporation ("FIU") for purposes of increasing the liquidity of FIU's common shares on the Toronto Stock Exchange and the JSE Limited. The offeror subsequently provided notice to Investec that it wished to terminate the SLA with respect to 2.5 million FIU common shares and on August 20, 2007 ownership of 2.5 million FIU common shares was transferred back to the offeror by Investec. Excluding the 5 million FIU common shares that continue to be subject to the SLA, the offeror holds 76,722,653 FIU common shares, representing approximately 61% of the issued and outstanding common shares of FIU.

(3) Designation and number or principal amount of securities and the offeror's securityholding percentage in the class of securities immediately after the transaction or occurrence giving rise to the obligation to file the news release

Excluding the 5 million common shares that continue to be subject to the SLA, the offeror holds 76,722,653 FIU common shares, representing approximately 61% of the issued and outstanding common shares of FIU.

(4) Designation and number or principal amount of securities and the percentage of outstanding securities of the class of securities referred to in paragraph (3) over which

- (i) the offeror, either alone or together with any joint actors, have ownership and control**

See (3) above.

- (ii) **the offeror, either alone or together with any joint actors, has ownership but control is held by other persons or companies other than the offeror or any joint actor**

Not applicable.

- (iii) **the offeror, either alone or together with any joint actors, has exclusive or shared control but do not have ownership**

Not applicable.

- (5) **Name of the market in which the transaction or occurrence that gave rise to the news release took place**

Not applicable.

- (6) **Purpose of the offeror and any joint actors in effecting the transaction or occurrence that gave rise to the news release, including any future intention to acquire ownership of, or control over, additional securities of the reporting issuer**

See (2) above.

- (7) **General nature and material terms of any agreement, other than lending arrangements, with respect to securities of the reporting issuer entered into by the offeror, or any joint actor, and the issuer of the securities or any other entity in connection with the transaction or occurrence giving rise to the news release, including agreements with respect to the acquisition, holding, disposition or voting of any of the securities**

Not applicable.

- (8) **Names of any joint actors in connection with the disclosure required by this report**

Not applicable.

- (9) **In the case of a transaction or occurrence that did not take place on a stock exchange or other market that represents a published market for the securities, including an issuance from treasury, the nature and value of the consideration paid by the offeror**

See (2) above.

- (10) **If applicable, a description of any change in any material fact set out in a previous report by the entity under the early warning requirements or Part 4 of National Instrument 62-103 in respect of the reporting issuer's securities**

Not applicable.

DATED this 19th day of September, 2007.

ITEM 3 - GLOSSARY OF TERMS

The following abbreviations have been used in the document:-

Abbreviation	Definition
ADU	Ammonium diurate
Au	Gold
AusIMM	Australian Institute of Mining and Metallurgy
B.Sc	Bachelor of Science
BGM	Buffelsfontein Underground Gold Mine
BH or BH's	Borehole or Boreholes
Capex	Capital Expenditure
CGT	Capital Gains Tax
CIL	Carbon in Leach
COG	Cut-off Grade
CoR	Certificate of Registration
DCF	Discounted Cash Flow
DME	Department of Minerals and Energy
DRD	Durban Roodepoort Deep Gold Mining Company
DTM	Digital Terrain Model
DWAF	Department of Water Affairs and Forestry
ECSA	Engineering Council of South Africa
EMC	Ezulwini Mining Company
EMP	Environmental Management Plan
EMPR	Environmental Management Programme Report
First Uranium	First Uranium Corporation
FUSA	First Uranium (Pty) Ltd (South Africa)
GCS	Groundwater Consulting Services (Pty) Ltd
GMSSDD	Gold Mine Sand and Slime Dump Drillers
GSSA	Geological Society of South Africa
HCl	Hydrogen Chloride
HNO ₃	Nitric Acid
IAS	Investment Analysts Society
LOM	Life of Mine
MCF	Mine Call Factor
ML	Mining Licence
MPRDA	Minerals and Petroleum Resources Development Act (No. 28 of 2002)
MR	Mining Right
MWS	Mine Waste Solutions
NI 43-101	National Instrument 43 101
NPV	Net Present Value
NSR	Net Smelter Royalty
NW	North West
OK	Ordinary Kriging
Opex	Operating Expenditure
PR	Prospecting Right
SAIMM	South African Institute of Mining and Metallurgy
SAMREC	South African Code for the Reporting of Mineral Resources and Mineral Reserves
SANAS	South African National Accreditation System
SG	Specific Gravity
SGM	Stilfontein Gold Mine
Simmers	Simmer and Jack Mines Limited
SRP	Surface Right Permit
U ₃ O ₈	Uranium
UOC	Uranium di- and tri-oxide, reported as U ₃ O ₈
UG	Underground
VAT	Value Added Tax
VCR	Ventersdorp Contact Reef
WMC	Waterpan Mining Company

The following units of measurement have been used in the document:-

Unit of Measurement	Definition
\$	United States Dollar
a	annum
g	gram
g/t	grams per tonne
ha	hectares
hr	hour
k	kilo (thousand)
kg	kilogram
kg/t	kilograms/tonne
km ²	square kilometre
lb	Pound
m	metre
Ma	Million years
MASL	metres above sea level
Mlb	Million pounds
Mt	Million tonnes
oz	ounce (troy)
t	metric tonne
t/m	tonnes per month
t/m ³	tonnes per metre cubed
tpa	tonnes per annum
tpd	tonnes per day
yr	year
ZAR	South African Rand

ITEM 4 - SUMMARY

INTRODUCTION, PROJECT DESCRIPTION AND LOCATION

Minxcon (Pty) Ltd (“Minxcon”) was commissioned by First Uranium Corporation (“First Uranium” or the “Corporation”) to compile an updated Technical Report on the Buffelsfontein Tailings Recovery Project (“the Project”), located near the town of Stilfontein, North West Province, South Africa.

The Project comprises fifteen tailings dams, twelve of which originated from the processing of material from the Buffelsfontein Gold Mines Limited (“BGM”) (formerly the Buffelsfontein and Hartebeestfontein Underground Gold Mines), and three Mine Waste Solutions (Pty) Ltd (“MWS”) tailings dams, which originated from the processing of material from the now defunct Stilfontein Gold Mine (“SGM”), as well as a gold recovery plant on the MWS site, which is situated near the currently operating BGM Underground Mine and which is currently recovering gold from the tailings. The entire project, comprising all fifteen tailings dams, is herein referred to as the Project. The twelve dams comprising the OLD Buffelsfontein Tailings Recovery Project include the following:-

- Buffels 2, 3, 4 and 5, collectively known as the Buffels Dams;
 - Harties 1, 2, 5, 6 and 7; and
 - Flanagan, Ellaton and NKGE
- } Collectively known as the Harties Dams

The three MWS dams that now form part of the Project include MWS 2, 4 and 5 dams.

First Uranium intends to immediately start construction for the expansion of the existing MWS gold plant and the initial modules of a new uranium plant at the Project, with commissioning expected in November 2008.

The most significant changes included in this Technical Report from the previously announced 22 May 2007 preliminary assessment report, in order of their impact on the economics of the Project, include:

- A decision to increase price assumptions for gold and uranium, based on consensus forecasts;
- an increase in the capital investment in the Project due to the escalation in the cost of construction materials and the expanded scope of the Project;
- a decision to implement an atmospheric leach process in the initial year of operation and a subsequent change to a pressure leach process that is expected to yield higher recovery rates and boost production;
- an increase in the recovery rate of uranium in the flotation process; and
- the conversion of the Project’s Mineral Resources to Mineral Reserves.

The following changes to the Project’s commodity price and exchange rate assumptions have been made:-

Years Ending		Unit	Mar 2009	March 2010	March 2011	March 2012	> March 2012
May 2007	Gold Price	\$/oz	500	500	500	500	500
	Uranium Price	\$/lb	50	50	50	50	50
	Exchange Rate	ZAR/\$	7.4	7.4	7.4	7.4	7.4
December 2007	Gold Price	\$/oz	737	734	683	627	635
	Uranium Price	\$/lb	104	104	91	78	45
	Exchange Rate	ZAR/\$	7.4	7.4	7.4	7.4	7.4

Notes:

The current real term commodity price assumptions are based on the consensus of the nominal forecasts by the Investment Research Analysts at 13 North American-based brokerage firms, adjusted downward by the US inflation rate for the period covering the construction of the Project

The following table details the changes that have been made to the Project:-

Area	Units of Measure	May 2007	December 2007	Change
Gold Plant				
Design Capacity of Gold Plant				
Module 1	Tonnes per month	600,000	633,000	6%
Module 2	Tonnes per month	600,000	650,000	8%
Module 3	Tonnes per month	600,000	650,000	8%
Total	Tonnes per month	1,800,000	1,933,000	7%
Average annual gold production	'000 oz	128	126	-2%
Peak annual gold production	'000 oz	165	182	10%
Total LOM gold production	'000 oz	2,054	2,024	-1%
Average LOM gold recovery	%	67.2%	66.0%	-120bps
Uranium Plant				
Design Capacity of Uranium Plant				
Module 1	Tonnes per month	60,000	63,000	5%
Module 2	Tonnes per month	60,000	65,000	8%
Module 3	Tonnes per month	60,000	65,000	8%
Total	Tonnes per month	180,000	193,000	7%
Average annual uranium production	'000 lb	922	1,339	45%
Peak annual uranium production	'000 lb	1,595	2,231	44%
Total LOM uranium production	'000 lb	14,748	20,078	36%
Average LOM uranium recovery	%	28.8%	33.0%	420 bps
Financial Measures				
Net present value	\$millions	295	505	71%
Internal rate of return	%	69%	151%	8,200bps
Capital investment	\$millions	148	260	76%
Peak funding	\$millions	83	67	-19%
Life of Mine ("LOM")	Years	16	16	-
Cash cost - Gold	\$/oz	220	264	20%
Cash cost - Uranium	\$/lb	22	24	9%
Total operating cost	\$/tonne	2.55	3.10	22%

Notes:

1. LOM is the abbreviation of 'life of mine'.
2. The tonnes to be processed in the uranium plant are included in, not additional to, the tonnes to be processed in the gold plant.
3. NPV is calculated using an 8% real discount rate and a 13% mass pull.

Since the acquisition of Mine Waste Solutions ("MWS") effective June 6, 2007, the Project has effectively been in operation. The acquired infrastructure averaged 570,000 tonnes of tailings per month through the gold plant with a proven capacity in excess of 600,000 tonnes of tailings per month. In September 2007, the Corporation's Board of Directors approved an expansion of the capacity of the gold plant to process 633,000 tonnes of tailings per month. This expansion is expected to be completed by January 2008.

Also in September 2007, the Board of Directors approved the construction of a monitoring station and pipelines to transport the tailings that would be hydraulically mined from the Buffels and Harties tailings dams. The monitoring station and pipelines are now in production.

The further expansion of the MWS gold plant to double its capacity and the construction of the first two modules of the Project's uranium plant are to begin immediately for commissioning in November 2008. The third and final modules of the gold plant and the uranium plant are to be commissioned in November 2009.

First Uranium believes that the effective recovery rate from mill feed to uranium production for the Project will be better than previously determined due to the expected results of further test work. The effective recovery rate is the combination of recoveries in the flotation process and in the plant. The preliminary assessment for the Project published in May 2007, reported a 30% recovery in the flotation process and a 90% recovery in the plant for a blended recovery rate of 27%.

Recent tests lead the Corporation to expect a 36.8% recovery from the flotation process. Plant recovery rates, however, will initially be less than the previously reported 90% rate as management has decided to refine the pressure leach process and intends to commission the first two modules of the uranium plant as planned in November 2008 with an atmospheric leach process. Initially the plant is expected to achieve a yield of 75% using an atmospheric leach process. The economic model in the Report is based on the assumption that by November 2009 the Corporation will have completed sufficient testing to confirm the validity of the pressure leach process in advance of the implementation process.

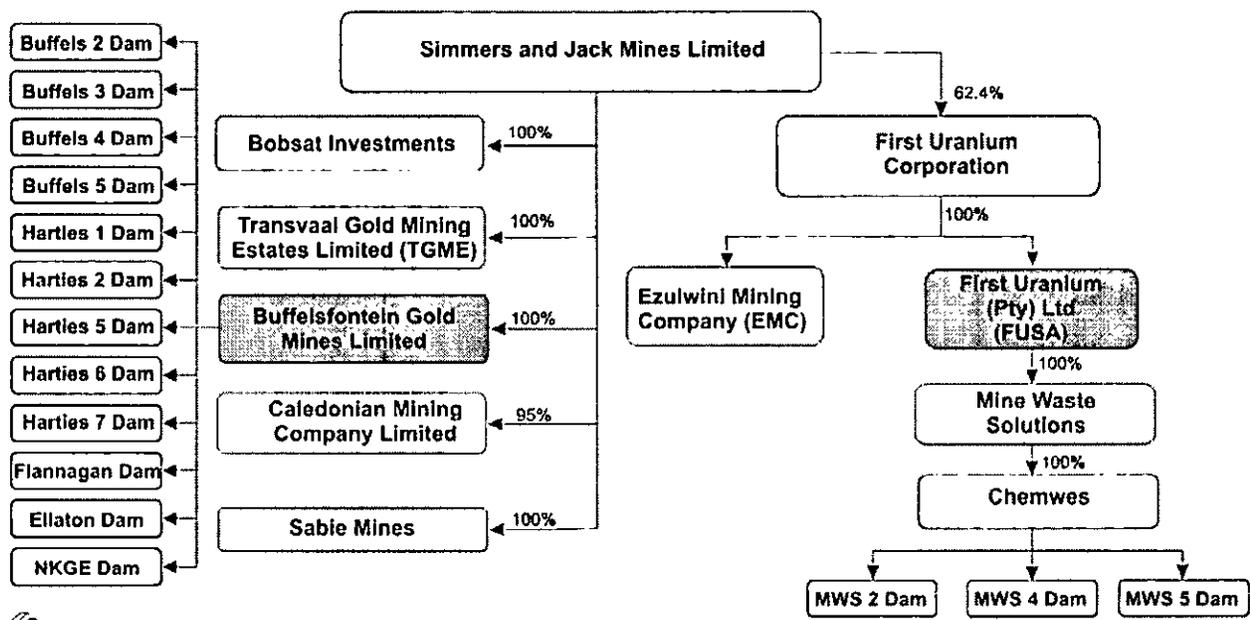

Although still in the pre-feasibility stage, the pressure leach process is expected to increase the plant recovery rate back to 90% for an effective recovery rate of 33% and, hence, yield a higher uranium production. The pressure leach process will also contribute an acid by-product for the gold circuit to improve gold recovery.

Earlier plans for the Project to currently be at the feasibility stage are being postponed until further testing of the pressure leach process is completed and agreements to ensure access to the land covering the preferred site for the new tailings dam are concluded.

OWNERSHIP

The following diagram illustrates the ownership of First Uranium.

Ownership Structure

The preliminary assessment for the project published in May 2007 reflected a different ownership structure, wherein Waterpan Mining Consortium (“WMC”) owned 10% of Ezulwini Mining Company (“EMC”). It is expected that the Corporation will acquire the remaining 10% interest in EMC from WMC during December 2007.

As is illustrated in the diagram, the twelve Harties and Buffels dumps are held by BGM and the three MWS dams by Chemwes. The new order Mining Right will be applied for in the name of MWS, who will be the operating entity (See Item 7 (c)).

GEOLOGY AND EXPLORATION

The tailings dams are made up of tailings material which originated from the processing of the underground ore from BGM and old SGM. The BGM and SGM are/were deep level gold mines, which extracted the tabular, conglomeritic orebodies of the Klerksdorp Goldfield, namely the Vaal Reef and the Ventersdorp Contact Reef ("VCR"). These reefs contain gold, as well as uranium, however for most of the duration of the mines life, only gold was extracted.

Recent geological work at the Project, which included drilling 66 new boreholes on the tailings dams and the remodelling of all the dams, increased the level of confidence in the Mineral Resources. The subsequent conversion of most of the Project's Mineral Resources to Proven and Probable Reserves resulted in a reduction in the number of tonnes, ounces and pounds on some tailings dams, but this was more than offset by the confirmation of a portion of the Mine Waste Solutions ("MWS") 5 dam as a Probable Reserve. Although it was hoped that the conversion of the MWS 5 dam would extend the life of the Project, the life of the Project will remain at approximately 16 years due to the higher monthly feed capacity of the gold plant and the changes between the Mineral Resources and the Mineral Reserves.

MINERAL RESOURCES AND MINERAL RESERVES

The following tables detail the Mineral Resources and Mineral Reserves contained in the fifteen tailings dams as at 1 November 2007:-

Mineral Resource Estimate as at 1 November 2007

Category	Surface		Tonnes Mt	Gold			Uranium		
	Place	Dam		Aug/t	Au('000oz)	Au tonnes	U ₃ O ₈ kg/t	U ₃ O ₈ Mlb	U ₃ O ₈ tonnes
Measured	Buffels	2	24.1	0.398	309	9.6	0.086	4.58	2,077
	Buffels	3	24.9	0.350	280	8.7	0.099	5.44	2,466
	Buffels	4	14.1	0.374	170	5.3	0.102	3.17	1,439
	Harties	5	23.9	0.213	163	5.1	0.062	3.26	1,479
	Harties	6	13.3	0.199	85	2.6	0.063	1.85	839
Total Measured			100.3	0.312	1,008	31.3	0.083	18.30	8,300
Indicated	Buffels	5	47.6	0.235	360	11.2	0.063	6.62	3,001
	Harties	1	74.4	0.261	624	19.4	0.062	10.17	4,611
	Harties	2	43.8	0.262	369	11.5	0.060	5.79	2,626
	Harties	7	1.3	0.267	11	0.3	0.164	0.46	211
	Harties	NKGE	1.2	0.501	19	0.6	0.182	0.47	214
	MWS	2	0.6	0.450	9	0.3	0.082	0.11	49
	MWS	4 (Domain 1)	9.7	0.138	43	1.3	0.047	1.01	456
	MWS	4 (Domain 2)	17.4	0.280	157	4.9	0.133	5.12	2,322
MWS	5	40.3	0.310	402	12.5	0.088	7.81	3,543	
Indicated Total			236.3	0.262	1,993	62.0	0.072	37.55	17,033
Measured & Indicated			336.6	0.277	3,000	93.3	0.075	55.85	25,333
Inferred	Harties	Flanagan	0.0	0.694	1	0.0	0.152	0.02	7
	MWS	5	15.2	0.300	146	4.6	0.095	3.17	1,437
	MWS	5 (from MWS 2)	4.7	0.175	26	0.8	0.102	1.05	476
	Harties	Ellaton	1.3	0.387	16	0.5	0.147	0.41	187
Inferred Total			21.2	0.279	189	5.9	0.100	4.64	2,106

Notes:

1. Mineral Resources are quoted as in-situ Mineral Resources.
2. No cutoff grades were applied.
3. Rows and columns may not add exactly due to rounding.
4. Mineral Resources include Mineral Reserves. Resources which are not Reserves do not have demonstrated economic viability.
5. Table reflects depletion of 1.5 million tonnes from July through October 2007 for MWS 2 Dam.
6. MWS 4 Dam is split into two domains, namely Domain 1, which is the uppermost section of the dam, and Domain 2, the lowermost portion of the dam. The tailings dam has been evaluated in two separate sections as they show distinct differences in grade.

Mineral Resource to Mineral Reserve Conversion

The following factors have been used to calculate the gold equivalent cut-off grades that were used to convert the Mineral Resources to Mineral Reserves:-

Type	Description	Au Factor	U Factor	Unit
Ore Resource	Density	1.42	1.42	t/m ³
Mining	External sources - dilution	0%	0%	%
Mining	Mine call factor ("MCF")	99.88%	100%	%
Processing	Plant recovery factor	66%	90%	%
Processing	Flotation plant recovery		37%	%
Processing	Flotation plant mass pull		13%	%
Flotation Cost	Treatment Costs - Total Tonnes	na	0.45	US\$/t
Uranium Treatment Cost	Treatment Costs - Float Conc. Tonnes	na	13.20	US\$/t
Gold Treatment Cost	Treatment Costs - Total Tonnes	1.55	na	US\$/t
Revenue	Exchange Rate	7.40	7.40	R/USD
Revenue	Metal price	500	50	USD/oz USD/lb
Revenue	Metal price	16,075	110	US\$/kg
Conversion	Oz/kg	32.15076		Oz
Conversion	lb per kg		2.20466	lb

A 0% mining dilution has been used as no mining dilution is likely to take place as the tailings dams are mined out completely. The soil at the bottom of the dams that is likely to be mined and processed will also be mineralised as the gold and uranium migrate into the soil via gravity. A 100% MCF for uranium has been used for this exercise, as the MCF cannot be calculated. The MCF of 99.88% was calculated during the processing of MWS 2 dam.

Gold paylimits were calculated as follows (2008 paylimit calculation):-

	Value	Unit	Paylimit (g/t)	Action
Metal price	20	US\$/g		
OPEX	2.00	US\$/t	0.098	OPEX/ Metal Price
Dilution	0%	%	0.098	=PL x (1+Dilution %)
Mine call factor	99.88%	%	0.098	=PL/MCF
Recovery	66%	%	0.149	=PL/Recovery

The OPEX used in this table includes the floatation costs and Au Plant costs, which are detailed in Table 38 in the document.

Uranium paylimits were calculated as follows (2008 paylimit calculation):-

Factor	Value	Unit	Paylimit (g/t)	Action
Metal price	99	US\$/g		
OPEX	13.20	US\$/t	17.3	OPEX/ Metal Price
Dilution	0%	%	17.3	=PL x (1+Dilution %)
Mine call factor	100%	%	17.3	=PL/MCF
Recovery	33%	%	52.3	=PL/Recovery

* Recovery of 33% is achieved as follows: 90% x 36.8% = 33%

Gold Equivalent paylimits were calculated as follows (2008 paylimit calculation):-

Factor	Value	Unit	Paylimit (g/t)	Action
Metal price	20	US\$/g		
OPEX	3.72	US\$/t	0.182	OPEX/ Metal Price
Dilution	0%	%	0.182	=PL x (1+Dilution %)
Mine call factor	99.88%	%	0.182	=PL/MCF
Recovery	66%	%	0.276	=PL/Recovery

The OPEX used in this table is calculated as follows: - Gold OPEX + (Uranium OPEX x 13% Mass Pull).

The following table details the summary of the gold, uranium and gold equivalent paylimits for 2007 through to 2011, after which it will remain constant:-

Year	Year Ending	Gold		Uranium		Gold Equivalent	
		Cost (US\$/t)	Pay Limit g/t	Cost (US\$/t)	Pay Limit g/t	Cost (US\$/t)	Pay Limit g/t
2007	Mar-08	2.05	0.152	na	na	na	na
2008	Mar-09	2.00	0.149	13.20	52.3	3.72	0.276
2009	Mar-10	2.00	0.149	8.50	33.7	3.11	0.231
2010	Mar-11	1.89	0.141	7.82	31.0	2.91	0.231
2011	Mar-12	1.89	0.141	7.82	31.0	2.91	0.216

The following table details the gold equivalent grades of all the dams, as well as illustrating the dams that have grades above the cut-off grades ("COG") over time. The gold equivalent grade of 0.276g/t (which rounds off to 0.28g/t) was used as the COG for the Mineral Reserve Declaration:-

Dam	Gold Equivalent Grade	Above COG
Harties 1	0.384	Yes
Harties 2	0.381	Yes
Harties 5	0.336	Yes
Harties 6	0.324	Yes
Harties 7	0.593	Yes
Buffels 2	0.569	Yes
Buffels 3	0.547	Yes
Buffels 4	0.577	Yes
Buffels 5	0.360	Yes
NGKE	0.863	Yes
MWS 2	0.613	Yes
MWS 4 (Dom 1)	0.231	No
MWS 4 (Dom 2)	0.545	Yes
MWS 5 Indicated	0.485	Yes

Notes: Yellow cells indicate dams that did not meet the COG and were therefore not classified as Mineral Reserves

Flanagan and Ellaton dams and the MWS 5 (Inferred) section and MWS 5 section from the MWS 2 tailings have not been included in this table as they are classified as Inferred Resources, and therefore cannot be converted to Mineral Reserves. Domain 1 of the MWS 4 dam was also not included in the Mineral Reserves, as it did not achieve the COG.

Using the above criteria, the following Mineral Reserves have been classified:-

Mineral Reserve Estimate as at 1 November 2007

Category	Surface		Tonnes Mt	Gold			Uranium		
	Place	Dam		Aug/t	Au('000oz)	Au Tonnes	U ₃ O ₈ kg/t	U ₃ O ₈ Mlb	U ₃ O ₈ tonnes
Proven	Buffels	2	24.1	0.398	309	9.6	0.086	4.58	2,077
	Buffels	3	24.9	0.350	280	8.7	0.099	5.44	2,466
	Buffels	4	14.1	0.374	170	5.3	0.102	3.17	1,439
	Harties	5	23.9	0.213	163	5.1	0.062	3.26	1,479
	Harties	6	13.3	0.199	85	2.6	0.063	1.85	839
Proven Total			100.3	0.312	1,008	31.3	0.083	18.30	8,300
Probable	Buffels	5	47.6	0.235	360	11.2	0.063	6.62	3,001
	Harties	1	74.4	0.261	624	19.4	0.062	10.17	4,611
	Harties	2	43.8	0.262	369	11.5	0.060	5.79	2,626
	Harties	7	1.3	0.267	11	0.3	0.164	0.46	211
	Harties	NGKE	1.2	0.501	19	0.6	0.182	0.47	214
	MWS	2	0.6	0.450	9	0.3	0.082	0.11	49
	MWS	4 (Domain 2)	17.4	0.280	157	4.9	0.133	5.12	2,322
MWS	5 (Indicated)	40.3	0.310	402	12.5	0.088	7.81	3,543	
Probable Total			226.6	0.268	1,950	60.6	0.073	36.55	16,578
Total Proven & Probable			326.9	0.281	2,957	92.0	0.076	54.85	24,877

Notes:

1. Mineral Reserves are quoted as fully diluted delivered to mill estimates.
2. Based on assumptions of a gold price of \$635 per ounce, a uranium price of \$45 per pound and ZAR/\$ exchange rate of 7.40, which are long term forecast figures (post 2012).
3. A Reserve COG of 0.28 grams per tonne gold equivalent was used, uranium grades were converted to gold equivalent using a conversion factor of 1 gram per tonne, which equals 0.503 kilograms per tonne on an extracted metal basis.

4. Rows and columns may not add exactly due to rounding.
5. The average LOM gold recovery applied was 66%.
6. An effective LOM uranium recovery of 27% was used and is based on an atmospheric leach process.
7. Only Domain 2 of the MWS 4 dam has been converted to a Mineral Reserve as the gold grade in Domain 1 is below cutoff.
8. Table reflects depletion of 1.5 million tonnes from July through October 2007 for MWS No. 2 Dam.
9. The legal tenure of the NKGE dam is uncertain.

ECONOMIC ANALYSIS

Valuation Method

The Discounted Cash Flow (“DCF”) method of mineral project valuation was used to estimate the value of the project. This method is generally applied to late stage exploration to early development projects. This report constitutes a pre-feasibility study, which has demonstrated positive economic results, thus enabling the Corporation to commence with the construction of the plants and associated infrastructure. The Corporation will progress with the necessary work to move the Project from Pre- Feasibility to Feasibility level.

Commodity Prices

The metal prices and US\$/ZAR exchange rate that was used in the DCF are shown in the table above, on page ix. A decision was made to increase the price assumptions, as the prices of \$500/oz for gold and \$50/lb for uranium were considered to be outdated, considering the current prices for the commodities. Therefore, prices of \$737/oz (2008) for gold and \$104/lb (2008) for uranium were used in light of the fact that for 1 November 2007, the price of gold closed at \$790.25 per ounce (London PM Fix) and the average price for uranium in November 2007 was US\$93/lb. The US\$/ZAR exchange rate as at 1 November 2007 was ZAR/US\$6.56.

The gold and uranium prices, used in the valuation of the Project, were calculated from an average nominal consensus forecast from thirteen investment banking institutions, which were then deflated by the US inflation rate of 2.5% (from 2008 to 2011) to bring the figures back to real terms. After 2011 the long term trends were used.

Discount Rates

A real discount rate of 8% was used in the DCF.

Discounted Cash Flow

The following table details the summary of the DCF (Real Terms):-

Discount Rate	8%
Project Value (US\$ million)	504.84
IRR (%)	151%
Total Oz in LOM Plan	3,027,068
US\$/Oz	166

NPV Sensitivities

The sensitivity of the NPV to metal price, variable costs and capital expenditure (“Capex”) are detailed in the table below:-

Metal Price/Exchange Rate					
	80%	90%	100%	110%	120%
	287.25	396.27	504.82	613.15	721.48
Variable Cost					
	80%	90%	100%	110%	120%
	506.66	505.74	504.82	503.90	502.98
Capex					
	80%	90%	100%	110%	120%
	538.16	521.49	504.82	488.15	471.06

The NPV is most sensitive to metal prices, exchange rates and Capex. Due to large upfront expenditure on the plant and a relative short LOM, Capex also has an impact, although to a lesser extent than the economic factors.

CONCLUSIONS AND RECOMMENDATIONS

Minxcon have reviewed all the information and have made the following observations:-

- The preliminary assessment for the project published in May 2007 reflected a tonnage estimate that was based upon historical survey returns to the DME. The revised tonnages are based upon surveyed volume and measured densities that reconcile with the recent reprocessing of MWS 2 dam. Consequently the density of the tailings material has been revised from 1.6t/m³ to 1.42t/m³. The revised density is considered by Minxcon to be more realistic;
- Previously, the Mineral Resources were estimated using the Central Limit Theorem. All the dams have subsequently undergone an in-depth geostatistical remodelling using Datamine® as the platform package. An in-house estimation programme was used for the geostatistical modelling, which is also used by a series of major mining companies. All the dams have been re-estimated according to sound geostatistical principals, which have verified the confidence levels applied to the Mineral Resource estimation. Simple and Ordinary kriging methodologies were employed. The kriging method of Mineral Resource estimation is deemed appropriate for the style of mineralisation and is consistent with CIM guidelines;
- The preliminary assessment for the project published in May 2007 reflected the use of Pressure Leach technology. Since May 2007, significant test work has been undertaken, which is however not yet complete. Consequently, First Uranium has adopted a hybrid approach, which includes the initial use of proven Atmospheric Leach technology. The migration from Atmospheric Leaching to Pressure Leaching in the uranium plant in November 2009 is expected to reduce plant operating costs. In addition, the acid produced from the Pressure Leach circuit will positively impact the recovery of gold from the gold plant;
- The NPV of the Project is positive at US\$505 and the IRR is 151%;
- The Projects economics are most sensitive to the Metals Prices, Exchange rates and Capex
- The Life of Mine of the Project is estimated at 16 years;
- No Inferred Mineral Resources were included in the economic analysis contained in this Technical Report. The Mineral Resources that were not converted to Mineral Reserves, either do not have demonstrated economic viability, as illustrated by the COG calculations, or do not have sufficient information to confirm the gold and uranium grades; and
- The only additional work that is anticipated includes the work to be undertaken on the new tailings dam that will be built to accommodate the reprocessed tailings from the fifteen tailings dams included in this report. Both the design and construction elements are already covered within the existing budget.

The following Items are recommended for consideration as the Project moves forward:-

- Negotiations with the landowners to secure options for the land, comprising the new tailings dam site, need to be concluded;
- The pressure leach testwork for the design for the uranium processing plant must be finalised;
- The legal tenure of the Flanagan, Ellaton and NKGE dams must be resolved as the uncertainty behind the security of tenure of these dams places doubt on these Mineral Resources being converted to Mineral Reserves. It should be noted that these three dams collectively constitute 1.1% of the gold Resource and 1.5% of the uranium Resource.

ITEM 5 - INTRODUCTION

ITEM 5 (A) - TERMS OF REFERENCE

Minxcon (Pty) Ltd. ("Minxcon") was commissioned by First Uranium Corporation ("First Uranium") to compile an updated Technical Report on the Buffelsfontein Tailings Recovery Project ("the Project"), located near the town of Stilfontein, North West Province, South Africa for use as a posting on the Canadian securities regulatory electronic filing site, Sedar. The Project comprises fifteen tailings dams, which contain both gold and uranium. In order to meet the terms of reference and scope of work of this report, Minxcon visited the Project on several occasions during 2007 and January 2008 to become familiar with the workings and to collect information. Minxcon comprehensively reviewed all of the critical issues during the discussions held with the relevant First Uranium managers and personnel.

ITEM 5 (B) - PURPOSE OF THE REPORT

The purpose of this report was to disclose all the material changes that have taken place to the Project since the May 22, 2007 preliminary assessment report for the Project. The report is compliant with the specifications embodied in South African Code for Reporting of Mineral Resources and Mineral Reserves ("SAMREC Code"), as well as Standards of Disclosure for Mineral Projects as set out by the Canadian Code for reporting of Resources and Reserves - National Instrument 43-101 (Standards of Disclosure for Mineral Projects), Form 43-101F1 and the Companion Policy Document 43-101CP ("NI 43 101").

ITEM 5 (C) - SOURCES OF INFORMATION

The following sources of information were used to compile this report, including:-

- Environmental - Environmental Management Programme Report ("EMPR") on the Reprocessing of the Stilfontein No 2 Slimes Dam (November 2001) and Environmental Management Plan ("EMP") by Groundwater Consulting Services (Pty) Ltd ("GCS") (October 2007);
- Legal - First Uranium Corporation and GCS.
- Mineral Resources and Mineral Reserves - Minxcon Report dated 14 December 2007.
- Capital and Operating Cost of Plant - K'enyuka (Pty) Ltd ("K'enyuka"); and
- Cash flow Model - Trevor Pearton (Independent Consultant), reviewed and remodelled by Minxcon.

Over and above these sources of information, discussions were held with personnel from First Uranium as well as consultants to First Uranium and much valuable information obtained. Other documentation and sources of information are listed at the end of this report, in Item 25.

ITEM 5 (D) - QUALIFIED PERSONS PERSONAL INSPECTION OF THE PROJECT

Minxcon is an independent advisory company. Its consultants have had extensive experience in preparing technical and economic advisors' and valuation reports for mining and exploration companies. Neither Minxcon nor its staff have any interest capable of affecting its ability to give a fair opinion, and will not receive any pecuniary or other benefits in connection with this assignment, other than normal consulting fees.

The authors of this report are members in good standing of appropriate professional institutions. The qualifications and professional registrations of the qualified persons who have contributed to this evaluation are provided at the end of this report:

The following persons are qualified persons, as defined in SAMREC and NI 43-101, and responsible for the preparation of the report:-

Geology and Evaluation - Charles Muller (Director Minxcon): B.Sc Hons (Geol), Pr. Sci. Nat.400201/04

Charles has a wealth of knowledge in the field of geology and mineral resource evaluation. Charles is an expert in data processing, ore-body modelling and mineral resource evaluation using Datamine™, as well as the other major computer packages aimed at the minerals industry. During his 24 years in the mining industry, he has gained extensive experience in the fields of sedimentology, gold exploration and target generation of gold, platinum, diamonds, coal and base metal projects. His skills in software development, customizing data systems and integration of databases are widely recognised in the mining industry. Charles has been involved with the modelling and geostatistical evaluation of various ore-bodies across the globe. He has presented papers on ore resource evaluation at international venues and has a number of publications to his credit.

Mining and Mineral Reserves - Daan v Heerden (Director Minxcon): B.Sc. (Min. Eng.), M.Comm. (Bus. Admin.), ECSA Reg. No.20050318, FSAIMM Reg. No.37309. 4.

Daan has worked as a Mining Engineer for a total of 23 years and has obtained significant experience in managing mining operations in South Africa and abroad, both underground and open cast, for world-class major mining and for junior mining companies. He also has extensive experience in new business development locally and internationally being responsible for such activities for two major mining companies, one focused on gold and the other platinum. He also made significant contributions in the areas of Mineral Reserve Management and Mine Services Management, with the purpose of improved mining productivity and reduced operating cost.

Financial Analysis - Johan Odendaal (Director Minxcon): B.Sc. (Geol), B.Sc. Hons (Min. Econ.), M.Sc. (Min. Eng.), Pr. Sci. Nat. Reg. No. 400024/04, FSAIMM Reg. No. 702615, MGSSA No. 965119, MAusIMM Reg. No. 220813, IAS.

Johan has worked as a Geoscientist for a total of 22 years. He was actively involved in advising mining companies and investment bankers on corporate related issues. As a rated mining analyst he became a globally recognized industry valuation specialist.

Compliance and Reporting - Heidi Sternberg (Minxcon Mineral Project Analyst): B.Sc. Hons (Geol), GDE, Pr. Sci. Nat. Reg. No. 400113/05, MSAIMM Reg. No.702754 , MGSSA Reg. No. 964804.

Heidi began her career as a geologist, working on a deep level gold mine in South Africa, after which she joined a Mining Consultancy Company where she worked for four years, which included compilation of documentation including due diligence, technical and competent persons' reports covering a wide range of commodities located in several countries. She specializes in the compilation and writing of documentation for mineral companies required for both local and international stock exchanges.

The authors of this report visited the operation on numerous occasions during 2007 and January 2008 and are familiar with all aspects of the Project.

ITEM 6 - RELIANCE ON OTHER EXPERTS

Minxcon independently estimated the Mineral Resource and Mineral Reserve estimates of the tailings dams.

With regard to the legal information, Minxcon has relied on First Uranium for information included in this Technical Report. No independent research regarding the property title to the twelve Buffels and Harties dams, prospecting or mining rights of the Project has been undertaken on the project.

All the environmental information included in this report has been sourced from the Environmental Management Programme Reports and Closure Cost Estimate Reports, compiled by Groundwater Consulting Services (Pty) Ltd or Envirogreen Consulting (Pty) Ltd.

The financial analysis was conducted by Trevor Pearton, an independent First Uranium consultant. However, Minxcon independently checked all the assumptions and inputs to the Discounted Cash flow and ran all inputs in the Minxcon in-house model.

Minxcon has scrutinized all the information provided by these companies and is satisfied that the information is sound and could be used in the estimation of the Mineral Reserves that were used in the economic evaluation of the mine.

ITEM 7 - PROPERTY DESCRIPTION

The Project is located in the western portion of the Witwatersrand Basin, some 160km from Johannesburg approximately 8km from the town of Klerksdorp at Stilfontein in the North West Province, Republic of South Africa (Figure 1). The location of the fifteen tailings dams proposed for recovery is illustrated in Figure 2. The operations are situated on portions of the farms Stilfontein 408IP (MWS 2, 4 and 5 Dams and Plant), Buffelsfontein 443 IP (Buffels 1, 2, 3 and 4 Dams), Mapaiskraal 441 IP (Buffels 5 Dam), Zandpan 423 IP (Harties 1, 2, 5 and 6 Dams), Townlands 424 IP (Harties 7, NKGE and Flanagan Dams) and Strathmore 436 IP (Ellaton Dam). Only the Buffels 1 dam has not been evaluated, as it is currently being used to deposit the tailings produced from BGM.

The MWS operations involve the hydraulic mining of old tailings dams, pumping the slurry to a CIL plant at a rate of 600,000tpm (which will increase to 633,000tpm by January 2008), and then depositing the treated tailings onto MWS Dam 5. Water for the operations is obtained from Margaret shaft dewatering.

The hydraulic mining and the management of the MWS tailings dam is undertaken by Fraser Alexander Tailings (Proprietary) Limited ("Fraser Alexander") on contract to MWS. Fraser Alexander is also responsible for the rehabilitation of the footprint of the mined tailings dams and the closure of the resulting tailings dams from the retreatment process.

Figure 1: Location of the Project Area

Location of the Buffelsfontein Tailings Dam Project Area

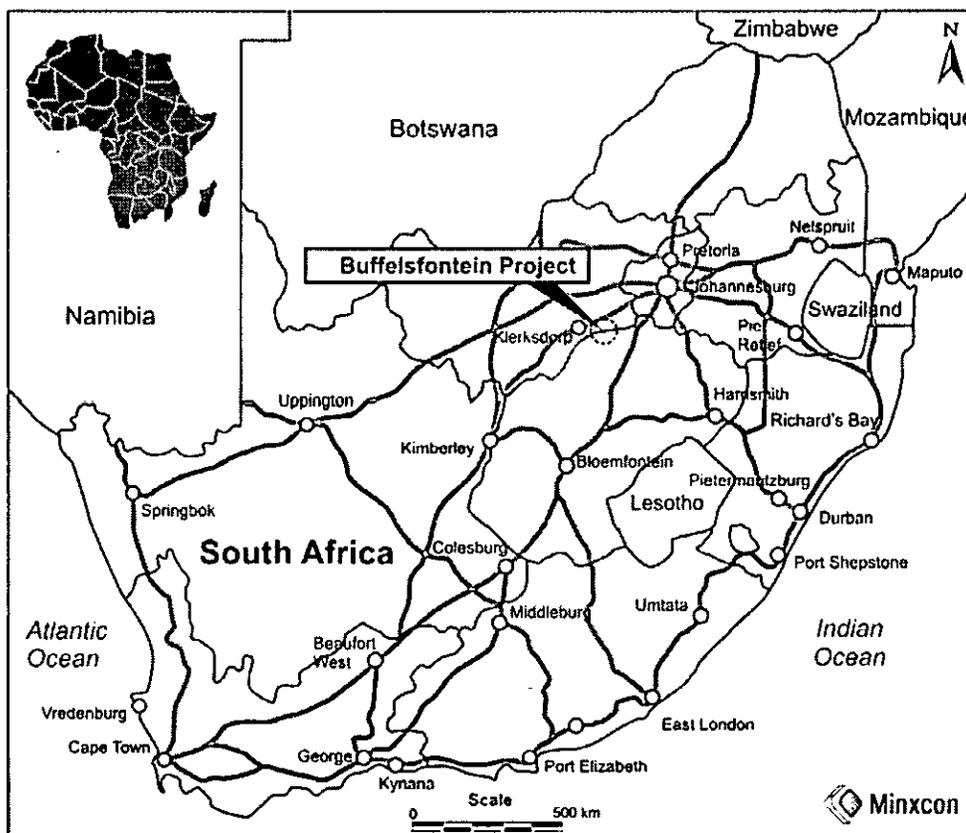

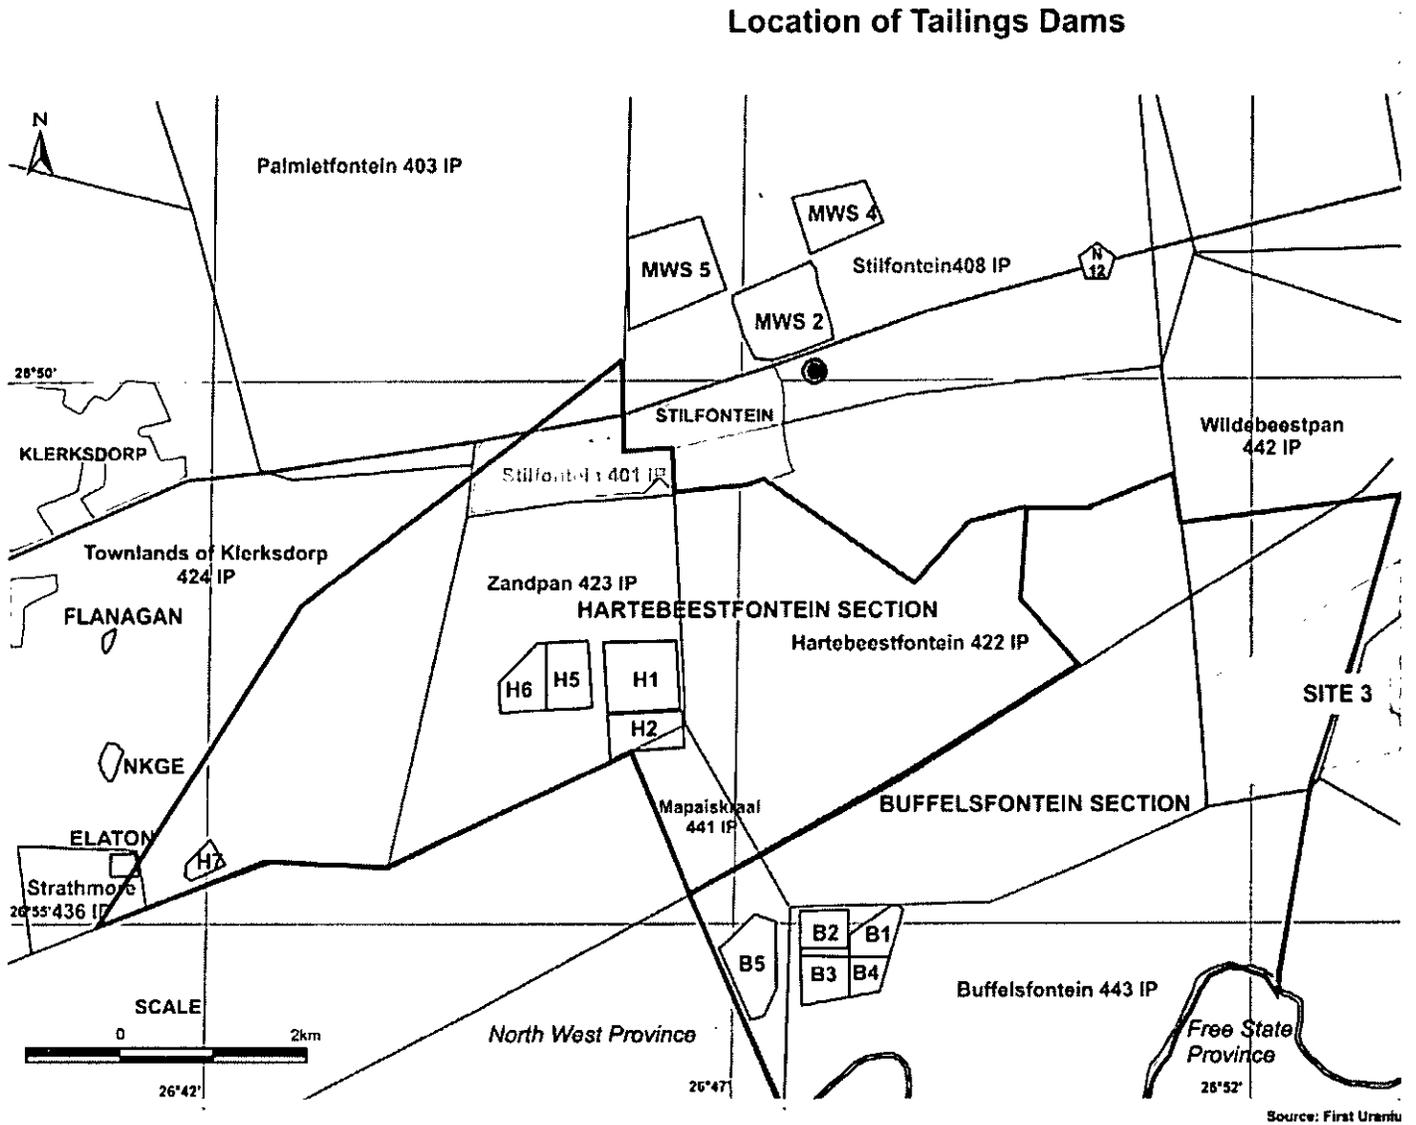

Figure 2: Location of Tailings Dams

Source: First Uranium

ITEM 7 (A) AND (B) - EXTENT AND LOCATION OF THE PROPERTY

The Project is located on portions of the farms Stilfontein 408IP, Buffelsfontein 443 IP, Mapaiskraal 441 IP, Zandpan 423 IP, Townlands of Klerksdorp 424 IP and Strathmore 436 IP, surrounding the town of Stilfontein, North West Province, South Africa (Figure 1 and Figure 2). The project is centred around the following coordinates:-

- 26° 50' S
- 26° 47' E

The area is relatively flat lying, and the elevation varies between 1,330m above mean sea level ("mamsl") and 1,350mamsl.

The tailings dams are scattered over an area that stretches approximately 13.5km north-south and 14km east-west. The footprints of the fifteen tailings dams cover an area of approximately 1,100ha.

ITEM 7 (C) AND (D) - LEGAL ASPECTS AND TENURE

South Africa has a complex system of mineral tenure, with all old order rights having to be converted to new order rights under the new regulations of the Mineral and Petroleum Resources Development Act ("MPRDA") by 2009. The entire system of South African Tenure over minerals is detailed in Item 22 of this report. The Project extends across portions of the following farms:-

- Stilfontein 408IP (MWS 2, 4 and 5 Dams and Plant),
- Buffelsfontein 443 IP (Buffels 1, 2, 3 and 4 Dams),
- Mapaiskraal 441 IP (Buffels 5 Dam),
- Zandpan 423 IP (Harties 1, 2, 5 and 6 Dams),
- Townlands 424 IP (Harties 7, NKGE and Flanagan Dams) and
- Strathmore 436 IP (Ellaton Dam).

A summary of the legal aspects and tenure relating to these areas is detailed in the sections below:-

Current Prospecting Right and Mining Licence - Buffels and Harties Dams

BGM filed an application with the South African Department of Minerals and Energy ("DME") for a Prospecting Right (Ref No NW30/5/1/1/2/1488PR) with respect to uranium, sulphur (pyrite) and other minerals in terms of the BGM and tailings dams in order to secure its priority to such a right. The application was accepted by the DME on 4 July 2007 (Attached in Appendix 1). It should be noted however that the following discrepancies occurred in the Prospecting Right Application:-

1. The diagram indicates that the Ellaton dam is included in the application, but Ellaton occurs on Klerksdorp Townlands 436 IP (also known as Strathmore 436 IP), not Klerksdorp Townlands 424 IP which farm is included in the granting of the Prospecting Right Application letter. For this reason, the approved Prospecting Area excludes Ellaton.
2. Flanagan and NKGE dams do occur on Klerksdorp Townlands 424 IP, however the diagram illustrating the area covered by the Prospecting Right does not include these dams.

Due to these discrepancies, the legal tenure of the Flanagan, Ellaton and NKGE dams could not be verified.

In the interim, the Buffels 2 Dam, from which production is expected to begin in December 2007, will be mined under the Tailings and Mining Right Agreement between BGM and First Uranium (Pty) Ltd until such time as the Mining Right has been Granted and Notarially Executed by the Department of Minerals and Energy ("DME") and transferred from BGM to MWS.

An old order Mining Licence for the mining of the underground portions of BGM, as well as the surface tailings dams (for gold only) is still in place and is valid up to 30 April 2009.

Current Mining Rights - MWS Dams

The MWS dams have an old order Mining Licence (ML16/2003) to mine the material from the MWS 2, 4 and 5 dams that is valid until 21 February 2008. As mining nears completion at MWS Dam 2, the expiry of this licence will not hinder current mining operations, as the MWS 4 and 5 dams are only expected to be mined in 2011 and 2013/14 respectively, by which time a new order Mining Right is expected to be in place.

Future Mining Right - Buffels Dams and MWS Dams

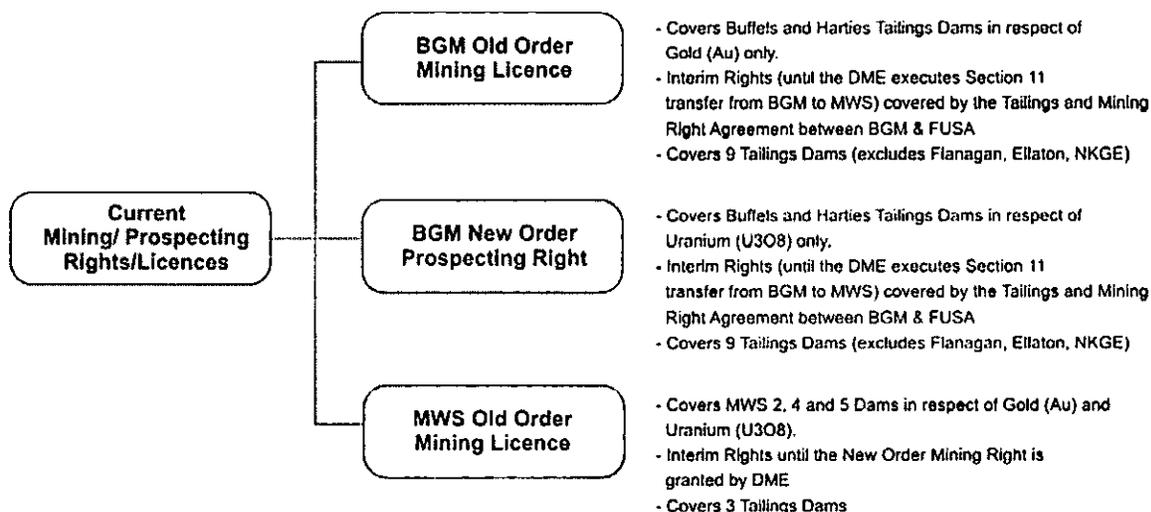

A new order Mining Right Application, which will cover all the Buffels, Harties and MWS dams, has been compiled by GCS. It is expected to be submitted to the DME during December 2007 and will also cover the Flanagan, Ellaton and NKGE dams. It will include the mining of gold and uranium from all the tailings dams and has been compiled in the name of Mine Waste Solutions (Pty) Ltd, the company which will hold all the rights to mine all fifteen of the tailings dams.

Summary of Mining and Prospecting Rights/Licences

The following diagram graphically illustrates the legal tenure of the Mining and Prospecting Rights/Licences as they are currently in place:-

Figure 3: Summary of Mining and Prospecting Rights and Licences

Summary of Mining and Prospecting Rights and Licences

Note: Flanagan, Ellaton and NKGE dams not included in any of the above. They will however be include in the New Order Mining Right, along with the twelve dams held by the Rights/Licences detailed above, that is being applied for under the name of Mine Waste Solutions (Pty) Ltd.

Surface Rights - MWS

The surface rights held by MWS are summarised in the following table:-

Table 1: MWS Surface Rights

Farm Name	Portion Number	Area (ha)	Title Deed No.
Hartebeestfontein 422 IP	Re of Ptn 24	174.2967	T 18439/2005
Stilfontein 408 IP	Re of Ptn 21	97.0936	T 18439/2005
Stilfontein 408 IP	Re of Ptn 30	88.1534	T 18439/2005

Farm Name	Portion Number	Area (ha)	Title Deed No.
Stilfontein 408 IP	Re of Ptn 33	18.2680	T 18439/2005
Stilfontein 408 IP	Re of Ptn 31	118.8037	T 18439/2005
Stilfontein 408 IP	Re of Ptn 10	272.7024	T 18439/2005
Stilfontein 408 IP	Re of Ptn 66	254.7884	T 18439/2005
Stilfontein 408 IP	Re of Ptn 49	39.2994	T 18439/2005
Stilfontein 408 IP	Re of Ptn 48	109.1917	T 18439/2005
Stilfontein 408 IP	Re of Ptn 15	189.2577	T 18439/2005
Stilfontein Ext 3 408 IP	ERF 3678	0.1379	T 2026/1994

The three MWS dams overlie these surface rights. Minxcon has independently verified that these surface rights are held by Chemwes.

Surface Rights - Buffels

The following table details the surface right permits ("SRP") held by BGM:-

Table 2: Surface Rights held by Buffels

Tailings Dam	Reference Number	Permit Number	RMT Plan Number	Nature of Right	Area Covered (Ha)
Buffels 2, Buffels 3, Buffels 4	97	95/73	0.198/72	Slimes Dams, Reticulated Water and Catchment Dams	Unspecified
Buffels 5	95	10/74	0.82/73	Slimes Dam	Unspecified
Harties 1, Harties 2 (Ptn of)	14	C7/59	SR 398	Slimes Dam, Pipe Lines	218.9490
Harties 2 (remainder of)	57	69/82	063/82	Extension to Slimes Dam	19.0093
Harties 7	8	C19/64	743	Slimes Dam	40.7257
Harties 5, Harties 6	19	52/73	03/73	Area for Slimes Dam	157.2875
Unused	42	8/99	010/95	Slimes Dam	165.6564

Maps for the above surface rights were received by Minxcon and the location of the surface rights was checked to ensure that they did in fact correspond with the relevant slimes dams.

The following table was received from First Uranium and lists the surface right permits ("SRP") that are held over the farm Klerksdorp Townlands 424 IP, on which Flanagan and NKGE dams are located. The table did not have an accompanying map, so the location of these surface right permits was not validated. The surface rights to the Ellaton dam could not be established.

Table 3: Surface Right Permits held by Buffels

FARM	MINING RIGHT DESCRIPTION	RMT NO.	REMARKS
Klerksdorp Townlands 424 IP	Portion of SRP C2/1936 and a portion of SRP C4/1935, Surface Right Permit, C18, 1953, SRP, C10/1940, SRP C2/1940, SRP t C19/1942, SRP C4/1941	701, 702, 217, 62, 53, 102, 67	Acquired from Avgold and GFL
	SRP C3/1940 for the purpose of two UG electric cables, overhead electric lighting line, two water pipelines and extension to slimes dam with fencing	53	
	SRP C20/1942 for the purpose of a slimes dam with fencing	102	
	SRP C1/1950 for the purpose of compound for the housing of persons employed by the permit holder in its mining activities, overhead electric power line, water pipeline.	146	Deed of Transfer No. 31/2001
	SRP C16/1951 in respect of extension of compound for the housing of persons employed by the permit holder.	156	
	Portion of SRP C2/1936 for the purpose of slimes dam with fencing	50 & 701	
	SRP C4/1935 for the purpose of shaft equipment with fencing.	702	

Water Licence - Buffels

Buffels does not require a water licence as water for the mining operations will be bought from the Margaret Shaft.

Water Licence - MWS

MWS holds a valid water licence (No. 23050323). This licence is valid until 20 October 2008.

Certificate of Registration (Nuclear Regulator) - Buffels and MWS

MWS hold a Certificate of Registration under the National Nuclear Regulator Act, 47 of 1999 ("CoR"). This Act establishes and empowers the National Nuclear Regulator. The main object of the Regulator is to provide for the protection of persons, property and environment against nuclear damage through the establishment of safety standards and regulatory practices. A CoR is required to operate a uranium recovery processing operation. MWS has been issued a Certificate of Registration (CoR 36) dated July 3, 2003, which authorizes MWS to operate a nuclear facility (as defined). Fourteen procedures have been identified and the required documentation approved. When the additional plant is built, additional procedures will have to be identified and also approved. Application will be made to extend this CoR to include the BGM existing tailings dams and the tailings from the BGM Underground Mine. Concurrently, an application will be made to exclude those areas from the CoR issued to BGM, subject to the extension of the CoR issued to MWS.

ITEM 7 (E) - PROPERTY BOUNDARIES AND SURVEY CERTIFICATES

The tailings dam boundaries were surveyed by TM Surveys during the latter part of 2007 and these surveys were used to calculate the volumes of the individual tailings dams. The survey points were received from Mr Ian Davidson, an independent consultant to First Uranium, in .csv format, which was imported into Datamine® to create the DTMs.

The farms Stilfontein 408 IP, (MWS 2, 4 and 5 Dams and Plant), Buffelsfontein 443 IP (Buffels 1, 2, 3 and 4 Dams), Mapaiskraal 441 IP (Buffels 5 Dam), Zandpan 423 IP (Harties 1, 2, 5 and 6 Dams), Townlands 424 IP (Harties 7, NKG E and Flanagan Dams) and Strathmore 436 (Ellaton Dam) are registered with the Deeds Office (RSA), North West Province. The farms can be located on Government 1:50,000 Topo-cadastral sheets 2626DC Klerksdorp (4th Edition) and 2626DD Stilfontein (4th Edition), which are published by the Chief Directorate, Surveys and Mapping (Private Bag X10, Mowbray 7705, RSA, Phone: +27 21 658 4300, Fax: +27 21 689 1351 or e-mail: cdsm@sli.wcape.gov.za). The central coordinates (WGS84) are 26° 47'00'' (E) and 26° 50'00'' (S).

ITEM 7 (F) - LOCATION OF RESOURCES, RESERVES AND MINE INFRASTRUCTURE

Location of Resources and Reserves

All the Mineral Resources have been quoted as inclusive of the Mineral Reserves. All the Resources and Reserves are located on surface. The Resources and Reserves are all contained in the tailings dams, as illustrated in Figure 2.

Mine Infrastructure

Extensive mine infrastructure exists in the Project area with a network of roads, electrical power lines and small towns. The Project will be mostly undertaken on the surface of the current BGM underground mining operation, with only the MWS, Ellaton, Flanagan and NKG E dams lying outside of the BGM boundary. There is ample space available for the required works.

Processing Plant

The current processing plant, which is currently only extracting gold, is located south of the N12 national road, and to the east of the town of Stilfontein, as illustrated in Figure 2.

Tailings Facilities

A site for the new tailings dam, which will have a footprint of approximately 1,200ha, is in the process of being finalised (Figure 2).

Seven sites were assessed by GCS of which two were recommended for selection by the Corporation, namely Site 1 and Site 3. Site 1 is underlain by dolomites and hence is problematic to DWAF despite significant historical precedent. The Corporation continues to hold discussions with DWAF in this regard as there is potential to reduce Project Capital Costs. Site 3 is NOT underlain by dolomites and forms the basis of the Corporations Pre-Feasibility Study. The land comprising Site 3 is held by several land owners and in some cases trusts, the Corporation is in the process of securing option agreements for land tenure.

Currently, all processed material is being deposited on MWS 5 dam, which has sufficient capacity to hold the waste material produced by the plant at a rate of 633,000t/m. However, once Phase 1B of the processing plant phases has been implemented, the plant will produce approximately 1,283,000t/m, which will be too much for the MWS 5 dam to accommodate.

MWS 5 dam is currently being converted to a cyclone facility, which will allow approximately 1Mt/m of waste material to be deposited on MWS 5 dam. MWS 4 dam can provide additional deposition capacity should it be required, however, there is sufficient time available to finalise the site selection, secure the land tenure and operationalise the new tailings dam.

Water

Drinking water is sourced from a municipal water source. Water used for mining of the dams, is currently sourced from the pumping of water from the defunct Margaret Shaft. This pumping, at a rate of 40ML/d, is undertaken via an agreement between Simmers, Harmony Gold Mining Company and Anglovaal Mining Limited.

BGM has five surface boreholes which could also be used in the future as a possible water source. This will be a cheaper option than the water from the Margaret Shaft; however the use of this water is yet to be approved by DWAF.

ITEM 7 (G) - ROYALTIES AND PAYMENTS

The Mineral and Petroleum Royalty Bill (the "Bill") suggests that a 1.5% royalty will be placed on all refined gold and a 1.5% royalty will be placed on all uranium produced. This bill has not as yet been enacted, as there are still ongoing discussions regarding the Bill. It is anticipated that royalties to the state would not become payable until 2009. First Uranium has not included an allowance for any government royalty in their economic analysis. Minxcon did however calculate the potential impact thereof to be 3.23% on the Project NPV.

BGM has amended the Buffelsfontein Tailings and Mining Right agreement to include the transfer of three additional tailings dams to First Uranium (Pty) Ltd ("FUSA"), namely the Flanagan, Ellaton and NKGE dams. For the above mentioned rights, FUSA will be required to:-

1. Pay a nominal consideration of \$13.50 to BGM;
2. Assume the rehabilitation obligation relating to the dams; and
3. Pay to BGM a 1% Royalty plus VAT of the gross revenue accrued by FUSA from the sale of uranium, gold and any other minerals recovered from the tailings.

BGM will be responsible for any Capital Gains Tax ("CGT") that may be assessed under the Buffelsfontein Tailings Rights Agreement up to \$2 million. If such tax exceeds the amount, then BGM will pay any such tax pursuant to the agreement but the royalty will be adjusted accordingly in order that BGM incurs a net CGT cost of no more than \$2 million.

Simmers is party to a loan agreement (the “Aberdeen Loan Agreement”) with Aberdeen International Inc. (“Aberdeen”) dated March 30, 2006 pursuant to which Aberdeen provided to Simmers a loan facility in the amount of up to \$10 million in respect of the financing of Simmers’ acquisition of BGM and the BGM Underground Mine. As part of the consideration for the facility, Simmers granted to Aberdeen a net smelter royalty on all of the gold assets held by Simmers through BGM, which royalty is calculated on a graduated basis with reference to the price of gold. For instance, assuming a price of gold of \$600, Aberdeen is entitled to a net smelter royalty of 3.25%. This royalty will be applicable to any gold produced by FUSA pursuant to the Buffelsfontein Project and will continue until the loan is repaid to Aberdeen, which is expected to occur by December 31, 2008 (unless extended by Simmers to December 31, 2010). In addition, pursuant to the Aberdeen Loan Agreement, Aberdeen has the sole option, at any time following the one year anniversary of the first advance thereunder, to convert the amount of the facility outstanding at that time into ordinary shares of Simmers at a conversion rate of R0.80, subject to the approval of Simmers’ shareholders. In the event that such shareholder approval is not obtained within a reasonable period of time, Aberdeen shall be entitled to a 1.0% net smelter royalty in perpetuity on gold produced by properties held by BGM, including the Buffelsfontein Tailings Reclamation Project, (excluding the MWS dams).

The economic analysis included in this report assumes no extension by Simmers of the loan facility and, therefore, an ongoing net smelter royalty (“NSR”) after 2008 of 1.0% on gold produced from the Project, excluding gold produced from the MWS tailings reprocessing. The following table illustrates the application of the NSR in respect of the BGM and Aberdeen Agreements:-

Table 4: NSR in respect of the BGM and Aberdeen Agreements

Tailings Dams	BGM Royalty Applicable	Aberdeen Royalty Applicable
Buffels and Harties Dams	Gold and Uranium	Gold Only
MWS Dams	Gold and Uranium	NA

ITEM 7 (H) - ENVIRONMENTAL LIABILITIES

Buffels and Harties Dams

GCS compiled an amended Closure Cost Estimate Report in October 2007. The amounts, which have been extracted from the report pertaining only to the relevant tailings dams, are detailed in the table below:-

Table 5: Summary of Outstanding BGM Environmental Liabilities (for Tailings Dams only)

Liability/Trust Fund	Amount (ZAR)
Buffels 2, 3, 4 and 5 Dams	81,081,170
Harties 1, 2, 5, 6 and 7 Dams	42,242,745
Harties -Ellaton, -Flanagan, -NKGE	3,768,840
Total Liability (Tailings dams)	127,092,756
Amount currently available in Trust Fund (Nov 2007)	0
Variance	-127,092,756

Note: Amounts include P&G’s, a 10% contingency and 14% VAT
 Due to rounding, amounts may not add up
 An amount of ZAR0 has been indicated as being available in the trust fund, as this obligation to fund the trust will be the responsibility of MWS.

The liability, detailed in the table above, is only valid for the dams if they are not mined. A new EMP and Closure Cost Assessment will be undertaken by GCS once the new Mining Right has been accepted by the DME, which will take into consideration the reprocessing of the tailings dams.

The amount for the rehabilitation of the remaining footprints, after the dams have been reprocessed, is expected to be considerably less than the amount detailed in the table above.

MWS

MWS have an approved Environmental Management Program Report (“EMPR”), which was completed in November 2001 and officially signed off on 9 March 2003. The report was compiled by Envirogreen Consulting and only covers the reprocessing of the MWS 2 dam, which is almost completely mined out.

An independent Closure Programme was also compiled in addition to the EMPR, which covered the rehabilitation of the MWS 2 dam footprint, once it had been completely mined out, the disturbed land to the east of MWS 2 dam, as well as the area to the south of the N12 national road, which liability was also the responsibility of MWS.

The following table details the amounts that have been estimated to complete the rehabilitation of the MWS areas, as well as the amount currently in the SGM Rehabilitation and Closure Trust Fund:-

Table 6: Summary of Outstanding MWS Environmental Liabilities as at 1 November 2007

Liability/Trust Fund	Amount (ZAR)
Rehabilitation Liability for area North of N12	7,282,267
Rehabilitation Liability for area South of N12	6,861,208
Total outstanding Liability	14,143,475
Amount currently available in Trust Fund	14,647,169
Variance	503,694

The amount in the trust fund exceeds the amount that has been estimated for the rehabilitation, as the operation has been funding the on-going rehabilitation through working costs. However, the excess funds may be applied to the environmental liability associated with the twelve Harties and Buffels dams, which will become the responsibility of MWS, once the Mining Right has been approved.

Summary of Environmental Liabilities

MWS will submit a new Mining Right application to the DME in December 2007, covering all the tailings dams. A new EMPR will then have to be submitted 180 day later to cover all the tailings dams, the processing plant and the new tailings dam. Should the transfer of these dams to MWS be successful, all liabilities, environmental responsibilities and closure cost liabilities will be transferred to MWS and removed from BGM.

The DCF makes allowance for R5million per year to be contributed to the Environmental Trust Fund (to cover all the tailings dams), from 2009 up to and including 2021, amounting to R65,000,000.

This amount will be amended if the updated MWS Closure Cost Assessment, which will cover the rehabilitation of all the tailings dams, is greater than, or less than, the amount catered for in the DCF.

ITEM 7 (I) - PERMITS TO CONDUCT WORK

See Item 7 (c) and (d).

ITEM 8 - ACCESSIBILITY, CLIMATE, LOCAL RESOURCES, INFRASTRUCTURE AND PHYSIOGRAPHY

ITEM 8 (A) - TOPOGRAPHY, ELEVATION AND VEGETATION

The surface topography over the area is characterized by moderately undulating plains. The area is relatively flat lying, and the elevation varies between 1,330mamsl and 1,350mamsl.

The area has been highly disturbed by mining and the current vegetation types are dominated by grasslands and areas of secondary reeds, which are associated with areas surrounding the tailings dams or areas where the natural drainage has been restricted by mining access.

ITEM 8 (B) - ACCESS

The BGM and MWS properties, on which the tailings dams are located, are adjacent to each other and are located some 160km south west of Johannesburg. The mine is easily accessible via the N12 national road from Johannesburg. A large network of roads exists between the tailings dams and all the dams are easily accessible via either paved roads or gravel roads in good condition.

ITEM 8 (C) - POPULATION CENTRES

The Project is located in the vicinity of the town of Stilfontein, which is approximately 10km east of Klerksdorp. The area has a long history of gold mining and mine suppliers and contractors are readily available locally. Experienced and general labour is also available in the Project area.

ITEM 8 (D) - CLIMATE AND OPERATIONAL SEASON

The climate in the area is typical of the Highveld of South Africa, with mild winters and warm to hot summers. Temperatures average approximately 30°C in summer and approximately 18°C in winter.

The area falls within a summer rainfall area, with the highest rainfall recorded in January. The annual rainfall recorded is in the region of 625mm. Mining operations can generally continue throughout the year, however heavy rain storms do have the potential to hinder the mining operations. During the past four years however, mining has only been suspended due to adverse weather conditions, for a total of approximately 72 hours.

ITEM 8 (E) - MINING INFRASTRUCTURE

There is extensive existing infrastructure in the Project area with a network of roads, electrical power lines and small towns. General mining infrastructure is detailed in Item 7 (F) in this report.

ITEM 9 - HISTORY

ITEM 9 (A) - PRIOR OWNERSHIP

BGM

BGM consists of the Buffelsfontein Mine (also referred to as the South Division) and the Hartebeestfontein Mine (now known as the North Division). The Buffelsfontein Mine commenced production in 1954, while production at Hartebeestfontein commenced a year later. Randgold & Exploration Company Limited bought Buffelsfontein Mine from Mining House Gencor and, in September 1997, Durban Roodepoort Deep Group ("DRD") was formed when Durban Roodepoort Deep Limited merged with Blyvooruitzicht Gold Mining Company Limited and Buffelsfontein Gold Mines Limited. In August 1999, DRD bought the Hartebeestfontein mining business from the Anglovaal stable and incorporated it into BGM.

DRD's northwest operations (Buffelsfontein and Hartebeestfontein) were placed under provisional liquidation on March 22, 2005, following continued financial losses and a massive earthquake on March 9, 2005, which caused damage to the No 5 shaft.

In October 2005, Simmers purchased the BGM (formerly DRD Gold's North West Operations), comprising the Buffelsfontein and Hartebeestfontein underground mines, out of provisional liquidation (the Buffelsfontein Liquidation Acquisition). The total acquisition cost was approximately \$13.5 million, consisting of a purchase price of \$6.1 million, \$4.4 million in restart costs, as well as holding costs of \$4.1 million incurred while operating as the preferred bidder on behalf of the provisional liquidators. Simmers shortly thereafter recommenced mining operations at the BGM Underground Mine and the production of gold in the gold plant. Both of the Buffelsfontein Mine and the Hartebeestfontein Mine have produced gold and uranium over periods of the mine life. The uranium plants were closed when the price dropped in the mid-1990s. Both uranium plants were decommissioned and demolished.

The ongoing production activity by BGM and its predecessors has generated a significant amount of underground development and ongoing exploration. The BGM Underground Mine is planned to produce at a rate of approximately 90,000tpm until approximately 2030, after which only a tail of production is forecast to remain. While the Buffelsfontein property has a history of production, it is mostly from primary processing and not from the reclaiming and reprocessing of slimes. However, there have been some successful tailings reprocessing operations in the area, including the Chemwes operation, now held by MWS, on the Stilfontein tailings.

FUSA entered into the Buffelsfontein Tailings and Rights Agreement with BGM and Simmers pursuant to which, among other things:-

1. BGM has covenanted to take all necessary steps to obtain all ministerial approvals required for the items requested in the Buffelsfontein Conversion Application in order to effect the transfer of the Buffelsfontein Tailings Mining Right to FUSA as soon as possible;
2. BGM has agreed to sell to FUSA upon FUSA's receipt of the Buffelsfontein Tailings Mining Right, the Buffelsfontein and Hartebeestfontein tailings dumps as well as certain property required for construction of the proposed processing plants, and grant to FUSA a right to the tailings arising from BGM's ongoing mining operations at the BGM Underground mine; and
3. BGM will grant a servitude to FUSA for access and egress to BGM's Buffelsfontein property to enable FUSA, its employees, consultants, agents and subcontractors access for purposes of constructing, servicing and operating the uranium and gold processing plants and tailings pipelines to be built by FUSA.

MWS

MWS was established in 1999 to effect sustainable environmental remediation while, at the same time, reclaiming and reprocessing mine tailings and other waste materials. MWS purchased the shares of Chemwes in 2003 as the inaugural project for the reprocessing of tailings. Chemwes is a wholly owned subsidiary of MWS. MWS holds the surface sources produced by SGM, neighbouring the BGM Underground Mine.

The Chemwes operation commenced as a uranium recovery operation based upon the SGM. SGM commenced operations as a gold mine in 1952 and had a primary uranium processing operation from 1953 to 1961. In the 1970s, the price of uranium rose and the recovery of uranium from the SGM tailings (and other tailings in the area) was investigated. Following laboratory test work, the Chemwes uranium plant was commissioned in mid-1979 and operated until 1989, processing 29.4Mt of tailings and recovering 4,560t of U_3O_8 .

Following the MWS purchase of Chemwes, the plant was converted to a gold tailings treatment plant and commenced operations in 2003. To-date, the Chemwes operation has produced 12.44t of gold from 26.98Mt of material at an average grade of 0.461g/t. No uranium has been extracted from the tailings material, which are likely to be reprocessed at a later stage for uranium.

The mining of MWS 2 dam is almost complete, leaving only the MWS 4 and 5 dams still to be processed.

FUSA, a subsidiary of First Uranium Corporation, entered into a purchase agreement in April 2007 with the shareholders of MWS to acquire MWS and the underlying assets, including MWS 4 and 5 Dams and the operating processing plant, to provide a fast track approach for the processing of the tailings dams from BGM for the recovery of gold and uranium. The transaction closed on 6 June 2007.

ITEM 9 (B) - HISTORICAL EXPLORATION AND DEVELOPMENT

Buffels and Harties Dams

The information regarding the historical exploration of the Buffels and Harties dams was in the form of paper maps indicating the location of the drilling that took place as well as paper copies of the results obtained, to the extent that these were available. The information was all closely scrutinised by Minxcon and only information which could be validated, was used for the estimation of the Mineral Resources.

None of the Buffels or Harties dams have been historically reprocessed and many of the dumps have been re-vegetated in line with applicable rehabilitation requirements.

MWS

The three MWS dams were previously drilled and evaluated by Chemwes. The information from this previous drilling was in good order, all the positions of the boreholes were recorded and the assay information was in electronic format, which made utilizing the information for the current modelling and evaluation exercise relatively simple.

The historical Mineral Resources that were estimated for all the dams is detailed in the section below, and details regarding the historical mining that has taken place on MWS 2 dam are shown in Item 8 (D).

ITEM 9 (C) - HISTORICAL MINERAL RESOURCES AND MINERAL RESERVES

The following Mineral Resources were estimated for the tailings dams in May 2007:-

Table 7: Historical Mineral Resources

Dam	Tonnes	Gold Grade	U ₃ O ₈ Grade	Gold Content	U ₃ O ₈ Content
MEASURED MINERAL RESOURCES					
Buffels 2	23,000	0.40	0.0087	301	4,544
Buffels 3	29,400	0.35	0.0103	335	6,674
Buffels 4	16,380	0.38	0.0102	202	3,682
Total Measured	69,480	0.38	0.0097	838	14,901
INDICATED MINERAL RESOURCES					
Buffels 5	45,584	0.21	0.0062	306	6,229
Harties 1	92,576	0.32	0.0061	941	12,446
Harties 2	35,640	0.31	0.0058	354	4,556
Harties 5	23,133	0.31	0.0053	228	2,702
Harties 6	14,604	0.22	0.0059	105	1,899
MWS 2	2,600	0.45	0.0080	38	458
MWS4 (Domain 2)	14,423	0.29	0.0140	134	4,450
Total Indicated	228,560	0.29	0.0065	2,106	32,741
Total Measured & Indicated	298,040	0.31	0.0073	2,944	47,642
INFERRED MINERAL RESOURCES					
Harties 7	1,740	0.54	0.0243	30	932
Harties Flanagan	43	0.80	0.0229	1	22
Harties Ellaton	1,500	0.52	0.0087	25	288
Harties NKGE	680	0.41	0.0158	9	237
MWS 5	60,700	0.29	0.0093	566	12,442
Total Inferred	64,663	0.30	0.0098	631	13,920

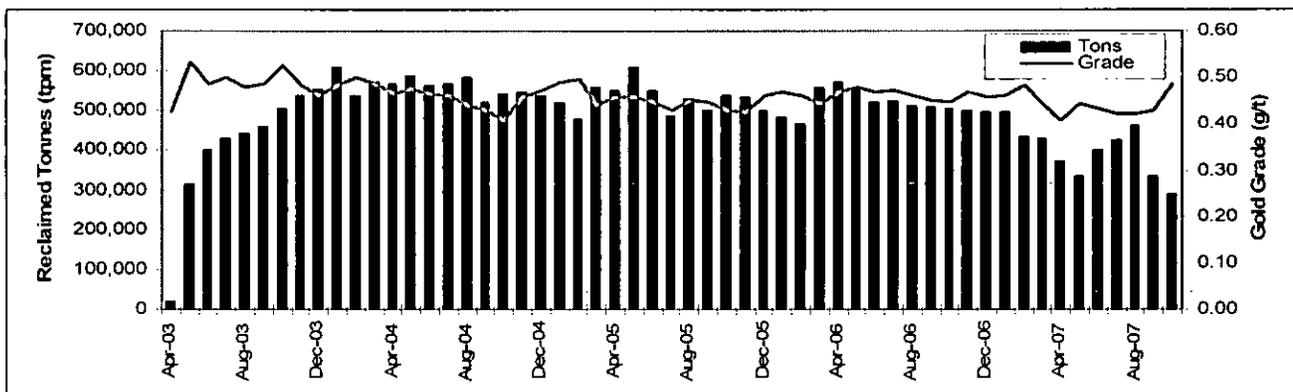

- Notes:
1. CIM definitions were followed for Mineral Resources.
 2. A zero grade cut-off grade was used.
 3. Rows and columns may not add exactly due to rounding.
 4. Preliminary metallurgical test results indicate that recoveries will be approximately 27% for uranium and 68% for gold.
 5. Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability.
 6. The MWS Mineral Resource estimate assumes the completion of the MWS acquisition by First Uranium.
 7. Harties-Flanagan, Harties-Ellaton, and Harties-NKGE are proposed to be acquired by First Uranium from BGM pursuant to an amendment to the Buffelsfontein Tailings Rights Agreement

No Mineral Reserves were previously estimated.

ITEM 9 (D) - HISTORICAL PRODUCTION

Only MWS 2 Dam has been processed to-date and has produced 12.44t of gold from 26.98Mt of material at an average grade of 0.461g/t between April 2003 and November 2007, as illustrated in the graph below:-

Figure 4: Production History of MWS 2 Dam

Notably, the production has fallen in recent months, which can be attributed to the diminishing resources on MWS 2 Dam, which necessitated the migration from a high-volume low-cost hydraulic mining operation to a low-volume high-cost mechanical load and haul operation. With the imminent completion of the installation of the equipment required to mine the Buffels 2 and 3 dams, the high-volume low-cost operation will be restored in December 2007 and increased to 633,000 tpm by January 2008.

ITEM 10 - GEOLOGY

Regional Geology

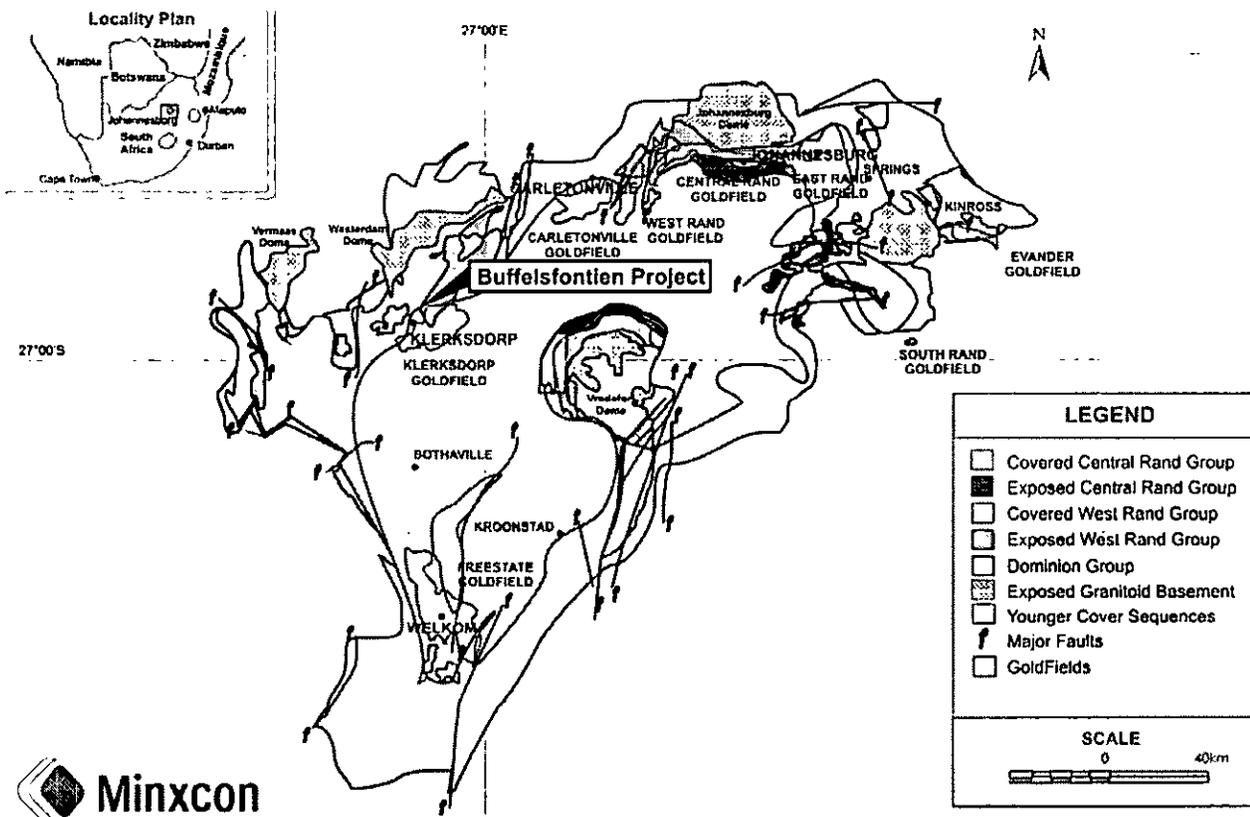

The Project lies within the Witwatersrand Basin (Figure 5), an Archaean sedimentary basin which was deposited over a protracted time period extending from some 360 Ma between 3,074 and 2,714 Ma (Wilson and Anhaeusser, 1998), whose surface expression is an elongate structure that extends longitudinally for approximately 300km NE-SW by 100km NW-SE.

It contains an approximately 6km thick stratigraphic sequence consisting mainly of quartzites and shales with minor intermittent volcanic units. The first stage of basin development is recorded by rocks of the Dominion Group, composed of fluvial sediments and volcanic rocks. The Witwatersrand Supergroup overlies the Dominion Group and has been subdivided into the lower West Rand Group and the upper Central Rand Group, both of which consist primarily of sandstones, shales, and conglomerates. The Central Rand Group has produced the majority of the gold from the Witwatersrand Basin. The Ventersdorp Supergroup unconformably overlies the Witwatersrand Supergroup and is in turn overlain by the Transvaal and Karoo Sequences.

The differences in the morphology and gold distribution patterns from one reef to the next, and within individual reefs, reflect the different sedimentary processes that prevailed during deposition on erosional surfaces in fluvial and littoral environments. Despite its age, the sedimentary rocks within the Witwatersrand Basin are remarkably well preserved and relatively undeformed. The basin has undergone numerous phases of faulting but has not been subjected to significant metamorphism.

Figure 5: Regional Geology of the Witwatersrand Basin

Regional Geology of the Witwatersrand Basin

Source: The Mineral Resources of South Africa

Local Geology

The BGM Underground Mine, as well as the now defunct SGM, are located in the Klerksdorp Goldfield (Figure 5) and the mineralization is hosted by the Central Rand Group, the upper unit of the Witwatersrand Supergroup. This unit has produced the majority of the gold from the Witwatersrand Basin, and is composed predominantly of quartzite with subordinate zones of conglomerate and a single argillite horizon, the Booyens Shale Formation. Using the central position of the Booyens Shale, the stratigraphy of the Central Rand Group has been historically subdivided into the lower Johannesburg Subgroup and the upper Turffontein Subgroup.

Mineralized reefs in the Johannesburg Subgroup tend, on average, to be more laterally extensive and more uniform in thickness and gold content. The principal gold-bearing conglomerate packages in the Johannesburg Subgroup are the Main Reef and Bird Reef.

The mineralization at BGM and SGM is hosted by the Johannesburg Subgroup of the Central Group. In the Klerksdorp Goldfield, the Johannesburg Subgroup is represented by a sequence of quartzites, conglomerates, and quartz wackes, approximately 1,100m thick.

Property Geology

The economic gold and uranium mineralization at BGM and SGM is hosted by the Vaal Reef, an oligomictic, pebbly, quartz arenite reef, deposited approximately 2.8 billion years ago, as well as the Ventersdorp Contact Reef ("VCR") albeit to a far lesser extent, which is also an oligomictic, pebbly quartz arenite reef deposited approximately 2.78 billion years ago (Wilson and Anhaeusser, 1998).

In the North Division (previously the Hartebeestfontein Mine), dips vary from shallow to 45°. The depth of the Vaal Reef varies between 800m and 2,500m due to the displacement by faults and dykes. Structural geological complexity decreases from east to west, as do the gold grades.

In the South Division (BGM Underground Mine), dips average 25°. The structural geology is complex, with fault displacements of 800m to 1,000m. A thrust fault has caused triplication of the reef in the central area of the South Division.

During the past approximately 50 years during which time the BGM has been in operation, vast quantities of reef material have been processed for gold and the tailings from this processing deposited in the 12 surface tailings dams, which form part of this Project.

The three MWS dams, which also form part of this Project, originated from the mining of the conglomerate reefs of the now defunct SGM.

The gold deposits in the Witwatersrand Basin have a primary sedimentary origin and show great lateral continuity throughout the basin. Local discontinuities in mineralization within the reefs are a result of facies variation, ore formation processes, and structural history.

The mineralization planned for exploitation in this Project is the tailings dams generated from operations over the years and from future tailings, provided from the mining operations at the BGM underground mine.

ITEM 11 - DEPOSIT TYPE AND GEOLOGICAL MODELLING

Deposit Type

The material contained in all fifteen of the tailings dams, forming part of this Project, originated from the processing of the conglomerate reefs and waste material that was mined from both the BGM and the SGM underground mines. The material contained in the tailings dams is generally extremely fine, with particles varying in size from -25microns up to -850microns.

The tailings dams differ significantly in size, from approximately 92Mt (Harties 1 dam) to 45,000t contained in the Flanagan dam.

All the deposits are surface deposits.

Geological Modelling

No geological modeling as such, was carried out on the tailings dams as they all generally uniform in shape. The dams were however all surveyed in order to ascertain the volume of material contained in each of the dams. TM Surveyors were contracted to carry out the surveying of the MWS dams and the in-house Simmers Surveyor was commissioned to survey the Buffels and Harties dams.

All the data points (X, Y and Z co-ordinates) were received from the surveyors in digital format, which was imported into the Datamine ® geological modeling package. Using these points, as well as information regarding the original surface topography and the borehole drilling logs, 3-Dimensional ("3-D") wireframes were constructed for each of the 15 tailings dams.

The only dump that required any type of geological modeling was the MWS 4 dam, which displayed marked differences in both gold and uranium grades through the dam. This dam was therefore separated into two separate domains, namely domain 1, forming the upper portion of the dam, and domain 2, forming the lower 12m of the dam.

ITEM 12 - MINERALIZATION

The gold and uranium contained in the tailings dams was originally associated with the conglomerate reefs that are/were mined at the BGM and SGM underground mines. The material from these mines has been processed over the years for gold, and for a period of time, uranium too.

As the mines came into operation approximately 50 years ago when processing methodologies were not as efficient as they are today, the material that was deposited on the tailings dams contained residue gold and uranium, which could not be extracted using the technology of the day. The tailings dam material can therefore now be reprocessed, using more advanced technology, and the residual gold and uranium mineralisation can be extracted.

Brannerite [(U,Ca,Ce)(Ti,Fe)₂O₆] is the dominant uranium-bearing phase, but it occurs in very low proportions less than 0.02 mass%. Some uraninite (UO₂) is also present but the concentration in the sample was too low to be detected.

The brannerite content of 0.01 to 0.02 mass percentage accounts for a uranium grade of 38ppm to 76ppm. The assayed uranium grade is 67ppm. The brannerite occurs mostly as middling's ($\pm 57\%$), with $\pm 29\%$ locked in silicate gangue. Only 14% of the brannerite is liberated, all of it occurring within the $<38 \mu\text{m}$ fractions. The brannerite middling's and locked brannerite are mainly associated with silicate gangue, of which quartz, chlorite, and mica are the dominant phases. Brannerite within the gangue occurs in two forms, either as discreet grains ($50\mu\text{m}$) or as fine intergrowths ($<1\mu\text{m}$).

The discreet brannerite grains contain inclusions of either lead or a REE (Rare Earth Element) phase (florencite/crandalite) $((\text{Ca,Ce,Nd,Th,Sr,Ba})\text{Al}_3(\text{PO}_4)_2(\text{OH})_6)$. The brannerite is occasionally closely associated and intergrown with the REE phase.

ITEM 13 - EXPLORATION

Exploration at the Project has been limited to the auger drilling of the tailings dams as described in detail in Item 14.

ITEM 14 - DRILLING

All the drilling carried out on the Project has been in the form of vertical auger drilling, using a hand held auger drill. All the drilling that was carried out prior to March 2007 is referred to as historical drilling and all drilling carried out after March 2007 is termed current drilling. These two drilling campaigns will be discussed separately below:-

Historical Drilling

The following table details all the information that is available for the historical drilling that was carried out on the Tailings Dams:-

Table 8: Summary of Historical Drilling

Dam	No of BHs Drilled	Comments	Ave BH Spacing (m)
Harties 1	6	Location of CH borehole unknown.	716
Harties 2	6	Location of CH borehole unknown.	597
Harties 5	6	Location of CH borehole unknown.	663
Harties 6	6	Location of CH borehole unknown.	211
Harties 7	unknown	No historical drilling information available.	n/a
Buffels 2	7	CH borehole was scaled off plan	270
Buffels 3	6	CH borehole was scaled off plan	370
Buffels 4	6	CH borehole was scaled off plan	350
Buffels 5	7	Includes CH borehole. Location of BH 6 not found	570
Flanagan	unknown	No information regarding historical drilling available	n/a
Ellaton	24	All locations unknown	n/a
NKGE	9	All locations unknown	n/a
MWS 2	61	All Locations Known	Not Modelled
MWS 4	45	All Locations Known	125
MWS 5	56	All Locations Known. Drilled between May 2000 and Feb 2007.	200
TOTAL	245	Only 211 of these boreholes were valid and used.	388

Note: CH refers to a Central Hole that was drilled.

All the boreholes were drilled using auger drillers by Dump and Dune Drillers, a professional dump drilling company, and the assaying of the samples was carried out by Performance Laboratories (Pty) Ltd ("Performance Labs"). Performance Labs are located in Randfontein, Gauteng Province, South Africa and they are SANAS accredited (Faculty Accreditation Number T0265).

Performance Labs are independent of First Uranium. The facility complies with the general requirements of ISO/IEC 17025:2005 and the accreditation is valid until February 2010 (Appendix 2). Performance Labs are SANAS accredited for the assaying of gold via the fire assay technique. It should be noted that they are NOT yet accredited for uranium assaying.

The auger drilling machine extracted 50mm diameter samples at 1.5m intervals. All the drilling took place vertically. The material was placed into plastic sampling bags and tagged with original sample numbers for each sample. The samples were sent through to Performance Labs for assaying and the transportation of the samples was undertaken by a member of the drilling team.

Gold was analysed via the standard fire assay methodology. The detection limit for gold is 0.02g/t au. Uranium was analysed via the Aztec method of estimation, using an X-ray instrument. The detection limit for uranium is 0.01kg/t U₃O₈.

No information was available regarding the use of standards and blanks in-between the samples that were sent to the labs. Therefore it is assumed that this practice was not employed during the Historical Drilling exercise.

Internal QA/QC procedures at the Performance Lab included assaying one duplicate sample and one standard sample from each batch of 20 samples.

Although historical boreholes were drilled on the Ellaton and NKGE dams, the location of the boreholes were not available and therefore the information could not be utilised in the geological modelling and Mineral Resource estimation exercise.

Current Drilling

The recent drilling on the dams was carried out by Dump and Dune as well as Gold Mine Sand and Slimes Dump Drillers (“GMSSDD”). Normal auger drilling (50mm at 1.5m increments) was undertaken and the samples were bagged and individually numbered using standard procedures.

Samples were taken to Performance Labs for analysis and the results of the assaying were emailed through to Mr. Ian Davidson, an independent consultant to First Uranium, for compilation. Minxcon received the assay results in their original format from Performance Labs and sorted the data so that it could be utilised in Datamine®. The following table summarises the recent drilling that was undertaken on the dams:-

Table 9: Summary of Recent Borehole Information

Dam	No of BHs Drilled	Ave Depth of BHs (m)
Harties 1	6	45.8
Harties 2	6	43.5
Harties 5	6	23.2
Harties 6	11	19.6
Harties 7	6	6
Buffels 2	-	-
Buffels 3	-	-
Buffels 4	-	-
Buffels 5	6	23.5
MWS 2	-	-
MWS 4	-	-
MWS 5	-	-
Flanagan	2	10.5
Ellaton	13	9.7
NKGE	10	13.3
TOTAL	66	21.6

Duplicate samples were sent to the Mintek Analytical Services Division ("Mintek"), located in Randburg, Gauteng for Gold and Uranium analyses. Mintek is SANAS accredited (Faculty Accreditation Number T0042) and are independent of First Uranium. The facility complies with the general requirements of ISO/IEC 17025:2005 and the accreditation is valid until January 2008 (Appendix 3).. Gold was analysed via the standard fire assay methodology. The detection limit for gold is 0.02g/t au. Uranium was analysed via the Aztec method of estimation, using an X-ray instrument. The detection limit for uranium is 0.01kg/t U₃O₈.

Mintek are SANAS accredited for the assaying of gold via the fire assay technique. It should be noted that they are NOT yet accredited for uranium assaying.

All the drilling took place vertically. The location of the borehole collars drilled for each of the tailings dams, as well as the wireframes that were constructed using the survey data, are illustrated on Figure 6 to Figure 12 overleaf.

It should be noted that in the diagrams, "old BH's" refer to all Historical Drilling and "new BH's" refers to the Current Drilling that has taken place. No diagram illustrating the location of the boreholes or the wireframe was constructed for MWS 2 dam as it is virtually mined out.

ITEM 15 - SAMPLING METHOD AND APPROACH

ITEM 15 (A) - SAMPLING METHODS

Sampling was carried out after each 1.5m drill rod was pulled out of the tailings dam. The material is placed directly into a plastic sampling bag from the drill rod and the drill rod is cleaned after each sample is taken. The sample bag is numbered with an individual sample number and sealed using a stapler.

The location of the sampling is illustrated in Figure 6 to Figure 12, as all sampling took place in the boreholes. Sampling is evenly spaced at 1.5m increments down the boreholes, from the top of the borehole usually to the floor of the dam (if conditions allowed). Spacing of the boreholes across the dams differs from dam to dam. The following table details the average borehole spacing for each of the dams:-

Table 10: Borehole Spacing of all Boreholes used in Mineral Resource Estimation

Dam Name	Borehole spacing in X and Y Direction (m)	Average distance between Boreholes (m)
Harties 1	400 x 300	350
Harties 2	300 x 250	250
Harties 5	320 x 250	275
Harties 6	200 x 140	179
Harties 7	160 x 150	150
Buffels 2	245 x 360	270
Buffels 3	250 x 400	370
Buffels 4	400 x 215	350
Buffels 5	250 x 350	320
Flanagan	Not Modelled – Only 2 BH's	Not Modelled – Only 2 BH's
Ellaton	70 x 70	60
NKGE	70 x 70 & 40 x 50	70 & 40
MWS 2	Not Modelled – Almost Depleted	Not Modelled – Almost Depleted
MWS 4	150 x 100	125
MWS 5	140 x 138 & 300 x 375	200

Notes: NKGE has two borehole populations or groupings and therefore two borehole spacing's have been included
 MWS 5 - the (300 x 375) area has no infill drilling - Relates to area classified as an Inferred Resource.

The total number of samples used for the estimation of the Mineral Resources, is illustrated in the table below:-

Table 11: Data used for the Modelling and Estimation of the Dams

Dam	No of BH's	No of Data Points (Uranium)	No of Data Points (Gold)
Harties 1	11	354	355
Harties 2	11	319	320
Harties 5	11	186	187
Harties 6	16	209	209
Harties 7	6	25	25
Buffels 2	7	194	194
Buffels 3	6	147	147
Buffels 4	6	156	156
Buffels 5	12	227	227
MWS 2	61	NA	NA
MWS 4 (Dom 1)	45	271	266
MWS 4 (Dom 2)	45	434	426
MWS 5	56	533	533
Flanagan	2	14	14
Ellaton	13	206	206
NGKE	10	170	171

The tailings dams are scattered over an area that stretches approximately 13.5km north-south and 14km east-west. The footprints of the fifteen tailings dams cover an area of approximately 1,100ha.

ITEM 15 (B) - SAMPLING RECOVERY

Recovery of the material is generally very high and only samples where the recovery is good are used. However, if the tailings material is wet, recoveries are low and the drilling of the borehole is stopped. It is for this reason that not all of the boreholes reach the floor of the dam. These boreholes are utilised up to and including the last valid sample where recovery was acceptable.

ITEM 15 (C) - SAMPLING QUALITY AND REPRESENTATIVENESS

The core sampling was conducted by Dump and Dune or GMSSDD and both companies have a long history of drilling and sampling sand and tailings dams. A representative of MWS carried out regular checks of the sampling that was being conducted and no problems were encountered. Therefore, there is no reason to believe that the sample quality was not to standard and the sampling is considered representative.

ITEM 15 (D) - SAMPLING INTERVAL

As the entire tailings dam will be mined, samples need to be taken through the entire length of the borehole, up to and including a sample of the soil intersection (if reached). Samples were taken at 1.5m downhole intervals, each sample weighing approximately 3kg. This sampling interval is the standard interval used for this type of sampling.

ITEM 15 (E) - SUMMARY OF SAMPLE COMPOSITES, VALUES AND TRUE WIDTHS

The samples are not composited as the sample lengths are all uniform. The boreholes are drilled vertically; therefore no true widths need to be calculated.

ITEM 16- SAMPLE PREPARATION, ANALYSIS AND SECURITY

ITEM 16 (A) - INDEPENDENCE OF SAMPLE PREPARATION

Core samples were prepared by an independent drilling company, being either Dump and Dune or GMSSDD. The sampling was overseen by a representative of MWS in order to ensure that no contamination took place.

ITEM 16 (B) - SAMPLE PREPARATION METHOD, ASSAYING & ANALYTICAL PROCEDURES

All the auger drill samples were prepared at the Performance laboratory in Johannesburg, by drying and pressing through a 1.0mm screen to break up lumps.

Uranium Analysis by Aztec Method of Assaying

TREATMENT OF SAMPLES IN THE SAMPLE PREPARATION SECTION, DETAILING RECEIVING, CRUSHING, PULVERISING AND READING OF SAMPLES.

- Samples received in plastic bags are opened and tipped into clean sample dishes, the ticket for each sample is placed in the sample dish.
- The samples are dried, if necessary, samples are sorted numerically and checked according to dockets.
- Samples are then crushed using a 10" x 6" jaw crusher to < 3mm.
- A vertical spindle pulveriser is used to mill the sample to 85% -75microns, mixed in a cocktail and placed together with the sample ticket in a sample cup. Sequence of sample numbers are again checked and placed on sample trays (twenty samples to a tray).
- Trays are then submitted to Aztec for preparation section.
- Sample sequence is checked according to worksheets and Aztec tubes are filled in sequential order and placed in magazines for analysis.
- Filled magazines are loaded and logged into Aztec analyser, samples are read at constant time (100 seconds) in duplicate and results are printed and recorded on worksheets.
- Operator checks that all the values are available before accepting the worksheet as complete.
- Results are then transmitted or reported via e-mail to the various clients.
- Results reported as U_3O_8 Kg/t. No correction is needed for the interfering elements.
- Standards are read after each batch of 20 samples.

INSTRUMENT USED FOR ANALYSIS

- The Aztec is an X-ray instrument using a Tungsten tube operating at 142Kv and 4.0mAmps.
- The detectors are made from high purity Germanium. It is an energy dispersive technique and uses high energy K-X -rays.
- It responds to the K-alpha energy level.
- Instrument is calibrated using pure metals as well as certified reference standards.
- Background information is collected and updated between each sample and internal standards every 300 seconds.
- Detection limit is 0.01Kg/t U_3O_8 .

Gold Analysis by Fire Assay and Gravimetric Finish

Analysis for gold was by standard fire assay procedures, using a 30g or 50g sample with a gravimetric finish. The detection limit is 0.02 g/t gold, with the practical range of the method from 0.08 to 3 027g/t gold (Au). The method-reporting limit is 0.08g/t gold (Au).

METHOD

Essentially, the method consists of two consecutive pyrochemical separations, followed by a chemical separation. Initially, the finely ground sample is fused with a suitable flux under reducing conditions. The flux combines with the gangue to form a fluid slag, and the litharge in the flux is reduced to minute globules of lead. The rain of lead globules, falling through the molten mass, collects the particles of precious metals and coalesces into a button at the bottom of the crucible. As silver is a better collector of gold than lead and facilitates the easier handling of prills, it is employed in conjunction with the lead as a co-collector. Upon cooling, the slag solidifies, and is separated from the lead button containing the gold and silver.

Subsequently, the lead is removed by oxidising fusion, where the litharge thus formed, wets the inner surface of the hot, porous cupel and is absorbed (cupellation). The molten precious metals, are not absorbed because of their high surface tension, and because they do not form oxides. They remain on the concave bed of the cupel in the form of a bead, called a prill. The silver is removed from the prill by acid dissolution (parting). The black, spongy gold thus obtained is annealed to a coherent, malleable prill of the classical golden yellow colour, making the gold available for further measurement.

Results were reported by electronic spreadsheets.

The Performance laboratory is certified by the South African National Accreditation System, an affiliate of the Standards Council of Canada. First Uranium employees or consultants were not engaged in the sample preparation or analyses. Performance Laboratories are SANAS accredited for the assaying of gold via the fire assay technique (see Appendix 2).

Internal Quality Assurance/Quality Control (QA/QC) procedures at the Performance laboratory included assaying one duplicate sample and one standard sample from each batch of 20 samples.

ITEM 16 (C) - QUALITY CONTROL

No information was available regarding the use of standards and blanks in-between the samples that were sent to the labs and therefore it is assumed that this practice was not employed during the Historical Sampling.

During the recent drilling campaign, duplicate samples were sent to the Mintek laboratory for Gold and Uranium analyses.

The amount of duplicate sampling carried out on samples from each of the dams was not very high, and therefore % correlation was not extremely high between the results obtained from Mintek and Performance Labs.

Internal QA/QC procedures at the Performance Lab included assaying one duplicate sample and one standard sample from each batch of 20 samples and the correlation here

ITEM 16 (D) - ADEQUACY OF SAMPLE PREPARATION

All sampling was conducted to strict industry standards. Minxcon also carried out an independent audit on the sampling procedures that were carried out by the drillers, who were carrying out the sampling. No material issues were identified and Minxcon is satisfied that the sampling carried out is adequate for this type of deposit, the sample preparation and analysis were done according to standard industry practice and no breaches in security were detected.

ITEM 17- DATA VERIFICATION

ITEM 17 (A) - QUALITY CONTROL MEASURES AND DATA VERIFICATION

With regard to the Buffels and Harties dams, First Uranium relied on the QA/QC program carried out by Performance Labs, as described in the previous Item. Minxcon did not carry out any independent sampling due to the fact that Minxcon is familiar with Performance Labs and considers their QA/QC processes to be compliant with both SAMREC and NI 43-101 Codes.

The MWS 4 and 5 dams had verification holes drilled by Dump and Dune in April 2007. The grade differences obtained from the sampling of the verification boreholes was less than 10%, which was considered to be acceptable.

All the electronic data was analysed during the estimation process and any outliers were excluded from the database. The incidences of outliers was not high and by visual inspection, were found to generally be a multiple of 10 out, which would indicate a typing error.

ITEM 17 (B) - INDEPENDENCE OF DATA VERIFICATION

Performance Labs carried out independent verification of the assaying results. The data from the verification boreholes that were drilled on the MWS 4 and 5 dams was analysed by Gijima AST Group Limited ("GijimaAST"), who are also independent of First Uranium. Minxcon also carried out independent verification of the assay results, in the form of removing any outliers from the database.

ITEM 17 (C) - NATURE AND LIMITATIONS OF DATA VERIFICATION

Minxcon did not carry out independent drilling or sampling of the tailings dams. The data verification conducted by the laboratory as well as GijimaAST, an independent consulting company as discussed in the sections above was, in Minxcon's opinion, sufficient for the information to be used in the estimation of the Mineral Resources.

ITEM 17(D) - COMMENT ON VERIFICATION FAILURE

The failure for Minxcon to independently verify all the data was not deemed necessary for the Mineral Resource estimation process as Minxcon considered that sufficient steps had been taken by independent sources to verify the data.

ITEM 18- ADJACENT PROPERTIES

There are no adjacent properties to the Project as defined by NI43-101.

ITEM 19- MINERAL PROCESSING AND METALLURGICAL TESTING

In September 2007, First Uranium’s Board of Directors approved the following expansion projects:-

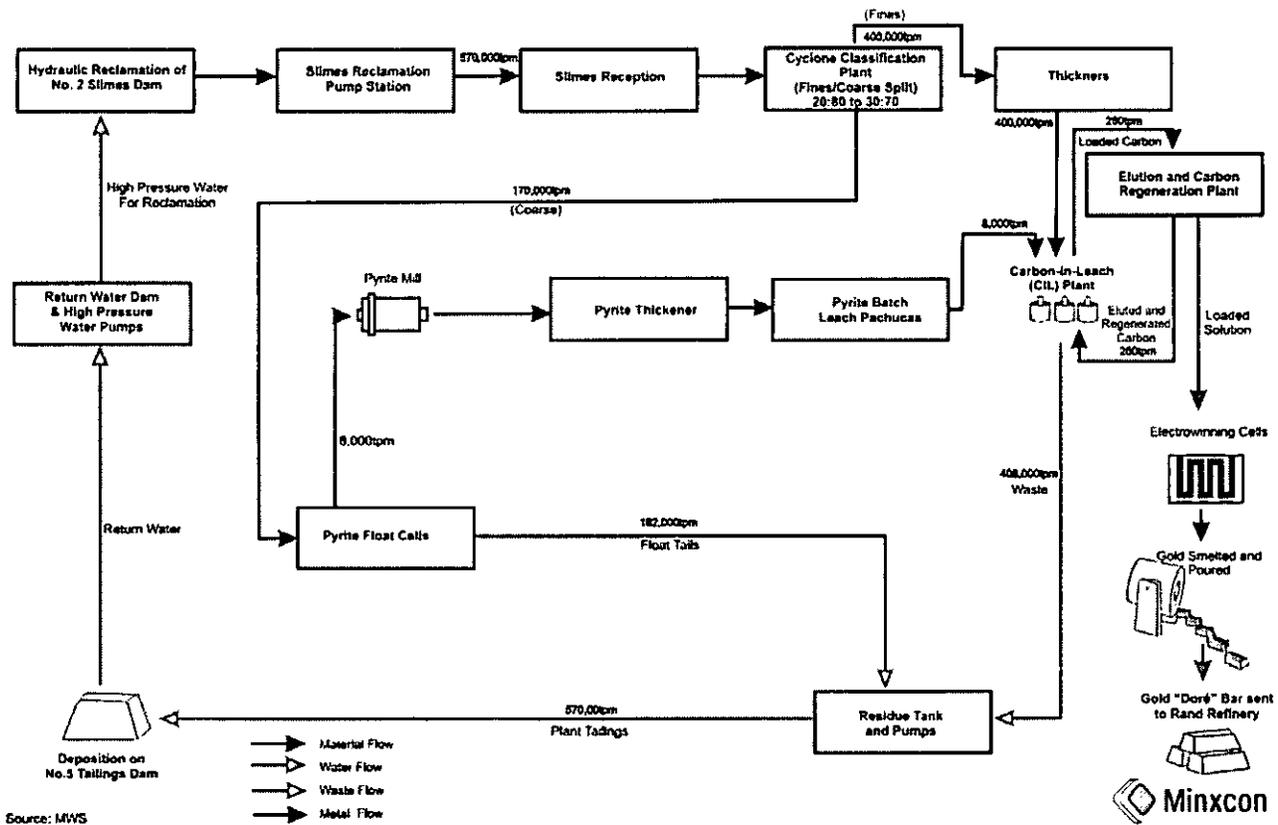

- **Module 1 - Completion Due end January 2008** - Expansion of the capacity of the gold plant from 600,000tpm to process 633,000tpm;
- **Module 2 - Completion Due November 2008** -Further expansion of the gold plant to increase it’s capacity to 1,283,000tpm and the construction of the first two modules of the Project’s uranium plant;
- **Module 3 - Completion Due November 2009** - Further expansion of the gold plant to increase it’s capacity to 1,933,000tpm and the construction of the third module of the Project’s uranium plant.

Mineral Processing (Module 1)

Mineral processing at the Chemwes plant has been taking place for the past 4 years, whilst the MWS 2 dam was being processed. The following diagram illustrates the flow of material through the current plant:-

Figure 13: Schematic Process Flow Diagram (Current)

Schematic Process Flow Diagram

The current gold plant will be upgraded to ensure it can accommodate the 633,000tpm that are planned for processing. The gold plant, as it has been designed, can process on average 943tph at a density of 1.43t/m³ and 94% availability and utilization. This translates to an average of 633,000 tpm, taking into account that the 28, 30 and 31 day months will achieve 581,944tpm, 624,492tpm and 645,766tpm respectively.

Although the current Chemwes plant circuit was designed for 570,000tpm, the plant has previously achieved 623,000tpm (May 2005). The reason for this is that the CIL circuit can comfortably achieve a rate of 525,000tpm. The fines/coarse split is of the order of 70-80/20-30, thus a total reclaimed tonnage of 650,000 will split 520,000tpm to the thickeners and CIL, and 130,000tpm to the float. Float tails go directly to the residue tank together with the CIL residue.

Phase 1B and 2 will design the CIL circuits to achieve rates of 650,000tpm through the CIL, as there will be no splits within the circuits.

Metallurgical Test Work (for Module 2 and 3)

There have been two phases of uranium and gold recovery testing undertaken for First Uranium by Mintek. The first was completed in mid-2006 and the second in May 2007. The economic analysis was based upon the Phase 1 testing. A summary of the second phase is being reported whilst both phases were used to decide upon the optimal processing method that will be employed.

PHASE 1 MINTEK TESTWORK - GOLD

Bulk samples were prepared by Performance Labs and, after their analyses, Mintek was retained to carry out the metallurgical test work. The following is an extract from Mintek’s reports titled “Laboratory Gold and Uranium Flotation Scoping Studies on Gold Slimes Dams Material” dated 23 May 2006, and “Scoping Studies on the Leaching of the Buffelsfontein Concentrates” dated 28 June 2006. Note that, through this section, Mintek have reported results as U and not U₃O₈ and 1% U is equal to 1.18% U₃O₈. The following table details the results of the Diagnostic Leach test:-

Table 12: Diagnostic Leach Test Results (Phase 1 of Testwork)

Association	Gold Grade (g/t)	Gold Distribution (%)
Gold available to direct cyanidation	0.184	51.11
Gold that is pre=robbed (CIL)	0.021	5.73
Gold associated with HCl digestible minerals	0.074	20.49
Gold associated with HNO ₃ digestible minerals	0.036	10.13
Gold associated with carbonaceous matter	0.006	1.76
Gold associated with quartz (balance)	0.039	10.78
Total	0.360	100.00

Grind (% -75 Micron)

The sample was treated “as received” and had a head grade of 0.360g/t Au. Of the total contained gold, 51.11% (0.184 g/t) was extracted by direct cyanidation.

CIL dissolution indicated that 5.73% (0.021 g/t) of the contained gold was preg-robbed by constituents occurring in the ore. Some 56.84% (0.205 g/t) of the gold is therefore expected to be recoverable by carbon-in-leach (“CIL”) processing.

The HCl digestion indicated that 20.49% (0.074 g/t) of the contained gold was associated with HCl digestible minerals (calcite, pyrrhotite, etc.), while 10.13% (0.036g/t) was associated with the more stable sulphides, digested with HNO₃ (e.g., pyrite, sulphides, arsenopyrite, etc.). Of the remaining gold, 1.76% (0.006 g/t) was found to be associated with carbonaceous constituents in the ore and 10.78% (0.039 g/t) of the gold is assumed to be occluded in gangue constituents.

After all the test work was completed, it was determined that the gold recovery process would be by CIL.

PHASE 1 MINTEK TESTWORK - URANIUM

After determining that the gold recovery process would be by CIL, test work was started to determine a recovery route for the uranium

Two floatation strategies were explored. The first aimed at floatation of the sulphides using xanthate collectors, the second aimed at uranium minerals using fatty acid collectors. The latter provided high mass pulls, with high reagent costs. Neither process produced high recoveries with acceptable concentrate grades. However, acceptable concentrate grades were achieved by sacrificing recovery. A preliminary financial optimization was completed, which suggested that a mass pull of between 10% and 20% would be optimal. Financial modeling indicates that the most effective mass pull is 13% where the relative product extraction versus associated operating cost is optimal.

PHASE 2 MINTEK TEST WORK

Equal quantities (800kg each) of material from Buffels Dams 2, 3 and 4 were delivered to Mintek and blended into a composite. The composite was subjected to:-

- flotation tests for the recovery of uranium including a mini plant test run,
- uranium leach tests on the flotation concentrate (atmospheric and pressure leaching); and
- gold diagnostic leach and CIL test work.

The flotation tests indicated that a mass pull of 15% was required to achieve a U grade of 200ppm at recovery of approximately 37%. The mini mill plant was able to produce a 210kg bulk concentrate with a grade of 239.7ppm uranium.

With pressure leaching extractions of 88% to 91% were achieved after two hours of leaching.

Bottle roll leach tests on material that was composed of 84% flotation tails and 16% uranium leaching tails generated gold dissolution of 50% to 70% as a direct CIL while acid pretreatment increased the dissolution to 58.1% to 74.2%.

SUMMARY OF METALLURGICAL TEST WORK AND PROCESS DESIGN

The following is an extract from the Metallicon Process Consulting (Pty) Ltd Report, compiled by the Managing Director Mr Michael Valenta (Pr.Eng (Int)), addressed to First Uranium:-

“In a previous report it was recommended that the test work conducted in Phase 2 of the test programme be repeated to confirm the findings. The major reason for the recommendation was to verify the source of the material tested.

Sample was taken from the dams by a reputable company (Dump and Dune) that have an acceptable sampling methodology and procedure. I am therefore satisfied that the necessary attention was given to acquiring a representative sample of the dams.

The test work was conducted at Mintek and yielded similar floatation results as were achieved in the previous test programme with regard grade and recovery.

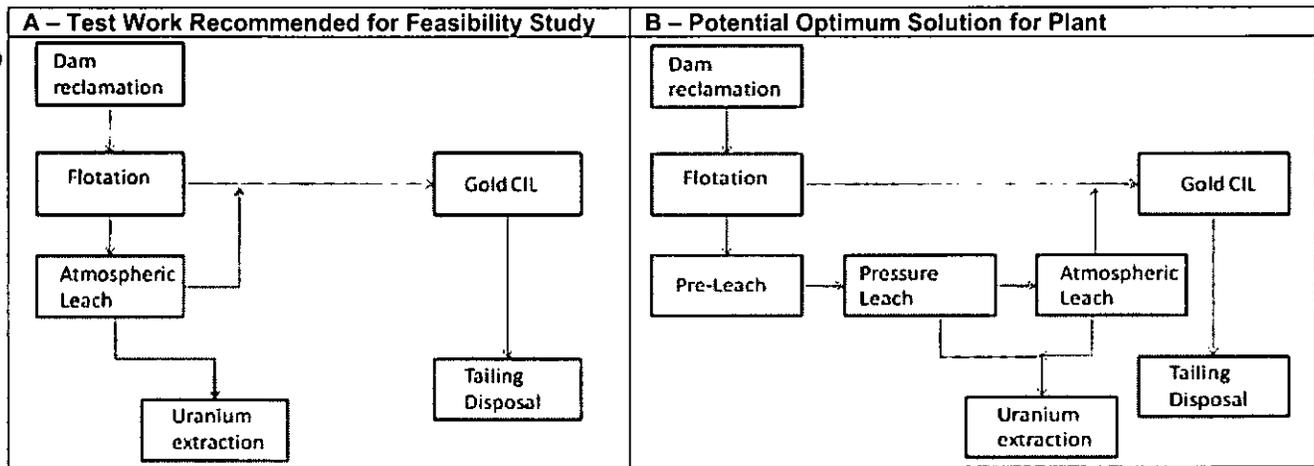

A bulk sample of flotation concentrate was produced on a “pilot plant” for the subsequent leach test work. I am therefore of the opinion that the floatation test work is adequate for a Feasibility Study.

Batch atmospheric leach tests results confirmed the original test work results and a subsequent bulk leach product was produced for further test work on the Uranium extraction process. The atmospheric leach has proven to be a viable alternative with a Uranium recovery of 77% over the leach circuit. An added benefit of the introduction of an atmospheric Uranium leach is an increase in the Gold recovery in the CIL circuit from 56% to 65%. In my opinion the amount of test work, and the results and reproducibility of the atmospheric leach test work are adequate for a Feasibility Study.

Pressure leach test work has yielded promising results with Uranium recoveries in excess of 90% and Gold recoveries in the order of 74% over the leach circuit. These results are significantly higher than those achieved for the atmospheric leach. The pressure leach results have confirmed the findings of the previous testwork; however the testwork has not been reproducible. More test work is being planned to increase the confidence in the results and from that generate an optimum flow diagram and confirm the process design criteria. The pressure leach test work has identified the possible combination of pressure and atmospheric leach whereby the pressure leach is used to also generate acid for the atmospheric leach. This requires further test work to identify the optimum split between the pressure leach and atmospheric leach, and the possible introduction of a pre-leach step ahead of the pressure leach to optimize the use of the resultant acid being produced.

Further information is also required to describe the process design criteria for ancillary process equipment around the pressure leach e.g. the oxygen plant and for that reason more testwork is required. I would certainly continue with the pressure leach as an option and am of the opinion that the information is adequate for a Pre-Feasibility study. More work must be conducted to generate sufficient information for a Feasibility study. I would therefore recommend the Feasibility study to include the process steps illustrated in Figure 14 (Part A). I have studied the proposed test programme recommended by the consultants and feel that the necessary information will be generated from the work to add the pressure leach processing route to the Feasibility study. From the initial results it appears that the circuit illustrated in Figure 14 (Part B) may be the optimum solution for the plant."

Figure 14: Recommended Test Work

Source: Metallicon

SUMMARY OF RECOVERIES

The effect of the revised test work has led First Uranium to implement an Atmospheric Leach, followed by Pressure Leach process to the uranium plant. The model assumptions are as follows:-

Table 13: Summary of Recoveries (May 2007 vs. November 2007)

Recovery	May 2007 (as was)			November 2007 (as is)		
	Pre Nov '08	Post Nov '08	Post Nov '09	Pre Nov '08	Post Nov '08	Post Nov '09
Au Recovery - CIL only	52%	-	-	52%	-	-
Au Recovery - Atmospheric Leach	-	-	-	-	58%	-
Au Recovery - Pressure Leach	-	68%	68%	-	-	68%
Float Recovery	-	30%	30%	36.8%	36.8%	36.8%
U ₃ O ₈ Recovery - Atmospheric Leach	-	-	-	-	75%	-
U ₃ O ₈ Recovery - Pressure Leach	-	90%	90%	-	-	90%
Effective Uranium - Recovery	-	27%	27%	-	28%	33%

The average LOM gold recovery is 66% and the average LOM uranium recovery is 33%.

ITEM 20- MINERAL RESOURCES AND MINERAL RESERVES

The surface Mineral Resources comprise 15 tailings dams containing approximately 357Mt on the property as a result of processing mineralization from the Buffelsfontein, Hartebeestfontein, and Stilfontein underground mines. The tonnage is based on the independent assessment of the Mineral Resources that was carried out by Minxcon during 2007.

ITEM 20 (A) - MINERAL RESOURCE AND MINERAL RESERVE REPORTING SYSTEM

All Mineral Resources and Mineral Reserves, that have been reported herein, are compliant with the specifications embodied in the SAMREC Code as well as NI 43 101.

ITEM 20 (B) - MINERAL RESOURCE AND MINERAL RESERVE CATEGORIES

Mineral Resources have been reported separately, as per NI43-101 and the SAMREC Code, as:-

- Measured Resources;
- Indicated Resources; and
- Inferred Resources.

Mineral Reserves have been reported separately, as per NI43-101 and the SAMREC Code as

- Proven Reserves; and
- Provable Reserves.

All Mineral Resources are quoted as inclusive of Mineral Reserves.

ITEM 20 (C) - INFERRED RESOURCES

Inferred Resources have been reported upon, but have been reported on separately and have not been incorporated with the Measured and Indicated Mineral Resources.

ITEM 20 (D) - RELATIONSHIP OF THE QUALIFIED PERSON TO ISSUER

Minxcon is an independent advisory company. Its consultants have had extensive experience in preparing technical and economic advisors' and valuation reports for mining and exploration companies. Neither Minxcon nor its staff have any interest capable of affecting its ability to give a fair opinion, and will not receive any pecuniary or other benefits in connection with this assignment, other than normal consulting fees. Minxcon independently estimated the Mineral Resources and Mineral Reserves disclosed in this report.

ITEM 20 (E) - DETAILED MINERAL RESOURCE AND MINERAL RESERVE TABULATION

The Mineral Resources and Mineral Reserves for the Project are detailed in the sections below. This report was compiled in accordance with the requirements of NI 43-101.

Mineral Resources

The Mineral Resources detailed in the table overleaf are effective as at 1 November 2007, as they take into account the tonnage mined out of MWS 2 dam up to and including 31 October 2007. The MWS 2 dam will be mined out by end December 2007 and production will then move to the Buffels 2 dam.

Table 14: Mineral Resources as at 1 November 2007

Category	Surface		Tonnes	Gold			Uranium		
	Place	Dam	Mt	Aug/ft	Au('000oz)	Au tonnes	U ₃ O ₈ kg/ft	U ₃ O ₈ Mlb	U ₃ O ₈ tonnes
Measured	Buffels	2	24.1	0.398	309	9.6	0.086	4.58	2,077
	Buffels	3	24.9	0.350	280	8.7	0.099	5.44	2,466
	Buffels	4	14.1	0.374	170	5.3	0.102	3.17	1,439
	Harties	5	23.9	0.213	163	5.1	0.062	3.26	1,479
	Harties	6	13.3	0.199	85	2.6	0.063	1.85	839
Total Measured			100.3	0.312	1,008	31.3	0.083	18.30	8,300
Indicated	Buffels	5	47.6	0.235	360	11.2	0.063	6.62	3,001
	Harties	1	74.4	0.261	624	19.4	0.062	10.17	4,611
	Harties	2	43.8	0.262	369	11.5	0.060	5.79	2,626
	Harties	7	1.3	0.267	11	0.3	0.164	0.46	211
	Harties	NKGE	1.2	0.501	19	0.6	0.182	0.47	214
	MWS	2	0.6	0.450	9	0.3	0.082	0.11	49
	MWS	4 (Domain 1)	9.7	0.138	43	1.3	0.047	1.01	456
	MWS	4 (Domain 2)	17.4	0.280	157	4.9	0.133	5.12	2,322
	MWS	5	40.3	0.310	402	12.5	0.088	7.81	3,543
Indicated Total			236.3	0.262	1,993	62.0	0.072	37.55	17,033
Measured & Indicated			336.6	0.277	3,000	93.3	0.075	55.85	25,333
Inferred	Harties	Flanagan	0.0	0.694	1	0.0	0.152	0.02	7
	MWS	5	15.2	0.300	146	4.6	0.095	3.17	1,437
	MWS	5 (from MWS 2)	4.7	0.175	26	0.8	0.102	1.05	476
	Harties	Ellaton	1.3	0.387	16	0.5	0.147	0.41	187
Inferred Total			21.2	0.279	189	5.9	0.100	4.64	2,106

Notes:

1. Mineral Resources are quoted as in-situ Mineral Resources.
2. No cut-off grades were applied.
3. Rows and columns may not add exactly due to rounding.
4. Mineral Resources include Mineral Reserves. Resources which are not Reserves do not have demonstrated economic viability.
5. Table reflects depletion of 1.5 million tonnes from July through October 2007 for MWS 2 Dam.
6. MWS 4 Dam is split into two domains, namely Domain 1, which is the uppermost section of the dam, and Domain 2, the lowermost portion of the dam. The tailings dam has been evaluated in two separate sections as they show distinct differences in grade.

Mineral Resource to Mineral Reserve Conversion

The following factors have been used to calculate the gold equivalent cut-off grades that were used to convert the Mineral Resources to Mineral Reserves:-

Table 15: Factors used in the Mineral Reserve Estimation

Type	Description	Au Factor	U Factor	Unit
Ore Resource	Density	1.42	1.42	t/m ³
Mining	External sources - dilution	0%	0%	%
Mining	Mine call factor ("MCF")	99.88%	100%	%
Processing	Plant recovery factor	66%	90%	%
Processing	Flotation plant recovery		37%	%
Processing	Flotation plant mass pull		13%	%
Flotation Cost	Treatment Costs - Total Tonnes	na	0.45	US\$/t
Uranium Treatment Cost	Treatment Costs - Float Conc. Tonnes	na	13.20	US\$/t
Gold Treatment Cost	Treatment Costs - Total Tonnes	1.55	na	US\$/t
Revenue	Exchange Rate	7.40	7.40	R/USD
Revenue	Metal price	500	50	USD/oz USD/lb
Revenue	Metal price	16,075	110	US\$/kg
Conversion	Oz/kg	32.15076		Oz
Conversion	lb per kg		2.20466	lb

A 0% mining dilution has been used as no mining dilution is likely to take place as the tailings dams are mined out completely. The soil at the bottom of the dams that is likely to be mined and processed will also be mineralised as the gold and uranium migrate into the soil via gravity.

A 100% MCF for uranium has been used for this exercise, as the MCF cannot be calculated. The MCF of 99.88% was calculated during the processing of MWS 2 dam.

The following tables illustrate the method of calculation of the gold, uranium and gold equivalent paylimits:-

Table 16: Calculation of Gold Paylimits for 2008

	Value	Unit	Paylimit (g/t)	Action
Metal price	20	US\$/g		
OPEX	2.00	US\$/t	0.098	OPEX/ Metal Price
Dilution	0%	%	0.098	=PL x (1+Dilution %)
Mine call factor	99.88%	%	0.098	=PL/MCF
Recovery	66%	%	0.149	=PL/Recovery

The OPEX used in this table includes the floatation costs and Au Plant costs, which are detailed in Table 38 in the document.

Table 17: Calculation of Uranium Paylimits for 2008

Factor	Value	Unit	Paylimit (g/t)	Action
Metal price	99	US\$/g		
OPEX	13.20	US\$/t	17.3	OPEX/ Metal Price
Dilution	0%	%	17.3	=PL x (1+Dilution %)
Mine call factor	100%	%	17.3	=PL/MCF
Recovery	33%	%	52.3	=PL/Recovery

* Recovery of 33% is achieved as follows: $90\% \times 36.8\% = 33\%$

Table 18: Calculation of Gold Equivalent Paylimits for 2008

Factor	Value	Unit	Paylimit (g/t)	Action
Metal price	20	US\$/g		
OPEX	3.72	US\$/t	0.182	OPEX/ Metal Price
Dilution	0%	%	0.182	=PL x (1+Dilution %)
Mine call factor	99.88%	%	0.182	=PL/MCF
Recovery	66%	%	0.276	=PL/Recovery

The OPEX used in this table is calculated as follows: - Gold OPEX + (Uranium OPEX x 13% Mass Pull).

The following table details the summary of the gold, uranium and gold equivalent paylimits for 2007 through to 2011, after which it will remain constant:-

Table 19: Summary of Gold, Uranium and Gold Equivalent Paylimits (2007 - 2011)

Year	Year Ending	Gold		Uranium		Gold Equivalent	
		Cost (US\$/t)	Pay Limit g/t	Cost (US\$/t)	Pay Limit g/t	Cost (US\$/t)	Pay Limit g/t
2007	Mar-08	2.05	0.152	na	na	na	na
2008	Mar-09	2.00	0.149	13.20	52.3	3.72	0.276
2009	Mar-10	2.00	0.149	8.50	33.7	3.11	0.231
2010	Mar-11	1.89	0.141	7.82	31.0	2.91	0.231
2011	Mar-12	1.89	0.141	7.82	31.0	2.91	0.216

The following table details the gold equivalent grades of all the dams, as well as illustrating the dams that have grades above the cut-off grades ("COG") over time. The gold equivalent grade of 0.276 (which rounds off to 0.28) was used as the COG for the Mineral Reserve Declaration:-

Table 20: Gold Equivalent Grades (g/t) 2008

Dam	Gold Equivalent Grade (g/t)	Above COG
Harties 1	0.384	Yes
Harties 2	0.381	Yes
Harties 5	0.336	Yes
Harties 6	0.324	Yes
Harties 7	0.593	Yes
Buffels 2	0.569	Yes
Buffels 3	0.547	Yes
Buffels 4	0.577	Yes
Buffels 5	0.360	Yes
NGKE	0.863	Yes
MWS 2	0.613	Yes
MWS 4 (Dom 1)	0.231	No
MWS 4 (Dom 2)	0.545	Yes
MWS 5 Indicated	0.485	Yes

Notes:

Yellow cells indicate dams that did not meet the COG and were therefore not classified as Mineral Reserves

Flanagan and Ellaton dams and the MWS 5 (Inferred) section and MWS 5 section from the MWS 2 tailings have not been included in this table as they are classified as Inferred Resources, and therefore cannot be converted to Mineral Reserves. Domain 1 of the MWS 4 dam was also not included in the Mineral Reserves, as it did not achieve the COG.

Mineral Reserves

Using the above criteria, the following Mineral Reserves have been classified:-

Table 21: Mineral Reserves as at 1 November 2007

Category	Surface		Tonnes Mt	Gold			Uranium		
	Place	Dam		Aug/t	Au('000oz)	Au tonnes	U ₃ O ₈ kg/t	U ₃ O ₈ Mib	U ₃ O ₈ tonnes
Proven	Buffels	2	24.1	0.398	309	9.6	0.086	4.58	2,077
	Buffels	3	24.9	0.350	280	8.7	0.099	5.44	2,466
	Buffels	4	14.1	0.374	170	5.3	0.102	3.17	1,439
	Harties	5	23.9	0.213	163	5.1	0.062	3.26	1,479
	Harties	6	13.3	0.199	85	2.6	0.063	1.85	839
Proven Total			100.3	0.312	1,008	31.3	0.083	18.30	8,300
Probable	Buffels	5	47.6	0.235	360	11.2	0.063	6.62	3,001
	Harties	1	74.4	0.261	624	19.4	0.062	10.17	4,611
	Harties	2	43.8	0.262	369	11.5	0.060	5.79	2,626
	Harties	7	1.3	0.267	11	0.3	0.164	0.46	211
	Harties	NKGE	1.2	0.501	19	0.6	0.182	0.47	214
	MWS	2	0.6	0.450	9	0.3	0.082	0.11	49
	MWS	4 (Domain 2)	17.4	0.280	157	4.9	0.133	5.12	2,322
	MWS	5 (Indicated)	40.3	0.310	402	12.5	0.088	7.81	3,543
Probable Total			226.6	0.268	1,950	60.6	0.073	36.55	16,578
Total Proven & Probable			326.9	0.281	2,957	92.0	0.076	54.85	24,877

Notes:

- Mineral Reserves are quoted as fully diluted delivered to mill estimates.
- Based on assumptions of a gold price of \$635 per ounce, a uranium price of \$45 per pound and ZAR/\$ exchange rate of 7.40, which are long term forecast figures (post 2012).
- A Reserve cutoff grade of 0.28 grams per tonne gold equivalent was used, uranium grades were converted to gold equivalent using a conversion factor of 1 gram per tonne, which equals 0.503 kilograms per tonne on an extracted metal basis.
- Rows and columns may not add exactly due to rounding.
- The average LOM gold recovery applied was 66%.
- An effective LOM uranium recovery of 27% was used and is based on an atmospheric leach process.
- Only Domain 2 of the MWS 4 dam has been converted to a Mineral Reserve as the gold grade in Domain 1 is below cutoff.
- Table reflects depletion of 1.5 million tonnes from July through October 2007 for MWS No. 2 Dam.
- The legal tenure of the NKGE dam is uncertain.

ITEM 20 (F) - KEY ASSUMPTIONS, PARAMETERS AND CLASSIFICATION METHODOLOGY

Geological Modelling Methodology

Three dimensional (“3D”) wireframes were constructed from survey points and borehole information representing the dams in 3D space. The reef wireframes were filled with block models of various sizes (as illustrated in Figure 6, Figure 7, Figure 8, Figure 9, Figure 10, Figure 11 and Figure 12). The 1.5m samples were used for the grade estimation.

Statistical analysis provided a basis for final data verification and was used to establish specific information on population distributions and checks for anomalous values. Spatial continuity illustrations (variograms) were constructed for Au and U₃O₈. Ordinary kriging methodologies were utilized for the evaluation of the tailings dams.

Database

The total number of samples used for the estimation of the Mineral Resources, is illustrated in the table below:-

Table 22: Data used for the Modelling and Estimation of the Dams

Dam	No. of BH's	No. of Data Points (Uranium)	No. of Data Points (Gold)
Harties 1	11	354	355
Harties 2	11	319	320
Harties 5	11	186	187
Harties 6	16	209	209
Harties 7	6	25	25
Buffels 2	7	194	194
Buffels 3	6	147	147
Buffels 4	6	156	156
Buffels 5	12	227	227
MWS 2	61	No Modelling Carried Out	No Modelling Carried Out
MWS 4 (Dom 1)	45	271	266
MWS 4 (Dom 2)	45	434	426
MWS 5	56	533	533
Flanagan	2	14	14
Ellaton	13	206	206
NGKE	10	170	171

The MWS 2 dam was not remodelled for this exercise as it was almost depleted at the time this Technical Report was compiled.

The tailings dams are scattered over an area that stretches approximately 13.5km north-south and 14km east-west. The footprints of the fifteen tailings dams cover an area of approximately 1,100ha.

Statistical Analysis

Statistics are performed to develop an understanding of the statistical characteristics and sample population distribution relationships. Descriptive statistics in the form of histograms (frequency distributions) and probability plots (evaluate the normality of the distribution of a variable) are thus used to develop an understanding of such statistical relationships. Skewness is a measure of the deviation of the distribution from symmetry (0 – no skewness). Kurtosis measures the “peaked ness” of a distribution (0 – normal distribution). The following table illustrates the descriptive statistics that were used for the modelling:-

Table 23: Descriptive Statistics for the Tailings Dams

Harties 6 represents the lowest gold grade of the Harties dams, although Harties 7 has the lowest range of the values. All the Harties dams, barring Harties 5, have standard deviations (“Std. Dev.”) significantly lower than the mean, indicating predominance of lower grade values. This relationship of lower Std.Dev. value to the mean value applies to uranium for all the dams.

The Buffels dams are of higher gold and uranium grade than the Harties dams. The Std.Dev. values for all the Buffels dams are lower than the respective means for uranium and gold. This relationship also holds for the MWS, Ellaton and NKGE dams as well.

Histogram, Distribution Plots and Variograms

All the gold and uranium histograms, distribution plots and variograms have been included as Appendix 4, Error! Reference source not found. and Appendix 6, respectively.

Block Models

Volume Calculation

The volumes of all of the dams were calculated by using the survey information obtained from First Uranium (detailed in Item 7 (e)) and importing the data into Datamine® in order to create a 3 -dimensional (3-D") Digital Terrain Model ("DTM"). The following table details the volumes that were calculated:-

Table 25: Tailings Dam Volumes

Dam	May 2007 Volume (m ³)	November 2007 Volume (m ³)	Variance (m ³)
Harties 1	57,860,000	52,378,551	-5,481,449
Harties 2	22,275,000	30,823,856	8,548,856
Harties 5	14,458,125	16,797,405	2,339,280
Harties 6	9,127,500	9,375,167	247,667
Harties 7	1,062,500	905,430	-157,070
Buffels 2	14,812,500	17,005,468	2,192,968
Buffels 3	18,375,000	17,544,506	-830,494
Buffels 4	10,237,500	9,935,885	-301,615
Buffels 5	28,490,000	33,548,913	5,058,913
MWS 2	2,682,171	440,024	-2,242,147*
MWS 4	18,640,916	19,066,197	425,281
MWS 5	48,030,350	42,354,059	-5,676,291
Flanagan	29,825	31,690	1,865
Ellaton	638,056	894,366	256,310
NGKE	440,439	828,354	387,915
TOTAL	247,159,882	251,929,871	4,769,989

*Equals to material that has been mined

Since May 2007, all the dams have been surveyed and DTMs created, which increased the confidence in the volume of the dams as these measurements are considered more accurate than the previous calculations.

The discrepancy in the volume of MWS 5 dam can be attributed to the fact that during the November 2007 exercise the dam was only measured to the extent that the boreholes were drilled and the boreholes did not all reach the bottom of the dam. More material could potentially lie beneath this level, but has not been evaluated, due to the lack of drilling to that depth.

Specific Gravity

The following table details the specific gravity (SG”) testwork carried out in August 2007 on the density of the dams:-

Table 26: SG Testwork Results

Dam	As at May 2007 SG (t/m ³)	As at November 2007 SG (t/m ³)
Harties 1	1.60	1.360
Harties 2	1.60	1.410
Harties 5	1.60	1.410
Harties 6	1.60	1.369
Harties 7	1.60	1.496
Buffels 2	1.60	1.381
Buffels 3	1.60	No new Testwork – Too wet
Buffels 4	1.60	No new Testwork – Too wet
Buffels 5	1.60	1.498
MWS 2	1.42	No change (previously calculated)
MWS 4	1.43	No change (previously calculated)
MWS 5	1.44	No change (previously calculated)
Flanagan	1.60	No new Testwork
Ellaton	1.42	1.386
NKGE	1.42	1.448
AVERAGE	1.54	1.418

Civilab (Pty) Ltd carried out the testwork on the dams. The tests were carried out in accordance with Method A10(b): Method C of TMH1 of 1986. No test work was carried out on the Buffels 3 and 4 and Flanagan Dams.

It was decided to use an average of 1.42t/m³ for all the dams, as this is the average that has been achieved during the mining of the MWS Dam 2, as well as the rounded average of all the testwork conducted on all the dams. The figures illustrated in the table above show high variability as the material is variable though the dam. However, the information gathered was useful in that it showed that the average of the dams (when rounded) is the same as the average of MWS 2 dam, which figure is proved.

Tonnage Calculation

The tonnages of the dams were calculated using the volumes obtained by creating DTMs of the dams and multiplying these with an SG of 1.42t/m³.

The difference between the May and November tonnage estimates can mainly be attributed to the SG testwork that was conducted and the verification of the SG for MWS 2 dam, which proved that the actual SG was actually lower than the 1.6t/m³ previously estimated. The figure of 1.6t/m³ was previously based on government returns.

The results are illustrated in the following table, as well as illustrating the variance in tonnage calculated in May 2007 compared to November 2007:-

Table 27: Estimated Tonnages

Dam	May 2007 Tonnes	November 2007 Tonnes	Variance
Harties 1	92,576,000	74,377,542	-18,198,458
Harties 2	35,640,000	43,769,875	8,129,875
Harties 5	23,133,000	23,852,315	719,315
Harties 6	14,604,000	13,312,737	-1,291,263

* Equates to material that has been mined.

Grade Estimation

The grades detailed below were estimated using Datamine Studio®, unless otherwise stated:-

Table 28: Estimated Grades

Dam	May 2007 U ₃ O ₈ Grade (kg/t)	November 2007 U ₃ O ₈ Grade (kg/t)	May 2007 Gold Grade (g/t)	November 2007 Gold Grade (g/t)
Harties 1	0.060	0.062	0.32	0.261
Harties 2	0.060	0.060	0.31	0.262
Harties 5	0.050	0.062	0.31	0.213
Harties 6	0.060	0.063	0.22	0.199
Harties 7	0.240	0.164	0.54	0.267
Buffels 2	0.090	0.086	0.40	0.398
Buffels 3	0.100	0.099	0.35	0.350
Buffels 4	0.100	0.102	0.38	0.374
Buffels 5	0.060	0.063	0.21	0.235
MWS 2	0.082	0.082	0.45	0.450
MWS 4	0.104	0.102	0.22	0.229
MWS 5	0.084	0.091	0.29	0.276
Flanagan	Non were available	0.152	0.74	0.694
Ellaton	0.154	0.147	0.48	0.387
NGKE	0.126	0.182	0.46	0.501
WEIGHTED AVERAGE	0.075	0.077	0.30	0.275

The grades for the Flanagan Dam are weighted average grades of the drilling that was carried out on the dam as there were only 2 boreholes drilled on this dam and kriging could not be carried out using only two boreholes.

As is illustrated in the table above, the weighted average uranium grade that was estimated for November increased slightly against the May average, whilst the gold grade decreased slightly. This can be attributed to the in-fill drilling that was carried out as previous drilling was concentrated around the edges of the dams, where the gold grades are higher and the uranium grades lower. Minxcon believe that the updated figures are more representative of the dams as a whole.

Mineral Resource Classification

The Mineral Resource classification is a function of the confidence of the whole exploration process, from drilling, sampling, geological understanding through to geostatistical relationships.

The following aspects or parameters were used for Resource classification:

1. Sampling - QA/QC
 - a. Measured: high confidence, no problem areas.
 - b. Indicated: high confidence, some problem areas with low risk.
 - c. Inferred: some aspects might be of medium to high risk.
2. Geological Confidence
 - a. Measured: high confidence in the understanding of geological relationships, continuity of geological trends and sufficient data.
 - b. Indicated: good understanding of geological relationships.
 - c. Inferred: geological continuity not established.
3. Number of samples used to estimate a specific block
 - a. Measured: at least 4 boreholes within semi-variogram range and minimum of twenty 1m composited samples.
 - b. Indicated: at least 3 boreholes within semi-variogram range and a minimum of twelve 1m composite samples.
 - c. Inferred: less than 3 boreholes within the semi-variogram range.
4. Kriged variance
 - a. This is a relative parameter and is only an indication and used in conjunction with the other parameters.
5. Distance to sample (semi-variogram range)
 - a. Measured: at least within 60% of semi - variogram range.
 - b. Indicated: within semi-variogram range.
 - c. Inferred: further than semi-variogram range.
6. Lower Confidence Limit (blocks)
 - a. Measured: < 20% from mean (80% confidence).
 - b. Indicated: 20% - 40% from mean (80% - 60% confidence).
 - c. Inferred: more than 40% (less than 60% confidence).
7. Kriging Efficiency
 - a. Measured: > 40%.
 - b. Indicated: 20 - 40%.
 - c. Inferred: <20%.
8. Deviation from lower 90% confidence limit (data distribution within area considered for classification)
 - a. Measured Resource: <10% deviation from mean.
 - b. Indicated Resource: 10 - 20%.
 - c. Inferred Resource: >20.

The Mineral Resources are classified based on the points 1 to 8 above. The QA/QC for drilling, sampling and assay values require a high level of confidence for the Resource to be classified as a Measured Mineral Resource.

ITEM 20 (G) AND (H) - MODIFYING FACTORS

Minxcon's assessment of the extent to which the Mineral Resources and Mineral Reserves may be affected by certain factors is set out overleaf:

Table 29: Modifying Factors

Modifying Factor	Effect on Mineral Resources and Mineral Reserves
Environmental	The reprocessing of the existing tailings dams is likely to improve the environmental situation, therefore the environmental factors will not have a material effect on the Resources or Reserves
Permitting/Legal/ Title	Minxcon do not believe that the DME would withhold the approval of the Mining Right which is in the process of being applied for. However, no legal tenure could be established for the Flanagan, Ellaton or NKGE dams, which could affect the Mineral Resources/Reserves. The mining of gold is assured up till April 2009 from the Harties and Buffels Dams as a valid Mining Licence is in place up to this time.
Taxation	Taxation issues are not expected to affect the Mineral Resources/Reserves.
Socio-economic	There are no socio-economic issues that will affect the status of the Mineral Resources or Reserves
Marketing	No issues regarding marketing will have a material effect on the Mineral Resources and Reserves.
Political	No issues regarding the political situation in South Africa are likely to have a material effect on the Mineral Resources and Reserves.
Mining	The mining method has been proved during the mining of MWS 2 dam; therefore no issues regarding any of the mining aspects are likely to materially affect the Mineral Resources or Reserves.
Metallurgical	The metallurgical process to be utilised during Module 3 of the upgrade plan still needs to be finalised, however, the choice of metallurgical process (atmospheric leach or pressure leach) will not affect the status of the Mineral Resources or Reserves.
Infrastructure	The area has very well established infrastructure facilities; therefore no impact on the Mineral Resources or Reserves is foreseen.

ITEM 20 (I) - MINERAL RESOURCES AND MINERAL RESERVES USED IN ECONOMIC ANALYSIS

Only Measured and Indicated Resources were used in the calculation of the discounted cash flow. Inferred Resources were not valued.

ITEM 20 (J) - INFERRED MINERAL RESOURCES USED IN ECONOMIC ANALYSIS

Inferred Resources were not used in the economic valuation contained in this report. These Inferred Resources are considered too speculative to have economic considerations applied to them that would enable them to be categorised as Mineral Reserves.

ITEM 20 (K) - INDICATED RESOURCES NOT CONVERTED TO MINERAL RESERVES

Only Domain 1 of MWS 4 dam, which is classified as an Indicated Mineral Resource, was NOT converted to a Mineral Reserve as the gold grade is not currently economically viable at the gold price that was used to evaluate the viability of the Mineral Reserves. When this dam comes on line to be mined, it will be re-evaluated, using the gold price at the time, to re-evaluate its viability to be mined. If, at that time, it still proves to be uneconomic, the material contained in Domain 1 will simply be moved straight to the new tailings dam in order to access Domain 2, which lies below Domain 1. Costs to move the material from Domain 1 have been incorporated into the DCF as a precautionary measure.

ITEM 20 (L) - GRADE, QUANTITY & CATEGORY OF THE MINERAL RESOURCES AND MINERAL RESERVES

Included in Item 20 (e).

ITEM 20 (M) - METAL SPLITS FO MULTI ELEMENT MINE

Only gold and uranium have been estimated. Details on the quantities of these two elements are included in Item 20 (e).

ITEM 21- ADDITIONAL INFORMATION

ITEM 21 (A) - MINING AND PRODUCTION

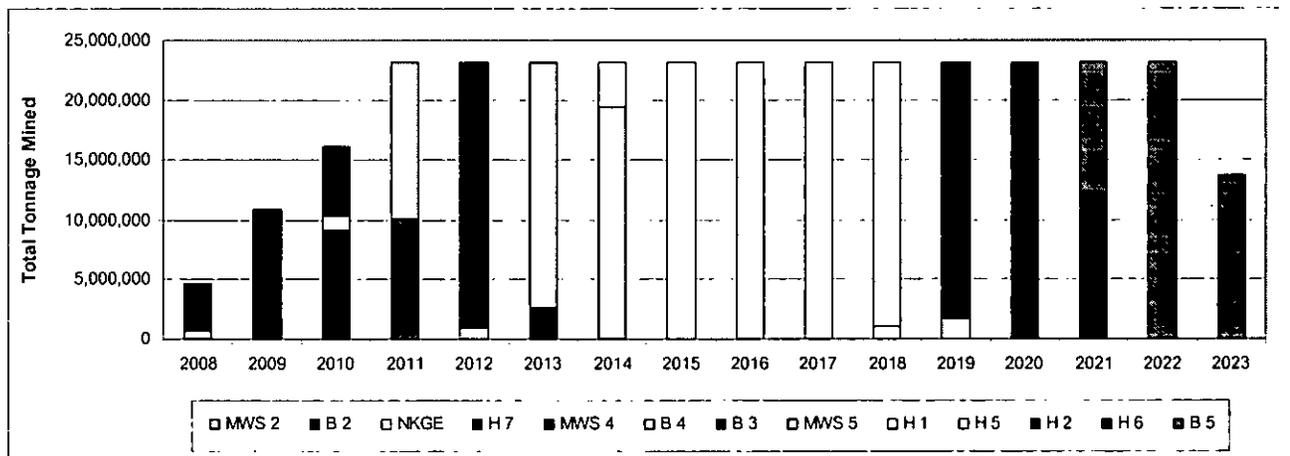

The tailings are recovered using high pressure water cannons. The pulp is screened to remove debris and coarse material at the dam. The screened slurry is then pumped to the plant. Most of the water required for the process is used at this stage.

This type of recovery operation is not uncommon. The AngloGold Ashanti Limited ERGO project operated for 25 years recovering gold and uranium from tailings dams using this method of tailings recovery.

All of the Measured and Indicated Mineral Resources of the combined MWS/Buffelsfontein Project will be recovered and processed except for the MWS 4 dam (Domain 1). In the MWS 4 dam, the upper 12m of the dam has been sampled and identified as having too low a grade for recovery and treatment. Therefore, the top 12m of material will be moved to a tailings storage area. The bottom portion of the dam will then be available for recovery and treatment.

The following table details the production schedule of the mining of the tailings dams:-

Figure 40: LOM Tonnage Profile

The preproduction phase for the mining is relatively short and includes the installation of piping to the plant, collection ditches, water pumping areas, and a screening plant in the area to be reclaimed.

Power is available in the area as this is an industrial area with power lines feeding the various mines and mills. There is an existing network of roads in the area.

The main mine equipment consists of slurry and water piping and cannons for hydraulic mining of the tailings.

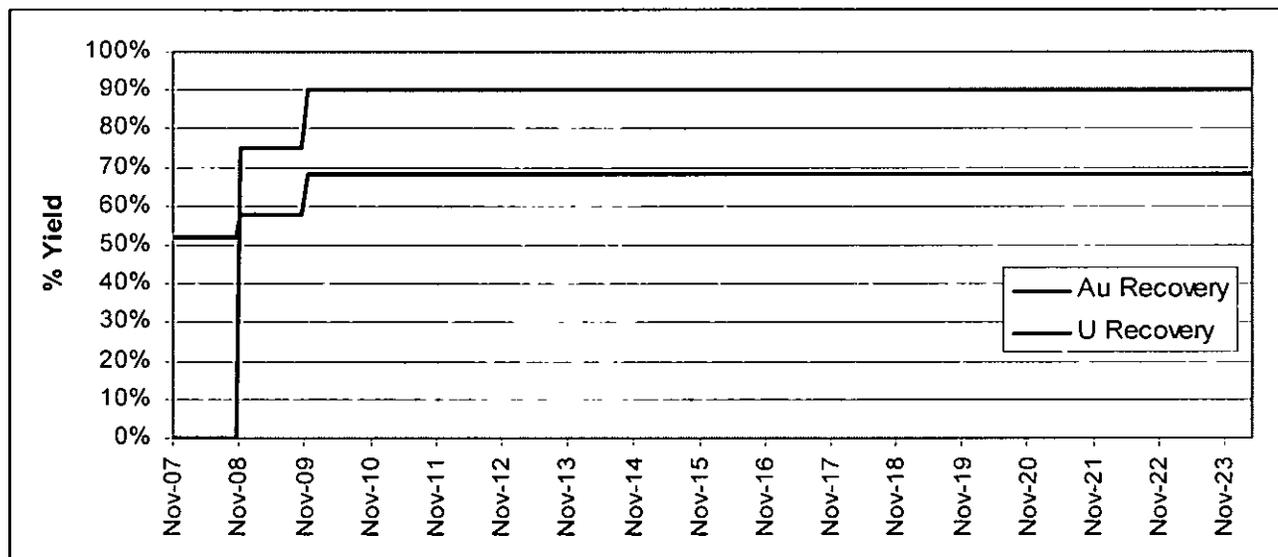

In addition to the recovered tailings, there is a tailings stream from the BGM Underground Mine gold plant that will be taken to the tailings recovery plant and treated for the recovery of uranium and gold. The BGM Underground Mine operates at about 90,000tpm from a number of shafts. The ore is leached for gold recovery, but there is no longer a uranium recovery circuit at the facility. Therefore, the uranium goes to tails. Over the Project life, the BGM plant is planned to produce some 18Mt of tailings (Minxcon, 2006).

From these tailings the Project will generate 3.4Mt of flotation concentrates to be combined with the flotation concentrate from the slimes and treated for uranium recovery. Currently, the DCF has taken into account 20.000tpm to be added to the process flow from the BGM. after it has been processed for gold.

ITEM 21 (B) - RECOVERABILITY

The plants and recoverability are discussed in detail in Item 19. The following graph illustrates a summary of the recoverability for gold and uranium over the LOM:-

Figure 41: Gold and Uranium Recoveries

The first stepped increase (November 2008) in the recoveries of both gold and uranium, occurs as a result of the uranium plant being introduced with an atmospheric leaching circuit, which will also increase the amount of gold that is liberated, thus increasing the gold yield.

The second stepped increase that takes place in November 2009 is a result of the replacement of the atmospheric leach processing facility with a pressure leach processing facility, which increases the yield of both the gold and uranium.

ITEM 21 (C) - MARKETS

Gold is freely traded, at prices that are widely known, so that prospects for sale of any production are assured. Currently all the gold doré (bullion) produced is sent to the Rand Refinery Limited (“Rand Refinery”), once a week via helicopter. Each gold bar is stamped with a reference number and the weight recorded at the plant is compared to the weight received at Rand Refinery. Each gold bar that is received by the Rand Refinery is assayed for gold, silver, copper, iron, lead, zinc and nickel. Both the silver and gold is sold by the Rand Refinery. The price received for the gold will be based on the PM Fix gold price and the ZAR/US\$ exchange rate on the day of sale.

Uranium is also freely traded, although the number of buyers and sellers is much smaller than for gold. The ammonium diuranate (“ADU” or “Yellow Cake”) that will be produced by the processing plant will be sold to the Nuclear Fuels Corporation of South Africa (“NUFCOR”), a wholly owned subsidiary of AngloGold Ashanti, located in Zuurbekom, northwest of Johannesburg off the N12 national road, until December 2008 when NUFCOR is expected to commission a new calcining plant for the Toll Treatment of First Uranium’s ADU.

Uranium will be transported in drums from the mine to the conversion facility and this transport does not pose any special problems. The most common use for uranium is fuel for nuclear power plants. The demand for uranium is directly proportional to the level of electricity generated by nuclear power plants, which in turn is driven by the future global consumption of electricity.

Minxcon used the following gold and uranium prices and exchange rates for the DCF calculation:-

Table 30: Gold and Uranium Prices and Exchange Rates

Years Ending		Unit	Mar 2009	March 2010	March 2011	March 2012	> March 2012
May 2007	Gold Price	\$/oz	500	500	500	500	500
	Uranium Price	\$/lb	50	50	50	50	50
	Exchange Rate	ZAR/\$	7.4	7.4	7.4	7.4	7.4
November 2007	Gold Price	\$/oz	737	734	683	627	635
	Uranium Price	\$/lb	104	104	91	78	45
	Exchange Rate	ZAR/\$	7.4	7.4	7.4	7.4	7.4

Notes:

The current real term commodity price assumptions are based on the consensus of the nominal forecasts by the investment research analysts at 13 North American-based brokerage firms, adjusted downward by the US inflation rate for the period covering the construction of the Project.

The price of gold on 1 November 2007 closed at \$790.25 per ounce (London PM Fix) and the average price for uranium in November 2007 was US\$93/lb. The US\$/ZAR exchange rate as at 1 November 2007 was ZAR/US\$6.56.

ITEM 21 (D) - CONTRACTS

NUFCOR Agreements

First Uranium has entered into two agreements with NUFCOR, namely:-

1. Toll Treatment Agreement for the calcining of Ammonium Diuranate($(\text{NH}_4)_2\text{U}_2\text{O}_7$) ("ADU") to produce U_3O_8 ; and
2. Off Take Agreement for the interim period spanning June 2008 to December 2008, during which First Uranium will be producing ADU. The Off Take Agreement is required so that First Uranium is able to sell U_3O_8 as it produces, whilst NUFCOR builds the First Uranium calcining facility to enable toll treatment to occur.

NUFCOR Toll Treatment Agreement

A toll treatment agreement exists between NUFCOR and First Uranium (Agreement Reference 42215/WW/003). The agreement records the terms and conditions upon which:-

3. NUFCOR will collect and transport the ADU from the First Uranium Works, located at the Chemwes (Pty) Ltd plant in Stilfontein, to the NUFCOR Works, located in Western Areas;
4. NUFCOR will dry and calcine ADU to produce UOC (predominantly composed of UO_2 and UO_3 , reported as U_3O_8), on behalf of First Uranium;
5. NUFCOR will package and store the UOC;
6. NUFCOR will return the Ammonium Sulphate Solution (a waste product from the calcining of ADU) from NUFCOR Works to the First Uranium Works;
7. NUFCOR will facilitate the transport and shipping of UOC to the Converters (which is a facility licensed to receive, store and convert U_3O_8 into natural uranium hexafluoride (UF_6) in accordance with the Treaty on the Non-Proliferation of Nuclear Weapons ("NPT"), on behalf of First Uranium, and
8. NUFCOR will build Stream 3, which will be the calcining stream at the NUFCOR Works, with a maximum installed capacity of 2,700tpa UOC that will be used non-exclusively to treat First Uranium material including the planned stream availability of 82%, which equates to 2,200tpa UOC. However, only 50% of this available capacity will be dedicated to First Uranium, that is, week 1 and week 3 of every production month (approximately 1,100tpa of available capacity to First Uranium).

The Toll Treatment Agreement commenced on the 3 September 2007 and shall, subject to any earlier termination in terms of this agreement, continue indefinitely thereafter for so long as mining operations are conducted at the First Uranium Works by First Uranium. According to the agreement, the U₃O₈ content in the ADU delivered to NUFCOR will be >30% and <38%.

NUFCOR Off Take Agreement

An Off Take Agreement also exists between First Uranium and NUFCOR (Agreement Reference: 42215/WWW/005). The agreement records the terms and conditions upon which:-

1. NUFCOR will collect and road transport ADU from the First Uranium Works to the NUFCOR Works, and
2. NUFCOR will purchase the U₃O₈ in ADU from First Uranium.

The agreement was signed on the 12 October 2007 and shall, subject to any earlier termination in terms of the Agreement, continue in full force and effect up to and including 20 December 2008, or until such time as the ADU is processed in Stream 3 as referenced in the Toll Treatment Agreement.

Shared Service Agreement

A Shared Services Agreement has been entered into by Simmers and First Uranium. During the term of the agreement, Simmers shall provide to First Uranium and/or the subsidiaries, the following services, as required by First Uranium and/or the Subsidiaries:-

- Project management and technical services;
- Cash management and investment services;
- Accounting, treasury and financial services;
- Corporate secretarial services;
- Human resource and staffing services, including payroll and benefits administration; and
- Such other services as may be required by First Uranium and which Simmers is able and willing to provide.

Tailings and Mining Right Agreement

A Tailings and Mining Right Agreement was entered into between BGM, FUSA and Simmers. The agreement is in terms of 11 (eleven) tailings dams, including Buffels 1 and excluding Flanagan and NKGE. The particulars of the agreement are detailed in Item 9 (a) and will not be repeated here.

ITEM 21 (E) - ENVIRONMENTAL CONSIDERATIONS

MWS

An EMPR was compiled on the MWS project area by Envirogreen Consulting in November 2001. This EMPR covered only the Reprocessing of the MWS 2 dam. In undertaking the mining of MWS 2 dam, MWS undertook to contribute sufficient revenue from the project into the then existing SGM Rehabilitation and Closure Trust fund to cover the full rehabilitation and close liability for the remaining extent of the SGM.

An independent closure programme was compiled for the remaining areas of the SGM property in which the outstanding liabilities were estimated and proposed closure works detailed. Further details on the closure cost estimates, which have subsequently been updated, are covered in Item 7 (h).

The following sections detail the findings of the Environmental Impact Assessment. It should be noted that both positive and negative impacts have been detailed:

Table 31: Environmental Impacts of Reclamation of MWS 2 Dam

Environmental Impact	Impact Rating	Impact
Geology – Sinkhole formation	Low	Negative
Topography – Change in landform – Reclamation of No 2 Dam	Low	Positive
Topography – Change in landform – Reinitiating of deposition on No 5 dam	Low	Negative
Soil – Erosion by over stripping	Moderate	Negative
Soil – Uncovering of sterilised soils	Low	Negative
Land Capability – Recovery of land capability potential	Low	Negative
Land Capability – Uncovering of sterilised soils	Moderate	Positive
Land Use – Change in land use	Moderate	Positive
Vegetation – Replacement of natural species with grasses during rehabilitation	Low	Negative
Vegetation – Loss of established grass during reclamation of Dam 2	Low	Negative
Animal Life – Displacement of remaining animal life	Low	Negative
Surface Water – Change in surface drainage patterns	Moderate	Positive
Surface Water – Impairment of surface water quality	Low	Negative
Groundwater – Impairment due to mobilisation of metals in recharge from return-water dam	Moderate/High	Negative
Air Quality – Increase in dust generation	Moderate	Negative
Air Quality – Decrease in Radon exposure in village	High	Positive
Noise – Increase in noise levels due to mining	Low	Negative
Visual – Deterioration in visual impact	Low	Negative

High Negative Impacts

Groundwater impairment was expected to take place due to the mining of MWS 2 dam. Mitigation measures included the removal and stockpiling of contaminated soil in the return water dam as well as the monitoring of the groundwater in order to confirm the predicted situation.

High Positive Impacts

The reduction of Radon exposure has been listed as a high positive impact as this will positively change the human health risk of those living in the vicinity of the dam.

Conclusions

Envirogreen Consulting concluded that in the dams current state (as at November 2001) the SGM impacted heavily on the environment, in terms of the deterioration in surface and groundwater quality, public radon exposure due to the close proximity of the dam to the Stilfontein Village and the contamination of soils by fugitive tailings with an associated reduction in the agricultural potential of the affected land.

They also concluded that the reprocessing of the MWS 2 dam would positively impact the environment by removing the potential health risk of Radon exposure as a result of the final deposition site, some distance away from the Stilfontein Village, improving the surface drainage with an associated reduction in contact time of dam runoff moving past mine impacted sites, the making of land available for agricultural use by removing the overlying deposited tailings and spillages and contributing to the local economy.

Buffels

BGM has an old order mining right to mine the area occupied by the BGM Underground mine and the Hartebeestfontein Gold Mine (ML 4/2001). The BGM Underground Mine has an Environmental Management Plan, approved in August 2002 by the DME, which includes retreatment of the tailings dams. This EMP was updated in by GCS in October 2007 to include the closure cost of the BGM, which includes the tailings dams.

The following section contains extracts or summaries from the Risk Assessment conducted by GCS:-

Table 32: Risk Assessment of the Buffels Tailings Dams

Risk	H1	H2	H5	H6	H7	B2	B3	B4	B5	Ellaton	Flan	NKGE
Dust Generation	✓	✓	✓	✓	✓	✓	✓	✓	✓			✓
Side slope erosion	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Insufficient paddock capacity	✓				✓	✓	✓	✓	✓	✓	✓	✓
Side Slope grading	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Seepage to ground water	✓	✓	✓	✓	✓	✓	✓	na	✓	✓	✓	✓
Sinkhole presence	na	✓	na	na	na	na						

✓ - Pertains to a risk that is potentially significant

Source: GCS

✓ - Pertains to a risk that is insignificant

Risk mitigation strategies for risks that are potentially significant include:-

Dust Generation:	Ridge ploughing or dry vegetation of areas liberating dust
Side slope erosion:	Containment in paddock system
Insufficient paddock capacity:	Ensure sufficient paddock capacity
Side slope grading:	Ensure subtle side slopes when reworked

GCS noted that short and medium term rehabilitation has been concurrent with most tailings facilities and that a concise rehabilitation programme was being investigated for implementation.

However, once the tailings dams have been retreated, all of the risk factors will be mitigated, and then similar environmental impacts, as were detailed for the MWS 2 dam, would come into play.

ITEM 21 (F) - TAXES

Company taxes under South African legislation are 29% of profits under consideration of the tax shields of unredeemed capital and assessed losses. A tax rate of 29% has been factored into the DCF. The taxation assumptions were developed by Simmers and Fist Uranium.

ITEM 21 (G) - CAPITAL AND OPERATING COSTS

Capital Expenditure

The capital expenditure has been broken down into three phases, namely Phase 1A, Phase 1B and Phase 2. Read, Swatman and Voigt (Pty Ltd ("RSV")) and K'enyuka carried out the costing for the Capital Expenditure for the different phases, and Minxcon has relied upon this information to calculate the economic viability of the Resources and hence the Reserves. It should be noted that RSV have performed the Phase 1A and 1B Capital Cost Estimations to Feasibility level of accuracy and the Phase 2 Capital Cost Estimations to Pre-Feasibility level of accuracy. The following summary of estimated capital costs have been factored into the DCF:-

Table 33: Capital Costs (US\$)

PHASE	Unit	2008	2009	2010	2011	Total
Phase 1A	\$ '000,000	3.2	1.4			4.6
Phase 1B	\$ '000,000	9.6	97.9	31.6	3.0	142.1
Phase 2	\$ '000,000			58.2	13.3	71.5
New Tailings Dam	\$ '000,000		13.1	25.0	2.6	40.7
Sub Total	\$ '000,000	12.8	112.4	114.8	18.8	258.8
MWS Plant Capex	\$ '000,000	1.6				1.6
Sub Total (NPV Valuation Capital)	\$ '000,000	14.4	112.4	114.8	18.8	260.4
Add Back Phase 1A Capital expensed to Nov '07	\$ '000,000					14.8
Add Back Phase 1B Capital expensed to Nov '07	\$ '000,000					1.0
Grand Total (LOM Capital)	\$ '000,000					276.2
Grand Total (LOM Capital)	ZAR '000 000					2.043.9

The US\$1.6million for the MWS plant expansion from 600,000tpm to 633,000tpm has already been expended and consequently does not form part of this economic evaluation.

The following sections detail the breakdown of the estimated costs per phase:-

Phase 1A

Phase 1A includes the reclamation and pumping of tailings from existing dams to the existing Chemwes Plant at a rate of 633,000tpm.

Table 34: Phase 1A Cost

Description	Total (ZAR)	Total (US\$)
Civils	20,174,461	2,726,279

ITEM 21 (H) - ECONOMIC ANALYSIS

Valuation Approach

The Discounted Cash Flow ("DCF") method of mineral project valuation was used to estimate the value of the project. This method is generally applied to late stage exploration to early development projects. This report constitutes a pre-feasibility study, which has demonstrated positive economic results, thus enabling the Corporation to commence with the construction of the plants and associated infrastructure. The Corporation will progress with the necessary work to move the Project from Pre- Feasibility to Feasibility level.

Prices and Projections

Exchange Rate and Metal Prices

Metal Prices were taken from the following consensus figures, which were then deflated by 2.5% to bring the figures back to real terms:-

Table 40: Gold Price Forecast Consensus

Firm	2006A	2007E	2008E	2009E	2010E	2011E	Trend

Source: RBC Capital Markets Nov 07

The gold and uranium prices, used in the valuation of the Project, were calculated from an average nominal consensus forecast from thirteen investment banking institutions, which was then deflated by 2.5% (from 2008 to 2011) to bring the figures back to real terms. After 2011 the long term trends were used.

The following table details the gold and uranium prices as well as the ZAR/\$ exchange rate that was used in the DCF:-

Table 42: Gold and Uranium Prices and Exchange Rates

Years Ending		Unit	Mar 2009	March 2010	March 2011	March 2012	> March 2012
May 2007	Gold Price	\$/oz	500	500	500	500	500
	Uranium Price	\$/lb	50	50	50	50	50
	Exchange Rate	ZAR/\$	7.4	7.4	7.4	7.4	7.4
November 2007	Gold Price	\$/oz	737	734	683	627	635
	Uranium Price	\$/lb	104	104	91	78	45
	Exchange Rate	ZAR/\$	7.4	7.4	7.4	7.4	7.4

Notes:

The current real term commodity price assumptions are based on the consensus of the nominal forecasts by the investment research analysts at 13 North American-based brokerage firms, adjusted downward by the US inflation rate for the period covering the construction of the Project.

A decision was made to increase the price assumptions, as the prices of \$500/oz for gold and \$50/lb for uranium were considered to be outdated, considering the current prices for the commodities. Therefore, prices of \$737/oz (2008) for gold and \$104/lb for uranium were used in light of the fact that for 1 November 2007, the price of gold closed at \$790.25 per ounce (London PM Fix) and the average price for uranium on 1 November 2007 was US\$93/lb. The US\$/ZAR exchange rate as at 1 November 2007 was ZAR/US\$6.56.

Discount Rates

A real discount rate of 8% was used in the DCF, based on a nominal discount rate of 14.04%.

Discounted Cash Flow

The following table details the summary of the DCF and reflects a robust cash flow:-

Table 43: Summary of DCF (Real Terms)

Discount Rate	8%
Project Value (US\$ million)	504.84
IRR (%)	151%
Total Oz in LOM Plan	3,027,068
US\$/Oz	166

The following table overleaf details the consolidated DCF.

Table 44: NPV Sensitivities (Real Terms)

Metal Price/Exchange Rates					
	80%	90%	100%	110%	120%
	287.25	396.27	504.82	613.15	721.48
Variable Cost					
	80%	90%	100%	110%	120%
	506.66	505.74	504.82	503.90	502.98
Capex					
	80%	90%	100%	110%	120%
	538.16	521.49	504.82	488.15	471.06

The NPV is most sensitive to metals prices, exchange rates and Capex. Due to large upfront expenditure on the plant and relative short life, Capex also have an impact, although not as much as the economic factors.

ITEM 21 (I) - PAYBACK

The mines payback period is 2.83 years.

ITEM 21 (J) - MINE LIFE

The life of the operation, using the estimated Mineral Reserves, is 16 years.

ITEM 22- OTHER RELEVANT DATA AND INFORMATION

SOUTH AFRICA'S FINANCIAL AND ECONOMIC STATUS

Since its democracy, the country has enjoyed a period of relative political and social stability. South Africa has been considered to have the most advanced economy on the African continent and it also provides the gateway to Sub-Saharan Africa. It is classified as a middle-income emerging market with well developed financial, legal and judicial systems and modern infrastructure. It has a stock exchange that ranks among the 10 largest in the world.

The South African government promotes and encourages foreign investment albeit foreign investors are treated substantially the same as domestic investors. They receive access to the same export incentive programs and tariffs, tax allowances and other trade regulations. Profits earned by a non-resident shareholder in a South African company can be freely remitted through an authorized dealer or bank in South Africa.

South Africa is rich in Mineral Resources and is the world's largest producer of gold, manganese, palladium and vanadium, and ranks highly in production of diamonds, iron ore, platinum and chromium.

South Africa's GDP was estimated at US\$587.5bn for 2006 with an annual real growth rate of 5%. South Africa's inflation rate has decreased over the last ten years and is estimated at 4.6% for 2006 and South Africa's exports amounted to US\$63.7bn for 2006 (CIA World Fact Book, 2008).

South Africa's economic policy is fiscally conservative, but pragmatic, focusing on targeting inflation and liberalizing trade as means to increase employment and income of the nation (CIA World Fact Book, 2008).

Recent legislation has created a changing business environment in South Africa. Black Economic Empowerment ("BEE"), increased social responsibility, new regulations relating to employment opportunities for historically disadvantaged South Africans ("HDSA's) and ownership of all mineral rights going back to the state are all current issues that are evolving.

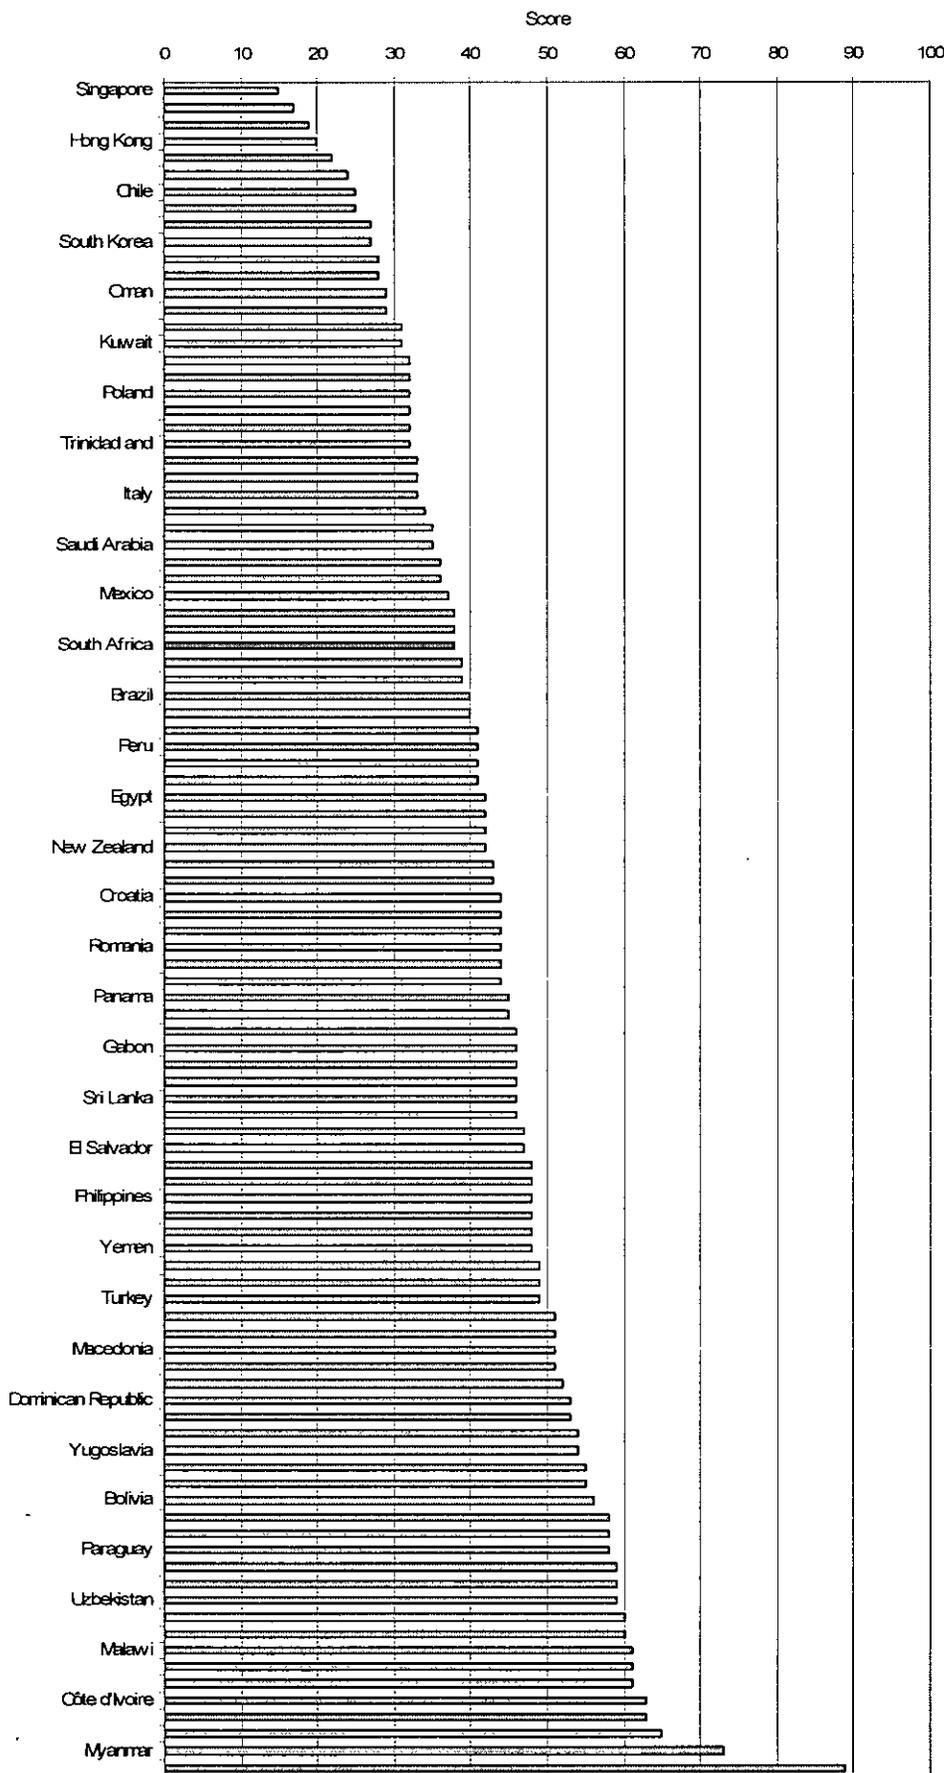

Figure 43 illustrates the Economist Intelligence Unit's Country Risk Model ("EIU"). Their risk rating methodology examines risk from two distinct perspectives:

- 1) broad categories of risk grouped in analytical categories of political, economic policy, economic structure and liquidity factors; and
- 2) risk exposure associated with investing in particular types of financial instruments, namely specific investment risk.

This includes risk associated with taking on foreign-exchange exposure against the US dollar, foreign-currency loans to sovereigns and foreign-currency loans to banks.

Overall scores are awarded in one-point increments, and can range from 0 ("A" category) to a maximum of 100 points ("E" category) for the highest-risk countries. On points, South Africa ranks in the "B" category, which contains countries which have no significant foreign-exchange constraint, but whose economic policies or political structure may be a cause for concern. B-rated countries have access to commercial capital markets. There are no major risks with respect to international financial transactions, but political risk and economic policy risk often need to be carefully watched.

SOUTH AFRICAN MINING LAW

Mineral and Petroleum Resource Development Act

The Mineral and Petroleum Resource Development Act of 2002 (“MPRDA” or “the Act”) was enacted in South Africa on the 1st May 2004. This Act defines the State’s legislation on Mineral Rights and mineral transactions in South Africa. One of the focus points of the Act is that it emphasises that the government does not accept the dual State and private ownership of Mineral Rights in South Africa, and the long-term objective is for all Mineral Rights to vest in the State.

The Act entrenches a “use it and keep it” principle that will be applied to companies or individuals who owned old order, i.e. rights in force immediately before the date on which the Act took effect, Mineral Rights, Prospecting Permits and Mining Licences under the previous legislation. Under the provisions of the Act, privately held old order Mineral Rights must be transferred into Rights to prospect and mine. In due course, all minerals in South Africa will vest in the State and private persons and mining and exploration companies must apply for new order rights to mine or prospect for minerals. In the Act, the State has reaffirmed its commitment to guaranteeing security of tenure in respect of prospecting and mining operations. However the Act does not allow for the hoarding mineral rights to the exclusion of new entrants to the minerals industry.

A further objective of the Act is the pursuance of the government’s policy of furthering black economic empowerment (“BEE”) within South Africa’s minerals industry, by encouraging mineral exploration and mining companies to enter into equity partnerships with BEE companies.

The Act also makes provision for the implementation of social responsibility procedures and programmes by Mineral Resource companies. Applicants for rights to prospect and mine will be required to provide details of these criteria under Schedule II of the Act, which details the Transitional Arrangements.

Schedule II of the Act outlines certain transitional arrangements whereby holders of old order Mineral Rights were required to lodge for conversion of the right within one year. This deadline therefore lapsed on the 1st May 2005 and all old order Mineral Rights that were not converted to new order Prospecting or Mining Rights were transferred back to the State.

Any old order Prospecting Permits continued in force for a period of two years from the date on which the Act took effect. This deadline lapsed on the 1st May 2006 and if companies had not lodged for conversion of the permits to new order Prospecting Rights, the old order Prospecting Permits became null and void.

Old order Mining Licences or Authorisations continue in force for a period of five years from the date on which the Act took effect and will lapse on the 1st May 2009 or on the date up to which the Mining Licence is valid, if this date precedes the 1st May 2009.

Holders of unused old order rights had the exclusive right to apply for a Prospecting or Mining Right within one year of the Act coming into effect, failing which the right ceased to exist.

Mining Charter

The Mining Charter, which came into effect on the 1st May 2004, provides a framework to assist mining companies to carry out their obligation to comply with sections 2(d) and 2(f) of the MPRDA. The Mining Charters main objectives are:-

- to promote equitable access to South Africa’s Mineral Resources for all South Africans;

- to substantially and meaningfully expand opportunities for historically disadvantaged South Africans (“HDSA’s”), including women, to enter the mining and minerals industry and to benefit from the exploitation of South Africa’s Mineral Resources;
- to utilise the existing skills base for the empowerment of HDSA;
- to expand the skills base of HDSA to serve the community;
- to promote employment and advance the social and economic welfare of mining communities and areas supplying mining labour;
- to promote beneficiation of South Africa’s mineral commodities beyond mining and processing, including the production of consumer products.

The Mining Charter also clarifies that it is not the Government’s intention to nationalise the mining industry. To achieve these objectives, the Mining Charter requires that each mining company achieves a 15% HDSA ownership of mining assets within five years and a 26% HDSA ownership of mining assets within 10 years. Ownership can comprise active involvement, through HDSA controlled companies (where HDSA own at least 50% plus one share of the company and have management control), strategic joint ventures or partnerships (where HDSA own at least 25% plus one vote and there is joint management and control) or collective investment vehicles (the majority ownership of which is HDSA based) or passive involvement, particularly through broad based vehicles like employee stock option plans.

When considering applications for the conversion of existing licenses, the government will take a “scorecard” approach to ascertain a company’s compliance with the charter. In February 2003 the Department of Minerals and Energy (“DME”) published the scorecard, which is intended to facilitate the application of the Mining Charter and measure compliance with the empowerment requirements of the MPRDA for the purpose of determining whether an application for conversion of old order rights to new order rights should be granted. The scorecard sets out the requirements of the Mining Charter in tabular form which allows the DME to check areas where a mining company is in compliance. The scorecard covers the following areas:-

- Human resource development;
- Employment equity (including participation in management and participation by women);
- Migrant labour;
- Mine community and rural development;
- Housing and living conditions;
- Ownership and joint ventures;
- Beneficiation; and
- Reporting.

The Mining Charter, together with the scorecard, provides a system of “credits” or “offsets” with respect to measuring compliance with HDSA ownership targets. The charter also requires mining companies to submit annual, audited reports on progress towards their commitments.

The Royalty Bill

This Bill, a draft of which was released for comment on 20th March 2003, outlines the government’s intention to impose royalties on mineral projects. The indications are that the gold mines will attract a 3% (Unrefined Rate %) or 1.5% (Refined Rate %) royalty on gross revenue and uranium mines will attract a 1.5% royalty on uranium oxide (yellow cake) or 3% on uranium concentrate. The document created a significant amount of controversy within the mining industry and regulatory agencies. As a result the Bill has been withdrawn and is being re-drafted. The enactment of the Royalty Bill has been postponed to 2009.

ITEM 23- INTERPRETATION AND CONCLUSIONS

The following conclusions were made regarding the Project as it moves forward:-

- The preliminary assessment for the project published in May 2007 reflected a tonnage estimate that was based upon historical survey returns to the DME. The revised tonnages are based upon surveyed volume and measured densities that reconcile with the recent reprocessing of MWS 2 dam. Consequently the density of the tailings material has been revised from 1.6t/m³ to 1.42t/m³. The revised density is considered by Minxcon to be more realistic;
- Previously, the Mineral Resources were estimated using the Central Limit Theorem. All the dams have subsequently undergone an in-depth geostatistical remodelling using Datamine® as the platform package. An in-house estimation programme was used for the geostatistical modelling, which is also used by a series of major mining companies. All the dams have been re-estimated according to sound geostatistical principals, which have verified the confidence levels applied to the Mineral Resource estimation. Simple and Ordinary kriging methodologies were employed. The kriging method of Mineral Resource estimation is deemed appropriate for the style of mineralisation and is consistent with CIM guidelines;
- The preliminary assessment for the project published in May 2007 reflected the use of Pressure Leach technology. Since May 2007, significant test work has been undertaken, which is however not yet complete. Consequently, First Uranium has adopted a hybrid approach, which includes the initial use of proven Atmospheric Leach technology. The migration from Atmospheric Leaching to Pressure Leaching in the uranium plant in November 2009 is expected to reduce plant operating costs. In addition, the acid produced from the Pressure Leach circuit will positively impact the recovery of gold from the gold plant;
- The NPV of the Project is positive at US\$505 and the IRR is 151%;
- The Projects economics are most sensitive to the Metals Prices, Exchange rates and Capex
- The Life of Mine of the Project is estimated at 16 years;
- No Inferred Mineral Resources were included in the economic analysis contained in this Technical Report. The Mineral Resources that were not converted to Mineral Reserves, either do not have demonstrated economic viability, as illustrated by the COG calculations, or do not have sufficient information to confirm the gold and uranium grades; and
- The only additional work that is anticipated includes the work to be undertaken on the new tailings dam that will be built to accommodate the reprocessed tailings from the fifteen tailings dams included in this report. Both the design and construction elements are already covered within the existing budget.

ITEM 24- RECOMMENDATIONS

The following Items are recommended for consideration as the Project moves forward:-

- Negotiations with the landowners to secure options for the land, comprising the new tailings dam site, need to be concluded;
- The pressure leach testwork for the design for the uranium processing plant must be finalised;
- The legal tenure of the Flanagan, Ellaton and NKGE dams must be resolved as the uncertainty behind the security of tenure of these dams places doubt on these Mineral Resources being converted to Mineral Reserves. It should be noted that these three dams collectively constitute 1.1% of the gold Resource and 1.5% of the uranium Resource.

ITEM 25- REFERENCES

The following table details the references that were used in the compilation of this Technical Report:-

Date	Author	Company	Report Title
1998	MGC Wilson and CR Anhaeusser	N/A	The Mineral Resources of South Africa.

Sir

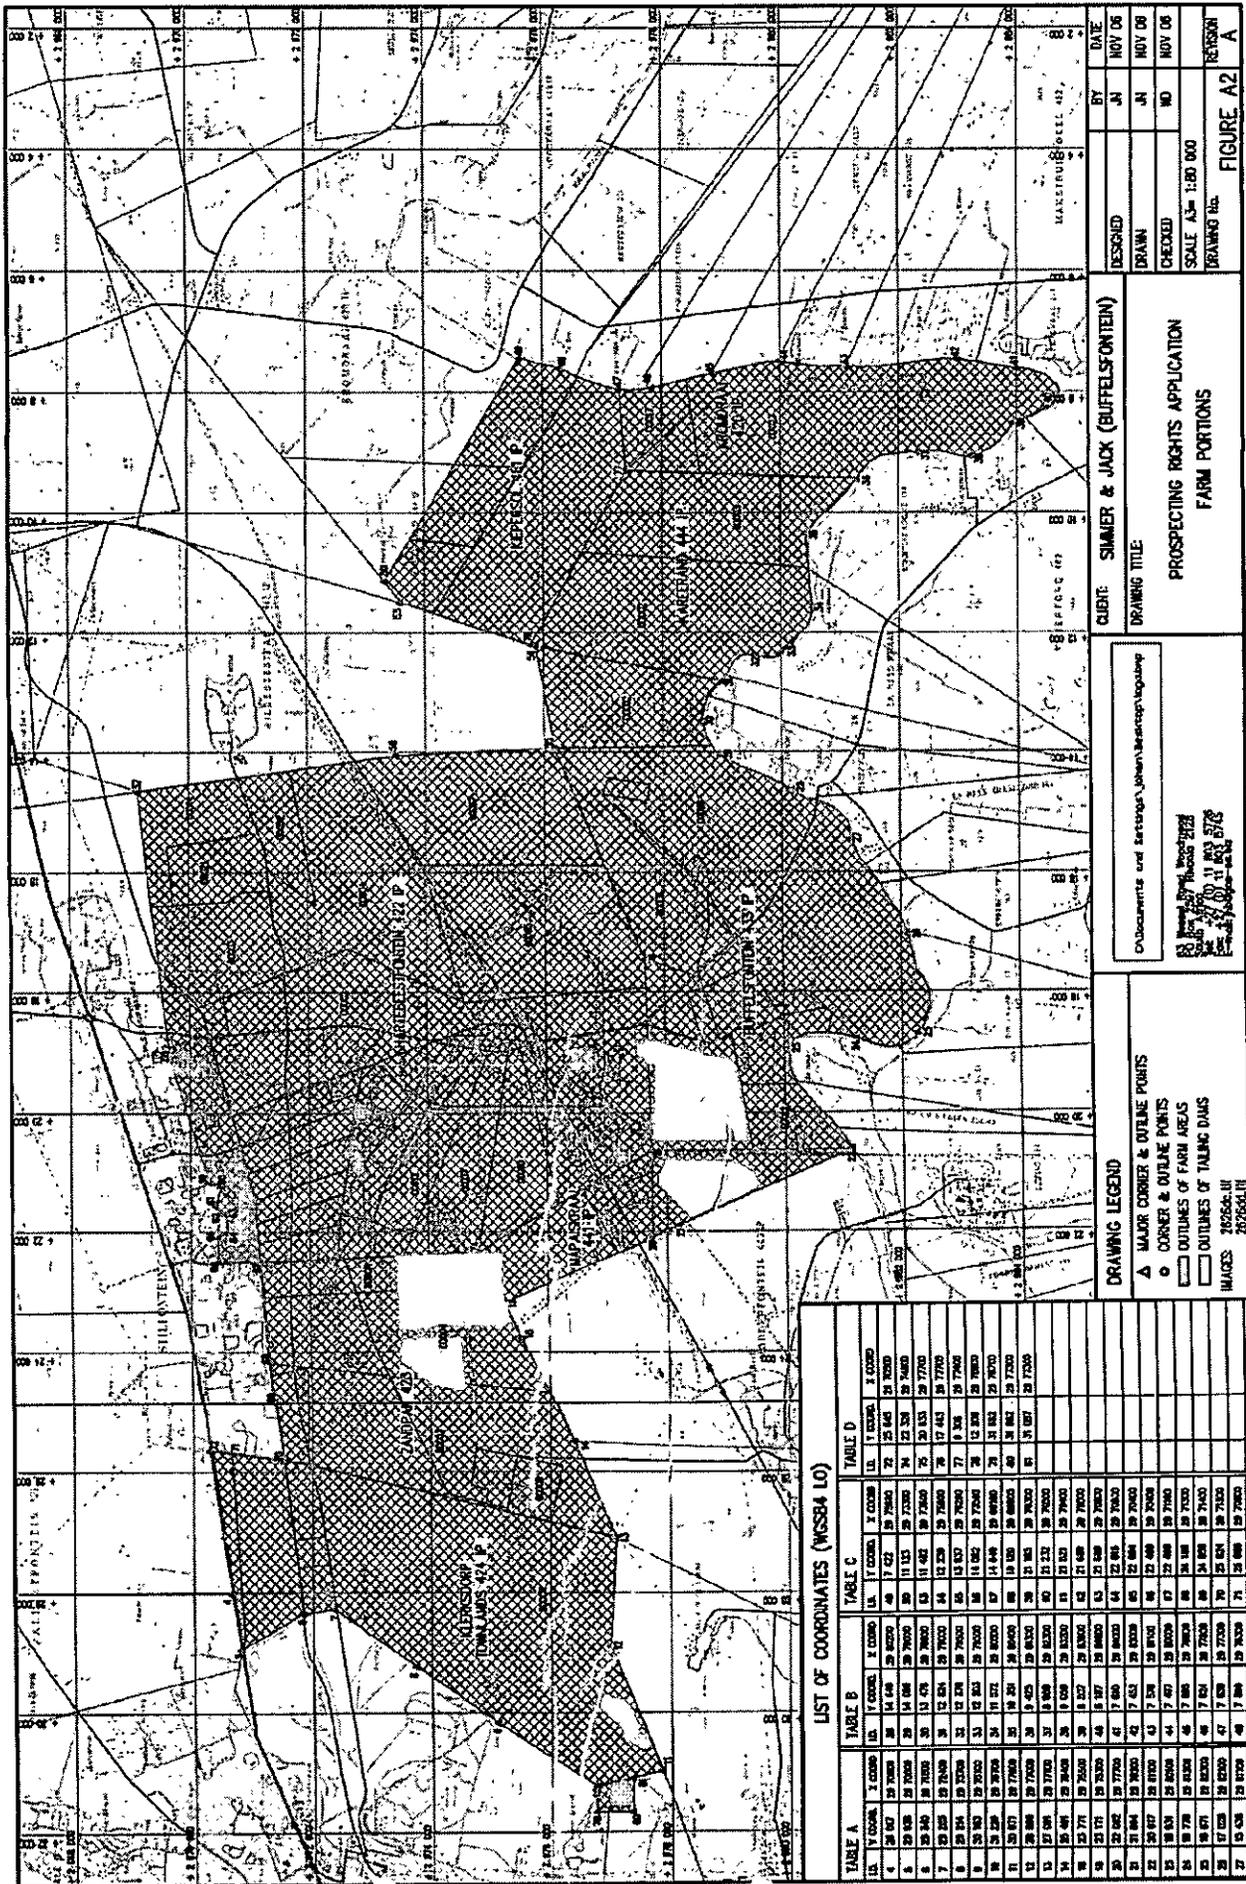

GRANTING OF A PROSPECTING RIGHT IN TERMS OF SECTION 17 OF THE MINERAL AND PETROLEUM RESOURCES DEVELOPMENT ACT, 2002 (ACT 28 OF 2002): VARIOUS PORTIONS OF THE FARMS: KLERSDORP TOWN & TOWNLANDS 424 IP, ZANDPAN 423 IP, MAPAIKRAAL 441 IP, HARTEBEESTFONTEIN 422 IP, BUFFELSFONTEIN 433 IP, KAREERAND 444 IP, KIEPERSOL 481 IP, KROMDRAAI 420 IP, MAGISTERIAL DISTRICT OF KLERKSDORP:

1. This is to confirm that your abovementioned application for the prospecting of uranium ore, rare earth, sulphur (in pyrite) in respect of the abovementioned properties has been granted in terms of section 17(1) of the Mineral and Petroleum Resources Development Act, 2002 (Act 28 of 2002).
2. Take note that the Regional Manager will approve the Environmental Management Plan and sign the right on the *11 July 2007*
3. Further note that in terms of section 17(5) of the Act, the prospecting right comes into effect on the date on which the Environmental Management Plan is approved. In terms of section 19(2) prospecting activities must commence within 120 days of the effective date.
4. In light of the afore-going you are requested to:
 - 4.1. Submit financial guarantee to the amount of R 30 000 for rehabilitation of the environment; and
 - 4.2. Submit a brief explanation about the relation between Jaganda Trading (Pty) Ltd and Buffelsfontein Gold Mines Ltd.
 - 4.3. Submit a profile of Rechtrau No. 47 (Pty) Ltd; and
 - 4.4. The above must be submitted to this office by no later than 30 days from the date of this correspondence.
5. Note further that in terms of section 19(2)(a), the signed/executed prospecting right must be lodged for registration at the Mineral and Petroleum Titles Registration Office by no later than 30 days from the date on which the right is effective.
6. Failure to comply may result in the withdrawal, suspension or cancellation of the right.

Yours faithfully

DEPARTMENT OF MINERAL AND ENERGY AFFAIRS

MINING LICENCE

[Minerals Act, 1991: Section 9 (1) read with 9 (3) (e)]

Office date stamp

Licence No. **ML 4/2001**
Office reference **RDNW(KL) 5/3/2/1330**

Authorization is hereby granted under and subject to the provisions of the Minerals Act, 1991, to (full name) **BUFFELSFONTEIN GOLD MINES LIMITED**

identity or registration number **9 5 7 1 0 0 7 2 7 0 6**

(hereinafter referred to as "the holder")

of (address) **PRIVATE BAG
STILFONTEIN
2550**

to mine for (name of mineral) **GOLD**
in respect of tailings*

on (full name of farm and subdivision) **SEE REVERSE**

No. **MD 4/2001** Magisterial District **KLERKSDORP** Region **NORTH-WEST**

as indicated on the attached sketch plan No. **MD 4/2001**
signed by the Regional Director on **19 FEBRUARY 2001**

Full name of the holder of the right to the said mineral **BUFFELSFONTEIN GOLD MINES LTD**

Unless this licence is suspended, cancelled or abandoned or lapses it shall be valid for a period (more than two years) ~~which shall extend from the date of issuing until~~ **19**

or until the mineral the mining of which is hereby authorized can no longer be mined economically by the holder of the land concerned. (If a specific date is inserted, delete the words that follow the date.)

MO 109E

This licence does not exempt the holder from the requirements of any provision of any other law or from any restrictive provisions or conditions contained in the title deed of the land concerned, nor does it encroach upon the rights of any person who may have an interest in the land or tailings concerned or the mineral rights in respect of such land or tailings.

Signed at KLERKSDORP this 26TH day of FEBRUARY 2001 19

Regional Director E. J. J. van der Merwe

* Delete the words "in respect of tailings" if they are not applicable.

Appendix 2: Performance Labs Certificate of Accreditation

This is to certify that:

PERFORMANCE LABORATORIES (PTY) LTD.

Testing Laboratory No. T0265

is a South African National Accreditation System Accredited Laboratory

for five years commencing **February 2005** provided that

all SANAS conditions and requirements are complied with.

This certificate is valid for:

CHEMICAL ANALYSES

as per scope on accompanying schedule of accreditation

THE LABORATORY COMPLIES WITH ISO/IEC 17025

While this certificate remains valid,
the Accredited Laboratory named above
is authorised to issue SANAS certificates.

Programme Manager

*"Recognised as the official national accreditation body by the
Department of Trade and Industry of the Republic of South Africa"*

This certificate is only valid when accompanied by its schedule of accreditation.

Testing Laboratory Number: T0265

<u>Permanent Address of Laboratory:</u> Performance Laboratories (Pty) Ltd Cooke Recovery Plant Santos Road Off the R559 Randfontein/Zuurbekom Road Randfontein 1759		<u>Technical Signatories:</u> : R Olivier : R Scheepers : S Posthumus : A Kruger
<u>Postal Address:</u> P O Box 1870 Krugersdorp 1740		<u>Nominated Representative:</u> : R Olivier
Tel : (011) 414 0769 Fax : (011) 414 4533 E-mail 1 : roger.olivier@harmony.co.za Email 2 : raymond.scheepers@harmony.co.za		Issue No : 2 Date of issue : February 2006 Expiry date : February 2010

Rocks, ores, cores, sludges plant feeds, plant residues and concentrates	Gold by fire assay and gravimetric finish Range of measurement 0.08 to 3027g/t gold (Au)	M001

Original date of accreditation: February 2005

Page 1 of 1

ISSUED BY THE SOUTH AFRICAN NATIONAL ACCREDITATION SYSTEM

Programme Manager

Appendix 3: Mintek Certificate of Accreditation

CERTIFICATE OF ACCREDITATION

This is to certify that:

MINTEK ANALYTICAL SERVICES DIVISION

Facility Accreditation Number: **T0042**

is a South African National Accreditation System accredited Testing laboratory provided that all SANAS conditions and requirements are complied with.

This certificate is valid as per the scope on the accompanying schedule of accreditation bearing the above accreditation number for

CHEMICAL ANALYSIS

The facility complies with the general requirements of

ISO/IEC 17025:2005

A laboratory's fulfilment of the requirements of ISO/IEC 17025:2005 means the laboratory meets both the technical competence requirements and management system requirements

The management system requirements in ISO/IEC 17025 (Section 4) meet the principles of ISO 9001:2000 and are aligned with its pertinent requirements

While this certificate remains valid, the Accredited Facility named above is authorised to use the relevant SANAS logo to issue facility reports and/or certificates

Chief Executive Officer

Initial Accreditation: May 1995

Certificate Commences: January 2003

Certificate Expires: January 2008

"Recognised as the official national accreditation body by the Department of Trade and Industry of the Republic of South Africa"

This certificate is only valid when accompanied by its schedule of accreditation.

Notes:

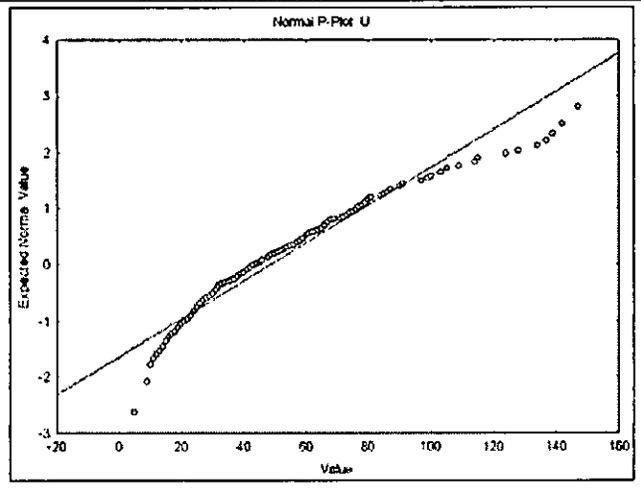

Buffels 5

The uranium values display a peaked (kurtosis 0.73), positively skewed distribution with an asymmetric tail extending toward more positive values. For interpolation of gold, as seen in both the histograms and scatter plots, it was decided to apply a cut-off of AU1g/t to lower the chance of poor looking variograms. The variance for both U and AU are low indicating low variability of the data.

Appendix 7: Qualified Person's Certificate

CERTIFICATE of QUALIFIED PERSON
(Johan Odendaal)

I, Johan Odendaal, Pr. Sci. Nat do hereby certify that:

1. I am Director of:
Minxcon (Pty) Ltd
Suite 5, Coldstream Office Park
Cnr Hendrik Potgieter & Van Staden
Johannesburg, South Africa
2. I graduated with a B.Sc (Geology) degree from the Rand Afrikaans University in 1985. In addition, I have obtained a B.Sc Hons (Mineral Economics) from the Rand Afrikaans University in 1986 and a M.Sc. Min. Eng. from the University of the Witwatersrand in 1992.
3. I am a member/fellow of the following professional associations.

Class	Professional Society	Year of Registration
Member	Geological Society of South Africa	2003
Fellow	South African Institute of Mining and Metallurgy	2003
Member	Australasian Institute of Mining and Metallurgy	2003
Member	Natural Scientist Institute of South Africa	2003
Member	Investment Analysts Society of South Africa	1992

4. I have worked as a Geoscientist for a total of 21 years since my graduation from university. As a former employee of Merrill Lynch, I was actively involved in advising mining companies and investment bankers on corporate related issues. Rated one of the top platinum mining analysts I became a globally recognised industry specialist. I have worked on a number of mineral projects that entailed the compilation of pre-feasibility studies as well as due diligence reports and resource audits on numerous commodities, including gold deposits in the Witwatersrand Basin.
5. I have read the definition of "qualified person" set out in NI 43 101 and certify that by reason of my education, affiliation with a professional association (as defined in NI 43 101) and past relevant work experience, I fulfil the requirements to be a "competent person" for the purposes of NI 43 101.
6. I am responsible for the compilation of the Technical Report titled "Technical Report on the Mineral Assets of the Tailings Dams located near Stilfontein, North West Province, South Africa" dated 1st November 2007, (the "Report"). I have visited the Project on numerous occasions during 2007.
7. I have had prior involvement with the properties that are the subject of the Report. The nature of my prior involvement is a Competent Persons Report compiled on the Buffelsfontein Mine, completed in 2007.
8. To the best of my knowledge, information and belief, the technical report contains all scientific and technical information required to be disclosed to make the report not misleading.
9. I am independent of the commissioning entity.
10. I have read the NI 43 101 code, and the Report has been prepared in compliance with it.
11. I consent to the filing of the Qualified Persons Report with any stock exchange and other regulatory authority and any publication by them for regulatory purposes, including electronic publication in the public company files on their websites accessible by the public, of the Report.

Yours faithfully,

N J ODENDAAL
B.Sc. (Geol), B.Sc. Hons. (Min.Econ.), M.Sc. (Min. Eng.)
Pr. Sci. Nat., FSAIMM, MGSSA, MAusIMM
DIRECTOR

Dated: 1 November 2007.

CERTIFICATE of QUALIFIED PERSON

(Daniel van Heerden)

I, Daniel van Heerden, Pr. Min Eng do hereby certify that:

1. I am Director of:
Minxcon (Pty) Ltd
Suite 5, Coldstream Office Park
Cnr Hendrik Potgieter & Van Staden
Johannesburg, South Africa
2. I graduated with a B.Eng (Mining) degree from the University of Pretoria in 1985 and a M. Comm. (Business Administration) from the Rand Afrikaans University in 1993. In addition, I have obtained a the following:

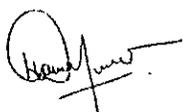

Degree/Diploma	Field	Institution	Year
Data metrics	Computer Science	UNISA	1989
Advanced development programme	Executive development	London Business School	1995
Mine Managers Certificate	Government certificate of competency	Chamber of Mines	1989

3. I am a member/fellow of the following professional associations.

Class	Professional Society	Year of Registration
Member	Association of Mine Managers of SA	1987
Fellow	South African Institute of Mining and Metallurgy	1985
Pending	Australasian Institute of Mining and Metallurgy	2005
Member	Engineering council of South Africa	2005

4. I have worked as a Mining Engineer for a total of 23 years since my graduation from university and have obtained significant experience in managing mining operations in South Africa and abroad both underground and open cast for world-class mining major and for junior mining companies. I also have extensive experience in new business development locally and internationally being responsible for such activities in two major mining companies, one gold focused and the other platinum. I have experience in mining mergers & acquisitions (friendly and hostile) and related activities such as valuation, due diligence, finance structuring and change management required post the event. I have also made significant contributions in the areas of Ore Reserve Management, Reserve estimation and Mine Services Management with the purpose of improved mining productivity. I have worked on a number of mineral projects that entailed the compilation of pre-feasibility studies as well as due diligence reports and resource audits and reserve calculations on numerous commodities, including gold deposits in the Witwatersrand Basin.
5. I have read the definition of "qualified person" set out in NI 43 101 and certify that by reason of my education, affiliation with a professional association (as defined in NI 43 101) and past relevant work experience, I fulfil the requirements to be a "competent person" for the purposes of NI 43 101.
6. I am responsible for the compilation of the Technical Report titled "Technical Report on the Mineral Assets of the Tailings Dams located near Stilfontein, North West Province, South Africa" dated 1st November 2007, (the "Report"). I have visited the Project on numerous occasions during 2007.
7. I have had prior involvement with the properties that are the subject of the Report. The nature of my prior involvement is a Competent Persons Report compiled on the Buffelsfontein Mine, completed in 2007.
8. To the best of my knowledge, information and belief, the technical report contains all scientific and technical information required to be disclosed to make the report not misleading.
9. I am independent of the commissioning entity.
10. I have read the NI 43 101 code, and the Report has been prepared in compliance with it.
11. I consent to the filing of the Qualified Persons Report with any stock exchange and other regulatory authority and any publication by them for regulatory purposes, including electronic publication in the public company files on their websites accessible by the public, of the Report.

Yours faithfully,

D VAN HEERDEN
B.Sc. (Min.Eng.), M.Comm. (Bus. Admin.)
ECSA, MSAIMM, AMMSA
DIRECTOR

Dated: 1 November 2007.

CERTIFICATE of QUALIFIED PERSON

(CJ Muller)

I, Charles J. Muller, BSc. (Hons), do hereby certify that:

1. I am Director of:
Minxcon (Pty) Ltd
Suite 5, Coldstream Office Park
Cnr Hendrik Potgieter & Van Staden
Johannesburg, South Africa
2. I graduated from the Rand Afrikaanse University (BSc. (1988) and BSc. Hons (1992)).
3. I am a member in good standing of the South African Council for Natural Scientific Professions (SACNASP), registration number 400201/04.
4. I have worked as a geoscientist for a total of eighteen years since my graduation from university.
5. I have read the definition of "qualified person" set out in NI 43 101 and certify that by reason of my education, affiliation with a professional association (as defined in NI 43 101) and past relevant work experience, I fulfil the requirements to be a "competent person" for the purposes of NI 43 101.
6. I am responsible for the compilation of the Technical Report titled "Technical Report on the Mineral Assets of the Tailings Dams located near Stilfontein, North West Province, South Africa" dated 1st November 2007, (the "Report"). I have visited the Project on numerous occasions during 2007.
7. I have had prior involvement with the properties that are the subject of the Report. The nature of my prior involvement is a Competent Persons Report compiled on the Buffelsfontein Mine, completed in 2007.
8. To the best of my knowledge, information and belief, the technical report contains all scientific and technical information required to be disclosed to make the report not misleading.
9. I am independent of the commissioning entity.
10. I have read the NI 43 101 code, and the Report has been prepared in compliance with it.
11. I consent to the filing of the Qualified Persons Report with any stock exchange and other regulatory authority and any publication by them for regulatory purposes, including electronic publication in the public company files on their websites accessible by the public, of the Report.

Yours faithfully,

CJ Muller
B.Sc. (Hons)
Pr. Sci. Nat
DIRECTOR

Dated: 1 November 2007

CERTIFICATE of QUALIFIED PERSON

(H Sternberg)

I, Heidi Sternberg, Pr. Sci.Nat do hereby certify that:

1. I am an employee of:
Minxcon (Pty) Ltd
Suite 5, Coldstream Office Park
Cnr Hendrik Potgieter & Van Staden
Johannesburg, South Africa
2. I graduated with a B.Sc (Hons) Geol. degree from the University of Port Elizabeth in 2000. In addition, I obtained a Graduate Diploma in Engineering (GDE) from the University of the Witwatersrand in 2006.
3. I am a member/fellow of the following professional associations.

Class	Professional Society	Year	Reg. No.
Member	Geological Society of South Africa	2001	946804
Member	South African Institute of Mining and Metallurgy	2002	702754
Member	South African Council for Natural Scientific Professions	2005	400113/05

4. I have worked in the mining industry for the past 6 years since graduating from university. As a graduate I joined AngloGold as a trainee geologist on Western Deep Levels South Shaft (Mponeng), where I was responsible for the general geological responsibilities of a section of the mine. Thereafter I joined Venmyn Rand (Pty) Ltd as a Mineral Project Analyst where my responsibilities included the compilation of Due Diligence, Competent Persons' and Technical Reports on various mining companies involved in the mining of a variety of different commodities in a wide range of countries. I joined Minxcon in 2006, where I have continued working as a consultant in the minerals industry.
5. I have read the definition of "qualified person" set out in NI 43 101 and certify that by reason of my education, affiliation with a professional association (as defined in NI 43 101) and past relevant work experience, I fulfil the requirements to be a "competent person" for the purposes of NI 43 101.
6. I am responsible for the compilation of the Technical Report titled "Technical Report on the Mineral Assets of the Tailings Dams located near Stilfontein, North West Province, South Africa" dated 1st November 2007, (the "Report"). I have visited the Project on numerous occasions during 2007.
7. I have had prior involvement with the properties that are the subject of the Report. The nature of my prior involvement is a Competent Persons Report compiled on the Buffelsfontein Mine, completed in 2007.
8. To the best of my knowledge, information and belief, the technical report contains all scientific and technical information required to be disclosed to make the report not misleading.
9. I am independent of the commissioning entity.
10. I have read the NI 43 101 code, and the Report has been prepared in compliance with it.
11. I consent to the filing of the Qualified Persons Report with any stock exchange and other regulatory authority and any publication by them for regulatory purposes, including electronic publication in the public company files on their websites accessible by the public, of the Report.

ITEM 3 - GLOSSARY OF TERMS

The following abbreviations have been used in the document:-

Abbreviation	Definition
ADU	Ammonium diurate
Au	Gold
AusIMM	Australian Institute of Mining and Metallurgy
B.Sc	Bachelor of Science
BGM	Buffelsfontein Underground Gold Mine
BH or BH's	Borehole or Boreholes
Capex	Capital Expenditure
CGT	Capital Gains Tax
CIL	Carbon in Leach
COG	Cut-off Grade
CoR	Certificate of Registration
DCF	Discounted Cash Flow
DME	Department of Minerals and Energy
DRD	Durban Roodepoort Deep Gold Mining Company
DTM	Digital Terrain Model
DWAF	Department of Water Affairs and Forestry
EBITDA	Earnings before tax, interest, depreciation and amortization
ECSA	Engineering Council of South Africa
EMC	Ezulwini Mining Company
EMP	Environmental Management Plan
EMPR	Environmental Management Programme Report
First Uranium	First Uranium Corporation
FUSA	First Uranium (Pty) Ltd (South Africa)
GCS	Groundwater Consulting Services (Pty) Ltd
GSSA	Geological Society of South Africa
HCl	Hydrogen Chloride
HNO ₃	Nitric Acid
IAS	Investment Analysts Society
LOM	Life of Mine
MCF	Mine Call Factor
ML	Mining Licence
MPRDA	Minerals and Petroleum Resources Development Act (No. 28 of 2002)
MR	Mining Right
MWS	Mine Waste Solutions
NI 43-101	National Instrument 43 101
NPV	Net Present Value
NSR	Net Smelter Royalty
NW	North West
OK	Ordinary Kriging
Opex	Operating Expenditure
PR	Prospecting Right
SAIMM	South African Institute of Mining and Metallurgy
SAMREC	South African Code for the Reporting of Mineral Resources and Mineral Reserves
SANAS	South African National Accreditation System
SG	Specific Gravity
SGM	Stilfontein Gold Mine
Simmers	Simmer and Jack Mines Limited
U ₃ O ₈	Uranium
UOC	Uranium di- and tri-oxide, reported as U ₃ O ₈
UG	Underground
VAT	Value Added Tax
VCR	Ventersdorp Contact Reef
WMC	Waterpan Mining Company

The following units of measurement have been used in the document:-

Unit of Measurement	Definition
\$	United States Dollar
a	annum
g	gram
g/t	grams per tonne
ha	hectares
hr	hour
k	kilo (thousand)
kg	kilogram
kg/t	kilograms/tonne
km ²	square kilometre
lb	Pound
m	metre
Ma	Million years
MASL	metres above sea level
Mlb	Million pounds
Mt	Million tonnes
oz	ounce (troy)
t	metric tonne
t/m	tonnes per month
t/m ³	tonnes per metre cubed
tpa	tonnes per annum
tpd	tonnes per day
yr	year
ZAR	South African Rand

ITEM 4 - EXECUTIVE SUMMARY

INTRODUCTION, PROJECT DESCRIPTION AND LOCATION

Minxcon (Pty) Ltd ("Minxcon") was commissioned by First Uranium Corporation ("First Uranium", "FIU" or the "Corporation") to compile an updated Technical Report on the Mine Waste Solutions ("MWS") Tailings Recovery Project ("the Project"), located near the town of Stilfontein, North West Province, South Africa.

The Project now comprises fourteen tailings dams, twelve of which originated from the processing of material from the Buffelsfontein Gold Mines Limited ("BGM") (formerly the Buffelsfontein and Hartebeestfontein Underground Gold Mines), and two Mine Waste Solutions (Pty) Ltd ("MWS") tailings dams, which originated from the processing of material from the now defunct Stilfontein Gold Mine ("SGM"), as well as a gold recovery plant on the MWS site, which is situated near the currently operating BGM Underground Mine and which is currently recovering gold from the tailings. The entire project, comprising all fourteen tailings dams, is herein referred to as the Project. The twelve dams comprising the OLD Buffelsfontein Tailings Recovery Project include the following:-

- Buffels 2, 3, 4 and 5, collectively known as the Buffels Dams;
 - Harties 1, 2, 5, 6 and 7; and
 - Flanagan, Ellaton and NKGE
- } Collectively known as the Harties Dams

The two MWS dams that now form part of the Project include MWS 4 and 5 dams. MWS 2 dam has been completely mined out since the submission of the previous Technical Report.

This report will serve as a technical report to inform investors of the developments that have taken place since the release of the previous Technical Report on the Project in February 2008 (effective date of the report was 1 November 2007).

Since the release of the previous Technical Report, the following key developments have taken place:-

- The MWS 2 dam has been completely mined out and is currently undergoing final rehabilitation;
- The Buffels 2 dam underwent further drilling to firm up the estimated resources and to gain a greater understanding of the distribution of the gold and uranium through the dump and is currently being mined;
- Upgrading of the MWS gold plant to increase the design capacity to 633,000tpm was completed on schedule;
- The purchase and construction of an Acid Plant at the Metallurgical plant site is being investigated from which MWS will purchase acid once the plant is operational; and
- The intention by FIU to generate a portion of its future electrical power requirements to supplement that supplied by South Africa's national energy utility, Eskom.

The effects of these developments include the following:-

- As the MWS 2 dam was mined out and the mining of Buffels 2 has begun, the total tonnage available for mining decreased;
- The remodelling of the Buffels 2 dam resulted in the following changes:-
 - an increase in the previously estimated tonnage from 24.1Mt to 25.0Mt (although this tonnage has now been depleted to take account of the mining that has taken place up to 31 March 2008);
 - a decrease in the gold grade from 0.398g/t to 0.357g/t; and

- o an increase in the uranium grade from 0.086kg/t to 0.090kg/t.
- The Acid Plant will reduce the future costs of acid and secure a supply of acid required for the tailings recovery project; and
- The arrangements to generate additional power will increase the projected capital and operating costs of the operation. This investment in power is justified by securing supply of electrical power and it will be more than offset by the increased realized price for gold and the decline in the value of the South African Rand against the US dollar

No further developments have taken place on any of the other dams, barring Buffels 2 dam. The most significant financial changes included in this Technical Report from the previously filed 1 November 2007 report, in order of their impact on the economics of the Project, include:

- An increase in the capital investment in the Project due to the generation of additional power;
- Corporate tax rates were reduced from 29% to 28% as per revised tax directive.
- The following changes to the Project’s commodity price and exchange rate assumptions have been made:-

Years Ending		Unit	Mar 2009	March 2010	March 2011	March 2012	> March 2012
April 2008	Gold Price	\$/oz	889.64	907.49	874.14	796.62	711
	Uranium Price	\$/lb	96	92	79	75	50
	Exchange Rate	ZAR/\$	7.27	7.36	7.50	7.45	7.57
November 2007	Gold Price	\$/oz	737	734	683	627	635
	Uranium Price	\$/lb	104	104	91	78	45
	Exchange Rate	ZAR/\$	7.40	7.40	7.40	7.40	7.4

The plant is currently operating at a rate of 536 ktpm being fed by material from the Buffels 2 dam. In the previous report it was estimated that the plant would be running at a capacity of 633 ktpm from January 2008, but there have been issues with the material that has been encountered in the tailings dam. These issues are:

- The volume shortfall can be ascribed to the difficulty in reclaiming clay like material that has been encountered in Buffels 2 dam;
- higher degree of difficulty to re-pulp at the mining face and to move the lumpy clay;
- clay lumps are low in density and flow with the slurry stream, choking trenches along the slurry flow path towards the pump station pit sump;
- the flopper valve unit that controls the pool ahead of the pit sump also chokes, causing the pit sump to pull empty;
- the pit sump screen “blinds” with near size clay, causing the pit sump to pull empty, but with a pool of slurry on top of the pit sump screen. In this instance, the screen needs to be cleaned manually, causing delays in the operations;
- hydraulic mining of material with high clay content produces slurry with low density that causes flooding at the pit sump area, due to the pumping system delivering maximum output, but not pumping the required volume; and
- the current reclamation system is capable of reclaiming in excess of 20,000 tonnes per day of material with low clay content, but the results show a decrease in tonnages to as low as 15,000 tonnes per day when material with high clay content is being mined.

The following steps have been implemented by FUSA to overcome the mining problems that have been encountered:-

- Deployment of a track gun at the bottom bench of the Buffels 2 dam during April 2008 that should improve both grade and throughput. More track guns will be deployed once units become available in July 2008;
- Reduced monitoring gun nozzle sizes as of April 2008 to increase slurry re-pulping efficiency which in turn is expected to improve slurry density and tonnage throughput;
- Installation of a temporary scalping screen and winch to reduce handling of coarse clay and to prevent choking of the secondary screen at the pit sump;
- A prototype clay shredder that is currently being manufactured, which will be installed at the end of Q1 2009; and
- Designed a clay log washer that will be utilized as a secondary clay handling system, reducing clay size to less than 20 millimetres. The design is expected to be completed by July 2008 with manufacturing completed by September 2008

Due to the anomalous material that is being sent to the plant, projected recoveries have also not been achieved. The following steps have been implemented at the plant to overcome the processing problems being encountered:-

- Installation of eight "Filblast" high shear mixers during May 2008 at the head of the carbon-in-leach ("CIL") circuit. This would result in an increase in dissolved oxygen levels in the CIL circuit that should result in improved leaching kinetics to improve overall plant recovery by reducing washed residue values;
- Increased pyrite float slurry feed densities by reducing pump speed as of April 2008;
- Commenced with flotation reagent optimization test work which is expected to be completed by the end of May 2008 to improve overall gold recoveries;
- Increased plant sampling frequency to improve confidence in head and tail grades used for metal accounting;
- Improved plant security aspects such as introducing search procedures at the high grade areas and vehicles leaving the plant, 24 hour surveillance utilizing closed circuit television and fencing off certain risk areas;
- Doubled up on electro-winning acid treatment of cathodes that should reduce gold lock-up on cathodes during smelthouse clean ups;
- Increased carbon inventory by 30 tonnes plus revised carbon management strategy which would result in a steeper solution profile down the CIL circuit that will ultimately reduce soluble gold losses reporting to plant final residue; and
- Contracted two metallurgical specialists on an ongoing basis to assist in recovery improvement.

These improvements are expected to mitigate the issues that have been experienced over the last few months going forward.

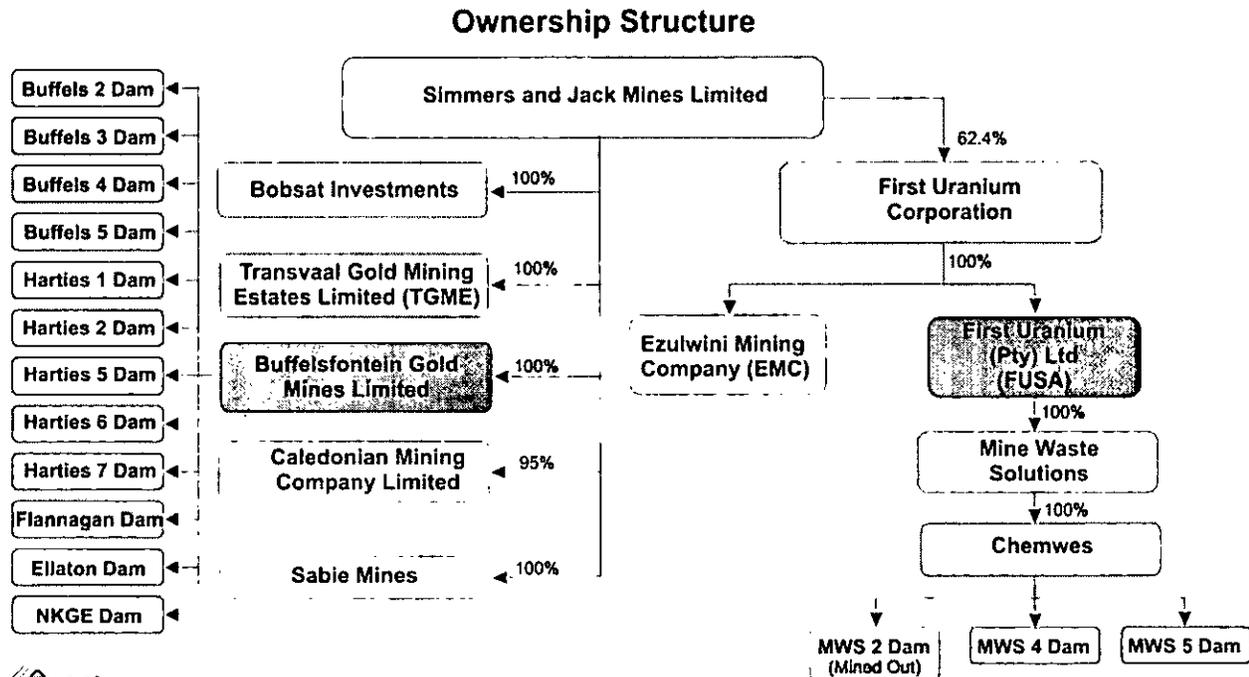

The further expansion of the MWS gold plant to double its capacity and the construction of the first two modules of the Project's uranium plant has been initiated for commissioning in December 2008. The third and final modules of the gold plant and the uranium plant are to be commissioned in December 2009.

OWNERSHIP

As is illustrated in the diagram, the twelve Harties and Buffels dumps are held by BGM and the three MWS dams by MWS, an indirect wholly-owned subsidiary of FUSA.

The new order Mining Right will be applied for in the name of MWS, who will be the operating entity (See Item 7 (c)) and will cover all the dams.

The following diagram illustrates the ownership of First Uranium and Simmers.

GEOLOGY AND EXPLORATION

The tailings dams are made up of tailings material which originated from the processing of the underground ore from BGM and old SGM. The BGM and SGM are/were deep level gold mines, which extracted the tabular, conglomeritic ore bodies of the Klerksdorp Goldfield, namely the Vaal Reef and the Ventersdorp Contact Reef (“VCR”). These reefs contain gold, as well as uranium, however for most of the duration of the mines life, only gold was extracted.

The recent modelling undertaken on the Buffels 2 dam was based on the 18 new boreholes that were recently drilled on the dump, and excluded the historical drilling, as the historical drilling, upon revisiting the distribution of gold and uranium, illustrated by the modelling only using the 18 new boreholes, did not tie up. It has therefore been recommended to FUSA that further drilling also be carried out on the Buffels 3, 4 and 5 dumps, which were also only estimated using historical drilling information.

MINERAL RESOURCES AND MINERAL RESERVES

The following tables detail the Mineral Resources and Mineral Reserves contained in the remaining fourteen tailings dams as at 31 March 2008:-

Mineral Resource Estimate as at 31 March 2008

Surface			Tonnes	Gold			Uranium		
Category	Place	Dam	Mt	Aug/t	Au('000oz)	Au	U ₃ O ₈ kg/t	U ₃ O ₈ Mlb	U ₃ O ₈
Measured	Buffels	2	23.2	0.36	267	8.3	0.09	4.61	2 090
	Buffels	3	24.9	0.35	280	8.7	0.10	5.44	2 466

	MWS	5	15.2	0.30	146	4.6	0.09	3.17	1 437
	MWS	5 (from 2)	4.7	0.18	26	0.8	0.10	1.05	476
	Harties	Ellaton	1.3	0.39	16	0.5	0.15	0.41	187
Inferred Total			21.2	0.28	189	5.9	0.10	4.64	2 106

Notes:

1. Mineral Resources are quoted as in-situ Mineral Resources.
2. No cut-off grades were applied.
3. Rows and columns may not add exactly due to rounding.
4. Mineral Resources are quoted as inclusive of Mineral Reserves. Resources which are not Reserves do not have demonstrated economic viability.
5. MWS 4 Dam is split into two domains, namely Domain 1, which is the uppermost section of the dam, and Domain 2, the lowermost portion of the dam. The tailings dam has been evaluated in two separate sections as they show distinct differences in grade.

Mineral Reserve Estimate as at 31 March 2008

Surface			Tonnes	Gold			Uranium		
Category	Place	Dam	Mt	Aug/t	Au('000oz)	Au	U ₃ O ₈ kg/t	U ₃ O ₈ Mlb	U ₃ O ₈
Proven	Buffels	2	23.2	0.36	267	8.3	0.09	4.61	2 090
	Buffels	3	24.9	0.35	280	8.7	0.10	5.44	2 466
	Buffels	4	14.1	0.37	170	5.3	0.10	3.17	1 439
	Harties	5	23.9	0.21	163	5.1	0.06	3.26	1 479
	Harties	6	13.3	0.20	85	2.6	0.06	1.85	839
Proven Total			99.4	0.30	965	30.0	0.08	18.33	8 313
Probable	Buffels	5	47.6	0.24	360	11.2	0.06	6.62	3 001
	Harties	1	74.4	0.26	624	19.4	0.06	10.17	4 611
	Harties	2	43.8	0.26	369	11.5	0.06	5.79	2 626
	Harties	7	1.3	0.27	11	0.3	0.16	0.46	211
	Harties	NKGE	1.2	0.50	19	0.6	0.18	0.47	214
	MWS	4 dom 2	17.4	0.28	157	4.9	0.13	5.12	2 322
MWS	5	40.3	0.31	402	12.5	0.09	7.81	3 543	
Probable Total			226.0	0.27	1 941	60.4	0.07	36.44	16 529
Total Proven & Probable			325.4	0.28	2 907	90.4	0.08	54.77	24 842

Notes:

1. Mineral Reserves are quoted as fully diluted delivered to mill estimates.
2. Based on assumptions of a gold price of \$711 per ounce, a uranium price of \$49 per pound and ZAR/\$ exchange rate of 7.57, which are long term forecast figures (post 2012).
3. A Reserve COG of 0.28g/t gold equivalent was used. Uranium grades were converted to gold equivalent using a conversion factor of 1 gram per tonne, which equals 0.503 kilograms per tonne on an extracted metal basis.
4. Rows and columns may not add exactly due to rounding.
5. The average LOM gold recovery applied was 68% and 34% for uranium.
6. Only Domain 2 of the MWS 4 dam has been converted to a Mineral Reserve as the gold grade in Domain 1 is below cut-off.

ECONOMIC ANALYSIS

An after-tax Cash Flow Projection has been generated from the Mine Reserve production schedule and capital and operating cost estimates. A summary of the key criteria is provided below:-

Economic Criteria

Revenue

- Up to 1 933 000 tpm slimes from tailings dams will be treated;
- First stage float recoveries of 37.9% at a mass pull of 13% will be achieved;
- Steady state plant recoveries of 90% for gold and 68% for uranium;
- Payment is based upon 100% payment within 30 days;
- Long term exchange rate US\$1.00 = R7.57; and
- Metal price: \$711 per ounce gold and \$50 per lb for uranium.

Costs

- The operation is currently in production;
- Mine life: 16 years;
- Mine life capital totals \$251.32 million; and
- Average operating cash cost over the mine life is \$3.44 per ton reclaimed.

Cash flow analysis

After taking into consideration the impact of the power situation, the undiscounted after-tax real cash flow totals \$757 million over the mine life for the operation on a stand-alone basis. The total cash cost is \$3.44 per reclaimed tonne. Working capital, revenue royalties, general and admin costs, rehabilitation net of scrap sale credits add a further \$0.57 per tonne for a total production cost of \$4.00 per tonne. The NPV at real discounts rates of 6.1%, 8%, and 9.9% is \$473.07, \$413.64 and \$363.22 million respectively.

Sensitivity Analysis

Project risks can be identified in both economic and non-economic terms. Key economic risks were examined by running cash flow sensitivities;

- Total cash cost; and
- Capital costs.

The following table details the sensitivity analyses that were carried out using different parameters. Due to its marginality, grades do have a significant impact on the operations.

Exchange rate					
	80%	90%	100%	110%	120%
	264.55	347.65	413.60	467.81	512.98
Metal Price					
	80%	90%	100%	110%	120%
	211.64	312.89	413.60	514.59	615.57
Variable Cost					
	80%	90%	100%	110%	120%
	498.79	456.20	413.60	371.01	328.42
Capex					
	80%	90%	100%	110%	120%
	447.97	430.79	413.60	396.42	379.24

The NPV is most sensitive to metal prices, exchange rates and Capex, in that order. Due to large upfront expenditure on the plant and a relative short LOM, Capex also has an impact, although to a lesser extent than the economic factors.

CONCLUSIONS AND RECOMMENDATIONS

Minxcon have reviewed all the information and have made the following observations:-

- Previously, the Mineral Resources were estimated using the Central Limit Theorem. All the dams have subsequently undergone an in-depth geostatistical remodelling using Datamine® as the platform package. An in-house estimation programme was used for the geostatistical modelling, which is also used by a series of major mining companies. All the dams have been re-estimated according to sound geostatistical principals, which have verified the confidence levels applied to the Mineral Resource estimation. Simple and ordinary kriging methodologies were employed. The kriging method of Mineral Resource estimation is deemed appropriate for the style of mineralisation and is consistent with CIM guidelines;
- The preliminary assessment for the project published in May 2007 reflected the use of Pressure Leach technology. Since May 2007, significant test work has been undertaken, which is however not yet complete. Consequently, First Uranium has adopted a hybrid approach, which includes the initial use of proven Atmospheric Leach technology. The migration from Atmospheric Leaching to Pressure Leaching in the uranium plant in December 2009 is expected to reduce plant operating costs. In addition, the acid produced from the Pressure Leach circuit will positively impact the recovery of gold from the gold plant;
- The NPV of the Project is positive at US\$413m and the IRR is 69.9%;
- The Projects economics are most sensitive to the gold and uranium prices, exchange rates and Capex
- The Life of Mine of the Project is estimated at 16 years; (includes 2008 depletion)
- No Inferred Mineral Resources were included in the economic analysis contained in this Technical Report. The Mineral Resources that were not converted to Mineral Reserves either do not have demonstrated economic viability, as illustrated by the COG calculations, or do not have sufficient information to confirm the gold and uranium grades; and
- The only additional work that is anticipated includes the work to be undertaken on the new tailings dam that will be built to accommodate the reprocessed tailings from the fifteen tailings dams included in this report. Both the design and construction elements are already covered within the existing budget.

The following Items are recommended for consideration as the Project moves forward:-

- Negotiations with the landowners to secure options for the land comprising the new tailings dam site need to be concluded;
- The pressure leach testwork for the design for the uranium processing plant must be finalised;
- Additional Drilling for sulphur grades to be undertaken so as to evaluate the sulphur grades in the dams, which will be utilized in the Acid Plant.

ITEM 5 - INTRODUCTION

ITEM 5 (A) - TERMS OF REFERENCE

Minxcon (Pty) Ltd ("Minxcon") was commissioned by First Uranium Corporation ("First Uranium", "FIU" or the "Corporation") to compile an updated Technical Report on the Mine Waste Solutions ("MWS") Tailings Recovery Project ("the Project"), located near the town of Stilfontein, North West Province, South Africa.

The Project now comprises fourteen tailings dams, twelve of which originated from the processing of material from the Buffelsfontein Gold Mines Limited ("BGM") (formerly the Buffelsfontein and Hartebeestfontein Underground Gold Mines), and two Mine Waste Solutions (Pty) Ltd ("MWS") tailings dams, which originated from the processing of material from the now defunct Stilfontein Gold Mine ("SGM"), as well as a gold recovery plant on the MWS site, which is situated near the currently operating BGM Underground Mine and which is currently recovering gold from the tailings. The entire project, comprising all fourteen tailings dams, is herein referred to as the Project. The twelve dams comprising the OLD Buffelsfontein Tailings Recovery Project include the following:-

- Buffels 2, 3, 4 and 5, collectively known as the Buffels Dams;
 - Harties 1, 2, 5, 6 and 7; and
 - Flanagan, Ellaton and NKGE
- } Collectively known as the Harties Dams

The two MWS dams that now form part of the Project include MWS 4 and 5 dams. MWS 2 dam has been completely mined out since the submission of the previous Technical Report.

Minxcon comprehensively reviewed all of the critical issues during the discussions held with the relevant First Uranium managers and personnel.

ITEM 5 (B) - PURPOSE OF THE REPORT

This report will serve as a technical report to inform investors of the developments that have taken place since the release of the previous Technical Report on the Project in February 2008 (effective date of the report was 1 November 2007).

The report is compliant with the specifications embodied in Standards of Disclosure for Mineral Projects as set out by the Canadian Code for reporting of Resources and Reserves - National Instrument 43-101 (Standards of Disclosure for Mineral Projects), Form 43-101F1 and the Companion Policy Document 43-101CP ("NI 43 101").

ITEM 5 (C) - SOURCES OF INFORMATION

The following sources of information were used to compile this report, including:-

- Environmental - GCS and FUSA;
- Legal - First Uranium Corporation and GCS;
- Acid Plant - FUSA;
- Power Generation - FUSA;
- Mineral Resources and Mineral Reserves - Minxcon;
- Capital and Operating Cost of Plant - EHL consultants and MDM; and
- Cash flow Model - Minxcon.

ITEM 5 (D) - QUALIFIED PERSONS PERSONAL INSPECTION OF THE PROJECT

Minxcon is an independent advisory company. Its consultants have had extensive experience in preparing technical and economic advisors' and valuation reports for mining and exploration companies. Neither Minxcon nor its staff have any interest capable of affecting its ability to give a fair opinion, and will not receive any pecuniary or other benefits in connection with this assignment, other than normal consulting fees. The authors of this report are members in good standing of appropriate professional institutions. The qualifications and professional registrations of the qualified persons who have contributed to this evaluation are provided at the end of this report. The following persons are qualified persons, as defined in SAMREC and NI 43-101, and responsible for the preparation of the report:-

Geology and Evaluation - Charles Muller (Director Minxcon): B.Sc Hons (Geol), Pr. Sci. Nat.400201/04

Charles has a wealth of knowledge in the field of geology and mineral resource evaluation. Charles is an expert in data processing, ore-body modelling and mineral resource evaluation using Datamine™, as well as the other major computer packages aimed at the minerals industry. During his 24 years in the mining industry, he has gained extensive experience in the fields of sedimentology, gold exploration and target generation of gold, platinum, diamonds, coal and base metal projects. His skills in software development, customizing data systems and integration of databases are widely recognised in the mining industry. Charles has been involved with the modelling and geostatistical evaluation of various ore-bodies across the globe. He has presented papers on ore resource evaluation at international venues and has a number of publications to his credit.

Mineral Reserves - Daan v Heerden (Director Minxcon): B.Sc. (Min. Eng.), M.Comm. (Bus. Admin.), ECSA Reg. No.20050318, FSAIMM Reg. No.37309. 4.

Daan has worked as a Mining Engineer for a total of 23 years and has obtained significant experience in managing mining operations in South Africa and abroad, both underground and open cast, for world-class major mining and for junior mining companies. He also has extensive experience in new business development locally and internationally being responsible for such activities for two major mining companies, one focused on gold and the other platinum. He also made significant contributions in the areas of Mineral Reserve Management and Mine Services Management, with the purpose of improved mining productivity and reduced operating cost.

Financial Analysis - Johan Odendaal (Director Minxcon): B.Sc. (Geol), B.Sc. Hons (Min. Econ.), M.Sc. (Min. Eng.), Pr. Sci. Nat. Reg. No. 400024/04, FSAIMM Reg. No. 702615, MGSSA No. 965119, MAusIMM Reg. No. 220813, IAS.

Johan has worked as a Geoscientist for a total of 22 years. He was actively involved in advising mining companies and investment bankers on corporate related issues. As a rated mining analyst he became a globally recognized industry valuation specialist.

Compliance and Reporting - Heidi Sternberg (Minxcon Mineral Project Analyst): B.Sc. Hons (Geol), GDE, Pr. Sci. Nat. Reg. No. 400113/05, MSAIMM Reg. No.702754, MGSSA Reg. No. 964804.

Heidi began her career as a geologist, working on a deep level gold mine in South Africa, after which she joined a Mining Consultancy Company where she worked for four years, which included compilation of documentation including due diligence, technical and competent persons' reports covering a wide range of commodities located in several countries. She specializes in the compilation and writing of documentation for mineral companies required for both local and international stock exchanges.

The authors of this report visited the operation on numerous occasions during 2007 and January 2008 and are familiar with all aspects of the Project.

ITEM 6 - RELIANCE ON OTHER EXPERTS

Minxcon independently re-estimated the Mineral Resource estimates of all the tailings dams, and more recently re-estimated the Mineral Resources of the Buffels 2 tailings dam. All remaining Mineral Resources have not been changed since the release of the previous Technical Report

With regard to the legal information, Minxcon has relied on First Uranium for information included in this Technical Report. No independent research regarding the property title to the twelve Buffels and Harties and three MWS dams, or prospecting or mining rights of the Project has been undertaken on the project.

All the environmental information included in this report has been sourced from the Environmental Management Programme Reports and Closure Cost Estimate Reports, compiled by Groundwater Consulting Services (Pty) Ltd or Envirogreen Consulting (Pty) Ltd.

The financial analysis was conducted by Minxcon, who relied on Capex and Opex costs supplied by FUSA (who in turn, contracted EHL Consultants and MDM to conduct studies on the Acid and Power plants).

Minxcon has scrutinized all the information provided by these companies and is satisfied that the information is sound and reliable, and could be used in the estimation of the Mineral Reserves that were used in the economic evaluation of the Project.

ITEM 7 - PROPERTY DESCRIPTION AND LOCATION

The Project is located in the western portion of the Witwatersrand Basin, some 160km from Johannesburg approximately 8km from the town of Klerksdorp at Stilfontein in the North West Province, Republic of South Africa.

The location of the fourteen tailings dams that will be recovered is illustrated in Figure 2. The operations are situated on portions of the farms Stilfontein 408IP (MWS 4 and 5 Dams and Plant), Buffelsfontein 443 IP (Buffels 1, 2, 3 and 4 Dams), Mapaiskraal 441 IP (Buffels 5 Dam), Zandpan 423 IP (Harties 1, 2, 5 and 6 Dams), Townlands 424 IP (Harties 7, NKEG and Flanagan Dams) and Strathmore 436 IP (Ellaton Dam). Only the Buffels 1 dam has not been evaluated, as it is currently being used to deposit the tailings produced from BGM.

The MWS operations involve the hydraulic mining of old tailings dams, pumping the slurry to a CIL plant at a rate of 536ktpm (March 2008), to be increased as soon as possible to 633ktpm, and then depositing the treated tailings onto MWS Dam 5. Water for the operations is obtained from Margaret shaft dewatering. The hydraulic mining and the management of the MWS tailings dam is undertaken by Fraser Alexander Tailings (Proprietary) Limited ("Fraser Alexander") on contract to MWS. Fraser Alexander is also responsible for the rehabilitation of the footprint of the mined tailings dams and the closure of the resulting tailings dams from the retreatment process.

The construction of an acid plant and a power generating plant is also planned for the operation although the acid plant will be an independent project from which MWS will purchase acid. The location of these two plants is illustrated graphically in Figure 3.

Figure 1: Location of the Project Area

Figure 2: Location of Tailings Dams

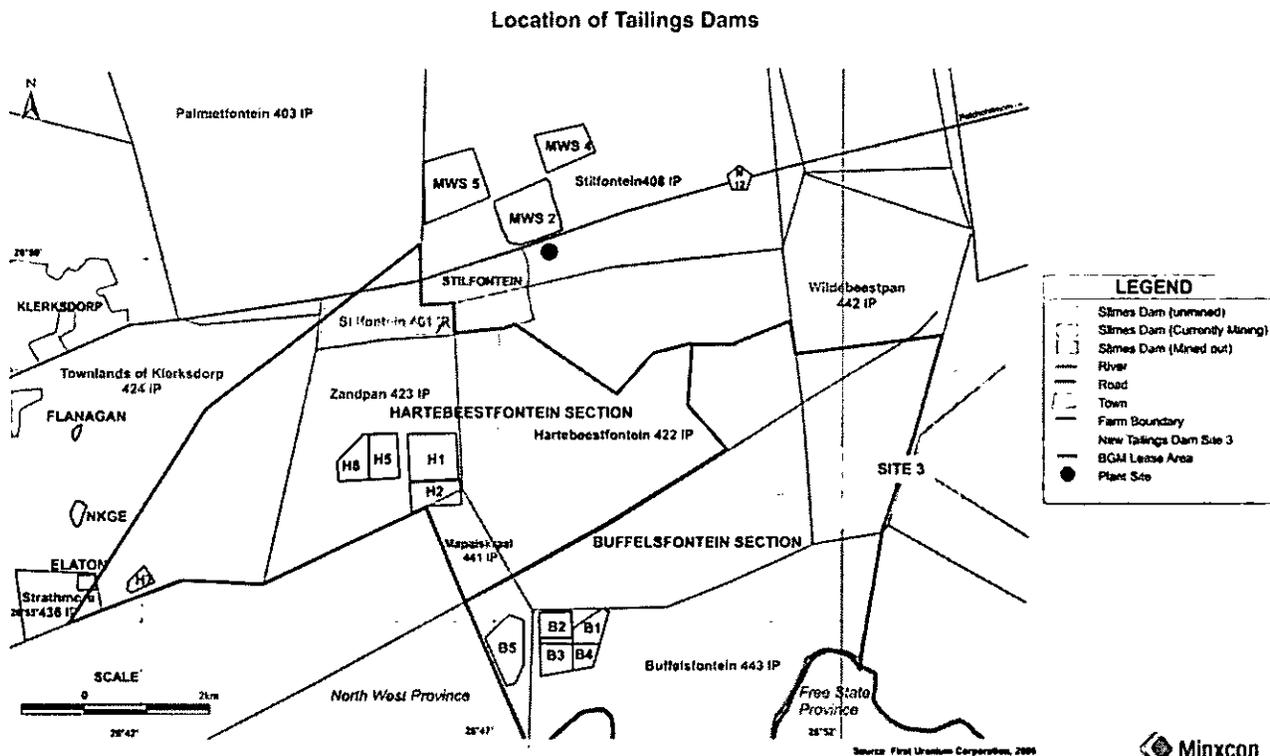

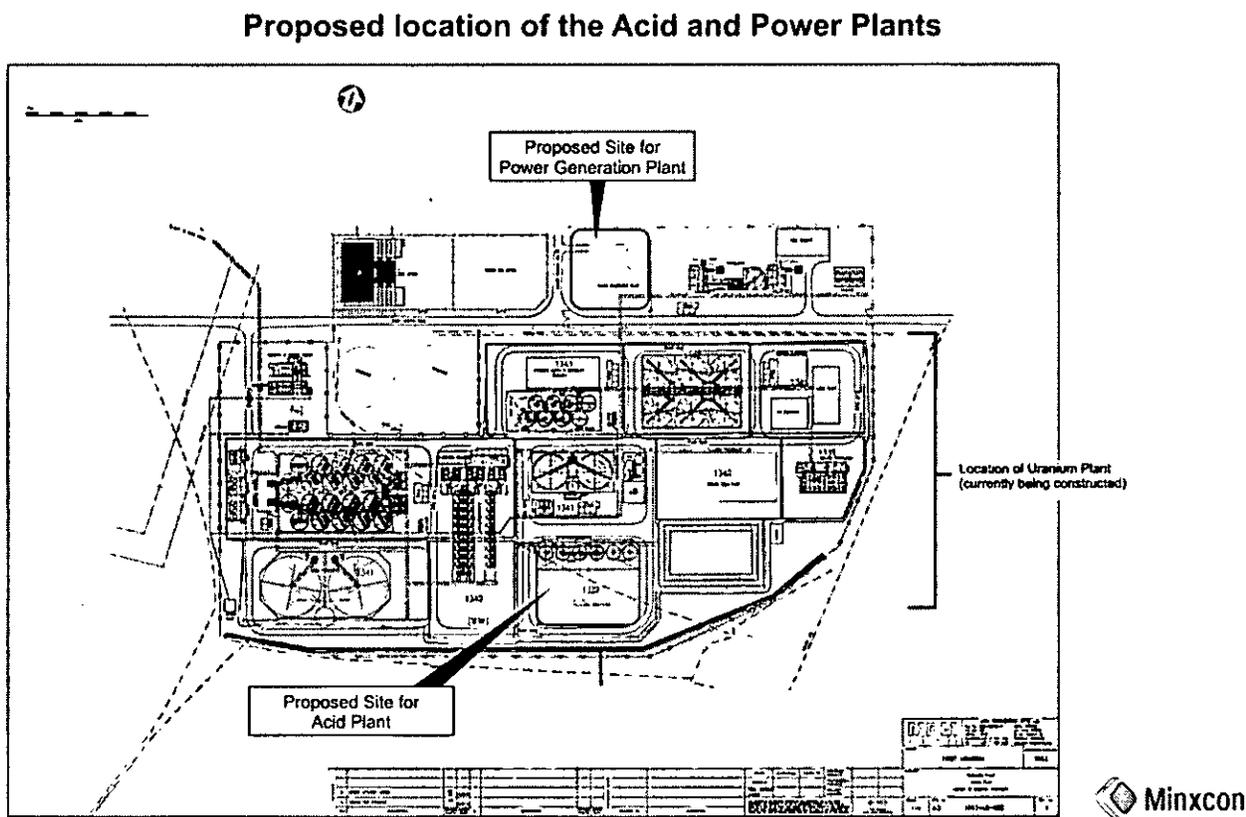

Figure 3: Location of the Acid and Power Plants

ITEM 7 (A) AND (B) - EXTENT AND LOCATION OF THE PROPERTY

The Project is located on portions of the farms Stilfontein 408IP, Buffelsfontein 443 IP, Mapaiskraal 441 IP, Zandpan 423 IP, Townlands of Klerksdorp 424 IP and Strathmore 436 IP, surrounding the town of Stilfontein, North West Province, South Africa (Figure 1 and Figure 2). The project is centred around the following coordinates:-

- 26° 50' S
- 26° 47' E

The area is relatively flat lying, and the elevation varies between 1,330m above mean sea level (“mamsl”) and 1,350mamsl.

The tailings dams are scattered over an area that stretches approximately 13.5km north-south and 14km east-west. The footprints of the fourteen tailings dams cover an area of approximately 1,100ha.

ITEM 7 (C) AND (D) - LEGAL ASPECTS AND TENURE

South Africa has a complex system of mineral tenure, with all old order rights having to be converted to new order rights under the new regulations of the Mineral and Petroleum Resources Development Act (“MPRDA”) by 2009. The entire system of South African Tenure over minerals is detailed in Item 22 of this report. The Project extends across portions of the following farms:-

- Stilfontein 408IP (MWS 2, 4 and 5 Dams and Plant),
- Buffelsfontein 443 IP (Buffels 1, 2, 3 and 4 Dams),
- Mapaiskraal 441 IP (Buffels 5 Dam),
- Zandpan 423 IP (Harties 1, 2, 5 and 6 Dams),
- Townlands 424 IP (Harties 7, NKGE and Flanagan Dams) and

- Strathmore 436 IP (Ellaton Dam).

A summary of the legal aspects and tenure relating to these areas is detailed in the table below:-

Table 1: Legal Tenure of the Dumps

Type of Right/Application	Dumps Applicable	Mineral	Company	Ref No.	Status	Expiry Date	Comment
Old Order Mining Licence	All except Flanagan, Ellaton, NKGE	Gold	BGM	ML83	Valid	30 April 2009	Being converted to New Order Mining Right
New Order Prospecting Right	All except Flanagan, NKGE	Uranium, REE & Sulphur (in Pyrite)	BGM	1488PR	Valid		
New Order Prospecting Right Application	Flanagan, NKGE Ellaton	Gold, Uranium, Pyrite	MWS	1872PR	Awaiting Granting	Will be 3 Years from Granting	Expected to be granted in May 2008
New Order Mining Right Application	All	Gold, Uranium, Pyrite	MWS	364MR	Not yet Submitted	Will be 30 years from Granting	Expected to be submitted in May 2008

BGM currently holds an old order Mining Licence in respect of mining gold at the BGM Underground Mine but not for the mining of the gold and uranium in the Harties and Buffels dumps. On June 4, 2007, the DME granted to BGM a new order Prospecting Right with respect to uranium and other minerals in the Buffels property and tailings dumps, subject to certain conditions which BGM expects to satisfy in due course.

BGM has also filed with the DME an application to convert its old order Mining Licence for Buffels into a new order Mining Right (BGM's old order Mining Licence will expire if application to convert it to a new order Mining Right is not made by April 30, 2009). If and when this conversion application is approved, BGM intends to file with the DME one or more applications (which, together with the foregoing conversion application, are collectively referred to herein as the "Buffelsfontein Conversion Application") to:

- (i) amend, with effect from the date of conversion, the new order Mining Right to include the authority to mine for uranium underground and for gold, uranium and other minerals in respect of the tailings;
- (ii) divide the new order Mining Right, if granted, into two separate new order mining rights – one in respect of the mining for gold, uranium and other minerals at the BGM Underground Mine and the other (the "Buffelsfontein Tailings Mining Right") to be registered in the name of MWS in respect of the mining of the gold, uranium and other minerals in the MWS Tailings dumps; and
- (iii) cede the Buffelsfontein Tailings Mining Right, if granted, to MWS.

Pursuant to an agreement (the "Buffelsfontein Tailings and Rights Agreement") dated December 20, 2006 between FUSA, BGM and Simmer & Jack:

- (i) BGM covenanted to take all necessary steps to obtain all ministerial approvals for the items requested in the Buffelsfontein Conversion Application in order to effect the transfer of the Buffelsfontein Tailings Mining Right to FUSA as soon as possible;
- (ii) BGM agreed to sell to FUSA, upon FUSA's receipt of the Buffelsfontein Tailings Mining Right, the Buffels and Harties tailings dumps and grant to FUSA a right to the tailings arising from BGM's ongoing mining operations at the BGM Underground Mine; and
- (iii) BGM will grant a servitude to FUSA for access and egress to BGM's Buffelsfontein property to enable FUSA, its employees, consultants, agents and subcontractors access to the property. For the above mentioned rights, FUSA was required to
 - (i) pay a nominal consideration of \$13.50 to BGM

- (ii) assume the rehabilitation obligation relating to the dams, and
- (iii) pay to BGM, a 1% royalty plus value-added tax of the gross revenue accrued by FUSA from the sale of uranium, gold, and any other minerals recovered from the tailings.

When the FUSA acquired MWS in June 2007, the Corporation acquired an existing operating gold mine tailings re-processing facility and an historic uranium plant, adjacent to the Buffels property. The Corporation changed its plans for the Buffels Tailings Recovery Project (now called MWS Tailings Recovery Project) such that the historical and future tailings from the BGM mine would be transported to the MWS site and processed through the existing gold plant, and subject to their commissioning, through the planned uranium recovery plant and additional gold recovery facilities. The original agreement between FUSA, Simmers and BGM was terminated and a new agreement entered into between MWS, BGM and Simmers, that reflects the changed plans, on materially similar terms to the original agreement. MWS has indemnified BGM against any tax liability incurred by BGM from the sale recorded in the new agreement on the basis that MWS has no liability unless the amount of any claim exceeds \$2 million and then only in respect of any amounts in excess of \$2 million.

Freehold - MWS

The freehold held by MWS is summarised in the following table:-

Table 2: MWS Freehold

Farm Name	Portion Number	Area (ha)	Title Deed No.
Hartebeestfontein 422 IP	Re of Ptn 24	174.2967	T 18439/2005
Stilfontein 408 IP	Re of Ptn 21	97.0936	T 18439/2005
Stilfontein 408 IP	Re of Ptn 30	88.1534	T 18439/2005
Stilfontein 408 IP	Re of Ptn 33	18.2680	T 18439/2005
Stilfontein 408 IP	Re of Ptn 31	118.8037	T 18439/2005
Stilfontein 408 IP	Re of Ptn 10	272.7024	T 18439/2005
Stilfontein 408 IP	Re of Ptn 66	254.7884	T 18439/2005
Stilfontein 408 IP	Re of Ptn 49	39.2994	T 18439/2005
Stilfontein 408 IP	Re of Ptn 48	109.1917	T 18439/2005
Stilfontein 408 IP	Re of Ptn 15	189.2577	T 18439/2005
Stilfontein Ext 3 408 IP	ERF 3678	0.1379	T 2026/1994

The three MWS dams overlie this freehold. Minxcon has independently verified that these rights are held by Chemwes, a wholly-owned subsidiary of MWS.

Surface Right Permits - Buffels

The following table details the surface right permits ("SRP") held by BGM:-

Table 3: Surface Right Permits held by Buffels

Tailings Dam	Reference	Permit	RMT Plan	Nature of Right	Area Covered
Buffels 2, Buffels 3,	97	95/73	0.198/72	Slimes Dams, Reticulated	Unspecified
Buffels 5	95	10/74	0.82/73	Slimes Dam	Unspecified
Harties 1, Harties 2 (Ptn of)	14	C7/59	SR 398	Slimes Dam, Pipe Lines	218.9490
Harties 2 (remainder of)	57	69/82	063/82	Extension to Slimes Dam	19.0093
Harties 7	8	C19/64	743	Slimes Dam	40.7257
Harties 5, Harties 6	19	52/73	03/73	Area for Slimes Dam	157.2875
Unused	42	8/99	010/95	Slimes Dam	165.6564

Maps for the above surface rights were received by Minxcon and the location of the surface rights was checked to ensure that they did in fact correspond with the relevant slimes dams.

The following table was received from First Uranium and lists the surface right permits ("SRP") that are held over the farm Klerksdorp Townlands 424 IP, on which Flanagan and NKGE dams are located.

The table did not have an accompanying map, so the location of these surface right permits was not validated.

Table 4: Surface Right Permits held by Buffels

FARM	MINING RIGHT DESCRIPTION	RMT NO.	REMARKS
Klerksdorp Townlands 424 IP	Portion of SRP C2/1936 and a portion of SRP C4/1935, Surface Right Permit, C18, 1953, SRP, C10/1940, SRP C2/1940, SRP t C19/1942, SRP C4/1941	701, 702, 217, 62, 53, 102, 67	Acquired from Avgold and GFL
	SRP C3/1940 for the purpose of two UG electric cables, overhead electric lighting line, two water pipelines and extension to slimes dam with fencing	53	
	SRP C20/1942 for the purpose of a slimes dam with fencing	102	
	SRP C1/1950 for the purpose of compound for the housing of persons employed by the permit holder in its mining activities, overhead electric power line, water pipeline.	146	Deed of Transfer No. 31/2001
	SRP C16/1951 in respect of extension of compound for the housing of persons employed by the permit holder.	156	
	Portion of SRP C2/1936 for the purpose of slimes dam with fencing	50 & 701	
	SRP C4/1935 for the purpose of shaft equipment with fencing.	702	

Once the Prospecting Right has been granted by the DME (which is expected to take place in May 2008), these surface rights issues will no longer be relevant.

Water Licence - Buffels

Buffels does not require a water licence as water for the mining operations will be bought from the Margaret Shaft.

Water Licence - MWS

MWS holds a valid water licence (No. 23050323). This licence is valid until 20 October 2008.

Certificate of Registration (Nuclear Regulator) - Buffels and MWS

MWS hold a Certificate of Registration under the National Nuclear Regulator Act, 47 of 1999 ("CoR"). This Act establishes and empowers the National Nuclear Regulator. The main object of the Regulator is to provide for the protection of persons, property and environment against nuclear damage through the establishment of safety standards and regulatory practices. A CoR is required to operate a uranium recovery processing operation. MWS has been issued a Certificate of Registration (CoR 36) dated July 3, 2003, which authorizes MWS to operate a nuclear facility (as defined). Fourteen procedures have been identified and the required documentation approved. When the additional plant is built, additional procedures will have to be identified and also approved. Application will be made to extend this CoR to include the BGM existing tailings dams and the tailings from the BGM Underground Mine. Concurrently, an application will be made to exclude those areas from the CoR issued to BGM, subject to the extension of the CoR issued to MWS.

ITEM 7 (E) - PROPERTY BOUNDARIES AND SURVEY CERTIFICATES

The tailings dam boundaries were surveyed by TM Surveys during the latter part of 2007 and early 2008 and these surveys were used to calculate the volumes of the individual tailings dams. The survey points were received from Mr Iain Davidson, an independent consultant to First Uranium, in .csv format, which was imported into Datamine® to create the DTMs.

The farms Stilfontein 408 IP, (MWS 4 and 5 Dams and Plant), Buffelsfontein 443 IP (Buffels 1, 2, 3 and 4 Dams), Mapaiskraal 441 IP (Buffels 5 Dam), Zandpan 423 IP (Harties 1, 2, 5 and 6 Dams), Townlands 424 IP (Harties 7, NKGE and Flanagan Dams) and Strathmore 436 (Ellaton Dam) are registered with the Deeds Office (RSA), North West Province.

The farms can be located on Government 1:50,000 Topo-cadastral sheets 2626DC Klerksdorp (4th Edition) and 2626DD Stilfontein (4th Edition), which are published by the Chief Directorate, Surveys and Mapping (Private Bag X10, Mowbray 7705, RSA, Phone: +27 21 658 4300, Fax: +27 21 689 1351 or e-mail: cdsm@slu.wcape.gov.za). The central coordinates (WGS84) are 26° 47'00'' (E) and 26° 50'00'' (S).

ITEM 7 (F) - LOCATION OF RESOURCES, RESERVES AND MINE INFRASTRUCTURE

Location of Resources and Reserves

All the Mineral Resources have been quoted as inclusive of the Mineral Reserves. All the Resources and Reserves are located on surface. The Resources and Reserves are all contained in the tailings dams, as illustrated in Figure 2.

General Mine Infrastructure

Extensive mine infrastructure exists in the Project area with a network of roads, electrical power lines and small towns. The Project will be mostly undertaken on the surface of the current BGM underground mining operation, with only the MWS, Ellaton, Flanagan and NKGE dams lying outside of the BGM boundary. There is ample space available for the required works.

The current processing plant, which is currently only extracting gold, is located south of the N12 national road, and to the east of the town of Stilfontein, as illustrated in Figure 2.

A current site for the new tailings dam, which will have a footprint of approximately 1,200ha, is in the process of being finalised (Figure 2).

Water

Drinking water is sourced from a municipal water source. Water used for mining of the dams, is currently sourced from the pumping of water from the defunct Margaret Shaft. This pumping, at a rate of 40ML/d, is undertaken via an agreement between Simmers, Harmony Gold Mining Company and Anglovaal Mining Limited.

BGM has five surface boreholes which could also be used in the future as a possible water source. This will be a cheaper option than the water from the Margaret Shaft; however the use of this water is yet to be approved by DWAF.

Acid Plant

The acid plant (which will be owned and operated as a separate business from the MWS Project) will be located adjacent to the MWS uranium plant, which is currently under construction. The location of this plant is illustrated in Figure 3.

Subsequent to the end of Q4 2008, First Uranium approved a plan to build an acid plant at MWS to secure a low-cost supply of sulphuric acid, a necessary re-agent for the production of uranium, from the sulphur within the tailings dams already being processed.

As announced during April 2008, the Corporation plans to purchase and install an "off the shelf" acid plant to produce sulphuric acid to reduce the future costs and secure supply of acid required for its two uranium and gold mining projects in South Africa, the Ezulwini Mine and the MWS Project. At a projected cost of \$124 million, the acid plant will be installed at MWS. Based on an analysis of pyrite feed-stock potential from the MWS tailings dams, a preliminary technical assessment and a recent market analysis, the Corporation expects that it will take nineteen months to procure and commission the acid plant with anticipated production beginning in January 2010.

The Corporation has secured its initial requirements for sulphuric acid in a market where acid supplies remain very tight. The Corporation anticipates significant acid price increases that are expected to continue in the medium term, as acid prices are closely related to the market for sulphur which is also indicating tight supply and significant price increases.

Once the acid plant is completed, the Corporation will direct all of the pyrite currently produced as waste at the MWS tailings plant to the acid plant for the production of sulphuric acid, which will eliminate the need to source acid from third-party vendors. Since the planned production of the acid would be more than sufficient to supply both Ezulwini's and MWS's projected acid requirements, excess acid could be sold into the market at the then prevailing market rates. In addition, as the production of acid in the plant will be an exothermic reaction, there is the opportunity to generate a by-product of approximately four megawatts of power, which will be available to augment the power supply to Ezulwini and MWS.

Power Generators

The location of the power generators to be constructed in the future, will be located adjacent and to the north of the uranium plant. The location of this plant is illustrated in Figure 3.

ITEM 7 (G) - ROYALTIES AND PAYMENTS

Royalty Bill

The National Treasury released the third draft of the Mineral and Petroleum Resources Royalty Bill, for a final round of public comment and parliamentary review. The tax base for the mineral and petroleum resources royalty regime as defined in both the first and second draft Bills was gross sales. In the latest draft of the Bill, gross sales are confirmed as the tax base, but it also takes into account the process of beneficiation. In general beneficiation expenses in the gold industry relate to smelting, refining, and processing.

In addition to a revised tax base the royalty rates have also been reviewed. Both the previous draft Bills incorporated specific, but differential royalty rates for the various minerals. In the second draft Bill the specific royalty rates were reduced and, in addition, dual royalty rates were introduced for certain minerals (with a lower rate for refined minerals). The new royalty rate structure will be based on a formula that takes into account the profitability of company. The royalty rate will be equal to:-

$$\text{Royalty rate} = \frac{\text{EBITDA} \times 100}{\text{Gross sales for the assessment period} \times 12.5}$$

Details of the royalties that will be payable by FUSA are detailed in the Economic Evaluation Section.

Pursuant to the Buffelsfontein Tailings and Rights Agreement, MWS has agreed to:-

- (i) pay a nominal consideration of \$13.50 to BGM
- (ii) assume the rehabilitation obligation relating to the dams, and
- (iii) pay to BGM, a 1% royalty plus value-added tax of the gross revenue accrued by MWS from the sale of uranium, gold, and any other minerals recovered from the tailings.

BGM will be responsible for any tax that may be assessed under the Buffelsfontein Tailings and Rights Agreement, up to \$2 million. If such tax exceeds that amount, then BGM will pay any such tax pursuant to the agreement but the royalty will be adjusted accordingly in order that BGM incurs a net tax cost of no more than \$2 million.

Simmers is party to a loan agreement (the Aberdeen Loan Agreement) with Aberdeen International Inc. (Aberdeen) dated March 30, 2006 pursuant to which Aberdeen provided to Simmers a loan facility in the amount of up to US\$10 million in respect of the financing of Simmers' acquisition of Buffels. As part of the consideration for the facility, Simmers granted to Aberdeen a net smelter royalty on all of the mineral gold assets held by Simmers through Buffels. This royalty will continue until the loan is repaid to Aberdeen, which is expected to occur by December 31, 2008 (unless extended by Simmers to December 31, 2010).

The economic analysis included in this report assumes no extension by Simmers of the loan facility from the Buffelsfontein Project.

This royalty will be applicable to any gold produced by FUSA pursuant to the Buffelsfontein Project and will continue until the loan is repaid to Aberdeen, which is expected to occur by December 31, 2008 (unless extended by Simmers to December 31, 2010). In addition, pursuant to the Aberdeen Loan Agreement, Aberdeen has the sole option, at any time following the one year anniversary of the first advance thereunder, to convert the amount of the facility outstanding at that time into ordinary shares of Simmers at a conversion rate of R0.80, subject to the approval of Simmers' shareholders. In the event that such shareholder approval is not obtained within a reasonable period of time, Aberdeen shall be entitled to a 1.0% net smelter royalty in perpetuity on gold produced by properties held by BGM, including the Buffelsfontein Tailings Reclamation Project, (excluding the MWS dams).

The economic analysis included in this report assumes no extension by Simmers of the loan facility and, therefore, an ongoing net smelter royalty ("NSR") after 2008 of 1.0% on gold produced from the Project, excluding gold produced from the MWS tailings reprocessing. The following table illustrates the application of the NSR in respect of the BGM and Aberdeen Agreements:-

Table 5: NSR in respect of the BGM and Aberdeen Agreements

Tailings Dams	BGM Royalty Applicable	Aberdeen Royalty Applicable
Buffels and Harties Dams	Gold and Uranium	Gold Only
MWS Dams	Gold and Uranium	NA

ITEM 7 (H) - ENVIRONMENTAL LIABILITIES

Buffels and Harties Dams

GCS compiled an amended Closure Cost Estimate Report in October 2007. The amounts, which have been extracted from the report pertaining only to the relevant tailings dams, are detailed in the table below:-

Table 6: Summary of Outstanding BGM Environmental Liabilities (for Tailings Dams only)

Liability/Trust Fund	Amount (ZAR)
Buffels 2, 3, 4 and 5 Dams	81,081,170
Harties 1, 2, 5, 6 and 7 Dams	42,242,745
Harties -Ellaton, -Flanagan, -NKGE	3,768,840
Total Liability (Tailings dams)	127,092,756
Amount currently available in Trust Fund	0
Variance	-127,092,756

Note: Amounts include P&G's, a 10% contingency and 14% VAT
 Due to rounding, amounts may not add up
 An amount of ZAR0 has been indicated as being available in the trust fund, as this obligation to fund the trust will be the responsibility of MWS.

The liability, detailed in the table above, is only valid for the dams if they are not mined. A new EMP and Closure Cost Assessment will be undertaken by GCS once the new Mining Right has been accepted by the DME, which will take into consideration the reprocessing of the tailings dams. The amount for the rehabilitation of the remaining footprints, after the dams have been reprocessed, is expected to be considerably less than the amount detailed in the table above.

MWS

MWS have an approved Environmental Management Program Report ("EMPR"), which was completed in November 2001 and officially signed off by the DME on 9 March 2003. The report was compiled by Envirogreen Consulting and only covers the reprocessing of the MWS 2 dam, which is currently being rehabilitated.

An independent Closure Programme was also compiled in addition to the EMPR, which covered the rehabilitation of the MWS 2 dam footprint, the disturbed land to the east of MWS 2 dam, as well as the area to the south of the N12 national road, which liability was also the responsibility of MWS.

The following table details the amounts that have been estimated to complete the rehabilitation of the MWS areas, as well as the amount currently in the SGM Rehabilitation and Closure Trust Fund:-

Table 7: Summary of Outstanding MWS Environmental Liabilities as at 1 November 2007

Liability/Trust Fund	Amount (ZAR)
Rehabilitation Liability for area North of N12	7,282,267
Rehabilitation Liability for area South of N12	6,861,208
Total outstanding Liability	14,143,475
Amount currently available in Trust Fund	15,906,410
Variance	1,762,935

Summary of Environmental Liabilities

MWS submitted a new Mining Right application to the DME in December 2007 in respect of gold (which was rejected) followed by an amended Mining Right Application in February 2008. The Mining Right Application is going to be resubmitted in May 2008 and it will cover all the tailings dams. If it is accepted by the DME, GCS will compile a Scoping Report in conjunction with a Public Participation, which will then be reviewed by the DME. GCS will then have 120 days in which to complete an Environmental Impact assessment.

Should the transfer of these dams to MWS be successful, all liabilities, environmental responsibilities and closure cost liabilities will be transferred to MWS and removed from BGM.

The DCF makes allowance for monies to be contributed to the Environmental Trust Fund (to cover all the tailings dams), from 2009 up to and including 2021, amounting to R217,650,964.

This amount will be amended if the updated MWS Closure Cost Assessment, which will cover the rehabilitation of all the tailings dams, is greater than, or less than, the amount catered for in the DCF.

ITEM 7 (I) - PERMITS TO CONDUCT WORK

See Item 7 (c) and (d).

ITEM 8 - ACCESSIBILITY, CLIMATE, LOCAL RESOURCES, INFRASTRUCTURE AND PHYSIOGRAPHY

ITEM 8 (A) - TOPOGRAPHY, ELEVATION AND VEGETATION

The surface topography over the area is characterized by moderately undulating plains. The area is relatively flat lying, and the elevation varies between 1,330mamsl and 1,350mamsl.

The area has been highly disturbed by mining and the current vegetation types are dominated by grasslands and areas of secondary reeds, which are associated with areas surrounding the tailings dams or areas where the natural drainage has been restricted by mining access.

ITEM 8 (B) - ACCESS

The BGM and MWS properties, on which the tailings dams are located, are adjacent to each other and are located some 160km south west of Johannesburg. The mine is easily accessible via the N12 national road from Johannesburg. A large network of roads exists between the tailings dams and all the dams are easily accessible via either paved roads or gravel roads in good condition.

ITEM 8 (C) - POPULATION CENTRES

The Project is located in the vicinity of the town of Stilfontein, which is approximately 8km east of Klerksdorp. The area has a long history of gold mining and mine suppliers and contractors are readily available locally. Experienced and general labour is also available in the Project area.

ITEM 8 (D) - CLIMATE AND OPERATIONAL SEASON

The climate in the area is typical of the Highveld of South Africa, with mild winters and warm to hot summers. Temperatures average approximately 30°C in summer and approximately 18°C in winter.

The area falls within a summer rainfall area, with the highest rainfall recorded in January. The annual rainfall recorded is in the region of 625mm. Mining operations can generally continue throughout the year, however heavy rain storms do have the potential to hinder the mining operations. During the past four years however, mining has only been suspended due to adverse weather conditions, for a total of approximately 72 hours.

ITEM 8 (E) - MINING INFRASTRUCTURE

There is extensive existing infrastructure in the Project area with a network of roads, electrical power lines and small towns. General mining infrastructure is detailed in Item 7 (f) in this report.

ITEM 9 - HISTORY

ITEM 9 (A) - PRIOR OWNERSHIP

BGM

BGM consists of the Buffelsfontein Mine (also referred to as the South Division) and the Hartebeestfontein Mine (now known as the North Division). The Buffelsfontein Mine commenced production in 1954, while production at Hartebeestfontein commenced a year later. Randgold & Exploration Company Limited bought Buffelsfontein Mine from Mining House Gencor and, in September 1997, Durban Roodepoort Deep Group ("DRD") was formed when Durban Roodepoort Deep Limited merged with Blyvooruitzicht Gold Mining Company Limited and Buffelsfontein Gold Mines Limited. In August 1999, DRD bought the Hartebeestfontein mining business from the Anglovaal stable and incorporated it into BGM.

DRD's northwest operations (Buffelsfontein and Hartebeestfontein) were placed under provisional liquidation on March 22, 2005, following continued financial losses and a massive earthquake on March 9, 2005, which caused damage to the No 5 shaft.

In October 2005, Simmers purchased BGM (formerly DRD Gold's North West Operations), comprising the Buffelsfontein and Hartebeestfontein underground mines and the tailings dams, out of provisional liquidation (the Buffelsfontein Liquidation Acquisition). The total acquisition cost was approximately \$13.5 million, consisting of a purchase price of \$6.1 million, \$4.4 million in restart costs, as well as holding costs of \$4.1 million incurred while operating as the preferred bidder on behalf of the provisional liquidators. Simmers shortly thereafter recommenced mining operations at the BGM Underground Mine and the production of gold in the gold plant. Both of the Buffelsfontein Mine and the Hartebeestfontein Mine have produced gold and uranium over periods of the mine life. The uranium plants were closed when the price dropped in the mid-1990s. Both uranium plants were decommissioned and demolished.

The ongoing production activity by BGM and its predecessors has generated a significant amount of underground development and ongoing exploration. The BGM Underground Mine is planned to produce at a rate of approximately 90,000tpm until approximately 2030, after which only a tail off production is forecast to remain. While the Buffelsfontein property has a history of production, it is mostly from primary processing and not from the reclaiming and reprocessing of slimes. However, there have been some successful tailings reprocessing operations in the area, including the Chemwes operation, now held by MWS, on the Stilfontein tailings.

FUSA entered into the Buffelsfontein Tailings and Rights Agreement with BGM and Simmers pursuant to which, among other things:-

1. BGM has covenanted to take all necessary steps to obtain all ministerial approvals required for the items requested in the Buffelsfontein Conversion Application in order to effect the transfer of the Buffelsfontein Tailings Mining Right to FUSA as soon as possible;
2. BGM has agreed to sell to FUSA upon FUSA's receipt of the Buffelsfontein Tailings Mining Right, the Buffelsfontein and Hartebeestfontein tailings dumps as well as certain property required for construction of the proposed processing plants, and grant to FUSA a right to the tailings arising from BGM's ongoing mining operations at the BGM Underground mine; and
3. BGM will grant a servitude to FUSA for access and egress to BGM's Buffelsfontein property to enable FUSA, its employees, consultants, agents and subcontractors access for purposes of constructing, servicing and operating the uranium and gold processing plants and tailings pipelines to be built by FUSA.

MWS

MWS was established in 1999 to effect sustainable environmental remediation while, at the same time, reclaiming and reprocessing mine tailings and other waste materials. MWS purchased the shares of Chemwes in 2003 as the inaugural project for the reprocessing of tailings. Chemwes is a wholly owned subsidiary of MWS. MWS holds the surface sources produced by SGM, neighbouring the BGM Underground Mine.

The Chemwes operation commenced as a uranium recovery operation based upon the SGM. SGM commenced operations as a gold mine in 1952 and had a primary uranium processing operation from 1953 to 1961. In the 1970s, the price of uranium rose and the recovery of uranium from the SGM tailings (and other tailings in the area) was investigated. Following laboratory test work, the Chemwes uranium plant was commissioned in mid-1979 and operated until 1989, processing 29.4Mt of tailings and recovering 4,560t of U_3O_8 .

Following the MWS purchase of Chemwes, the plant was converted to a gold tailings treatment plant and commenced operations in 2003. To-date, the Chemwes operation has produced 12.44t of gold from 26.98Mt of material at an average grade of 0.461g/t. No uranium has been extracted from the tailings material, which are likely to be reprocessed at a later stage for uranium.

The mining of MWS 2 dam is complete, leaving only the MWS 4 and 5 dams still to be processed.

FUSA entered into a purchase agreement in April 2007 with the shareholders of MWS to acquire MWS and the underlying assets, including MWS 4 and 5 Dams and the operating processing plant, to provide a fast track approach for the processing of the tailings dams from BGM for the recovery of gold and uranium. The transaction closed on 6 June 2007. MWS, Simmers and BGM entered into an agreement whereby MWS assumed all of the rights and obligations of FUSA under the Buffelsfontein Tailings Right Agreement.

ITEM 9 (B) - HISTORICAL EXPLORATION AND DEVELOPMENT

Buffels and Harties Dams

The information regarding the historical exploration of the Buffels and Harties dams was in the form of paper maps indicating the location of the drilling that took place as well as paper copies of the results obtained, to the extent that these were available. The information was all closely scrutinised by Minxcon and only information which could be validated, was used for the estimation of the Mineral Resources.

None of the Buffels or Harties dams have been historically reprocessed and many of the dumps have been re-vegetated in line with applicable rehabilitation requirements.

MWS

The three MWS dams were previously drilled and evaluated by Chemwes. The information from this previous drilling was in good order, all the positions of the boreholes were recorded and the assay information was in electronic format, which made utilizing the information for the current modelling and evaluation exercise relatively simple.

The historical Mineral Resources that were estimated for all the dams is detailed in the section below, and details regarding the historical mining that has taken place on MWS 2 dam are shown in Item 8 (D).

ITEM 9 (C) - HISTORICAL MINERAL RESOURCES AND MINERAL RESERVES

The following Mineral Resources and Mineral Reserves were estimated for the Project in November 2007:-

Table 8: Historical Mineral Resources - November 2007

Category	Surface		Tonnes Mt	Gold			Uranium		
	Place	Dam		Aug/t	Au('000oz)	Au	U ₃ O ₈ kg/t	U ₃ O ₈ Mlb	U ₃ O ₈
Measured	Buffels	2	24.1	0.398	309	9.6	0.086	4.58	2,077
	Buffels	3	24.9	0.350	280	8.7	0.099	5.44	2,466
	Buffels	4	14.1	0.374	170	5.3	0.102	3.17	1,439
	Harties	5	23.9	0.213	163	5.1	0.062	3.26	1,479
	Harties	6	13.3	0.199	85	2.6	0.063	1.85	839
Measured Total			100.3	0.312	1,008	31.3	0.083	18.30	8,300

Notes: 1. Mineral Resources are quoted as in-situ Mineral Resources.

2. No cut-off grades were applied.

3. Rows and columns may not add exactly due to rounding.

4. Mineral Resources are quoted as inclusive of Mineral Reserves. Resources which are not Reserves do not have demonstrated economic viability.

5. Table reflects depletion of 1.5 million tonnes from July through October 2007 for MWS 2 Dam.

6. MWS 4 Dam is split into two domains, namely Domain 1, which is the uppermost section of the dam, and Domain 2, the lowermost portion of the dam. The tailings dam has been evaluated in two separate sections as they show distinct differences in grade.

Table 9: Historical Mineral Reserves - November 2007

Category	Surface		Tonnes Mt	Gold			Uranium

Proven & Probable Total			326.9	0.281	2,957	92.0	0.076	54.85	24,877

Notes: 1. Mineral Reserves are quoted as fully diluted delivered to mill estimates.

2. Based on assumptions of a gold price of \$635 per ounce, a uranium price of \$45 per pound and ZAR/\$ exchange rate of 7.40, which are long term forecast figures (post 2012).

3. A Reserve COG of 0.28 g/t gold equivalent was used. Uranium grades were converted to gold equivalent using a conversion factor of 1 gram per tonne, which equals 0.503 kilograms per tonne on an extracted metal basis.

4. Rows and columns may not add exactly due to rounding.

5. The average LOM gold recovery applied was 66%.

6. An effective LOM uranium recovery of 27% was used and is based on an atmospheric leach process.

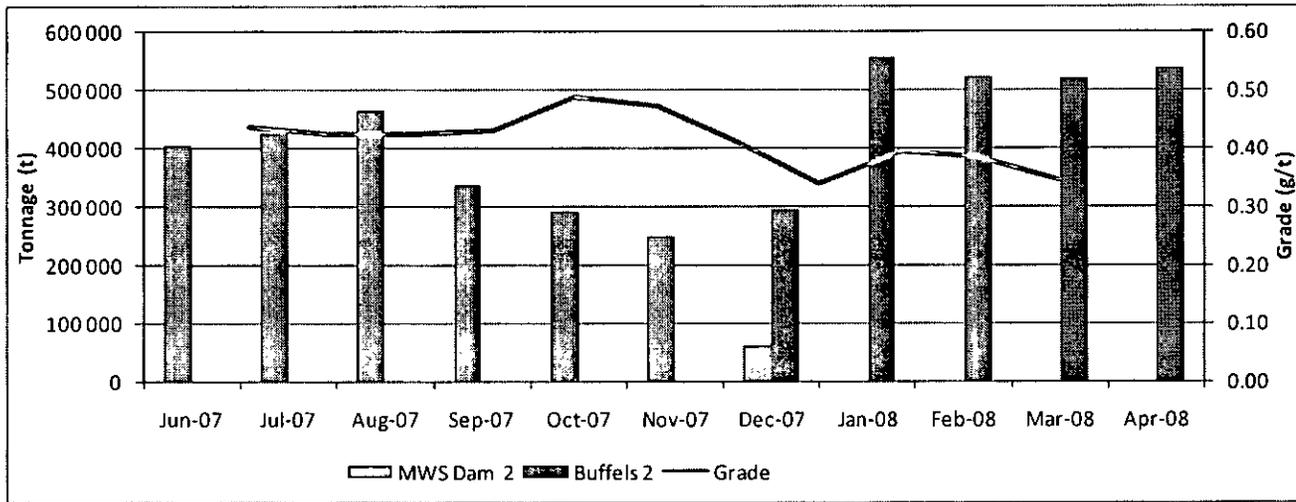

7. Only Domain 2 of the MWS 4 dam has been converted to a Mineral Reserve as the gold grade in Domain 1 is below cut-off.

8. The legal tenure of the NKGE dam is uncertain at present.

ITEM 9 (D) - HISTORICAL PRODUCTION

Details of the production for MWS dam 2 and Buffels 2 dam from June 2007 to March 2008 is illustrated in the figure below:-

Figure 4: Production History of MWS Dam 2 and Buffels dam 2

Notably, the production has not reached the target of 633ktpm as was previously predicted. This can be attributed to problems associated with the start-up of the mining of a new dump and associated plant expansion upgrades. Minxcon expects production to reach the 633ktpm level in the next quarter as a result of the improvement in the mining techniques to cater for unexpected problematic clay material currently being encountered.

The plant is currently running at a rate of 536ktpm being fed by material from the Buffels 2 dam. In the previous report it was estimated that the plant would be running at a capacity of 633ktpm from January 2008, but there have been reclamation issues with the clay material that has been encountered in the tailings dam.

The shortfall can be ascribed to the clay like material that has been encountered in Buffels 2. The clay is harder than the slimes and it floats as it has a lower SG than the slimes. The clay is also clogging the pump station, causing technical difficulties. The following steps have been implemented by FUSA to overcome the problems that have been encountered:-

- The size of the nozzle on the monitor gun has been altered to accommodate the clay, which seems to be more effective in breaking up the harder material;
- A clay shredder and log washer is currently being built to further break up the clay material, which will make it easier to transport;

Due to the anomalous material that is being sent to the plant, projected recoveries have also not been achieved. The following steps have been implemented at the plant to overcome the problems being encountered:-

- Optimization of the flotation;
- Optimization of the high shear reactor efficiency to improve leach kinetics; and
- Optimization of the chemical suite of reagents that are being used. These are being phased in one at a time to study the effects thereof on the recovery achieved.

These improvements are expected to mitigate the issues that have been experienced over the last few months going forward.

ITEM 10 - GEOLOGY

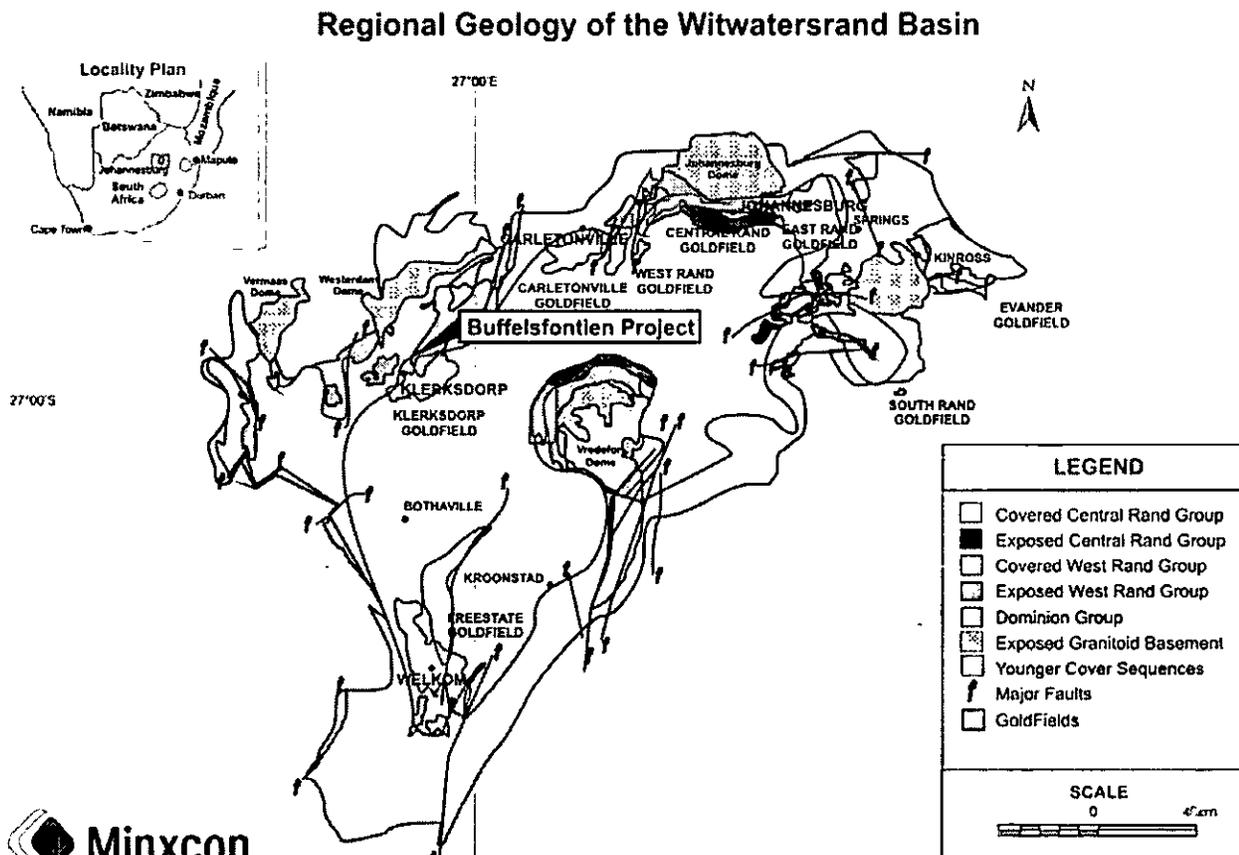

Regional Geology

The Project lies within the Witwatersrand Basin, an Archaean sedimentary basin which was deposited over a protracted time period extending from some 360 Ma between 3,074 and 2,714 Ma (Wilson and Anhaeusser, 1998), whose surface expression is an elongate structure that extends longitudinally for approximately 300km NE-SW by 100km NW-SE.

It contains an approximately 6km thick stratigraphic sequence consisting mainly of quartzites and shales with minor intermittent volcanic units. The first stage of basin development is recorded by rocks of the Dominion Group, composed of fluvial sediments and volcanic rocks. The Witwatersrand Supergroup overlies the Dominion Group and has been subdivided into the lower West Rand Group and the upper Central Rand Group, both of which consist primarily of sandstones, shales, and conglomerates. The Central Rand Group has produced the majority of the gold from the Witwatersrand Basin. The Ventersdorp Supergroup unconformably overlies the Witwatersrand Supergroup and is in turn overlain by the Transvaal and Karoo Sequences.

The differences in the morphology and gold distribution patterns from one reef to the next, and within individual reefs, reflect the different sedimentary processes that prevailed during deposition on erosional surfaces in fluvial and littoral environments. Despite its age, the sedimentary rocks within the Witwatersrand Basin are remarkably well preserved and relatively undeformed. The basin has undergone numerous phases of faulting but has not been subjected to significant metamorphism.

Figure 5: Regional Geology of the Witwatersrand Basin

Source: The Mineral Resources of South Africa

Local Geology

The BGM Underground Mine, as well as the now defunct SGM, are located in the Klerksdorp Goldfield and the mineralization is hosted by the Central Rand Group, the upper unit of the Witwatersrand Supergroup. This unit has produced the majority of the gold from the Witwatersrand Basin, and is composed predominantly of quartzite with subordinate zones of conglomerate and a single argillite horizon, the Booyens Shale Formation. Using the central position of the Booyens Shale, the stratigraphy of the Central Rand Group has been historically subdivided into the lower Johannesburg Subgroup and the upper Turffontein Subgroup.

Mineralized reefs in the Johannesburg Subgroup tend, on average, to be more laterally extensive and more uniform in thickness and gold content. The principal gold-bearing conglomerate packages in the Johannesburg Subgroup are the Main Reef and Bird Reef.

The mineralization at BGM and SGM is hosted by the Johannesburg Subgroup of the Central Group. In the Klerksdorp Goldfield, the Johannesburg Subgroup is represented by a sequence of quartzite's, conglomerates, and quartz wackes, approximately 1,100m thick.

Property Geology

The economic gold and uranium mineralization at BGM and SGM is hosted by the Vaal Reef, an oligomictic, pebbly, quartz arenite reef, deposited approximately 2.8 billion years ago, as well as the Ventersdorp Contact Reef ("VCR") albeit to a far lesser extent, which is also an oligomictic, pebbly quartz arenite reef deposited approximately 2.78 billion years ago (Wilson and Anhaeusser, 1998).

In the North Division (previously the Hartebeestfontein Mine), dips vary from shallow to 45°. The depth of the Vaal Reef varies between 800m and 2,500m due to the displacement by faults and dykes. Structural geological complexity decreases from east to west, as do the gold grades.

In the South Division (BGM Underground Mine), dips average 25°. The structural geology is complex, with fault displacements of 800m to 1,000m. A thrust fault has caused triplication of the reef in the central area of the South Division.

During the past approximately 50 years during which time the BGM has been in operation, vast quantities of reef material have been processed for gold and the tailings from this processing deposited in the 12 surface tailings dams, which form part of this Project.

The three MWS dams, which also form part of this Project, originated from the mining of the conglomerate reefs of the now defunct SGM.

The gold deposits in the Witwatersrand Basin have a primary sedimentary origin and show great lateral continuity throughout the basin. Local discontinuities in mineralization within the reefs are a result of facies variation, ore formation processes, and structural history.

The mineralization planned for exploitation in this Project is the tailings dams generated from operations over the years and from future tailings, provided from the mining operations at the BGM underground mine.

ITEM 11 - DEPOSIT TYPE AND GEOLOGICAL MODELLING

Deposit Type

The material contained in all fifteen of the tailings dams, forming part of this Project, originated from the processing of the conglomerate reefs and waste material that was mined from both the BGM and the SGM underground mines. The material contained in the tailings dams is generally extremely fine, with particles varying in size from -25microns up to -850microns.

The tailings dams differ significantly in size, from approximately 92Mt (Harties 1 dam) to 45,000t contained in the Flanagan dam.

All the deposits are surface deposits.

Geological Modelling

No geological modelling as such was carried out on the tailings dams as they are all generally uniform in shape. The dams were however all surveyed in order to ascertain the volume of material contained in each of the dams. TM Surveyors were contracted to carry out the surveying of the MWS dams and the in-house Simmers Surveyor was commissioned to survey the Buffels and Harties dams.

All the data points (X, Y and Z co-ordinates) were received from the surveyors in digital format, which was imported into the Datamine® geological modelling package. Using these points, as well as information regarding the original surface topography and the borehole drilling logs, 3-Dimensional ("3-D") wireframes were constructed for each of the 14 tailings dams. The only dump that required any type of geological modelling was the MWS 4 dam, which displayed marked differences in both gold and uranium grades through the dam. This dam was therefore separated into two separate domains, namely domain 1, forming the upper portion of the dam, and domain 2, forming the lower 12m of the dam.

ITEM 12 - MINERALIZATION

The gold and uranium contained in the tailings dams was originally associated with the conglomerate reefs that are/were mined at the BGM and SGM underground mines. The material from these mines has been processed over the years for gold, and for a period of time, uranium too.

Since the price of sulphur has escalated to the extent that it has in the recent past, FUSA has opted to purchase and install an "off the shelf" acid plant to produce sulphuric acid to reduce the future costs and secure the supply of acid required for the project.

Pyrite is an iron disulphide (FeS_2) and is often used to produce sulphuric acid. The pyrite will be roasted with excess oxygen to produce sulphur trioxide that forms sulphuric acid when combined with water.

Pyrite occurs naturally in the conglomerate in which the gold and uranium are hosted.

ITEM 13 - EXPLORATION

Exploration at the Project has been limited to the auger drilling of the tailings dams as described in detail in Item 14.

ITEM 14 - DRILLING

All the drilling carried out on the Project has been in the form of vertical auger drilling, using a small mechanised auger drills. All the drilling that was carried out prior to March 2007 is referred to as historical drilling, all drilling carried out between March 2007 and November 2007 is termed recent drilling and all drilling conducted after November 2007 is termed current drilling. These three drilling campaigns will be discussed separately below:-

Historical Drilling

The following table details all the information that is available for the historical drilling that was carried out on the Tailings Dams:-

Table 10: Summary of Historical Drilling

Dam	No of BHs Drilled	Comments	Ave BH Spacing (m)
Harties 1	6	Location of CH borehole unknown.	716
Harties 2	6	Location of CH borehole unknown.	597
Harties 5	6	Location of CH borehole unknown.	663
Harties 6	6	Location of CH borehole unknown.	211
Harties 7	unknown	No historical drilling information available.	n/a
Buffels 2	7	CH borehole was scaled off plan	270
Buffels 3	6	CH borehole was scaled off plan	370
Buffels 4	6	CH borehole was scaled off plan	350
Buffels 5	7	Includes CH borehole. Location of BH 6 not found	570
Flanagan	unknown	No information regarding historical drilling available	n/a
Ellaton	24	All locations unknown	n/a
NKGE	9	All locations unknown	n/a
MWS 2	61	All Locations Known	Not Modelled
MWS 4	45	All Locations Known	125
MWS 5	56	All Locations Known. Drilled between May 2000 and Feb 2007.	200
TOTAL	245	Only 211 of these boreholes were valid and used.	388

Note: CH refers to a Central Hole that was drilled.

All the boreholes were drilled using auger drills by Dump and Dune Drillers as well as Gold Mine Sand and Slime Dam Drillers ("GMSSDD"), two professional dump drilling companies, and the assaying of the samples was carried out by Performance Laboratories (Pty) Ltd ("Performance Labs"). Performance Labs are located in Randfontein, Gauteng Province, South Africa and they are SANAS accredited (Faculty Accreditation Number T0265).

Performance Labs are independent of First Uranium. The facility complies with the general requirements of ISO/IEC 17025:2005 and the accreditation is valid until February 2010 (Appendix 2). Performance Labs are SANAS accredited for the assaying of gold via the fire assay technique. It should be noted that they are NOT yet accredited for uranium assaying.

The auger drilling machines extracted 50mm diameter samples at 1.5m intervals. All the drilling took place vertically. The material was placed into plastic sampling bags and tagged with original sample numbers for each sample. The samples were sent through to Performance Labs for assaying and the transportation of the samples was undertaken by a member of the drilling team.

Gold was analysed via the standard fire assay methodology. The detection limit for gold is 0.02g/t au. Uranium was analysed via the Aztec method of estimation, using an X-ray instrument. The detection limit for uranium is 0.01kg/t U₃O₈.

No information was available regarding the use of standards and blanks in-between the samples that were sent to the labs. Therefore it is assumed that this practice was not employed during the Historical Drilling exercise. Internal QA/QC procedures at the Performance Lab included assaying one duplicate sample and one standard sample from each batch of 20 samples.

Although historical boreholes were drilled on the Ellaton and NKGE dams, the location of the boreholes were not available and therefore the information could not be utilised in the geological modelling and Mineral Resource estimation exercise.

Recent Drilling

The recent drilling on the dams was carried out by Dump and Dune as well as Gold Mine Sand and Slimes Dump Drillers (“GMSSDD”). Normal auger drilling (50mm at 1.5m increments) was undertaken and the samples were bagged and individually numbered using standard procedures.

Samples were taken to Performance Labs for analysis and the results of the assaying were emailed through to Mr. Iain Davidson, an independent consultant to First Uranium, for compilation. Minxcon received the assay results in their original format from Performance Labs and sorted the data so that it could be utilised in Datamine®. The following table summarises the recent borehole drilling that was undertaken on the dams:-

Table 11: Summary of Recent Borehole Information

Dam	No of BHs Drilled	Ave Depth of BHs (m)
Harties 1	6	45.8
Harties 2	6	43.5
Harties 5	6	23.2
Harties 6	11	19.6
Harties 7	6	6
Buffels 2	-	-
Buffels 3	-	-
Buffels 4	-	-
Buffels 5	6	23.5
MWS 2	-	-
MWS 4	-	-
MWS 5	-	-
Flanagan	2	10.5
Ellaton	13	9.7
NKGE	10	13.3
TOTAL	66	21.6

Duplicate samples were sent to the Mintek Analytical Services Division (“Mintek”), located in Randburg, Gauteng for Gold and Uranium analyses. Mintek is SANAS accredited (Faculty Accreditation Number T0042) and are independent of First Uranium. The facility complies with the general requirements of ISO/IEC 17025:2005 and the accreditation is valid until January 2008. Gold was analysed via the standard fire assay methodology. The detection limit for gold is 0.02g/t au. Uranium was analysed via the Aztec method of estimation, using an X-ray instrument. The detection limit for uranium is 0.01kg/t U₃O₈.

Mintek are SANAS accredited for the assaying of gold via the fire assay technique. It should be noted that they are NOT yet accredited for uranium assaying.

All the drilling took place vertically. The location of the borehole collars drilled for each of the tailings dams, as well as the wireframes that were constructed using the survey data, are illustrated on Figure 6 to Figure 12 overleaf. It should be noted that in the diagrams, “old BH’s” refer to all Historical Drilling and “new BH’s” refers to the Current Drilling that has taken place. No diagram illustrating the location of the boreholes or the wireframe was constructed for MWS 2 dam as it is virtually mined out.

Current Drilling

Since November 2007, 18 new auger boreholes (named BH 7 to BH 24) were drilled on Buffels 2 dam. The methodology of drilling and sampling did not change from the previous drilling exercise.

All the boreholes were drilled using auger drillers by GMSSD during November 2007, a professional dump drilling company, and the assaying of the samples was carried out by Performance Labs.

The auger drilling machine extracted 50mm diameter samples at 1.5m intervals. All the drilling took place vertically. The material was placed into plastic sampling bags and tagged with original sample numbers for each sample. The samples were sent through to Performance Labs for assaying and the transportation of the samples was undertaken by a member of the drilling team.

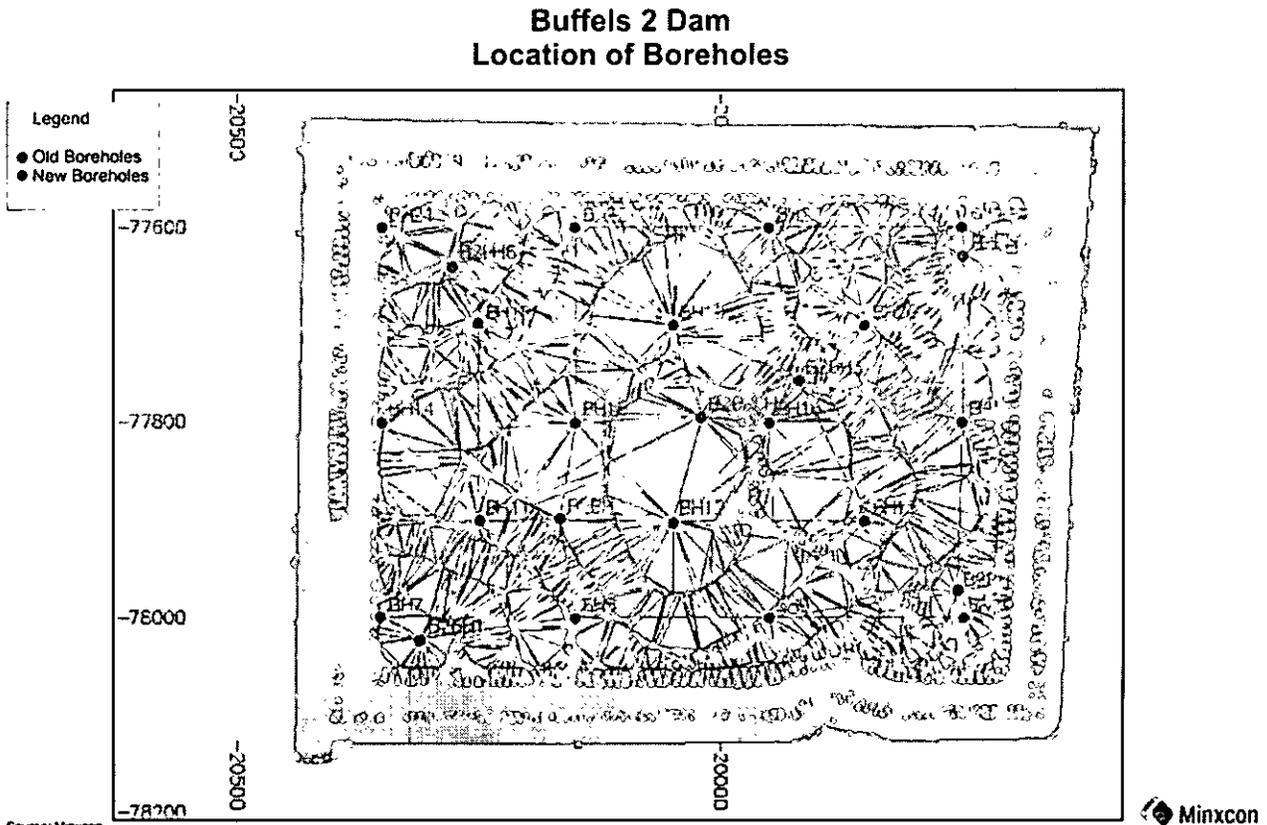

Gold was analysed via the standard fire assay methodology. The detection limit for gold is 0.02g/t au. Uranium was analysed via the Aztec method of estimation, using an X-ray instrument. The detection limit for uranium is 0.01kg/t U₃O₈.

Internal QA/QC procedures at the Performance Lab included assaying one duplicate sample and one standard sample from each batch of 20 samples.

The results of the assaying were emailed through to Mr. Iain Davidson, an independent consultant to First Uranium, for compilation. Minxcon received the assay results in their original format from Performance Labs and sorted the data so that it could be utilised in Datamine®.

All the drilling took place vertically. The location of the borehole collars, as well as the wireframes that were constructed using the survey data, are illustrated in the diagram below.

Figure 13: Buffels Dams 2, Wireframe and Location of BH's

ITEM 15 - SAMPLING METHOD AND APPROACH

ITEM 15 (A) - SAMPLING METHODS

Sampling was carried out after each 1.5m drill rod was pulled out of the tailings dam. The material is placed directly into a plastic sampling bag from the drill rod and the drill rod is cleaned after each sample is taken. The sample bag is numbered with an individual sample number and sealed using a stapler.

The location of the sampling is illustrated in Figure 6 to Figure 12, as all sampling took place in the boreholes. Sampling is evenly spaced at 1.5m increments down the boreholes, from the top of the borehole usually to the floor of the dam (if conditions allowed). Spacing of the boreholes across the dams differs from dam to dam. The following table details the average borehole spacing for each of the dams:-

Table 12: Borehole Spacing of all Boreholes used in Mineral Resource Estimation

Dam Name	Borehole spacing in X and Y Direction (m)	Average distance between Boreholes (m)
Harties 1	400 x 300	350
Harties 2	300 x 250	250
Harties 5	320 x 250	275
Harties 6	200 x 140	179
Harties 7	160 x 150	150
Buffels 2	200 x 140	180
Buffels 3	250 x 400	370
Buffels 4	400 x 215	350
Buffels 5	250 x 350	320
Flanagan	Not Modelled – Only 2 BH's	Not Modelled – Only 2 BH's
Ellaton	70 x 70	60
NKGE	70 x 70 & 40 x 50	70 & 40
MWS 2	Not Modelled – Almost Depleted	Not Modelled – Almost Depleted
MWS 4	150 x 100	125
MWS 5	140 x 138 & 300 x 375	200

Notes: NKGE has two borehole populations or groupings and therefore two borehole spacing's have been included
MWS 5 - the (300 x 375) area has no infill drilling - Relates to area classified as an Inferred Resource.

The total number of samples used for the estimation of the Mineral Resources is illustrated in the table below:-

Table 13: Data used for the Modelling and Estimation of the Dams

Dam	No of BH's	No of Data Points (Uranium)	No of Data Points (Gold)
Harties 1	11	354	355
Harties 2	11	319	320
Harties 5	11	186	187
Harties 6	16	209	209
Harties 7	6	25	25
Buffels 2	18	488	488
Buffels 3	6	147	147
Buffels 4	6	156	156
Buffels 5	12	227	227
MWS 2	61	NA	NA
MWS 4 (Dom 1)	45	271	266
MWS 4 (Dom 2)	45	434	426
MWS 5	56	533	533
Flanagan	2	14	14
Ellaton	13	206	206
NGKE	10	170	171

The tailings dams are scattered over an area that stretches approximately 13.5km north-south and 14km east-west. The footprints of the fifteen tailings dams cover an area of approximately 1,100ha.

ITEM 15 (B) - SAMPLING RECOVERY

Recovery of the material was generally very high and only samples where the recovery is good are used. However, if the tailings material is wet, recoveries are low and the drilling of the borehole is stopped. It is for this reason that not all of the boreholes reach the floor of the dam. These boreholes are utilised up to and including the last valid sample where recovery was acceptable.

ITEM 15 (C) - SAMPLING QUALITY AND REPRESENTATIVENESS

The core sampling was conducted by Dump and Dune and GMSSD, and both companies have a long history of drilling and sampling sand and tailings dams. A representative of MWS carried out regular checks of the sampling that was being conducted and no problems were encountered. Therefore, there is no reason to believe that the sample quality was not to standard and the sampling is considered representative.

ITEM 15 (D) - SAMPLING INTERVAL

As the entire tailings dam will be mined, samples need to be taken through the entire length of the borehole, up to and including a sample of the soil intersection (if reached). Samples were taken at 1.5m downhole intervals, each sample weighing approximately 3kg. This sampling interval is the standard interval used for this type of sampling.

ITEM 15 (E) - SUMMARY OF SAMPLE COMPOSITES, VALUES AND TRUE WIDTHS

The samples are not composited as the sample lengths are all uniform. The boreholes are drilled vertically; therefore no true widths need to be calculated.

ITEM 16- SAMPLE PREPARATION, ANALYSIS AND SECURITY

ITEM 16 (A) - INDEPENDENCE OF SAMPLE PREPARATION

Core samples were prepared by a independent drilling companies namely Dump and Dune or GMSSD. The sampling was overseen by a representative of MWS in order to ensure that no contamination took place.

ITEM 16 (B) - SAMPLE PREPARATION METHOD, ASSAYING & ANALYTICAL PROCEDURES

All the auger drill samples were prepared at Performance Labs in Johannesburg, by drying and pressing through a 1.0mm screen to break up lumps.

Uranium Analysis by Aztec Method of Assaying

TREATMENT OF SAMPLES IN THE SAMPLE PREPARATION SECTION, DETAILING RECEIVING, CRUSHING, PULVERISING AND READING OF SAMPLES.

- Samples received in plastic bags are opened and tipped into clean sample dishes; the ticket for each sample is placed in the sample dish.
- The samples are dried, if necessary, samples are sorted numerically and checked according to docket.
- Samples are then crushed using a 10" x 6" jaw crusher to < 3mm.

- A vertical spindle pulveriser is used to mill the sample to 85% -75microns, mixed in a cocktail and placed together with the sample ticket in a sample cup. Sequence of sample numbers are again checked and placed on sample trays (twenty samples to a tray).
- Trays are then submitted to Aztec for preparation section.
- Sample sequence is checked according to worksheets and Aztec tubes are filled in sequential order and placed in magazines for analysis.
- Filled magazines are loaded and logged into Aztec analyser, samples are read at constant time (100 seconds) in duplicate and results are printed and recorded on worksheets.
- Operator checks that all the values are available before accepting the worksheet as complete.
- Results are then transmitted or reported via e-mail to the various clients.
- Results reported as U_3O_8 Kg/t. No correction is needed for the interfering elements.
- Standards are read after each batch of 20 samples.

INSTRUMENT USED FOR ANALYSIS

- The Aztec is an X-ray instrument using a Tungsten tube operating at 142Kv and 4.0mAmps.
- The detectors are made from high purity Germanium. It is an energy dispersive technique and uses high energy K-X -rays.
- It responds to the K-alpha energy level.
- Instrument is calibrated using pure metals as well as certified reference standards.
- Background information is collected and updated between each sample and internal standards every 300 seconds.
- Detection limit is 0.01Kg/t U_3O_8 .

Gold Analysis by Fire Assay and Gravimetric Finnish

Analysis for gold was by standard fire assay procedures, using a 30g or 50g sample with a gravimetric finish. The detection limit is 0.02 g/t gold, with the practical range of the method from 0.08 to 3 027g/t gold (Au). The method-reporting limit is 0.08g/t gold (Au).

METHOD

Essentially, the method consists of two consecutive pyrochemical separations, followed by a chemical separation. Initially, the finely ground sample is fused with a suitable flux under reducing conditions. The flux combines with the gangue to form a fluid slag, and the litharge in the flux is reduced to minute globules of lead. The rain of lead globules, falling through the molten mass, collects the particles of precious metals and coalesces into a button at the bottom of the crucible. As silver is a better collector of gold than lead and facilitates the easier handling of prills, it is employed in conjunction with the lead as a co-collector. Upon cooling, the slag solidifies, and is separated from the lead button containing the gold and silver.

Subsequently, the lead is removed by oxidising fusion, where the litharge thus formed, wets the inner surface of the hot, porous cupel and is absorbed (cupellation). The molten precious metals, are not absorbed because of their high surface tension, and because they do not form oxides. They remain on the concave bed of the cupel in the form of a bead, called a prill. The silver is removed from the prill by acid dissolution (parting). The black, spongy gold thus obtained is annealed to a coherent, malleable prill of the classical golden yellow colour, making the gold available for further measurement. Results were reported by electronic spreadsheets.

Performance labs are certified by the South African National Accreditation System, an affiliate of the Standards Council of Canada. First Uranium employees or consultants were not engaged in the sample preparation or analyses. Performance Labs are SANAS accredited for the assaying of gold via the fire assay technique (see Appendix 2).

Internal Quality Assurance/Quality Control (QA/QC) procedures at Performance Labs included assaying one duplicate sample and one standard sample from each batch of 20 samples.

ITEM 16 (C) - QUALITY CONTROL

Internal QA/QC procedures at Performance Labs included assaying one duplicate sample and one standard sample from each batch of 20 samples and the correlation here. The following graphs illustrate the results obtained by Performance Labs on the duplicates and standards assayed:-

Figure 14: Performance Labs QAQC Results (Standards used for low grade material) (Buffels 2)

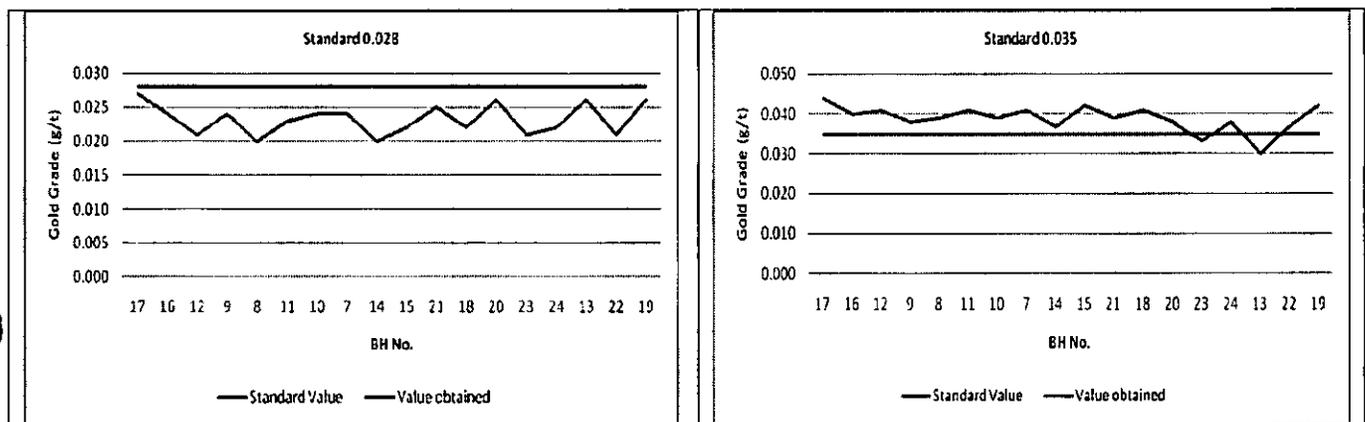

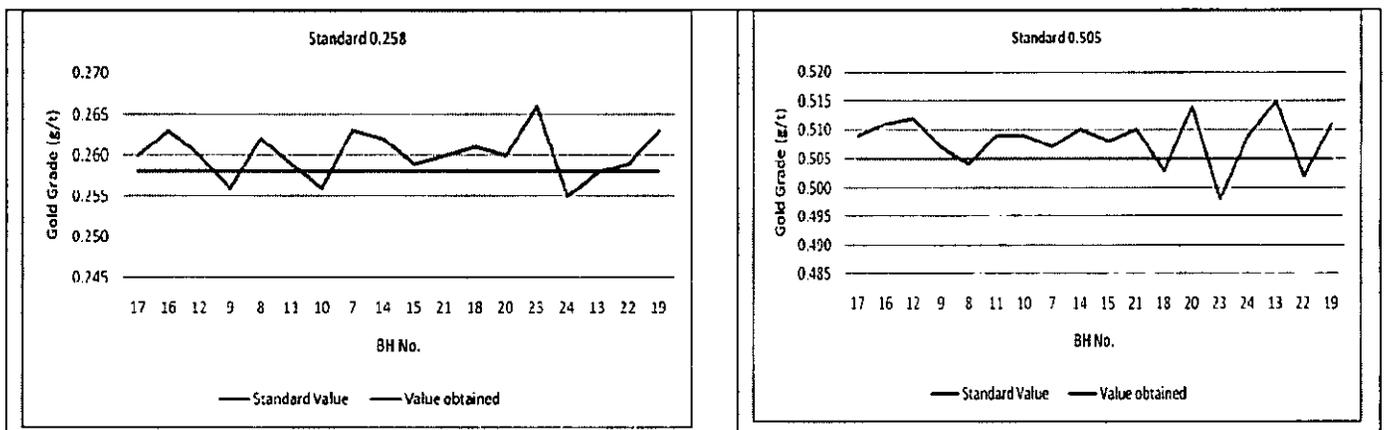

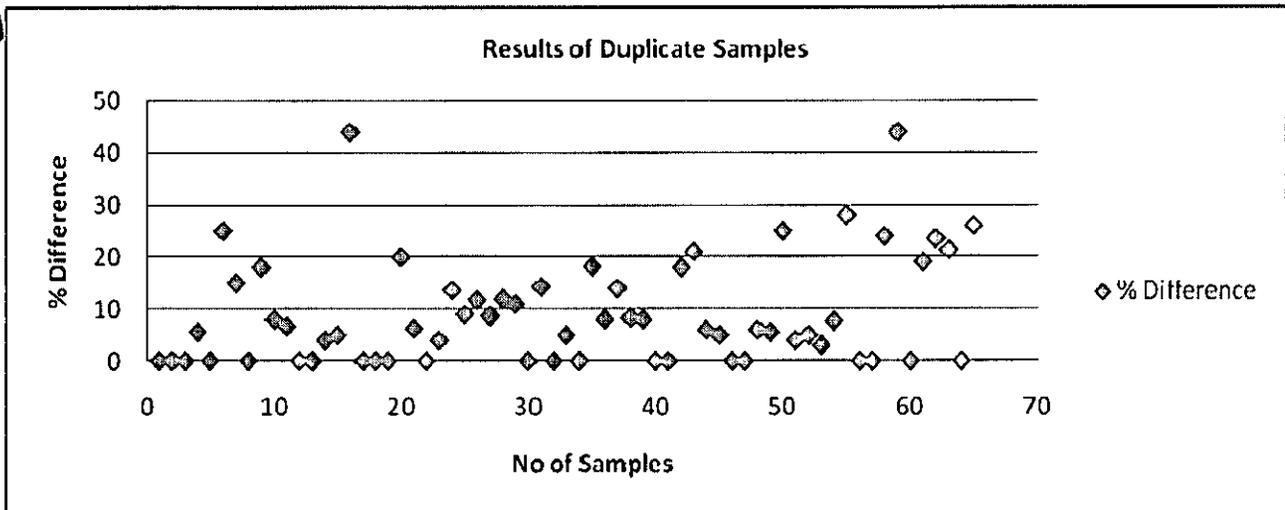

Figure 15: Performance Labs QAQC Results (High Grade Standards)

Each borehole had four standards included, two low standards and two high standards. It is clear that the analysis of the lowest standard showed that lab was generally undervalued, which may have an influence on the lower grade samples.

A total of 65 samples were split and both samples analysed for gold. The following graph illustrates the results, showing the % difference between the two samples:-

Figure 16: Performance Labs QAQC Results (Duplicates) (Buffels 2)

ITEM 16 (D) - ADEQUACY OF SAMPLE PREPARATION

All sampling was conducted to strict industry standards. Minxcon also carried out an independent audit on the sampling procedures that were carried out by the drillers, who were carrying out the sampling. No material issues were identified and Minxcon is satisfied that the sampling carried out is adequate for this type of deposit, the sample preparation and analysis were done according to standard industry practice and no breaches in security were detected.

ITEM 17- DATA VERIFICATION

ITEM 17 (A) - QUALITY CONTROL MEASURES AND DATA VERIFICATION

With regard to the Buffels and Harties dams, First Uranium relied on the QA/QC program carried out by Performance Labs, as described in the previous Item. Minxcon did not carry out any independent sampling due to the fact that Minxcon is familiar with Performance Labs and considers their QA/QC processes to be compliant with both SAMREC and NI 43-101 Codes.

The MWS 4 and 5 dams had verification holes drilled by Dump and Dune in April 2007. The grade differences obtained from the sampling of the verification boreholes was less than 10%, which was considered to be acceptable.

With regard to the Buffels 2 dam, First Uranium relied on the QA/QC program carried out by Performance Labs, as described in the previous Item. Minxcon did not carry out any independent sampling due to the fact that Minxcon is familiar with Performance Labs and considers their QA/QC processes to be compliant with both NI 43-101 and SAMREC Codes.

All the electronic data was analysed during the estimation process and any outliers were excluded from the database.

ITEM 17 (B) - INDEPENDENCE OF DATA VERIFICATION

Performance Labs carried out independent verification of the assaying results. Minxcon also carried out independent verification of the assay results, in the form of removing any outliers from the database.

ITEM 17 (C) - NATURE AND LIMITATIONS OF DATA VERIFICATION

Minxcon did not carry out independent drilling or sampling of the tailings dams. The data verification conducted by the laboratory was, in Minxcon's opinion, sufficient for the information to be used in the estimation of the Mineral Resources.

ITEM 17(D) - COMMENT ON VERIFICATION FAILURE

The failure for Minxcon to independently verify all the data was not deemed necessary for the Mineral Resource estimation process as Minxcon considered that sufficient steps had been taken by independent sources to verify the data.

ITEM 18- ADJACENT PROPERTIES

There are no adjacent properties to the Project as defined by NI43-101.

ITEM 19- MINERAL PROCESSING AND METALLURGICAL TESTING

In September 2007, First Uranium's Board of Directors approved the following expansion projects:-

- **Module 1 - Completion Due end January 2008** - Expansion of the capacity of the gold plant from 600,000tpm to process 633,000tpm;
- **Module 2 - Completion Due December 2008** -Further expansion of the gold plant to increase it's capacity to 1,283,000tpm and the construction of the first two modules of the Project's uranium plant;
- **Module 3 - Completion Due December 2009** - Further expansion of the gold plant to increase it's capacity to 1,933,000tpm and the construction of the third module of the Project's uranium plant.

Module 1 was completed in January 2008 and Module 2 and 3 are expected to be completed on time, as illustrated above.

Mineral Processing (Module 1)

Mineral processing at the MWS plant has been taking place for the past 4 years, whilst the MWS 2 dam was being processed.

The current gold plant will be upgraded to ensure it can accommodate the 633,000tpm that are planned for processing. The gold plant, as it has been designed, can process on average 943tph at a density of 1.43t/m³ and 94% availability and utilization. This translates to an average of 633,000 tpm, taking into account that the 28, 30 and 31 day months will achieve 581,944tpm, 624,492tpm and 645,766tpm respectively.

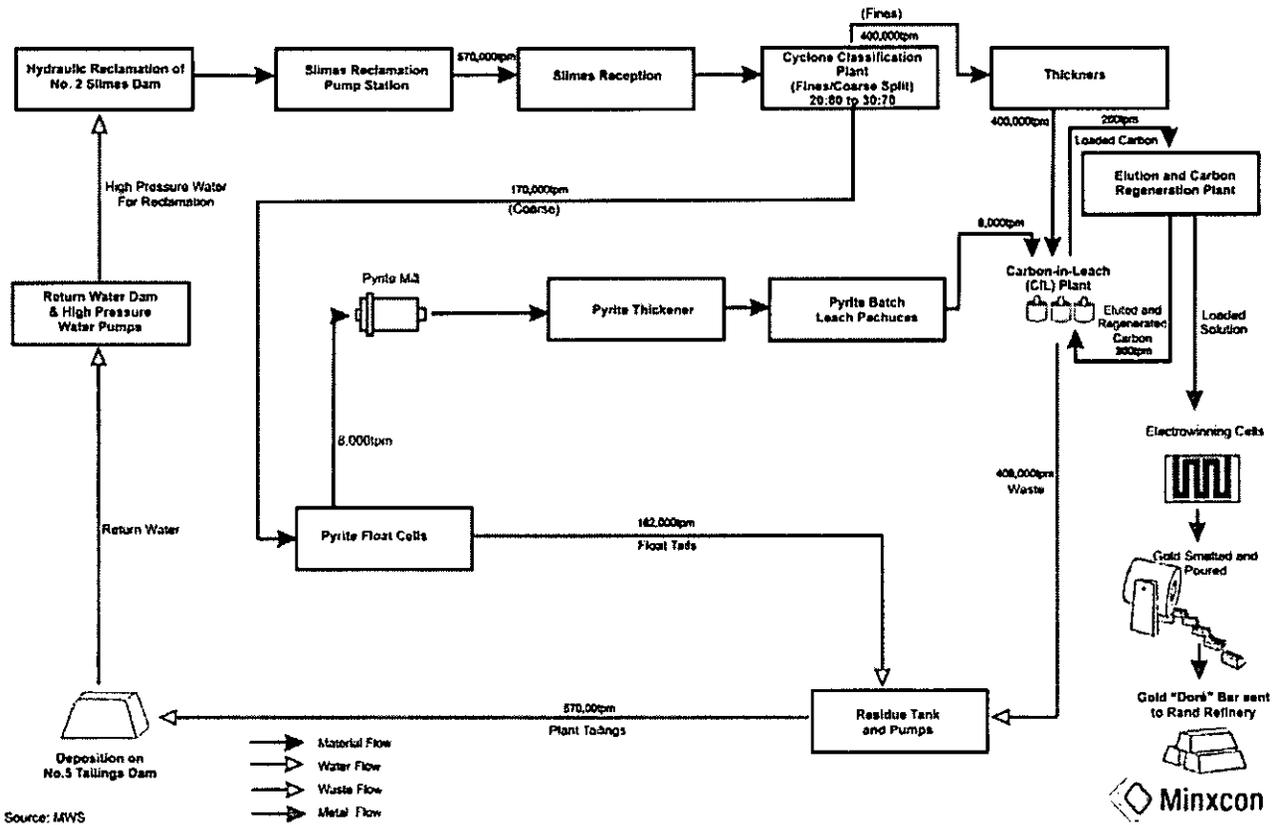

Although the current MWS plant circuit was designed for 570,000tpm, the plant has previously achieved 623,000tpm (May 2005). The reason for this is that the CIL circuit can comfortably achieve a rate of 525,000tpm. The fines/coarse split is of the order of 70-80/20-30, thus a total reclaimed tonnage of 650,000 will split 520,000tpm to the thickeners and CIL, and 130,000tpm to the float. Float tails go directly to the residue tank together with the CIL residue.

Phase 1B and 2 will design the CIL circuits to achieve rates of 650,000tpm through the CIL, as there will be no splits within the circuits.

The following diagram illustrates the flow of material through the current plant:-

Figure 17: Schematic Process Flow Diagram (Current)

Schematic Process Flow Diagram

Metallurgical Test Work (for Module 2 and 3)

There have been two phases of uranium and gold recovery testing undertaken for First Uranium by Mintek. The first was completed in mid-2006 and the second in May 2007. The viability was based upon the Phase 1 testing. A summary of the second phase is being reported whilst both phases were used to decide upon the optimal processing method that will be employed.

PHASE 1 MINTEK TESTWORK - GOLD

Bulk samples were prepared by Performance Labs and, after their analyses, Mintek was retained to carry out the metallurgical test work. The following is an extract from Mintek's reports titled "Laboratory Gold and Uranium Flotation Scoping Studies on Gold Slimes Dams Material" dated 23 May 2006, and "Scoping Studies on the Leaching of the Buffelsfontein Concentrates" dated 28 June 2006. Note that, through this section, Mintek have reported results as U and not U₃O₈ and 1% U is equal to 1.18% U₃O₈. The following table details the results of the Diagnostic Leach test:-

Table 14: Diagnostic Leach Test Results (Phase 1 of Testwork)

Association	Gold Grade (g/t)	Gold Distribution (%)
Gold available to direct cyanidation	0.184	51.11
Gold that is pre=robbed (CIL)	0.021	5.73
Gold associated with HCl digestible minerals	0.074	20.49
Gold associated with HNO ₃ digestible minerals	0.036	10.13
Gold associated with carbonaceous matter	0.006	1.76
Gold associated with quartz (balance)	0.039	10.78
Total	0.360	100.00

The sample was treated "as received" and had a head grade of 0.360g/t Au. Of the total contained gold, 51.11% (0.184 g/t) was extracted by direct cyanidation.

CIL dissolution indicated that 5.73% (0.021 g/t) of the contained gold was preg-robbed by constituents occurring in the ore. Some 56.84% (0.205 g/t) of the gold is therefore expected to be recoverable by carbon-in-leach ("CIL") processing.

The HCl digestion indicated that 20.49% (0.074 g/t) of the contained gold was associated with HCl digestible minerals (calcite, pyrrhotite, etc.), while 10.13% (0.036g/t) was associated with the more stable sulphides, digested with HNO₃ (e.g., pyrite, sulphides, arsenopyrite, etc.). Of the remaining gold, 1.76% (0.006 g/t) was found to be associated with carbonaceous constituents in the ore and 10.78% (0.039 g/t) of the gold is assumed to be occluded in gangue constituents.

After all the test work was completed, it was determined that the gold recovery process would be by CIL.

PHASE 1 MINTEK TESTWORK - URANIUM

After determining that the gold recovery process would be by CIL, test work was started to determine a recovery route for the uranium.

Two floatation strategies were explored. The first aimed at flotation of the sulphides using xanthate collectors, the second aimed at uranium minerals using fatty acid collectors. The latter provided high mass pulls, with high reagent costs. Neither process produced high recoveries with acceptable concentrate grades. However, acceptable concentrate grades were achieved by sacrificing recovery. A preliminary financial optimization was completed, which suggested that a mass pull of between 10% and 20% would be optimal. Financial modeling indicates that the most effective mass pull is 13% where the relative product extraction versus associated operating cost is optimal.

PHASE 2 MINTEK TEST WORK

Equal quantities (800kg each) of material from Buffels Dams 2, 3 and 4 were delivered to Mintek and blended into a composite. The composite was subjected to:-

- flotation tests for the recovery of uranium including a mini plant test run,
- uranium leach tests on the flotation concentrate (atmospheric and pressure leaching); and
- gold diagnostic leach and CIL test work.

The flotation tests indicated that a mass pull of 15% was required to achieve a U grade of 200ppm at recovery of approximately 37%. The mini mill plant was able to produce a 210kg bulk concentrate with a grade of 239.7ppm uranium.

With pressure leaching extractions of 88% to 91% were achieved after two hours of leaching.

Bottle roll leach tests on material that was composed of 84% flotation tails and 16% uranium leaching tails generated gold dissolution of 50% to 70% as a direct CIL while acid pretreatment increased the dissolution to 58.1% to 74.2%.

SUMMARY OF METALLURGICAL TEST WORK AND PROCESS DESIGN

The following is an extract from the Metallicon Process Consulting (Pty) Ltd Report, compiled by the Managing Director Mr. Michael Valenta (Pr.Eng (Int)), addressed to First Uranium:-

"In a previous report it was recommended that the test work conducted in Phase 2 of the test programme be repeated to confirm the findings. The major reason for the recommendation was to verify the source of the material tested

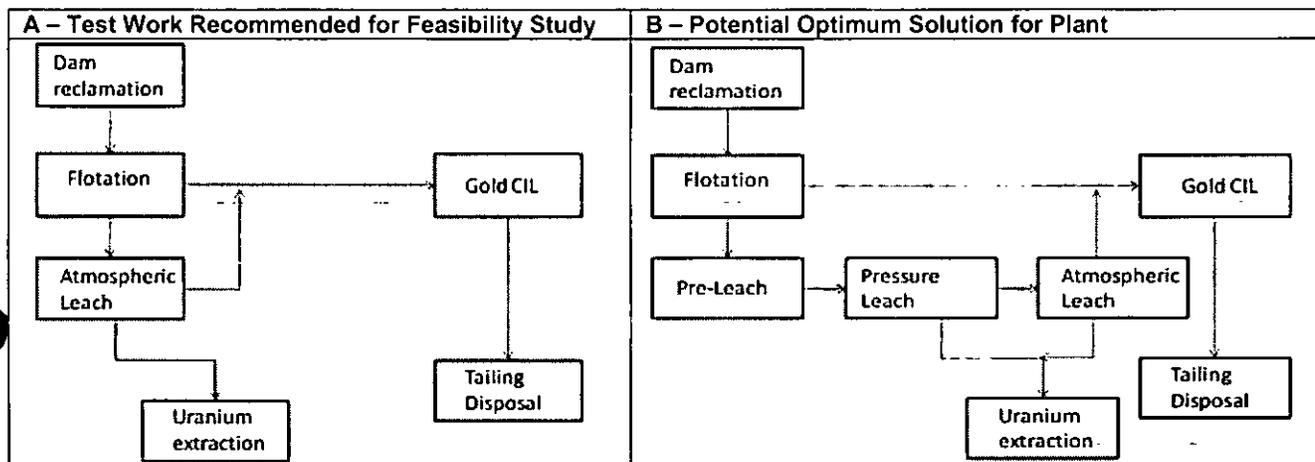

Sample was taken from the dams by a reputable company (Dump and Dune) that have an acceptable sampling methodology and procedure. I am therefore satisfied that the necessary attention was given to acquiring a representative sample of the dams. The test work was conducted at Mintek and yielded similar flotation results as were achieved in the previous test programme with regard grade and recovery.

A bulk sample of flotation concentrate was produced on a "pilot plant" for the subsequent leach test work. I am therefore of the opinion that the flotation test work is adequate for a Feasibility Study. Batch atmospheric leach tests results confirmed the original test work results and a subsequent bulk leach product was produced for further test work on the Uranium extraction process. The atmospheric leach has proven to be a viable alternative with a Uranium recovery of 77% over the leach circuit. An added benefit of the introduction of an atmospheric Uranium leach is an increase in the Gold recovery in the CIL circuit from 56% to 65%. In my opinion the amount of test work, and the results and reproducibility of the atmospheric leach test work are adequate for a Feasibility Study.

Pressure leach test work has yielded promising results with Uranium recoveries in excess of 90% and Gold recoveries in the order of 74% over the leach circuit. These results are significantly higher than those achieved for the atmospheric leach. The pressure leach results have confirmed the findings of the previous testwork; however the testwork has not been reproducible. More test work is being planned to increase the confidence in the results and from that generate an optimum flow diagram and confirm the process design criteria. The pressure leach test work has identified the possible combination of pressure and atmospheric leach whereby the pressure leach is used to also generate acid for the atmospheric leach. This requires further test work to identify the optimum split between the pressure leach and atmospheric leach, and the possible introduction of a pre-leach step ahead of the pressure leach to optimize the use of the resultant acid being produced.

Further information is also required to describe the process design criteria for ancillary process equipment around the pressure leach e.g. the oxygen plant and for that reason more testwork is required. I would certainly continue with the pressure leach as an option and am of the opinion that the information is adequate for a Pre-Feasibility study. More work must be conducted to generate sufficient information for a Feasibility study. I would therefore recommend the Feasibility study to include the process steps illustrated in Figure 18 (Part A). I have studied the proposed test programme recommended by the consultants and feel that the necessary information will be generated from the work to add the pressure leach processing route to the Feasibility study. From the initial results it appears that the circuit illustrated in Figure 18 (Part B) may be the optimum solution for the plant."

Figure 18: Recommended Test Work

Source: Metallicon

SUMMARY OF RECOVERIES

The effect of the revised test work has led First Uranium to implement an Atmospheric Leach, followed by Pressure Leach process to the uranium plant. The model assumptions are as follows:-

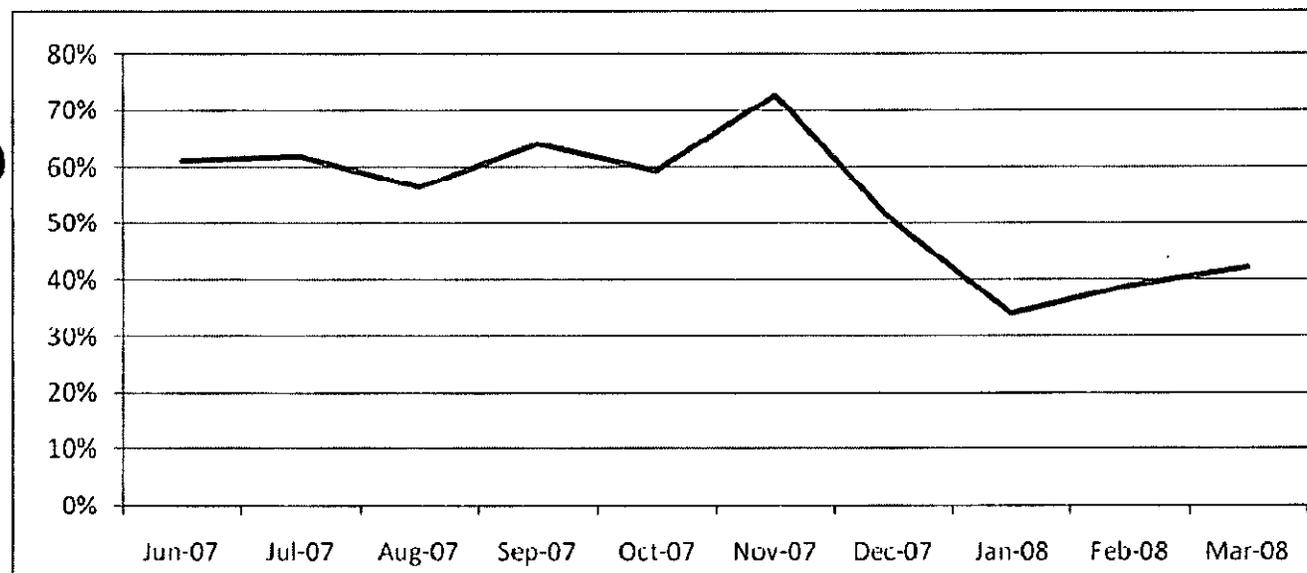

Table 15: Summary of Recoveries (May 2007 vs. November 2007)

Recovery	May 2007 (as was)			November 2007 (as is)		
	Pre Nov '08	Post Nov '08	Post Nov '09	Pre Nov '08	Post Nov '08	Post Nov '09
Au Recovery - CIL only	52%	-	-	52%	-	-
Au Recovery - Atmospheric Leach	-	-	-	-	58%	-
Au Recovery - Pressure Leach	-	68%	68%	-	-	68%
Float Recovery	-	30%	30%	36.8%	36.8%	36.8%
U ₃ O ₈ Recovery - Atmospheric Leach	-	-	-	-	75%	-
U ₃ O ₈ Recovery - Pressure Leach	-	90%	90%	-	-	90%
Effective Uranium - Recovery	-	27%	27%	-	28%	33%

The average LOM gold recovery is 66% and the average LOM uranium recovery is 33%.

The following graph illustrates the actual gold recoveries that are being achieved at the current gold plant:-

Figure 19: Gold Recoveries (%)

Notes:

1. Jun-07 until Nov-07, treating MWS dam2.
2. Dec-07, plant feed from different sources; 140639 t from Buffels dam2; 61772 t from MWS dam2; 91941 t from MWS dam4
3. From Jan-08 onwards, only Buffels dam2 reclaimed

The following plant upgrades have also taken place recently in order to mitigate the low recoveries that are being obtained:-

- Fill blast installed;
- Modifications to float plant;
- Feed pump rates reduced;
- Reagent testwork underway;
- Plant sampling frequency has been doubled;
- Solution spillage rerouted to middle of CIL circuit;
- Security procedures upgraded;
- Electro-winning cleanup doubled (acid treatment of cathodes);

- Analysis of recent increase in plant feed and soluble gold being interrogated; and
- Ongoing analysis and inputs from D Clemente (Minxcon) and H Bartlett.

ITEM 20- MINERAL RESOURCES AND MINERAL RESERVES

The surface Mineral Resources comprise 14 tailings dams containing approximately 356Mt on the property as a result of processing mineralization from the Buffelsfontein, Hartebeestfontein, and Stilfontein underground mines. The tonnage is based on the independent assessment of the Mineral Resources that was carried out by Minxcon during 2008.

ITEM 20 (A) - MINERAL RESOURCE AND MINERAL RESERVE REPORTING SYSTEM

All Mineral Resources and Mineral Reserves, that have been reported herein, are compliant with the specifications embodied in NI 43 101 Code as well as the SAMREC Code.

ITEM 20 (B) - MINERAL RESOURCE AND MINERAL RESERVE CATEGORIES

Mineral Resources have been reported separately, as per NI43-101 and the SAMREC Code, as:-

- Measured Resources;
- Indicated Resources; and
- Inferred Resources.

Mineral Reserves have been reported separately, as per NI43-101 and the SAMREC Code as

- Proven Reserves; and
- Provable Reserves.

All Mineral Resources are quoted as inclusive of Mineral Reserves.

ITEM 20 (C) - INFERRED RESOURCES

Inferred Resources have been reported upon, but have been reported on separately and have not been incorporated with the Measured and Indicated Mineral Resources.

ITEM 20 (D) - RELATIONSHIP OF THE QUALIFIED PERSON TO ISSUER

Minxcon is an independent advisory company. Its consultants have had extensive experience in preparing technical and economic advisors' and valuation reports for mining and exploration companies. Neither Minxcon nor its staff have any interest capable of affecting its ability to give a fair opinion, and will not receive any pecuniary or other benefits in connection with this assignment, other than normal consulting fees. Minxcon independently estimated the Mineral Resources and Mineral Reserves disclosed in this report.

ITEM 20 (E) - DETAILED MINERAL RESOURCE AND MINERAL RESERVE TABULATION

The Mineral Resources and Mineral Reserves for the Project are detailed in the sections below. This report was compiled in accordance with the requirements of NI 43-101.

Mineral Resources

The Mineral Resources detailed in the table overleaf are effective as at 31 March 2008, as they take into account the fact that MWS 2 was mined out by this time.

Table 16: Mineral Resource Estimates (31 March 2008)

Surface			Tonnes		Gold		Uranium		
Category	Place	Dam	Mt	Aug/t	Au('000oz)	Au tonnes	U ₃ O ₈ kg/t	U ₃ O ₈ Mib	U ₃ O ₈ tonnes
Measured	Buffels	2	23.2	0.36	267	8.3	0.09	4.61	2 090
	Buffels	3	24.9	0.35	280	8.7	0.10	5.44	2 466
	Buffels	4	14.1	0.37	170	5.3	0.10	3.17	1 439
	Harties	5	23.9	0.21	163	5.1	0.06	3.26	1 479
	Harties	6	13.3	0.20	85	2.6	0.06	1.85	839
Total Measured			99.4	0.30	965	30.0	0.08	18.33	8 313
Indicated	Buffels	5	47.6	0.24	360	11.2	0.06	6.62	3 001
	Harties	1	74.4	0.26	624	19.4	0.06	10.17	4 611
	Harties	2	43.8	0.26	369	11.5	0.06	5.79	2 626
	Harties	7	1.3	0.27	11	0.3	0.16	0.46	211
	Harties	NKGE	1.2	0.50	19	0.6	0.18	0.47	214
	MWS	4 dom 1	9.7	0.14	43	1.3	0.05	1.01	456
	MWS	4 dom 2	17.4	0.28	157	4.9	0.13	5.12	2 322
MWS	5	40.3	0.31	402	12.5	0.09	7.81	3 543	
Indicated Total			235.7	0.26	1 984	61.7	0.07	37.44	16 984
Total Measured & Indicated			335.1	0.27	2 949	91.7	0.08	55.77	25 297
Inferred	Harties	Flanagan	0.0	0.69	1	0.0	0.15	0.02	7
	MWS	5	15.2	0.30	146	4.6	0.09	3.17	1 437
	MWS	5 (from 2)	4.7	0.18	26	0.8	0.10	1.05	476
	Harties	Ellaton	1.3	0.39	16	0.5	0.15	0.41	187
Inferred Total			21.2	0.28	189	5.9	0.10	4.64	2 106

Notes:

1. Mineral Resources are quoted as in-situ Mineral Resources.
2. No cut-off grades were applied.
3. Rows and columns may not add exactly due to rounding.
4. Mineral Resources are quoted as inclusive of Mineral Reserves. Resources which are not Reserves do not have demonstrated economic viability.
5. MWS 4 Dam is split into two domains, namely Domain 1, which is the uppermost section of the dam, and Domain 2, the lowermost portion of the dam. The tailings dam has been evaluated in two separate sections as they show distinct differences in grade.

Mineral Resource to Mineral Reserve Conversion

The following factors have been used to calculate the gold equivalent cut-off grades that were used to convert the Mineral Resources to Mineral Reserves:-

Table 17: Summary of Recovery and Mass Pull Factors

Type	Description	2009	2010	long term
Processing	AU Plant recovery factor	53%	60%	68%
Processing	U3O8 Plant recovery factor	75%	78%	90%
Processing	Flotation plant recovery (U3O8)	22%	28%	38%
Processing	Flotation plant mass pull (U3O8)	6%	8%	13%

Table 18: Summary of Factors (LOM)

Type	Description	Unit	Au Factor	U Factor
Ore Resource	Density	t/m ³	1.42	1.42
Mining	External sources - dilution	%	0%	0%
Mining	Mine call factor ("MCF")	%	100%	100%
Revenue	Exchange Rate	R/USD	7.57	7.57
Revenue	Metal price	USD/oz USD/lb	711	49
Revenue	Metal price	US\$/kg	173 004	818
Conversion	Oz/kg	Oz	32.15076	
Conversion	lb per kg	lb		2.20466

A 0% mining dilution has been used as no mining dilution is likely to take place as the tailings dams are mined out completely. The soil at the bottom of the dams that is likely to be mined and processed will also be mineralised as the gold and uranium migrate into the soil via gravity. A 100% MCF for gold and uranium has been used for this exercise, as the MCF cannot be calculated.

The following tables illustrate the method of calculation of the gold, uranium and gold equivalent paylimits:-

Table 19: Calculation of Gold Paylimits for 2008

	Value	Unit	Paylimit (g/t)	Action
Metal price	173	ZAR/g		
OPEX	20.27	ZAR/t	0.117	OPEX/ Metal Price
Dilution	0%	%	0.117	=PL x (1+Dilution %)
Mine call factor	100%	%	0.117	=PL/MCF
Recovery	53%	%	0.221	=PL/Recovery

The OPEX used in this table includes the floatation costs and Au Plant costs.

Table 20: Calculation of Uranium Paylimits for 2008

Factor	Value	Unit	Paylimit (g/t)	Action
Metal price	818	ZAR/g		
OPEX	70.47	ZAR/t	13.3	OPEX/ Metal Price
Dilution	0%	%	13.3	=PL x (1+Dilution %)
Mine call factor	100%	%	13.33	=PL/MCF
Recovery	17%	%	80.9	=PL/Recovery

Table 21: Calculation of Gold Equivalent Paylimits for 2008

Factor	Value	Unit	Paylimit (g/t)	Action
Metal price	173	ZAR/g		
OPEX	31.18	ZAR/t	0.180	OPEX/ Metal Price
Dilution	0%	%	0.180	=PL x (1+Dilution %)
Mine call factor	100%	%	0.180	=PL/MCF
Recovery	53%	%	0.340	=PL/Recovery

The OPEX used in this table is calculated as follows: - Gold OPEX + (Uranium OPEX x 6% Mass Pull).

The following table details the summary of the gold, uranium and gold equivalent paylimits for 2009 through to >2010, after which it will remain constant:-

Table 22: Summary of Gold, Uranium and Gold Equivalent Paylimits (2007 - 2011)

Year	Year Ending	Gold		Uranium		Gold Equivalent	
		Cost (US\$/t)	Pay Limit g/t	Cost (US\$/t)	Pay Limit g/t	Cost (US\$/t)	Pay Limit g/t
2009	Mar-10	20.27	0.221	170.47	80.9	31.18	0.340
2010	Mar-11	22.52	0.216	115.30	53.1	31.93	0.307
>2010		22.99	0.195	74.14	34.6	32.63	0.277

The following table details the gold equivalent grades of all the dams, as well as illustrating the dams that have grades above the cut-off grades ("COG") over time:-

Table 23: Gold Equivalent Grades (g/t) 2008

Dam	Gold Equiv Grade (g/t) 2009	Above COG (0.340g/t)	Gold Equiv Grade (g/t) 2010	Above COG (0.307g/t)	Gold Equiv Grade (g/t) >2010	Above COG (0.277g/t)
Harties 1	0.352	Yes	0.367	Yes	0.408	Yes
Harties 2	0.350	Yes	0.364	Yes	0.404	Yes
Harties 5	0.304	No	0.319	Yes	0.360	Yes
Harties 6	0.292	No	0.306	No	0.348	Yes
Harties 7	0.508	Yes	0.546	Yes	0.656	Yes

Dam	Gold Equiv Grade (g/t) 2009	Above COG (0.340g/t)	Gold Equiv Grade (g/t) 2010	Above COG (0.307g/t)	Gold Equiv Grade (g/t) >2010	Above COG (0.277g/t)
Buffels 3	0.496	Yes	0.519	Yes	0.585	Yes
Buffels 4	0.524	Yes	0.548	Yes	0.616	Yes
Buffels 5	0.328	No	0.342	Yes	0.384	Yes
NGKE	0.769	Yes	0.811	Yes	0.932	Yes
MWS 2	0.571	Yes	0.590	Yes	0.644	Yes
MWS 4 (Dom 1)	0.207	No	0.218	No	0.249	No
MWS 4 (Dom 2)	0.476	Yes	0.507	Yes	0.596	Yes
MWS 5 Indicated	0.439	Yes	0.460	Yes	0.518	Yes

Shaded cells do not make the COG. It is for this reason that MWS 4 (Dom 1) is not included in the Reserve estimates. Harties 5 and 6 are not planned for mining in the next two years after which they are above the COG, and have therefore been included in the Reserve estimate.

Flanagan and Ellaton dams and the MWS 5 (Inferred) section and MWS 5 section from the MWS 2 tailings have not been included in this table as they are classified as Inferred Resources, and therefore cannot be converted to Mineral Reserves. Domain 1 of the MWS 4 dam was also not included in the Mineral Reserves, as it did not achieve the COG.

Mineral Reserves

Using the above criteria, the following Mineral Reserves have been classified:-

Table 24: Mineral Reserves as at 31 March 2008

Category	Surface		Tonnes Mt	Gold			Uranium		
	Place	Dam		Aug/t	Au('000oz)	Au (t)	U ₃ O ₈ kg/t	U ₃ O ₈ Mlb	U ₃ O ₈ (t)
Proven	Buffels	2	23.2	0.36	267	8.3	0.09	4.61	2 090
	Buffels	3	24.9	0.35	280	8.7	0.10	5.44	2 466
	Buffels	4	14.1	0.37	170	5.3	0.10	3.17	1 439
	Harties	5	23.9	0.21	163	5.1	0.06	3.26	1 479
	Harties	6	13.3	0.20	85	2.6	0.06	1.85	839
Proven Total			99.4	0.30	965	30.0	0.08	18.33	8 313

Notes:

1. Mineral Reserves are quoted as fully diluted delivered to mill estimates.
2. Based on assumptions of a gold price of \$711 per ounce, a uranium price of \$49 per pound and ZAR/\$ exchange rate of 7.57, which are long term forecast figures (post 2012).
3. A Reserve COG of 0.28g/t gold equivalent was used. Uranium grades were converted to gold equivalent using a conversion factor of 1 gram per tonne, which equals 0.503 kilograms per tonne on an extracted metal basis.
4. Rows and columns may not add exactly due to rounding.
5. The average LOM gold recovery applied was 68% and 34% for uranium.
6. Only Domain 2 of the MWS 4 dam has been converted to a Mineral Reserve as the gold grade in Domain 1 is below cut-off.

ITEM 20 (F) - KEY ASSUMPTIONS, PARAMETERS AND CLASSIFICATION METHODOLOGY

Geological Modelling Methodology

Three dimensional ("3D") wireframe of the dams were constructed from survey points and borehole information representing the dam in 3D space. The reef wireframes were filled with a block model. The 1.5m samples were used for the grade estimation.

Statistical analysis provided a basis for final data verification and was used to establish specific information on population distributions and checks for anomalous values. Spatial continuity illustrations (variograms) were constructed for Au and U₃O₈. Ordinary kriging methodologies were utilized for the evaluation of the tailings dams.

Database

The total number of samples used for the estimation of the Mineral Resources, is illustrated in the table below:-

Table 25: Data used for the Modelling and Estimation of the Dams

Dam	No. of BH's	No. of Data Points (Uranium)	No. of Data Points (Gold)
Harties 1	11	354	355
Harties 2	11	319	320
Harties 5	11	186	187
Harties 6	16	209	209
Harties 7	6	25	25
Buffels 2	18	488	488
Buffels 3	6	147	147
Buffels 4	6	156	156
Buffels 5	12	227	227
MWS 2	61	No Modelling Carried Out	No Modelling Carried Out
MWS 4 (Dom 1)	45	271	266
MWS 4 (Dom 2)	45	434	426
MWS 5	56	533	533
Flanagan	2	14	14
Ellaton	13	206	206
NGKE	10	170	171

The MWS 2 dam was not remodelled for this exercise as it was depleted at the time this Technical Report was compiled.

The tailings dams are scattered over an area that stretches approximately 13.5km north-south and 14km east-west. The footprints of the fifteen tailings dams cover an area of approximately 1,100ha.

Statistical Analysis

Statistics are performed to develop an understanding of the statistical characteristics and sample population distribution relationships. Descriptive statistics in the form of histograms (frequency distributions) and probability plots (evaluate the normality of the distribution of a variable) are thus used to develop an understanding of such statistical relationships. Skewness is a measure of the deviation of the distribution from symmetry (0 - no skewness). Kurtosis measures the "peaked ness" of a distribution (0 - normal distribution).The following table illustrates the descriptive statistics that were used for the modelling:-

Table 26: Descriptive Statistics for the Tailings Dams

Harties 6 represents the lowest gold grade of the Harties dams, although Harties 7 has the lowest range of the values. All the Harties dams, barring Harties 5, have standard deviations (“Std. Dev.”) significantly lower than the mean, indicating predominance of lower grade values. This relationship of lower Std.Dev. value to the mean value applies to uranium for all the dams.

The Buffels dams are of higher gold and uranium grade than the Harties dams. The Std.Dev. values for all the Buffels dams are lower than the respective means for uranium and gold. This relationship also holds for the MWS, Ellaton and NKGE dams as well.

Histogram, Distribution Plots and Variograms

All the gold and uranium histograms, distribution plots and variograms have been included as Appendix 4, Appendix 5, and Appendix 6, respectively.

Block Models

The diagrammatic illustrations of the Block Models created in Datamine® are included below:-

Volume Calculation

The volumes of all of the dams were calculated by using the survey information obtained from First Uranium (detailed in Item 7 (e)) and importing the data into Datamine® in order to create a 3 -dimensional (3-D”) Digital Terrain Model (“DTM”). The following table details the volumes that were calculated:-

Table 28: Tailings Dam Volumes

Dam	May 2007 Volume (m ³)	November 2007 Volume (m ³)	Variance (m ³)
Harties 1	57,860,000	52,378,551	-5,481,449
Harties 2	22,275,000	30,823,856	8,548,856
Harties 5	14,458,125	16,797,405	2,339,280
Harties 6	9,127,500	9,375,167	247,667
Harties 7	1,062,500	905,430	-157,070
Buffels 3	18,375,000	17,544,506	-830,494
Buffels 4	10,237,500	9,935,885	-301,615
Buffels 5	28,490,000	33,548,913	5,058,913
MWS 4	18,640,916	19,066,197	425,281
MWS 5	48,030,350	42,354,059	-5,676,291
Flanagan	29,825	31,690	1,865
Ellaton	638,056	894,366	256,310
NGKE	440,439	828,354	387,915
TOTAL	247,159,882	251,929,871	4,769,989

Since May 2007, all the dams have been surveyed and DTMs created, which increased the confidence in the volume of the dams as these measurements are considered more accurate than the previous calculations.

The discrepancy in the volume of MWS 5 dam can be attributed to the fact that during the November 2007 exercise the dam was only measured to the extent that the boreholes were drilled and the boreholes did not all reach the bottom of the dam. More material could potentially lie beneath this level, but has not been evaluated, due to the lack of drilling to that depth.

The volume of the Buffels 2 dam was calculated by using the survey information obtained from First Uranium (detailed in Item 7 (e)) and importing the data into Datamine® in order to create a 3 -dimensional (3-D") Digital Terrain Model ("DTM"). The following table details the volumes that were calculated:-

Table 29: Tailings Dam Volume

Dam	May 2007 Volume (m ³)	November 2007 Volume (m ³)	December 2008 Volume (m ³)	March 2008 Volume (m ³)*
Buffels 2	14,812,500	17,005,468	17,922,783	16,702,514

*Takes into account material that has been mined out since December 2007.

Specific Gravity

The following table details the specific gravity (SG") testwork carried out in August 2007 on the density of the dams:-

Table 30: SG Testwork Results

Dam	As at May 2007 SG (t/m ³)	As at November 2007 SG (t/m ³)
Harties 1	1.60	1.360
Harties 2	1.60	1.410
Harties 5	1.60	1.410
Harties 6	1.60	1.369
Harties 7	1.60	1.496
Buffels 2	1.60	1.381
Buffels 3	1.60	No new Testwork – Too wet
Buffels 4	1.60	No new Testwork – Too wet
Buffels 5	1.60	1.498
MWS 4	1.43	No change (previously calculated)
MWS 5	1.44	No change (previously calculated)
Flanagan	1.60	No new Testwork
Ellaton	1.42	1.386
NKGE	1.42	1.448
AVERAGE	1.54	1.418

Civilab (Pty) Ltd carried out the testwork on the dams. The tests were carried out in accordance with Method A10(b): Method C of TMH1 of 1986. No test work was carried out on the Buffels 3 and 4 and Flanagan Dams.

It was decided to use an average of 1.42t/m³ for all the dams, as this is the average that has been achieved during the mining of the MWS Dam 2, as well as the rounded average of all the testwork conducted on all the dams. The figures illustrated in the table above show high variability as the material is variable though the dam. However, the information gathered was useful in that it showed that the average of the dams (when rounded) is the same as the average of MWS 2 dam, which figure is proved.

Tonnage Calculation

The tonnage of the dams was calculated using the volumes obtained by creating a DTM of the dam and multiplying the volume obtained by an SG of 1.42t/m³.

The difference between the May and November tonnage estimates can mainly be attributed to the SG testwork that was conducted and the verification of the SG for MWS 2 dam, which proved that the actual SG was actually lower than the $1.6\text{t}/\text{m}^3$ previously estimated. The figure of $1.6\text{t}/\text{m}^3$ was previously based on government returns.

The results are illustrated in the following table, as well as illustrating the variance in tonnage calculated in May 2007 compared to November 2007:-

Table 31: Estimated Tonnages

Dam	May 2007 Tonnes	November 2007 Tonnes	Variance
Harties 1	92,576,000	74,377,542	-18,198,458
Harties 2	35,640,000	43,769,875	8,129,875
Harties 5	23,133,000	23,852,315	719,315
Harties 6	14,604,000	13,312,737	-1,291,263
Harties 7	1,700,000	1,285,710	-414,290
Buffels 3	29,400,000	24,913,199	-4,486,801
Buffels 4	16,380,000	14,108,957	-2,271,043
Buffels 5	45,584,000	47,639,457	2,055,457
MWS 2	7,798,000	624,834	-7,173,166*
MWS 4	26,757,177	27,074,000	316,823
MWS 5	60,691,378	60,142,764	-548,614
Flanagan	42,352	45,000	2,648
Ellaton	906,039	1,270,000	363,961
NGKE	625,424	1,176,262	550,838
TOTAL	379,537,370	357,740,417	-21,796,953

* Equates to material that has been mined.

The results for Buffels 2 dam are illustrated in the following table, as well as illustrating the variance in tonnage calculated in May 2007 compared to November 2007 and March 2008:-

Table 32: Estimated Tonnages

Dam	May 2007 Tonnes	November 2007 Tonnes	December 2007 Tonnes	March 2008 Tonnes*
Buffels 2	23,700,000	24,147,765	24,955,367	23,222,586

*Takes into account material that has been mined out since December 2007.

Grade Estimation

The grades detailed below were estimated using Datamine Studio®, unless otherwise stated:-

Table 33: Estimated Grades

Dam	May 2007 U ₃ O ₈ Grade (kg/t)	November 2007 U ₃ O ₈ Grade (kg/t)	May 2007 Gold Grade (g/t)	November 2007 Gold Grade (g/t)
Harties 1	0.060	0.062	0.32	0.261
Harties 2	0.060	0.060	0.31	0.262

Ellaton	0.154	0.147	0.48	0.387
NGKE	0.126	0.182	0.46	0.501
WEIGHTED AVERAGE	0.075	0.077	0.30	0.275

The grades for the Flanagan Dam are weighted average grades of the drilling that was carried out on the dam as there were only 2 boreholes drilled on this dam and kriging could not be carried out using only two boreholes.

As is illustrated in the table above, the weighted average uranium grade that was estimated for November increased slightly against the May average, whilst the gold grade decreased slightly. This can be attributed to the in-fill drilling that was carried out as previous drilling was concentrated around the edges of the dams, where the gold grades are higher and the uranium grades lower. Minxcon believe that the updated figures are more representative of the dams as a whole.

The grades (gold and uranium) detailed for Buffels 2 dam below were estimated using Datamine Studio®:-

Table 34: Estimated Grades

Dam	May 2007 U ₃ O ₈ Grade (kg/t)	November 2007 U ₃ O ₈ Grade (kg/t)	March 2008 U ₃ O ₈ Grade (kg/t)	May 2007 Gold Grade (g/t)	November 2007 Gold Grade (g/t)	March 2008 Gold Grade (g/t)
Buffels 2	0.090	0.086	0.090	0.40	0.398	0.357

As is illustrated in the table above, the average uranium grade that was estimated for March 2008 increased slightly against the May average, whilst the gold grade decreased slightly. This can be attributed to the spacing of the drilling that was carried out as previous drilling was concentrated around the edges of the dam, where the gold grades are higher and the uranium grades lower. Minxcon believe that the updated figures are more representative of the dams as a whole.

Mineral Resource Classification

The Mineral Resource classification is a function of the confidence of the whole exploration process, from drilling, sampling, geological understanding through to geostatistical relationships.

The following aspects or parameters were used for Resource classification:

1. Sampling - QA/QC
 - a. Measured: high confidence, no problem areas.
 - b. Indicated: high confidence, some problem areas with low risk.
 - c. Inferred: some aspects might be of medium to high risk.
2. Geological Confidence
 - a. Measured: high confidence in the understanding of geological relationships, continuity of geological trends and sufficient data.
 - b. Indicated: good understanding of geological relationships.
 - c. Inferred: geological continuity not established.
3. Number of samples used to estimate a specific block
 - a. Measured: at least 4 boreholes within semi-variogram range and minimum of twenty 1m composited samples.
 - b. Indicated: at least 3 boreholes within semi-variogram range and a minimum of twelve 1m composite samples.
 - c. Inferred: less than 3 boreholes within the semi-variogram range.
4. Kriged variance
 - a. This is a relative parameter and is only an indication and used in conjunction with the other parameters.
5. Distance to sample (semi-variogram range)
 - a. Measured: at least within 60% of semi - variogram range.
 - b. Indicated: within semi-variogram range.

- c. Inferred: further than semi-variogram range.
- 6. Lower Confidence Limit (blocks)
 - a. Measured: < 20% from mean (80% confidence).
 - b. Indicated: 20% - 40% from mean (80% - 60% confidence).
 - c. Inferred: more than 40% (less than 60% confidence).
- 7. Kriging Efficiency
 - a. Measured: > 40%.
 - b. Indicated: 20 - 40%.
 - c. Inferred: <20%.
- 8. Deviation from lower 90% confidence limit (data distribution within area considered for classification)
 - a. Measured Resource: <10% deviation from mean.
 - b. Indicated Resource: 10 - 20%.
 - c. Inferred Resource: >20.

The Mineral Resources estimated for the dams are classified based on the points 1 to 8 above as Measured Mineral Resources.

ITEM 20 (G) AND (H) - MODIFYING FACTORS

Minxcon's assessment of the extent to which the Mineral Resources and Mineral Reserves may be affected by certain factors is set out overleaf:

Table 35: Modifying Factors

Modifying Factor	Effect on Mineral Resources and Mineral Reserves
Environmental	The reprocessing of the existing tailings dams is likely to improve the environmental situation, therefore the environmental factors will not have a material effect on the Resources or Reserves
Permitting/Legal/ Title	Minxcon do not believe that the DME will withhold the approval of the Mining Right which is currently with the DME. The mining of gold is assured up till April 2009 from the Harties and Buffels Dams as a valid Mining Licence is in place up to this time.
Taxation	Taxation issues are not expected to affect the Mineral Resources/Reserves.
Socio-economic	There are no socio-economic issues that will affect the status of the Mineral Resources or Reserves
Marketing	No issues regarding marketing will have a material effect on the Mineral Resources and Reserves.
Political	No issues regarding the political situation in South Africa are likely to have a material effect on the Mineral Resources and Reserves.
Mining	The mining method has been proved during the mining of MWS 2 and Buffels 2 dams; therefore no issues regarding any of the mining aspects are likely to materially affect the Mineral Resources or Reserves.
Metallurgical	The metallurgical process to be utilised during Module 3 of the upgrade plan still needs to be finalised, however, the choice of metallurgical process (atmospheric leach or pressure leach) will not affect the status of the Mineral Resources or Reserves.
Infrastructure	The area has very well established infrastructure facilities; therefore no impact on the Mineral Resources or Reserves is foreseen.

ITEM 20 (I) - MINERAL RESOURCES AND MINERAL RESERVES USED IN ECONOMIC ANALYSIS

Only Measured and Indicated Resources were used in the calculation of the discounted cash flow. Inferred Resources were not valued.

ITEM 20 (J) - INFERRED MINERAL RESOURCES USED IN ECONOMIC ANALYSIS

Inferred Resources were not used in the economic valuation contained in this report. These Inferred Resources are considered too speculative to have economic considerations applied to them that would enable them to be categorised as Mineral Reserves.

ITEM 20 (K) - INDICATED RESOURCES NOT CONVERTED TO MINERAL RESERVES

Only Domain 1 of MWS 4 dam, which is classified as an Indicated Mineral Resource, was NOT converted to a Mineral Reserve as the gold grade is not currently economically viable at the gold price that was used to evaluate the viability of the Mineral Reserves. When this dam comes on line to be mined, it will be re-evaluated, using the gold price at the time, to re-evaluate its viability to be mined. If, at that time, it still proves to be uneconomic, the material contained in Domain 1 will simply be moved straight to the new tailings dam in order to access Domain 2, which lies below Domain 1. Costs to move the material from Domain 1 have been incorporated into the DCF as a precautionary measure.

ITEM 20 (L) - GRADE, QUANTITY & CATEGORY OF THE MINERAL RESOURCES AND MINERAL RESERVES

Included in Item 20 (e).

ITEM 20 (M) - METAL SPLITS OF MULTI ELEMENT MINE

Only gold and uranium have been estimated. Details on the quantities of these two elements are included in Item 20 (e).

ITEM 21- ADDITIONAL INFORMATION

ITEM 21 (A) - MINING AND PRODUCTION

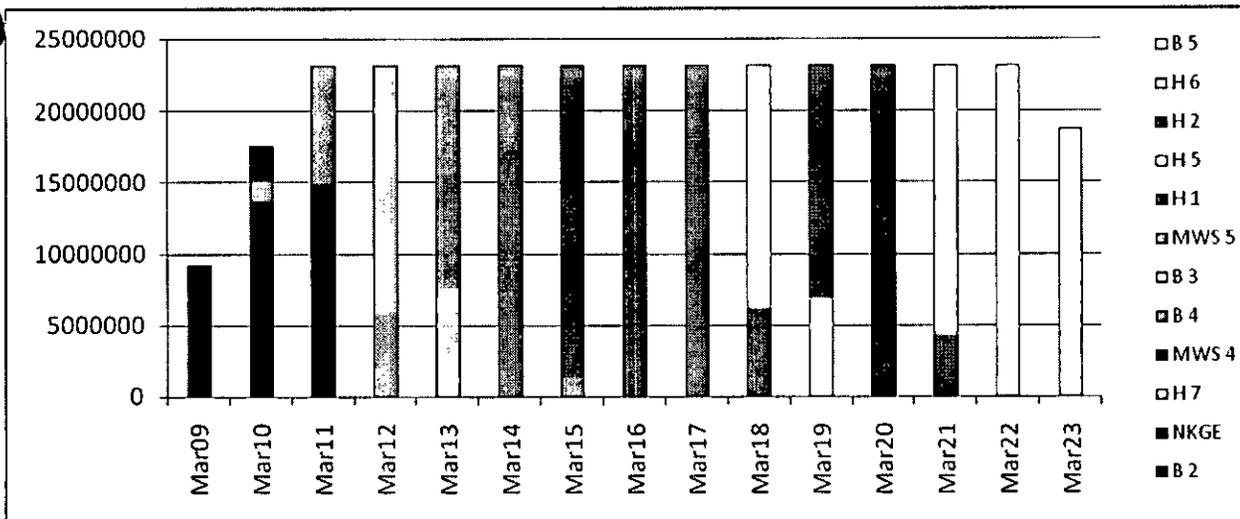

The tailings are recovered using high pressure water cannons. The pulp is screened to remove debris and coarse material at the dam. The screened slurry is then pumped to the plant. Most of the water required for the process is used at this stage.

This type of recovery operation is not uncommon. The AngloGold Ashanti Limited ERGO project operated for 25 years recovering gold and uranium from tailings dams using this method of tailings recovery.

All of the Measured and Indicated Mineral Resources of the combined MWS/Buffelsfontein Project will be recovered and processed except for the MWS 4 dam (Domain 1). In the MWS 4 dam, the upper 12m of the dam has been sampled and identified as having too low a grade for recovery and treatment. Therefore, the top 12m of material will be moved to a tailings storage area. The bottom portion of the dam will then be available for recovery and treatment.

The following table details the production schedule of the mining of the tailings dams:-

Figure 45: LOM Tonnage Profile

The plant is currently running at a rate of 536ktpm being fed by material from the Buffels 2 dam. In the previous report it was estimated that the plant would be running at a capacity of 633ktpm from January 2008, but there have been issues with the clay material that has been encountered in the tailings dam. Volume throughput is however on the increase at present.

The preproduction phase for the mining is relatively short and includes the installation of piping to the plant, collection ditches, water pumping areas, and a screening plant in the area to be reclaimed.

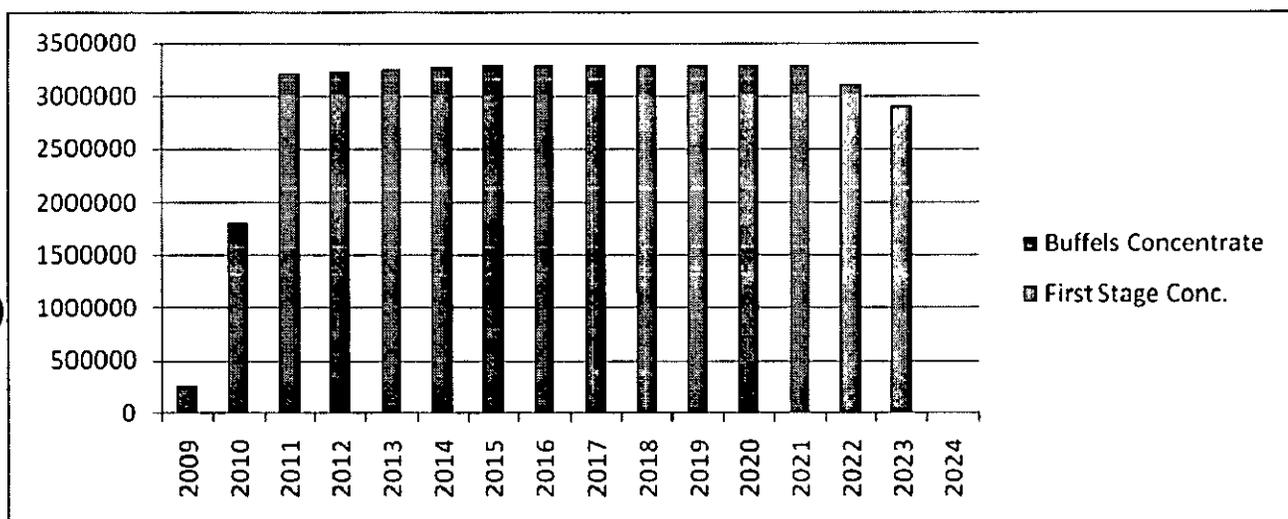

Power is available in the area as this is an industrial area with power lines feeding the various mines and mills. Future power generation is discussed in greater detail in below.

There is an existing network of roads in the area.

The main mine equipment consists of slurry and water piping and cannons for hydraulic mining of the tailings.

In addition to the recovered tailings, there is a concentrate stream (3.2Mt over the LOM) from the BGM Underground Mine gold plant that will be taken to the tailings recovery plant and treated for the recovery of uranium and gold. The following graph details the amount of concentrates to be treated:-

Figure 46: Buffels and Plant Concentrate Streams

Acid Plant

FUSA plans to purchase and install an "off the shelf" acid plant to produce sulphuric acid to reduce the future costs and secure supply of acid required for the Project. Reduction in the availability of electrical power in South Africa has caused cutbacks in the operation of smelters and other facilities that produce sulphuric acid as a by-product.

The reduced supply of acid, increases in the cost of elemental sulphur (which is used to produce acid) and increased demand for acid in the base metal sector and for fertilizer production have led to rapidly increasing acid prices.

Preliminary test work has been conducted on the flotation of sulphides from the historic slimes dams at MWS. The test work was done by Mintek under the auspices of FUSA management and external consultants to evaluate the desired parameters necessary to recover pyrite at the desired sulphur levels and gold and uranium recovery.

The flotation concentrate will be roasted in a fluidised bed roaster at high temperature to convert the pyrite to iron oxide and sulphur dioxide which in turn is converted to sulphuric acid using a chemical process. Further testwork is to be carried out on representative slimes dam samples with the view of establishing the optimum extraction efficiencies of both valuable metals and sulphur during sulphide flotation.

Test work will also be required on the roasting of the pyrite in order to establish the availability and conversion of the sulphur contained in the Pyrite to sulphuric acid. Additional test work in both flotation and roasting will be required

The Corporation has assessed the feasibility of constructing its own acid plant to provide the required amount of sulphuric acid for its operations to mitigate the effect of the rising costs of elemental sulphur and sulphuric acid.

Based on a 2007 analysis of pyrite feed-stock potential from the MWS tailings dams, a 2008 preliminary technical assessment and a recent market analyst, the Corporation expects that it will take nineteen months to procure and commission the acid plant and anticipates that the first acid production would begin in January 2010. The industry outlook for sulphuric acid is closely related to the sulphur market which calls for tight supply and significant price increases.

Once the Corporation procures and installs an acid plant, the plan is to direct all of the pyrite currently produced as waste at the MWS tailings plant to the acid plant, where tried and tested pyrite roasting and gas scrubbing technology will be used to produce sulphuric acid. The acid plant would be operated as a separate business segment of First Uranium, which would buy pyrite from MWS at a set price and sell sulphuric acid to MWS at a set price. The acid business would be charged with the capital to purchase and install the acid plant, sell its acid production to the Ezulwini Mine, MWS, as well as sell any excess acid produced to third-parties at the prevailing market rates and report its revenue and profitability as a subsidiary business of First Uranium.

The technical parameters used for the economic assessment are based upon test work and a preliminary assessment that has been conducted by MDM (Pty) Ltd during the past five months. The feasibility study is expected to be concluded by the end of July 2008. Of potential benefit to the installation of an acid plant is Simmer & Jack Mines, Limited's existing license to produce acid at their Buffelsfontein Gold Mine under their Old Order Mining Right, which is in the process of being converted to a New Order Mining Right.

The documentation to support the conversion of this mining right will require an amendment to include an acid plant.

Table 36: Acid Plant Project Specifications and Economics

Description	Amount	Unit
Tonnes of sulphur required per month	6,000	tpm
Tonnes of tailings concentrate (pyrite) required per month	23,100	tpm
Tonnes of acid produced per month	18,000	tpm
Total capital	124	\$ millions
Total capital cost per total tonne of acid produced	30.9	\$/tonne
Operating cost of acid plant per tonne of acid produced	14	\$/tonne
Revenue per tonne of acid charged to Ezulwini and MWS	50.6	\$/tonne
IRR	6%	%
Payback	11	years
NPV	28	\$ millions

Source: FUSA

The planned acid plant is expected to be able to produce up to 600 tonnes of sulphuric acid per day with the option to reduce capacity to 450tpd depending on the Corporation's acid requirements. In addition, the installed plant would have the flexibility to adjust the process to achieve the desired sulphuric acid production regardless of the pyrite content in the tailings, which should allow the Corporation to fulfil its sulphuric acid requirements despite variances in the pyrite content from one tailings dam to the next.

The Corporation expects there to be a healthy market into which it should be able to sell any acid production that is excess to the Corporation's requirements for the running of its gold and uranium plants.

Based on the price projections to purchase sulphuric acid, the Corporation expects the acid plant to operate at an incremental cost of approximately \$14/t of acid, which will be reduced by credits received the roughly 4MW of electrical power by-product that the plant is expected to produce. The financial impact of the acid plant, but not the 4MW power by-product, has been factored in the cash flow analysis below.

The incremental benefits to the Corporation's MWS project are tabled below and reflect the required investment in electrical power generation, the rising costs of Eskom-supplied power in future years and the construction of an acid plant, the Corporation's current assumptions for the projects prices of uranium and gold and the project currency exchange rate of the South African rand and the US dollar.

Table 37: Acid Prices at MWS

Description	November 2007 ¹	April 2008 Power & Own Acid	April 2008 Acid Exposed Conservative case	April 2008 Acid Market Downside case
Average H ₂ SO ₄ price (\$/tonne)	60	73.4 ²	114.6 ³	168.3 ⁴
Operating cost (\$/tonne)	2.5	2.9	3.2	3.4
NPV (\$ millions)	505	443	396	367

Notes:

- 1) The source of the November 2007 data was the 'Technical Report on the Pre-Feasibility of the Buffelsfontein Tailings Recovery Project, located at Stilfontein, North West Province, South Africa'
- 2) H₂SO₄ : Yr1 \$266 / tonne; Yr2 \$266 / tonne; Yr3 and beyond \$34.2 / tonne
- 3) H₂SO₄ : Yr1 \$266 / tonne; Yr2 \$266 / tonne; Yr3 -Yr6 \$170 / tonne ; Yr6 and beyond \$95 / tonne
- 4) H₂SO₄ : Yr1 \$266 / tonne; Yr2 \$266 / tonne; Yr3 and beyond \$200 / tonne
- 5) Average life of mine rate to exchange Rand to US dollars = 7.53
- 6) Average acid input cost of total operating cost for MWS = 23%
- 7) Average H₂SO₄ costs are a blend of the cost of contracted acid supply and the cost of the planned acid plant

Table 38: Acid Plant Economic Assumptions and Valuation

Economic Assumptions	Unit	Mar 2011	Mar 2012	Mar 2013	Mar 2014	>Mar 2014
Currency exchange rate	(ZAR/\$US)	7.50	7.45	7.57	7.57	7.57

Sulphuric acid price (Market High Case)	\$/tonne	200	200	200	200	200
PRELIMINARY ASSESSMENT VALUATION				Unit	Market Outlook	Market High Case
NPV				\$ millions	28	75
IRR				%	6%	13%

Power Generation

On January 24, 2008 Eskom communicated to the mining industry that the utility could not guarantee power availability and asked the industry to operate at electrical power levels below historical load requirements until 2012. While Eskom has announced plans to increase the supply of power incrementally in the years leading up to 2012, Eskom also reports that full power availability cannot be guaranteed until then. So far, the Project has not been affected by the power situation as it is drawing additional power from Buffelsfontein Gold Mines Limited.

FUSA has conducted a study assessing the economic viability of generating its own power for the next five years, as a result of the significantly reduced supply of electrical power currently available in South Africa and Eskom’s concerns about its ability to supply power to the country’s mining industry in the short term.

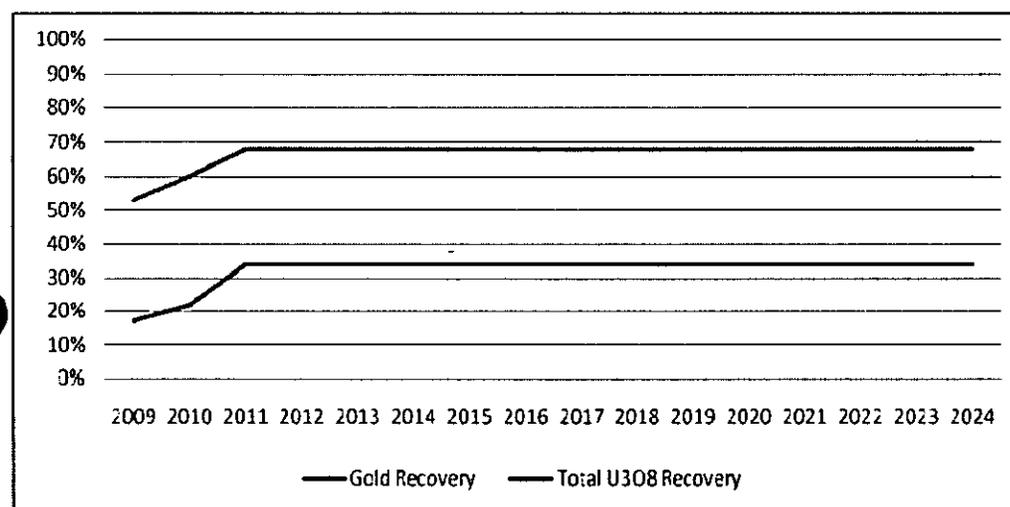

Full operation of MWS is expected to require a maximum demand of 43mW of power by February 2010, of which Eskom has committed to supply 29mW by this date, requiring the Corporation to generate 14mW independently.

The results of the economic analysis were positive and FUSA plans to initially lease diesel generators for a term of up to 5 years. In addition, the Corporation plans to purchase and install 30mW of electrical power generating capacity at a cost of approximately US\$20 million. The Corporation expects to power its generators using a combination of diesel fuel and heavy fuel oil for approximately 5 years and to recover approximately 50% of its investment by selling the power generators when they are no longer needed.

ITEM 21 (B) - RECOVERABILITY

The following graph illustrates a summary of the recoverability for gold and uranium over the LOM:-

Figure 47: Gold and Uranium Recoveries

The first stepped increase in the recoveries of both gold and uranium, occurs as a result of the uranium plant being introduced with an atmospheric leaching circuit, which will also increase the amount of gold that is liberated, thus increasing the gold yield.

The second stepped increase that takes place is a result of the replacement of the atmospheric leach processing facility with a pressure leach processing facility, which increases the yield of both the gold and uranium.

The further expansion of the MWS gold plant to double its capacity and the construction of the first two modules of the Project’s uranium plant has been initiated for commissioning in December 2008. The third and final modules of the gold plant and the uranium plant are to be commissioned in December 2009.

ITEM 21 (C) - MARKETS

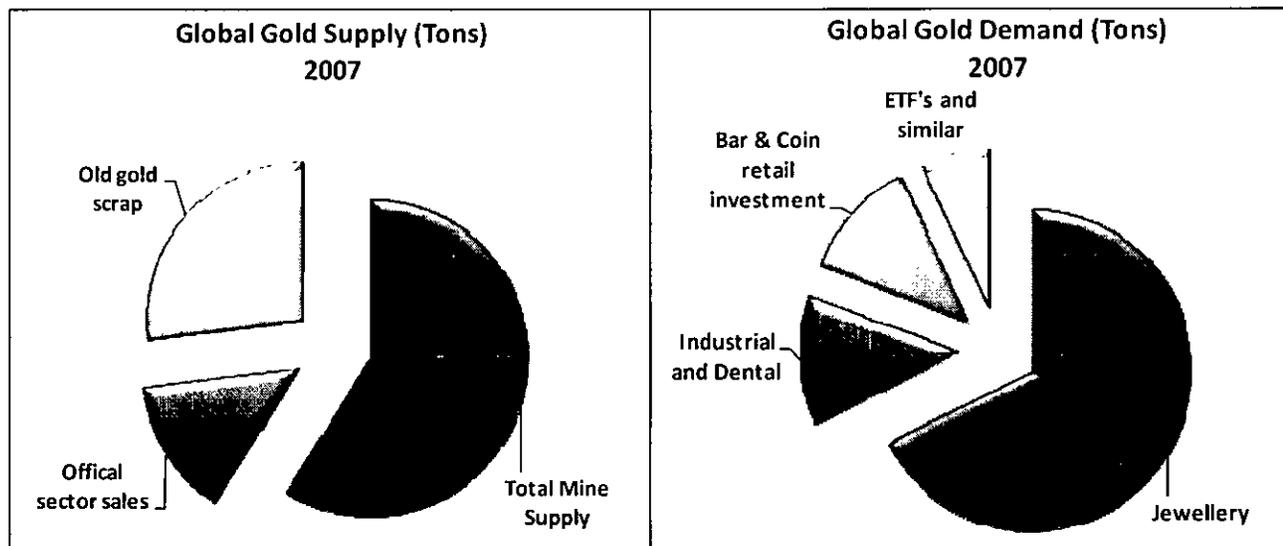

Gold Markets

Since 2001, the US\$ gold price has steadily been increasing, reaching a high of \$1011/oz in March 2008, which is the highest gold price ever recorded. The average quarterly price for the first quarter of 2008 was \$924.83/oz, up \$138.58/oz from the final quarter of 2007.

An encouraging sign is that both consumers and investors pushed demand (US\$) for gold to a record level of \$79.2 billion in 2007 (a 20% increase from 2006 figures), according to figures published by the World Gold Council (“WGC”), with all categories of demand (jewellery, industrial and investment) recording double-digit year-on-year growth in dollar terms.

In 2007, the supply of gold fell by 3% below 2006 levels to 3,469 tonnes. Mine output remained similar to that of 2006. An increase in de-hedging, which rose to 400tons from 373 tons, and a 15% fall in scrap supply were largely, but not entirely offset, by higher level of central bank sales (World Gold Council Website, April 2008).

Figure 48: Global Gold Supply and Demand

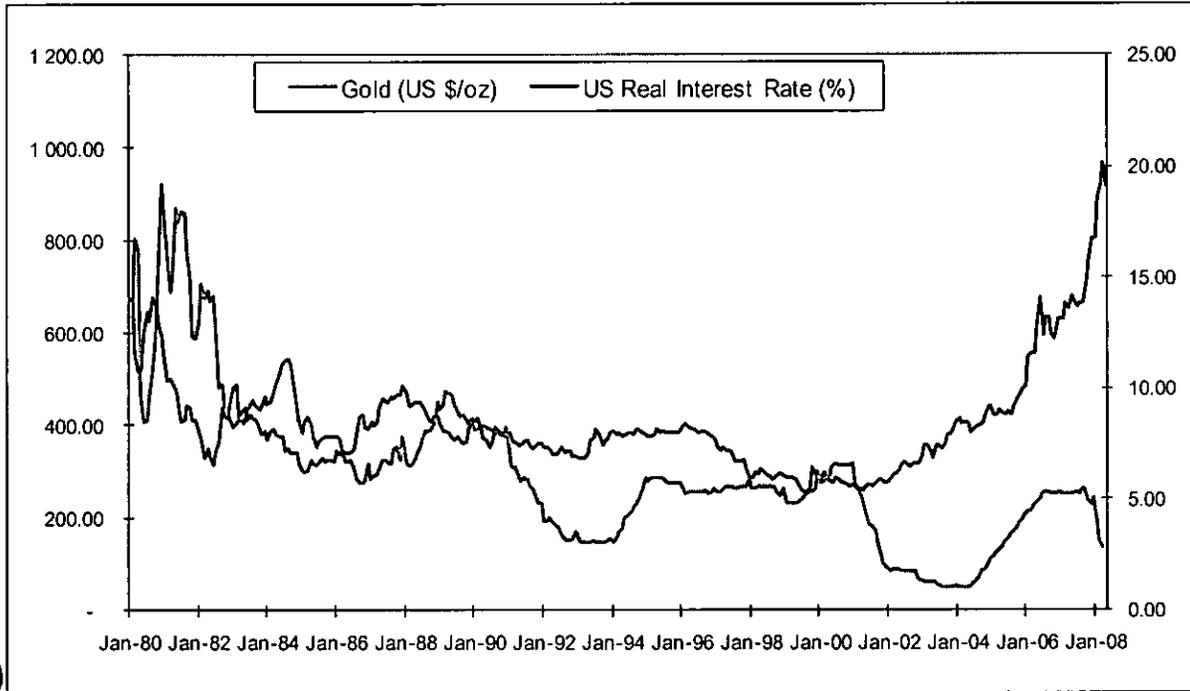

For now, the outlook for gold remains buoyant. Historically drivers for gold creating market uncertainty and prompting investors to opt for gold as alternative investment were:-

- political uncertainty;
- currency fluctuation;
- stock market uncertainty;
- high inflation and low real interest rates.

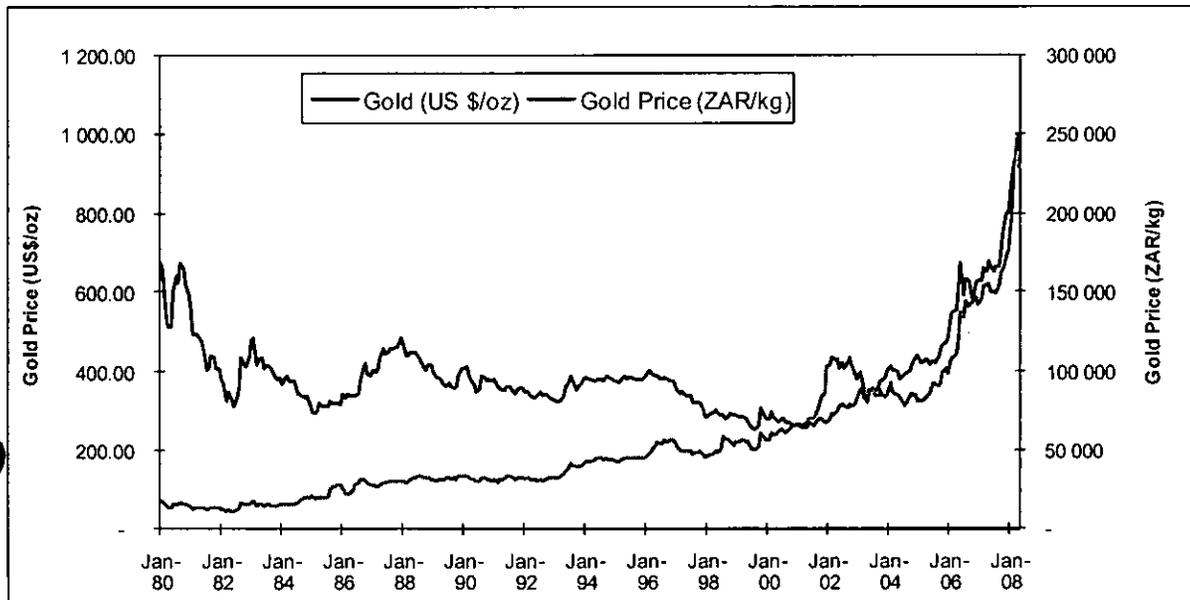

While political tension has faded during the past few years, the after affects are still dictating the direction of the gold price. Although the gold market has never again experienced hyperinflation like was seen in the early 1980's, it still has an impact as illustrated in the figure below, effectively lowering the real interest rate in the US.

Figure 49: Gold Price and Interest Rate Relationship

The real rate of short term interest is currently following a downward trend, going close to negative territory therefore forcing investors to find alternative investments. In addition to this, the continued credit crisis and depreciation of the US\$ has led to increased gold purchases as a safe haven asset and dollar hedge. These factors underpinned the gold price reaching levels above US\$1000/oz. The gold price has seen a significant turnaround since March 2001, when the price hovered around the \$260/oz level, currently trading at between US\$850/oz to US\$950/oz, levels last seen in the 1980's.

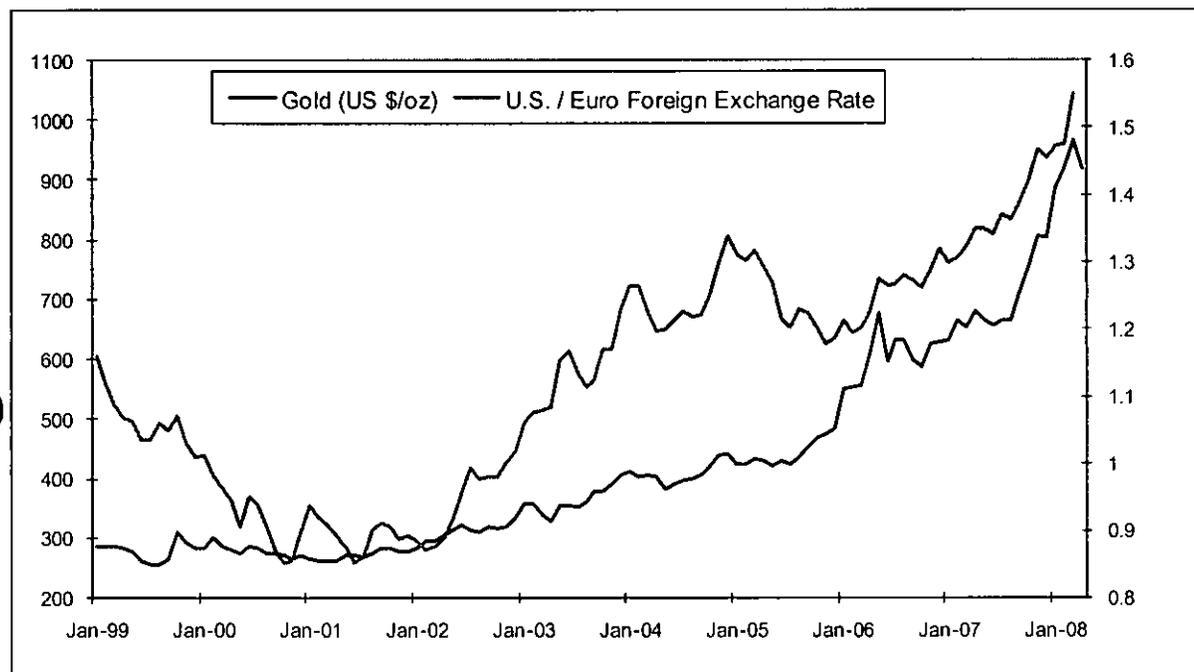

Figure 50: Gold Price in USD and ZAR

US and world markets are currently dominated by the fallout from the housing and financial sector crisis in the US. The first quarter of 2008 was beset by announcements of massive sub-prime related write downs and record losses in the banking sector. Sharp falls in the value of financial stocks dragged down world equity markets. Gold prices during 2007 have largely been attributed to the interplay between investors and the jewellery sector. The year saw capital flowing in such homes as exchange traded funds (“ETF’s”), allocated metal accounts and the futures markets.

Overall, this still paints a rosy picture for the dollar gold price. The other side of the coin is that non-US producer currencies could strengthen against the dollar as a result, therefore placing a ceiling on the gold price in own currency. As illustrated in the figure below, gold has become cheaper for Non-US investors. The question however remains will the US\$ recover against other major currencies in the future?

Figure 51: Gold Price and US\$/Euro relationship

Most analysts remain bullish of the gold price and short-term forecasts reflect a strong and gold price.

Uranium Markets

Close to half of the world’s mine production of uranium comes from Canada (25%) and Australia (19%). South Africa currently accounts for only 1% of total demand but is likely to increase due to old slimes dams that will be treated in the near future. World mine production of U3O8 decreased marginally from 108.37Mlb in 2005 to 102.32Mlb in 2006.

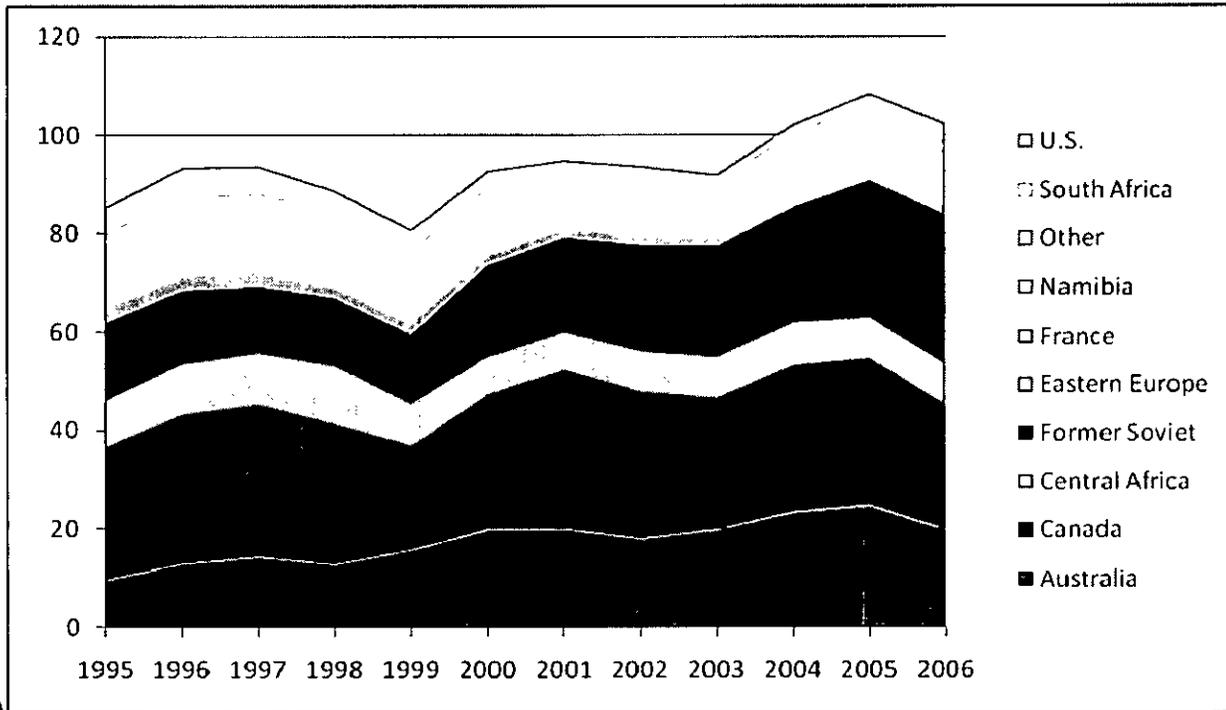

The demand for U3O8 is directly linked to electrical generation by nuclear power plants. Annual fuel consumption by the Western nations has increased from approximately 73 million pounds of U3O8 in 1980 to approximately 170 million pounds of U3O8 in 2007.

The overriding feature of the uranium market is that uranium consumption continues to exceed mine production by a significant margin. This deficit is filled from several secondary sources including:-

- recycled uranium and plutonium from spent fuel, as mixed oxide fuel,
- re-enriched depleted uranium tails,
- ex military weapons-grade uranium,

- civil stockpiles,
- ex military weapons-grade plutonium.

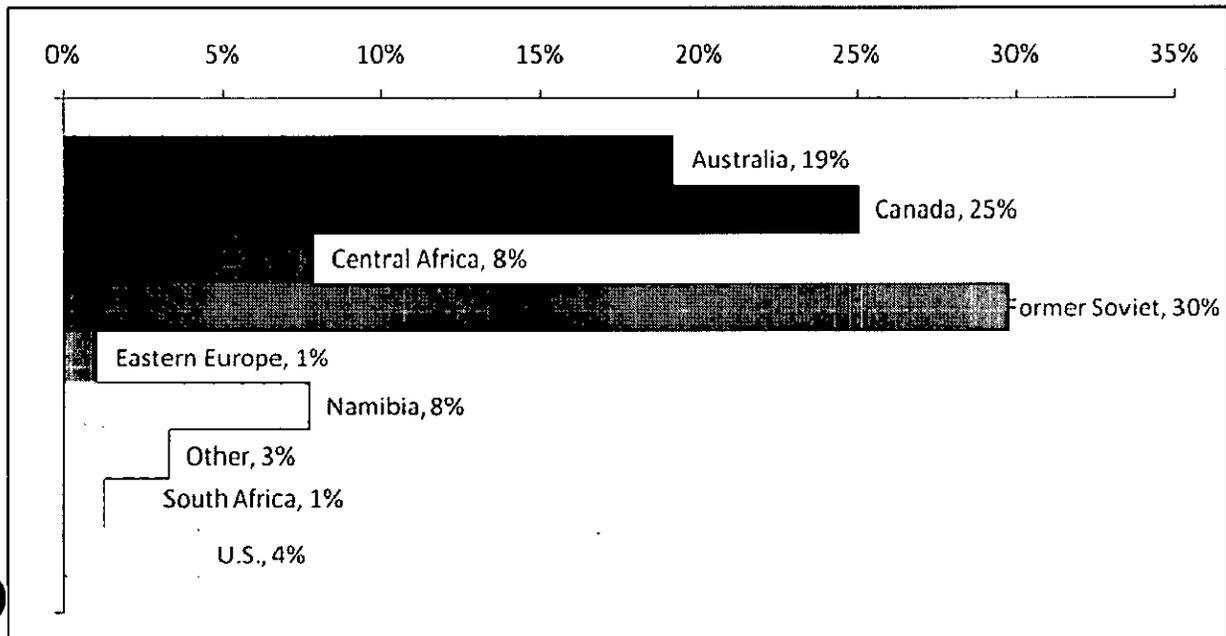

Figure 52: Global Uranium Primary Production (1995-2006)

Note: The Ux Consulting Company, LLC

The following graph illustrates global production per country for 2006:-

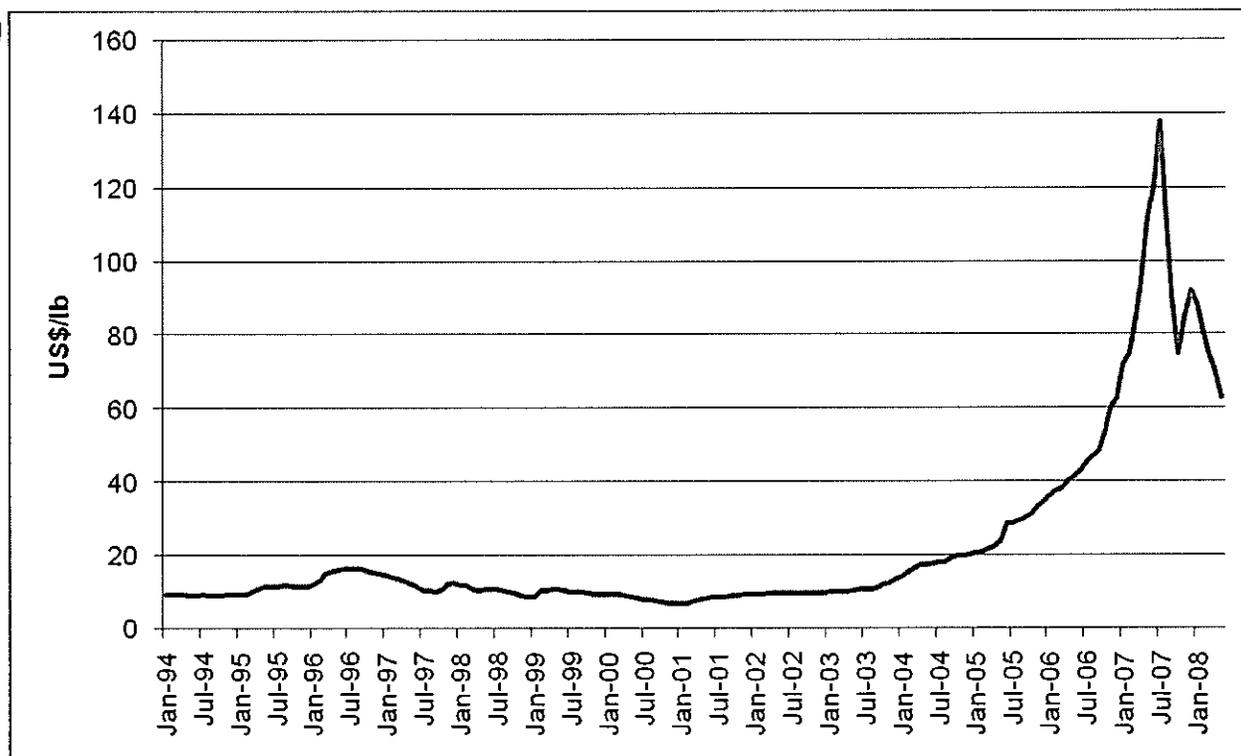

Figure 53: Global Uranium Production per Region (2006)

Note: The Ux Consulting Company, LLC

The spot uranium market has been through a turbulent period during the last three and a half years, characterized by a series of upward price jumps, as shown in Figure 54.

Figure 54: U3O8 Spot Price - (Monthly)

The combination of robust demand and sellers' expectations of future price increases continued to exert upward pressure on the spot uranium price, until June of 2007. The Uranium spot price pretty much followed that same trend as other base metals and following the fourth quarter of 2006, when active supply of spot uranium was at its lowest level on record, accompanied by short supply, prices started to rise significantly.

After reaching its all-time low of 1.3 million pounds U3O8 in October-December 2006, the active supply of uranium started to recover—to a level of about 2.7 million pounds U3O8 by the end of July 2007. Simultaneously, active demand dropped precipitously, from a peak of 6.3 million pounds U3O8 in November of 2006, to below the level of one million pounds U3O8. With this very low demand level and reasonable supply, the spot price retracted, dropping from \$138 per pound U3O8 to \$105 in 6 weeks.

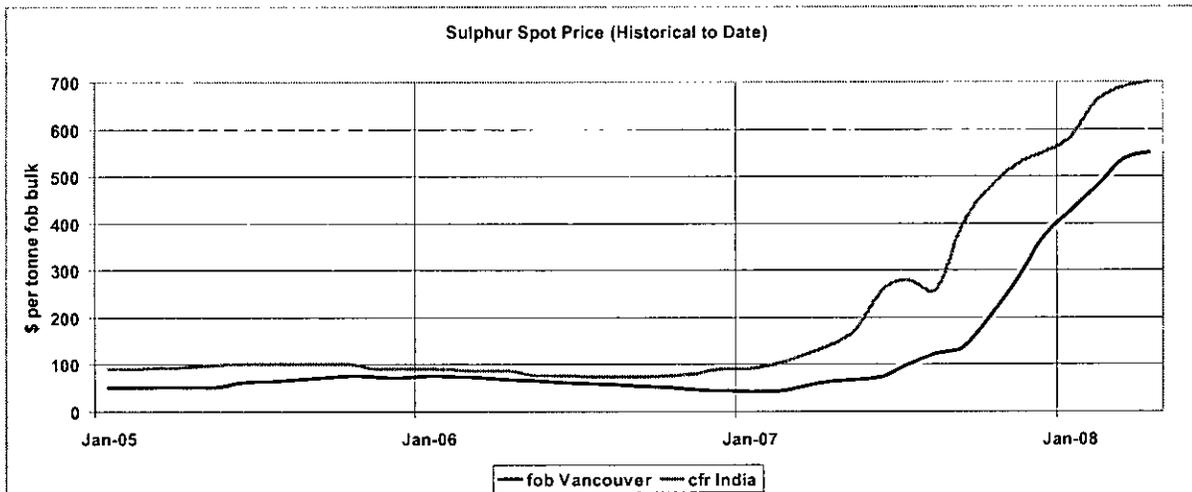

The 2007 weighted-average price of \$32.78 per pound U3O8 increased 76 percent compared with the 2006 price of \$18.61 per pound U3O8e, as uranium prices rose significantly during 2007. The current spot price is dropping now (Currently US\$60/lb), because of little near-term demand, but long-term prices looks to be steady

- Questions about production expansion remain and some of the recent announcements of new production are unlikely to become feasible
- More reactors are being ordered, so long-term prospects for uranium demand look good
- Spot prices are likely to remain volatile until a clear picture of future supply/demand emerges

Sulphur

The following graph illustrates the Sulphur spot price comparison from 2005 to 2008:-

Figure 55: Sulphur Spot Price Comparison

Notes:

- 1) FOB means “free on board” and indicates that the quoted price includes the cost of loading the goods into transport vessels at the specified location.
- 2) CFR means “cost and freight” and indicates that the cost of the goods and freight charges are included in the quoted price; while the buyer arranges for and pays insurance.
- 3) As South Africa is a net importer of sulphur, local suppliers practice import parity pricing with industry recognized benchmark prices as shown.

The long-term global outlook for the sulphuric acid (“H₂SO₄”) market is based upon information from sulphur industry research and is primarily driven by the spot price for sulphur.

Table 39: International Acid Price Forecast

	2008 (US\$/t)	2009e (US\$/t)	2010 – 2015e (US\$/t)	2015-2020e (US\$/t)
Tampa (cfr) consumer (fob)	250	175	80	80
Houston (fob)	260	175	80	80
Average H₂SO₄ price	265	175	80	80

Notes:

- 1) FOB means “free on board” and indicates that the quoted price includes the cost of loading the goods into transport vessels at the specified location.
- 2) CFR means “cost and freight” and indicates that the cost of the goods and freight charges are included in the quoted price; while the buyer arranges for and pays insurance.

The forecast acid prices, indicated in the table below, exclude the \$90 per tonne cost of transport from the port of entry into South Africa to the Corporation’s mining operations which are in the West Witwatersrand region. Due to new uranium mining activity in this region, there is increasing local demand for sulphuric acid. This demand is expected to normalize once additional acid plants have been commissioned. Until then First Uranium and other competitors will buy acid and will have to deal with a landed sulphuric acid cost plus domestic transportation costs.

Table 40: Delivered Acid Price Forecast

	2008 (US\$/t)	2009e (US\$/t)	2010 – 2014e (US\$/t)	2014-2020e (US\$/t)
Average international H ₂ SO ₄ price -- fob Richards Bay, South Africa	260	175	80	80
Transport -- ex Richards Bay, South Africa	90	90	90	15
Total cost modelled	350	265	170	95

Future price projections by some South African suppliers indicate sulphuric acid costs ranging between US\$330 and US\$600 per tonne and have not yet taken into consideration the acid demand at mining projects, such as MWS, which are yet to come on stream and represents 15% of current market acid supply.

ITEM 21 (D) - CONTRACTS**NUFCOR Agreements**

First Uranium has entered into two agreements with the Nuclear Fuels Corporation of South Africa (Pty) Ltd ("NUFCOR"), namely:-

- Toll Treatment Agreement for the calcining of Ammonium Diurate ((NH₄)₂U₂O₇) ("ADU") to produce U₃O₈; and
- Off Take Agreement for the interim period spanning June 2008 to December 2008, during which First Uranium will be producing ADU. The Off Take Agreement is required so that First Uranium is able to sell U₃O₈ as it produces, whilst NUFCOR builds the First Uranium calcining facility to enable toll treatment to occur.

NUFCOR Toll Treatment Agreement

A toll treatment agreement exists between NUFCOR and First Uranium (Agreement Reference 42215/WW/003). The agreement records the terms and conditions upon which:-

- NUFCOR will collect and transport the ADU from the First Uranium Operation, located at the MWS (Pty) Ltd plant in Stilfontein, to the NUFCOR Works, located in Western Areas;
- NUFCOR will dry and calcine ADU to produce UOC (predominantly composed of UO₂ and UO₃, reported as U₃O₈), on behalf of First Uranium;
- NUFCOR will package and store the UOC;
- NUFCOR will return the Ammonium Sulphate Solution (a waste product from the calcining of ADU) from NUFCOR Works to the First Uranium Works;
- NUFCOR will facilitate the transport and shipping of UOC to the Converters (which is a facility licensed to receive, store and convert U₃O₈ into natural uranium hexafluoride (UF₆) in accordance with the Treaty on the Non-Proliferation of Nuclear Weapons ("NPT"), on behalf of First Uranium), and
- NUFCOR will build Stream 3, which will be the calcining stream at the NUFCOR Works, with a maximum installed capacity of 2,700tpa UOC that will be used non-exclusively to treat First Uranium material including the planned stream availability of 82%, which equates to 2,200tpa UOC. However, only 50% of this available capacity will be dedicated to First Uranium, that is, week 1 and week 3 of every production month (approximately 1,100tpa of available capacity to First Uranium).

The Toll Treatment Agreement commenced on 3 September 2007 and shall, subject to any earlier termination in terms of this agreement, continue indefinitely thereafter for so long as mining operations are conducted at the First Uranium Works by First Uranium. According to the agreement, the U₃O₈ content in the ADU delivered to NUFCOR will be >30% and <38%.

NUFCOR Off Take Agreement

An Off Take Agreement also exists between First Uranium and NUFCOR (Agreement Reference: 42215/WWW/005). The agreement records the terms and conditions upon which:-

- NUFCOR will collect and road transport ADU from the First Uranium Works to the NUFCOR Works, and
- NUFCOR will purchase the U₃O₈ in ADU from First Uranium.

The agreement was signed on 12 October 2007 and shall, subject to any earlier termination in terms of the Agreement, continue in full force and effect up to and including 20 December 2008, or until such time as the ADU is processed in Stream 3 as referenced in the Toll Treatment Agreement.

Shared Services Agreement

Simmers and First Uranium are parties to a shared services agreement pursuant to which Simmers shall provide to First Uranium and/or its subsidiaries, the following services, as required by First Uranium and/or its subsidiaries:-

- Project management and technical services;
- Cash management and investment services;
- Accounting, treasury and financial services;
- Corporate secretarial services;
- Human resource and staffing services, including payroll and benefits administration; and
- Such other services as may be required by First Uranium and which Simmers is able and willing to provide.

Tailings and Mining Right Agreement

A Tailings and Mining Right Agreement was entered into between BGM, MWS and Simmers, as described in Section 7 (c) and (d).

ITEM 21 (E) - ENVIRONMENTAL CONSIDERATIONS

MWS

An EMPR was compiled on the MWS project area by Envirogreen Consulting in November 2001. This EMPR covered only the Reprocessing of the MWS 2 dam. In undertaking the mining of MWS 2 dam, MWS undertook to contribute sufficient revenue from the project into the then existing SGM Rehabilitation and Closure Trust fund to cover the full rehabilitation and close liability for the remaining extent of the SGM.

An independent closure programme was compiled for the remaining areas of the SGM property in which the outstanding liabilities were estimated and proposed closure works detailed. Further details on the closure cost estimates, which have subsequently been updated, are covered in Item 7 (h).

The following sections detail the findings of the Environmental Impact Assessment. It should be noted that both positive and negative impacts have been detailed:-

Table 41: Environmental Impacts of Reclamation of MWS 2 Dam

Environmental Impact	Impact Rating	Impact
Geology – Sinkhole formation	Low	Negative
Topography – Change in landform – Reclamation of No 2 Dam	Low	Positive
Topography – Change in landform – Reinitiating of deposition on No 5 dam	Low	Negative
Soil – Erosion by over stripping	Moderate	Negative
Soil – Uncovering of sterilised soils	Low	Negative
Land Capability – Recovery of land capability potential	Low	Negative
Land Capability – Uncovering of sterilised soils	Moderate	Positive
Land Use – Change in land use	Moderate	Positive
Vegetation – Replacement of natural species with grasses during rehabilitation	Low	Negative
Vegetation – Loss of established grass during reclamation of Dam 2	Low	Negative
Animal Life – Displacement of remaining animal life	Low	Negative
Surface Water – Change in surface drainage patterns	Moderate	Positive
Surface Water – Impairment of surface water quality	Low	Negative
Groundwater – Impairment due to mobilisation of metals in recharge from return-water dam	Moderate/High	Negative
Air Quality – Increase in dust generation	Moderate	Negative
Air Quality – Decrease in Radon exposure in village	High	Positive

Environmental Impact	Impact Rating	Impact
Noise – Increase in noise levels due to mining	Low	Negative
Visual – Deterioration in visual impact	Low	Negative

High Negative Impacts

Groundwater impairment was expected to take place due to the mining of MWS 2 dam. Mitigation measures included the removal and stockpiling of contaminated soil in the return water dam as well as the monitoring of the groundwater in order to confirm the predicted situation.

High Positive Impacts

The reduction of Radon exposure has been listed as a high positive impact as this will positively change the human health risk of those living in the vicinity of the dam.

Conclusions

Envirogreen Consulting concluded that in the dams current state (as at November 2001) the SGM impacted heavily on the environment, in terms of the deterioration in surface and groundwater quality, public radon exposure due to the close proximity of the dam to the Stilfontein Village and the contamination of soils by fugitive tailings with an associated reduction in the agricultural potential of the affected land.

They also concluded that the reprocessing of the MWS 2 dam would positively impact the environment by removing the potential health risk of Radon exposure as a result of the final deposition site, some distance away from the Stilfontein Village, improving the surface drainage with an associated reduction in contact time of dam runoff moving past mine impacted sites, the making of land available for agricultural use by removing the overlying deposited tailings and spillages and contributing to the local economy.

Buffels

BGM has an old order mining right to mine the area occupied by the BGM Underground mine and the Hartebeestfontein Gold Mine (ML 4/2001). The BGM Underground Mine has an Environmental Management Plan, approved in August 2002 by the DME, which includes retreatment of the tailings dams. This EMP was updated in by GCS in October 2007 to include the closure cost of the BGM, which includes the tailings dams.

The following section contains extracts or summaries from the Risk Assessment conducted by GCS:-

Table 42: Risk Assessment of the Buffels Tailings Dams

Risk	H1	H2	H5	H6	H7	B2	B3	B4	B5	Ellaton	Flan	NKGE
Dust Generation	✓	✓	✓	✓		✓	✓	✓	✓			
Side slope erosion	✓	✓	✓	✓		✓	✓	✓	✓	✓	✓	✓
Insufficient paddock capacity										✓	✓	✓
Side Slope grading	✓	✓	✓	✓		✓	✓	✓	✓	✓	✓	✓
Seepage to ground water	✓	✓	✓	✓	✓	✓	✓	na	✓	✓	✓	✓
Sinkhole presence	na	✓	na	na	na	na						

✓ - Pertains to a risk that is potentially significant

Source: GCS

na - Pertains to a risk that is insignificant

Risk mitigation strategies for risks that are potentially significant include:-

- Dust Generation: Ridge ploughing or dry vegetation of areas liberating dust
- Side slope erosion: Containment in paddock system
- Insufficient paddock capacity: Ensure sufficient paddock capacity
- Side slope grading: Ensure subtle side slopes when reworked

GCS noted that short and medium term rehabilitation has been concurrent with most tailings facilities and that a concise rehabilitation programme was being investigated for implementation.

However, once the tailings dams have been retreated, all of the risk factors will be mitigated, and then similar environmental impacts, as were detailed for the MWS 2 dam, would come into play.

ITEM 21 (F) - TAXES

Company taxes under South African legislation are 28% of profits after consideration of the tax shields of unredeemed capital and assessed losses. A corporate tax rate of 28% (for non mining income) has been factored into the DCF and a Gold Mine tax formula, equating to $y=43 - 225/x$ (y being the tax % and x the profit/revenue ratio) has been factored into the DCF for mining income. The taxation assumptions were supplied by Simmers and First Uranium.

Ring Fencing

Several types of ring fencing affect taxation within the mining sector in South Africa. These include:-

- The mining activity ring-fence, which is mining income, derived from gold and non-mining income, is taxed separately. The former is taxed according to special formulae and the latter at the ordinary rate applicable to all companies;
- Capital expenditure 'general' ring fence: This restriction disallows the off-set of unredeemed mining capital expenditure against non-mining income, and provides that the total amount of mining capital expenditure deductible in any year of assessment in relation to any mine or mines shall not exceed the taxable income derived by the taxpayer from mining. Any amount that exceeds such taxable income shall be carried forward to the succeeding year.
- Capital expenditure 'per mine' ring-fence: In the past the deduction of capital expenditure on a particular mine was restricted to the mining income generated by that mine only. In 1990 a provision was introduced which allowed a 25% breach of the ring fence in certain circumstances. That means that in a company which operates a number of mines and has a taxable income, a maximum of 25% of such income may be absorbed by capital expenditure incurred in relation to a new mine in respect of which mining operations commenced after 14th March 1990.

Income Tax Deductions

Capital expenditure

In addition to the normal provisions, which apply to general companies, capital expenditure is allowed as a deduction from mining income, subject to capital expenditure 'general' and capital expenditure 'per mine' ring-fencing requirements. In respect of all mines, capital expenditure incurred may be redeemed immediately against mining profits and not on the basis of 20% over 5 years, as is the case with manufacturing concerns.

Prospecting

Subject to ring fencing requirements, expenditure incurred on prospecting operations prior to the establishment of a mine in respect of any area within the Republic may be deducted from income derived from mining operations of a particular class of mining to which the prospecting relates. However, the Commissioner for the South African Revenue Service has the power to determine that such expenditure be deductible in instalments.

Environmental Funds

Mining companies are required by law to make financial provision for mining-related environmental rehabilitation. If the financial provisions are in the form of a trust fund, the Income Tax Act allows for the deduction of this provision from income, and exempts the receipts and accruals of registered environmental funds established to hold these provisions from tax.

Royalty Bill

The National Treasury recently released the third draft of the Mineral and Petroleum Resources Royalty Bill, for a final round of public comment and parliamentary review. The tax base for the mineral and petroleum resources royalty regime as defined in both the first and second draft Bills was gross sales. In the latest draft of the Bill, gross sales are confirmed as the tax base, but it also takes into account the process of beneficiation. In general, beneficiation expenses in the gold industry relate to smelting, refining and processing. These expenses qualify as deductible expenditure, but in the case of gold are very low at 0.4%. In addition to a revised tax base, the royalty rates have also been reviewed. Both the previous draft Bills incorporated specific, but differential royalty rates for the various minerals. In the second draft Bill the specific royalty rates were reduced and, in addition, dual royalty rates were introduced for certain minerals (with a lower rate for refined minerals). The new royalty rate structure will be based on a formula that takes into account the profitability of company, as follows:-

$$\text{Royalty Rate} = \frac{\text{EBITDA} \times 100}{\text{Gross sales for the assessment period} \times 12.5}$$

ITEM 21 (G) - CAPITAL AND OPERATING COSTS

Capital Expenditure

The capital expenditure has been broken down into three phases, namely Phase 1A, Phase 1B and Phase 2. Read, Swatman and Voigt (Pty Ltd ("RSV")) and K'enyuka carried out the costing for the Capital Expenditure for the different phases, and Minxcon has relied upon this information to calculate the economic viability of the Resources and hence the Reserves. It should be noted that RSV have performed the Phase 1A and 1B Capital Cost Estimations to Feasibility level of accuracy and the Phase 2 Capital Cost Estimations to Pre-Feasibility level of accuracy. The following summary of estimated capital costs have been factored into the DCF:-

Table 43: Capital Costs (FY2008-2009) (US\$)

PHASE	Unit	2008	2009	2010	2011	Total
Phase 1A	\$ '000,000	3.2	1.4			4.6
Phase 1B	\$ '000,000	9.6	97.9	31.6	3.0	142.1
Phase 2	\$ '000,000			58.2	13.3	71.5
New Tailings Dam	\$ '000,000		13.1	25.0	2.6	40.7
Sub Total	\$ '000,000	12.8	112.4	114.8	18.8	258.8
MWS Plant Capex	\$ '000,000	1.6				1.6
Sub Total (NPV Valuation Capital)	\$ '000,000	14.4	112.4	114.8	18.8	260.4
Add Back Phase 1A Capital expensed to Nov '07	\$ '000,000					14.8
Add Back Phase 1B Capital expensed to Nov '07	\$ '000,000					1.0
Grand Total (LOM Capital)	\$ '000,000					276.2
Grand Total (LOM Capital)	ZAR '000,000					2,043.9

The US\$1.6million for the MWS plant expansion from 600,000tpm to 633,000tpm has already been expended and consequently does not form part of this economic evaluation. The following sections detail the breakdown of the estimated costs per phase:-

Phase 1A

Phase 1A includes the reclamation and pumping of tailings from existing dams to the existing MWS Plant at a rate of 633,000tpm.

Table 44: Phase 1A Cost

Description	Total (ZAR)	Total (US\$)
Civils	20,174,461	2,726,279
Platework	1,854,557	250,616

ITEM 21 (H) - ECONOMIC ANALYSIS

Valuation Approach

The Discounted Cash Flow ("DCF") method of mineral project valuation was used to estimate the value of the project. This method is generally applied to late stage exploration to early development projects. This report constitutes a pre-feasibility study, which has demonstrated positive economic results, thus enabling the Corporation to commence with the construction of the plants and associated infrastructure. The Corporation will progress with the necessary work to move the Project from Pre- Feasibility to Feasibility level.

Prices and Projections

Exchange Rate and Metal Prices

The gold and uranium prices, used in the valuation of the Project, were calculated from an average nominal consensus forecast from investment banking institutions, which was then deflated by 2.5% (from 2009 to 2011) to bring the figures back to real terms. After 2011 the long term trends were used. The following table details the gold and uranium prices as well as the ZAR/\$ exchange rate used in the DCF:-

Table 50: Gold and Uranium Prices and Exchange Rates

Years Ending		Unit	Mar 2009	March 2010	March 2011	March 2012	> March 2012
April 2008	Gold Price	\$/oz	889.64	907.49	874.14	796.62	711
	Uranium Price	\$/lb	96	92	79	75	50
	Exchange Rate	ZAR/\$	7.27	7.36	7.50	7.45	7.57

A decision was made to increase the price assumptions for gold and lower slightly the prices for uranium, as the prices for gold and uranium were considered to be outdated, considering the current prices for the commodities. Therefore, prices of \$889.64/oz (2008) for gold and \$96/lb for uranium declining to US\$50/lb were used in light of the fact that the price of gold on the 31st March 2008 closed at US\$933.50 per ounce (London PM Fix) and the average price for uranium in March 2008 was US\$65/lb. The US\$/ZAR exchange rate as at 31st March 2008 was ZAR/US\$8.14.

Discount Rates

A real discount rate of 8% was used in the DCF, based on a nominal discount rate of 14.63%.

Discounted Cash Flow

After taking into consideration the impact of the power situation, the undiscounted after-tax real cash flow totals \$757 million over the mine life for the operation on a stand-alone basis. The Total Cash Cost is \$3.44 per reclaimed ton. Working capital, Revenue royalties, General and Admin Costs, rehabilitation net of Scrap sale credits adds a further \$0.57 per ton for a Total production cost of \$4.00 per ton. The NPV at real discounts rates of 6.1%, 8%, and 9.9% is, respectively, \$473.07, \$413.64 and \$363.22 million

The following table details the summary of the DCF and reflects a robust cash flow:-

Table 51: Summary of DCF (Real Terms)

Discount Rate	8%
Project Value (US\$ million)	413.60
IRR (%)	69.9%

The following table overleaf details the consolidated DCF.

Table 52: NPV Sensitivities (Real Terms)

Exchange rate					
	80%	90%	100%	110%	120%
	264.55	347.65	413.60	467.81	512.98
Metal Price					
	80%	90%	100%	110%	120%
	211.64	312.89	413.60	514.59	615.57
Variable Cost					
	80%	90%	100%	110%	120%
	498.79	456.20	413.60	371.01	328.42
Capex					
	80%	90%	100%	110%	120%
	447.97	430.79	413.60	396.42	379.24

The NPV is most sensitive to metals prices, exchange rates and Capex. Due to large upfront expenditure on the plant and relative short life, Capex also have an impact, although not as much as the economic factors.

ITEM 21 (I) - PAYBACK

The mines payback period is 2.80 years.

ITEM 21 (J) - MINE LIFE

The life of the operation, using the estimated Mineral Reserves, is 16 years.

ITEM 22- OTHER RELEVANT DATA AND INFORMATION

SOUTH AFRICAN MINING LAW

Mineral and Petroleum Resource Development Act

The Mineral and Petroleum Resource Development Act of 2002 (“MPRDA” or “the Act”) was enacted in South Africa on the 1st May 2004. This Act defines the State’s legislation on Mineral Rights and mineral transactions in South Africa. One of the focus points of the Act is that it emphasises that the government does not accept the dual State and private ownership of Mineral Rights in South Africa, and that all minerals vest in the State.

Companies which owned old order, i.e. rights in force immediately before the date on which the Act took effect, and which were mining at the 1st May 2002 are entitled to continue to mine but are obliged to apply for the conversion of those old order rights into Prospecting and Mining Rights under the Act, before 30 April 2009, or the date on which the old order right lapses, whichever is the earliest. All minerals in South Africa vest in the State and private persons and mining and exploration companies must apply for new order rights to mine or prospect for minerals. In the Act, the State has reaffirmed its commitment to guaranteeing security of tenure in respect of prospecting and mining operations. However the Act does not allow for the hoarding mineral rights to the exclusion of new entrants to the minerals industry.

A further objective of the Act is the pursuance of the government’s policy of furthering broad based black economic empowerment (“BBBEE”) within South Africa’s minerals industry, by encouraging mineral exploration and mining companies to enter into equity partnerships with historically disadvantaged South Africans.

The Act also makes provision for the implementation of social responsibility procedures and programmes by Mineral Resource companies. Applicants for rights to prospect and mine are required to provide details of compliance with these criteria under Schedule II of the Act, which details the Transitional Arrangements.

Mining Charter

The Mining Charter, which came into effect on the 1st May 2004, provides a framework to assist mining companies to carry out their obligation to comply with sections 2(d) and 2(f) of the MPRA. The Mining Charters main objectives are:-

- to promote equitable access to South Africa’s Mineral Resources for all South Africans;
- to substantially and meaningfully expand opportunities for historically disadvantaged South Africans (“HDSA’s”), including women, to enter the mining and minerals industry and to benefit from the exploitation of South Africa’s Mineral Resources;
- to utilise the existing skills base for the empowerment of HDSA;
- to expand the skills base of HDSA to serve the community;
- to promote employment and advance the social and economic welfare of mining communities and areas supplying mining labour;
- to promote beneficiation of South Africa’s mineral commodities beyond mining and processing, including the production of consumer products.

The Mining Charter also clarifies that it is not the Government’s intention to nationalise the mining industry. To achieve these objectives, the Mining Charter requires that each mining company achieves a 15% HDSA ownership of mining assets within five years and a 26% HDSA ownership of mining assets within 10 years.

Ownership can comprise active involvement, through HDSA controlled companies (where HDSA own at least 50% plus one share of the company and have management control), strategic joint ventures or partnerships (where HDSA own at least 25% plus one vote and there is joint management and control) or collective investment vehicles (the majority ownership of which is HDSA based) or passive involvement, particularly through broad based vehicles like employee stock option plans.

When considering applications for the conversion of existing licenses, the government will take a "scorecard" approach to ascertain a company's compliance with the charter. In February 2003 the Department of Minerals and Energy ("DME") published the scorecard, which is intended to facilitate the application of the Mining Charter and measure compliance with the empowerment requirements of the MPRDA for the purpose of determining whether an application for conversion of old order rights to new order rights should be granted. The scorecard sets out the requirements of the Mining Charter in tabular form which allows the DME to check areas where a mining company is in compliance. The scorecard covers the following areas:-

- Human resource development;
- Employment equity (including participation in management and participation by women);
- Migrant labour;
- Mine community and rural development;
- Housing and living conditions;
- Ownership and joint ventures;
- Beneficiation; and
- Reporting.

The Mining Charter, together with the scorecard, provides a system of "credits" or "offsets" with respect to measuring compliance with HDSA ownership targets. The charter also requires mining companies to submit annual, audited reports on progress towards their commitments.

The Royalty Bill

Details of the Royalty Bill are included in Section 7 (g) of this report.

ITEM 23- INTERPRETATION AND CONCLUSIONS

Minxcon have reviewed all the information and have made the following observations:-

- Previously, the Mineral Resources were estimated using the Central Limit Theorem. All the dams have subsequently undergone an in-depth geostatistical remodelling using Datamine® as the platform package. An in-house estimation programme was used for the geostatistical modelling, which is also used by a series of major mining companies. All the dams have been re-estimated according to sound geostatistical principals, which have verified the confidence levels applied to the Mineral Resource estimation. Simple and ordinary kriging methodologies were employed. The kriging method of Mineral Resource estimation is deemed appropriate for the style of mineralisation and is consistent with CIM guidelines;
- The preliminary assessment for the project published in May 2007 reflected the use of Pressure Leach technology. Since May 2007, significant test work has been undertaken, which is however not yet complete. Consequently, First Uranium has adopted a hybrid approach, which includes the initial use of proven Atmospheric Leach technology. The migration from Atmospheric Leaching to Pressure Leaching in the uranium plant in December 2009 is expected to reduce plant operating costs. In addition, the acid produced from the Pressure Leach circuit will positively impact the recovery of gold from the gold plant;

- The NPV of the Project is positive at US\$413m and the IRR is 69.9%;
- The Projects economics are most sensitive to the gold and uranium prices, exchange rates and Capex
- The Life of Mine of the Project is estimated at 16 years; (includes 2008 depletion)
- No Inferred Mineral Resources were included in the economic analysis contained in this Technical Report. The Mineral Resources that were not converted to Mineral Reserves either do not have demonstrated economic viability, as illustrated by the COG calculations, or do not have sufficient information to confirm the gold and uranium grades; and
- The only additional work that is anticipated includes the work to be undertaken on the new tailings dam that will be built to accommodate the reprocessed tailings from the fifteen tailings dams included in this report. Both the design and construction elements are already covered within the existing budget.

ITEM 24- RECOMMENDATIONS

The following Items are recommended for consideration as the Project moves forward:-

- Negotiations with the landowners to secure options for the land comprising the new tailings dam site need to be concluded;
- The pressure leach testwork for the design for the uranium processing plant must be finalised;
- Additional Drilling for sulphur grades to be undertaken so as to evaluate the sulphur grades in the dams, which will be utilized in the Acid Plant.

ITEM 25- REFERENCES

Sir

GRANTING OF A PROSPECTING RIGHT IN TERMS OF SECTION 17 OF THE MINERAL AND PETROLEUM RESOURCES DEVELOPMENT ACT, 2002 (ACT 28 OF 2002): VARIOUS PORTIONS OF THE FARMS: KLERSDORP TOWN & TOWNLANDS 424 IP, ZANDPAN 423 IP, MAPAISKRAAL 441 IP, HARTEBEESTFONTEIN 422 IP, BUFFELSFONTEIN 433 IP, KAREERAND 444 IP, KIEPERSOL 481 IP, KROMDRAAI 420 IP, MAGISTERIAL DISTRICT OF KLERKSDORP:

1. This is to confirm that your abovementioned application for the prospecting of uranium ore, rare earth, sulphur (in pyrite) in respect of the abovementioned properties has been granted in terms of section 17(1) of the Mineral and Petroleum Resources Development Act, 2002 (Act 28 of 2002).
2. Take note that the Regional Manager will approve the Environmental Management Plan and sign the right on the *11 July 2007*.
3. Further note that in terms of section 17(5) of the Act, the prospecting right comes into effect on the date on which the Environmental Management Plan is approved. In terms of section 19(2) prospecting activities must commence within 120 days of the effective date.
4. In light of the afore-going you are requested to:
 - 4.1. Submit financial guarantee to the amount of R 30 000 for rehabilitation of the environment; and
 - 4.2. Submit a brief explanation about the relation between Jaganda Trading (Pty) Ltd and Buffelsfontein Gold Mines Ltd.
 - 4.3. Submit a profile of Rechtrau No. 47 (Pty) Ltd; and
 - 4.4. The above must be submitted to this office by no later than 30 days from the date of this correspondence.
5. Note further that in terms of section 19(2)(a), the signed/executed prospecting right must be lodged for registration at the Mineral and Petroleum Titles Registration Office by no later than 30 days from the date on which the right is effective.
6. Failure to comply may result in the withdrawal, suspension or cancellation of the right.

Yours faithfully

F-R00HA
DEPUTY DIRECTOR-GENERAL: MINERAL REGULATION
DATE:

Buffelsfontein Mining Right for Gold

G.P.-S 0:10 0233

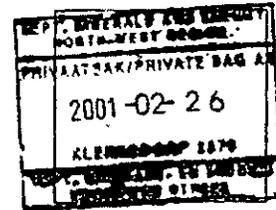

MD 109E

DEPARTMENT OF MINERAL AND ENERGY AFFAIRS

MINING LICENCE

(Minerals Act, 1991: Section 9 (1) read with 9 (3) (e))

Office date stamp

Licence No. **ML 4/2001**
 Office reference **RDNW (KL) 5/3/2/1330**

Authorization is hereby granted under and subject to the provisions of the Minerals Act, 1991,

to (full name) **BUFFELSFONTEIN GOLD MINES LIMITED**

identity or registration number **9 5 / 1 0 0 7 2 / 0 6**

(hereinafter referred to as "the holder")

of (address) **PRIVATE BAG
 STILFONTEIN
 2550**

to mine for (name of mineral) **GOLD**

in respect of tailings*

on (full name of farm and subdivision) **SEE REVERSE**

No. **Magisterial District** **KLERKSDORP** **Region** **NORTH-WEST**

as indicated on the attached sketch plan No. **ML 4/2001**

signed by the Regional Director on **19 FEBRUARY 2001**

Full name of the holder of the right to the said mineral **BUFFELSFONTEIN GOLD MINES
 LTD**

Unless this licence is suspended, cancelled or abandoned or lapses it shall be valid for a period
 (more than two years) ~~which shall extend from the date of issuing until~~ **19**

or until the mineral the mining of which is hereby authorized can no longer be mined economi-
 cally by the holder of the land concerned. (If a specific date is inserted, delete the words that
 follow the date.)

MD 109E

This licence does not exempt the holder from the requirements of any provision of any other law or from any restrictive provisions or conditions contained in the title deed of the land concerned, nor does it encroach upon the rights of any person who may have an interest in the land or tailings concerned or the mineral rights in respect of such land or tailings.

Signed at KLERKSDORP this 26TH day of FEBRUARY 2001 19

Regional Director *E. G. van der Merwe*

* Delete the words "in respect of tailings" if they are not applicable.

Appendix 2: Performance Labs Certificate of Accreditation

This is to certify that:

PERFORMANCE LABORATORIES (PTY) LTD.

Testing Laboratory No. T0265

is a South African National Accreditation System Accredited Laboratory
for five years commencing **February 2005** provided that
all SANAS conditions and requirements are complied with.

This certificate is valid for:

CHEMICAL ANALYSES

as per scope on accompanying schedule of accreditation

THE LABORATORY COMPLIES WITH ISO/IEC 17025

While this certificate remains valid,
the Accredited Laboratory named above
is authorised to issue SANAS certificates.

Programme Manager

*"Recognised as the official national accreditation body by the
Department of Trade and Industry of the Republic of South Africa"*

This certificate is only valid when accompanied by its schedule of accreditation.

Appendix 3: Qualified Person's Certificate

CERTIFICATE of QUALIFIED PERSON
(Johan Odendaal)

I, Johan Odendaal, Pr. Sci. Nat do hereby certify that:

1. I am Director of:
Minxcon (Pty) Ltd
Suite 5, Coldstream Office Park
Cnr Hendrik Potgieter & Van Staden
Johannesburg, South Africa
2. I graduated with a B.Sc (Geology) degree from the Rand Afrikaans University in 1985. In addition, I have obtained a B.Sc Hons (Mineral Economics) from the Rand Afrikaans University in 1986 and a M.Sc. Min. Eng. from the University of the Witwatersrand in 1992.
3. I am a member/fellow of the following professional associations.

Class	Professional Society	Year of Registration
Member	Geological Society of South Africa	2003
Fellow	South African Institute of Mining and Metallurgy	2003
Member	Australasian Institute of Mining and Metallurgy	2003
Member	Natural Scientist Institute of South Africa	2003
Member	Investment Analysts Society of South Africa	1992

4. I have worked as a Geoscientist for a total of 22 years since my graduation from university. As a former employee of Merrill Lynch, I was actively involved in advising mining companies and investment bankers on corporate related issues. Rated one of the top platinum mining analysts I became a globally recognised industry specialist. I have worked on a number of mineral projects that entailed the compilation of pre-feasibility studies as well as due diligence reports and resource audits on numerous commodities, including gold deposits in the Witwatersrand Basin.
5. I have read the definition of "qualified person" set out in National Instrument 43 101 ("NI 43 101") and certify that by reason of my education, affiliation with a professional association (as defined in NI 43 101) and past relevant work experience, I fulfil the requirements to be a "qualified person" for the purposes of NI 43 101.
6. I am responsible for all sections of the Technical Report titled "Technical Report on the Mine Waste Solutions Tailings Recovery Project, located near Stilfontein, North West Province, South Africa" dated 31st March 2008, (the "Report"), specifically the Financial Evaluation of Buffels Mine included in the Report. I have visited the Project on numerous occasions during 2007.
7. I have had prior involvement with the properties that are the subject of the Report. The nature of my prior involvement includes the preparation of the Technical Report on the Pre-Feasibility of the Buffelsfontein Tailings recovery Project located near Stilfontein, North West Province, South Africa" dated 1st November 2007.
8. To the best of my knowledge, information and belief, the Report contains all scientific and technical information required to be disclosed to make the Report not misleading.
9. I am independent of the First Uranium and Simmers, as defined by NI 43 101.
10. I have read the NI 43 101 code, and the Report has been prepared in compliance with it.
11. I consent to the filing of the Qualified Persons Report with any stock exchange and other regulatory authority and any publication by them for regulatory purposes, including electronic publication in the public company files on their websites accessible by the public, of the Report.

Yours faithfully,

N J ODENDAAL
B.Sc. (Geol), B.Sc. Hons. (Min.Econ.), M.Sc. (Min. Eng.)
Pr. Sci. Nat., FSAIMM, MGSSA, MAusIMM
DIRECTOR

Dated: 31 March 2008.

CERTIFICATE of QUALIFIED PERSON (Daan van Heerden)

I, Daniel van Heerden, Pr. Min Eng do hereby certify that:

1. I am Director of:

Minxcon (Pty) Ltd
 Coldstream Office Park, Suite 5
 Cnr Hendrik Potgieter & Van Staden Road
 Johannesburg, South Africa

2. I graduated with a B.Eng (Mining) degree from the University of Pretoria in 1985 and a M. Comm. (Business Administration) from the Rand Afrikaans University in 1993. In addition, I have obtained a the following:

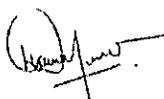

Degree/Diploma	Field	Institution	Year
Data metrics	Computer Science	UNISA	1989
Advanced development programme	Executive development	London Business School	1995
Mine Managers Certificate	Government certificate of competency	Chamber of Mines	1989

3. I am a member/fellow of the following professional associations.

Class	Professional Society	Year of Registration
Member	Association of Mine Managers of SA	1987
Fellow	South African Institute of Mining and Metallurgy	1985
Pending	Australasian Institute of Mining and Metallurgy	2005
Member	Engineering council of South Africa	2005

4. I have worked as a Mining Engineer for a total of 23 years since my graduation from university and have obtained significant experience in managing mining operations in South Africa and abroad both underground and open cast for world-class mining major and for junior mining companies. I also have extensive experience in new business development locally and internationally being responsible for such activities in two major mining companies, one gold focused and the other platinum. I have experience in mining mergers & acquisitions (friendly and hostile) and related activities such as valuation, due diligence, finance structuring and change management required post the event. I have also made significant contributions in the areas of Ore Reserve Management, Reserve estimation and Mine Services Management with the purpose of improved mining productivity. I have worked on a number of mineral projects that entailed the compilation of pre-feasibility studies as well as due diligence reports and resource audits and reserve calculations on numerous commodities, including gold deposits in the Witwatersrand Basin.
5. I have read the definition of "qualified person" set out in National Instrument 43 101 ("NI 43 101") and certify that by reason of my education, affiliation with a professional association (as defined in NI 43 101) and past relevant work experience, I fulfil the requirements to be a "qualified person" for the purposes of NI 43 101.
6. I am responsible for all sections of the Technical Report titled "Technical Report on the Mine Waste Solutions Tailings Recovery Project, located near Stilfontein, North West Province, South Africa" dated 31st March 2008, (the "Report"), specifically the estimation of the Reserves and Mining Sections included in the Report. I have visited the Project on numerous occasions during 2007.
7. I have had prior involvement with the properties that are the subject of the Report. The nature of my prior involvement includes the preparation of the Technical Report on the Pre-Feasibility of the Buffelsfontein Tailings recovery Project located near Stilfontein, North West Province, South Africa" dated 1st November 2007.
8. To the best of my knowledge, information and belief, the Report contains all scientific and technical information required to be disclosed to make the Report not misleading.
9. I am independent of the First Uranium and Simmers, as defined by NI 43 101.
10. I have read the NI 43 101 code, and the Report has been prepared in compliance with it.
11. I consent to the filing of the Qualified Persons Report with any stock exchange and other regulatory authority and any publication by them for regulatory purposes, including electronic publication in the public company files on their websites accessible by the public, of the Report.

Yours faithfully,

D VAN HEERDEN
 B.Sc. (Min.Eng.), M.Comm. (Bus. Admin.)
 ECSA, MSAIMM, AMMSA
 DIRECTOR

Dated: 31st March 2008

CERTIFICATE of QUALIFIED PERSON

(CJ Muller)

I, Charles J. Muller, BSc. (Hons), do hereby certify that:

1. I am Director of:

Minxcon (Pty) Ltd
 Suite 5, Coldstream Office Park
 Cnr Hendrik Potgieter & Van Staden
 Johannesburg, South Africa

2. I graduated from the Rand Afrikaanse University (BSc. (1988) and BSc. Hons (1992)).
3. I am a member in good standing of the South African Council for Natural Scientific Professions (SACNASP), registration number 400201/04.
4. I have worked as a geoscientist for a total of eighteen years since my graduation from university.
5. I have read the definition of "qualified person" set out in National Instrument 43 101 ("NI 43 101") and certify that by reason of my education, affiliation with a professional association (as defined in NI 43 101) and past relevant work experience, I fulfil the requirements to be a "qualified person" for the purposes of NI 43 101.
6. I am responsible for all sections of the Technical Report titled "Technical Report on the Mine Waste Solutions Tailings Recovery Project, located near Stilfontein, North West Province, South Africa" dated 31st March 2008, (the "Report") , specifically the estimation of the Resources included in the Report. I have visited the Project on numerous occasions during 2007.
7. I have had prior involvement with the properties that are the subject of the Report. The nature of my prior involvement includes the preparation of the Technical Report on the Pre-Feasibility of the Buffelsfontein Tailings recovery Project located near Stilfontein, North West Province, South Africa" dated 1st November 2007.
8. To the best of my knowledge, information and belief, the Report contains all scientific and technical information required to be disclosed to make the Report not misleading.
9. I am independent of the First Uranium and Simmers, as defined by NI 43 101.
10. I have read the NI 43 101 code, and the Report has been prepared in compliance with it.
11. I consent to the filing of the Qualified Persons Report with any stock exchange and other regulatory authority and any publication by them for regulatory purposes, including electronic publication in the public company files on their websites accessible by the public, of the Report.

Yours faithfully,

CJ Muller
 B.Sc. (Hons)
 Pr. Sci. Nat
DIRECTOR

Dated: 31 March 2008

**CERTIFICATE of QUALIFIED PERSON
(H Sternberg)**

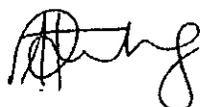

I, Heidi Sternberg, Pr. Sci. Nat do hereby certify that:

1. I am an employee of:
Minxcon (Pty) Ltd
Suite 5, Coldstream Office Park
Cnr Hendrik Potgieter & Van Staden
Johannesburg, South Africa
2. I graduated with a B.Sc (Hons) Geol. degree from the University of Port Elizabeth in 2000. In addition, I obtained a Graduate Diploma in Engineering (GDE) from the University of the Witwatersrand in 2006.
3. I am a member/fellow of the following professional associations.

Class	Professional Society	Year	Reg. No.
Member	Geological Society of South Africa	2001	946804
Member	South African Institute of Mining and Metallurgy	2002	702754
Member	South African Council for Natural Scientific Professions	2005	400113/05

4. I have worked in the mining industry for the past 6 years since graduating from university. As a graduate I joined AngloGold as a trainee geologist on Western Deep Levels South Shaft (Mponeng), where I was responsible for the general geological responsibilities of a section of the mine. Thereafter I joined Venmyn Rand (Pty) Ltd as a Mineral Project Analyst where my responsibilities included the compilation of Due Diligence, Competent Persons' and Technical Reports on various mining companies involved in the mining of a variety of different commodities in a wide range of countries. I joined Minxcon in 2006, where I have continued working as a consultant in the minerals industry.
5. I have read the definition of "qualified person" set out in National Instrument 43 101 ("NI 43 101") and certify that by reason of my education, affiliation with a professional association (as defined in NI 43 101) and past relevant work experience, I fulfil the requirements to be a "qualified person" for the purposes of NI 43 101.
6. I am responsible for all sections of the Technical Report titled "Technical Report on the Mine Waste Solutions Tailings Recovery Project, located near Stilfontein, North West Province, South Africa" dated 31st March 2008, (the "Report"). I have visited the Project on numerous occasions during 2007.
7. I have had prior involvement with the properties that are the subject of the Report. The nature of my prior involvement includes the preparation of the Technical Report on the Pre-Feasibility of the Buffelsfontein Tailings recovery Project located near Stilfontein, North West Province, South Africa" dated 1st November 2007.
8. To the best of my knowledge, information and belief, the Report contains all scientific and technical information required to be disclosed to make the Report not misleading.
9. I am independent of the First Uranium and Simmers, as defined by NI 43 101.
10. I have read the NI 43 101 code, and the Report has been prepared in compliance with it.
11. I consent to the filing of the Qualified Persons Report with any stock exchange and other regulatory authority and any publication by them for regulatory purposes, including electronic publication in the public company files on their websites accessible by the public, of the Report.

Notes:

Buffels 5

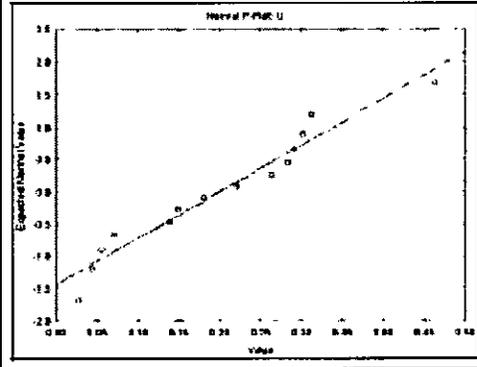

The uranium values display a peaked (kurtosis 0.73), positively skewed distribution with an asymmetric tail extending toward more positive values. For interpolation of gold, as seen in both the histograms and scatter plots, it was decided to apply a cut-off of AU1g/t to lower the chance of poor looking variograms. The variance for both U and AU are low indicating low variability of the data.

1 SUMMARY

EXECUTIVE SUMMARY

INTRODUCTION

Scott Wilson Roscoe Postle Associates Inc. (Scott Wilson RPA) was retained by First Uranium Corporation (First Uranium) to prepare an independent Technical Report on the Ezulwini Project (the Project, or the Ezulwini Mine) located in Gauteng Province, near Johannesburg, Republic of South Africa. The purpose of this report is to update the preliminary economic assessment and incorporate the latest developments with regard to permitting / mining rights and changes to the capital and operating cost forecasts. This Technical Report conforms to NI43-101 Standards of Disclosure for Mineral Projects.

First Uranium is a public Canadian company which completed its IPO on the Toronto Stock Exchange (TSX) on December 20, 2006, and its secondary listing on the Johannesburg Stock Exchange (JSE) on March 30, 2007. The common shares of First Uranium are traded on the TSX under the symbol FIU and on the JSE under the symbol FUM. The funds raised from the IPO are being used to develop the Ezulwini gold and uranium project in South Africa.

The Ezulwini Project involves the re-commissioning of an underground uranium and gold mining operation located approximately 40 km from Johannesburg on the outskirts of the town of Westonaria in Gauteng Province, Republic of South Africa. Re-commissioning activities involving the refurbishment of the shaft and construction of the gold and uranium plants began in earnest in December 2006, subsequent to the successful completion of the IPO, and were ongoing at the time of the site visit. Prior to re-commissioning, the mine was on a care and maintenance program which was initiated in 2001. The mine was constructed in the 1960s and reached production of 200,000 tonnes per month in the same decade. In 2001, mine production at Ezulwini was suspended primarily as a result of capital constraints compounded by a weak gold and uranium market environment.

The geology of the Ezulwini property includes a number of reef packages, with the Upper Elsberg and Middle Elsberg reefs being the primary focus of First Uranium's mine reopening plans. First Uranium's plans for the development of the Ezulwini Project include the rehabilitation and re-engineering of the main mine shaft through the installation of a floating steel tower, de-stressing the area where the shaft pillar intersects the shaft barrel, and the construction of uranium and gold processing facilities.

The Ezulwini Mine is an underground mine previously operated by Harmony Gold Mining Company Limited (Harmony). The Ezulwini Mining Company (Proprietary) Limited (EMC), a subsidiary of First Uranium, concluded a purchase agreement with Randfontein Estates Limited (REL), a wholly owned subsidiary of Harmony, which enabled EMC to acquire the surface and underground assets relating to the former operators of the Ezulwini Mine, including two shaft headframes and four hoists, fans, compressors, generators, and underground equipment as well as the necessary surface freehold required to operate the mine.

The major assets and facilities associated with the Project:

- Gold resources in the Ezulwini Shaft pillar within the Upper Elsberg formation; gold resources within the Upper Elsberg formation beyond the shaft pillar; and gold and uranium resources within the Middle Elsberg formation. All of these resources are within the Witwatersrand Basin and have been mined in the past.
- Hoisting and ventilation shafts to surface including the associated facilities and underground shafts to access the resources.
- Mine development to and within the resource areas.
- Mine infrastructure including the hoisting plants, mine dewatering system, compressed air system, and electrical power distribution system.
- Surface infrastructure including the compressor and power house, electrical power supply, offices, and shop buildings.
- Engineering and geological records from the past operations.
- Gold and uranium processing plants which are under construction.

This report is considered by Scott Wilson RPA to meet the requirements of a Preliminary Economic Assessment as defined in Canadian NI43-101 regulations. The economic analysis contained in this report is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserve development, production and economic forecasts on which this preliminary assessment is based will be realized.

CONCLUSIONS

Based on the Ezulwini site visit and review of the available data, Scott Wilson RPA offers the following interpretation and conclusions.

- The mineral resources, as presented, are estimated consistent with CIM guidelines.
- Mineral resources that are not mineral reserves do not have demonstrated economic viability.
- Previous production demonstrates there is good continuity on the Upper and Middle Elsburg Reefs. Therefore, there is good potential to upgrade the inferred mineral resources to measured and indicated resources with underground development.
- There is good exploration potential at depth in reefs that have not yet been exploited.
- Based upon the planning work to date and the assumptions in this initial economic assessment, the Ezulwini Mine has the potential to be reopened and to become a producing gold and uranium operation.
- For the base case and considering the Project on a stand-alone basis, with Life of Mine (LOM) capital costs of \$213 million, operating costs of \$70.31 per tonne and metal prices averaging \$760.10/oz for gold and \$53.09/lb for uranium concentrates, the Project has an Internal Rate of Return (IRR) of 278% and a Net Present Value (NPV) at 8% of \$690 million. The Project would generate some 5.2 million ounces of gold and 16 million pounds of uranium (U_3O_8) in concentrates over a 17 year period.
- In the base case, the Total Cash Cost is \$317 per ounce of gold including a credit of \$165 per ounce for U_3O_8 revenue. The mine life capital and royalty unit cost is \$55 per ounce, for a Total Production Cost of \$372 per ounce of

gold. Average annual gold production during operations is 306,000 ounces per year and the average U_3O_8 production is 952,000 pounds per year.

- The Project economics are most sensitive to gold price, head grade, and metallurgical recovery, followed by exchange rates, operating costs, uranium price and capital costs.
- The planned production includes material from the measured and indicated resources, as well as inferred resources. There is no assurance that inferred resources will be upgraded to become measured and indicated resources or mineral reserves. The initial economic assessment only utilizes approximately 14% of the inferred mineral resource. Therefore, there is potential for further production beyond that used in this assessment.
- An alternative case using consensus economic assumptions (for metal prices and exchange rates) prepared for First Uranium was also considered. On a stand-alone basis and based upon LOM capital costs of \$220 million, operating costs of \$71.82 per tonne and metal prices averaging \$739.38/oz for gold and \$55.02/lb for uranium concentrates, the Project has an IRR of 336% and an NPV at 8% of \$667 million. The Project would generate some 5.2 million ounces of gold and 16 million pounds of uranium (U_3O_8) in concentrates over a 17 year period.
- In the alternative case with First Uranium's consensus assumptions, the Total Cash Cost is \$321 per ounce of gold including a credit of \$171 per ounce for U_3O_8 revenue. The mine life capital and royalty unit cost is \$55 per ounce, for a Total Production Cost of \$376 per ounce of gold. Average annual gold production during operations is 306,000 ounces per year and the average U_3O_8 production is 952,000 pounds per year.
- The mine is located in a major historic gold and uranium production area and has a history of past gold and uranium production. The mine is located immediately adjacent to the South Deep Mine and the mines in this area have tremendous lateral extent along the reefs.
- There is the potential to expand the mine output through the potential utilization of the underutilized shafts in adjacent mines. There are also underutilized concentrators in the vicinity of the Ezulwini Mine.
- The fluctuations in the uranium price have prompted design changes to maximize the flexibility in the production planning to increase or decrease production from the Middle Elsburg, and to decrease or increase production from the Upper Elsburg, and thereby maximize the return depending upon the prices of gold and uranium.
- Further improvements to the Project economics may be realized through the sale of mine water to a local utility and the resultant reduction in mine pumping costs.

RECOMMENDATIONS

Scott Wilson RPA recommends that the Project development activities continue and that more detailed planning for the development of the Ezulwini Mine be completed. The refinement of estimates to prefeasibility study level and the upgrading of inferred resources are recommended so that a mineral reserve can be stated.

Scott Wilson RPA recommends that First Uranium continue the exploration program with the objective of upgrading additional resources beyond the planned project to evaluate the potential for further expansion.

The following items are recommended for consideration as part of a prefeasibility study of the Project.

- Compile underground sample data, diamond drilling data, and update geological model and mineral resource estimate.
- Review and update, if necessary, the mine production schedule based upon the revised resource estimates in the shaft pillar area.
- Continue the rehabilitation of the Upper Elsburg section of the Ezulwini Mine to facilitate further exploration and the conversion of inferred resources to measured and/or indicated mineral resources.
- Continue the rehabilitation of the Middle Elsburg section of the Ezulwini Mine to facilitate further verification of the database in that area and with the objective of converting inferred resources to measured and/or indicated resources.
- Reconcile historic gold and uranium production to that predicted by diamond drilling and channel sampling.
- Continue the construction of the gold and uranium processing plants.
- Proceed with the selection and procurement of alternative energy sources for the Project to supplement the supply from Eskom, the national power supply company.
- Carry out more detailed work and explanation of the planned uranium recovery rate either through metallurgical testing or more detailed review of past production records.

- Prepare separate production schedules, with the measured plus indicated resources carried in a separate schedule, and a further economic analysis with the inferred resources added as well.
- Re-examine the Project schedule and provide more detail to ensure that critical items are not missed.
- Provide a clear trail of the changes and factors from the resource estimate through to the Life of Mine plan for all areas including a discussion of the unpay factors and/or pillars that will be required at depth.
- Review the rock mechanics and seismic risk factors associated with the Middle Elsburg deposit to ensure that the mine plan is consistent with the rock mechanics design criteria.
- Review the mine production schedule with regard to the mine production profile to reduce dips in the output over time.
- Ensure that a detailed assessment of the planned production areas has been undertaken to provide evidence to support the assumption that future mine production will be similar to past production.
- Pursue the possible sale of water to a local utility to reduce the mine operating costs.

The cost of this recommended work is included in the cost estimates within the Preliminary Assessment in this report.

For further exploration beyond the current planned mining area, Scott Wilson RPA recommends that First Uranium continue with the surface exploration program currently underway.

ECONOMIC ANALYSIS

An after-tax Cash Flow Projection has been generated from the Life of Mine production schedule and capital and operating cost estimates. A summary of the key criteria is provided below.

ECONOMIC CRITERIA – BASE CASE

REVENUE

- Up to 200,000 tpm mining from underground.
- Mill recovery of gold of 95.5% and recovery of U₃O₈ of 80%, based upon previous operating history.
- Gold payment is based upon 100% payment less a refining charge of \$120,000 per year plus \$0.50 per ounce.
- Exchange rate US\$1.00 = R7.70.
- Metal price: US\$850 per ounce gold for the year beginning in 2008, \$800 per ounce for the years beginning in 2009, 2010 and 2011, and \$750 per ounce thereafter; and \$80 per pound U₃O₈ in years beginning in 2008 and 2009, \$70 per pound in the year beginning in 2010, \$60 per pound in the year beginning in 2011 and \$50 per pound thereafter.
- Revenue is recognized at the time of production.

COSTS

- Operations will commence in 2008, but production increases to 2 M tpa in 2011.
- Mine life: 17 years.
- Life of Mine production plan as summarized in Tables 18-1 and 18-2.
- Mine life capital totals \$213 million, including a contingency.
- Average operating cost over the mine life is \$70.31 per tonne milled.

CASH FLOW ANALYSIS – BASE CASE

Considering the Project on a stand-alone basis, the undiscounted after-tax cash flow totals \$1,461 million over the mine life, and simple payback occurs after approximately 1.4 years.

The IRR is 278% and the NPV at discounts rates of 5%, 8%, and 10% is \$895, \$690, and \$587 million, respectively.

The Total Cash Cost is US\$317 per ounce of gold, including a credit of \$165 per ounce for U₃O₈ revenue. The mine life capital and royalty unit cost is US\$55.2 per ounce, for a Total Production Cost of US\$372 per ounce of gold. Average annual gold production during operation is 306,000 ounces per year and the average U₃O₈ production is 952,000 pounds per year.

The economic analysis contained in this report is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserve development, production, and economic forecasts on which this preliminary assessment is based will be realized.

CASH FLOW ANALYSIS – OWNER’S CONSENSUS PRICES

A cash flow analysis prepared by First Uranium’s advisors using “consensus prices” was evaluated. The only changes from the base case were the metal price and exchange rate assumptions. The changes are shown below together with the results for the alternative scenario.

ECONOMIC CRITERIA – OWNERS CONSENSUS PRICE CASE

REVENUE

- Exchange rate US\$1.00 = R7.36 for 2008, R7.50 for 2009, R7.45 for 2010 and R7.57 thereafter.
- Metal price: US\$890 per ounce gold for 2008, \$907 for 2009, \$874 for 2010, \$797 for 2011 and \$711 thereafter, and \$96 per pound U₃O₈ in 2008, \$92 in 2009, \$79 in 2010, \$75 in 2011 and \$50 thereafter

CASH FLOW ANALYSIS – OWNER’S CONSENSUS PRICE CASE

Considering the Project on a stand-alone basis, the undiscounted after-tax cash flow totals for this alternative case is \$1,371 million over the mine life, and simple payback occurs after approximately 1.3 years.

The IRR is 336% and the NPV at discounts rates of 5%, 8%, and 10% is \$855, \$667, and \$572 million, respectively.

The Total Cash Cost is US\$321 per ounce of gold, including a credit of \$171 per ounce for U₃O₈ revenue. The mine life capital and royalty unit cost is US\$55.2 per ounce, for a Total Production Cost of US\$376 per ounce of gold. Average annual gold

production during operation is 306,000 ounces per year and the average U₃O₈ production is 952,000 pounds per year.

SENSITIVITY ANALYSIS

Project risks can be identified in both economic and non-economic terms. Key economic risks were examined by running cash flow sensitivities:

- Metal prices, metallurgical recovery, and head grade (gold and uranium)
- Exchange rate
- Operating costs (Total Cash Cost)
- Pre-production capital costs

IRR sensitivity over the base case has been calculated for -20% to +20% variations. The revenue for each metal is proportional to the product of price times head grade times metallurgical recovery. Therefore, the sensitivity is shown as a single item where the change in the variable is the sum of the changes to the price, metallurgical recovery, and head grade. The sensitivities for the base case are shown in Table 1-1 and Figure 1-1.

FIGURE 1-1 SENSITIVITY ANALYSIS

TECHNICAL SUMMARY

PROPERTY LOCATION AND DESCRIPTION

The Ezulwini Mine is located some 40 km from Johannesburg in the Republic of South Africa. The mine is located in the province of Gauteng in the western portion of the Witwatersrand basin. The property consists of some 3,718 ha. The Witwatersrand Basin is a famous gold mining area with a number of producing mines and past producers. Mine suppliers and contractors are available locally, and experienced and general labour is available in the mine area. The site infrastructure includes two shaft headframes and four hoists, fans, compressors, generators, and underground equipment, as well as the necessary surface freehold required to operate the mine.

In May 2005, Simmer & Jack Mines, Limited (Simmers) took its initial steps to acquire the Ezulwini Project by submitting an application for new order mining rights in respect of the Ezulwini mine (formerly Ezulwini Shaft Randfontein Estates). In order to

maintain access to the underground workings at Ezulwini, approximately 65 megalitres of water needed to be pumped from a depth of approximately 1,300 m every day.

In May 2006, Simmers received a letter from the South African Department of Minerals and Energy (DME) stating that the Ezulwini mining right was granted to Simmers, subject to complying with certain stated conditions. The Mining Right was granted to Simmers and registered on December 8, 2006. Simmers lodged an application for the consent of the Minister to transfer the Mining Right to Ezulwini on December 12, 2007. First Uranium and Simmers entered into agreements whereby First Uranium would purchase from Simmers its 90% interest in Ezulwini. First Uranium also entered into an Agreement with Waterpan Mining Consortium (WMC) to purchase its 10% interest in Ezulwini. EMC was acquired by First Uranium from Simmers in December 2006 and EMC now owns 100% of Ezulwini, having completed the purchase of the interest previously held by WMC.

HISTORY

Production at Ezulwini Shaft commenced in 1961 under the control of the Western Areas Gold Mining Company. Ezulwini Shaft was purchased by REL in 1997. In January 2000, Harmony acquired REL. Harmony continued operations until July 2001, when the mine was closed due to low gold and uranium prices. The mine continued on a care and maintenance basis until December 2006 when First Uranium concluded its IPO and the purchase agreements which enabled the commencement of rehabilitation and construction activities at the site.

GEOLOGY

The Project lies within the Witwatersrand Basin, an Archean (approximately 2.7 billion years) sedimentary basin, whose surface expression is an elongate structure that extends longitudinally for approximately 300 km NE-SW by 100 km NW-SE. It contains an approximately six kilometre thick stratigraphic sequence consisting mainly of quartzites and shales, with minor intermittent volcanic units. Gold is hosted by the Upper Elsberg and Middle Elsberg Reefs of the Mondeor Formation. Uranium is mostly found in the Middle Elsberg Reef, with other reefs containing only small amounts.

MINERAL RESOURCES AND MINERAL RESERVES

The current mineral resources are summarized in Table 1-2. There are no mineral reserves as defined by NI43-101.

TABLE 1-2 SUMMARY OF MINERAL RESOURCES – JANUARY 2007

First Uranium Corporation - Ezulwini Project

Category	Tonnes (t 000's)	Grade Au (g/t Au)	Grade U ₃ O ₈ (%)	Cont. Au (oz 000's)	Cont. U ₃ O ₈ (lb 000's)
Measured Reef					
UE Shaft Pillar	2,490	7.7	-	615	-
Middle Elsburg	2,450	4.9	0.072	384	3,888
Total	4,940	6.3	n/a	999	3,888
Indicated Reef					
UE Shaft Pillar	3,640	5.8	-	683	-
Middle Elsburg	1,370	5.8	0.095	257	2,880
Total	5,010	5.8	n/a	940	2,880
Meas + Ind Reef					
UE Shaft Pillar	6,130	6.6	-	1,298	-
Middle Elsburg	3,820	5.2	0.08	641	6,768
Total	9,950	6.1	n/a	1,939	6,768
Inferred Reef					
Upper Elsburg	64,550	5.8	-	12,055	-
Middle Elsburg Channel	4,810	2.3		351	
Middle Elsburg	131,100	4.7	0.075	19,742	218,319
Total	201,460	5.0	n/a	32,148	218,319

Notes:

1. CIM definitions were followed for mineral resources.
2. Mineral resources in the Upper Elsburg shaft pillar are estimated at a 4.0 g/t Au cutoff grade
3. Mineral resources are estimated using an average long-term gold price of US\$500 per ounce, and a US\$/R exchange rate of 7.0.
4. A minimum mining width of 1.53 m was used.
5. Rows and columns may not add exactly due to rounding.
6. Mineral resources that are not mineral reserves do not have demonstrated economic viability.

MINING OPERATIONS

The Ezulwini mining will be by conventional breast stoping of the Upper and Middle Elsburg reefs. The ore will be broken in the stopes and moved by slushers to be loaded in rail cars for transportation to the shaft. From the shaft and through the balance of the handling, the gold ores and the gold/uranium ores are kept separate. The ores will be hoisted to surface and processed. In the upper Elsburg, the initial task will be the removal of the shaft pillar to reduce stability problems in the shaft and in the shaft pillar area.

MINERAL PROCESSING

The ore will be crushed and ground and then subjected to gold recovery by gravity and cyanidation. The uranium will be extracted by a hot acidic leaching followed by solvent extraction and precipitation to form a concentrate (yellowcake). The uranium tailings will then be leached for gold recovery. Leaching will occur in a carbon in leach process after which gold will be electrowon and refined into doré bars.

ENVIRONMENTAL CONSIDERATIONS

An Environmental Management Program was approved by the DME in October 2005. Approval of applications for the water licence and the approval to recover uranium are expected shortly.

CAPITAL AND OPERATING COST

The estimated capital cost is \$213 million and the pre-production period is four years. The operating cost is estimated at \$70.31 per tonne milled.

2 INTRODUCTION AND TERMS OF REFERENCE

Scott Wilson Roscoe Postle Associates Inc. (Scott Wilson RPA) was retained by First Uranium Corporation (First Uranium) to prepare an independent Technical Report on the Ezulwini Project (the Project, or the Ezulwini Mine) located in Gauteng Province, near Johannesburg, Republic of South Africa. The purpose of this report is to revise the previous preliminary economic assessment to incorporate progress to date and to address the significant changes related to electrical power supply in South Africa. This Technical Report conforms to NI43-101 Standards of Disclosure for Mineral Projects.

First Uranium is a public Canadian company which completed its Initial Public Offering (IPO) on the Toronto Stock Exchange (TSX) on December 20, 2006, and its secondary listing on the Johannesburg Stock Exchange (JSE) on March 30, 2007. The Common Shares of First Uranium are traded on the TSX under the symbol of FIU and on the JSE under the symbol of FUM. First Uranium owns the Ezulwini underground gold-uranium project and the Mine Waste Solutions gold-uranium tailings reprocessing operations. First Uranium acquired the Ezulwini Project from Simmers and Waterpan Mining Consortium (WMC).

The Ezulwini Project involves the re-commissioning of an underground, uranium and gold mining operation located approximately 40 km from Johannesburg on the outskirts of the town of Westonaria in Gauteng Province, South Africa. Re-commissioning activities involving the refurbishment of the shaft and construction of the gold and uranium plants began in earnest in December 2006, subsequent to the successful completion of the IPO, and were ongoing at the time of the site visit. Prior to re-commissioning, the mine was on a care and maintenance program which was initiated in 2001. The mine was constructed in the 1960s and reached production of 200,000 tonnes per month in the same decade. In 2001, mine production at Ezulwini was suspended primarily as a result of capital constraints compounded by a weak gold and uranium market environment.

The Ezulwini Mine was previously operated by Harmony Gold Mining Company Limited (Harmony). The Ezulwini Mining Company (Proprietary) Limited (EMC), a subsidiary of Simmer & Jack Mines, Limited (Simmers), concluded a purchase agreement with Randfontein Estates Limited (REL), a wholly owned subsidiary of Harmony, which enabled EMC to acquire the surface and underground assets relating to the former operators of the Ezulwini Mine, including two shaft headframes and four hoists, fans, compressors, generators, and underground equipment as well as the necessary surface freehold required to operate the mine. EMC now owns 100% of Ezulwini, having completed the purchase of the interest previously held by WMC. EMC was acquired by First Uranium from Simmers in December 2006.

The major assets and facilities associated with the Project are:

- Gold resources in the Ezulwini Shaft pillar within the Upper Elsberg formation; gold resources within the Upper Elsberg formation beyond the shaft pillar; and gold and uranium resources within the Middle Elsberg formation. All of these resources are within the Witwatersrand Basin and have been mined in the past.
- Hoisting and ventilation shafts to surface including the associated facilities and underground shafts to access the resources.
- Mine development to and within the resource areas.
- Mine infrastructure including the hoisting plants, mine dewatering system, compressed air system, and electrical power distribution system.
- Surface infrastructure including the compressor and power house, electrical power supply, offices, and shop buildings.
- Engineering and geological records from the past operations.
- Gold and uranium processing plants which are under construction.

The December 2006 Technical Report was the first Scott Wilson RPA involvement with this Project. At the request of First Uranium, Scott Wilson RPA prepared two revisions to the initial report and has now prepared this technical report.

This report is considered by Scott Wilson RPA to meet the requirements of a Preliminary Economic Assessment as defined in Canadian NI43-101 regulations. The economic analysis contained in this report is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserve development, production, and economic forecasts on which this preliminary assessment is based will be realized.

SOURCES OF INFORMATION

Site visits were carried out by Mr. Wayne Valliant, P.Geo., Principal Geologist with Scott Wilson RPA (Associate Consulting Geologist at the time of the visit), and Mr. Dennis Bergen, P.Eng., Associate Mining Engineer with Scott Wilson RPA, from August 22 to 25, 2006. Wayne Valliant carried out a subsequent site visit from February 20 to 22, 2007. Wayne Valliant and Dennis Bergen carried out the latest site visit from April 7 to 11, 2008.

Discussions were held with personnel from Simmers and First Uranium and their consultants:

- Syd Caddy, Executive Vice President and COO First Uranium
- John Gould, Vice President, Technical Services, First Uranium
- Wouter de Vos, General Manager, Ezulwini Mine
- Cecil Jones, Technical Services Manager, Ezulwini Mine
- Drickus Lambrecht, Production Manager, Upper Ezulwini Shaft
- Daan Van Heerden, Director, Minxcon
- Heather King, Sr. Resource Geologist, Minxcon
- Willem Pretorius, Planning Engineer, Minxcon
- Peter Marx, Simmer and Jack Mines Ltd., principal project consultant to Ezulwini Mining Company
- Come Fourier, Managing Director, of GeoNingiZimu Pty geological consultant to Ezulwini
- Tony Ward, Shaft Engineer and rock monitoring consultant

Mr. Valliant prepared Items 7 to 15 and 17 and contributed to Items 1, 2, 19, and 20.
Mr. Bergen prepared Items 3 to 6, 16, and 18 and contributed to Items 1, 2, 19, and 20.

The documentation reviewed, and other sources of information, are listed at the end of this report in Item 21 References.

LIST OF ABBREVIATIONS

Units of measurement used in this report conform to the SI (metric) system. All currency in this report is US dollars (US\$) unless otherwise noted.

μ	micron	kPa	kilopascal
°C	degree Celsius	kVA	kilovolt-amperes
°F	degree Fahrenheit	kW	kilowatt
μg	microgram	kWh	kilowatt-hour
A	ampere	L	Litre
a	annum	L/s	litres per second

3 RELIANCE ON OTHER EXPERTS

This report has been prepared by Scott Wilson RPA for First Uranium. The information, conclusions, opinions, and estimates contained herein are based on:

- Information available to Scott Wilson RPA at the time of preparation of this report,
- Assumptions, conditions, and qualifications as set forth in this report, and
- Data, reports, and other information supplied by First Uranium and other third party sources.

For the purpose of this report, Scott Wilson RPA has relied on ownership information provided by First Uranium. Scott Wilson RPA has not researched property title or mineral rights for the Ezulwini Project and expresses no opinion as to the ownership status of the property.

Except for the purposes legislated under provincial securities laws, any use of this report by any third party is at that party's sole risk.

4 PROPERTY DESCRIPTION AND LOCATION

PROPERTY DESCRIPTION

The Ezulwini Mine is located some 40 km from Johannesburg in the outskirts of the town of Westonaria in the Republic of South Africa. The mine is located in the province of Gauteng in the western portion of the Witwatersrand Basin, as illustrated in Figure 4-1.

LAND TENURE

The immovable property consists of some 3,718 ha on various portions of Farms Jachtfontein 344IQ, Modderfontein 345IQ, and Waterpan 292IQ, as illustrated in Figure 4-2. Under the terms of the REL Purchase Agreement it was agreed that registration of transfer of the immovable property to EMC would be effected by REL's attorneys as soon as reasonably possible after 29 December 2006.

Certain portions of the immovable property as outlined in Table 4-1 ("Undivided Portions") cannot be transferred to and registered in the name of EMC until those portions of the immovable property have been subdivided. In terms of the REL Purchase Agreement, EMC will apply for permission to subdivide the Undivided Portions and they are currently attending to same. Registration of transfer of the Undivided Portions will take place after subdivision. Pending subdivision and transfer of the Undivided Portions, EMC will lease such Undivided Portions from REL under the terms of a lease agreement entered into between the parties on 19 October 2006 ("REL Lease Agreement").

Transfer of those properties which do not require subdivision has taken place and the properties are registered in the name of EMC.

TABLE 4-1 AGREED UPON FREEHOLD AREA
First Uranium Corporation - Ezulwini Project

Farm	Portion	Prtn of prtn	Area (ha)	
Waterpan	3		102.1	Peter Wright dam
292 IQ	4	C	30.4	Between village and old training centre
	4	D	19.9	Hostel zone
	13	A	72.3	Waste rock and Delta area
	14		176.9	Tailings dam (Ha to be confirmed)

	24	B	49.5	Area North of Link portion of slvge yard, hostels & school
	25	B	52.5	Area South of Link road farmer centre pivot
	26	A	6.8	Portion of shaft area
Modderfontein	27	A	40.2	Area between tailings dam and plants
	24	A	78.5	Magazine zone
345 IQ				
Total			641.8	First Uranium freehold area

In May 2005, Simmers took initial steps towards acquiring the Project by submitting an application for new order mining rights in respect of the Ezulwini Mine. Simmers was granted the Mining Right, which was registered on December 8, 2006. The mining right is valid up to November 19, 2036, and is renewable. This mining right covers the same area as was previously held by REL under Mining Licence ML38/39. Simmers has applied to have the Mining Right transferred to EMC and the Minister of Minerals and Energy has consented to that transfer. The draft documentation has been submitted to the Department of Minerals and Energy for approval, whereafter the transfer will be registered.

There is an approved closure plan in place along with an approved EMP. The DME has also approved EMC's mine operating plan. The Water Licence application has been submitted to the South African Department of Water Affairs and Forestry, the national office in Pretoria has confirmed receipt of the application and whilst no guarantees can be given have indicated that they have no major areas of concern with the application.

An application for a Certificate of Registration (COR) for the operation of a uranium processing plant was submitted to the South African National Nuclear Regulator on July 18, 2006. EMC received a response from the South African National Nuclear Regulator on August 15, 2006, detailing various outstanding information requirements. Malepa Holdings has been mandated to provide the necessary radiation protection advisory services and will monitor and submit any additional information required by the National Nuclear Regulator.

EMC awarded the shaft rehabilitation work to Murray and Roberts and EMC is undertaking the mining of the shaft pillar. Sufficient work has been completed such that hoisting of the planned production can be done, but the completion of the shaft repair has taken longer than planned. On January 24, 2008, Eskom, the national power supplier, communicated to the mining industry that the utility could not guarantee power availability and asked the industry to operate at electrical power levels below historical load requirements until 2012. While Eskom has announced plans to increase the supply of power incrementally in the years leading up to 2012, Eskom also reports that full power availability cannot be guaranteed until then. As a result, First Uranium temporarily suspended operations at Ezulwini as outlined in the January 28, 2008 press release and began a search for alternative energy supplies. Following the subsequent Eskom announcements, First Uranium started to ramp up again on January 30, 2008. The gold and uranium plant engineering, procurement and construction management (EPCM) contract was awarded to MDM Technical Africa (Pty) Ltd. (MDM). Construction is well advanced and commissioning of the first phase gold plant commenced in April, with mill production planned to commence in June 2008.

Revisions and amendments to the proposed Mineral and Petroleum Royalty Bill (the Bill) have been introduced by the South African government. The Bill provides for a royalty rate of 12.5% of the operating profit divided by the revenue. Operating profit includes overhead, but not capital. The royalty is expected to come into effect in May 2009 and has been included as such in the project evaluation.

EZULWINI PROSPECTING RIGHT

In March 2007, First Uranium submitted a prospecting application in respect of properties contiguous to the northeast and southeast of the existing Ezulwini mining right area. The DME accepted the application, implying that no other parties had made prior application for the prospecting rights, and that, subject to First Uranium complying with all the requirements of the DME, the rights would in due course be granted. First Uranium was required to submit the following to the DME to obtain their approval for the grant of the rights: (i) results of a notification and consultation with the surface owners of the land overlying the program area by May 13, 2007; (ii) an acceptable Environmental Management Plan ("EMP") by June 12, 2007; and (iii) confirmation of First Uranium's qualifying Black Economic Empowerment credentials, all of which were submitted to the DME within the time prescribed.

In November 2007, First Uranium received approval from the regional DME for the Corporation's application in respect of the prospecting work program. Final approval by the regional DME was subject to the approval of the EMP. In December 2007, the regional DME approved First Uranium's EMP and granted the Corporation an unconditional prospecting right for 6,843 hectares of additional property contiguous to the northeast and southeast of the Ezulwini Mine.

5 ACCESSIBILITY, CLIMATE, LOCAL RESOURCES, INFRASTRUCTURE AND PHYSIOGRAPHY

ACCESSIBILITY

The Ezulwini property is accessed by paved roads some 40 km to the west of Johannesburg in the Gauteng Province of the Republic of South Africa. It is 5 km south of the Johannesburg – Potchefstroom road (National Road N12). The nearest airport is the international airport in Johannesburg.

CLIMATE

The climate is typical of the Highveld, with hot to warm summers and cold winters. Rainfall occurs predominantly in summer. The diurnal range in winter reflects a particularly harsh climate, the mean difference between daily maximum and daily minimum being almost 20°C. The data for Zuurbekom in WB40 are taken as being representative of the Ezulwini Shaft area. Mean annual rainfall given in WB40 (1951 – 1984) is 664 mm.

Rainfall peaks in January. Winters are very dry. The rain season starts in October and ceases at the end of April. Approximately 83% of the mean annual rainfall occurs in those six months. Rainfall is variable; zero rainfall has been recorded in all six “dry” months. Heavy showers of up to 85 mm in 24 hours have been recorded; even in the dry month of July, 41 mm has been recorded in 24 hours.

There are on average 100.5 rain days (with more than 0.1 mm) annually. A large portion of the rainfall occurs as light showers of less than 10 mm, while the remainder occurs as heavy storms.

No record of thunder is available. There are about 30 thunderstorms in the Witwatersrand annually. Not all are accompanied by heavy falls of rain.

Climatic conditions do not impose any special construction restrictions, and conditions are such that many plants and grinding facilities have only light structures over top. Older offices do not have central heating facilities.

LOCAL RESOURCES

The Witwatersrand Basin is a famous gold mining area with a number of producing mines and past producers. Mine suppliers and contractors are available locally, and experienced and general labour is available in the mine area.

INFRASTRUCTURE

The surface and underground infrastructure of the Ezulwini Mine include:

- Main shaft (1,518 m deep) from surface to 51A Level (1,408 m below surface) complete with 6.6 kV power cables, compressed air pipelines, and mine dewatering pipelines;
- Internal subvertical shaft from the 50 Level to the 63A Level;
- Underground rock transfer and skip loading facilities;
- 6.0 m diameter Koepe winder for skipping in the main shaft;
- 4.9 m diameter double drum winder (south) for man and material hoisting in the main shaft;
- 4.9 m diameter double drum winder (north) for man and material hoisting in the main shaft;
- 6.7 m diameter concrete lined ventilation shaft to the 41 Level (1,102 m below surface) complete with 6.6 kV power lines, which are separate from those in the main shaft and spare mine dewatering pipelines;
- Mine ventilation fans;
- 3.0 m double drum man winder for the ventilation shaft;
- Underground pumping stations on the 33, 41, and 50A levels, with facilities to handle clear water and slurry.
- Two surface conveyors to move reef (ore) and waste from the head gear bins to a waste silo and to a reef transfer conveyor;

- Workshops including a mechanical shop, boiler shop, and compressor house;
- Electrical power supply from Eskom (the national power supplier) with two independent feeds to the mine site and subject to some supply restrictions as announced by Eskom;
- Electrical power distribution system on surface and in the underground mine;
- Emergency power generators with an installed capacity of 13.3 MW;
- Management and engineering offices, fenced storage yards, and employee parking areas;
- A gold and uranium processing plant which is being constructed by Ezulwini;
- A slimes storage dump with a remaining lifespan of approximately 19 years at 150,000 tpm.

PHYSIOGRAPHY

The Ezulwini Shaft is situated on the southern slope of the anticline, between the two most northerly prominent ridges of the Gatsrand on the Transvaal Highveld at an elevation of 1,620 m to 1,695 m amsl. The shaft is located some 25 km south of the subcontinental water shed between the Limpopo and Vaal drainage basins. Quartzitic ridges of the Gatsrand trend roughly east-west and form the most prominent features.

Pre-mining land capability within the mining lease area consists mainly of grazing and arable land. The soils are mainly of the hill wash type and low in fertility.

The area has been classified as Bakenveld. The soils are poor, shallow, acid, stony and sandy. The Western Variation occurs on sandy planes and low rocky ridges, ranging in altitude from 1,350 m to 1,700 m amsl. These areas receive approximately 550 mm to 700 mm of rain during the summer months.

It is rather sparse, sour, strongly tufted veld and, in the nature of its grasses, clearly transitional from Cymbopogon Hemeda veld to sour bushveld. The presence of

Cymbopogon Pluinodis and the general absence of Tristachya Leucothrix distinguish it from the central and eastern variations.

6 HISTORY

The Ezulwini Shaft of Randfontein Estates Limited was previously utilized for the mining of mineral deposits from which gold and uranium ores were extracted by metallurgical processing.

Activities at the Ezulwini Shaft commenced in 1961 under the control of the then Western Areas Gold Mining Company (WAGMC), which also owned the South Deep Gold Mine (South Deep). South Deep was the subject of a joint venture between Placer Dome South Africa (Proprietary) Limited, a wholly-owned subsidiary of Placer Dome Inc., and Western Areas Limited (the PDWAJV). Subsequently, Barrick Gold Corporation acquired Placer Dome and then entered into an agreement to sell its interest in PDWA JV to Gold Fields Limited. The South Deep Mine and the workings from the Ezulwini Shaft were formerly connected on two levels and dewatering of the Ezulwini Shaft kept the South Deep mine dewatered. Ezulwini Shaft was purchased by REL in 1997. In January 2000, Harmony acquired REL.

Harmony continued operations until July 2001 after giving notice to PDWAJV in April of its intention to cease mining and pumping operations. Harmony prepared a closure plan for the Ezulwini Shaft and that plan was approved by the DME. PDWAJV took over the pumping operations in March 2003 to allow the completion of the construction of plugs between the two mines and to verify the competency of the barrier pillar, the purpose being that once the dewatering of the Ezulwini Shaft operations was stopped, the necessary measures would be in place to ensure the safety and health of the South Deep Mine. The work was completed and PDWAJV gave notice to Harmony that pumping operations would cease on February 8, 2005.

In October 2005, Simmers undertook the pumping operations as part of its purchase agreement with Harmony in respect of the Ezulwini mine. Simmers commenced pumping and exploration work to determine the feasibility of reopening the mine. First Uranium subsequently purchased Simmer's interest in Ezulwini in December 2006, and

in December 2007 First Uranium purchased Waterpan Mining Consortium's 10% interest in Ezulwini. First Uranium is now the 100% owner of Ezulwini.

The mine operated until 2001, producing gold and, at times, uranium. A uranium recovery circuit was operated from 1982 to 1997. Over the course of mine development and operation, there was extensive diamond drilling, development in waste and ore, and extraction of ore.

Table 6-1 summarizes the production history from the Ezulwini Mine.

TABLE 6-1 PRODUCTION HISTORY

Note. Results for Upper Elsburg compiled only to 1970. From 1971 production started from the SV1 area which is not part of Ezulwini.

Mineral resource and mineral reserve estimates at the mine were compiled regularly by the owners and, from the 1997 report onwards, the estimates were presented as compliant with the SAMREC guidelines.

Simmers reported SAMREC compliant mineral resources for the Ezulwini Project effective July 30, 2006. The mineral resource estimate was prepared by Horizon Blue Resources (HBR) and Minxcon. Scott Wilson RPA reviewed the estimates and reported the mineral resources as NI43-101 compliant in the December 5, 2006 Technical Report entitled Technical Report Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa. The July 30, 2006 mineral resources are summarized in Table 6-2. Scott Wilson RPA prepared an update to the technical report dated May 9, 2007. The report included an update of the mineral resources effective January 2007. The results are summarized in Table 6-3. There were no mineral reserves as defined by NI 43-101 in either of the aforementioned reports.

6. Mineral resources that are not mineral reserves do not have demonstrated economic viability.

First Uranium completed an IPO in December 2006 and has since been advancing the mine and plant design. It commenced work on the refurbishing of the Ezulwini shaft. Mine development and construction progress is described in Item 18, Other Relevant Data and Information.

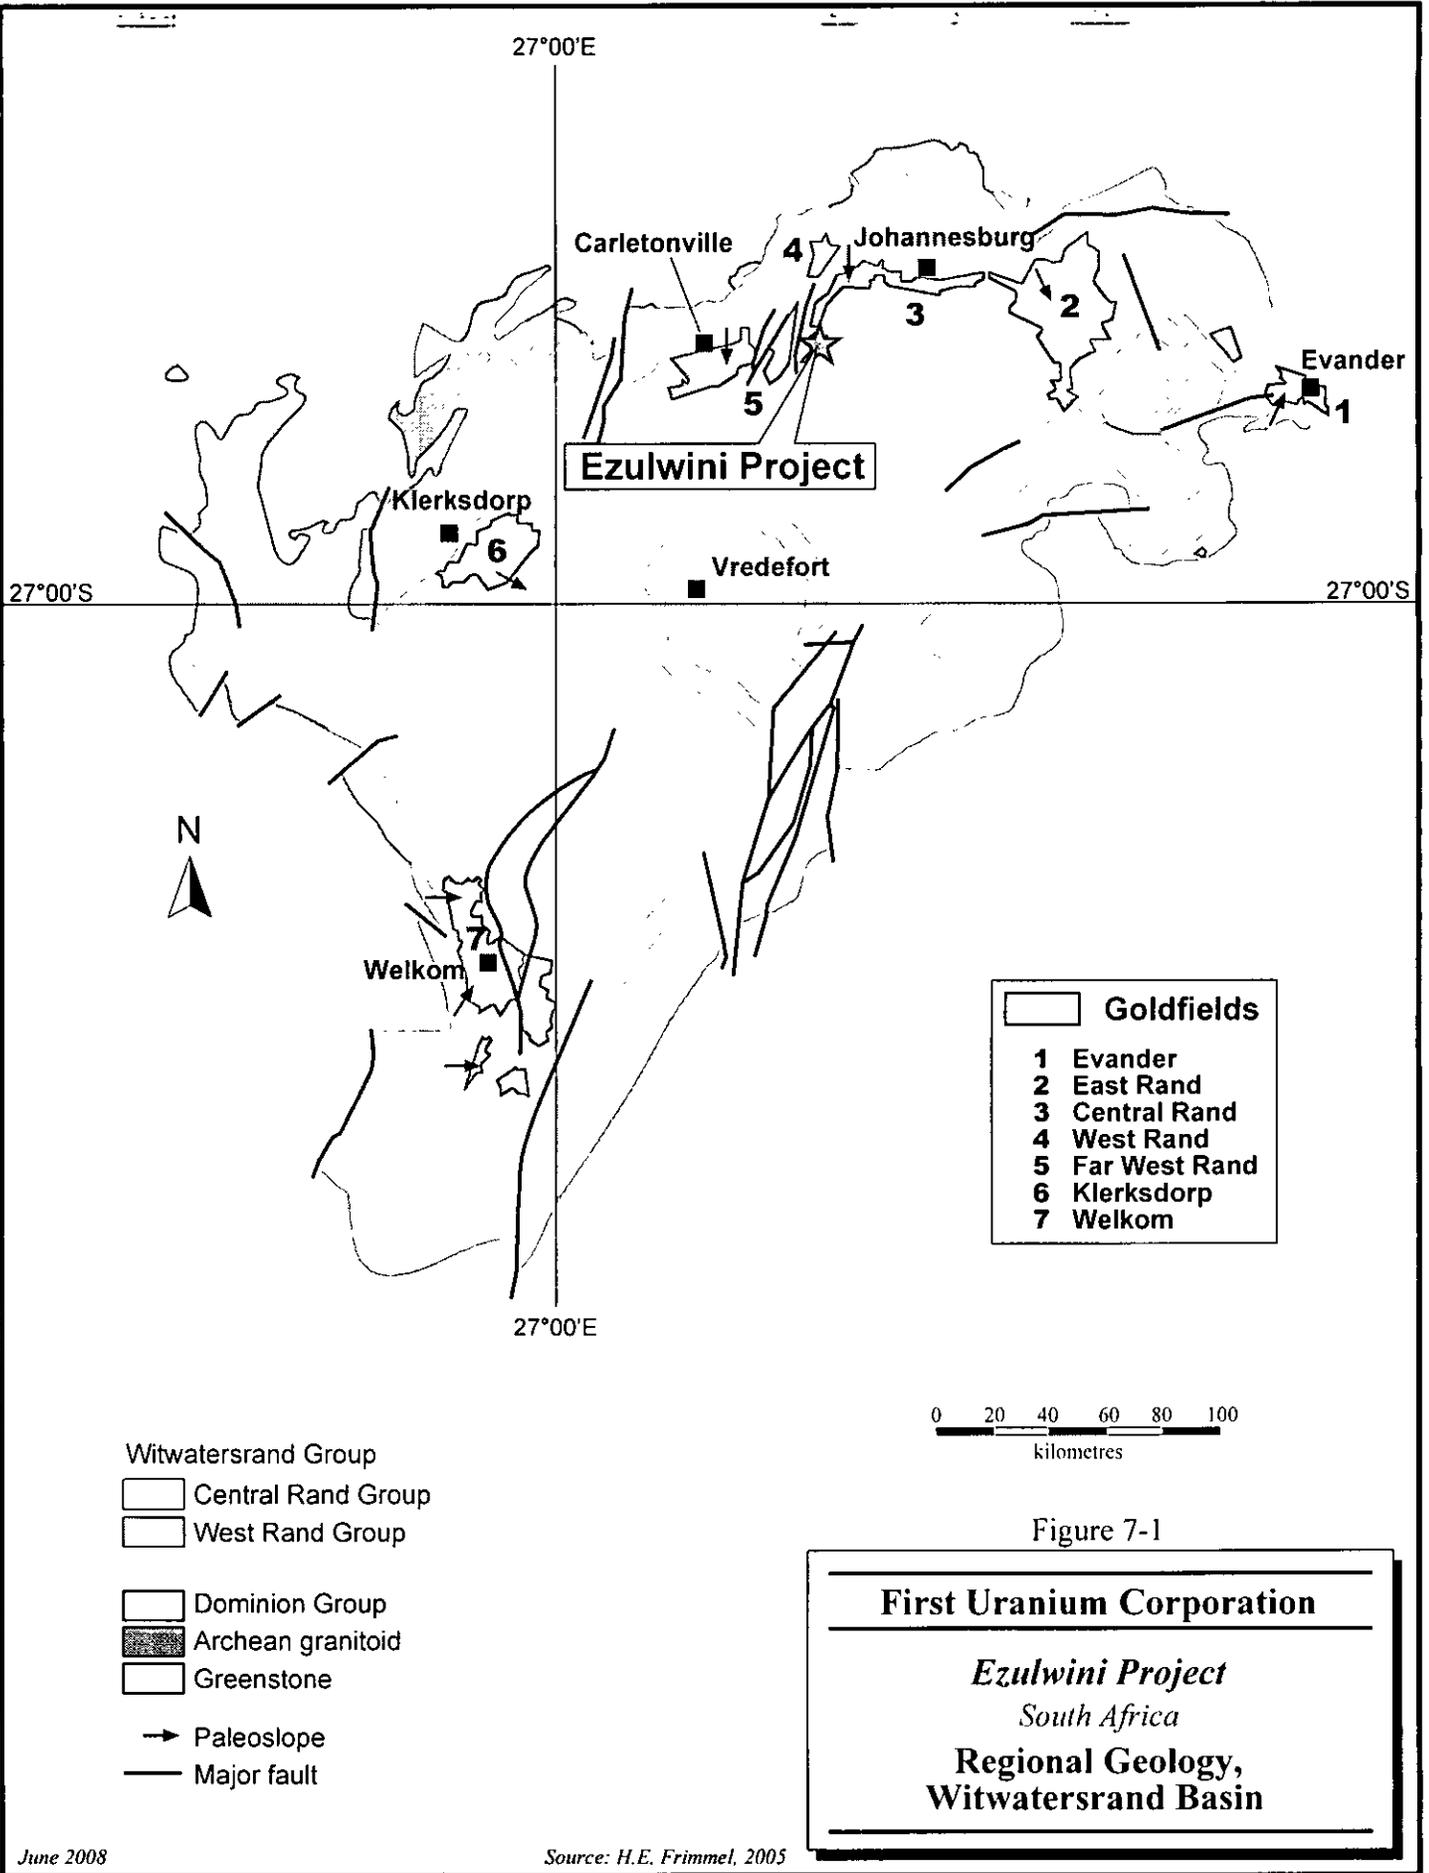

7 GEOLOGICAL SETTING

REGIONAL GEOLOGY

The Project lies within the Witwatersrand Basin, an Archean (approximately 2.7 billion years) sedimentary basin, whose surface expression is an elongate structure that extends longitudinally for approximately 300 km NE-SW by 100 km NW-SE. It contains an approximately six kilometre thick stratigraphic sequence consisting mainly of quartzites and shales with minor intermittent volcanic units. The first stage of basin development is recorded by rocks of the Dominion Group, composed of fluvial sediments and volcanic rocks. The Witwatersrand Supergroup overlies the Dominion Group and has been subdivided into the lower West Rand Group and the upper Central Rand Group, both of which consist primarily of sandstones, shales, and conglomerates. The Central Rand Group has produced the majority of the gold from the Witwatersrand Basin. The Ventersdorp Supergroup unconformably overlies the Witwatersrand Supergroup and is in turn overlain by the Transvaal and Karoo Sequences.

The differences in the morphology and gold distribution patterns from one reef to the next, and within individual reefs, reflect the different sedimentary processes that prevailed during deposition on erosional surfaces in fluvial and littoral environments. Despite their age, the sedimentary rocks within the Witwatersrand Basin are remarkably well preserved and relatively undeformed. The basin has undergone numerous phases of faulting but has not been subjected to significant metamorphism.

The general geology of the Witwatersrand Basin is illustrated in Figures 7-1 and 7-2.

--

LOCAL GEOLOGY

The Ezulwini Mine is located in the West Rand Goldfield and the mineralization is hosted by the Central Rand Group, the upper unit of the Witwatersrand Supergroup. This unit has produced the majority of the gold from the Witwatersrand Basin, and is composed predominantly of quartzite with subordinate zones of conglomerate and a single argillite horizon, i.e., the Booyens Shale Formation. Using the central position of the Booyens Shale, the stratigraphy of the Central Rand Group has been historically subdivided into the lower Johannesburg Subgroup and the upper Turffontein Subgroup. Mineralized reefs in the Johannesburg Subgroup tend, on average, to be more laterally extensive and more uniform in thickness and gold content. The principal gold-bearing conglomerate packages in the Johannesburg Subgroup are the Main Reef and South Reef. Reefs hosted by the upper Turffontein Subgroup include the Kimberley and Elsburg Reefs and are generally characterized by discrete, and often linear, higher grade zones of gold concentration separated by areas of low grade or barren conglomerate.

The Turffontein Subgroup has been subdivided into the upper Mondeor Formation, middle Elsburg/Elderado Formation, and the basal Kimberley Formation. The Mondeor Formation hosts the Middle Elsburg, Upper Elsburg, and Ventersdorp Contact Reefs of the Ezulwini Mine.

The stratigraphy of the Witwatersrand Subgroup is illustrated in Figure 7-3.

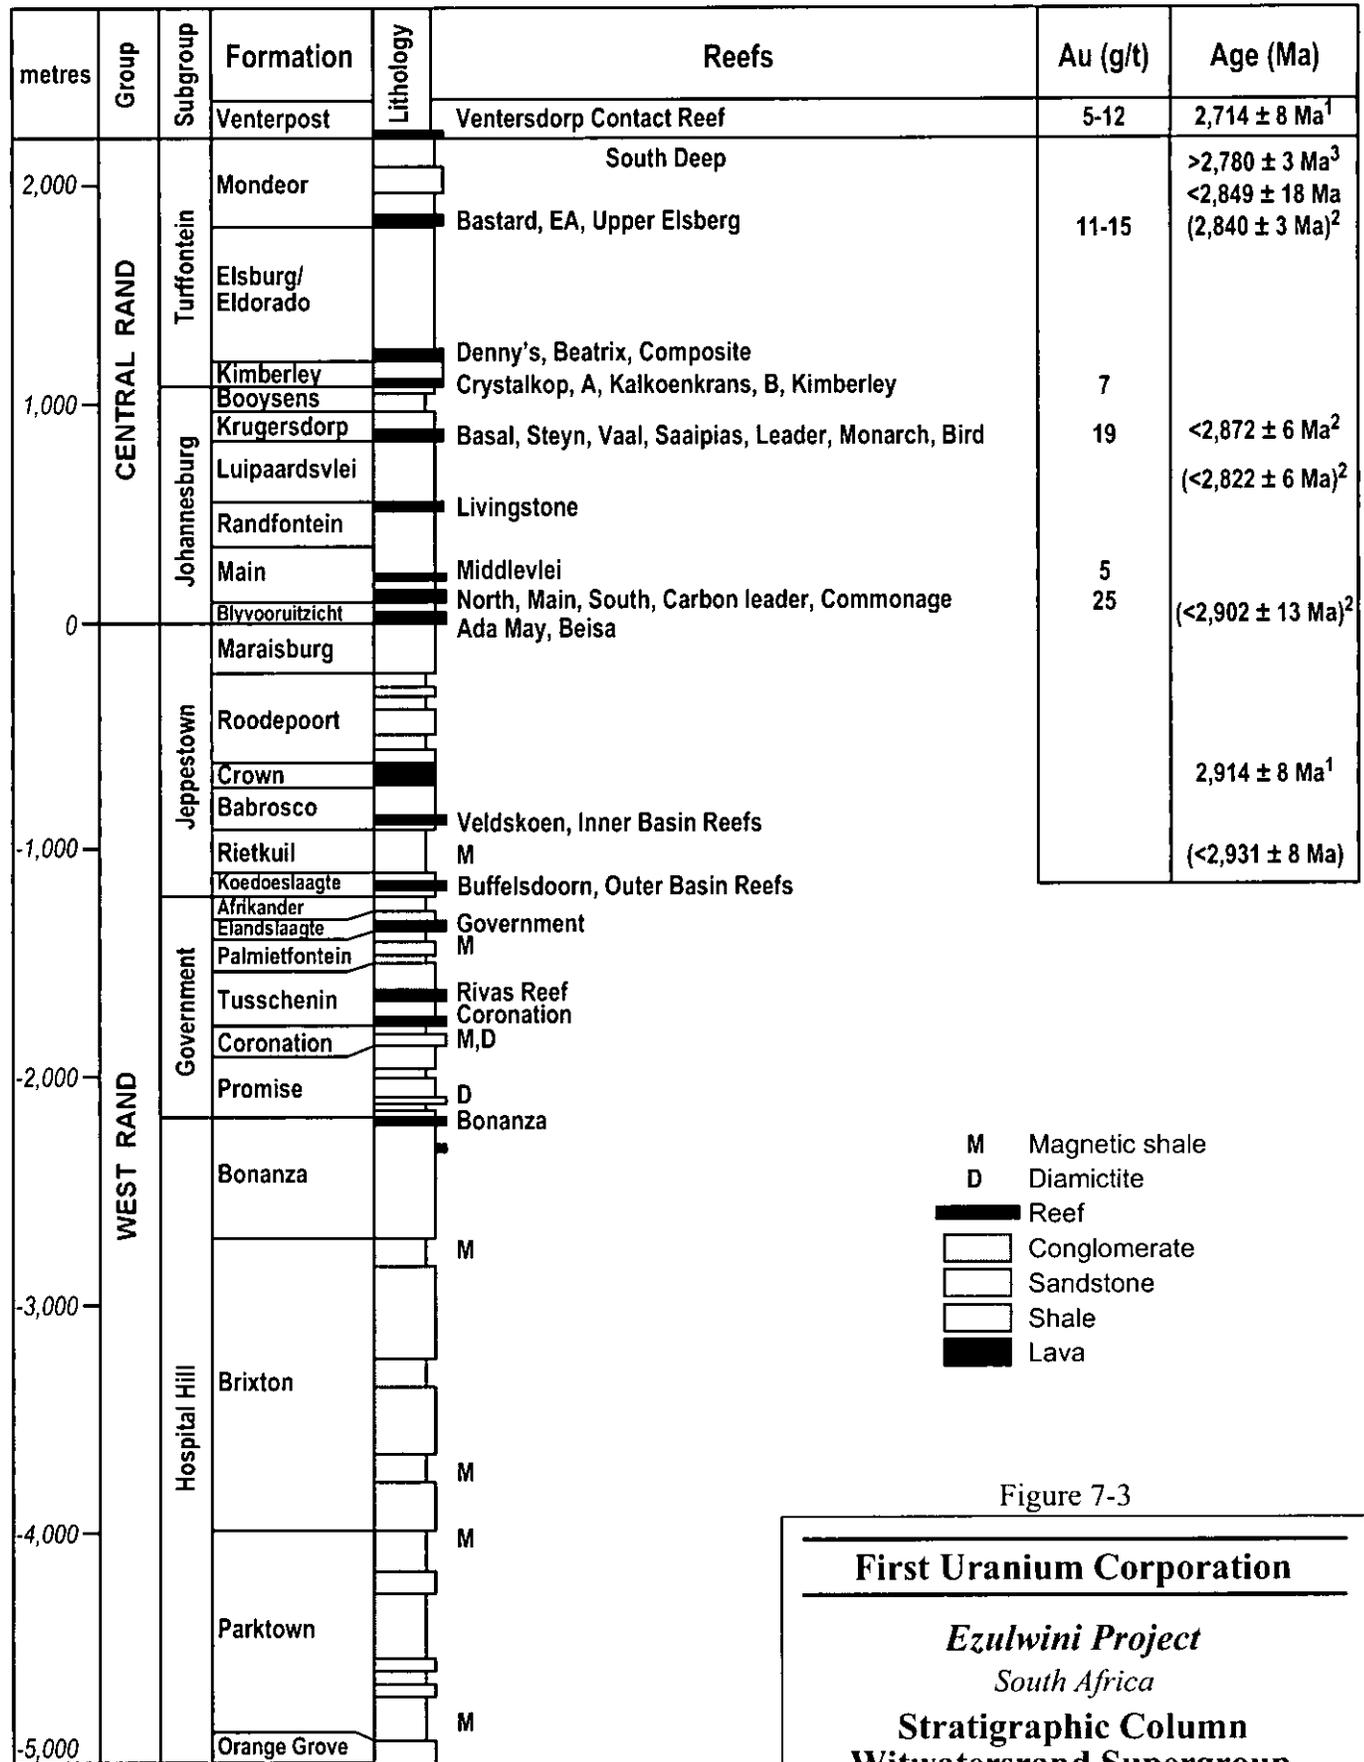

Figure 7-3

First Uranium Corporation
Ezulwini Project
South Africa
Stratigraphic Column
Witwatersrand Supergroup

PROPERTY GEOLOGY

The Ezulwini property is underlain by the Timeball Hill and Fountains Formations, and the Malmani Dolomite Formation of the Transvaal Sequence. The Transvaal Sequence is underlain by the Ventersdorp Supergroup. A lower unit of the Ventersdorp includes the Westonaria Formation, which consists of ultramafic lavas and zones of fine-grained tuff, and is responsible locally for poor ground conditions. The basal unit of the Ventersdorp Supergroup is a conglomerate-gritty quartzite band of the Venterspost Formation, often referred to as the Ventersdorp Contact Reef (VCR). The Mondeor Conglomerate Formation (Turfontein Subgroup, Central Rand Group, Witwatersrand Supergroup) lies unconformably below the VCR and hosts the Upper Elsburg and Middle Elsburg Reefs. The Upper Elsburg Reef is further subdivided into the Modderfontein Member and the Waterpan Member.

The Modderfontein Member consists predominantly of medium to small pebble conglomerates and is generally more robust than the underlying conglomerates of the Waterpan Member. The sequence has been traditionally subdivided into two conglomerate packages (the lower MA units and upper MB subzones) separated by a three metre to four metre zone of quartzite with subordinate small pebble conglomerate lenses (MI subzone).

The MB subzone typically ranges from four metres to six metres in thickness and contains up to three discrete conglomerate bands hosted by apple-green to light grey siliceous quartzite. These horizons have varying channel thickness and excellent secondary mineralization. These poorly sorted, polymictic, medium to large pebble conglomerates were probably deposited onto scour surfaces and grade upwards into quartzite. The MB conglomerate(s) are characterized by abundant pyrite, both buckshot and interstitial crystalline forms, and, at the shaft pillar, form the most prospective horizon for gold mineralization. In many cases, boreholes have shown that gold mineralization in the MB horizon is quite erratic in the conglomerate package and is not always bottom loaded. Clast type is predominantly moderately to well-rounded vein

quartz and chert pebbles with scattered shale-like chips. The matrix varies between a light green to khaki coloured coarse-grained quartzite.

The MB conglomerate lies directly on a sandier substrate. The basal contact is often difficult to discern in borehole intersections. The underlying MI subzone consists of a six metre thick cross-bedded pyritic quartzite that becomes more conglomeratic towards the south. The conglomerate lags and multiple thin bands consist of polymictic small to medium gravels with occasional scattered large quartz vein clasts. The interbedded light green, coarse-grained quartzite layers may be up to one metre thick and are often argillaceous, containing numerous small shale clasts and bands of khaki-coloured sericitic shale.

The basal MA subzone is the thickest subzone of the Modderfontein Member and typically ranges from seven metres to nine metres and includes a capping of one metre to three metres of apple green, coarse-grained, immature quartzite with thin bands (<10 cm) of khaki sericitic greywacke. The MA conglomerate can be upward fining and consists of a well-packed, robust polymictic conglomerate with abundant buck-shot pyrite. Clasts are predominately vein quartz with chert, shale-like clasts, and the distinguishable khaki-coloured chert pebbles. Thin layers of light greenish grey, fine-grained, siliceous quartzite can be present in the conglomerate sequence.

The Waterpan Member of the Mondeor Conglomerate Formation lies directly below the Modderfontein Member and consists of a number of discreet conglomerate horizons separated by quartzite. The various conglomerates are referred to as the "Individuals" and have been arbitrarily labelled A to D, from bottom to top. The lower EA and EB subzones are not persistent and are of no significant economic importance at the shaft pillar. The EC conglomerate is sporadically developed in channels across the pillar area and may form a number of discreet units. The highest unit of the Waterpan Member is the ED band, which is well-developed as a persistent horizon immediately below the MA subzone of the Modderfontein Member.

The EC subzone consists of light grey but fine-grained siliceous quartzite with a few thin polymictic, matrix supported, small to medium pebble conglomerate lags with distinguishable features such as small square shale-like clasts. The average conglomerate thickness typically ranges from one metre to two metres, with gold content being very low. Mature quartzite often separates the EC subzone from the overlying ED subzones. The ED subzone is better developed and can attain a thickness of three metres to four metres in places. The ED reef is developed as an upward fining, small to medium pebble, moderately sorted, polymictic conglomerate, dominated by vein quartz pebbles. The matrix is a mature, coarse-grained light to dark grey quartzite with fine pyrite. This conglomerate is characterized by variable grades and channel thickness.

In the area of the shaft pillar, approximately 1,025 m below the shaft collar, the general stratigraphy strikes 040° and dips 17° to the southwest. Dips may vary due to channelling and faulting.

The property geology is illustrated on two sections in Figures 7-4 and 7-5.

8 DEPOSIT TYPES

The gold-uranium deposits in the Witwatersrand Basin have a primary sedimentary origin and show great lateral continuity throughout the basin. Local discontinuities in mineralization within the reefs are a result of facies variation, ore formation processes, and structural history.

9 MINERALIZATION

UPPER ELSBURG REEF

The mineralization in the Upper Elsburg Reef has been defined around the shaft, at a depth of approximately 1,000 m for a radius of approximately 250 m by the 2006 diamond drilling program and for a further 200 m by historical diamond drilling. The combined thickness of the gold-bearing reef members, i.e., MB, MI, MA, ED, and EC, ranges from 25 m to 50 m. The reef strikes 040° azimuth, dips 17° SW, and exhibits good lateral continuity but is offset by steeply dipping faults and dykes.

Gold in the Upper Elsburg is found in the form of native gold and is associated with sulphide minerals, especially various forms of pyrite. Historically, 30% to 40% of the gold has been recovered by gravity processes, suggesting a high nugget effect. Normally, higher gold values are associated with sulphides, however, there are many instances where extensive sulphide development yields low gold values. Visually, pyrite occurs in a number of forms, e.g., a fine crystalline mass within the matrix and/or as replacement textures within clasts. Pervasive replacement of small clasts is often referred to as “buck shot pyrite”. In places the pyrite distribution within the conglomerate matrix suggests “streaming” of the paleo-hydrothermal fluid during the mineralizing event. Thin stringers of crystalline pyrite are also present within the altered quartzite horizons. At the base of the serpentinized ultramafic lava, the dominant sulphide is pyrrhotite with minor amounts of nickel and copper. Pyrrhotite also exists to a lesser degree in the sedimentary horizons immediately beneath the lava. Gold has occasionally been found in the lava.

MIDDLE ELSBURG REEF

Mineralization in the Middle Elsburg Reef is confined to the UE1A and E9EC Reefs that lie approximately 400 m below the Upper Elsburg Reef. The UE1A Reef lies approximately 60 m above the E9EC Reef. Both reefs strike 030° azimuth, dip 15° to 35° SE, and are interpreted to extend to the property limits. The Middle Elsburg Reef is found in the South Deep Mine to the south and the Doornkorp Mine to the north. The UE1A Reef reaches a maximum thickness of 2.5 m and occasionally pinches out. The

E9EC Reef ranges from one metre to 3.5 m and averages 1.8 m thick. Generally, the reefs are thicker down the paleoslope.

Gold is most commonly associated with pyrite, although some gold occurs in small blebs in arsenopyrite and cobaltite. Uranium is found in the form of uraninite. Mineralization in the Middle Elsburg Reef has less of a nugget effect than the Upper Elsburg Reef.

10 EXPLORATION

Simmer's exploration program was limited to underground diamond drilling as described in Item 11.

The Middle Elsburg reef package, i.e., UE1A and E9EC, hosts approximately 140 million tonnes of inferred mineral resources as described in Section 17 Mineral Resources and Mineral Reserves. An exploration program has been planned with the objective of upgrading a portion of the mineral resources to the indicated category and carrying out a prefeasibility study. The specific Areas of Prospecting Rights Application for the area contiguous to the northeast and southeast of Ezulwini are illustrated in Figure 10-1.

Phase 1 of the program includes diamond drilling approximately 30,000 m in 18 holes from surface and approximately 7,200 m from underground. The underground diamond drilling would be collared in rehabilitated headings in the Upper Elsburg workings. The Phase 1 program would drill the target on approximately 400 m by 400 m spacing.

Contingent on success of the Phase 1 program, the Phase 2 program will comprise approximately 75,000 m of diamond drilling in 42 holes from surface and approximately 16,800 m in 42 holes drilled from underground. Phase 2 would drill the target on approximately 200 m by 200 m spacing, which, considering the generally strong continuity in the Witwatersrand reefs, would likely be sufficient to upgrade a portion of the target to indicated resources.

The surface diamond drilling program, incorporating four drills, was underway at the time of the last site visit in April 2008; however, the Elsburg Reefs had not yet been intersected.

11 DRILLING

UPPER ELSBURG SHAFT PILLAR

First Uranium contracted Murray and Roberts Cementation Limited to conduct an underground diamond drill project in the Ezulwini shaft pillar. Horizon Blue Resources (Pty) Limited (HBR) planned the program, managed the drill contractors, logged and sampled the core, and prepared the database. The program comprised 3,463 m of HQ (5.08 cm dia.) and N (4.76 cm dia.) size diamond drilling in 50 holes. Forty-seven of the holes were collared below the reef and drilled upwards due to core recovery problems in the unit immediately above the reef. Hole depths ranged from 16 m to 201 m and averaged 78 m. The inclination of the three holes drilled downwards ranged from -65° and -90° , while the up-holes ranged from $+40^{\circ}$ to $+70^{\circ}$. The reef dips at approximately 17° and the holes were intended to cut the reef as closely as possible to normal. Therefore, the true thickness of the reef ranges from 80% to 100% of the mineralized core length.

The diamond drill hole collar locations are illustrated in Figure 11-1. Highlights of the drilling are summarized in Table 11-1.

12 SAMPLING METHOD AND APPROACH

UPPER ELSBURG SHAFT PILLAR

The Ezulwini Shaft Pillar resource estimate is based principally on the results from 50 diamond drill holes, drilled January to October 2006, from various levels below the pillar elevation. Drilling from above was problematic due to poor ground conditions in the Westonia Formation lavas, stratigraphically above the Upper Elsburg Reef. The holes have irregular spacing due to availability of drill sites, and range from approximately 25 m to 100 m. Simmers contracted HBR to log the core, capture the data, and prepare the database. Core logging noted and recorded lithology, including reef members, mineralogy, and structure. Diamond drill core sample intervals were determined by HBR geologists based on lithology (reef member) contacts and mineralization. The nominal sample width was 30 cm and respected lithological contacts.

Core recovery problems were common. In most cases, corrections were made by adjusting the driller-reported depth to the surveyed depth. Two holes were not used in the modelling procedure due to large differences in the driller-reported depth and the surveyed depth.

Intersections selected for sampling were halved with a diamond saw. Half the core was placed in a plastic sample bag with a sample ticket denoting the hole number and sample number. The "from – to" was not indicated on the sample ticket. Samples were delivered to the analytical laboratory by HBR personnel.

In Scott Wilson RPA's opinion, there are no factors of the sampling method and approach that would affect the reliability of the mineral resource estimate.

A summary of the grade and thickness of mineralization intersected in the diamond drilling program is found in Item 11, Drilling.

UPPER ELSBURG INFERRED

The Upper Elsburg inferred mineral resources are the extension of the MB, MI, MA, ED, and EC reef members past the limit of the shaft pillar and are based exclusively on diamond drilling. Diamond drill core was AX (2.5 cm) size. Core was taken to surface where it was halved with a diamond saw under the supervision of a geologist. Logging recorded lithology, mineralization, and sample intervals. Sample intervals were maximum 20 cm and respected lithological and mineralogical contacts.

In Scott Wilson RPA's opinion, there are no factors of the sampling method and approach that would affect the reliability of the mineral resource estimate.

This section of the Upper Elsburg mineral resources were classified as inferred because verification of the diamond drill database was problematic. Historically, mineral resources have been classified as measured and indicated only when verified by development in the reef. This Upper Elsburg inferred mineral resources have high potential for upgrading to indicated and measured resources.

MIDDLE ELSBURG

The Middle Elsburg measured and indicated mineral resources are based on channel sampling by previous owners. The inferred mineral resources are based on diamond drilling. The methodology of channel sampling and diamond drill sampling is described in the 2006 report (Van Heerden et al., 2006) by Minxcon Pty. Ltd (Minxcon), an independent South African geology and mining consulting company. The description is based on documentation of standard operating procedures and interviews with previous sampling supervisors.

Channel samples were taken by trained samplers. Following each six-metre advance, the face was washed and samples were taken with a hammer and chisel. Channels approximately 10 cm wide and 0.5 cm deep were cut beginning at the footwall of the reef and repeated on maximum 30 cm vertical intervals. The results were recorded on sample sheets and resource block plans.

The Middle Elsburg inferred mineral resources are based on diamond drill data. Diamond drill core was AX (2.5 cm) size. Core was taken to surface where it was halved with a diamond saw under the supervision of a geologist. Logging recorded lithology, mineralization, and sample intervals. Sample intervals were maximum 20 cm and respected lithological and mineralogical contacts.

In Scott Wilson RPA's opinion, there are no factors of the sampling method and approach in the Middle Elsburg Reef measured, indicated, and inferred resources that would affect the reliability of the estimate.

13 SAMPLE PREPARATION, ANALYSES AND SECURITY

UPPER ELSBURG SHAFT PILLAR

Diamond drill core samples were prepared at the Performance Laboratories (Performance) laboratory in Johannesburg, by drying, crushing to 80% minus 6 mm, split to a representative sample of 250 g to 500 g, and pulverizing to 75% minus 75 microns. Analysis for gold was by standard fire assay procedures, using a 30 g or 50 g sample with a gravimetric finish. The detection limit was 0.02 g/t gold. The Performance laboratory is certified by the South African National Accreditation System, an affiliate of the Standards Council of Canada.

Simmers employees, consultants, or contractors were not engaged in the sample preparation or analyses.

Internal Quality Assurance/Quality Control (QA/QC) procedures at the Performance laboratory included assaying one duplicate sample and one standard reference sample from each batch of 20 samples.

In Scott Wilson RPA's opinion, the sample preparation and analyses methodologies, and QA/QC programs, conform to industry standards and are adequate for resource estimation.

UPPER ELSBURG INFERRED

The Upper Elsburg inferred resources were based on diamond drilling data. Scott Wilson RPA was unable to determine the sample preparation and analytical methods for these data. Minxcon (Van Heerden et al., 2006) reports the data were audited twice during Harmony's ownership.

MIDDLE ELSBURG

The Middle Elsburg measured and indicated resource estimations were based on underground channel samples. The sample preparation and analysis was performed at the Performance laboratory using the same process described for the Shaft Pillar diamond drilling program. In Scott Wilson RPA's opinion, the sample preparation and analyses methodologies, and QA/QC programs conducted for the measured and indicated resources in the Middle Elsburg, conform to industry standards and are adequate for resource estimation.

The Middle Elsburg inferred resources were based on diamond drilling data. Scott Wilson RPA was unable to determine the sample preparation and analytical methods for these data. Minxcon (Van Heerden et al., 2006) reports the data were audited twice during Harmony's ownership.

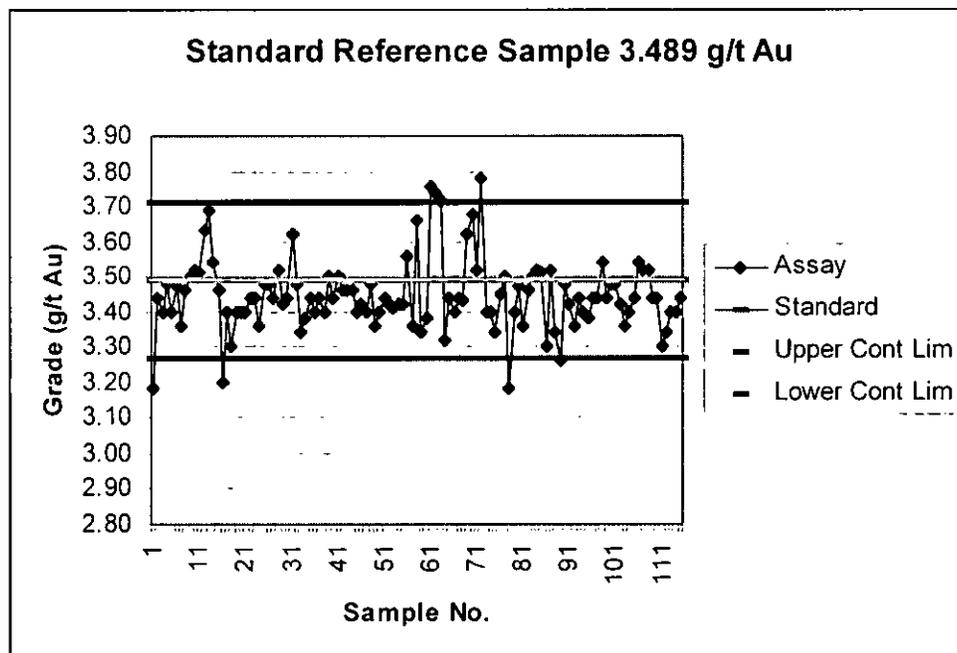

14 DATA VERIFICATION

UPPER ELSBURG SHAFT PILLAR

STANDARD REFERENCE SAMPLES

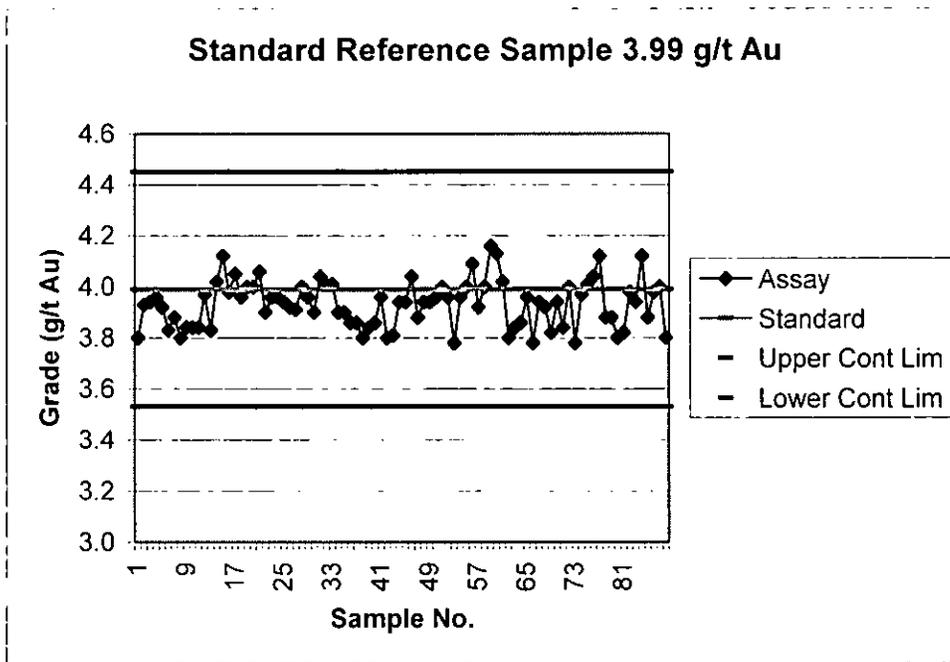

The Upper Elsburg Shaft Pillar measured and indicated mineral resources were based on data from a 2006 diamond drill program. HBR submitted one standard reference sample in each batch of twenty samples to check the accuracy of the Performance laboratory. Three reference standards were used. The lowest of reference standards at 3.489 g/t Au was purchased from Rocklabs in New Zealand. HBR's control limits were \pm two standard deviations, i.e., 0.222 g/t Au. The mean grade of the standards at Performance was 3.45 g/t Au, which was very close to the standard of 3.489. Six of the 115 samples were slightly outside the control limits as illustrated in Figure 14-1. In Scott Wilson RPA's opinion, the results indicate acceptable accuracy in the low grade range.

FIGURE 14-1 STANDARD REFERENCE SAMPLE 3.489 G/T AU

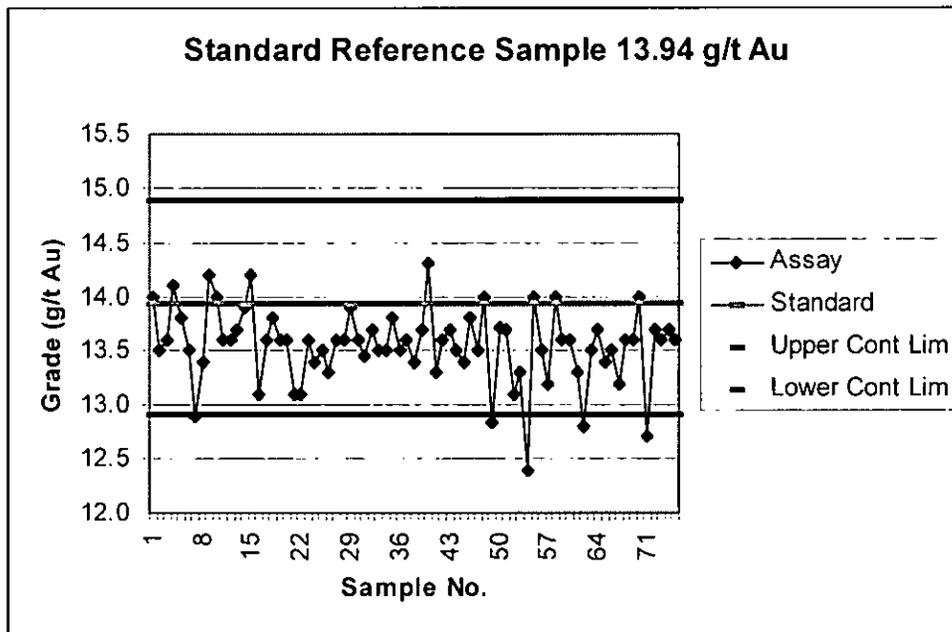

The second reference standard, SARM 99, was certified at 3.99 g/t Au. HBR inserted 88 samples that averaged 3.93 g/t Au. None of the samples returned results outside the acceptable limits as illustrated in Figure 14-2.

FIGURE 14-2 STANDARD REFERENCE SAMPLE 3.99 G/T AU

The highest grade reference standard material, grading 13.94 g/t Au, was purchased from ALS Chemex (ALS) in South Africa. HBR's control limits were ± 1.03 g/t Au, as recommended by the supplier. The mean grade of the standards at Performance was 13.55 g/t Au, which was approximately 3% less than the standard. Four of the 75 samples fell slightly outside the control limits. In Scott Wilson RPA's opinion, the results indicate acceptable accuracy in the high grade range.

FIGURE 14-3 STANDARD REFERENCE SAMPLE 13.94 G/T AU

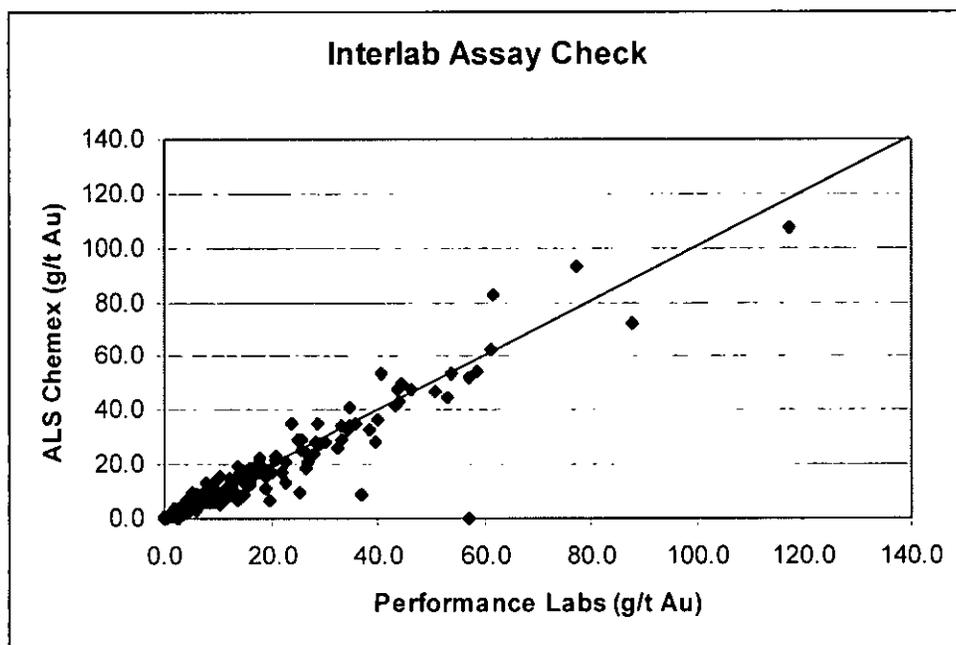

BLANK SAMPLES

HBR inserted 284 blank samples, 4% of the total samples, to check for contamination and drift. Only one sample exceeded the acceptable limit.

INTERLAB CHECKS

HBR submitted 374 pulps, originally assayed at the Performance Lab, for re-assay to ALS in South Africa to test for grade variability. The average grade returned from the ALS was 6% lower than the Performance results. Most of the variability is in the higher grade samples, as the ALS results are 2% lower than the Performance results in samples where the grade is less than 10 g/t Au. Figure 14-4 is a scatterplot comparing the assay results from the two assay laboratories.

FIGURE 14-4 INTERLAB CHECK ASSAYS

SCOTT WILSON RPA CHECK SAMPLES

Scott Wilson RPA collected five samples of split core from two diamond drill holes in the Shaft Pillar drilling. The samples were assayed by fire assay at SGS Canada Ltd., Mineral Services. The results, shown in Table 14-1, demonstrate the presence of significant gold values in the Project. Although five samples are not statistically significant, the two sample sets show reasonable agreement, given the high nugget in the Upper Elsburg Reef.

TABLE 14-1 SCOTT WILSON RPA CHECK SAMPLES
First Uranium Corporation - Ezulwini Project

Hole No.	From (m)	To (m)	Simmers Grade (g/t Au)	Check Grade (g/t Au)

41-03	33.08	33.35	8.69	17.00

UPPER ELSBURG INFERRED

The Upper Elsburg inferred mineral resources were based on historical diamond drilling data. It was not possible for First Uranium or its consultants to verify the data. Consequently, the Upper Elsburg mineralization outside the shaft pillar was classified as inferred resources. During development of the shaft pillar, First Uranium will attempt to verify the historical data by diamond drilling from underground and/or lateral development, thereby upgrading the mineral resources to a higher classification.

MIDDLE ELSBURG

In the area immediately surrounding the previously mined areas, Minxcon checked approximately ten percent of the assays from original assay reports to the assay plans and a similar percentage of survey notes against survey points plotted on plans. Interviews were conducted with previous senior technical personnel, including the Chief Sampler and Chief Surveyor, to verify sample collection and processing procedures. In Minxcon's opinion, the data presented as assay plans were considered as high quality, despite many of the original assay sheets and survey notes having been removed or destroyed. Mr. Valliant, Scott Wilson RPA, inspected a random selection of the assay plans and discussed the sampling and plotting methodology with Mr. Ed Edwards, Harmony's Section Sampler and Surveyor, as well as Ms. Yolanda Welgemoed, the Chief Draftsperson. Scott Wilson RPA concurs that the database is adequate for resource estimation.

15 ADJACENT PROPERTIES

The South Deep Gold Mine lies immediately south of the Ezulwini Mine and began commercial production in 1961. The reef horizons currently being exploited at South Deep include the Ventersdorp Contact Reef and the reef horizons that comprise the Upper Elsburg. From 2001 to 2005 inclusive, the mine produced an average of 1.61 million tonnes annually at an average grade of 8.84 g/t gold. Western Areas Mines Limited (Annual Report 2005) reported the South Deep measured and indicated mineral resources, effective year end 2005, of 289 Mt grading 7.20 g/t gold, containing 67.1 Moz, including proven and probable reserves of 147 Mt grading 6.19 g/t gold containing 29.1 Moz. The South Deep property was subsequently sold to Goldfields who reported the South Deep measured and indicated mineral resources, effective year end 2006, of 288.7 Mt grading 7.20 g/t gold, containing 66.781 million ounces of gold, including proven and probable reserves of 155.5 million tonnes grading 6.1 g/t gold containing 30.582 million ounces.

The Cooke 1, 2, and 3 Shafts and the Doornkop Mine, owned by Harmony, lie immediately north of the Ezulwini Mine. The main horizons exploited at the Cooke 1, 2, and 3 Shafts are the UE1A, with secondary reefs being the E8 Reef and the Ventersdorp Contact Reef. At the Doornkop Mine, the Kimberley Reefs and the South Reef are being mined. Effective June 2007, Harmony reported (Annual Report 2007) underground measured and indicated resources of 87.2 Mt, grading 4.36 g/t gold, containing 12.2 Moz, including proven and probable reserves of 7.4 Mt, grading 6.78 g/t gold, containing 1.6 Moz.

Scott Wilson RPA did not attempt to verify the foregoing information. The mineral resources and reserves reported at the adjacent properties are not necessarily indicative of the mineralization at the Ezulwini Mine.

16 MINERAL PROCESSING AND METALLURGICAL TESTING

GOLD

The Ezulwini Mine has been operated in the past with production from the same areas as scheduled for future development. The metallurgical process selection is based upon the use of the previously existing processes on the site. Therefore, there has been no metallurgical testing of the ores for this study. Further support for the selection of metallurgical parameters based upon historical data is that there is also data available from current and past operations on the same orebody.

There is existing data related to:

- Ore feed size distribution
- Bond Work Index determination
- Power grind relationship
- Gravity separation
- Leach time optimization
- Cyanide and lime addition
- Plant recovery

For the design of the gold recovery plant, MDM Technical Africa (Pty) Ltd. (MDM), a company of South African mineral processing engineers, reviewed the data and concluded that:

- The rock has a medium hardness with a Bond Work Index of 15.6 kWh/t and a Rod Work Index of 20.7 kWh/t.
- Detailed investigation of the Witwatersrand gold field ores has confirmed the power grind relationship of 30.5 kWh/t -75 micron as being the critical design parameter, which would require 24.4 kWh/t to achieve the desired 75% minus 75 micron size. This is confirmed by historical data and neighbouring mines.
- Gravity gold recovery is essential for proper gold recovery of Upper Elsburg ores, with a gravity circuit which can handle 35% to 40% gravity gold being required.

- Witwatersrand ores from the West Rand have not shown any preg-robbing effects.
- Available data shows that milling to 75% minus 75 micron produced significant gold dissolution benefits compared to the coarser grinds of 60% and 70% minus 75 micron.
- Leaching with oxygen has shown no justifiable benefit in previous tests and has been excluded from consideration.
- Plant leach residence time trials identified leach times of at least 36 hours as being required for maximum gold recovery.
- Comparison to other plants treating the same ore shows that the Wilson formula gives conservative recoveries lower by 0.5%. The plant design has related to a recovery of 95.55% which is 1.1% less than the Wilson derived value.
- Sodium cyanide and lime consumptions were chosen higher than historic data indicates due to current experience at South Deep. This is recommended at 0.34 kg/t (100% NaCN) and 1.675 kg/t (100% CaO).

URANIUM

The Project has been operated for the production of uranium in the past, with production from the same areas as slated for future development. The metallurgical process selection is based upon the use of the same processes as previously used on the site. Therefore, there has been no metallurgical testing of the ores for this study.

There is less historical data available related to uranium processing since detailed plant reports were destroyed when the plant was demolished and further reports were lost when offices were relocated. The metallurgical work related to the gold feed size, work index and grinding is expected, however, to be similar to that for the gold ore, as the uranium bearing reef has been in production in the past for uranium and gold and most recently for gold only.

Scott Wilson RPA has reviewed the metallurgical data and is of the opinion that the assumptions are reasonable. If there is any change in the planned processing, it will be necessary to undertake metallurgical testing to determine the expected performance.

17 MINERAL RESOURCE AND MINERAL RESERVE ESTIMATES

MINERAL RESOURCES

In December 2007, First Uranium contracted a South African mining consultant to create a geological model and prepare an interim mineral resource estimate for internal purposes in the Middle Elsburg (E9EC and UE1A) reefs. The geological model and mineral resource estimate were reviewed by Scott Wilson RPA. Scott Wilson RPA considers the methodology appropriate for a global estimate. However, the compositing, search distances, and application of geological factors to grade estimation were considered inappropriate for realistic mine planning. Therefore, in Scott Wilson RPA's opinion, the January 2007 mineral resources, as reported in the May 2007 technical report (Valliant and Bergen, 2007), remains the current mineral resource estimate. First Uranium is currently re-sampling panels in the Middle Elsburg reefs and diamond drilling in the Upper Elsburg shaft pillar. Updated geological models and mineral resource estimates are expected in July-August 2008. A description of the database, parameters and assumptions, methodology, and classification regarding the January 2007 mineral resource follows.

The mineral resources at the Ezulwini Mine are currently confined to the Upper Elsburg and Middle Elsburg Reefs. Historic production at Ezulwini and other mines in the Witwatersrand Basin demonstrates that the mineralization in the reefs has very good lateral and down-dip continuity. Currently, measured and indicated mineral resources include only the areas that could be verified by diamond drilling or chip/channel sampling. Extensions beyond the verified data were classified as inferred mineral resources. There is a high likelihood that development and diamond drilling will upgrade a significant portion of the inferred resources to measured and/or indicated resources.

Historically, the depth of many of the reefs in the Witwatersrand Basin has made diamond drilling on a pattern sufficient for measured and indicated resources prohibitive. Additionally, the reefs are developed in mineralization with only minimal development in waste, which makes diamond drilling from underground impractical. Generally,

exploration and mining companies have tested the continuity of the reef and estimated inferred mineral resources by wide spaced diamond drilling from surface and upgraded to indicated and measured mineral resources by development and channel sampling. Consequently, most mining operations could only report two or three years of measured plus indicated resources, and the ratio of inferred resources to measured plus indicated resources was high. Given the good lateral continuity of the reefs, however, a significant fraction of the inferred mineral resources were normally upgraded and ultimately exploited. For example, in the Upper Elsberg Reef, approximately 60% of the mineral resources originally classified as inferred based on wide spaced diamond drilling were subsequently “payable” and exploited. Given the current gold price and exchange rate, the percentage would have been greater than 60%.

The mineral resources at the Ezulwini Mine can be considered as three discrete sections as follows:

1. The Upper Elsberg Shaft Pillar (UE Shaft Pillar), an approximate 250 m radius around the main shaft, in the Upper Elsberg Reef, defined by recent diamond drilling.
2. Inferred resources in the Upper Elsberg Reef beyond the shaft pillar.
3. Resources in the Middle Elsberg Reef.

SUMMARY

Table 17-1 summarizes the mineral resources in the three areas.

TABLE 17-1 SUMMARY OF MINERAL RESOURCES – JANUARY 2007

First Uranium Corporation - Ezulwini Project

Category	Tonnes (t 000s)	Grade Au (g/t Au)	Grade U ₃ O ₈ (%)	Cont. Au (oz 000s)	Cont. U ₃ O ₈ (lb 000s)

Middle Elsburg	131,100	4.7	0.075	19,742	218,319
Total	201,460	5.0	n/a	32,148	218,319

Notes:

- 1 CIM definitions were followed for mineral resources.
- 2 Mineral resources in the Upper Elsburg shaft pillar are estimated at a 4.0 g/t Au cut-off grade
3. Mineral resources are estimated using an average long-term gold price of US\$500 per ounce, and a US\$/R exchange rate of 7.0.
4. A minimum mining width of 1.53 m was used.
5. Rows and columns may not add exactly due to rounding.
6. Mineral resources that are not mineral reserves do not have demonstrated economic viability.

UPPER ELSBURG REEF - SHAFT PILLAR

First Uranium plans to recover the shaft pillar on the Upper Elsburg Reef as described further in Item 18. In plan view, the shaft pillar is oval, roughly 550 m E-W, 450 N-S, and forms an area of 17.6 ha approximately 1,025 m below the shaft collar, comprising a 25 m to 50 m thick segment of the Upper Elsburg Reef.

The resource estimate is based principally on the results from 50 diamond drill holes, drilled January to October 2006, from various levels below the pillar elevation. Drilling from above was problematic due to poor ground conditions in the Westons Formation lavas, stratigraphically above the Upper Elsburg Reef. The holes have irregular spacing but range from approximately 25 m to 100 m.

Simmers contracted HBR, under the direction of Mr. Chris McKnight, to log the diamond drill core, compile the database, and estimate the mineral resources in the shaft pillar. Mr. McKnight is a "Competent Person" as defined by the "South African Code for Reporting of Mineral Resources and Mineral Reserves" (SAMREC). HBR subcontracted Lower Quartile Solutions (Pty) Ltd. (LQS) to prepare the solid models, conduct geostatistical evaluations, and classify the mineral resources.

Historical diamond drill data was supplied by Simmers in a Sable database. Verification of historical diamond drill data included:

- Check "From - To" depths for consistency.
- Check collar coordinates, lithologies, and gold assays against original drill logs.

Holes with inconsistent data were corrected according to the diamond drill log or removed from the database.

Separate three-dimensional lithological models were created for the lavas, VCR, and six members of the Upper Elsburg Reef, i.e., MB, MI, MA, ED, EC, EB. Structural blocks were also modeled based on faults and dykes intersected in diamond drilling and development from adjacent levels. Only the MB, MI, MA, ED, and EC models were considered for resources.

Gold grades were composited over 0.25 m. Classical statistical analyses were conducted within the five principal reef members, i.e., MB, MI, MA, ED, and EC. The studies were undertaken independently in the data from the 50 holes within the limits of the shaft pillar and in the data from the 261 holes 200 m peripheral to the shaft pillar. The results indicate that although the average gold grade in individual reef members inside and peripheral to the pillar have a high variance, the weighted average gold grade of the five reef members is approximately the same inside and peripheral to the pillar.

LQS constructed cumulative log probability plots, indicator correlation for lag 1 plots, coefficient of variation plots, and percent metal contained plots for each reef member to determine the suitable level to cut erratic high grade gold values. The analyses indicated that 25 g/t gold was the appropriate cutting level for the 0.25 m composites in the MB, MA, and ED reefs and 20 g/t gold was suitable in the MI and EC reefs. Scott Wilson RPA normally recommends cutting individual assays as opposed to cutting composited data. In this case, however, as the composites are very narrow, the difference between the two practices is likely not material.

Variography was performed on the 0.25 m composites from each reef member. Ordinary kriging was selected as the estimation method of interpolating grades into a 3D block model. Block sizes were 10 m north by 10 m east by 1.0 m vertically. Search directions and distances were consistent with the variography. The principal search axis in the five reef members ranged from 250 m to 300 m, 90° to 120° azimuth, with a 0° dip. The minor axis ranged from 150 m to 200 m, 170° to 210° azimuth, and -10° to -30° dip. The first estimation run was performed with these search parameters and a second run was performed with a 30 m to 60 m axis in the principal direction and a 30 m to 35 m axis in the minor direction. A minimum of three data points and a maximum of 20 were required for block grade estimation. Searches were confined to hard boundaries defined by the solid model of each reef member.

LQS undertook several validation tests on the block model and, in their opinion, the results adequately represent the grade and grade trends of the mineralization within the shaft pillar.

Measured mineral resources are defined as the total of the blocks estimated by the second of the two runs, i.e., shorter search distances. Indicated resources were defined as the total of the blocks estimated by the first, i.e., longer search distances. Resources were reported in 1.0 g/t gold cut-off increments and by reef member. Table 17-2 summarizes the mineral resources of the MB, MI, MA, ED, and EC reef members at the 4.0 g/t gold cut-off grade.

TABLE 17-2 MINERAL RESOURCES - UE SHAFT PILLAR - JANUARY 2007
First Uranium Corporation - Ezulwini Project

Meas+Indic	2,317	7.6	570	1,323	5.9	251	1,367	6.3	278	608	5.5	108	516	5.5	9

Notes:

1. CIM Definitions were followed for mineral resources.
2. Mineral resources estimated at a 4.0 g/t Au cut-off grade.
3. Mineral resources estimated using an average long-term gold price of US\$500/oz and a US\$/R exchange of 7.0
4. A minimum width of 1.53 m was used.
5. Mineral resources that are not mineral reserves do not have demonstrated economic viability.
6. Rows and columns may not add exactly due to rounding.

Figure 17-1 demonstrates the tonnage-grade relationship in the UE Shaft Pillar measured and indicated mineral resources.

FIGURE 17-1 GRADE TONNAGE CURVE

UPPER ELSBURG REEF - INFERRED RESOURCES

The Upper Elsburg inferred mineral resources comprise the mineralization outside the UE Shaft Pillar and are defined by historical drilling where the data could not be physically verified by relogging or resampling diamond drill core. Geological modeling was based on structural interpretation by Harmony. Each reef member was subdivided into blocks where the limits were defined by structures and dykes.

GeoLogix Mineral Resource Consultants (Pty) Ltd. (GeoLogix) estimated the mineral resources in the following manner. The resource estimate is based on the weighted average gold grade from all available surface drill hole data. All the grade-thickness (Cmg/t Au) values and reef thickness (Cm) values were totaled. The sum of the grade-thickness values was divided by the sum of the thickness values to obtain the gold grade. The areas of the blocks were totaled to estimate the area per reef. The area was multiplied by the average reef thickness to estimate volume, then by the 2.72 specific gravity to calculate tonnes. The specific gravity is derived from the historical specific gravity in similar mineralization.

Given that the data could not be verified and the grade and thickness values were not weighted spatially, the mineral resources have been classified as inferred. Scott Wilson RPA concurs with this classification but notes that a significant percentage of the inferred resources will likely be upgraded to measured and/or indicated with additional development. Table 17-3 summarizes the Upper Elsburg inferred resources.

**TABLE 17-3 INFERRED MINERAL RESOURCES -

Total	64,560	5.8	12,055

MIDDLE ELSBURG REEF

The mineral resources in the Middle Elsberg Reef were estimated for Simmers by Minxcon. The project was under the management of Daan Van Heerden, Johan Odendaal, and Francois Martens, all competent persons as defined by SAMREC. Minxcon in turn subcontracted the geostatistics and resource modeling to GeoLogix. Despite the fact that many of the plans and associated data have been removed or destroyed, in Minxcon's opinion, sufficient data was salvaged to undertake an effective audit.

Minxcon checked approximately ten percent of the assays from original assay reports to the assay plans. Interviews were conducted with previous senior technical personnel, including the Chief Sampler and Chief Surveyor, to verify sample collection and processing procedures.

Two of the reef members within the Middle Elsberg Reef, i.e., the E9EC and UE1A members, in the vicinity of the shaft were considered to have sufficient gold and/or uranium grades to meet the requirements for mineral resources.

There is currently no access to the mineralized material due to lack of ventilation and scaling. Therefore, no physical verification, e.g., resampling and resurveying, was

possible. The database for the resource estimation was based on 13,133 chip samples profiles, and surface and underground diamond drilling in the E9EC reef member and 233 in the UE1A reef member. The results were plotted by previous operators on stope plans and 1:1,000 scale development plans. Gold and U_3O_8 assays were available for the E9EC member. Only gold was assayed in the UE1A as recovery of U_3O_8 was not economic at that time.

Geological modeling was based on Harmony's previous interpretation. Discrete structural blocks were created, bounded by faults and dykes. Voids, as a result of previous mining, were removed from the model. The reefs were regarded as tabular two-dimensional shapes, consistent with typical Witwatersrand practice.

The mean thickness in the E9EC and UE1A reefs is 1.84 m and 1.61 m, respectively. The block model is based on grade-thickness, expressed as Cmg/t for gold and CmKg/t for U_3O_8 . The grade-thickness was estimated for each sample point. Variography was performed on the grade-thickness data from each reef member. Tables 17-4 and 17-5 summarize the parameters used to construct the E9EC and UE1A block models.

TABLE 17-4 BLOCK MODEL PARAMETERS - MIDDLE ELSBURG E9EC REEF

First Uranium Corporation - Ezulwini Project

Interpolation Method	Ordinary into two-dimensional block model
Block Size	25 m N x 25 m E
Search Distance/Azimuth	210 m, azimuth 68° and 125 m, azimuth 158°
Minimum Data	15
Maximum Data	40

TABLE 17-5 BLOCK MODEL PARAMETERS - MIDDLE ELSBURG UE1A REEF**First Uranium Corporation - Elsburg Project**

Interpolation Method	Ordinary into two-dimensional block model
Block Size	25 m N x 25 m E
Search Distance/Azimuth	170 m, azimuth 135° and 50 m, azimuth 45°
Minimum Data	3
Maximum Data	20

Blocks were classified as measured resources if they were located within one-half of the variogram range from a data point. Blocks located one-half to one variogram range from a data point were classified as indicated. Mineralization beyond one variogram range, but within the property limits, was classified as inferred resources. The UE1A Reef hosted 4,810 t grading 2.3 g/t Au, consistent with the kriging parameters for measured and indicated mineral resources. However, given the low gold grade, lack of U₃O₈ assays, and the inability to verify the diamond drill data, the entire UE1A reef was classified as inferred mineral resources.

Mineral resources in the Middle Elsburg Reef are summarized in Tables 17-6 and 17-7.

TABLE 17-6 MEASURED + INDICATED MINERAL RESOURCES - MIDDLE ELSBURG REEF**First Uranium Corporation - Ezulwini Project**

Classification	Tonnes (000's)	Grade (g/t Au)	Cont. Gold (oz. 000's)	Grade U₃O₈ (%)	Cont. U₃O₈ (lbs 000's)
Measured	2,451	4.9	384	0.07	3,903
Indicated	1,372	5.8	257	0.10	2,880
Meas. + Indic.	3,823	5.2	641	0.08	6,783

Notes:

1. CIM definitions were followed for mineral resources.
2. Mineral resources in the Middle Elsburg Reef are estimated using a zero cutoff grade since the mining method does not facilitate selective mining
3. A minimum mining width of 1.53 m was used.
4. Rows and columns may not add exactly due to rounding.

TABLE 17-7 INFERRED MINERAL RESOURCES – MIDDLE ELSBURG
First Uranium Corporation - Ezulwini Project

Reef	Database	Tonnes (t 000's)	Grade Au (g/t Au)	Grade U ₃ O ₈ (%U ₃ O ₈)	Cont. Au (oz 000's)	Cont. U ₃ O ₈ (lb 000's)
UE1A	Channel	4,810	2.3	-	351	-
UE1A	DD	10,134	1.7	0.095	566	21,219

Total		136,915	4.6	n/a	20,093	218,319

Notes:

1. CIM definitions were followed for mineral resources.
2. Mineral resources in the Middle Elsburg Reef are estimated using a zero cutoff grade since the mining method does not facilitate selective mining
3. A minimum mining width of 1.53 m was used.
4. Rows and columns may not add exactly due to rounding.

MINERAL RESERVES

There are currently no mineral reserves at the Ezulwini Mine as defined by CIM.

18 OTHER RELEVANT DATA AND INFORMATION

First Uranium is progressing with activity to bring the Ezulwini Mine into production. In the Ezulwini shaft, the rehabilitation work is underway with the replacement of shaft hardware as needed, the installation of support and monitoring for the mining of the reef through the shaft, and the installation of a floating tower in that section to permit full long term use of the shaft. EMC awarded the shaft rehabilitation work to Murray and Roberts and EMC is undertaking the mining of the shaft pillar. Sufficient work has been completed such that hoisting of the planned production can be done but the completion of the shaft repair has taken longer than planned. This, however, is not expected to result in delays to the Project development.

Rehabilitation and re-supporting of main levels and shaft station areas are underway, as well as the development towards stoping areas in the shaft pillar, Upper Elsburg and Middle Elsburg areas. Mine equipment for the development and production is arriving on site and being moved into the mine.

Construction of the gold and uranium processing plants and the associated infrastructure is underway in an area near the shaft and near the previous mill site. The gold and uranium plant engineering, procurement and construction management (EPCM) contract was awarded to MDM Technical Africa (Pty) Ltd. (MDM). Construction is well advanced and commissioning of the first phase gold plant commenced in April, with gold mill production planned to commence in June 2008.

In January 2008, Eskom, the national power supply company, announced that supply could not be guaranteed to the mines. Therefore, First Uranium suspended all not critical work but restarted them as Eskom subsequently announced it could supply 80% and then 90% of the current requirements. First Uranium, however, investigated energy supply requirements and alternatives and has made arrangements for the rental of diesel powered generators. It also proposes the purchase of a 15 MW diesel plant for Ezulwini.

The existing infrastructure at the Project is old but has been well maintained and is being placed back into service. The mine development to the mineralized zones is in place and conditions in the mine, while difficult at times, are in general better than expected.

The Project will be a conventional underground mine with breasting of the Upper and Middle Elsburg reefs. The ore will be broken in the stopes and moved by slushers to be loaded in rail cars for transportation to the shaft. From the shaft and through the balance of the handling, the gold ores and the gold/uranium ores are kept separate. The ores will be hoisted to surface and processed.

The gold ore will be crushed and ground and then subjected to gold recovery by gravity and cyanidation. The uranium will be extracted by a hot acidic leaching followed by solvent extraction and precipitation to form a concentrate (yellowcake). The uranium tailings will then be leached for gold recovery together with the gold ore. Leaching will occur in a carbon in leach process after which gold will be electrowon and refined into doré bars.

A portion of the mill tailings will be used for cemented whole tailings backfill and the balance will be sent to a surface storage area.

The mine is dewatered at a rate of 65 million litres per day. This rate is expected to continue for a number of years and EMC is reviewing the potential to sell mine water to a local utility to reduce the pumping costs the mine must carry.

Shaft refurbishing commenced in December 2006 and the Project has progressed slower than planned with completion of the shaft work and floating tower installation now scheduled for early 2009. However, sufficient work has been completed to permit hoisting of ore and the shaft work and other operational needs are being met through careful scheduling and planning of all of the shaft activities.

MINING OPERATIONS

Mining at Ezulwini will be conventional underground breast mining of the reef. There are three planned mining areas, the Upper Elsburg Shaft Pillar, the Upper Elsburg beyond the shaft pillar, and the Middle Elsburg. All areas are mined by up dip conventional drift and fill mining using cemented whole mill tailings for backfill. The method is common and well understood by people in the area. One significant difference at Ezulwini is that the reef in the Upper Elsburg contains several mineralized horizons and, in some cases, these horizons are up to five metres to six metres thick as opposed to other mines in the Witwatersrand Reef where the mineralized horizon is only one metre to two metres thick.

For mining, a drift along the strike (a strike gully) is established, with the necessary ore transport facilities at the lowest point in a block. From this drift, raises are driven up dip, leaving a 6.5 m pillar between the raises, to the top of the block and holing in to a top strike drift.

Once the raises break through, the retreat mining starts downwards at a four metre width advancing 30 m/month using winches and scrapers to move the ore. Primary four metre wide stopes are taken, leaving four metre wide pillars to be recovered after the primary stopes have been filled.

Broken ore is scraped down the raise to the strike gully and then to short ore passes, with chutes to load rail cars for transport to the shaft for hoisting to surface.

The method is development intensive, but this development provides the opportunity for sampling in the proposed stopes as the raises are driven and provides locations for short diamond drill holes to confirm the mining location. The sequence is dictated by rock mechanics parameters so that in a given area the active face advances at an angle to reduce the risk of seismic activity due to mining. Areas of low grade (“unpay”) are left and form random pillars. Other pillars are left to protect infrastructure.

All of the LOM production plans presented in this report include inferred resources, however, there is no certainty that inferred resources will be converted to measured or indicated resources and then to mineral reserves.

Mining activity to the end of April 2008 has totalled 52,665 t grading 5.59 g/t gold compared to the plan of 100,040 t grading 5.86 g/t gold. The shortfall reflects the delays in the shaft work and reductions in ventilation air flow while ground support work was underway in the ventilation shaft.

CUT-OFF GRADE CALCULATIONS

The cut-off grade for the Upper Elsburg Reef is based upon gold only. The mining cut-off grade calculations for the Upper Elsburg are shown below:

Gold price	\$739.38 (LOM average)/oz
Exchange rate	R7.7=\$1.00
Gold Recovery in plant	95.5%
Operating cost	R531/tonne (LOM average)
Cut off grade at zero profit	3.0 g/t Au.

Assuming a simple 20% operating margin, the cut-off grade becomes 3.6 g/t. Despite cost increases projected since the previous technical report, the increase in gold price has resulted in a reduction in the cut off grade for the project from 3.8 g/t at a zero profit margin to the current 3.0 g/t.

In the Middle Elsburg, there is recovery of both uranium and gold. Based upon the same factors as in the Upper Elsburg, along with uranium prices of \$55.02/lb (LOM average) and mill recovery of 80%, the equivalent gold and uranium grades are:

$$\text{Au Eq (g/t)} = \text{Au g/t plus } 0.0043 \text{ times } \text{U}_3\text{O}_8 \text{ in g/t}$$

$$\text{U}_3\text{O}_8 \text{ Eq (g/t)} = \text{U}_3\text{O}_8 \text{ g/t} + 233 \text{ times Au g/t.}$$

On this basis, the 3.0 g/t Au and 3.6 g/t Au cut-off grades would equate to U_3O_8 Eq grades of 699 g/t and 839 g/t, respectively.

UPPER ELSBURG SHAFT PILLAR

At the start of mining in 1961, a shaft pillar area was left in the Upper Elsburg area. The shaft pillar is an ellipsoid, approximately 450 m by 550 m, centered on the main and ventilation shafts. The shaft pillar resources can be accessed from the 33 Level to the 41 Level of the main shaft (880 m to 1,100 m below surface). The shaft pillar ore cuts the shaft barrel at the 38 Level. Subsequent to the extraction of ore from the area beyond the shaft pillar, ground movement problems were encountered in the shaft area as the weak lava unit overlying the ore horizon failed. It was necessary on at least one occasion to cease shaft operations and excavate the lava unit around the shaft and then to reinstall the necessary shaft hardware.

In order to eliminate the ground control problems in the shaft area, it is proposed to mine out the shaft pillar as one of the first steps in restarting the mining operations. This will eliminate the ongoing problems in the shaft, and the risk to the shaft, caused by the failure of the lava unit overlying the reef. The extraction of shaft pillars before the commencement of production has been practised at other deep mines in South Africa, including the adjacent South Deep Mine. The material within the shaft pillar will be easily accessible as the access drifts are in place and the mining will be in close proximity to the shaft.

A design for the extraction of the shaft pillar was prepared by SRK Consulting (SRK) and Read, Swatman & Voigt (RSV) has designed a steel tower to be placed in the shaft in the area where the shaft pillar cuts the shaft barrel. By first excavating a distress cut through the extent of the 500 m diameter shaft pillar area and then filling that cut with cemented backfill, it will be possible to extract the bulk of the remaining ore while eliminating the stress related ground control issues that have previously led to problems in the shaft (and which could lead to problems in the shaft in the future). Where the ore horizon cuts the shaft barrel, a steel tower will be hung in the shaft to hold the shaft hardware and permit unrestricted shaft operation in the future.

SRK developed a detailed plan and sequence considering the stress regime and RSV, based on that plan, generated a development and production schedule for the shaft pillar

area. SRK designed permanent pillars in the immediate area of the shaft barrels (both the main shaft and the ventilation shaft are within the shaft pillar area), alongside permanent drives, beside existing major faults, and at the rim of the shaft pillar area where the previously mined area commences. In addition to the mining plan developed by SRK, there was a comprehensive monitoring plan to be implemented.

The monitoring equipment as recommended by SRK is currently being installed by International Seismic Systems (ISS) and monitoring has commenced. The monitoring includes a system by Yield Point which provides direct digital output from ground monitoring sensors. The full monitoring system will not be functional until the end of 2008, but it will include outsourced monitoring and a protocol for action depending upon the level of activity noted in the monitoring. Seismic events are to be expected based on the mining plans.

Ezulwini has also reviewed and revised the shaft pillar mining schedule and the schedule for areas beyond the shaft pillar based on the current progress in the shaft area and the information being gained from working in the areas. Ezulwini now has experienced mine supervisors who have assisted in the development of revised mining plans. The revised mining plans include input from rock mechanics specialists and execution of the plans will incorporate information from the ground control monitors which have been installed.

There is little pre-production development required as there are a number of levels and headings that exist in the shaft pillar area. However, mining must follow a planned sequence to prevent the build up of stresses in any area with the destress cut preceding all other mining. Production builds up slowly with the smaller destress cut and then builds more rapidly as more areas become available. In the revisions to the mining schedule, additional extraction areas within the shaft pillar have been identified along with plans to mine from locations beyond the shaft pillar boundary.

There are mineral resources within the shaft pillar and these have been scheduled for production. The original production schedule was generated by RSV using the

parameters defined by SRK for the extraction sequence and a set of development and production parameters based upon experience in the area. The schedule was generated in the Mine2-4D software. This software uses the assumed parameters and applies them to the resource area to generate the development and production schedules.

The shaft pillar mining plan and schedule as developed for the December 2006 Technical Report is described in the 2007 Technical Report (Valliant and Bergen, 2007). The only modifications for this report have been in year one where ore sources were changed based on short term planning but the overall production remains as previously developed and reported and as shown in Table 18-1.

The shaft pillar area is well serviced by the existing infrastructure for materials handling, dewatering, mine services, and mine ventilation.

Scott Wilson RPA recommends that Ezulwini continue the review of the Upper Elsberg resources and incorporate any revisions into the next planned production schedule revisions. Scott Wilson RPA further recommends that revisions to the production schedule be undertaken for use in a prefeasibility study when such study is prepared.

UPPER ELSBURG BEYOND THE SHAFT PILLAR

The Upper Elsberg formation has been mined in the past beyond the shaft pillar area. Development was curtailed prior to the cessation of operations. Therefore, while there are inferred resources, mine development must be advanced to prepare further areas for stoping.

The area beyond the shaft pillar contains only inferred resources, however, a LOM plan has been prepared including this material. Short term planning is based on recent reviews and stoping plans, while longer term planning was based on the historical layouts and productivities. This material will be mined in the same manner as the shaft pillar except that there is no need for an initial destress cut.

The schedule was generated in the Mine2-4D software. This software uses the assumed parameters and applies them to the resource area to generate the development and production schedules. The current production schedule for the Upper Elsburg material is shown in Table 18-1.

TABLE 18-1 UPPER ELSBURG PRODUCTION SCHEDULE

Total	5,032	7.09	13,017	6.65	18,050	6.77

The Upper Elsburg area is serviced by the existing infrastructure for materials handling, dewatering, mine services, and mine ventilation. As work starts in a given area it is necessary to inspect the main levels to determine the ground conditions and to evaluate how much of the services for the drifts will have to be reinstalled. At the time of the latest site visit, the focus was on completing work on the access ways of the main levels so that there was space to bring down and store mining supplies. Re-establishing the levels has been time consuming but the work is proceeding well. Main development headings will be extended as the proposed mining area expands.

Hand held rock drills, winches and scrapers, as well as locomotives and cars for the transportation of rock and materials have been purchased to equip the mining areas. Some of the equipment will be common to the shaft pillar material and some of the stoping equipment will be taken from the shaft pillar stopes as those stopes are exhausted and mining activity moves into the area beyond the shaft pillar.

The production schedule developed for the two portions of the Upper Elsburg deposit has a “valley” in the production forecast because the forecast was originally prepared with the understanding that development beyond the shaft pillar would be difficult and time consuming. However, conditions in the drives inspected have been better than anticipated and, therefore, production from the areas beyond the shaft pillar will be brought forward in the production schedule. Scott Wilson RPA recommends that production planning be reviewed in the future to determine how to reduce the dip in production and maintain a steady ore flow from this area.

MIDDLE ELSBURG

The Middle Elsburg area targets two reefs, the E9EC and the UE1A, which contain both gold and uranium. Historically, the E9EC has been mined much more extensively than the UE1A. The Middle Elsburg area is accessed from the 36 Level to the 50 Level and continues for an additional six levels below the 50 Level. Those areas below the 50 Level would be accessed by a system of declines with mechanized haulage to the 50 level.

Mining is by conventional breast mining based on the same method that has been successfully used in the past. Access is provided from crosscuts from the level haulage, and raises are developed up from one level to the next.

Support will be based upon the use of backfill, however, grouted cement packs or timber mat packs may be used if necessary. Support pillars have not been considered as a result of geological losses and unpay blocks providing adequate “natural pillars”. Panels are planned at 20 m to 30 m in length, with 10 m face advance planned per month and the stoping width of 100 cm to 180 cm depending upon the reef channel.

PRE-PRODUCTION SCHEDULE

Since the Middle Elsburg area has been mined in the past, there is level development from the shaft to the mining areas, which, however, will have to be extended to provide access to the proposed mining areas. The mine plan was developed using Surpac, a CAD based mine design and scheduling software package.

PRODUCTION SCHEDULE

Table 18-2 summarizes the current Middle Elsburg production schedule.

TABLE 18-2 MIDDLE ELSBURG PRODUCTION SCHEDULE
First Uranium Corporation – Ezulwini Project

Year	ME Tonnes (‘000s)	Feed Grade (Au g/t)	Feed Grade U ₃ O ₈ (g/t)
2009	402	3.83	464
2010	729	3.47	472
2011	831	3.39	472
2012	978	3.31	477
2013	1,108	3.13	490
2014	1,003	2.68	517
2015	1,039	2.47	534
2016	1,097	2.46	536
2017	1,121	2.46	536
2018	1,118	2.46	536
2019	1,195	2.46	536
2020	1,148	2.46	536
2021	1,104	2.46	536
2022	1,226	2.46	536
2023	1,199	2.46	536
2024	1,204	2.46	536
2025	1,123	2.46	536
Total	17,627	2.68	521

The Middle Elsburg area has been mined in the past, and development out to the mining areas, as well as the infrastructure to support the mining, is in place down to the 50 Level.

The ore and waste handling facilities at the shaft will be replaced and/or upgraded for rock hoisting and for the movement of men and materials. All of the infrastructure will have to be extended along with the Middle Elsburg development prior to the

commencement of operations. This area will require continuous development to permit the buildup of production over a period of years.

The main drifts to the previously mined areas have been inspected and assessment of the necessary rock work and infrastructure replacement for the drifts has been compiled. Ventilation is the first requirement to reduce the levels of radioactive gases in the areas. During the last quarter of 2006, the Ezulwini project team reconnoitered the available Middle Elsburg panels and found them to be more accessible and in better condition than anticipated. Therefore, the mining plan has been accelerated in years 2008 and 2009 as it is clear that the production panels can be brought online much faster.

MINE EQUIPMENT

The mining equipment had been removed from the mine before EMC acquired the assets, and new equipment is being purchased. The equipment required to meet the production target is shown below in Table 18-3.

TABLE 18-3 MIDDLE ELSBURG MINING EQUIPMENT

OPPORTUNITIES FOR IMPROVEMENTS

With the fluctuations in the prices of uranium and gold, there may be opportunities to improve the Project cash flow by altering the ratio of gold plant feed to uranium plant feed to maximize cash flow depending on the prices of gold and uranium. To this end the plan is to develop the ME zones as quickly as possible, construct the uranium

processing plant module and to modify the mill feed system to maximize the ability to process mixtures of ores.

Within the mining area, there are opportunities to implement actions to improve the Project. The inferred resource covers a large area and it may be possible to increase production by developing and commencing mining in additional areas. The Ezulwini shaft does not have the capacity for additional hoisting, but it may be possible to gain access to other underutilized shafts in the immediate area. Those shafts are connected to the Project and have in past been used to hoist ore from the Ezulwini Mine. Alternatively, additional hoisting capacity could be obtained through deepening of the ventilation shaft and installation of a skipping hoist, or a complete new shaft could be developed. The development of a new shaft would have the advantage of bottom access so that it could be bored rather than sunk, decreasing the cost and the time to complete the shaft.

MINERAL PROCESSING

Recovery of gold and uranium will be accomplished by processing on site through the construction of facilities similar to those that existed in the past on the same site. The gold plant will, at full capacity, treat 200,000 tons per month of ore and will consist of the following process steps:

- SAG milling of underground ore to 75% -75 µm with four SAG mills grinding all of the mill feed
- Dilute cyclone overflow (20% solids)
- Gravity recovery from cyclone underflow material
- Pre-leach thickening
- Cyanidation in seven tank hybrid carbon-in-leach circuit
- Gold adsorption onto activated carbon and stripping via Zadra elution
- Carbon regeneration in horizontal electric kiln
- Gold electrowinning and smelting
- Tailings disposal to conventional slimes dam

Because of the treatment of the two different ore types, the plant layout has two sets of silos. Two 3,700 tonne silos are dedicated to Upper Elsburg ore and one 7,400 tonne silo is dedicated to Middle Elsburg ore. It is anticipated that two mills will always be dedicated to Middle Elsburg ore, whilst the other two mills may operate on either Upper Elsburg ore or Middle Elsburg ore. This silo configuration provides flexibility in terms of feeding Middle Elsburg ore to two, three or four mills, thus allowing the mine to respond to changes in the price of uranium.

Gold recovery is forecast to be 95.5%, with 30% to 40% of the gold recovery in the gravity circuit.

The Ezulwini uranium plant will, at full capacity, treat 100,000 tonnes per month of ore, and where appropriate it will be designed as two 50,000 tonnes per month modules and will consist of the following process steps:

- Pre-leach filtration
- Agitated, atmospheric, heated, sulphuric acid leaching
- Six stage counter current decantation (CCD) of leached slurry
- Clarification of pregnant leach solution (PLS) from CCD
- Neutralization of CCD tailings and pumping to the gold plant
- Ion exchange (IX) processing of the PLS
- Solvent extraction (SX) of the uranium from the IX eluate
- Precipitation and washing of ammonium di-uranate from the OK liquor from SX

The Middle Elsburg (ME) ore is processed for both gold and uranium in a reverse leach process, with uranium leached first and gold second. The U_3O_8 recovery is forecast to be 80%. This forecast is lower than the recovery noted in the literature for operation at the original Ezulwini uranium operation. The lower value was chosen to reflect the lack of direct testing and the gap in time and experience since a plant with this flow sheet has been operated in this area.

The ME ore is ground and thickened in the gold plant and the feed to the uranium plant is received from the pre-leach thickener underflow. This underflow must be further dewatered before feeding to the uranium leach to allow a satisfactory water balance over the whole process. Horizontal belt vacuum filters have been selected for this duty. The horizontal belt filter installation will comprise two modules of 50,000 tonnes per month each.

Test work is scheduled on samples being collected from the Ezulwini ME ore to determine whether the ore is amenable to paste thickening. This may offer a cost advantage of the combination of high rate thickening and filtration.

Minxcon reported that historically the ore mix from the shaft yielded one pound of uranium per tonne of ore processed (that is a recovery of 373 g/t). The average recovery factor was 80% and the average head grade was 466 g/t. Scott Wilson RPA notes that from annual reports spanning the period from 1985 to 1997 (excluding 1987, as no data were found for that year), the recovered grade for uranium ranged from 0.3 kg/t to 0.53 kg/t and the average recovered grade of uranium oxide was 0.44 kg/t. The annual reports reviewed by Scott Wilson RPA did not contain head grade information. The processing plant that was previously used to process the ore was dismantled after the mine was placed on care and maintenance in 2002.

With the significant appetite for uranium demonstrated in the market, First Uranium included design considerations to increase the split of production from the Middle Elsburg uranium bearing reef. An option to increase the plant flexibility to accommodate a blend of up to 150,000 tpm from the Middle Elsburg and 50,000 tpm from the Pillar (instead of 1:1) was included to allow a higher uranium processing rate option if this proved to be more profitable. The additional 50,000 tpm uranium module that would be required has not been added to the capital costs, but the plant infrastructure changes required to facilitate a seamless addition of this module have been included in the plant design.

Existing facilities in the mine infrastructure are designed to keep the gold and gold/uranium ores separate from the mine ore passes through to the surface stockpiles. Gold ore will be treated just for gold, while the uranium/gold ores will first be treated for the recovery of uranium after which the residue will be leached for gold recovery. This separation reduces the processing costs as not all of the mine tonnage needs to be treated for uranium recovery.

Installation of a primary jaw crusher on surface is underway.

Toll milling of development ore was undertaken until the Eskom announcement restricting power, after which the toll milling company had insufficient power to handle the additional feed. Development ore is being stockpiled and will be processed in the Ezulwini facility as soon as it is ready. MDM estimates that the first portion of the gold plant will be ready in June 2008 and the uranium plant will be ready in October 2008.

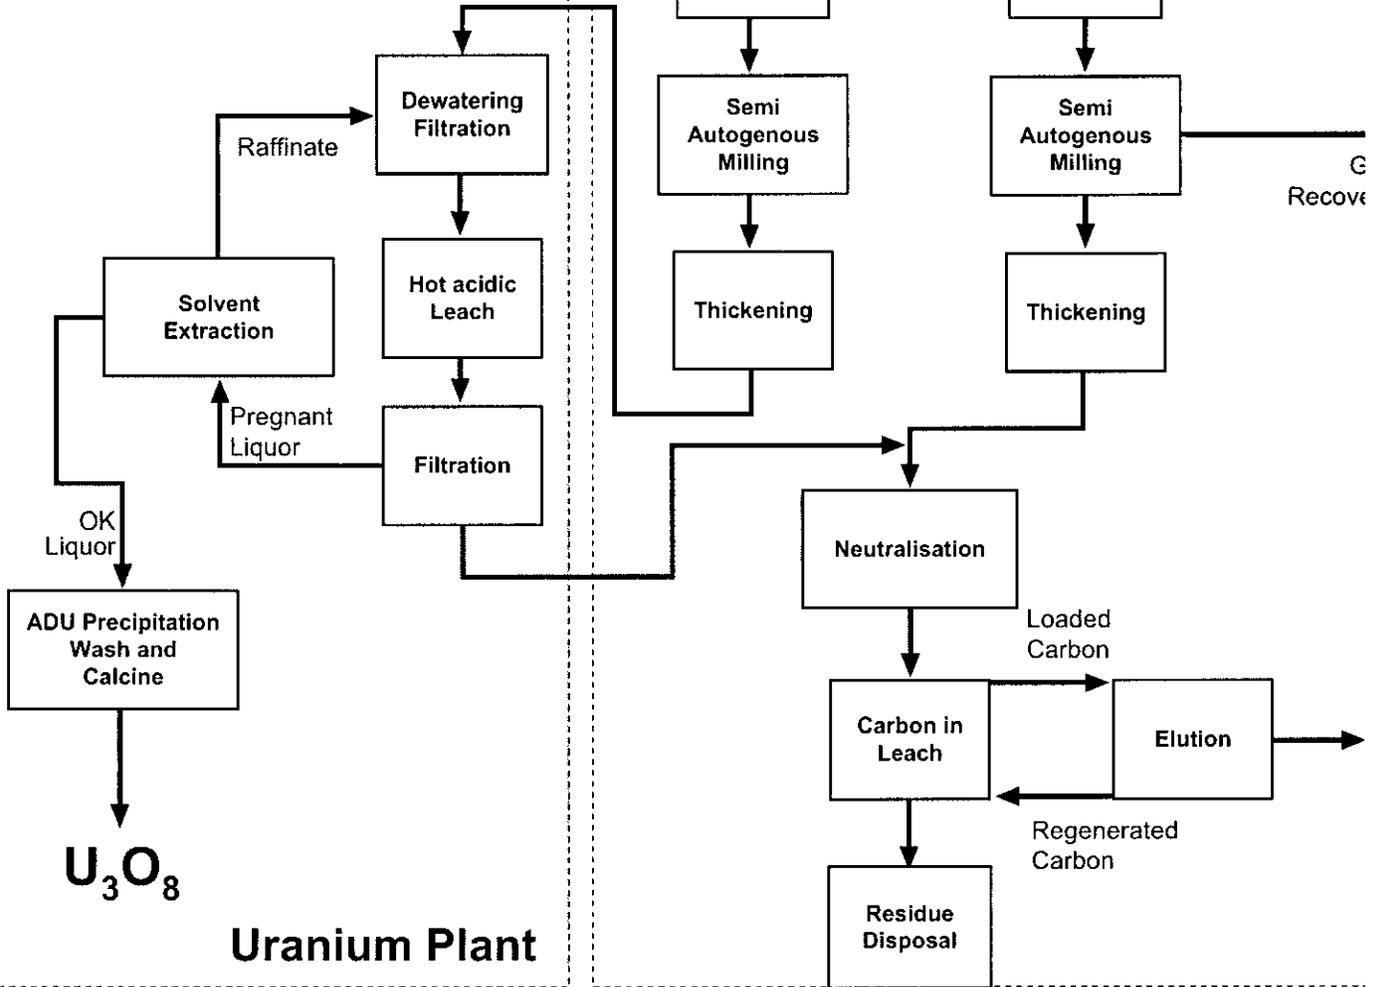

The recovery process is illustrated in Figure 18-1.

Figure 18-1

Process Flow Sheet

18-16

OPPORTUNITIES FOR IMPROVEMENT

The plant design is based upon the design and equipment formerly installed at the site. The main changes as a result of additional plant engineering were a change to counter current decantation instead of filtering in the uranium circuit and the inclusion of bins and feeders such that feed from either bin can be fed to either the uranium or the gold circuit. This latter change increases the operational flexibility and allows milling of more of one feed stream or the other depending upon the ore availability and metal prices.

If additional ore could be hoisted, it would be necessary to either improve the plant throughput to exceed the design capacity of 200,000 tpm or to enter into agreements with the owners of local under-utilized concentrators to process additional ore.

The uranium plant capacity could be increased if the expected uranium and gold prices made treating only Middle Elsburg mineralization more profitable. The production schedule generated for this initial assessment should be reviewed to maximize the Project return through an increase in the proportion of the production from the Middle Elsburg through periods of high uranium price.

MARKETS

GOLD

Gold is freely traded, at prices that are widely known, so that prospects for sale of any production are assured. Scott Wilson RPA used base case gold price of \$850 per ounce in 2008-09, dropping to \$800 per ounce for the following three years and \$750 per ounce thereafter. The price of gold on June 3, 2008, as posted on Kitco was \$882 per ounce. A case using consensus prices provided by First Uranium was also included as a sensitivity case. The consensus gold prices for that case valuated were \$890 per ounce in the years beginning in 2008-09, \$907 per ounce for the years beginning in 2009-10, \$874 per ounce for the years beginning in 2010-11, \$797 per ounce in the years beginning in 2011-12, and \$711 per ounce thereafter.

URANIUM

Uranium is freely traded, but the number of buyers and sellers is much smaller than for gold. The world wide uranium market was approximately \$5 billion in 2005 compared to the gold market which was \$57 billion. Half of the world's mine production comes from Canada (28%) and Australia (22%). South Africa currently accounts for only 1.8% of the total production. World production of uranium in 2005 was 91,700 M lb (41,609 Kt). The top six uranium producers yield 77% of the world production.

The most common commercial use for uranium is fuel for nuclear power plants. The demand for uranium is directly proportional to the level of electricity generated by nuclear power plants, which in turn is driven by the future global consumption of electricity. According to the Energy Information Administration's International Energy Outlook 2006 (base case), world net energy consumption will more than double before 2030. There are 442 operable, commercial nuclear power plants that currently supply approximately 16% of the world's electricity production. There are another 28 plants under construction, 62 planned, and 160 proposed. The World Nuclear Association (base case) projects that reactor related demand will increase by more than 65% by 2030, up to 110,776 tonnes of required uranium.

In 2005, the uranium consumption exceeded mine supply by about 36%. The deficit is filled from secondary sources including reprocessed spent fuel, government and civilian stockpiles, and the conversion of highly enriched uranium from nuclear weapons. These secondary supplies accounted for 46% of requirements in 2004.

There is currently no regulated commodity market underwritten by a market maker for the various components of nuclear fuel. Utilities typically purchase uranium pursuant to contracts with producers on either a medium (less than 5 years) or long term basis, with the delivery of the uranium generally commencing two to three years after the date of the contract. Pricing formulas are complicated and generally remain confidential and undisclosed to the public.

The uranium from Ezulwini is expected to be sold under contract to a processor. There is a uranium processor operating in South Africa and it has in the past received concentrates from Ezulwini.

For the base case, Scott Wilson RPA used a U_3O_8 price of \$80.00 per pound for the years beginning in 2008-10, \$70 per pound for the years beginning in 2010-11, \$60 per pound for the years beginning in 2011-12, and \$50.00 per pound thereafter. On June 2, 2008, the spot price of U_3O_8 as published by Ux Consulting was \$60.00 per pound. A case using consensus prices provided by First Uranium was also included as a sensitivity case. The consensus uranium prices for that case valuated were \$96.00 per pound for the years beginning in 2008-09, \$92.00 per pound for the years beginning in 2009-10, \$79.00 per pound for the years beginning in 2010-11, \$75.00 per pound in for the years beginning in 2011-12, and \$50.00 per pound thereafter.

CURRENCY

Scott Wilson RPA used a currency exchange rate of R:US\$ = 7.7:1 for the base case economic analysis. At noon on June 2, 2008, the exchange rate was R:C\$ =7.704 and the US\$:C\$=0.9987 as reported by the Bank of Canada. A case using consensus exchange rates provided by First Uranium was also included as a sensitivity case. The consensus exchange rates for that case valuated were R7.27:C\$1 for 2008-09, R7.36:C\$1 for 2009-10, R7.50:C\$1 for 2010-11, R7.45:C\$1 in 2011-12 and R7.57:C\$1 thereafter.

CONTRACTS

The main contracts in place include:

- Murray & Robert have the contract for the shaft rehabilitation;
- MDM has the contract for EPCM of the gold and uranium plants;
- Toll Treatment Agreement between Nuclear Fuels Corporation of South Africa (Pty) Limited (Nufcor) and First Uranium dated September 3, 2007;
- First Uranium Off-take Agreement between Nuclear Fuels Corporation of South Africa (Pty) Limited for Treatment of ammonia diuranate (ADU) dated October 12, 2007;
- Circle Labour Hire Co. (Ltd.) has the contract for labour hire.

The toll treatment agreement sets out the terms for the toll treatment of ADU from the uranium plant to be transported to the Nufcor facility and calcined to produce uranium ore concentrate (UOC). Nufcor agreed to build a third treatment line, with one half of that line capacity dedicated to First Uranium. This would allow a treatment capacity of approximately 2.5 million pounds of U_3O_8 per year (3,350 tonnes of ADU with an average grade of 34% U_3O_8 per year). A tolling fee of R242,080 per month plus R2.98 per kilogram of UOC would be charged. In addition, First Uranium would pay back 50% of the R30 million cost for construction of the third line at Nufcor's facility over a seven year period. Under the toll treatment agreement, title to the product does not pass to Nufcor.

The off-take agreement was for the sale of ADU to Nufcor from Ezulwini for the off-take of product until such time as ADU is being processed in Stream 3 as contemplated in the toll treatment agreement. The payment for off-take sales is the U_3O_8 spot price based on the Ux weekly price on the day of ADU delivery less \$10.00 per pound of U_3O_8 to cover the Nufcor operating costs. First Uranium will be paid for 98% of the U_3O_8 contained in the ADU. Title passes to Nufcor two days after the material is received and determined to meet specifications, provided there has been no dispute from First Uranium with regard to the receipt notice.

Both of the agreements with Nufcor contain specifications for the ADU. The specifications for the off-take agreement and for the toll treatment agreement require the ADU to contain between 30% and 38% U_3O_8 . Additional specifications for the off-take agreement are shown in Table 18-4. There are penalty limits and rejection limits within the agreement.

There is no recent laboratory test work to indicate product specifications from the Ezulwini uranium plant, and this is only the historical information that uranium ores from the Ezulwini deposit, treated with a similar process to that being built, were previously treated at the Nufcor facility and sold.

ENVIRONMENTAL CONSIDERATIONS

An environmental management program (EMP) was submitted to the DME in October 2005 in respect of the Ezulwini Project. The mining licence is based upon the approval of an EMP which is generated from an EIA. Simmers received approval of the EMP Report, which includes the previously approved closure plan for the Ezulwini Shaft (that approval was obtained by Harmony when it planned to cease pumping and complete the mine closure).

An application for a Certificate of Registration (COR) for the operation of a uranium processing plant was submitted to the South African National Nuclear Regulator on July 18, 2006. EMC received a response from the South African National Nuclear Regulator on August 15, 2006, detailing various outstanding information requirements. Whilst most of these requirements have been addressed, there are still several requirements

outstanding which include specific radiation protection advisory services. Malepa Holdings has been mandated to provide the necessary radiation protection advisory services and has recently submitted the outstanding information required to the National Nuclear Regulator.

WATER

Dewatering of the Ezulwini Shaft continues with about 65 million litres per day (Mlpd) pumped from the mine. In 2005, the South Deep Mine completed works to separate the two mines, so that dewatering of the Ezulwini Shaft is not necessary for the South Deeps Mine operations. The dewatering of the Gemsbokfontein western subcompartment of the Dolomite structures commenced in 1986 to reduce the increase in extraneous water from the dolomites into the underground workings at the Ezulwini Shaft.

Precautions were taken to safeguard surface ground movement anticipated in 1986. The monitoring program continues with daily monitoring of the status of ground movement in the affected areas.

Dewatering has decreased from 150 Mlpd to the current 65 Mlpd and, should dewatering continue, it is expected to reduce to approximately 48 Mlpd over the next ten years.

Ingress of water occurs from the workings on the 32, 33, and 41 levels and, to a lesser extent, below the 41 Level. Water is currently pumped from 50A, 41, and 33 levels. As water cascades through the old workings, it is polluted and the salt load increases. The water being pumped is a mixture of clean and polluted waters. It may be possible to separate the clean and polluted waters and generate revenue from the sale of clean water.

The water pumped from the mine is used as follows:

- 10 Mlpd is used to recharge the Gemsbokfontein East Dolomitic Subcompartment as required by an agreement with Rand Water.
- Makeup water of some 5 Mlpd is used for the mining service water circuit.

- 50 Mlpd is discharged to the Kleinwes Rietspruit under licence to DWA&F.

It is this latter component that is destined for treatment to potable standards. The water is planned for sale to Rand Water. These sales would recoup the cost of treatment and pumping from the mine. The latter would improve the return from the mining operation. No potential benefit from the sale of water is included in this analysis. A similar proposal is currently being negotiated at Stilfontein Gold Mine, which, when concluded, would be used as a model to facilitate First Uranium's own negotiations. As of March 30, 2007, the Stilfontein Gold Mine water deal was still in process. Given the multitude of stakeholders involved, no guarantee can be given as to the expected timing for deal closure.

TAILINGS

There is an existing slimes storage dump on the property and that facility is ready for use. The existing slimes dam has a remaining lifespan of approximately 19 years.

LIABILITIES

As part of the REL Purchase Agreement, EMC assumed all of the liabilities for the areas purchased. EMC established a new environmental trust fund (Fund) for the rehabilitation of the Ezulwini mining area. EMC is obligated, on an ongoing basis, to contribute to the Fund such amounts (or provide guarantees for such amounts acceptable to the South Africa Minister of Minerals and Energy) as shall be required in order to ensure that the total balance of the Fund (including the amount of any such guarantees) at any point in time shall be not less than the total amount which it is obliged to hold in the Fund at that point in time pursuant to any and all applicable laws and/or regulations and as agreed with the Minister from time to time, in respect of the rehabilitation of the Ezulwini mining area and or the immovable property subject to the REL Purchase Agreement and/or any other related environmental matter. EMC adjusted the closure costs in January 2007 to reflect the necessary inflationary adjustment as required by the DME. The inflationary adjustment increased the closure cost estimate by \$0.4 million to \$5.1 million as at March 30, 2007.

If the amount of the total balance of the Fund (including the amount of any guarantees) is at any time less than the total obligation, EMC will not be permitted to make any payment or other distribution to its shareholders until such shortfall has been extinguished.

The environmental liability at and post closure of the mine has been estimated as shown in Table 18-5.

TABLE 18-5 CLOSURE AND POST CLOSURE ENVIRONMENTAL LIABILITIES
First Uranium Corporation – Ezulwini Project

Cost Component	Aspects included in costs	Cost \$ '000s
Mining	Mine waste clean up	2,859
Infrastructure	Dewatering Rehabilitation of shaft area Rehabilitation of slimes dam and rock dumps Rehabilitation of surface and buildings	
Rewatering Costs	Monitoring of water quality & ground stability Rehabilitation of sinkholes Underground infrastructure removal Rewatering management fees Further studies on the rewatering	1,209
After Closure Monitoring		608
Total Rehabilitation Costs		\$4,676
DME advised inflationary adjustment (as at March 30, 2007)		400
Total Rehabilitation Costs (as at March 30, 2007)		\$5,076

Under the terms of the REL Purchase Agreement, REL transferred approximately \$2.6 million into the Fund on March 2, 2007. The remaining \$2.4 million has been provided for through a Bank Guarantee underwritten by Lombard Insurance Company, the Bank Guarantee incepted on January 1, 2007.

Under the REL Purchase Agreement, Simmers entered into a guarantee with REL on December 12, 2006, whereby Simmers irrevocably and unconditionally guaranteed to REL the performance by EMC of all of its obligations under the REL Purchase Agreement and the related REL Lease Agreement.

TAXES

Company taxes under South African legislation are 29% of profits after consideration of the tax shields of unredeemed capital and assessed losses. Scott Wilson RPA has included these taxes in the economic analysis. The tax calculation assumptions were provided by First Uranium .

Revisions and amendments to the proposed Mineral and Petroleum Royalty Bill (the Bill) have been introduced by the South African government. The Bill provides for a royalty rate of 12.5% of the operating profit divided by the revenue. Operating profit includes over head but not capital. The royalty is expected to come into effect in May 2009 and has been included as such in the project evaluation. Scott Wilson RPA has relied on the advice of First Uranium in the calculation of the state mining royalty.

CAPITAL AND OPERATING COST ESTIMATES

The Project is a major project that will extend over a lengthy period. For the purposes of this report, the first four years were taken together to represent the pre-production period as the production exceeds 1.9 Mtpa after the fourth year. The life of mine (LOM) capital is summarized in Table 18-6.

The pre-production capital will be expended over a period of three and one half years. Years are taken as ending in March of each year such that Q4 2008 ends at March 31, 2009. The capital costs are taken from April 1, 2008, and sunk costs are not considered in the analysis. The unredeemed capital expenditure opening balance was taken as \$124.49 million. covering operating costs, capital for the shaft refurbishing, mine development, purchase of the infrastructure and repayment of the Simmers debt.

TABLE 18-6 CAPITAL COSTS
First Uranium Corporation - Ezulwini Project

	Life of Mine (\$ million)	2008-9 (\$ million)	2010 -25 (\$ million)
Exploration	4.0	-	4.0
Technical and Feasibility Studies	0.4	-	0.4
Expansion Capital Expenditure	-	-	-

Other Middle Elsburg (LOM) (ME Declines)	34.5	-	34.5
Process Plants	35.5	35.5	-
Water management	0.4	0.4	-
Capital for Self Power Generation	5.0	10.0	(5.0)
	-	-	-
Contingency @ 20%	47.3	25.3	22.0
Total	194.2	89.5	104.7
Sustaining Capital (in addition to above)	18.8		18.8

MINE CAPITAL

The mine capital costs were generated from a listing of the necessary infrastructure upgrades and replacements and mine development from the output of the mine scheduling software that was used for production and development planning. Expenditures to date were reviewed and compared to the previous cost estimates. The remaining capital costs were inflated by 7% to account for the supplies and labour cost increases that Ezulwini has experienced over the past year. For the shaft pillar work an additional allowance of \$5.2 million was added to reflect the longer time period for completion of the work.

GOLD AND URANIUM CONCENTRATOR CAPITAL

The capital expenditures committed to February 28, 2008, for the construction and development of the gold and uranium mills totalled \$82 million. The construction is well advanced. Through some cost savings measures, most notably the substitution of mild steel for stainless steel in the leach tanks, the plant costs are expected to come in on budget despite increases in steel prices and labour costs.

Scott Wilson RPA has applied a 20% contingency to the remaining planned expenditures for the concentrator.

INFRASTRUCTURE CAPITAL

Until the announcement by Eskom in January 2008 limiting power available to commercial clients, all of the major infrastructure was considered to be in place and in many cases simply in need of repairs or replacement of components. The existing components will be placed in existing buildings and there is still a power supply system in place. In some cases, such as hoist ropes, there are spares on site, but replacement spares will be needed as items are replaced in preparation for production.

In the case of electrical power, Ezulwini undertook studies to determine the demand for electrical power for the Project and the estimated level of power available from Eskom. Additionally, Ezulwini incorporated the revised electrical power rates into the operating cost estimates for the Project. The shortage of power available from Eskom is currently forecast to last for a period of five years as Eskom is expected to improve the availability of its existing plants and to bring additional capacity on line each year.

First Uranium estimated the electrical requirements for the Ezulwini Project and the availability of electricity from Eskom based on the statements from Eskom related to the availability of power on a month by month basis. The difference was the amount of generating capacity which First Uranium would need to provide. This demand rose to a maximum of 12.9 MW in one month and First Uranium chose 15 MW as the generating capacity that First Uranium would require. Ezulwini evaluated a number of power supply options to assure that production could be brought on line. With a short time before production is scheduled to commence, the key choices were diesel or heavy fuel generators. Ezulwini secured a rental agreement for ten units rated at 2 MW each. The agreement is for power at a set rate per unit of power consumed. The plan is to use these units as needed and, when the supply from Eskom is assured, these units will be returned to their owner.

First Uranium also located a 30 MW diesel power plant for sale and the plan is to purchase the plant in two halves, with one half destined for installation at Ezulwini. Each half of the plant will consist of six units, each with a capacity of 2.5 MW. The units are rated for 2.5 MW continuous output and operate at 730 rpm.

Ezulwini's share of the plant purchase cost is estimated to be \$10 million. The plant will be used for several years and when it is no longer required, the plan is to sell it to recover half of the purchase price.

SURFACE FACILITIES PURCHASE

The purchase of the surface facilities and the Simmers debt repayment have been completed and are considered part of the sunk costs and are not included in this assessment.

CONTINGENCY

There is a contingency of 20% included in the capital plan.

SUSTAINING CAPITAL

The major sustaining capital item is the ongoing capital development of the mine. This development is generated by the mine scheduling program and provides the haulage drives and capital stope development for ongoing production.

A \$12.08 million allowance for infrastructure and concentrator improvements is included in year 11 as the production at that time is forecast to continue at a rate of up to 2.4 Mtpa and many of the facilities will be in need of upgrades and refurbishment.

The facilities at Ezulwini appear to be in good condition, but some of the mine and mine surface support equipment is now 40 years old. Except as noted above, there are no significant sustaining capital allowances for upgrading or replacement of the main mine infrastructure over the Project life.

WORKING CAPITAL

The analysis does not include an estimate of working capital, however, there will be a buildup of gold and uranium within the process plant and, in the case of the uranium, at the refinery. In the economic analysis, there is a quantity of both gold and uranium that is assumed to be “locked up” in the plant over the life of the mine. This production was deducted at the start of operations and shown as production in the final year of operation. More detailed estimates of the in process inventory and the lag between shipping and payment should be prepared in the next stage of the Project evaluation.

OPERATING COSTS

Operating costs were prepared by site personnel based on experience to date with operating labour costs and supplies costs. Allowances for training and medical examinations and the costs associated with the mine’s social and labour plan have also been included.

Table 18-7 shows the makeup of the estimated cost per tonne milled. These costs are based on the total Life of Mine production. In the initial years of operation, the cost per tonne is higher.

TABLE 18-7 OPERATING COSTS
First Uranium Corporation – Ezulwini Project

Parameter	LOM Cost per tonne (\$/t)
Skilled Labour	4.49
Semi Skilled Labour	9.57
HR Development	0.60
Underground Stores Costs	20.22
Services Stores Costs	1.64
Power Costs	6.85
Pumping & Water Costs	2.37
Metallurgical Cost	12.35
Security	0.08
Other Costs (+ Contingency)	10.84
Total Cash Costs	69.00
	-
Total Corporate Costs	1.18
Rehabilitation Costs	0.14
Total Costs	70.32

Operating costs are now estimated to be \$13.45 (24%) higher than the previous estimate of \$56.87 per tonne. Within this the power costs have increased by \$4.86 per tonne, reflecting the higher Eskom rates and the cost of self-generated power in the early years of the operating life. Labour costs were reduced based upon a review of the productivities with the supervisors, therefore, the reduction in the number of men required has more than offset the increases in salary. Mining supplies costs have increased with the higher metal prices and fuel prices.

Processing costs were increased to a level considered to be more consistent with operating plants in the area. Other costs include the costs for offsite processing of the ADU and sales costs for the sale of the uranium concentrates.

MANPOWER

At April 30, 2008, there were 2,705 persons employed at the Project, with 574 Ezulwini employees, 1,551 underground contractors and 580 plant contractors.

The workforce of the Ezulwini Mine (not including processing plants) will grow to approximately 3,600 employees by year 1. Then there is a decrease as activity shifts in the mine. Table 18-8 shows the mine manpower levels. Levels are projected to be flat or decrease slightly after year 10.

TABLE 18-8 MANPOWER LEVELS
First Uranium Corporation – Ezulwini Project

	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	Year 7	Year 8	Year 9	Year 10

Services	10	9	9	9	9	9	9	9	9	9
Production	288	1,177	2,042	2,706	2,997	3,152	2,388	2,553	2,953	3,409
Totals	460	1,336	2,234	2,919	3,206	3,374	2,576	2,747	3,158	3,625

First Uranium has reviewed and revised the productivities for the mining activity leading to a reduction in the mine manpower requirements compared to the previous technical reports. The revisions are based on the assessments of the mine overseers who are now employed by Ezulwini as compared to the original estimates which were purely engineering estimates. Productivities in the mine activities were increased by 16% to 19% compared to previous estimates, resulting in a significant reduction in manpower required. The changes in productivities are shown in Table 18-9.

TABLE 18-9 REVISIONS TO MINE PRODUCTIVITIES

In 1993, the mine employed 1,693 persons on surface and 7,081 underground for a total of 8,774, including 359 persons attributed to the South Deep project (no longer part of this mine).

Simmers presented a Social and Labour Plan (SLP) as part of their application for the Ezulwini mining rights. The SLP was submitted on the basis of the work planned in the shaft pillar and Middle Elsburg zones. The SLP includes commitments, training, and career progression plans with the objective of having 40% Historically Disadvantaged South Africans (HDSA) in management by 2010. There is a further goal to have 10% women in the mining workforce.

The Ezulwini Mine intends to recruit new employees on the basis of a Living-out Allowance to employees who do not reside in the EMC-sponsored accommodation. It is not the owner's plan to provide on site housing for employees and the mine will discourage the development of unsustainable settlements in the area of the mine.

The objective of the above-stated scheme is to encourage and give the employees who do not want to reside in the company accommodation the option to reside where and with whom they wish, near their place of work, and to act as a housing subsidy for both home-ownership and rental options.

An annual amount of 3.5% of the wage bill will be committed to human resources development initiatives at the Ezulwini Mine. The activities that will be included:

- Technical training;
- Accelerated development of HDSA employees;
- Succession and career path training;
- Organizational development and transformation training;
- Diversity training;
- Mentor training; and,
- ABET (Adult Basic Education and Training).

PROJECT SCHEDULE

Shaft refurbishment and repair and the installation of the floating tower are underway. Work has progressed slower than originally planned, however, the work schedule is now being reorganized and more closely managed and monitored. While the shaft job will take longer than planned, it is possible to advance the mine development work and production while continuing to work in the shaft.

Levels are being rehabilitated in the shaft pillar area and in the lower areas of the mine. Ventilation cutbacks are slowing this work as one fan must be shut down to provide better working conditions for the crews working in the ventilation shaft. That work will soon be complete and the ventilation will be returned to normal to permit appropriate ventilation of more areas of the mine.

A production schedule for the Upper and Middle Elsburg areas has been prepared in detail for the balance of the year.

On surface, the gold and uranium plants are being constructed. Commissioning of the gold plant commenced in April 2008 and gold plant operations are scheduled to start in June 2008. The uranium plant operation is scheduled to commence in October 2008. As portions of the circuits are completed, they are being tested and commissioned. The current construction is the first module of the gold and uranium plants, but construction of the next modules is scheduled to commence immediately. Plant construction has suffered with 25 to 30 days lost due to unseasonably wet weather, delays in steel delivery and the general tightening of the market for supplies and skilled workers.

ECONOMIC ANALYSIS

An after-tax Cash Flow Projection has been generated from the Life of Mine production schedule and capital and operating cost estimates, and is summarized in Table 18-10. A summary of the key criteria is provided below.

ECONOMIC CRITERIA – BASE CASE

REVENUE

- Up to 200,000 tpm mining from underground.
- Mill recovery of gold of 95.5% and recovery of U_3O_8 of 80%, based upon previous operating history.
- Gold payment is based upon 100% payment less a refining charge of \$120,000 per year plus \$0.50 per ounce.
- Exchange rate US\$1.00 = R7.70.
- Metal price: US\$850 per ounce gold for the year beginning in 2008, \$800 per ounce for the years beginning in 2009, 2010 and 2011, and \$750 per ounce thereafter; and \$80 per pound U_3O_8 in years beginning in 2008 and 2009, \$70 per pound in the year beginning in 2010, \$60 per pound in the year beginning in 2011 and \$50 per pound thereafter.
- Revenue is recognized at the time of production.

COSTS

- Operations will commence in 2008, but production increases to 2 M tpa in 2011.
- Mine life: 17 years.

- Life of Mine production plan as summarized in Tables 18-1 and 18-2.
- Mine life capital totals \$213 million, including a contingency
- Average operating cost over the mine life is \$70.31 per tonne milled.

CASH FLOW ANALYSIS – BASE CASE

Considering the Project on a stand-alone basis, the undiscounted after-tax cash flow totals \$1,461 million over the mine life, and simple payback occurs after approximately 1.4 years.

The IRR is 278% and the NPV at discounts rates of 5%, 8%, and 10% is \$895, \$690, and \$587 million, respectively.

The Total Cash Cost is US\$317 per ounce of gold, including a credit of \$165 per ounce for U₃O₈ revenue. The mine life capital and royalty unit cost is US\$55.2 per ounce, for a Total Production Cost of US\$372 per ounce of gold. Average annual gold production during operation is 306,000 ounces per year and the average U₃O₈ production is 952,000 pounds per year.

The economic analysis contained in this report is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as Mineral Reserves. There is no certainty that the reserve development, production, and economic forecasts on which this preliminary assessment is based will be realized.

CASH FLOW ANALYSIS – OWNER'S ECONOMIC ASSUMPTIONS

A cash flow analysis prepared by First Uranium's advisors using "consensus prices" was evaluated. The only changes from the base case were the metal price and exchange rate assumptions. The changes are shown below together with the results for the alternative scenario.

ECONOMIC CRITERIA – OWNER’S ECONOMIC ASSUMPTIONS**REVENUE**

- Exchange rate US\$1.00 = R7.36 for 2008, R7.50 for 2009, R7.45 for 2010 and R7.57 thereafter.
- Metal price: US\$890 per ounce gold for 2008, \$907 per ounce for 2009, \$874 for 2010, \$797 for 2011 and \$711 per ounce thereafter and \$96 per pound U₃O₈ in 2008, \$92 per lb in 2009, \$79 per pound in 2010, \$75 per pound in 2011 and \$50 per pound thereafter.

CASH FLOW ANALYSIS – OWNERS ECONOMIC ASSUMPTIONS

Considering the Project on a stand-alone basis, the undiscounted after-tax cash flow totals for this alternative case was \$1,371 million over the mine life, and simple payback occurs after approximately 1.3 years.

The IRR is 336% and the NPV at discounts rates of 5%, 8%, and 10% is \$855, \$667, and \$572 million, respectively.

The Total Cash Cost is US\$321 per ounce of gold, including a credit of \$171 per ounce for U₃O₈ revenue. The mine life capital and royalty unit cost is US\$55.2 per ounce, for a Total Production Cost of US\$376 per ounce of gold. Average annual gold production during operation is 306,000 ounces per year and the average U₃O₈ production is 952,000 pounds per year.

SENSITIVITY ANALYSIS

Project risks can be identified in both economic and non-economic terms. Key economic risks were examined by running cash flow sensitivities:

- Metal prices, metallurgical recovery, and head grade (gold and uranium)
- Exchange rate
- Operating costs (Total Cash Cost)
- Pre-production capital costs

IRR sensitivity over the base case has been calculated for -20% to +20% variations. The revenue for each metal is proportional to the product of price times head grade times metallurgical recovery. Therefore, the sensitivity is shown as a single item where the change in the variable is the sum of the changes to the price, metallurgical recovery, and head grade. The sensitivities for the base case are shown in Table 18-11 and Figure 18-2.

FIGURE 18-2 SENSITIVITY ANALYSIS

19 INTERPRETATION AND CONCLUSIONS

Based on the Ezulwini site visit and review of the available data, Scott Wilson RPA offers the following interpretation and conclusions.

- The mineral resources, as presented, are estimated consistent with CIM guidelines.
- Mineral resources that are not mineral reserves do not have demonstrated economic viability.
- There is good potential to upgrade the inferred mineral resources to measured and indicated resources with underground development.
- There is good exploration potential at depth in reefs that have not yet been exploited.
- Based upon the planning work to date and the assumptions in this initial economic assessment, the Ezulwini mine has the potential to be reopened and to become a producing gold and uranium operation.
- For the base case and considering the Project on a stand-alone basis and based upon LOM capital costs of \$213 million, operating costs of \$70.31 per tonne and metal prices averaging \$760.10/oz for gold and \$53.09/lb for uranium concentrates, the Project has an IRR of 278% and an NPV at 8% of \$690 million. The Project would generate some 5.2 million ounces of gold and 16 million pounds of uranium (U_3O_8) in concentrates over a 17 year period.
- In the base case the Total Cash Cost is \$317 per ounce of gold including a credit of \$165 per ounce for U_3O_8 revenue. The mine life capital and royalty unit cost is \$55 per ounce, for a Total Production Cost of \$372 per ounce of gold. Average annual gold production during operations is 306,000 ounces per year and the average U_3O_8 production is 952,000 pounds per year.
- The Project economics are most sensitive to gold price, head grade, and metallurgical recovery, followed by exchange rates, operating costs, uranium price and capital costs.
- The planned production includes material from the measured and indicated resources, as well as inferred resources. There is no assurance that inferred resources will be upgraded to become measured and indicated resources or mineral reserves. The initial economic assessment only utilizes approximately 14% of the inferred mineral resource, therefore, there is potential for further production beyond that used in this assessment.

- An alternative case using consensus economic assumptions (for metal prices and exchange rates) prepared for First Uranium was also considered. On a stand-alone basis and based upon LOM capital costs of \$220 million, operating costs of \$71.82 per tonne and metal prices averaging \$739.38/oz for gold and \$55.02/lb for uranium concentrates, the Project has an IRR of 336% and an NPV at 8% of \$667 million. The Project would generate some 5.2 million ounces of gold and 16 million pounds of uranium (U₃O₈) in concentrates over a 17 year period.
- In the alternative case with First Uranium's consensus assumptions, the Total Cash Cost is \$321 per ounce of gold including a credit of \$171 per ounce for U₃O₈ revenue. The mine life capital and royalty unit cost is \$55 per ounce, for a Total Production Cost of \$376 per ounce of gold. Average annual gold production during operations is 306,000 ounces per year and the average U₃O₈ production is 952,000 pounds per year.
- The mine is located in a major historic gold and uranium production area and has a history of past gold and uranium production. The mine is located immediately adjacent to the South Deep Mine and the mines in this area have tremendous lateral extent along the reefs.
- There is the potential to expand the mine output through the potential utilization of the underutilized shafts in adjacent mines. There are also underutilized concentrators in the vicinity of the Ezulwini Mine.
- The fluctuations in the uranium price have prompted design changes to maximize the flexibility in the production planning to increase or decrease production from the Middle Elsburg, and to decrease or increase production from the Upper Elsburg, and thereby maximize the return depending upon the prices of gold and uranium.
- Further improvements to the Project economics may be realized through the sale of mine water to a local utility and the resultant reduction in mine pumping costs.

20 RECOMMENDATIONS

Scott Wilson RPA recommends that the Project development activities continue and that more detailed planning for the development of the Ezulwini Mine be completed. The refinement of estimates to prefeasibility study level and the upgrading of inferred resources are recommended so that a mineral reserve can be stated.

Scott Wilson RPA recommends that First Uranium continue the exploration program with the objective of upgrading additional resources beyond the planned project to evaluate the potential for further expansion.

The following items are recommended for consideration as part of a prefeasibility study of the Project.

- Compile underground sample data, diamond drilling data, and update geological model and mineral resource estimate.
- Review and update, if necessary, the mine production schedule based upon the revised resource estimates in the shaft pillar area.
- Continue the rehabilitation of the Upper Elsburg section of the Ezulwini Mine to facilitate further exploration and the conversion of inferred resources to measured and/or indicated mineral resources.
- Continue the rehabilitation of the Middle Elsburg section of the Ezulwini Mine to facilitate further verification of the database in that area and with the objective of converting inferred resources to measured and/or indicated resources.
- Reconcile historic gold and uranium production to that predicted by diamond drilling and channel sampling.
- Continue the construction of the gold and uranium processing plants.
- Proceed with the selection and procurement of alternative energy sources for the Project to supplement the supply from Eskom, the national power supply company.
- Carry out more detailed work and explanation of the planned uranium recovery rate either through metallurgical testing or more detailed review of past production records.

- Prepare separate production schedules, with the measured plus indicated resources carried in a separate schedule, and a further economic analysis with the inferred resources added as well.
- Re-examine the Project schedule and provide more detail to ensure that critical items are not missed.
- Provide a clear trail of the changes and factors from the resource estimate through to the Life of Mine plan for all areas including a discussion of the unpay factors and/or pillars that will be required at depth.
- Review the rock mechanics and seismic risk factors associated with the Middle Elsburg deposit to ensure that the mine plan is consistent with the rock mechanics design criteria.
- Review the mine production schedule with regard to the mine production profile to reduce dips in the output over time.
- Ensure that a detailed assessment of the planned production areas has been undertaken to provide evidence to support the assumption that future mine production will be similar to past production.
- Pursue the possible sale of water to a local utility to reduce the mine operating costs.

The cost of this recommended work is included in the cost estimates within the Preliminary Assessment in this report.

For further exploration beyond the current planned mining area, Scott Wilson RPA recommends that First Uranium continue with the surface exploration program currently underway.

23 CERTIFICATE OF QUALIFICATIONS

WAYNE W. VALLIANT

I, Wayne W. Valliant, P.Geo., as an author of this report entitled "Technical Report Preliminary Assessment of The Ezulwini Project, Gauteng Province, Republic of South Africa", prepared for First Uranium Corporation and dated June 5, 2008, do hereby certify that:

1. I am a Principal Geologist with Scott Wilson Roscoe Postle Associates Inc. of Suite 501, 55 University Ave Toronto, ON, M5J 2H7.
2. I am a graduate of Carleton University, Ottawa, Ontario, Canada in 1973 with a Bachelor of Science degree in Geology.
3. I am registered as a Professional Geologist with the Association of Professional Geoscientists of Ontario (Reg.# 1175). I have worked as a geologist for a total of 34 years since my graduation. My relevant experience for the purpose of the Technical Report is:
 - Review and report as a consultant on more than thirty mining operations and projects around the world for due diligence and resource/reserve estimation
 - General Manager of Technical Services for corporation with gold mining operations and mine development projects in Canada and Latin America
 - Superintendent of Technical Services at three mines in Canada and Mexico
 - Chief Geologist at three Canadian mines, including two gold mines
4. I have read the definition of "qualified person" set out in National Instrument 43-101 ("NI43-101") and certify that by reason of my education, affiliation with a professional association (as defined in NI43-101) and past relevant work experience, I fulfill the requirements to be a "qualified person" for the purposes of NI43-101.
5. I visited the Ezulwini Project on August 22-25, 2006, February 20-22, 2007, and on April 7-11, 2008.
6. I am responsible for Items 7 to 15 and 17 and contributed to Items 1, 2, 19, and 20 of the Technical Report.
7. I am independent of the Issuer applying the test set out in Section 1.4 of National Instrument 43-101.
8. I have had no prior involvement with the property that is the subject of the Technical Report.
9. I have read National Instrument 43-101, and the Technical Report has been prepared in compliance with National Instrument 43-101 and Form 43-101F1.

10. To the best of my knowledge, information, and belief, the Technical Report contains all scientific and technical information that is required to be disclosed to make the technical report not misleading.

Dated this 5th day of June, 2008

(Signed & Sealed)

Wayne W. Valliant, P. Geo.

R. DENNIS BERGEN

I, Raymond Dennis Bergen, P.Eng., as an author of this report entitled "Technical Report Preliminary Assessment of The Ezulwini Project, Gauteng Province, Republic of South Africa", prepared for First Uranium Corporation and dated June 5, 2008, do hereby certify that:

1. I am an Associate Engineer engaged by Scott Wilson Roscoe Postle Associates Inc. of Suite 501, 55 University Ave Toronto, ON, M5J 2H7.
2. I am a graduate of the University of British Columbia, Vancouver, B.C., Canada in 1979 with a Bachelor of Applied Science degree in Mineral Engineering. I am a graduate of the British Columbia Institute Technology in Burnaby, B.C. Canada in 1972 with a Diploma in Mining Technology.
3. I am registered as a Professional Engineer in the Province of British Columbia (Reg.# 16064) and as a Licensee with the Association of professional Engineers, Geologists and Geophysicists of the Northwest Territories (License L1660). I have worked as an engineer for a total of 26 years since my graduation. My relevant experience for the purpose of the Technical Report is:
 - Practice as a mining engineer, production superintendent, mine manager, Vice President of Operations and a consultant in the design, operation and review of mining operations.
 - Review and report, as an employee and as a consultant, on numerous mining operations and projects around the world for due diligence and operational review related to project acquisition and technical report preparation, including:
 - Engineering and operating superintendent at the Con gold mine, a deep underground gold mine, Yellowknife, NWT, Canada
 - Contribute to the Independent Report on the Reopening of the Cantung Mine at Tungsten, NWT, Canada
 - General Manager in Charge of the Reopening of the Cantung Mine, NWT, Canada
 - Detailed diligence review of the ERG Tailings Recovery Project, Ontario, Canada
 - VP Operations in charge of the restart of the Golden Bear Mine, BC, Canada
 - Mining engineer in underground gold and base metal mines.
 - Consulting engineer working on project acquisition and project design.
 - Mine Manager at three different mines with open pit and underground operations
 - Vice President of Operations responsible for an operating gold mine, development of a feasibility study for a project in Costa Rica and project review and evaluation related to project acquisition for numerous projects around the world including the successful acquisition of mines in Mexico and Australia and an interest in a mine in Argentina.
4. I have read the definition of "qualified person" set out in National Instrument 43-101 ("NI43-101") and certify that by reason of my education, affiliation with a

professional association (as defined in NI43-101) and past relevant work experience, I fulfill the requirements to be a "qualified person" for the purposes of NI43-101.

5. I visited the Ezulwini Project on August 22-25, 2006 and on April 7-11, 2008.
6. I am responsible for Items 3 to 6, 16, and 18 and contributed to Items 1, 2, 19, and 20 of the Technical Report.
7. I am independent of the Issuer applying the test set out in Section 1.4 of National Instrument 43-101.
8. I have had no prior involvement with the property that is the subject of the Technical Report.
9. I have read National Instrument 43-101, and the Technical Report has been prepared in compliance with National Instrument 43-101 and Form 43-101F1.
10. To the best of my knowledge, information, and belief, the Technical Report contains all scientific and technical information that is required to be disclosed to make the technical report not misleading.

Dated this 5th day of June, 2008

AGREEMENT

1. PARTIES

1.1. The parties to this agreement are -

1.1.1. Simmer and Jack Mines Limited; and

1.1.2. First Uranium Limited (formerly Dalegreen Limited).

1.2. The parties agree as set out below.

2. INTERPRETATION

2.1. In this agreement, unless clearly inconsistent with or otherwise indicated by the context -

2.1.1. "~~the/this agreement~~" means the agreement set out in this document and the appendices hereto;

2.1.2. "business day" means any day other than a Saturday, Sunday or official public holiday in the Republic of South Africa;

2.1.3. "the closing date" means 20 December 2006;

2.1.4. "the company" means First Uranium (Proprietary) Limited (Registration Number 2005/033680/07), a company duly registered according to the company laws of the Republic of South Africa;

- 2.1.5. "the Companies Act" means the Companies Act, 1973 (as amended);
- 2.1.6. "the date of signature" means the date of signature of this agreement by the last party signing;
- 2.1.7. "the documents of title" means collectively -
- 2.1.7.1. the share certificates in respect of the shares together with share transfer forms in respect thereof duly completed and signed by the registered holder/s or its/their duly authorised representative/s in accordance with the Company's Act and the memorandum and articles of association of the company on the closing date ;
 - 2.1.7.2. a certified copy of a resolution of the directors of the company, passed in accordance with the articles of association of the company approving the transfer of the shares into the name of the transferee -
 - 2.1.7.3. all other books, documents and records of the company which is in the transferor's possession;
- 2.1.8. "the effective date" means the date of signature;
- 2.1.9. "FUL shares" means 1196 (one thousand one hundred and ninety six) Class A shares in the authorised share capital of the transferee;
- 2.1.10. "the transferee" means First Uranium Limited (formerly Dalegreen Limited), a corporation duly registered under the laws of Cyprus;

- 2.1.11. "the consideration" means the value of the transfer shares referred to in 5;
- 2.1.12. "the transfershares" means 1 200 (one thousand two hundred) ordinary shares in the share capital of the company constituting 80% (eighty per centum) of the issued share capital of the company transferred by the transferor to the transferee in terms of this agreement;
- 2.1.13. "the transferor" means Simmer and Jack Mines Limited (Registration Number 1924/007778/06), a company duly registered and incorporated according to the company laws of the Republic of South Africa;
- 2.1.14. any reference to the singular includes the plural and vice versa;
- 2.1.15. any reference to natural persons includes legal persons and vice versa; and
- 2.1.16. any reference to a gender includes the other genders.
- 2.2. Should any provision in a definition be a substantive provision conferring rights or imposing obligations on any party, then effect shall be given to that provision as if it were a substantive provision in the body of this agreement.
- 2.3. Any reference to an enactment, regulation, rule or by-law is that enactment, regulation, rule or by-law as at the date of signature, and as amended or replaced from time to time.
- 2.4. Where any number of days is prescribed, such number shall exclude the first and include the last day, unless the last day falls on a Saturday, Sunday or
- 

public holiday in the Republic of South Africa, in which case the last day shall be the next succeeding day which is not a Saturday, Sunday or public holiday.

- 2.5. The use of the word "including" followed by a specific example/s shall not be construed as limiting the meaning of the general wording succeeding it and the *eiusdem generis* rule shall not be applied in the interpretation of such general wording or such specific example/s.
- 2.6. The expiration or termination of this agreement shall not affect those provisions of this agreement which expressly provide that they will operate after any such expiration or termination or which of necessity must continue to have effect after such expiration or termination, notwithstanding the fact that the clauses themselves do not expressly provide this.
- 2.7. In its interpretation, the *contra proferentem* rule of construction shall not apply (this agreement being the product of negotiations between the parties) nor shall this agreement be construed in favour of or against any party by reason of the extent to which any party or its professional advisors participated in the preparation of this agreement.
- 2.8. Records shall be binding on the parties and are not merely for information purposes.
- 2.9. All amounts payable in terms of this agreement are exclusive of VAT unless otherwise indicated.
- 2.10. The clause headings in this agreement have been inserted for convenience only and shall not be taken into account in its interpretation.
- 2.11. Words and expressions defined in any sub-clause shall, for the purposes of the clause of which that sub-clause forms part, bear the meaning assigned to such words and expressions in that sub-clause.

2.12. This agreement shall be governed by and construed and interpreted in accordance with the laws of the Republic of South Africa.

3. RECORDAL

3.1. The transferor wishes to organise its current direct holdings in the company through a share for share exchange of these holdings with shares in the transferee. In the context of the reorganization the transferee will own the holdings in the company. At the final stage of the reorganization First Uranium Corporation will hold 100% (one hundred percent) of the shares in the transferee and the transferor will have exchanged its holdings with shares in First Uranium Corporation.

3.2. The transferor wishes to transfer to the transferee, and the transferee wishes to acquire the transfershares on the terms and conditions stipulated in this agreement.

4. TRANSFER OF SHARES

4.1. The transferor transfers to the transferee who acquires the transfershares with effect from the effective date on which date all risk in and benefit attaching to the transfershares shall pass to the transferee.

4.2. The transfer constitutes an indivisible transfer of the transfershares by the transferor.

5. CONSIDERATION

5.1. The consideration at which the transfer is to be effected is an amount as is detailed in the Resolution to be signed by the directors of the transferor authorising the transactions set out in this agreement.

- 5.2. The consideration given by the transferee to the transferor for the shares shall be effected on the closing date by the transferee issuing the FUL shares to the transferor.

6. CLOSING

- 6.1. At 15h30 South African time, on the closing date, representatives of the transferor and the transferee shall meet at the offices of the company ("the closing meeting")
- 6.2. At the closing meeting -
- 6.2.1. the transferor shall deliver the documents of title to representatives of the transferee;
- 6.2.2. the transferee shall deliver to representatives of the transferor the share certificates in respect of the FUL shares.

7. WARRANTIES

- 7.1. The transferor warrants that -
- 7.1.1. it is as at the date of signature the sole registered and beneficial owner of the shares and will be reflected in the register of members of the company as such;
- 7.1.2. as at the date of signature, the transferor has no claims against the company whether on loan account or otherwise;
- 7.1.3. the shares will, when delivered to the transferee, be free of any pledge, lien, hypothec, notarial bond or encumbrance whatever and

free of all other rights of retention or pre-emption and no person has an option to acquire the shares;

7.1.4. on the closing date against delivery of the documents in title by the transferor to the transferee, ownership of the shares will pass to the transferee and the transferee will become the sole beneficial and registered owner of the shares.

7.2. Save for the warranties provided by the transferor to the transferee in terms of this clause 7, the transferor gives and makes no warranties, representations or the like of whatsoever nature and howsoever arising and whether express or implied as regards the company and the shares and accordingly the shares are sold voetstoots.

7.3. The transferee warrants that :

7.3.1. on the closing date, the transferor will become the sole, registered and beneficial owner of the FUL shares and will be reflected in the register of members of the transferee as such;

7.3.2. the FUL shares will, when delivered to the transferor, be free of any pledge, lien, hypothec, notarial bond or encumbrance whatsoever and free of all other rights of retention or pre-emption and the transferor will become the owner of such FUL shares upon the issue thereof to the transferor.

7.4. The provisions of 7.2 shall *mutatis mutandis* apply in respect of the warranties provided by the transferee in terms of 7.3.

8. BREACH

Should any party ("the defaulting party") commit a breach of any of the provisions of this agreement, then the other party ("the aggrieved party") shall be obliged to give

the defaulting party 14 (fourteen) days' written notice or such longer period as may reasonably be required in the circumstances, to remedy the breach. If the defaulting party fails to comply with such notice, the aggrieved party shall be entitled to claim immediate payment and/or specific performance by the defaulting party of all the defaulting party's obligations whether or not the due date for payment and/or performance shall have arrived, in either event without prejudice to the aggrieved party's rights to claim damages. The foregoing is without prejudice to such other rights as the aggrieved party may have at law; provided always that, notwithstanding anything to the contrary contained in this agreement, the aggrieved party shall not be entitled to cancel this agreement for any breach by the defaulting party unless such breach is a material breach going to the root of this agreement and is incapable of being remedied by payment in money, or if it is capable of being remedied by payment in money, the defaulting party fails to pay the amount concerned within 14 (fourteen) days after such amount has been finally determined.

9. **ARBITRATION**

- 9.1. Save as specifically provided to the contrary in this agreement, any disputes arising from or in connection with this agreement or the termination thereof shall, at the request of any party to the dispute, be finally resolved in accordance with the rules of the Arbitration Foundation of Southern Africa (or its successor in title) ("Foundation") by an arbitrator or arbitrators appointed by the Foundation.
 - 9.2. Notwithstanding anything to the contrary contained in this 9, any party shall be entitled to apply for, and if successful, be granted, an interdict from any competent court having jurisdiction.
 - 9.3. For the purposes of clause 9.2 and for the purposes of having any award made by the arbitrator/s being made an order of court, each of the parties hereby submits itself to the non-exclusive jurisdiction of Witwatersrand Local Division of the High Court of South Africa.
- 

9.4. This clause 9 is severable from the rest of this agreement and shall remain in full force and effect notwithstanding the termination of this agreement.

10. NOTICES AND DOMICILIUM

10.1. The parties choose as their domicilium citandi et executandi their respective addresses set out in this clause for all purposes arising out of or in connection with this agreement at which addresses all the processes and notices arising out of or in connection with this agreement, its breach or termination may validly be served upon or delivered to the parties.

10.2. For the purpose of this agreement the parties' respective addresses shall be -

10.2.1. as regards the transferor at 5 Press Avenue, Selby, Johannesburg, 2025;

facsimile number (011) 837 0390;

Attention : The company secretary;

10.2.2. as regards the transferee at 3 Themistocles Dervis Street, CY-1066 Nicosia, Cyprus

facsimile number +357 226 73284

Attention : Stelios Panayides

or at such other address not being a post office box or poste restante, of which the party concerned may notify the others in writing.

10.3. Any notice given in terms of this agreement shall be in writing and shall -

10.3.1. if delivered by hand be deemed to have been duly received by the addressee on the closing date;

10.3.2. if posted by prepaid registered post be deemed to have been received by the addressee on the 8th (eighth) business day following the date of such posting;

10.3.3. if transmitted by facsimile be deemed to have been received by the addressee 1 (one) business day after despatch.

10.4. Notwithstanding anything to the contrary contained in this agreement, a written notice or communication actually received by one of the parties from another including by way of facsimile transmission shall be adequate written notice or communication to such party.

11. WHOLE AGREEMENT

This agreement constitutes the whole agreement between the parties as to the subject-matter hereof and no agreement, representations or warranties between the parties other than those set out herein are binding on the parties.

12. VARIATION

No addition to or variation, consensual cancellation or novation of this agreement and no waiver of any right arising from this agreement or its breach or termination shall be of any force or effect unless reduced to writing and signed by all the parties or their duly authorised representatives.

13. RELAXATION

No latitude, extension of time or other indulgence which may be given or allowed by any party to any other party in respect of the performance of any obligation hereunder

or enforcement of any right arising from this agreement and no single or partial exercise of any right by any party shall under any circumstances be construed to be an implied consent by such party or operate as a waiver or a novation of, or otherwise affect any of that party's rights in terms of or arising from this agreement or estop such party from enforcing, at any time and without notice, strict and punctual compliance with each and every provision or term hereof.

14. COSTS

Each party shall pay its own cost of negotiating, drafting, preparing and implementing this agreement and the appendices to it.

15. COUNTERPARTS

This agreement may be signed in separate counterparts, each of which shall be deemed to be an original and all of which taken together shall constitute one and the same instrument. The counterpart of this agreement in fax form shall be conclusive evidence of the original signature and shall be as effected in law as the counterpart in original form showing the original signatures.

AGREEMENT

1. PARTIES

- 1.1. The parties to this agreement are -
 - 1.1.1. Simmer and Jack Mines Limited; and
 - 1.1.2. First Uranium Corporation.
- 1.2. The parties agree as set out below.

2. INTERPRETATION

- 2.1. In this agreement, unless clearly inconsistent with or otherwise indicated by the context -
 - 2.1.1. "~~the~~/this agreement" means the agreement set out in this document and the appendices hereto;
 - 2.1.2. "business day" means any day other than a Saturday, Sunday or official public holiday in the Republic of South Africa;
 - 2.1.3. "the closing date" means 20 December 2006;

- 2.1.4. "the company" means First Uranium Limited (formerly Dalegreen Limited), a corporation duly registered under the laws of Cyprus;
- 2.1.5. "the date of signature" means the date of signature of this agreement by the last party signing;
- 2.1.6. "the documents of title" means collectively -
- 2.1.6.1. the share certificates in respect of the shares together with share transfer forms in respect thereof duly completed and signed by the registered holder/s or its/their duly authorised representative/s in accordance with the Laws of Cyprus and the founding documents of the company on the closing date;
 - 2.1.6.2. a certified copy of a resolution of the directors of the company, passed in accordance with the articles of association of the approving the transfer of the shares into the name of the transferee
 - 2.1.6.3. all other books, documents and records of the company which is in the transferor possession;
- 2.1.7. "the effective date" means the date of signature;
- 2.1.8. "FUC shares" means 26 416 295 (twenty six million four hundred and sixteen thousand two hundred and ninety five) ordinary shares in the authorised share capital of the transferee;

- 2.1.9. "the transferee" means First Uranium Corporation (BC Corporate Number C0777384), a corporation continued under the Business Corporations Act of the Province of British Columbia, Canada;
- 2.1.10. "the consideration" means the consideration of the shares referred to in 5;
- 2.1.11. "the shares" means 1 196 (one thousand one hundred and ninety six) Class A shares in the issued share capital of the company transferred by the transferor to the transferee in terms of this agreement;
- 2.1.12. "the transferor" means Simmer and Jack Mines Limited (Registration Number 1924/007778/06), a company duly registered and incorporated according to the company laws of the Republic of South Africa;
- 2.1.13. any reference to the singular includes the plural and vice versa;
- 2.1.14. any reference to natural persons includes legal persons and vice versa; and
- 2.1.15. any reference to a gender includes the other genders.
- 2.2. Should any provision in a definition be a substantive provision conferring rights or imposing obligations on any party, then effect shall be given to that provision as if it were a substantive provision in the body of this agreement.
- 2.3. Any reference to an enactment, regulation, rule or by-law is that enactment, regulation, rule or by-law as at the date of signature, and as amended or replaced from time to time.

- 2.4. Where any number of days is prescribed, such number shall exclude the first and include the last day, unless the last day falls on a Saturday, Sunday or public holiday in the Republic of South Africa, Canada and Cyprus, in which case the last day shall be the next succeeding day which is not a Saturday, Sunday or public holiday.
- 2.5. The use of the word "including" followed by a specific example/s shall not be construed as limiting the meaning of the general wording succeeding it and the *eludem generis* rule shall not be applied in the interpretation of such general wording or such specific example/s.
- 2.6. The expiration or termination of this agreement shall not affect those provisions of this agreement which expressly provide that they will operate after any such expiration or termination or which of necessity must continue to have effect after such expiration or termination, notwithstanding the fact that the clauses themselves do not expressly provide this.
- 2.7. In its interpretation, the *contra proferentem* rule of construction shall not apply (this agreement being the product of negotiations between the parties) nor shall this agreement be construed in favour of or against any party by reason of the extent to which any party or its professional advisors participated in the preparation of this agreement.
- 2.8. Records shall be binding on the parties and are not merely for information purposes.
- 2.9. All amounts payable in terms of this agreement are exclusive of VAT unless otherwise indicated.

- 2.10. The clause headings in this agreement have been inserted for convenience only and shall not be taken into account in its interpretation.
- 2.11. Words and expressions defined in any sub-clause shall, for the purposes of the clause of which that sub-clause forms part, bear the meaning assigned to such words and expressions in that sub-clause.
- 2.12. This agreement shall be governed by and construed and interpreted in accordance with the laws of the Republic of South Africa;

3. RECORDAL

- 3.1. The transferor wishes to organise its current direct holdings in First Uranium (Proprietary) Limited through a share for share exchange of these holdings with shares in the company. In the context of this reorganisation the company will own the holdings in First Uranium (Proprietary) Limited. At the final stage of the reorganization the transferee will hold 100% (one hundred percent) of the shares in the company and the transferor will have exchanged its holdings with shares of the transferee.
- 3.2. The transferor wishes to transfer to the transferee, and the transferee wishes to acquire the shares on the terms and conditions stipulated in this agreement.

4. TRANSFER OF SHARES

- 4.1. The transferor transfers to the transferee which acquires the shares with effect from the effective date on which date all risk in and benefit attaching to the shares shall pass to the transferee.
- 

4.2. The transfer constitutes an indivisible transfer of the shares by the transferor.

5. CONSIDERATION

5.1. The consideration at which the transfer is to be effected shall be the amount as stipulated in the Resolution to be signed by the Board of Directors of the transferor authorising the transaction set out in this agreement.

5.2. The consideration given by the transferee to the transferor for the shares shall be effected on the closing date by the transferee issuing the FUC shares to the transferor.

6. CLOSING

6.1. At 15H30 South African time, on the closing date, representatives of the transferor and the transferee shall meet at the offices of the transferor ("the closing meeting").

6.2. At the closing meeting -

6.2.1. the representatives of the transferor shall deliver the documents of title to the transferee;

6.2.2. the representatives of the transferee shall deliver to the representatives of the transferor the share certificates in respect of the FUC shares.

7. WARRANTIES

7.1. The transferor warrants that -

7.1.1. it is as at the date of signature the sole registered and beneficial owner of the shares and will be reflected in the register of members of the company as such;

7.1.2. as at the date of signature, the transferor has no claims against the company whether on loan account or otherwise;

7.1.3. the shares will, when delivered to the transferee, be free of any pledge, lien, hypothec, notarial bond or encumbrance whatever and free of all other rights of retention or pre-emption and no person has an option to acquire the shares;

7.1.4. on the closing date against delivery of the documents in title by the transferor to the transferee, ownership of the shares will pass to the transferee and the transferee will become the sole beneficial and registered owner of the shares.

7.2. Save for the warranties provided by the transferor to the transferee in terms of this clause 7, the transferor gives and makes no warranties, representations or the like of whatsoever nature and howsoever arising and whether express or implied as regards the company and the shares and accordingly the shares are sold voetstoots.

7.3. The transferee warrants that:

- 7.3.1. on the closing date, the transferor will become the sole, registered and beneficial owner of the FUC shares and will be reflected in the register of members of the transferee as such;
- 7.3.2. the FUC shares will, when delivered to the transferor, be free of any pledge, lien, hypothec, notarial bond or encumbrance whatsoever and free of all other rights of retention or pre-emption and the transferor will become the owner of such FUC shares upon the issue thereof to the transferor.
- 7.4. The provisions of 7.2 shall *mutatis mutandis* apply in respect of the warranties provided by the transferee in terms of 7.3.

8. BREACH

Should any party ("the defaulting party") commit a breach of any of the provisions of this agreement, then the other party ("the aggrieved party") shall be obliged to give the defaulting party 14 (fourteen) days' written notice or such longer period as may reasonably be required in the circumstances, to remedy the breach. If the defaulting party fails to comply with such notice, the aggrieved party shall be entitled to claim immediate payment and/or specific performance by the defaulting party of all the defaulting party's obligations whether or not the due date for payment and/or performance shall have arrived, in either event without prejudice to the aggrieved party's rights to claim damages. The foregoing is without prejudice to such other rights as the aggrieved party may have at law; provided always that, notwithstanding anything to the contrary contained in this agreement, the aggrieved party shall not be entitled to cancel this agreement for any breach by the defaulting party unless such breach is a material breach going to the root of this agreement and is incapable of being remedied by payment in money, or if it is capable of being remedied by payment in money, the defaulting party fails to pay the amount concerned within 14 (fourteen) days after such amount has been finally determined.

9. ARBITRATION

- 9.1. Save as specifically provided to the contrary in this agreement, any disputes arising from or in connection with this agreement or the termination thereof shall, at the request of any party to the dispute, be finally resolved in accordance with the rules of the Arbitration Foundation of Southern Africa (or its successor in title) ("Foundation") by an arbitrator or arbitrators appointed by the Foundation.
- 9.2. Notwithstanding anything to the contrary contained in this 9, any party shall be entitled to apply for, and if successful, be granted, an interdict from any competent court having jurisdiction.
- 9.3. For the purposes of clause 9.2 and for the purposes of having any award made by the arbitrator/s being made an order of court, each of the parties hereby submits itself to the non-exclusive jurisdiction of Witwatersrand Local Division of the High Court of South Africa.
- 9.4. This clause 9 is severable from the rest of this agreement and shall remain in full force and effect notwithstanding the termination of this agreement.

10. NOTICES AND DOMICILIUM

- 10.1. The parties choose as their domicilium citandi et executandi their respective addresses set out in this clause for all purposes arising out of or in connection with this agreement at which addresses all the processes and notices arising out of or in connection with this agreement, its breach or termination may validly be served upon or delivered to the parties.
- 

10.2. For the purpose of this agreement the parties' respective addresses shall be -

10.2.1. as regards the transferor at 5 Press Avenue, Selby, Johannesburg,
2025;

facsimile number (011) 837 0390;

Attention : The company secretary;

10.2.2. as regards the transferee at 2100 - 1075 West Georgia Street,
Vancouver, BC V6E 3G2 Canada;

facsimile number +604 631 3232;

Attention : The company secretary,

or at such other address not being a post office box or poste restante, of
which the party concerned may notify the others in writing.

10.3. Any notice given in terms of this agreement shall be in writing and shall -

10.3.1. if delivered by hand be deemed to have been duly received by the
addressee on the closing date;

10.3.2. if posted by prepaid registered post be deemed to have been
received by the addressee on the 8th (eighth) business day following
the date of such posting;

10.3.3. If transmitted by facsimile be deemed to have been received by the addressee 1 (one) business day after despatch.

10.4. Notwithstanding anything to the contrary contained in this agreement, a written notice or communication actually received by one of the parties from another including by way of facsimile transmission shall be adequate written notice or communication to such party.

11. WHOLE AGREEMENT

This agreement constitutes the whole agreement between the parties as to the subject-matter hereof and no agreement, representations or warranties between the parties other than those set out herein are binding on the parties.

12. VARIATION

No addition to or variation, consensual cancellation or novation of this agreement and no waiver of any right arising from this agreement or its breach or termination shall be of any force or effect unless reduced to writing and signed by all the parties or their duly authorised representatives.

13. RELAXATION

No latitude, extension of time or other indulgence which may be given or allowed by any party to any other party in respect of the performance of any obligation hereunder or enforcement of any right arising from this agreement and no single or partial exercise of any right by any party shall under any circumstances be construed to be an implied consent by such party or operate as a waiver or a novation of, or otherwise affect any of that party's rights in terms of or arising from this agreement or estop

such party from enforcing, at any time and without notice, strict and punctual compliance with each and every provision or term hereof.

14. COSTS

Each party shall pay its own cost of negotiating, drafting, preparing and implementing this agreement and the appendices to it.

15. COUNTERPARTS

This agreement may be signed in separate counterparts, each of which shall be deemed to be an original and all of which taken together shall constitute one and the same instrument. The counterpart of this agreement in fax form shall be conclusive evidence of the original signature and shall be as effected in law as the counterpart in original form showing the original signatures.

AGREEMENT

1. PARTIES

1.1. The parties to this agreement are -

1.1.1. First Uranium Corporation; and

1.1.2. First Uranium Limited (formerly Dalegreen Limited).

1.2. The parties agree as set out below.

2. INTERPRETATION

2.1. In this agreement, unless clearly inconsistent with or otherwise indicated by the context -

2.1.1. "the/this agreement" means the agreement set out in this document and the appendices hereto;

2.1.2. "business day" means any day other than a Saturday, Sunday or official public holiday in the Republic of South Africa;

2.1.3. "the closing date" means 20 December 2006;

2.1.4. "the company" means First Uranium (Proprietary) Limited (Registration Number 2005/033680/07), a company duly registered according to the company laws of the Republic of South Africa;

- 2.1.5. "the Companies Act" means the Companies Act, 1973 (as amended);
- 2.1.6. "the date of signature" means the date of signature of this agreement by the last party signing;
- 2.1.7. "the documents of title" means collectively -
- 2.1.7.1. the share certificates in respect of the shares together with share transfer forms in respect thereof duly completed and signed by the registered holder/s or its/their duly authorised representative/s in accordance with the Company's Act and the memorandum and articles of association of the company on the closing date;
 - 2.1.7.2. a certified copy of a resolution of the directors of the company, passed in accordance with the articles of association of the company approving the transfer of the shares into the name of the transferee;
 - 2.1.7.3. all other books, documents and records of the company which is in the transferor's possession;
- 2.1.8. "the effective date" means the date of signature;
- 2.1.9. "the FUL shares" means 300 (three hundred) Class A shares in the authorised share capital of the transferee;
- 2.1.10. "the transferee" means First Uranium Limited (formerly Dalegreen Limited), a corporation duly registered under the laws of Cyprus;
- 2.1.11. "the consideration" means the value of the shares referred to in 5;

- 2.1.12. "the shares" means 300 (three) ordinary shares in the share capital of the company constituting 20% (twenty per centum) of the issued share capital of the company transferred by the transferor to the transferee in terms of this agreement;
- 2.1.13. "the transferor" means First Uranium Corporation (BC Corporate Number C0777 384), a corporation duly continued under the Business Corporations Act of the Province of British Columbia, Canada;
- 2.1.14. any reference to the singular includes the plural and vice versa;
- 2.1.15. any reference to natural persons includes legal persons and vice versa; and
- 2.1.16. any reference to a gender includes the other genders.
- 2.2. Should any provision in a definition be a substantive provision conferring rights or imposing obligations on any party, then effect shall be given to that provision as if it were a substantive provision in the body of this agreement.
- 2.3. Any reference to an enactment, regulation, rule or by-law is that enactment, regulation, rule or by-law as at the date of signature, and as amended or replaced from time to time.
- 2.4. Where any number of days is prescribed, such number shall exclude the first and include the last day, unless the last day falls on a Saturday, Sunday or public holiday in Canada, South Africa and Cyprus, in which case the last day shall be the next succeeding day which is not a Saturday, Sunday or public holiday.
- 2.5. The use of the word "including" followed by a specific example/s shall not be construed as limiting the meaning of the general wording succeeding it and

the *elusdem generis* rule shall not be applied in the interpretation of such general wording or such specific example/s.

- 2.6. The expiration or termination of this agreement shall not affect those provisions of this agreement which expressly provide that they will operate after any such expiration or termination or which of necessity must continue to have effect after such expiration or termination, notwithstanding the fact that the clauses themselves do not expressly provide this.
- 2.7. In its interpretation, the *contra proferentem* rule of construction shall not apply (this agreement being the product of negotiations between the parties) nor shall this agreement be construed in favour of or against any party by reason of the extent to which any party or its professional advisors participated in the preparation of this agreement.
- 2.8. Records shall be binding on the parties and are not merely for information purposes.
- 2.9. All amounts payable in terms of this agreement are exclusive of VAT unless otherwise indicated.
- 2.10. The clause headings in this agreement have been inserted for convenience only and shall not be taken into account in its interpretation.
- 2.11. Words and expressions defined in any sub-clause shall, for the purposes of the clause of which that sub-clause forms part, bear the meaning assigned to such words and expressions in that sub-clause.
- 2.12. This agreement shall be governed by and construed and interpreted in accordance with the laws of Canada.

3. RECORDAL

- 3.1. The transferor wishes to organise its current and direct holdings in the company through a share for share exchange of these holdings with shares in the transferee. In the context of this reorganisation the transferee will own the holdings in the company. At the final stage of the reorganisation the transferor will hold 100% (one hundred percent) of the shares in the transferee.
- 3.2. The transferor wishes to transfer to the transferee, and the transferee wishes to acquire the shares on the terms and conditions stipulated in this agreement.

4. TRANSFER OF SHARES

- 4.1. The transferor transfers the transferee which acquires the shares with effect from the effective date on which date all risk in and benefit attaching to the shares shall pass to the transferee.
- 4.2. The transfer constitutes an indivisible transfer of the shares by the transferor.

5. CONSIDERATION

- 5.1. The consideration at which the transfer is to be effected shall be as set out in the Resolution to be signed by the board of directors of the transferor authorising the transaction set out in this agreement.
 - 5.2. The consideration given by the transferee to the transferor for the shares shall be effected on the closing date by the transferee issuing the FUL shares to the transferor.
- 

6. CLOSING

- 6.1. At 15h30 South African time, on the closing date, representatives of the transferor and the transferee shall meet at the offices of the transferor ("the closing meeting").
- 6.2. At the closing meeting -
 - 6.2.1. the representatives of the transferor shall deliver the documents of title to the transferee;
 - 6.2.2. the representatives of the transferee shall deliver to the representatives of the transferor the share certificates in respect of the FUL shares.

7. WARRANTIES

- 7.1. The transferor warrants that -
 - 7.1.1. It is as at the date of signature the sole registered and beneficial owner of the shares and will be reflected in the register of members of the company as such;
 - 7.1.2. as at the date of signature, the transferor has no claims against the company whether on loan account or otherwise;
 - 7.1.3. the shares will, when delivered to the transferee, be free of any pledge, lien, hypothec, notarial bond or encumbrance whatever and free of all other rights of retention or pre-emption and no person has an option to acquire the shares;

7.1.4. on the closing date against delivery of the documents in title by the transferor to the transferee, ownership of the shares will pass to the transferee and the transferee will become the sole beneficial and registered owner of the shares.

7.2. Save for the warranties provided by the transferor to the transferee in terms of this clause 7, the transferor gives and makes no warranties, representations or the like of whatsoever nature and howsoever arising and whether express or implied as regards the company and the shares and accordingly the shares are sold voetstoots.

7.3. The transferee warrants that :

7.3.1. on the closing date, the transferor will become the sole, registered and beneficial owner of the FUL shares and will be reflected in the register of members of the transferee as such;

7.3.2. the FUL shares will, when delivered to the transferor, be free of any pledge, lien, hypothec, notarial bond or encumbrance whatsoever and free of all other rights of retention or pre-emption and the transferor will become the owner of such FUL shares upon the issue thereof to the transferor.

7.4. The provisions of 7.2 shall *mutatis mutandis* apply in respect of the warranties provided by the transferee in terms of 7.3.

8. BREACH

Should any party ("the defaulting party") commit a breach of any of the provisions of this agreement, then the other party ("the aggrieved party") shall be obliged to give the defaulting party 14 (fourteen) days' written notice or such longer period as may reasonably be required in the circumstances, to remedy the breach. If the defaulting party fails to comply with such notice, the aggrieved party shall be entitled to claim

immediate payment and/or specific performance by the defaulting party of all the defaulting party's obligations whether or not the due date for payment and/or performance shall have arrived, in either event without prejudice to the aggrieved party's rights to claim damages. The foregoing is without prejudice to such other rights as the aggrieved party may have at law; provided always that, notwithstanding anything to the contrary contained in this agreement, the aggrieved party shall not be entitled to cancel this agreement for any breach by the defaulting party unless such breach is a material breach going to the root of this agreement and is incapable of being remedied by payment in money, or if it is capable of being remedied by payment in money, the defaulting party fails to pay the amount concerned within 14 (fourteen) days after such amount has been finally determined.

9. **ARBITRATION**

Any dispute arising out of or in connection with this Agreement shall be resolved by arbitration in Toronto conducted in the English language by a single arbitrator pursuant to the rules of the London Court of International Arbitration ("LCIA"), save that unless the Participants agree otherwise :

- 9.1. the LCIA shall appoint the arbitrator;
- 9.2. the claimant shall serve its written claim within 14 (fourteen) days of the arbitrator's appointment. The defence shall be served within 28 (twenty-eight) days after that and the reply 14 (fourteen) days thereafter. Each shall attach any documents relied upon. The parties will be entitled to be represented by qualified legal practitioners. Neither party shall be required to give general discovery of documents, but may be required only to produce specific, identified documents that are directly relevant to the dispute;
- 9.3. the arbitration proceedings and the decision of the arbitrator shall be confidential, subject to applicable laws;
- 9.4. the costs of the arbitration shall be paid as determined by the arbitrator; and

- 9.5. the award made by the arbitrator shall be final and binding upon the parties, except in the case of manifest error.

10. NOTICES AND DOMICILIUM

- 10.1. The parties choose as their domicilium citandi et executandi their respective addresses set out in this clause for all purposes arising out of or in connection with this agreement at which addresses all the processes and notices arising out of or in connection with this agreement, its breach or termination may validly be served upon or delivered to the parties.

- 10.2. For the purpose of this agreement the parties' respective addresses shall be -

10.2.1. as regards the transferor at 2100 - 1075 West Georgia Street,
Vancouver, BC V6E 3G2 Canada;

facsimile number +604 631 3232;

Attention : The Company Secretary

10.2.2. as regards the transferee at 3 Themistocles Dervis Street, CY-1066;

facsimile number +357 2267 3284;

Attention : Stellios Panayides,

or at such other address not being a post office box or poste restante, of which the party concerned may notify the others in writing.

- 10.3. Any notice given in terms of this agreement shall be in writing and shall -

10.3.1. If delivered by hand be deemed to have been duly received by the addressee on the closing date;

10.3.2. if posted by prepaid registered post be deemed to have been received by the addressee on the 8th (eighth) business day following the date of such posting;

10.3.3. if transmitted by facsimile be deemed to have been received by the addressee 1 (one) business day after despatch.

10.4. Notwithstanding anything to the contrary contained in this agreement, a written notice or communication actually received by one of the parties from another including by way of facsimile transmission shall be adequate written notice or communication to such party.

11. **WHOLE AGREEMENT**

This agreement constitutes the whole agreement between the parties as to the subject-matter hereof and no agreement, representations or warranties between the parties other than those set out herein are binding on the parties.

12. **VARIATION**

No addition to or variation, consensual cancellation or novation of this agreement and no waiver of any right arising from this agreement or its breach or termination shall be of any force or effect unless reduced to writing and signed by all the parties or their duly authorised representatives.

13. **RELAXATION**

No latitude, extension of time or other indulgence which may be given or allowed by any party to any other party in respect of the performance of any obligation hereunder

or enforcement of any right arising from this agreement and no single or partial exercise of any right by any party shall under any circumstances be construed to be an implied consent by such party or operate as a waiver or a novation of, or otherwise affect any of that party's rights in terms of or arising from this agreement or estop such party from enforcing, at any time and without notice, strict and punctual compliance with each and every provision or term hereof.

14. COSTS

Each party shall pay its own cost of negotiating, drafting, preparing and implementing this agreement and the appendices to it.

15. COUNTERPARTS

This agreement may be signed in separate counterparts, each of which shall be deemed to be an original and all of which taken together shall constitute one and the same instrument. The counterpart of this agreement in fax form shall be conclusive evidence of the original signature and shall be as effected in law as the counterpart in original form showing the original signatures.

AGREEMENT

1. PARTIES

- 1.1. The parties to this agreement are -
- 1.1.1. Simmer & Jack Mines Limited; and
 - 1.1.2. First Uranium Limited (formerly Dalegreen Limited).
- 1.2. The parties agree as set out below.

2. INTERPRETATION

- 2.1. In this agreement, unless clearly inconsistent with or otherwise indicated by the context -
- 2.1.1. "the/this agreement" means the agreement set out in this document and the appendices hereto;
 - 2.1.2. "business day" means any day other than a Saturday, Sunday or official public holiday in the Republic of South Africa;
 - 2.1.3. "the closing date" means 20 December 2006
 - 2.1.4. "the Companies Act" means the Companies Act, 1973 (as amended);

- 2.1.5. "the company" means Ezulwini Mining Company (Proprietary) Limited, (Registration Number 2004/028640/07), a company duly registered according to the company laws of the Republic of South Africa;
- 2.1.6. "the date of signature" means the date of signature of this agreement by the last party signing;
- 2.1.7. "the documents of title" means collectively -
- 2.1.7.1. the share certificates in respect of the shares together with share transfer forms in respect thereof duly completed and signed by the registered holder/s or its/their duly authorised representative/s in accordance with the Company's Act and the memorandum and articles of association of the company on the closing date;
 - 2.1.7.2. a certified copy of a resolution of the directors of the company, passed in accordance with the articles of association of the company approving the transfer of the shares into the name of the transferee;
 - 2.1.7.3. all other books, documents and records of the company which are in the transferor's possession;
- 2.1.8. "the effective date" means the date of signature;
- 2.1.9. "FUL shares" means 2 504 (two thousand five hundred and four) Class A shares in the authorised share capital of the transferee;
- 

- 2.1.10. "the transferee" First Uranium Limited (formerly Dalegreen Limited), a corporation duly registered under the laws of Cyprus;
- 2.1.11. "the consideration" means the aggregate consideration of the shares referred to in 4;
- 2.1.12. "the shares" means 90 (ninety) ordinary shares in the issued share capital of the company constituting 90% (ninety per centum) of the entire issued share capital of the company, transferred by the transferor to the transferee in terms of this agreement;
- 2.1.13. "the transferor" means Simmer and Jack Mines Limited (Registration Number 1924/007778/06), a company duly registered and incorporated according to the company laws of the Republic of South Africa;
- 2.1.14. any reference to the singular includes the plural and vice versa;
- 2.1.15. any reference to natural persons includes legal persons and vice versa; and
- 2.1.16. any reference to a gender includes the other genders.
- 2.2. Should any provision in a definition be a substantive provision conferring rights or imposing obligations on any party, then effect shall be given to that provision as if it were a substantive provision in the body of this agreement.
- 2.3. Any reference to an enactment, regulation, rule or by-law is that enactment, regulation, rule or by-law as at the date of signature, and as amended or replaced from time to time.

- 2.4. Where any number of days is prescribed, such number shall exclude the first and include the last day, unless the last day falls on a Saturday, Sunday or public holiday in the Republic of South Africa, in which case the last day shall be the next succeeding day which is not a Saturday, Sunday or public holiday.
- 2.5. The use of the word "including" followed by a specific example/s shall not be construed as limiting the meaning of the general wording succeeding it and the *eiusdem generis* rule shall not be applied in the interpretation of such general wording or such specific example/s.
- 2.6. The expiration or termination of this agreement shall not affect those provisions of this agreement which expressly provide that they will operate after any such expiration or termination or which of necessity must continue to have effect after such expiration or termination, notwithstanding the fact that the clauses themselves do not expressly provide this.
- 2.7. In its interpretation, the *contra proferentem* rule of construction shall not apply (this agreement being the product of negotiations between the parties) nor shall this agreement be construed in favour of or against any party by reason of the extent to which any party or its professional advisors participated in the preparation of this agreement.
- 2.8. Records shall be binding on the parties and are not merely for information purposes.
- 2.9. All amounts payable in terms of this agreement are exclusive of VAT unless otherwise indicated.
- 2.10. The clause headings in this agreement have been inserted for convenience only and shall not be taken into account in its interpretation.

2.11. Words and expressions defined in any sub-clause shall, for the purposes of the clause of which that sub-clause forms part, bear the meaning assigned to such words and expressions in that sub-clause.

2.12. This agreement shall be governed by and construed and interpreted in accordance with the laws of the Republic of South Africa.

3. RECORDAL

3.1. The transferor wishes to organise its current and direct holdings in the company through a share for share exchange of these holdings with shares in the transferee. In the context of this reorganisation the transferee will own the holdings in the company. At the final stage of the reorganisation First Uranium Corporation will hold 100% (one hundred percent) of the shares in the transferee and the transferor will have exchanged its holdings with shares in First Uranium Corporation.

3.2. The transferor wishes to transfer to the transferee, and the transferee wishes to acquire the shares on the terms and conditions stipulated in this agreement.

4. TRANSFER OF SHARES

The transferor transfers to the transferee which acquires the shares with effect from the effective date on which date all risk in and benefit attaching to the shares shall pass to the transferee.

5. CONSIDERATION

5.1. The transfer referred to in this agreement shall be effected at a consideration as is set out in the Resolution to be signed by the directors of the transferor authorising the transaction set out in this agreement.

- 5.2. The consideration given by the transferee to the transferor for the shares shall be effected on the closing date by the transferee issuing the FUL shares to the transferor.

6. CLOSING

- 6.1. At 15H30 South African time, on the closing date, representatives of the transferor and the transferee shall meet at the offices of the transferor ("the closing meeting")
- 6.2. At the closing meeting -
- 6.2.1. the transferor shall deliver the documents of title to the transferee;
- 6.2.2. the transferee shall deliver to the transferor the share certificates in respect of the FUL shares.

7. WARRANTIES

- 7.1. The transferor warrants that -
- 7.1.1. It is as at the date of signature the sole registered and beneficial owner of the shares and will be reflected in the register of members of the company as such;
- 7.1.2. as at the date of signature, the transferor has no claims against the company other than the sale claims;
- 7.1.3. the shares will, when delivered to the transferee, be free of any pledge, lien, hypothec, notarial bond or encumbrance whatever and

free of all other rights of retention or pre-emption and no person has an option to acquire the shares;

7.1.4. on the closing date against delivery of the documents in title by the transferor to the transferee, ownership of the shares will pass to the transferee and the transferee will become the sole beneficial and registered owner of the shares.

7.2. Save for the warranties provided by the transferor to the transferee in terms of this clause 7, the transferor gives and makes no warranties, representations or the like of whatsoever nature and howsoever arising and whether express or implied as regards the company and the shares and accordingly the shares are sold voetstoots.

7.3. The transferee warrants that :

7.3.1. on the closing date, the transferor will become the sole, registered and beneficial owner of the FUL shares and will be reflected in the register of members of the transferee as such;

7.3.2. the FUL shares will, when delivered to the transferor, be free of any pledge, lien, hypothec, notarial bond or encumbrance whatsoever and free of all other rights of retention or pre-emption and the transferor will become the owner of such FUL shares upon the issue thereof to the transferor;

7.4. The provisions of 7.2 shall *mutatis mutandis* apply in respect of the warranties provided by the transferee in terms of 7.3.

8. BREACH

Should any party ("the defaulting party") commit a breach of any of the provisions of this agreement, then the other party ("the aggrieved party") shall be obliged to give

the defaulting party 14 (fourteen) days' written notice or such longer period as may reasonably be required in the circumstances, to remedy the breach. If the defaulting party fails to comply with such notice, the aggrieved party shall be entitled to claim immediate payment and/or specific performance by the defaulting party of all the defaulting party's obligations whether or not the due date for payment and/or performance shall have arrived, in either event without prejudice to the aggrieved party's rights to claim damages. The foregoing is without prejudice to such other rights as the aggrieved party may have at law; provided always that, notwithstanding anything to the contrary contained in this agreement, the aggrieved party shall not be entitled to cancel this agreement for any breach by the defaulting party unless such breach is a material breach going to the root of this agreement and is incapable of being remedied by payment in money, or if it is capable of being remedied by payment in money, the defaulting party fails to pay the amount concerned within 14 (fourteen) days after such amount has been finally determined.

9. ARBITRATION

- 9.1. Save as specifically provided to the contrary in this agreement, any disputes arising from or in connection with this agreement or the termination thereof shall, at the request of any party to the dispute, be finally resolved in accordance with the rules of the Arbitration Foundation of Southern Africa (or its successor in title) ("Foundation") by an arbitrator or arbitrators appointed by the Foundation.
 - 9.2. Notwithstanding anything to the contrary contained in this 9, any party shall be entitled to apply for, and if successful, be granted, an interdict from any competent court having jurisdiction.
 - 9.3. For the purposes of clause 9.2 and for the purposes of having any award made by the arbitrator/s being made an order of court, each of the parties hereby submits itself to the non-exclusive jurisdiction of Witwatersrand Local Division of the High Court of South Africa.
- 

- 9.4. This clause 9 is severable from the rest of this agreement and shall remain in full force and effect notwithstanding the termination of this agreement.

10. NOTICES AND DOMICILIUM

- 10.1. The parties choose as their domicilium citandi et executandi their respective addresses set out in this clause for all purposes arising out of or in connection with this agreement at which addresses all the processes and notices arising out of or in connection with this agreement, its breach or termination may validly be served upon or delivered to the parties.

- 10.2. For the purpose of this agreement the parties' respective addresses shall be –

10.2.1. as regards the transferee at 3 Themistocles Dervis Street, CY-1066
Nicosia, Cyprus

facsimile number +357 226 73284

Attention : Stellos Panayides;

10.2.2. as regards the transferor at 5 Press Avenue, Seiby, Johannesburg,
2025;

facsimile number (011) 837 0390;

Attention : (011) 837 0390,

or at such other address not being a post office box or poste restante, of which the party concerned may notify the others in writing.

- 10.3. Any notice given in terms of this agreement shall be in writing and shall -

10.3.1. if delivered by hand be deemed to have been duly received by the addressee on the closing date;

10.3.2. If posted by prepaid registered post be deemed to have been received by the addressee on the 8th (eighth) business day following the date of such posting;

10.3.3. If transmitted by facsimile be deemed to have been received by the addressee 1 (one) business day after despatch.

10.4. Notwithstanding anything to the contrary contained in this agreement, a written notice or communication actually received by one of the parties from another including by way of facsimile transmission shall be adequate written notice or communication to such party.

11. WHOLE AGREEMENT

This agreement constitutes the whole agreement between the parties as to the subject-matter hereof and no agreement, representations or warranties between the parties other than those set out herein are binding on the parties.

12. VARIATION

No addition to or variation, consensual cancellation or novation of this agreement and no waiver of any right arising from this agreement or its breach or termination shall be of any force or effect unless reduced to writing and signed by all the parties or their duly authorised representatives.

13. RELAXATION

No latitude, extension of time or other indulgence which may be given or allowed by any party to any other party in respect of the performance of any obligation hereunder

or enforcement of any right arising from this agreement and no single or partial exercise of any right by any party shall under any circumstances be construed to be an implied consent by such party or operate as a waiver or a novation of, or otherwise affect any of that party's rights in terms of or arising from this agreement or estop such party from enforcing, at any time and without notice, strict and punctual compliance with each and every provision or term hereof.

14. COSTS

Each party shall pay its own cost of negotiating, drafting, preparing and implementing this agreement and the appendices to it.

15. COUNTERPARTS

This agreement may be signed in separate counterparts, each of which shall be deemed to be an original and all of which taken together shall constitute one and the same instrument. The counterpart of this agreement in fax form shall be conclusive evidence of the original signature and shall be as effected in law as the counterpart in original form showing the original signatures.

AGREEMENT

1. PARTIES

- 1.1. The parties to this agreement are -
- 1.1.1. Simmer and Jack Mines Limited; and
 - 1.1.2. First Uranium Corporation.

- 1.2. The parties agree as set out below.

2. INTERPRETATION

- 2.1. In this agreement, unless clearly inconsistent with or otherwise indicated by the context -
- 2.1.1: "the/this agreement" means the agreement set out in this document and the appendices hereto;
 - 2.1.2. "business day" means any day other than a Saturday, Sunday or official public holiday in the Republic of South Africa;
 - 2.1.3. "the closing date" means 20 December 2006;
 - 2.1.4. "the company" means First Uranium Limited (formerly Dalegreen Limited), a corporation duly registered under the laws of Cyprus;

2.1.5.

2.1.6. "FUC shares" means 55 306 358 (fifty five million three hundred and six thousand three hundred and fifty eight) ordinary shares in the authorised share capital of the transferee;

2.1.7. "the date of signature" means the date of signature of this agreement by the last party signing;

2.1.8. "the documents of title" means collectively -

2.1.8.1. the share certificates in respect of the shares together with share transfer forms in respect thereof duly completed and signed by the registered holder/s or its/their duly authorised representative/s in accordance with the Laws of Cyprus and the founding document of the company on the closing date;

2.1.8.2. a certified copy of a resolution of the directors of the company, passed in accordance with the articles of association of the company approving the transfer of the shares into the name of the transferee;

2.1.8.3. all other books, documents and records of the company which is in the transferor's possession;

2.1.9. "the effective date" means the date of signature;

2.1.10. "the transferee" means First Uranium Corporation (BC Corporate Number C0777 384), a corporation duly continued under the Business Corporations Act of the Province of British Columbia, Canada;

- 2.1.11. "the consideration" means the value of the shares referred to in 5;;
- 2.1.12. "the shares" means 2 504 (two thousand five hundred and four) Class A shares in the issued share capital of the company transferred by the transferor to the transferee in terms of this agreement;
- 2.1.13. "the transferor" means Simmer and Jack Mines Limited (Registration Number 1924/007778/06), a company duly registered and incorporated according to the company laws of the Republic of South Africa;
- 2.1.14. any reference to the singular includes the plural and vice versa;
- 2.1.15. any reference to natural persons includes legal persons and vice versa; and
- 2.1.16. any reference to a gender includes the other genders.
- 2.2. Should any provision in a definition be a substantive provision conferring rights or imposing obligations on any party, then effect shall be given to that provision as if it were a substantive provision in the body of this agreement.
- 2.3. Any reference to an enactment, regulation, rule or by-law is that enactment, regulation, rule or by-law as at the date of signature, and as amended or replaced from time to time.
- 2.4. Where any number of days is prescribed, such number shall exclude the first and include the last day, unless the last day falls on a Saturday, Sunday or public holiday in the Republic of South Africa and Cyprus, in which case the last day shall be the next succeeding day which is not a Saturday, Sunday or public holiday.

- 2.5. The use of the word "including" followed by a specific example/s shall not be construed as limiting the meaning of the general wording succeeding it and the *eiusdem generis* rule shall not be applied in the interpretation of such general wording or such specific example/s.
- 2.6. The expiration or termination of this agreement shall not affect those provisions of this agreement which expressly provide that they will operate after any such expiration or termination or which of necessity must continue to have effect after such expiration or termination, notwithstanding the fact that the clauses themselves do not expressly provide this.
- 2.7. In its interpretation, the *contra proferentem* rule of construction shall not apply (this agreement being the product of negotiations between the parties) nor shall this agreement be construed in favour of or against any party by reason of the extent to which any party or its professional advisors participated in the preparation of this agreement.
- 2.8. Records shall be binding on the parties and are not merely for information purposes.
- 2.9. All amounts payable in terms of this agreement are exclusive of VAT unless otherwise indicated.
- 2.10. The clause headings in this agreement have been inserted for convenience only and shall not be taken into account in its interpretation.
- 2.11. Words and expressions defined in any sub-clause shall, for the purposes of the clause of which that sub-clause forms part, bear the meaning assigned to such words and expressions in that sub-clause.
- 2.12. This agreement shall be governed by and construed and interpreted in accordance with the laws of the Republic of South Africa;

3. RECORDAL

- 3.1. The transferor wishes to organise its current and direct holdings in Ezulwini Mining Company (Proprietary) Limited through a share for share exchange of these holdings with shares in the company. In the context of this reorganisation the company will own the holdings in Ezulwini Mining Company (Proprietary) Limited . At the final stage of the reorganisation the transferee will hold 100% (one hundred percent) of the shares in the company and the transferor will have exchanged its holdings with shares in the transferee.
- 3.2. The transferor wishes to transfer to the transferee, and the transferee wishes to acquire the shares on the terms and conditions stipulated in this agreement.

4. TRANSFER OF SHARES

- 4.1. The transferor transfers to the transferee which acquires the shares with effect from the effective date on which date all risk in and benefit attaching to the shares shall pass to the transferee.
- 4.2. The transfer constitutes an indivisible transfer of the shares by the transferor.

5. CONSIDERATION

- 5.1. The consideration at which the transfer is to be effected shall be an amount as is set out in the Resolution to be signed by the board of directors of the transferor authorising the transaction set out in this agreement.
 - 5.2. The consideration given by the transferee to the transferor for the shares shall be effected on the closing date by the transferee issuing the FUC shares to the transferor.
- 

6. CLOSING

- 6.1. At 15h30 on the closing date, representatives of the transferor and the transferee shall meet at the offices of The transferor ("the closing meeting")
- 6.2. At the closing meeting -
 - 6.2.1. the transferor shall deliver the documents of title to the transferee;
 - 6.2.2. the transferee shall deliver to the transferor the share certificates in respect of the FUC shares together with transfer forms in respect thereof duly completed and signed by the transferee in accordance with the Laws of Canada and the founding documents of FUC.

7. WARRANTIES

- 7.1. The transferor warrants that -
 - 7.1.1. it is as at the date of signature the sole registered and beneficial owner of the shares and will be reflected in the register of members of the company as such;
 - 7.1.2. as at the date of signature, the transferor has no claims against the company whether on loan account or otherwise;
 - 7.1.3. the shares will, when delivered to the transferee, be free of any pledge, lien, hypothec, notarial bond or encumbrance whatever and free of all other rights of retention or pre-emption and no person has an option to acquire the shares;
 - 7.1.4. on the closing date against delivery of the documents in title by the transferor to the transferee, ownership of the shares will pass to the

transferee and the transferee will become the sole beneficial and registered owner of the shares.

- 7.2. Save for the warranties provided by the transferor to the transferee in terms of this clause 7, the transferor gives and makes no warranties, representations or the like of whatsoever nature and howsoever arising and whether express or implied as regards the company and the shares and accordingly the shares are sold voetstoots.
- 7.3. The transferee warrants that:
- 7.3.1. on the closing date, the transferor will become the sole, registered and beneficial owner of the FUC shares and will be reflected in the register of members of the transferee as such;
- 7.3.2. the FUC shares will, when delivered to the transferor, be free of any pledge, lien, hypothec, notarial bond or encumbrance whatsoever and free of all other rights of retention or pre-emption and the transferor will become the owner of such FUC shares upon the issue thereof to the transferor.
- 7.4. The provisions of 7.2 shall *mutatis mutandis* apply in respect of the warranties provided by the transferee in terms of 7.3.

8. BREACH

Should any party ("the defaulting party") commit a breach of any of the provisions of this agreement, then the other party ("the aggrieved party") shall be obliged to give the defaulting party 14 (fourteen) days' written notice or such longer period as may reasonably be required in the circumstances, to remedy the breach. If the defaulting party fails to comply with such notice, the aggrieved party shall be entitled to claim immediate payment and/or specific performance by the defaulting party of all the defaulting party's obligations whether or not the due date for payment and/or

performance shall have arrived, in either event without prejudice to the aggrieved party's rights to claim damages. The foregoing is without prejudice to such other rights as the aggrieved party may have at law; provided always that, notwithstanding anything to the contrary contained in this agreement, the aggrieved party shall not be entitled to cancel this agreement for any breach by the defaulting party unless such breach is a material breach going to the root of this agreement and is incapable of being remedied by payment in money, or if it is capable of being remedied by payment in money, the defaulting party fails to pay the amount concerned within 14 (fourteen) days after such amount has been finally determined.

9. ARBITRATION

- 9.1. Save as specifically provided to the contrary in this agreement, any disputes arising from or in connection with this agreement or the termination thereof shall, at the request of any party to the dispute, be finally resolved in accordance with the rules of the Arbitration Foundation of Southern Africa (or its successor in title) ("Foundation") by an arbitrator or arbitrators appointed by the Foundation.
- 9.2. Notwithstanding anything to the contrary contained in this 9, any party shall be entitled to apply for, and if successful, be granted, an interdict from any competent court having jurisdiction.
- 9.3. For the purposes of clause 9.2 and for the purposes of having any award made by the arbitrator/s being made an order of court, each of the parties hereby submits itself to the non-exclusive jurisdiction of Witwatersrand Local Division of the High Court of South Africa.
- 9.4. This clause 9 is severable from the rest of this agreement and shall remain in full force and effect notwithstanding the termination of this agreement.

10. NOTICES AND DOMICILIUM

10.1. The parties choose as their domicilium citandi et executandi their respective addresses set out in this clause for all purposes arising out of or in connection with this agreement at which addresses all the processes and notices arising out of or in connection with this agreement, its breach or termination may validly be served upon or delivered to the parties.

10.2. For the purpose of this agreement the parties' respective addresses shall be -

10.2.1. as regards the transferor at 5 Press Avenue, Selby, Johannesburg, 2025;

facsimile number (011) 837 0390;

Attention : The company secretary;

10.2.2. as regards the transferee at 2100 - 1075 West Georgia Street, Vancouver, BC V6E 3G2 Canada;

facsimile number +604 631 3232;

Attention : The company secretary,

or at such other address not being a post office box or poste restante, of which the party concerned may notify the others in writing.

10.3. Any notice given in terms of this agreement shall be in writing and shall -

10.3.1. If delivered by hand be deemed to have been duly received by the addressee on the closing date;

- 10.3.2. If posted by prepaid registered post be deemed to have been received by the addressee on the 8th (eighth) business day following the date of such posting;
- 10.3.3. If transmitted by facsimile be deemed to have been received by the addressee 1 (one) business day after despatch.
- 10.4. Notwithstanding anything to the contrary contained in this agreement, a written notice or communication actually received by one of the parties from another including by way of facsimile transmission shall be adequate written notice or communication to such party.

11. WHOLE AGREEMENT

This agreement constitutes the whole agreement between the parties as to the subject-matter hereof and no agreement, representations or warranties between the parties other than those set out herein are binding on the parties.

12. VARIATION

No addition to or variation, consensual cancellation or novation of this agreement and no waiver of any right arising from this agreement or its breach or termination shall be of any force or effect unless reduced to writing and signed by all the parties or their duly authorised representatives.

13. RELAXATION

No latitude, extension of time or other indulgence which may be given or allowed by any party to any other party in respect of the performance of any obligation hereunder or enforcement of any right arising from this agreement and no single or partial exercise of any right by any party shall under any circumstances be construed to be an implied consent by such party or operate as a waiver or a novation of, or otherwise

affect any of that party's rights in terms of or arising from this agreement or estop such party from enforcing, at any time and without notice, strict and punctual compliance with each and every provision or term hereof.

14. COSTS

Each party shall pay its own cost of negotiating, drafting, preparing and implementing this agreement and the appendices to it.

15. COUNTERPARTS

This agreement may be signed in separate counterparts, each of which shall be deemed to be an original and all of which taken together shall constitute one and the same instrument. The counterpart of this agreement in fax form shall be conclusive evidence of the original signature and shall be as effected in law as the counterpart in original form showing the original signatures.

AGREEMENT

1. PARTIES

1.1. The parties to this agreement are -

1.1.1. Desert Charm Trading 221 (Proprietary) Limited (trading as Waterpan Mining Consortium);

1.1.2. First Uranium Limited;

1.1.3. First Uranium Corporation;

1.1.4. John Sembie Danana;

1.1.5. Henning Johannes Fourie;

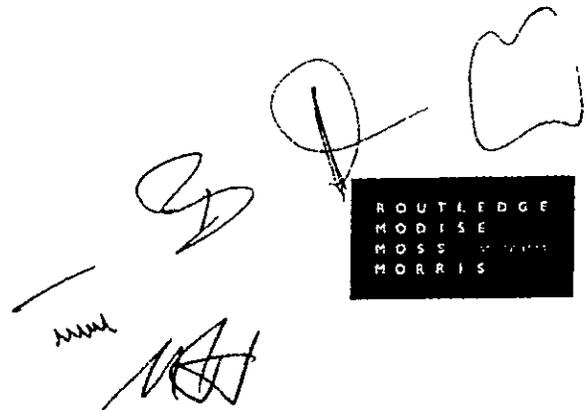

1.1.6. Lobbertus Jacobus Van Der Bijl; and

1.1.7. Ari Rasempe Letshuba Kgomongwe

1.2. The parties agree as set out below.

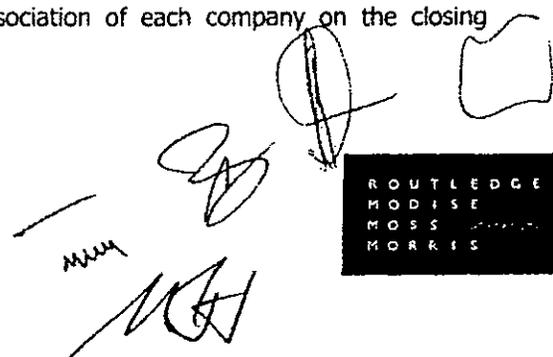

2. INTERPRETATION

2.1. In this agreement, unless clearly inconsistent with or otherwise indicated by the context -

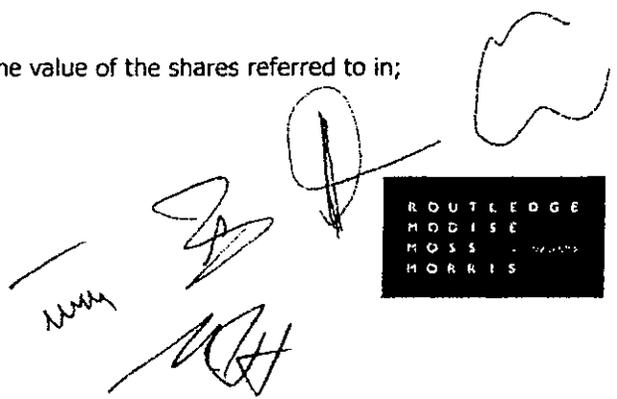

The bottom right of the page contains several handwritten signatures and a logo. The logo is a black rectangle with the text "ROUTLEDGE MODISE MOSS MORRIS" in white, stacked vertically. There are several handwritten signatures in black ink, including one that appears to be "SD" and another that is more complex and stylized.

- 2.1.1. "the/this agreement" means the agreement set out in this document and the appendices hereto;
- 2.1.2. "business day" means any day other than a Saturday, Sunday or official public holiday in the Republic of South Africa;
- 2.1.3. "the closing date" means the date upon which the JSE Limited admits the listing of FUC on the JSE Limited as contemplated in 4.1.2;
- 2.1.4. "CSDP" means Central Securities Depository Participant, registered in terms of the Custody and Administration of Securities Act No 85 of 1992, as amended;
- 2.1.5. "the company" means Ezulwini Mining Company (Proprietary) Limited, (Registration Number 2004/028460/07), a company duly registered according to the company laws of the Republic of South Africa;
- 2.1.6. "the Companies Act" means the Companies Act, 1973 (as amended);
- 2.1.7. "the date of signature" means the date of signature of this agreement by the last party signing;
- 2.1.8. "the documents of title" means collectively -
- 2.1.8.1. the share certificates in respect of the shares together with share transfer forms in respect thereof duly completed and signed by the registered holder/s or its/their duly authorised representative/s in accordance with the Company's Act and the memorandum and articles of association of each company on the closing date;

Handwritten signatures and initials, including a large signature, a smaller signature, and the initials 'MMH' and 'MAH'.

- 2.1.8.2. a certified copy of a resolution of the directors of the company appointed by the transferor, passed in accordance with the articles of association of the company approving the transfer of the shares into the name of the transferee;
- 2.1.8.3. all other books, documents and records of the company which is in the transferor's possession;
- 2.1.9. "the effective date" means the closing date;
- 2.1.10. "FUC shares" means 6 141 009 (six million one hundred and forty one thousand and nine) shares in the authorised share capital of the FUC, to be issued to the transferor in discharge of the purchase price;
- 2.1.11. "FUC" means First Uranium Corporation (BC Number C0777 384), a corporation duly continued under the Business Corporations Act of the Province of British Columbia, Canada;
- 2.1.12. "the lock up period" means the period commencing on the closing date and expiring on the second anniversary thereof
- 2.1.13. "the lock in shares" means 90% of the FUC shares to be issued to the transferor in terms of this agreement;
- 2.1.14. "the transferee" means First Uranium Limited a Corporation duly registered under the laws of Cyprus;
- 2.1.15. "the consideration" means the value of the shares referred to in;

The bottom right of the page contains several handwritten signatures and a rectangular stamp. The stamp is black with white text that reads "ROUTLEDGE MODISE MOSS & MORRIS". There are three distinct signatures: one on the left, one in the middle, and one on the right that appears to be a large, stylized flourish or signature.

- 2.1.16. "the shares" means ordinary shares in the issued share capital of the company constituting 10% (ten per centum) of the entire issued share capital of the company transferred by the transferor to the transferee in terms of this agreement;
- 2.1.17. "the transferor" means Desert Charm Trading 221 (Proprietary) Limited (trading as Waterpan Mining Consortium) (Registration Number 2003/021403/07), a company duly registered and incorporated according to the company laws of the Republic of South Africa;
- 2.1.18. "the shareholders" means

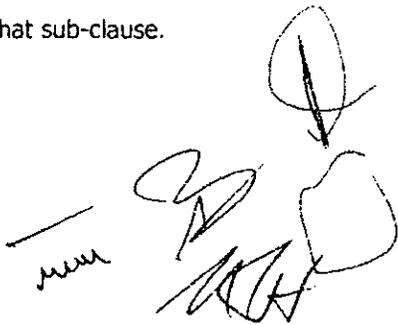

John Sembie Danana, Henning Johannes Fourie, Lobbertus Jacobus Van Der Bijl and Ari Rasempe Letshuba Kgomongwe, or any of them as the context may indicate.
- 2.1.19. any reference to the singular includes the plural and vice versa;
- 2.1.20. any reference to natural persons includes legal persons and vice versa; and
- 2.1.21. any reference to a gender includes the other genders.
- 2.2. Should any provision in a definition be a substantive provision conferring rights or imposing obligations on any party, then effect shall be given to that provision as if it were a substantive provision in the body of this agreement.
- 2.3. Any reference to an enactment, regulation, rule or by-law is that enactment, regulation, rule or by-law as at the date of signature, and as amended or replaced from time to time.
- 2.4. Where any number of days is prescribed, such number shall exclude the first and include the last day, unless the last day falls on a Saturday, Sunday or public

A collection of handwritten signatures and initials in black ink, including a large signature that appears to be 'Moss' and several other initials.

A black rectangular logo with the text 'ROUTLEDGE MODISE MOSS MORRIS' in white, stacked vertically.

holiday in the Republic of South Africa, in which case the last day shall be the next succeeding day which is not a Saturday, Sunday or public holiday.

- 2.5. The use of the word "including" followed by a specific example/s shall not be construed as limiting the meaning of the general wording succeeding it and the *eiusdem generis* rule shall not be applied in the interpretation of such general wording or such specific example/s.
- 2.6. The expiration or termination of this agreement shall not affect those provisions of this agreement which expressly provide that they will operate after any such expiration or termination or which of necessity must continue to have effect after such expiration or termination, notwithstanding the fact that the clauses themselves do not expressly provide this.
- 2.7. In its interpretation, the *contra proferentem* rule of construction shall not apply (this agreement being the product of negotiations between the parties) nor shall this agreement be construed in favour of or against any party by reason of the extent to which any party or its professional advisors participated in the preparation of this agreement.
- 2.8. Recordals shall be binding on the parties and are not merely for information purposes.
- 2.9. All amounts payable in terms of this agreement are exclusive of VAT unless otherwise indicated.
- 2.10. The clause headings in this agreement have been inserted for convenience only and shall not be taken into account in its interpretation.
- 2.11. Words and expressions defined in any sub-clause shall, for the purposes of the clause of which that sub-clause forms part, bear the meaning assigned to such words and expressions in that sub-clause.

2.12. This agreement shall be governed by and construed and interpreted in accordance with the laws of South Africa.

3. RECORDAL

The transferor wishes to organise its current direct holding in the company through a share for share exchange in FUC. In the context of the re-organisation the transferee will own the holdings in the company. At the final state of the reorganisation the transferee will hold 100% of the shares in the company and the transferor will have exchanged its holding for shares in FUC.

4. CONDITIONS PRECEDENT

4.1. The whole of this agreement (other than this clause 4 and clauses 10, 12, 13, 14, 15, 16 and 17 by which the parties shall nevertheless be bound) is subject to the fulfilment of the suspensive conditions that:

4.1.1. by no later than 31 December 2006 a primary listing of the transferee takes place on the Toronto Stock Exchange;

4.1.2. by no later than 31 December 2007 the JSE limited agrees to admit the listing of the transferee on the JSE Limited;

4.2. Each of the parties shall use reasonable endeavours to procure the fulfilment of the conditions.

4.3. The conditions in 4.1 are expressed to be for the benefit of the transferee. The transferee may waive (to the extent possible) the conditions precedent referred to in 4.1 or extend the date for their fulfilment for a further period of 12 (twelve) months from the expiry of the period referred to in 4.1 or such longer period as may be agreed to between the parties.

Handwritten signatures and initials, including a large signature that appears to be 'J. Morris' and another signature that appears to be 'M. Morris'.

ROUTLEDGE
MOORE
MOSS
MORRIS

4.4. If the conditions referred to in 4.1 are not fulfilled on or before the date referred to in that clause (and fulfilment thereof is not waived or extended), this agreement shall be of no further force and effect and -

4.4.1. all obligations of the parties under this agreement (other than this clause 4 and clauses 10, 12, 13, 14, 15, 16 and 17 by which the parties shall nevertheless be bound) shall terminate;

4.4.2. to the extent that this agreement may have been partially implemented, the parties shall both be restored to their status *quo ante*.

5. TRANSFER OF SHARES

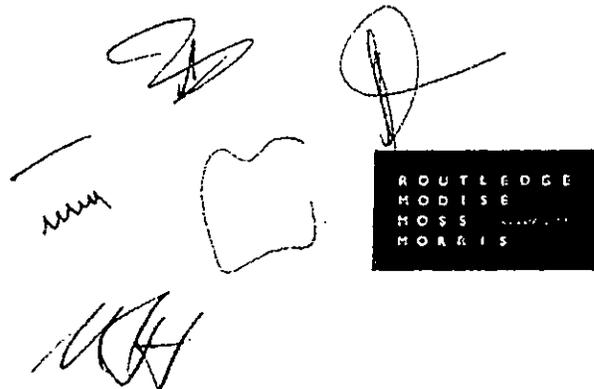

5.1. The transferor transfers to the transferee which acquires the shares with effect from the effective date on which date all risk in and benefit attaching to the shares shall pass to the transferee.

5.2. The transfer constitutes an indivisible transfer of the shares by the transferor.

6. CONSIDERATION

6.1. The consideration at which the transfer is to be effected shall be the amount as stipulated in the Resolution to be signed by the Board of Directors of the transferee authorising the transaction set out in this agreement.

6.2. The consideration given by the transferee to the transferor for the shares shall be effected on the closing date by the transferee causing FUC to issue and allot the FUC shares to the transferor, and FUC hereby agrees to issue and allot the FUC shares to the transferor on the closing date.

The bottom right of the page contains several handwritten signatures and a stamp. There are three distinct signatures in ink. To the right of these is a rectangular stamp with the text "ROUTLEDGE MODISE HOSS MORRIS" arranged in four lines. The stamp is partially obscured by the signatures.

7. CLOSING

7.1. At 10h00, on the closing date, representatives of the transferor and the transferee shall meet at the offices of the transferor ("the closing meeting")

7.2. At the closing meeting -

7.2.1. the transferor shall deliver the documents of title to the transferee;

7.2.2. the transferee shall procure that FUC delivers written confirmation of the issue and allotment to the transferor of the FUC shares which FUC shares will -

7.2.2.1. be registered in the name of the CSDP appointed by the transferor with the transferor as beneficial holder;

7.2.2.2. be credited as fully paid; and

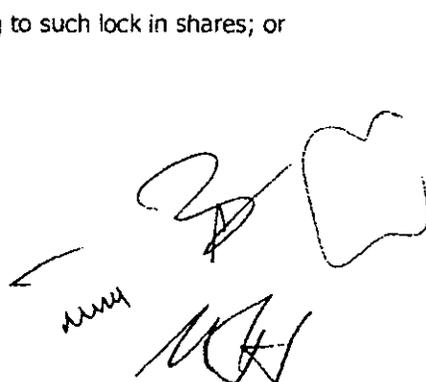

7.2.2.3. be listed on the JSE Limited.

8. LOCK-UP

8.1. The transferor irrevocably and unconditionally warrants and undertakes that it shall not, without the prior written consent of transferee:-

8.1.1. dispose of, lend, alienate, encumber or in any other manner deal with lock in shares or any of the rights attaching to such lock in shares; or

8.1.2. enter into any contract to sell, cede, transfer, lend, alienate, encumber or in any other manner deal with all or any part of its lock in shares or any of the rights attaching to such lock in shares; or

Handwritten signatures and initials, including a large signature that appears to be 'Moss' and another that appears to be 'Morris'. There is also a circular stamp or mark.

ROUTLEDGE
MODISE
MOSS
MORRIS

8.1.3. enter into any agreement in respect of the votes attaching to any of its lock in shares or any of the other rights attaching to its lock in shares; or

8.1.4. agree to do any of the foregoing,

prior to the expiry of the lock-up period.

8.2 The shareholders irrevocably and unconditionally warrant and undertake that they shall during the lock-up period, unless otherwise agreed to by the transferee, be and remain the controlling shareholders of the transferor in the proportions in which they hold shares in the transferor on the date of signature.

9. WARRANTIES

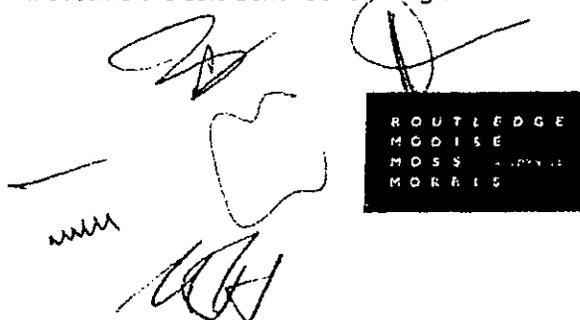

9.1. The transferor warrants that -

9.1.1. it is as at the date of signature, the closing date and the period between those dates the sole registered and beneficial owner of the shares and will be reflected in the register of members of the company as such;

9.1.2. as at the date of signature, the closing date and the period between those dates the transferor has no claims against the company whether on loan account or otherwise;

9.1.3. the shares will, when delivered to the transferee, be free of any pledge, lien, hypothec, notarial bond or encumbrance whatever and free of all other rights of retention or pre-emption and no person has an option to acquire the shares;

9.1.4. on the closing date against delivery of the documents in title by the transferor to the transferee, ownership of the shares will pass to the transferee and the transferee will become the sole beneficial and registered owner of the shares.

The bottom right of the page contains several handwritten signatures and a stamp. There are three distinct signatures in black ink. To the right of these signatures is a rectangular stamp with the text "ROUTLEDGE MOISE MOSS MORRIS" arranged in four lines. The stamp is partially obscured by the signatures.

9.2. Save for the warranties provided by the transferor to the transferee in terms of this clause 8, the transferor gives and makes no warranties, representations or the like of whatsoever nature and howsoever arising and whether express or implied as regards the company and the shares and accordingly the shares are sold voetstoots.

10. NEGATIVE UNDERTAKINGS

10.1. Notwithstanding 9, as from the date of signature until the closing date the transferor and each shareholder respectively gives to the transferee the undertakings contained in clause 10.2 and 10.3 below. Each of the below mentioned undertakings -

10.1.1. are a separate and distinct undertaking;

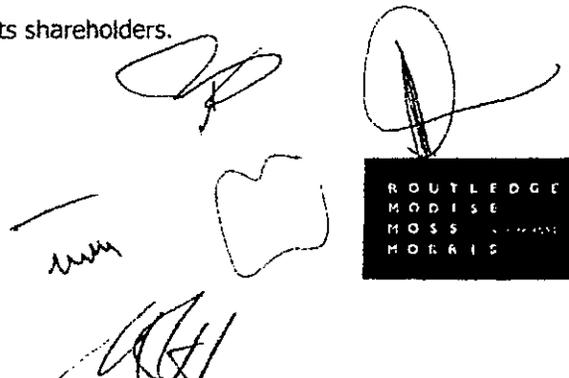

10.1.2. shall not be qualified by or limited with reference to any other such undertaking and/or any other undertaking contained elsewhere in this agreement;

10.2. The transferor shall not, without the transferee's prior written consent, which consent shall not be unreasonably withheld,-

10.2.1. create or permit to any mortgage, pledge, lien, deed of cession, assignment, hypothecation or security interest or any other agreement or arrangement over the shares having the effect of conferring security whether by contract or operation of law;

10.2.2. dispose of, whether by one or more transactions or series of transactions (whether related or not and whether voluntarily or involuntarily) any of the shares;

10.2.3. make any payments to its shareholders.

The bottom right of the page contains several handwritten signatures and a stamp. There are three distinct signatures in black ink. To the right of these signatures is a rectangular stamp with the text "ROUTLEDGE MODISE MOSS MORRIS" arranged in four lines. The stamp is partially obscured by a signature that appears to be written over it.

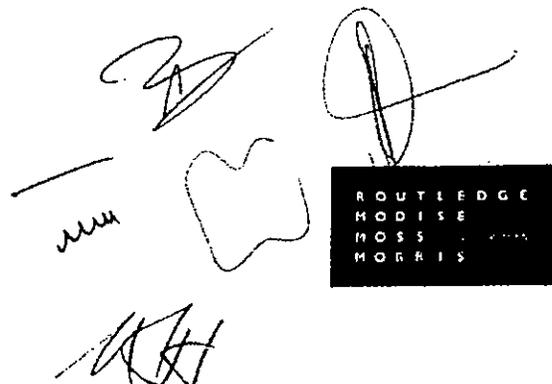

10.3. The shareholders shall not, without the transferee's prior written consent, which consent shall not be unreasonably withheld,-

10.3.1. create or permit to any mortgage, pledge, lien, deed of cession, assignment, hypothecation or security interest or any other agreement or arrangement over the shares which they hold in the transferor having the effect of conferring security whether by contract or operation of law;

10.3.2. dispose of, whether by one or more transactions or series of transactions (whether related or not and whether voluntarily or involuntarily) any of their shares which they hold in the transferor.

11. BREACH

Should any party ("the defaulting party") commit a breach of any of the provisions of this agreement, then the other party ("the aggrieved party") shall be obliged to give the defaulting party 14 (fourteen) days' written notice or such longer period as may reasonably be required in the circumstances, to remedy the breach. If the defaulting party fails to comply with such notice, the aggrieved party shall be entitled to claim immediate payment and/or specific performance by the defaulting party of all the defaulting party's obligations whether or not the due date for payment and/or performance shall have arrived, in either event without prejudice to the aggrieved party's rights to claim damages. The foregoing is without prejudice to such other rights as the aggrieved party may have at law; provided always that, notwithstanding anything to the contrary contained in this agreement, the aggrieved party shall not be entitled to cancel this agreement for any breach by the defaulting party unless such breach is a material breach going to the root of this agreement and is incapable of being remedied by payment in money, or if it is capable of being remedied by payment in money, the defaulting party fails to pay the amount concerned within 14 (fourteen) days after such amount has been finally determined.

The block contains several handwritten signatures and initials. At the top left, there is a signature that appears to be 'W'. To its right is a signature that looks like 'A'. Below these, there are initials 'mm' and a large, stylized signature that resembles 'AH'. At the bottom center, there is another signature that looks like 'AH'. To the right of the 'mm' initials, there is a rectangular stamp with the text 'ROUTLEDGE MODISE MOSS MORRIS' arranged in four lines.

12. ARBITRATION

- 12.1. Save as specifically provided to the contrary in this agreement, any disputes arising from or in connection with this agreement or the termination thereof shall, at the request of any party to the dispute, be finally resolved in accordance with the rules of the Arbitration Foundation of Southern Africa (or its successor in title) ("Foundation") by an arbitrator or arbitrators appointed by the Foundation.
- 12.2. Notwithstanding anything to the contrary contained in this 12, any party shall be entitled to apply for, and if successful, be granted, an interdict from any competent court having jurisdiction.
- 12.3. For the purposes of clause 12.2 and for the purposes of having any award made by the arbitrator/s being made an order of court, each of the parties hereby submits itself to the non-exclusive jurisdiction of Witwatersrand Local Division of the High Court of South Africa.
- 12.4. This clause 12 is severable from the rest of this agreement and shall remain in full force and effect notwithstanding the termination of this agreement.

13. NOTICES AND DOMICILIUM

- 13.1. The parties choose as their domicilium citandi et executandi their respective addresses set out in this clause for all purposes arising out of or in connection with this agreement at which addresses all the processes and notices arising out of or in connection with this agreement, its breach or termination may validly be served upon or delivered to the parties.

- 13.2. For the purpose of this agreement the parties' respective addresses shall be -

13.2.1. as regards the transferor and the shareholders at 2 Van Oordt Avenue,
Monument, Krugersdorp

The block contains several handwritten signatures in black ink. To the right of the signatures is a rectangular stamp with the text "ROUTLEDGE HODISE MOSS MORRIS" arranged in four lines. The stamp is partially obscured by the signatures.

13.2.2. as regards the transferee at 5 Press Avenue, Selby, Johannesburg;

facsimile number: (011) 837-3842;

Attention : The Company Secretary,

or at such other address not being a post office box or poste restante, of which the party concerned may notify the others in writing.

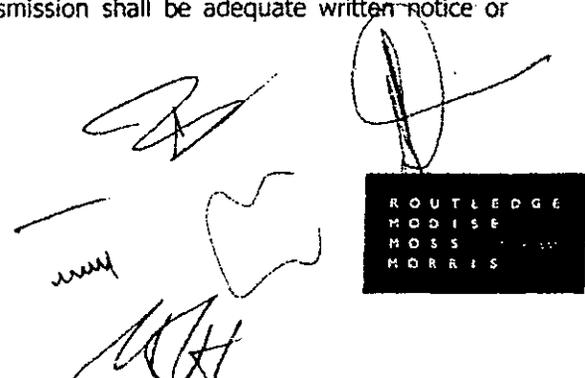

13.3. Any notice given in terms of this agreement shall be in writing and shall -

13.3.1. if delivered by hand be deemed to have been duly received by the addressee on the closing date;

13.3.2. if posted by prepaid registered post be deemed to have been received by the addressee on the 8th (eighth) business day following the date of such posting;

13.3.3. if transmitted by facsimile be deemed to have been received by the addressee 1 (one) business day after despatch.

13.4. Notwithstanding anything to the contrary contained in this agreement, a written notice or communication actually received by one of the parties from another including by way of facsimile transmission shall be adequate written notice or communication to such party.

The block contains several handwritten signatures in black ink. To the right of the signatures is a black rectangular logo with the text "ROUTLEDGE MOISE MOSS MORRIS" in white, stacked vertically.

14. WHOLE AGREEMENT

This agreement constitutes the whole agreement between the parties as to the subject-matter hereof and no agreement, representations or warranties between the parties other than those set out herein are binding on the parties.

15. VARIATION

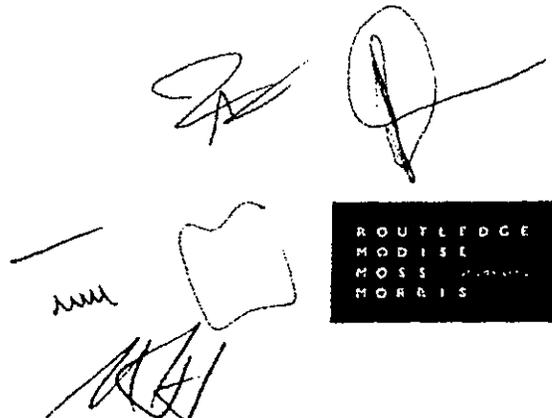

No addition to or variation, consensual cancellation or novation of this agreement and no waiver of any right arising from this agreement or its breach or termination shall be of any force or effect unless reduced to writing and signed by all the parties or their duly authorised representatives.

16. RELAXATION

No latitude, extension of time or other indulgence which may be given or allowed by any party to any other party in respect of the performance of any obligation hereunder or enforcement of any right arising from this agreement and no single or partial exercise of any right by any party shall under any circumstances be construed to be an implied consent by such party or operate as a waiver or a novation of, or otherwise affect any of that party's rights in terms of or arising from this agreement or estop such party from enforcing, at any time and without notice, strict and punctual compliance with each and every provision or term hereof.

17. COSTS

Each party shall pay its own cost of negotiating, drafting, preparing and implementing this agreement and the appendices to it.

The bottom right of the page contains several handwritten signatures and a stamp. There are four distinct signatures: one at the top left, one at the top right, one at the bottom left, and one at the bottom right. A rectangular stamp is located at the bottom right, containing the text "ROUTLEDGE MODISE MOSS MORRIS" in a grid-like format.

18. COUNTERPARTS

This agreement may be signed in separate counterparts, each of which shall be deemed to be an original and all of which taken together shall constitute one and the same instrument. The counterpart of this agreement in fax form shall be conclusive evidence of the original signature and shall be as effected in law as the counterpart in original form showing the original signatures.

SALE OF TAILINGS DAMS AND MINING RIGHT AGREEMENT

1. **PARTIES**

1.1 **BUFFELSFONTEIN GOLD MINES LIMITED**

1.2 **FIRST URANIUM (PROPRIETARY) LIMITED**

1.3 **SIMMER AND JACK MINES LIMITED**

2. **INTERPRETATION**

2.1 The headnotes to the clauses of this Agreement are inserted for reference purposes only and shall in no way govern or effect the interpretation hereof.

2.2 Unless in consistent with the context the expressions set forth below shall bear the following meanings:

“this Agreement” this agreement together with all attachments thereto;

“Business Day” any day other than a Saturday, Sunday or official public holiday in the Republic of South Africa;

“Buffelsfontein” Buffelsfontein Gold Mines Limited, Registration Number 1995/010072/06, a company duly registered according to the laws of the Republic of South Africa;

"Buffelsfontein Plant"	the existing gold processing plant situated on the Property and shaded in blue on the plan annexed hereto as Appendix 1;
"Closing Date"	the first Business Day occurring 1 (one) day after the Effective Date;
"Conditions Precedent"	the conditions precedent referred to in 4;
"Current Arisings"	the tailings arising from Buffelsfontein's processing of all gold bearing ore produced at the Mine on an ongoing basis after the Effective Date
"Date of Signature"	the date of signature of this Agreement by the Party signing last in time;
"DME"	Department of Minerals and Energy;
"Effective Date"	the date on which the Conditions Precedent are fulfilled;
"FUSA"	First Uranium (Proprietary) Limited, Registration Number 2005/033680/07, a company registered according to the laws of the Republic of South Africa;
"Lease"	The draft lease attached as Appendix 5;
"Mine"	the underground gold mining operation

undertaken by Buffelsfontein on the Property;

"Mining Right"

the old order mining right held by Buffelsfontein under mining license number ML4/2001 in respect of gold on certain portions of the farms Mapaiskraal 441 IP, Buffelsfontein 443 IP, Wildebeestpan 442 IP, Stilfontein 401 IP, Hartebeestfontein 422 IP, Zandpan 423 IP, Palmietfontein 403 IP, Grootvaderbosch 470 IP, Die Hoek 114 IP, Doornkom Oost 447 IP and Townlands of Klerksdorp 424 IP with the common law mineral rights and/or mining rights in terms of sec 47 of the minerals Act, 1991, held by Buffelsfontein in relation thereto;

"Minister"

the Minister of Minerals and Energy;

"MPRDA"

the Mineral and Petroleum Resources Development Act 28 of 2002;

"New Order Mining Right"

the mining right, once converted pursuant to conversion of the Mining Right in terms of Item 7(2) of schedule II of the MPRDA, which converted right will be amended as contemplated in 3.3 below;

"Party"	Buffelsfontein, FUSA or Simmers and "Parties" means a reference to any of them;
"Plant Manager"	the juristic entity or natural person appointed by FUSA to manage the day to day operations of the Processing Plant;
"Portion Mining Right"	that portion of the New Order Mining Right which relates to the gold, uranium, sulphur, pyrite aggregate and rare earths in respect of the Tailings Dams and Current Arisings;
"Property"	the Property indicated by the area shaded in light orange on the plan annexed hereto as Appendix 1 together with all permanent improvements thereon;
"Prospecting Right"	the right applied for by Buffelsfontein in terms of section 16 of the MPRDA to prospect for uranium, sulphur, pyrite and rare earths in respect of the Tailings Dams;
"Processing Plant"	the processing plant to be constructed on the Property in order to process gold, uranium, sulphur, pyrite, aggregate and rare earths in the Tailings Dams and the

Current Arising;

"Process"

when used as a noun means the activity of the extraction of gold, uranium, sulphur, silver, pyrite, aggregate and rare earths from the Tailings Dams and Current Arisings by the treatment process conducted at the Processing Plant;

"Rehabilitation Liabilities"

the obligations to rehabilitate the Tailings Dams in terms of section 41 of the MPRDA which obligations are set out in Appendix 2A hereto;

"ROM"

the run of mine ore produced by Buffelsfontein at the Mine subsequent to the effective date;

"Sale Property"

those portions of the Property which are owned by Buffelsfontein as at the Effective date;

"Simmers"

Simmer and Jack Mines Limited, a company duly registered according to the company laws of the Republic of South Africa;

"SRP's"

the Surface Right Permits listed in Appendix 2 hereto;

- 2.3 "Tailings Dams" the 11 (eleven) tailings dams situated on the Property and indicated by the area shaded orange on the plan annexed hereto as Appendix 1;
- "Transfer SRP's" All the Surface Right Permits that attach to the Property and the Tailings Dams, including without limitation, Surface Right Permit No's 95/73 (with R.M.T. O 198/72), 10/74 (with R.M.T. O 82/73), 97/86 (with R.M.T O 43/86), 98/86 (with R.M.T. O 41/86), C7/1959 (with R.M.T. 398), 8/95 (with R.M.T. O 10/95), 52/1973 (with R.M.T. O 3/73) and 69/82 (with R.M.T. O 63/82);
- "Undivided Portions" those portions of the Sale Property which will be required to be subdivided as contemplated in 19.
- 2.4 a "person" shall be construed as a reference to any person, firm, company, corporation, government, state or agency of a state or any association or partnership (whether or not having separate legal personality) of two or more of the foregoing.
- 2.5 If any provision in a definition is a substantive provision conferring rights or imposing obligations on either Party, notwithstanding that it is only in

the definitions clause, effect shall be given to it as if it were a substantive provision of this Agreement.

2.6 Unless the context dictates otherwise, an expression which denotes any gender includes both the others; and to a natural person includes an artificial person and to the singular includes the plural, and vice versa in each case.

2.7 The Appendices to this Agreement form an integral part hereof and words and expressions defined in this Agreement shall bear, unless the context otherwise requires, the same meaning in such Appendices.

2.8 When any number of days is prescribed in this Agreement, same shall be reckoned exclusively of the first and inclusively of the last day unless the last day falls on a day which is not a Business Day, in which case the last day shall be the next succeeding Business Day.

2.9 In the event that the day for payment of any amount due in terms of this Agreement should fall on a day which is not a Business Day, the relevant date shall be the next succeeding Business Day.

2.10 Where any term is defined within the context of any particular clause in this Agreement, the term so defined, unless it is clear from the clause in question that the term so defined has limited application to the relevant clause, shall bear the same meaning as ascribed to it for all purposes in

terms of this Agreement, notwithstanding that that term has not been defined in this interpretation clause.

- 2.11 Any reference in this Agreement to an enactment or a statute is to that enactment or statute passed by the Legislature of the Republic of South Africa, as at the Date of Signature of this Agreement and as amended or re-enacted from time to time.
- 2.12 The rule of construction that the contract shall be interpreted against the Party responsible for the drafting or preparation of the Agreement, shall not apply.
- 2.13 The expiration or termination of this Agreement shall not affect such of the provisions of this Agreement as expressly provide that they will operate after any such expiration or termination or which of necessity must continue to have effect after such expiration or termination, notwithstanding that the clauses themselves do not expressly provide for this.
- 2.14 Save where the contrary is indicated, any reference in this Agreement to this Agreement or any other Agreement or document shall be construed as a reference to this Agreement or, as the case may be, such other Agreement or document, as same may have been, or may from time to time be, amended, varied, novated or supplemented.

2.15 Where any term is not defined in this Agreement then the term shall be defined in terms of the applicable South African law as at the Date of Signature of this Agreement, irrespective of the place of registration or incorporation of the Party to whom such term is applied.

2.16 Without prejudice to any other provision of this Agreement, any successor in title, including any executor, heir, liquidator, judicial manager, curator or trustee of any party shall be bound by this Agreement as fully and effectually as if they had signed this Agreement in the first instance and reference to any party shall be deemed to include any successor in title.

3. INTRODUCTION

3.1 Buffelsfontein _

3.1.1 owns the Mining Right, the Sale Property, the Buffelsfontein Plant and the Tailings Dams; and

3.1.2 will acquire the SRP's; and

3.1.3 conducts and will in the future conduct gold mining operations at the Mine and produce Current Arisings.

3.2 An application for the Prospecting Right ("the Prospecting Right Application") has been submitted by Buffelsfontein to the DME and has been accepted.

- 3.3 Notwithstanding the submission of the Prospecting Right Application and after having received advice from the Deputy Regional Manager of the DME, North West Region, Buffelsfontein has in addition to the Prospecting Right Application applied to the DME to have the Mining Right converted into a New Order Mining Right in terms of section 7 (2) of Schedule II of the MPRDA. If and when this conversion application is approved, Buffelsfontein will also apply –
- 3.3.1 to have the New Order Mining Right amended, with effect from the date of conversion, in terms of section 102 of the MPRDA to include the authority to mine for uranium, gold, sulphur, silver, pyrite, aggregate and rare earths underground and in respect of the Current Arisings and the Tailings Dams ("the Conversion, Amendment and Subdivision Application"); and
- 3.3.2 to have that portion of the New Order Mining Right subdivided ("the Portion Mining Right").
- 3.4 It is the intention of the parties that the Prospecting Right Application and the Conversion, Amendment and Subdivision Application will be pursued in parallel with the intention that the Prospecting Right Application will be held in abeyance pending the Minister's approval of the Conversion, Amendment and Subdivision Application.
- 3.5 Upon the conversion of the Mining Right and the grant of the amendment and subdivision as contemplated in 3.3 above or upon

granting the Prospecting Right by the Minister, Buffelsfontein shall apply to the Minister pursuant to section 11 of the MPRDA to transfer to FUSA either -

3.5.1 the Portion Mining Right; or

3.5.2 the Prospecting Right.

3.6 Arising out of the above --

3.6.1 FUSA wishes to purchase the Tailings Dams and the Sale Property from Buffelsfontein and Buffelsfontein wishes to sell such Tailings Dams and the Sale Property to FUSA;

3.6.2 Buffelsfontein wishes to sell and cede the Portion Mining Right or the Prospecting Right, as the case may be, to FUSA who hereby wishes to purchase and take transfer of such right;

3.6.3 Buffelsfontein wishes to sell the Current Arisings to FUSA;

3.6.4 Buffelsfontein wishes to cede the Transfer SRP's to FUSA.

4. **CONDITIONS PRECEDENT**

4.1 The whole of this Agreement (other than this clause 4 and clauses 10, 14, 25, 29, 30 and 31 by which the parties shall nevertheless be bound) is subject to the fulfilment of the following suspensive conditions by not later than 31 December 2007 -

- 4.1.1 Buffelsfontein applies for and obtains the conversion of its Mining Right into the New Order Mining Right and that simultaneously with such conversion the New Order Mining Right is amended to include the right to mine for gold, uranium, silver, sulphur, pyrite, aggregate and rare earths underground and in respect of the Current Arisings and the Tailings Dams and that that portion of the amended New Order Mining Right, being the Portion Mining Right, be subdivided and that the Minister grants consent to cede the Portion Mining Right to FUSA; or
- 4.1.2 Buffelsfontein applies for and is granted the Prospecting Right and that the Minister consents to the Prospecting Right being ceded to FUSA.
- 4.2 Each of the parties shall use reasonable endeavours to procure the fulfilment of the conditions.
- 4.3 The conditions are expressed to be for the benefit of FUSA . FUSA may , where possible, waive the conditions referred to in 4.1 or extend the date for their fulfilment for a further period of 180 (one hundred and eighty) days from the expiry of the period referred to in 4.1.
- 4.4 If the conditions referred to in 4.1 are not fulfilled on or before the date referred to in that clause (and fulfilment thereof is not waived and/or

extended) this Agreement shall be of no further force and effect unless otherwise agreed by the parties hereto and -

4.4.1 all obligations of the parties under this Agreement (other than clause 4 and clauses 10, 14, 25, 29, 30 and 31 by which the parties shall nevertheless be bound) shall terminate;

4.4.2 to the extent that this Agreement may have been partially implemented the parties shall both be restored to their status quo ante.

5. **SALE**

5.1 Subject to the fulfilment of the Conditions Precedent, Buffelsfontein hereby;

5.1.1 sells to FUSA, which hereby purchases, the Tailings Dams with effect from the Effective Date on the terms set out in this Agreement;

5.1.2 sells to FUSA, which hereby purchases, the Sale Property and the Undivided Portions with effect from the Effective Date.;

5.1.3 sells and undertakes to cede, assign and make over to FUSA the Portion Mining Right or the Prospecting Right on the terms set out in this Agreement and Appendix 3 and Appendix 4, as the case may be;

5.1.4 sells and undertakes to deliver to FUSA as and when it produces, all Current Arisings;

5.1.5 sells and undertakes to cede, assign and transfer to FUSA, the Transfer SRP's; and

5.1.6 undertakes to grant to FUSA the servitudes contemplated in clause 11 and 12 hereof;

5.1.7 sells and undertakes to cede, assign, transfer and make over to FUSA all its right, title and interest in and to all geological information and/or other development work and designs which have been prepared by or on behalf of Buffelsfontein or which is in the process of being prepared for and on behalf of Buffelsfontein,

all of the above constituting ("the Sale Assets").

5.2 The above sale constitutes one indivisible transaction. Neither party shall be entitled to claim sale or purchase of any of the above assets separately from all the Sale Assets.

6. PURCHASE CONSIDERATION

6.1 The purchase consideration payable by FUSA to Buffelsfontein for the Sale Assets shall be the following:

6.1.1 in respect of the Tailings Dams and the Property

6.1.1.1 the sum of R100,00 (one hundred Rand); plus

6.1.1.2 the assumption by FUSA of the Rehabilitation Liabilities subject to the requirements of the DME.

6.1.2 for the cession of the Portion Mining Right or the Prospecting Right, as the case may be, and for the Current Arisings, the Transfer SRP's, for the granting of the servitudes contemplated in clauses 11 and 12 and for the geological information and development work referred to in 5.1.7 FUSA shall pay to Buffelsfontein, subject to the provisions of 13, a royalty of 1% (one per centum) plus value-added tax, of the gross revenue earned by FUSA from the sale of gold, uranium, silver, sulphur, pyrite, aggregate and rare earth recovered from the Process;

7. **DISCHARGE OF PURCHASE CONSIDERATION**

7.1 The purchase consideration payable by FUSA to Buffelsfontein in terms of clause 6 shall be paid by FUSA to Buffelsfontein as follows :

7.1.1 on the Closing Date FUSA shall pay the sum of R100,00 (one hundred Rand) referred to in 6.1.1 to Buffelsfontein in cash;

7.1.2 with effect from the Closing Date FUSA shall pursuant to the assignment referred to in 8, assume the Rehabilitation Liabilities and shall act in accordance with the provisions of clause 8;

7.1.3 the royalty referred to in 6.1.2 shall be paid by FUSA to Buffelsfontein in accordance with the provisions of 13.

8. **ENVIRONMENTAL REHABILITATION**

8.1 Subject to the consent of the DME and any other state department being provided, if necessary, on and with effect from the Closing Date

Buffelsfontein hereby cedes and assigns all of its rights and obligations under the Rehabilitation Liabilities to FUSA who hereby accept such cession and assignment. The parties undertake to sign such documents and do whatever may be required in order to obtain the above consent from the DME, if required.

- 8.2 Buffelsfontein records that it has established a trust fund pursuant to the Mining Right in terms of section 10(1)(cH) of the Income Tax Act for the environmental rehabilitation of the Mine and the Tailings Dams.
- 8.3 Buffelsfontein undertakes, subject to the approval of the DME and the South African Revenue Services, to amend the trust deed to reflect the environmental principles set out in 8.4 and 14.2 below.
- 8.4 FUSA undertakes, simultaneously with the submission of the environmental management programme contemplated in 14.2, to establish a trust fund in terms of Section 10(i)(cH) of the Income Tax Act No 58 of 1962 to make financial provision for the rehabilitation of the Tailings Dams and to obtain such approval as may be required by the DME and the South African Revenue Services to establish such trust fund.
- 8.5 FUSA shall, if required to do so by the DME, provide bank guarantees or other suitable financial instruments in an amount required by the DME for the Rehabilitation Liabilities and hereby indemnifies and holds

harmless Buffelsfontein against any claim which may be made by the DME against Buffelsfontein in respect of the Rehabilitation Liabilities pursuant to section 41 of the MPRDA, read with Regulations 52 and 53 of the MPRDA Regulations.

8.6 FUSA hereby indemnifies and holds Buffelsfontein harmless against any claim made against Buffelsfontein in respect of the rehabilitation liabilities assumed by FUSA in terms of this agreement.

9. **DELIVERY OF THE TAILINGS DAMS AND THE PORTION MINING RIGHT OR THE PROSPECTING RIGHT AND CURRENT RISINGS**

9.1 Buffelsfontein shall, deliver the Tailings Dams to FUSA within 2 (two) days after the Closing Date and in the presence of a notary public by way of *constitutum possessorium*, with the intention that ownership of the Tailings Dams shall pass to and be vested in FUSA upon the discharge by FUSA of the purchase consideration pursuant to the provisions of 7.

9.2 The parties shall take such steps as may be necessary to procure that the said notary public shall certify that delivery has taken place and shall complete a notarial certificate to that effect.

9.3 Until such time as the Tailings Dams have been delivered to FUSA, Buffelsfontein undertakes not to cause or permit the Tailings Dams to accede to the Property.

- 9.4 Buffelsfontein shall deliver the Current Arisings to FUSA on the Property as and when such Current Arisings are produced and as set out in 11.4.
- 9.5 Buffelsfontein undertakes to sign such documents and do such things as may be required to procure that the Portion Mining Right or the Prospecting Right, as the case may be, is ceded and transferred to FUSA in accordance with the provisions of the Mining Titles Registration Amendment Act No. 16 of 1967.
- 9.6 It is recorded that the Transfer SRP's are currently registered in the name of Beatrix Gold Mining Company Limited and are in the process of being transferred into Buffelsfontein's name. Buffelsfontein shall procure that as soon as reasonably possible after the Transfer SRP's are registered in its name, that it shall transfer the Transfer SRP's to FUSA and have same registered in the name of FUSA.

10. **SECURITY**

- 10.1 Buffelsfontein knows of no reason why this Agreement should not become unconditional and accordingly guarantees that the Tailing Dams will be delivered and that ownership thereof will be transferred to FUSA. Should Buffelsfontein for any reason whatsoever (including if the Conditions Precedent are not fulfilled), fail to deliver and transfer ownership of the Tailings Dams to FUSA on the Closing Date, Buffelsfontein shall pay to FUSA on demand pre-agreed damages in an amount of R1 455 000 000,00 (one billion four hundred and fifty five

million Rand) being the agreed damages that FUSA will suffer in the event that Buffelsfontein fails to deliver and transfer ownership of the Tailings Dams to FUSA for whatever reason.

- 10.2 As security for the obligations of Buffelsfontein to pay the penalty due in terms of this clause 10 should the Tailings Dams not be delivered or should ownership thereof not be transferred to FUSA for whatever reason, FUSA shall be entitled to register a notarial covering bond over the Tailings Dams substantially in the form of that annexed hereto as Appendix 5.

11. **CONSTRUCTION OF PIPELINES**

- 11.1 FUSA shall at its own cost construct and commission pipelines for the transfer of the Tailings from the Tailings Dams and the Current Arisings to the Processing Plant.
- 11.2 Buffelsfontein, insofar as it is able, hereby grants to FUSA a servitude to construct pipelines across the Property substantially on the terms set out in Appendix 6.
- 11.3 Buffelsfontein undertakes, within 2 (two) days after the Closing Date to execute a notarial deed of servitude (in the form of Appendix 6) and to procure the registration of such servitude in the Deed Registry Office.

11.4 Buffelsfontein agrees that the Current Arisings arising from future mining operations at the Mine will not be transferred to the Tailings Dams but will be transferred to the Processing Plant, by arrangement with the Plant Manager from time to time or to the extent that FUSA elects not to treat such Arising, such Arising shall be pumped by Buffelsfontein to its operating Tailings Dams at the time. No royalty will be payable by FUSA to Buffelsfontein in respect of any Tailings which are not processed by FUSA.

11.5 Buffelsfontein hereby agrees to allow FUSA to use the existing pipelines of Buffelsfontein if such pipelines are not required to be used by Buffelsfontein.

12. **SERVITUDE OF ACCESS AND EGRESS**

12.1 Buffelsfontein hereby grants to FUSA a servitude of access and egress across the Property to allow FUSA, its employees, consultants, agents and subcontractors to access the Processing Plant, the pipelines and the Tailings Dams for the purposes contemplated in this Agreement on the terms set out in Appendix 7. Buffelsfontein undertakes, within 2 (two) days after the Closing Date to execute a notarial deed of servitude (in the form of Appendix 6) and to procure the registration of such servitude in the Deed Registry Office.

13. **PAYMENT OF ROYALTY**

13.1 In relation to the payment of the royalty referred to in 6.1.2 FUSA agrees that it shall within 15 (fifteen) Business Days of the end of each quarter during the term of this Agreement cause to be delivered to Buffelsfontein:

13.1.1 a report in writing showing separately the gross revenue earned by FUSA arising from the sale of gold, uranium, silver, sulphur, pyrite, aggregate and rare earths recovered from the Process during the prior quarter;

13.1.2 a statement of the amount payable to Buffelsfontein in terms of the report referred to in clause 13.1.

13.2 Payment of the amount due in terms of the statement issued in terms of clause 13.1.1, together with value-added tax thereon at the standard rate from time to time, shall be made 10 (ten) Business Days after the date of delivery of each statement.

13.3 Buffelsfontein may nominate an independent auditor to examine the reports and statements referred to in 13.1. If in the opinion of the independent auditor, such reports and statements are inaccurate to the extent that a discrepancy of 5% (five percent) or more is discovered in relation to the amounts paid or payable in terms of 13.2, then the fees and expenses of such independent auditor shall be paid by FUSA.

- 13.4 In the event that FUSA disputes the opinion of the independent auditor, such dispute shall be referred to a partner of PriceWaterhouseCoopers appointed by the senior partner for the time being, who shall determine the dispute in his capacity as an expert and not as an arbitrator and whose decision shall be final and binding upon the parties.
- 13.5 The royalty payable has been determined on the basis that the Capital Gains Tax payable by Buffelsfontein in respect of the transactions contemplated under this agreement should not exceed an amount of \$2 000 000,00 (two million United States Dollars) (converted to South African Rands at the prevailing Rand/Dollar exchange rate as quoted by the Standard Bank of South Africa Limited on the date that such Capital Gains Tax is required to be paid). If the Capital Gains Tax payable in respect of the transactions contemplated under this agreement exceeds the sum of \$2 000 000,00 (two million United States Dollars) then Buffelsfontein shall pay such Capital Gains Tax in excess of \$2 000 000,00 (two million United States Dollars) but FUSA shall on the date that Buffelsfontein is required to pay the Capital Gains Tax pay a once off royalty to Buffelsfontein in an amount equal to the amount of Capital Gains Tax required to be paid by Buffelsfontein in excess of the sum of \$2 000 000,00 (two million United States Dollars) so that the net Capital Gains Tax payable by Buffelsfontein shall not exceed an amount of \$2 000 000,00 (two million United States Dollars) as converted to South African Rands.

14. **NEW ORDER MINING RIGHT**

The parties acknowledge that in order for the New Order Mining Right or the Prospecting Right, as the case may be, to be granted to Buffelsfontein and the Portion Mining Right or Prospecting Right, as the case may be, to be ceded to FUSA:

14.1 Buffelsfontein shall, simultaneously with the lodging of the Conversion, Amendment and Subdivision Application apply to the DME to amend the environmental management programme in respect of the Mining Right by excluding therefrom, the rehabilitation provisions in relation to that portion of the New Order Mining Right which will be ceded to FUSA in terms of this Agreement, being the Portion Mining Right; and

14.2 FUSA shall, simultaneously with the lodging of the Conversion, Amendment and Subdivision Application, submit and obtain approval from the DME of an environmental management programme which will cover the Portion Mining Right on the basis that Buffelsfontein will be completely released of all environmental and rehabilitation obligations in respect of the Portion Mining Right as regulated in this Agreement. It is recorded that Buffelsfontein will remain liable for the rehabilitation liabilities in respect of the Mine when it is awarded the New Order Mining Right.

15. **CURRENT ARISINGS**

15.1 With effect from the date that FUSA advises Buffelsfontein that the Processing Plant is ready to commence operations and to accept Tailings, Buffelsfontein shall, at its own cost and expense, procure that the Current Arisings is delivered to the Processing Plant as and when it is produced from the Mine.

15.2 Buffelsfontein undertakes to provide the Current Arisings exclusively to FUSA for so long as Buffelsfontein continues to mine and process gold ore at the Mine and undertakes not to Process the Current Arisings itself or grant any third party the right to Process the Current Arisings.

16. **ANCILLARY FACILITIES**

16.1 FUSA shall be entitled to use a portion of the electricity supplied to the Mine in terms of the agreement entered into between Buffelsfontein and Eskom on the basis that FUSA shall pay at cost, all charges for electricity supplied to that area of the Property which covers its operations, which include the Tailings Dams, the pipelines in 11 and the Processing Plant. FUSA shall be entitled to erect separate sub meters to measure the electricity used by it pursuant to this clause.

16.2 In addition to the aforesaid, FUSA shall be entitled to use water, chemicals, lime, security and all other infrastructure of Buffelsfontein

("the Facilities") on the basis that FUSA shall pay only its pro rata share of the direct costs incurred by Buffelsfontein in providing the Facilities.

17. **WASTE MATERIAL**

All Tailings remaining after the Process is completed may be returned, by FUSA, to the Tailings Dams or deposited elsewhere on the Property in accordance with –

- 17.1 the Mine plan lodged at the DME's office in support of the application for the Mining License which formed part of the Mining Right in terms of the Minerals Act, 1991; or
- 17.2 the Mining Works Programme submitted in terms of the MPRDA in support of the application for the issue of the Mining Right to FUSA; and
- 17.3 the provisions of the approved environmental management programme pertaining to the Tailings Dams, the Process and the Processing Plant and the Subdivided Mining Right and/or the Portion Mining Right.

18. **BUFFELSFONTEIN SALE**

Buffelsfontein shall not sell the assets comprising the Buffelsfontein Plant and the Mining Right or that portion of the New Order Mining Right which does not form part of the Portion Mining Right or its business ("Buffelsfontein Assets") without the prior written consent of FUSA.

19. **SUBDIVISION**

- 19.1 It is recorded and agreed that the Undivided Portions cannot be transferred to and registered in the name of FUSA until those portions of the Sale Property have been subdivided. The Parties undertake to use reasonable commercial endeavours to apply for permission to subdivide the Undivided Portions as soon as reasonably possible after the Date of Signature.
- 19.2 The Parties have determined that the Undivided Portions formed part of the area of jurisdiction of the Stilfontein Municipal Council prior to the commencement date of the Subdivision of Agricultural Land Act, No 70 of 1970 (as amended) and have since the amalgamation of Klerksdorp, Orkney, Stilfontein and Hartebeestfontein formed part of the area of jurisdiction of the Matlosana Municipal Council. Accordingly the Subdivision of Agricultural Land Act, No 70 of 1970 (as amended) does not apply to the Undivided Portions.
- 19.3 Buffelsfontein hereby undertakes to take all such steps as may be necessary to procure the subdivision at its cost.
- 19.4 Buffelsfontein hereby undertakes to grant whatever assistance may be reasonably required by FUSA for it to procure the subdivision, to support the subdivision and to sign any documents which may be required to be signed in order to give effect to the subdivision, including any powers of attorneys required for any application for the subdivision, when called upon to do so.
- 19.5 Registration of transfer of the Undivided Portions will be given to FUSA

as soon as reasonably possible after the subdivision at which time ownership will pass to FUSA.

19.6 Registration of transfer of the Undivided Portions will be effected by Buffelsfontein's attorneys at FUSA's cost, the Parties hereby undertaking upon demand to sign all documents necessary to effect transfer of the Undivided Portions into FUSA's name.

19.7 FUSA will pay all costs and charges of and incidental to the transfer of the Undivided Portions into its name on request from or on behalf of Buffelsfontein.

19.8 Until such time as the Undivided Portions has been created pursuant to the subdivision, FUSA will, if necessary, taking into account the rights attaching to the Transfer SRPs lease the Undivided Portions from Buffelsfontein in accordance with and subject to terms and conditions materially the same as those contained in the Lease. On termination or cancellation of the lease that may be entered into for any reason whatsoever, other than as a result of registration of transfer of the Undivided Portions into FUSA's name being effected, FUSA shall vacate and return vacant possession of the Undivided Portions to Buffelsfontein.

20. **RISK AND TRANSFER OF PROPERTY**

20.1 Risk in and benefit to the Sale Property will pass to FUSA on the Effective Date from which date the Sale Property will be at the sole risk, loss or profit of FUSA.

20.2 The Sale Property is sold by Buffelsfontein to FUSA subject to all the

conditions and servitudes mentioned and/or referred to in the current and/or prior title deeds of the Property and to all such conditions and servitudes which may exist in regard thereto including the provisions of any applicable town planning scheme.

- 20.3 Ownership of the Sale Property will, subject to the provisions of clause 19, pass to FUSA on registration of transfer of the Sale Property into FUSA's name in the appropriate registry.
- 20.4 Registration of transfer of the Property will, subject to the provisions of clause 19, be given to FUSA as soon as reasonably possible after the Effective Date.
- 20.5 Registration of transfer of the Sale Property will be effected by Attorneys Routledge Modise at FUSA's cost. The parties hereby undertake upon demand to sign all documents necessary to effect transfer of the Sale Property into FUSA's name.
- 20.6 FUSA will pay all costs and charges of and incidental to the transfer of the Sale Property into its name on request from or on behalf of Buffelsfontein.
- 20.7 The parties hereby undertake to sign and execute upon request all such documents as may be reasonably necessary to procure the transfer to FUSA of the Sale Property into FUSA's name.
- 20.8 Occupation of the Sale Property will be given to FUSA on the Date of Signature provided that FUSA shall be obliged to immediately vacate the

Sale Property in the event that this Agreement fails to become unconditional in accordance with its terms.

20.9 It is agreed that FUSA shall be entitled to all benefits from the Sale Property and shall be liable, except as otherwise provided herein for all obligations in respect of the Sale Property from the Date of Signature which shall include but not be limited to _

20.9.1 any assessment rates, fees, levies or charges which are payable to any local or any other authority in respect of the Sale Property, if any;

20.9.2 any charges payable for services rendered in respect of the Sale Property including the cost of electricity and the provision of any security services;

20.9.3 the premiums payable by Buffelsfontein in respect of any insurance of or in connection with or relating to the Sale Property,

all of which amounts shall be paid by FUSA as and when such amounts become due and payable by Buffelsfontein or shall be refunded by FUSA to Buffelsfontein on demand in the event that Buffelsfontein has paid all or any such amounts.

21. PUBLICATION IN TERMS OF INSOLVENCY ACT

21.1 The Parties agree that notice of the sale of the Sale Assets will not be published as contemplated in Section 34 of the Insolvency Act, 1936 ("the Insolvency Act").

- 21.2 FUSA will have no duty to resist any proceedings to attach or to take possession of any of the Sale Assets instituted by any person in consequence of notice of this transaction not being published. Buffelsfontein hereby indemnifies FUSA against any loss or damage which FUSA may suffer as a result of notice of this transaction not being published as aforesaid.
- 21.3 Buffelsfontein hereby assumes the risk of attachment of any of the Sale Assets as a result of such notice not being published and undertakes to do all that is necessary to ensure the release of any attached assets. If such assets are not released Buffelsfontein shall compensate FUSA on demand the value of the assets attached, subject to the condition that such compensation shall be limited to a maximum aggregate amount of R1 455 000 000,00 (one billion four hundred and fifty five million Rand);
- 21.4 If for any reason whatsoever the parties determine that notice of the sale of the Sale Assets should be published then:
- 21.4.1 such notice will be published by FUSA at its costs as contemplated in Section 34 of the Insolvency Act.
- 21.4.2 publication of the notice shall occur as soon as reasonably possible after the Conditions Precedent have been fulfilled;
- 21.4.3 in the event of any creditor making any claim after publication of the notice as aforesaid Buffelsfontein shall either contest such claim in its name and/or settle same at its sole cost but shall in any event ensure that none of the Sale Assets purchased by FUSA shall be attached pursuant to such claim.

22. **ACCESS TO INFORMATION**

While this Agreement remains in force Buffelsfontein shall be entitled to have free and unfettered access to all legal, financial, technical and operational information and data relating to the Process under the control of FUSA, including confidential information provided that the provisions of clause 24 shall apply thereto. FUSA gives no warranties in regard to the accuracy and veracity of such information.

23. **FORCE MAJEURE**

23.1 Any failure on the part of a Party hereto to comply with any of the terms, conditions and provisions of this Agreement shall not be grounds for termination or for claim of damages insofar as such arises from force majeure, if the Party in question –

23.1.1 has taken all appropriate precautions, due care and reasonable alternative measures with the objective of avoiding such failure and of carrying out its obligations under the term of this Agreement; and

23.1.2 has given notice to the other Party of the occurrence of force majeure at the time the Party in question has become aware of such an event.

23.2 For the purposes of this Agreement "force majeure" shall be defined in accordance with standards of civil law. An event constitutes force

majeure if it is of an external, irresistible, unpredictable and insurmountable character such as the closure of the plant for economic reasons, war, riots, blockades, embargoes, strikes, lock-outs and other labour conflicts, land disputes, epidemics, volcanic eruptions, earthquakes, cyclones, floods, explosions, fires, lightning, breakdown of plant and equipment, governmental restrictions, change in applicable law or unavailability of materials or equipment and any other event which the Party claiming force majeure could not reasonably prevent or control.

23.3 In the event of any event of a kind set out in this clause 23 the period of time allowed for the performance of those obligations or exercise of those rights which are delayed by such event of force majeure and the periods of time thereafter allowed for the performance of obligations or exercise of rights which are dependent upon the first mentioned obligations or rights; shall be extended with a period equal to the period of force majeure.

23.4 Where any period is, or is deemed to be extended or any later date substituted to an earlier date under this clause 23, that extended or substituted period or date shall be deemed to constitute the period or day referred to in this Agreement (notwithstanding that at the time of such extension or substitution such period or such date may have expired).

23.5 In the event the case of force majeure would last more than 60 (sixty) days, either Party shall be entitled to terminate this Agreement forthwith

by notice in writing to the other Party. For that purpose and within a period of 90 (ninety) days from the declaration of force majeure.

24. **CONFIDENTIAL INFORMATION**

24.1 Neither Party shall, at any time after the Signature Date, notwithstanding any termination of this Agreement, directly or indirectly disclose, or directly or indirectly use, whether for their own benefit or that of any other person, any information which is a trade secret of, confidential to or proprietary information of the other including, without limitation:

24.1.1 technical, scientific, commercial, financial or market information, know-how or trade secrets;

24.1.2 data concerning business relationships, processes, services, personnel;

24.1.3 plans, designs, drawings, functional and technical requirements and specifications;

24.1.4 information which by its nature or content is identifiable as confidential and/or proprietary to the Party and/or any third party.

(collectively, the "confidential information");

24.1.5 any document or other record (whether in electronic or any other

medium whatsoever) containing confidential information which is supplied to it by the other Party as well as documents, diagrams and records which are produced by it (whether or not by copying, photocopying or otherwise reproducing documents or records supplied to it), and containing any confidential information.

24.2 Notwithstanding clause 24.1, confidential information may be disclosed or used by either Party to the extent to which it:

24.2.1 is made public other than as a result of any breach of this Agreement or any other agreement;

24.2.2 is information which was already in the possession of that Party prior to its disclosure by the other Party or is independently developed by that Party without reference to the confidential information.

25. **COSTS**

The costs payable in respect of the preparation and execution of this Agreement, the subsequent registration of the Notarial Cession of the Portion Mining Right or the Prospecting Right and all costs relating to the transfer of the Portion Mining Right or the Prospecting Right shall be borne by FUSA.

26. **COUNTERPARTS**

This agreement may be signed in separate counterparts, each of which shall be deemed to be an original and all of which taken together shall constitute one and the same instrument. The counterpart of this agreement in fax form shall be conclusive evidence of the original signature and shall be as effected in law as the counterpart in original form showing the original signatures.

27. **WARRANTIES**

27.1 Buffelsfontein and Simmers warrant to FUSA that as at the Effective Date Buffelsfontein is the owner of the Sale Assets to the exclusion of all others and is entitled to dispose of the Sale Assets in terms of this Agreement;

27.2 Buffelsfontein and Simmers warrant to FUSA that as at the Effective Date the Sale Assets are not subject to, and there is no agreement or commitment to give or create any option, lien or encumbrance of any nature whatsoever over the Sale Assets;

27.3 Buffelsfontein and Simmers warrant to FUSA that as at the Effective Date there has been no exercise, purported exercise or claim for any charge, lien or encumbrance over the Sale Assets and there is no dispute directly or indirectly relating to the Sale Assets;

- 27.4 Buffelsfontein and Simmers warrant to FUSA that as at the Effective Date the Sale Assets are not subject to, and there is no agreement or commitment to give or create, any option, lien or encumbrance of any nature whatsoever over the Sale Assets;
- 27.5 Buffelsfontein warrants to FUSA that as at the Effective Date Buffelsfontein has the power to enter into and perform this Agreement and the transactions contemplated herein and all corporate and other actions required to authorise the execution and delivery of this Agreement and the performances being duly taken;
- 27.6 Buffelsfontein warrants that this Agreement constitutes legal, valid and binding obligations on Buffelsfontein and is enforceable against it in accordance with its terms;
- 27.7 Buffelsfontein warrants that to the extent possible, Buffelsfontein will procure that it will comply with the provisions of section 17(2) and section 23(3) of the MPRDA;
- 27.8 Buffelsfontein warrants that Buffelsfontein will maintain the validity of the Mining Right and pursue its conversion, amendment and Subdivision pursuant to the Conversion, Amendment and Subdivision Application;
- 27.9 Buffelsfontein warrants that the Mining Right is not subject to, and there has been no agreement or commitment to give or create, any option or

lien or encumbrance of any nature whatsoever over the Mining Right, the Portion Mining Right or the Prospecting Right until and as at the Effective Date;

27.10 Each representation and warranty described in this clause 27 shall be a separate representation and warranty inducing FUSA to enter into this Agreement. Buffelsfontein acknowledges that FUSA has entered into this Agreement relying on the said representations and warranties.

27.11 Save for the warranties provided by Buffelsfontein and Simmers to FUSA in terms of this clause 27, Buffelsfontein and Simmers gives and makes no warranties, representations or the like of whatsoever nature and howsoever arising and whether express or implied as regards the Tailings Dams and accordingly the Tailings Dams are sold Voetstoots.

28. **INDEMNITY**

28.1 Buffelsfontein and Simmers hereby indemnify and hold FUSA harmless against all claims and loss of whatsoever nature (including all indirect and consequential damages or loss which FUSA may suffer) as a result of any breach of any warranty or representation made by Buffelsfontein and Simmers in terms of this agreement.

29. **BREACH**

29.1 Should either Party ("the Guilty Party") breach any of its obligations in terms of this Agreement, all of which are agreed to be material, and fail

to remedy such breach within a period of 20 (twenty) days after the date of delivery of a written notice from the other Party ("the Innocent Party") requiring the breach to be remedied, the Innocent Party shall without any further notice, and without prejudice to any of its rights in law be entitled:

29.1.1 to cancel this Agreement and to claim and to recover all damages suffered by it; and/or

29.1.2 to enforce performance of the terms of this Agreement and to claim damages.

29.2 The Guilty Party shall be liable for the payment of all costs, fees and disbursements, as determined on the attorney and client scale (as between attorney and its own client) of any attorney appointed by the Innocent Party, in respect of anything done in terms of this Agreement by the Innocent Party to enforce any of its rights in terms of this Agreement or in terms of law.

30. **DOMICILIUM**

30.1 The parties hereto choose domicilia citandi et executandi for all purposes of and in connection with this Agreement as follows:

Buffelsfontein and Simmers:

5 Press Avenue, Selby, Johannesburg, 2025

facsimile number (011) 837 0390

Attention : The company secretary

FUSA: 5 Press Avenue, Selby, Johannesburg, 2025

facsimile number (011) 837 0390

Attention : The company secretary

- 30.2 Any Party hereto shall be entitled to change its domicilium from time to time, provided that any new domicilium selected by it shall be an address in the Republic of South Africa, other than a box number, and any such change shall only be effective upon receipt of notice in writing by the other parties of such change.
- 30.3 All notices, demands, communications or payments intended for any Party shall be made or given at such Party's domicilium for the time being.
- 30.4 A notice sent by one Party to another Party shall be deemed to be received:

- 30.4.1 on the same day, if delivered by hand
- 30.4.2 on the same day of transmission if sent by telefax with receipt received confirming completion of transmission;
- 30.4.3 on the tenth day after posting, if sent by prepaid registered mail.
- 30.5 Notwithstanding anything to the contrary herein contained a written notice or communication actually received by a Party shall be an adequate written notice or communication to it notwithstanding that it was not sent to or delivered at its chosen domicilium citandi et executandi.

31. **GENERAL**

- 31.1 The parties shall not be bound by or have any claim or right of action arising from any express or implied term, undertaking, representation, warranty, promise or the like not included or recorded in this document whether it induced the contract and/or whether it was negligent or not.
- 31.2 No variation, amendment or consensual cancellation of this Agreement or any provision or term hereof or of any agreement, bill of exchange or other document issued or executed pursuant to or in terms of this Agreement and no settlement of any disputes arising under this Agreement and no extension of time, waiver or relaxation or suspension of any of the provisions or terms of this Agreement or of any agreement,

bill of exchange or other document issued pursuant to or in terms of this Agreement shall be binding or have any force and effect unless reduced to writing and signed by or on behalf of all the Shareholders at that time.

31.3 No extension of time or waiver or relaxation of any of the provisions or terms of this Agreement or any agreement, bill of exchange or other document issued or executed pursuant to or in terms of this Agreement, shall operate as an estoppel against any Party in respect of its rights under this Agreement. Any such extension, waiver or relaxation or suspension which is so given or made shall be strictly construed as relating to strictly to the matter in respect whereof it was made or given.

31.4 No failure by a Party to enforce any provision of this Agreement shall constitute a waiver of such provision or affect in any way such Party's right to require the performance of such provision at any time in the future, nor shall a waiver of a subsequent breach nullify the effectiveness of the provision itself.

31.5 If any clause or term of this Agreement should be invalid, unenforceable, defective or illegal for any reason whatsoever, then the remaining terms and provisions of this Agreement shall be deemed to be severable therefrom and shall continue in full force and effect unless such invalidity, unenforceability, defect or illegality goes to the root of this Agreement.

Dear Sir

RE-REGISTRATION OF SURFACE RIGHT PERMITS

This serves to confirm that our Messrs Daniel Johannes Pretorius and Neville Lane, duly authorized hereto in terms of the attached Board Resolution, hereby submit a schedule of rights (Annexure A) for re-registration of the rights, in accordance with the Mineral and Petroleum Resources Development Act 28/2002.

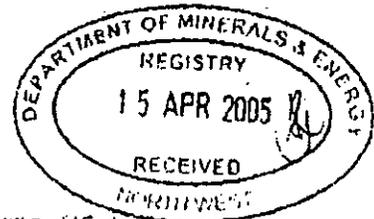

The rights listed are referenced in chronological order, showing list, permit and RMT plan numbers and the rights description.

A copy of authorization of ownership and right to submit for re-registration is included in respect of each surface right permit and accompanying RMT plan.

Yours faithfully

T J GWEBU

AGREEMENT

1. PARTIES

1.1. The parties to this agreement are -

1.1.1. Buffelsfontein Gold Mines Limited; and

1.1.2. First Uranium (Proprietary) Limited; and

1.2. The parties agree as set out below.

2. INTERPRETATION

2.1. In this agreement, unless clearly inconsistent with or otherwise indicated by the context -

2.1.1. "the/this agreement" means the agreement set out in this document and in the annexures hereto;

2.1.2. "the commencement date" means the date on which the tailings agreement becomes unconditional and binding on the parties thereto in accordance with its terms;

2.1.3. "the date of signature" means the date of signature of this agreement by the last party signing;

2.1.4. "the expiry date" means the earlier of the date on which all of the property has been transferred to and registered in the name of the Tenant or 9 (nine) years and 11 (eleven) months from the commencement date;

- 2.1.5. "Immovable Property" means the immovable property indicated by the area shaded light orange on annexe "1" hereto, together with all permanent improvements thereon;
- 2.1.6. "the Landlord" means Buffelsfontein Gold Mines Limited, Registration No. 1995/010072/06, a public company duly registered according to the laws of the Republic of South Africa;
- 2.1.7. "the property" means those areas of the Immovable Property shaded blue on annexe "1" hereto which are required to be transferred to the Purchaser immediately once sub-division as contemplated in clause 22 of the tailings agreement has occurred;
- 2.1.8. "the tailings agreement" means the tailings agreement to be entered into between the parties hereto and Simmer & Jack Mines Limited simultaneously with the entering into of this agreement;
- 2.1.9. "the Tenant" means First Uranium (Proprietary) Limited, Registration No. 2005/033680/07, a company duly registered according to the laws of the Republic of South Africa;
- 2.1.10. any reference to the singular includes the plural and vice versa;
- 2.1.11. any reference to natural persons includes legal persons and vice versa;
- 2.1.12. any reference to a gender includes the other genders;
- 2.2. The terms "holding company" and "subsidiary" shall bear the meaning assigned to them in the Companies Act, No. 61 of 1973, (as amended).

- 2.3. Should any provision in a definition be a substantive provision conferring rights or imposing obligations on any party, then effect shall be given to that provision as if it were a substantive provision in the body of this agreement.
- 2.4. Any reference to an enactment, regulation, rule or by-law is that enactment, regulation, rule or by-law as at the date of signature, and as amended or replaced from time to time.
- 2.5. Where any number of days is prescribed, such number shall exclude the first and include the last day, unless the last day falls on a Saturday, Sunday or public holiday in the Republic of South Africa, in which case the last day shall be the next succeeding day which is not a Saturday, Sunday or public holiday.
- 2.6. The use of the word "including" followed by a specific example/s shall not be construed as limiting the meaning of the general wording succeeding it and the *eiusdem generis* rule shall not be applied in the interpretation of such general wording or such specific example/s.
- 2.7. The expiration or termination of this agreement shall not affect those provisions of this agreement which expressly provide that they will operate after any such expiration or termination or which of necessity must continue to have effect after such expiration or termination, notwithstanding the fact that the clauses themselves do not expressly provide this.
- 2.8. In its interpretation, the *contra proferentem* rule of construction shall not apply (this agreement being the product of negotiations between the parties) nor shall this agreement be construed in favour of or against any party by reason of the extent to which any party or its professional advisors participated in the preparation of this agreement.
- 2.9. Recordals shall be binding on the parties and are not merely for information purposes.

2.10. The clause headings in this agreement have been inserted for convenience only and shall not be taken into account in its interpretation.

2.11. Words and expressions defined in any sub-clause shall, for the purposes of the clause of which that sub-clause forms part, bear the meaning assigned to such words and expressions in that sub-clause.

2.12. This agreement shall be governed by and construed and interpreted in accordance with the laws of the Republic of South Africa.

3. **BACKGROUND**

It is recorded that the tailings agreement has been concluded between the Landlord and the Tenant. Pending transfer of the property from the Landlord to the Tenant as contemplated in the tailings agreement, the Tenant wishes to secure its rights in respect of the property and accordingly is entering into this lease agreement.

4. **HIRE**

The Landlord lets to the Tenant which hires the property with effect from the effective date.

5. **DURATION**

This lease shall commence on the commencement date and shall continue until the expiry date.

6. **RENEWAL**

6.1. Either party shall be entitled to renew this lease for a further period of 9 (nine) years and 11 (eleven) months from the expiry of the initial period at a rental equal to the rental payable in terms of clause 7.

- 6.2. The option to renew shall be exercised by either party notifying the other at least 6 (six) months prior to the termination of the initial period of the renewal in terms of this clause 6.

7. RENTAL

- 7.1. The monthly rental payable by the Tenant to the Landlord during each month of this lease from the commencement date shall be an amount of R..... (..... Rand) per month excluding value added tax.
- 7.2. All rentals payable in terms of clause 7.1 shall be paid by the Tenant monthly in advance on the first business day of every calendar month.
- 7.3. All amounts payable by the Tenant to the Landlord in terms of this lease, shall be paid free of deduction and without set-off at such place as the Landlord may from time to time by notice in writing direct.

8. ASSESSMENT RATES, MUNICIPAL CHARGES AND INSURANCE

It is agreed that the Tenant shall, from the commencement date, be entitled to all benefits from the property and be liable for all obligations in respect of the property including but not limited to -

- 8.1. any assessment rates, fees, levies or charges which are payable to the local or any other authority in respect of the property; and
- 8.2. any charges payable for services rendered in respect of the property;
- 8.3. the premiums payable by the Landlord in respect of any insurance of, in connection with or relating to the property.

9. ELECTRICITY, WATER AND SANITARY FEES

The Tenant shall from the commencement date pay on demand to the Landlord or to the local authority or body concerned, as the Landlord may require -

- 9.1. the cost of all electricity, water and gas, if any, consumed on the property;
- 9.2. all other taxes, levies and fees which may be charged by any local or other competent authority during the term of this lease.

10. THE TENANT'S GENERAL RIGHTS AND OBLIGATIONS

The Tenant -

- 10.1. shall not contravene or permit the contravention of any law, by-law or statutory regulation or the conditions of any licence relating to or affecting the property;
- 10.2. shall not contravene or permit the contravention of -
 - 10.2.1. any of the conditions of the title deeds under which the Landlord owns the property; or
 - 10.2.2. any laws which the Landlord is required to observe by reason of its ownership of the property.

11. LIMITATION OF LIABILITY

- 11.1. The Tenant, notwithstanding anything to the contrary contained herein, shall not under any circumstances, have any claim of any nature whatsoever whether for damages, remission of rental, cancellation of this lease or otherwise against the Landlord, its employees, directors, agents or independent contractor (on whose behalf the Landlord is contracting in terms hereof) -
 - 11.1.1. in respect of any loss of or damage caused to any articles or assets of any nature whatsoever kept on the property by the Tenant, its employees, directors, agents or invitees or in regard to the Tenant's business or any loss (including consequential loss) suffered by the Tenant, its employees, directors, agents or invitees or loss of life

and/or injury to person caused to or sustained by any person whomsoever on the property or to the Tenant, its employees, directors, agents, invitees or visitors on, about or on the property as a result of rain, water seepage or leakage howsoever occurring, hail, lightning, fire, theft, riot or civil commotion, or as a result of *vis major* or *casus fortuitous* or for any other reason whatsoever and the Tenant indemnifies the Landlord, its employees, directors, agents or independent contractors against any claims in respect of any such loss, damage, injury or loss of life, or expense, including legal costs on an attorney and client scale, which may be demanded from any one or more of such parties;

11.1.2. on account of any interruption to the supply of water, electricity or any other service howsoever arising.

11.2. The Tenant indemnifies the Landlord against any claim in terms of this clause 11 that may be made against the Landlord by any person arising out of any loss or damage suffered or sustained in or on the property in consequence of any act or omission of the Tenant and or the Landlord and or their servants and or agents.

12. TENANT'S RIGHTS

12.1. The Landlord hereby acknowledges and agrees that the Tenant intends to conduct mining operations on the property and may, pursuant to conducting such operations, require to develop infrastructure on the property.

12.2. The Tenant will subject to the consent of the Landlord, which will not be unreasonably withheld taking into account the nature of the business to be conducted by the Tenant on the property, be entitled to construct such infrastructure on the property and deposit tailings and the like on the property as the Tenant may require in order to give effect to its stated intent in 12.1.

12.3. The infrastructure constructed on the property shall remain the Tenant's and the Tenant shall on termination of this lease by the effluxion of time be

entitled to remove the infrastructure provided that it does not cause damage to the property.

13. TERMINATION

13.1. Notwithstanding the provisions of clause 5, this lease will terminate on the date that the property is transferred into the name of the Tenant as contemplated in the tailings agreement.

13.2. If this agreement terminates for any reason other than that stated in 13.1, the Tenant shall return the property to the Landlord in the condition which it then lies and the Landlord shall not be required to compensate the Tenant for any improvements made by the Tenant to the property as contemplated in 12.1.

14. RENEWAL

The Tenant shall be entitled to renew this agreement for a further period of 20 (twenty) years by giving written notice to the Landlord of its renewal of this lease at least 1 (one) year prior to the termination of this lease by the effluence of time.

15. GENERAL

15.1. This lease constitutes the whole agreement between the parties and no warranties or representations, whether express or implied, not stated herein shall be binding on the parties. The Tenant agrees that it shall have no claim whatsoever for rectification of any of the provisions of this lease.

15.2. No agreement at variance with the terms and conditions of this lease and no consensual cancellation hereof or of any of the terms hereof shall be binding on the parties unless reduced to a written agreement signed by or on behalf of the parties.

15.3. No relaxation or indulgence which the Landlord may show to the Tenant shall in any way prejudice or be deemed to be a waiver of its rights hereunder and, in particular, no acceptance by the Landlord of rent after due date (whether

on one or more occasions) nor any other act or omission by the Landlord or its servants shall preclude or estop it from exercising any rights enjoyed by it hereunder by reason of any subsequent payment not being made strictly on due date or by reason of any subsequent breach by the Tenant.

16. NOTICES AND DOMICILIUM

16.1. The parties choose as their domicilium citandi et executandi their respective addresses set out in this clause for all purposes arising out of or in connection with this agreement at which addresses all the processes and notices arising out of or in connection with this agreement, its breach or termination may validly be served upon or delivered to the parties.

16.2. For the purpose of this agreement the parties' respective addresses shall be –

16.2.1. as regards the Landlord at

facsimile number

Attention :

16.2.2. as regards the Tenant at

facsimile number;

Attention ;;

or at such other address not being a post office box or poste restante, of which the party concerned may notify the others in writing.

16.3. Any notice given in terms of this agreement shall be in writing and shall –

16.3.1. if delivered by hand be deemed to have been duly received by the addressee on the date of delivery;

16.3.2. if transmitted by facsimile be deemed to have been received by the addressee 1 (one) business day after despatch.

16.4. Notwithstanding anything to the contrary contained in this agreement, a written notice or communication actually received by one of the parties from another including by way of facsimile transmission shall be adequate written notice or communication to such party.

17. COUNTERPARTS

This agreement may be signed in separate counterparts, each of which shall be deemed to be an original and all of which taken together shall constitute one and the same instrument. The counterpart of this agreement in fax form shall be conclusive evidence of the original signature and shall be as effected in law as the counterpart in original form showing the original signatures.

18. COSTS

Each party shall pay its own cost of negotiating, drafting, preparing and implementing this agreement.

OFFICE OF INTERNATIONAL
CORPORATE FINANCE

FIRST URANIUM CORPORATION

- and -

SIMMER & JACK MINES, LIMITED

CORPORATE OPPORTUNITY AGREEMENT

DECEMBER 20, 2006

CORPORATE OPPORTUNITY AGREEMENT

THIS AGREEMENT made as of the 20th day of December, 2006

BETWEEN:

FIRST URANIUM CORPORATION, a corporation continued under the laws of British Columbia ("**First Uranium**")

- and -

SIMMER & JACK MINES, LIMITED, a South African corporation ("**Simmer & Jack**")

WITNESSETH THAT:

WHEREAS First Uranium is a resources company focused on the development of uranium and gold projects in South Africa.

AND WHEREAS Simmer & Jack shall sell certain assets to First Uranium in connection with a reorganization and the initial public offering of First Uranium such that subsequent to such reorganization and offering, Simmer & Jack will be a controlling shareholder of First Uranium, and Simmer & Jack and First Uranium will share certain senior officers and directors in common;

AND WHEREAS the parties wish to ensure that potential conflicts of interest as they relate to the acquisition and/or development of existing or potential mineral projects are minimized through this Agreement;

NOW, THEREFORE, the Parties do hereby agree, in consideration of US\$1.00 now paid by each to the other (the receipt and sufficiency of which is hereby acknowledged), as follows:

1. Definitions and Interpretation

For the purposes of this Agreement, the following definitions shall apply:

- (a) **"Affiliate"** with respect to First Uranium means any Person that holds 35% or more of its issued and outstanding Common Shares;
- (b) **"Agreement"** means this corporate opportunity agreement, as it may be amended from time to time by further written agreement;
- (c) **"Business Day"** means a day that is not a Saturday, Sunday or a day on which banks are generally not open for business in either Johannesburg, South Africa or Toronto, Ontario;
- (d) **"CIM"** means the Canadian Institute of Mining, Metallurgy and Petroleum;
- (e) **"Common Shares"** means common shares in the capital of First Uranium;
- (f) **"Communication"** has the meaning given thereto in Section 8;
- (g) **"Confidential Information"** includes:
 - (i) any and all information, data, records, reports, calculations, opinions, observations, maps, charts, contracts, constating documents and other information (written or oral and whether or not noted thereon to be confidential), including trade secrets, pertaining to a Mineral Property, as well as all summaries, extracts and copies therefrom and all notes, memoranda, studies and analysis based thereon; and
 - (ii) the nature of any discussions or negotiations between a Party and one or more third parties with respect to a Mineral Property;
- (h) **"Controlling Interest"** means the ability to vote more than 35% of the voting rights (or equivalent rights) attached to all outstanding securities (or interests) of the relevant Person (other than voting rights that are dependent upon the occurrence of an event that has not occurred or is no longer outstanding);
- (i) **"Effective Date"** means the date hereof;
- (j) **"Expenditures"** means expenditures incurred by a Party with respect to a Project, including:
 - (i) any field trip expenses incurred in examining a Project;

(ii) all direct costs of exploration, development or production activities, including metallurgical analysis or studies; and

(iii) legal, accounting and other professional fees relating to the Project;

provided, however, that where Expenditures have been incurred in a currency other than US\$, then the Expenditures shall be converted into US\$ using the applicable exchange rate as at December 31 of the calendar year in which such Expenditures were so incurred or, where incurred in a calendar year that has not yet expired, the date of such calculation. The applicable exchange rate shall be determined by the auditors of the applicable Party;

(k) "LCIA" has the meaning given thereto in Section 9(a);

(l) "Mineral" means minerals, rocks or other similar product that may be removed from a Mineral Property and sold, including, without limitation, gold, uranium, gems, diamonds, peat, sand, gravel and clay, as well as any product that contains Minerals, such as concentrate, sludge and dore;

(m) "Mineral Property" means any and all forms of title or contract which evidence the right to explore, develop or produce Minerals, including any exploration or prospecting licences or permits or similar approvals, mineral or mining claims, mining or mineral licences, concessions or leases, as well as all rights associated with such rights to explore, develop or produce, such as surface rights, water rights, hydro rights and other rights relating to exploration, development or mining operations within the applicable territory, whether contractual, statutory or otherwise;

(n) "Non-Uranium Project" means a Project which contains economic quantities of Minerals in addition to or other than uranium;

(o) "Opportunity" means the opportunity to acquire an interest in a Project from a third party, including, but not limited to, an opportunity to acquire such interest:

(i) indirectly through the acquisition of a Controlling Interest in a Project Company; and

(ii) from a sovereign state or governmental agency;

(p) "Parties" means First Uranium and Simmer & Jack, and their respective successors and permitted assignees;

(q) "Person" means an individual, body corporate, unincorporated joint venture, partnership, association, government, governmental agency, state, foundation and trust (in each case whether or not having separate legal personality);

- (r) **"Project"** means one or more Mineral Properties located in the same general area within Southern Africa (whether or not contiguous) that are considered to be one project by a Party;
- (s) **"Project Company"** means a Person, other than an individual that holds one or more Projects;
- (t) **"Referral"** means a referral by one Party to the other Party of an Opportunity to acquire an interest in a Project; "Referred" and "Refer" have corresponding meanings, where applicable;
- (u) **"Representative"** means any director, officer, employee, agent, advisor, consultant or nominee of a Party to this Agreement;
- (v) **"Southern Africa"** includes South Africa, Botswana, Lesotho, Namibia, Swaziland, Mozambique, Zimbabwe, Zambia and Malawi;
- (w) **"TSX"** means the Toronto Stock Exchange;
- (x) **"Uranium Project"** means a Project which contains economic quantities of uranium; and
- (y) **"US\$"** means United States dollars.

The headings inserted in this Agreement are inserted only for convenience and in no way define, limit, or describe the scope or intent of this Agreement or affect its terms and provisions.

2. Object and Intention

The object of this Agreement is to minimize conflicts arising from competition naturally arising between First Uranium and Simmer & Jack with respect to the pursuit of new Projects within Southern Africa. It is the intention of the Parties in entering into this Agreement that Opportunities will be Referred to the Party that is likely to be in the best position to advance a Project. It is recognized that this may lead to an exceptional Referral to a Party that is never adequately compensated in return, but the Parties have put their mind to such possibility and agree that this Agreement is fair and reasonable as of the Effective Date.

3. General Principles

- (a) The Parties agree that, subject to the exceptions noted herein:
 - (i) all Opportunities available to First Uranium in respect of a Non-Uranium Project located within Southern Africa shall be Referred to Simmer & Jack; and

- (ii) all Opportunities available to Simmer & Jack in respect of a Uranium Project located within Southern Africa shall be Referred to First Uranium.
- (b) Further, in order to minimize the potential for disagreement concerning the characterization of a Project as a Non-Uranium Project or as a Uranium Project, the parties agree to the inclusion of Schedule "A" which characterizes a number of known Projects as either Non-Uranium Projects or Uranium Projects.
- (c) With respect to a Project not set out in Schedule "A", First Uranium and Simmer & Jack agree that where a Project includes economic quantities of both uranium and non-uranium Minerals, then the Project will be classified as a Uranium Project (and therefore for the account of First Uranium) if it is determined by the board of directors of the originating party that the Project would economically justify the construction of a uranium plant for the Project based on then current metal prices; otherwise, the Project will be classified as a Non-Uranium Project (and therefore for the account of Simmer & Jack).
- (d) In making a determination as to whether a Project should be characterized as a Uranium Project or Non-Uranium Project, each of First Uranium and Simmer & Jack will act reasonably and in good faith.

4. Re-Evaluation As a Result of Exploration Work

- (a) If First Uranium determines that a Project held by it is a Non-Uranium Project, then the following rules shall apply:
 - (i) where First Uranium has not incurred Expenditures in excess of US\$1,000,000, the Project shall be offered to Simmer & Jack in consideration of an amount equal to such Expenditures; and
 - (ii) where First Uranium has incurred Expenditures in excess of US\$1,000,000, Simmer & Jack shall be offered a joint venture arrangement with respect to the Project on terms which must be approved by each of the independent directors of both First Uranium and Simmer & Jack.
- (b) If Simmer & Jack fails to give notice of its acceptance of an offer made to it under subsections 4(a)(i) or 4(a)(ii) within 30 (thirty) days, then First Uranium may develop the Project without further reference to this Agreement. First Uranium shall cooperate in the provision to Simmer & Jack of all relevant information with respect to such Project, including Confidential Information, forthwith upon request being made therefor.
- (c) If Simmer & Jack determines that a Project held by it is a Uranium Project, then the following rules shall apply:

- (i) where Simmer & Jack has not incurred Expenditures in excess of US\$1,000,000, the Project shall be offered to First Uranium in consideration of an amount equal to such Expenditures; and
 - (ii) where Simmer & Jack has incurred Expenditures in excess of US\$1,000,000, First Uranium shall be offered a joint venture arrangement with respect to the Project on terms which must be approved by each of the independent directors of both Simmer & Jack and First Uranium.
- (d) If First Uranium fails to give notice of its acceptance of an offer made to it under subsections 4(c)(i) or 4(c)(ii) within 30 (thirty) days, then Simmer & Jack may develop the Project without further reference to this Agreement. Simmer & Jack shall cooperate in the provision to First Uranium of all relevant information with respect to such Project, including Confidential Information, forthwith upon request being made therefor.

5. Referral Process

- (a) Referrals shall be made by notice, in writing, as soon as reasonably practical (and in any event within 30 (thirty) days of the date on which the Opportunity arises to the knowledge of the Party giving such notice (the "Notifying Party"), together with all Confidential Information pertaining to the Project (the date of such notice being the "Notice Date") and the terms and conditions upon which such Confidential Information must be maintained in confidence. All Confidential Information shall be held by the Entitled Party (as defined below) in accordance with such terms and conditions.
- (b) The Notifying Party shall make itself available to the other Party ("Entitled Party") for purposes of addressing further reasonable inquiries by the other Party with respect to such Opportunity.
- (c) The Entitled Party shall give notice to the Notifying Party within a further 30 (thirty) days of the Notice Date should it wish to pursue the Opportunity being Referred, in which event the Notifying Party shall have no right to pursue the Opportunity and shall cooperate fully with the Entitled Party in making all necessary introductions to facilitate a possible transaction between the Entitled Party and the third party or parties holding the Opportunity.
- (d) Should the Entitled Party fail to respond to such notice within the 30 (thirty) day period following the Notice Date or should the Entitled Party respond by declining the Opportunity, then the Notifying Party may pursue the Opportunity in its sole discretion.

6. Safe Harbours

- (a) Either Party may determine in its sole discretion whether an Opportunity is of sufficient potential significance to require a Party to apply to it the Referral provisions contained herein, provided, however, that where a Party determines to not apply the referral provisions set out herein, no such Opportunity may then be pursued by such Party. Should a Party determine in good faith that an Opportunity to acquire a Project is not worthy of Referral in circumstances where a Referral is otherwise required, no liability shall flow to the Party making such determination, provided such Party does not subsequently acquire an interest therein. Otherwise, if the Party subsequently acquires an interest in an Opportunity that it previously did not consider for Referral hereunder, the Opportunity must be considered for Referral under Section 5 hereof and held in trust pending the operation of Section 5 hereof).
- (b) No Party shall be liable to another with respect to the disclosure of Confidential Information to the other Party in furtherance of a Referral (and the other Party shall indemnify the first Party with respect to any third party liability arising as a result of any such disclosures).
- (c) Any action taken by a Representative of a Party hereunder shall be deemed to be action taken by such Party, unless the other Party knows otherwise.
- (d) Where an Opportunity is declined by an Entitled Party (whether by actual notice or failure to respond) and the Notifying Party decides to pursue the Opportunity, the Notifying Party shall have no further obligation to inform the Entitled Party of any changes to the terms and conditions that relate to the Opportunity, provided the Notifying Party has acted in good faith in disclosing all relevant information at the time of the Referral.
- (e) Either Party may designate a nominee for purposes of accepting an Opportunity Referred by the other.

7. Non-Solicitation

During the term hereof, neither Party shall offer employment to professional employees (including contract employees) or engineering professionals associated with mining and mineral processing of the other Party, without such other Party's written consent. The failure to comply with this provision shall give rise to damages where the employee has accepted such offer, the assessment of which shall be fixed at a sum equal to three times the annual salary (and benefits) contained in such offer. The Parties acknowledge that such sum is a genuine pre-estimate of the liquidated damages flowing from such breach. Professional employees shall include geologists, lawyers, accountants and all senior officers and directors of the relevant Party. Nothing shall preclude a Party from

appointing professional employees of the other Party to its Board of Directors, provided such appointments are non-executive appointments.

8. Notices

Any notice, direction or other communication ("**Communication**") given hereunder, irrespective of whether such Communication was required, permitted or otherwise provided pursuant to or in respect of this Agreement, shall be in writing and, if delivered, shall be deemed to have been given and received on the day it is actually received and, if mailed by registered mail, shall be deemed to have been given and received on the fifth (5th) day following such mailing and, if sent by fax or other similar form of electronic communication, shall be deemed to have been given and received on the day it was so sent if sent during normal business hours (9:00 a.m. to 5:00 p.m. local time at the place of receipt) or on the next following business day if sent outside of normal business hours. Notices in each case shall be by facsimile as follows:

If to First Uranium, 27 (11) 837 3840 (for the attention of Gordon Miller); and

If to Simmer & Jack, 27 (11) 837 3840 (for the attention of Gordon Miller).

Any Party may give, at any time, notice in writing to the other Party of any change of address of the Party giving such notice and, from and after the giving of such notice, the address or addresses therein specified shall be deemed to be the address of such Party for purposes of giving notice hereunder. If the date for performance of any obligation or the giving of any notice falls on a day that is not a Business Day, the date for performance of the obligation or the giving of the notice shall be extended to the next Business Day.

9. Arbitration

- (a) Any dispute arising out of or in connection with this Agreement shall be resolved by arbitration in Toronto conducted in the English language by a single arbitrator pursuant to the rules of the London Court of International Arbitration ("**LCIA**"), save that unless the Participants agree otherwise:
 - (i) the LCIA shall appoint the arbitrator;
 - (ii) the claimant shall serve its written claim within fourteen (14) days of the arbitrator's appointment. The defence shall be served within twenty-eight (28) days after that and the reply fourteen (14) days thereafter. Each shall attach any documents relied upon. The Parties will be entitled to be represented by qualified legal practitioners. Neither Party shall be required to give general discovery of documents, but may be required only to produce specific, identified documents that are directly relevant to the dispute;
 - (iii) the arbitration proceedings and the decision of the arbitrator shall be confidential, subject to applicable laws;

- (iv) the costs of the arbitration shall be paid as determined by the arbitrator; and
 - (v) the award made by the arbitrator shall be final and binding upon the Parties, except in the case of manifest error.
- (b) Notwithstanding Section 9(a), should the dispute arise because the Parties disagree on whether or not a Project is a Non-Uranium Project, or a Uranium Project, then
- (i) The arbitrator shall be the President of the CIM or his or her delegate ("President").
 - (ii) The President shall review only technical information where a Party claims that the Project is a Non-Uranium Project or a Uranium Project. Each Party shall be obligated to submit to the President all technical information within its possession or control, including Confidential Information, within a period of 30 (thirty) days from the date of the appointment of the President.
 - (iii) The President shall decide any dispute within 60 (sixty) days of his or her appointment. Where an Opportunity might otherwise be lost, and on application by any Party, the President shall determine the dispute within such accelerated time period as may be necessary to avoid a loss of the Opportunity.
 - (iv) The rules of Sections 9(a)(iii), (iv) and (v) shall apply *mutatis mutandis*.

10. Termination

This Agreement shall terminate on the date that Simmer & Jack is no longer an Affiliate of First Uranium.

11. General

- (a) This Agreement constitutes the whole of this Agreement and encompasses the entire agreement among the Parties pertaining to Referrals. This Agreement supersedes all prior agreements, understandings, negotiations and discussions, whether oral or written, among the Parties and there are no warranties, representations or other agreements among the Parties, except as specifically set forth herein.
- (b) The rights and obligations in this Agreement shall be governed by and construed in accordance with the laws of Ontario and the Parties agree to submit to the exclusive jurisdiction of the courts of Ontario. The Parties agree to execute and cause to be executed such other documents, and take and cause to be taken such other actions, as are reasonably necessary to

secure and give effect to the rights and obligations granted and assumed hereunder. This Agreement may be executed in one or more counterparts (which may include counterparts delivered by facsimile) and all of those counterparts taken together shall constitute one and the same instrument.

- (c) Time is of the essence of this Agreement. The failure of a Party to insist on the strict performance of any provision of this Agreement or to exercise any right, power or remedy upon a breach hereof shall not constitute a waiver of any provision of this Agreement or limit the Party's right thereafter to enforce any provision or exercise any right. No modification of this Agreement shall be valid unless made in writing and duly executed by all of the Parties. This Agreement shall be binding upon and inure to the benefit of the respective successors and permitted assigns of the Parties. Neither of the Parties shall assign any of their rights or obligations under this Agreement without the express prior written consent of the other Party.
- (d) In the event that a court or other authority of competent jurisdiction determines that any term, part, or provision of this Agreement is unenforceable, illegal, or in conflict with any laws to which this Agreement is subject, the Parties intend that such authority reform that term, part, or provision within the limits permissible under the law in such manner as to approximate most closely the intent of the Parties to this Agreement. If the court cannot make such reformation, then that term, part, or provision shall be considered severed from this Agreement, the remaining portions of this Agreement shall not be affected, and this Agreement shall be construed and enforced as if it did not contain that term, part, or provision.
- (e) Each of the Parties acknowledges and confirms that it has obtained its own independent legal advice with respect to this Agreement and the negotiation thereof and the transactions contemplated thereunder.

IN WITNESS WHEREOF, the parties have caused this Agreement to be executed by their duly authorized officers as of the date first written above.

OFFICE OF INTERNATIONAL
CORPORATE FINANCE

FIRST URANIUM CORPORATION

- and -

SIMMER & JACK MINES, LIMITED

MAINTENANCE AGREEMENT

MAINTENANCE AGREEMENT

THIS AGREEMENT made as of the 20th day of December, 2006

BETWEEN:

FIRST URANIUM CORPORATION, a corporation continued under the laws of British Columbia ("**First Uranium**")

- and -

SIMMER & JACK MINES, LIMITED, a South African corporation ("**Simmer & Jack**")

RECITALS:

WHEREAS First Uranium is a mineral resource company working towards the development of two uranium/gold projects deposits in South Africa;

AND WHEREAS Simmer & Jack shall sell certain assets to First Uranium in connection with a reorganization and the initial public offering of First Uranium such that subsequent to such reorganization and offering, Simmer & Jack will be a majority shareholder of First Uranium, and Simmer & Jack and First Uranium will share certain senior officers and directors in common;

AND WHEREAS Simmer & Jack is required by the South African Reserve Bank to maintain a majority voting interest in First Uranium so as to comply with SARB Approval (as defined herein), subject to certain conditions;

NOW, THEREFORE, the Parties do hereby agree, in consideration of US\$1.00 now paid by each to the other (the receipt and sufficiency of which is hereby acknowledged), as follows:

1. Definitions and Interpretation

In this Agreement, the following terms shall have the following meanings:

- (a) "**Affiliate**" with respect to First Uranium means any Person that holds 35% or more of its issued and outstanding Common Shares;

- (b) **"Agreement"** means this maintenance agreement, as it may be amended from time to time by further written agreement;
- (c) **"Applicable Law"** means any domestic or foreign statute, law (including the common law), ordinance, rule, regulation, published regulatory policy or guideline, order, judgment, injunction, decree, award or writ of any court, tribunal or other regulatory authority, arbitrator, governmental authority, or other Person having jurisdiction, or any consent, exemption, approval or license of any governmental authority that applies in whole or in part to a Party and, with respect to First Uranium, includes securities laws and all related regulations, rules and instruments, corporate law and the rules of the TSX, Johannesburg Stock Exchange and/or any other exchange or quotation system on which the securities of First Uranium are listed or traded from time to time;
- (d) **"Arrangement Right"** has the meaning given thereto in Section 2(d);
- (e) **"BEE Purchaser"** means a purchaser that qualifies as a "black economic empowerment" purchaser under applicable South African laws;
- (f) **"Business Day"** means a day that is not a Saturday, Sunday or a day on which banks are generally not open for business in either Johannesburg, South Africa or Toronto, Ontario;
- (g) **"CIM"** means the Canadian Institute of Mining, Metallurgy and Petroleum;
- (h) **"Common Shares"** means the issued and outstanding common shares in the capital of First Uranium;
- (i) **"Communication"** has the meaning given thereto in Section 6;
- (j) **"Controlling Interest"** means the ability to vote more than 35% of the voting rights (or equivalent rights) attached to all outstanding securities (or interests) of the relevant Person (other than voting rights that are dependent upon the occurrence of an event that has not occurred or is no longer outstanding);
- (k) **"Convertible Security"** means a security of First Uranium that is convertible or exercisable into or exchangeable for Common Share(s), but excludes (i) a Special Option, (ii) a Right, and (iii) the Maintenance Right;
- (l) **"Effective Date"** means the date hereof;
- (m) **"Exercise Notice"** has the meaning set forth in Section 3(b);
- (n) **"Final Prospectus"** is the final long form prospectus of First Uranium dated December 12, 2006 in respect of the Offering;

- (o) **"Incentive Security"** means an option or other security of First Uranium convertible or exercisable into or exchangeable for Common Share(s) granted pursuant to any Share Incentive Plan;
- (p) **"LCIA"** has the meaning given thereto in Section 7;
- (q) **"Maintenance Closing"** means the closing from time to time of the issue of the Maintenance Securities under the Maintenance Right;
- (r) **"Maintenance Right"** means the right of Simmer & Jack to purchase the Maintenance Securities from First Uranium in accordance with this Agreement;
- (s) **"Maintenance Securities"** has the meaning set forth in Section 2(a);
- (t) **"Offering"** means an initial public offering of First Uranium's Common Shares in each of the provinces and territories of Canada;
- (u) **"Original Percentage"** means the percentage of outstanding Common Shares beneficially owned by Simmer & Jack immediately prior to a Triggering Event;
- (v) **"Parties"** means First Uranium and Simmer & Jack, and their respective successors and permitted assignees;
- (w) **"Person"** means an individual, body corporate, unincorporated joint venture, partnership, association, government, governmental agency, state, foundation and trust (in each case whether or not having separate legal personality);
- (x) **"Purchase Price"** means the purchase price for the Maintenance Securities referred to in Section 2(c);
- (y) **"Representative"** means any director, officer, employee, agent, advisor or consultant of a party to this Agreement;
- (z) **"Right"** means a right granted by First Uranium to all or substantially all of its holders of Common Shares (including Simmer & Jack) to purchase additional Common Shares and/or other securities of First Uranium;
- (aa) **"SARB Approval"** means the approval granted by the South African Reserve Bank with respect to, *inter alia*, the sale of certain subsidiaries by Simmer & Jack to First Uranium, dated November 16, 2006, as supplemented, amended or replaced;
- (bb) **"SARB Control Condition"** means any condition imposed upon Simmer & Jack to maintain beneficial ownership to a minimum percentage of outstanding Common Shares pursuant to SARB Approval;
- (cc) **"Share Incentive Plan"** means any plan of First Uranium in effect from time to time pursuant to which Common Shares may be issued, or options or other

securities convertible or exercisable into or exchangeable for Common Shares may be granted, to directors, officers and/or employees of First Uranium (as well as such other Persons as permitted under the Share Incentive Plan);

- (dd) **“Special Option”** means an option or other security granted by First Uranium that is convertible or exercisable into or exchangeable for Common Share(s) granted by First Uranium for nominal or indeterminate consideration pursuant to a shareholder protection plan, a shareholder rights plan or a similar plan;
- (ee) **“Subsidiary”** of a Party shall mean any corporation, partnership, joint venture, limited liability company, association or other entity which such Party controls (within the meaning of National Instrument 45-106 as of the date hereof);
- (ff) **“Triggering Event”** means the issue of Common Shares and/or Convertible Securities by First Uranium and, for greater certainty, includes any issue of Common Shares and/or Convertible Securities on the exercise, conversion or exchange of any Special Option, but excludes any issue of Common Shares and/or Convertible Securities:
 - (i) on the exercise, conversion or exchange of any previously issued Convertible Securities;
 - (ii) on the grant or exercise of any Right;
 - (iii) on the grant or exercise of the Maintenance Right;
 - (iv) pursuant to an over-allotment option granted by First Uranium to the underwriters in connection with the Offering;
 - (v) pursuant to any stock dividend, stock split, consolidation, amalgamation, share reclassification, reorganization or merger involving First Uranium or other similar event that affects all holdings of Common Shares in the same manner, on a per share basis; or
 - (vi) on the issue of the Waterpan Shares (as defined in the Final Prospectus) or on the grant or exercise of the Warrants (as defined in the Final Prospectus).
- (gg) **“Triggering Event Closing Date”** means the date on which a Triggering Event occurs;
- (hh) **“Triggering Event Notice”** has the meaning set forth in Section 3(a);
- (ii) **“Triggering Event Price”** means, in respect of an issue of Common Shares and/or Convertible Securities by First Uranium pursuant to a Triggering Event, the purchase price per Common Share and/or Convertible Security to be paid for such Common Shares and/or Convertible Securities and means, in respect of an issue of Common Shares and/or Convertible Securities for consideration other

than money, the price per Common Share and/or Convertible Security, as determined by the board of directors of First Uranium acting in good faith, that would have been received by First Uranium had such Common Shares and/or Convertible Securities been issued for money; and

(jj) "TSX" means the Toronto Stock Exchange.

The headings inserted in this Agreement are inserted only for convenience and in no way define, limit, or describe the scope or intent of this Agreement or affect its terms and provisions.

2. General Provisions

- (a) *Grant of Maintenance Right.* Subject to the provisions of this Agreement and Applicable Law, First Uranium hereby grants to Simmer & Jack the right, exercisable until the date that Simmer & Jack first fails to beneficially own at least 35% (thirty-five percent) of the outstanding Common Shares (and does not acquire Maintenance Securities on or before the Maintenance Closing to rectify such failure), to purchase on the Triggering Event Closing Date directly, or indirectly by another member of Simmer & Jack and its direct and indirect Subsidiaries, from time to time upon the occurrence of any Triggering Event up to such number of Common Shares and/or Convertible Securities issuable in connection with the Triggering Event on the same terms and conditions as those issuable in connection with the Triggering Event (the "**Maintenance Securities**") which will, when added to the Common Shares beneficially owned by Simmer & Jack immediately prior to the Triggering Event, result in Simmer & Jack beneficially owning the Original Percentage of outstanding Common Shares after giving effect to the issue of all Common Shares to be issued or issuable (pursuant to the exercise, conversion or exchange of Convertible Securities) in connection with the Triggering Event. In the event that a Triggering Event consists of an issue of both Common Shares and Convertible Securities, the Maintenance Securities shall be allocated to Simmer & Jack between Common Shares and Convertible Securities on the same *pro rata* basis as are allocated to subscribers in respect of the Triggering Event.
- (b) *Mandatory Exercise.* Simmer & Jack agrees to exercise its Maintenance Right wherever necessary to comply with the SARB Control Condition, subject to such exceptions and exemptions as may be applicable thereto. For purposes of clarity, nothing herein shall preclude Simmer & Jack from selling all of its Common Shares to a pre-determined buyer or from selling Common Shares that, subsequent to such sale or sales, leave it in compliance with the SARB Control Condition.
- (c) *Purchase Price.* In respect of each exercise of the Maintenance Right, the purchase price per Maintenance Security (the "**Purchase Price**") shall be equal to the greater of the Triggering Event Price and such price as may be prescribed by any securities regulator or stock exchange having jurisdiction over the issue of the Maintenance Securities to Simmer & Jack hereunder.

- (d) *Arrangement Right.* Simmer & Jack agrees that, in the event that it chooses to dispose of any of its Common Shares, it will provide to First Uranium prior notice in respect of such sale and provide First Uranium with a right (the "**Arrangement Right**") to arrange for a BEE Purchaser to purchase up to 100% of the Common Shares intended to be sold by Simmer & Jack on terms that are acceptable to Simmer & Jack, acting reasonably. The Arrangement Right will expire 60 days following the date of the giving of the aforementioned prior notice.
- (e) *Stock Exchange and Other Consents.* Each of the Parties shall use all reasonable commercial efforts to take, or cause to be taken, all actions, and to do, or cause to be done as promptly as practicable, all things necessary, proper or advisable under Applicable Law to consummate and make effective the transactions contemplated by this Agreement, including obtaining any governmental, regulatory, stock exchange or other consents, transfers, orders, qualifications, waivers, authorizations, exemptions and approvals, providing all notices and making all registrations, filings and applications necessary or desirable for the consummation of the transactions contemplated by this Agreement, including any filings with governmental or regulatory agencies. First Uranium shall forthwith notify Simmer & Jack if as a condition of obtaining any applicable regulatory approvals, including securities regulatory and stock exchange approval, the Purchase Price must be an amount greater than the Triggering Event Price and shall keep Simmer & Jack fully informed and allow Simmer & Jack to participate in any communications with such stock exchange regarding the exercise of the Maintenance Right.
- (f) *Expenses.* Except as otherwise specifically provided in this Agreement, each Party shall bear its own expenses incurred in connection with this Agreement and in connection with all obligations required to be performed by each of them under this Agreement.
- (g) *Publicity.* The Parties shall, subject to their respective legal obligations and Applicable Law, consult with each other, and use reasonable efforts to agree upon the text of any written press release relating to this Agreement or the transactions contemplated hereby, before issuing any such press release.

3. **Exercise of Maintenance Right**

- (a) First Uranium shall give Simmer & Jack notice (a "**Triggering Event Notice**") as soon as practicable (i) following a determination by First Uranium to effect a Triggering Event other than a Triggering Event that arises as a result of the grant or exercise of a Special Option and (ii) following the exercise of a Special Option. Each Triggering Event Notice shall include the number of Maintenance Securities that Simmer & Jack shall be entitled to purchase as a result of the applicable Triggering Event, a calculation demonstrating how such number was determined, the Triggering Event Price and the anticipated Triggering Event Closing Date and the terms and conditions of the Maintenance Securities, if other than Common

Shares. First Uranium shall also give Simmer & Jack notice as soon as practicable following the grant of a Special Option.

- (b) Subject to the provisions hereof, the Maintenance Right shall, in each instance, be exercisable by Simmer & Jack at any time during a period of ten (10) Business Days following receipt in accordance with Section 6 of the Agreement of a Triggering Event Notice, provided that Simmer & Jack shall make its determination as to whether to exercise the Maintenance Right in respect of such Triggering Event as soon as practicable and shall promptly deliver an irrevocable notice (an "Exercise Notice") in writing addressed to First Uranium confirming that it will exercise the Maintenance Right in respect of such Triggering Event, specifying the number of Maintenance Securities that it will purchase and the member(s) of Simmer & Jack and all of its direct and indirect Subsidiaries, to whom such Maintenance Securities are to be issued, if other than Simmer & Jack. If First Uranium does not receive an Exercise Notice in respect of a Triggering Event Notice within such 10 (ten) Business Day period, Simmer & Jack shall be deemed to have not exercised the Maintenance Right in respect of the Triggering Event to which such Triggering Event Notice relates and the Maintenance Right shall be deemed to have expired in respect of such Triggering Event.
- (c) Subject to Applicable Law, the Maintenance Closing in respect of the issue of the Maintenance Securities shall occur on the Triggering Event Closing Date or such later date as the Parties may agree upon.
- (d) The obligation of First Uranium to consummate the sale of the Maintenance Securities under this Agreement is subject to the fulfilment, prior to or at the Maintenance Closing, of each of the following conditions, any of which may be waived by First Uranium in writing:
 - (i) Simmer & Jack shall have performed and complied in all material respects with the agreements and covenants required by this Agreement to be performed or complied with by Simmer & Jack prior to or at the Maintenance Closing;
 - (ii) there shall not be in effect any injunction or restraining order issued by a court of competent jurisdiction which prohibits the consummation of the transactions contemplated by this Agreement nor shall there be any investigation or proceeding pending before any court or governmental authority seeking to prohibit the consummation of the transactions contemplated by this Agreement;
 - (iii) no Applicable Law shall have been enacted by any governmental authority which prohibits the consummation of the transactions contemplated by this Agreement or makes such consummation illegal;

- (iv) the closing of the issue and sale of the securities constituting the Triggering Event shall have occurred prior to, or shall occur concurrently with, the Maintenance Closing;
 - (v) any stock exchange upon which the Common Shares shall then be listed and any other securities regulator having jurisdiction and whose approval is required shall have approved the issue and sale of such Maintenance Securities on the terms described herein; and
 - (vi) Simmer & Jack shall have provided evidence satisfactory to First Uranium and its counsel, acting reasonably, that the issue and sale of the Maintenance Securities to Simmer & Jack is exempt from the prospectus and registration requirements, or the equivalent thereof, in all applicable jurisdictions.
- (e) The obligation of Simmer & Jack to consummate the purchase of the Maintenance Securities under this Agreement is subject to the fulfilment, prior to or at the Maintenance Closing, of each of the following conditions, any of which may be waived by Simmer & Jack in writing:
- (i) First Uranium shall have performed and complied in all material respects with the agreements and covenants required by this Agreement to be performed or complied with by it prior to or at the Maintenance Closing;
 - (ii) there shall not be in effect any injunction or restraining order issued by a court of competent jurisdiction which prohibits the consummation of the transactions contemplated by this Agreement, nor shall there be any investigation or proceeding pending before any court or governmental authority seeking to prohibit the consummation of the transactions contemplated by this Agreement;
 - (iii) no Applicable Law shall have been enacted by any governmental authority which prohibits the consummation of the transactions contemplated by this Agreement or makes such consummation illegal; and
 - (iv) any stock exchange upon which the Common Shares shall then be listed and any other securities regulator having jurisdiction and whose approval is required shall have approved of the issue and sale of such Maintenance Securities on the terms described herein.
- (f) At or prior to the time of the Maintenance Closing,
- (i) First Uranium shall deliver, or cause to be delivered, to Simmer & Jack certificates representing the Maintenance Securities registered in the name of First Uranium or such member of Simmer & Jack and all of its direct and indirect Subsidiaries, as is designated in writing by First Uranium;

- (ii) Simmer & Jack or such member of any of its direct and indirect Subsidiaries, as is designated in writing by Simmer & Jack shall deliver to First Uranium payment of the Purchase Price by certified cheque or wire or other electronic funds transfer; and
- (iii) The Parties shall deliver any documents required to evidence the requirements set out in Sections 3(d) and 3(e).

4. No Obligations Unless Maintenance Right Exercised

Nothing herein contained or done pursuant hereto shall (save as otherwise specifically provided in Section 2(b)) obligate Simmer & Jack to purchase or pay for, or shall obligate First Uranium to issue, the Maintenance Securities except upon the exercise by Simmer & Jack of the Maintenance Right in accordance with the provisions of this Agreement and compliance with all other conditions precedent to such issue and purchase contained in this Agreement.

5. No Rights As Holder of Maintenance Securities

Simmer & Jack shall not have any rights whatsoever as a holder of any of the Maintenance Securities (including any right to receive dividends or other distributions therefrom or thereon) until Simmer & Jack shall have duly acquired the Maintenance Securities.

6. Notices

Any notice, direction or other communication ("**Communication**") given hereunder, irrespective of whether such Communication was required, permitted or otherwise provided pursuant to or in respect of this Agreement, shall be in writing and, if delivered, shall be deemed to have been given and received on the day it is actually received and, if mailed by registered mail, shall be deemed to have been given and received on the fifth (5th) day following such mailing and, if sent by fax or other similar form of electronic communication, shall be deemed to have been given and received on the day it was so sent if sent during normal business hours (9:00 a.m. to 5:00 p.m. local time at the place of receipt) or on the next following business day if sent outside of normal business hours. Notices in each case shall be by facsimile as follows:

If to First Uranium, 27 (11) 837 3840 (for the attention of Gordon Miller); and

If to Simmer & Jack, 27 (11) 837 3840 (for the attention of Gordon Miller).

Any Party may give, at any time, notice in writing to the other Party of any change of address of the Party giving such notice and, from and after the giving of such notice, the address or addresses therein specified shall be deemed to be the address of such Party for purposes of giving notice hereunder. If the date for performance of any obligation or the giving of any notice falls on a day that is not a Business Day, the date for performance of the obligation or the giving of the notice shall be extended to the next Business Day.

7. Arbitration

Any dispute arising out of or in connection with this Agreement shall be resolved by arbitration in Toronto conducted in the English language by a single arbitrator pursuant to the rules of the London Court of International Arbitration ("LCIA"), save that unless the Participants agree otherwise:

- (a) the LCIA shall appoint the arbitrator;
- (b) the claimant shall serve its written claim within 14 (fourteen) days of the arbitrator's appointment. The defence shall be served within 28 (twenty-eight) days after that and the reply 14 (fourteen) days thereafter. Each shall attach any documents relied upon. The Parties will be entitled to be represented by qualified legal practitioners. Neither Party shall be required to give general discovery of documents, but may be required only to produce specific, identified documents that are directly relevant to the dispute;
- (c) the arbitration proceedings and the decision of the arbitrator shall be confidential, subject to applicable laws;
- (d) the costs of the arbitration shall be paid as determined by the arbitrator; and
- (e) the award made by the arbitrator shall be final and binding upon the Parties, except in the case of manifest error.

8. Termination

This Agreement shall terminate on the date that Simmer & Jack is no longer an Affiliate of First Uranium.

9. General

- (a) This Agreement constitutes the whole of this Agreement and encompasses the entire agreement among the Parties pertaining to pre-emptive rights to acquire securities. This Agreement supersedes all prior agreements, understandings, negotiations and discussions, whether oral or written, among the Parties and there are no warranties, representations or other agreements among the Parties, except as specifically set forth herein.
- (b) The rights and obligations in this Agreement shall be governed by and construed in accordance with the laws of Ontario and the Parties agree to submit to the exclusive jurisdiction of the courts of Ontario. The Parties agree to execute and cause to be executed such other documents, and take and cause to be taken such other actions, as are reasonably necessary to secure and give effect to the rights and obligations granted and assumed hereunder. This Agreement may be executed in one or more counterparts (which may include counterparts delivered by facsimile) and all of those counterparts taken together shall constitute one and the same instrument.

- (c) Time is of the essence of this Agreement. The failure of a Party to insist on the strict performance of any provision of this Agreement or to exercise any right, power or remedy upon a breach hereof shall not constitute a waiver of any provision of this Agreement or limit the Party's right thereafter to enforce any provision or exercise any right. No modification of this Agreement shall be valid unless made in writing and duly executed by all of the Parties. This Agreement shall be binding upon and inure to the benefit of the respective successors and permitted assigns of the Parties. Neither of the Parties shall assign any of their rights or obligations under this Agreement without the express prior written consent of the other Party.
- (d) In the event that a court or other authority of competent jurisdiction determines that any term, part, or provision of this Agreement is unenforceable, illegal, or in conflict with any laws to which this Agreement is subject, the Parties intend that such authority reform that term, part, or provision within the limits permissible under the law in such manner as to approximate most closely the intent of the Parties to this Agreement. If the court cannot make such reformation, then that term, part, or provision shall be considered severed from this Agreement, the remaining portions of this Agreement shall not be affected, and this Agreement shall be construed and enforced as if it did not contain that term, part, or provision.
- (e) Each of the Parties acknowledges and confirms that it has obtained its own independent legal advice with respect to this Agreement and the negotiation thereof and the transactions contemplated thereunder.

IN WITNESS WHEREOF, the parties have caused this Agreement to be executed by their duly authorized officers as of the date first written above.

FIRST URANIUM CORPORATION

- and -

SIMMER & JACK MINES, LIMITED

SHARED SERVICES AGREEMENT

SHARED SERVICES AGREEMENT

THIS AGREEMENT made as of the 20th day of December, 2006

BETWEEN:

FIRST URANIUM CORPORATION, a corporation continued under the laws of British Columbia ("**First Uranium**")

- and -

SIMMER & JACK MINES, LIMITED, a South African corporation ("**Simmer & Jack**")

RECITALS:

WHEREAS First Uranium is a mineral resource company working towards the development of two uranium/gold projects in South Africa;

AND WHEREAS Simmer & Jack shall sell certain assets to First Uranium in connection with a reorganization and the initial public offering of First Uranium such that subsequent to such reorganization and offering, Simmer & Jack will be a majority shareholder of First Uranium, and First Uranium will own or control certain corporations previously owned by Simmer & Jack;

AND WHEREAS Simmer & Jack has agreed to provide or cause to be provided by any of its subsidiaries to First Uranium and to the Subsidiaries (as defined below), certain services as set out in this Agreement;

NOW, THEREFORE, the Parties do hereby agree, in consideration of US\$1.00 now paid by each to the other (the receipt and sufficiency of which is hereby acknowledged), as follows:

1. DEFINITIONS AND INTERPRETATION

1.1 In this Agreement, including the premises hereto, this section, the words and phrases set forth below shall have the meaning ascribed thereto, namely:

1.1.1 "**Agreement**" means this shared services agreement, and the expressions "above", "below", "herein", "hereto", "hereof" and similar expressions refer to this Agreement;

- 1.1.2 **Business Day**” means a day that is not a Saturday, Sunday or a day on which banks are generally not open for business in either Johannesburg, South Africa or Toronto, Ontario;
- 1.1.3 **“day”** means a calendar day;
- 1.1.4 **“Effective Date”** means the date hereof;
- 1.1.5 **“Management Advice”** means advice, information or assistance provided by senior officers and directors of Simmer & Jack, as well as technical and accounting personnel, concerning strategic, financial, business development or operational matters, including project management advice in respect of First Uranium’s Buffelsfontein and Ezulwini projects, advice with respect to the preparation of First Uranium’s financial statements, and introductions to governmental, shareholder, financial and other present and potential stakeholder interests;
- 1.1.6 **“Offering”** means an initial public offering of First Uranium’s common shares in each of the provinces and territories of Canada;
- 1.1.7 **“Party”** means Simmer & Jack or First Uranium (collectively, the **“Parties”**);
- 1.1.8 **“Salary Costs”** means all costs of an employee, including salary, benefits and other costs (whether paid in cash, in kind or otherwise);
- 1.1.9 **“Subsidiaries”** of First Uranium shall mean any corporation, partnership, joint venture, limited liability company, association or other entity which First Uranium controls (within the meaning of National Instrument 45-106 as of the date hereof), including, without limitation, First Uranium (Proprietary) Limited and Ezulwini Mining Company (Proprietary) Limited;
- 1.1.10 **“Vulisango Management Agreement”** means the letter of understanding dated September 26, 2006 in respect of the provision of BEE advisory and consulting services to be provided by Vulisango Holdings (Proprietary) Ltd.
- 1.1.11 **“ZAR”** means the South African Rand.
- 1.2 The headings inserted in this Agreement are inserted only for convenience and in no way define, limit, or describe the scope or intent of this Agreement or affect its terms and provisions.
- 1.3 In this Agreement, words importing persons include corporations and vice versa, words importing the masculine gender include the feminine and neuter genders and vice versa, and words importing the singular include the plural and vice versa.

- 1.4 All amounts of money which are referred to in this Agreement are expressed in lawful money of the Republic of South Africa unless otherwise specified.

2. SCOPE OF SERVICES

- 2.1 During the term of this Agreement, Simmer & Jack shall provide to First Uranium and/or the Subsidiaries the following services as required by First Uranium and/or the Subsidiaries:

- 2.1.1 project management and technical services;
- 2.1.2 cash management and investment services;
- 2.1.3 accounting, treasury and financial services;
- 2.1.4 corporate secretarial services;
- 2.1.5 human resource and staffing services, including payroll and benefits administration; and
- 2.1.6 such other services as may be required by First Uranium and which Simmer & Jack is able and willing to provide.

- 2.2 First Uranium may, on no less than 30 (thirty) days notice to Simmer & Jack, advise Simmer & Jack that certain of the services to be provided under this Agreement shall no longer be required.

3. SERVICES TO BE PROVIDED UNDER THIS AGREEMENT

3.1 Availability of Simmer & Jack Personnel

- 3.1.1 First Uranium acknowledges that Simmer & Jack is not required to devote its personnel and resources exclusively to or for the benefit of First Uranium.
- 3.1.2 Simmer & Jack makes no assurance that the services to be provided by Simmer & Jack will be available at all times and acknowledges that, as a result of services to be performed for Simmer & Jack, its personnel will generally be available to devote only a portion of their time to the business of First Uranium.
- 3.1.3 Simmer & Jack may need to assign Simmer & Jack employees, other than those that provide Management Advice to First Uranium, to work on either a full or part time basis in order to provide the services to be provided hereunder, including project management and technical services, cash management and investment services, accounting, treasury and financial services, corporate secretarial services and human resource and staffing services.

3.2 Risk Management

Simmer & Jack agrees to provide advice to First Uranium on risk management matters generally and to include First Uranium and the Subsidiaries as named insureds on all its policies of insurance from time to time in order to ensure that First Uranium will be covered in respect of property, plant and equipment, directors' and officers' liability (including liability that might flow from negligent statements made in the prospectus pertaining to the Offering), public liability, environmental liability, occupiers' liability and business against the same risks and subject to the same policy limits as Simmer & Jack's other operations. In the event of a claim, Simmer & Jack agrees to co-operate with First Uranium to take such steps as may be necessary or desirable to file proof of loss with the insurers and obtain settlement of the claim. First Uranium shall be responsible for its share of the premiums payable by Simmer & Jack in respect of the coverage provided to First Uranium.

4. **FEES AND EXPENSES**

4.1 First Uranium will reimburse Simmer & Jack for all costs reasonably incurred by Simmer & Jack in connection with any services provided by it or any of its subsidiaries pursuant to the terms and conditions of this Agreement.

4.2 First Uranium will reimburse Simmer & Jack 50% of the management fee that Simmer & Jack pays pursuant to the Vulisango Management Agreement provided that First Uranium is not required to pay more than ZAR 125,000 per month in respect of the foregoing. In the event this Agreement is terminated and First Uranium continues to want access to the services provided pursuant to the Vulisango Management Agreement, then First Uranium and Simmer & Jack agree to enter into a separate agreement governing First Uranium's access to such services on similar terms and conditions as set out herein.

4.3 Time spent on services hereunder by management, employees or consultants of Simmer & Jack or its subsidiaries will be recorded on an hourly basis by such persons (with no requirement for partial hours to be recorded and waiver of all time less than 30 (thirty) minutes in duration).

4.4 All Salary Costs for employees of Subsidiaries shall be paid directly by First Uranium.

4.5 Quarterly Review

4.5.1 The fees payable under this Agreement shall be reviewed by the Parties on a quarterly basis.

4.5.2 The purpose of such review is to ensure that the amounts payable hereunder are neither insufficient (so as to generate a loss) nor excessive (so as to generate a profit), as the case may be, for Simmer & Jack.

- 4.5.3 Simmer & Jack will act reasonably and in good faith in the determination of the costs and fees charged to First Uranium under this Agreement and shall, among other things, ensure that there is no duplication of such costs and fees.

5. INVOICES AND PAYMENT

5.1 Invoicing

- 5.1.1 Simmer & Jack shall submit a detailed invoice each month for costs to be reimbursed and fees and other compensation to which it is entitled.
- 5.1.2 Each invoice shall describe in reasonable detail the costs for which reimbursement is sought and the fees or other compensation for which payment is sought, all of which shall be expressed in ZAR.
- 5.1.3 Any value added tax that may be payable shall be added to the relevant fees or other compensation and shall be paid by First Uranium.
- 5.1.4 Payment shall be made by First Uranium within 30 (thirty) days after receipt of the invoice at Simmer & Jack's offices in Southdale, South Africa, or at such other place in South Africa designated by Simmer & Jack.
- 5.1.5 To the extent it is necessary to secure the consent of any government or governmental agency to any payment to Simmer & Jack by First Uranium in ZAR, First Uranium agrees to use reasonable efforts to secure such consent.
- 5.1.6 Upon request of First Uranium, Simmer & Jack will prepare and submit an estimate of the costs and/or fees or other compensation of any assistance requested by First Uranium pursuant to this Agreement prior to the rendering thereof.

5.2 Records and Compensation

- 5.2.1 Simmer & Jack shall keep or cause to be kept complete and accurate records of all costs and expenses incurred by it in the performance of its obligations under this Agreement.
- 5.2.2 All such records shall be kept so as to be readily susceptible to standard auditing tests.
- 5.2.3 Costs and expenses shall include, without limitation, all direct costs and expenses incurred by Simmer & Jack in the performance of such obligations and fully allocated indirect costs and expenses, including salaries and benefits of Simmer & Jack personnel providing services to First Uranium under this Agreement, based on such reasonable policies and procedures for allocation as may be agreed on by Simmer & Jack and First Uranium.

5.2.4 First Uranium or its duly authorized representative shall have the right, at its expense, during reasonable business hours during the term of this Agreement and for two years thereafter to inspect the records and accounts of Simmer & Jack pertaining hereto and make such audit thereof as First Uranium may deem necessary.

5.2.5 Simmer & Jack and First Uranium may from time to time agree upon accounting procedures to eliminate unnecessary detailing of indirect and overhead costs and other matters.

6. TAXES

First Uranium shall pay, at its cost, all registration fees, remittance fees, stamp taxes and similar taxes and charges, if any, that are assessed upon this Agreement or upon payments made hereunder provided, however, that First Uranium shall not be liable for taxes in the nature of income taxes upon the income of Simmer & Jack in relation to the payment of compensation to Simmer & Jack in excess of Simmer & Jack's costs under this Agreement.

7. TERM OF THE AGREEMENT

This Agreement shall commence on the Effective Date and continue until terminated. This Agreement may be terminated:

7.1.1 by either Party giving written notice of termination to the other Party not less than 180 (one hundred and eighty) days prior to the termination date designated in such notice; and

7.1.2 by either Party giving notice with immediate effect, in the event that the other Party becomes insolvent, bankrupt, files a petition seeking to take advantage of any other law relating to bankruptcy, insolvency, reorganization, or winding-up, makes a general assignment for the benefit of its creditors, or admits in writing its inability to pay its debts as they become due;

provided that in no event shall Simmer & Jack give notice to First Uranium pursuant to Section 7.1.1 so long as Simmer & Jack continues to hold at least a 50% equity interest in First Uranium.

8. LOSSES AND LIABILITIES

8.1 Except as herein otherwise provided, neither Party (the "first party") shall be liable to the other Party (the "second party") for any losses or liabilities sustained or incurred by the second party, except such losses and liabilities as may result from the first party's gross negligence or willful misconduct or from the willful and intentional breach by the first party of one or more of the provisions of this Agreement, and then only to the extent that such losses and liabilities are not covered by the second party's insurance.

8.2 Under no circumstances shall either Party be liable to the other for indirect or consequential damages.

8.3 Notwithstanding Section 8.1 and 8.2, First Uranium hereby indemnifies and agrees to hold Simmer & Jack harmless from and against any and all claims, demands, suits, actions, losses, damages and liability of whatsoever nature arising directly or indirectly out of the performance or purported performance of services or other obligations under this Agreement by Simmer & Jack or its employees, agents or contractors, except only as and to the extent the same arise directly from the gross negligence or willful misconduct of or the willful and intentional breach of this Agreement by Simmer & Jack or its employees or agents. First Uranium will indemnify Simmer & Jack as aforesaid in respect of claims by and liability to anyone sustained by Simmer & Jack by reason of anyone relying on information furnished by or purporting to be furnished by First Uranium to Simmer & Jack for the purposes of this Agreement. First Uranium will also bear all risk and will indemnify Simmer & Jack as aforesaid in respect of claims by and liability to anyone sustained by Simmer & Jack by reason of Simmer & Jack, its employees or agents acting or omitting to act on instructions and authorization of First Uranium or accepted by Simmer & Jack in good faith as being made with the authority of First Uranium. This provision shall survive any termination of this Agreement.

9. REPRESENTATIONS AND WARRANTIES

Each of the Parties represents and warrants to each other Party:

9.1 that it has the capacity to enter into and perform this Agreement and all the obligations contemplated herein and that all corporate and other actions required to authorize it to enter into and perform this Agreement have been properly taken;

9.2 that it is duly incorporated or continued and validly existing under the laws of its jurisdiction of incorporation and that it has the corporate power and capacity to own its assets and to enter into and perform its obligations under this Agreement;

9.3 that this Agreement has been duly authorized and duly executed and delivered by such Party and constitutes a valid and binding obligation enforceable in accordance with its terms, subject to the usual exceptions as to bankruptcy and the availability of equitable remedies;

9.4 that the execution, delivery and performance of this Agreement does not and will not contravene the provisions of its articles, by-laws, or other constating documents, or the provisions of any indenture, agreement or other instrument to which such Party is a party or by which such Party is bound; and

9.5 that all of the foregoing representations and warranties will continue to be true and correct during the continuance of the Agreement.

10. GENERAL

10.1 Assignment

This Agreement shall not be assigned in whole or in part by either Party without the prior written consent of the other Party; provided that this section shall not preclude or restrict Simmer & Jack from engaging such contractors (subject to the applicable provisions of this Agreement) as it deems necessary or prudent to perform in whole or in part any of the services required to be provided by Simmer & Jack under this Agreement.

10.2 Progress Updates

The Parties shall at all times keep each other informed of all its efforts in the implementation of its obligations hereunder.

10.3 Force Majeure

10.3.1 If Simmer & Jack is unable, wholly or in part, by reason of any occurrence beyond its reasonable control, to carry out any obligation under this Agreement, the performance of such obligation, to the extent and during the time that it is so affected, shall be suspended. Simmer & Jack shall notify First Uranium promptly of such circumstances and exercise due diligence in attempting to perform its obligations.

10.3.2 Simmer & Jack shall use its best efforts to reinstate the services suspended under this provision as soon as practicable and to mitigate the adverse effects on First Uranium of such suspension.

10.3.3 Fees under this Agreement shall be reduced proportionally to reflect the non-performance of those services suspended under this provision.

10.4 Remedies

Each Party's right of termination is in addition to any other rights it may have under this Agreement or otherwise, and the exercise of a right of termination will not be an election of remedies. If this Agreement is terminated, all further obligations and liabilities of the Parties under this Agreement will terminate, save and except as may be otherwise specified in this Agreement; provided, however, that if this Agreement is terminated by a Party because of a breach of the Agreement by the other Party or because one or more of the conditions to the terminating Party's obligations under this Agreement is not satisfied as a result of the other Party's failure to comply with its obligations under this Agreement, the terminating Party's right to pursue all legal remedies will survive such termination unimpaired.

10.5 Costs

Each Party will be responsible for and bear all of its own costs and expenses (including, without limitation, any broker's or finder's fees and the expenses of its representatives) incurred at any time in connection with pursuing, negotiating and consummating the transactions contemplated hereby.

10.6 Notices

All notices and communications which may be or are required to be given by either Party to the other shall be in writing and hand-delivered, sent by fax or sent by internationally recognized air-courier (such as Federal Express or DHL) to the Parties, at the following facsimile numbers, and shall be effective upon receipt:

If to First Uranium, 27 (11) 837 3840 (for the attention of Gordon Miller); and

If to Simmer & Jack, 27 (11) 837 3840 (for the attention of Gordon Miller).

10.7 Governing Law

The formation, interpretation, and performance of this Agreement shall be governed by and construed in accordance with the laws of Ontario. Any terms or agreements herein which by their nature may or must be performed or occur after termination of this Agreement shall survive such termination.

10.8 Arbitration

Any dispute arising out of or in connection with this Agreement shall be resolved by arbitration in Toronto conducted in the English language by a single arbitrator pursuant to the rules of the London Court of International Arbitration ("LCIA"), save that unless the Participants agree otherwise:

- (i) the LCIA shall appoint the arbitrator who shall be either a Canadian or South African Chartered Accountant;
- (ii) the claimant shall serve its written claim within fourteen (14) days of the arbitrator's appointment. The defence shall be served within twenty-eight (28) days after that and the reply fourteen (14) days thereafter. Each shall attach any documents relied upon. The Parties will be entitled to be represented by qualified legal practitioners. Neither Party shall be required to give general discovery of documents, but may be required only to produce specific, identified documents that are directly relevant to the dispute;
- (iii) the arbitration proceedings and the decision of the arbitrator shall be confidential, subject to applicable laws;

- (iv) the costs of the arbitration shall be paid as determined by the arbitrator; and
- (v) the award made by the arbitrator shall be final and binding upon the Parties, except in the case of manifest error.

10.9 Entire Agreement

This sets forth the entire Agreement between the Parties and supersedes all prior understandings and communications between the Parties or any of them, oral or written. This Agreement shall inure to the benefit of and be binding on the Parties and their respective heirs, executors, administrators, successors and permitted assigns. The Parties shall, without further consideration, from time to time execute and deliver further instruments and assurances as may be reasonably required to carry out the terms and intent of this Agreement.

10.10 Invalidity

In case any one or more of the provisions of this Agreement or any application thereof shall be invalid, illegal or unenforceable in any respect, the validity, legality and enforceability of the remaining provisions of this Agreement and other application thereof will not in any way be affected or impaired thereby.

10.11 Counterparts

This Agreement may be executed in separate counterparts, each of which shall be deemed to be an original but all of which, taken together, shall constitute one and the same instruments.

10.12 No Third Party Benefits

Nothing contained in this Agreement shall confer any rights upon any person who, or entity which, is not a party or assignee of a Party to this Agreement.

10.13 Compliance with Law

Each of the Parties shall comply, and use its best efforts to ensure compliance by all of its employees, agents and contractors, with all applicable laws, statutes, rules, regulations, orders, and permit and license terms and conditions of all federal, state or provincial, and local governments and governmental agencies, and all applicable orders of courts and administrative tribunals of competent jurisdiction, affecting the business and operations of First Uranium.

10.14 Power of First Uranium

Nothing herein shall affect the overall powers and duties of the Board of Directors and the management of First Uranium to manage the affairs of First Uranium.

IN WITNESS WHEREOF, the parties have caused this Agreement to be executed by their duly authorized officers as of the date first written above.

AGREEMENT

1. PARTIES

1.1. The parties to this agreement are -

1.1.1. Simmer & Jack Mines, Limited; and

1.1.2. Ezulwini Mining Company (Proprietary) Limited

1.2. The parties agree as set out below.

2. INTERPRETATION

2.1. In this agreement, unless clearly inconsistent with or otherwise indicated by the context –

2.1.1. "the/this agreement" means the agreement set out in this document and the appendices hereto;

2.1.2. "Ezulwini" means Ezulwini Mining Company (Proprietary) Limited, (Registration Number 2004/028460/07), a company duly registered according to the company laws of the Republic of South Africa;

2.1.3. "the date of signature" means the date of signature of this agreement by the last party signing;

- 2.1.4. "the effective date" means the date of filing of the Preliminary Prospectus with the Toronto Stock Exchange by First Uranium in respect of the IPO;
- 2.1.5. "First Uranium" means First Uranium Corporation (BCCorporate Number C0777 384), a corporation duly continued under the Business Corporations Act of the Province of British Columbia, Canada;
- 2.1.6. "the mining right" means the mining right for gold ore, silver ore, uranium ore and aggregate (from waste rock dumps) over various portions of the farms Jachtfontein 344 I.Q. Modderfontein 345 I.Q. and Waterpan 292 I.Q., district of Westonaria held under Grant of Mining Right No. GP 30/5/1/2/2(38) MR;
- 2.1.7. "Minister" means the Minister of Minerals and Energy;
- 2.1.8. "MPRDA" means the Mineral and Petroleum Resources Development Act 28 of 2002;
- 2.1.9. "Simmer & Jack" means Simmer and Jack Mines, Limited (Registration Number 1924/007778/06), a company duly registered and incorporated according to the company laws of the Republic of South Africa;
- 2.1.10. any reference to the singular includes the plural and vice versa;
- 2.1.11. any reference to natural persons includes legal persons and vice versa; and
- 2.1.12. any reference to a gender includes the other genders.

- 2.2. Should any provision in a definition be a substantive provision conferring rights or imposing obligations on any party, then effect shall be given to that provision as if it were a substantive provision in the body of this agreement.
- 2.3. Any reference to an enactment, regulation, rule or by-law is that enactment, regulation, rule or by-law as at the date of signature, and as amended or replaced from time to time.
- 2.4. Where any number of days is prescribed, such number shall exclude the first and include the last day, unless the last day falls on a Saturday, Sunday or public holiday in the Republic of South Africa, in which case the last day shall be the next succeeding day which is not a Saturday, Sunday or public holiday.
- 2.5. The use of the word "including" followed by a specific example/s shall not be construed as limiting the meaning of the general wording succeeding it and the *eiusdem generis* rule shall not be applied in the interpretation of such general wording or such specific example/s.
- 2.6. The expiration or termination of this agreement shall not affect those provisions of this agreement which expressly provide that they will operate after any such expiration or termination or which of necessity must continue to have effect after such expiration or termination, notwithstanding the fact that the clauses themselves do not expressly provide this.
- 2.7. In its interpretation, the *contra proferentem* rule of construction shall not apply (this agreement being the product of negotiations between the parties) nor shall this agreement be construed in favour of or against any party by reason of the extent to which any party or its professional advisors participated in the preparation of this agreement.
- 2.8. Recordals shall be binding on the parties and are not merely for information purposes.

- 2.9. All amounts payable in terms of this agreement are exclusive of VAT unless otherwise indicated.
- 2.10. The clause headings in this agreement have been inserted for convenience only and shall not be taken into account in its interpretation.
- 2.11. Words and expressions defined in any sub-clause shall, for the purposes of the clause of which that sub-clause forms part, bear the meaning assigned to such words and expressions in that sub-clause.
- 2.12. This agreement shall be governed by and construed and interpreted in accordance with the laws of the Republic of South Africa.

3. RECORDAL

- 3.1. It is recorded that the mining right has been awarded and registered in the name of Simmer & Jack by the Department of Minerals and Energy.
- 3.2. It is the intention of Simmer & Jack and First Uranium that First Uranium will list on the Toronto Stock Exchange. Pursuant to such listing Ezulwini will become an indirect subsidiary of First Uranium and Simmer & Jack will, inter alia, convert its shareholding in Ezulwini to a shareholding in First Uranium.
- 3.3. Arising out of the above, the parties intend that Simmer & Jack will, pursuant to section 11 of the MPRDA, apply to the Minister to cede, assign, transfer and make over to Ezulwini the mining right on such terms and conditions as the Minister may prescribe.

4. TRANSFER OF THE MINING RIGHT

- 4.1. Simmer & Jack undertakes to apply to the Minister to transfer the mining right to Ezulwini and to sign such documents and do such things and take all

necessary steps as may be required to procure that the mining right is transferred to and registered in the name of Ezulwini in accordance with the provisions of section 11 of the MPRDA and the Mining Titles Registration Act, No. 16 of 1967.

- 4.2. In giving effect to the above undertaking Simmer & Jack acknowledges, *inter alia*, that the consent of the Minister will be required and accordingly agrees to do whatever may be required in order to obtain the Minister's consent to such transfer of the mining right to Ezulwini.
- 4.3. Ezulwini agrees, in order to give effect to the provisions of clause 4.1, to sign all such documents and do all such things and take all necessary steps as may be required to procure that the Mining Right is transferred and registered in the name of to Ezulwini in accordance with the provisions of section 11 of the MPRDA and the Mining Titles Registration Act No. 16 of 1967.

5. BREACH

Should any party ("the defaulting party") commit a breach of any of the provisions of this agreement, then the other party ("the aggrieved party") shall be obliged to give the defaulting party 14 (fourteen) days' written notice or such longer period as may reasonably be required in the circumstances, to remedy the breach. If the defaulting party fails to comply with such notice, the aggrieved party shall be entitled to claim immediate payment and/or specific performance by the defaulting party of all the defaulting party's obligations whether or not the due date for payment and/or performance shall have arrived, in either event without prejudice to the aggrieved party's rights to claim damages. The foregoing is without prejudice to such other rights as the aggrieved party may have at law; provided always that, notwithstanding anything to the contrary contained in this agreement, the aggrieved party shall not be entitled to cancel this agreement for any breach by the defaulting party unless such breach is a material breach going to the root of this agreement and is incapable of being remedied by payment in money, or if it is capable of being remedied by payment in money, the defaulting party fails to pay the amount concerned within 14 (fourteen)

days after such amount has been finally determined.

6. NOTICES AND DOMICILIUM

6.1. The parties choose as their domicilium citandi et executandi their respective addresses set out in this clause for all purposes arising out of or in connection with this agreement at which addresses all the processes and notices arising out of or in connection with this agreement, its breach or termination may validly be served upon or delivered to the parties.

6.2. For the purpose of this agreement the parties' respective addresses shall be -

6.2.1. as regards Simmer & Jack at 5 Press Avenue, Selby, Johannesburg, 2025;

facsimile number (011) 837 0390;

Attention : The Company Secretary;

6.2.2. as regards Ezulwini at 5 Press Avenue, Selby, Johannesburg, 2025;

facsimile number (011) 837 0390;

Attention : The Company Secretary,

or at such other address not being a post office box or poste restante, of which the party concerned may notify the others in writing.

6.3. Any notice given in terms of this agreement shall be in writing and shall -

- 6.3.1. if delivered by hand be deemed to have been duly received by the addressee on the closing date;
 - 6.3.2. if posted by prepaid registered post be deemed to have been received by the addressee on the 8th (eighth) business day following the date of such posting;
 - 6.3.3. if transmitted by facsimile be deemed to have been received by the addressee 1 (one) business day after despatch.
- 6.4. Notwithstanding anything to the contrary contained in this agreement, a written notice or communication actually received by one of the parties from another including by way of facsimile transmission shall be adequate written notice or communication to such party.

7. WHOLE AGREEMENT

This agreement constitutes the whole agreement between the parties as to the subject-matter hereof and no agreement, representations or warranties between the parties other than those set out herein are binding on the parties.

8. VARIATION

No addition to or variation, consensual cancellation or novation of this agreement and no waiver of any right arising from this agreement or its breach or termination shall be of any force or effect unless reduced to writing and signed by all the parties or their duly authorised representatives.

9. RELAXATION

No latitude, extension of time or other indulgence which may be given or allowed by any party to any other party in respect of the performance of any obligation hereunder

or enforcement of any right arising from this agreement and no single or partial exercise of any right by any party shall under any circumstances be construed to be an implied consent by such party or operate as a waiver or a novation of, or otherwise affect any of that party's rights in terms of or arising from this agreement or estop such party from enforcing, at any time and without notice, strict and punctual compliance with each and every provision or term hereof.

10. COSTS

Each party shall pay its own cost of negotiating, drafting, preparing and implementing this agreement and the appendices to it.

11. COUNTERPARTS

This agreement may be signed in separate counterparts, each of which shall be deemed to be an original and all of which taken together shall constitute one and the same instrument. The counterpart of this agreement in fax form shall be conclusive evidence of the original signature and shall be as effected in law as the counterpart in original form showing the original signatures.

SALE OF TAILINGS DAMS AND MINING RIGHT AGREEMENT

1. **PARTIES**

1.1 **BUFFELSFONTEIN GOLD MINES LIMITED**

1.2 **CHEMWES (PROPRIETARY) LIMITED**

1.3 **SIMMER AND JACK MINES LIMITED**

2. **INTERPRETATION**

2.1 The headnotes to the clauses of this Agreement are inserted for reference purposes only and shall in no way govern or effect the interpretation hereof.

2.2 Unless in consistent with the context the expressions set forth below shall bear the following meanings:

"this Agreement" this Agreement together with all attachments thereto;

"Business Day" any day other than a Saturday, Sunday or official public holiday in the Republic of South Africa;

"Buffelsfontein Agreement" the agreement concluded between Buffelsfontein, FUSA and Simmers on 20 December 2006 pursuant to which Buffelsfontein, Inter alia, sold the Tailings Dams and the Current Arisings

to FUSA;

"Buffelsfontein"	Buffelsfontein Gold Mines Limited, Registration Number 1995/010072/06, a company duly registered according to the laws of the Republic of South Africa;
"Buffelsfontein Plant"	the existing gold Processing Plant situated on the Property and shaded in blue on the plan annexed hereto as <u>Appendix 1</u> ;
"Chemwes"	Chemwes (Proprietary) Limited, Registration Number 1964/02378/06, a company registered according to the laws of the Republic of South Africa;
"Closing Date"	31 march 2008;
"Current Arisings"	the tailings arising from Buffelsfontein's processing of all gold bearing ore produced at the Mine on an ongoing basis after the Effective Date
"Date of Signature"	the Date of Signature of this Agreement by the Party signing last in time;
"DME"	Department of Minerals and Energy;
"Effective Date"	20 December 2006;

- "FUSA" First Uranium (Proprietary) Limited, Registration Number 2005/033680/07, a company registered according to the laws of the Republic of South Africa;
- "Lease" The draft Lease attached as Appendix 5;
- "Mine" the underground gold mining operation undertaken by Buffelsfontein on the Property;
- "Mine Waste Transaction" the transaction concluded between Fraser Alexander (Proprietary) Limited through its division Fraser Alexander Tailings, Nedbank Limited, Industrial Development Corporation of South Africa Limited, RHA Plaistowe, KD Bouch, FUSA or its nominee and First Uranium Corporation on or about 26 April 2007 pursuant to which FUSA or its nominee acquired the entire issued share capital of Mine Waste Solutions (Proprietary) Limited;
- "Mining Right" the old order Mining Right held by Buffelsfontein under mining license number ML4/2001 in respect of gold on certain portions of the farms Mapaiskraal 441 IP, Buffelsfontein 443 IP, Wildebeestpan 442 IP, Stilfontein 401 IP, Hartebeestfontein 422 IP, Zandpan 423 IP, Palmietfontein 403 IP, Grootvaderbosch 470 IP, Die Hoek 114

IP, Doornkom Oost 447 IP and Townlands of Klerksdorp 424 IP with the common law mineral rights and/or Mining Rights in terms of sec 47 of the Minerals Act, 1991, held by Buffelsfontein in relation thereto;

- "Minister" the Minister of Minerals and Energy;
- "MPRDA" the Mineral and Petroleum Resources Development Act 28 of 2002;
- "New Order Mining Right" the Mining Right, once converted pursuant to conversion of the Mining Right in terms of Item 7(2) of schedule II of the MPRDA, which converted right will be amended as contemplated in 3.4 below;
- "Party" Buffelsfontein, FUSA or Simmers and "Parties" means a reference to any of them;
- "Plant Manager" the juristic entity or natural person appointed by Chemwes to manage the day to day operations of the Processing Plant;
- "Portion Mining Right" that portion of the New Order Mining Right which relates to the gold, uranium, sulphur, pyrite aggregate and rare earths in respect of the Tailings Dams and Current Arisings;

- "Prospecting Right" the right granted to Buffelsfontein under Number PR1488 executed on 2 August 2007 in terms of section 16 of the MPRDA pursuant to which Buffelsfontein has been granted the right to prospect for uranium, sulphur, pyrite and rare earths in respect of the Tailings Dams;
- "Processing Plant" the Processing Plant owned by Chemwes and which is to be modified and expanded in order to Process gold, uranium, sulphur, pyrite, aggregate and rare earths in the Tailings Dams and the Current Arising;
- "Process" when used as a noun means the activity of the extraction of gold, uranium, sulphur, silver, pyrite, aggregate and rare earths from the Tailings Dams and Current Arisings by the treatment Process conducted at the Processing Plant;
- "Rehabilitation Liabilities" the obligations to rehabilitate the Tailings Dams in terms of section 41 of the MPRDA which obligations are set out in Appendix 2A hereto;
- "Simmers" Simmer and Jack Mines Limited, a company duly registered according to the company laws of the Republic of

South Africa;

"SRP's" the Surface Right Permits listed in Appendix 2 hereto;

"Tailings Dams" the 11 (eleven) Tailings Dams situated on the Property and Indicated by the area shaded orange on the plan annexed hereto as Appendix 1;

"Transfer SRP's" all the Surface Right Permits that attach to the Property and the Tailings Dams, including without limitation, Surface Right Permit No's 95/73 (with R.M.T. O 198/72), 10/74 (with R.M.T. O 82/73), 97/86 (with R.M.T O 43/86), 98/86 (with R.M.T. O 41/86), C7/1959 (with R.M.T. 398), 8/95 (with R.M.T. O 10/95), 52/1973 (with R.M.T. O 3/73) and 69/82 (with R.M.T. O 63/82);

a "person" shall be construed as a reference to any person, firm, company, corporation, government, state or agency of a state or any association or partnership (whether or not having separate legal personality) of two or more of the foregoing.

2.3 If any provision in a definition is a substantive provision conferring rights or imposing obligations on either Party, notwithstanding that it is only in the definitions clause, effect shall be given to it as if it were a substantive provision of this Agreement.

- 2.4 Unless the context dictates otherwise, an expression which denotes any gender includes both the others; and to a natural person includes an artificial person and to the singular includes the plural, and vice versa in each case.
- 2.5 The Appendices to this Agreement form an integral part hereof and words and expressions defined in this Agreement shall bear, unless the context otherwise requires, the same meaning in such Appendices.
- 2.6 When any number of days is prescribed in this Agreement, same shall be reckoned exclusively of the first and inclusively of the last day unless the last day falls on a day which is not a Business Day, in which case the last day shall be the next succeeding Business Day.
- 2.7 In the event that the day for payment of any amount due in terms of this Agreement should fall on a day which is not a Business Day, the relevant date shall be the next succeeding Business Day.
- 2.8 Where any term is defined within the context of any particular clause in this Agreement, the term so defined, unless it is clear from the clause in question that the term so defined has limited application to the relevant clause, shall bear the same meaning as ascribed to it for all purposes in terms of this Agreement, notwithstanding that that term has not been defined in this interpretation clause.

- 2.9 Any reference in this Agreement to an enactment or a statute is to that enactment or statute passed by the Legislature of the Republic of South Africa, as at the Date of Signature of this Agreement and as amended or re-enacted from time to time.
- 2.10 The rule of construction that the contract shall be interpreted against the Party responsible for the drafting or preparation of the Agreement, shall not apply.
- 2.11 The expiration or termination of this Agreement shall not affect such of the provisions of this Agreement as expressly provide that they will operate after any such expiration or termination or which of necessity must continue to have effect after such expiration or termination, notwithstanding that the clauses themselves do not expressly provide for this.
- 2.12 Save where the contrary is indicated, any reference in this Agreement to this Agreement or any other Agreement or document shall be construed as a reference to this Agreement or, as the case may be, such other Agreement or document, as same may have been, or may from time to time be, amended, varied, novated or supplemented.
- 2.13 Where any term is not defined in this Agreement then the term shall be defined in terms of the applicable South African law as at the Date of Signature of this Agreement, irrespective of the place of registration or incorporation of the Party to whom such term is applied.

2.14 Without prejudice to any other provision of this Agreement, any successor in title, including any executor, heir, liquidator, judicial manager, curator or trustee of any party shall be bound by this Agreement as fully and effectually as if they had signed this Agreement in the first instance and reference to any party shall be deemed to include any successor in title.

3. INTRODUCTION

3.1 Buffelsfontein -

3.1.1 owns the Mining Right and the Tailings Dams; and

3.1.2 has acquired the SRP's which are about to be registered into its name; and

3.1.3 conducts and will in the future conduct gold mining operations at the Mine and produce Current Arisings.

3.2 As part of the listing of First Uranium Corporation on the Toronto Stock Exchange during December 2006 and as part of the listing procedure, the Buffelsfontein Agreement was signed by the Parties thereto.

3.3 The Buffelsfontein Agreement was subject to various Conditions Precedent, inter alia, the conversion of the Mining Right and that portion of the amended New Order Mining Right i.e. the Portion Mining Right being sub-divided and the Minister granting consent to cede the portion Mining Right to FUSA.

3.4 Notwithstanding that the Prospecting Right has been granted, based on advice received from the Deputy Regional Manager of the DME, North West Region, at the time that the Prospecting Right Application was lodged at the DME Buffelsfontein simultaneously applied to have the Mining Right converted into a New Order Mining Right in terms of section 7 (2) of Schedule II of the MPRDA. If and when this conversion application is approved, Buffelsfontein will also apply -

3.4.1 to have the New Order Mining Right amended, with effect from the date of conversion, in terms of section 102 of the MPRDA to include the authority to mine for uranium, gold, sulphur, silver, pyrite, aggregate and rare earths underground and in respect of the Current Arisings and the Tailings Dams ("the Conversion, Amendment and Subdivision Application"); and

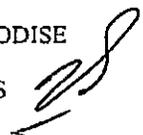

3.4.2 to have that portion of the New Order Mining Right subdivided so as to create the Portion Mining Right.

3.5 In terms of the Buffelsfontein Agreement it was intended that upon the conversion of the Mining Right and the grant of the amendment and subdivision as contemplated in 3.4 above or upon granting the Prospecting Right by the Minister, Buffelsfontein would apply to the Minister pursuant to section 11 of the MPRDA to transfer to FUSA either -

3.5.1 the Portion Mining Right; or

3.5.2 the Prospecting Right.

- 3.6 FUSA in having concluded the Buffelsfontein Agreement was to undertake the construction of a plant necessary to Process the Tailings from the Tailings Dams and the Current Arisings so as to extract therefrom amongst other things gold and uranium.
- 3.7 Following the conclusion of the Buffelsfontein Agreement and the listing of First Uranium Corporation on the Toronto Stock Exchange and in the process of waiting for the conditions in the Buffelsfontein Agreement to be fulfilled the Mine Waste Transaction was concluded, which resulted in FUSA through the Mine Waste Transaction, acquiring Chemwes.
- 3.8 Chemwes undertakes the business of tailings recovery and owns the plant necessary to do so. Due to having concluded the Mine Waste Transaction, the need for FUSA to construct a gold Processing Plant no longer existed and it was agreed that the processing of the Tailings from the Tailings Dams and the Current Arising was to be done using the Chemwes plant which was to be upgraded.
- 3.9 Upon the Mine Waste Transaction having been concluded it was decided by the Parties to the Buffelsfontein Agreement that the transaction recorded in the Buffelsfontein Agreement should be a transaction concluded with Chemwes as Chemwes –
- 3.9.1 owned the plant necessary to undertake the business which FUSA was to undertake;
- 3.9.2 was a going concern.

3.10 Arising from the discussions in 3.9, the Parties orally agreed that Chemwes would acquire the assets from Buffelsfontein that FUSA was to acquire in terms of the Buffelsfontein Agreement and that the transfer to FUSA of the Portion Mining Right and the Prospecting Right in terms of the Buffelsfontein Agreement would now be transferred to Chemwes.

3.11 From the time that the oral agreement was reached, Chemwes began incurring liabilities in gearing up the Processing Plant to Process the Tailings Dams and Current Arisings and began –

3.11.1 improving and increasing the capacity of its Processing Plant which included amongst other things the building of pipelines; and

3.11.2 commenced processing tailings from the Tailings Dams in terms of a toll treatment agreement.

3.12 Arising from 3.10 and 3.11 above, the Parties to the Buffelsfontein Agreement allowed the Buffelsfontein Agreement to lapse and to become of no force and effect taking into account the oral agreement reached and referred to in 3.10.

3.13 The Parties want to record the oral agreement reached between them in writing and accordingly agree as follows :

4. **SALE**

4.1 Buffelsfontein hereby :

- 4.1.1 sells to Chemwes, which hereby purchases, the Tailings Dams with effect from the Effective Date on the terms set out in this Agreement;
- 4.1.2 sells and undertakes to cede, assign and make over to Chemwes the Portion Mining Right or the Prospecting Right on the terms set out in this Agreement and Appendix 3 and Appendix 4, as the case may be;
- 4.1.3 sells and undertakes to deliver to Chemwes as and when it produces, all Current Arisings;
- 4.1.4 sells and undertakes to cede, assign and transfer to Chemwes, the Transfer SRP's; and
- 4.1.5 undertakes to grant to Chemwes the servitudes contemplated in clause 9 and 10 hereof;
- 4.1.6 sells and undertakes to cede, assign, transfer and make over to Chemwes all its right, title and interest in and to all geological information and/or other development work and designs which have been prepared by or on behalf of Buffelsfontein or which is in the process of being prepared for and on behalf of Buffelsfontein, all of the above constituting ("the Sale Assets").
- 4.2 The above sale constitutes one Indivisible transaction. Neither Party shall be entitled to claim sale or purchase of any of the above assets separately from all the Sale Assets.

5. **PURCHASE CONSIDERATION**

5.1 The purchase consideration payable by Chemwes to Buffelsfontein for the Sale Assets shall be the following :

5.1.1 in respect of the Tailings Dams and the Property the sum of R100,00 (one hundred Rand); plus

5.1.2 for the cession of the Portion Mining Right or the Prospecting Right, as the case may be, and for the Current Arisings, the Transfer SRP's, for the granting of the servitudes contemplated in clauses 9 and 10 and for the geological information and development work referred to in 5.1.7 Chemwes shall pay to Buffelsfontein, subject to the provisions of 11, a royalty of 1% (one per centum) plus value-added tax, of the gross revenue earned by Chemwes from the sale of gold, uranium, silver, sulphur, pyrite, aggregate and rare earth recovered from the Process.

6. **DISCHARGE OF PURCHASE CONSIDERATION**

The purchase consideration payable by Chemwes to Buffelsfontein in terms of clause 5 shall be paid by Chemwes to Buffelsfontein as follows :

6.1 on the Closing Date Chemwes shall pay the sum of R100,00 (one hundred Rand) referred to in 5.1.1 to Buffelsfontein in cash;

6.2 the royalty referred to in 5.1.2 shall be paid by Chemwes to Buffelsfontein in accordance with the provisions of 11.

7. **ENVIRONMENTAL REHABILITATION**

7.1 By operation of law and in having acquired and taken delivery of the Tailings Dams and subject to the consent of the DME and any other state department being provided, if necessary, on and with effect from the Closing Date Buffelsfontein hereby cedes and assigns all of its rights and obligations under the Rehabilitation Liabilities to Chemwes which hereby accepts such cession and assignment. The Parties undertake to sign such documents and do whatever may be required in order to obtain the above consent from the DME, if required.

7.2 The Rehabilitation Liabilities are a contingent liability to rehabilitate the Tailings Dams and the Property to the extent required in terms of section 41 of the MPRDA.

7.3 In the business plan prepared by Chemwes it is intended that most of the Tailings Dams will over time be removed so that the contingent liability will not become realised. The actual liability of Chemwes once the Tailings Dams have been removed is to rehabilitate the footprint of the Tailings Dams which will be a liability different to the Rehabilitation Liability.

7.4 Buffelsfontein records that it has established a trust fund in terms of section 10(1)(cH) of the Income Tax Act for the rehabilitation of the Mine and the Tailings Dams.

- 7.5 Buffelsfontein undertakes, subject to the approval of the DME and the South African Revenue Services, to amend the trust deed to reflect the environmental principles set out in 7.6 and 12.4.2 below.
- 7.6 Chemwes has establish a trust fund in terms of Section 10(i)(cH) of the Income Tax Act No 58 of 1962 to make financial provision for the rehabilitation of the Tailings Dams and to obtain such approval as may be required by the DME and the South African Revenue Services to establish such trust fund.
- 7.7 Chemwes shall provide bank guarantees or other suitable financial instruments in an amount required by the DME for the Rehabilitation Liabilities and hereby indemnifies and holds harmless Buffelsfontein against any claim which may be made by the DME against Buffelsfontein in respect of the Rehabilitation Liabilities pursuant to section 41 of the MPRDA, read with Regulations 52 and 53 of the MPRDA Regulations.
- 7.8 Chemwes hereby indemnifies and holds Buffelsfontein harmless against any claim made against Buffelsfontein in respect of the Rehabilitation Liabilities assumed by Chemwes in terms of this Agreement.

8. **DELIVERY OF THE TAILINGS DAMS AND THE PORTION MINING
RIGHT OR THE PROSPECTING RIGHT AND CURRENT ARISING**

- 8.1 Buffelsfontein shall, deliver the Tailings Dams to Chemwes within 2 (two) days after the Closing Date and in the presence of a notary public by way of *constitutum possessorium*, with the intention that ownership of the Tailings Dams shall pass to and be vested in Chemwes upon the discharge by Chemwes of the purchase consideration pursuant to the provisions of 6.
- 8.2 The Parties shall take such steps as may be necessary to procure that the said notary public shall certify that delivery has taken place and shall complete a notarial certificate to that effect.
- 8.3 Until such time as the Tailings Dams have been delivered to Chemwes, Buffelsfontein undertakes not to cause or permit the Tailings Dams to accede to the Property.
- 8.4 Buffelsfontein shall deliver the Current Arisings to Chemwes on the Property as and when such Current Arisings are produced and as set out in 9.4.
- 8.5 Buffelsfontein undertakes to sign such documents and do such things as may be required to procure that the Portion Mining Right or the Prospecting Right, as the case may be, is ceded and transferred to Chemwes in accordance with the provisions of the MPRDA.
- 8.6 It is recorded that the Transfer SRP's are currently registered in the name of Beatrix Gold Mining Company Limited and are in the process

of being transferred into Buffelsfontein's name. Buffelsfontein shall procure that as soon as reasonably possible after the Transfer SRP's are registered in its name, that it shall transfer the Transfer SRP's to Chemwes and have same registered in the name of Chemwes.

9. **CONSTRUCTION OF PIPELINES**

- 9.1 Chemwes shall at its own cost construct and commission pipelines for the transfer of the Tailings from the Tailings Dams and the Current Arisings to the Processing Plant.
- 9.2 Buffelsfontein, insofar as it is able, hereby grants to Chemwes a servitude to construct pipelines across such properties as Buffelsfontein may own substantially on the terms set out in Appendix 6.
- 9.3 Buffelsfontein undertakes as soon as reasonably possible after the Date of Signature to execute a notarial deed of servitude (in the form of Appendix 6) and to procure the registration of such servitude in the Deed Registry Office to the extent that such registration is necessary to enable Chemwes to construct the pipelines across the properties owned by Buffelsfontein.
- 9.4 Buffelsfontein agrees that the Current Arisings arising from future mining operations at the Mine will be transferred to the Tailings Dams. No royalty will be payable by Chemwes to Buffelsfontein in respect of any Tailings which are not processed by Chemwes.

9.5 Buffelsfontein hereby agrees to allow Chemwes to use the existing pipelines of Buffelsfontein if such pipelines are not required to be used by Buffelsfontein.

10. **SERVITUDE OF ACCESS AND EGRESS**

10.1 Buffelsfontein hereby grants to Chemwes such servitudes of access and egress across the properties owned by Buffelsfontein as may be necessary to allow Chemwes, its employees, consultants, agents and subcontractors to access the pipelines and the Tailings Dams for the purposes contemplated in this Agreement on the terms set out in Appendix 7. Buffelsfontein undertakes, within 2 (two) days after the Closing Date to execute a notarial deed of servitude (in the form of Appendix 6) and to procure the registration of such servitude in the Deed Registry Office.

11. **PAYMENT OF ROYALTY**

11.1 In relation to the payment of the royalty referred to in 5.1.2 Chemwes agrees that it shall within 15 (fifteen) Business Days of the end of each quarter during the term of this Agreement cause to be delivered to Buffelsfontein:

11.1.1 a report in writing showing separately the gross revenue earned by Chemwes arising from the sale of gold, uranium, silver, sulphur, pyrite, aggregate and rare earths recovered from the Process during the prior quarter;

11.1.2 a statement of the amount payable to Buffelsfontein in terms of the report referred to in clause 11.1.

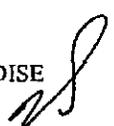

11.2 Payment of the amount due in terms of the statement issued in terms of clause 11.1.1, together with value-added tax thereon at the standard rate from time to time, shall be made 10 (ten) Business Days after the date of delivery of each statement.

11.3 Buffelsfontein may nominate an independent auditor to examine the reports and statements referred to in 11.1. If in the opinion of the independent auditor, such reports and statements are inaccurate to the extent that a discrepancy of 5% (five percent) or more is discovered in relation to the amounts paid or payable in terms of 11.2, then the fees and expenses of such independent auditor shall be paid by Chemwes.

11.4 In the event that Chemwes disputes the opinion of the independent auditor, such dispute shall be referred to a partner of PriceWaterhouseCoopers appointed by the senior partner for the time being, who shall determine the dispute in his capacity as an expert and not as an arbitrator and whose decision shall be final and binding upon the Parties.

12. **NEW ORDER MINING RIGHT**

12.1 Buffelsfontein has applied for the conversion of its Mining Right into a New Order Mining Right on the basis that, simultaneously with the conversion to a New Order Mining Right, such Mining Right shall be amended to include the right to mine for uranium, silver, sulphur,

pyrite, aggregate and rare earths underground and from the Tailings Dams and that portion of the amended New Order Mining Right being the Portion Mining Right be sub-divided and that the Minister grants consent to cede the Portion Mining Right to Chemwes.

12.2 Buffelsfontein has also applied for and has been granted a Prospecting Right which Prospecting Right is to be ceded to Chemwes.

12.3 Buffelsfontein shall do everything in its power to procure that the New Order Mining Right or the Prospecting Right, as the case may be, is ceded to Chemwes as soon as reasonably possible in the circumstances.

12.4 The Parties acknowledge that in order for the New Order Mining Right or the Prospecting Right, as the case may be, to be granted to Buffelsfontein and the Portion Mining Right or Prospecting Right, as the case may be, to be ceded to Chemwes :

12.4.1 Buffelsfontein shall, simultaneously with the lodging of the Conversion, Amendment and Subdivision Application apply to the DME to amend the environmental management programme in respect of the Mining Right by excluding therefrom, the rehabilitation provisions in relation to that portion of the New Order Mining Right which will be ceded to Chemwes in terms of this Agreement, being the Portion Mining Right; and

12.4.2 Chemwes shall, simultaneously with the lodging of the Conversion, Amendment and Subdivision Application, submit and obtain approval from the DME of an environmental management

programme which will to the extent allowed in law cover the Portion Mining Right on the basis that Buffelsfontein will be completely released of all environmental and rehabilitation obligations in respect of the Portion Mining Right as regulated in this Agreement. It is recorded that Buffelsfontein will remain liable for the rehabilitation liabilities in respect of the Mine when it is awarded the New Order Mining Right.

13. **CURRENT ARISINGS**

Buffelsfontein undertakes to provide the Current Arisings exclusively to Chemwes for so long as Buffelsfontein continues to mine and process gold ore at the Mine and undertakes –

- 13.1 that the Current Arisings will be deposited on the Tailings Dams or elsewhere as may be agreed to between Chemwes and Buffelsfontein; and
- 13.2 not to Process the Current Arisings itself or grant any third party the right to Process the Current Arisings.

14. **ANCILLARY FACILITIES**

Chemwes shall be, depending on the amount of electricity available to Buffelsfontein, entitled to use a portion of the electricity supplied to the Mine in terms of the agreement entered into between Buffelsfontein and Eskom on the basis that Chemwes shall pay at cost, all charges for electricity supplied to that area of the Property which covers its

operations, which include the Tailings Dams, the pipelines in 9 and the Processing Plant. Chemwes shall be entitled to erect separate sub meters to measure the electricity used by it pursuant to this clause. Chemwes acknowledges that Buffelsfontein can not guarantee electricity supply to Chemwes and any supply by Buffelsfontein of electricity to Chemwes will be dependent on the amount of electricity available to Buffelsfontein. In light of the above, Buffelsfontein shall notify Chemwes from time to time of the amount of electricity available for supply by Buffelsfontein to Chemwes. The provisions of clause 0 shall apply until such time as Chemwes is able to apply for and is granted its own electricity supply by Eskom which application Chemwes shall make in due course.

15. **WASTE MATERIAL**

All Tailings remaining after the Process is completed shall be returned, by Chemwes, to the Tailings Dams or deposited elsewhere in accordance with –

- 15.1 the Mine plan lodged at the DME's office in support of the application for the Mining License which formed part of the Mining Right in terms of the Minerals Act, 1991; or
- 15.2 the Mining Works Programme submitted in terms of the MPRDA in support of the application for the issue of the Mining Right to Chemwes; and

15.3 the provisions of the approved environmental management programme pertaining to the Tailings Dams, the Process and the Processing Plant and the Subdivided Mining Right and/or the Portion Mining Right.

16. **BUFFELSFONTEIN SALE**

Until such time as the provisions of clause 12 are given effect to Buffelsfontein shall not sell the assets comprising the Mining Right or that portion of the New Order Mining Right which does not form part of the Portion Mining Right or its business ("Buffelsfontein Assets") without the prior written consent of Chemwes.

17. **INDEMNITY**

17.1 Chemwes hereby indemnifies Buffelsfontein against all loss, liability, damage or expense which Buffelsfontein's may suffer as a result of or which may be attributable to any liability of Buffelsfontein for taxation arising solely from the sale recorded in this agreement including -

- 17.1.1 normal taxation in the Republic of South Africa;
- 17.1.2 value added tax;
- 17.1.3 regional service levies;
- 17.1.4 municipal or local town council rates, taxes and levies;
- 17.1.5 secondary tax on companies;
- 17.1.6 provisional tax;

17.1.7 capital gains tax;

17.1.8 stamp duty;

17.1.9 uncertified securities tax,

and all other forms of taxation other than deferred tax benefits or any penalties of interest charged on any of the above.

17.2 In the event that any such claim is made against Buffelsfontein -

17.2.1 Buffelsfontein shall give written to Chemwes of any such claim without delay to enable Chemwes to take steps to resist the claim. Buffelsfontein shall not make any admission or payment or take any steps to settle the claim without the prior written approval of Chemwes being obtained; and

17.2.2 Chemwes shall be entitled to resist such claim in the name of Buffelsfontein and to control the proceeds in regard thereto and in such instance, Buffelsfontein shall render any such assistance to Chemwes as may be required by Chemwes at the expense of Chemwes in regard to such proceeding and Chemwes hereby indemnifies and holds Buffelsfontein harmless against any legal or other costs and expenses which may be incurred in respect of any proceedings as contemplated above.

17.3 Notwithstanding anything to the contrary contained in this agreement, Chemwes shall have no liability in respect of any claim arising pursuant to this indemnity unless the amount of all of such claims equals or exceeds the amount of US\$2 000 000,00 (two million United States Dollars) (as converted from South African Rands at the prevailing Rand/Dollar exchange rate on the date of such claim as

quoted by Standard Bank of South Africa Limited) and then such liability shall only be in respect of such excess i.e. in respect of any amounts over and above the sum of US\$2 000 000,00 (two million United States Dollars).

18. **PUBLICATION IN TERMS OF INSOLVENCY ACT**

18.1 The Parties agree that notice of the sale of the Sale Assets will not be published as contemplated in Section 34 of the Insolvency Act, 1936 ("the Insolvency Act").

18.2 Chemwes will have no duty to resist any proceedings to attach or to take possession of any of the Sale Assets instituted by any person in consequence of notice of this transaction not being published. Buffelsfontein hereby indemnifies Chemwes against any loss or damage which Chemwes may suffer as a result of notice of this transaction not being published as aforesaid.

18.3 Buffelsfontein hereby assumes the risk of attachment of any of the Sale Assets as a result of such notice not being published and undertakes to do all that is necessary to ensure the release of any attached assets. If such assets are not released Buffelsfontein shall compensate Chemwes on demand the value of the assets attached, subject to the condition that such compensation shall be limited to a maximum aggregate amount of R1 455 000 000,00 (one billion four hundred and fifty five million Rand);

18.4 If for any reason whatsoever the Parties determine that notice of the sale of the Sale Assets should be published then:

18.4.1 such notice will be published by Chemwes at its costs as

contemplated in Section 34 of the Insolvency Act.

18.4.2 publication of the notice shall occur as soon as reasonably possible after the Conditions Precedent have been fulfilled;

18.4.3 in the event of any creditor making any claim after publication of the notice as aforesaid Buffelsfontein shall either contest such claim in its name and/or settle same at its sole cost but shall in any event ensure that none of the Sale Assets purchased by Chemwes shall be attached pursuant to such claim.

19. **ACCESS TO INFORMATION**

While this Agreement remains in force Buffelsfontein shall be entitled to have free and unfettered access to all legal, financial, technical and operational information and data relating to the Process under the control of Chemwes, including confidential information provided that the provisions of clause 21 shall apply thereto. Chemwes gives no warranties in regard to the accuracy and veracity of such information.

20. **FORCE MAJEURE**

20.1 Any failure on the part of a Party hereto to comply with any of the terms, conditions and provisions of this Agreement shall not be grounds for termination or for claim of damages insofar as such arises from force majeure, if the Party in question –

20.1.1 has taken all appropriate precautions, due care and reasonable alternative measures with the objective of avoiding such failure and

of carrying out its obligations under the term of this Agreement;

and

20.1.2 has given notice to the other Party of the occurrence of force majeure at the time the Party in question has become aware of such an event.

20.2 For the purposes of this Agreement "force majeure" shall be defined in accordance with standards of civil law. An event constitutes force majeure if it is of an external, irresistible, unpredictable and insurmountable character such as the closure of the plant for economic reasons, war, riots, blockades, embargoes, strikes, lock-outs and other labour conflicts, land disputes, epidemics, volcanic eruptions, earthquakes, cyclones, floods, explosions, fires, lightning, breakdown of plant and equipment, governmental restrictions, change in applicable law or unavailability of materials or equipment and any other event which the Party claiming force majeure could not reasonably prevent or control.

20.3 In the event of any event of a kind set out in this clause 20 the period of time allowed for the performance of those obligations or exercise of those rights which are delayed by such event of force majeure and the periods of time thereafter allowed for the performance of obligations or exercise of rights which are dependent upon the first mentioned obligations or rights, shall be extended with a period equal to the period of force majeure.

20.4 Where any period is, or is deemed to be extended or any later date substituted to an earlier date under this clause 20, that extended or substituted period or date shall be deemed to constitute the period or day referred to in this Agreement (notwithstanding that at the tie of such extension or substitution such period or such date may have expired).

20.5 In the event the case of force majeure would last more than 60 (sixty) days, either Party shall be entitled to terminate this Agreement forthwith by notice in writing to the other Party. For that purpose and within a period of 90 (ninety) days from the declaration of force majeure.

21. **CONFIDENTIAL INFORMATION**

21.1 Neither Party shall, at any time after the Signature Date, notwithstanding any termination of this Agreement, directly or indirectly disclose, or directly or indirectly use, whether for their own benefit or that of any other person, any information which is a trade secret of, confidential to or proprietary information of the other including, without limitation:

21.1.1 technical, scientific, commercial, financial or market information, know-how or trade secrets;

21.1.2 data concerning business relationships, processes, services, personnel;

21.1.3 plans, designs, drawings, functional and technical requirements and specifications;

21.1.4 information which by its nature or content is identifiable as confidential and/or proprietary to the Party and/or any third party.

(collectively, the "confidential information");

21.1.5 any document or other record (whether in electronic or any other medium whatsoever) containing confidential information which is supplied to it by the other Party as well as documents, diagrams and records which are produced by it (whether or not by copying, photocopying or otherwise reproducing documents or records supplied to it), and containing any confidential information.

21.2 Notwithstanding clause 21.1, confidential information may be disclosed or used by either Party to the extent to which it:

21.2.1 is made public other than as a result of any breach of this Agreement or any other agreement;

21.2.2 is information which was already in the possession of that Party prior to its disclosure by the other Party or is independently developed by that Party without reference to the confidential information.

22. **COSTS**

The costs payable in respect of the preparation and execution of this Agreement, the subsequent registration of the Notarial Cession of the Portion Mining Right or the Prospecting Right and all costs relating to the transfer of the Portion Mining Right or the Prospecting Right shall be borne by Chemwes.

23. **COUNTERPARTS**

This Agreement may be signed in separate counterparts, each of which shall be deemed to be an original and all of which taken together shall constitute one and the same instrument. The counterpart of this Agreement in fax form shall be conclusive evidence of the original signature and shall be as effected in law as the counterpart in original form showing the original signatures.

24. **WARRANTIES**

24.1 Buffelsfontein and Simmers warrant to Chemwes that as at the Effective Date Buffelsfontein is the owner of the Sale Assets to the exclusion of all others and is entitled to dispose of the Sale Assets in terms of this Agreement;

24.2 Buffelsfontein and Simmers warrant to Chemwes that as at the Effective Date the Sale Assets are not subject to, and there is no agreement or commitment to give or create any option, lien or encumbrance of any nature whatsoever over the Sale Assets;

- 24.3 Buffelsfontein and Simmers warrant to Chemwes that as at the Effective Date there has been no exercise, purported exercise or claim for any charge, lien or encumbrance over the Sale Assets and there is no dispute directly or indirectly relating to the Sale Assets;
- 24.4 Buffelsfontein and Simmers warrant to Chemwes that as at the Effective Date the Sale Assets are not subject to, and there is no agreement or commitment to give or create, any option, lien or encumbrance of any nature whatsoever over the Sale Assets;
- 24.5 Buffelsfontein warrants to Chemwes that as at the Effective Date Buffelsfontein has the power to enter into and perform this Agreement and the transactions contemplated herein and all corporate and other actions required to authorise the execution and delivery of this Agreement and the performances being duly taken;
- 24.6 Buffelsfontein warrants that this Agreement constitutes legal, valid and binding obligations on Buffelsfontein and is enforceable against it in accordance with its terms;
- 24.7 Buffelsfontein warrants that to the extent possible, Buffelsfontein will procure that it will comply with the provisions of section 17(2) and section 23(3) of the MPRDA;
- 24.8 Buffelsfontein warrants that Buffelsfontein will maintain the validity of the Mining Right and pursue its conversion, amendment and Subdivision pursuant to the Conversion, Amendment and Subdivision Application;

24.9 Buffelsfontein warrants that the Mining Right is not subject to, and there has been no agreement or commitment to give or create, any option or lien or encumbrance of any nature whatsoever over the Mining Right, the Portion Mining Right or the Prospecting Right until and as at the Effective Date;

24.10 Each representation and warranty described in this clause 24 shall be a separate representation and warranty inducing Chemwes to enter into this Agreement. Buffelsfontein acknowledges that Chemwes has entered into this Agreement relying on the said representations and warranties.

24.11 Save for the warranties provided by Buffelsfontein and Simmers to Chemwes in terms of this clause 24, Buffelsfontein and Simmers gives and makes no warranties, representations or the like of whatsoever nature and howsoever arising and whether express or implied as regards the Tailings Dams and accordingly the Tailings Dams are sold Voetstoets.

25. **INDEMNITY**

25.1 Buffelsfontein and Simmers hereby indemnify and hold Chemwes harmless against all claims and loss of whatsoever nature (including all indirect and consequential damages or loss which Chemwes may suffer) as a result of any breach of any warranty or representation made by Buffelsfontein and Simmers in terms of this Agreement.

25.2 Chemwes hereby indemnifies and holds Buffelsfontein and Simmers harmless against all claims and loss of whatsoever nature (including

all indirect and consequential damages or loss which Buffelsfontein and Simmers may suffer) as a result of any breach of any warranty or representation made by Chemwes in terms of this Agreement.

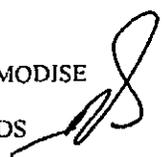

26. **BREACH**

26.1 Should either Party ("the Guilty Party") breach any of its obligations in terms of this Agreement, all of which are agreed to be material, and fail to remedy such breach within a period of 20 (twenty) days after the date of delivery of a written notice from the other Party ("the Innocent Party") requiring the breach to be remedied, the Innocent Party shall without any further notice, and without prejudice to any of its rights in law be entitled:

26.1.1 to cancel this Agreement and to claim and to recover all damages suffered by it; and/or

26.1.2 to enforce performance of the terms of this Agreement and to claim damages.

26.2 The Guilty Party shall be liable for the payment of all costs, fees and disbursements, as determined on the attorney and client scale (as between attorney and its own client) of any attorney appointed by the Innocent Party, in respect of anything done in terms of this Agreement by the Innocent Party to enforce any of its rights in terms of this Agreement or in terms of law.

27. **DOMICILIUM**

27.1 The Parties hereto choose domicilia citandi et executandi for all purposes of and in connection with this Agreement as follows:

Buffelsfontein and Simmers:

5 Press Avenue, Selby, Johannesburg, 2025

facsimile number (011) 837 0390

Attention : The company secretary

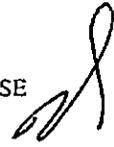

Chemwes :

5 Press Avenue, Selby, Johannesburg, 2025

facsimile number (011) 837 0390

Attention : The company secretary

27.2 Any Party hereto shall be entitled to change its domicilium from time to time, provided that any new domicilium selected by it shall be an address in the Republic of South Africa, other than a box number, and any such change shall only be effective upon receipt of notice in writing by the other parties of such change.

27.3 All notices, demands, communications or payments intended for any Party shall be made or given at such Party's domicilium for the time being.

27.4 A notice sent by one Party to another Party shall be deemed to be received:

27.4.1 on the same day, if delivered by hand

27.4.2 on the same day of transmission if sent by telefax with receipt received confirming completion of transmission;

27.4.3 on the tenth day after posting, if sent by prepaid registered mail.

27.5 Notwithstanding anything to the contrary herein contained a written notice or communication actually received by a Party shall be an adequate written notice or communication to it notwithstanding that it was not sent to or delivered at its chosen domicilium citandi et executandi.

28. **GENERAL**

28.1 The Parties shall not be bound by or have any claim or right of action arising from any express or implied term, undertaking, representation, warranty, promise or the like not included or recorded in this document whether it induced the contract and/or whether it was negligent or not.

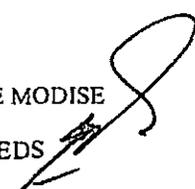

28.2 No variation, amendment or consensual cancellation of this Agreement or any provision or term hereof or of any agreement, bill of exchange or other document issued or executed pursuant to or in terms of this Agreement and no settlement of any disputes arising under this Agreement and no extension of time, waiver or relaxation or suspension of any of the provisions or terms of this Agreement or of any agreement, bill of exchange or other document issued pursuant to or in terms of this Agreement shall be binding or have any force and effect unless reduced to writing and signed by or on behalf of all the Shareholders at that time.

28.3 No extension of time or waiver or relaxation of any of the provisions or terms of this Agreement or any agreement, bill of exchange or other document issued or executed pursuant to or in terms of this Agreement, shall operate as an estoppel against any Party in respect of its rights under this Agreement. Any such extension, waiver or relaxation or suspension which is so given or made shall be strictly construed as relating to strictly to the matter in respect whereof it was made or given.

28.4 No failure by a Party to enforce any provision of this Agreement shall constitute a waiver of such provision or affect in any way such Party's right to require the performance of such provision at any time in the future, nor shall a waiver of a subsequent breach nullify the effectiveness of the provision itself.

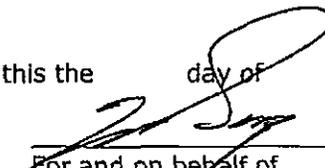

28.5 If any clause or term of this Agreement should be invalid, unenforceable, defective or illegal for any reason whatsoever, then

the remaining terms and provisions of this Agreement shall be deemed to be severable therefrom and shall continue in full force and effect unless such invalidity, unenforceability, defect or illegality goes to the root of this Agreement.

APPENDIX "3"

PROTOCOL NO. 2008/

**NOTARIAL CESSION OF MINING RIGHT IN TERMS OF SECTION 11 OF THE
MINERAL AND PETROLEUM RESOURCES DEVELOPMENT ACT, 2002 (Act
No. 28 of 2002) ("the Act")**

Let it hereby be known :

That on the day of In the year 2008, before me,
Maryann Middleton, a Notary Public, duly sworn and admitted, residing and
practicing at Sandton in the Gauteng Province of South Africa, and in the
presence of the subscribing competent witnesses personally came and appeared:

Regional Manager, Gauteng Region of the Department of Minerals and Energy,
and as such in his/her capacity as the duly authorised representative of:

THE MINISTER OF MINERALS AND ENERGY

The said Regional Manager, being duly authorised thereto under and by virtue of a Power of Attorney granted by the Director - General or Deputy Director - General : Mineral Regulation of the Department of Minerals and Energy on the _____ day of _____ in the year 2008 in terms of the powers delegated by the Minister on the 12th day of May 2004 in terms of Section 103(1) of the Act,

And

In his/her capacity as a director of

Buffelsfontein Gold Mines Limited
Registration No. 1995/010072/06
(hereinafter referred to as "the Cedent")

The said representative being duly authorised thereto under and by virtue of a Resolution of the Directors of the Cedent signed at _____ on the _____ of _____ 2008, a certified copy of which resolution has been exhibited to me, the Notary, and remains filed of record in my protocol with the minute hereof.

And

in his capacity as a Director of

Chemwes (Proprietary) Limited
Registration No. 1964/02378/06
(hereinafter referred to as "the Cessionary").

The said representative being duly authorised thereto under and by virtue of a Resolution of the Directors of the Cessionary signed at _____ on the _____ day of _____ in the year of 2008, a certified copy of which resolution has this day been exhibited to me, the Notary, and remains filed of record in my protocol with the minute hereof.

AND THE PARTIES DECLARED THAT:

1. The Cedent is the holder of the Mining Right, more fully described hereafter.
2. The Cedent has agreed to cede the Mining Right to the Cessionary pursuant to an agreement between the Cedent and the Cessionary dated which cession the cessionary is prepared to accept.
3. The Minister has consented to the transfer of the Mining Right in terms of Section 11 of the Act.

NOW THEREFORE THESE PRESENTS WITNESS

4. The Cedent does hereby cede, assign, transfer and make over to and in favour of the Cessionary the New Order Mining Right for gold ore, silver ore, uranium ore and aggregate over

subject to such conditions as are mentioned or referred to in the notarial mining right agreement in terms of Section 17 of the Act dated _____ and registered under number _____.

5. The Cessionary hereby accepts cession of the aforesaid rights, subject to all attendant obligations, and subject to the aforesaid conditions.
6. This cession shall take effect on the date of registration hereof in the Mineral and Petroleum Titles Registration Office.
7. The Cedent shall pay all costs and charges incurred in connection with the execution and registration of the cession of this Mining Right.
8. As consideration for the cession of the Mining Right in terms hereof the Cessionary shall pay to the Cedent a sum of R.....

2008 ANNUAL REPORT

FIRST URANIUM CORPORATION IS FOCUSED ON THE DEVELOPMENT OF ITS SOUTH AFRICAN URANIUM AND GOLD MINES WITH THE GOAL OF BECOMING A SIGNIFICANT PRODUCER THROUGH THE REOPENING AND UNDERGROUND DEVELOPMENT OF THE EZULWINI MINE AND THE EXPANSION OF THE MINE WASTE SOLUTIONS TAILINGS RECOVERY FACILITY. FIRST URANIUM ALSO PLANS TO GROW PRODUCTION BY PURSUING VALUE ENHANCING ACQUISITION AND JOINT VENTURE OPPORTUNITIES IN SOUTH AFRICA AND ELSEWHERE.

2 Uranium and gold projects in South Africa

Ezulwini Mine
MWS

We believe effective mining delivers above average returns without compromising safety or the environment

Nigel Brunette
Chairman

Although a report to shareholders in this format has become somewhat unusual in Canada, I have decided nevertheless to use the opportunity of extending a common South African practice. First Uranium is a Canadian corporation, but it has very strong South African links and is listed on the Johannesburg Stock Exchange as well as the TSX. Added to that, as Non-Executive Chairman of the Company I have few opportunities to communicate directly to shareholders, and I believe a useful purpose is served by reporting on certain matters which have exercised the minds of directors during the year under review.

First Uranium, like its parent company, Simmer and Jack Mines, Limited ("Simmer & Jack"), whose board of directors I also chair, was set up to exploit opportunities that had presented themselves in the South African gold and uranium mining industry. Conventional wisdom amongst many investors all over the world holds that these sectors in South Africa are in virtually terminal decline. Over decades of mining, ore bodies have been depleted, mines have become very deep and consequently more difficult, expensive and dangerous to mine, and there has been a steady depletion of mining skills. South Africa's status as a developing country and the profound political changes which have taken place have added further elements of uncertainty, and therefore risk, for prospective investors. Despite these factors, it is indisputable that vast deposits of payable ore still reside in South African gold and uranium mines. Although average grades have declined, many areas of high-grade reserves are still unmined, and there are huge areas of lower grade ore that can yet be economically exploited. Many existing mines, if managed on a sustainable footing and in a responsible manner, can still deliver profits at considerably lower metal prices than those currently in force. Indeed there are some mines which can be brought back to world-class status. There are thus many opportunities left for safe, effective and highly profitable mining that can continue for decades to come.

Initially some like-minded entrepreneurs resurrected a moribund public company called Simmer and Jack Mines, Limited, and set about equipping it with capital, assets and a team of skilled managers. The objective was the

formation of a new corporate group that would redevelop certain mines selected and acquired on the basis that they were considered by the new management to contain sufficient potential to once again become world-class gold and uranium producers, for a period of approximately twenty years or more, at metal prices significantly below current market levels. To this end, the Buffelsfontein mines in the North West Province and the Ezulwini Mine in the West Rand region of Gauteng Province were cheaply acquired by the group. These assets have been substantially rehabilitated, and a mining methodology was adopted which resulted in reserves being increased so that the potential life of both mines now exceeds twenty years. The need for further capital for this development led to the "spin-out" listing of First Uranium.

The transition to democratic government in South Africa has given rise to the concept of Black Economic Empowerment, or BEE, which is designed to facilitate entry into and participation in the economy by those citizens denied reasonable access thereto under the former dispensation. In the mining sector this has resulted in ownership of mineral rights being transferred from private to state ownership. Access to unmined minerals takes place either by way of "old order" or "new order" mineral rights conferred by the state. Old order rights are temporary rights which have not yet been converted, and require such conversion within a certain period to prevent expiry. New order rights are granted by the state in place of old order rights provided certain specific criteria are met by the prospective holder. In the case of Simmer & Jack and

First Uranium, new order rights have been granted on the basis that the group's BEE partner, Vulisango Holdings (Pty) Ltd., holds a minimum of 26% of the issued shares of Simmer & Jack and holds a "management contract" with Simmer & Jack in terms of which certain key functions are performed on behalf of the group for a monthly fee. Certain transformational targets are also contained in the various mining plans that the companies have submitted to the Department of Minerals and Energy when making application for the rights. These targets relate mainly to the numbers of previously disadvantaged South Africans employed at various levels in management.

Although First Uranium is a Canadian corporation, it operates in South Africa using new order mineral rights, and it qualifies to hold these new order rights on the basis of Simmer & Jack's relationship with Vulisango. However, as long as it is a subsidiary of Simmer & Jack it is not also required to have a majority of its board nominated by a BEE partner, and actually the First Uranium board contains a majority of independent directors. These independent directors are all men of high reputation and ability, and I am full of admiration and gratitude for the manner in which they have ensured that the board and the Company have swiftly moved to levels of best practice in respect of corporate governance, disclosure, financial management, human resource management and safety. Whilst Simmer & Jack and First Uranium have a common origin, it is likely that over time the destinies of the two companies will steadily diverge. They hold different assets and are becoming progressively more independent as regards management. The entrepreneurial spirit, which gave rise to both, is alive and well in each.

Shareholders have committed a significant investment for the development of the Company's assets. Because that development is not yet complete, First Uranium has still to deliver the fruits of the investment. It is therefore crucial that investors are able to monitor the progress of the Company for themselves. To this end, management has adhered to stringent standards of disclosure. Targets and milestones are disclosed on the Company's website and regularly updated. Performance against these measures is independently verified and likewise disclosed. An ongoing program of engagement with institutional investors and analysts has been put in place. During this period of development, therefore, shareholders are well placed to assess progress objectively and form a knowledgeable opinion concerning management's ability and the Company's prospects.

The directors have set the Company on a path of rapid growth. Much of this will come organically, but in order to meet our targets it is envisaged that First Uranium will need to make acquisitions in Southern Africa, North America and, possibly, elsewhere. Opportunities are being evaluated.

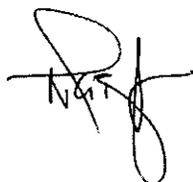

All mining throughout the world contains elements of danger, and in South Africa the depth of the mines exacerbates the problem. This does not make injuries inevitable, but it does make our responsibility for the safety of our employees more onerous. We believe that effective mining involves the delivery of above average returns to investors without compromising the safety of miners and without the ruination of the environment in which we operate. A determined effort is being made to rid our mines of the notion that deep-level mining involves numerous casualties and that a wasteland is a regrettable yet acceptable aftermath of normal mining operations.

First Uranium has already received accolades from local authorities as regards rehabilitation of certain sites and, since inception, it has had an excellent safety record. We cannot promise that nobody will ever be hurt, but we can promise that no stone will ever be left unturned to prevent it. Our industry is already safer than many others in South Africa and elsewhere, and we will continue our efforts to improve.

During the year under review two changes were made to the board of directors: Mr. George Faught, a founding non-executive director, did not stand for re-election, and his place on the board was taken by Mr. Wayne Hill, an independent. On behalf of the Company I wish to thank Mr. Faught for the many things he contributed, not the least of which was a careful attention to detail which often stood us in good stead. Mr. Hill chairs the Audit Committee.

Finally, I wish to acknowledge the efforts of my fellow directors and also those of management. The board is a forum for candid debate and insightful advice, and I thank the directors for their hard work. They are responsible for a business where innovation and creativity flourish, where sound principles endure, and where the best is drawn out from those who work for the Company. Management, under the exceptional leadership of Gordon Miller, has become an effective team that has made progress in the face of many obstacles, including delays in permitting, bureaucratic intervention, uncertain power supplies and all the myriad problems associated with rehabilitating deep mines and building large plants. Despite all these, we remain well capitalized, on track and on time.

I therefore believe that First Uranium can face the coming year with confidence.

Nigel Brunette
Chairman

Our focus is uranium. Our advantage is gold.

Our first full year as a public company was an incredibly important year for the advancement of our development projects and for building our relationship with investors.

We have made significant strides in the development of uranium and gold production at our two projects in South Africa: the underground Ezulwini Mine and the Mine Waste Solutions tailings recovery project (MWS).

We are already producing gold at both operations and expect to be producing uranium at both projects by the end of FY2009 (which ends March 31, 2009). At MWS, we began to produce gold in June 2007. At the Ezulwini Mine, from September 2007 until January 2008 we hoisted gold ore for toll milling at a neighbouring gold plant until a power shortage in South Africa curtailed that plant. Our own gold plant at the Ezulwini Mine began commissioning in April 2008 and producing gold in July 2008.

in FY2008
we expect to
produce

>

454,000
pounds of uranium

144,000
ounces of gold

A compelling investment

We spend a lot of time meeting with our shareholders and investors to help them make informed decisions about their investment in First Uranium. As a new public company that operates in a dynamic industry and in a country that continues to evolve its social and economic structure, it is also important for us to use those meetings to listen to the needs of investors, hear their concerns and better understand what strategies they will reward with their investment in First Uranium.

Whenever we speak with investors, we discuss the primary reasons that we believe First Uranium is a compelling investment. Those reasons are that the Company is a near-term producer that has taken several significant steps to reduce risk and is structured to become a low-cost operator.

Gordon Miller
Chief Executive Officer

Near-term producer

From the earliest days of spinning out First Uranium from South African gold miner Simmer and Jack Mines, Limited, our primary goal has been to put our projects into production as quickly as possible. At the time of our initial public offering in December 2006, we expected to begin the commissioning of the initial modules of our gold and uranium plants at both operations in June 2008.

During our development some timelines were extended, such as those to accommodate the relocation of the MWS plants adjacent to the acquired plant and to allow time to study the impact of a diminished power supply in South Africa. Most of our milestones were, however, implemented on or ahead of schedule, including:

- the first module of the MWS gold plant began to produce gold for account in June 2007, a full year ahead of schedule as a result of the acquisition of an adjacent gold plant
- the second and third modules of the MWS gold and uranium plants, originally scheduled for commissioning in June 2009 and June 2010, respectively, are now scheduled to begin commissioning about eight months ahead of plan
- the commissioning of the gold plant at the Ezulwini Mine was advanced by three months to begin in April 2008

In FY2008 (which ended on March 31, 2008), we produced 28,192 ounces of gold at MWS and, on a toll-milling basis, 7,735 ounces of gold at the Ezulwini Mine.

In FY2009, we expect to produce 144,000 ounces of gold and 454,000 pounds of uranium. Over the currently defined life of our mines (MWS – 16 years; Ezulwini Mine – 18 years), we expect average annual production to be 421,000 ounces of gold and 2.1 million pounds of uranium.

Reduced risk exposure

We owe it to our shareholders to be diligent in our efforts to protect their investment from downside risk and we have taken steps to reduce our risk exposure in key aspects of our business, including:

REHABILITATING THE EZULWINI MINE FOR UNINTERRUPTED SAFE OPERATION

The Company has completed the installation of the safety support systems to prevent future impact on the Ezulwini Mine from possible ground movement within the weak Western Areas Formation (“WAF”) where it intersects both the main shaft and the ventilation shaft of the mine.

As we thought that this was an unacceptable environment in which to operate a long life mine, we have been installing a safety support system to prevent pressure from the WAF building up on the rock surrounding a small portion of the main shaft that accesses our operation. As part of that system, we established a program to install a hanging tower within the main shaft right through the WAF layer to provide for uninterrupted operation. In addition, we reinforced an annulus around the shaft to protect the operation of the main shaft and the vent shaft from being impacted by any future rock movement. Further, the mine plan includes the excavation of a de-stress cut through the extent of the 500-metre diameter shaft pillar. All of these measures are designed to eliminate the risk of production interruptions from the WAF and improve hoisting capacity over the life of mine.

IMPLEMENTING SOLUTIONS TO A POWER CRISIS

At the end of January 2008, South Africa’s national power utility, Eskom, announced that it could no longer guarantee a sufficient power supply. During an initial period of rotating and unplanned blackouts, Eskom announced that it could only manage to produce about 80% of its future power capacity and that it would introduce a load-shedding system of power allocation that would reduce power significantly to high power consumers such as the mining industry. While the power allocation was later increased to 90% and, in certain circumstances, 95%, these percentages were based on each user’s load requirements as of October 2007, which for a developing miner such as First Uranium meant that there would not be sufficient power to run the new uranium and gold plants being built at these sites.

Our board of directors decided that the Company's two projects were robust enough at projected uranium and gold costs and prices that management should seek solutions to generate its own power, even if that would result in higher costs. We went the distance on this project to understand exactly what power Eskom would provide, what our power needs would be for our regular and peak power demand at every stage of both projects and examined our options to generate our own power. Based on our findings, we updated the technical reports for both projects and on April 21, 2008 issued a news release that described in detail why we made the decision to generate our own power, how much it would cost and the long-term economic impact on our two operations. We subsequently connected the 14 megawatts of standby generators and signed agreements to procure 10 megawatts of diesel generators on a capital lease plan at the Ezulwini Mine and bought a 30-megawatt power plant, comprised of 12 2.5-megawatt units, for MWS.

SECURING THE SUPPLY OF LOW-COST SULPHURIC ACID

The global demand and cost of sulphur and sulphuric acid have been rising significantly since early 2007 as pressure mounted on both demand and supply. Growth in the fertilizer business and the start-up of new mines for minerals such as copper and uranium that require acid as an extraction re-agent have increased demand for sulphuric acid. Power restrictions in South Africa that have curtailed production at smelters and other facilities that produce sulphuric acid as a by-product have reduced local supply. With rising costs and uncertain availability of acid, we decided to install our own acid plant.

Although the final size of the acid plant is yet to be determined, we calculated the economics to procure, install and operate an acid plant. For \$124 million, we could install a new acid plant to produce twice as much acid as we need and sell the rest. If, however, we decided to build

We expect that average annual production from our two projects will be

2.1 million
pounds of uranium

421,000
ounces of gold

Even though Eskom incrementally increased its power allocation to the Ezulwini Mine in June 2008, we believe that having backup generators is good risk management against the possibility of further power shortages in South Africa. If we don't use the generators, our power costs will be below those planned in our updated technical reports, but, importantly, we have ensured ourselves of a reliable source of power to produce gold and uranium without being subject to the risk of future power interruptions.

a smaller acid plant, to fit our purposes and/or were able to acquire a used acid plant, the capital required could be considerably less.

We estimate that we could produce acid at \$14 per tonne, which compares favourably to our FY2009 price assumption of \$350 per tonne and even our long-term outlook range of between \$95 and \$200 per tonne. We can run this plant at such a low cost because we will be using by-product sulphur from the MWS tailings dams as the raw material for the plant.

With this initiative we avoid the risk of having to pay higher prices for acid and will be able to secure a low-cost supply of acid, thus avoiding the risk of interrupting our operations due to a potential lack of supply.

USING PROVEN TECHNOLOGY

The gold mining industry has a long history in South Africa and so does uranium mining as the country previously had 20 uranium plants in operation. When demand and prices fell at the end of the last cycle, many of the gold plants and all but one of the uranium plants were shut and dismantled. This was the case at the Ezulwini Mine.

Today, with a few exceptions, we are replacing the same plant processes that were there the last time. We are using engineers who have built successful plants for decades, and will initially target the start-up production levels that this mine produced in the past and intend to run this operation with some of the same people who also ran the Ezulwini Mine before. By taking this low-risk approach, we expect to avoid surprises and have a high degree of confidence that we will replicate the successes of past operations.

MANAGING FINANCIAL RISK

In addition to managing operational risks, thanks to excellent counsel from the board of directors, we have taken a conservative and prudent approach to managing the company's finances.

In May 2007, we raised gross proceeds of Cdn\$150 million through an issue of 4.25% senior unsecured convertible debentures. The intent of that issue was to fund a possible expansion of the Ezulwini Mine and, together with the net proceeds of the December 2006 initial public offering, fund the development of MWS and the Ezulwini Mine and for general corporate purposes. In advance of the deployment of these funds, the proceeds of the debentures were placed in Canadian guaranteed investment certificates. With the collapse of riskier investments, such as asset-backed commercial paper, our risk adverse money management approach protected our capital.

MANAGING PRICING AND FOREIGN EXCHANGE RISK

We believe that our fellow shareholders need to make informed decisions about their investments and we treat our shareholders' money the same way. Prior to taking the company public, we produced technical reports that were signed off by independent consultants to the requirements of Canada's National Instrument 43-101. Those reports analyzed the geological and engineering aspects of our mining projects to determine the economic viability of our projects. All mining companies are required to do that.

We, however, have diligently updated those technical reports every time we introduced significant changes to our projects, such as adding a pressure leach process, an acid plant or self-generated power. Since the original reports were published in late 2006, we have updated the Ezulwini Mine report twice and the MWS technical report four times to ensure that we knew exactly what the financial implications were before proceeding with those changes. Those technical reports reduce the risk of making uninformed decisions and are publicly disclosed so that our shareholders also stay well informed.

Despite any company's best efforts to eliminate operational risk, external economic events can affect the financial performance of a company. While we are exposed to changes in foreign exchange rates and changes in the market prices for uranium and gold, we have chosen not to hedge any of our currencies or sell forward our gold production with the result that we and our shareholders are not exposed to the risk of missing the full upside opportunity of strong prices and favourable exchange rates.

As for uranium, we do not intend to sign any long-term fixed-delivery contracts until we are assured that no external factors will inhibit our production and thus mitigate the risk of having to buy potentially higher-priced uranium to fulfill contract obligations.

Low-cost operator

We believe that the best strategy to reduce long-term risk is to be one of the lowest-cost producers in our sector, which allows First Uranium:

- to have enough operating margin and the financial flexibility to solve unexpected issues, such as we did when we decided to acquire and operate diesel generators in response to the power crisis in South Africa
- to have a competitive advantage when bidding for acquisitions and long-term contracts to supply uranium
- to survive and prosper in the long term, even if prices for gold and uranium fall to lower levels

SPLITTING COSTS BETWEEN URANIUM AND GOLD

One of our cost advantages is mining two minerals at the same time. At the Ezulwini Mine, the same mine contains both uranium and gold. At the MWS tailings recovery project, the ore we are reprocessing contains uranium,

gold and sulphur. Mining two minerals at the cost of mining one is a clear advantage as it enables us to split the costs between the two minerals. We intend to split the cost on a co-product basis, which means that our costs are proportionally split between uranium and gold, based on the forecast for revenue (the product of the estimated production times the estimated price for each mineral).

According to our current technical models at the Ezulwini Mine, we expect our costs to be \$376 per ounce for gold and \$33 per pound for uranium. At MWS, we expect costs to be lower at \$347 per ounce for gold and \$22 per pound for uranium. These costs compare favourably to our price expectations, which are based on the April 2008 consensus estimates of 13 North American brokerage firms. The consensus estimate assumes that the spot price for gold will peak at an average annual price of \$907 per ounce in FY2010 and settle at a long-term average annual price of \$711 per ounce starting in FY2013. For uranium, the consensus estimate assumes that the average annual price for uranium contracts will peak at an average annual price of \$96 per pound in FY2009 and settle at a long-term average annual price of \$50 per pound starting in FY2013.

We expect that our cost estimates will enable us to be a low-cost uranium producer and a low-cost gold producer. Comparing our relative cost estimates to the consensus price estimates should provide us with a healthy operating margin.

REOPENING THE EZULWINI MINE

From the outset, we were able to keep capital costs low for very important reasons, particularly at the Ezulwini Mine where much of the structure of the mine already exists. We are rebuilding the gold and uranium plants, developing new underground workings and investing capital to rehabilitate the main shaft, but when we acquired the mining rights for the Ezulwini Mine, we bought extensive surface and underground assets such as:

- a working 1,518-metre deep shaft complete with fully operational infrastructure
- an internal sub-vertical shaft
- extensive underground workings
- three winders in the main shaft
- a ventilation shaft complete with ventilation fans and
- a tailings dam with projected capacity for 19 years of tailings deposition

Both MWS and the Ezulwini Mine are centred in historical mining areas. As such, the infrastructure of roads, communities to house mine workers, power grids and water management systems are in place and reduce the risk and cost associated with their construction.

RECOVERING TAILINGS YIELDS LOW-COSTS

MWS is a tailings recovery project, where 350 million tonnes of tailings deposited from previous mining operations will be hydraulically mined. Hydraulic mining involves using water cannons to wash the tailings to nearby pump stations that pump a slurry of tailings and water to the plants for uranium and gold extraction.

To move tailings to the gold and uranium plants utilizes water, gravity and pumps to transport the ore to the processing facilities. The ore requires no milling as the ore has already been milled. A small workforce operates the 20,000 tonnes of material per day mining units, resulting in a high-volume, low-cost operation.

The tailings that we are processing at MWS contain uranium as a by-product from historical gold operations and it was only extracted from part of the MWS tailings for a few of the 50 years of operations. Gold mining is also economic using current gold extraction methods as all of these tailings were created using an older, less efficient gold extraction technology.

BUILDING FROM EXPERIENCE

Fortunately, Simmer & Jack began to build the First Uranium team in 2005 before the renaissance for uranium gained momentum and experienced mining personnel became harder to acquire. First Uranium benefits from a wealth of experience in mining gold and uranium and particularly in the case of the Ezulwini Mine, people with operational experience at this specific site.

By having the experience of mining and extracting the same minerals from the same orebody using the same methods, management understands what processes work best. That experience is a competitive advantage which reduces the likelihood of costly mistakes and increases the probability for success. Our team has the history of seeing the previous downturn of an uranium market, the wisdom to know another downturn will eventually come and are building these operations as low-cost long-term operations.

Production first, then growth

OUR FOCUS IS URANIUM. OUR ADVANTAGE IS GOLD.

These two simple phrases summarize what drives us now and for our future. Our near-term priority is clearly to get into production and prove to investors that we can build and operate uranium mines. Our gold production helps to fund the building of our uranium plants. Future gold production is expected to offset a significant portion of our costs and allow us to maintain low-cost uranium mining operations. Gold and uranium production at these two projects is expected to give us a strong financial platform for future growth.

We have identified the following potential avenues for growth:

- organic growth
- regional consolidation
- exploration potential
- geopolitical diversification

GROWING ORGANICALLY IS POSSIBLE AT BOTH OPERATIONS

Organic growth at the Ezulwini Mine is possible if the Company can convert a sufficient amount of the 201 million tonnes of inferred resource to a measured and indicated resource. Converting even a tenth of that amount could justify a feasibility study to sink a second shaft with a capacity to hoist 250,000 tonnes per month and to triple the capacity of our planned uranium plant.

At MWS, the uranium plant process is being designed to recover about 27% of the uranium in the tailings, which should yield the best return. MWS could grow organically and more than double the recovery of uranium, but only at higher operating costs because of lower cut-off grades, increased consumption of reagents and higher capital expenditures to build a much larger uranium plant. The higher costs could only be justified if the Company is able to contract uranium sales at a high enough price to cover the higher costs and margins.

CONSOLIDATING REGIONAL ASSETS IS POSSIBLE

We operate in an environment where sufficient power supply is in question, sulphuric acid has become less abundant and more costly to acquire, permitting for tailings

deposition sites is harder to attain and uranium plant construction materials and expertise are more difficult to assemble. When fully operational each of our operations will be running a uranium plant and have licensed depositions sites for new tailings. With our decision to acquire power generators and to build an acid plant, we may also have excess power capacity and acid.

With these competitive advantages in place we believe other regional players who want to produce uranium from their ore bodies (both underground and tailings) will be interested in consolidation strategies that could enable us to grow our operations.

EXPLORING THE POTENTIAL AT THE EZULWINI MINE

Beyond getting into production, we have the opportunity to expand the Ezulwini Mine. We have embarked on an expansion program that could result in a feasibility study to convert portions of our extensive inferred uranium resources and to expand the uranium plant to accelerate the rate of production.

In November 2008, we received approval by the South African Department of Minerals and Energy to prospect on contiguous properties north-east and south-east of the Ezulwini Mine along a 20-kilometre strike zone. If we can confirm additional resources, we could justify a new mine shaft with a capacity to hoist 250,000 tonnes per month and an expansion of the plant to three and a half times the currently planned capacity.

While this potential expansion is not a current priority and will not interfere with our near-term objective to commission our plants and commence production, our three-year exploration budget of \$12 million will also help us better define our near-term mine development plans.

DIVERSIFYING GEOPOLITICAL RISK

It has always been part of First Uranium's vision to grow production by pursuing accretive acquisition and joint venture opportunities. While there is still plenty of opportunity to grow the number and scope of our projects within South Africa, we recognize that there are certain risks associated with the operation of mines in this area. We expect that geopolitical diversification will please shareholders and any power utilities who are considering becoming our potential customers for a long-term supply of uranium.

We know that some of the world's best mines with the lowest operational risks have been developed in North America and have established a business development team there, led by Jim Fisher, to look at acquisition and/or joint venture opportunities for uranium mining in this region. Ideally, we will seek opportunities that are near-term development projects that have the potential to become low-cost operations.

Market outlook

While uranium spot prices are tracked and published, most of the world's uranium is sold into long-term contracts. We believe that the average term price for those contracts is more indicative than the spot price of the selling price that we expect to realize for our uranium production. According to Ux Consulting, the term price rose from \$25 per pound at the end of 2004 to peak at \$95 per pound by May 2007, where it stayed until April 2008. At the end of June 2008, the term price for uranium was \$80 per pound.

One of the key short-term drivers for pricing is the continued deficit between primary mine supply and growing demand by energy utility companies around the world for their nuclear reactors, the primary users of uranium. Another key driver for pricing over the next three or four years is the first core fills for nuclear reactors that are currently being permitted. Additionally, fuel specifications for new reactor technologies require earlier core fills, which means that deliveries of uranium will have to come in as much as five years ahead of reactor commissioning. Add to this the ongoing reduction in global uranium inventories and we believe that pricing for longer-term delivery should remain buoyant.

The gold price shows little sign of ending its six-year bull run, despite periodic slip backs into lower territory since it peaked at record levels in March 2008. The major drivers of the gold price are consumption driven by solid off-take for jewelry manufacture, ongoing producer de-hedging, perceptions of increasing global financial risk, and the threat of long-term currency devaluation caused by rising inflation and the sub-prime fallout that continues to widen. Despite a small number of dissenting voices, analysts remain bullish on the basis that a global downturn will see a move out of dollar-based assets and into alternative tangible assets such as gold.

In the economic models for the Ezulwini Mine and MWS, we needed to make assumptions regarding future uranium and gold prices. We tapped into the collective research of 13 North American brokerage firms and based our price assumptions on their forecasts and then discounted those by the US inflation rate for the next few years while we complete the construction of our uranium and gold plants.

The right people

The team we have assembled complements our mine assets. The operations team, led by Syd Caddy, has extensive working knowledge of uranium and gold mining in South Africa and transferable skills in geology, engineering, metallurgy, tailings recovery and plant operations to meet our needs wherever our growth takes us.

Overseeing the management team is an experienced Board of seasoned resource sector specialists that is helping to steer us in the right direction. Chairman, Nigel Brunette, and lead director, Rob Franklin, directors Patrick Evans, John Hick, Wayne Hill and, most recently added, Graham Wanblad continue to challenge us to do our best for our shareholders. I thank them for their outstanding commitment and sage counsel.

Together, we have made solid progress in a very short time. We have world-class assets and highly competent people and have eliminated much of the development risk associated with start-up projects. We believe First Uranium is a compelling investment that offers investors the opportunity to own a near-term producer that has the potential to be a very low-cost operator. And we have significant opportunities for growth.

Gordon Miller
Chief Executive Officer

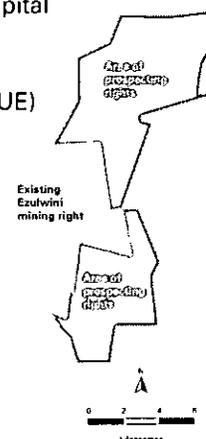

Ezulwini

An underground mining project

The Ezulwini Mine is a re-commissioned underground uranium and gold mining operation located approximately 40 kilometres southwest of Johannesburg on the outskirts of the town of Westonaria in Gauteng Province, South Africa.

The mine was constructed in the 1960s and reached production of 200,000 tonnes of gold per month in the same decade. In 2001, mine production at Ezulwini was suspended by its previous owners primarily as a result of capital constraints compounded by a weak gold and uranium market environment.

The geology of the Ezulwini property includes a number of reef packages, with the Upper Elsburg (UE) and Middle Elsburg (ME) reefs being the primary focus of First Uranium's mine reopening plans. First Uranium's plans for the development of the Ezulwini Mine include the rehabilitation and re-engineering of the main mine shaft through the installation of a floating steel tower, de-stressing the area where the shaft pillar intersects the shaft barrel, and the construction of uranium and gold processing facilities.

Mineral resources

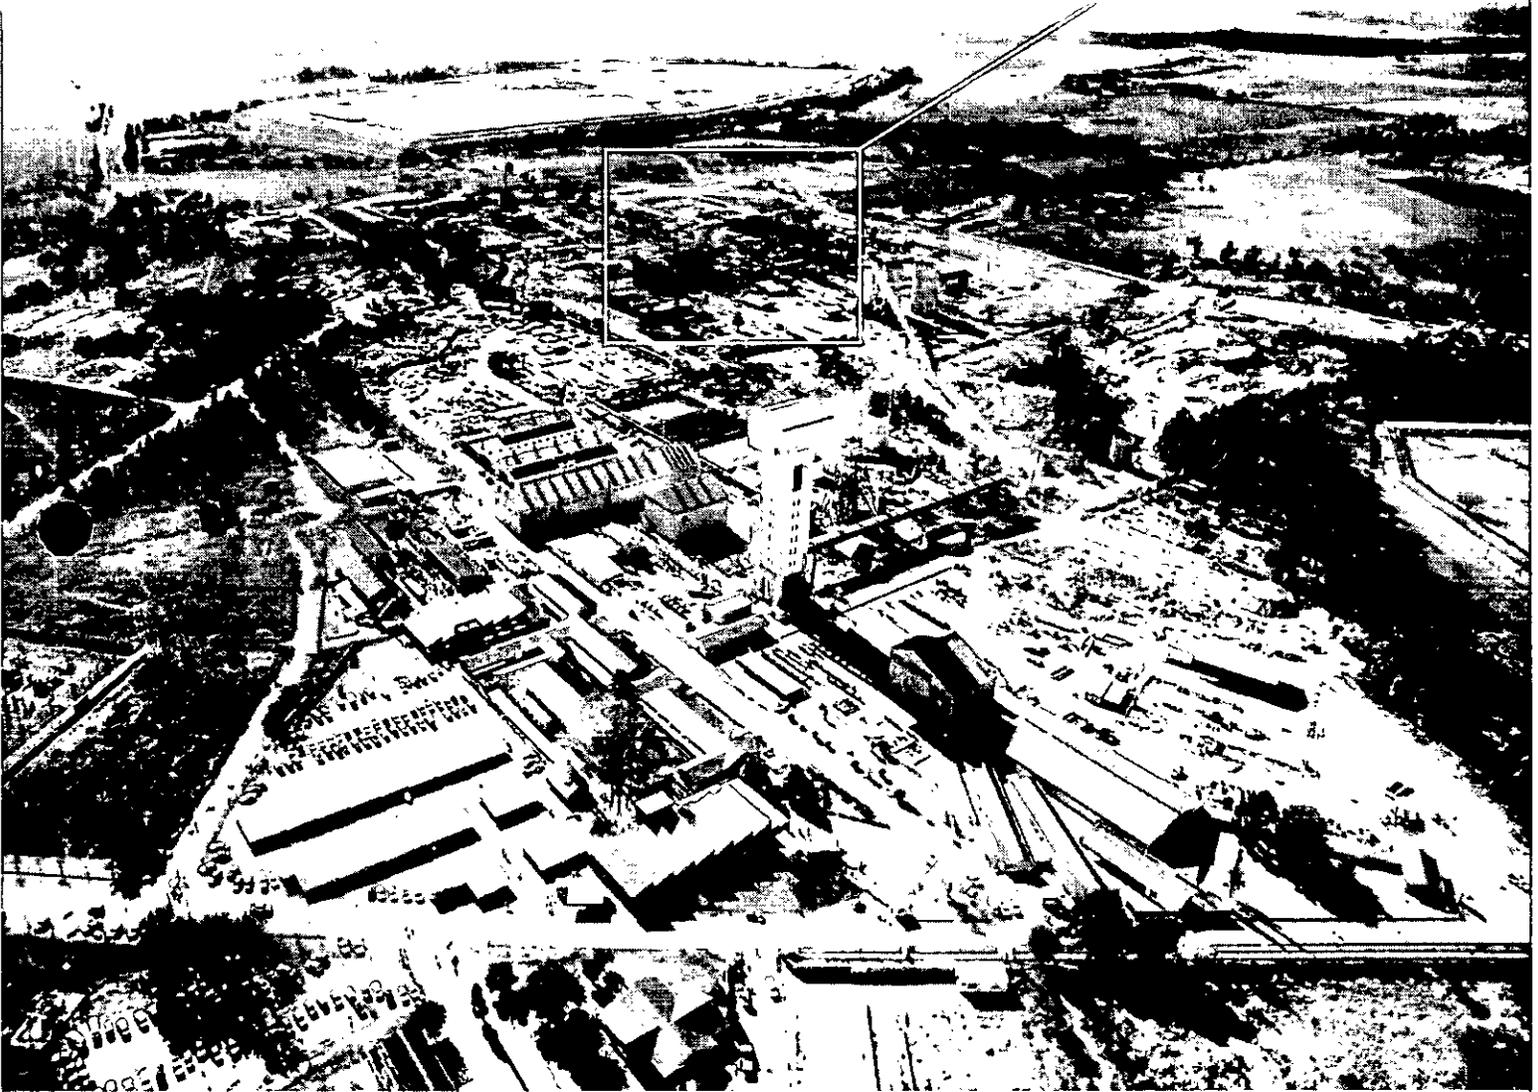

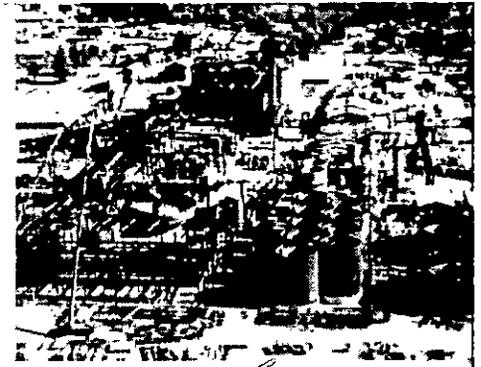

The following table is a summary of the estimated mineral resources at the Ezulwini Mine:

AS AT JANUARY 2007	CATEGORY	TONNES (000 t)	GRADE AU (g/t Au)	GRADE U ₃ O ₈ (%)	CONT. AU (000 oz)	CONT. U ₃ O ₈ (000 lb)
	Measured reef					
	UE Shaft Pillar	2,490	7.7	–	615	–
	Middle Elsburg	2,450	4.9	0.072	384	3,888
	Total	4,940	6.3	n/a	999	3,888
	Indicated reef					
	UE Shaft Pillar	3,640	5.8	–	683	–
	Middle Elsburg	1,370	5.8	0.095	257	2,880
	Total	5,010	5.8	n/a	940	2,880
	Measured + indicated reef					
	UE Shaft Pillar	6,130	6.6	–	1,298	–
	Middle Elsburg	3,820	5.2	0.08	641	6,768
	Total	9,950	6.1	n/a	1,939	6,768
	Inferred reef					
	Upper Elsburg	64,550	5.8	–	12,055	–
	Middle Elsburg Channel	4,810	2.3	–	351	–
	Middle Elsburg	132,100	4.7	0.075	19,742	218,319
	Total	201,460	5.0	n/a	32,148	218,319

NOTES:

1. CIM definitions were followed for mineral resources.
2. Mineral resources in the Upper Elsburg shaft pillar are estimated at a 4.0 g/t Au cut-off grade.
3. Mineral resources are estimated using an average long-term gold price of US\$500 per ounce, and a US\$/R exchange rate of 7.0.
4. A minimum mining width of 1.53 m was used.
5. Rows and columns may not add exactly due to rounding.
6. Mineral resources that are not mineral reserves do not have demonstrated economic viability.
7. For additional information, see the Company's Annual Information Form dated June 24, 2008.

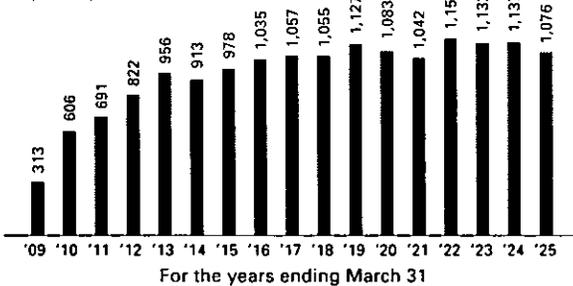

The construction of the first of four 22,000 tonne per month mills and the 200,000 tonne per month grid plant is now complete, with the first grid plant achieved in early 2008. The Company expects to commission the remaining plant and procedure yellowcake in October 2008.

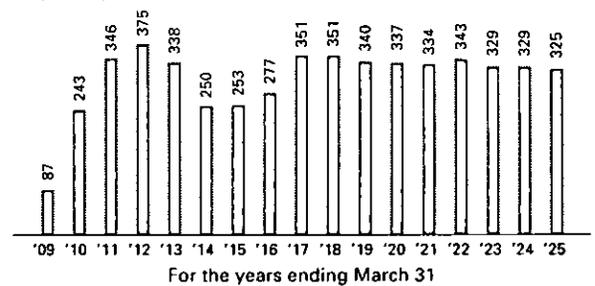

Uranium

Gold

Projected production (000 lb)

Projected production (000 oz)

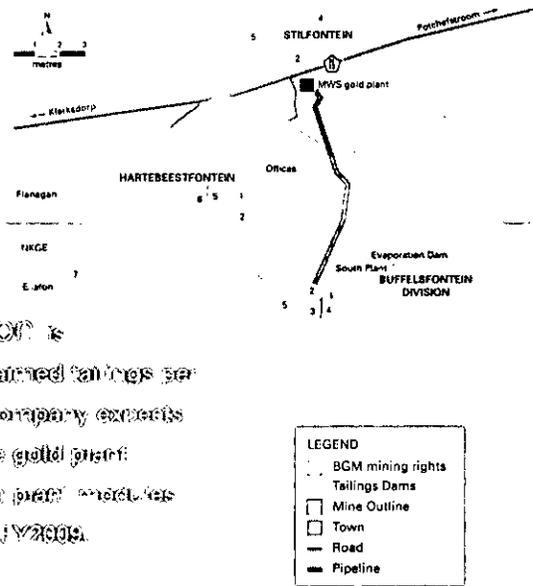

A uranium and gold tailings recovery operation

The MWS Project (formerly the Buffelsfontein Tailings Recovery Project) is a uranium and gold tailings recovery operation located in the western portion of the Witwatersrand basin, approximately 160 kilometres from Johannesburg and approximately eight kilometres from the town of Klerksdorp at Stilfontein, in the North West Province, South Africa.

The MWS Project is comprised of 12 tailings dams which originated from 50 years of mining at what is now Simmer and Jack Mines, Limited's Buffelsfontein Gold Mine ("BGM") and three MWS tailings dams, which originated from the processing of material from the now defunct Stilfontein Gold Mine, as well as a gold recovery plant on the MWS site, which is situated near BGM and which is currently recovering gold from the tailings.

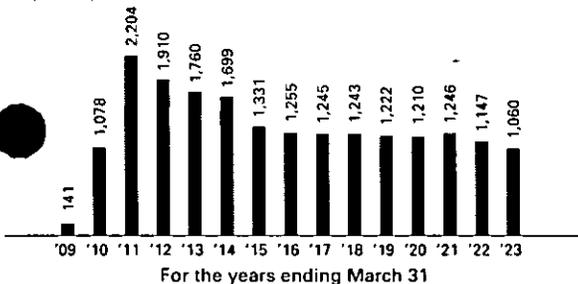

The operations involve the hydraulic mining of the tailings dams using high pressure water cannons to slurry the tailings, which will then be pumped to the plants for the recovery of uranium and gold. First Uranium will also process tailings from the ongoing mining operations at BGM for recovery of uranium and gold.

The new pumping station is transporting 20,000 tonnes of reclaimed tailings per day to the MWS gold plant. The Company expects to commission the second of three gold plant modules and the first two uranium plant modules at MWS during the last quarter of FY2009.

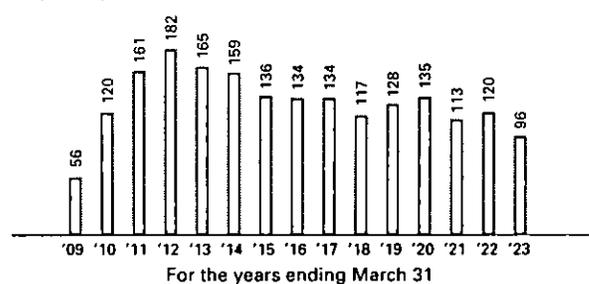

MWS Uranium

Projected production (000 lb)

MWS Gold

Projected production (000 oz)

Mineral resources

The mineral resources detailed below are effective as at 31 March 2008:

ESTIMATES (31 MARCH 2008)	SURFACE Category	Place	Dam	TONNES (Mt)	Au (g/t)	GOLD Au (000 oz)	U ₃ O ₈ (kg/t)	URANIUM U ₃ O ₈ (Mib)
Measured	Buffels		2	23.2	0.36	267	0.09	4.61
	Buffels		3	24.9	0.35	280	0.10	5.44
	Buffels		4	14.1	0.37	170	0.10	3.17
	Harties		5	23.9	0.21	163	0.06	3.26
	Harties		6	13.3	0.20	85	0.06	1.85
	Total measured				99.4	0.30	965	0.08
Indicated	Buffels		5	47.6	0.24	360	0.06	6.62
	Harties		1	74.4	0.26	624	0.06	10.17
	Harties		2	43.8	0.26	369	0.06	5.79
	Harties		7	1.3	0.27	11	0.16	0.46
	Harties	NKGE		1.2	0.50	19	0.18	0.47
	MWS	4 dom 1		9.7	0.14	43	0.05	1.01
	MWS	4 dom 2		17.4	0.28	157	0.13	5.12
	MWS	5		40.3	0.31	402	0.09	7.81
Total indicated				235.7	0.26	1 984	0.07	37.44
Total measured & indicated				335.1	0.27	2 949	0.08	55.77
Inferred	Harties	Flanagan		0.05	0.69	1	0.15	0.02
	MWS	5		15.2	0.30	146	0.09	3.17
	MWS	5 (from 2)		4.7	0.18	26	0.10	1.05
	Harties	Ellaton		1.3	0.39	16	0.15	0.41
Total inferred				21.2	0.28	189	0.10	4.64

NOTES:

1. Mineral Resources are quoted as in-situ Mineral Resources.
2. No cut-off grades were applied.
3. Rows and columns may not add exactly due to rounding.
4. Mineral Resources are quoted as inclusive of Mineral Reserves. Resources which are not Reserves do not have demonstrated economic viability.
5. MWS 4 Dam is split into two domains, namely Domain 1, which is the uppermost section of the dam, and Domain 2, the lowermost portion of the dam. The tailings dam has been evaluated in two separate sections as they show distinct differences in grade.
6. For additional information, see the Company's Annual Information Form dated June 24, 2008.

Mineral reserves

The following mineral reserves have been classified:

AS AT 31 MARCH 2008	SURFACE Category	Place	Dam	TONNES (Mt)	Au (g/t)	GOLD Au (000 oz)	U ₃ O ₈ (kg/t)	URANIUM U ₃ O ₈ (Mib)
Proven	Buffels		2	23.2	0.36	267	0.09	4.61
	Buffels		3	24.9	0.35	280	0.10	5.44
	Buffels		4	14.1	0.37	170	0.10	3.17
	Harties		5	23.9	0.21	163	0.06	3.26
	Harties		6	13.3	0.20	85	0.06	1.85
	Total proven				99.4	0.30	965	0.08
Probable	Buffels		5	47.6	0.24	360	0.06	6.62
	Harties		1	74.4	0.26	624	0.06	10.17
	Harties		2	43.8	0.26	369	0.06	5.79
	Harties		7	1.3	0.27	11	0.16	0.46
	Harties	NKGE		1.2	0.50	19	0.18	0.47
	MWS	4 dom 2		17.4	0.28	157	0.13	5.12
	MWS	5		40.3	0.31	402	0.09	7.81
Total probable				226.0	0.27	1 941	0.07	36.44
Total proven & probable				325.4	0.28	2 907	0.08	54.77

NOTES:

1. Mineral Reserves are quoted as fully diluted delivered to mill estimates.
2. Based on assumptions of a gold price of \$711 per ounce, a uranium price of \$49 per pound and ZAR/S exchange rate of 7.57, which are long-term forecast figures (post 2012).
3. A Reserve COG of 0.28 grams per tonne gold equivalent was used. Uranium grades were converted to gold equivalent using a conversion factor of 1 gram per tonne, which equals 0.503 kilograms per tonne on an extracted metal basis.
4. Rows and columns may not add exactly due to rounding.
5. The average LOM gold recovery applied was 68% and 34% for uranium.
6. Only Domain 2 of the MWS 4 dam has been converted to a Mineral Reserve as the gold grade in Domain 1 is below cut-off.
7. For additional information, see the Company's Annual Information Form dated June 24, 2008.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE AUDITED CONSOLIDATED FINANCIAL CONDITION AND RESULTS OF OPERATIONS

for the years ended March 31, 2008 and March 31, 2007

This Management's Discussion and Analysis ("MD&A") of the consolidated financial position and results of operations reviews the activities, audited consolidated results of operations and financial condition of First Uranium Corporation and its subsidiaries ("First Uranium" or the "Corporation") for the years ended March 31, 2008 ("FY 2008") and March 31, 2007 ("FY 2007"), together with certain trends and factors that are expected to have an impact in the future. References to "Q1 2008", "Q2 2008", "Q3 2008" and "Q4 2008" refer to the Corporation's three months ending June 30, 2007, September 30, 2007, December 31, 2007 and March 31, 2008, respectively. References to "Q1 2009" refer to the Corporation's three month period ending June 30, 2008.

This MD&A is intended to supplement and complement the audited consolidated financial statements for the year ended March 31, 2008 and the notes thereto (collectively the "Financial Statements") which have been prepared in accordance with Canadian generally accepted accounting principles ("Canadian GAAP"). The information contained in this MD&A is current as of June 9, 2008, unless otherwise indicated.

The reporting currency for the Corporation is the US dollar, and all amounts in the following discussion are in US dollars ("\$\$"), except where otherwise indicated.

This MD&A includes certain forward-looking statements. Please read the cautionary note at the end of this document.

Responsibility of management and the Board of Directors

Management is responsible for the information disclosed in this MD&A and the accompanying Financial Statements and has in place the appropriate information systems, procedures and controls to ensure that information used internally by management and disclosed externally is materially complete and reliable. In addition, the Corporation's Audit Committee, on behalf of the Board of Directors, provides an oversight role with respect to all public financial disclosures made by the Corporation, and has reviewed and approved this MD&A and the accompanying Financial Statements.

DISCLOSURE CONTROLS AND PROCEDURES

Disclosure controls and procedures are designed to provide reasonable assurance that all relevant information is gathered and reported on a timely basis to senior management, including the Corporation's Chief Executive Officer and Chief Financial Officer, so that appropriate decisions can be made regarding public disclosure. As at the end of the period covered by this MD&A, management of First Uranium, under the direction of the Chief Executive Officer and the Chief Financial Officer, evaluated the effectiveness of the Corporation's disclosure controls and procedures as required by Canadian securities laws.

Based on this evaluation, the Chief Executive Officer and the Chief Financial Officer have concluded that as of the end of the period covered by this MD&A, the disclosure controls and procedures were effective to provide reasonable assurance that information required to be disclosed in First Uranium's annual filings and interim filings (as such terms are defined under Multilateral Instrument 52-109 – Certification of Disclosure in Issuers' Annual and Interim Filings) and other reports filed or submitted under Canadian securities laws is recorded, processed, summarized and reported within the time periods specified by those laws, and that material information is accumulated and communicated to management of First Uranium, including the Chief Executive Officer and the Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

During the most recent year there were no changes in the Corporation's internal controls over financial reporting that materially affected, or are reasonably likely to materially affect, the Corporation's internal control over financial reporting.

Overview

First Uranium is a Canadian resource company focused on the development of uranium and gold projects in South Africa. The Corporation's goal is to become a significant low-cost producer of uranium and gold through the re-opening and development of the Ezulwini Mine and the expansion of Mine Waste Solutions ("MWS"). To expand its production profile, First Uranium plans to pursue value-enhancing opportunities in South Africa and elsewhere.

First Uranium is currently focused on the rehabilitation and bringing into production of the Ezulwini underground uranium ("U₃O₈") and gold ("Au") mine (the "Ezulwini Mine") and the recovery of uranium and gold from the existing and future surface tailings at the Buffelsfontein mine through gold and uranium plants originally planned to be constructed near the tailings at the Buffelsfontein mine (the "Buffelsfontein Tailings Recovery Project"). In June 2007, the Corporation acquired Mine Waste Solutions (Proprietary) Limited, an existing tailings treatment company which had an operating gold recovery plant in place. As a result of the acquisition, First Uranium changed its plans for the Buffelsfontein Tailings Recovery Project so that the historical and future tailings from the Buffelsfontein mine (the "Buffelsfontein Tailings") are now transported by pipeline to the MWS site and processed through MWS's existing gold plant and, subject to their commissioning, through the planned uranium recovery plant and additional gold recovery facilities. For greater clarity, the Buffelsfontein Tailings Recovery Project, as enhanced and modified by the acquisition of MWS, was renamed Mine Waste Solutions.

The Corporation received net proceeds of \$177.7 million from the sale of 33 million common shares in an initial public offering (the "Offering") in December 2006 and raised an additional \$130.6 million (net of expenses) from the sale of convertible debentures (as defined below) in May 2007. The common shares and the convertible debentures are listed on the Toronto Stock Exchange (the "TSX"). In addition, the common shares are listed on the Johannesburg Stock Exchange (the "JSE"). As of June 9, 2008, Simmer and Jack Mines, Limited ("Simmer & Jack"), a South African incorporated public company listed on the JSE, owned 62.3% of the common shares of First Uranium.

HIGHLIGHTS

During Q1 2008, First Uranium:

- raised gross proceeds of Cdn\$150 million in May 2007 through an issue of 4.25% senior unsecured convertible debentures (the "Debentures")
- acquired, effective June 6, 2007, 100% of the equity and management control, of Mine Waste Solutions (Proprietary) Limited and its wholly-owned subsidiary Chemwes (Proprietary) Limited, following which First Uranium commenced to record for its account, production from the MWS gold plant
- filed a revised technical report for each of the Ezulwini Mine and MWS, which indicated improvement to the net present value ("NPV") and internal rate of return ("IRR") of each project, reflecting the accelerated timetables
- accelerated capital investment at the Ezulwini Mine to advance the plant commissioning and production startup by three months

During Q2 2008, First Uranium:

- began hoisting development material at its Ezulwini Mine in September 2007, as scheduled
- defined initial underground and surface drilling targets related to the possible expansion of the existing Ezulwini Mine (the "Ezulwini Expansion Program")
- approved an \$11.7 million capital program to construct a reclamation station and pipelines at MWS and increase the planned processing rate from 500,000 tonnes per month to 630,000 tonnes per month
- entered into an agreement with a third party to calcine ammonium diuranate ("yellowcake") produced by First Uranium to produce uranium oxide for dispatch to converters commencing January 2009

During Q3 2008, First Uranium:

- completed construction of the reclamation station at MWS and the 10.5-kilometre pipeline from the Buffelsfontein Tailings to the MWS gold plant
- completed the clean up and processing of the remaining tailings from the MWS No.2 tailings dam and commenced hydraulic mining and pumping of material from the Buffelsfontein No.2 tailings dam to the MWS gold plant for processing during mid-December
- completed a pre-feasibility study of MWS during November 2007 incorporating higher average uranium and gold price assumptions and increased capital investment, which projected the MWS project's expected NPV to increase by 71% to \$505 million and its IRR to increase from 69% to 151%
- entered into an interim off-take agreement pursuant to which a third party will purchase yellowcake from First Uranium from June 2008 until January 2009 at rates based upon the then prevailing spot prices
- issued 6.1 million First Uranium common shares to Waterpan Mining Consortium ("Waterpan") in connection with the acquisition of the remaining 10% interest in Ezulwini Mining Company (Proprietary) Limited ("EMC") which owns and operates the Ezulwini Mine, resulting in EMC becoming wholly-owned by First Uranium (the "Waterpan Transaction")

During Q4 2008, First Uranium:

- commenced drilling the initial three of nine exploration and expansion diamond core holes as part of the Ezulwini Expansion Program
- was granted an unconditional prospecting right for 6,843 hectares of additional property adjacent to the Ezulwini Mine
- on March 20, 2008, the South African Department of Minerals and Energy (the "DME") consented to Simmer & Jack's application to cede the Ezulwini mining rights from Simmer & Jack to EMC
- commenced earthworks in preparation for the construction of the second gold plant module and the first two uranium plant modules at MWS

During FY 2008, First Uranium:

- ended FY 2008 with \$164.7 million cash and cash equivalents on hand
- toll-treated 46,271 tonnes of ore from the Ezulwini Mine at a recovered grade of 5.2 grams of gold per tonne, producing 7,735 ounces of gold
- treated a total of 4.1 million tonnes of tailings through the MWS gold plant at a recovered grade of 0.22 grams of gold per tonne, producing a total of 28,192 ounces of gold at a Cash Cost of \$533 per ounce (as defined in the notes to the production tables in the Operations Overview of this MD&A)

Subsequent to the end of Q4 2008, First Uranium:

- approved, subject to financing, a plan to build an acid plant at MWS to secure low-cost supply of sulphuric acid, a necessary reagent for the production of uranium, from the sulphur contained in the pyritic material within the tailings dams, which are already being processed for gold
- approved a plan and entered into agreements to supplement the power supplied by the South African national power utility, Eskom, by obtaining and installing diesel-fired generators and a power plant to secure a steady supply of electrical power with a total capacity of 54 megawatts ("MW"), inclusive of existing stand-by units, to the two operations until Eskom could be expected to restore a steady, reliable supply of electrical power
- filed updated independent technical reports on June 5, 2008 on both the Ezulwini Mine and MWS, taking into consideration the capital and operating costs of generating additional power, revised acid price assumptions and a revaluation of metal price and exchange rate assumptions, for which projected revised NPVs are \$667 million for the

for the years ended March 31, 2008 and March 31, 2007

Ezulwini Mine and \$413 million for MWS and the projected IRRs for the projects are 336% for the Ezulwini Mine and 70% for MWS (See Outlook in this MD&A for more detail).

- commenced wet commissioning of the Ezulwini gold plant during May 2008
- completed the upgrading of the MWS gold plant to increase the design capacity from 500,000 tonnes per month to 633,000 tonnes per month during May 2008
- upgraded MWS No.5 tailings dam to enable a deposition rate of 633,000 tonnes of material per month during May 2008
- On June 9, 2008, the Corporation was notified by Eskom that it will be able to increase its supply of power to the Ezulwini Mine from 40 MW to 55 MW, which is expected to reduce the Corporation's requirement and cost to generate its own power. Further updates will be provided in due course.

During Q1 2009, First Uranium plans to:

- hoist and stockpile 30,000 tonnes of ore, of which 18,000 tonnes would come from gold and uranium bearing ore in the ME reef horizon and 12,000 tonnes would come from gold bearing ore in the UE reef horizon, resulting in a stockpiled inventory of 157,500 tonnes containing:
 - 2,800 ounces of gold from the existing stockpile of 127,500 tonnes at an average recoverable grade of 0.7 grams per tonne
 - an additional 5,600 ounces of gold from the newly stockpiled 30,000 tonnes at an average recovery grade of 5.8 grams per tonne
 - 23,760 pounds of uranium from the newly stockpiled 18,000 tonnes of ME ore at an average recovery grade of 0.6 kilograms per tonne
- continue commissioning the Ezulwini Mine's 200,000 tonne per month gold plant with the first 50,000 tonne per month module on schedule for production of gold on carbon in June 2008 and gold bullion in July 2008
- commence final commissioning of the Ezulwini Mine's uranium plant in June 2008
- process 1.7 million tonnes of tailings through the MWS gold plant at a yield of approximately 0.15 grams of gold per tonne with expected production in excess of 8,100 ounces of gold

FINANCIAL OVERVIEW

First Uranium's primary focus has been the initial development of the Ezulwini Mine and MWS, resulting in limited gold production and no uranium production to date. During FY 2008 a total of 35,927 ounces of gold were produced and sold from the Ezulwini Mine and MWS at an average selling price of \$784 per ounce.

During FY 2008, gold was produced at average Cash Costs of \$533 per ounce at MWS. The relatively high average Cash Costs at MWS can be attributed primarily to the diminishing resources taken from the MWS No.2 tailings dam, which necessitated a low-volume, high-cost mechanical load and placement operation. With the transition to the high-volume, low-cost operations associated with the mining of the Buffelsfontein Tailings during December 2007, the average Cash Costs started to decrease and are expected to decrease further as the throughput to the MWS gold plant increases. As the Ezulwini Mine is still in a ramp-up phase and has not yet achieved commercial levels of production, the \$6.7 million revenue from its mining operations has been credited against mine infrastructure costs at the Ezulwini Mine, in Property, Plant and Equipment.

General, consulting and administrative expenditures combined with the limited ore and gross profit from tailings processed during the development phase of the two uranium and gold projects resulted in an operating loss of \$18.5 million in FY 2008. The Corporation reported an operating loss of \$6.6 million in FY 2007, reflecting expenditures incurred in preparation of the uranium and gold projects for production, along with general and administrative expenses.

The loss of \$22.3 million in FY 2008 was primarily the result of the ongoing expenditures mentioned above. The Corporation reported a loss of \$7.9 million in FY 2007, primarily as a result of expenditures incurred in preparation of the mining projects for production, general, consulting and administrative expenses and foreign exchange losses on translation of Canadian and South African assets, liabilities, revenues and expenses converted to the US dollar.

At the end of FY 2008 (March 31, 2008), First Uranium had total assets of \$387.7 million, total liabilities of \$155.3 million and shareholders' equity of \$232.4 million. It had cash and cash equivalents of \$164.7 million, compared to \$138.9 million at the end of FY 2007. The Corporation currently holds its funds in cash and bank-sponsored guaranteed investment certificates. It has no exposure to asset-backed commercial paper. The increase in cash and cash equivalents from the end of FY 2007 was primarily attributable to the net proceeds of \$130.6 million received from the sale of the Debentures in May 2007, offset by \$112.7 million of cash utilized for capital expenditure at the Corporation's two mining operations during FY 2008.

THE POWER SITUATION

On January 24, 2008, Eskom communicated to the South African mining industry that the utility could not guarantee power availability and asked the industry to operate at electrical power levels below historical load requirements until 2012 (the "Power Situation"). While Eskom has announced plans to increase the supply of power incrementally in the years leading up to 2012, Eskom also reported that full power availability cannot be guaranteed until then.

Subsequent to the Power Situation, the Corporation investigated the economic viability of generating its own power at the Ezulwini Mine and MWS for the next five years, as a result of the significantly reduced supply of electrical power currently available in South Africa and Eskom's concerns about its ability to supply power to the country's mining industry in the short and medium term.

Prior to the Power Situation, management believed that Eskom would be able to provide all of the power to operate both of its current projects. Management believes that Eskom will be able to provide a minimum of approximately 40 MW at the Ezulwini Mine and 12 MW at MWS. To supplement the Eskom power at the Ezulwini Mine, the Corporation will use the 14 MW of its existing stand-by capacity at the Ezulwini Mine but expects to require an additional 10 MW of power to fill any gaps during periods of peak power consumption. At MWS, the Corporation expects to require a minimum of an additional 14 MW.

The Corporation agreed to lease diesel generators for the Ezulwini Mine with a combined capacity of 10 MW for an initial term of eighteen months, with the option to extend the lease agreement for a period of up to sixty months. In addition, the Corporation has purchased a 30 MW power plant (comprising twelve 2.5 MW generating sets) for installation where required. (See Liquidity and Capital Resources in this MD&A)

The Corporation expects to power its generators using diesel fuel for approximately five years, based on the assumption that the Power Situation is alleviated by then as Eskom plans. Once the purchased diesel generators are no longer required, the Corporation intends to sell the power generators at that time and recoup a significant portion of their cost.

On June 9, 2008, the Corporation was notified by Eskom that it will be able to increase its supply of power to the Ezulwini Mine from 40 MW to 55 MW, which is expected to reduce the Corporation's requirement and cost to generate its own power. Further updates will be provided in due course.

for the years ended March 31, 2008 and March 31, 2007

OPERATIONS OVERVIEW

Ezulwini Mine

	FY 2008	FY 2007
Ezulwini Mine		
Tonnes processed (000s)	46	-
Average gold recovery grade (grams/tonne)	5.2	-
Total ounces of gold produced and sold	7,735	-
Average selling price per ounce (\$)	869	-
Revenue (\$000s) credited against mine infrastructure costs	6,723	-

The Ezulwini Mine is located approximately 40 kilometres from Johannesburg on the outskirts of the town of Westonaria in the Gauteng Province, South Africa. The Ezulwini Mine is an underground mine constructed in the 1960s. Although the mine was put on care-and-maintenance from 2001 until 2006 when the Corporation acquired the mine, it has historically produced approximately 14 million pounds of uranium and 12 million ounces of gold. The mine has two separate tabular ore bodies about 400 metres apart. The Upper Elsburg ore body, where most of the mining has been done to date, is a gold only deposit. The Middle Elsburg ore body is a gold and uranium deposit and is relatively un-mined.

The Ezulwini Mine is part of the Ezulwini mining right, which includes certain surface and underground assets, acquired by EMC. On the date of the Offering, Simmer & Jack was the registered owner of the Ezulwini mining right. On December 20, 2006, EMC and Simmer & Jack entered into an agreement (the "Ezulwini Mining Right Agreement") pursuant to which Simmer & Jack agreed to take the necessary steps to obtain all ministerial approvals in order to effect the ceding of the Ezulwini mining right from Simmer & Jack to EMC. On March 20, 2008, the DME consented to the ceding of the Ezulwini mining right to EMC. EMC will operate the Ezulwini Mine under a new order mining right as described in detail in the Corporation's Annual Information Form for the year ended March 31, 2008 (the "AIF").

The Corporation has substantially completed the re-commissioning of the Ezulwini Mine that began in December 2006 and was, until the onset of the Power Situation in January 2008, in the process of ramping up underground production. As announced in the Corporation's press release dated April 21, 2008, the Corporation conducted a study subsequent to the onset of the Power Situation assessing the economic viability of First Uranium generating its own power at the Ezulwini Mine and MWS for the next five years.

The impact of the Power Situation on the Ezulwini Mine is as follows:

- given the uncertainty of power supply from the end of January 2008 until mid-April 2008, the Ezulwini Mine halted toll-milling of its ore and reduced mine development and hoisting ore to surface during February and March, 2008. The Ezulwini Mine instead directed its focus on completing the shaft refurbishment, which was also underway and well advanced, until the operation's gold plant commenced commissioning during April 2008, when mine development and hoisting ore resumed at planned rates.
- management expects to recover any interim production shortfalls arising from the reduction of mine development as the new processing plant has available milling capacity to accommodate additional throughput for the next 12 months
- commissioning of the gold plant and the first 50,000 tonne per month mill commenced on schedule in April 2008 using power from Eskom
- the uranium plant remains on schedule for commissioning to begin in June 2008 using the Corporation's existing stand-by power generation capacity. Current mine production from the UE section and the ME section is being stockpiled separately on surface in the interim

- the second 50,000 tonne per month mill is on schedule for commissioning to begin in September 2008
- the Corporation does not expect any material adjustments to the previously reported production forecasts
- prior to the Power Situation, electrical power costs were expected to represent about 9% of the operating costs. The impact of additional operating costs for power generation are estimated to be an additional \$3.59 (a 12% overall increase) per pound for uranium and an additional \$35.50 (an 8% overall increase) per ounce for gold over the five-year period of self power generation.

As disclosed above, the revenue from the Ezulwini Mine's mining operations of \$6.7 million has been credited against mine infrastructure costs in Property, Plant and Equipment during FY 2008 as the mine is still in a ramp-up phase and has not yet achieved commercial levels of production.

The ramp-up of production at the Ezulwini Mine during FY 2008 resulted in the toll-treatment of 46,271 tonnes of ore at a recovered grade of 5.2 grams of gold per tonne, producing 7,735 ounces of gold.

During Q4 2008 the production ramp-up resulted in the toll-treatment of 18,320 tonnes of ore at a recovered grade of 4.6 grams of gold per tonne, producing 2,680 ounces of gold. Q4 2008 production was limited as a result of the decision to curtail underground development due to the shutdown of toll-milling capacity and lack of sufficient ventilation due to the shortage of power during the initial months of the Power Situation and the slower than anticipated shaft refurbishment program.

The Ezulwini Mine terminated the third-party toll-treatment arrangement at the end of March 2008 in order to start building a stockpile to be used during the commissioning of the gold plant in June 2008.

As at June 9, 2008, the clean-up process on surface and underground activities generated the following stockpiles at the Ezulwini Mine:

- from the material removed during the mining and excavation of the previous plant foundations and gold bearing soil, in excess of 127,500 tonnes containing an average grade of 1.1 grams per tonne of gold
- from the UE section, approximately 6,000 tonnes containing an average grade of 5 grams per tonne of gold
- from the ME section, approximately 6,000 tonnes containing an average grade of 3.5 grams per tonne of gold and 0.6 kilogram per tonne of U_3O_8

During May 2008, the Ezulwini Mine commenced wet commissioning of the gold plant. Final commissioning is expected to commence in June 2008 and finish during July 2008. The UE section stockpile will also be introduced to the plant during this phase.

Stopping for de-stressing of the 41 level MB raise has resulted in an area of 712 square metres being mined at an in-situ stope grade of 4.74 grams per tonne. In the ME section, stope production in the newly re-established 45 10B stope commenced in Q3 2008 and has resulted in an area of 1,059 square metres being mined at an in-situ stope grade of 25.78 grams of gold per tonne. Further stope development has been postponed due to the Power Situation, but is expected to resume closer to the start-up of the gold plant.

The Corporation continues to develop access to the Ezulwini Mine shaft de-stress cut on the UE section on levels 38a and 41. During Q4 2008, 169 metres were developed, bringing the total metres developed in the shaft pillar to 1,002 metres.

Current construction activities include the stabilization and refurbishment of the shaft and construction of the gold and uranium plant, surface gantry, transfer tower and crusher. EMC has accelerated the main shaft rehabilitation program and is continuing the refurbishment of the infrastructure in the ME section and the UE section from which hoisting of the ore began in October 2007.

for the years ended March 31, 2008 and March 31, 2007

The following is a summary of the process of shaft stabilization at the Ezulwini Mine:

- the second phase of the main shaft refurbishment, which involves support of the shaft where it passes through the Western Areas Formation ("WAF"), continues to be undertaken from the access provided by the new floating tower steelwork located above and below the WAF
- the section where the shaft barrel traverses the WAF zone has been consolidated and reinforced through the injection of resin and reinforced with anchors
- to prevent bulging of the low-strength WAF between the anchors, a combined cladding consisting of the original lining, strengthened heavy screens and high quality shotcrete, form a load-distribution diaphragm that will spread the points of loading of the anchors and injection rods more uniformly over the weak WAF layer
- the resulting reinforced thick "shell" will then be tied back to the surrounding rock mass by means of long anchors. These anchors are designed to withstand large amounts of elongation and high ground acceleration resulting from seismic events without compromising their initial stiffness.

The shaft operational time has been limited to four days per week while shaft rehabilitation work is executed.

Dry commissioning of the uranium plant is expected to commence in June 2008 with the first shipment of yellowcake production expected in August 2008.

As at March 31, 2008, \$112.3 million cash has been spent on the capital projects at the Ezulwini Mine (FY 2007: \$19.3 million) including \$20.3 million capitalized pre-production costs and pumping and other capital related costs (FY 2007: \$10.0 million). The costs of production from the Ezulwini Mine will be capitalized and the related proceeds of sales credited against capital until such time as the Ezulwini Mine has achieved commercial levels of production. Until completion of the Ezulwini Mine capital projects there will be additional pumping and other capital related costs capitalized although these costs will decrease on completion of the various phases of the capital projects. In terms of the revised project costs released in April 2008, the original estimate of \$271 million increased to \$312 million of total capital required over the life of the mine (inclusive of sustaining capital) of which \$220 million still has to be spent. The increase is attributable to inflation related increases of 7% or \$15 million, cost overruns of \$5 million as a result of barrel reparations and additional provisions for sustaining capital from years 16 to end of life of mine that increased from \$31 million to \$58 million.

Ezulwini expansion program

Based upon an internal concept evaluation, the combined Phase 1 drilling target areas have the potential to delineate a substantial portion of measured and indicated resources which would be required to justify the construction of a new 250,000 tonne-per-month shaft and a related mill expansion having the potential to triple production capacity from the uranium bearing ME ore body. The conceptual evaluation excludes any potential contribution from the UE1A reef. Approximately 16,000 metres will need to be drilled in order to complete Phase 1. To date, a total of 4,321 metres have been drilled. Of the four holes being drilled, three have intersected the Black Reef and one hole has intersected both the UE1A and the E9EC reefs. Additional Phase 2 target areas have been defined and Controlled Budget Estimates have been developed for these additional target areas.

It is expected that all four holes will have intersected the E9EC reef horizon by the end of the September 2008. Deflections from these four existing boreholes to supplement borehole valuation data and the start of the Phase 2 drilling project are expected to take place in the third quarter of fiscal 2009.

The final holes of the Phase 1 drilling project and the first reef intersections of the Phase 2 drilling project are expected to begin during Q4 2009.

Mine waste solutions

	FY 2008	FY 2007
MWS		
Tonnes processed (000s)	4,053	–
Average gold recovery grade (grams/tonne)	0.22	
Total ounces of gold produced and sold	28,192	–
Average selling price per ounce (\$)	760	–
Average cost per ounce produced and sold (\$)	588	–
Average Cash Cost per ounce (\$)	533	–
<hr/>		
<i>(in thousands of dollars)</i>		
Revenue	21,429	–
Cost of sales	(15,025)	–
Amortization	(1,555)	–
Total cost of sales	(16,580)	–
Gross profit	4,849	–

"Cash Costs" are costs directly related to the physical activities of producing gold, and include mining, processing and other plant costs, third-party refining and smelting costs, marketing expense, on-site general and administrative costs, royalties, on-mine drilling expenditures that are related to production and other direct costs. Sales of by-product metals are deducted from the above in computing cash costs. Cash costs exclude depreciation, depletion and amortization, corporate general and administrative expense, exploration, interest, and pre-feasibility costs and accruals for mine reclamation. Cash costs are calculated and presented using the "Gold Institute Production Cost Standard" applied consistently for all periods presented.

Total cash costs per ounce is a non-GAAP measurement and investors are cautioned not to place undue reliance on it and are urged to read all GAAP accounting disclosures presented in the consolidated financial statements and accompanying footnotes.

MWS is a uranium and gold tailings recovery operation located in the western portion of the Witwatersrand Basin, approximately 160 kilometres from Johannesburg. MWS consists of 14 tailings deposits from three gold and uranium mines that operated for 50 years. These tailings represent in excess of 355 million tonnes of mineral resources including inferred resources, of which 325 million are mineable reserves estimated to contain 55 million pounds of uranium and 3.0 million ounces of gold. The tailings dams are spread over an area that stretches approximately 13.5 kilometres north-south and 14 kilometres east-west and cover an area of approximately 1,100 hectares. The tailings dams are being hydraulically mined with high-pressure water cannons.

When the Corporation's wholly-owned subsidiary, First Uranium (Proprietary) Limited ("FUSA") acquired MWS in June 2007, it acquired an existing operating gold tailings re-processing facility and an historic uranium plant, adjacent to the Buffelsfontein property. The Corporation changed its plans for the Buffelsfontein Tailings Recovery Project such that the historical and future tailings from the Buffelsfontein mine would be transported to the MWS site and processed through the existing gold plant, and subject to their commissioning, through the planned uranium recovery plant and additional gold recovery facilities.

FUSA had entered into an agreement on December 20, 2006 to acquire surface tailings from Buffelsfontein Gold Mines Limited ("BGM"), a subsidiary of Simmer & Jack (the "Buffelsfontein Tailings and Rights Agreement"). A new agreement has subsequently been entered into between MWS, BGM and Simmer & Jack, that reflects the change in plans, with MWS assuming the obligations of FUSA under the original agreement. MWS has also agreed to pay FUSA the amounts due to Simmer & Jack by FUSA under the Aberdeen Arrangement as described below. MWS has indemnified BGM against any tax liability incurred by BGM from the sale recorded on the basis that MWS has no liability unless the amount of any claim exceeds \$2 million and then only in respect of any amounts in excess of \$2 million.

for the years ended March 31, 2008 and March 31, 2007

It was originally contemplated that the transaction pursuant to the Buffelsfontein Tailings and Rights Agreement would be recognized upon the satisfaction of the conditions precedent in the Buffelsfontein Tailings and Rights Agreement, including the transfer of the mining rights to MWS. While the transfer of the mining rights has not yet occurred, MWS commenced processing and accounting for Buffelsfontein Tailings in December 2007. Consequently, MWS has assumed the asset retirement obligation related to the Buffelsfontein Tailings. The corresponding asset of \$10.2 million associated with the Buffelsfontein Tailings is capitalized as part of tailings for processing under Property, Plant and Equipment and amortized over the estimated life of the Buffelsfontein Tailings. (See Note 7 to the Financial Statements.)

A loan agreement (the "Aberdeen Loan Agreement") was entered into by Simmer & Jack with Aberdeen International Inc. ("Aberdeen") dated March 30, 2006 pursuant to which Aberdeen provided to Simmer & Jack a loan facility in the amount of \$10 million in respect of the financing of Simmer & Jack's acquisition of BGM and the BGM Underground Mine. As part of the consideration for the facility, Simmer & Jack granted to Aberdeen a net smelter royalty on all of the gold assets held by Simmer & Jack through BGM. The royalty as determined in the Aberdeen Loan Agreement, will be applicable to any gold produced by MWS from tailings acquired from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement and will continue until the loan is repaid to Aberdeen, which Simmer and Jack has advised, is expected to occur by December 31, 2008 (unless extended by Simmer & Jack to December 31, 2010).

In addition, pursuant to the Aberdeen Loan Agreement, Aberdeen has the sole option, at any time following the one year anniversary of the first advance thereunder, to convert the amount of the facility outstanding at that time into ordinary shares of Simmer & Jack at a conversion rate of ZAR0.80, subject to the approval of Simmer & Jack's shareholders. In the event that such shareholder approval is not obtained within a reasonable period of time, Aberdeen will be entitled to a 1.0% net smelter royalty in perpetuity on gold produced from properties held by BGM, including the Buffelsfontein Tailings. The capital portion of the loan will not be required to be repaid under a Simmer & Jack shareholders non-conversion into Simmer & Jack equity.

On December 20, 2006, FUSA, Simmer & Jack and Aberdeen entered into an arrangement (the "Aberdeen Arrangement") pursuant to which (i) Simmer & Jack confirmed that it will pay to Aberdeen the amount of any royalty owing to Aberdeen under the Aberdeen Loan Agreement in respect of gold produced from the Buffelsfontein Tailings and (ii) FUSA confirmed that it will pay to Simmer & Jack, immediately prior to any payment contemplated in (i) above, an amount equal to the amount of any royalty payment to be made by Simmer & Jack to Aberdeen in respect of gold produced from the Buffelsfontein Tailings.

Pursuant to the Buffelsfontein Tailings and Rights Agreement, in consideration for the cession of the Buffelsfontein Tailings and Mining Right from BGM to MWS as well as certain servitudes, and the right to the tailings arising from future underground mining operations by BGM at the BGM Underground Mine, MWS agreed to pay to BGM a royalty of 1% plus value added tax of the gross revenue earned by MWS from the sale of uranium, gold, sulphur and other minerals recovered from the processing of tailings acquired by FUSA from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement.

In summary, as and when there is production from the tailings acquired from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement, FUSA will become liable to pay: (i) to Simmer & Jack, under the Aberdeen Arrangement, an amount equal to the royalty payable by Simmer & Jack to Aberdeen pursuant to the Aberdeen Loan Agreement in respect of gold produced from the Buffelsfontein Tailings, and (ii) to BGM the above-mentioned 1% royalty pursuant to the terms of the Buffelsfontein Tailings and Rights Agreement.

Since MWS is now processing Buffelsfontein Tailings, the royalty is paid monthly in arrears to BGM and Simmer & Jack as described above. During FY 2008 \$0.4 million have been accrued as royalties.

The impact of the Power Situation on MWS is as follows:

- the current MWS operation remains unaffected as it is drawing additional power from BGM
- upgrading of the MWS gold plant to increase the design capacity from 500,000 to 633,000 tonnes per month was completed in May 2008
- the Corporation expects to start commissioning the second gold plant module and the first two modules of the uranium plant in December 2008
- the construction schedule for the third modules of its gold and uranium plants is planned to be completed by December 2009
- prior to the Power Situation, electrical power costs were expected to represent about 9% of the operating costs. The impact of additional operating costs for power generation at MWS are estimated to be an additional \$2.49 (a 10% overall increase) per pound for uranium and an additional \$44.70 (a 13% overall increase) per ounce for gold over the five-year period of self power generation.

The project to construct the initial long-life reclamation station and 10.5-kilometre pipeline from the Buffelsfontein Tailings to the MWS plant facility was initiated in June 2007. Despite a delay due to late delivery of slurry pumps and heavy rains during October 2007, which made construction difficult, these new production facilities were commissioned in mid-December.

As a result of the late commissioning of the production infrastructure at the Buffelsfontein No.2 tailings dam, it was necessary to continue hydraulic mining from MWS No.2 tailings dam until December rather than stop in October, as previously planned.

As the resources in the MWS No.2 tailings dam neared exhaustion during the third quarter, the volume of ore declined and it was necessary to use mechanical loading and placement of the remnant material in addition to hydraulic mining, which resulted in increased handling costs relative to a normal reclamation operation. Only 0.8 million tonnes of tailings (0.4 million tonnes in Q1 2008 and 1.2 million tonnes in Q2 2008) were reclaimed from the MWS No.2 tailings dam during Q3 2008.

The reclamation station and the pipeline between the Buffelsfontein property and the MWS gold plant were completed and operation commenced during December which enabled the Corporation to stop mining from the MWS No.2 tailings dam and to initiate the hydraulic mining of the Buffelsfontein No.2 tailings dam on the Buffelsfontein property. The material from the Buffelsfontein No.2 tailings dam is being transported via the pipeline to the MWS gold plant for processing. Full commissioning of the introduction of the material from Buffelsfontein No. 2 tailings dam to the plant is ongoing.

During FY 2008, MWS processed 1.7 million tonnes of material from the Buffelsfontein No.2 tailings dam through the MWS gold plant at a Cash Cost of \$533 per ounce that includes 1.6 million tonnes reclaimed during Q4 at a Cash Cost of \$455 per ounce.

Results from the mining of Buffelsfontein No.2 tailings dam to date have confirmed the mineral resource estimates for gold and uranium, as well as the estimated sulphur content. Minor modifications to the hydraulic mining system to improve throughput and to the carbon-in-leach ("CIL") plant flow sheet to improve recovery are being implemented and are expected to be completed in July 2008 after which the commissioning of the first phase of the transition to the Buffelsfontein complex of dams should be complete.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE AUDITED CONSOLIDATED FINANCIAL CONDITION
AND RESULTS OF OPERATIONS

for the years ended March 31, 2008 and March 31, 2007

These modifications include:

- installation of a slime re-pulping system to break up clay lumps and improve hydraulic mining rates to 1.9 million tonnes per quarter and to stabilize pulp densities pumped to the plant
- completion of the current work to re-route flotation tailings from the tailings disposal line to the CIL gold circuit to reduce float tails grades and increase overall gold recovery rates from 0.15 grams per tonne to expected levels of 0.19 grams per tonne
- installation of high shear oxygen reactors to improve gold recovery grades to 0.19 grams per tonne in the expanded CIL circuit

The current and planned capital projects at MWS include:

- completing the commissioning of the hydraulic mining, pumping and processing system to reclaim material from the Buffelsfontein No.2 tailings dam at the full capacity of 21,000 tonnes per day
- upgrading the CIL circuit, which is expected to improve overall recoveries
- construction of one additional gold and two uranium modules that is scheduled for commissioning in January 2009
- construction of one additional gold and one additional uranium module that is scheduled for commissioning in December 2009 – this will increase plant capacity to 1.9 million tonnes per month
- establishing a single large tailings dam that will contain all future production tailings as well as tailings from processing BGM's ore for uranium. Although additional deposition capacity must be commissioned within the next two to three years as the MWS No.5 dam will run out of deposition capacity within that time, management is confident that a solution will be in place this year.

The design and construction of the one additional gold and one additional uranium module for the MWS plant that is scheduled for commissioning in December 2009 was awarded to MDM Engineering. Orders for long lead items have been placed and a total of \$3.6 million has been committed. Civil construction commenced during April 2008. To save time, MWS is adopting as many designs as possible from the Ezulwini Mine processing plant, which is expected to save considerable design time.

As at March 31, 2008, \$21.2 million cash has been spent on the capital projects at MWS (FY 2007: \$1.5 million). In terms of the revised project costs released in April 2008, the total capital required over the life of mine is estimated at \$272 million (inclusive of sustaining capital).

The Mineral Resources detailed in the table below are effective as at 31 March 2008.

MWS Mineral Resource estimates

Surface			Tonnes	Gold			Uranium

Notes:

1. Mineral Resources are quoted as in-situ Mineral Resources.
2. No cut-off grades were applied.
3. Rows and columns may not add exactly due to rounding.
4. Mineral Resources are quoted as inclusive of Mineral Reserves. Resources which are not Reserves do not have demonstrated economic viability.
5. MWS No.4 tailings dam is split into two domains, namely Domain 1, which is the uppermost section of the dam, and Domain 2, the lowermost portion of the dam. The tailings dam has been evaluated in two separate sections as they show distinct differences in grade.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE AUDITED CONSOLIDATED FINANCIAL CONDITION
AND RESULTS OF OPERATIONS

for the years ended March 31, 2008 and March 31, 2007

On March 31, 2008, the Corporation declared an updated mineral reserve estimate for MWS.

MWS Mineral Reserves

Surface			Tonnes (Mt)	Gold			Uranium		
Category	Place	Dam		Au (g/t)	Au (‘000 oz)	Au (t)	U ₃ O ₈ (kg/t)	U ₃ O ₈ (Mlb)	U ₃ O ₈ (t)
Proven	Buffels	2	23.2	0.36	267	8.3	0.09	4.61	2,090
	Buffels	3	24.9	0.35	280	8.7	0.10	5.44	2,466
	Buffels	4	14.1	0.37	170	5.3	0.10	3.17	1,439
	Harties	5	23.9	0.21	163	5.1	0.06	3.26	1,479
	Harties	6	13.3	0.20	85	2.6	0.06	1.85	839
Total proven			99.4	0.30	965	30.0	0.08	18.33	8,313

Total proven & probable			325.4	0.28	2,907	90.4	0.08	54.77	24,842

Notes:

1. Mineral Resources are quoted as in-situ Mineral Resources.
2. No cut-off grades were applied.
3. Rows and columns may not add exactly due to rounding.
4. Mineral Resources are quoted as inclusive of Mineral Reserves. Resources which are not Reserves do not have demonstrated economic viability.
5. MWS No.4 tailings dam is split into two domains, namely Domain 1, which is the uppermost section of the dam, and Domain 2, the lowermost portion of the dam. The tailings dam has been evaluated in two separate sections as they show distinct differences in grade.

Technical disclosure

All technical disclosure under the heading "Mine Waste Solutions" and in respect of MWS under "Outlook – Operating Cost Impact" has been prepared in accordance with National instrument 43-101 ("NI 43-101") by Daan van Heerden, B.Sc., M.Comm., Charles Muller, B.Sc, Pr.Sci.Nat, and Johan Odendaal, B.Sc., M.Sc., Pr.Sci.Nat all of Minxcon (Pty) Ltd, each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium.

Technical disclosure under the heading "Mine Waste Solutions" and in respect of MWS under "Outlook – Operating Cost Impact" is extracted from a technical report entitled "Technical Report on the Mine Waste Solutions ("MWS") Tailings Recovery Project, located near Stilfontein, North West Province, South Africa" with an effective date of March 31, 2008, prepared in accordance with NI 43-101 by Daan van Heerden, B.Sc., M.Comm., Charles Muller, B.Sc, Pr.Sci.Nat, Johan Odendaal, B.Sc., M.Sc., Pr.Sci.Nat, and Heidi Sternberg, B.Sc. Hons. (Geol.), GDE, Pr.Sci.Nat all of Minxcon (Pty) Ltd, each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium.

All technical disclosure under the heading "Ezulwini Mine", other than the disclosure on the stockpiles, date of first yellowcake production and the Ezulwini Exploration Program, and in respect of the Ezulwini Mine under "Outlook – Operating Cost Impact" has been prepared in accordance with NI 43-101 by R. Dennis Bergen, P.Eng and Wayne Valliant P.Geo of Scott Wilson Roscoe Postle Associates Inc. ("Scott Wilson RPA") each of whom is a "qualified person" under NI 43-101 and is independent of First Uranium.

Technical information under the heading "Ezulwini Mine", other than the disclosure on the stockpiles, date of first yellowcake production and Ezulwini Exploration Program, and in respect of the Ezulwini Mine under "Outlook – Operating Cost Impact" is extracted from a technical report entitled "Technical Report – Preliminary Assessment of the Ezulwini Project, Gauteng Province, Republic of South Africa" dated June 5, 2008 prepared in accordance with NI 43-101 by Messrs. Bergen and Valliant, who have also reviewed and approved the disclosure in this MD&A relevant to their respective contributions.

Results of operations

Consolidated results

(in thousands of dollars)	FY 2008	FY 2007
Group		
Revenue	21,429	—
Cost of sales (excluding amortization)	(15,025)	—
Amortization	(1,555)	—
Total cost of sales	(16,580)	—
Gross profit	4,849	—

Revenue for FY 2008 was generated from the sale of the gold from the MWS operations. As the Ezulwini Mine is still in a ramp-up phase and has not yet achieved commercial levels of production, revenues from the material, which was mined and then toll-treated at a neighbouring third party gold plant, have been credited against mine infrastructure costs relating to the Ezulwini Mine's mining operations in Property, Plant and Equipment. The Corporation had no production during FY 2007.

Other income

(in thousands of dollars)	FY 2008	FY 2007
Other income	2,738	27

Other income consists primarily of fees for sludge pumping services to a third party and hostel rental income at the Ezulwini Mine.

Expenditures

(in thousands of dollars)	FY 2008	FY 2007
General, consulting and administrative expenditures	(15,573)	(3,262)
Stock-based compensation	(5,125)	(2,460)
Pumping, feasibility and rehabilitation costs	(5,343)	(871)
Total expenditures	(26,041)	(6,593)
Operating loss	(18,454)	(6,566)

General, consulting and administrative expenditures included \$5.5 million for FY 2008 (FY 2007: \$1.6 million) for employee compensation costs, consulting and professional fees, as well as fees charged by Simmer & Jack for services provided pursuant to the Shared Services Agreement of \$1.4 million for FY 2008 (FY 2007: \$0.6 million). (See Related Party Transactions in this MD&A)

General, consulting and administrative expenses in FY 2008 primarily reflect the ongoing and increasing project activities, the costs of corporate offices in Johannesburg and Toronto and other expenses of operating a public company, which were not applicable in FY 2007.

The FY 2008 stock-based compensation expense reflects the amortized cost relating to 2,551,433 stock options granted during FY 2008 and the amortized cost relating to 1,223,001 stock options granted during FY 2007. The fair value of the stock-based compensation was estimated using the Black-Scholes option pricing model.

Pumping, feasibility and rehabilitation costs for FY 2008 were primarily comprised of the \$4.6 million portion expensed of the pumping and feasibility costs incurred at the Ezulwini Mine. During FY 2007, only \$0.8 million (mostly feasibility costs) were expensed to this account, as the majority of the pumping costs were capitalized. An increasing amount of pumping costs will be expensed as part of cost of production as the Ezulwini Mine production expands.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE AUDITED CONSOLIDATED FINANCIAL CONDITION
AND RESULTS OF OPERATIONS

for the years ended March 31, 2008 and March 31, 2007

(in thousands of dollars)	FY 2008	FY 2007
Operating loss	(18,454)	(6,566)
Interest income	14,847	3,433
Interest expense	(5,782)	(162)
Accretion expense on Debentures	(8,485)	-
Accretion expense on Asset Retirement Obligations	(896)	
Foreign exchange losses	(2,611)	(4,612)
Loss before income taxes	(21,381)	(7,907)

Interest income in FY 2008 primarily represents interest earned on the net proceeds from the Offering and the Debentures. Cash balances have been invested in short-term deposits with the Corporation's bankers until required for capital projects or to fund operating costs. The interest income in FY 2007 primarily represents the interest earned from the December 2006 Offering to the March 31, 2007 yearend.

Interest expense in FY 2008 consists of the interest paid on the Debentures. The interest expense during FY 2007 consisted of the non-capital portion of interest paid by EMC on the loan payable to Simmer & Jack. The accretion expense on Debentures relates to the senior unsecured convertible debentures issued during May 2007. (See Note 11 to the Financial Statements.) The accretion expense on Asset Retirement Obligations relates to the environmental rehabilitation liabilities of the Ezulwini Mine and MWS. (See Note 12 to the Financial Statements.)

The foreign exchange losses on translation in FY 2008 reflect the overall strengthening of the Cdn\$ against the US dollar and the overall weakening of the ZAR against the Cdn\$ and the US dollar.

The table below shows the exchange rate movements over the quarters of FY 2008 relative to FY 2007:

	Q4 2008	Q3 2008	Q2 2008	Q1 2008	FY 2008	FY 2007
Cdn\$ to the ZAR – closing rate	8.02	6.99	6.98	6.68	8.02	6.30
Cdn\$ to the ZAR – average rate	7.52	6.93	6.81	6.47	6.93	6.20
Cdn\$ to the US\$ – closing rate	0.98	1.10	1.01	0.94	0.98	0.87
Cdn\$ to the US\$ – average rate	1.00	1.01	0.95	0.91	0.97	0.88
US\$ to the ZAR – closing rate	8.20	6.85	6.92	7.01	8.20	7.28
US\$ to the ZAR – average rate	7.55	6.79	7.12	7.11	7.14	7.06

Loss before income taxes

(in thousands of dollars)	FY 2008	FY 2007
Loss before income taxes	(21,381)	(7,907)
Income tax charge	(966)	(21)
Loss for the year	(22,347)	(7,928)

The loss before taxes in FY 2008 increased year over year as a result of increased ongoing expenditures that more than offset gross profit from gold sales. The increase in expenditures year over year reflects the ramp-up of activities, ongoing project activities, the costs of corporate offices in Johannesburg and Toronto and other expenses of operating a public company, which were not applicable for most of FY 2007.

The income tax charge increased year over year as a result of the deferred taxation provision at MWS for the period from acquisition to March 31, 2008.

Use of proceeds

OFFERING

Pursuant to the Offering in December 2006, First Uranium raised total net proceeds of \$177.7 million of which \$143.6 million had been expended as at March 31, 2008 leaving a balance on hand at that date of \$34.1 million:

Use of net proceeds

(in millions of dollars)	Total spent at March 31, 2008	Spent during FY 2008	Spent during FY 2007
Development of the Ezulwini Mine	(112.3)	(93.0)	(19.3)
Development of MWS	(21.2)	(19.7)	(1.5)
Repayment of indebtedness owed by EMC to Simmer & Jack	(14.1)	-	(14.1)
Purchase of the Ezulwini Mine infrastructure	(8.9)	-	(8.9)
Working capital and general corporate purposes	12.9	4.3	8.6
Total	(143.6)	(108.4)	(35.2)

While First Uranium intends to apply the net proceeds of the Offering approximately as disclosed in the Corporation's final prospectus dated December 12, 2006 in connection with the Offering, such uses are by definition, based on estimates and assumptions and are subject to variance. In addition, there may be circumstances where, for sound business reasons, a re-allocation of the funds may be necessary or advisable.

DEBENTURES

The Corporation intends to use the net proceeds from the issue of the Debentures together with the balance of the net proceeds of the Offering, to fund the Ezulwini Expansion Program, the development of the Ezulwini Mine and MWS as described above and for general corporate purposes. The net proceeds of \$130.6 million from the issue of the Debentures are currently held in Canadian dollar denominated short-term deposits bearing interest at 4.85% per annum. The approval of the South African Reserve Bank ("SARB"), which was required in connection with the issue of the Debentures, included a condition that the Corporation transfers the net Debenture proceeds to bank accounts of the Corporation in South Africa and convert the funds to ZAR, by May 3, 2008. On April 30, 2008, Cdn\$50 million was transferred to the Corporation's bank account in South Africa and converted to ZAR. The balance remains in Canadian dollar pending consideration by SARB of the Corporation's application to allow the funds to remain in Canada.

Cash flows

(in thousands of dollars)	FY 2008	FY 2007
Cash flows utilized in operating activities	(1,723)	(15,743)
Cash flows utilized in investing activities	(111,612)	(24,373)
Cash flows from financing activities	131,624	178,470
Net effect of exchange rates on cash held in foreign currencies	7,536	-
Net increase in cash and cash equivalents for the year	25,825	138,354
Cash and cash equivalents at beginning of year	138,914	560
Cash and cash equivalents at end of year	164,739	138,914

for the years ended March 31, 2008 and March 31, 2007

The cash utilized in operating activities during FY 2008 was primarily used to fund the ongoing expenditures incurred by the Corporation during the year that more than offset the gross profit from gold sales. The cash utilized in operating activities during FY 2007 was mainly the result of a reduction in net receivables from related parties and an increase in accounts payable and accrued liabilities.

The cash utilized in investing activities in FY 2008 primarily relates to \$93.0 million and \$19.7 million of capital expenditures at the Ezulwini Mine and MWS, respectively. The cash utilized in investing activities in FY 2007 relates to capitalized pumping costs at the Ezulwini Mine.

The cash generated during FY 2008 from financing activities was primarily attributable to the \$130.6 million of net proceeds raised from the Debentures in May 2007. The cash generated from financing activities during FY 2007 was attributable to the \$177.7 million of net proceeds from the Offering in December of 2006.

The net effect of exchange rates on cash held in foreign currencies (Cdn\$ and ZAR) during FY 2008 is primarily the result of the Debenture proceeds held in cash and the debt portion of the Debentures translated to US dollars at the exchange rate in effect at the end of FY 2008, while the equity portion of the Debentures was translated to US dollars at the rate in effect on the date that the Debentures were issued.

Financial position and liquidity

ASSETS

Cash and cash equivalents increased by \$25.8 million during FY 2008 to \$164.7 million as at March 31, 2008. The increase was primarily the net result of the \$130.6 million of Debenture net proceeds, offset by capital expenditures of \$112.7 million at the Corporation's two operations.

Accounts receivable of \$9.7 million at March 31, 2008 (FY 2007: \$1.7 million) were primarily comprised of \$2.3 million of gold revenue (after toll-treatment and transport costs) and \$6.5 million of value-added tax and goods and services taxes recoverable, mainly relating to the ongoing capital expenditures on the projects.

Inventories of \$2.8 million at the end of FY 2008 (FY 2007: \$0.3 million) include \$0.5 million of gold work-in-progress and \$1.6 million of spares and consumables from the MWS operations. At the end of FY 2008, the Corporation also had surface stockpiles at the Ezulwini Mine measured and valued at \$0.7 million.

Property, plant and equipment increased to \$204.7 million at March 31, 2008 (FY 2007: \$31.0 million) representing capital expenditures at the Corporation's two mining operations as well as the \$40.4 million of MWS assets acquired in June 2007 (see Note 4 to the Financial Statements) and the \$10.2 million value of Buffelsfontein Tailings associated with the asset retirement obligation related to the processing of Buffelsfontein Tailings that was assumed during December 2007 (See Note 7 to the Financial Statements).

Cash capital expenditures at the Ezulwini Mine of \$93.0 million for FY 2008 were primarily related to additions to mining infrastructure and construction of its gold and uranium plants. At MWS, cash capital expenditures of \$19.7 million for FY 2008 were mostly related to the construction of the reclamation station and the pipeline between the Buffelsfontein Tailings and the MWS gold plant.

The increase in asset retirement funds to \$4.8 million (FY 2007: \$2.8 million) was the result of the \$2.0 million environmental rehabilitation trust fund assumed by the Corporation on the acquisition of MWS in June 2007.

The \$1.0 million loan to a related party represents the loan advanced to the President and Chief Executive Officer on October 17, 2007. (See Note 24 to the Financial Statements.)

INVESTING ACTIVITIES

During FY 2008, investing activities were primarily comprised of mining and pumping costs incurred and capitalized to mine development expenditures.

LIABILITIES

At March 31, 2008, total liabilities were \$155.3 million (FY 2007: \$11.1 million), consisting of the debt portion of \$99.9 million of the Debentures (see Note 11 to the Financial Statements), accounts payable and accrued liabilities of \$24.3 million (FY 2007: \$5.7 million), the future tax liability in the amount of \$10.6 million arising from the MWS acquisition, the asset retirement obligation of \$19.9 million (FY 2007: \$5.3 million) and the payable to a related party of \$0.5 million (FY 2007: Nil).

Included in the accounts payable and accrued liabilities of \$24.3 million (FY 2007: \$5.7 million) at the end of FY 2008 was \$8.7 million and \$0.7 million of payables related to the capital expenditures incurred at the Ezulwini Mine and MWS, respectively, as well as trade payables of \$7.2 million and \$3.3 million related to the Ezulwini Mine and MWS operations, respectively.

The payable to a related party of \$0.5 million at the end of FY 2008 results from transactions pursuant to the Shared Services Agreement between First Uranium and Simmer & Jack, which were incurred in the normal course of business.

At the end of FY 2007, the Corporation had a receivable from a related party of \$6.8 million, representing funds held by Simmer & Jack on behalf of the Corporation's South African operations while the Corporation was establishing their own bank accounts. (See Related Party Transactions in this MD&A.)

Asset retirement obligations increased as a result of the \$2.8 million environmental rehabilitation obligation assumed with the MWS acquisition in June 2007 and the environmental rehabilitation obligation of \$10.2 million relating to the mining of the Buffelsfontein Tailings commencing in December 2007. (See Note 12 to the Financial Statements.)

LIQUIDITY AND CAPITAL RESOURCES

At March 31, 2008, First Uranium had working capital of \$152.4 million (FY 2007: \$142.0 million). The increase in working capital from FY 2007 is mainly attributable to the net proceeds of \$130.6 million from the Debentures offset by the \$112.7 million cash utilized on capital expenditures incurred at the Corporation's two operations.

Capital investments of \$312 million and \$272 million, inclusive of expenditures to date, are the total estimated cash required to complete the capital projects at the Ezulwini Mine and MWS, respectively, for which current commitments of \$40.3 million (FY 2007: \$14.8 million) are in place. As at March 31, 2008, the Corporation's cumulative cash investments relating to its two projects were \$133.4 million (FY 2007: \$20.3 million).

Capital of \$0.9 million was spent during FY 2008 in relation to the approved exploration budgets of \$10 million for the contiguous properties to the north-east and south-east of the Ezulwini Mine and \$30 million for the Ezulwini Mine. The extent to which the budgeted amounts are spent depends on the ongoing exploration results. Current commitments of \$0.5 million relating to exploration work existed as at March 31, 2008.

The Corporation entered into an agreement with a third party, commencing in January 2009, to calcine the yellowcake received from First Uranium's operations to produce uranium oxide packaged for dispatch to converters ("Toll Treatment Agreement"). Either party may terminate the agreement on 18 months notice. The third party calciner will construct a plant with one-half of the capacity of the plant to be dedicated for the processing of the First Uranium yellowcake and will purchase a road tanker to transport the yellowcake from the First Uranium operations to the third party calciner's facility. First Uranium

for the years ended March 31, 2008 and March 31, 2007

will pay one-half of the construction cost of the calcining plant up to a maximum of \$1.8 million and one-half of the cost of the road tanker (together referred to as the "Loan"). The Loan will be effective as of January 5, 2009 and is to be repaid in monthly installments over a seven-year period commencing January 30, 2009. The Loan will bear interest at a rate equal to the prime overdraft rate as quoted by SARB, plus 2%, commencing January 5, 2009. If First Uranium cancels the agreement, in the absence of a right under the agreement to cancel the agreement in a prescribed circumstance, First Uranium will continue to be obligated to repay the entire Loan.

As at March 31, 2008, First Uranium had the following contractual obligations:

Payments due by date

(in thousands of dollars)	Less than 1 year	1-3 years	4-5 years	After 5 years	Total
Operating leases	91	279	16	–	386
Purchase obligations	40,301	–	–	–	40,301
Asset retirement obligations	–	–	–	19,901	19,901
Senior unsecured convertible debentures	–	–	99,880	–	99,880
Total contractual obligations	40,392	279	99,896	19,901	160,468

Subsequent to March 31, 2008, the Corporation:

- entered into an agreement to purchase a 30 MW diesel-fired power plant and associated equipment, refurbished and configured in accordance with the Corporation's specifications for \$8.5 million. The vendor will oversee the installation, construction, start-up and commissioning of the power plant at both of the Corporation's operations. Eighty percent of the purchase price is payable upon shipment of the power plant and the balance upon installation and the successful commissioning at site. The Corporation is responsible for shipping charges of approximately \$750,000. In addition, the costs of civil, structural and electrical switchgear and transmission equipment are estimated to be \$6.5 million.
- agreed to lease ten self contained diesel powered generating sets ("gensets") for an initial term of eighteen months. The fixed monthly rental charge is \$13,500 per genset for the first twelve months, reducing to \$12,500 per genset thereafter. After the initial eighteen months period, the Corporation has the option to extend the lease agreement period for up to sixty months, in successive twelve month periods. The fixed monthly charge per genset is \$12,500 for months 19 to 24; \$12,000 for months 25 to 36; \$11,500 for months 37 to 48; and \$11,000 for months 49 to 60. If the gensets are rented for sixty months, the Corporation is entitled to purchase the gensets for \$50,000 per set. The Corporation is also obligated to pay a monthly fixed charge of \$25,000 and a running hourly charge of EUR11.30 (\$17.85). These charges are subject to indexation based on consumer price indexes. The Corporation is also responsible for \$75,000 mobilization charges and \$56,250 demobilization charges per shipment.

First Uranium anticipates that the estimated \$471 million of capital required (exclusive of a proposed acid plant) over the remaining life of the Ezulwini Mine and MWS (inclusive of sustaining capital) as well as \$40 million approved for the long-term Ezulwini Expansion Program are expected to be funded from existing cash and cash equivalents of \$164.7 million and from internally generated cash flow from future sales of gold and uranium at current price assumptions, along with funds that may be available under a proposed mandate letter and term sheet with a financial institution for a credit facility. Discussions in respect of the credit facility and potential lines of credit are ongoing. The Corporation expects to fund the proposed acid plant through a separate project and/or end-user financing arrangement.

Summary of quarterly results

The table below sets out selected financial data for the periods indicated (as derived from First Uranium's consolidated financial statements):

(in thousands of dollars, except per share amounts)	Revenue	Loss (income) for the three months	Basic & diluted loss (earnings) per share	Total assets	Long term liabilities
Fiscal quarters ended					
March 31, 2008	6,360	(26,871)	(0.21)	387,742	(130,430)
December 31, 2007	6,633	(3,998)	(0.03)	404,555	(128,182)
September 30, 2007	6,254	3,051	0.02	389,554	(117,349)
June 30, 2007	2,183	5,471	0.04	373,549	(118,900)
March 31, 2007	Nil	(2,689)	(0.02)	181,427	(5,377)
December 31, 2006	Nil	(3,787)	(0.04)	195,374	Nil
September 30, 2006	Nil	786	0.01	8,839	Nil
June 30, 2006	Nil	(2,238)	(0.03)	4,120	Nil

Fourth quarter results

During Q4 2008, the Corporation generated \$6.4 million revenue from gold sales at MWS at a total cost of sales of \$3.6 million resulting in \$2.8 million gross profit. Ezulwini generated \$2.5 million revenue during Q4 2008 that has been credited against mine infrastructure cost relating to the Ezulwini Mine in Property, Plant and Equipment. Q4 2008 production at the Ezulwini Mine was limited as a result of the decision to curtail underground development due to the shutdown of toll-milling capacity and lack of sufficient ventilation due to the shortage of power during the initial months of the Power Situation and the slower than anticipated shaft refurbishment program.

The operating loss (loss before interest, accretion expenses and foreign exchange translation losses) for Q4 2008 was \$8.6 million and is the result of higher ongoing expenditures relating to development and corporate activities during the quarter as well as higher stock-based compensation cost as a result of the 2.2 million stock options granted during Q4 2008.

The Corporation recorded a loss in Q4 2008 of \$26.9 million which is primarily attributable to the ongoing expenditures as well as foreign exchange translation losses of \$16.2 million resulting from the significant weakening of the ZAR against the US\$ during Q4 2008.

Cash flows utilized in operating activities was \$23.8 million which is the result of increased ongoing expenditures during the quarter as well as the foreign exchange translation losses incurred during the quarter.

Cash used in investing activities was \$23.8 million of which \$22.3 million was comprised of capital expenditures incurred at the Corporation's two operations.

There was a \$0.2 million increase in cash from financing activities due to the exercise of 30,476 stock options during Q4 2008.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF THE AUDITED CONSOLIDATED FINANCIAL CONDITION
AND RESULTS OF OPERATIONS

for the years ended March 31, 2008 and March 31, 2007

Outlook

As mentioned above, the Corporation conducted studies to assess the economic viability of First Uranium generating its own power at the Ezulwini Mine and MWS for the next five years and to build its own acid plant to secure future supply of sulphuric acid for its uranium plants at reduced costs. The following table summarizes the impact of the power supply and acid cost changes at the Ezulwini and MWS:

Operating cost impact of revised project economics

	MWS	Ezulwini Mine
Electrical power required	43 MW	56 MW
Eskom commitment	29 MW	32 MW
Self-generated power	14 MW	24 MW
Life-of-mine average operating costs		
Operating cost per reclaimed tonne gold (\$/tonne)	2.12	
Operating cost per concentrate tonne U ₃ O ₈ (\$/tonne)	9.82	
Operating cost per milled tonne (\$/tonne)		71.82
Uranium cash cost (\$/pound)	22	33
Gold cash cost (\$/ounce)	347	376
Capital expenditures	\$251 million	\$220 million
Average annual life-of-mine production		
Uranium (pounds)	1,317,000	952,000
Gold (ounces)	130,000	306,000
MWS production milestones		
1st module of gold plant	June 2007	
2nd module of gold plant	Dec. 2008	
3rd module of gold plant	Dec. 2009	
1st module of uranium plant	Dec. 2008	
2nd module of uranium plant	Dec. 2008	
3rd module of uranium plant	Dec. 2009	
Ezulwini Mine production milestones		
Gold plant commissioning commences		April 2008
1st 50,000 tonne per month mill		June 2008
Uranium plant commissioning commences		June 2008
2nd 50,000 tonne per month mill		Sep 2008
3rd 50,000 tonne per month mill		Jan 2009
4th 50,000 tonne per month mill		Jan 2009
NPV ₈	\$413 million	\$667 million
IRR	70%	336%

Notes:

1. The assumed exchange rate for South African rand for all dates in the table above is as shown in the table below.
2. Co-product costs assume that operating cash costs are split in proportion to the revenue earned from each product.
3. NPV is calculated using a nominal discount rate of 8%.
4. The MWS figures differs from the November 2007 model in that the Corporation's fiscal year 2008, which ended on March 31, 2008, has not been considered in the above calculations.
5. At MWS, the first gold plant module became operational with the acquisition of the MWS gold plant in June 2007.
6. The Corporation previously disclosed the NPV as \$419 million and an IRR of 75% for MWS.

The following assumptions were used in the above assessment of the impact of the power supply and acid cost changes at Ezulwini and MWS:

	Unit	Mar 2009	Mar 2010	Mar 2011	Mar 2012	Beyond Mar 2012
Gold price	(\$/oz.)	890	907	874	797	711
Uranium price	(\$/lb.)	96	92	79	75	50
Currency exchange rate	(ZAR/\$)	7.27	7.36	7.50	7.45	7.57
Market sulphuric acid price (incl. transport)	\$/tonne	350	265	170	95	95
Project sulphuric acid price (MWS)	\$/tonne	266	266	34.2	34.2	34.2
Project sulphuric acid price (Ezulwini)	\$/tonne	565	565	47.5	47.5	47.5

Based on the positive economic results of the studies, the Corporation also entered into an agreement to purchase a power plant (30 MW, comprised of twelve 2.5 MW generating sets) that is expected to arrive in South Africa during July 2008, with construction, installation and commissioning to be completed during December 2008. The Corporation also entered into an agreement to lease gensets (1 MW each) with a combined capacity of 10 MW that will be delivered to the Ezulwini Mine over a three-month period with the first four generators arriving during July 2008 with commissioning by the end of the month. (See Liquidity and Capital Resources in this MD&A)

In April 2008, the Corporation also announced plans, subject to financing, to purchase and install at the MWS facility an "off the shelf" acid plant to produce sulphuric acid to reduce the future costs and secure the supply of acid required for its two uranium and gold mining projects. The projected cost is approximately \$124 million. Based on an analysis of pyrite feed-stock potential from the MWS tailings dams, a preliminary technical assessment and a recent market analysis, the Corporation expects that it will take nineteen months to procure and commission the acid plant with anticipated production beginning in January 2010. Until the Corporation can produce its own acid, it has secured its initial requirements for sulphuric acid in a market where acid supplies remain very tight. The Corporation anticipates that significant acid price increases will continue in the medium term, as acid prices are closely related to the market for sulphur which is also indicating tight supply and significant price increases. A specification and procurement study has been initiated and is expected to be completed by the middle of the second fiscal quarter. To date the Corporation has not made any capital commitments with regards to the acid plant.

Once the acid plant is completed, the Corporation will direct all of the pyrite currently produced as waste at the MWS plant to the acid plant for the production of sulphuric acid, which will eliminate the need to source acid from third-party vendors. Since the planned production of the acid would be more than sufficient to supply both the Ezulwini Mine's and MWS's projected acid requirements, excess acid could be sold into the market at the then prevailing market rates. In addition, as the production of acid in the plant will be an exothermic reaction, there is the opportunity to generate a by-product of approximately 4 MW of power, which will be available to augment the power supply to MWS.

The next major milestone for the Ezulwini Mine is the completion of the commissioning of the 200,000 tonne per month gold plant, which is on schedule for June 2008 and to produce gold bullion in July 2008. The 100,000 tonne per month uranium plant is on schedule to deliver its first shipment of yellowcake in August 2008. Current mine production from the UE section and the ME section is being stockpiled separately on surface to feed the plants during its commissioning phases.

for the years ended March 31, 2008 and March 31, 2007

In addition to the Toll Treatment Agreement with a third party discussed in this MD&A under Liquidity and Capital Resources, the Corporation also entered into an interim off-take agreement with the third party, for the period from the planned startup of the uranium plant at the Ezulwini Mine in June 2008 until January 2009, pursuant to which the third party will purchase First Uranium's yellowcake production at rates based on the then prevailing spot prices.

At MWS, the pipeline from the Buffelsfontein No.2 tailings dam to the MWS gold plant is complete and operating. Commissioning of the introduction of the new material from the Buffelsfontein No.2 tailings dam to the MWS gold plant is ongoing. Upgrades to re-pulping of the tailings, the pumping and the plant processes are expected to improve volume, recoveries and costs in the MWS gold plant.

An upgrade to accommodate a deposition rate of 1.3 million tonnes of material per month on the MWS No.5 tailings dam is planned in advance of the commissioning of the second module of the MWS gold plant and the first two modules of the uranium plant.

Related party transactions

On December 20, 2006, First Uranium and Simmer & Jack entered into a shared services agreement (the "Shared Services Agreement"). For a description of the Shared Services Agreement, see the Corporation's AIF for 2008. During FY 2008, the Corporation paid \$2.3 million to Simmer & Jack pursuant to the Shared Services Agreement (FY 2007: \$2.6 million). During FY 2008 \$0.9 million of the fees charged by Simmer & Jack relating to technical services provided to the Ezulwini Mine and MWS were capitalized (FY 2007: \$2.0 million).

Prior to December 2006, the Corporation shared its premises with other companies that had common directors and reimbursed the related companies for its proportional share of expenses or was reimbursed by the related companies for their proportional share of expenses. During FY 2007, the Corporation was also charged \$0.6 million for consulting services provided by related directors, officers and consultants of the Corporation.

First Uranium has agreed to reimburse Simmer & Jack for 50% of the fees that Simmer & Jack is required to pay to an empowerment company for consulting. During FY 2008 the Corporation paid \$0.2 million to Simmer & Jack in connection with such services (FY 2007: \$0.05 million).

As previously disclosed and at the same time as the Offering, the Corporation entered into an agreement on December 12, 2006 with Waterpan providing for the acquisition of the remaining 10% of the shares of EMC in consideration for 6.1 million common shares of First Uranium. On December 14, 2007 this transaction was completed. (See Note 1, 13 and 24 to the Financial Statements.)

On September 13, 2007, the Ezulwini Mine acquired a reconditioned mill for the first 50,000 tonne per month milling unit from BGM for a consideration of \$1.7 million.

On September 27, 2007, the Board approved a loan in the amount of Cdn\$1 million to the President and Chief Executive Officer of First Uranium for the purpose of facilitating the relocation of his family to Toronto, where the corporate office is located. The loan carries interest at 4% payable monthly in arrears, is for a term of six years from date of closing of the purchase of a family residence and is unsecured. The loan was advanced on October 17, 2007. Interest of \$14,680 was received during FY 2008.

Critical accounting policies and estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amount of assets and liabilities and disclosure of contingent liabilities at the date of the financial statements, and reported amounts of revenues and expenditures during the reporting period. Note 2 to the Financial Statements describes all of the Corporation's significant accounting policies.

PROPERTY, PLANT AND EQUIPMENT

The cost of an item of property, plant and equipment is recognized as an asset when:

- it is probable that future economic benefits associated with the item will flow to the Corporation; and
- the cost of the item can be measured reliably.

Costs include costs incurred initially to acquire or construct an item of property, plant and equipment and costs incurred subsequently to add to, replace part of, or service it. If a replacement cost is recognized in the carrying amount of an item of property, plant and equipment, the carrying amount of the replaced part is derecognized.

Property, plant and equipment are carried at cost less accumulated amortization and any impairment losses.

Amortization is provided on all property, plant and equipment other than freehold land, to write down the cost, less residual value, over their useful lives. See Note 2.5 to the Financial Statements for detail.

Exploration costs incurred to the date of establishing that a property has mineral reserves, which have the potential of being economically recoverable, are expensed. Exploration and development expenses incurred subsequent to this date are capitalized. If the project becomes feasible, the costs are amortized over the life of the mine. If the project is stopped, the costs are written off immediately.

Once a development mineral property goes into commercial production, the property is classified as "Producing" and the accumulated costs are amortized over the estimated recoverable reserves in the current mine plan using a unit-of-production basis. Commercial production occurs when a property is substantially complete and ready for its intended use.

Costs associated with start-up activities on constructed plants are deferred from the date of mechanical completion of the facilities until the date the Corporation is ready to commence service. Any revenues earned during this period are recorded as a reduction in deferred start-up costs. These costs are amortized using the units-of-production method over the life of the mine, commencing on the date of commercial service.

The amortization charge for each period is recognized in earnings or loss unless it is included in the carrying amount of another asset.

ASSET RETIREMENT OBLIGATIONS

The Corporation recognizes the fair value of a future asset retirement obligation as a liability in the year in which it incurs a legal obligation associated with the retirement of tangible long-lived assets resulting from the acquisition, construction, development, and/or normal use of the assets. The obligations are measured initially at fair value and the resulting costs are capitalized and added to the carrying value of the related assets. In subsequent periods, the liability is adjusted for the accretion of the discount and the expense is recorded in the statement of operations, deficit, and comprehensive income. Changes in the amount or timing of the underlying future cash flows are immediately recognized as an increase or decrease in the carrying amounts of the liability and related assets. These costs are amortized to the results of operations over the life of the asset.

for the years ended March 31, 2008 and March 31, 2007

The Corporation's activities are subject to numerous governmental laws and regulations. Estimates of future reclamation liabilities for asset decommissioning and site restoration are recognized in the period when such liabilities are incurred. These estimates are updated on a periodic basis and are subject to changing laws, regulatory requirements, changing technology and other factors which will be recognized when appropriate. Liabilities related to site restoration include long-term treatment and monitoring costs and incorporate total expected costs net of recoveries. Expenditures incurred to dismantle facilities, restore and monitor closed resource properties are charged against the related reclamation and remediation liability.

STOCK-BASED COMPENSATION

The Corporation has a stock-based compensation plan which is described in Note 14 to the Financial Statements. The Corporation accounts for all stock-based payments under the fair value based method.

Under the fair value based method, compensation cost is measured at fair value at the grant date. Compensation cost is recognized in earnings on a straight-line basis over the relevant vesting period. The counterpart is recognized in contributed surplus. Upon the exercise of a stock option, share capital is recorded at the sum of the proceeds received and the related amount of contributed surplus. The fair value relating to forfeited stock options is debited to contributed surplus and credited to the statement of operations and deficit, and comprehensive loss.

Changes in accounting policies

Effective April 1, 2007, the Corporation adopted two new accounting standards that were issued by the Canadian Institute of Chartered Accountants ("CICA"):

- Handbook Section 1530 – Comprehensive Income
- Handbook Section 3855 – Financial Instruments – Recognition and Measurement

As provided under the standards, the comparative consolidated financial statements have not been restated. There were no transitional effects and as a result no adjustments have been recorded to deficit as at April 1, 2007.

SECTION 1530 – COMPREHENSIVE INCOME

This section describes the reporting and disclosure standards with respect to comprehensive income and its components. Comprehensive income or loss consists of changes in the equity of the Corporation from sources other than the Corporation's shareholders, and includes earnings or losses of the Corporation, the foreign currency translation adjustment relating to self sustaining foreign operations and unrealized gains and losses on changes in fair values of available-for-sale assets and effective cash flow hedging instruments. Other comprehensive income or loss comprises revenues, expenses and gains and losses that are recognized in comprehensive income or loss but are excluded from earnings or losses for the year. This change in accounting policy had no effect on the consolidated financial statements of First Uranium.

SECTION 3855, FINANCIAL INSTRUMENTS – RECOGNITION AND MEASUREMENT

This section establishes standards for recognizing and measuring financial assets, financial liabilities and non-financial derivatives. It requires that financial assets and financial liabilities, including derivatives, be recognized on the consolidated balance sheet when the Corporation becomes a party to the contractual provisions of the financial instrument or a non-financial derivative contract. All financial instruments should be measured at fair value on initial recognition, except for certain related party transactions. Fair value is the amount at which an item could be exchanged between willing parties. Measurement in subsequent periods depends on whether the financial instruments have been classified as held-for-trading, available-for-sale, held-to-maturity, loans and receivables, or other financial liabilities.

The Corporation designated certain financial assets and financial liabilities and adopted the following new accounting policies:

Cash and cash equivalents

Cash and cash equivalents are classified as “assets available-for-sale” and are measured at fair value at each balance sheet date. Any changes in fair value are recognized in Other comprehensive income in the period in which the change arises. Fair value is calculated using published price quotations in an active market, where applicable. The carrying amounts for cash and cash equivalents at March 31, 2008 approximated their fair values because of their short terms of maturity; no adjustments were made to the opening values.

Accounts receivable and receivables from related parties

These assets are classified as “loans and receivables” and are recorded at amortized cost, which upon their initial measurement is equal to their fair value. Subsequent measurements are recorded at amortized cost using the effective interest rate method. The carrying amounts for these assets as at March 31, 2008 approximated their fair values because of their short terms of maturity; no adjustments were made to the opening values.

Asset retirement funds

Asset retirement funds are classified as “assets available-for-sale” and are measured at fair value at each balance sheet date. Any changes in fair value are recognized in Other comprehensive income in the period in which the change arises. Fair value is calculated using the quoted prices of South African equities in an active market, with interest and dividends recognized in net income. Any equities without market quotes are carried using the cost method. The carrying values for the asset retirement funds as at March 31, 2008 approximated their fair values; no adjustments were made to the opening values.

Accounts payable and accrued liabilities and payable to related parties

These liabilities are classified as “other financial liabilities” and are initially measured at their fair values. Subsequent measurements are recorded at amortized cost using the effective interest rate method. The carrying values for these liabilities as at March 31, 2008 approximated their fair values; no adjustments were made to the opening values.

Senior unsecured convertible debentures

The sum of the carrying amounts assigned to the liability and equity components of the convertible debentures on initial recognition is always equal to the carrying amount that would be ascribed to the instrument as a whole. The debt portion is recorded at fair value on initial recognition and subsequently accreted over the life of the convertible debentures. No gain or loss arises from recognizing and presenting the components of the instrument separately. The relative fair value method is used to determine the value of the option directly either by reference to the fair value of a similar option, if one exists, or by using an option pricing model. The value determined for each component is then adjusted on a pro rata basis to the extent necessary to ensure that the sum of the carrying amounts assigned to the components equals the amount of the consideration received for the convertible debentures.

for the years ended March 31, 2008 and March 31, 2007

SECTION 1506 – ACCOUNTING CHANGES

In July 2006, the CICA issued a new version of Section 1506 of the CICA Handbook, "Accounting Changes". This new standard establishes criteria for changing accounting policies, together with the accounting treatment and disclosure of changes in accounting policies and estimates, and correction of errors. This new section was adopted by the Corporation on January 1, 2007 and had no impact on the Corporation's results.

Accounting policy choice for transaction costs

On June 1, 2007, CICA Emerging Issues Committee issued Abstract no. 166, "Accounting Policy Choice for Transaction Costs" (EIC 166). This EIC addresses the accounting policy choice of expensing or adding transaction costs related to the acquisition of financial assets and financial liabilities that are classified as other than held-for-trading. Specifically, it requires the same accounting policy choice be applied to all similar financial instruments classified as other than held-for-trading, but permits a different policy choice for financial instruments that are not similar. EIC 166 requires retroactive application to all transaction costs accounted for in accordance with Section 3855. The current recognition policy for transaction costs is consistent with this guidance.

On December 1, 2007, the CICA issued the following new accounting standards which became effective for interim periods beginning on or after October 1, 2007:

Section 1535 – Capital disclosures

This Section establishes standards for disclosing information about an entity's capital and how it is managed. It describes the disclosure of the entity's objectives, policies and processes for managing capital, the quantitative data about what the entity regards as capital, whether the entity has complied with any capital requirements, and, if it has not complied, the consequences of such non-compliance. The Corporation has included disclosures recommended by Section 1535 in Note 22 to the Financial Statements.

Section 3862 – Financial instruments – disclosures

This Section describes the required disclosure for the assessment of the significance of financial instruments for an entity's financial position and performance and of the nature and extent of risk arising from financial instruments to which the entity is exposed and how the entity manages those risks. The Corporation has included disclosures recommended by Section 3862 in Note 23 to the Financial Statements.

Section 3863 – Financial instruments – presentation

This Section establishes standards for presentation of the financial instruments and non-financial derivatives. It carries forward the presentation related requirement of Section 3861, "Financial Instruments – Disclosure and Presentation". The Corporation has included disclosures recommended by Section 3863 in Note 23 to the Financial Statements.

Future accounting standards

The CICA issued the following amendments to the accounting standards for periods beginning on or after January 1, 2008:

General standards on financial statement presentation

Section 1400 "General standards on financial statement presentation" has been amended to include requirements to assess and disclose an entity's ability to continue as a going concern. The Corporation does not expect the adoption of these changes effective January 1, 2008, to have an impact on its consolidated financial statements.

Inventories

Section 3031 "Inventories" provides guidance on the determination of costs and its subsequent recognition as an expense, including any write-down to net realizable value. It also provides guidance on the cost formulas that are used to assign cost to inventories. The Corporation does not expect the adoption of these changes effective January 1, 2008, to have an impact on its consolidated financial statements.

Goodwill and intangible assets

Section 3064, "Goodwill and intangible assets" establishes revised standards for recognition measurement, presentation and disclosure of goodwill and intangibles assets. Concurrent with the introduction of this standard, the CICA withdrew EIC 27, "Revenues and expenses during the pre-operating period". As a result of the withdrawal of EIC 27, the Corporation will no longer be able to defer costs and revenues incurred prior to commercial production at new operations. This is effective for periods beginning on or after January 1, 2009.

Outstanding share data

	FY 2008	FY 2007
Common shares outstanding at beginning of period	121,686,047	87,536,047
Shares issued during the period	9,387,990	34,150,000
Common shares outstanding at end of period	131,074,037	121,686,047
Unexercised stock options outstanding at end of period	3,438,956	1,223,001
Average strike price of outstanding options (Cdn\$)	9.13	7.30

As at June 9, 2008, First Uranium had 131,074,037 common shares outstanding and there were 3,438,956 unexercised stock options outstanding, at an average strike price of Cdn\$9.13 per share.

As at March 31, 2008 and June 9, 2008, First Uranium also had \$135.1 million (Cdn\$150 million) principal amount of Debentures outstanding which are convertible into 60.9013 common shares for each Cdn\$1,000 principal amount of Debentures, representing 9,135,195 common shares.

Risks and uncertainties

UNCERTAINTIES

There are a number of uncertainties in the mining business of First Uranium that are beyond First Uranium's control, including:

- demand and prices for the Corporation's future production of uranium and gold
- the consistent supply of sufficient electrical power
- the consistent supply of sufficient sulphuric acid
- government legislation regarding mining companies in South Africa
- securities regulation regarding public listed companies in Canada and South Africa
- foreign exchange rates
- interest rates
- the decisions and activities of the Corporation's competitors in the uranium and gold mining business, which impact the supply of uranium and the demand for available services, construction materials, labour and the rights for prospecting and mining
- the continued endorsement of nuclear power as a preferred source for the world's energy needs
- the decisions of investors to continue to buy and hold the securities of the Corporation
- natural disasters, war or random occurrences or acts that could result in a material change to economic and market performance, business conditions or operations

RISKS

In addition, First Uranium's mining properties are in the development stage and are subject to the risks and challenges similar to other companies in a comparable stage of development. The risks include, but are not limited to, certain business, operational and market risks. For a detailed discussion of the Corporation's risks please refer to the Corporation's 2008 AIF, which is available on the Corporation's website www.firsturanium.com and on www.sedar.com or upon request from the Corporation.

Business risks

Simmer & Jack

Simmer & Jack and First Uranium share the Chair of the Board and the same President & CEO, as well as several services that benefit both companies.

In addition, SARB requires that Simmer & Jack maintain a controlling interest in the Corporation, which could reduce or impede the Corporation's ability to raise additional required funds at favourable rates should Simmer & Jack desire to avoid dilution of their shareholding in the Corporation.

First Uranium also relies on Simmer & Jack for its BEE credentials, among other things.

Black Economic Empowerment ("BEE") requirements

Failure to comply with BEE requirements could jeopardize First Uranium's ability to obtain and retain mining and prospecting rights. There is also no guarantee that the interests of First Uranium will be wholly aligned with the interests of its (direct or indirect) BEE shareholders.

Mining and prospecting rights, licenses and titles

The Corporation has not obtained all mining rights and government approvals required to develop its proposed uranium and gold project at MWS. The Corporation will make significant expenditures in respect of MWS prior to it obtaining the mining rights necessary to construct and operate its project.

Senior management

As a new company with a small management team, First Uranium is dependant on certain key management personnel for the successful operation of the business. Loss of key personnel could harm the Corporation's operations and financial condition.

Business interruption

The Corporation is exposed to risks that could interrupt its business. One of the Corporation's two projects, the Ezulwini Mine, is an underground mine that has historically had ground movement problems in the UE shaft pillar. On one occasion it was necessary to cease shaft operations and excavate the lava unit around the shaft and then to reinstall the necessary shaft hardware. To eliminate the ground control problems in the shaft area, the Corporation is executing its plan to mine out the shaft pillar and to stabilize the main shaft.

There is a risk of flooding at the Ezulwini underground mine, where the Corporation pumps approximately 65 million litres of water from the site every day. The pumps are well maintained and there are several contingency arrangements including multiple power sources, large diesel generators, back-up pumps and catch basins in the event of failure of the main pumps. The mine has never been flooded, including during the period of 2001 through 2006 when the mine ceased operations and was on care and maintenance.

Disclosure

The Corporation is required to comply with securities reporting legislation and accounting standards in Canada and South Africa. To ensure that the First Uranium meets its regulatory obligations and mitigate risks associated with inaccurate or incomplete disclosure, the Audit Committee is responsible for reviewing and assessing the quality and integrity of the Corporation's continuous disclosure documents. The Corporation is also in the process of implementing a disclosure policy.

Insurance

First Uranium's insurance coverage does not cover all of its potential losses, liabilities and damage related to its business and certain risks are uninsured or uninsurable. The Corporation makes its insurance decisions based on the likelihood of any risk occurring, the cost of the insurance and the Corporation's tolerance for risk.

Financing

Although management believes that First Uranium has secured sufficient financing to bring its two projects into production as currently contemplated, the Corporation may require additional capital in the future and no assurance can be given that such capital will be available at all, or on terms acceptable to First Uranium.

Foreign currency exchange rates

The Corporation has exposure to the risk of significant change in foreign currency exchange rates between US dollars, Canadian dollars and the South African rand. Most of the Corporation's expenses are currently in rand. When the Corporation starts to produce and sell uranium and gold, those sales will be in US dollars. As a result, an increase in the US dollar value of the rand would decrease profitability. In addition, the Corporation runs a small office in Canada and any further increase in the value of the Canadian dollar relative to the US dollar, increases expenses as the Corporation's reporting currency is in US dollars.

Operational risks

Mining

The business of mining generally involves a high degree of risk and First Uranium has a limited operating history. No assurance can be given that the development and bringing into commercial production of a mine or tailings processing facility will be completed as contemplated and for the estimated capital costs or within the estimated schedule. Also, no assurance can be given that the intended production schedule, metal recoveries, estimated operating costs and/or that profitable operations will be achieved.

for the years ended March 31, 2008 and March 31, 2007

Confidence in resources

The economic analysis for the Ezulwini project is based, in part, on inferred resources, and is preliminary in nature. Inferred resources are considered too geologically speculative to have mining and economic considerations applied to them and to be categorized as mineral reserves. There is no certainty that the reserves, development, production and economic forecasts on which such preliminary assessments are based, will be realized.

Labour

The Corporation will employ most of its labour at its two project sites. There has historically been much higher employment in the areas of the two projects and management does not consider availability of general labourers a risk. The higher demand for uranium, gold and other metals has raised the demand for skilled professionals, such as mining engineers, metallurgists and geologists.

The cost of that labour is a risk since labour costs have risen significantly since the last time uranium mines were in production at these sites. Higher costs have been identified and factored into the economic forecasts for these projects.

A trend that could increase risk for the Corporation is the heightened labour unrest in South Africa. Workers at various South African mining operations have been demanding, through their unions, higher compensation as a result of increased revenues in the mining sector being driven by rising mineral prices. Strikes have been threatened during some of the negotiations. First Uranium has mitigated the threat of work stoppages by negotiating recent settlements with unions representing workers at its operations.

Similarly, workers in other industries have been demanding higher compensation and threatening strike action. One such example is the strike by petroleum workers in early August 2007, which limited the supply of petrol. Strikes in the public sector and service industries, if protracted, also have the potential to disrupt the development of the Corporation's two projects. No material delays have been experienced to date and the projects are on track for their scheduled completion dates.

South Africa has significantly higher HIV infection rates than those prevailing in North America and Europe. Current and future First Uranium employees may have or could contract this potentially deadly virus. While the Corporation is not aware of any lost-time incident related to HIV, the prevalence of HIV could cause the Corporation to sustain higher costs to replace sick employees.

Operational safety is considered a top priority by management and the Board has established an Environmental, Health and Safety Committee. The Committee has the responsibility to review and make recommendations in regard to the Corporation's health and safety programs and compliance issues.

Power

Regular power outages have recently beset South Africa, causing disruption in business activities. Coal-fed power stations have run low on fuel and several power-generating facilities have been down for maintenance. No new power-generating facilities are expected to start up in South Africa until 2012. Eskom's primary response to these power deficiencies is to ask that its customers conserve energy and/or to restrict the amount of power supplied to them.

On January 24, 2008, Eskom advised that continuity of electric power supply could not be guaranteed. Specific warnings were communicated to South African mining companies, including the Corporation, which were specifically asked by Eskom to reduce power consumption to 80% of load requirements. While this was subsequently increased to 90%, Eskom also informed mining companies that this authorization could be withdrawn at a later date, as electrical power supply remains tight.

To mitigate the impact of these power restrictions, the Corporation is in the process of adding power generation to its two projects, having committed to purchase a power plant and lease diesel-powered generators, which will secure a total capacity of 54 MW of power at the Ezulwini Mine.

See also the section entitled, Assessment of the Impact of the Power Situation for each operation as discussed earlier in this MD&A.

Acid

Reduced availability of electrical power in South Africa has caused cutbacks in the operation of smelters and other facilities that produce sulphuric acid as a byproduct. The reduced supply of acid, increases in the cost of elemental sulphur (which is used to produce acid) and increased demand for acid in the base metal sector and for fertilizer production have led to rapidly increasing global acid prices. The Corporation has assessed and confirmed the economic viability of constructing an acid plant to provide the required sulphuric acid for its operations to mitigate the effects of supply constraints and rapidly rising costs for acid.

On April 21, 2008, the Corporation announced that, subject to financing, it will purchase and install an "off the shelf" acid plant to produce sulphuric acid to reduce the future costs and secure supply of acid required for the Ezulwini Mine and MWS. Based on an analysis of pyrite feed-stock potential from the MWS tailings dams, a preliminary technical assessment and a recent market analysis, the Corporation expects that it will take 19 months to procure and commission the acid plant with anticipated production beginning in January 2010. Until the Corporation can produce its own acid, it has secured its initial requirements for sulphuric acid in a market where acid supplies remain very tight. The Corporation anticipates significant acid price increases that are expected to continue in the medium term, as acid prices are closely related to the market for sulphur which is also indicating tight supply and significant price increases.

Construction costs

First Uranium is in the development stage and is building its gold and uranium plants. To complete the construction of these plants requires steel, concrete and construction tradespeople. With the vast amount of construction underway in South Africa, materials and construction tradespeople are difficult to acquire and retain, particularly in light of the upcoming World Cup of soccer in South Africa in 2010 and the high metal prices, which has driven the demand for new mines and plants around the world.

To mitigate this risk, First Uranium has secured its supply of materials and tradespeople for the construction of the mills and the gold and uranium plants for the planned modules of the Ezulwini Mine.

For MWS, the required materials to expand the gold plant and build the uranium plant have not yet been secured. To mitigate the impact of rising costs, the Corporation has ordered the long-lead items for expansion of this project.

Fuel

Rising costs of fuel impact the costs of running the plants and the transportation of labour and materials to the sites and eventually the costs of moving rock from the underground mine and the metals that are to be produced at both projects. Higher costs of other fuels have increased the demand for uranium offsetting the negative impact of the increase in the costs of these fuels in the Corporation's operations.

As a result of the Corporation's decision to install diesel-powered generators, it will be exposed to changes in the availability and price of diesel fuel. Close geographic proximity to a government source of fuel provides the Corporation with some confidence in its ability to source some of its diesel fuel requirements domestically, but it may also have to transport diesel fuel from South African ports. To mitigate the risk of price escalation for the transport of diesel fuel, the Corporation will seek long term transportation contracts.

Securing permitting for tailings deposition areas

The success of MWS is, in part, dependent on the permitting of sufficient tailings deposition areas. While one such deposition area was acquired in June 2007, the Corporation requires permitting for one additional deposition area in the next two to three years. Failure to acquire permitting for such an area on schedule could delay production of uranium and gold at this project.

for the years ended March 31, 2008 and March 31, 2007

Environmental and hazardous materials

Laws and regulations involving the protection and remediation of the environment and the governmental policies for implementation of such laws and regulations are constantly changing and are generally becoming more restrictive. Mining operations have inherent risks and liabilities associated with pollution of the environment and the disposal of waste products and hazardous materials occurring as a result of mining and production. First Uranium cannot give any assurance that, notwithstanding its precautions, breaches of environmental laws (whether inadvertent or not) or environmental pollution will not materially and adversely affect its financial condition and its results of operations.

First Uranium's proposed mining projects are subject to the risk of uranium exposure. The Corporation has put systems in place to manage exposure to uranium or uranium metal and no known exposures have occurred at First Uranium to date. Exposure by First Uranium's employees, however, could result in the Corporation having to incur extra compensation costs.

Market risks

Uranium and gold prices

First Uranium's future revenues will be directly related to the world market prices of uranium and gold as its revenues will be derived primarily from gold and uranium mining, assuming that First Uranium is able to develop one or more of the Ezulwini Mine and MWS projects. Uranium and gold prices can be subject to volatile price movements, which can be material and can occur over short periods of time and are affected by numerous factors beyond First Uranium's control.

If, after the commencement of commercial production, uranium and/or gold prices fall below the costs of production at First Uranium's mines for a sustained period, it may not be economically feasible to continue production at such sites. This would materially and adversely affect production, profitability and First Uranium's financial position. A decline in uranium and/or gold prices may also require First Uranium to write down its mineral reserves and mineral resources, which would have a material adverse effect on its earnings and profitability. First Uranium's future profitability may be materially and adversely affected by the effectiveness of any hedging strategy. While First Uranium currently does not hedge or forward sell any of its future gold and uranium production, should circumstances in future so warrant (including the need to obtain debt financing), First Uranium may hedge, or forward sell, future production.

The spot price for uranium ranged between \$60 and \$136 per pound during FY 2008 but the more indicative price for establishing contracts is the term price which has ranged between \$85 and \$95 per pound during FY 2008. As of June 9, 2008, the uranium spot price was \$59 per pound and the term price was \$90 per pound. The spot price for gold ranged between \$642.10 and \$1,011.25 per ounce during FY 2008. As of June 9 2008, the gold spot price was \$896.25 per ounce. The Corporation has no plans to hedge the price it receives for its gold production at this time.

Public perception and acceptance of nuclear energy

Growth of the uranium and nuclear power industry will depend, amongst other factors, upon continued and increased acceptance of nuclear technology as a means of generating electricity. Because of unique political, technological and environmental factors that affect the nuclear industry, the industry is subject to public opinion risks that could have an adverse impact on the demand for nuclear power and increase the regulation of the nuclear power industry. An accident at a nuclear reactor anywhere in the world could impact the continuing acceptance of nuclear energy and the future prospects for nuclear power generation, which may have a material adverse effect on First Uranium.

Uranium and gold industry competition

International uranium and gold industries are highly competitive. There is no guarantee that First Uranium will be able to compete successfully with other mining companies, particularly the larger, seasoned mining companies. The Corporation can not assure that it will be able to compete successfully with its competitors in developing or acquiring uranium or gold projects or in attracting and retaining skilled and experienced employees.

First Uranium intends to market its uranium in a number of potential markets in direct competition with supplies available from a relatively small number of mining companies. Current and future international trade agreements and policies, governmental policies and trade restrictions are beyond the control of First Uranium and may affect the supply of uranium available to the market.

Competition from other energy sources

Nuclear energy competes with other sources of energy, including oil, natural gas, coal and hydroelectricity. These other energy sources are to some extent interchangeable with nuclear energy, particularly over the longer term. Sustained lower prices of oil, natural gas, coal and hydro-electricity may result in lower demand for uranium concentrates.

ADDITIONAL INFORMATION

Additional information relating to First Uranium is included in the Corporation's Annual Information Form dated June 9, 2008 and it is available on SEDAR at www.sedar.com.

Forward-looking information

This annual report contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the availability of electrical power, the planned addition of owner-operated power generation, price of uranium and gold, price of electrical power, supply and price of sulphuric acid, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the realization of estimated pyrite content in MWS tailings dams, the timing and amount of estimated future production, costs of production, capital expenditures, costs and timing of development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, requirements for additional capital, availability of financing on acceptable terms, government regulation of mining operations, environmental risks, unanticipated reclamation expenses and title disputes or claims and limitations on insurance coverage. In certain cases, forward-looking statements can be identified by the use of words such as "goal", "objective", "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of First Uranium to be materially different from any future results, performance or achievement expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium and gold. Although First Uranium has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. It is important to note, that: (i) unless otherwise indicated, forward-looking statements indicate the Corporation's expectations as at the date of this annual report; (ii) actual results may differ materially from the Corporation's expectations if known and unknown risks or uncertainties affect its business, or if estimates or assumptions prove inaccurate; (iii) the Corporation cannot guarantee that any forward-looking statement will materialize and, accordingly, readers are cautioned not to place undue reliance on these forward-looking statements; and (iv) the Corporation disclaims any intention and assumes no obligation to update or revise any forward-looking statement even if new information becomes available, as a result of future events or for any other reason. In making the forward-looking statements in this annual report, First Uranium has made several material assumptions, including but not limited to, the assumption that: (i) consistent supply of sufficient power will be available to develop and operate the projects as planned; (ii) approvals to transfer or grant, as the case may be, mining rights or prospecting rights will be obtained; (iii) metal prices, exchange rates and discount rates applied in the preliminary economic assessments are achieved; (iv) mineral resource estimates are accurate; (v) the technology used to develop and operate its two projects has, for the most part, been proven and will work effectively; (vi) that labour and materials will be sufficiently plentiful as to not impede the projects or add significantly to the estimated cash costs of operations; (vii) that Black Economic Empowerment ("BEE") investors will maintain their interest in the Corporation and their investment in the Corporation's common shares to a sufficient level to continue to support the Corporation's compliance with 2014 BEE requirements; and (viii) that the innovative work on stabilizing the main shaft at the Ezulwini Mine will be successful in maintaining a safe and uninterrupted working environment until 2024.

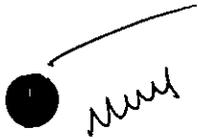

MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL REPORTING

The accompanying consolidated financial statements have been prepared by management and are in accordance with Canadian generally accepted accounting principles and reflect informed judgments and estimates based on currently available information and with due consideration given to materiality. Management acknowledges its responsibility for the fairness, integrity and objectivity of all information in the consolidated financial statements.

As a means of fulfilling its responsibility, management relies on the system of internal controls of First Uranium Corporation (First Uranium or the Corporation). This system has been established to ensure, within reasonable limits, that the assets are safeguarded, transactions are properly recorded and are executed in accordance with management's authorization and that the accounting records provide a solid foundation from which to prepare the consolidated financial statements.

The Board of Directors carries out its responsibility for the consolidated financial statements principally through its Audit Committee, consisting solely of non-management directors. The Audit Committee meets with management as well as the external auditors to ensure that management is properly fulfilling its financial reporting responsibilities to the Directors who approve the financial statements. The external auditors have full and unrestricted access to the Audit Committee to discuss the scope of the external audit, the adequacy of the system of internal controls and financial reporting issues.

The consolidated financial statements have been audited by PricewaterhouseCoopers LLP, Chartered Accountants. Their report outlines the scope of their examination and opinion on the consolidated financial statements.

AUDITORS' REPORT

To the Shareholders of First Uranium Corporation

We have audited the consolidated balance sheets of First Uranium Corporation as at March 31, 2008 and 2007, the consolidated statements of operations and deficit and comprehensive loss, and cash flows for the years then ended. These consolidated financial statements are the responsibility of the company's management. Our responsibility is to express an opinion on these financial statements based on our audit.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the company as at March 31, 2008 and 2007 and the results of its operations and its cash flows for the years then ended in accordance with Canadian generally accepted accounting principles.

Supplementary information (Note 20)

1. NATURE OF OPERATIONS AND BASIS OF PRESENTATION

First Uranium Corporation is a Canadian resource company focused on the development of uranium and gold projects in South Africa. See Note 7, Property, Plant and Equipment for a description of the Corporation's key projects. The Corporation has a primary listing on the Toronto Stock Exchange (TSX) and a secondary listing on the Johannesburg Stock Exchange (JSE). First Uranium owns 100% of First Uranium Limited (FUL), which in turn holds 100% of First Uranium (Proprietary) Limited (FUSA) and 100% of Ezulwini Mining Company (Proprietary) Limited (EMC), which owns and operates the Ezulwini Mine.

On June 6, 2007, the Corporation, through FUSA, acquired all the issued and outstanding shares of Mine Waste Solutions (Proprietary) Limited and its subsidiary, Chemwes (Proprietary) Limited (collectively MWS), an existing tailings treatment company which had an operating gold recovery plant in place. As a result of the MWS acquisition, First Uranium changed its plans for the Buffelsfontein Tailings Recovery Project so that the historical and future tailings from the Buffelsfontein mine (the Buffelsfontein Tailings) are now transported by pipeline to the MWS site and processed through MWS's existing gold plant and, subject to their completion, through the new uranium recovery plant and additional gold recovery facilities which are currently being constructed at the MWS site. The Buffelsfontein Tailings Recovery Project, as enhanced and modified by the addition of MWS, is henceforth referred to as MWS.

On December 14, 2007, First Uranium issued 6.1 million shares to Waterpan Mining Consortium (Waterpan) completing the purchase of the remaining 10% interest in EMC (the Waterpan transaction) as contemplated in the Corporation's initial public offering in December 2006 (the Offering) and as disclosed in the Offering documents and in the annual consolidated financial statements for the year ended March 31, 2007 and the interim consolidated financial statements for the three months ended June 30, 2007, September 30, 2007 and December 31, 2007. This transaction resulted in EMC becoming wholly owned by First Uranium. First Uranium and Waterpan collaborated to effect this transaction considering the terms of the Offering and, as such, the acquisition of the remaining 10% interest in EMC is accounted for under Canadian generally accepted accounting principles (Canadian GAAP) as a continuity of interests.

All amounts in these financial statements are in US\$, except where otherwise indicated.

1.1 Investment in subsidiaries

1.2 Basis of preparation

The consolidated financial statements have been prepared by First Uranium in accordance with Canadian GAAP.

Consolidated financial statements

The acquisition by First Uranium of shareholdings in FUSA and EMC are accounted for under Canadian GAAP as a continuity of interests. Certain adjustments have been reflected in the financial statements to reflect the reorganization pursuant to which First Uranium acquired 100% of FUSA and 100% of EMC.

Acquisition from entities under common control

A business combination involving entities or businesses under common control is a business combination in which all of the combining entities or businesses are ultimately controlled by the same party or parties both before and after the business combination, and that control is not transitory.

The assets and liabilities acquired in a business combination under common control are recognized at the carrying amounts recognized previously in the Corporation's controlling shareholder, Simmer and Jack Mines, Limited's (Simmer & Jack), consolidated financial statements.

2. SIGNIFICANT ACCOUNTING POLICIES

2.1 Consolidation

The consolidated financial statements include the accounts of First Uranium and all of its subsidiaries (including special purpose entities/variable interest entities). All significant inter company balances and transactions are eliminated on consolidation.

2.2 Subsidiaries

A subsidiary is an entity which is controlled by the Corporation. The consolidated financial statements include all the assets, liabilities, revenues, expenses and cash flows of First Uranium and its subsidiaries after eliminating inter company balances and transactions.

2.3 Use of estimates

The preparation of these consolidated financial statements in accordance with Canadian GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amount of revenues and expenses during the reporting period.

Significant areas requiring the use of management estimates relate to the determination of impairment of capital assets, goodwill estimation of future site restoration costs and future income taxes, and classification of current portion of long term debt. Financial results as determined by actual events could differ from those estimated.

2.4 Foreign currency translation

Items included in the financial statements of each entity in the Corporation are measured using the currency that best reflects the economic substance of the underlying events and circumstances relevant to that entity (the functional currency).

Foreign currency transactions are translated into the functional currency using the exchange rates prevailing at the dates of the transactions. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation of monetary assets and liabilities denominated in foreign currencies are recognized in the statements of operations and deficit, and comprehensive loss.

The translated amounts are of a foreign entity where its subsidiaries are accounted for as integrated foreign operations and as such, the translation to US\$ was made using the temporal method. Monetary assets and liabilities denominated in foreign currencies are translated in US\$ at the year-end exchange rates, while non-monetary items are translated at the exchange rate in effect at the transaction dates. Revenue and expense items are translated at the exchange rates in effect on the date of the transaction. Exchange gains and losses resulting from the translation of these amounts are included in the consolidated statements of operations and deficit, and comprehensive loss.

2.5 Property, plant and equipment

The cost of an item of property, plant and equipment is recognized as an asset when:

- it is probable that future economic benefits associated with the item will flow to the Corporation; and
- the cost of the item can be measured reliably.

Costs include costs incurred initially to acquire or construct an item of property, plant and equipment and costs incurred subsequently to add to, replace part of, or service it. If a replacement cost is recognized in the carrying amount of an item of property, plant and equipment, the carrying amount of the replaced part is derecognized.

Property, plant and equipment are carried at cost less accumulated amortization and any impairment losses.

Amortization is provided on all property, plant and equipment other than freehold land, to write down the cost, less residual value, over their useful lives as follows:

Item	Average useful life
Buildings Plant and equipment Office furniture and equipment Motor vehicles Computer equipment and software	Life of mine – straight line Life of mine – units-of-production 6 years – straight-line 5 years – straight-line 3 years – straight-line
Mining assets <ul style="list-style-type: none"> • Mining assets are stated at cost, less accumulated amortization and impairments. • All separately identifiable equipment is amortized over the estimated useful life of the asset. • Amortization is first charged on new mining ventures from the date on which production reaches commercial quantities. 	Life of mine
Mine infrastructure <ul style="list-style-type: none"> • Mine infrastructure costs include expenditures incurred to develop new ore bodies, to define further mineralization in existing ore bodies and to expand the capacity of a mine. Cost includes pre-production expenditures incurred during the development of the mine to the extent it provides access to gold and uranium bearing deposits and have future economic benefit. Cost also includes borrowing costs capitalized during the construction period where such costs are financed by borrowings. • Mine infrastructure costs are amortized using the units-of-production method, based on proven and probable reserves. These reserves are reassessed annually. 	Proven and probable reserves
Mining rights <ul style="list-style-type: none"> • The cost of acquiring mining rights are capitalized and amortized over the mining period awarded by the Department of Minerals and Energy (DME) to the Corporation for the respective mining right. If the mining right period exceeds the estimated life of mine, then the amortization period is limited to the life of mine. 	Mining period as per licence – straight-line

Exploration costs incurred to the date of establishing that a property has mineral reserves, which have the potential of being economically recoverable, are expensed. Exploration and development expenses incurred subsequent to this date are capitalized. If the project becomes feasible, the costs are amortized over the life of the mine. If the project is stopped, the costs are written off immediately.

Once a development mineral property goes into commercial production, the property is classified as "Producing" and the accumulated costs are amortized over the estimated recoverable reserves in the current mine plan using a unit-of-production basis. Commercial production occurs when the operation has reached a steady state of production.

Costs associated with start-up activities on constructed plants are deferred from the date of mechanical completion of the facilities until the date the Corporation is ready to commence service. Any revenues earned during this period are recorded as a reduction in deferred start-up costs. These costs are amortized using the units-of-production method over the life of the mine, commencing on the date of commercial service.

The amortization charge for each period is recognized in earnings or loss unless it is included in the carrying amount of another asset.

2.6 Capitalization of interest

Net interest costs incurred during the development, construction and start-up phase of major projects are capitalized.

2.7 Asset retirement obligations

The Corporation recognizes the fair value of a future asset retirement obligation as a liability in the year in which it incurs a legal obligation associated with the retirement of tangible long-lived assets resulting from the acquisition, construction, development, and/or normal use of the assets. The obligations are measured initially at fair value and the resulting costs are capitalized and added to the carrying value of the related assets. In subsequent periods, the liability is adjusted for the accretion of the discount and the expense is recorded in the statement of operations, deficit, and comprehensive income. Changes in the amount or timing of the underlying future cash flows are immediately recognized as an increase or decrease in the carrying amounts of the liability and related assets. These costs are amortized to the results of operations over the life of the asset.

The Corporation's activities are subject to numerous governmental laws and regulations. Estimates of future reclamation liabilities for asset decommissioning and site restoration are recognized in the period when such liabilities are incurred. These estimates are updated on a periodic basis and are subject to changing laws, regulatory requirements, changing technology and other factors which will be recognized when appropriate. Liabilities related to site restoration include long-term treatment and monitoring costs and incorporate total expected costs net of recoveries. Expenditures incurred to dismantle facilities, restore and monitor closed resource properties are charged against the related reclamation and remediation liability.

2.8 Impairment of long-lived assets

The Corporation applies CICA Handbook Section 3063: Impairment of Long-Lived Assets which provides standards for the recognition, measurement and disclosure of impairment of long-lived assets including property, plant and equipment. Long-lived assets are assessed by management for impairment whenever events or changes in circumstances indicate that the related carrying amounts may not be recoverable. The amount of the impairment loss is determined as the excess of the carrying value of the asset over its fair value and is charged to the results of operations. Fair value represents future undiscounted cash flows from an area of interest, including estimates of selling price and costs to develop and extract the mining assets.

2.9 Future income and mining taxes

The Corporation utilizes the asset and liability method of accounting for income and mining taxes. Under the asset and liability method, future income and mining tax assets are recognized for the future tax consequences attributable to differences between the consolidated financial statements' carrying amounts of existing assets and liabilities and their respective tax bases, reduced by a valuation allowance to reflect the recoverability of any future income tax asset. Future income and mining tax assets and liabilities are measured using enacted or substantively enacted tax rates expected to apply when the asset is realized or the liability settled. The effect on future income and mining tax assets and liabilities of a change in tax rates is recognized in income in the year the enactment or substantive enactment occurs.

2.10 Stock-based compensation

The Corporation has a stock-based compensation plan which is described in Note 14. The Corporation accounts for all stock-based payments under the fair value based method.

Under the fair value based method, stock-based compensation cost is measured at fair value at the grant date and recognized in earnings on a straight-line basis over the relevant vesting period. The counterpart is recognized in contributed surplus. Upon the exercise of a stock option, share capital is recorded at the sum of the proceeds received and the related amount of contributed surplus. The fair value previously recognized in earnings relating to forfeited stock options is debited to contributed surplus and credited to the statement of operations and deficit, and comprehensive loss.

2.11 Interest recognition

Interest income is recognized on a time proportion basis, taking account of the principal outstanding and the effective rate over the period of maturity, when it is determined that such income will accrue to the Corporation.

2.12 Leased assets

Leases of property, plant and equipment, where the Corporation has substantially all the risks and rewards of ownership, are classified as capital leases. Capital leases are capitalized at the inception of the lease at the lower of the fair value of the leased property or the present value of the minimum lease payments. Each lease payment is allocated between the liability and finance charges so as to achieve a constant rate on the finance balance outstanding. The corresponding obligations, net of finance charges, are included in other liabilities. The interest element of the installment is charged to the statement of operations and deficit, and comprehensive loss over the lease period so as to produce a constant periodic rate of interest on the remaining balance of the liability for each period. The property, plant and equipment acquired under capital leases are amortized over the shorter of the useful life of the asset or the lease term.

2.13 Inventories

Inventories include ore stockpiles, gold work-in-progress and spares and consumables, and are recorded at the lower of cost or net realizable value. The cost of ore stockpiles and gold produced is determined principally by the weighted average cost method using related production costs. Costs of gold produced inventories include costs such as milling costs, mining costs and mine general and administration costs but exclude transport, refining and taxes. Net realizable value is determined with reference to current market prices. Stockpiles consist of ore to be processed through the processing plant. The stockpiles have been sampled and evaluated and are on surface. All ore is expected to be fully processed within the life of mine. Spares and consumable stores are valued at weighted average cost after appropriate impairment of redundant and slow moving items.

2.14 Revenue recognition

Revenue from sales is recognized when significant risks and rewards of title and ownership of the concentrate are transferred, and collection is reasonably assured.

2.15 Earnings or loss per share

Basic earnings or loss per share is computed by dividing earnings or loss available to common shareholders by the weighted average number of common shares outstanding during the period. The treasury stock method is used to calculate diluted earnings or loss per share. Diluted earnings or loss per share is similar to basic earnings or loss per share, except that the denominator is increased to include the number of additional common shares that would have been outstanding assuming that stock options with an average market price for the period greater than their exercise price are exercised and the proceeds used to repurchase common shares. In applying the treasury stock method, options with an exercise price greater than the average quoted market price of the common shares are not included in the calculation of diluted earnings or loss per share, as the effect is anti-dilutive.

For convertible securities that may be settled in cash or shares at the holder's option the more dilutive of cash settlement and share settlement is used in computing diluted earnings or loss per share. Where the exchange price of the convertible securities is greater than the common share price, their impact on the diluted earnings or loss per share is excluded from the calculation, as they are considered anti-dilutive.

2.16 Financial instruments

Transaction costs for financial assets and financial liabilities

For a financial asset or financial liability classified other than as held-for-trading, the Corporation has added the transaction costs that are directly attributable to the acquisition or issue of a financial asset or financial liability to the fair value of that asset or liability established at the recognition of that asset or liability.

2.17 Comparative figures

Certain 2007 comparative figures have been reclassified to conform to the presentation adopted in 2008.

3. CHANGES IN ACCOUNTING POLICIES

Effective April 1, 2007, the Corporation adopted two new accounting standards that were issued by the Canadian Institute of Chartered Accountants (CICA):

- Handbook Section 1530 – Comprehensive Income
- Handbook Section 3855 – Financial Instruments – Recognition and Measurement

As provided under the standards, the comparative consolidated financial statements have not been restated. There were no transitional effects and as a result no adjustments have been recorded to deficit as at April 1, 2007.

Section 1530 – Comprehensive income

This section describes the reporting and disclosure standards with respect to comprehensive income and its components. Comprehensive income or loss consists of changes in the equity of the Corporation from sources other than the Corporation's shareholders, and includes earnings or losses of the Corporation, the foreign currency translation adjustment relating to self sustaining foreign operations and unrealized gains and losses on changes in fair values of available-for-sale assets and effective cash flow hedging instruments. Other comprehensive income or loss comprises revenues, expenses and gains and losses that are recognized in comprehensive income or loss but are excluded from earnings or losses for the year. This change in accounting policy had no effect on the consolidated financial statements of First Uranium.

Section 3855 – Financial instruments – recognition and measurement

This section establishes standards for recognizing and measuring financial assets, financial liabilities and non-financial derivatives. It requires that financial assets and financial liabilities, including derivatives, be recognized on the consolidated balance sheet when the Corporation becomes a party to the contractual provisions of the financial instrument or a non-financial derivative contract. All financial instruments should be measured at fair value on initial recognition, except for certain related party transactions. Fair value is the amount at which an item could be exchanged between willing parties. Measurement in subsequent periods depends on whether the financial instruments have been classified as held-for-trading, available-for-sale, held-to-maturity, loans and receivables, or other financial liabilities.

The Corporation designated certain financial assets and financial liabilities and adopted the following new accounting policies:

Cash and cash equivalents

Cash and cash equivalents are classified as “assets available-for-sale” and are measured at fair value at each balance sheet date. Any changes in fair value are recognized in Other comprehensive income in the period in which the change arises. Fair value is calculated using published price quotations in an active market, where applicable. The carrying amounts for cash and cash equivalents at March 31, 2008 approximated their fair values because of their short terms of maturity; no adjustments were made to the opening values.

Accounts receivable and receivables from related parties

These assets are classified as “loans and receivables” and are recorded at amortized cost, which upon their initial measurement is equal to their fair value. Subsequent measurements are recorded at amortized cost using the effective interest rate method. The carrying amounts for these assets as at March 31, 2008 approximated their fair values because of their short terms of maturity; no adjustments were made to the opening values.

Asset retirement funds

Asset retirement funds are classified as “assets available-for-sale” and are measured at fair value at each balance sheet date. Any changes in fair value are recognized in Other comprehensive income in the period in which the change arises. Fair value is calculated using the quoted prices of equities in an active market, with interest and dividends recognized in net income. Any equities without market quotes are carried using the cost method. The carrying values for the asset retirement funds as at March 31, 2008 approximated their fair values; no adjustments were made to the opening values.

Accounts payable and accrued liabilities and payable to related parties

These liabilities are classified as “other financial liabilities” and are initially measured at their fair values. Subsequent measurements are recorded at amortized cost using the effective interest rate method. The carrying values for these liabilities as at March 31, 2008 approximated their fair values; no adjustments were made to the opening values.

Senior unsecured convertible debentures

The sum of the carrying amounts assigned to the liability and equity components of the convertible debentures on initial recognition is always equal to the carrying amount that would be ascribed to the instrument as a whole. The debt portion is recorded at fair value on initial recognition and subsequently accreted over the life of the convertible debentures. No gain or loss arises from recognizing and presenting the components of the instrument separately. The relative fair value method is used to determine the value of the option directly either by reference to the fair value of a similar option, if one exists, or by using an option pricing model. The value determined for each component is then adjusted on a pro rata basis to the extent necessary to ensure that the sum of the carrying amounts assigned to the components equals the amount of the consideration received for the convertible debentures.

Section 1506 – Accounting changes

In July 2006, the CICA issued a new version of Section 1506 of the CICA Handbook, "Accounting Changes". This new standard establishes criteria for changing accounting policies, together with the accounting treatment and disclosure of changes in accounting policies and estimates, and correction of errors. This new section was adopted by the Corporation on January 1, 2007 and had no impact on the Corporation's results.

Accounting policy choice for transaction costs

On June 1, 2007, CICA Emerging Issues Committee issued Abstract no. 166, "Accounting Policy Choice for Transaction Costs" (EIC 166). This EIC addresses the accounting policy choice of expensing or adding transaction costs related to the acquisition of financial assets and financial liabilities that are classified as other than held-for-trading. Specifically, it requires the same accounting policy choice be applied to all similar financial instruments classified as other than held-for-trading, but permits a different policy choice for financial instruments that are not similar. EIC 166 requires retroactive application to all transaction costs accounted for in accordance with Section 3855. The current recognition policy for transaction costs is consistent with this guidance.

On December 1, 2007, the CICA issued the following new accounting standards which became effective for interim periods beginning on or after October 1, 2007:*Section 1535 – Capital disclosures*

This section establishes standards for disclosing information about an entity's capital and how it is managed. It describes the disclosure of the entity's objectives, policies and processes for managing capital, the quantitative data about what the entity regards as capital, whether the entity has complied with any capital requirements, and, if it has not complied, the consequences of such non-compliance. The Corporation has included disclosures recommended by Section 1535 in Note 22.

Section 3862 – Financial instruments – disclosures

This section describes the required disclosure for the assessment of the significance of financial instruments for an entity's financial position and performance and of the nature and extent of risk arising from financial instruments to which the entity is exposed and how the entity manages those risks. The Corporation has included disclosures recommended by Section 3862 in Note 23.

Section 3863 – Financial instruments – presentation

This section establishes standards for presentation of the financial instruments and non-financial derivatives. It carries forward the presentation related requirement of Section 3861, "Financial Instruments – Disclosure and Presentation". The Corporation has included disclosures recommended by Section 3863 in Note 23.

Future accounting standards

The CICA issued the following amendments to the accounting standards for periods beginning on or after January 1, 2008:

General standards on financial statement presentation

Section 1400 "General standards on financial statement presentation" has been amended to include requirements to assess and disclose an entity's ability to continue as a going concern. The Corporation does not expect the adoption of these changes effective January 1, 2008, to have an impact on its consolidated financial statements.

Inventories

Section 3031 "Inventories" provides guidance on the determination of costs and its subsequent recognition as an expense, including any write-down to net realizable value. It also provides guidance on the cost formulas that are used to assign cost to inventories. The Corporation does not expect the adoption of these changes effective January 1, 2008, to have an impact on its consolidated financial statements.

Goodwill and intangible assets

Section 3064, "Goodwill and intangible assets" establishes revised standards for recognition measurement, presentation and disclosure of goodwill and intangibles assets. Concurrent with the introduction of this standard, the CICA withdrew EIC 27, "Revenues and expenses during the pre-operating period". As a result of the withdrawal of EIC 27, the Corporation will no longer be able to defer costs and revenues incurred prior to commercial production at new operations. This is effective for periods beginning on or after January 1, 2009.

4. BUSINESS ACQUISITION

Acquisition of Mine Waste Solutions (Proprietary) Limited

First Uranium, through its wholly owned subsidiary, FUSA, acquired all of the issued and outstanding shares of MWS. MWS owns and operates an existing gold mine tailings and re-processing facility adjacent to First Uranium's Buffelsfontein Tailings Recovery Project in South Africa.

The MWS acquisition closed on June 6, 2007 (effective date of acquisition), at which point First Uranium assumed management control of MWS.

A total consideration of \$32.3 million was paid for the MWS acquisition in the form of an issuance of 3.1 million First Uranium common shares valued at \$31.6 million and \$0.7 million in cash for transaction costs.

The acquisition was accounted for by the purchase method of accounting and the allocation of fair value to the assets acquired and liabilities assumed as at June 6, 2007 was:

(in thousands of dollars)	Book value	Fair value adjustments	Fair value
Current assets	4,608	–	4,608
Asset retirement fund	1,950	–	1,950
Property, plant and equipment	5,226	35,204	40,430
Total assets acquired	11,784	35,204	46,988
Current liabilities	1,476	–	1,476
Lease obligations	28	–	28
Asset retirement obligation	2,777	–	2,777
Future tax liability	236	10,209	10,445
Total liabilities assumed	4,517	10,209	14,726
Net assets acquired	7,267	24,995	32,262

Current assets include cash and cash equivalents of \$2.0 million (see Note 20.5).

The excess of the purchase consideration over the net book value of MWS was attributed to the Tailings for processing of \$29.6 million and \$5.6 million adjustment of the fair value of property, plant and equipment obtained with the MWS acquisition less the related future tax liability arising on these assets.

5. ACCOUNTS RECEIVABLE

(in thousands of dollars)	2008	2007
Trade receivables	3,100	99
Value Added Tax and Goods and Services Tax	6,538	1,463
Prepayments and advances	80	144
Deposits and guarantees	2	7
	9,720	1,713

March 31, 2008

6. INVENTORIES

(in thousands of dollars)	2008	2007
Gold work-in-progress	514	–
Spares and consumables	1,550	292
Stockpiles	744	–
	2,808	292

7. PROPERTY, PLANT AND EQUIPMENT

March 31, 2008 (in thousands of dollars)	Cost	Accumulated amortization	Net carrying amount
Land and buildings	1,616	(44)	1,572
Mine infrastructure	81,642	(143)	81,499
Mining assets	17,922	–	17,922
Tailings for processing	29,642	(1,197)	28,445
Mining rights	55	–	55
Plant and equipment	72,228	(139)	72,089
Exploration	1,010	–	1,010
Motor vehicles	1,080	(101)	979
Office furniture and equipment	517	(38)	479
Computer equipment and software	729	(129)	600
Total	206,441	(1,791)	204,650

March 31, 2007 (in thousands of dollars)	Cost	Accumulated amortization	Net carrying amount
Land and buildings	863	–	863
Mine infrastructure	3,710	–	3,710
Mining assets	16,942	–	16,942
Mining rights	13	–	13
Plant and equipment	9,000	–	9,000
Motor vehicles	179	(8)	171
Office furniture and equipment	56	(1)	55
Computer equipment and software	205	(5)	200
Total	30,968	(14)	30,954

Included in the above are mining related assets with a net carrying amount of \$124.6 million (March 31, 2007 \$29.0 million) related to the Ezulwini Mine and \$43.9 million (March 31, 2007: \$0.8 million) related to MWS.

As at March 31, 2008 all property, plant and equipment were owned by the Corporation, except for motor vehicles with a net carrying amount of \$0.02 million, which are held under capitalized lease contracts.

Ezulwini Mine

The Ezulwini Mine project involves the recommissioning of an underground uranium and gold mining operation located on the outskirts of the town of Westonaria in Gauteng Province, South Africa. The Corporation has been in the process of ramping up underground production. The development of the Ezulwini Mine includes the rehabilitation and re-engineering of the main mine shaft through the installation of a floating steel tower, de-stressing the area where the shaft pillar intersects the shaft barrel, and the construction of uranium and gold processing facilities.

EMC purchased certain surface and underground assets relating to the Ezulwini Mine for a total consideration of \$7.8 million, effective December 22, 2006.

As part of the Ezulwini acquisition, the related environmental rehabilitation trust fund amounting to \$2.7 million (see Note 8, Asset retirement funds) was transferred into the Ezulwini trust fund and EMC took over the related environmental rehabilitation provision of \$5.1 million (see Note 12, Asset retirement obligations), as determined by the DME. The difference of \$2.4 million between the environmental rehabilitation trust fund and the environmental rehabilitation provision has been capitalized as part of mining infrastructure.

On December 8, 2006, the Ezulwini mining right was awarded to Simmer & Jack by the DME. On December 20, 2006, EMC and Simmer & Jack entered into an agreement (the Ezulwini Mining Right Agreement), pursuant to which Simmer & Jack agreed to take all necessary steps to obtain all ministerial approvals in order to effect the transfer of the Ezulwini mining right from Simmer & Jack to EMC. On March 20, 2008, the DME accepted Simmer & Jack's application to cede the Ezulwini mining right from Simmer & Jack to EMC.

MWS

MWS is a uranium and gold tailings recovery operation located in the western portion of the Witwatersrand Basin. With the MWS acquisition (see Note 4), the Corporation acquired an existing operating gold mine tailings re-processing facility and an historic uranium plant, adjacent to the Buffelsfontein property, where the Buffelsfontein Tailings are now being treated. The Corporation commissioned the pump station and a pipeline between the MWS property and the Buffelsfontein property during December 2007 and hydraulic mining of the Buffelsfontein Tailings commenced.

During December 2006, FUSA entered into an agreement to acquire surface tailings from Buffelsfontein Gold Mines Limited (BGM), a subsidiary of Simmer & Jack (the Buffelsfontein Tailings and Rights Agreement). It was originally contemplated that the transaction would be recognized on the satisfaction of the conditions precedent in the Buffelsfontein Tailings and Rights Agreement. While the conditions have not yet been satisfied, MWS commenced processing the material from the Buffelsfontein Tailings in December 2007. All the benefits thereof accrued to MWS, and consequently, MWS assumed the asset retirement obligation related to the Buffelsfontein Tailings (see Note 12, Asset retirement obligations). The corresponding asset of \$10.2 million associated with the Buffelsfontein Tailings is capitalized as part of tailings for processing and amortized over the estimated life of the Buffelsfontein Tailings.

8. ASSET RETIREMENT FUNDS

(in thousands of dollars)	2008	2007
Balance, beginning of the year	2,791	–
Trust fund assumed on acquisition of Ezulwini Mine	–	2,686
Trust fund assumed on acquisition of MWS (see Note 4)	1,950	–
Investment income	194	82
Contributions in respect of investment funds	109	103
Costs incurred	–	(80)
Foreign exchange differences	(197)	–
Balance, end of the year	4,847	2,791

The asset retirement funds, consisting of environmental rehabilitation trust funds under the Corporation's control are to be used to fund the respective mining operation's rehabilitation liabilities. Funds in the trust consist primarily of cash held in interest-bearing accounts, as well as investment funds which consist of a combination of South African effective trusts. An accredited South African financial institution manages the trust funds under the direction of the trustees. The trust deed limits the trustees' investments to institutions and investment vehicles as referred to in section 37A of the South African Income Tax Act. Trust funds can only be drawn for rehabilitation purposes.

March 31, 2008

9. GUARANTEES

The following guarantees have been issued:

To	Regarding	Guarantee value (\$000)
DME	Ezulwini environmental rehabilitation provision	4,585
Murray and Roberts Cementation (Pty) Ltd	Ezulwini shaft rehabilitation project	1,220
Eskom Holdings Ltd	Electricity accounts	1,037

The Ezulwini rehabilitation trust funds included in the asset retirement funds (see Note 8) have been pledged as security against all of the above guarantees. These guarantees are reviewed and renewed on an annual basis. The guarantee concerning the Murray and Roberts Cementation (Pty) Ltd will be terminated once the shaft rehabilitation project is complete.

10. ACCOUNTS PAYABLE AND ACCRUED LIABILITIES

(in thousands of dollars)	2008	2007
Trade payables	17,664	5,302
Accruals	6,639	400
	24,303	5,702

The trade payables primarily relate to capital expenditure of \$8.7 million and \$0.7 million at the Ezulwini Mine and MWS, respectively.

1. SENIOR UNSECURED CONVERTIBLE DEBENTURES

On May 3, 2007 First Uranium issued senior unsecured convertible debentures (the Debentures) in denominations of \$1,000 Canadian dollars (Cdn\$) in the principal amount of \$135.1 million (Cdn\$150 million). The interest rate on the Debentures is 4.25% per annum. The Debentures pay interest semi-annually in arrears on June 30 and December 31 and have a maturity date of June 30, 2012. The Debentures are convertible at the option of the holder into common shares at any time prior to the maturity date at an exchange price of Cdn\$16.42 per share.

The Debentures may not be redeemed by the Corporation prior to June 30, 2010. On or after June 30, 2010 and prior to the maturity date, the Debentures may be redeemed by the Corporation, in whole or in part from time to time, provided that the weighted average trading price of the common shares on the TSX for the 20 consecutive trading days ending five trading days prior to the date on which notice of redemption is provided is at least 130% of the exchange price of Cdn\$16.42 per share.

First Uranium has the option, subject to regulatory approval, to satisfy its obligations to repay the principal amount of the Debentures on redemption or at maturity by issuing and delivering that number of its freely tradable common shares obtained by dividing the principal amount of the Debentures by 95% of the weighted average trading price of its common shares on the TSX for the 20 consecutive trading days ending five trading days before the date fixed for the redemption or maturity.

The equity component of the Debentures was valued on issuance at \$46.5 million which is recorded as a separate component of shareholders' equity. The conversion option was valued using the Black-Scholes pricing model with the following assumptions: Expected dividend yield, 0%; expected volatility, 56%; risk-free interest rate of 4.2% and expected life of five years.

The liability component of the Debentures is being accreted such that the liability at maturity will equal the gross proceeds of \$135.1 million (Cdn\$150 million) less conversions. The amounts accreted during the year ended March 31, 2008 was \$8.5 million (March 31 2007: \$nil). The cost of issuing the Debentures amounted to \$4.5 million.

As at March 31, 2008, no portion of the Debenture had been converted. Interest paid and accrued for the year ended March 31, 2008 amounted to \$4.2 million and \$1.6 million, respectively.

12. ASSET RETIREMENT OBLIGATIONS

(in thousands of dollars)	2008	2007
Balance, beginning of the year	5,377	–
Provision assumed on acquisition of the Ezulwini Mine	–	5,133
Provision assumed on acquisition of MWS (see Note 4)	2,777	–
Provision recognized with commencement of processing the Buffelsfontein Tailings	10,162	–
Accretion expense	896	244
Rehabilitation expenditure incurred	(1,841)	–
Additional rehabilitation provision on MWS	2,530	–
Balance, end of the year	19,901	5,377

The following are the key assumptions used during the year:

(in thousands of South African rand)	2008	2007
Gross amount of estimated cash flows – Ezulwini Mine	40,495	23,206
Gross amount of estimated cash flows – MWS	178,195	–
Number of years over which cash flows will occur:		
Ezulwini Mine	26	19
MWS	25	–
First Uranium credit-adjusted risk free rate	9%	8%
South African inflation rate assumed	6%	6%

The environmental rehabilitation provision assumed by EMC as part of the acquisition of the Ezulwini assets was determined by the DME as at November 2006. During March 2008 an independent review was performed by Johan Fourie & Associates on the Ezulwini assets relating to environmental rehabilitation provision that confirmed the current cost estimate of the provision at March 31, 2008 was sufficient.

The environmental rehabilitation provision assumed as part of the MWS acquisition is to be partly funded by its environmental rehabilitation trust fund (see Note 8). During March 2008, an independent valuation of the environmental rehabilitation provision was completed by GCS (Proprietary) Limited, a water environmental engineering and science consultancy company. The provision was based on the estimated cost to rehabilitate the mine.

The environmental rehabilitation provision associated with the Buffelsfontein Tailings was recognized with the commencement of the hydraulic mining of the Buffelsfontein Tailings in December 2007. Management estimated the respective environmental rehabilitation provision assumed at \$10.2 million (see Note 7).

March 31, 2008

13. SHARE CAPITAL**Common shares**

	Number of shares (000)		(\$000)	
	2008	2007	2008	2007
Balance, beginning of the year	121,686	87,536	206,726	4,176
Shares issued in public or private offering	-	33,350	-	201,795
Shares issued in respect of acquisition (see Note 4)	3,094	-	31,557	-
Shares issued pursuant to the Waterpan transaction (see Note 1)	6,141	-	-	-
Exercise of stock options	153	800	1,063	728
Contributed surplus relating to stock options exercised	-	-	642	27
	131,074	121,686	239,988	206,726
Less: Share issue costs	-	-	(24,053)	(24,053)
Balance, end of the year	131,074	121,686	215,935	182,673

Authorized

The authorized share capital of First Uranium consists of an unlimited number of common shares.

Issued and outstanding

On June 1, 2006, 800,000 stock options were exercised for proceeds of \$0.7 million.

During December 2006, First Uranium issued 33.35 million shares pursuant to the Offering at Cdn\$7 per share for gross proceeds of \$201.8 million.

On June 6, 2007, First Uranium issued 3.1 million shares valued at \$31.6 million relating to the acquisition of MWS (see Note 4).

On December 14, 2007, First Uranium issued 6.1 million shares pursuant to the Offering (see Note 1).

During the year ended March 31, 2008, 153,001 stock options were exercised, at an exercise price of Cdn\$7 per share.

14. CONTRIBUTED SURPLUS – STOCK-BASED COMPENSATION

The Corporation maintains a stock option plan (the Option Plan) for employees, officers, directors and for certain consultants who provide ongoing support to First Uranium and its subsidiaries. Under the Option Plan, options typically are granted for a period of up to ten years following the date of grant. The amounts granted reflect the level of responsibility of the particular optionee and his or her contributions to First Uranium.

The Board of Directors has discretion to set the terms of any vesting schedule of each option granted. Except in specified circumstances, stock options are not assignable and non-transferable and terminate 90 days after the optionee ceases to be employed or associated with First Uranium.

The terms of the Option Plan further provide that the price at which shares may be issued under the Option Plan shall not be less than the volume weighted average trading price of the shares on the TSX for the five trading days immediately preceding the day the option is granted.

The following table details the movements of contributed surplus during the year:

(in thousands of dollars)	2008	2007
Balance, beginning of the year	2,460	27
Transfer to share capital relating to stock options exercised	(642)	(27)
Stock options vesting expense recognised during the year	6,039	2,460
Stock options forfeited during the year	(849)	–
Balance, end of year	7,008	2,460

Assumptions

The fair value of shares used to calculate the compensation expense was determined using the share price on the grant date and was adjusted for the probability of the recipients remaining employed or associated with the Corporation until the vesting date.

During the year ended March 31, 2008, the fair values of the stock options were estimated using the Black-Scholes option pricing model with the following assumptions:

Expected dividend yield – 0% (March 31, 2007: 0%)

Expected volatility of the Corporation's share price ranged between 56% and 66.7% (March 31, 2007: 85%).

Risk-free interest rate ranged between 3.84% and 4.81% (March 31, 2007: 3.90%).

Expected life – 3 years (March 31, 2007: 3 years)

During the year ended March 31, 2008, 2,551,433 stock options were granted for a period of ten years following the date of the grant and are subject to vesting within two years from the date of grant. The fair value of the stock options granted during the year ended March 31, 2008 was Cdn\$9.4 million. The weighted average fair value of each stock option granted was Cdn\$3.70 per share.

The following table is a summary of the Corporation's options granted under its stock-based compensation plan:

	Number of options		Weighted average exercise price (Cdn\$)	
	2008	2007	2008	2007
Outstanding options, beginning of year	1,223,001	800,000	7.30	1.00
Granted during the year	2,551,433	1,223,001	9.02	7.30
Exercised during the year	(153,001)	(800,000)	(7.00)	(1.00)
Forfeited during the year	(182,477)	–	(7.56)	–
Outstanding options, end of year	3,438,956	1,223,001	9.13	7.30

The stock-based compensation expense recognized in the statements of operations and deficit and comprehensive loss was \$5.0 million (March 31, 2007: \$2.5 million). During the year ended March 31, 2008 \$0.2 million stock-based compensation was capitalized to the projects (March 31 2007: \$nil). As at March 31, 2008, the aggregate unexpensed fair value of unvested stock options granted amounted to \$5.8 million (March 31, 2007: \$2.9 million).

March 31, 2008

The following table summarizes information about First Uranium's outstanding stock options as at March 31, 2008:

Exercise price ranges (Cdn\$)	Options outstanding			Options exercisable		
	Number of options outstanding	Weighted average remaining life (years)	Weighted average exercise price (Cdn\$)	Number of options exercisable	Weighted average remaining life (years)	Weighted average exercise price (Cdn\$)
7.00 to 8.99	3,057,670	9.58	8.83	1,263,387	9.42	8.09
9.00 to 11.99	321,286	9.45	11.31	152,475	9.32	10.12
12.00 to 13.99	60,000	9.17	12.87	20,000	9.17	12.87
	3,438,956	9.56	9.13	1,435,862	9.40	8.37

15. CONTRIBUTION FROM PARENT

(in thousands of dollars)	2008	2007
Balance, beginning of year	-	-
Stock-based compensation relating to parent	153	-
Balance, end of year	153	-

These contributions represent the stock-based compensation relating to stock options granted under the Simmer & Jack stock option scheme to individuals that were previously employed by Simmer & Jack and that got transferred to First Uranium during the year. During the year ended March 31, 2008, 7.6 million Simmer & Jack stock options were granted to these employees. The weighted average fair value of the Simmer and Jack options assumed was ZAR4.3 per stock option. The fair value of these stock options was ZAR22 million (\$2.8 million).

The fair values of the stock options were estimated using the Black-Scholes option pricing model with the following assumptions:

Expected dividend yield – 0%

Expected volatility of Simmer & Jack's share price ranged between 56% and 90%

Risk-free interest rate ranged between 8.98% and 10.02%

Expected life – 6 years

Vesting period – 3 years

16. TAXATION

Provision for income taxes

The reconciliation of income taxes attributable to operations computed at the statutory tax rates to income tax recovery, using a Canadian statutory tax rate of 35.47% for the year ended March 31, 2008 (March 31, 2007: 36.12%), is as follows:

(in thousands of dollars)	2008	2007
Loss before income taxes	(21,381)	(7,907)
Income tax recovery at statutory rate	7,584	(2,864)
Difference between Canadian rates and foreign jurisdiction	(636)	130
Change in valuation allowance	5,322	3,536
Adjustment for future tax rate difference	(2,716)	(612)
Non-taxable items	(10,398)	(211)
Other	(122)	-
Income tax charge	(966)	(21)

Future income tax assets

(in thousands of dollars)	2008	2007
Property, plant and equipment	4	-
Non-capital loss carry-forwards	5,684	1,602
Share issue costs	6,697	6,629
Foreign resource expenses	1,102	1,099
Foreign exchange	6,040	850
	19,527	10,180
Less: Valuation allowance	(19,527)	(10,180)
	-	-

Future income tax liabilities

(in thousands of dollars)	2008	2007
Property, plant and equipment	(10,649)	-
	(10,649)	-

As at March 31, 2008, the Corporation had non-capital losses of approximately \$7.1 million (March 31, 2007: \$4.9 million) in Canada that may be applied against earnings in future years. These losses are expected to expire between 2026 and 2028. The Corporation had non-capital losses of approximately \$12.3 million (March 31, 2007: \$1.5 million) in South Africa that may be applied against earnings in future years, unlimited.

Due to uncertainties in the Corporation's ability to utilize its net operating losses in all of its operations, the Corporation has provided a valuation allowance against those future tax assets for which uncertainty exist.

17. OTHER INCOME

(in thousands of dollars)	2008	2007
Sludge pumping income	1,929	27
Rental income	503	-
Scrap sales	242	-
Other income	64	-
	2,738	27

18. FOREIGN EXCHANGE LOSSES

(in thousands of dollars)	2008	2007
Foreign exchange losses	(2,611)	(4,612)

19. BASIC AND DILUTED LOSS PER COMMON SHARE

	2008	2007
Basic and diluted loss per share of (\$)	(0.18)	(0.08)
is calculated based on loss for the year of (\$000)	(22,347)	(7,928)
and a weighted average number of common shares outstanding of (000)	126,096	97,522

For the years ended March 31, 2008 and 2007, the impact of outstanding share options was excluded from the diluted common shares calculation because it was anti-dilutive for earnings per share purposes.

March 31, 2008

The impact of the Debentures issued on May 3, 2007, has been excluded from the diluted common shares computation because it was anti-dilutive for earnings per share purposes.

21. COMMITMENTS

Lease agreement

The Corporation has an operating lease agreement which expires on May 31, 2012. The total rent expense charged under this agreement was \$69,125 (March 31, 2007: \$nil).

Minimum lease payments under the operating lease in effect through 2013 are as follows:

(in thousands of dollars)	
Year 2009	91
Years 2010 to 2012	279
Year 2013	16
	386

Capital commitments

(in thousands of dollars)	2008	2007
Ezulwini Mine	35,128	14,836
MWS	5,173	–
Total contractual obligations	40,301	14,836

The capital commitments are payable within one year.

Toll treatment agreement

The Corporation entered into an agreement with a third party, commencing in January 2009, to calcine the ammonium diuranate (yellowcake) from First Uranium to produce uranium oxide packaged for dispatch to converters. Either party may terminate the agreement on 18 months notice. The third party calciner will construct a plant with one half of the capacity of the plant to be dedicated for the processing of the First Uranium yellowcake and will acquire a road tanker to transport the yellowcake from the First Uranium operations to the calciner's operations. First Uranium will pay one-half of the construction cost of the calcining plant up to a maximum of \$1.8 million and one half of the cost of the tanker (together referred to as the Loan). The Loan will be effective as of January 5, 2009 and is to be repaid in monthly instalments over a seven year period commencing January 30, 2009. The Loan will bear interest equal to the prime overdraft rate as quoted by the South African Reserve Bank (SARB), plus 2% commencing on January 5, 2009.

*March 31, 2008***Royalty agreements**

On December 20, 2006, FUSA, Simmer & Jack and Aberdeen International Incorporated (Aberdeen) entered into an arrangement (the Aberdeen Arrangement) pursuant to which (i) Simmer & Jack confirmed that it will pay to Aberdeen the amount of any royalty owing to Aberdeen under the Aberdeen Loan Agreement in respect of gold produced from the tailings to be acquired by FUSA from BGM, pursuant to the Buffelsfontein Tailings and Rights Agreement, and (ii) FUSA confirmed that it will pay to Simmer & Jack, immediately prior to any payment contemplated in (i) above, an amount equal to the amount of any royalty payment to be made by Simmer & Jack to Aberdeen in respect of gold produced from the tailings to be acquired by FUSA from BGM, pursuant to the Buffelsfontein Tailings and Rights Agreement.

Pursuant to the Buffelsfontein Tailings and Rights Agreement dated December 20, 2006 among BGM, Simmer & Jack and FUSA, in consideration for the cession of the Buffelsfontein Tailings and Mining Right from BGM to FUSA, as well as certain servitudes, and the right to the tailings arising from future underground mining operations by BGM at the BGM Underground Mine, FUSA agreed to pay to BGM a royalty of 1%, plus value added tax of the gross revenue earned by FUSA from the sale of uranium, gold, sulphur and other minerals recovered from the processing of tailings acquired by FUSA from BGM pursuant to the Buffelsfontein Tailings and Rights Agreement. When the Corporation purchased MWS in June 2007, the Corporation acquired an existing operating gold mine tailings re-processing facility and an historic uranium plant, adjacent to the Buffelsfontein property. The Corporation changed its plans for the Buffelsfontein Tailings Recovery Project such that the historical and future tailings from the Buffelsfontein mine would be transported to the MWS site and processed through the existing gold plant, and subject to their commissioning, through the planned uranium recovery plant and additional gold recovery facilities. A new agreement has subsequently been entered into between MWS, BGM and Simmer & Jack, that reflects the change in plans subsequent to the Offering with MWS assuming the obligations of FUSA under the original agreement. MWS has indemnified BGM against any tax liability incurred by BGM from the sale recorded on the basis that MWS has no liability unless the amount of any claim exceeds \$2 million and then only in respect of any amounts in excess of \$2 million.

In summary, as and when there is production from the Buffelsfontein Tailings acquired from BGM, pursuant to the Buffelsfontein Tailings and Rights Agreement, MWS will become liable to pay: (i) to Simmer & Jack, under the Aberdeen Arrangement Agreement, an amount equal to the royalty payable by Simmer & Jack to Aberdeen pursuant to the Aberdeen Agreement in respect of the tailings to be acquired from BGM, pursuant to the Buffelsfontein Tailings and Rights Agreement; and (ii) to BGM the above-mentioned 1% royalty, pursuant to the terms of the Buffelsfontein Tailings and Rights Agreement.

During December 2007, MWS commenced processing the Buffelsfontein Tailings and, as a result, MWS is now obligated to pay a royalty to BGM, pursuant to the Buffelsfontein Tailings and Rights Agreement and make other payments to Simmer & Jack pursuant to the Aberdeen Arrangement in respect of the metals recovered from the Buffelsfontein Tailings. The total royalties expensed amounted to \$0.4 million.

22. CAPITAL MANAGEMENT

First Uranium's capital includes convertible debentures and shareholders' equity. The Corporation's objectives when managing shareholders' equity are to provide returns for shareholders and safeguard its ability to continue as a going concern. Mining is capital intensive and the Corporation strives to achieve lowest industry costs at all of its operations and meet cash flow requirements through internally generated cash flows.

The Corporation's current operations involve the re-opening and development of the Ezulwini Mine and the development of MWS. During December 2006, the Corporation raised \$177.7 million net proceeds of sale of shares and is dependent on these funds to finance its current operations.

First Uranium intends to use the net proceeds from the issue of the Debentures raised in May 2007 to fund the Ezulwini Expansion Program which is designed to determine the potential for a possible expansion of the Ezulwini Mine; together with the balance of the net proceeds of the Offering, fund the development of the Ezulwini Mine and MWS and for general corporate purposes.

In order to carry out the planned development and exploration and pay for administrative costs, the Corporation plans to spend the capital raised to date, as well as its existing working capital and raise additional amounts as needed. The Corporation will continue to assess new properties and seek to acquire an interest in additional properties if it feels there is sufficient geologic or economic potential and if it has adequate financial resources to do so.

The Corporation manages its capital structure and makes adjustments to it, based on the funds available to the Corporation, in order to support the development of its operations and the exploration and development of mineral properties. The Board of Directors does not establish quantitative return on capital criteria for management, but rather relies on the expertise of the Corporation's management to sustain future development of the business.

Management reviews its capital management approach on an ongoing basis and believes that this approach, given the relative size of the Corporation, is reasonable.

There were no changes in the Corporation's approach to capital management during the year ended March 31, 2008. Neither the Corporation nor its subsidiaries is subject to externally imposed capital requirements.

23. FINANCIAL INSTRUMENTS

Financial risk factors

a) Credit risk

Credit risk is the risk of loss associated with a counter party's inability to fulfill its payment obligations. The Corporation's credit risk is primarily attributable to gold sales and value-added taxes receivable. The Corporation has a concentration of credit risk with one customer which is closely monitored by management. Value-added taxes receivable are collectable from the South African government. Management believes that the credit risk concentration with respect to financial instruments attributable to gold sales and value-added taxes receivable is remote.

In addition, the majority of the Corporation's cash and cash equivalents are on deposit with highly-rated financial institutions.

b) Liquidity risk

First Uranium has sufficient funds (March 31, 2008: \$164.7 million; March 31, 2007: \$138.9 million) to settle current and long term liabilities. The Corporation's accounts payable and accrued liabilities, as well as the payable to related party, have contractual maturities of less than 30 days and are subject to normal trade terms.

March 31, 2008

c) Market risk

Market risk is the risk of loss that may arise from changes in market factors such as interest rates, foreign exchange rates, and gold prices.

i. Interest rate risk

First Uranium has significant cash balances and long-term debt, with the latter having a fixed rate of interest of 4.25% (see Note 11, Senior unsecured convertible debentures). The Corporation's current policy is to invest excess cash in short-term deposits in banks with which it keeps its bank accounts. The Corporation monitors the investments it makes and is satisfied with the credit ratings of its banks.

ii. Foreign currency risk

The Corporation's functional currency is the US\$. The Corporation is affected by currency transaction risk and currency translation risk. Consequently, fluctuations of the US\$ in relation to other currencies impact the fair value of financial assets, liabilities and operating results. The Corporation does not hedge its exposure to foreign currency exchange risk.

Certain short term financial liabilities are denominated in other currencies, predominantly Cdn\$ and ZAR. The Corporation's operations are primarily in South Africa and as a result the Corporation has maintained significant cash and cash equivalents during the year in ZAR to meet these operation's short term liquidity requirements. Financial assets and liabilities subject to currency translation risk primarily include non-US\$ cash and cash equivalents and the Debentures.

The SARB approval that was required in connection with the issue of the Debentures includes a condition that the Corporation transfers the net Debenture proceeds to bank accounts of the Corporation in South Africa and convert the funds to ZAR, by May 3, 2008. SARB has granted an extension in respect of Cdn\$60 million of such funds pending consideration of an application by the Corporation to permit the funds to remain in Canada. As at March, 31 2008, the net proceeds from the issue of the Debentures were held in Canadian dollar denominated short-term deposits bearing interest at 4.85% per annum.

iii. Price risk

Gold price risk is defined as the potential adverse impact on earnings and economic value due to gold price movements and volatilities. The Corporation does not hedge its exposure to commodity price fluctuation risk.

Sensitivity analysis

The Corporation has designated its cash and cash equivalents as available-for-sale, which are measured at fair value. Financial instruments included in accounts receivable and receivables from related party are classified as loans and receivables, which are measured at amortized cost. Accounts payable and accrued liabilities and payable to related party are classified as other financial liabilities, which are measured at amortized cost.

Based on management's knowledge and experience of the financial markets, First Uranium believes the following movements are "reasonably possible" over a 12 month period.

As of March 31, 2008, management estimates that if interest rates had changed by 1%, assuming all other variables remained, constant, the impact to net loss would have been approximately \$148,466.

Financial instruments that impact the Corporation's operations due to currency fluctuations include:

- Cdn\$ denominated cash and cash equivalents, accounts receivable, loan to related party, accounts payable and accrued liabilities, and the debt portion of convertible debentures.
- ZAR denominated cash and cash equivalents, accounts receivable, accounts payable and accrued liabilities, and payables to related party.

As at March 31, 2008, management estimates that if the foreign exchange rates had changed 10% against the US\$ assuming all other variables remained constant, the impact on net loss would have been approximately as follows:

(in thousands of dollars)

10% increase in value of Cdn\$	4,240
10% decrease in value of Cdn\$	(4,240)
10% increase in value of ZAR	1,295
10% decrease in value of ZAR	(1,295)

The Corporation's current exposure to price risk on the commodities in which it produces and sells is limited.

Fair value estimation

In assessing the fair value of other financial instruments, the Corporation uses a variety of methods and makes assumptions that are based on market conditions existing at each balance sheet date.

The face values less any estimated credit adjustments for financial assets and financial liabilities with a maturity of less than one year are assumed to approximate their fair values. The fair value of financial liabilities for disclosure purposes is estimated by discounting the future contractual cash flows at the current market interest rate available to the Corporation for similar financial instruments.

As at March 31, 2008, the actual disclosed values of the financial instruments all approximate the fair values of these instruments.

24. RELATED PARTY TRANSACTIONS AND COMMITMENTS

Related party balances

(in thousands of dollars)	2008	2007
First Uranium amount from Simmer & Jack	–	1,684
Loan to Chief Executive Officer	978	–

Related party transactions

(in thousands of dollars)	2008	2007
Shared services fees to Simmer & Jack	(2,258)	(2,639)
Fees paid to empowerment company	(222)	(53)
Stock-based compensation to parent (see Note 15)	(153)	–
Royalties paid to BGM (see Note 21)	(62)	–
Capital purchase of asset from BGM	(1,702)	–
Interest paid to Simmer & Jack by EMC	–	(1,130)
Interest received from Simmer & Jack by FUSA	–	583
Interest received on loan to Chief Executive Officer	15	–

These transactions are in the normal course of operations and are measured at the exchange amount of consideration established and agreed to by the parties involved, having regard to prevailing market rates.

On December 20, 2006, First Uranium and Simmer & Jack entered into a shared services agreement (the Shared Services Agreement). Pursuant to the terms of the Shared Services Agreement, First Uranium may retain certain services to be provided by Simmer & Jack, including project management and technical services, cash management and investment services,

March 31, 2008

accounting, treasury and financial services, corporate secretarial support and human resources and staffing services, including payroll and benefits administration, and such other services as may be required by First Uranium and which Simmer & Jack is able and willing to provide. The expenses for the year ended March 31, 2007 relates to such services received.

During the year ended March 31, 2008, \$1.4 million (March 31, 2007: \$0.6 million) of the fees to Simmer & Jack pursuant to the Shared Services Agreement were expensed and \$0.9 million (March 31, 2007: \$2.0 million) of the fees were capitalized, representing services provided in respect of technical services for the Ezulwini Mine and the Buffelsfontein Tailings Recovery Project.

Prior to December 2006, the Corporation shared its premises with other companies that had common directors and reimbursed the related companies for its proportional share of expenses or was reimbursed by the related companies for their proportional share of expenses. During the year ended March 31, 2007, the Corporation was charged \$0.6 million for consulting services provided by related directors, officers and consultants of the Corporation.

In addition, First Uranium has agreed to reimburse Simmer & Jack with respect to 50% of fees that Simmer & Jack is required to pay to an empowerment company for consulting services regarding transformation, human resources and occupational health and safety. BJ Njenje, AX Sisulu and SLB Mapisa, shareholders of the empowerment company, are also directors of Simmer & Jack.

On September 13, 2007, the Ezulwini Mine acquired a reconditioned mill for the first 50,000 tonne per month milling unit from BGM for a consideration of \$1.7 million.

On September 27, 2007, the Board of Directors approved a loan in the amount of Cdn\$1 million to the Chief Executive Officer of First Uranium for the purpose of facilitating his purchase of a family home. The loan is for a term of six years, is unsecured and bears interest at 4% per annum payable monthly in arrears. The loan was advanced on October 17, 2007.

As previously disclosed, the Corporation entered into an agreement on December 20, 2006 with Waterpan for the purchase of the remaining 10% of the shares of EMC in consideration for 6.1 million common shares of First Uranium. On December 14, 2007, EMC obtained a bridging loan from a South African banking institution to purchase Waterpan's 10% shareholding in EMC. Waterpan used the proceeds to partially fund the purchase of 6.1 million common shares (the Waterpan Shares) of First Uranium for a consideration of \$42.4 million. First Uranium used the proceeds from the sale of the Waterpan Shares to repay the bridging loan to the South African banking institution and to pay the taxes resulting from the purchase of the EMC shares. Concurrent with the closing of this transaction, one million of the Waterpan Shares were sold by way of a private placement. Waterpan has a contractual agreement to retain its remaining Waterpan Shares until April 1, 2009. Certain shareholders of Waterpan are officers or employees of First Uranium or directors of its subsidiaries. The Waterpan transaction had no net impact on the cash flow of the First Uranium group of companies.

25. SUBSEQUENT EVENTS

During May 2008, the Corporation entered into an agreement for the purchase of a 30 megawatt diesel-fired power plant and associated equipment, refurbished and configured in accordance with the Corporation's specifications for \$8.5 million. The vendor will oversee the installation, construction, start-up and commissioning of the power plant at the operations of the Corporation at its own cost. Eighty percent of the purchase price is payable upon shipment of the power plant and the balance upon installation and the successful commissioning at site. The Corporation is responsible for shipping charges of approximately \$750,000.

During May 2008, the Corporation also agreed to lease ten self contained diesel powered generating sets (gensets) for an initial term of eighteen months. The fixed monthly rental charge is \$13,500 per genset for the first twelve months, reducing to \$12,500 per genset thereafter. After the initial eighteen months period, the Corporation has the option to extend the lease agreement period for up to sixty months, in successive twelve month periods. The fixed monthly charge per genset is

\$12,500 for months 19 to 24; \$12,000 for months 25 to 36; \$11,500 for months 37 to 48; and \$11,000 for months 49 to 60. If the gensets are rented for sixty months, the Corporation is entitled to purchase the gensets for \$50,000 per set. The Corporation is also obligated to pay a monthly fixed charge of \$25,000 and a running hourly charge of EUR11.30 (\$17.85). These charges are subject to indexation based on consumer prices. The Corporation is also responsible for \$75,000 mobilization charges and \$56,250 demobilization charges per shipment. The gensets will be installed over a three month period commencing July 2008. The total rental and fixed charges for the initial eighteen month period are estimated at \$2.2 million and \$0.5 million, respectively.

As the rental period is shorter than the useful life of the gensets, this agreement will be accounted for as an operating lease. This treatment will be reviewed in accordance with any changes that may be made in the successive agreements.

26. SEGMENTED INFORMATION

Segmented information is presented in respect of the Corporation's business and geographical segments. The primary format business segments, are based on the Corporation's management and internal reporting structure. Inter-segment reporting is determined on an arm's length basis.

Segment results, assets and liabilities include items directly attributable to a segment as well as those that can be allocated on a reasonable basis. Unallocated items comprise mainly income earning assets and revenue, interest-bearing loans, borrowing and expenses, and corporate assets and expenses. Segment capital expenditure is the total cost incurred during the year to acquire segment assets that are expected to be used for more than one year.

Changing your shareholder records

To change your address, eliminate multiple mailings, transfer First Uranium shares or for other shareholder account inquiries, registered shareholders should contact the principal offices of the Transfer Agents listed above. To initiate any such change, beneficial shareholders who have their shares held on their behalf by an investment advisor, such as a stock broker, should contact the advisor directly.

Disclosure documents
