

Irene Aldridge, founder
and Managing Partner,
ABLE Alpha Trading, LTD.

ABLE Alpha Trading, LTD. (ABLE Alpha), was launched in 2007 to fill the needs for sophisticated computerized trading, serving both the buy-side and the sell-side communities. The primary value-add of ABLE Alpha is its competency in cutting-edge high-frequency trading technologies, including automated market making, statistical arbitrage and ticker-tape reading. ABLE Alpha helps investment businesses increase their competitiveness in the new automated financial market reality, and to increase their profitability by capturing a larger premium and reducing risk.

In the buy-side capacity, ABLE Alpha develops and deploys short-term quantitative trading algorithms in various financial instruments. ABLE Alpha makes selected trading algorithms available on an exclusive basis to large institutional investors.

For more information, please contact Irene Aldridge at ialdridge@ablealpha.com or via phone at +1 646 233 3513.

Have a very profitable day!

ABOUT OUR BRAND

"Alpha" is the key metric of risk-adjusted return. Typically reported as a percentage, Alpha measures portfolio performance abstracted from broad market influences. The name "ABLE Alpha" embodies the highest performance standards that guide our company's culture.

WELCOME

At Able Alpha Trading Ltd., we specialize in the cutting edge quantitative and high-frequency trading across all asset classes. We continuously refine our expertise in this field.

Able Alpha Trading, LTD., is a Registered Investment Advisor (RIA) under the U.S. Securities and Exchange Commission (the SEC) guidelines.

SERVICES – INVESTMENT CONSULTING

On a consulting retainer basis, ABLE Alpha researches and develops profitable plug-and-play high-frequency trading models for independent buy-side organizations. The clients deploying ABLE Alpha algos tend to appreciate the alpha provided by the algorithms, usually uncorrelated with the clients' other strategies. Clients also report satisfaction with the ease of deployment of the ABLE Alpha algos. In addition, ABLE Alpha assists clients in developing and deploying sophisticated risk management strategies, including portfolio hedging and immunization against potentially predatory algorithms. Finally, ABLE Alpha continuously researches ever more profitable ways to execute orders buy-side orders. Our advanced market impact studies and the hands-on understanding of the order execution issues have led to development of a new generation of execution algorithms, currently available via licensing arrangements to both buy-side and sell-side practitioners.

SERVICES – INVESTMENT MANAGEMENT

While ABLE Alpha does not presently take custody of third-party assets, we provide an HFT-based high capacity managed account investment platform for selected clients. All offered HFT strategies are built internally at ABLE Alpha, and hand-picked for their strong performance, low risk and high capacity.

SERVICES – PROPRIETARY TRADING

ABLE Alpha engages in proprietary trading with limited capital. The proprietary operation is critical to our clients' success: it is here that we test by fire our newest models, and ascertain their profitability and risk capacity, *before* we offer the models to clients. The resulting real-money performance of our models is made available to clients and saves clients the losses of trial-and-error model development on their own premises.

SELECTED PAST PROJECTS

- Automated market making deployment for a mid-size bank
- Algorithmic research on best execution for a sell-side commodity operation
- HFT trading strategy optimization for a commodity trading advisor seeking diversification and risk control
- Market quality analysis for an exchange
- Trading idea generation workshops for a large diversified hedge fund

We always ensure confidentiality of our clients' business.
