Manson Creek Discovers 194 g/t Gold At Surface and Intersects 5.94 g/t Gold In Drilling On Meridian Project

Manson Creek Resources Ltd. (Manson Creek) is pleased to provide complete sample results for the diamond drill program on the Meridian gold – silver project, located 45 kilometers southeast of Revelstoke, British Columbia.

The drill campaign successfully intersected widespread gold mineralization adjacent to the historic Eva Mine. The seven hole, 1,141 meter (m), program successfully tested 600 m of mineralized strike length adjoining the historic gold producer and confirmed mineralization along a 250 m additional zone that cross cuts the main mineralized trend.

Surface sampling conducted at the time of drilling further demonstrates the widespread mineralization. One grab sample assayed 194.00 g/t gold and 48.10 g/t silver. This sample was collected from an outcrop of sheeted quartz veins within a carbonate altered sediment host located along strike of the Camborne Fault and between drill setups for 08MER-02 and 08MER-03.

Sampling from a 3.0 m exposure of the cross fault between drill setups 08MER-04 and 08MER-05 returned 4.42 g/t gold and 1.40 g/t silver on a 1.0 m continuous chip sample and a grab sample returned 10.6 g/t gold and 4.40 g/t silver from the same location.

Table 1. Meridian Project: Significant Results

Background

Manson Creek has consolidated five historic past producing gold – silver mines on the current, road accessible, 675 hectare claim block. The Meridian Camp was active in the early 1900's but the fragmented land ownership at the time did not allow for growth and the camp faded after only a few years of production.

Gold and silver mineralization on the block is within and proximal to mesothermal quartz veins related to the regional scale Camborne Fault that bisects the Meridian Claim group and hosts many of the historic deposits. Mineralization is also in association with Siderite-Ankerite-Dolomite veins that appear to post-date regional deformation in the area.

The Phase one drilling completed this year is the first drill program to test the proximal areas of this historic mining center.

The President of Manson Creek Resources Ltd., Regan Chernish P.Geol., is the Qualified Person responsible for the design and implementation of the Field Program as well as the preparation of this news release.
