Title: Making America Greater with Post-Blockchain Collateral: HBAR as a Pro-Dollar Asset

Prepared for Review by: Federal Reserve, Securities and Exchange Commission, Trump Family Advisors

Date: September 4, 2025

Executive Summary

This paper presents a national strategy for securing the U.S. dollar's supremacy in the digital age by deploying post-blockchain collateral systems rooted in uniquely American mathematics (Parcel-19) and energy-efficient distributed ledgers (HBAR). The proposed framework prevents foreign actors from destabilizing U.S. monetary integrity, as seen in offshore experiments like Justin Sun's USDD, while enabling American households and institutions to participate directly in strengthening the nation's reserves.

1. Origins of Parcel-19

Parcel-19 arises from 2025 discoveries by an unnamed former cryptographic courier and U.S. Army Signal School graduate (MOS 25B). These formulas mirror—but do not replicate—conceptual work associated with Nikola Tesla. The mathematics is uniquely American, never before documented in Tesla's archives, and creates the basis for post-blockchain monetary systems. Purpose: deliver lightweight, quantum-resistant structures that stabilize collateral and preserve the global supremacy of the U.S. dollar.

2. National Security Imperative

Offshore stablecoins such as USDD operate without U.S. asset backing, diverting capital away from U.S. Treasuries. This undermines U.S. fiscal strength and risks destabilizing the USDT peg, which remains critical to digital dollar dominance. To counteract this, the U.S. must control collateral frameworks that are auditable, pro-dollar, and post-blockchain secure.

3. HBAR as the Strategic Asset

HBAR (Hedera Hashgraph) offers: • ABFT consensus & low energy cost, enabling billions of secure transactions. • Deterministic fees suitable for loan repayment, escrow, and government accounting. • Post-blockchain ledger qualities aligned with Parcel-19, ensuring interoperability with national payment rails.

4. Domestic Accumulation Strategy

Program: “HBAR in American Homes”. U.S. households accumulate and hold HBAR as a pro-dollar collateral layer. Each participating wallet = a vote of strength for U.S. monetary security. Household accumulation prevents foreign concentration of HBAR supply and ensures American citizens are the backbone of national collateral.

5. Federal Lending Facility Proposal

Federal Reserve HBAR Reserve & Lending Facility (HRLF): • Fed acquires HBAR into custody, PQC-hardened per the Post-Quantum Financial Infrastructure Framework (PQFIF). • Loans denominated in HBAR: e.g., 100,000 HBAR loan → 120,000 HBAR repayment. • Use cases: infrastructure, energy, housing, and strategic innovation projects. • Outcomes: circulation of HBAR into the real economy, dollar stability, and controlled growth of pro-American digital collateral.

6. Oversight & Compliance

• SEC: monitor issuance, custody, and lending structures. • Federal Reserve: manage reserve accumulation, lending windows, and FX guardrails. • Trump Family Advisory Network: ensure alignment with the Make America Greater vision, protecting U.S. taxpayers and reinforcing national prosperity.

Conclusion

The Gold Paper establishes a post-blockchain roadmap where Parcel-19 mathematics and HBAR technology combine to defend and extend the supremacy of the U.S. dollar. By ensuring collateral systems remain pro-U.S., pro-household, and pro-Treasury, America can prevent foreign destabilization schemes, empower its citizens, and inaugurate a new era of national financial leadership.
