FHFA (RIN 2590-AA43); HUD (RIN 2501-AD53)

Ladies and Gentlemen:

NexBank SSB (“NexBank”) is pleased to submit these comments in response to the joint Further Notice of Proposed Rulemaking, 78 Fed. Reg. 57928 (Sept. 20, 2013; originally released Aug. 28, 2013) (“FNPRM”), concerning risk retention and the implementation of Section 941 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the “Dodd-Frank Act”).

I. Overview.

NexBank is a sophisticated investor and invests in various securities, including securities

issued by Collateralized Loan Obligations (“CLO”s). We submit these comments to address how the agencies’ proposed regulations would adversely affect investors by severely curtailing the formation of CLOs, how features of CLOs already protect investors through extensive and adequate incentives that align CLO managers’ interests with those of CLO investors, and how, if regulation is deemed necessary, other alternatives would protect investors without causing extensive harm to CLOs, credit markets, and competition.

In particular, NexBank is concerned that the regulations proposed by the agencies would significantly and adversely affect the formation and continued operation of CLOs, together with the scope of investment opportunities they offer to investors. Open Market CLOs present none of the risks to investors presented by the originate-to-distribute model that Section 941 was designed to address, and a range of incentives ensure that their managers act consistently with investors’ interests. CLO performance during the recent financial crisis confirms the robustness of these incentives and investor protections, as does the subsequent resurgence of the CLO market that demonstrates investors’ confidence that their interests are fully protected. For these reasons, additional regulation requiring CLO managers to retain more credit risk would produce no added benefits to CLO investors and would substantially harm competition and the public. This result would be especially unfortunate because various alternatives are available to the agencies that would far better advance the public interest.

II. Our Experience with CLO Securities and the Investor Protections Afforded by Open Market CLOs.

Originally founded in 1922 and headquartered in Dallas, Texas, NexBank is a subsidiary of NexBank Capital, Inc., a fully-integrated financial services organization that also includes a broker-dealer and an investment banking and corporate advisory firm. Together with our affiliates, we provide a wide range of resources that enable companies, individuals and institutions to meet a variety of complex financial needs. NexBank is affiliated with Highland Capital Management, L.P., the largest CLO manager in the U.S. We currently have approximately \$90 million of investments in CLOs generally targeted to the AAA portion of the capital structure, and we intend to continue our investment philosophy as it relates to CLOs.

NexBank’s market role and experience provides us with a clear understanding of the current CLO market, CLOs’ performance during and since the recent financial crisis, and the likely adverse effects of the proposed regulations.

III. The Proposed Rules Would Adversely Affect Us, Other CLO Investors, Investors in Related Products, and Open Market CLO Managers.

Our experience as an investor in the CLO market leaves us with no doubt that the proposed rules would significantly and adversely affect the formation and scope of future CLOs, and thus would severely curtail CLOs’ offerings to investors.

The requirement that Open Market CLO managers retain five percent of the face value of the CLO’s assets – in addition to the significant credit risks already assumed through the CLO managers’ compensation structure – would drastically reduce CLO formation. Many CLO

managers are too small to secure or devote funds of that magnitude for positions that cannot be disposed or hedged – no matter what the competing business opportunities or demands. For other CLO managers that might have the financial capacity to hold such a significant position, doing so would require a restructuring of current business models and anticipated returns – making a once viable business much less profitable, requiring that managers instead devote those funds to other, more productive uses.

Our market assessment is that the proposed rules would cause a dramatic decrease in the size and functioning of the CLO market as a whole. We are aware of the survey of CLO managers that indicated that the decrease in CLO offerings is anticipated to be in the order of 75 percent.¹ We generally agree with that assessment, and are concerned that it may well be too optimistic. We are also aware of the broad range of comments and record evidence that establish that the proposed rules would adversely affect the formation and continued operation of the CLO market.² We agree with the factors identified in those comments and assess that those factors will contribute to the magnitude of the decrease in CLO formation identified in the LSTA survey. Indeed, the agencies themselves anticipate these adverse effects on CLOs and competition.³

Our experience also indicates that this resulting decrease in the formation and scope of CLOs would have negative implications for us, other CLO investors, and investors in products that compete with CLO securities. CLO offerings are an important part of the market that benefits investors. CLO securities are an attractive, transparent mechanism for securing yield and exposure to an important credit sector. They permit that exposure while providing a range of protections, modes of investment, and related services to investors. CLOs also compete with other, similar investment offerings, putting downward pressure on those competitors' margins and prices – while increasing the range of investor protections and service features that competitors must offer.

IV. Additional Regulation of Open Market CLOs Is Inappropriate and Unnecessary.

A. Commercial and Regulatory Factors Already Align the Interests of Open Market CLO Managers and CLO Investors.

The proposed credit risk retention rules fail to account for the significant factors that already ensure that Open Market CLO managers select and manage CLO assets prudently and in investors' interests. Open Market CLOs do not employ the "originate-to-distribute" model of securitization that contributed to the financial crisis and prompted Congress to enact Section 941.

³ See 78 Fed. Reg. 57962.

The nature of Open Market CLOs, and their role in the loan market and in the provision of securities to investors, ensures that they operate independently and that managers' interests are aligned with CLO investors' interests. This alignment of interests, and related lack of any need for risk retention regulation to further align those interests, arises from the following characteristics of Open Market CLOs.

First, Open Market CLO managers act independently of loan originators and exercise independent judgment in selecting among loans originated by unaffiliated entities. They are free from potential conflicts and disincentives related to the originate-to-distribute model and attract investors based in large measure on this independence and the resulting quality of asset selection. This provides a strong incentive for continued selection of higher-quality assets.

Second, CLO managers bear significant risk through their deferred, contingent compensation structure that has been shaped and ratified by the market. CLO managers receive their primary sources of compensation only if they deliver for their investors: they are compensated principally as the most subordinated CLO investors secure their returns, and a large component of their compensation is received only after the CLO has performed well over most of its life for all classes of investors, including those whose securities are most at risk. CLO managers' compensation structure places a premium on careful selection and management of assets, aligning their interests with investors' interests. Indeed, investors and the competitive process have shaped and ratified the compensation structure. In this fundamental sense, CLO managers already have "skin in the game" – and creating that interest, which already exists for CLOs, is the entire point of the proposed regulations. The agencies have recognized and acknowledged this alignment of investor and manager interests created by the compensation structure.⁴

Third, almost all Open Market CLO managers are registered investment advisors, with associated fiduciary duties – and potential liabilities – to their investors. This status triggers a separate and quite effective regulatory and supervisory regime that also provides incentives for careful selection and management of assets.

Fourth, the assets selected by Open Market CLO managers have been evaluated through multiple layers of underwriting and market decisions. These include the loan arrangers' decisions in underwriting the loans, the market's evaluation in pricing and syndicating the loans, and the CLO manager's decisions in selecting the loans for the CLO to purchase. Often, the assessments reflected in secondary market pricing also contribute to the selection of high-quality assets.

Fifth, CLO managers actively manage their loan portfolios for much of the life of a CLO. This active role is unlike that for many other ABSs, and further protects investors. CLO managers can limit losses and secure additional gains based on the additional performance information provided for the particular loans and by the secondary market. In this management role, the CLO manager exercises independent judgment and has every incentive to act only in the best interest of CLO investors.

⁴ See 78 Fed. Reg. 57963.

Finally, CLO managers select – and CLO investors demand – commercial loans with features that protect investors. Prominently, CLO managers select senior secured loans. This often ensures complete or substantial recovery and loss protection even in the event of default, and is an important reason why CLOs protected investors so well during the recent financial crisis.

B. CLO Performance Confirms the Adequacy of Existing Incentives and Investor Protections.

The historically strong performance of CLOs demonstrates the concrete and practical results of these unique features of CLOs. Despite the massive financial crisis that resulted in widespread losses among other asset classes, CLOs performed exceptionally well. Although CLOs experienced ratings downgrades, the vast majority of CLO notes that were originally rated AAA retained ratings of AA or higher during the crisis.⁵ And most significantly, CLOs experienced *de minimis* events of default and even lower rates of financial loss.⁶ The Board of Governors of the Federal Reserve has acknowledged the low default rate among CLOs during the financial crisis, which it attributed in part to the incentive alignment mechanisms inherent to CLOs.⁷

We are aware of numerous comments submitted in this rulemaking that confirm the strong performance of CLOs during the financial crisis.⁸ Our experience as direct participants in the industry accords with these views. We believe that this record of performance demonstrates that the existing safeguards and incentive alignments in the CLO industry more than adequately meet the goals of Section 941.

In particular, the ongoing investor demand for CLO securities reflects a market judgment, by the most informed and interested parties, that Open Market CLOs are structured in a manner that protects and advances investor interests while offering a valuable investment opportunity. CLOs were one of the first type of ABS to experience revived demand following the 2008 financial crisis, and demand for CLOs has been quite strong during the past few years. This resurgence in investment indicates that the investor community has examined CLO performance during an extremely stressful financial period and has concluded that CLOs offered, and continue to offer, robust protections for investor interests.

Himes and other Members of Congress Letter Comment, July 29, 2011 at 2.

C. In Light of These Incentives and Performance History, Additional Regulation Would Provide No Public Interest Benefits.

Because existing commercial and regulatory incentives fully align the interests of CLO managers and CLO investors, additional risk retention requirements would not redress any market failure or further align those interests. Because Open Market CLO managers select assets independently of loan originators, and do not operate as part of an “originate-to-distribute” model, the operations of Open Market CLOs present none of the risks to investors that Section 941 was designed to address. As set out above, the recent performance of CLOs and investor demand for CLO securities confirms that no additional risk retention requirements are needed.

We agree with other commenters that have analyzed the language and purpose of Section 941 and have shown that Congress did not intend to impose risk retention requirements on Open Market CLO managers.⁹ Presumably, Congress did not intend to do so precisely because Open Market CLOs present none of the problems Section 941 was designed to fix. Because Open Market CLO managers facilitate the CLOs’ purchase of assets, they do not directly or indirectly sell or transfer assets to the CLO – and are thus not within the scope of the statutory definition of “sponsor” as the agencies incorrectly assert.¹⁰

We also agree with commenters that, in light of the high costs and absence of benefits arising from imposing credit risk retention requirements on Open Market CLO managers, the agencies should exercise their statutory powers to exempt those managers from the credit risk retention requirements – assuming that those requirements even apply.¹¹ If the agencies believe that certain types of CLOs pose a risk to investors, or that further restrictions on which CLO managers can qualify for an exemption are appropriate, a commercially sensible set of “ring-fencing” qualifications has been proposed in the comments.¹²

V. Other Regulatory Alternatives Would Be Preferable to the Agencies’ Proposed

Approach.

Although we believe that the intended scope of Section 941 and the facts surrounding the operation and market evaluation of CLOs indicate that it would be a significant mistake to impose credit risk retention requirements on Open Market CLOs, alternative regulatory approaches would meet the agencies' objectives while causing far less harm to CLOs and investor interests.

For example, the LSTA has proposed that CLO managers could retain credit risk, consistent with the statutory requirements, by holding a set of securities that embody the compensation structure currently endorsed by the market and purchasing an interest in the CLO's equity.¹³ Both the securities and the equity interest would confirm the alignment of interests between the CLO manager and the CLO investors. The cash outlay for the proposed equity interest would be manageable for most CLO managers. NexBank endorses that approach as far preferable to the agencies' proposed regulations. We also believe that the standard CLO compensation structure aligns CLO managers' interests with those of us and other CLO investors, and that the proposed purchase of an equity interest should remove any doubt that appropriate incentives apply to CLO managers' asset selection decisions.

Similarly, we endorse proposals that would reduce any risk retention requirement on a *pro rata* basis to the extent that a CLO's assets are comprised of higher-quality loans. A material portion of the loans that CLO managers select are higher-quality loans under any commercially reasonable definition, present minimal risks to investors, and should be taken into account in setting the amount of any credit risk that the CLO manager must retain.

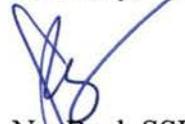

In addition, we are aware that various commenters are proposing that parties associated with the CLO manager be able to retain credit risk in a manner that would satisfy Section 941's requirements. We endorse those proposals. Often, key investors or market participants work with a CLO manager in initiating the CLO and may play an advisory or other role in the selection of CLO assets. Having such parties, rather than the CLO manager, retain credit risk makes considerable sense in terms of the agencies' objectives and the effect on the CLO market (the agencies' recently proposed alternative related to loan arrangers' holding risk similarly relies on a third party's retention of credit risk). Because parties coordinating with the CLO manager may contribute to the selection of assets, having them retain credit risk advances the agencies' goal of improving incentives related to asset selection. Such parties often have investment, rather than investment management, as their core business, making it more appropriate that they retain the requisite interest. In addition, they may do so without causing the disincentives and adverse impacts that would arise if the CLO manager is required to retain a comparable economic interest.
