March 31, 2015

This brochure provides information about the qualifications and business practices of Emerald Advisers, Inc. If you have any questions about the contents of this brochure, please contact us at (717) 396-1116 or jmeehan@teamemerald.com. The information in this brochure has not been approved or verified by the United States Securities and Exchange Commission or by any state securities authority.

Emerald Advisers, Inc is a registered investment adviser. Registration as an investment adviser does not imply any level of skill or training.

Additional information about Emerald Advisers, Inc. also available on the SEC's website at www.adviserinfo.sec.gov.

Item 2 Material Changes

The SEC adopted “Amendments to Form ADV” in July 2010. As you will see, Form ADV part 2 is substantially different than the previous version.

Material Developments at Emerald Advisers, Inc.

This section of the brochure will be used to address material changes since our last delivery or posting on the SEC’s public website.

Consistent with the new rules, we will ensure that you receive a summary of any material changes to this and subsequent Brochures within 120 days of the close of our business’ fiscal year. Additionally, we will provide you with other interim disclosure about material changes as necessary.

Emerald Advisers, Inc. acquired the assets and has integrated the management team of Elessar Investment Management, Inc. Elessar has offered personalized service focused on both individual and institutional investors interested in value-oriented small and small-to-midcap domestic equity investments.

Item 4: Advisory Business

Emerald Advisers, Inc. ("EAI") is a registered investment adviser investing our client's assets primarily in U.S. domestic equity securities. Our investment strategies include small, mid and large capitalization stocks. EAI has been providing discretionary advisory services to institutional, governmental, trusts, estates, charitable and high net worth individuals since it was founded in 1991.

EAI is a wholly-owned subsidiary of Emerald Asset Management. Emerald Asset Management is owned by the Emerald Asset Management Employee Stock Ownership Trust.

As of March 31, 2015 EAI had \$2.1 billion in discretionary assets under management.

Advisory Services:

For EAI's Small capitalization products we seek to maximize returns and minimize risks by capitalizing on the inefficiencies inherent in today's small cap markets.

Our Small Cap Growth product objective is to outperform its Russell Growth Index benchmark by investing in companies with the following attributes:

Capitalization less than or equal to the largest in the Russell 2000.

Competitive advantages

Leadership position

Growth rate exceeds peer group

Differentiated growth drivers

Our Mid Cap Growth product seeks to maximize returns and minimize risks by capitalizing on the inefficiencies inherent in today's mid-cap markets.

Our Mid Cap Growth product objective is to outperform its Russell Mid Cap Growth benchmark by investing in companies with the following attributes:

Capitalization less than or equal to the largest Russell Mid Cap Growth company

Competitive advantages

Increasing ROIC

Leadership position

Growth rate exceeds peer group

Differentiated growth drivers

Our All Cap product seeks long term capital appreciation, through active portfolio management, by investing in large, mid and small capitalization growth companies. This product strives to own the best investment ideas emanating from the deep research effort of our analyst and portfolio management teams. This product has the

flexibility to invest anywhere along the market capitalization spectrum and pick from all corners of the equity growth universe. This product is dedicated to owning a subset of the market's most rapidly growing and well-run companies, irrespective of market capitalization.

Our Small Cap Value product invests in domestic small cap value equities with a market capitalization range of approximately \$150 million to \$2.5 billion at the time of investment. Emerald Small Cap Value philosophy is to own companies that are statistically cheap, generate great amounts of free cash flow and possess catalysts for improved operating performance that are not properly discounted by the market.

The Smallcap, Midcap and Allcap products will include some form of general economic overview, but will concentrate more heavily on fundamental, bottom-up research to identify unrecognized, under-researched companies and their suitability for our client's objectives. We will review a company's annual report, 10-k filings and other published information gained from news sources, brokerage reports and recommendations. Whenever possible we will seek to discuss a particular company with its senior management, employees, customers, competitors and brokerage researches who specifically follow that company or its industry. In-person visits with company management are desirable whenever possible.

For EAI's Large capitalization product we utilize a quantitative profit-weighted methodology rather than a capitalization-weighted methodology. We believe that based on the volume of research available, the large cap asset class is much more efficient than other asset classes. The large-cap portfolios are broadly diversified into roughly 100 names and weighted by profit. These portfolios are rebalanced on a regular basis to assure the most current data is reflected.

For EAI's Diversified Financial Services product, through our stock selection process, provides a broad industry mix of financial stocks resulting in diversification within the financial sector. With fewer industry analysts covering community banks, portfolio management seeks to capitalize on undervalued and under-researched opportunities. This product has a growth stock orientation as portfolio management seeks growing companies in a traditional value sector. The selection process incorporates a focus on high asset quality and attractive valuation along with the following key factors:

- Smaller market capitalization
- Strong earnings growth
- Strong management & execution
- Attractive valuations
- Growth rate exceeds peer group

EAI may accept client imposed restrictions in our investment adviser accounts. Certain restrictions such as no tobacco or adherence to MacBride principals are accepted.

Item 5: Fees and Compensation

EAI's fees are based on a percentage of assets under management and are billed quarterly in arrears. Fees are based on the total portfolio values, including accruals, as of the last business day of the month. Client payment is due to the adviser promptly after billing, which is generally mailed at the beginning of the next calendar quarter. EAI may request payment directly from a client's account provided that the client has agreed to the arrangement by signing the management agreement and the client receives copies of all invoices paid. Bills for new accounts activated during the calendar quarter will be pro-rated so that the client pays only for the period of time during which the account was actually managed by the adviser. The management agreement can be terminated by either party with thirty days written notice to the other party by regular U.S mail. No fee will be charged if a new client terminates within five business days after signing the management agreement.

Our current fee schedule is:

For the first \$10,000,000 in assets: .20% per quarter
For assets over \$10,000,000: .15%

Due to the specific nature of certain client investment programs, these fees can be negotiated depending on the objectives and relative complexity of managing the account.

Emerald Mutual Fund Advisers Trust "EMFAT" is an affiliate of EAI. EMFAT acts as adviser to the Emerald Mutual Funds, a registered investment company. Where suitable, EAI may recommend the purchase of shares of the advised Emerald Mutual Funds for client accounts. No separate advisory fees are charged on assets held in the investment company. However, the client will pay operating expenses associated with the mutual fund to the investment company.

Account Minimums:

EAI's normal minimum to establish an account is \$5,000,000. However, EAI may reduce the minimum for certain types of accounts such as high net worth individuals.

Brokerage Commissions and Fees:

In addition to EAI advisory fees, clients pay brokerage commission, transaction fees, SEC fees and similar related costs and expenses. Clients will also incur fees from their custodian as well. These fees are not paid to EAI. Please see item 12 for a further discussion of our brokerage practices.

Item 6: Performance-Based Fees and Side-By-Side Management

Performance-Based Fees:

Performance-Based Fees are based on a share of relative out-performance of an account's assets. An account that pays a performance-based fee may cause a conflict of interest for an adviser as it may pay a higher total fee than a similar account that pays a fee based on assets under management. EAI does not currently have any accounts that pay a performance-based fee, but may accept them in the future.

Side-By-Side Management:

EAI does not offer a hedge fund investment product or side-by-side management.

Item 7: Types of Clients

EAI provides advisory services to the following types of clients:

- Corporations
- Pension and Profit Sharing Plans
- Trusts, Estates, and Charitable Organizations
- Individuals

Item 8: Methods of Analysis, Investment Strategies and Risk of Loss.

The entire Emerald investment team is dedicated to intense fundamental, bottom-up research designed to identify unrecognized, under-researched, undervalued as well as overvalued companies. We're constantly on the road visiting companies, meeting management and workers, and touring facilities. This hands-on approach provides Emerald with unique insights into industry trends as well as company specific trends that we believe gives us an advantage over managers who rely solely on traditional, top-down research techniques.

Growth Strategies:

For our Growth strategies, the Emerald process includes the production of an internal report on each company, which includes a brief company description, its competitive advantage, an assessment of management, specific growth drivers,

risks, valuation (and its comparables), and why Emerald should buy now. Idea generation resides with Emerald Research and the portfolio management team.

Emerald does not utilize screening in its traditional sense in order to narrow its universe, as we believe our best opportunities are those in which the earnings growth has yet to be reflected in "street/consensus" estimates. Instead the universe is screened on a fundamental bottom up basis by its team of research analysts. Each analyst is assigned to a specific Russell sector and industry. As such each analyst is responsible for understanding the businesses and prospects of those companies within his or her universe. To meet this objective Emerald's analysts are constantly on the road visiting companies, meeting management and workers, and touring facilities. This hands-on approach provides Emerald insight into industry trends as well as company specific trends. We believe this provides Emerald with an advantage over other managers who rely solely on research from Wall Street firms.

Emerald seeks only companies who have distinct competitive advantages within their respective industries and superior growth rates relative to their peers and the market. Our in-house research team prepares and reviews with portfolio management an internal report on each company that lists the reasons why a specific stock should be considered for purchase.

As a fundamental bottom up small capitalization growth manager, Emerald is seeking companies that meet the following qualitative/quantitative criteria:

- Capitalization less than/equal to the largest Russell 2000 company – Emerald has always been very true to its small capitalization mandate and as such will only add companies to the portfolio that fall within the upper bound of the Russell 2000 index constraints at the time of rebalance.
- Competitive Advantage – A key component to assessing an individual company's growth profile is understanding the competitive dynamics within the industry/sector that the company operates. Emerald's objective in this analysis is to identify those aspects of the business that will provide the company with a competitive advantage during our holding period. Examples include: first to market advantage with a new product or service, patented technology or brand recognition for example.
- Leadership position – Emerald is looking for leadership both in market (#1 or #2 market share, or the opportunity to get there), as well as leadership within the corporate suite. As a small capitalization manager, Emerald is in many cases investing in early stage business that have yet to be proven and in so doing, we believe assessing management's ability to execute on their strategic plan is a critical component to the company's success. Emerald's analysts and portfolio managers collectively conduct more than 2,000 company visits per year. As part of this visit Emerald's objective is to not only

qualitatively assess the management acumen of the corporate suite (Chief Executive Officer, Chief Financial Officer), but to do our best to assess the depth of the management ranks in speaking with individuals within key business departments/divisions which may include: manufacturing, marketing, store operations, various segment heads, distribution, etc.

- Growth Rates that Exceed Peer Group – While absolute earnings growth rates will fluctuate based on economic conditions, Emerald strives to identify and invest in the fastest growing companies within their respective sector and industry. This is born out in the long-term growth rate of the portfolio which has consistently tracked ahead of the long-term growth rate for the index overall.
- Differentiated Growth Drivers – In order to fully understand whether the growth rate described above is reasonable and attainable, it is critical to define what key components of the business will be the drivers of this growth. Examples include: new product, market share gains, store growth and market development/expansion.
- Under-researched – Lastly and not insignificantly, Emerald seeks out those companies that it deems to be under-researched. Under-research is not only defined by the number of analysts that may follow the company, but can also be defined by the relevancy of their coverage.

The role of the research analyst is to conduct the following 10-step Emerald Research Process in conjunction with the portfolio management team to identify new investment ideas and to re-evaluate existing holdings. The process places a heavy emphasis on meeting with company management and conducting independent channel checks with customers, competitors, suppliers, and distributors. We utilize SEC filings, press releases, news articles, product reviews, and other publicly available information in our research process. In addition, our analysts use sell-side research as a secondary source to compare the results of their independent findings. Valuation methods and parameters vary on a company-by-company and industry-by-industry basis.

For example, our analysts emphasize balance sheet strength and asset quality for financial services, same-store sales performance and expansion potential for retailers, discounted cash flow analysis of product pipelines for biotechnology companies, and peak to trough earnings modeling for cyclicals.

10-Step Research Process:

Review SEC filings, press releases and news stories:

The process includes monitoring relevant media sources such as industry press financial press and popular press.

Meet with Management:

Conduct on-site meetings with management across the organization in areas such as executive management, marketing, product development, operations and finance.

Interview Customers:

Interview customers to determine 1) the critical factors driving their buy decision, 2) what competitors or alternatives were considered, 3) level of satisfaction with the quality of the product or service, and 4) likelihood of generating repeat business.

Interview Competitors:

Interview competitors to determine their strengths and weaknesses, as well as the competitors' perception of the strengths and weaknesses of the company.

Interview Suppliers:

Interview suppliers to determine their ability to supply the products/services required by the company. Also, assess the extent of potential supply chain bottlenecks.

Interview Distributors:

Interview distributors to determine potential issues and opportunities in the company's distribution channel such as inventory levels, demand drivers and competitive pressures.

Develop Financial and Valuation Models:

Develop a financial model to analyze financial performance and estimate future cash flows, earnings and financing needs. Use a valuation model to analyze relative and absolute valuation.

Review Third Party Research:

Review published research from sell-side analysts and industry research firms to compare our data points and financial estimates. Also, use third party research to assess security-specific and industry-specific sentiment.

Publish an Internal Research Report:

Publish an internal research report summarizing the company's business, competitive advantages, management strengths/weaknesses, growth drivers and risks, as well as stating investment conclusions and recommendations.

Communicate, Communicate, Communicate:

The entire research team meets formally twice per week and informally on an ongoing basis with the portfolio management team to discuss the fundamentals of all current and potential holdings. Internal discussions are held throughout the process.

Value strategies:

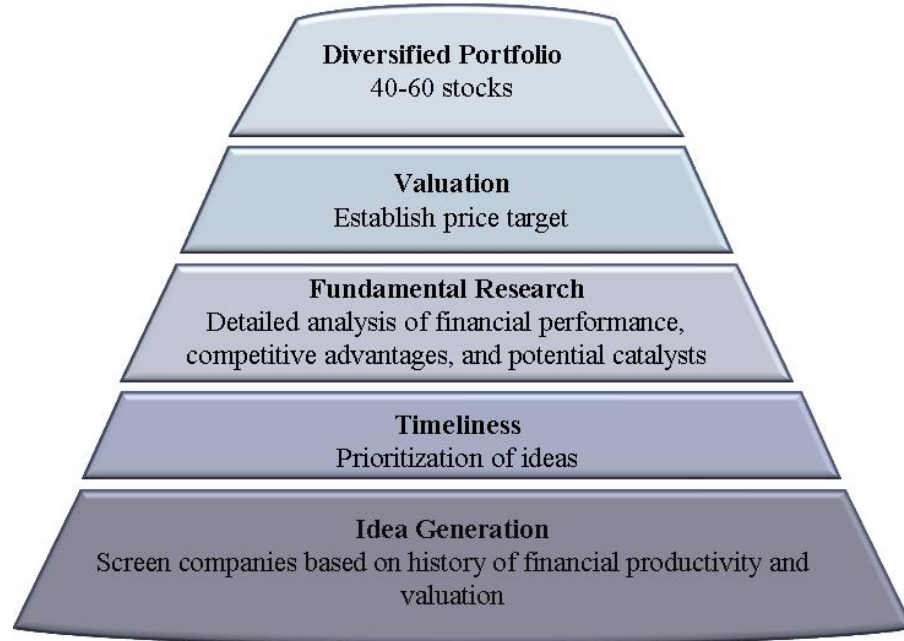

Throughout the stock selection and portfolio construction processes all sector coverage and investment decisions are made in a collaborative manner and with no individual member possessing veto power. This methodology provides Emerald with a robust vetting process for new investment ideas and, as such, is a differentiating factor of the firm's investment management process, it strengthens its overall alpha-generating capability, it enhances team-building dynamics, and it eliminates the potential for excessive risk-taking by individual team members.

The firm's equity investment selection and portfolio construction processes focus on companies that possess high levels of quality and financial productivity at the lowest possible price. Quality and financial productivity are measured by the company's historical free cash flow return on equity while price paid is measured by a company's current stock price-to-book valuation. The combination of these quality and valuation factors is a quantifiable metric, free cash flow yield, that has been incorporated into a model called the Quality at an Acceptable Price Model (QAPM).

The stock selection process begins with a small cap universe of approximately 3,700 domestic equity securities with a market cap range of \$150 million to \$2.5 billion. Companies that lack appropriate liquidity are eliminated from consideration. Emerald uses the following criterion for measuring liquidity: minimum average daily trading volume of \$500,000 during the past 12 months. Approximately 2,100 stocks make it through this initial screen. The front-end stock screen, QAPM, is used to rank the 2,100 securities by quintiles. The firm focuses on the top quintile, and as measured by trailing-twelve month free cash flow yield, or approximately 420 companies generated by QAPM.

However, some companies receive a favorable QAPM rating due to a one-time cash infusion from the sale of assets or other discrete and non-recurring events that do not contribute to the ongoing revenue and cash flow generating capabilities of the entity. These outliers are removed from consideration. This screening process narrows the universe to approximately 300 companies and from which the investment team performs its bottom-up fundamental research.

The investment research conducted by the investment team incorporates a variety of factors including: validation of the company's accounting policies, investigation of the competitive environment, its competitive strengths/weaknesses, and confirmation of how management's successful execution of the company's business model in the past is likely to sustain strong financial returns in the future. As Emerald performs the bottom-up fundamental analysis, a top-down context is applied to identify cyclical and secular changes, both positive and negative, within a particular industry/sector. The bulk of the investigation into a company and the majority of the investment team's time are exhausted during this step.

The final portfolio will consist of 40-60 holdings. Emerald will generally buy a partial position up to 1.5% of the total market value of the portfolio when that security is 10-15% from the price target. The firm will buy a full position up to 2.5% of the total market value of the portfolio when the security is 15%+ from our price target.

Emerald implements a disciplined set of risk controls at each step of the investment management process. Because the firm's top priorities as investment manager are to preserve its clients' invested principal and to produce above-market returns on a risk-adjusted basis, Emerald's research discipline attempts to assess and analyze the risk embedded in each potential holding. The firm believes that the higher the quality of the stock, the lower the risk of investment. Emerald's stock screening tool, QAPM, is

inherently and quantitatively biased against lower quality and, therefore, higher risk investments and as measured by trailing-twelve month free cash flow yield.

Unlike speculators who, in Emerald's opinion, spend very little time, if any, assessing and analyzing risk, the firm uses tools such as the discounted cash flow model in the bottom-up fundamental research process that allow the team to calibrate the risk and reward parameters, uncovered by the investment team's due diligence process, and relative to the current stock price, the company's business model, the competitive landscape, and the ability of the management team to execute its corporate strategies.

During the portfolio construction process Emerald uses the following parameters to limit the amount of risk taken in its small cap value portfolios: no holding shall be greater than 4.50% of the investment portfolio's total market value; and, sector weightings in the investment portfolio shall be no greater than +/- 750 basis points of the sector weightings within the benchmark, the Russell 2000 Value Index. Cash is not used as a risk control, but is typically no greater than 5% of the total portfolio. These portfolio construction parameters prevent excessive dispersion of performance results, or tracking error, between the firm's client portfolios and the benchmark. Emerald does not manage to a specific tracking error per se; however, the firm expects the tracking error to be in a range of 5 – 8%. The actual tracking error since inception through 12/31/13 was 6.39 (net).

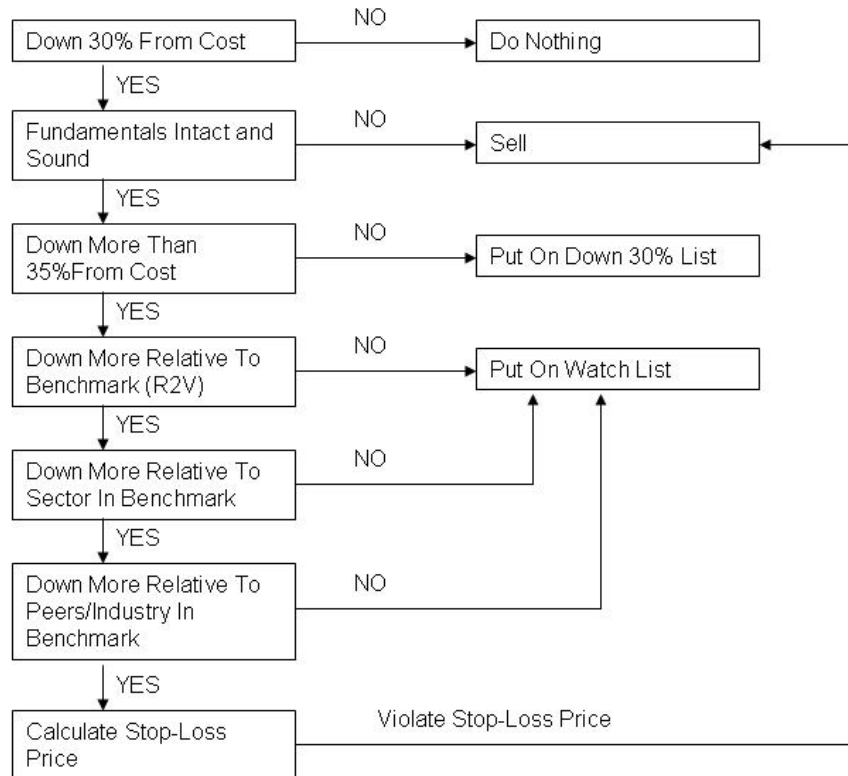

Emerald monitors the risk of portfolio style drift on a quarterly basis and via Lipper's Equity Classification Product available from FactSet.

Emerald's sell discipline is designed to limit investment losses and to eliminate emotional decision making. The decision to sell a security is based on changes in the valuation and/or changes in the quality of the company's fundamental trends and catalysts for near-term improvements in operating performance. If fundamental trends have deteriorated and the stock price has reached the price target, the investment team becomes a net seller of that security. If the stock hits the price target and the company's operating fundamentals conform to the investment thesis, Emerald will determine if a higher price target is justified on the basis of further due diligence; otherwise, they become a net seller. Finally, if fundamentals have deteriorated and the stock has not reached the price target, they become a net seller.

Emerald will trim or sell a position under the following price objective related conditions: (1) sell partial position (25% of holding) when the security reaches its price target; (2) sell full position if price declines by 5-10% from "period high" or (3) sell full position if price drops below original price target. The firm will also consider selling a position to weed-out chronic under performing stocks if the position is 35% below average cost and, at the same time, has failed to outperform the benchmark, and relevant sector and industry group.

The firm's enhanced sell discipline flow chart shown below provides the investment team with a common sense approach for the sell discipline and, at the same time, manages portfolio turnover in a reasonable manner during extremely volatile market conditions.

Enhanced Sell Discipline Process In Volatile Markets

- Avoid selling good companies where valuation metrics are dislocated from fundamentals
- Reduce undue churn in the portfolio
- Be vigilant and pro-active managing the portfolio in volatile markets

The material risks associated with Emerald's small cap value strategy are:

Equity Market Risk – Overall stock market risks may affect the value of investments in equity strategies. Factors such as interest rates, availability of credit, inflation rates, economic uncertainty, changes in laws and national and international political circumstances may affect the value of investments in equity strategies. These factors may also affect the level and volatility of securities prices and their liquidity.

Market Capitalization of Securities – Emerald believes small cap securities provide significant potential for appreciation. The securities of these companies may trade less frequently and in smaller volumes than securities of larger companies. In addition, small cap companies may be more vulnerable to economic, market and industry changes. Because smaller companies may have limited product lines, markets or financial resources, they may be more susceptible to particular economic events or competitive factors than larger capitalization companies.

Trading Frequency – The buying and selling of securities within a client's portfolio will generate transaction costs. These costs are the responsibility of the client.

Risk of Loss:

Risk: Investing in the stocks of publicly traded companies involves risk. All methods of analysis carry the risk that the data is interpreted incorrectly. This would lead to the risk that the investment's actual return will be different than the expected return. Risk includes the possibility of losing some or all of your investment. Investing in securities involves risk of loss that clients should be prepared to bear.

Item 9: Disciplinary Information

We are required to disclose any disciplinary events that are material to a client's or prospective client's evaluation of EAI as an investment adviser. EAI does not have any disciplinary history to report.

Item 10: Other Financial Industry Activities and Affiliations

Certain management or adviser personnel are Series 7 licensed registered representatives with ALPS Fund Distributors for the sole purpose of wholesaling the Forward Funds which we sub-advise.

EAI is a wholly-owned subsidiary of Emerald Asset Management.

EAI is the parent company of Emerald Mutual Fund Advisers Trust (EMFAT). EMFAT acts as an investment adviser registered investment companies. EAI acts as a sub-adviser to the Emerald Mutual Funds. Where suitable, EAI may recommend the purchase of shares of the Emerald Mutual Funds for client accounts. No separate advisory fees are charged on assets held in the Forward Funds. However, the client will pay operating expenses associated with the mutual fund to the investment company.

EAI is a majority owner in Emerald Fixed Income Advisers (EMFINC). EMFINC acts as an investment adviser for clients investing in fixed income.

Emerald Asset Management is the parent company of Emerald Separate Account Management (EMSAM). EMSAM is an adviser to equity separate accounts. EMSAM is the parent company of Emerald Direct Lending Advisers, LLC. Emerald Direct Lending Advisers, LLC advises its clients about, and facilitates the investment of its clients in whole loans, loan certificates, promissory notes and interests in promissory notes underwritten, issued by, or connected with, one or more operators of internet-based lending platforms, or special purpose vehicles.

Item 11 Code of Ethics, Participation or Interest in Client Transactions and Personal Trading

Code of Ethics

EAI maintains and enforces a Code of Ethics which establishes the standards of business conduct that we require of our employees, including compliance with applicable securities laws. The EAI Code of Ethics and Compliance Manual detail EAI procedures for managing conflicts of interest in Personal Trading, Material Non-Public Information and giving and receiving gifts. Employees must acknowledge in writing each year their commitment to the terms of the Code of Ethics. To receive a copy of our Code of Ethics, contact Julie Clawser at 717-396-1116 or by email at jclawser@teamemerald.com

Personal Trading

EAI personnel may purchase for their personal accounts the same securities that EAI purchases for client accounts. EAI personnel must pre-clear all equity security transactions. EAI prohibits gains on the purchase and sale of equity securities within 60 days. There is a possibility that employees might benefit from market activity from our client's accounts.

Item 12: Brokerage Practices

Each client executes a management agreement with the Adviser, which gives EAI full discretionary authority to buy and sell client securities without specific further client consent. Exceptions may apply if a client is in a directed brokerage arrangement.

EAI has established a Trading Procedures & Best Execution Committee that will provide for "Best Practices" for the Trade Desk operations ranging from the start of a transaction through the affirmation process. The committee is responsible for approval of all brokerage relationships, trade procedures and compliance with all regulatory authorities. The committee will maintain a list of brokers which are approved for the Trade Desk to utilize for all investment products. Changes to the approved broker list are made when the Trading Procedures & Best Execution Committee meet. The committee considers the following criteria for approving a brokerage firm.

- Ability to find liquidity
- Ability to act as a market maker and execute among many markets in a time sensitive manner.
- Ability to execute in difficult markets
- Access to research (proprietary and third party) as well as IPO's

- Ability to execute efficiently with little if any settlement/custodial problems
- Timely reporting of order executions
- Custody of client securities

In addition to these factors EAI may consider brokerage and research services in selecting broker-dealers. These services include advice, either directly or through publications, as to the value of securities, the advisability of purchasing or selling securities, analyses and reports concerning issuers, securities or industries; information on economic factors and trends; assistance with portfolio strategies; computer software used in security analysis; portfolio performance evaluation services and technical analysis. These services may be provided by on a proprietary basis where EAI trades with a particular desk and receives these services. Additionally, these services may be developed by a third party.

EAI may pay a broker-dealer that provides brokerage and research services commissions in excess of the amount another broker-dealer might have charged for effecting the same transaction. This occurs when we believe that the amount paid is reasonable in relation to the services provided. Some of the brokerage and research services we receive may benefit all or our clients as a whole, while other services may benefit a specific segment of our clients. We do not attempt to match a particular client's trade execution with broker-dealers that provide brokerage and research service directly benefiting such client's account.

Paying for research with client commission dollars is commonly referred to as using "Soft Dollars" to pay for research. Using soft dollars to pay for research creates a conflict of interest for the adviser. Because many of the products or services that we receive with soft dollars could be considered to provide a benefit to EAI, we may have a conflict in allocating client commission dollars. We may choose to execute a transaction through a particular broker-dealer from which we receive research even though a different broker-dealer may have charged less commission. Additionally, this could cause EAI to trade more frequently to generate a greater total of soft dollars.

We may use research service from a broker-dealer for purposes other than investment decision-making under Section 28(e). In these circumstances, an adviser will make a good faith allocation with respect to such research services and directly pay for the allocated portion of the research services not used for investment decision-making purposes. We will have a conflict of interest in making allocations for such mixed-use research.

The Trading Procedures & Best Execution Committee meets to review brokers, the previous quarter's trades and examine brokerage commission, soft dollar reports and approve the soft dollar budget.

EAI does not select brokers to execute client transactions to receive client referrals.

EAI will endeavor to bunch trades for clients in order to effect best execution at the lowest cost (commissions and spread) and to avoid disparities in execution prices for accounts that are managed similarly. These clients will receive the same average price and pro rata execution. EAI will permit a client to direct their own security transactions to a specific broker dealer that they choose. If a client uses a directed broker their account execution price may be different than the bunched trade price due to difference in the number of shares traded or movement and volatility of the stock or markets in general. A client directing all or a portion of their trading activity should satisfy themselves that the broker-dealer they have selected can adequately provide price and execution on their transactions. The client should weigh a variety of factors including portfolio turnover rate, the value of custodial and other services provided along with any fees that are charged when comparing to the cost if the adviser were free to negotiate commissions.

Item 13: Review of Accounts

Account Reviews

All accounts are reviewed at least bi-weekly by a portfolio manager of the firm. All accounts are reviewed as to the continued relevancy of client objectives and the adherence to those objectives. In addition, all securities held in client accounts are reviewed daily by an officer of the firm, evaluating their performance relative to the financial markets in general. Major economic events will trigger a review of all accounts.

Client Reports

Reports are issued to each client upon the conclusion of each calendar quarter or account termination, mailed or e-mailed to clients within thirty days following the quarter's end. The report relates pertinent information of the account, including buy not limited to: a portion of each security held, portfolio transactions, performance to-date, and when deemed appropriate, specific comments regarding a particular security, industry or economic development. In addition, more detailed client reviews are held when the EAI deems the situation warrants a closer review of the client's progress or stated objectives.

Item 14: Client Referrals and Other Compensation

EAI may enter into written agreements with certain persons pursuant to which we pay a non-supervised person a cash referral fee for soliciting clients on our behalf. This is in accordance with Rule 206 (4)-3 of the Investment Advisers Act. If we pay a referral fee, the client is informed under separate disclosure that includes the following:

- The Solicitor's name and relationship to the firm

- That the Solicitor is being paid a referral fee
- The amount of the fee
- The effect the Solicitor's fee will have on the client's fee.

Item 15: Custody

EAI does not maintain custody of client assets. Clients are responsible for selecting custodians to hold funds and securities within investment accounts managed on their behalf.

EAI prepares quarterly statements for our clients showing portfolio holdings, transactions and performance. As the custodian's statements are considered to be the official record for client accounts, each client should compare statements from EAI and their custodian. EAI client reports may vary from custodian reports due to accounting procedures, reporting dates or security valuation.

Item 16: Investment Discretion

Upon executing the client agreement, the client and adviser determine general investment guidelines. Factors taken into consideration include a client's particular circumstances such as risk tolerance, time horizon, income needs, tax liability and other times which may have a bearing on investment approach utilized. EAI will then have full discretionary authority to pursue client objectives as set forth in the management agreement. If a client imposes restrictions which limit discretion, performance may deviate from other accounts managed in the same style.

Item 17: Voting Client Securities

EAI will accept authority to vote client security proxy ballots as part of our fiduciary duty. EAI will vote all proxies in the best economic interest of our clients. Our proxy voting policy sets forth our guidelines for voting which includes selecting directors, ensuring the directors have properly supervised management, and to resolve conflict issues. In selections of the Board of Directors, EAI will vote in a manner that will ensure independence between directors and management and that directors are adequately representing shareholders.

If a client retains proxy voting authority, the client should review proxy voting with their custodian. If a client retains proxy voting authority and would like to ask questions about a particular proxy solicitation, contact Julie Clawser at 717-396-1116 or email jclawser@teamemerald.com.

To obtain a copy of the EAI proxy voting policy or to inquire about how securities were voted, contact Julie Clawser at 717-396-1116 or email jclawser@teamemerald.com.

Item 18: Financial Information

As an SEC-registered investment adviser, we are required to disclose certain information regarding our financial condition. We have no financial obligation that impairs our capacity to meet contractual or fiduciary commitments to our clients. We have not been the subject of a bankruptcy proceeding. An independent accounting firm prepares our financial audit.
