Item 8: Methods of Analysis, Investment Strategies & Risk of Investment Loss

A. Methods of Analysis and Investment Strategies

Methods of Analysis

BAKER STREET ASSET MANAGEMENT, LLC's methods of analysis include fundamental analysis, technical analysis and cyclical analysis. Each of these methods may be assessed using quantitative measures, and the weightings of the methods themselves may vary over time.

- a) ***Fundamental analysis*** involves the analysis of financial statements, the general financial health of companies, and/or the analysis of management or competitive advantages.
- b) ***Technical analysis*** involves the analysis of past market data; primarily price and volume.
- c) ***Cyclical analysis*** involved the analysis of business cycles to find favorable conditions for buying and/or selling a security.

Investment Strategies

BAKER STREET ASSET MANAGEMENT, LLC uses short-term trading, short sales, margin transactions, and options writing (including covered options, uncovered options, or spreading strategies).

Investing in securities involves a significant risk of loss that you, as a client, should be prepared to bear. The adviser's approaches may not be suitable for all investors. All investing is risky and past performance, whether actual or tested, is no guarantee of future results or profitability.

B. Material Risks Involved

Methods of Analysis

- a) ***Fundamental analysis*** concentrates on factors that determine a company's value and expected future earnings. This strategy would normally encourage equity purchases in stocks that are undervalued or priced below their perceived value. The risk assumed is that the market will fail to reach expectations of perceived value.
- b) ***Technical analysis*** attempts to predict a future stock price or direction based on market trends. The assumption is that the market follows discernible patterns and if these patterns can be identified then a prediction can be made. The risk is that markets do not always follow patterns and relying solely on this method may not work long term.
- c) ***Cyclical analysis*** assumes that the markets react in cyclical patterns which, once identified, can be leveraged to provide performance. The risks with this strategy are two-fold: 1) the markets do not always repeat cyclical patterns and 2) if too many investors begin to implement this strategy, it changes the very cycles they are trying to take advantage of.

Investment Strategies

Short term trading, short sales, margin transactions, and options writing generally hold greater risk and clients should be aware that there is a material risk of loss using any of those strategies.

Investing in securities involves a significant risk of loss that you, as a client, should be prepared to bear. The adviser's approaches may not be suitable for all investors. All investing is risky and past performance, whether actual or tested, is no guarantee of future results or profitability.

C. Risks of Specific Securities Utilized

BAKER STREET ASSET MANAGEMENT, LLC generally seeks investment strategies that do not involve significant or unusual risk beyond that of the general domestic and/or international equity markets. However, it may utilize short sales, margin transactions, and options writing. Short sales, margin transactions, and options writing generally hold greater risk of capital loss and clients should be aware that there is a material risk of loss using any of those strategies. Reasonable restrictions on security selection and trading will be accepted for all BAKER STREET ASSET MANAGEMENT, LLC model approaches to investing.

Mutual Funds: Investing in mutual funds carries the risk of capital loss. Mutual funds are not guaranteed or insured by the FDIC or any other government agency. You can lose money investing in mutual funds. All mutual funds have costs that lower investment returns. They can be of bond "fixed income" nature (lower risk) or stock "equity" nature (mentioned above).

Equity investment generally refers to buying shares of stocks by an individual or firms in return for receiving a future payment of dividends and capital gains if the value of the stock increases. There is an innate risk involved when purchasing a stock that it may decrease in value and the investment may incur a loss.

Stocks & Exchange Traded Funds/Notes (ETF/N): Investing in stocks & ETF/N's carries the risk of capital loss (sometimes up to a 100% loss in the case of a stock holding or counterparty bankruptcy). Investments in these securities are not guaranteed or insured by the FDIC or any other government agency.

Short-term trading risks include liquidity, economic stability and inflation.

Short sales risks include the upward trend of the market and the infinite possibility of loss.

Margin transactions use leverage that is borrowed from a brokerage firm as collateral.

Options writing involve a contract to purchase a security at a given price, not necessarily at market value, depending on the market.
