

OC INVESTMENT MANAGEMENT LP
Part 2A of Form ADV

3350 Virginia St.
Suite 540
Miami, FL. 33133

305-842-5062

December 5, 2024

This Brochure (the “Brochure”) provides information about the qualifications and business practices of OC Investment Management LP (“OCIM” or the “Adviser”). If you have any questions about the contents of this Brochure, please contact the Adviser’s Chief Compliance Officer, Dominic Hood at 305-842-5062 or compliance@ocimgt.com. Registration with the SEC does not imply a certain level of skill or training. The information in this Brochure has not been approved or verified by the SEC or by any state securities authority.

Additional information about the Adviser is also available on the SEC’s website at www.adviserinfo.sec.gov.

ITEM 2 – MATERIAL CHANGES AND GENERAL INFORMATION

OCIM is required to disclose a summary of material changes since our last annual update of this Brochure. Since the last filing of this Brochure on October 8, 2024, OCIM began managing the private funds, OCIM Master Fund Limited, and its two feeder funds, OCIM Partnership Fund LP and OCIM Offshore Fund Limited.

As a result, changes were made to the following sections:

- Item 4 – A description of the private funds and the general partner of the onshore fund
- Item 5 – The fee structure for the private funds
- Item 6 – A description of potential conflicts of interest involved in managing more than one account with the same investment strategy
- Item 7 – The addition of the private funds as a new type of client
- Item 10 – The affiliation with the onshore fund's general partner, and related persons' ability to invest in the private funds
- Item 15 – The adviser's assumption of custody as a result of its affiliation with the private funds

Other non-material changes were also made to reflect OCIM's management of the private funds.

If you would like another copy of this Brochure, please download it from the SEC website as indicated in Item 1, or you may contact our principal office at (305) 842-5062.

We encourage all recipients to read this brochure carefully.

ITEM 3 – TABLE OF CONTENTS

Item 1 – Cover Page	i
Item 2 – Material Changes and General Information	ii
Item 3 -Table of Contents	iii
Item 4 – Advisory Business	1
Item 5 – Fees and Compensation	1
Item 6 – Performance-Based Fees and Side-By-Side Management	2
Item 7 – Types of Clients.....	3
Item 8 – Methods of Analysis, Investment Strategies and Risk of Loss.....	3
Item 9 – Disciplinary Information	16
Item 10 – Other Financial Industry Activities and Affiliations	16
Item 11 –Code of Ethics, Participation or Interest in Client Transactions and Personal Trading	17
Item 12 – Brokerage Practices	17
Item 13 – Review of Accounts.....	19
Item 14 – Client Referrals and Other Compensation.....	19
Item 15 – Custody	19
Item 16 – Investment Discretion	19
Item 17 – Voting Client Securities.....	20
Item 18 – Financial Information.....	20

ITEM 4 – ADVISORY BUSINESS

The Adviser was formed in 2021 by Ivan G. Ortiz as a Delaware limited partnership and has its principal place of business in Coral Gables, FL. The Adviser is owned and controlled by Mr. Ortiz.

The Adviser provides discretionary investment advice to an unaffiliated private investment fund (the “Account”) pursuant to the terms, guidelines and restrictions provided in the investment management agreement between the Adviser and the Account (“IMA”). The Adviser also provides discretionary investment advice to the OCIM Master Fund Limited, and its two feeder funds, OCIM Partnership Fund LP and OCIM Offshore Fund Limited (the “Funds”). The General Partner of the OCIM Partnership Fund LP is OCIM Fund GP LLC, which is under common control with OCIM. As used in this Brochure, the term “Client” collectively refers to the Account and the Funds.

The terms of the relationships with the Funds are set out in our investment management agreements with, or the governing documents of, the Funds. The terms of the Funds are set forth in Confidential Private Placement Memoranda or Confidential Offering Memoranda (the “Offering Documents”) of the Funds. The Funds are offered only to investors (“Investors”) who are (i) “accredited investors” as defined under the Securities Act of 1933, as amended (the “Securities Act”) and “qualified purchasers” as defined in section 2(a)(51)(A) of the Investment Company Act of 1940, as amended (the “Investment Company Act”), (ii) “knowledgeable employees” (as defined in Rule 3c-5 under the Investment Company Act), or (iii) non-U.S. persons. With respect to the Funds, OCIM manages assets in accordance with the investment objectives and restrictions set forth in the governing documents applicable to each Fund. The individual needs of the Investors in the Funds do not provide the basis of investment decisions. Investment advice is provided directly to the Funds and not individually to the Funds’ Investors.

As of December 31, 2023, the Adviser has regulatory assets under management (“RAUM”) of \$22,910,866,310 all of which is managed on a discretionary basis.

ITEM 5 – FEES AND COMPENSATION

Account Fees

The Adviser does not have a general fee schedule. Our management fee for the Account is negotiated annually with the Account’s general partner and paid monthly in advance. Once paid, the negotiated management fee is non-refundable.

We are also entitled to receive an annual performance fee (subject to a hurdle rate and high water mark) calculated based on net trading profits (after the deduction of losses carried forward from the previous year, if any) as of the end of each calendar year. The performance fee is calculated by the Account’s administrator and approved by the general partner – we neither calculate the performance fee, nor authorize its payment.

Account Expenses

Other fees and expenses borne by the Account include a pro rata share of the Account's administration fees and expenses as well as any transaction or investment fees or expenses related to the Account's activities. Also, to the extent we invest a portion of the capital we manage in third-party exchange-traded funds or other similar vehicles, the Account will bear additional fees and expenses payable to such third-party investment managers.

Fund Fees

As described more fully in the Funds' Offering Documents, OCIM is entitled to receive an annual asset-based management fee of 2%, paid monthly calculated based on the value of each Limited Partner's Capital Account as of the end of each month (the "Management Fee"), and an Incentive Fee of 20% multiplied by the amount by which the adjusted net asset value of a series of the Master Fund shares exceeds its prior high net asset value.

Fund Expenses

The expenses (other than the Management Fee and the Incentive Fee) borne by the Fund (directly or indirectly) may generally be divided into four categories, Trade Expenses, Fund-Specific Expenses, Ongoing Investment Manager Expenses and Recruitment Expenses, each of which is described in the Funds' Offering Documents.

ITEM 6 – PERFORMANCE-BASED FEES AND SIDE-BY-SIDE MANAGEMENT

As described in Item 5, above, OCIM is eligible to receive an Incentive Fee and/or annual performance fee based on the outperformance of its Clients. OCIM provides investment management services to multiple Clients, and the management fees, Incentive Fees and performance fees differ. Side-by-side management of multiple accounts with different fee arrangements may create potential conflicts of interest, as OCIM and its investment personnel have a greater incentive to favor client accounts that pay OCIM higher performance-based compensation or higher fixed, asset-based fees.

Although performance-based fees are intended to align OCIM's interests with those of its Clients, creating a greater incentive for OCIM to manage its Clients' assets well, they also can create conflicts of interest between OCIM and its supervised persons, on the one hand, and the Clients, on the other hand. For example, a performance-based fee may create an incentive for OCIM to make investments on behalf of the Clients that are riskier, more speculative, or exhibit more volatility than would be the case in the absence of a performance-based fee.

To mitigate potential conflicts, OCIM has adopted and implemented policies and procedures intended to address conflicts of interest relating to the management of its Client accounts. It is also OCIM's basic policy that no OCIM Client will receive preferential treatment over any other OCIM Client.

As more fully explained in Item 12, OCIM will allocate trades to all Clients fairly over time in accordance with the Clients' applicable investment strategies. Among strategies, OCIM intends to allocate trades pro-rata whenever possible but is under no obligation to do so. Other factors that may affect allocation

decisions may include, but are not necessarily limited to, client directed investment limitations, differing investment strategies and objectives, trading restrictions, risk parameters, liquidity of the investment relative to the needs of the particular entity, the nature of the investment opportunity taken in the context of the other investments at the time, transaction costs and cash flows or tax considerations. OCIM has also developed procedures that require the fair and equitable allocation of limited opportunities among accounts.

ITEM 7 – TYPES OF CLIENTS

OCIM currently provides investment advisory services to the Account and to the Funds, as described in Item 4 above. Investment advice is provided directly to the Clients, subject to the discretion and control of the Account's principals and the Funds' General Partner, and not individually to the investors in the Account or Funds. In both cases, the Account and the Funds are not registered under the U.S. Securities Act of 1933, as amended and are excepted from the definition of an "investment company" under Section 3(c)(7) of the Investment Company Act of 1940, as amended. Accordingly, interests in the Account and the Funds are offered exclusively to investors satisfying the applicable eligibility and suitability requirements either in private placement transactions within the United States or in offshore transactions. Investors in the Account and Funds are also Qualified Eligible Persons as defined in the Commodity Exchange Act.

OCIM may in the future provide advisory services to other funds or separately managed accounts.

ITEM 8 – METHODS OF ANALYSIS, INVESTMENT STRATEGIES AND RISK OF LOSS

The Adviser is a process-driven, investment management firm specializing in fixed income arbitrage markets performing fundamental analysis inferred from historical prices and other data in evaluating prospective investments for both absolute return and relative value opportunities. These strategies are implemented by employing various risk management, investment, optimization and execution techniques. While the main approach to investing by the Adviser is through the use of fundamental analysis techniques, it also employs certain strategies where economic intuition and investing experience are the main drivers of the strategies or their implementation.

Alternative investment strategies are speculative and involve a high degree of risk, including, without limitation, risks associated with limited diversification, leverage, interest rates, currencies, volatility, tracking risks in hedged positions, security borrowing risks in short sales, credit deterioration or default risks, liquidity risk, financing risk and prepayment risk, operational risks, counterparty risk, legal, structural and documentation risk and other risks inherent in the Portfolio's investment activities and financial instruments traded. Risk is also associated with the underlying performance of the global economy in general and the US in particular and the overall macro-economic environment. The use of leverage can magnify the impact of adverse market moves to which the Portfolio may be subject. Investments may be materially affected by conditions in the financial markets and overall economic conditions occurring globally or in particular countries or markets in which the Portfolio invests. There may be risks that are not monitored or controlled by us and risks that may be greater than forecasted, especially in unusual

market conditions. Information used to manage risks may not be accurate, complete or current, or misinterpreted by us.

Investment Risk: Inherent in any alternative investment strategy is the risk of total loss of capital. We cannot predict, measure or hedge all market, or other risks inherent in our investment strategies. We may choose or may determine that it is economically appropriate to not hedge certain risks. The profitability of our investment strategies depends to a great extent on our ability to correctly assess the future course of price movements of securities and other investments. There can be no assurance that we will be able to accurately predict price movements. The performance of any investment is subject to numerous factors which we cannot predict or control. These factors include a wide range of economic, political, competitive and other conditions (including acts of terrorism and war) that may affect investments in general or in specific industries or companies. Market volatility may cause performance to fluctuate substantially over time.

We may not accurately predict what the exit strategy will ultimately be for any given position. Exit strategies which appear to be viable when an investment is initiated may be precluded due to economic, legal, political or other factors.

Competition: There is currently, and will likely be, competition for investment opportunities with other investors having investment objectives and strategies like those of the Adviser. Performance may be adversely impacted if competition prevents or hinders the Adviser's ability to participate in certain investment opportunities.

Fundamental Credit Strategies, Payment History, Cash Flow and Asset Value Behavior: These strategies are typically predicated on analytics designed around historical and anticipated price behavior and portfolio construction. As such, these strategies may not be successful if these valuation models do not anticipate market behavior or idiosyncratic events. Perceived mispricings and predicted volatilities may fail to materialize as expected. Markets for certain investments traded in these strategies may be inefficient or illiquid and calculations within the models may involve significant uncertainties. There may be significant directional exposure to the volatility of one or more assets or the correlation of two or more assets. These strategies also may invest in securities with inherent structural leverage, and can employ external sources of leverage that can magnify gains and losses.

Fundamental Credit Strategies: The Adviser may use an investment strategy that is determined principally by fundamental strategy analysis concepts and utilizes valuation and forecasting models designed to help identify mispriced or under-valued securities. The Adviser is unlikely to be successful unless both the underlying assumptions of these models and the concepts utilized in their construction are reliable. If such assumptions and concepts are unreliable, it is likely that the model will not generate profitable investment recommendations. Model based valuation will be dependent upon the reliability of the inputs which can impact the accuracy of the model's outputs. Fundamental valuation models may be ineffective or may contain human or electronic errors (in coding, inputs or otherwise) that are either not discovered, or if discovered not disclosed to the Client. The models may not accurately forecast or model borrower behavior and this can result in significant losses. Assumptions about performance or valuation of underlying collateral may not be correct and this can result in significant losses also.

Obsolescence Risk: The investment Adviser's fundamental investment strategies are unlikely to be successful unless the assumptions underlying the Adviser's models used to implement those strategies are realistic and either remain realistic and relevant in the future or are adjusted to account for changes in the overall market environment. If such assumptions are inaccurate or become inaccurate and are not promptly adjusted, it is likely that model outputs will be inaccurate and significant losses may occur. If and to the extent that the models do not reflect certain variables, and the Adviser does not successfully address such omission through its testing and evaluation and modify the models accordingly, major losses may result. Valuation models employed by the Adviser will not always fully match the complexity of the financial markets or the assets underlying individual credits; accordingly, unanticipated changes in underlying market conditions and asset performance and valuations can significantly impact such strategies' performance. As market dynamics shift over time, a previously highly successful strategy may become non-economic. The Adviser will continue to test, evaluate and add new models, as a result of which the existing models may be modified from time to time. There can be no assurance as to the effects (positive or negative) of any modification on the Client's performance.

Reliance on Data Availability and Accuracy: Financial models rely on historical, current market and other data provided by third parties. Any interruption in the flow of data, or an inability to appropriately process, clean or analyze such data is likely to disrupt the Adviser's ability to trade effectively. In addition, no assurance can be provided that the data supplied by third parties is accurate. There may be inaccuracies in such data and errors may be made in incorporating such data into models and analyses used. Investment decisions (including hedging decisions) made, or programming code, on the basis of inaccurate or incomplete information could have a material adverse impact on the Adviser's ability to trade and may cause positions to be unintentionally liquidated and/or cause the Adviser to accumulate positions it would not have sought to accumulate with accurate data. It is not expected that investors will be notified when such issues occur.

Furthermore, it is not possible for the Adviser to integrate all relevant data into the models that are developed. Subjective decisions may be made regarding what data to integrate into its models. In making such determinations, the Adviser may consider various factors, including the cost of obtaining such data, the technology cost of incorporating such data into the Adviser's research and trading infrastructure, and the reliability of the third party providing such data. The acquisition and/or processing of data from third parties are significant components of the modelling utilized by the Adviser and inaccuracies in such data could have a negative impact on the Adviser's trading performance and, as such, a negative impact on the operating results of the Client.

Dependence on Technology: The Adviser's investment strategies employ proprietary and third-party hardware and software for the purpose of valuation and forecasting. The Adviser uses such hardware and software to provide investment advice to the Client, including research, valuation, trade identification and construction, trade execution, clearing, risk management, back-office functions and reporting. The performance of the Adviser, and, therefore, the performance of the Client, could be severely compromised by coding errors (including design and implementation errors), computer viruses, telecommunications failures, natural disasters, security breaches, software related "system crashes," disruption or deterioration of services of third-party providers, terrorist attacks and similar events. Any event that interrupts the computer and telecommunications operations of the Adviser could result in, among other things, the inability of the Adviser to establish, modify, liquidate, hedge or monitor the Client's investments and therefore could have a material adverse effect on the operating results of the Client.

Coding Errors: The Adviser's investment strategies may involve the development and/or use of software and pricing models that are prone to coding errors that may result in the misvaluation of cash flows and analysis of asset prices. While there are methods to mitigate the incidence and impact of software errors, such as testing, changing management procedures, monitoring and automated risk checks, the decision as to when to utilize new software involves balancing the expected benefits of any change (which would call for turning over the change quickly) with the risks that the software will contain errors (which would call for exhaustive testing).

Given the difficulty of detecting coding errors, some errors will go undetected for long periods of time and some will never be detected. Moreover, some coding errors will be detected but not fixed by the Adviser immediately, or, possibly, at all, due to competing priorities and/or the perception that the impact of the error is not material. Although the Adviser will generally make judgments about the perceived impact of discovered errors so as to appropriately prioritize the remediation of the errors with other business demands, the Adviser may not perform a quantitative impact analysis on discovered coding errors. The Adviser's judgment could prove to be wrong, and a software error that the Adviser chooses not to fix immediately, could have a material impact on the Client. In addition, as a mathematical model can be expressed in computer code in multiple ways, the choice of code ultimately used may not result in the best representation of the model.

The occurrence of coding errors is inevitable given the Adviser's sophisticated and highly complex valuation models, and coding errors will not constitute trade errors under the Adviser's policies. The Client should understand that they are assuming the risks (including any losses) associated with these errors when investing in the Adviser's investment strategy. The Adviser does not expect to disclose all discovered coding errors to the Client, and losses arising from coding errors will be borne by the Client.

Use of Systems: The Adviser relies extensively on the use of computer systems, hardware, software and telecommunications equipment. The Adviser makes use of its own models as well as systems that are publicly available or provided by third parties. Accordingly, the Client is exposed to the risk that computer hardware, software, electronic equipment and other services used by the Adviser may cease to be available, for example, due to the insolvency of the provider or the discontinuation of services or software updates. In such circumstances, the Adviser would seek to obtain equivalent hardware, software and services from an alternative supplier.

System Failure: As the Adviser makes extensive use of computer hardware, systems and software, the Client is exposed to risks caused by failures of information technology infrastructure and data. In addition, outright failure or a partial impairment (whether due to external situations or internal file corruption) of the underlying hardware, operating system, software or network may leave the Adviser unable to trade either generally or in certain of its strategies, and this may expose it to risk should the outage coincide with turbulent market conditions. To mitigate this risk, backup and failover plans have been put in place by the Adviser.

Data Feed Failure: The Adviser's models utilize data feeds from a number of sources. If these data feeds were to be corrupted, compromised, or discontinued in any manner, or not delivered or accessible in a timely manner, the models may not be properly formulated. This failure to receive market prices, trustee reports, security mapping information and similar data, in a timely manner may leave the Adviser unable

to trade or may result in trades that are not aligned with a strategy's goal, and this may expose the Client to risk of loss or loss of opportunities, in particular if the loss of the data feed coincides with turbulent market conditions. If the data feeds are compromised or discontinued in any material manner or if the data feeds are not delivered or accessible in a timely manner, it may result in a loss to the Client, which could be material.

Execution, Market and Liquidity Risk: We may, at times, trade in markets that are volatile and illiquid. Closing positions may be difficult if there is a significant decrease in trading volume or increase in price volatility. Orders may not be executed timely or efficiently in periods of market distress due to various circumstances including liquidity and market restrictions.

At times, the fixed income markets have experienced significant falloffs in liquidity, however, typically this is not the case for US Treasury and Bond Sovereign securities. While such events may sometimes be attributable to changes in interest rates or other factors, the cause is not always apparent. During periods of market illiquidity, we may not be able to close out positions or may only be able to do so at unfavorable prices. This liquidity risk could adversely impact the performance of the Portfolio and may be difficult or impossible to hedge against. We may also invest in financial instruments that are not publicly traded and may not be able to readily dispose of such instruments and, in some cases, may be contractually prohibited from disposing of such securities for a specified period of time.

The prices of securities can be highly volatile. Price movements are influenced by, among other things, interest rates, changing supply and demand relationships, trade, fiscal, monetary and exchange control programs and policies of governments, and national and international political and economic events. Although market volatility can create trading opportunities, too much volatility may create additional risks that may impact our ability to put on and maintain effective hedges. It can cause the correlation between long positions and hedges to diverge, with the hedge having the opposite effect of that intended.

Material Non-public Information: We may come into possession of material non-public information that would limit our ability to buy and sell investments for the Portfolio. The Portfolio's investment flexibility may be constrained as a consequence of our inability to take certain actions because of such information. The Portfolio may experience losses if we are restricted from selling an investment because we are in possession of material non-public information about the investment.

Highly Volatile Markets: The prices of securities can be highly volatile. Price movements are influenced by, among other things, interest rates, changing supply and demand relationships, trade, fiscal, monetary and exchange control programs and policies of governments, and national and international political and economic events. Although market volatility can create trading opportunities, too much volatility may create additional risks that affect our ability to put on and maintain effective hedges. It can cause the correlation between long positions and hedges to diverge, with the hedge having the opposite effect of that intended.

Leverage and Financing Risk: All leverage used by the Portfolio is controlled by the Fund's general partner. The Portfolio, however, could experience losses due to its, or the Fund's, use of leverage. While leverage presents opportunities for increasing the Portfolio's total return, it has the effect of potentially increasing losses as well. Further, if the securities pledged to brokers to secure margin accounts decline in value, the Portfolio of Fund could be subject to a "margin call," pursuant to which the Portfolio or Fund must either deposit additional funds or securities with the brokers, or suffer mandatory liquidation of the pledged securities to compensate for the decline in value. In the event of a sudden drop in the value of the Portfolio's (or Fund's) assets, we may be forced to liquidate the Portfolio to raise money to satisfy margin requirements. The forced liquidation of all or a portion of the Portfolio at distressed prices could result in significant losses to the Portfolio.

Change in Margin Terms: In the absence of specific agreements, securities margin arrangements are generally subject to change or revocation by the lender upon very limited notice and for any or no reason. The lender may demand an increase in the collateral, including requiring collateral equal to the full amount of the borrowings, and, if the Fund is unable to provide additional collateral, the lender could liquidate assets held by the lender to satisfy the Fund's obligations. The assets of the Portfolio could be part of such a liquidation. Liquidation in that manner could have extremely adverse consequences, which may be exacerbated in the event that these changes or revocations are imposed suddenly or by multiple lenders.

Margin in Periods of Stress: In periods of market stress, and particularly in periods of stress specific to the Fund, lenders or counterparties may attempt to increase margin levels. Additionally, a simultaneous, broad-based increase in margin among hedge funds generally would likely adversely impact the investments held in the Portfolio by decreasing demand and increasing supply of those or similar investments.

Counterparty Risk: We may enter into transactions, including derivative and other over-the-counter transactions, with or through third parties in which the failure of the third party to perform its obligations could have a material adverse effect on the Portfolio. The counterparty risk is accentuated for contracts with longer maturities where events may intervene to prevent settlement. In addition, because the Portfolio's securities may be held in margin accounts, and the prime brokers have the ability to loan those securities to other persons, the Fund's ability to recover assets in the context of a bankruptcy or other failure of a prime broker may be further limited.

We may transact with counterparties (including prime brokers) located in various jurisdictions outside the United States. The local counterparties are subject to various laws and regulations in various jurisdictions that are designed to protect their customers in the event of their insolvency. However, the practical effect of these laws and their application to the Portfolio's assets are subject to substantial limitations and uncertainties. Because of the large number of entities and jurisdictions involved and the range of possible scenarios involving the insolvency of any counterparty, it is impossible to generalize about the effect of their insolvency on the Portfolio's assets. It should be assumed that the insolvency of any significant counterparty would result in a loss to the Portfolio, which could be material.

Financial Institution Risk; Distress Events: The Portfolio is subject to the risk that one of the Portfolio's banks, brokers, hedging counterparties, lenders or other custodians of some or all of the Portfolio's assets (each, a "Financial Institution") fails to perform its obligations or experiences insolvency, closure, receivership or other financial distress or difficulty, similar to that experienced by Silicon Valley Bank and Signature Bank in March 2023 (each, a "Distress Event"). Distress Events can be caused by factors including eroding market sentiment, significant withdrawals, fraud, malfeasance, poor performance or accounting irregularities. In the event a Financial Institution experiences a Distress Event, OCIM, the Portfolio may not be able to access deposits, borrowing facilities or other services for an extended period of time or ever. Although assets held by regulated Financial Institutions in the United States frequently are insured up to stated balance amounts by organizations such as the Federal Deposit Insurance Corporation ("FDIC"), in the case of banks, or the Securities Investor Protection Corporation ("SIPC"), in the case of certain broker-dealers, amounts in excess of the relevant insurance are subject to risk of loss, and any non-U.S. Financial Institutions that are not subject to similar regimes pose increased risk of loss. Although in recent years governmental intervention has resulted in additional protections for depositors, there can be no assurance that governmental intervention will be successful or avoid the risk of loss, substantial delays or negative impact on banking or brokerage conditions or markets.

Any Distress Event has a potentially adverse effect on the ability of OCIM to manage the Portfolio and its investments, and on the ability of OCIM, and the Portfolio to maintain operations, which in each case could result in significant losses and unconsummated investment acquisitions and dispositions. Although OCIM expects to exercise contractual remedies under the agreements with Financial Institutions in the event of a Distress Event, there can be no assurance that such remedies will be successful or avoid losses or delays.

Limited Diversification: The Portfolio may become concentrated in a single issuer, industry, market or sector. The concentration of risk may increase losses suffered by the Portfolio. Limited diversification may cause greater volatility than would otherwise be the case, and could expose the Portfolio to losses disproportionate to market movements in general. Even if we attempt to control risks through diversification, risks associated with different assets may become correlated in unexpected ways, with the result that the Portfolio becomes exposed to unforeseen risks.

Market Restrictions: Restrictions on investment size or investment activities imposed by various regulators or self-regulatory organizations and exchanges may limit the Portfolio's ability to effect transactions. Position limits (e.g., the maximum amounts of gross, net long or net short positions that any one person or entity may own or control in a particular financial instrument) and other market restrictions (e.g., prohibitions on short sales) may require aggregation across the Fund (as opposed to the Portfolio), for purposes of determining whether the applicable position limits have been exceeded, or short sales may be executed and may restrict the Portfolio's investment activities. As a result of these restrictions, we may be prevented from executing a desired transaction and the Portfolio may therefore incur losses which may be material.

Trade Error Risk: Occasionally, transactions may be executed erroneously on terms other than those intended. For example, a transaction may be executed in the wrong asset, for the wrong quantity or price, to buy when we intend to sell, to sell when we intend to buy, or by reason of a technology or administrative error. Except to the extent otherwise required by law, the Portfolio will generally bear the losses or costs of any such errors, unless it is determined that the error was caused by gross negligence.

General Political, Economic, Legal, Tax, and other Regulatory Risks: The Portfolio's investments may be adversely affected by changes in economic conditions or political events, such as a stock market break, acts of terrorism, the outbreak of hostilities involving the United States, the death of a major political figure, a serious pandemic, or a natural disaster, among many others. Additional factors, such as changes in federal or state tax laws, federal or state securities laws, bank regulatory policies or accounting standards, may make certain investments less desirable or may make certain investment strategies less effective. Similarly, legislative acts, rulemaking, adjudicatory, or other activities of governmental or quasi-governmental bodies, agencies, and regulatory organizations may make the business of the Fund less attractive. Laws and regulations, particularly those involving taxation, investment and trade, applicable to the Fund's or Portfolio's activities can change quickly and unpredictably, and may at any time be amended, modified, repealed or replaced in a manner adverse to the interests of the Portfolio. In particular, in response to significant recent events in international financial markets, governmental intervention, and certain regulatory measures have been or may be adopted in certain jurisdictions, including restrictions on short selling of certain securities in certain jurisdictions. The extent to which the underlying causes of these recent events are pervasive throughout global financial markets and have the potential to cause further instability is not yet clear. These recent events, and their underlying causes, are likely to be the catalyst for changes in global financial regulation for some time, and may result in major and unavoidable losses to the Fund.

With respect to certain countries, there is a possibility of expropriation, confiscatory taxation, imposition of withholding or other taxes on dividends, interest, capital gains or other income, limitations on the removal of funds or other assets, political or social instability or diplomatic developments that could affect investments in those countries. An issuer of securities may be domiciled in a country other than the country in whose currency the instrument is denominated. The values and relative yields of investments in the securities markets of different countries, and their associated risks, are expected to change independently of each other.

Cybersecurity Risk: With the increased use of technologies such as the Internet to conduct business, the Portfolio is susceptible to operational, information security, and related risks. In general, cyber incidents can result from deliberate attacks or unintentional events. Cyberattacks include, but are not limited to, gaining unauthorized access to digital systems (e.g., through "hacking" or malicious software coding) for purposes of misappropriating assets or sensitive information, corrupting data, or causing operational disruption. Cyberattacks may also be carried out in a manner that does not require gaining unauthorized access, such as causing denial-of-service attacks on websites (i.e., efforts to make network services unavailable to intended users). Cyber incidents affecting the Portfolio or its service providers may cause disruptions and impact business operations, potentially resulting in financial losses, interference with the

Portfolio's ability to trade, regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs. Similar adverse consequences could result from cyber incidents affecting issuers of securities in which the Portfolio invests, counterparties with which the Portfolio engages in transactions, governmental and other regulatory authorities, exchange and other financial market operators, banks, brokers, dealers, insurance companies and other financial institutions (including financial intermediaries and service providers for shareholders) and other parties. In addition, substantial costs may be incurred in order to prevent any cyber incidents in the future. While the Portfolio's service providers have established business continuity plans in the event of, and risk management systems to prevent, such cyber incidents, there are inherent limitations in such plans and systems including the possibility that certain risks have not been identified. Furthermore, the Portfolio cannot control the cyber security plans and systems put in place by its service providers or any other third parties whose operations may affect the Portfolio. As a result, the Portfolio could be negatively impacted.

We trade a wide variety of instruments for the Portfolio and, in general, do not enter into management agreements that materially restrict the universe of securities and other trading instruments that we may employ. There are certain inherent risks associated with the instruments we trade, as discussed below. Please note that there may be instruments other than those noted below that we may trade in.

Futures: The low margin deposits normally required in futures contract trading (typically between 2% and 20% of the value of the contract purchased or sold) permit an extremely high degree of leverage. Like other leveraged investments, investments in any futures trade may result in losses in excess of the amount invested. Futures and related options may be illiquid because they can generally only be traded while the exchange in question is open and certain commodity exchanges limit fluctuations in certain futures contract prices during a single day by regulations referred to as "daily price fluctuation limits" or "daily limits." Under such daily limits, during a single trading day no trades may be executed at prices beyond the daily limits. Once the price of a contract for a particular future has increased or decreased by an amount equal to the daily limit, positions in the future can neither be taken nor liquidated unless traders are willing to effect trades at or within the limit. Thus, once the market has moved to the "daily limit," it becomes extremely expensive, as well as difficult if not impossible, to close out positions against which the market is moving. This could prevent the Portfolio from liquidating unfavorable positions promptly and subject them to substantial losses. The governing bodies of the various futures exchanges also may intervene so as to limit trading or require the liquidation of certain positions, resulting in major losses for affected market participants. Futures trading, unlike forward trading (as discussed below), is typically highly regulated, and such regulation could adversely affect the Portfolio in certain circumstances.

Debt Securities: The Portfolio may invest in debt securities, bonds, or other fixed income securities and loan instruments of U.S. and non-U.S. sovereign and corporate issuers that pay fixed, variable, or floating rates of interest. The value of fixed income securities and loans in which the Portfolio may invest can change in response to fluctuations in interest rates and/or to perceptions of creditworthiness, political stability or soundness of economic policies. These fluctuations may be more acute with respect to high yield and distressed issuers. The value of fixed income securities can also be impacted by dealer and market liquidity, particularly in periods of significant financial market stress. Liquidity and bid/offer

spreads in the securities that we trade can be extremely wide and liquidity can be sporadic. This will affect our ability to enter and exit trades successfully and to value the portfolio with accuracy at certain times.

Distressed and High Yield Securities: We may invest in “below investment grade” securities and obligations of issuers in weak financial condition, experiencing poor operating results, having substantial capital needs or negative net worth, facing special competitive or product obsolescence problems, including companies involved in bankruptcy or other reorganization and liquidation proceedings. In addition we may invest in junior debt and equity tranches of Asset Backed Securities, Commercial Mortgage Backed Securities and Collateralized Debt Obligations that have significant structural leverage that may result in high losses if defaults in the underlying collateral occur. Among the risks inherent in investments in troubled companies is the fact that it may be difficult to obtain information as to the true condition of the issuers. These investments may also be adversely affected by laws relating to, among other things, fraudulent transfers and other voidable transfers or payments, lender liability and the bankruptcy court’s power to disallow, reduce, subordinate or disenfranchise particular claims. Debt securities of troubled companies may not pay interest or dividends, whether inherently or by reason of default, whereas healthier issuers typically will pay interest or dividends on their debt securities. We may also invest in bonds of issuers that do not have publicly traded equity securities, making it more difficult to hedge the risks associated with such investments.

Derivatives: Derivatives include futures, options, swaps, structured securities and other instruments and contracts that are derived from, or the value of which is related to one or more underlying securities, financial indexes, currencies or other underlying asset. Derivatives allow an investor to hedge or speculate upon the price movements of the underlying asset at a fraction of the cost of investing directly in the underlying asset. The value of a derivative therefore depends largely on the price movements in the underlying asset and many of the risks applicable to the underlying asset are also applicable to the derivatives of that asset. However, there are a number of other risks associated with derivatives trading. For example, because many derivatives are inherently leveraged and create significantly more market exposure than the money paid or deposited when the transaction is entered into, therefore a relatively small adverse market movement can cause a loss greater than the original amount invested. Derivatives also have liquidity risk because there may not be a liquid market in which to close or dispose of outstanding derivatives contracts. Derivatives also carry counterparty risk. In the event of default by a derivatives counterparty the Portfolio may lose all or a portion of the amount it is contractually entitled to receive.

The prices of derivatives can be highly volatile. Price movements of derivative contracts in which we may invest are influenced by, among other things, interest rates, changing supply and demand relationships, trade, fiscal, monetary and exchange control programs and policies of governments and national and international political and economic events and policies. In addition, governments from time to time intervene, directly and by regulation, in certain markets, particularly those in currencies, financial instruments, futures and options. Such intervention often is intended to influence prices and may, together with other factors, cause all of such markets to move rapidly in the same direction because of among other things, interest rate fluctuations.

Options: We may buy or sell (write) call and put options. The purchase or sale of an option involves the payment or receipt of a premium and the corresponding right or obligation, as applicable, to either purchase or sell the underlying asset for at a specified price at, or by, a specified date or during a particular period. Purchasing options involves the risk that the underlying instrument will not change in price in the manner expected and the premium will be lost. Selling options involves greater risk because of the seller's exposure to the actual price movement in the underlying asset rather than only the premium payment which could result in potentially unlimited loss.

ETFs: The public trading price of shares in an ETF may be different from the net asset value of such shares (i.e., ETF shares may trade at a premium over, or a discount to, the net asset values of such shares) and similarly, the public trading market price per ETF share may be different from the net asset value per ETF share. ETF arbitrage strategies are designed to profit from such deviations. The exploitation of such arbitrage opportunities should tend to cause the public trading price to track net asset value per share closely over time, thus limiting the opportunities for arbitrage. ETF shares are listed for trading on exchanges. Trading in such shares may be halted due to market conditions or, in light of exchange rules and procedures, for reasons that, in the view of the relevant exchange, make trading in the ETF shares inadvisable. In addition, trading is subject to trading halts caused by extraordinary market volatility pursuant to "circuit breaker" rules that require trading to be halted for a specific period based on a specified market decline. There can be no assurance that the requirements necessary to maintain the listing of any ETF's shares will continue to be met or will remain unchanged. Although it is anticipated that the ETF shares will be listed and traded on exchanges, there can be no guarantee that an active trading market for such shares will develop or be maintained. If the Portfolio needs to sell ETF shares at a time when no active market for them exists, the price the Portfolio receives for such shares, assuming that the Portfolio is able to sell them, likely will be lower than that it would receive if an active market did exist. In addition, certain ETFs arbitrage strategies require the Portfolio to be able to redeem or create ETF shares. If the Portfolio is unable to do so, the strategy could be rendered unprofitable. In addition to the Management Fee and Incentive Fees paid and the other expenses of the Portfolio, the investment managers of the ETFs in which the Portfolio invests may be paid a management fee to which the Fund, as an investor, is indirectly subject. The ETFs in which the Portfolio invests also bear their own brokerage commissions and other expenses, and as an investor, the Portfolio will indirectly bear a portion of those expenses. Similarly, the ETFs in which the Portfolio may invest may pay fees to a trustee, and may also pay licensing and other fees. The fees and expenses involved in the Portfolio's operation, including, without limitation, the layering of fees at the level of the client's investment in ETFs, could result in a high cost of investment.

ETNs: The Portfolio may invest in ETNs, which are debt securities whose returns are linked to a particular index. ETNs are typically linked to the performance of a commodities index that reflects the potential return on unleveraged investments in futures contracts of physical commodities, plus a specified rate of interest that could be earned on cash collateral. ETNs are subject to credit risk. The value of an ETN may vary and may be influenced by time to maturity, level of supply and demand for the ETN, volatility and lack of liquidity in underlying commodities markets, changes in the applicable interest rates, changes in

the issuer's credit rating, and economic, legal, political or geographic events that affect the referenced commodity. ETNs are also subject to the risk of being illiquid. When the Portfolio invests in ETNs it will bear its proportionate share of any fees and expenses borne by the ETN. There may be restrictions on the Portfolio's right to redeem its investment in an ETN, which is meant to be held until maturity. The Portfolio's decision to sell its ETN holdings may be limited by the unavailability of a secondary market.

ADRs: ADRs are receipts issued by a U.S. bank or trust company evidencing ownership of underlying Securities issued by foreign issuers. ADRs may be listed on a national securities exchange or may be traded in the over-the-counter market. Holders of unsponsored ADRs generally bear all the costs of such facilities. The depository of an unsponsored facility frequently is under no obligation to distribute investor communications received from the issuer of the deposited Security or to pass through voting rights to the holders of depository receipts in respect of the deposited Securities. Investments in ADRs pose, to the extent not hedged, currency exchange risks (including, without limitation, blockage, devaluation and non-exchangeability), as well as a range of other potential risks relating to the underlying shares, which could include expropriation, confiscatory taxation, imposition of withholding or other taxes on dividends, interest, capital gains or other income, political or social instability or diplomatic developments that could affect investments in those countries, illiquidity, price volatility and market manipulation. In addition, less information may be available regarding the underlying shares of ADRs, and non-U.S. companies may not be subject to accounting, auditing and financial reporting standards and requirements comparable to, or as uniform as, those of U.S. companies. Such risks may have a material adverse effect on the performance of such investments and could result in substantial losses.

Swap Agreements: Swap agreements are privately negotiated over-the-counter derivative products in which two parties agree to exchange actual or contingent payments that may be calculated in relation to a rate, index, instrument or certain securities and a particular "notional amount". Swaps may be subject to risks including market risk, liquidity risk, structuring risk, tax risk and counterparty risk.

Securities of Non-U.S. Companies: Investments in securities of non-U.S. issuers have a range of risks which may include expropriation, confiscatory taxation, imposition of withholding or other taxes on dividends, interest, capital gains or other income, political or social instability, illiquidity, price volatility and market manipulation. In addition, less information may be available regarding securities of non-U.S. issuers, and non-U.S. issuers may not be subject to accounting, auditing and financial reporting standards and requirements comparable to, or as uniform as, those of U.S. issuers. There may also be less government supervision and regulation of exchanges, brokers and issuers than there is in the U.S., and we may have greater difficulty taking appropriate legal action in non-U.S. courts. Non-U.S. markets also have different clearance and settlement procedures which in some markets have at times failed to keep pace with the volume of transactions, creating substantial delays and settlement failures that could adversely affect the Portfolio's performance. Transaction costs of investing in non-U.S. securities markets may be higher than in the U.S., and securities denominated or whose prices are quoted in non-U.S. currencies also pose currency exchange risks (including blockage, devaluation and non-exchangeability).

Developing or Emerging Markets: Any of our investment strategies may be executed in developing or emerging markets. In addition to the risks for securities of non-U.S. companies, developing or emerging markets may be more likely than developed markets to experience periods of illiquidity, market disruptions, political instability, economic distress, social instability, rule changes, restrictions on capital movement, etc.

Short Selling: Short selling involves selling securities that are not owned and borrowing them for delivery to the purchaser with an obligation to replace borrowed securities at a later date. A short sale creates the risk of a theoretically unlimited loss, in that the price of the underlying security could increase without limit, thus increasing the cost to the Portfolio of buying those securities to cover the short position. There is no assurance that a borrowed security will not be recalled and that the Portfolio will not be “bought in” (i.e. forced to repurchase securities in the open market to return them to the lender). Furthermore, the securities necessary to cover a short position may not be available for purchase, and purchasing securities to close out the short position can itself cause the price of the securities to rise further, thereby exacerbating the loss. The securities borrowed to affect the short sale may be recalled by the lender of those securities at any time, thus forcing the Portfolio to purchase the securities and close out the short position at a loss.

Short sale transactions have been subject to increased regulatory scrutiny including the imposition of restriction on short selling certain securities and reporting requirements. Our ability to execute a short sale may be materially adversely impacted by temporary and/or new permanent rules, interpretations, prohibitions and restrictions adopted in response to these adverse events. Temporary restrictions and/or prohibitions on short selling activity may be imposed by regulatory authorities with little or no advance notice and may impact prior, current and future trading activities.

Regulatory authorities may also impose restrictions that adversely affect our ability to borrow certain securities in connection with short sale transactions. In addition, traditional lenders of securities might be less likely to lend securities under certain market conditions. As a result, we may not be able to effectively pursue a short selling strategy due to the limited supply of securities available for borrowing.

Exchange Rate Fluctuations; Currency Considerations: Changes in currency exchange rates (to the extent unhedged) will affect the value of the Portfolio and the unrealized appreciation or depreciation of investments.

Transaction costs of investing in non-U.S. securities markets are generally higher than in the U.S., and securities denominated or whose prices are quoted in non-U.S. currencies also pose currency exchange risks (including blockage, devaluation and non-exchangeability).

Hedging Transactions: The success of hedging transactions strategy depend, in part, upon our ability to correctly assess the degree of correlation between the performance of the instruments used to hedge risks and the performance of the securities or risks being hedged. Since the characteristics of many securities change as markets change or time passes, the success of a hedge will also be subject to our

ability to continually recalculate, readjust and execute hedges in an efficient and timely manner. While hedging transactions may be entered into with the intent to reduce risk, such transactions may result in poorer overall performance for the Portfolio than if such hedging transactions were not entered into. For a variety of reasons, we may not seek to establish a perfect correlation between the hedging instruments utilized and the securities being hedged. Such an imperfect correlation may prevent the Portfolio from achieving the intended hedge or expose the Portfolio to risk of loss.

The information included in this ITEM 8 does not include every potential risk associated with our investment strategies. Investing in securities involves risk of loss, possibly a total loss of invested capital that investors should be prepared to bear.

There is no guarantee that the Portfolio's investment program, including, without limitation, its investment objectives, strategies, or risk monitoring goals will be successful. Investment results may vary substantially over time. The Portfolio's investments are speculative and involve a high degree of risk. There may be risks which cannot be monitored or controlled, and risks that may be greater than forecasted, especially in unusual market conditions. The Adviser cannot guarantee that any assumptions relied on herein will be true for all future events or that all assumptions have been considered or stated.

ITEM 9 – DISCIPLINARY INFORMATION

OCIM and its employees have not been involved in any legal or disciplinary events in the past 10 years that would be material to OCIM's (including its Client's and their underlying investors') evaluation of the Adviser or its personnel.

ITEM 10 – OTHER FINANCIAL INDUSTRY ACTIVITIES AND AFFILIATIONS

OCIM is a member of the National Futures Association and is registered as a Commodity Pool Operator. Neither the Firm nor any of its management persons is registered or has an application pending to register as (i) a broker-dealer or a registered representative of a broker-dealer or (ii) a futures commission merchant or a commodity trading adviser.

The Firm has no material relationships or arrangements with a related person who is a broker-dealer, investment company, other investment adviser, financial planning firm, commodity trading adviser or futures commission merchant, banking or thrift institution, accounting firm, law firm, insurance company or agency, pension consultant, real estate broker or dealer, or an entity that sponsors or syndicates limited partnerships that are material to its advisory services or the Clients. The Firm has developed and will continue to develop relationships with professionals who provide services such as legal, accounting, banking, tax preparation, insurance brokerage, and other personal services. None of the above relationships create a material conflict of interest with the Clients or their investors.

As described in Item 4, the Firm is affiliated with the Funds' General Partner. The Firm serves as the Adviser to the Fund, and the General Partner is the general partner of, and receives investment management and incentive fees from the Fund. Certain of the Firm's partners, officers, employees,

affiliates, and their respective family members invest directly in the Fund. Investments in the Fund made by these persons are not subject to the Management Fees or the Incentive fees described in Item 5 above.

ITEM 11 – CODE OF ETHICS, PARTICIPATION IN CLIENT TRANSACTIONS AND PERSONAL TRADING

Pursuant to Rule 204A-1 under the Investment Advisers Act of 1940, we have adopted a Code of Ethics that sets out standards of business and personal conduct for employees of the Adviser. The Code of Ethics includes procedures for engaging in and reporting personal securities transactions for employee accounts and/or for the accounts of family members, as applicable. Employees of the Adviser are required to certify, at least annually, that they have read and understand the Code of Ethics.

The foundation of the Code of Ethics is based on the underlying principles that:

- Employees must at all times place the interests of our clients first;
- Employees must at all times comply with all applicable federal securities laws; and
- Employees should not take inappropriate advantage of their position at Adviser.

Our Code of Ethics requires employees to provide the Chief Compliance Officer with initial and annual holdings reports (excluding accounts holding certain securities or discretionary accounts) and quarterly transactions reports. Employees are also generally prohibited from participating in initial public offerings and executing transactions in issuers included on the Restricted List. Employees must also receive approval prior to investing in any private placement. The Chief Compliance Officer reviews violations of the Code of Ethics to determine appropriate remedial action.

The Code of Ethics also includes procedures for the Adviser's employees related to outside business activities and gifts and entertainment.

The Adviser's Code of Ethics is available to clients upon request by contacting the Adviser's Chief Compliance Officer, Dominic Hood at 305-842-5062 or compliance@ocimgt.com.

ITEM 12 – BROKERAGE PRACTICES

The Fund's general partner reviews, approves and monitors the prime brokers, executing brokers-dealers and counterparties used by the Adviser. Executing broker-dealers and counterparties are chosen from those that have been reviewed and approved by the general partner.

SOFT DOLLAR USAGE

It is currently the Adviser's policy not to use soft dollars. However, the Adviser enters into securities transactions with broker-dealers that provide, as part of their bundled services, the Adviser with access to research and research-related services. The Adviser may have an incentive to select a broker based on the Adviser's interest in receiving the research or other products or services offered by such broker.

Soft dollar arrangements generally arise when an investment adviser obtains products and services, other than securities execution, from a broker-dealer in return for directing client securities transactions to the broker-dealer. Soft dollar arrangements pose a conflict of interest for the Adviser in that such arrangements allow the Adviser to pay with brokerage commissions, expenses that would otherwise be borne by the Adviser. In the event that the Adviser uses brokerage commissions (or markups or markdowns) to obtain research or other products or services, the Adviser could receive a benefit because it would not have to produce or pay for the research, products or services.

In recommending brokers and dealers to effect portfolio transactions we consider factors as we deem appropriate to consider under the circumstances, which may include one or more of the following:

- reliability;
- reputation;
- experience in the industry;
- financial stability;
- capital commitment;
- efficiency in executing and clearing transactions;
- confidentiality of trading activity;
- provision of Products and Services (defined below);
- idea generation;
- competitive rates; and
- general responsiveness.

Products and Services constituting “research” may be in any form (*e.g.*, written, oral or on-line) and may include, without limitation:

- traditional research reports analyzing the performance of a particular company or stock, market, company and financial data;
- market, economic, political and financial information (including studies and forecasts);
- statistical information;
- data on the pricing and availability of securities; and
- seminars and conferences relating to the investment in securities or containing analyses of issuers, industries, securities, economic factors and trends and portfolio strategy.

Products and Services constituting “brokerage” may include, without limitation:

- clearance services;
- settlement services; and
- custody services.

To the extent that the Portfolio's commissions are used to acquire Products and Services through the use of "soft dollars," Products and Services received will be of the type contemplated by Section 28(e) of the U.S. Securities Exchange Act of 1934 (that is, "research" and "brokerage"), although transactions may or may not otherwise comply with the provisions of Section 28(e) (e.g., may relate to transactions in instruments other than securities).

TRADE ERRORS

The Fund (and not the Adviser) will bear the cost of any losses (and reap the benefits of any gains) resulting from trading errors and similar human errors, absent gross negligence or intentional misconduct. Trade errors might include, for example, keystroke errors that occur when entering trades into an electronic trading system or typographical or drafting errors related to derivatives contracts or similar agreements.

ITEM 13 – REVIEW OF ACCOUNTS

The Portfolio's transactions and positions are reviewed on a daily basis by the Adviser and the general partner.

ITEM 14 – CLIENT REFERRALS AND OTHER COMPENSATION

Not applicable.

ITEM 15 – CUSTODY

Under Rule 206(4)-2 of the Advisers Act, an adviser has custody if it acts in any capacity that gives the adviser legal ownership of, or access to, the Client funds or securities. Hence, OCIM has custody of Fund assets because it or its affiliate either (i) acts as general partner of a Fund with the authority to dispose of funds and securities in such Fund's account or (ii) is deemed to have custody because of its ability to withdraw its fees directly from the Funds. Rule 206(4)-2 imposes certain requirements on registered investment advisers who have actual or deemed custody of client assets. OCIM, however, expects to be exempt from many of the provisions of these requirements because (1) the Funds will be audited in accordance with the U.S. generally accepted accounting principles on an annual basis, (2) the independent public accountant conducting the audit is registered with, and subject to regular inspection by, the Public Company Accounting Oversight Board, and (3) audited financial statements will be distributed to each Investor in the Funds within 120 days of the end of each Fund's fiscal year.

OCIM maintains Fund assets at prime brokers, or a custodial bank, all of whom are qualified custodians, as that term is defined under the custody rule under the Advisers Act.

ITEM 16 – INVESTMENT DISCRETION

The Firm has discretionary authority to trade securities on behalf of the Clients, subject to the terms of the Firm's investment management agreement with the Clients.

ITEM 17 – VOTING CLIENT SECURITIES

OCIM does not vote proxies since the Client has retained the authority to vote proxies on behalf of the Fund.

ITEM 18 – FINANCIAL INFORMATION

We do not require or solicit prepayment of fees six months or more in advance and therefore is not required to include a balance sheet for its most recent fiscal year. We are not subject to any financial commitment that impairs our ability to meet contractual and fiduciary commitments to clients, nor have we been the subject of a bankruptcy petition.
