Item 4. Advisory Business

Element Capital Management LLC ("Element") is an investment adviser with its principal place of business in New York, New York. Element was formed in February 2007 and commenced operations as an investment adviser in June 2007. The principal owner of Element is Jeffrey M. Talpins.

Element provides investment advisory services to pooled investment vehicles intended for sophisticated investors and institutional investors (the "Element Funds"). Element provides advice to the Element Funds tailored to the investment objectives and strategies set forth in each Element Fund's offering memorandum. The Element Funds do not impose restrictions on investing in certain securities or certain types of securities. In the future, Element may also provide investment advisory services to sophisticated investors and institutional investors (the "Managed Accounts" and together with the Element Funds, the "Clients").

As of December 31, 2013, Element had approximately \$30,517,069,000 of regulatory assets under management, all of which are managed on a discretionary basis.

Item 5. Fees and Compensation

Element's fees and compensation from the Element Funds are set forth in each Element Fund's offering memorandum. They are not negotiable.

MANAGEMENT FEE

Element charges each Element Fund a management fee equal to 2% per annum of the net asset value of the Element Fund's shares or interests as of the last day of each month. Management fees are payable monthly in arrears and are deducted from the Element Funds' assets. If new or additional subscriptions into an Element Fund are made during a month, the management fee will be prorated for the number of days remaining in the month.

PERFORMANCE ALLOCATION

A related person of Element (Element Capital Holdings LLC) also receives an annual performance allocation equal to 20% of the net capital appreciation (both realized and unrealized) of the assets of the Element Funds, subject to a "high water mark" provision.

In addition to the management fees and performance allocations, each Element Fund also pays certain costs and expenses in connection with its operation, including without limitation, third-party fund administration fees, withholding taxes that may arise on investments, registration fees and other expenses due to regulatory, supervisory or fiscal authorities in various jurisdictions, insurance premiums, interest, brokerage and transaction costs, research costs, all professional and other fees and expenses in connection therewith, all costs and expenses in connection with determining and calculating the net asset value of such Element Fund's shares or interests, and the costs of preparing all material contracts, marketing materials, investor circulars and newsletters in relation to such Element Fund. The Element Funds are organized in a "master-feeder" structure, and each feeder fund, as a shareholder of the related master fund, bears a pro rata share of the expenses associated with such master fund, including the master fund's formation expenses. Each Element Fund also bears all expenses incurred in connection with its formation and the initial and continuing offering of its shares or interests.

If Element advises any Managed Accounts in the future, the fees and compensation related thereto will be determined at the time Element enters into such advisory arrangements.

Please refer to Item 12 of this Brochure for a discussion of Element's brokerage practices.

Item 6. Performance-Based Fees and Side-by-Side Management

Currently, Element provides investment advisory services only to the Element Funds, all of which are subject to the performance allocations described in Item 5 above.

If Element advises other Client accounts in the future that are not subject to performance-based fees, this may create an incentive for Element to favor Client accounts for which Element (or an affiliate) receives performance-based fees. In this event, Element will adopt policies and procedures designed to ensure that Element allocates investment opportunities among Clients in accordance with the investment objectives of such Clients and in a manner that it considers fair and equitable.

Item 7. Types of Clients

Currently, Element provides investment advisory services only to the Element Funds. In the future, Element may also provide investment advisory services to Managed Accounts.

Item 8. Methods of Analysis, Investment Strategies and Risk of Loss

The investment strategies, methods of analysis, and material risks applicable to each Element Fund are set forth in detail in the respective Element Fund's offering memorandum. A summary of those investment strategies, methods of analysis, and material risks is provided below. Note that each Element Fund that is a feeder fund invests substantially all of its assets through the related master fund.

Element utilizes a variety of methods of analysis and investment strategies to manage the assets of the Element Funds. Element uses its proprietary base of technology and risk management systems together with a specialized product expertise, holistic portfolio risk allocation and innovative approach to trade construction to access the volatility markets and express macro views.

The Element Funds invest primarily in G-12 sovereign debt securities, G-12 interest rate swaps, G-12 interest rate futures, U.S. agency mortgage-backed securities, G-20 foreign exchange, G-20 equity securities, and all listed and over-the-counter derivatives in respect of the foregoing. The Element Funds may also invest in, among other financial instruments: (i) commercial mortgage-backed securities; (ii) asset-backed securities; (iii) non-U.S. agency mortgage-backed securities and non-U.S. agency debentures; (iv) non-G-12 sovereign debt securities, interest rate swaps and interest rate futures; (v) non-G-20 currencies; (vi) commodities; (vii) securities issued by supranational organizations or public international bodies, governments and their agencies and instrumentalities, municipal or local authorities and their agencies and instrumentalities; (viii) other debt and equity or equity-related securities (including, but not limited to, notes, commercial paper and structured or hybrid instruments) and participation interests issued by corporations, partnerships, trusts and other issuers; and (ix) all listed and over-the-counter derivatives in respect of the foregoing. The Element Funds may also enter into repurchase and reverse-repurchase agreements, master note purchase agreements, forward commitment and delayed delivery transactions, dollar rolls of mortgage backed securities, stock-lending agreements, short-term money market investment funds, and such other types of agreements or transactions as Element regards as appropriate for the Element Funds having regard to its investment objectives and policies. The investment strategies utilized by the Element Funds to achieve their investment objective may vary over time based on Element's changing views of then current and future market conditions.

If Element advises any Managed Accounts in the future, Element will utilize methods of analysis and investment strategies that are tailored to the terms of the Managed Account agreement, and the material risks will depend on the investment strategies applicable to such Managed Account.

SUMMARY OF MATERIAL RISKS

FOR A COMPLETE DISCUSSION OF RISKS ASSOCIATED WITH ANY ELEMENT FUND, ELIGIBLE INVESTORS SHOULD REFER TO THE OFFERING MEMORANDUM FOR SUCH ELEMENT FUND.

The Element Funds invest in and actively trade over-the-counter ("OTC") derivatives, options, futures, forwards, currencies, equities, swaps and other instruments using strategies and investment techniques with significant risk characteristics, including risks arising from the volatility of markets, the risks of borrowings and short sales, the leverage associated with trading in these markets and in derivatives markets, the potential illiquidity of derivative instruments, the risk of loss from counterparty defaults and the risk of borrowing to meet redemption requests. No guarantee or representation is made that any Element Fund's program will be successful, that the various investment strategies utilized will have low correlation with each other or that any Element Fund's returns will exhibit low correlation to any other investment portfolio. Each Element Fund's investment program may utilize such investment techniques as option transactions, margin transactions, short sales, leverage, derivatives trading and futures and forward contracts, which practices involve substantial volatility and can, in certain circumstances, substantially increase the adverse impact to which the Element Fund's investment portfolio may be subject. All investments made by an Element Fund risk the loss of capital. No guarantee or representation

is made that any Element Fund's program will be successful, and investment results may vary substantially over time.

The markets for derivatives and other financial instruments are speculative. Prices for the Element Funds' investments can be highly volatile and market movements are difficult to predict. Supply and demand for such instruments change rapidly and are affected by a variety of factors, including interest rates, commodity prices and general trends in the overall economy or particular industrial or other economic sectors. A variety of factors which are inherently difficult to predict, such as interest rates, earnings, changing supply and demand relationships, trade, fiscal, monetary and exchange control programs and policies of governments, and national and international political and economic events and policies, can have significant effects on such markets. Each Element Fund may have only limited ability to vary its investment portfolio in response to changing economic, financial and investment conditions. No assurance can be given as to when or whether adverse events might occur which could cause significant and immediate loss in the value of the Element Fund's portfolio. Even in the absence of such events, investing in and trading commodity derivatives and other financial instruments can quickly lead to large losses.

LEVERAGE

The Element Funds are not subject to any limits on the incurrence of leverage. Leverage may take the form of loans for borrowed money, trading on margin, derivative investments that are inherently leveraged, including among others, forward contracts, futures contracts, swaps and repurchase agreements, and other forms of direct and indirect borrowings, increasing the volatility of the Element Funds' investments. The use of leverage by the Element Funds can increase the adverse impact to which the Element Funds' investment portfolios may be subject.

For example, should the securities pledged to brokers to secure an Element Fund's margin accounts decline in value, the Element Fund could be subject to a "margin call," pursuant to which the Element Fund must either deposit additional funds with the broker, or suffer mandatory liquidation of the pledged securities to compensate for the decline in value.

Additionally, in an unsettled credit environment, Element may find it difficult or impossible to obtain leverage for the Element Funds. Since leveraging its assets is an integral part of the investment strategy of the Element Funds, in such event the Element Funds could find it difficult to implement their strategies.

OVER-THE-COUNTER DERIVATIVE CONTRACTS

Element makes use of fixed income, interest rate, mortgage, equity, foreign exchange and other derivatives in each Element Fund's investment program. Depending on their structure, swap agreements may increase or decrease an Element Fund's exposure to long-term or short-term interest rates in the United States or abroad, foreign currency and equity values or other reference assets. Swap agreements will tend to shift an Element Fund's investment exposure from one type of investment to another. Depending on how they are used, swap agreements may increase or decrease the overall volatility of an Element Fund's portfolio. Certain swaps, options and other derivative instruments may be subject to various types of risks, including market risk, liquidity risk, counterparty credit risk, legal risk and operational risk. In addition, swaps and other derivatives can involve significant economic leverage and may, in some cases, involve significant risks of loss.

In general, there is less government regulation and supervision of transactions in the OTC markets than of transactions entered into on organized exchanges. In addition, many of the protections afforded to participants on some organized exchanges, such as the performance guarantee of an exchange clearing house, are generally not available in connection with OTC transactions. OTC transactions are specifically tailored to the needs of the counterparties and enable the counterparties to structure precisely the date, market level and amount of a given position. The counterparty for these agreements will be the specific firm involved in the transaction rather than a recognized exchange and accordingly the bankruptcy or default of a counterparty with which an Element Fund trades OTC contracts could result in substantial

losses to the Element Fund. An Element Fund will only enter into transactions with counterparties which it believes to be creditworthy, and may reduce the exposure incurred in connection with such transactions through the receipt of letters of credit or collateral from certain counterparties. Regardless of the measures an Element Fund may implement to reduce counterparty credit risk, however, there can be no assurance that a counterparty's creditworthiness will not decline or that a counterparty will not default or that an Element Fund will not sustain losses on the transactions as a result.

While Element believes that it will be able to establish the necessary counterparty business relationships to permit the Element Funds to effect transactions in the OTC currency market and other counterparty markets, including the swaps market, there can be no assurance that it will be able to do so. Moreover, the counterparties with which the Element Funds expect to establish such relationships will not be obligated to maintain the credit lines extended to the Element Funds, and such counterparties could decide to reduce or terminate such credit lines at their discretion. In addition, from time to time, the counterparties with which the Element Funds effect transactions might cease making markets or quoting prices in certain of the instruments. In such instances, an Element Fund might be unable to enter into a desired transaction, or to enter into any offsetting transaction with respect to an open position, which might adversely affect its performance.

TRADING ON NON-U.S. EXCHANGES

Element engages in trading on commodity exchanges outside the United States. Trading on such exchanges is not regulated by any United States governmental agency and may involve certain risks not applicable to trading on United States exchanges. For example, some foreign exchanges, in contrast to United States exchanges, are "principals' markets" in which performance is the responsibility only of the individual member with whom the trader has entered into a futures contract and not of an exchange or clearing corporation. Due to the absence of a clearing house system on certain foreign markets, such markets are significantly more susceptible to disruptions than are United States exchanges and, therefore, trading thereon potentially is subject to greater risks. Moreover, such trading may be subject to whatever regulatory provisions are applicable to transactions effected outside the United States, whether on foreign exchanges or otherwise. Trading on foreign exchanges involves the additional risks of expropriation, burdensome or confiscatory taxation, moratoriums, and investment controls or political or diplomatic events which might adversely affect Element's trading activities. Engaging in trading on foreign exchanges, as noted above, is also subject to the risk of changes in the exchange rate between United States dollars and the currencies in which contracts traded on such exchanges are settled.

NON-US GOVERNMENT SECURITIES

Investing in securities of non-U.S. governments that are generally denominated in non-U.S. currencies involve certain risks not typically associated with investing in the securities issued by the U.S. Government. Such risks may include: default by the issuing government; possibility of debt restructuring; changes in exchange rates and exchange control regulations; political and social instability; political risk; imposition of foreign taxes; less liquid markets; limited availability of information; higher transaction costs; and greater price volatility.

OPTIONS

The Element Funds utilize options as part of their investment programs. There are risks associated with the sale and purchase of call options. The seller (writer) of a call option which is covered (e.g., the writer holds the underlying security) assumes the risk of a decline in the market price of the underlying security below the purchase price of the underlying security less the premium received, and gives up the opportunity for gain on the underlying security above the exercise price of the option. The seller of an uncovered call option assumes the risk of a theoretically unlimited increase in the market price of the underlying security above the exercise price of the option. The buyer of a call option assumes the risk of losing his entire investment in the call option. If the buyer of the call sells short the underlying security, the loss on the call will be offset in whole or in part by any gain on the short sale of the underlying security.

There are risks associated with the sale and purchase of put options. The seller (writer) of a put option which is covered (e.g., the writer has a short position in the underlying security) assumes the risk of an increase in the market price of the underlying security above the sales price (in establishing the short position) of the underlying security plus the premium received, and gives up the opportunity for gain on the underlying security below the exercise price of the option. The seller of an uncovered put option assumes the risk of a decline in the market price of the underlying security below the exercise price of the option. The buyer of a put option assumes the risk of losing his entire investment in the put option. If the buyer of the put holds the underlying security, the loss on the put will be offset in whole or in part by any gain on the underlying security.

FUTURES

The Element Funds utilize futures as part of their investment programs. Futures positions may be illiquid because certain futures exchanges limit fluctuations in certain futures contract prices during a single day by regulations referred to as “daily price fluctuation limits” or “daily limits.” Under such daily limits, during a single trading day, no trades may be executed at prices beyond the daily limits. Once the price of a particular futures contract has increased or decreased by an amount equal to the daily limit, positions in that contract can neither be taken nor liquidated unless traders are willing to effect trades at or within the limit. This constraint could prevent the Element Funds from promptly liquidating unfavorable positions and subject the Element Funds to losses. In addition, the Commodity Futures Trading Commission and various exchanges impose speculative position limits on the number of positions that the Element Funds may indirectly hold or control on particular commodities.

In the U.S. futures markets, margin deposits typically range between 1% and 15% of the value of the futures contracts purchased or sold. In the forward, currency and certain other derivative markets, margin deposits may be even lower or may not be required at all. Such low margin deposits are indicative of the fact that any trading in these markets typically is accompanied by a high degree of leverage. Low margin deposits mean that a relatively small adverse price movement in a futures or forward contract may result in immediate and substantial losses to the investor. Thus, like other leveraged investments, any purchase or sale of a futures, forward or other futures contract may result in losses in excess of the amount invested.

FORWARD CONTRACTS

Element enters into forward contracts on behalf of the Element Funds that are not traded on exchanges and are generally not regulated. There are no limitations on daily price moves of forward contracts. Banks and other dealers with whom the Element Funds may maintain accounts may require the Element Funds to deposit margin with respect to such trading, although margin requirements are often minimal or non-existent. The Element Funds’ counterparties are not required to continue to make markets in such contracts. There have been periods during which certain counterparties have refused to continue to quote prices for forward contracts or have quoted prices with an unusually wide spread (the price at which the counterparty is prepared to buy and that at which it is prepared to sell). Arrangements to trade forward contracts may be made with only one or a few counterparties, and liquidity problems therefore might be greater than if such arrangements were made with numerous counterparties. The imposition of credit controls by governmental authorities might limit such forward trading to less than that which Element would otherwise recommend, to the possible detriment of the Element Funds.

MORTGAGE-BACKED AND ASSET-BACKED SECURITIES

The Element Funds invest in mortgage-backed securities and other asset-backed securities. Payments of principal and interest on the underlying loans are passed through to the holders of such securities over the lives of the securities. Most mortgage-backed and asset-backed securities are subject to early repayment of principal, which can be expected to accelerate during periods of declining interest rates. For certain types of asset pools, such as collateralized mortgage obligations, prepayments may be allocated to one tranche of securities ahead of other tranches, in order to reduce the risk of prepayment for the other tranches. Such repayments can usually be reinvested only at the lower yields than prevailing in the

market. Therefore, during periods of declining interest rates, these securities are less likely than other fixed-income obligations to appreciate in value and less effective at locking in a particular yield. On the other hand, mortgage-backed and asset-backed securities are subject to substantially the same risk of depreciation during periods of rising interest rates as other fixed-income securities. Asset-backed securities also present certain credit risks that are not presented by mortgage-backed securities due to differences in the nature of the underlying collateral. Specifically, such collateral may be composed of lease obligations or unsecured loans or loans secured by assets that depreciate more rapidly than real estate. There is the possibility that, in some cases, recoveries on repossessed collateral may not be available to support payments on these securities.

DERIVATIVE MORTGAGE-BACKED SECURITIES

The Element Funds invest in derivative mortgage-backed securities such as principal-only (“POs”) and interest only (“IOs”) or inverse floating-rate securities, which are more exposed to mortgage repayments, and which therefore generally involve a greater amount of risk. Small changes in repayments can significantly impact the cash flow and the market value of these securities. The risk of faster than anticipated prepayments can significantly impact the cash flow and the market value of these securities. The risk of faster than anticipated prepayments generally adversely affects IOs, super floaters and premium priced mortgage-backed securities. The risk of slower than anticipated prepayments generally adversely affects POs, floating-rate securities subject to interest rate caps, support tranches and discount priced mortgage-backed securities. In addition, particular derivative securities may be leveraged such that their exposure (i.e., price sensitivity) to interest rate and/or prepayment risk is magnified.

NON-U.S. DOLLAR CURRENCY EXPOSURE

Element may invest a portion of an Element Fund’s assets in non-U.S. currencies, or in instruments denominated in non-U.S. currencies, the prices of which will be determined with reference to currencies other than the U.S. Dollar. Element may seek to hedge the non-U.S. Dollar currency exposure of an Element Fund’s portfolio by investing in currencies, currency futures contracts, and options on currency futures contracts, forward currency contracts, swaps, swaptions, or any combination thereof, but there can be no assurance that such hedging transactions will be effective. To the extent the hedging transactions are partly or entirely unsuccessful, or if Element chooses not to hedge some or all of a Element Fund’s exposure to non-U.S. Dollar currencies, the value of the assets of the Element Fund will fluctuate with U.S. Dollar exchange rates and with price changes of the investments of the Element Fund in the various local markets and currencies. In addition, Element’s hedging techniques entail additional risks. Foreign exchange rates are highly volatile and subject to event risks, as the political situation with regard to the relevant foreign government may itself be volatile. Moreover, if the cash flow of the assets is contingent, it may be difficult to quantify the attendant cross-currency risk, compounding the risk of changes in underlying currencies by the other risks in the portfolio. Correlations between these risks are difficult to quantify and, therefore, difficult to hedge. An inaccurate estimation of the correlation may lead to a faulty hedge and a consequent loss in the portfolio. In highly volatile markets, predictions of correlation based on historical data can diverge dramatically from observed market moves. Swaps, “synthetic” or derivative instruments, certain types of options and other customized financial instruments are subject to the risk of non-performance by the other party to the contract. As a result, a default on the instrument may deprive an Element Fund of unrealized profits, or may force the Element Fund to cover its commitments for purchase or resale of the underlying currency at the then current market price.

SHORT SELLING

The Element Funds engage in short sales, which are transactions in which the Element Fund sells a security or other instrument it does not own in anticipation of a decline in the market value of that security or other instrument or as a hedge. To complete a short sale transaction, the Element Fund must borrow the security to make delivery to the buyer. The Element Fund is then obligated to replace the borrowed security, which generally entails purchasing it at the market price at the time of replacement. Until the security is replaced, the Element Fund is required to pay to the lender amounts equal to any dividends or interest which accrue or are deemed to accrue during the period of the loan. The Element Fund may also

be required to pay a premium to borrow the security. In addition to direct short sales, the Element Funds may also enter into a short position through a forward commitment or a short derivative position through a futures contract or swap agreement.

Short sales are subject to special risks. Short sales can in certain circumstances, increase the impact of adverse market movements on the value of the short position. A short sale involves the risk of a theoretically unlimited increase in the market price of the security or other instrument represented by the short position, which could result in an inability of the Element Fund to cover the short position and a theoretically unlimited loss. In addition, there can be no assurance that securities necessary to cover a short position will be available for purchase. There is also the risk that the securities or other instruments borrowed by the Element Funds in connection with a short sale would need to be returned to the lender on short notice or at the most disadvantageous time. Finally, from time to time, regulatory or legislative action taken by U.S. or non-U.S. regulators may restrict the ability of the Element Funds to engage in short selling.

EQUITY SECURITIES

Equity securities represent an ownership interest, or the right to acquire an ownership interest, in an issuer. The values of equity securities may decline due to general market conditions which are not specifically related to a particular company, such as real or perceived adverse domestic or international economic or political conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or adverse investor sentiment generally. Such values may also decline due to factors which affect a particular industry or industries, such as labor shortages or increased production costs and competitive conditions within an industry. Equity securities generally have greater price volatility than fixed income securities. Each of the factors affecting the value of equity securities are inherently difficult to predict.

EXCHANGE-TRADED FUNDS AND OTHER EQUITY INDEX SECURITIES

The Element Funds may invest in exchange-traded funds (ETFs) or other equity index securities or listed and over-the-counter derivatives in respect of the foregoing. Such investments represent interests in portfolios of selected equities, the value of which fluctuates in response to issuer, political, market and economic developments. ETFs and other similar instruments involve risks generally associated with investments in a broadly based portfolio of common stocks or commodities, including the risk that the general level of stock prices or commodity prices, or that the prices of stocks within a particular sector, may increase or decrease, thereby affecting the value of the shares of the ETF or other instruments. In addition, the market price of such investments may not be equivalent to the pro rata value of the underlying portfolio of securities.

VOLATILITY

The prices of commodities contracts and derivative instruments, including futures and option prices and equity securities, can be highly volatile. Price movements of forward, futures and other derivative contracts in which the assets of the Element Funds may be invested are influenced by, among other things, interest rates, changing supply and demand relationships, trade, fiscal, monetary and exchange control programs and policies of governments, and national and international political and economic events and policies. In addition, governments from time to time intervene, directly and by regulation, in certain markets, particularly those in currencies, securities, futures and options. Such intervention often is intended directly to influence prices and may, together with other factors, cause all of such markets to move rapidly in the same direction because of, among other things, interest rate fluctuations.

CONCENTRATION OF INVESTMENTS

The Element Funds may hold a few, relatively large positions in relation to the capital of the Element Funds. Consequently, a loss in any such position could result in a proportionately higher reduction in the

net asset value of the Element Fund than if the Element Fund's capital had been spread among a wider number of instruments. Unlike many other investment companies which, as a matter of investment policy, diversify portfolio holdings so that no more than a fixed percentage of their assets are invested in any one issuer or industry or group of industries, no Element Fund has fixed guidelines for diversification. No Element Fund applies, or is required to apply, diversification rules over and above the rules described in such Element Fund's offering memorandum. Since a relatively high percentage of each Element Fund's assets may be invested in a limited number of instruments, such Element Fund's portfolio may be more susceptible to any single economic, political or regulatory occurrence, and may be more volatile, than the portfolio of a diversified investment company.

Item 9. Disciplinary Information

This Item is not applicable.

Item 10. Other Financial Industry Activities and Affiliations

An affiliate of Element (Element Capital Holdings LLC) serves as the managing member to certain Element Funds. In addition, Jeffrey M. Talpins, the principal owner of Element, serves as one of the directors of certain Element Funds. Element is registered with the Commodity Futures Trading Commission as a commodity pool operator and certain of Element's management persons are registered as associated persons of Element.

Item 11. Code of Ethics, Participation or Interest in Client Transactions and Personal Trading

Element has adopted a code of ethics (the "Code of Ethics") pursuant to rule 204A-1 under the Investment Advisers Act of 1940, as amended. The Code of Ethics highlights that Element and its supervised persons have a fiduciary duty to act in the best interest of Clients and must observe high standards of ethical conduct with respect to each Client.

The Code of Ethics contains policies and procedures that, among other things: (a) require all supervised persons to comply with applicable Federal securities laws; (b) prohibit supervised persons from trading on the basis of material non-public information; (c) place limitations and holding periods on personal securities transactions in reportable securities; (d) require supervised persons to pre-clear personal securities transactions in reportable securities; (e) require supervised persons to refrain from activities that may conflict with the interests of Clients; (f) restrict supervised persons' outside business activities; (g) impose limitations on the giving or receiving of gifts and entertainment from certain types of third parties; and (h) require supervised persons to certify their compliance with the Code of Ethics on at least an annual basis.

Subject to the restrictions set forth in the Code of Ethics, Element and its supervised persons and affiliates (i) may engage in, invest in, participate in or otherwise enter into other business ventures of any kind, nature or description, alone or with others and (ii) may invest and trade for their own accounts, including in securities which are the same as or different from those traded or held by Clients and as a result may from time to time take positions in their personal accounts that are opposite to the positions taken for Clients.

Clients or prospective Clients may obtain a copy of the Code of Ethics by contacting Element's Chief Compliance Officer at the address or telephone number listed on the cover page of this Brochure.

Item 12. Brokerage Practices

Element considers a number of factors in selecting a broker-dealer to execute transactions (or series of transactions) and determining the reasonableness of the broker-dealer's compensation. Such factors include price, the ability to effect the transactions, the brokers-dealer's facilities, reliability and financial responsibility, special execution capabilities, block trading and block positioning capabilities, willingness to execute related or unrelated difficult transactions in the future, efficiency of execution and error resolution, quotation services, the availability of securities to borrow for short trades, custody, recordkeeping and similar services, and any research or investment management-related services provided by such broker-dealer. In selecting a broker-dealer to execute transactions (or series of transactions) and determining the reasonableness of the broker-dealer's compensation, Element need not solicit competitive bids and does not have an obligation to seek the lowest available commission cost.

Currently, Element does not have any formal soft dollar arrangements in place. To the extent Element receives research or other products or services other than execution from broker-dealers in connection with Client securities transactions, any such services will be limited to research and brokerage within the meaning of Section 28(e) of the Securities Exchange Act of 1934 ("Section 28(e)"). Research services within Section 28(e) may include, but are not limited to, research reports (including market research); certain financial newsletters and trade journals; software providing analysis of securities portfolios; corporate governance research and rating services; attendance at certain seminars and conferences; discussions with research analysts; meetings with corporate executives; consultants' advice on portfolio strategy; data services (including services providing market data, company financial data and economic data); advice from broker-dealers on order execution; and certain proxy services. Brokerage services within Section 28(e) may include, but are not limited to, services related to the execution, clearing and settlement of securities transactions and functions incidental thereto (i.e., connectivity services between an adviser and a broker-dealer and other relevant parties such as custodians); trading software operated by a broker-dealer to route orders; software that provides trade analytics and trading strategies; software used to transmit orders; clearance and settlement in connection with a trade; electronic communication of allocation instructions; routing settlement instructions; post trade matching of trade information; and services required by the SEC or a self regulatory organization such as comparison services, electronic confirms or trade affirmations.

Element's Best Execution Committee periodically reviews and evaluates Element's brokerage practices to determine in good faith whether, with respect to any research or other products or services received from a broker-dealer, the commissions used to obtain those products and services were reasonable in relation to the value of the brokerage, research or other products or services provided by the broker-dealer.

The use of Client commissions (or markups or markdowns) to obtain research and brokerage products and services raises conflicts of interest. For example, Element will not have to pay for the products and services itself. This creates an incentive for Element to select or recommend a broker-dealer based on its interest in receiving those products and services.

Element and its affiliates and employees may have other business arrangements with brokers and dealers used to execute transactions for the Clients. Brokerage firms and their affiliates may invest in the Element Funds, and may provide financing or other services to Element, its affiliates and/or the Clients. Subject to compliance with applicable law and Element's obligation to seek best execution, Element may also use a broker-dealer that has referred investors to Element to execute or clear transactions on behalf of the Clients or as counterparty to transactions for the Clients. Brokerage firms and their employees may offer gifts to employees of Element, and may invite employees of Element to entertainment and social events. It is Element's policy that factors such as gifts and entertainment provided to Element's supervised persons shall not be considered when selecting brokers and counterparties to execute transactions for the Clients. In addition, Element's Code of Ethics places certain reporting requirements and limitations on the receipt of such gifts and entertainment.

Currently, all the Element Funds are organized in one “master-feeder” structure and, therefore, only one Element Fund (i.e., the master fund) makes portfolio investments. Accordingly, Element does not aggregate purchases or sales of securities among multiple Element Funds. If Element advises additional Clients in the future, Element will adopt policies and procedures regarding trade aggregation and allocation. Generally, such policies and procedures will provide that Element will aggregate trades in accordance with its best execution obligations and allocate investment opportunities among Clients in accordance with the investment objectives of such Clients and in a manner that it considers fair and equitable.

Item 13. Review of Accounts

Element provides direct regular management of the Element Funds' accounts under the supervision of its Chief Investment Officer. On at least a weekly basis, Element conducts a portfolio review involving the Chief Investment Officer, the Head of Risk Management, and other members of Element's investment staff. The portfolio review typically covers the recent performance and portfolio positions of the Element Funds, current market conditions, events and expectations, and various risk and portfolio management considerations. In addition, Element's Risk Committee meets to conduct risk reviews on a monthly basis and at any time in response to significant portfolio drawdown triggers or upon the request of senior management.

On a monthly basis, Element generally provides each Element Fund with the following written reports: (i) mid-month and month-end performance estimates, (ii) a letter containing market commentary and performance updates and (iii) a report of certain risk metrics.

Item 14. Client Referrals and Other Compensation

This Item is not applicable.

Item 15. Custody

A related person of Element (Element Capital Holdings LLC) may be deemed to have custody of certain Element Fund assets within the meaning of the Investment Advisers Act of 1940, as amended. Each Element Fund (i) is audited annually by an independent public accountant that is registered with, and subject to regular inspection by, the Public Company Accounting Oversight Board and (ii) distributes its audited financial statements prepared in accordance with generally accepted accounting principles to all investors in such Element Fund within 120 days of the end of its fiscal year.

Item 16. Investment Discretion

Pursuant to the investment management agreements with the Element Funds, Element has discretionary authority to manage the assets of the Element Funds. There are no limitations placed on this authority. If Element advises any Managed Accounts in the future, such may be subject to limitations relevant to such account.

Pursuant to the terms of the governing documents of each Element Fund, Element and its affiliates generally will not be liable to such Element Fund or its investors for the consequences of their conduct, and will be indemnified by the Element Fund against any losses they may incur, in the absence of fraud, willful misconduct or gross negligence. As a result of these provisions, the Element Fund (and not Element or its affiliates) will be responsible for any losses from trading errors and similar human errors, absent fraud, willful misconduct or gross negligence.

Item 17. Voting Client Securities

Element has been delegated the authority and right to vote proxies received by the Element Funds for any investments that may have attached voting rights.

In voting proxies, Element utilizes the services of a third-party proxy agent that votes in favor of routine corporate housekeeping proposals, including election of directors (where no corporate governance issues are implicated), selection of auditors and increases in or reclassification in common stock.

If Element determines that the proposed vote by the third-party proxy agent is not in the best interest of the Element Funds, Element will not utilize the third-party proxy agent for such proxy and will instead vote such proxy in the manner that it determines is in the best interest of the Element Funds.

If a proxy vote creates a material conflict between the interests of Element or its supervised persons and the interests of the Element Funds, Element will resolve the conflict before voting the proxies. Element's proxy voting policy includes guidelines for Element's Chief Compliance Officer to follow to ensure any material conflict of interest is resolved in the best interests of the Element Funds. Generally, the Element Funds cannot direct how Element votes proxies in a particular situation.

If Element advises any Managed Account in the future, the allocation of responsibilities for proxy voting will be set forth in the Managed Account agreement.

Clients may obtain a copy of Element's proxy voting policies and procedures and/or a record of proxy votes cast since the effective date of Element's registration as an investment adviser with the SEC by contacting Element's Chief Compliance Officer at the address or telephone number listed on the cover page of this Brochure.

Item 18. Financial Information

This Item is not applicable.

Item 19. Requirements for State-Registered Advisers

This Item is not applicable.
