

To whom it may concern,

I'm sending this email to urge the SEC to approve the Bitcoin ETF. There have been many innovations in the past that have shaken our economy. From the television, to cell phones, and even computers. Many couldn't have imagined that these innovations would have made a lasting impact on our lives the way they do now. Blockchain and cryptocurrency are no different. It is understandable that many of the letters or comments that the SEC and CFTC are receiving, and will probably continue to receive, will be outrageous or only concerned with their own monetary benefit, but take a second to think of blockchain and cryptocurrency as the television preceding the radio, cell phones upgrading the way we communicate with each other, and computers being in countless households instead of just with big corporations or companies.

The United States has an excellent opportunity to show the world that, not only are we pioneers in adapting to changes, but accepting to innovations that will benefit the United States, its citizens, and future generations to come. Bitcoin ETF's will give the crypto-market the stability it has been yearning for, and the United States can pave the way for other countries to start adopting it and give clear regulatory guidelines to the crypto-market. With Bitcoin ETF's, we will absolutely see more stability in our current market, which in turn, will show other countries that this market can and will benefit us all in unimaginable ways. There will be a lot more security with the physical Bitcoin ETF's via insurance carriers against any potential loss or theft of Bitcoin via private key.

We can clearly see that major cryptocurrency exchanges are willing to comply with the SEC, and that they are diligently working to comply with any regulation. The rest is up to the SEC. Although this proposal has been rejected many times in the past, as an American citizen, I humbly request that the SEC approves the proposal for the Bitcoin ETF's to make our current market more accessible to all who are interested in it, and also immensely help the United States economy.

Thank you for taking the time to read this,

-Yazan Salman
