

Dear Sir/Madam,

I strongly supported the bitcoin ETF. There are many arguments against the ETF pointing the manipulation and regulation. My argument is manipulation is everywhere. There are good and bad actors in every market place. This is the same with Crude Oil or Gold and therefore we need Bitcoin ETF to control the bad actors. More good actors in this market keep the bad actors at bay. I consider Bitcoin as the currency of Internet. When internet came in to existence not many people supported it but how about now. Please consider approving the Bitcoin ETF and give an amazing opportunity for the US citizens to participate in this great technological breakthrough.

Thanks for listening to us,

Shijo Thekkel
