ITEM 4

ADVISORY BUSINESS

A. General Description of C12 Capital Management US LP

C12 is a Delaware limited partnership that was established on November 10, 2011 and began operating in January 2012. Its general partners are C12 Capital Management US LLC, a Delaware limited liability company (“US GP”), and C12 Global Management US LLC, a Delaware limited liability company (“Global GP,” and together with US GP, the “General Partners” and each, a “General Partner”), and its limited partners are Roy Cantu, David Wright, Thomas McCosker, Darryl Kenneth Herrick and Jasen Yang, who are also the members of C12’s management team (collectively, the “Management Team”).

US GP is wholly owned on a collective basis by the individuals comprising the Management Team. Global GP is wholly owned by Stephen King and Sean McKenna.

B. Advisory Services

C12’s advisory services predominantly consist of discretionary sub-advisory services tailored to clients who themselves provide investment management or advisory services to others. C12’s initial client is C12 Capital Management LP, a Delaware limited partnership also registered as an investment adviser with the U.S. Securities and Exchange Commission (its “Initial Client”). C12 provides investment analysis, research and advice to its Initial Client with respect to C12 Helix Liquid Opportunities LP, a Delaware limited partnership, C12 Helix Liquid Opportunities, Ltd., an exempted company incorporated with limited liability under the laws of the Cayman Islands, and their respective subsidiaries and other vehicles controlled by C12 Helix Liquid Opportunities General Partner, Ltd., an exempted company incorporated under the laws of the Cayman Islands (“Helix GP”), or established by Helix GP to facilitate investment in the foregoing entities (collectively, the “Helix Funds”). C12 exercises discretionary authority with respect to investment decisions for its Initial Client in respect of the Helix Funds.

The services that C12 provides to its clients generally will be determined on a negotiated basis and tailored to meet each client’s needs and investment objectives, strategies and restrictions. Because C12’s clients are predominantly expected to be clients who themselves provide investment management or advisory services to others, C12’s services typically will be based on the services that its clients are required or expected to provide to their respective clients.

C12 provides sub-advisory services relating to investments in interest rate and credit derivatives, government debt, corporate debt, mortgage-backed securities, asset-backed securities, commodities, equities and indices, futures, options, and other derivatives with respect thereto. C12 may expand its services, expertise, capabilities and relationships in the future to meet the needs of its clients or particular advisory or sub-advisory relationships, including, in the future, the provision of direct or discretionary investment management or advisory services.

Each pooled investment vehicle C12 may manage or otherwise advise or sub-advise in the future (collectively, with the Helix Funds, “client funds”) will be managed or advised in accordance with its investment guidelines and restrictions and C12’s advice or services are not tailored to the individualized needs of any particular investor in any Client Fund.. An investment in a Client Fund does not, in and of itself, create an advisory relationship between the investor and C12. Investors in any Client Fund must consider whether such vehicle meets their investment objectives and risk tolerance prior to making an investment in the Client Fund. Depending on the needs of its clients, C12 may in the future provide discretionary investment advisory services or otherwise exercise discretionary authority with respect to investment decisions for its Client Funds.

C. Assets Under Management

C12 provides non-discretionary sub-advisory services in respect of approximately \$2.052bn in regulatory assets under management, calculated as of February 28, 2013.

ITEM 5

FEES AND COMPENSATION

A. Advisory Fees

C12's fee arrangements generally depend on the services being provided, vary by client and are negotiated with each client based on a number of factors, including, investment strategy, the nature and scope of services performed and the size of the account/relationship. C12 and/or the Management Team (or entities or individuals affiliated with any of them) may also receive performance fees, special allocations and asset-based fees from time to time. Please see Item 6 "Performance-Based Fees and Side-By-Side Management" for an additional discussion of performance based fees and allocations.

B. Fee Schedules – Initial Client

For its Initial Client, C12 charges a cost-plus fee that is billed to the Initial Client in advance for each quarter. The cost-plus fee arrangement provides for the payment of C12's expenses, generally up to a predetermined amount, and includes a predetermined fee, equal to a percentage of C12's budgeted costs as determined by the Initial Client, in addition to such expense payment. The fee is negotiated annually for each upcoming year but may be further adjusted on a quarterly or other basis, subject to the agreement of the Initial Client.

C. Timing and Payment of Fees

C12 will negotiate the timing of fee payments with each client, but C12's fees will generally be billed and payable in advance of each quarter. If a client terminates C12's advisory relationship mid-quarter, the client may be able to recover an amount up to the unearned portion of the fee, but generally will not be able to recover amounts relating to costs already incurred (including any related fees charged by C12). In addition, because many of the service providers C12 expects to employ in connection with its activities also bill for their services in advance, the amounts that a client may be able to recover may be further limited to the amounts that C12 can recover from its service providers.

D. Other Fees and Expenses

In addition to the fees described above, clients may be subject to other costs and expenses in connection with C12's sub-advisory or advisory services. Such fees may include, among others: custodial charges, brokerage fees, commissions and related costs; interest expenses; taxes, duties and other governmental charges; transfer and registration fees or similar expenses; costs associated with foreign exchange transactions; other portfolio expenses; and costs, expense and fees associated with products or services that may be necessary or incidental to such investments or accounts.

Please see Item 12 "Brokerage Practices" for an additional discussion of brokerage and other transaction costs.

ITEM 6

PERFORMANCE-BASED FEES AND SIDE-BY-SIDE MANAGEMENT

As noted in Item 5 “Fees and Compensation”, C12 and/or the Management Team (or entities affiliated with any of them) of C12 may earn performance-based fees or other incentive compensation at various levels, with respect to certain clients. Under a performance based fee or allocation, C12 receives a portion of the portfolio’s positive rate of return which, in certain instances, may be subject to the portfolio reaching a target level of return. However, performance-based fees and their terms, conditions and methods of calculation may vary among clients and investment strategies and certain clients do not pay performance-based fees and may only be charged a management fee or other fixed fee. Currently, certain members of the Management Team receive performance-based or asset-based compensation pursuant to their contractual agreements.

The management of portfolios that are charged different types of fees and are managed by the same adviser can create a conflict of interest. The variation in management fees and performance-based incentive compensation among C12’s clients may create an incentive for C12 to direct the best investment ideas to, or to allocate or sequence trades in favor of, clients that pay or allocate performance-based incentive based compensation over a client that only pays asset-based fees. In addition, when C12 or its personnel (including the Management Team) receives performance-based incentive compensation, or C12 and such personnel have a financial incentive to achieve gains in excess of the disincentive to suffer losses, C12 and/or such personnel may have an incentive to choose investments that are riskier or more speculative than might otherwise be chosen.

In connection with any non-discretionary execution services it may provide, C12 is committed to allocating investment opportunities on a fair and equitable basis and has established policies and procedures to address the conflicts of interest described above, including generally allocating trades among clients on a *pro rata* basis and periodically reviewing trade allocations to ensure that they are fair, equitable and in compliance with C12’s allocation policy and fiduciary duties to each of its clients. Please see Item 11 “Code of Ethics, Participation or Interests in Client Transactions and Personal Trading” for an additional discussion of C12’s trade allocation policy.

ITEM 7

TYPES OF CLIENTS

Currently, C12 primarily provides sub-advisory services to clients who themselves provide investment management or advisory services to others; C12 has entered into such a relationship with its Initial Client, but may enter into direct or discretionary advisory relationships with other clients in the future. C12 expects to provide services predominantly to institutional clients and to investment advisers in respect of pooled investment vehicles, but may in the future provide services for various other types of appropriately qualified clients. C12 currently does not currently impose on its clients a minimum dollar value of assets or other requirements in order to open or maintain an account, but may do so in the future.

Although C12 has not yet imposed any minimum account size of its own, C12's Initial Client imposes on behalf of the Helix Funds a minimum commitment on investors in the Helix Funds, which minimum is dependent on the class of interests in the Helix Funds which such investor is acquiring. These minimums may be waived only at the sole discretion of the Helix Funds and/or Helix GP. Investors in the Helix Funds may include, without limitation, high net worth individuals, financial, banking or thrift institutions, insurance companies, investment companies (including mutual funds), fund-of-funds, pension and profit-sharing plans, other pooled investment vehicles, charitable organizations or foundations, endowments, trusts and estates, corporations and other business entities, development finance institutions and federal, as well as state or municipal government entities.

ITEM 8

METHODS OF ANALYSIS, INVESTMENT STRATEGIES AND RISK OF LOSS

A. Methods of Analysis and Investment Strategies

Although C12 may enter into direct advisory relationships with clients in the future, C12's current services consist of providing discretionary services on a sub-advisory basis to clients, such as the Initial Client, who themselves provide investment management or advisory services to others. Accordingly, our primary role currently is to provide additional tools and expertise to enhance its clients' ability to achieve the investment objectives and strategies of their respective clients. With respect to our Initial Client, we provide investment analysis, research and advice with respect to the Helix Funds based on the investment strategy described below.

The investment strategy for the Fund begins with the premise that attractive and scalable relative value opportunities exist across global macro markets. We seek to profit from the most attractive of these cross-market relative value opportunities, leveraging the Investment Process described below, through a tactical asset allocation across global markets.. We assists the Investment Manager in accomplishing the investment goals of the Fund

The Fund's investment objective is to deliver attractive risk-adjusted returns to its investors, leveraging proprietary analytical technology and the experience of the Investment Committee. Examples of assets and instruments that may be used in connection with the above objective include: (i) interest rate derivatives; (ii) government debt; (iii) currencies; (iv) credit derivatives; (v) corporate debt; (vi) mortgage-backed securities; (vii) asset-backed securities; (viii) commodities; (ix) equities; and (x) indices, futures, options, and other derivatives with respect thereto.

B. Material, Significant or Unusual Risks Relating to Investment Strategies

U.S. Government Obligations. U.S. Government obligations include securities issued by the U.S. Treasury, U.S. Government agencies or government-sponsored entities. While U.S. Treasury obligations are backed by the "full faith and credit" of the U.S. Government, securities issued by U.S. Government agencies or government-sponsored entities may not be backed by the full faith and credit of the U.S. Government. Government National Mortgage Association ("GNMA" or "Ginnie Mae"), a wholly owned U.S. Government corporation, is authorized to guarantee, with the full faith and credit of the U.S. Government, the timely payment of principal and interest on securities issued by institutions approved by GNMA and backed by pools of mortgages insured by the Federal Housing Administration or the Department of Veterans Affairs. Government-sponsored entities (whose obligations are not backed by the full faith and credit of the U.S. Government) include the Federal National Mortgage Association ("FNMA" or "Fannie Mae") and the Federal Home Loan Mortgage Corporation ("FHLMC" or Freddie Mac). Pass-through securities issued by FNMA are guaranteed as to timely payment of principal and interest by FNMA but are not backed by the full faith and credit of the U.S. Government. FHLMC guarantees the timely payment of interest and ultimate collection or scheduled payment of principal, but its participation certificates are not backed by the full faith and credit of the U.S. Government. If a government-sponsored entity is unable to meet its obligations or its

creditworthiness declines, the performance of a Client Account that holds securities issued or guaranteed by the entity will be adversely impacted. U.S. Government obligations are subject to low but varying degrees of credit risk, and are still subject to interest rate and market risk.

Credit Default Swaps. A credit default swap is a contract between two parties which transfers the risk of loss if a company fails to pay principal or interest on time or files for bankruptcy. In essence, an institution which owns corporate debt instruments can purchase a limited form of default protection by entering into a credit default swap with another bank, broker-dealer or financial intermediary. Upon an event of default, the swap may be terminated in one of two ways: (i) by the purchaser of credit protection delivering the referenced instrument to the swap counterparty and receiving a payment of par value, or (ii) by the parties pairing off payments, with the purchaser of the protection receiving a payment equal to the par value of the reference security less the price at which the reference security trades subsequent to default. The first way is the more common form of credit default swap termination.

In the manner described above, credit default swaps can be used to hedge a portion of the default risk on a single corporate bond or a portfolio of bonds. Credit default swaps can be used to implement C12's view that a particular credit, or group of credits, will experience credit improvement. In the case of expected credit improvement, C12 may recommend selling credit default protection in which a Client Account would receive a premium to take on the risk. In such an instance, the obligation of the Client Account to make payments upon the occurrence of a credit event creates leveraged exposure to the credit risk of the referenced entity. C12 may also recommend that a Client Account "purchase" credit default protection even in the case in which it does not own the referenced instrument if there is a high likelihood of credit deterioration.

The credit default swap market in high yield securities is comparatively new and rapidly evolving compared to the credit default swap market for more seasoned and liquid investment grade securities. Swap transactions dependent upon credit events are priced incorporating many variables including the pricing and volatility of the common stock, potential loss upon default and the shape of the U.S. Treasury Yield curve, among other factors. In addition, there are variations among credit default swaps with respect to when a restructuring of the underlying debt obligation triggers a credit event requiring the seller of credit protection to pay the purchaser of credit protection, as well as which underlying debt obligations of a particular issuer are deliverable in connection with the restructuring. Credit default swaps on sovereign debt, in particular, may present additional risks in connection with events of restructuring, compared to credit default swaps on corporate debt, which have historically been relatively better-defined and understood among industry participants. For example, in the context of the October 27, 2011 Eurozone proposal relating to Greek Debt, which would have caused holders of Greek debt to accept write-downs of 50%, the International Swaps and Derivatives Association, Inc. indicated that because the proposed restructuring was voluntary and non-binding, "it does not appear to be likely that the Eurozone proposal will trigger payments under existing CDS contracts."

As such, there are many factors upon which market participants may have divergent views. C12 may also recommend credit default swap transactions, even if the credit outlook is positive, if it believes that participants in the marketplace have incorrectly valued the components which determine the value of a swap.

Residential Mortgage-Backed Securities (“RMBS”). RMBS represent interests in pools of residential mortgage loans secured by one to four family residential mortgage loans. Such loans may be prepaid at any time. Residential mortgage loans are obligations of the borrowers thereunder only and are not typically insured or guaranteed by the government or any other entity. The rate of defaults and losses on residential mortgage loans will be affected by a number of factors, including general economic conditions and those in the geographic area where the related mortgaged property is located, the terms of the loan, the borrower’s “equity” in the mortgaged property and the financial circumstances of the borrower. If a residential mortgage loan is in default, foreclosure of such residential mortgage loan may be a lengthy and difficult process and may involve significant expenses. Furthermore, the market for defaulted residential mortgage loans or foreclosed properties may be very limited.

At any one time, a portfolio of RMBS may be backed by residential mortgage loans with disproportionately large aggregate principal amounts secured by properties in only a few states or regions. As a result, the residential mortgage loans may be more susceptible to geographic risks relating to such areas, such as adverse economic conditions, adverse events affecting industries located in such areas and natural hazards affecting such areas, than would be the case for a pool of mortgage loans having more diverse property locations. In addition, the residential mortgage loans backing RMBS often are “jumbo” mortgage loans, having original principal balances that are higher than the loan balance limitations imposed by Fannie Mae and Freddie Mac. As a result, such RMBS may experience increased losses.

Each underlying residential mortgage loan backing an issue of RMBS may have a “balloon” payment due on its maturity date. Balloon residential mortgage loans involve a greater risk to a lender than self-amortizing loans because the ability of a borrower to pay such amount will normally depend on its ability to obtain refinancing of the related mortgage loan or sell the related mortgaged property at a price sufficient to permit the borrower to make the balloon payment, which will depend on a number of factors prevailing at the time such refinancing or sale is required, including, without limitation, the strength of the residential real estate markets, tax laws, the financial situation and operating history of the underlying property, interest rates, conditions in credit markets and general economic conditions. If the borrower is unable to make such balloon payment, the related issue of RMBS may experience losses.

Prepayments on the underlying residential mortgage loans in an issue of RMBS will be influenced by the prepayment provisions of the related mortgage notes and may also be affected by a variety of economic, geographic and other factors, including the difference between the interest rates on the underlying residential mortgage loans (giving consideration to the cost of refinancing) and prevailing mortgage rates and the availability of refinancing. In general, if prevailing interest rates fall significantly below the interest rates on the related residential mortgage loans, the rate of prepayment on the underlying residential mortgage loans would be expected to increase. Conversely, if prevailing interest rates rise to a level significantly above the interest rates on the related mortgages, the rate of prepayment would be expected to decrease. Prepayments could reduce the yield received on the related issue of RMBS. RMBS are particularly susceptible to prepayment risks, as they generally do not contain prepayment penalties and a reduction in interest rates will increase the prepayments on the RMBS, resulting in a reduction in yield to maturity for holders of such securities.

Non-agency RMBS typically are backed by non-conforming mortgage loans, which are mortgage loans that do not qualify for purchase by government-sponsored agencies, such as Fannie Mae and Freddie Mac, because of credit characteristics and size that do not satisfy Fannie Mae and Freddie Mac guidelines, including loans to mortgagors whose creditworthiness and repayment ability do not satisfy Fannie Mae and Freddie Mac underwriting guidelines and loans to mortgagors who may have a record of credit write-offs, outstanding judgments, prior bankruptcies and other negative credit items. Accordingly, non-conforming mortgage loans are likely to experience rates of delinquency, foreclosure and loss that are higher, and that may be substantially higher, than mortgage loans originated in accordance with Fannie Mae or Freddie Mac underwriting guidelines. The majority of mortgage loans made in the United States qualify for purchase by government-sponsored agencies. The principal differences between conforming mortgage loans and non-conforming mortgage loans include the applicable loan-to-value ratios, the credit and income histories of the related mortgagors, the documentation required for approval of the related mortgage loans, the types of properties securing the mortgage loans, the loan sizes and the mortgagors' occupancy status with respect to the mortgaged properties, and such differences generally lead to higher delinquency, foreclosure and losses on non-conforming mortgage loans as compared to conforming mortgage loans.

Another factor that may result in higher delinquency rates is the increase in monthly payments on adjustable rate mortgage loans. Borrowers with adjustable rate mortgage loans are being exposed to increased monthly payments when the related mortgage interest rate adjusts upward from the initial fixed rate or a low introductory rate. Borrowers seeking to avoid these increased monthly payments by refinancing their mortgage loans may no longer be able to find available replacement loans at comparably low interest rates. A decline in housing prices may also leave borrowers with insufficient equity in their homes to permit them to refinance. Furthermore, borrowers who intend to sell their homes on or before the expiration of the fixed rate periods on their mortgage loans may find that they cannot sell their properties for an amount equal to or greater than the unpaid principal balance of their loans. These events, alone or in combination, may contribute to higher delinquency rates and, as a result, adversely affect the performance and market value of RMBS.

The mortgage loans underlying certain of the RMBS may be structured with negative amortization features. Negative amortization arises when the mortgage payment in respect of a loan is smaller than the interest due on such loan. On any such mortgage loans, if the monthly payments are not enough to cover both the interest and principal payments on the loan, the shortfall is added to the principal balance, causing the loan balance to increase rather than decrease over time. During periods in which the outstanding principal balance of any such mortgage loan is increasing due to the addition of deferred interest, the increasing principal balance of such mortgage loan may approach or exceed the value of the related mortgage property, thus increasing the likelihood of defaults, as well as the amount of any loss experienced with respect to any such mortgage loan that is required to be liquidated. Furthermore, each such mortgage loan generally provides for the payment of any remaining unamortized principal balance (due to the addition of deferred interest, if any, to the principal balance of such mortgage loan) in a single payment at the maturity of the loan. Because the related mortgagors may be required to make a larger single payment upon maturity, it is possible that the default risk associated with such mortgage loans could be greater than that associated with fully amortizing mortgage loans. If the pool of mortgage loans underlying any RMBS owned by a Client Account were to contain loans with negative amortization features, the yield on such RMBS could be adversely affected.

Structural features of RMBS securities may contribute to the impact of increased delinquencies and defaults and lower recoveries on the underlying mortgage pool. In particular, there may be a decline in the interest rate payable under RMBS because the interest rate on RMBS typically is limited by the weighted average net coupon of the underlying mortgage loans themselves, often referred to as an “available funds cap.” Mortgage loans bearing interest at a higher rate will have a greater tendency to default than those with lower mortgage rates. Such defaults will reduce the weighted average coupon of the underlying mortgage loans and accordingly the interest rate payable to investors in the related RMBS security, including any Client Account.

Violations of consumer protection laws may result in losses on RMBS. Applicable state laws generally regulate interest rates and other charges, require licensing of originators and require specific disclosures. In addition, other state laws, public policy and general principles of equity relating to the protection of consumers, unfair and deceptive practices and debt collection practices may apply to the origination, servicing and collection of the loans backing RMBS. Depending on the provisions of the applicable law and the specific facts and circumstances involved, violations of these laws, policies and principles may limit the ability of the issuer of a RMBS to collect all or part of the principal of or interest on the underlying loans, may entitle a borrower to a refund of amounts previously paid and, in addition, could subject the owner of a mortgage loan to damages and administrative enforcement.

Delinquencies, defaults and losses on residential mortgage loans may continue to increase, which may affect the performance of RMBS. In particular, RMBS that are backed by subprime and midprime mortgage loans, as well as “Alt-A” and “Alt-B” mortgage loans and second lien mortgage loans, may continue to see increased default rates. Subprime and midprime mortgage loans are generally made to borrowers with lower credit scores and having higher loan-to-value ratios. Alt-A and Alt-B loans may also have some of the characteristics of subprime and midprime mortgage loans. Accordingly, these types of mortgage loans are more sensitive to economic factors that could affect the ability of borrowers to pay their obligations under the mortgage loans backing these securities. In addition, in recent months, housing prices and appraisal values in many states have declined or stopped appreciating.

RMBS often provide that the servicer is required to make advances in respect of delinquent mortgage loans. However, servicers experiencing financial difficulties may not be able to perform these obligations. Servicers who have sought bankruptcy protection may, due to application of the provisions of bankruptcy law, not be required to advance such amounts. Even if a servicer were able to advance amounts in respect of delinquent mortgage loans, its obligation to make such advances may be limited to the extent that it does not expect to recover such advances due to the deteriorating credit of the delinquent mortgage loans. In addition, a servicer’s obligation to make such advances may be limited to the amount of its servicing fee.

Since 2007, a number of originators and servicers of mortgage loans have experienced serious financial difficulties and, in some cases, have entered bankruptcy proceedings. Such financial difficulties may have a negative effect on the ability of servicers to pursue collection on mortgage loans that are experiencing increased delinquencies and defaults and to maximize recoveries on sale of underlying properties following foreclosure. The inability of the originator to repurchase such mortgage loans in the event of early

payment defaults and loan representation breaches may also affect the performance of RMBS backed by those mortgage loans.

A number of servicers have entered into agreements with federal and state government agencies committing the servicers to modify underlying mortgage loans in order to reduce interest rates on the loans, forgive delinquent interest (and in some cases principal) and to take other actions that are intended to delay or prevent foreclosure on the mortgaged property. Federal legislation has been proposed that would protect servicers who make such modifications to mortgages backing RMBS from claims brought by investors in the RMBS. Amendments to the U.S. Bankruptcy Code have also been proposed that would enable a bankruptcy court to reduce the principal amount of a mortgage loan without the consent of the owner of the mortgage loan.

These adverse changes in market conditions and in laws and regulations may reduce the cashflow which a Client Account receives from RMBS held by the Client Account and decrease the market value of such RMBS.

Federal Conservatorship of FNMA and FHLMC. The payments of principal and interest Client Accounts receive on certain of their RMBS, which depend directly upon payments on the mortgages underlying such securities, may be guaranteed by GNMA, FNMA or FHLMC (such RMBS, “Agency RMBS”). GNMA is part of a U.S. Government agency and its guarantees are backed by the full faith and credit of the United States. FNMA and FHLMC are U.S. Government-sponsored entities (“GSEs”), but their guarantees are not backed by the full faith and credit of the United States.

In response to general market instability and, more specifically, the financial conditions of FNMA and FHLMC, in July 2008, the Housing and Economic Recovery Act of 2008 (“HERA”), established a new regulator for FNMA and FHLMC, the U.S. Federal Housing Finance Agency (the “FHFA”). In September 2008, the U.S. Treasury, the FHFA and the U.S. Federal Reserve announced a comprehensive action plan to help stabilize the financial markets, support the availability of mortgage financing and protect taxpayers. Under this plan, among other things, the FHFA was appointed as conservator of both FNMA and FHLMC, allowing the FHFA to control the actions of the two GSEs, without forcing them to liquidate, which would be the case under receivership. Importantly, the primary focus of the plan was to increase the availability of mortgage financing by allowing these GSEs to continue to grow their guarantee business without limit, while limiting the size of their retained mortgage and agency security portfolios and requiring that these portfolios be reduced over time.

In an effort to further stabilize the U.S. mortgage market, the U.S. Treasury pursued three additional initiatives beginning in 2008. First, it entered into preferred stock purchase agreements, which have been subsequently amended, with each of the GSEs to ensure that they maintain a positive net worth. Second, it established a new secured short-term credit facility, which was available to FNMA and FHLMC (as well as Federal Home Loan Banks) when other funding sources were unavailable. Third, it established an agency security purchase program under which the U.S. Treasury purchased Agency RMBS in the open market. The U.S. Federal Reserve also established a program of purchasing Agency RMBS.

Those efforts resulted in significant U.S. Government financial support and increased control of the GSEs. In December 2010, the FHFA reported that, from the time of execution of the preferred stock purchase agreements through September 30, 2010, funding provided to FNMA and FHLMC under the preferred stock purchase agreements amounted to approximately \$89 billion and \$64 billion, respectively. The U.S. Treasury has committed to support the positive net worth of FNMA and FHLMC, through preferred stock purchases as necessary, through 2012. Those agreements, as amended, also require the reduction of FNMA's and FHLMC's mortgage and agency security portfolios (they were limited to \$900 billion as of December 31, 2009, and to \$810 billion as of December 31, 2010, and must be reduced each year until their respective mortgage assets reach \$250 billion).

Both the secured short-term credit facility and the agency security program initiated by the U.S. Treasury expired on December 31, 2009. However, through that securities purchase program (from September 2008 through December 2009), the U.S. Treasury acquired approximately \$220 billion of Agency RMBS. In addition, while the U.S. Federal Reserve's program of agency security purchases terminated in 2010, through the first quarter of 2010, the U.S. Federal Reserve had purchased \$1.25 trillion of Agency RMBS. Subject to specified investment guidelines, the portfolios of Agency RMBS purchased through the programs established by the U.S. Treasury and the U.S. Federal Reserve may be held to maturity and, based on mortgage market conditions, adjustments may be made to these portfolios. This flexibility may adversely affect the pricing and availability of Agency RMBS that Client Accounts seek to acquire during the remaining term of these portfolios.

Although the U.S. Government has committed to support the positive net worth of FNMA and FHLMC through 2012, there can be no assurance that these actions will be adequate for their needs. These uncertainties lead to questions about the availability of, and trading market for, Agency RMBS. Despite the steps taken by the U.S. Government, FNMA and FHLMC could default on their guarantee obligations which would materially and adversely affect the value of Client Accounts' Agency RMBS. Accordingly, if these government actions are inadequate and the GSEs continue to suffer losses or cease to exist, Client Accounts' performance could be materially and adversely affected.

In addition, the problems faced by FNMA and FHLMC resulting in their being placed into federal conservatorship and receiving significant U.S. Government support have sparked serious debate among federal policy makers regarding the continued role of the U.S. Government in providing liquidity for mortgage loans. The future roles of FNMA and FHLMC could be significantly reduced and the nature of their guarantee obligations could be considerably limited relative to historical measurements. Any such changes to the nature of their guarantee obligations could redefine what constitutes an agency security and could have broad adverse implications for the market and our business, operations and financial condition. Alternatively, FNMA and FHLMC could be dissolved or privatized, and the U.S. Government could determine to stop providing liquidity support of any kind to the mortgage market. In February 2011, the U.S. Treasury and the Department of Housing and Urban Development released a report to Congress entitled "Reforming America's Housing Finance Market" in which they proposed to reduce or eliminate the role of GSEs in mortgage financing. The report calls for phasing in increased pricing of FNMA and FHLMC guarantees to help level the playing field for the private sector to take back market share, reducing conforming loan limits by allowing the temporary increase in FNMA's and FHLMC's conforming loan limits to reset as scheduled on October 1, 2011 to the lower levels set in the HERA and continuing to wind down FNMA's and FHLMC's investment portfolio at

an annual rate of no less than 10% per year. The upper limit for loans backed by Fannie Mae and Freddie Mac were lowered in October as scheduled from \$729,750 to \$625,500. If Fannie Mae or Freddie Mac were eliminated, or their structures were to change (i.e., limitation or removal of the guarantee obligation), or their market share reduced because of required price increases or lower limits on the loans they can guarantee, the Fund could be unable to acquire additional Agency RMBS and existing positions in Agency RMBS and related positions could be materially and adversely impacted.

As indicated above, recent legislation has changed the relationship between FNMA and FHLMC and the U.S. Government. Future legislation could further change the relationship between FNMA and FHLMC and the U.S. Government, and could also nationalize, privatize, or eliminate such entities entirely. Any law affecting these GSEs may create market uncertainty and have the effect of reducing the actual or perceived credit quality of securities issued or guaranteed by FNMA or FHLMC. As a result, such laws could increase the risk of loss on investments in Agency RMBS guaranteed by FNMA and/or FHLMC. It also is possible that such laws could adversely impact the market for such securities and spreads at which they trade. All of the foregoing could materially and adversely affect Client Account performance.

Commercial Mortgage-Backed Securities (“CMBS”). The collateral underlying CMBS generally consists of mortgage loans secured by income-producing property, such as regional malls, other retail space, office buildings, industrial or warehouse properties, hotels, rental apartments, nursing homes, senior living centers and self-storage properties. Performance of a commercial mortgage loan depends primarily on the net income generated by the underlying mortgaged property. The market value of a commercial property similarly depends on its income-generating ability. As a result, income generation will affect both the likelihood of default and the severity of losses with respect to a commercial mortgage loan. Any decrease in income or value of the commercial real estate underlying an issue of CMBS could result in cash flow delays and losses on the related issue of CMBS.

Successful management and operation of the related business (including property management decisions, such as pricing, maintenance and capital improvements) will have a significant impact on performance of commercial mortgage loans. Issues such as tenant mix, success of tenant business, property location and condition, competition, increases in interest rates, real estate taxes and other operational expenses, general or local economic conditions and/or specific industry segments, declines in real estate values, declines in rental or occupancy rates and civil disturbances, changes in governmental rules, regulations and fiscal policies, acts of God, social unrest and insurance coverage are among the factors that may impact both performance and market value. The value of commercial real estate is also subject to limitations on remedies imposed by bankruptcy laws and state laws regarding foreclosures and rights of redemption.

Property-specific issues with respect to the underlying mortgaged property, such as significant government regulation of a particular industry, reliance on franchise, management or operating agreements, transferability on purchase or foreclosure of related valuable assets such as liquor and other licenses and ease of conversion of a commercial property to an alternative use will impact both risk of loss and loss severity with respect to the underlying mortgage loan pool and the CMBS.

At any one time, a portfolio of CMBS may be backed by commercial mortgage loans with disproportionately large aggregate principal amounts secured by properties in only a few states or regions. As a result, the commercial mortgage loans may be more susceptible to geographic risks relating to such areas, such as adverse economic conditions, adverse events affecting industries located in such areas and natural hazards affecting such areas, than would be the case for a pool of mortgage loans having more diverse property locations.

Certain of the commercial mortgage loans underlying the CMBS may bear interest at adjustable rates based on LIBOR for one-month dollar deposits or other established interest indices. Accordingly, debt service for any such commercial mortgage loan will increase as interest rates rise. In contrast, rental and other income on the related mortgaged properties is not expected to rise significantly as interest rates rise. Accordingly, debt service coverage ratios of the underlying floating rate commercial mortgage loans generally will be adversely affected by rising interest rates, and a borrower's ability to make all payments due on such floating rate commercial mortgage loans may be adversely affected.

Mortgage loans on commercial properties often are structured so that a substantial portion of the loan principal is not amortized over the loan term but is payable at maturity, and repayment of the loan principal thus often depends upon the future availability of real estate financing from the existing or an alternative lender and/or upon the current value and salability of the real estate. Therefore, the unavailability of real estate financing may lead to default.

Most commercial mortgage loans underlying CMBS are effectively nonrecourse obligations of the borrower, meaning that there is no recourse against the borrower's assets other than the collateral. If borrowers are not able or willing to refinance or dispose of encumbered property to pay the principal and interest owed on such mortgage loans, payments on the subordinated classes of the related CMBS are likely to be adversely affected. The ultimate extent of the loss, if any, to the subordinated classes of CMBS may only be determined after a negotiated discounted settlement, restructuring or sale of the mortgage note, or the foreclosure (or deed in lieu of foreclosure) of the mortgage encumbering the property and subsequent liquidation of the property. Foreclosure can be costly and delayed by litigation and/or bankruptcy. Factors such as the property's location, the legal status of title to the property, its physical condition and financial performance, environmental risks, and governmental disclosure requirements with respect to the condition of the property may make a third party unwilling to purchase the property at a foreclosure sale or to pay a price sufficient to satisfy the obligations with respect to the related CMBS. Revenues from the assets underlying such CMBS may be retained by the borrower and the return on investment may be used to make payments to others, maintain insurance coverage, pay taxes or pay maintenance costs. Such diverted revenue is generally not recoverable without a court appointed receiver to control collateral cash flow.

Futures and Derivative Investments. The prices of futures contracts and derivative instruments, including futures and options, are highly volatile. Payments made pursuant to swap agreements may also be highly volatile. Price movements of futures and options contracts and payments pursuant to swap agreements are influenced by, among other things, interest rates, changing supply and demand relationships, trade, fiscal, monetary and exchange control programs and policies of governments, and national and international political and economic events and policies. The value of futures, options and swap

agreements also depends upon the price of the financial instrument underlying them. In addition, a Client Account's assets are subject to the risk of the failure of any of the exchanges on which their positions trade or of their clearinghouses or counterparties.

C12 may recommend buying or selling (writing) both call options and put options, including writing options on a "covered" or an "uncovered" basis. A call option is "covered" when the writer owns securities of the same class and amount as those to which the call option applies. A put option is covered when the writer has an open short position in securities of the relevant class and amount. These option transactions may be part of a hedging strategy (i.e., offsetting the risk involved in another securities position) or a form of leverage, in which the Client Account has the right to benefit from price movements in a large number of securities with a small commitment of capital. These activities involve risks that can be substantial, depending on the circumstances.

In general, without taking into account other positions or transactions a Client Account may enter into, the principal risks involved in options trading can be described as follows: When a Client Account buys an option, a decrease (or inadequate increase) in the price of the underlying security in the case of a call, or an increase (or inadequate decrease) in the price of the underlying security in the case of a put, could result in a total loss of a Client Account's investment in the option (including commissions). The Client Account could mitigate those losses by selling short, or buying puts on, the securities for which it holds call options, or by taking a long position (e.g., by buying the securities or buying calls on them) in securities for which it holds put options.

When a Client Account sells (writes) an option, the risk can be substantially greater than when it buys an option. The seller of an uncovered call option bears the risk of an increase in the market price of the underlying security above the exercise price. The risk is theoretically unlimited unless the option is "covered". If it is covered, a Client Account would forego the opportunity for profit on the underlying security should the market price of the security rise above the exercise price. If the price of the underlying security were to drop below the exercise price, the premium received on the option (after transaction costs) would provide profit that would reduce or offset any loss the Client Account might suffer as a result of owning the security.

Swaps and certain options and other customized instruments are subject to the risk of non-performance by the swap counterparty, including risks relating to the creditworthiness of the swap counterparty, market risk, liquidity risk and operations risk.

Short Selling. Short selling involves selling securities which are not owned by the short seller and borrowing them for delivery to the purchaser, with an obligation to replace the borrowed securities at a later date. Short selling allows the investor to profit from a decline in market price to the extent such decline exceeds the transaction costs and the costs of borrowing the securities. The extent to which a Client Account engages in short sales will depend upon its applicable investment strategy and opportunities. A short sale creates the risk of a theoretically unlimited loss, in that the price of the underlying security could theoretically increase without limit, thus increasing the cost to a Client Account of buying those securities to cover the short position. There can be no assurance that a Client Account will be able to maintain the ability to borrow securities sold short. In such cases, the Client Account can be "bought in" (i.e., forced to repurchase securities in the open market to return to the lender). There also can be no assurance that the securities necessary to cover a short

position will be available for purchase at or near prices quoted in the market. Purchasing securities to close out a short position can itself cause the price of the securities to rise further, thereby exacerbating the loss.

Forward Trading. Forward contracts and options thereon, unlike futures contracts, are not traded on exchanges and are not standardized; rather, banks and dealers act as principals in these markets, negotiating each transaction on an individual basis. Forward and “cash” trading is substantially unregulated; there is no limitation on daily price movements and speculative position limits are not applicable. The principals who deal in the forward markets are not required to continue to make markets in the currencies or futures they trade and these markets can experience periods of illiquidity, sometimes of significant duration. There have been periods during which certain participants in these markets have refused to quote prices for certain currencies or futures contracts or have quoted prices with an unusually wide spread between the price at which they were prepared to buy and that at which they were prepared to sell. Disruptions can occur in any market with respect to which C12 makes recommendations due to unusual trading volume, political intervention or other factors. The imposition of controls by governmental authorities might also limit such forward trading to less than that which C12 would otherwise recommend, to the possible detriment of a Client Account. Market illiquidity or disruption could result in major losses to a Client Account.

Investing in High Yield Securities. High yield securities generally trade in the over-the-counter marketplace, which is less transparent than the exchange-traded marketplace. In addition, it is more difficult to hedge the risks associated with bonds of issuers that do not have publicly traded equity securities. High-yield securities face ongoing uncertainties and exposure to adverse business, financial or economic conditions which could lead to the issuer’s inability to meet timely interest and principal payments. The market values of certain of these lower-rated and unrated debt securities tend to reflect individual corporate developments to a greater extent than do higher-rated securities which react primarily to fluctuations in the general level of interest rates, and tend to be more sensitive to economic conditions than are higher-rated securities. Companies that issue such securities are often highly leveraged and may not have available to them more traditional methods of financing. It is possible that a major economic recession could disrupt severely the market for such securities and may have an adverse impact on the value of such securities. In addition, it is possible that any such economic downturn could adversely affect the ability of the issuers of such securities to repay principal and pay interest thereon and increase the incidence of default of such securities.

Capital Structure Arbitrage. The success of this strategy will depend on the ability of C12 to identify and exploit the relationships between movements in different securities and instruments within an issuer’s capital structure (e.g., bank debt, convertible and non-convertible senior and subordinated debt and preferred and common stock). Identification and exploitation of these opportunities involve uncertainty. In the event that the perceived pricing inefficiencies underlying an issuer’s securities were to fail to materialize as expected by C12, Client Accounts could incur a loss.

Debt Securities Generally. C12 may recommend investments in corporate and government debt securities and other similar instruments. C12 may recommend investments in debt instruments that are unrated, and whether or not rated, the debt instruments may have speculative characteristics. The issuers of such instruments (including

sovereign issuers) may face significant ongoing uncertainties and exposure to adverse conditions that may undermine the issuer's ability to make timely payment of interest and principal. Such instruments are regarded as predominantly speculative with respect to the issuer's capacity to pay interest and repay principal in accordance with the terms of the obligations and involve major risk exposure to adverse conditions.

Commodities and Commodities-Linked Instruments. Investments in commodities markets or instruments linked to commodities may subject Client Accounts to greater volatility than investments in traditional securities, such as stocks and bonds. The commodities markets may fluctuate widely based on a variety of factors. These include changes in overall market movements, domestic and foreign political and economic events and policies, war, acts of terrorism, changes in domestic or foreign interest rates and/or investor expectations concerning interest rates, domestic and foreign inflation rates and/or investor expectations concerning inflation rates and investment and trading activities of mutual funds, hedge funds and commodities funds.

Prices of various commodities may also be affected by factors, such as drought, floods, weather, livestock disease, embargoes, tariffs and regulatory developments, which are unpredictable. The prices of commodities can also fluctuate widely due to supply and demand disruptions in major producing or consuming regions. Certain commodities may be produced in a limited number of countries and may be controlled by a small number of producers. As a result, political, economic and supply related events in such countries could have a disproportionate impact on the prices of such commodities.

The value of a commodity-linked derivative investment typically is based upon the price movements of a commodity, a commodity futures contract or commodity index, or some other readily measurable economic variable. Commodity-linked derivatives provide exposure to the investment returns of commodities that trade in the commodities markets without investing directly in physical commodities. The value of commodity-linked derivative instruments may be affected by the same factors that would affect an investment in the underlying commodities. Investments in commodity-linked derivatives may be subject to greater volatility than non-derivative based investments. A highly liquid secondary market may not exist for certain commodity-linked derivatives, and there can be no assurance that one will develop.

Commodity-linked derivatives also may be subject to credit and interest rate risks that in general affect the values of fixed-income securities. Therefore, at maturity, Client Accounts may receive more or less principal than it originally invested. Client Accounts might receive interest payments that are more or less than the stated coupon interest payments.

In addition, due to the limited number of entities that may serve as counterparties (and which C12 believes are creditworthy) at any one time, Client Accounts may enter into swap agreements with a limited number of counterparties and may invest in commodity-linked notes issued by a limited number of issuers that will act as counterparties, which may increase such Client Accounts' exposure to counterparty credit risk. There can be no assurance that any Client Account will be able to limit exposure to any one counterparty at all times.

To the extent Client Accounts invest in commodity-linked notes, in addition to commodity risk and general derivatives risk, they may be subject to additional risks.

If payment of interest on a commodity-linked note is linked to the value of a particular commodity, commodity index or other economic variable, a Client Account might not receive all (or a portion) of the interest due on its investment if there is a loss of value of the underlying investment. To the extent that the amount of the principal to be repaid upon maturity is linked to the value of a particular commodity, commodity index or other economic variable, a Client Account might not receive all or a portion of the principal at maturity of the investment.

A liquid secondary market may not exist for the commodity-linked notes that a Client Account buys, which may make it difficult to sell them at an acceptable price or to accurately value them. Commodity-linked notes are also subject to the credit risk of the issuer. If the issuer of a commodity-linked note in which a Client Account invests becomes bankrupt or otherwise fails to pay, the Client Account could lose money.

The value of the commodity-linked notes a Client Account buys may fluctuate significantly because the values of the underlying investments to which they are linked are themselves extremely volatile. Additionally, the particular terms of a commodity-linked note may create economic leverage by requiring payment by the issuer of an amount that is a multiple of the price increase or decrease of the underlying commodity, commodity index or other economic variable. Certain commodity-linked notes in which a Client Account may invest will be leveraged, which means that the amount by which the value of the notes will rise or fall in response to changes in the underlying instrument has been magnified by a certain multiple. This would have the effect of increasing the volatility of the value of these commodity-linked notes as they may increase or decrease in value more quickly than the underlying commodity, commodity index or other economic variable. Therefore, at the maturity of the note, the Client Account may receive more or less principal than it originally invested and may receive interest payments on the note that are more or less than the stated coupon interest payments.

Repurchase and Reverse Repurchase Agreements. When a Client Account enters into a repurchase agreement, it “sells” securities issued by the U.S. or a non-U.S. government, or agencies thereof, or corporate issuers to a broker-dealer or financial institution, and agrees to repurchase such securities for the price paid by the broker-dealer or financial institution, plus interest at a negotiated rate. In a reverse repurchase transaction, a Client Account “buys” securities issued by the U.S. or a non-U.S. government, or agencies thereof, or corporate issuers from a broker-dealer or financial institution, subject to the obligation of the broker-dealer or financial institution to repurchase such securities at the price paid by a Client Account, plus interest at a negotiated rate. The use of repurchase and reverse repurchase agreements by a Client Account involves certain risks including that the seller under a reverse repurchase agreement defaults on its obligation to repurchase the underlying securities. Disposing of the security in such case may involve costs to the Client Account.

Recent Developments in the Credit Market. Recently, declines in the market value of asset-backed securities, especially securities backed by subprime mortgages, have been associated with significant market events. Increasing credit and valuation problems in the subprime mortgage market have generated extreme volatility and illiquidity

in the markets for securities directly or indirectly exposed to subprime mortgage loans. This volatility and illiquidity has extended to the global credit and equity markets generally, and, in particular, to the high-yield bond and loan markets, intensified by, among other things, growing uncertainty regarding the extent of the problems in the mortgage industry and the degree of exposure of financial institutions and others, decreased risk tolerance by investors and significantly tightened availability of credit. The duration and ultimate effect of current market conditions cannot be predicted, nor is it known whether or the degree to which such conditions may worsen. However, the continuation of current market conditions, uncertainty or further deterioration could result in further declines in the market values of potential investments or declines in the market values of subsequently purchased investments. Such declines could lead to diminished investment opportunities for Client Accounts, prevent Client Accounts from successfully executing their investment strategies or require Client Accounts to dispose of investments at a loss while such adverse market conditions prevail.

Global and Emerging Market Investments. Investments in securities and instruments of issuers located outside the United States, including in markets regarded as emerging or developing markets, may include business uncertainties and political, social and economic uncertainties that affect a particular country or region. For example, many financial markets are not as developed or as efficient as those in the United States, and as a result, liquidity may be reduced and price volatility may be higher. The legal and regulatory environment may also be different, particularly as to bankruptcy and reorganization. Financial accounting standards and practices may differ, and there may be less publicly available information in respect of such companies.

With respect to certain countries, there is a possibility of expropriation, confiscatory taxation, limitations on the removal of funds or other assets of a Client Account, political or social instability or diplomatic developments that could affect investments in those countries. An issuer of securities may be domiciled in a country other than the country in whose currency the instrument is denominated. The values and relative yields of investments in the securities markets of different countries, and their associated risks, are expected to change independently of each other. Income received by a Client Account from sources within some countries may be reduced by withholding and other taxes imposed by such countries.

Client Accounts may be subject to additional risks which include possible adverse political and economic developments, possible seizure or nationalization of foreign deposits and possible adoption of governmental restrictions which might adversely affect the payment of principal and interest to investors located outside the country of the issuer, whether from currency blockage or otherwise. Furthermore, some of the securities may be subject to brokerage taxes levied by governments, which has the effect of increasing the cost of such investment and reducing the realized gain or increasing the realized loss on such securities at the time of sale. While C12 will take these factors into consideration in making investment recommendations to or on behalf of a Client Account, no assurance can be given that a Client Account will be able to fully avoid these risks.

Additionally, in emerging and developing markets, there is often less government supervision and regulation of business and industry practices, stock exchanges, over-the-counter markets, brokers, dealers, counterparties and issuers than in other more established markets. Any regulatory supervision which is in place may be subject to manipulation or control. Some emerging and developing market countries do not have

mature legal systems comparable to those of more developed countries. Moreover, the process of legal and regulatory reform may not be proceeding at the same pace as market developments, which could result in investment risk. Legislation to safeguard the rights of private ownership may not yet be in place in certain areas, and there may be the risk of conflict among local, regional and national requirements. In certain cases, the laws and regulations governing investments in financial instruments may not exist or may be subject to inconsistent or arbitrary appreciation or interpretation. Both the independence of judicial systems and their immunity from economic, political or nationalistic influences remain largely untested in many countries. Acting on behalf of or in respect of the Client Accounts, C12 may also encounter difficulties in pursuing legal remedies or in obtaining and enforcing judgments in non-U.S. courts. Due to the foregoing risks and complications, the costs associated with investments in emerging market securities generally are higher than for securities of issuers based in developed countries.

In addition, economic problems in a single country are increasingly affecting other markets and economies. A continuation of this trend could adversely affect global economic conditions and world markets and, in turn, could adversely affect the Client Accounts' performance.

European Debt Crisis and Market Conditions. Global markets and economic conditions have been negatively impacted by the sovereign debt crisis that has been emerging in Europe since 2010, triggered by high budget deficits and rising direct and contingent sovereign debt in Greece, Ireland, Italy, Portugal and Spain, which created concerns about the ability of these nations to continue to service their sovereign debt obligations. Despite assistance packages to Greece, Ireland and Portugal, the creation of a joint EU-IMF European Financial Stability Facility in May 2010, and a recently announced plan to expand financial assistance to Greece, uncertainty over the outcome of the European Union (EU) governments' financial support programs and worries about sovereign finances persist. There can be no assurance that the market disruptions in Europe, including the increased cost of funding for certain governments and financial institutions, will not spread, nor can there be any assurance that future assistance packages will be available or, even if provided, will be sufficient to stabilize the affected countries and markets in Europe or elsewhere. Specific events, such as sovereign debt restructurings or defaults may have a negative impact on the value of particular investments a Client Account makes, directly or indirectly, in sovereign debt. More generally, ongoing events relating to EU attempts to resolve the financial crisis, and continuing market concerns about future developments, could have a detrimental impact on the global economic recovery, sovereign and non-sovereign debt in these countries and the financial condition of European financial institutions. The full scope of the economic and political disruptions resulting from the financial crisis, which may potentially involve one or more EU member states leaving the euro, are uncertain and there is no assurance that such events and future developments will not have a negative impact on a Client Account's performance. In addition, it is possible that the sovereign debt crisis in the Eurozone will result in one or more countries leaving the euro and reverting to national currencies. Such an event could have a significant negative impact on the European economy and a Client Account's performance.

Nations outside of the Eurozone also face significant debt burdens, which have the potential to negatively impact the global economy. On August 5, 2011, Standard & Poor's lowered its long term sovereign credit rating on the United States of America from AAA to AA+. While U.S. lawmakers had reached agreement to raise the federal debt ceiling on

August 2, 2011, the downgrade reflected Standard & Poor's view that such agreement had fallen short of what would be necessary to stabilize the U.S. government's medium term debt dynamics. This downgrade, along with market concerns about possible further downgrades and about the government's credit in general, could have a material adverse impact on financial markets and economic conditions in the United States and throughout the world. In particular, such developments could disrupt payment systems, money markets, long-term or short-term fixed income markets, foreign exchange markets, commodities markets and equity markets and adversely affect the cost and availability of funding and certain effects, such as increased spreads in money market and other short term rates, have been experienced already. The ultimate effect of such developments on the performance of particular investments of a Client Account and its overall performance is unpredictable.

Highly Volatile Markets. The prices of financial instruments in which Client Accounts invest can be highly volatile. Price movements of forward and other derivative contracts are influenced by, among other things, interest rates, changing supply and demand relationships, trade, fiscal, monetary and exchange control programs and policies of governments, and national and international political and economic events and policies. Client Accounts are subject to the risk of failure of any of the exchanges on which its positions trade or of their clearinghouses.

Contingent Liabilities. From time to time, the Client Accounts may incur contingent liabilities in connection with an investment. For example, a Client Account may enter into agreements pursuant to which it agrees to assume responsibility for default risk presented by a third-party, and may, on the other hand, enter into agreements through which third-parties offer default protection to the Client Account.

Fraud. Of paramount concern in investments in loans is the possibility of material misrepresentation or omission on the part of the borrower. Such inaccuracy or incompleteness may adversely affect the valuation of the collateral underlying the loans or may adversely affect the ability of a Client Account to perfect or effectuate a lien on the collateral securing the loan. Client Accounts will rely upon the accuracy and completeness of representations made by borrowers to the extent reasonable when it makes its investments, but cannot guarantee such accuracy or completeness. Under certain circumstances, payments to a Client Accounts may be reclaimed if any such payment or distribution is later determined to have been a fraudulent conveyance or a preferential payment.

Convertible Securities. Convertible securities are bonds, debentures, notes, preferred stocks or other securities that may be converted into or exchanged for a specified amount of common stock of the same or different issuer within a particular period of time at a specified price or formula. A convertible security entitles its holder to receive interest that is generally paid or accrued on debt or a dividend that is paid or accrued on preferred stock until the convertible security matures or is redeemed, converted or exchanged. Convertible securities have unique investment characteristics in that they generally (i) have higher yields than common stocks, but lower yields than comparable non-convertible securities, (ii) are less subject to fluctuation in value than the underlying common stock due to their fixed-income characteristics and (iii) provide the potential for capital appreciation if the market price of the underlying common stock increases.

The value of a convertible security is a function of its "investment value" (determined by its yield in comparison with the yields of other securities of comparable

maturity and quality that do not have a conversion privilege) and its “conversion value” (the security’s worth, at market value, if converted into the underlying common stock). The investment value of a convertible security is influenced by changes in interest rates, with investment value declining as interest rates increase and increasing as interest rates decline. The credit standing of the issuer and other factors may also have an effect on the convertible security’s investment value. The conversion value of a convertible security is determined by the market price of the underlying common stock. If the conversion value is low relative to the investment value, the price of the convertible security is governed principally by its investment value. To the extent the market price of the underlying common stock approaches or exceeds the conversion price, the price of the convertible security will be increasingly influenced by its conversion value. A convertible security generally will sell at a premium over its conversion value by the extent to which investors place value on the right to acquire the underlying common stock while holding a fixed-income security. Generally, the amount of the premium decreases as the convertible security approaches maturity.

A convertible security may be subject to redemption at the option of the issuer at a price established in the convertible security’s governing instrument. If a convertible security held by a Client Accounts is called for redemption, the Client Account will be required to permit the issuer to redeem the security, convert it into the underlying common stock or sell it to a third-party. Any of these actions could have an adverse effect on a Client Account’s ability to achieve its investment objective.

Municipal Securities. Client Accounts may additionally invest in securities issued by political subdivisions or municipalities of various nations, agencies of such political subdivisions or municipalities or similar issuers (collectively, “Municipal Securities”). Various factors may adversely affect the value and yield of Municipal Securities. These factors include political or legislative changes and uncertainties related to the tax status of Municipal Securities or the rights of investors in such Municipal Securities. To the extent that a Client Account invests heavily in a particular issuer’s Municipal Securities, such Client Account will be more vulnerable to factors affecting that issuer. Investments in Municipal Securities, where principal and interest payments are made from the revenue of a specific project or facility, and not general tax revenues, may have increased risks. Factors affecting the project or facility, such as local business or economic conditions, could have a significant impact on the project’s ability to make payments of principal and interest on Municipal Securities.

Distressed Securities. Distressed securities are “below investment grade” securities and obligations of issuers in weak financial condition, experiencing poor operating results, having substantial capital needs or negative net worth, facing special competitive or product obsolescence problems, including companies involved in bankruptcy or other reorganization and liquidation proceedings. These securities are likely to be particularly risky investments although they also may offer the potential for correspondingly high returns, due to the difficulty in obtaining information as to the true condition of such issuers and the adverse impact of laws relating to, among other things, fraudulent transfers and other voidable transfers or payments, lender liability and the bankruptcy court’s power to disallow, reduce, subordinate or disenfranchise particular claims. Such companies’ securities may be considered speculative, and the ability of such companies to pay their debts on schedule could be affected by adverse interest rate movements, changes in the general economic climate, economic factors affecting a particular industry or specific developments within such companies. The level of analytical sophistication, both financial and legal, necessary for

successful investment in companies experiencing significant business and financial difficulties is unusually high. There is no assurance that C12 will correctly evaluate the value of the assets or the prospects for a successful reorganization or similar action. In any reorganization or liquidation proceeding relating to a company in which a Client Account invests, the Client Account may lose its entire investment, may be required to accept cash or securities with a value less than the Client Account's original investment and/or may be required to accept payment over an extended period of time. Under such circumstances, the returns generated from the Client Account's investments may not compensate the Client Account adequately for the risks assumed.

In certain transactions, Client Accounts may not be "hedged" against market fluctuations, or, in liquidation situations, may not accurately value the assets of the company being liquidated. This can result in losses, even if the proposed transaction is consummated.

Non-Performing Nature of Debt. It is anticipated that certain debt instruments purchased by a Client Account will be non-performing and possibly in default. Furthermore, the obligor or relevant guarantor may also be in bankruptcy or liquidation. There can be no assurance as to the amount and timing of payments, if any, with respect to the loans.

Bank Loans. Bank loans and participations (in each case relating to loans that were not originated by a Client Account) are subject to unique risks, including, without limitation: (i) the possible invalidation of an investment transaction as a fraudulent conveyance under relevant creditors' rights laws; (ii) so-called lender-liability claims by the issuer of the obligations; (iii) environmental liabilities that may arise with respect to collateral securing the obligations; and (iv) limitations on the ability of a Client Account to directly enforce its rights with respect to participations. In analyzing each bank loan or participation, C12 compares the relative significance of the risks against the expected benefits of the investment. Successful claims by third parties arising from these and other risks will be borne by the Funds.

Second Lien Loans. Second lien loans are a form of loan with a security interest in the assets of a company that are second in ranking behind a traditional senior credit facility. Second lien loans have been a developed market for a relatively short period of time, and there is limited historical data on the performance of second lien loans in adverse economic circumstances. In addition, second lien loan products are subject to intercreditor arrangements with the holders of first lien indebtedness, pursuant to which the second lien holders have waived many of the rights of a secured creditor, and some rights of unsecured creditors, including rights in bankruptcy which can materially affect recoveries. While there is broad market acceptance of some second lien intercreditor terms, no clear market standard has developed for certain other material intercreditor terms for second lien loan products. This variation in key intercreditor terms may result in dissimilar recoveries across otherwise similarly situated second lien loans in insolvency or distressed situations. While uncertainty of recovery in an insolvency or distressed situation is inherent in all debt instruments, second lien loan products carry more risks than certain other debt products.

Risks Associated with Bankruptcy Cases. Many of the events within a bankruptcy case are adversarial and often beyond the control of the creditors. While creditors may have the opportunity to object to significant actions, the bankruptcy court may approve actions that are contrary to the interests of a Client Account. Furthermore, creditors and

equity holders may lose their ranking and priority if they are considered to have taken over management and functional operating control of a debtor.

Generally, the duration of a bankruptcy case can only be roughly estimated. The reorganization of a company usually involves the development and negotiation of a plan of reorganization, plan approval by creditors and confirmation by the bankruptcy court. This process can involve substantial legal, professional and administrative costs to the company and a Client Account; it is subject to unpredictable and lengthy delays; and during the process the company's competitive position may erode, key management may depart and the company may not be able to invest adequately. In some cases, the company may not be able to reorganize and may be required to liquidate assets.

With respect to the Helix Funds, although the Helix Funds are expected to invest primarily in debt, the debt of companies in financial reorganization will, in most cases, not pay current interest, may not accrue interest during reorganization and may be adversely affected by an erosion of the issuer's fundamental value. Such investments can result in a total loss of principal.

U.S. bankruptcy law permits the classification of "substantially similar" claims in determining the classification of claims in a reorganization for purpose of voting on a plan of reorganization. Because the standard for classification is vague, there exists a significant risk that a Client Account's influence with respect to a class of securities can be lost by the inflation of the number and the amount of claims in, or other gerrymandering of, the class. In addition, certain administrative costs and claims that have priority by law over the claims of certain creditors (for example, claims for taxes) may be quite high.

C12 intends to primarily analyze and recommend securities and other financial instruments of North American and European issuers and assets located in these regions, although it may analyze and recommend securities and other financial instruments of other issuers domiciled, or assets located, elsewhere. Investment in the debt of financially distressed companies domiciled outside the United States involves additional risks. Bankruptcy law and process may differ substantially from that in the United States, resulting in greater uncertainty as to the rights of creditors, the enforceability of such rights, reorganization timing and the classification, seniority and treatment of claims. In certain developing countries, although bankruptcy laws have been enacted, the process for reorganization remains highly uncertain.

C12, on behalf of or in respect of one or more Client Accounts, may elect to serve on creditors' committees, official or unofficial, equity holders' committees or other groups to ensure preservation or enhancement of such Client Accounts' position as a creditor or equity holder. A member of any such committee or group may owe certain obligations generally to all parties similarly situated that the committee represents. If C12 concludes that its obligations owed to the other parties as a committee or group member conflict with its duties owed to its Client Accounts, it will resign from that committee or group, and any Client Accounts involved may not realize the benefits, if any, of participation on the committee or group. In addition, and also as discussed above, if a Client Account is represented on a committee or group, it may be restricted or prohibited under applicable law from disposing of or increasing its investments in such company while it continues to be represented on such committee or group.

C12 may recommend the purchase of creditor claims subsequent to the commencement of a bankruptcy case. Under judicial decisions, it is possible that such purchase may be disallowed by the bankruptcy court if the court determines that the purchaser has taken unfair advantage of an unsophisticated seller, which may result in the rescission of the transaction (presumably at the original purchase price) or forfeiture by the purchaser.

Bankruptcy Claims. Bankruptcy claims, which are amounts owed to creditors of companies in financial difficulty, are illiquid and generally do not pay interest and there can be no guarantee that the debtor will ever be able to satisfy the obligation on the bankruptcy claim. The markets in bankruptcy claims are not generally regulated by U.S. securities laws or the U.S. Securities and Exchange Commission. Because bankruptcy claims are frequently unsecured, holders of such claims may have a lower priority in terms of payment than certain other creditors in a bankruptcy proceeding. In addition, under certain circumstances, payments and distributions may be reclaimed if any such payment is later determined to have been a fraudulent conveyance or a preferential payment.

Equitable Subordination. Under common law principles that in some cases form the basis for lender liability claims, if a lender (a) intentionally takes an action that results in the undercapitalization of a borrower or issuer to the detriment of other creditors of such borrower or issuer, (b) engages in other inequitable conduct to the detriment of such other creditors, (c) engages in fraud with respect to, or makes misrepresentations to, such other creditors or (d) uses its influence as a stockholder to dominate or control a borrower or issuer to the detriment of other creditors of such borrower or issuer, a court may elect to subordinate the claim of the offending lender or bondholder to the claims of the disadvantaged creditor or creditors (a remedy called “equitable subordination”). C12 does not intend to engage in conduct that would form the basis for a successful cause of action based upon the equitable subordination doctrine; however, because of the nature of the debt obligations, Client Accounts may be subject to claims from creditors of an obligor that debt obligations of such obligor which are held by the issuer should be equitably subordinated.

ITEM 9
DISCIPLINARY INFORMATION

C12 does not have any reportable legal or disciplinary events that are material to its clients' or prospective clients' evaluation of its advisory business or the integrity of its management.

ITEM 10
OTHER FINANCIAL INDUSTRY ACTIVITIES AND AFFILIATIONS

A. Relationships or Arrangements with Affiliates and/or Related Persons

Although C12 is not under common control with its Initial Client, C12 is nevertheless operationally affiliated with its Initial Client in a number of respects, including shared use of the “C12” name, shared adherence to substantially similar internal policies and procedures and the fact that Global GP, one of C12’s General Partners, and the Initial Client share a common owner.

This affiliation could create or exacerbate conflicts of interest by reducing certain competitive pressures. For example, although C12’s agreement with its Initial Client generally will permit the Initial Client to terminate its relationship with C12 at will, the Initial Client may not wish to do so, among other reasons, due to its affiliation with C12 or due to the operational difficulties that a transition of services may entail. Subject to certain restrictions, C12 may also engage other parties affiliated with C12 as service providers in connection with the provision of its services. This affiliation may create an incentive for C12 to retain the services of these parties even if other competing service providers can provide better services or services at less cost.

C12, its affiliates and its personnel may take further action or give advice with respect to certain Client Funds that differs from the advice given to other Client Accounts. C12, its affiliates and its personnel will devote as much time to the activities of each Client Account as they deem necessary and appropriate and the amount of time devoted to different Client Accounts may vary.

C12 seeks to limit the potential adverse effects of any conflicts of interest that arise in connection with its provision of services by rigorously adhering to its Code of Ethics, as more fully described in Item 11.

B. Broker-Dealer Registration Status

C12 and its management persons are not registered as broker-dealers and do not have any application pending to register with the SEC as a broker-dealer or registered representative of a broker-dealer.

C. Futures Commission Merchant, Commodity Pool Operator or Commodity Trading Advisor Registration Status

C12 has registered with the Commodities Futures Trading Commission as a commodity trading adviser (CTA), and is a member of the National Futures Association, and has personnel registered as Principals or Associated Persons.

ITEM 11
CODE OF ETHICS, PARTICIPATION OR INTEREST IN CLIENT TRANSACTIONS
AND PERSONAL TRADING

A. Code of Ethics

C12 strives to adhere to the highest industry standards of conduct based on principles of professionalism, integrity, honesty and trust. In seeking to meet these standards, C12 has adopted a Code of Ethics (the “Code”) pursuant to Rule 204A-1 under the Investment Advisers Act of 1940, as amended (the “Advisers Act”). The Code incorporates the following general principles that all C12 employees are expected to uphold: employees must at all times place the interests of clients first; all personal securities transactions must be conducted in a manner consistent with the Code, any actual or potential conflicts of interest must be avoided or appropriately mitigated, and any abuse of an employee’s position of trust and responsibility must be avoided; employees must not take any inappropriate advantage of their positions; information concerning the identity of securities and financial circumstances of its Client Funds, including the Client Funds’ investors, must be kept confidential; and independence in the investment sub-advisory or advisory process must be maintained at all times. The Code also places restrictions on personal trades by employees, including that they disclose their personal securities holdings and transactions to C12 on a periodic basis, and requires that employees preclear certain types of personal securities transactions. Clients and prospective clients may request a copy of the Code by contacting C12 at the address or telephone number listed on the first page of this document.

B. Participation in Client Transactions

C12’s partners, officers and employees may from time to time make personal investments in securities or instruments in which C12 may recommend for Client Fund investment. Personal transactions by C12’s personnel are governed by the Code. C12’s personnel may buy, sell, or hold securities or other instruments for their own accounts while executing or recommending different trades or investments for one or more Client Funds. In addition, C12’s personnel may invest in eligible Client Funds of their choosing and are not required to invest in all Client Funds. It is expected that, if such investments are made, the size of these investments will change over time.

C12 may also have ongoing relationships with companies whose securities are in or are being considered for Client Funds. From time to time, various Client Funds may acquire securities or other financial instruments of an issuer in various parts of the capital structure. For example, one Client Fund may acquire or own securities that are senior or junior to securities or financial instruments of the same issuer that are acquired or held by another Client Fund (e.g., one Client Fund may acquire senior debt while another Client Fund may acquire subordinated debt). C12 recognizes that conflicts may arise under such circumstances and will endeavor to treat all Client Funds fairly and equitably.

C. Cross Transactions

To the extent C12 provides execution services, C12 may determine that it would be in the best interests of certain Client Funds to transfer a security from one Client Fund to another (each such transfer, a “Cross Trade”) for a variety of reasons, including, without limitation, tax purposes, liquidity purposes, to rebalance the portfolios of the Client

Funds, or to reduce transaction costs that may arise in an open market transaction. To the extent applicable, C12 will determine that the proposed Cross Trade is in the best interests of the Client Funds involved and to the extent C12 provides execution services, take steps to ensure that the transaction is consistent with the duty to obtain best execution for each of the Client Funds.

To the extent C12 provides execution services, C12 may execute Cross Trades with the assistance of a broker-dealer who executes and books the transaction at the close of the market on the day of the transaction at a reduced transaction cost due to the riskless nature of the transaction to the assisting broker-dealer. Alternatively, a Cross Trade between two Client Funds may occur as an “internal cross”, where C12 instructs the custodian for the Client Funds to book the transaction at the price determined in accordance with C12’s valuation policy. If C12 effects an internal cross, C12 will not receive any fee in connection with the completion of the transaction.

To the extent that Cross Trades may be viewed as principal transactions due to the ownership interest in a client by C12 or its personnel, C12 will comply with the requirements of Section 206(3) of the Investment Advisers Act of 1940, including that any such transactions will be considered on behalf of investors and approved or disapproved by (i) an advisory board comprised of representatives of investors in the Client Funds or (ii) a committee consisting of one or more persons selected by C12 (or its affiliate), and any valuation approved by such a committee will be determined or approved by an independent third-party that has appropriate experience in providing such valuations.

D. Trade Allocation Policies and Procedures

C12, to the extent it exercises discretionary authority for its Initial Client or other clients, has a policy to allocate investment opportunities for the Client Funds fairly and equitably, to the extent possible, over a period of time. C12, however, will have no obligation to purchase, sell or exchange any security or financial instrument for one Client Fund which C12 may purchase, sell or exchange for another Client Fund if C12 believes in good faith at the time of such determination that such transaction or investment would be unsuitable, impractical or undesirable for a particular Client Fund.

To the extent C12 exercises discretionary investment authority with respect to any clients now or in the future, C12 or a related person generally will make investment decisions among the Client Funds on a pro rata basis in proportion to the relative value of the eligible net assets of each Client Fund, or on a *pro rata* basis in proportion to the actual position size held by each Client Fund. Additional factors that C12 may take into account include, among others, the nature and size of the proportion of a securities issue likely to be available to C12 or the nature and size of the proposed sale; the investment objectives and restrictions on the Client Funds; the relative size and cash availability of the applicable strategy within a Client Fund; the ability to borrow and the cost of borrowed funds; tax consequences; legal restrictions, including those that may arise in foreign jurisdictions; the liquidity of the investment relative to the need of each Client Fund; the degree of specialization of a Client Fund relative to the investment offered; the relative historical participation of a Client Fund in the investment; the difficulty of liquidating an investment for more than one Client Fund; the possibility that an allocation may result in a small or odd lot; new Client Funds with a substantial amount of investable cash; and other factors consider relevant.

To the extent C12 exercises discretionary investment authority with respect to any clients now or in the future, if C12 determines that the purchase or sale of the same security is in the best interest of more than one Client Fund, C12 may, but is not obligated to, aggregate orders in order to reduce transaction costs to the extent permitted by applicable law. See Item 12 “Brokerage Practices – Order Aggregation” for an additional discussion of C12’s order aggregation policies.

ITEM 12

BROKERAGE PRACTICES

A. Factors Considered in Selecting or Recommending Broker-Dealers for Client Transactions

C12 may provide direct or discretionary investment management or advisory services now or in the future to the Initial Client with respect to the Helix funds, or in the future to other clients or with respect to the funds other than the Helix funds including for the Initial Client. To the extent C12 exercises any such authority or is authorized to make other decisions relating to trade execution, including with respect to which securities are bought and sold, the amount and price of those securities, the brokers or dealers to be used for a particular transaction, and commissions or markups and markdowns paid, it will be limited by its own internal policies and procedures and any investment guidelines imposed by the applicable Client Fund.

Subject to best execution, in selecting brokers and dealers (including prime brokers) to execute transactions, provide financing and securities on loan, hold cash and short balances and provide other services, C12 may consider, among other things, the following:

- the ability of the brokers and dealers to effect the transaction;
- the brokers' or dealers' facilities, reliability and financial responsibility; and
- the provision by the brokers of capital introduction, marketing assistance, consulting with respect to technology, operations and equipment, commitment of capital, access to company management and access to deal flow.

Accordingly, the commission rates (or dealer markups and markdowns) charged to Client Funds by brokers or dealers in the foregoing circumstances may be higher than those charged by other brokers or dealers who may not offer such services. C12 need not solicit competitive bids and does not have an obligation to seek the lowest available commission cost or spread. Generally, C12 does not expect that it or its Client Funds will separately compensate any broker or dealer for any of these other services.

If C12 decides, based on the factors set forth above, to execute over-the-counter ("OTC") transactions on an agency basis through Electronic Communications Networks ("ECNs"), it will also consider the following factors when choosing to use one ECN over another:

- the ease of use;
- the flexibility of the ECN compared to other ECNs; and
- the level of care and attention that will be given to smaller orders.

C12 maintains policies and procedures to review the quality of executions, including periodic reviews by its investment professionals and legal and compliance personnel.

B. Research and Other Soft Dollar Benefits

From time to time, C12 may pay a broker-dealer commissions (or markups or markdowns with respect to certain types of riskless principal transaction) for effecting Client Fund transactions in excess of that which another broker-dealer might have charged for effecting the transaction in recognition of the value of the brokerage and research services provided by the broker-dealer. C12 effects such transactions, and receives such brokerage and research services, only to the extent that they fall within the safe harbor provided by Section 28(e) of the Securities Exchange Act of 1934, as amended, and subject to prevailing guidance provided by the SEC regarding Section 28(e). C12 believes it is important to its investment sub-advisory or advisory processes to have access to independent research.

Generally, research services provided by broker-dealers may include information on the economy, industries, groups of securities, individual companies, statistical information, accounting and tax law interpretations, political developments, legal developments affecting portfolio securities, technical market action, pricing and appraisal services, credit analysis, risk measurement analysis, performance analysis, and analysis of corporate responsibility issues. Such research services are received primarily in the form of written reports, telephone contacts, and personal meetings with security analysts. In addition, such research services may be provided in the form of access to various computer-generated data and meetings arranged with corporate and industry spokespersons, economists, academicians, and government representatives. In some cases, research services are generated by third parties but are provided to C12 by or through broker-dealers.

Also, consistent with Section 28(e), research products or services obtained with “soft dollars” generated by one or more Client Funds may be used by C12 to service one or more other Client Funds. Where a product or service obtained with soft dollars provides both research and non-research assistance to C12 (*i.e.*, a “mixed use” item), C12 makes a good faith allocation of the cost which may be paid for with soft dollars. In making good faith allocations of costs between administrative benefits and research and brokerage services, a conflict of interest may exist by reason of C12’s allocation of the costs of such benefits and services between those that primarily benefit C12 and those that primarily benefit the Client Funds.

At least annually, C12 considers the amount and nature of research and research services provided by broker-dealers, as well as the extent to which such services are relied upon, and attempts to allocate a portion of the brokerage business of its Client Funds on the basis of that consideration. Broker-dealers sometimes suggest a level of business they would like to receive in return for the various products and services they provide. Actual brokerage business received by any broker-dealer may be less than the suggested allocation, but can (and often does) exceed the suggested level, because total brokerage is allocated on the basis of all of the considerations described above. In no case will C12 make binding commitments as to the level of brokerage commissions it will allocate to a broker-dealer, nor will it commit to pay cash if any informal targets are not met. A broker-dealer is not excluded from receiving business because it has not been identified as providing research products or services.

C. Brokerage for Client Referrals

Neither C12 nor any related person receives client referrals from any broker-dealer or third party. However, as discussed above, subject to best execution, C12 may consider, among other things, capital introduction and marketing assistance with respect to investors in Client Funds in selecting or recommending broker-dealers for Client Funds.

D. Directed Brokerage

C12 does not recommend, request or require that a client direct C12 to execute transactions through a specified broker-dealer.

E. Order Aggregation

To the extent C12 exercises discretionary investment authority now or in the future or provides non-discretionary execution services in respect of multiple clients, C12 may, but is not obligated to, purchase or sell such a security on behalf of such clients with an aggregated order, for the purpose of reducing transaction costs, to the extent permitted by applicable law. When an aggregated order is filled through multiple trades at different prices on the same day, each participating client will receive the average price, with transaction costs generally allocated *pro rata* based on the size of each client's participation in the order (or allocation in the event of a partial fill) as determined by C12. In the event of a partial fill, allocations may be modified on a basis that C12 deems to be appropriate, including, for example, in order to avoid odd lots or *de minimis* allocations. When orders are not aggregated, trades generally will be processed in the order that they are placed with the broker or counterparty selected by C12. As a result, certain trades in the same security for one client (including a client in which C12 and its personnel may have a direct or indirect interest) may receive more or less favorable prices or terms than another client, and orders placed later may not be filled entirely or at all, based upon the prevailing market prices at the time of the order or trade. In addition, some opportunities for reduced transaction costs and economies of scale may not be achieved.

F. Trade Errors

C12's clients will generally be responsible for any losses resulting from trading errors and similar human errors, absent willful misfeasance, gross negligence or bad faith. Trading errors might include, for example, keystroke errors that occur when entering trades into an electronic trading system or typographical or drafting errors related to derivatives contracts or similar agreements. Clients should assume that trading errors (and similar errors) could occur and that a client will be responsible for any resulting losses, even if such losses result from the negligence (but not gross negligence) of C12. C12 will have a conflict of interest in determining whether a trade error resulted from any conduct that would make it responsible for the losses associated with it or not.

ITEM 13 REVIEW OF ACCOUNTS

A. Frequency and Nature of Review of Client Accounts

To the extent requested by its Initial Client, C12 performs various daily, weekly, monthly, quarterly and periodic reviews of the Helix Funds' portfolios. Such reviews will be conducted by C12's senior portfolio managers, risk management personnel and research analysts. These reviews may include a review of the account's performance, investment objectives, strategies and restrictions, and other investment opportunities.

C12's personnel may participate in periodic portfolio reviews with Helix Fund investors at the direction and discretion of the Initial Client, which are attended by the appropriate members of the staff of the Initial Client and/or C12.

C12 expects to provide periodic reviews with respect to other clients on a similar basis.

B. Factors Prompting Review of Client Accounts other than a Periodic Review

In addition to periodic reviews, C12 will perform reviews of client accounts as requested by the Initial Client. Industry factors, market developments, statutory and regulatory developments, changes in a client's investment objectives, policies or restrictions, and any issues that may have been identified with respect to a client account trigger additional reviews of client accounts.

C. Content and Frequency of Account Reports to Clients

C12 expects to assist its Initial Client in the preparation of monthly reports documenting the performance of the applicable Helix Fund to investors in such Helix Fund. C12 may also assist in providing certain investors with information on a more frequent basis if requested to do so. In addition, C12 expects to assist its Initial Client in the preparation of investors' audited financial statements concerning the Helix Funds within 120 days of the end of the Helix Funds' fiscal year and tax reports 120 days following the audited financial statements.

ITEM 14C12 expects to provide periodic reports with respect to other clients on a similar basis.

ITEM 14
CLIENT REFERRALS AND OTHER COMPENSATION

A. Economic Benefits for Providing Services to Clients

C12 does not receive sales awards, prices or other economic benefits from non-clients for providing investment advice and other advisory services to its clients.

B. Compensation to Non-Supervised Persons for Client Referrals

C12 does not currently compensate any person who is not a supervised person for client referrals. However, as described in Item 12 “Brokerage Practices”, C12 may use soft dollars to pay for capital introduction services from certain broker-dealers in order to market Client Funds to potential investors.

In addition, C12 may in the future provide other compensation to placement agents for introducing potential investors to Client Funds.

ITEM 15

CUSTODY

C12 is deemed to have custody of client funds and securities because it has the authority to withdraw funds from a client's account in certain circumstances. Account statements related to the clients are sent by qualified custodians to C12.

C12 is subject to Rule 206(4)-2 under the Advisers Act (the "Custody Rule"). However, it is expected that C12 will not be required to comply (or will be deemed to have complied) with certain requirements of the Custody Rule with respect to certain of its Client Funds because it will comply with the provisions of the so-called "Pooled Vehicle Annual Audit Exception." Among other things, the "Pooled Vehicle Annual Audit Exception" requires that each applicable Client Fund be subject to audit at least annually by an independent public accountant that is registered with, and subject to regular inspection by, the Public Company Accounting Oversight Board, and requires that each such Client Fund distribute to its investors, within 120 days of the end of its fiscal year, its audited financial statements conducted in accordance with U.S. GAAP or other generally accepted accounting principles, such as the International Financial Reporting Standards ("IFRS"), reconciled to U.S. GAAP, with such reconciliation provided to US investors.

ITEM 16

INVESTMENT DISCRETION

As discussed in Item 4.B “Advisory Business – Advisory Services”, C12’s services to its Initial Client in respect of the Helix Funds are on a sub-advisory basis which includes discretionary investment authority. C12’s discretionary authority is limited to the provisions of the agreement with the client, including the investment guidelines the client establishes for the account. For additional information about the risks related to C12’s discretionary authority (to the extent applicable), please see Item 6 “Performance-Based Fees and Side-By-Side Management”.

ITEM 17

VOTING CLIENT SECURITIES

In accordance with Rule 206(4)-6 under the Advisers Act, C12 has adopted proxy voting policies and procedures (the “Policies”) for the voting of proxies on behalf of clients for which C12 has voting discretion. C12’s general policy is to vote proxy proposals, amendments, consents or resolutions relating to client securities, including interests in private investment funds, if any (collectively, “proxies”), in a manner that serves the best interests of the applicable Client Fund, as determined by C12 in its discretion. When exercising voting rights, C12 takes into account, among other considerations, the following factors: (i) the impact on the value of the investments; (ii) the anticipated associated costs and benefits; (iii) the continued or increased availability of portfolio information; and (iv) industry and business practices.

In certain circumstances, proxy voting involves logistical issues which can affect C12’s ability to vote such proxies as well as the desirability of voting such proxies. These issues include, among others, untimely notice of shareholder meetings; requirements to vote proxies in person; potential difficulties in translating the proxy and requirements to provide local agents with unrestricted powers of attorney to facilitate voting instructions. As a consequence, C12 votes proxies in these markets only on a “best-efforts” basis. In addition, C12 may refrain from voting proxies where it determines that voting the proxies would be inappropriate taking into consideration the cost of voting the proxy and the anticipated benefit to its Client Fund. A copy of the Policies and the proxy voting record relating to a client may be obtained by contacting C12.

Clients, including the Initial Client in respect of the Helix Funds that have not granted C12 proxy voting authority over securities held in their accounts will receive their proxies in accordance with the arrangement they have made with their service providers. C12 generally does not provide proxy voting recommendations to clients who have not granted C12 voting authority over their securities.

ITEM 18
FINANCIAL INFORMATION

C12 is not required to include a balance sheet for its most recent fiscal year as part of this Brochure, is not aware of any financial condition reasonably likely to impair its ability to meet contractual commitments to clients, and has not been the subject of a bankruptcy petition at any time during the past ten years.
