Client Customization

All services are tailored to the unique requirements of each client. Correlating appropriate investment strategies to the insurer's liabilities (asset/liability management), their business and investment objectives and risk tolerance are key components of our approach to insurance asset management. We have over 100 years of collective experience working with insurers and have honed our expertise in designing, implementing and monitoring investment programs that are highly customized and constrained by each client's unique tax, accounting and regulatory situation.

As of March 31, 2019, CapVisor provides advisory services for over \$ 804,445,226.00 Insurance client assets on a non-discretionary basis. Types of Clients

CapVisor provides investment advisory services to insurance companies, alternative risk insurance vehicles (captives, risk retention groups, etc.) self- insurance funds or Reg 114 reinsurance trusts. CapVisor also provides investment advisory services to private clients.

Methods of Analysis, Investment Strategies and Risk of Loss

CapVisor may use either internally developed or licensed external vendor software for proposing strategic asset allocations. This software allows various economic scenarios, of varying degrees of risk, to be applied to our analysis. These risks scenarios are discussed with clients and mutually agreed upon.

For tactical portfolio allocation advice, CapVisor's approach begins with a thorough company evaluation including each client's unique investment objectives and risk tolerance. Specifically this evaluation minimally involves an examination of their balance sheet, income statements, and actuarial reports including claims payout patterns, cash flows and liability durations by line of business. This information enables us to design a portfolio construction process reflective of the client's insurance liabilities,

risk/reward parameters, with consideration of constraints related to the client's tax, accounting and regulatory circumstances. Fixed income security type/sectors risks, as well as equity and alternative investment asset class and style risks are described fully to clients. Clients will also receive peer group analysis information to help guide their decisions concerning their ability to bear investment risk. CapVisor often works with network manager(s)' analytic packages to test the suitability of various portfolio allocations for our clients and to identify risk/reward trade-offs.

CapVisor does not recommend, nor do we buy or sell individual securities or other Investment products for clients.
