SEC / TM

Dear Mr. Seidel:

We have learned The Securities and Exchange Commission (SEC) is proposing new Rule and plan named Consolidated Audit Trail, and to develop a consolidated tracking system with respect to the trading of national market system. With a tremendous growth in trading volume, wildly dispersed markets and cross-market trading activities, The SEC is concerned the difficulties of capturing timely manner information and data to effectively monitor today's trading activities.

We would like to introduce the Historis database software and believe the Historis is the perfect solution for SEC's new mission including the Consolidated Audit Trail. Historis has been designed to handle massive amounts of time-series data. Historis is the fastest database software currently available with an insertion rate of 350,000 plus records per second and an extraction rate of 320,000 plus records per second. Historis because of its unique design significantly reduces disk space required, which can potentially save millions of dollars when dealing with multiple terabytes of data.

Many clients have found Historis to be highly suitable to their needs and in fact enhanced their capabilities. For example, Bank of America has utilized Historis to store all of their currency and interest rate trades for the last 15 years. The data they have stored is easily retrievable and can be shared throughout the entire organization. **Historis will be up to the task of handling stock market data in milliseconds.**

Historis system is designed by Logical Information Machines, Inc. (www.LIM.com), and is now part of Morningstar, a \$2.5 billion company located in Chicago, Illinois. Know More Software, Inc. (KMS), who I work for covering U.S. and international market, has the exclusive world-wide rights to distribute Historis. KMS and LIM are now offering U.S. SEC a free trial for Historis to demonstrate its suitability for the SEC information system. We look forward to working with you. Please contact us by calling 920-683-9936 or email us at ningwen@att.net, to start up a process of trail for Historis.

For a preview of the Historis database, please see www.historisdatabase.com.

Sincerely,

Ning Wen
Sales Director
