Rules of Cboe Exchange, Inc.

* * * * *

Rule 5.34. Order and Quote Price Protection Mechanisms and Risk Controls

* * * * *

(c) All Orders.

* * * * *

(9) Duplicate Order Protection. If a User enables this functionality for a port, after the System receives a specified number of duplicate orders with the same EFID, side, price, quantity, and class [within a specified time period] (the User determines the number of duplicative orders[and length of the time period]), the System will (A) reject additional duplicate orders until it receives instructions from the User to reset this control or (B) reject all incoming orders submitted through that port for that EFID until the User contacts the Trade Desk to request it reset this control. The User may continue to submit cancel requests prior to reset.

(10) Buy-Write/Married Put Check. If the Exchange applies this check to a class, the System cancels or rejects a stock-option order to buy the stock leg and sell a call (buy a put) for the option leg with a price that is more than the strike price of the call (put) plus (minus) a buffer amount (which the Exchange determines on a class-by-class basis).

(1[2]1) DAC Order Reasonability Check. If a User submits a DAC order to the System with an underlying reference price more than an Exchange-determined amount away from the underlying price or value at the time of submission of the DAC order, the System cancels or rejects the order.
