This brochure provides information about the qualifications and business practices of iSectors, LLC. If you have any questions about the contents of this brochure, please contact us at 920-731-4455. The information in this brochure has not been approved or verified by the United States Securities and Exchange Commission, nor by any state securities authority.

Additional information about iSectors, LLC also is available on the SEC's website at www.adviserinfo.sec.gov.

Material Changes

This Brochure supersedes the prior version dated 3/30/2012. Material changes effective since the last annual update (dated March 31, 2012) include:

- Section A. Advisory business, Paragraph 2: Descriptive language added to further detail iSectors primary business relationships with Platform Sponsors.
- Section A. Advisory Business, Paragraphs 6 & 7: Language added to reflect further development of iSectors 401(k) contractual arrangements with 401(k) plans.
- Section A. Advisory Business, Paragraphs 9-10: Relocated from Fees and Compensation section.
- Section A. Advisory Business, Last Paragraph: Updated assets in iSectors models.
- Section B. Paragraph 2: Added paragraph containing language on fees related to 401(k) services.
- Section D. Paragraph 3: Language added to reflect client services to 401(k) Plans.
- Section D. Paragraph 4, Account Investment Minimums: Table modified to reflect changes in model offerings and model names. Additional information below.
- Section D. Types of Accounts: Language added with respect to unitization of 401(k) Accounts
- Section E. Paragraph 1: Table added to list iSectors Model strategies.
 - iSectors has discontinued six models: Domestic Fixed Income, Domestic 60-40, Endowment 20-80, Endowment 40-60, Endowment 80-20, Endowment 100-0.
 - iSectors Endowment 60-40 Allocation has been renamed iSectors Endowment Allocation.
 - Institutional Allocation Model Changes: iSectors Institutional Series of five models has been renamed and three of the allocations have been modified, as follows:

Model Name	Previous Name	Allocation Change
Global Fixed Income	Institutional Fixed Income	None
Global Conservative Allocation	Institutional 40-60 Allocation	25% Equity/75% Fixed Income
Global Balanced Allocation	Institutional 60-40 Allocation	50% Equity/50% Fixed Income
Global Growth Allocation	Institutional 80-20 Allocation	75% Equity/25% Fixed Income
Global Equity Allocation	Institutional Equity Allocation	None

- Section E. Model Strategies: Language added to reflect inclusion of high yield securities, senior bank loans, and/or floating rate notes in Capital Preservation Allocation.
- Section E. Risks: Language addition: Business Development Companies have been added to investment universe.
- Section E. Risks: Language addition Emerging Market, Equity, Foreign Securities Risk
- Section E. Risks, Exchange Traded Notes: Language added to reflect recent removal of ETNs from iSectors allocations.
- Section M. Discretion. Language added to reflect investment discretion in 401k Plan accounts.

A. Advisory Business

The primary service provided by iSectors, LLC (“iSectors”) is to license its proprietary iSectors[®] investment program, consisting of a suite of asset allocation models, to affiliated and unaffiliated investment advisers. The advisers (“Licensees”) may use the models in managing their respective clients’ assets. iSectors, LLC (“iSectors”) **does not** provide investment supervisory services or financial planning services. Rather, iSectors’ models are available through one or more unaffiliated investment advisors or investment platform sponsors (each a “Platform Sponsor,” collectively the “Platform Sponsors”) that provide services to investment advisers.

Through these Platform Sponsors, iSectors provides recommendations and investment advice regarding the construction and maintenance of its model portfolios, representing different strategies to be used in the management of client accounts. iSectors role involves constructing the models and providing recommended securities, relative weights and relative changes in those weightings to the Platform Sponsor through web-based interfaces. The Platform Sponsor has the final authority to place orders for the execution of transactions in Client Accounts and is thus deemed to have investment discretion.

iSectors does not have any advisory agreements with individual clients. iSectors is **not responsible** for and does not have any underlying client/investor contact. Rather, all such client-related functions are the **responsibility** of the investment advisor licensing or accessing the models through a Platform Sponsor.

Direct Availability and Availability through 401(k) Plans. iSectors **makes selected** models available to investment advisors, pursuant to the terms and conditions of a license agreement between iSectors and such investment advisor(s) for use in 401(k) plans through Mid Atlantic Trust Company’s (“Mid Atlantic”) ModelxChange platform. The ModelxChange platform allows 401(k) professionals to incorporate mutual fund and ETF investment models into retirement plans through a single, web-based interface that allows for the creation, execution and ongoing management of investment models. Those models and corresponding model changes are then delivered to the Plans and plan participants’ accounts through the ModelxChange Platform.

iSectors also licenses its asset allocation models to Sumnicht for use in 401(k) Plans advised by Sumnicht. For any Plans advised by Sumnicht that utilize the iSectors Program, Sumnicht compensates iSectors for its license fees directly out of a portion of the Advisory fee that Sumnicht receives for its services to the Plan(s). Use of iSectors models in Plans advised by Sumnicht does not result in any additional charge to the respective Plan(s) or Plan participants.

iSectors intends to develop model management agreements with 401(k) Plans to include iSectors models as designated investment alternatives within their respective Plan(s) through the ModelxChange Platform. iSectors expects to complete development and begin execution of these agreements during the 2013 calendar year. Plan Sponsors who rely on advice from a consulting adviser and decide to include iSectors allocations within their plan may contract directly with iSectors to provide iSectors models and related services to the Plan(s). Alternatively, Plan Sponsors may designate an investment manager, who then will have the authority on behalf of the Plan(s) to contract with iSectors to make available its models and related services to the Plan(s). In both instances, iSectors, in its sole discretion, will determine the asset-class allocations and select the underlying investments for each Model, adjust the asset-class allocations, and/or otherwise add, remove or modify the allocation to any underlying investment. iSectors intends to contract with advisory firm(s) or the investment manager(s) to provide client contact-related advisory functions.

When iSectors Allocation Models are included as investment options within a 401(k) retirement plan, the models operate as designated investment alternatives and iSectors is a fiduciary within the meaning of ERISA Section 3(21)(A) with respect to its management of the Plan assets invested in its Models.

Investment advisors that license iSectors models for use in qualified plan advisory services to 401(k) plans through the ModelxChange Platform do so in conjunction with third-party plan administrators (“TPAs”). These may include such third-party administrators as Pension Inc. of Green Bay, WI or other TPAs that work with Mid Atlantic. The third-party administrators provide recordkeeping functions for one or more 401(k), 403(b) or other plans (each a “Plan,” and collectively the “Plans”) pursuant to a written agreement between the administrator and the Plan. Each Plan that engages an administrator to provide recordkeeping services also appoints a party (the “Plan Adviser”) to either manage or to assist with managing the Plan’s assets. For the Plan(s) that the advisor has selected iSectors’ models as investment choices to be made available to plan participants, the Plan Adviser compensates iSectors for the negotiated license fee based upon the size of the assets in iSectors models at the respective plans. This license fee is calculated, and paid pro-rata in arrears by Mid Atlantic, or by a plan administrator, directly to iSectors on a monthly or quarterly basis, as approved by the Plan Sponsor.

iSectors’ service is **limited** to the construction and ongoing management of its asset allocation models. These models are comprised of unaffiliated exchange-traded funds (ETFs), closed or open-end mutual funds, or Business Development Companies, exchange-traded notes (ETNs) or other securities registered in the U.S. Each investment advisor maintains exclusive responsibility to determine the initial and ongoing suitability of the model portfolio(s) they use for their clients.

The terms and conditions of the engagement between the Platform Sponsor and the investment advisor regarding the models (including information about pricing and costs) are set forth in a separate written agreement independent of iSectors’ agreements.

iSectors was originally a department of Sumnicht & Associates, LLC (“Sumnicht”). Sumnicht is also an SEC-registered investment adviser (SEC File No. 801-111421). iSectors became an independent registered investment adviser in 2008. iSectors continues to maintain an affiliation with Sumnicht. iSectors and Sumnicht continue to share administrative resources as well as certain human resources and personnel. iSectors utilizes Sumnicht personnel to provide ongoing assistance with the structure, maintenance, review and implementation of changes to the models. Sumnicht utilizes iSectors models to manage some of its clients’ accounts. iSectors, LLC is owned 50% by Vernon C. Sumnicht and 50% by Debra A. Sumnicht.

As of 2/28/2013, \$150.0 million was invested in the iSectors program.

B. Fees and Compensation

iSectors models are licensed to investment advisors and to Platform Sponsors. iSectors licenses the models to Platform Sponsors who, in turn, make them available to investment advisors. The investment advisors then use the models to service their clients’ accounts. The advisors, custodians or Platform Sponsors pay iSectors pro-rata monthly or quarterly in arrears or in advance, a license fee based upon a percentage (%) of the market value of the assets the investment advisors have allocated

to the various models. License fee percentages currently range from 0.10% to 0.30% (10 to 30 basis points) of assets. These license fees may be negotiable.

iSectors fees for its services to 401(k) Plans are similar in scope and structure as the license fees described above in that they range from 0.10% to 0.30% (10-30 basis points) of assets. Mid Atlantic's ModelxChange Platform accrues these fees daily and subsequently deducts and compensates iSectors on the last business day of each month.

Client accounts that are allocated to the various iSectors models through a Platform Sponsor or other investment Platform, such as ModelxChange may be subject to other fees, which may be bundled or unbundled. Some of these other fees could include: (i) an investment advisor's services fee, (ii) a broker-dealer or registered advisory firm's services fee, (iii) Platform Sponsor's services fee, (iv) account custodian/broker-dealer and/or transactions fees. In addition to the above applicable fees, 401(k) plan accounts may be subject to third-party administrator and recordkeeping fees.

iSectors requires a minimum dollar amount to be invested in each respective iSectors model. These minimums vary by model and may be waived at the sole discretion of iSectors. See Section D "Types of Clients" for more information on account minimums.

iSectors' annual license fee is prorated, calculated, deducted and then paid to iSectors by the Platform Sponsors. The timing and manner of the fees is typically determined by the Platform Sponsor. Dependent upon each respective Platform Sponsor's policy, the fees may be deducted monthly or quarterly, in arrears or in advance. The Platform Sponsors calculate these fees based upon the market value of the assets on the last business day of the previous period (quarter or month).

iSectors **does not** control or set Platform Sponsor, custodial or investment advisor-imposed fees and/or fee minimums and/or maximums charged by these respective service providers. iSectors **does not** receive nor share in the fees charged by these other independent service providers.

iSectors does not recommend broker-dealers and/or custodians for Platform Sponsors, investment advisors or investment advisor client accounts. The designations and selection of a broker-dealer and/or custodian, and the corresponding pricing/cost thereof, is the responsibility of parties other than iSectors, including the Platform Sponsors, investment advisors and/or each of their respective underlying firms and clients (see Section I on Brokerage Practices for more information on this topic).

C. Performance-Based Fees and Side-By-Side Management

iSectors' sole source of income is derived from the licensing and/or management of its investment models. iSectors does not assess nor accept any other fees with respect to the iSectors investment models. iSectors does not assess performance-related fees nor receive any performance-related income.

D. Types of Clients

iSectors models are available only through registered investment advisors. The investment advisors determine which iSectors model(s), if any, is (or are) appropriate for their clients based on each client's personal financial objectives and risk concerns. The risk assessment process to determine the

investments that are appropriate for any respective client is determined by the investment advisor. Platform Sponsors may make available to the investment advisor a risk assessment questionnaire to assist in the evaluation of the financial goals, investment needs, and risk tolerance of each respective client.

iSectors, LLC (“iSectors”) **does not** provide investment supervisory services or financial planning services. iSectors may provide information to investment advisors describing each respective model and/or model series.

To 401(k) Plans for which it is contracted to offer its models as designated investment alternatives, responsibility for ongoing contact with respect to education regarding the models with the Plan Sponsors and/or Plan Participants remains in the domain of the investment advisors or investment management fiduciaries with which the Plan has contracted with to provide those services.

Account Investment Minimums

iSectors typically suggests, or in some cases, requires that the Platform Sponsors establish account minimums for each respective model and/or model series (see table below). Some platforms and/or broker dealers establish higher or lower minimums for the investment models. iSectors, at its own discretion, may waive these account minimums.

Allocation Model or Series	Account Minimum (\$)
Capital Preservation	15,000
Domestic Equity	25,000
Endowment Allocation	100,000
Global Series	25,000
Inflation Protection	15,000
Liquid Alternatives	50,000
Post-MPT Series	50,000
Precious Metals	15,000
Tactical Series	25,000

Types of Accounts

iSectors models are available through the Platform Sponsors as Separate or Unified Managed Accounts (oftentimes referred to as SMAs or UMAs). Separate and Unified Managed Accounts are opened in the client’s name at independent custodians. iSectors models are available to any individual, corporation, partnership, foundation, endowment or other entities that have the authority and/or ability to open such account and are able to meet the aforementioned account minimums and agree to each respective Platform Sponsor’s terms.

Accounts for 401(k) Plans on the ModelxChange Platform are unitized, and individual participant balances are maintained by third party administrators and/or record keepers with which the Plan Sponsor has contracted to provide those services.

E. Methods of Analysis, Investment Strategies and Risk of Loss

Investment Philosophy

iSectors believes that: (1) proper asset allocation (rather than security selection) is the primary factor in the results of any investment strategy; (2) because of lower costs, most investors are generally better served by a passive, rather than an active strategy; and (3) lowering investment expenses helps increase returns.

iSectors shares many of the principles of Modern Portfolio Theory (or MPT) and portfolio management derived from the research of Miller, Markowitz, Sharpe and their colleagues, including:

- Investors are risk averse: The only acceptable risk is that which is adequately compensated by potential portfolio returns.
- Markets are efficient: Because of large numbers, stocks are, for the most part, fairly priced or efficient.
- The allocation of an investment portfolio, as a whole, is more important than individual security selection or market timing.
- Investing should be for the long-term.
- Efficient frontier: Every level of risk has an optimal allocation of asset classes that will maximize returns. Conversely, for every level of return, there is an optimal allocation of asset classes that can be determined to minimize risk.
- Diversification: Diversifying investments among assets with low correlation to each other reduces portfolio risk.

iSectors believes these principles are as valid today as they were when they were first published. iSectors employs MPT's Mean Variance Optimization in the asset allocation process for some of its models. iSectors also uses other algorithms and asset allocation methodologies.

iSectors uses multiple types of analysis in the construction of its models. Dependent upon the model, qualitative, quantitative and/or technical methods are employed in the construction and management of each respective model or model series.

iSectors investment models are primarily composed of exchange-traded funds and exchange-traded notes, and, to a lesser extent, open-end mutual funds, closed-end mutual funds and other registered, publicly-traded securities. iSectors models do not include individual equities, individual bond holdings or unregistered securities.

Model Strategies & Methods of Analysis

Model Name	Allocation Type
Capital Preservation Allocation	Passive Fixed Income
Endowment Allocation	Passive Alternatives/Equity/Fixed Income
Global Fixed Income	Passive Fixed Income
Global Conservative Allocation	Passive Equity/ Fixed Income
Global Balanced Allocation	Passive Equity/Fixed Income
Global Growth Allocation	Passive Equity/Fixed Income
Global Equity Allocation	Passive Equity
Inflation Protection	Passive Inflation
Liquid Alternatives	Passive Alternatives
Post-MPT Growth	Dynamic-Domestic
Post-MPT Moderate	Dynamic-Domestic
Precious Metals	Passive Commodities
Tactical Global Balanced	Tactical Global Multi-asset
Tactical International	Tactical International

Domestic Equity

iSectors® Domestic Equity Allocation model is a strategic asset allocation model that utilizes a Mean Variance Optimization (MVO) approach to asset allocation. The iSectors Domestic Equity allocation provides an index approach to a diversified portfolio of low-cost, large index domestic equity exchange traded funds (ETFs), intended to reduce active management costs and the correlating drag on investor performance.

Global Series

iSectors® Global models are designed to offer turnkey institutional-quality allocations to traditional asset classes, including domestic, international, and emerging market equity and fixed income securities. These strategic asset allocation models use a Mean Variance Optimization approach to implement a passive asset allocation solution. Consideration is given to Black Litterman, resampling and Monte Carlo simulations in the determination of the final portfolio allocations.

iSectors uses ETFs that are based upon fundamentally-weighted indexes in the Global Series of models. When compared to cap-weighted indexes, fundamentally-weighted indexes have shown the ability to provide better risk-adjusted returns. For example, fundamentally-weighted indexes can be based upon dividends. Numerous academic studies have consistently shown that dividend-paying stocks outperform the average stock and that, over time, dividends provide the majority of the total return from equity investments. Past performance does not ensure future results.

Endowment Allocation Model & Liquid Alternatives Allocation Model

iSectors® Endowment Allocation model operates on the premise that asset allocation, especially to inefficient asset classes, may add value to an investor's results. iSectors Endowment Allocation is based upon the philosophy pursued by the managers of Endowment portfolios at institutions like Yale and Harvard, which have been aggressively allocating to "alternative investments" such as hedge funds, private equity and real assets for decades. Not only has this enabled their longer-term

performance to be superior to their peer group, but also at a reduced risk level. While iSectors Endowment Allocation is not designed to mirror the Yale asset allocation to the fullest extent, the Endowment Allocation is inspired by the Yale approach and allocates a significant portion of the model to alternative asset classes. iSectors defines alternative assets as any asset class that is not either fixed income or long-only equities. iSectors is not affiliated nor endorsed by Yale University.

iSectors uses a number of mathematical tools, including Mean Variance Optimization, to determine the initial optimal security weightings for these models. iSectors Endowment Allocation offers investors diversification to more than 50 primarily index-based securities, a significant allocation to liquid alternative asset classes, as well as traditional domestic and international equity and fixed income asset classes. The Endowment Allocation employs a strategic asset allocation (buy and hold) strategy.

While iSectors Endowment Allocation includes alternative investments, it does not allocate to private partnerships, which are illiquid and only available to accredited investors (investors with a net worth exceeding one million dollars). All iSectors models provide daily liquidity and are available to any institutional or individual investor that meets suitability requirements. These unique advantages are achieved by using alternative investments that are available either through an ETF, ETN, business development company, a mutual fund, or other type of registered security.

The iSectors Liquid Alternatives Allocation model is comprised entirely of liquid alternative asset classes, including real assets, private equity, and hedge strategies. While iSectors Endowment Allocation is intended to be used as a stand-alone investment solution, the Liquid Alternatives Allocation model comprises the alternative investments portion of the Endowment Allocation model. iSectors Liquid Alternatives model is intended to be used by advisors in client accounts deemed to have sufficient equity and fixed income asset classes, but may benefit from an allocation to liquid alternatives. iSectors Liquid Alternative and Endowment Allocation models use only registered securities (no limited partnerships or other unregistered securities) and, therefore, advisors may use the models with non-accredited investors.

Dynamic (Post-Modern Portfolio Theory or P-MPT) Allocation Series

Post-Modern Portfolio Theory and research in Behavioral Finance have pointed the way toward more effective applications of Modern Portfolio Theory's principles. iSectors understands that:

- Equating risk with standard deviation or volatility implies that clients are just as concerned with an investment's unexpected gains as they are with unexpected losses. This violates logic, when we know investors are much more concerned with unexpected losses.
- Diversification can reduce investment risk by allocating to asset classes that are truly different from each other (have low correlation). Diversification to asset classes that are too similar to each other does not reduce risk. Note that even effective diversification does not ensure a profit nor prevent loss in a declining market.
- The economy, investment markets, investor utility, and especially investment portfolios, can all be affected by more than the three factors of risk, expected return, and correlation (which are the three main factors behind the Mean Variance Optimization asset allocation algorithm). Therefore, asset allocation algorithms that consider additional relevant capital and economic

factors when attempting to determine a portfolio's optimal asset allocation or re-balancing decisions might offer more effective solutions. A few examples of relevant factors might include: interest rates, inflation, GDP, unemployment, money supply, and others.

- Finally, lower-cost vehicles, like Exchange-Traded Funds (ETFs), can offer investors a lower total annual fee structure than managed mutual funds. These fee reductions can come from lower management expenses, commissions, and taxes. These savings may improve client returns over time.

iSectors® Post-MPT models advance traditionally-allocated MPT-based methodologies in the following ways:

- a. Because iSectors applies an algorithm that incorporates more than a dozen relevant, real-world capital and economic factors into the calculation (as opposed to the three used by MVO), the model is more robust than traditional MPT-based allocations.
- b. iSectors utilizes negative returns (loss of money) as opposed to standard deviation as a risk measurement in our calculations.
- c. iSectors utilizes index ETFs in the application of our strategies. These securities can lower costs and tax implications over traditional mutual fund or actively managed portfolios.
- d. iSectors Post-MPT models allocate to asset classes that are less correlated to one another than traditional methods. For example, the behavior of traditional capitalization (large, mid and small cap) and fundamental (value-growth) asset classes in the Morningstar style box have become too similar (with correlations approaching one). Therefore, asset allocation using these asset classes has become less effective at reducing risk. iSectors believes that the Post-MPT models have a more effective diversification methodology and may assist in providing better risk-adjusted returns. Diversification does not ensure a profit, nor does it prevent losses in a declining market.

Tactical Series

iSectors® Tactical Series are unique within the iSectors series of models in that they are the only models that will use cash as a defensive mechanism within the context of the strategy.

iSectors Tactical Global Balanced Allocation applies a proprietary trend-following set of rules to allocate to and among 7 identified asset classes, including Domestic Equities (both small and large capitalization), International Equities, Emerging Market Equities, Bonds, Gold, Commodities and Real Estate (Real Estate Investment Trusts or REITs). This model algorithm determines which, if any, of the defined asset classes are to be included or excluded within the model for each month. The model will move to cash (up to 100% of the portfolio) when certain criteria are not met.

iSectors Tactical International Allocation model allocates only to international, emerging market and regional/international ETF index securities. Domestic and fixed income securities are not targeted asset classes within this model. iSectors Tactical International Allocation model's objective is to provide greater returns than a simple diversified international index by implementing a momentum algorithm for selection of international ETFs. The iSectors Tactical International model is based upon a proprietary momentum algorithm that systematically identifies when individual international ETFs are showing positive performance momentum on both an absolute and relative basis. The Tactical model will rotate to cash (up to 100%) when there are no international ETF securities that meet its

minimum criteria.

Capital Preservation Allocation Model

The iSectors® Capital Preservation Allocation model has been constructed for investors with a desire for principal stability by creating a portfolio of investments with relatively low volatility. Nominal portfolio yield is a secondary goal of the model. The model holds fixed income Exchange-Traded Funds (ETFs) that invest in short-duration, investment grade-rated government or other investment-grade debt instruments. A smaller portion of the assets may be placed in ETFs holding short-term international instruments, high yield securities, senior bank loans, and/or floating rate notes. The model will generally target ETFs holding bond portfolios with duration of less than 3 years, although longer duration bond funds will be considered with the overall goal of limiting the model's overall portfolio duration to approximately 3 years (or less) and an overall average portfolio rating of investment grade. iSectors Capital Preservation model remains 100% allocated to short and intermediate-term fixed income allocations at all times. Risk is controlled through diversification and limiting the model to higher quality, shorter-term, fixed income instruments. Diversification does not ensure a profit nor prevent against loss in a declining market.

While stability of principal is the primary goal of this portfolio, the secondary objective is to provide current income higher than money market funds or short-term CDs. An investment in the iSectors Capital Preservation Allocation model, as with all iSectors models, is not guaranteed and will fluctuate in value.

Inflation Protection Allocation Model

For an investment portfolio to maintain purchasing power, the investments within that portfolio must earn a rate of return that, net of taxes, at a minimum, keeps pace with the rate of inflation.

The core philosophy of the iSectors® Inflation Protection Allocation model is a diversified, optimally allocated portfolio that offers investors the potential to hedge the risks of inflation. The model portfolio is designed to grow in a high inflationary environment, although there is no guarantee that the portfolio will perform as intended should an inflationary environment materialize.

Concerns of iSectors' Investment Committee with respect to macro-economic conditions in the U.S. economy led iSectors to research and develop a universe of investments (mostly ETFs) that have historically shown positive performance during inflationary periods. Mean Variance Optimization, fundamental and technical analysis of inflation-related indexes, portfolio optimization techniques and historical research were and are applied in the construction and maintenance of this model.

Precious Metals Allocation Model

For an investment portfolio to maintain purchasing power, the investments within that portfolio must earn a rate of return that, net of taxes, at a minimum, keeps pace with the rate of inflation.

The core philosophy of the iSectors® Precious Metals Allocation model is a diversified portfolio of precious metals bullion ETFs that offers investors the potential to hedge the risks of inflation. The model portfolio is designed to grow rapidly in a high inflationary environment, although there is no guarantee that the portfolio will perform as intended should an inflationary environment materialize.

Mean Variance Optimization, fundamental and technical analysis of precious metals indexes, portfolio optimization techniques and historical research were and are applied in the construction and maintenance of this model.

Research & Data Sources

iSectors conducts proprietary research in the development of its models. In conjunction with its research activities, iSectors relies upon unrelated, third-party sources for numerical and fundamental data, software, and other related materials. iSectors purchases these resources directly and does not receive soft dollar benefits from any broker-dealers or other third party in connection with procuring its research resources.

Other than its relationship with Sumnicht & Associates, iSectors is an independent organization. iSectors seeks to develop relationships with multiple investment Platform Sponsors, investment advisors and independent custodians. iSectors policy is to remain agnostic with respect to its relationships with the investment Platform Sponsors, investment advisors and independent custodians through which iSectors make its investment program available.

Risks

iSectors utilizes numerous asset allocation strategies which allocate assets to exchange-traded funds, mutual funds, business development companies, and exchange-traded notes. In turn, these investment vehicles will purchase and sell underlying securities in accordance with their investment documents. Those underlying securities may include traditional domestic and international asset classes. Certain ETFs and/or ETNs hold commodities, currencies, real estate investment trusts, master limited partnerships, options, futures and/or other derivatives. Thus, the risks associated with investing in iSectors models are closely related to the risks associated with the underlying securities and other investments held by the funds. The ability of each respective model portfolio to achieve its investment objective will depend on the ability of the underlying funds to achieve their investment objectives.

iSectors models are not guaranteed, nor are they FDIC insured. All iSectors models will fluctuate in value, and involve risk of loss. While iSectors employs various strategies that are intended to provide returns while reducing portfolio volatility and draw downs (portfolio declines), the various diversification, asset allocation and tactical strategies do not ensure a profit nor prevent a loss. Investors should examine their investment goals and understand to what extent they are capable of handling a loss when considering any investment, including those offered by iSectors.

Some, but not all of the risks of investing in iSectors models may include:

Active Trading Risk. Certain iSectors models and model holdings may be subject to active trading risk. The frequent exchange of shares of the portfolio may cause the portfolio to experience high turnover. High portfolio turnover may result in the portfolio having to pay higher transaction costs and may negatively impact the portfolio manager's ability to achieve the investment objective of the portfolio.

Commodities Risk. iSectors invests in securities and strategies linked to commodities indexes that are concentrated in the commodities sector. The market value of these holdings may be influenced by many unpredictable factors, including, where applicable, highly volatile commodities prices; changes in supply and demand relationships; weather; agriculture; trade; pestilence; changes in interest rates; and monetary and other governmental policies, action and inaction. Index components that track the performance of a single commodity, or index components concentrated in a single sector, are speculative and may typically exhibit higher volatility. The current or "spot" prices of the underlying physical commodities may be lower (contango) or higher (backwardation) than the prices of futures contracts of the respective commodities. When exchange-traded funds own futures, contango can make it more difficult to profit on the commodities investment. To the extent that any particular iSectors model may be invested in funds that hold commodities or commodities-related investments, that respective iSectors model is subject to commodities risk.

Credit Risk. Credit risk is the risk that the issuer of a security may be unable to make interest payments and/or repay principal when due. A downgrade to an issuer's credit rating or a perceived change in an issuer's financial strength may affect a security's value and, thus, impact the portfolio's performance. To the extent that any particular iSectors model holds fixed income securities, those respective models will be subject to credit risk.

Emerging Markets Risk: Some foreign markets in which the model may invest are considered to be emerging markets. Investment in these emerging markets subjects the portfolio to a greater risk of loss than investments in a developed market. This is due to, among other things, greater market volatility, lower trading volume, political and economic instability, high levels of inflation, deflation or currency devaluation, greater risk of market shut down, and more governmental limitations on foreign investment policy than those typically found in a developed market. In addition, the financial stability of issuers (including governments) in emerging market countries may be more precarious than in other countries. As a result, there will tend to be an increased risk of price volatility in investments in emerging market countries, which may be magnified by currency fluctuations relative to the U.S. dollar. Settlement practices for transactions in foreign markets may differ from those in U.S. markets. Such differences include delays beyond periods customary in the United States and practices, such as delivery of securities prior to receipt of payment, which increase the likelihood of a "failed settlement." Failed settlements can result in losses to the fund. For these and other reasons, investments in emerging markets are often considered speculative. To the extent that the portfolio has investments in emerging markets, the portfolio is subject to emerging markets risk.

Equity risk is the risk that one's investments will depreciate because of stock market dynamics causing one to lose money. iSectors models are subject to equity risk to the extent the portfolio is invested in equity securities. iSectors models not guaranteed and will fluctuate in value.

Foreign Securities Risk: Returns on investments in foreign securities could be more volatile than, or trail the returns on, investments in U.S. securities. Investments in securities issued by entities based outside the U.S. pose distinct risks since political and economic events unique to a country or region will affect those markets and their issuers. Further, such entities and/or their securities may also be affected by currency controls; different accounting, auditing, financial reporting, and legal standards and practices; expropriation; changes in tax policy; greater market volatility; differing securities market structures; higher transaction costs; and various administrative difficulties, such as delays in clearing and settling portfolio transactions or in receiving payment of dividends. Securities traded on foreign markets may be less liquid (harder to sell) than securities traded domestically. These risks

may be heightened in connection with investments in developing or emerging countries. Thus, to the extent the model is invested in funds that invest in foreign securities, this portion of the fund is subject to foreign securities risk.

Exchange-Traded Note Risk. Exchange-traded notes are unsecured obligations of the issuing bank and are not secured debt. Exchange-traded notes are riskier than ordinary unsecured debt securities and have no principal protection. Risks of investing in the exchange-traded notes include: limited portfolio diversification, trade price fluctuations, uncertain principal repayment, and illiquidity. Investing in exchange-traded notes is not equivalent to investing directly in an index or in any particular index components. The management fee will reduce the amount of return at maturity or on redemption and, as a result, you may receive less than the principal amount of your investment at maturity or upon redemption of the exchange-traded note(s), even if the level of the relevant index has increased or decreased (as may be applicable to the particular series of securities). To the extent that any particular iSectors model holds exchange-traded notes, that model is subject to exchange-traded note risk. In 2012 iSectors removed ETNs from all models. While ETNs remain part of the iSectors securities universe, iSectors has no current plans to include ETNs in any of its models for the foreseeable future.

Foreign Securities Risk. Certain iSectors models invest in portfolios of equity and fixed income securities of foreign issuers, which involves risks not typically associated with domestic issuers, including different accounting practices, currency fluctuations and the possibility of political and economic instability. Emerging markets involve risks in addition to those generally associated with foreign securities because political and economic structures in many emerging markets may be undergoing significant evolution and rapid development.

Index Fund Risk. Index fund risk relates to the fact that index holdings are not actively managed and may be affected by declines in general market segments related to the underlying indexes. Representative indexes invest in securities included in, or representative of, underlying indexes, regardless of their investment merits.

Interest Rate Risk. Interest rate risk is the risk (variability in value) borne by an interest-bearing asset, such as a loan or a bond, due to fluctuating interest rates. In general, as rates rise, the price of a fixed rate bond will fall, and vice versa. Interest rate risk is commonly measured by the bond's duration. iSectors models that contain fixed income securities, particularly medium and long-term fixed income holdings, will be subject to interest rate risk to the extent of the portion of fixed income instruments held in the portfolio in relation to the entire portfolio.

Inflation Risk. Inflation risk is the possibility that the value of assets or income will decrease as inflation shrinks the purchasing power of a currency. iSectors models with a greater percentage of holdings in domestic securities, particularly domestic fixed-income securities, are subject to a greater degree of inflation risk than those portfolios that may hold equity or real assets.

Leveraged ETF Risk. iSectors Post-MPT Growth portfolio, at times, will utilize leveraged exchange-traded funds in the execution of its strategy (no other iSectors models hold leveraged ETFs). Leveraged ETFs are different from most exchange-traded funds in that they seek leveraged returns, and only on a daily basis. These exchange-traded funds are riskier than similarly benchmarked exchange-traded funds that do not use leverage. Leveraged ETFs employ aggressive investment techniques (futures contracts, options, forward contracts, swap agreements and similar

instruments), correlation or inverse correlation, leverage and market price variance, all of which can increase volatility and decrease performance. In addition to the normal risks associated with investing, narrowly-focused investments typically exhibit higher volatility. These risks can increase volatility and decrease performance. In addition, leveraged ETFs seek investment results for a single day only, not for longer periods. This means that the return for leveraged ETFs for periods longer than a single trading day will be the result of each day's returns compounded over the period, which will very likely differ from twice (200%) the return of underlying index for that period. To the extent that the iSectors Post-MPT Growth Allocation holds leveraged exchange-traded funds, the model is subject to these risks.

Liquidity Risk. In finance, liquidity risk is the risk that a given security or asset cannot be traded quickly enough in the market to prevent a loss (or make the required profit). Only registered, publicly-traded securities are held in iSectors models. Securities held are primarily index exchange-traded funds, exchange-traded notes, closed-end mutual funds and open-end mutual funds. iSectors takes market capitalization, trading volume and other liquidity-related factors into consideration when evaluating securities for inclusion in all iSectors models. However, an active market with sufficient trading volume is not guaranteed and in the event of an unusual market event, such as one that occurred in May, 2010, investors with holdings in iSectors models may be subject to liquidity risk, should they choose or need to liquidate their model holdings at such time.

Model Risk. iSectors models employ research based upon historical studies and proprietary algorithms. There is no level of probability or guarantee that these models will continue to work in the future. Past performance is no guarantee of future results.

Performance Risk. There is no assurance that any particular iSectors model will achieve its stated goals.

Principal Risk. All iSectors models invest in publicly-issued securities that fluctuate in value. These securities, depending on the model, may include some or all of the following, including: equity securities such as common and preferred stocks, domestic and foreign government bonds, domestic and foreign corporate-issued fixed income securities, real assets (such as real estate investment trusts, commodities, and precious metals), or derivatives such as futures and options. Investments in all of these asset classes are subject to market risks that may cause their prices to fluctuate over time.

Tracking Error Risk. iSectors models hold index and index-related securities. Imperfect correlation between the index portfolio of securities, and those in its underlying index, can be caused by many factors, including: rounding of prices, changes of the underlying index and regulatory requirements that may cause tracking error, or the divergence of the index securities held in our models from those of their respective underlying indexes. This risk may be heightened during times of increased market volatility or unusual market conditions. Tracking error may also result from the fees incurred by the underlying funds, as well as the management, trading and other fees incurred by investing in the model, while the underlying indexes do not incur these fees. iSectors does not actively manage tracking error within its models.

* * * *

Some of the more obvious risks are discussed here. However, this is not a comprehensive list of all possible risks, as there are many other risks that could affect an investor's investment portfolio. For example, political risks, legal risks, risks of fraud, contango or backwardation in the case of futures and commodities, lack of diversification, management changes, and/or natural disasters. These, along with other risks not listed here because they are unknown or could develop in the future, can negatively affect investment portfolios.

Clients must accept and understand that investment in iSectors models is subject to various market, interest rate, liquidity, marketability, currency, economic, political, legal, business and/or other risks. In addition, these known and unknown risks may adversely affect investment results and/or the ability to achieve financial objectives.

Tax Information. Income and capital gain distributions you receive from investment in iSectors models are subject to federal income taxes and may also be subject to state and local taxes.

F. Disciplinary Information

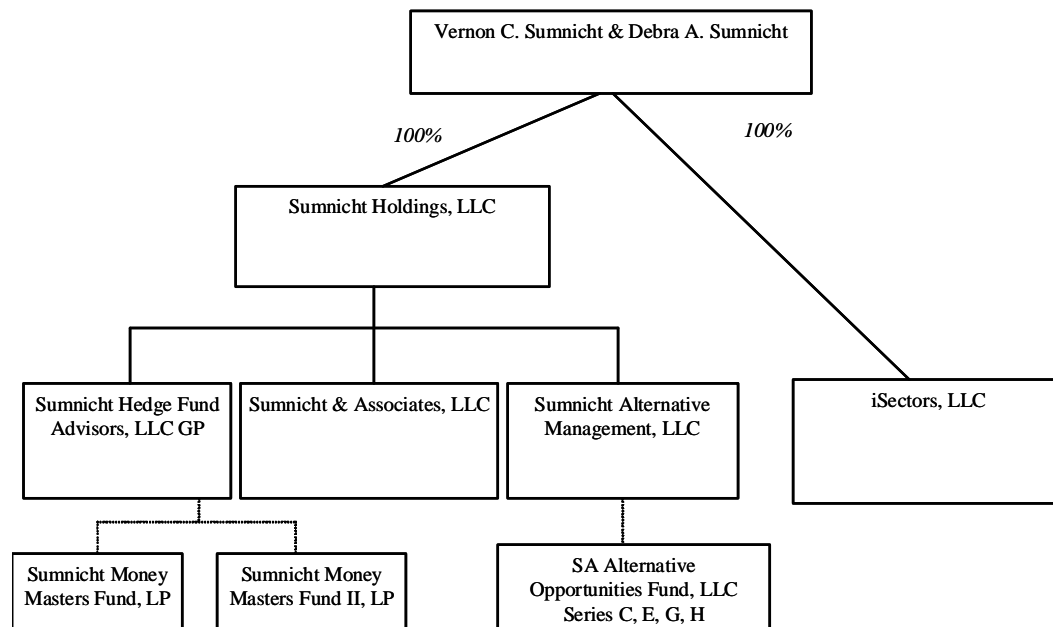

Nothing to disclose.

G. Other Financial Industry Activities and Affiliations

iSectors was originally developed in 2002 by Vernon C. Sumnicht as a department of his 1988 SEC-registered investment advisory firm, Sumnicht & Associates, LLC ("Sumnicht"). In 2008, iSectors, LLC became its own registered investment adviser and still maintains an affiliation with Sumnicht. iSectors and Sumnicht continue to share certain back-office and administrative resources, as well as certain capital resources and personnel. iSectors' responses within this disclosure document contemplate and include those shared resources.

Given the evolution of iSectors, the fact that the iSectors models were originally developed by Vernon Sumnicht at Sumnicht & Associates, LLC, and the affiliated and aligned nature of the relationship between iSectors and Sumnicht, note that Sumnicht has not undergone any major organizational or ownership changes during the past five years. Sumnicht became a registered investment advisor in 1988 and its control has always been, and continues to be, vested in Vernon Sumnicht and his wife, Debra Sumnicht.

iSectors, via its relationship to Sumnicht, is affiliated with various private investment funds sponsored by Sumnicht and/or its affiliated entities (the “Funds”). iSectors does not have arrangements with the Funds that are material to its advisory operations. iSectors does not make any of these Funds available to Platform Sponsors or investment advisors. A description of the Funds is set forth in Sumnicht & Associates’ written disclosure statement, a copy of which is available upon request.

H. Code of Ethics, Participation or Interest in Client Transactions and Personal Trading

iSectors has adopted a compliance manual that addresses actual and potential conflicts of interest. iSectors' associates are not generally presented with the types of conflicts of interest faced by many other investment advisors. This is because: (a) iSectors’ activities are limited to creating and revising its models, and (b) because iSectors does not advise clients on individual securities (or their individual financial situation and investment objectives).

iSectors, and/or its affiliated persons, may purchase or sell securities that comprise iSectors’ asset allocation models. iSectors, in conjunction with Sumnicht, has implemented an investment policy relative to personal securities transactions. This investment policy is part of iSectors’ overall Code of Ethics, which serves to establish a standard of business conduct for all of iSectors’ Access Persons that is based upon fundamental principles of competence, integrity, honesty, confidentiality, and trust.

Confidentiality - In accordance with Section 204A of the Investment Advisers Act of 1940, iSectors also maintains and enforces written policies reasonably designed to prevent the misuse of material non-public information by iSectors or any person associated with iSectors. The Code of Ethics includes policies and procedures for maintaining the confidentiality of confidential information

relating, among other things, to any personal, non-public information. Employees, as well as Access Persons, are prohibited from disclosing any confidential information within the company (other than on a “need-to-know basis”) or outside the company in the absence of appropriate confidentiality arrangements, or to regulators or legal authorities who have a legal right to receive such information.

Gifts and Gratuities - The Code of Ethics includes a limitation on the giving and receiving of gifts and gratuities by employees to items of small value. Items of more than small value are to be returned immediately and reported to the Firm’s Chief Compliance Officer. Similarly, business entertainment, provided or accepted, should be infrequent, modest and intended to serve legitimate business goals. Bribes and kickbacks are strictly prohibited.

Where applicable, and although not a material consideration when determining model holdings, iSectors and/or Sumnicht may receive from a particular broker-dealer/custodian, mutual fund, exchange-traded fund management or distributor group, without cost (and/or at a discount), support services and/or products, certain of which assist iSectors in its research and ongoing management process of its models. Included within the support services that may be obtained by iSectors may be investment-related research, pricing information and market data, software and other technology, compliance and/or practice management-related publications, discounted or gratis consulting services, discounted and/or gratis attendance at conferences, meetings, and other educational and/or social events, marketing support, and/or software and/or other products used by iSectors in furtherance of its investment advisory business operations.

As indicated above, certain of the support services and/or products that may be received may assist iSectors in managing and administering its models. Others do not directly provide such assistance, but rather assist iSectors to manage and further develop its business enterprise.

Neither iSectors nor Sumnicht pay more for investment transactions effected and/or assets maintained at any custodian as a result of these arrangements. There is no corresponding commitment made by iSectors to use an exchange-traded fund, exchange-traded note, mutual fund, any custodian or any other entity to invest any specific amount or percentage of assets in any specific mutual funds, securities or other investment products.

Compliance with Code of Ethics - The Firm’s Chief Compliance Officer is primarily responsible for implementing and administering the Code of Ethics. Employees, as well as Access Persons, are required to report any violations of the Code of Ethics or applicable laws. Failure to comply with the Code of Ethics may result in disciplinary action, up to and including termination.

Other Provisions - The Code of Ethics includes other provisions regarding insider trading, communications with media, honest and ethical conduct and fair dealing, the protection of corporate assets and corporate business opportunities, gifts and gratuities and the accuracy of the books and records and public records. iSectors will provide a copy of the Code of Ethics to any client or prospective client upon request.

I. Brokerage Practices

All trading functions for iSectors strategies are outsourced to the respective Platform Sponsors and/or licensees for all iSectors asset allocation models. iSectors does not generally have responsibility to execute securities transactions. Securities transactions within the models are directed by the Platform Sponsors through independent custodians selected by investment advisors and/or determined by their

clients. To the extent applicable to the models and/or transactions to be effected, iSectors has determined, where applicable, to follow Sumnicht & Associates' policies relative to the execution of securities brokerage transactions.

The custodial and trading fees charged by the independent custodians are typically assessed as a flat annual fee or are based on a percentage of assets in the models. These fees are negotiated between the custodian and the Platform Sponsors. The brokerage and custodial fees vary, dependent upon the independent agreements between the respective custodians, Platform Sponsors and, if applicable, any affiliated broker-dealer or investment advisor.

J. Review of Accounts

iSectors **does not** provide investment supervisory services or financial planning services to the general public. As such, iSectors is not responsible for any underlying client/investor contact. Rather, all such client-related functions are the exclusive responsibility of the adviser utilizing the iSectors models.

iSectors **does not** provide any client-related reports. Advisers and/or their clients are provided with transaction confirmation notices and regular summary account statements, performance reports, realized gains and/or loss reports, etc. directly from the designated broker-dealer/custodian and/or Platform Sponsor.

K. Client Referrals and Other Compensation

iSectors maintains two solicitor relationships and may engage additional solicitors in the future. Solicitors for iSectors limit activities to contacting potential Platform Sponsors or investment advisors for the purpose of introducing them to and educating them about the available models and model strategies.

iSectors requires each solicitor to provide each potential Platform Sponsor or investment advisor with iSectors' ADV Part 2 Brochure, as well as a letter which complies with Rule 206 (4)-3 of the Investment Advisers Act of 1940, and any corresponding state securities law requirements. (Note: iSectors views this disclosure as optional, since it does not have advisory clients within the definitions of the Rule 206 (4)-3.) Any referral fee earned by a solicitor from this arrangement shall be paid solely from iSectors' license fees, and shall not result in any additional charge to the client

L. Custody

Securities custody (and related transactions) within the models are typically directed by the Platform Sponsor through independent custodians selected by investment advisors and/or determined by their clients. iSectors does not recommend broker-dealers and/or custodians for Platform Sponsors, investment advisors or investment advisors' client accounts. The designations and selection of a broker-dealer and/or custodian, and the corresponding pricing/cost thereof, is the responsibility of parties other than iSectors, including the Platform Sponsors (Platform providers), investment advisors and/or each of their respective underlying clients.

The custodial and trading fees within the Program are typically assessed either on a flat annual fee or on a percentage of assets in the program. These fees are negotiated between the custodian and the

Platform Sponsors and vary dependent upon the independent agreements between the respective custodians, Platform Sponsors and, if applicable, any affiliated broker-dealer.

Sumnicht & Associates maintains equity ownership in National Advisors Trust Company - National Advisors Trust is in the process of becoming a custodial option for Envestnet, which is one of the Platform Sponsors of iSectors models. Vernon Sumnicht owns an equity interest (<1%) in National Advisors Trust Company and, therefore, iSectors & Sumnicht & Associates cannot be considered truly independent of this custodian. Neither Sumnicht & Associates, Vernon Sumnicht, nor any company affiliated with Sumnicht & Associates, receives any portion of the fees charged by National Advisors Trust.

M. Investment Discretion

iSectors is **not responsible** for and does not have any underlying client/investor contact. Rather, all such client-related functions are the **exclusive responsibility** of the investment advisors that have licensed the models directly from iSectors and/or are utilizing and accessing the models through a Platform Sponsor. iSectors does not have any advisory agreements with individual clients and does not maintain discretion over any individual client accounts.

For 401(k) and/or other retirement Plans that execute the iSectors model management agreement, (currently in development), iSectors will exercise discretion over the changes in accounts assigned to its respective models. For 401(k) plans, iSectors intends to contract with advisors and or investment managers to provide client contact-related functions to the Plans.

N. Voting Client Securities

iSectors does not vote client proxies. The Platform Sponsor(s) maintains responsibility for voting client proxies through retention of a third party for: (1) directing the manner in which proxies solicited by issuers of securities beneficially owned by the investment advisor's clients shall be voted, and (2) making all elections relative to any mergers, acquisitions, tender offers, bankruptcy proceedings or other type events pertaining to the investment assets in the client accounts.

O. Financial Information

No disclosure necessary.
