Chapter VI Trading Systems

* * * * *

Sec. 10 Book Processing

System orders shall be executed through the BX Book Process set forth below:

(1) Execution Algorithm - The Exchange will determine to apply, for each option, one of the following execution algorithms described in paragraphs (A) or (B). The Exchange will issue an Options Alert specifying which execution algorithm will govern which options any time it is modified.

(A) Price/Time - The System shall execute trading interest within the System in price/time priority, meaning it will execute all trading interest at the best price level within the System before executing trading interest at the next best price. Within each price level, if there are two or more quotes or orders at the best price, trading interest will be executed in time priority.

(B) Size Pro-Rata - The System shall execute trading interest within the System in price priority, meaning it will execute all trading interest at the best price level within the System before executing trading interest at the next best price. Within each price level, if there are two or more quotes or orders at the best price, trading interest will be executed based on the size of each Participant's quote or order as a percentage of the total size of all orders and quotes resting at that price. If the result is not a whole number, it will be rounded down to the nearest whole number. If there are residual contracts remaining after rounding, such contracts will be distributed one contract at a time to the remaining Participants in time priority.

(C) Priority Overlays

(1) Priority Overlays Applicable to Price/Time Execution Algorithm: the Exchange may apply the following designated Participant priority overlays, when the Price/Time execution algorithm is in effect:

(a) **Public Customer Priority:** the highest bid and lowest offer shall have priority except that Public Customer orders shall have priority over non-Public Customer

orders at the same price. If there are two or more Public Customer orders for the same options series at the same price, priority shall be afforded to such Public Customer orders in the sequence in which they are received by the System. For purposes of this Rule, a Public Customer order does not include a Professional Order. Public Customer Priority is always in effect when the Price/Time execution algorithm is in effect.

(b) Lead Market Maker (“LMM”) Priority: An LMM may be assigned by the Exchange in each option class in accordance with Chapter VII, Section 13. LMM participant entitlements shall only be in effect when the Public Customer Priority Overlay is also in effect. After all Public Customer orders have been fully executed, upon receipt of an order, provided the LMM’s bid/offer is at the Exchange’s disseminated price, the LMM will be afforded a participation entitlement. The LMM shall not be entitled to receive a number of contracts that is greater than the displayed size associated with such LMM. LMM participation entitlements will be considered after the opening process. The LMM participation entitlement is as follows:

(1) A BX Options LMM shall receive the greater of:

(a) contracts the LMM would receive if the allocation was based on time priority pursuant to subparagraph (1)(a) above with Public Customer priority;

(b) 50% of remaining interest if there is one or no other Market Maker at that price;

(c) 40% of remaining interest if there is two other Market Makers at that price; or

(d) 30% of remaining interest if there are more than two other Market Makers at that price.

If rounding would result in an allocation of less than one contract, a BX Options LMM shall receive one contract. Rounding will be up or down to the nearest integer.

(2) Orders for 5 contracts or fewer shall be allocated to the LMM. The Exchange will review this provision quarterly and will maintain the small order size at a level that will not allow orders of 5 contracts or less executed by the LMM to account for more than 40% of the volume executed on the Exchange.

If there are contracts remaining [after all LMM interest has been fully executed], such contracts shall be executed based on the Price/Time execution algorithm.

(2) Priority Overlays Applicable to Size Pro-Rata Execution Algorithm: the Exchange will apply the following designated Participant priority overlays, which are always in effect when the Size Pro-Rata execution algorithm is in effect.

- (i) Public Customer Priority: the highest bid and lowest offer shall have priority except that Public Customer orders shall have priority over non-Public Customer orders at the same price. If there are two or more Public Customer orders for the same options series at the same price, priority shall be afforded to such Public Customer orders in the sequence in which they are received by the System. For purposes of this Rule, a Public Customer order does not include a Professional Order. Public Customer Priority is always in effect when Size Pro-Rata execution algorithm is in effect.
- (ii) LMM Priority: An LMM may be assigned by the Exchange in each option class in accordance with Chapter VII, Section 13. After all Public Customer orders have been fully executed, upon receipt of an order, provided the LMM's bid/offer is at the Exchange's disseminated price, the LMM will be afforded a participation entitlement. The LMM shall not be entitled to receive a number of contracts that is greater than the displayed size associated with such LMM. LMM participation entitlements will be considered after the opening process. The LMM participation entitlement is as follows:

(1) A BX Options LMM shall receive the greater of:

- (a) the LMM's Size Pro-Rata share under (1)(C)(2)(iii) below;
- (b) 50% of remaining interest if there is one or no other Market Maker at that price;
- (c) 40% of remaining interest if there are two other Market Makers at that price; or
- (d) 30% of remaining interest if there are more than two other Market Makers at that price.

If rounding would result in an allocation of less than one contract, a BX Options LMM shall receive one contract. Rounding will be up or down to the nearest integer.

(2) Orders for 5 contracts or fewer shall be allocated to the LMM. The Exchange will review this provision quarterly and will maintain the small order size at a level that will not allow orders of 5 contracts or less executed by the LMM to account for more than 40% of the volume executed on the Exchange.

If there are contracts remaining, such contracts shall be executed based on the Size Pro-Rata execution algorithm.

(iii) Market Maker Priority: After all Public Customer orders have been fully executed and LMM participation entitlements applied, if applicable, BX Options Market Makers shall have priority over all other Participant orders at the same price. If there are two or more BX Options Market Maker quotes and orders for the same options series at the same price, those shall be executed based on the Size Pro-Rata execution algorithm. If there are contracts remaining after all Market Maker interest has been fully executed, such contracts shall be executed based on the Size Pro-Rata execution algorithm.

(2) - (7) No Change.
