PART 2A - APPENDIX 1 WRAP FEE PROGRAM BROCHURE

This brochure provides information about the qualifications and business practices of Divergent Wealth Advisors, LLC. If you have any questions about the contents of this brochure, contact us at 385-237-4000. The information in this brochure has not been approved or verified by the United States Securities and Exchange Commission or by any state securities authority.

Additional information about Divergent Wealth Advisors, LLC is available on the SEC's website at www.adviserinfo.sec.gov.

Divergent Wealth Advisors, LLC is a registered investment adviser. Registration with the United States Securities and Exchange Commission or any state securities authority does not imply a certain level of skill or training.

Item 2 Summary of Material Changes

Divergent Wealth Advisors, LLC is required to make clients aware of information that has changed since the last annual update to the Wrap Brochure ("Wrap Brochure") and that may be important to them. Clients can then determine whether to review the brochure in its entirety or to contact us with questions about the changes.

Since the filing of our last annual updating amendment, dated March 2, 2018, we are disclosing the following:

When clients participate in the Managed Account Program, DWA will absorb all commissions and transaction charges. However, many of the securities transactions used in our Managed Account Program do not have a commission or transaction fee associated with trading. For example, the ETF's (exchange-traded funds) used in our Managed Account Program are part of Fidelity's "NTF" (no transaction fee) offerings, and can be traded without cost by both advisors and Fidelity clients not trading through an advisor. Therefore, paying a wrap-fee does not necessarily save the client money on these transaction costs, and may be more expensive to the client than if the client executed these transactions themselves directly through the custodian. While the majority of trading that occurs within your accounts falls within Fidelity's NTF offerings, there may be situations when a transaction fee would be incurred. These situations include, but are not limited to, short-term trading, buying/selling securities outside of the NTF offerings, and tax loss harvesting strategies. In all of these cases, DWA will absorb the transaction costs as part of the Program fee.

While execution of transactions is an important part of our Managed Account Program, the Program fee is not intended to solely offset transaction costs. Our Managed Account Program also includes the following offered services, which clients may or may not choose to utilize:

Personal Financial Services

- Personal Financial Modeling
- Investment Tax Planning
- Estate Planning and Wealth Transfer Consulting
- Investment Analysis
- Portfolio Management
- Personal 401(k) Consulting
- Retirement Income Planning
- Liability Analysis
- Real Estate Investment Analysis
- Cash Management Services
- Budgeting Advice and Consulting
- Fixed Income Analysis
- Online Account Performance Monitoring

Institutional Wealth Management

- Plan Management
- Investment Management
- Participant Services
- Small Business Exit Consulting
- Employee Education Events

As part of our wrap-fee program, clients will not pay additional fees for these services offered by DWA.

Additionally we are advising that we have added a new model called **Aggressive Plus**: The aggressive plus investment portfolio is designed solely for capital appreciation and generally does not include any exposure to fixed-income investments with the exception of a small amount in money market funds. This aggressive plus model will occasionally increase market risk after certain thresholds of market decline, to take advantage of the eventual recovery. Generally, this model invests in a mix of equity, and REIT ETFs, including domestic and international securities. It is generally suitable for clients with a 10-year or longer time horizon, and a risk tolerance higher than that of the U.S. stock market.

Item 4 Services, Fees, and Compensation

Description of Firm

Divergent Wealth Advisors, LLC is a registered investment adviser primarily based in Midvale, UT. We are organized as a limited liability company ("LLC") under the laws of the State of Utah. We have been providing investment advisory services since April 2017. Our Firm is indirectly owned by Richard Collins, Jordan Collins, and Brady Ririe.

As used in this brochure, the words "we," "our," and "us" and "DWA" refer to Divergent Wealth Advisors, LLC and the words "you," "your," and "client" refer to you as either a client or prospective client of our firm. Also, you may see the term Associated Person in this brochure. Our Associated Persons are our firm's officers, employees, and all individuals providing investment advice on behalf of our firm.

We offer portfolio management services through a wrap-fee program ("Program") as described in this wrap fee program brochure to prospective and existing clients. We are the sponsor and investment adviser for the Program. A wrap-fee program is a type of investment program that provides clients with asset management and brokerage services for one all-inclusive fee. If you participate in our wrap fee program, you will pay our firm a single fee, which includes money management fees, certain transaction costs, and custodial and administrative costs. You are not charged separate fees for the respective components of the total services. We receive a portion of the wrap fee for our services. The overall cost you will incur if you participate in our wrap fee program may be higher or lower than you might incur by separately purchasing the types of securities available in the Program.

Prior to becoming a client under the Program, you will be required to enter into a separate written agreement with us that sets forth the terms and conditions of the engagement and describes the scope of the services to be provided, and the fees to be paid.

Client Investment Process

We provide discretionary and non-discretionary portfolio management services in accordance with your individual investment objectives. If you participate in our discretionary portfolio management services, we require you to grant our firm discretionary authority to manage your account. Subject to a grant of discretionary authorization, we have the authority and responsibility to formulate investment strategies on your behalf. Discretionary authorization will allow us to determine the specific securities, and the amount of securities, to be purchased or sold for your account without obtaining your approval prior to each transaction. We will also have discretion over the broker or dealer to be used for securities transactions, and over the commission rates that we pay. Discretionary authority is typically granted by the investment advisory agreement you sign with our firm and/or through trading authorization forms. You may limit our discretionary authority (for example, limiting the types of securities that can be purchased for your account) by providing our firm with your restrictions and guidelines in writing.

Our Wrap Advisory Services

As part of our Managed Account Program ("Program"), clients will be provided asset management and offered personal financial services and/or institutional wealth management services. The Program is designed to assist clients in meeting their financial goals through the use of a financial plan or consultation. Our firm conducts client meetings to understand their current financial situation, existing resources, financial goals, and tolerance for risk. Based on what is learned, an investment approach is presented to the client, consisting of one or more of several model portfolios developed and

maintained by our firm, which may consist of individual stocks, bonds, exchange traded funds ("ETFs"), mutual funds and other public and private securities or investments. Once the appropriate portfolio has been determined, portfolios are continuously and regularly monitored, and if necessary, rebalanced based upon the client's individual needs, stated goals and objectives. Upon client request, our firm provides a summary of observations and recommendations for the planning or consulting aspects of this service. All fees for our financial planning and consulting services are included in the wrap fee Program.

This Program allows you to choose an investment option that employs a model portfolio developed by our firm that is diversified among investments and/or asset classes. We will use the information we gather to develop a strategy that enables our firm to customize an investment portfolio for you in accordance with your risk tolerance and investment objectives. Once we construct an investment portfolio for you or select a model portfolio, we will monitor your portfolio's performance and re-balance your investments as required by changes in market conditions and in your financial circumstances.

If you enter into non-discretionary arrangements with our firm, we must obtain your approval prior to executing any transactions on behalf of your account. You have an unrestricted right to decline to implement any advice provided by our firm on a non-discretionary basis.

Assets for program accounts are held at Fidelity as custodian. Fidelity also acts as executing broker/dealer for transactions placed in Program accounts and provides other administrative services as described throughout this Brochure.

Changes in Your Financial Circumstances

In providing the contracted services, we are not required to verify any information we receive from you or from your other professionals (e.g., attorney, accountant, etc.) and we are expressly authorized to rely on the information you provide. Furthermore, unless you indicate to the contrary, we shall assume that there are no restrictions on our services, other than to manage your account in accordance with your designated investment objectives. It is your responsibility to promptly notify us if there are ever any changes in your financial situation or investment objectives for the purpose of reviewing/evaluating/revising our previous recommendations and/or services.

The Managed Account Program Fee

DWA charges an annual "wrap-fee" for participation in the Managed Account Program ("the Program"). Assets in each of your managed accounts are included in the wrap-fee assessment unless specifically excluded in writing. The Program fee charged is based upon the market value of your assets under our management. In special circumstances, and in our sole discretion, we may negotiate a lesser Program fee based upon certain criteria (i.e., the dollar amount of assets to be managed, related accounts, potential future assets, account composition, pre-existing client relationship, account retention, etc.).

When clients participate in the Managed Account Program, DWA will absorb all commissions and transaction charges. However, many of the securities transactions used in our Managed Account Program do not have a commission or transaction fee associated with trading. For example, the ETF's (exchange-traded funds) used in our Managed Account Program are part of Fidelity's "NTF" (no transaction fee) offerings, and can be traded without cost by both advisors and Fidelity clients not trading through an advisor. Therefore, paying a wrap-fee does not necessarily save the client money on these transaction costs, and may be more expensive to the client than if the client executed these transactions themselves directly through the custodian. While the majority of trading that occurs within your accounts falls within Fidelity's NTF offerings, there may be situations when a transaction fee

would be incurred. These situations include, but are not limited to, short-term trading, buying/selling securities outside of the NTF offerings, and tax loss harvesting strategies. In all of these cases, DWA will absorb the transaction costs as part of the Program fee.

While execution of transactions is an important part of our Managed Account Program, the Program fee is not intended to solely offset transaction costs. Our Managed Account Program also includes the following offered services, which clients may or may not choose to utilize:

Personal Financial Services

- Personal Financial Modeling
- Investment Tax Planning
- Estate Planning and Wealth Transfer Consulting
- Investment Analysis
- Portfolio Management
- Personal 401(k) Consulting
- Retirement Income Planning
- Liability Analysis
- Real Estate Investment Analysis
- Cash Management Services
- Budgeting Advice and Consulting
- Fixed Income Analysis
- Online Account Performance Monitoring

Institutional Wealth Management

- Plan Management
- Investment Management
- Participant Services
- Small Business Exit Consulting
- Employee Education Events

As part of our wrap-fee program, clients will not pay additional fees for these services offered by DWA.

The benefits under a wrap-fee program depend, in part, upon the size of the account, the Program fee charged, the Program services the client elects to use, and the number of commissioned transactions likely to be generated in the account. In order to evaluate whether our wrap-fee program is suitable for you, you should compare the Program fee and services you choose to utilize thereunder to all other expenses that might be incurred for comparable services through other advisors, broker-dealers, custodians, and investment companies.

Fee Schedule

The maximum annual fee charged for the Program will not exceed 1.60%; fees may differ among clients based on a number of factors, including the type and size of the account or client relationship. All fees will be outlined in the advisory agreement signed by the client. Annual fees are billed on a quarterly basis in advance based on the value of the account(s) on the last day of the previous quarter and will be deducted directly from client account(s).

If the portfolio management agreement is executed at any time other than the first day of a calendar quarter, our fees will apply on a pro rata basis, which means that the advisory fee is payable in proportion to the number of days in the quarter for which you are a client. Our advisory fee is negotiable, depending on individual client circumstances.

Adjustments will be made for deposits or withdrawals during the quarter in excess of \$2,500. Typically, the fee will be deducted from the account being managed, but may, if the client desires, be paid from another account or directly invoiced to the client. If cash in the account is insufficient to cover the fee, assets may be liquidated in order to cover it. As part of this process, Clients understand the following:

- a. The client's independent custodian sends statements at least quarterly showing the market values for each security in the account and all account disbursements, including the amount of the advisory fees paid to our firm;
- b. Clients will provide authorization permitting our firm to be directly paid by these terms. Our firm will send an invoice directly to the custodian; and
- c. If our firm sends a copy of our invoice to the client, a legend urging the comparison of information provided in our invoice with the statement issued by the qualified custodian will be included.

We encourage you to reconcile our agreed upon fee schedule with the statement(s) you receive from the qualified custodian. If you find any inconsistent information between our agreed upon fee schedule and the statement(s) you receive from the qualified custodian, call our main office number located on the cover page of this brochure.

Withdrawal of Assets

You may withdraw assets or funds from your account at any time by notifying our firm. All withdrawals are subject to the usual and customary securities settlement procedures. However, we design our portfolios as long-term investments and asset withdrawals may impair the achievement of your specific investment objectives.

Wrap Fee Program Disclosures

- The benefits under a wrap fee program depend, in part, upon the size of the Account, the management fee charged, and the number of transactions likely to be generated in the Account. For example, a wrap fee program may not be suitable for Accounts with little trading activity. In order to evaluate whether a wrap fee program is suitable for you, you should compare the Program Fee and any other costs of the Program with the amounts that would be charged by other advisers, broker-dealers, and custodians, for advisory fees, brokerage and other execution costs, and custodial services comparable to those provided under the Program.
- In considering the investment programs described in this brochure, you should be aware that participating in a wrap fee program may cost more or less than the cost of purchasing advisory, brokerage, and custodial services separately from other advisers or broker-dealers.
- Our firm and Associated Persons receive compensation as a result of your participation in the Program. This compensation may be more than the amount our firm or the Associated Persons would receive if you paid separately for investment advice, brokerage, and other services. Accordingly, a conflict of interest exists because our firm and our Associated Persons have a financial incentive to recommend the Program.
- Similar advisory services may be available from other registered investment advisers for lower fees.

Other Types of Fees & Expenses:

The Program Fee includes the costs of brokerage commissions for transactions executed through the Qualified Custodian (or a broker-dealer designated by the Qualified Custodian), and charges relating to the settlement, clearance, or custody of securities in the Account. The Program Fee does not include mark-ups and mark-downs, dealer spreads or other costs associated with the purchase or sale of

securities, interest, taxes, or other costs, such as national securities exchange fees, charges for transactions not executed through the Qualified Custodian, costs associated with exchanging currencies, wire transfer fees, or other fees required by law or imposed by the Qualified Custodian or other third parties. The Account will be responsible for these additional fees and expenses.

Additionally, fees not included in the advisory fee for the Program are charges imposed directly by a mutual fund, index fund, or exchange-traded fund which shall be disclosed in the fund's prospectus (i.e., fund management fees and other fund expenses), mark-ups and mark-downs, spreads paid to market makers, wire transfer fees and other fees and taxes on brokerage accounts and securities transactions.

The wrap-fees that you pay to our firm for portfolio management services are separate and distinct from the fees and expenses charged by mutual funds or exchange-traded funds (described in each fund's prospectus) to their shareholders. These fees will generally include a management fee and other fund expenses. To fully understand the total cost you will incur, you should review all the fees charged by mutual funds, exchange-traded funds, our firm, and others.

Brokerage Practices

If you participate in the Program, you will be required to establish an account with Fidelity (National Financial Services), member FINRA/SIPC, an unaffiliated SEC-registered broker-dealer. If you do not direct our firm to execute transactions through Fidelity (National Financial Services), we reserve the right to not accept your account. Not all advisers require their clients to direct brokerage. Since you are required to use Fidelity (National Financial Services), we may be unable to achieve the most favorable execution of your transactions. We believe that Fidelity (National Financial Services) provides quality and competitive execution services based on several factors, including, but not limited to, the ability to provide professional services, reputation, experience, financial stability, and our own best-execution analysis.

Termination of Advisory Relationship

You may terminate the wrap fee program agreement upon written notice to our firm. You will incur a pro rata charge for services rendered prior to the termination of the wrap fee program agreement, which means you will incur advisory fees only in proportion to the number of days in the quarter for which you are a client. If you have pre-paid advisory fees that we have not yet earned, you will receive a prorated refund of those fees.

Upon termination of accounts held at Fidelity, they will deliver securities and funds held in the account per your instructions. After the wrap fee program agreement has been terminated, transactions are processed at the prevailing brokerage rates/fees. You become responsible for monitoring your own assets and our firm has no further obligation to act upon or to provide advice with respect to those assets.

Wrap Fee Program Recommendations

Our firm does not recommend or offer the wrap program services of other providers.

Soft Dollar

We do not have any soft dollar arrangements.

Economic Benefits

As a registered investment adviser, we have access to the institutional platform of your account custodian. As such, we will also have access to research products and services from your account custodian. These may include financial publications, information about particular companies and industries, research software, and other products or services that provide lawful and appropriate assistance to our firm in the performance of our investment decision-making responsibilities. Such research products and services are provided to all investment advisers that utilize the institutional services platforms of these firms, and are not considered to be paid for with soft dollars. However, you should be aware that the commissions charged by a particular broker for a particular transaction or set of transactions may be greater than the amounts another broker who did not provide research services or products might charge.

Brokerage for Client Referrals

We do not receive client referrals from broker-dealers in exchange for cash or other compensation, such as brokerage services or research.

Item 5 Account Requirements and Types of Clients

In general, we do not require a minimum dollar amount to open and maintain an advisory account; however, we have the right to terminate your account if it falls below a minimum size which, in our sole opinion, is too small to manage effectively.

We may also combine account values for you and your minor children, joint accounts with your spouse, and other types of related accounts to meet the stated minimum.

Our firm has the following types of clients:

- Individuals, High Net Worth Individuals, Families, and Partnerships;
- Trusts, Estates or Charitable Organizations;
- Pension and Corporate Retirement Plans;
- Corporations, Limited Liability Companies and/or Other Business Types.

Item 6 Portfolio Manager Selection and Evaluation

Selection of Portfolio Managers

Our firm's investment adviser representatives ("IARs") act as portfolio manager(s) for this Program. A conflict arises in that other investment advisory firms may charge the same or lower fees than our firm for similar services. Our IARs are subject to individual licensing requirements as imposed by state securities boards. Our firm is required to confirm or update each IAR's Form U4 on an annual basis. IAR supervision is conducted by our Chief Compliance Officer or management personnel.

Advisory Business

Information about our services can be found in Item 4 of this brochure. Our firm offers individualized investment advice to Managed Account Program clients. Each Managed Account Program client has the opportunity to place reasonable restrictions on the types of investments to be held in the portfolio. Restrictions on investments in certain securities or types of securities may not be possible due to the level of difficulty this would entail in managing the account.

Participation in Wrap Fee Programs

Our firm only offers wrap fee accounts to our clients, which are managed on an individualized basis according to the client's investment objectives, financial goals, risk tolerance, etc.

Performance-Based Fees & Side-By-Side Management

We do not accept performance-based fees or participate in side-by-side management. Performance-based fees are fees that are based on a share of capital gains or capital appreciation of a client's account. Side-by-side management refers to the practice of managing accounts that are charged performance-based fees while at the same time managing accounts that are not charged performance-based fees. Our fees are calculated as described above, and are not charged on the basis of a share of capital gains upon, or capital appreciation of, the funds in your advisory account.

Methods of Analysis, Investment Strategies & Risk of Loss

General Risks of Owning Securities

The prices of securities held in client accounts and the income they generate may decline in response to certain events taking place around the world. These include events directly involving the issuers of securities held as underlying assets of mutual funds or ETFs in a client's account, conditions affecting the general economy, and overall market changes. Other contributing factors include local, regional, or global political, social, or economic instability and governmental or governmental agency responses to economic conditions. Finally, currency, interest rate, and commodity price fluctuations may also affect security prices and income.

The prices of, and the income generated by, most debt securities held in a client's account may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities. For example, the prices of debt securities in the client's account generally will decline when interest rates rise and increase when interest rates fall. In addition, falling interest rates may cause an issuer to redeem, "call" or refinance a security before its stated maturity, which may result in our firm having to reinvest the proceeds in lower yielding securities. Longer-maturity debt securities generally have higher rates of interest and may be subject to greater price fluctuations than shorter maturity debt securities. Debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default.

The guarantee of a security backed by the U.S. Treasury or the full faith and credit of the U.S. government only covers the timely payment of interest and principal when held to maturity. This means that the current market values for these securities will fluctuate with changes in interest rates.

Investments in securities issued by entities based outside the United States may be subject to increased levels of the risks described above. Currency fluctuations and controls, different accounting, auditing, financial reporting, disclosure, regulatory and legal standards and practices could also affect investments in securities of foreign issuers. Additional factors may include expropriation, changes in tax policy, greater market volatility, different securities market structures, and higher transaction costs. Finally, various administrative difficulties, such as delays in clearing and settling portfolio transactions, or in receiving payment of dividends can increase risk.

Finally, investments in securities issued by entities domiciled in the United States may also be subject to many of these risks.

Methods of Analysis

Securities analysis methods rely on the assumption that the companies whose securities are purchased and/or sold, the rating agencies that review these securities, and other publicly-available sources of information about these securities, are providing accurate and unbiased data. While our firm is alert to indications that data may be incorrect, there is always a risk that our firm's analysis may be compromised by inaccurate or misleading information.

Fundamental Analysis: When analyzing a stock, futures contract, or currency using fundamental analysis there are two basic approaches one can use: bottom-up analysis and top-down analysis. The terms are used to distinguish such analysis from other types of investment analysis, such as quantitative and technical. Fundamental analysis is performed on historical and present data, but with the goal of making financial forecasts. There are several possible objectives: (a) to conduct a company stock valuation and predict its probable price evolution; (b) to make a projection on its business performance; (c) to evaluate its management and make internal business decisions; (d) and/or to calculate its credit risk.; and (e) to find out the intrinsic value of the share.

When the objective of the analysis is to determine what stock to buy and at what price, there are two basic methodologies investors rely upon: (a) Fundamental analysis maintains that markets may misprice a security in the short run but that the "correct" price will eventually be reached. Profits can be made by purchasing the mispriced security and then waiting for the market to recognize its "mistake" and reprice the security; and (b) Technical analysis maintains that all information is reflected already in the price of a security. Technical analysts analyze trends and believe that sentiment changes predate and predict trend changes. Investors' emotional responses to price movements lead to recognizable price chart patterns. Technical analysts also analyze historical trends to predict future price movement. Investors can use one or both of these different but complementary methods for stock picking. This presents a potential risk, as the price of a security can move up or down along with the overall market regardless of the economic and financial factors considered in evaluating the stock.

Mutual Fund and/or Exchange Traded Fund Analysis: Analysis of the experience and track record of the manager of the mutual fund or ETF in an attempt to determine if that manager has demonstrated an ability to invest over a period of time and in different economic conditions. The underlying assets in a mutual fund or ETF are also reviewed in an attempt to determine if there is significant overlap in the underlying investments held in another fund(s) in the Client's portfolio. The funds or ETFs are monitored in an attempt to determine if they are continuing to follow their stated investment strategy. A risk of mutual fund and/or ETF analysis is that, as in all securities investments, past performance does not guarantee future results. A manager who has been successful may not be able to replicate that success in the future. In addition, as our firm does not control the underlying investments in a fund or ETF, managers of different funds held by the Client may purchase the same security, increasing the

risk to the Client if that security were to fall in value. There is also a risk that a manager may deviate from the stated investment mandate or strategy of the fund or ETF, which could make the holding(s) less suitable for the Client's portfolio.

Technical Analysis: A fundamental principle of technical analysis is that a market's price reflects all relevant information, so their analysis looks at the history of a security's trading pattern rather than external drivers such as economic, fundamental and news events. Therefore, price action tends to repeat itself due to investors collectively tending toward patterned behavior - hence technical analysis focuses on identifiable trends and conditions. Technical analysts also widely use market indicators of many sorts, some of which are mathematical transformations of price, often including up and down volume, advance/decline data and other inputs. These indicators are used to help assess whether an asset is trending, and if it is, the probability of its direction and of continuation. Technicians also look for relationships between price/volume indices and market indicators. Technical analysis employs models and trading rules based on price and volume transformations, such as the relative strength index, moving averages, regressions, inter-market and intra-market price correlations, business cycles, stock market cycles or, classically, through recognition of chart patterns. Technical analysis is widely used among traders and financial professionals and is very often used by active day traders, market makers and pit traders. The risk associated with this type of analysis is that analysts use subjective judgment to decide which pattern(s) a particular instrument reflects at a given time and what the interpretation of that pattern should be.

Recommendation of Particular Types of Securities

We primarily recommend ETFs. However, we may advise on other types of investments as appropriate for you since each client has different needs and different tolerance for risk. Each type of security has its own unique set of risks associated with it and it would not be possible to list here all of the specific risks of every type of investment. Even within the same type of investment, risks can vary widely. However, in very general terms, the higher the anticipated return of an investment, the higher the risk of loss associated with the investment.

Investment Strategies

We may use the following strategies in managing client accounts, provided that such strategies are appropriate to the needs of the client and consistent with the client's investment objectives, risk tolerance, and time horizons, among other considerations:

Asset Allocation: The implementation of an investment strategy that attempts to balance risk versus reward by adjusting the percentage of each asset in an investment portfolio according to the investor's risk tolerance, goals and investment time frame. Asset allocation is based on the principle that different assets perform differently in different market and economic conditions. A fundamental justification for asset allocation is the notion that different asset classes offer returns that are not perfectly correlated, hence diversification reduces the overall risk in terms of the variability of returns for a given level of expected return. Although risk is reduced as long as correlations are not perfect, it is typically forecast (wholly or in part) based on statistical relationships (like correlation and variance) that existed over some past period. Expectations for return are often derived in the same way.

An asset class is a group of economic resources sharing similar characteristics, such as riskiness and return. There are many types of assets that may or may not be included in an asset allocation strategy. The "traditional" asset classes are stocks (value, dividend, growth, or sector-specific [or a "blend" of any two or more of the preceding]; large-cap versus mid-cap, small-cap or micro-cap; domestic, foreign [developed], emerging or frontier markets), bonds (fixed income securities more generally: investment-grade or junk [high-yield]; government or corporate; short-term, intermediate, long-term; domestic,

foreign, emerging markets), and cash or cash equivalents. Allocation among these three provides a starting point. Occasionally included are hybrid instruments such as convertible bonds and preferred stocks, counting as a mixture of bonds and stocks. Other alternative assets that may be considered include: commodities: precious metals, nonferrous metals, agriculture, energy, others.; Commercial or residential real estate (also REITs); Collectibles such as art, coins, or stamps; insurance products (annuity, life settlements, catastrophe bonds, personal life insurance products, etc.); derivatives such as long-short or market neutral strategies, options, collateralized debt, and futures; foreign currency; venture capital; private equity; and/or distressed securities.

There are several types of asset allocation strategies based on investment goals, risk tolerance, time frames and diversification. The most common forms of asset allocation are: strategic, dynamic, tactical, and core-satellite.

- **Strategic Asset Allocation:** The primary goal of a strategic asset allocation is to create an asset mix that seeks to provide the optimal balance between expected risk and return for a long-term investment horizon. Generally speaking, strategic asset allocation strategies are agnostic to economic environments, i.e., they do not change their allocation postures relative to changing market or economic conditions.
- **Dynamic Asset Allocation:** Dynamic asset allocation is similar to strategic asset allocation in that portfolios are built by allocating to an asset mix that seeks to provide the optimal balance between expected risk and return for a long-term investment horizon. Like strategic allocation strategies, dynamic strategies largely retain exposure to their original asset classes; however, unlike strategic strategies, dynamic asset allocation portfolios will adjust their postures over time relative to changes in the economic environment.
- **Tactical Asset Allocation:** Tactical asset allocation is a strategy in which an investor takes a more active approach that tries to position a portfolio into those assets, sectors, or individual stocks that show the most potential for perceived gains. While an original asset mix is formulated much like a strategic and dynamic portfolio, tactical strategies are often traded more actively and are free to move entirely in and out of their core asset classes
- **Core-Satellite Asset Allocation:** Core-Satellite allocation strategies generally contain a 'core' strategic element making up the most significant portion of the portfolio, while applying a dynamic or tactical 'satellite' strategy that makes up a smaller part of the portfolio. In this way, core-satellite allocation strategies are a hybrid of the strategic and dynamic/tactical allocation strategies mentioned above.

Debt Securities (Bonds): Issuers use debt securities to borrow money. Generally, issuers pay investors periodic interest and repay the amount borrowed either periodically during the life of the security and/or at maturity. Alternatively, investors can purchase other debt securities, such as zero coupon bonds, which do not pay current interest, but rather are priced at a discount from their face values and their values accrete over time to face value at maturity. The market prices of debt securities fluctuate depending on such factors as interest rates, credit quality, and maturity. In general, market prices of debt securities decline when interest rates rise and increase when interest rates fall. Bonds with longer rates of maturity tend to have greater interest rate risks.

Certain additional risk factors relating to debt securities include: (a) When interest rates are declining, investors have to reinvest their interest income and any return of principal, whether scheduled or unscheduled, at lower prevailing rates.; (b) Inflation causes tomorrow's dollar to be worth less than today's; in other words, it reduces the purchasing power of a bond investor's future interest payments and principal, collectively known as "cash flows." Inflation also leads to higher interest rates, which in turn leads to lower bond prices.; (c) Debt securities may be sensitive to economic changes, political and corporate developments, and interest rate changes. Investors can also expect periods of economic change and uncertainty, which can result in increased volatility of market prices and yields of certain debt securities. For example, prices of these securities can be affected by financial contracts

held by the issuer or third parties (such as derivatives) relating to the security or other assets or indices. (d) Debt securities may contain redemption or call provisions entitling their issuers to redeem them at a specified price on a date prior to maturity. If an issuer exercises these provisions in a lower interest rate market, the account would have to replace the security with a lower yielding security, resulting in decreased income to investors. Usually, a bond is called at or close to par value. This subjects investors that paid a premium for their bond risk of lost principal. In reality, prices of callable bonds are unlikely to move much above the call price if lower interest rates make the bond likely to be called.; (e) If the issuer of a debt security defaults on its obligations to pay interest or principal or is the subject of bankruptcy proceedings, the account may incur losses or expenses in seeking recovery of amounts owed to it.; (f) There may be little trading in the secondary market for particular debt securities, which may affect adversely the account's ability to value accurately or dispose of such debt securities. Adverse publicity and investor perceptions, whether or not based on fundamental analysis, may decrease the value and/or liquidity of debt securities.

Our firm attempts to reduce the risks described above through diversification of the client's portfolio and by credit analysis of each issuer, as well as by monitoring broad economic trends and corporate and legislative developments, but there can be no assurance that our firm will be successful in doing so. Credit ratings for debt securities provided by rating agencies reflect an evaluation of the safety of principal and interest payments, not market value risk. The rating of an issuer is a rating agency's view of past and future potential developments related to the issuer and may not necessarily reflect actual outcomes. There can be a lag between the time of developments relating to an issuer and the time a rating is assigned and updated.

Exchange Traded Funds: An ETF is a type of Investment Company (usually, an open-end fund or unit investment trust) whose primary objective is to achieve the same return as a particular market index. The vast majority of ETFs are designed to track an index, so their performance is close to that of an index mutual fund, but they are not exact duplicates. A tracking error, or the difference between the returns of a fund and the returns of the index, can arise due to differences in composition, management fees, expenses, and handling of dividends. ETFs benefit from continuous pricing; they can be bought and sold on a stock exchange throughout the trading day. Because ETFs trade like stocks, you can place orders just like with individual stocks - such as limit orders, good-until-canceled orders, stop-loss orders etc. They can also be sold short. Traditional mutual funds are bought and redeemed based on their net asset values ("NAV") at the end of the day. ETFs are bought and sold at the market prices on the exchanges, which resemble the underlying NAV but are independent of it. However, arbitrageurs will ensure that ETF prices are kept very close to the NAV of the underlying securities. Although an investor can buy as few as one share of an ETF, most buy-in board lots. Anything bought in less than a board lot will increase the cost to the investor. Anyone can buy any ETF no matter where in the world it trades. This provides a benefit over mutual funds, which generally can only be bought in the country in which they are registered.

An ETF typically pays out dividends received from the underlying stocks on a quarterly basis. However, the underlying stocks pay dividends throughout the quarter. Therefore, these funds can hold cash for various time periods throughout the quarter, even though the underlying benchmark index is not composed of cash. With dividend-paying ETFs, the cash ends up in your brokerage account instead, just like the dividend on a regular stock. If you want to reinvest that cash, you have to make another purchase. ETFs are designed to replicate the performance of their underlying index or commodity. Investors always know exactly what they are buying and can see exactly what constitutes the ETF. The fees are also clearly laid out. Because mutual funds only have to report their holdings twice a year, when you buy into a mutual fund, what you're getting may not be as clear.

One of the main features of ETFs is their low annual fees, especially when compared to traditional mutual funds. The passive nature of index investing, reduced marketing, and distribution and accounting expenses all contribute to the lower fees. However, individual investors must pay a brokerage commission to purchase and sell ETF shares; for those investors who trade frequently, this can significantly increase the cost of investing in ETFs. That said, with the advent of low-cost brokerage fees, small or frequent purchases of ETFs are becoming more cost-efficient.

Fixed Income: Fixed income is a type of investing or budgeting style for which real return rates or periodic income is received at regular intervals and at reasonably predictable levels. Fixed-income investors are typically retired individuals who rely on their investments to provide a regular, stable income stream. This demographic tends to invest heavily in fixed-income investments because of the reliable returns they offer. Fixed-income investors who live on set amounts of periodically paid income face the risk of inflation eroding their spending power.

Some examples of fixed-income investments include Treasuries, money market instruments, corporate bonds, asset-backed securities, municipal bonds, and international bonds. The primary risk associated with fixed-income investments is the borrower defaulting on his payment. Other considerations include exchange rate risk for international bonds and interest rate risk for longer-dated securities. The most common type of fixed-income security is a bond. Bonds are issued by federal governments, local municipalities and major corporations. Fixed-income securities are recommended for investors seeking a diverse portfolio; however, the percentage of the portfolio dedicated to fixed income depends on your own personal investment style. There is also an opportunity to diversify the fixed-income component of a portfolio. Riskier fixed-income products, such as junk bonds and longer-dated products, should comprise a lower percentage of your overall portfolio.

The interest payment on fixed-income securities is considered regular income and is determined based on the creditworthiness of the borrower and current market rates. In general, bonds and fixed-income securities with longer-dated maturities pay a higher rate, also referred to as the coupon rate, because they are considered riskier. The longer the security is on the market, the more time it has to lose its value and/or default. At the end of the bond term, or at bond maturity, the borrower returns the amount borrowed, also referred to as the principal or par value.

Individual Stocks: A common stock is a security that represents ownership in a corporation. Holders of common stock exercise control by electing a board of directors and voting on corporate policy. Investing in individual common stocks provides us with more control of what you are invested in and when that investment is made. Having the ability to decide when to buy or sell helps us time the taking of gains or losses. Common stocks, however, bear a greater amount of risk when compared to certificates of deposit, preferred stock, and bonds. It is typically more difficult to achieve diversification when investing in individual common stocks. Additionally, common stockholders are on the bottom of the priority ladder for ownership structure; if a company goes bankrupt, the common stockholders do not receive their money until the creditors and preferred shareholders have received their respective share of the leftover assets.

Long-Term Purchases: Our firm may buy securities for your account and hold them for a relatively long time (more than a year) in anticipation that the security's value will appreciate over a long horizon. The risk of this strategy is that our firm could miss out on potential short-term gains that could have been profitable to your account, or it's possible that the security's value may decline sharply before our firm make a decision to sell.

Mutual Funds: A mutual fund is a company that pools money from many investors and invests the money in a variety of differing security types based on the objectives of the fund. The portfolio of the fund consists of the combined holdings it owns. Each share represents an investor's proportionate

ownership of the fund's holdings and the income those holdings generate. The price that investors pay for mutual fund shares is the fund's per share NAV plus any shareholder fees that the fund imposes at the time of purchase (such as sales loads). Investors typically cannot ascertain the exact make-up of a fund's portfolio at any given time, nor can they directly influence which securities the fund manager buys and sells or the timing of those trades. With an individual stock, investors can obtain real-time (or close to real-time) pricing information with relative ease by checking financial websites or by calling a broker or your investment adviser. Investors can also monitor how a stock's price changes from hour to hour—or even second to second. By contrast, with a mutual fund, the price at which an investor purchases or redeems shares will typically depend on the fund's NAV, which is calculated daily after market close.

The benefits of investing through mutual funds include: (a) Mutual funds are professionally managed by an investment adviser who researches, selects, and monitors the performance of the securities purchased by the fund; (b) Mutual funds typically have the benefit of diversification, which is an investing strategy that generally sums up as "Don't put all your eggs in one basket." Spreading investments across a wide range of companies and industry sectors can help lower the risk if a company or sector fails. Some investors find it easier to achieve diversification through ownership of mutual funds rather than through ownership of individual stocks or bonds.; (c) Some mutual funds accommodate investors who do not have a lot of money to invest by setting relatively low dollar amounts for initial purchases, subsequent monthly purchases, or both.; and (d) At any time, mutual fund investors can readily redeem their shares at the current NAV, less any fees and charges assessed on redemption.

Mutual funds also have features that some investors might view as disadvantages: (a) Investors must pay sales charges, annual fees, and other expenses regardless of how the fund performs. Depending on the timing of their investment, investors may also have to pay taxes on any capital gains distribution they receive. This includes instances where the fund went on to perform poorly after purchasing shares.; (b) Investors typically cannot ascertain the exact make-up of a fund's portfolio at any given time, nor can they directly influence which securities the fund manager buys and sells or the timing of those trades.; and (c) With an individual stock, investors can obtain real-time (or close to real-time) pricing information with relative ease by checking financial websites or by calling a broker or your investment adviser. Investors can also monitor how a stock's price changes from hour to hour—or even second to second. By contrast, with a mutual fund, the price at which an investor purchases or redeems shares will typically depend on the fund's NAV, which the fund might not calculate until many hours after the investor placed the order. In general, mutual funds must calculate their NAV at least once every business day, typically after the major U.S. exchanges close.

When investors buy and hold an individual stock or bond, the investor must pay income tax each year on the dividends or interest the investor receives. However, the investor will not have to pay any capital gains tax until the investor actually sells and makes a profit. Mutual funds are different. When an investor buys and holds mutual fund shares, the investor will owe income tax on any ordinary dividends in the year the investor receives or reinvests them. Moreover, in addition to owing taxes on any personal capital gains when the investor sells shares, the investor may have to pay taxes each year on the fund's capital gains. That is because the law requires mutual funds to distribute capital gains to shareholders if they sell securities for a profit, and cannot use losses to offset these gains.

Real Estate Investment Trusts ("REITs"): REITs primarily invest in real estate or real estate-related loans. Equity REITs own real estate properties, while mortgage REITs hold construction, development and/or long-term mortgage loans. Changes in the value of the underlying property of the trusts, the creditworthiness of the issuer, property taxes, interest rates, tax laws, and regulatory requirements, such as those relating to the environment all can affect the values of REITs. Both types of REITs are

dependent upon management skill, the cash flows generated by their holdings, the real estate market in general, and the possibility of failing to qualify for any applicable pass-through tax treatment or failing to maintain any applicable exemptive status afforded under relevant laws.

Short-Term Purchases: When utilizing this strategy, our firm may also purchase securities with the idea of selling them within a relatively short time (typically a year or less). Our firm does this in an attempt to take advantage of conditions that our firm believe will soon result in a price swing in the securities our firm purchase. The potential risk associated with this investment strategy is associated with the currency or exchange rate. Currency or exchange rate risk is a form of risk that arises from the change in the price of one currency against another. The constant fluctuations in the foreign currency in which an investment is denominated vis-à-vis one's home currency may add risk to the value of a security. Currency risk is greater for shorter-term investments, which do not have time to level off like longer-term foreign investments.

Risk of Loss

Investing in securities involves risk of loss that clients should be prepared to bear. While the stock market may increase and the account(s) could enjoy a gain, it is also possible that the stock market may decrease and the account(s) could suffer a loss. It is important that clients understand the risks associated with investing in the stock market, are appropriately diversified in investments, and ask any questions.

Capital Risk: Capital risk is one of the most basic, fundamental risks of investing; it is the risk that you may lose 100% of your money. All investments carry some form of risk and the loss of capital is generally a risk for any investment instrument.

Credit Risk: Credit risk can be a factor in situations where an investment's performance relies on a borrower's repayment of borrowed funds. With credit risk, an investor can experience a loss or unfavorable performance if a borrower does not repay the borrowed funds as expected or required. Investment holdings that involve forms of indebtedness (i.e. borrowed funds) are subject to credit risk.

Currency Risk: Fluctuations in the value of the currency in which your investment is denominated may affect the value of your investment and thus, your investment may be worth more or less in the future. All currency is subject to swings in valuation and thus, regardless of the currency denomination of any particular investment you own, currency risk is a realistic risk measure. That said, currency risk is generally a much larger factor for investment instruments denominated in currencies other than the most widely used currencies (U.S. dollar, British pound, German mark, Euro, Japanese yen, French franc, etc.).

Economic Risk: The prevailing economic environment is important to the health of all businesses. Some companies, however, are more sensitive to changes in the domestic or global economy than others. These types of companies are often referred to as cyclical businesses. Countries in which a large portion of businesses are in cyclical industries are thus also very economically sensitive and carry a higher amount of economic risk. If an investment is issued by a party located in a country that experiences wide swings from an economic standpoint or in situations where certain elements of an investment instrument are hinged on dealings in such countries, the investment instrument will generally be subject to a higher level of economic risk.

Financial Risk: Financial risk is represented by internal disruptions within an investment or the issuer of an investment that can lead to unfavorable performance of the investment. Examples of financial risk can be found in cases like Enron or many of the dot-com companies that were caught up in a period of extraordinary market valuations that were not based on solid financial footings of the companies.

Fixed Income Securities Risk: Typically, the values of fixed-income securities change inversely with prevailing interest rates. Therefore, a fundamental risk of fixed-income securities is interest rate risk, which is the risk that their value will generally decline as prevailing interest rates rise, which may cause your account value to likewise decrease, and vice versa. How specific fixed income securities may react to changes in interest rates will depend on the specific characteristics of each security. Fixed-income securities are also subject to credit risk, prepayment risk, valuation risk, and liquidity risk. Credit risk is the chance that a bond issuer will fail to pay interest and principal in a timely manner, or that negative perceptions of the issuer's ability to make such payments will cause the price of a bond to decline.

Inflation Risk: Inflation risk involves the concern that in the future, your investment or proceeds from your investment will not be worth what they are today. Throughout time, the prices of resources and end-user products generally increase and thus, the same general goods and products today will likely be more expensive in the future. The longer an investment is held, the greater the chance that the proceeds from that investment will be worth less in the future than what they are today. Said another way, a dollar tomorrow will likely get you less than what it can today.

Interest Rate Risk: Certain investments involve the payment of a fixed or variable rate of interest to the investment holder. Once an investor has acquired or has acquired the rights to an investment that pays a particular rate (fixed or variable) of interest, changes in overall interest rates in the market will affect the value of the interest-paying investment(s) they hold. In general, changes in prevailing interest rates in the market will have an inverse relationship to the value of existing, interest-paying investments. In other words, as interest rates move up, the value of an instrument paying a particular rate (fixed or variable) of interest will go down. The reverse is generally true as well.

Liquidity Risk: Certain assets may not be readily converted into cash or may have a very limited market in which they trade. Thus, you may experience the risk that your investment or assets within your investment may not be able to be liquidated quickly, thus, extending the period of time by which you may receive the proceeds from your investment. Liquidity risk can also result in unfavorable pricing when exiting (i.e. not being able to quickly get out of an investment before the price drops significantly) a particular investment and therefore, can have a negative impact on investment returns.

Manager Risk: There is always the possibility that poor security selection will cause your investments to underperform relative to benchmarks or other funds with a similar investment objective.

Market Risk: The value of your portfolio may decrease if the value of an individual company or multiple companies in the portfolio decreases or if our belief about a company's intrinsic worth is incorrect. Further, regardless of how well individual companies perform, the value of your portfolio could also decrease if there are deteriorating economic or market conditions. It is important to understand that the value of your investment may fall, sometimes sharply, in response to changes in the market, and you could lose money. Investment risks include price risk as may be observed by a drop in a security's price due to company-specific events (e.g. earnings disappointment or downgrade in the rating of a bond) or general market risk (e.g. such as a "bear" market when stock values fall in general). For fixed-income securities, a period of rising interest rates could erode the value of a bond since bond values generally fall as bond yields go up. Past performance is not a guarantee of future returns.

Past Performance: Charting and technical analysis are often used interchangeably. Technical analysis generally attempts to forecast an investment's future potential by analyzing its past performance and other related statistics. In particular, technical analysis often times involves an evaluation of historical pricing and volume of a particular security for the purpose of forecasting where future price and volume figures may go. As with any investment analysis method, technical analysis runs the risk of not knowing the future and thus, investors should realize that even the most diligent and thorough technical analysis cannot predict or guarantee the future performance of any particular investment instrument or issuer thereof.

Managed Bond Accounts

Our discretionary managed bond accounts may be utilized as part of our advisory services and are designed for investors who have full focus on preservation of capital. The portfolios will be managed on a custom basis for clients and can accommodate the risk, duration, credit-quality, cash flow and liquidity requirements of the client. Depending on the type of account and tax status of the client, we may use municipal bonds, government or agency bonds, investment grade corporate bonds, and certificate of deposit. We also have the ability to manage a "state-specific" strategy to accommodate the tax requirements of the investor.

Risk Adjusting Model Portfolios

Our discretionary risk adjusting model portfolios may be utilized as part of our advisory services and are uniquely designed to capitalize on stock market movements that will occur over time. Our models are designed to appropriately adjust the client's equity risk exposure during periods of market volatility. Each portfolio has four different risk postures that allow us to adjust equity market exposure appropriately, taking on a little more risk after equity market declines and reducing exposure aftermarket rallies. We use Exchange Traded Funds exclusively in this program to control our exposure to any given asset class and to also control fees for the clients. Client funds may be allocated in whole or in part to the following models:

Conservative: The conservative investment portfolio is designed with a primary focus on preservation of capital with a secondary focus of income and capital appreciation. This conservative model will occasionally increase market risk after certain thresholds of market decline, to take advantage of the eventual market recovery. Generally, this model invests into a mix of fixed income, equity and REIT ETFs, including domestic and international securities. It is generally suitable for clients with a 3-year or longer investment time horizon, and low tolerance for investment risk.

Conservative Plus: The conservative-plus investment portfolio is designed with a primary focus on income-generating investments and modest capital appreciation. This conservative plus model will occasionally increase market risk after certain thresholds of market decline, to take advantage of the eventual market recovery. Generally, this model invests into a mix of fixed income, equity and REIT ETFs, including domestic and international securities. It is generally suitable for clients with a 4-year or longer time horizon and low to moderate tolerance for investment risk.

Moderate: The moderate investment portfolio is designed with an initial focus on income-generating investments and a slightly greater desire to see more capital appreciation. This moderate model will occasionally increase market risk after certain thresholds of market decline, to take advantage of the eventual market recovery. Generally, this model invests into a mix of fixed income, equity and REIT ETFs, including domestic and international securities. It is generally suitable for clients with a 5-year or longer time horizon, and a tolerance for about half of the volatility risk of the U.S. stock market.

Moderate Plus: The moderate plus investment portfolio is designed with a balanced focus on income-generating investments and capital appreciation. This moderate plus model will occasionally increase market risk after certain thresholds of market decline, to take advantage of the eventual market recovery. Generally, this model invests into a mix of fixed income, equity and REIT ETFs, including domestic and international securities. It is generally suitable for clients with a 7-year or longer time horizon, and a tolerance for about 60% of the volatility of the U.S. stock market.

Balanced: The balanced investment portfolio is designed with slightly more focus on capital appreciation than income-generating investments. This balanced model will occasionally increase market risk after certain thresholds of market decline, to take advantage of the eventual market recovery. Generally, this model invests into a mix of fixed income, equity and REIT ETFs, including domestic and international securities. It is generally suitable for clients with a 7-year or longer time horizon, and a tolerance for about 70% of the volatility of the U.S. stock market.

Balanced Growth: The balanced growth investment portfolio is designed with a heavier focus on capital appreciation with a smaller focus on income-generating investments. This balanced growth model will occasionally increase market risk after certain thresholds of market decline, to take advantage of the eventual market recovery. Generally, this model invests into a mix of fixed income, equity and REIT ETFs, including domestic and international securities. It is generally suitable for clients with a 10-year or longer time horizon, and a tolerance for about 80% of the volatility of the U.S. stock market.

Aggressive: The aggressive investment portfolio is designed with a heavy focus on capital appreciation with a slight focus on income-generating investments. This aggressive model will occasionally increase market risk after certain thresholds of market decline, to take advantage of the eventual market recovery. Generally, this model invests into a mix of fixed income, equity and REIT ETFs, including domestic and international securities. It is generally suitable for clients with a 10-year or longer time horizon, and a risk tolerance equal to or slightly above that of the U.S. stock market.

Aggressive Plus: The aggressive plus investment portfolio is designed solely for capital appreciation and generally does not include any exposure to fixed-income investments with the exception of a small amount in money market funds. This aggressive plus model will occasionally increase market risk after certain thresholds of market decline, to take advantage of the eventual recovery. Generally, this model invests in a mix of equity, and REIT ETFs, including domestic and international securities. It is generally suitable for clients with a 10-year or longer time horizon, and a risk tolerance higher than that of the U.S. stock market.

Voting Client Securities:

Our firm does not accept the proxy authority to vote client securities. Clients will receive proxies or other solicitations directly from their custodian or a transfer agent. Clients may call, write or email us to discuss questions they may have about particular proxy votes or other solicitations.

Item 7 Client Information Provided to Portfolio Managers

All Program accounts are managed by our in-house licensed IARs. The IAR selected to manage the client's account(s) or portfolio(s) will be privy to the client's investment goals and objectives, risk tolerance, restrictions placed on the management of the account(s) or portfolio(s) and relevant client notes taken by our firm.

In order to provide the Program services, we will share your private information with your account custodian. We may also provide your private information to mutual fund companies and/or private managers as needed. We will only share the information necessary in order to carry out our obligations to you in servicing your account. We share your personal account data in accordance with our privacy policy as described below.

Privacy Notice

We view protecting your private information as a top priority. Pursuant to applicable privacy requirements, we have instituted policies and procedures to ensure that we keep your personal information private and secure.

We do not disclose any nonpublic personal information about you to any nonaffiliated third parties, except as permitted by law. In the course of servicing your account, we may share some information with our service providers, such as transfer agents, custodians, broker-dealers, accountants, consultants, and attorneys.

We restrict internal access to nonpublic personal information about you to employees, who need that information in order to provide products or services to you. We maintain physical and procedural safeguards that comply with regulatory standards to guard your nonpublic personal information and to ensure our integrity and confidentiality. We will not sell information about you or your accounts to anyone. We do not share your information unless it is required to process a transaction, at your request, or required by law.

You will receive a copy of our privacy notice prior to or at the time you sign an advisory agreement with our firm. Thereafter, we will deliver a copy of the current privacy policy notice to you on an annual basis. Contact our main office at the telephone number on the cover page of this brochure if you have any questions regarding this policy.

If you decide to close your account(s) we will adhere to our privacy policies, which may be amended from time to time.

If we make any substantive changes in our privacy policy that would further permit or require disclosures of your private information, we will provide written notice to you. Where the change is based on permitted disclosures, you will be given an opportunity to direct us as to whether such disclosure is acceptable. Where the change is based on required disclosures, you will only receive written notice of the change. You may not opt out of the required disclosures.

If you have questions about our privacy policies contact our main office at the telephone number on the cover page of this brochure and ask to speak to the Chief Compliance Officer.

Item 8 Client Contact with Portfolio Managers

Clients are always free to directly contact their portfolio manager(s) with any questions or concerns about their portfolios or other matters. You should contact your advisory representative with respect to changes in your investment objectives, risk tolerance, or requested restrictions placed on the management of your Program assets.

Item 9 Additional Information

Disciplinary Information

There are no legal or disciplinary events that are material to the evaluation of our advisory business or the integrity of our management.

Financial Industry Activities & Affiliations

Some of the representatives of our firm are registered representatives of Purshe Kaplan Sterling Investments, Inc ("PKS"), member FINRA/SIPC, and licensed insurance agents. In their capacity as registered representatives, these persons will receive commission-based compensation in connection with the purchase and sale of securities, including 12b-1 fees for the sale of investment company products. Compensation earned by these persons in their capacities as registered representatives is separate and in addition to our advisory fees. A conflict of interest exists as these commissionable securities sales create an incentive to recommend products based on the compensation earned. To mitigate this potential conflict, our firm will act in the client's best interest. You are under no obligation, contractually or otherwise, to purchase securities products through any person affiliated with our firm.

Compensation for the Sale of Securities or Other Investment Products

Persons providing investment advice on behalf of our firm are licensed as insurance agents. These persons will earn commission-based compensation for selling insurance products, including insurance products they sell to you. Insurance commissions earned by these persons are separate and in addition to our advisory fees. This practice presents a conflict of interest because persons providing investment advice on behalf of our firm who are insurance agents have an incentive to recommend insurance products to you for the purpose of generating commissions rather than solely based on your needs. You are under no obligation, contractually or otherwise, to purchase insurance products through any person affiliated with our firm. All supervised persons have a fiduciary duty to recommend products that are in the clients' best interest. See the *Services, Fees and Compensation* section in this brochure for more information on the compensation received by insurance agents who are affiliated with our firm.

Code of Ethics, Participation or Interest in Client Transactions & Personal Trading

As a fiduciary, it is an investment adviser's responsibility to provide fair and full disclosure of all material facts and to act solely in the best interest of each of our clients at all times. Our fiduciary duty is the underlying principle for our firm's Code of Ethics, which includes procedures for personal securities transaction and insider trading. Our firm requires all representatives to conduct business with the highest level of ethical standards and to comply with all federal and state securities laws at all times. Upon employment with our firm, and at least annually thereafter, all representatives of our firm will acknowledge receipt, understanding and compliance with our firm's Code of Ethics. Our firm and representatives must conduct business in an honest, ethical, and fair manner and avoid all circumstances that might negatively affect or appear to affect our duty of complete loyalty to all clients. This disclosure is provided to give all clients a summary of our Code of Ethics. If a client or a potential client wishes to review our Code of Ethics in its entirety, a copy will be provided promptly upon request.

Our firm recognizes that the personal investment transactions of our representatives demand the application of a Code of Ethics with high standards and requires that all such transactions be carried out in a way that does not endanger the interest of any client. At the same time, our firm also believes that if investment goals are similar for clients and for our representatives, it is logical, and even desirable, that there be common ownership of some securities.

In order to prevent conflicts of interest, our firm has established procedures for transactions effected by our representatives for their personal accounts¹. In order to monitor compliance with our personal trading policy, our firm has pre-clearance requirements and a quarterly securities transaction reporting system for all of our representatives.

Neither our firm nor a related person recommends, buys or sells for client accounts, securities in which our firm or a related person has a material financial interest without prior disclosure to the client.

Related persons of our firm may buy or sell securities and other investments that are also recommended to clients. We may also combine our orders to purchase securities with your orders to purchase securities ("trade aggregation"). A conflict of interest exists in such cases because we have the ability to trade ahead of you and potentially receive more favorable prices than you will receive. To eliminate this conflict of interest, it is our policy that neither our firm nor persons associated with our firm shall have priority over your account in the purchase or sale of securities.

In order to minimize this conflict of interest, our related persons will place client interests ahead of their own interests and adhere to our firm's Code of Ethics, a copy of which is available upon request. For purposes of the policy, our associate's personal account generally includes any account (a) in the name of our associate, his/her spouse, his/her minor children or other dependents residing in the same household, (b) for which our associate is a trustee or executor, or (c) which our associate controls, including our client accounts which our associate controls and/or a member of his/her household has a direct or indirect beneficial interest in.

Review of Accounts

Our management personnel or financial advisors review accounts on an ongoing basis and will conduct account reviews at least quarterly for Program clients. The nature of these reviews is to learn whether client accounts are in line with their investment objectives, appropriately positioned based on market conditions, and investment policies, if applicable. Our firm does not provide written reports to clients, unless asked to do so. Verbal reports to clients take place on at least an annual basis when our Program clients are contacted. Our firm may review client accounts more frequently than described above. Among the factors which may trigger an off-cycle review are major-market or economic events, the client's life events, requests by the client, etc.

Trade Errors

In the event a trading error occurs in your account, our policy is to restore your account to the position it should have been in had the trading error not occurred. Depending on the circumstances, corrective actions may include canceling the trade, adjusting an allocation, and/or reimbursing the account.

Class Action Lawsuits

We do not determine if securities held by you are the subject of a class action lawsuit or whether you are eligible to participate in class action settlements or litigation nor do we initiate or participate in litigation to recover damages on your behalf for injuries as a result of actions, misconduct, or negligence by issuers of securities held by you.

Other Compensation

Except for the arrangements outlined in Item 12 of Form ADV Part 2A, our firm has no additional arrangements to disclose.

Financial Information

Our firm is not required to provide financial information in this Brochure because:

- Our firm does not require the prepayment of more than \$1,200 in fees when services cannot be rendered within 6 months.
- Our firm does not take custody of client funds or securities.
- Our firm does not have a financial condition or commitment that impairs our ability to meet contractual and fiduciary obligations to clients.

Our firm has never been the subject of a bankruptcy proceeding.

IRA Rollover Considerations

As part of our investment advisory services to you, we may recommend that you withdraw the assets from your employer's retirement plan and roll the assets over to an individual retirement account ("IRA") that we will manage on your behalf. If you elect to roll the assets to an IRA that is subject to our management, we will charge you an asset based fee as set forth in the agreement you executed with our firm. This practice presents a conflict of interest because persons providing investment advice on our behalf have an incentive to recommend a rollover to you for the purpose of generating fee based compensation rather than solely based on your needs. You are under no obligation, contractually or otherwise, to complete the rollover. Moreover, if you do complete the rollover, you are under no obligation to have the assets in an IRA managed by our firm.

Many employers permit former employees to keep their retirement assets in their company plan. Also, current employees can sometimes move assets out of their company plan before they retire or change jobs. In determining whether to complete the rollover to an IRA, and to the extent the following options are available, you should consider the costs and benefits of:

1. Leaving the funds in your employer's (former employer's) plan.
2. Moving the funds to a new employer's retirement plan.
3. Cashing out and taking a taxable distribution from the plan.
4. Rolling the funds into an IRA rollover account.

Each of these options has advantages and disadvantages and before making a change we encourage you to speak with your CPA and/or tax attorney.

If you are considering rolling over your retirement funds to an IRA for us to manage here are a few points to consider before you do so:

1. Determine whether the investment options in your employer's retirement plan address your needs or whether you might want to consider other types of investments.
 - a. Employer retirement plans generally have a more limited investment menu than IRAs.
 - b. Employer retirement plans may have unique investment options not available to the public such as employer securities, or previously closed funds.
2. Your current plan may have lower fees than our fees.

- a. If you are interested in investing only in mutual funds, you should understand the cost structure of the share classes available in your employer's retirement plan and how the costs of those share classes compare with those available in an IRA.
 - b. You should understand the various products and services you might take advantage of at an IRA provider and the potential costs of those products and services.
3. Our strategy may have higher risk than the option(s) provided to you in your plan.
4. Your current plan may also offer financial advice.
5. If you keep your assets titled in a 401k or retirement account, you could potentially delay your required minimum distribution beyond age 70.5.
6. Your 401k may offer more liability protection than a rollover IRA; each state may vary.
 - a. Generally, federal law protects assets in qualified plans from creditors. Since 2005, IRA assets have been generally protected from creditors in bankruptcies. However, there can be some exceptions to the general rules so you should consult with an attorney if you are concerned about protecting your retirement plan assets from creditors.
7. You may be able to take out a loan on your 401k, but not from an IRA.
8. IRA assets can be accessed any time; however, distributions are subject to ordinary income tax and may also be subject to a 10% early distribution penalty unless they qualify for an exception such as disability, higher education expenses or the purchase of a home.
9. If you own company stock in your plan, you may be able to liquidate those shares at a lower capital gains tax rate.
10. Your plan may allow you to hire us as the manager and keep the assets titled in the plan name.

It is important that you understand the differences between these types of accounts and to decide whether a rollover is best for you. Prior to proceeding, if you have questions contact your investment adviser representative, or call our main number as listed on the cover page of this brochure.

¹For purposes of the policy, our associate's personal account generally includes any account (a) in the name of our associate, his/her spouse, his/her minor children or other dependents residing in the same household, (b) for which our associate is a trustee or executor, or (c) which our associate controls, including our client accounts which our associate controls and/or a member of his/her household has a direct or indirect beneficial interest in. The benefits under a wrap fee program depend, in part, upon the size of the Account, the management fee charged, the participating services the client elects to use, and the number of commissioned transactions likely to be generated in the account. In order to evaluate whether a wrap fee program is suitable for you, you should compare the Program Fee and any other costs of the Program with the amounts that would be charged by other advisers, broker-dealers, and custodians, for advisory fees, brokerage and other execution costs, and custodial services comparable to those provided under the Program.
