Karen Evans
Administrator, Office of E-Government and Information Technology
Office of Management and Budget
Washington, DC 20503

Ms. Evans:

As required in OMB memorandum M-07-20, "FY 2007 E-Government Act Reporting Instructions," attached is the U.S. Securities and Exchange Commission's FY 2007 Annual E-Government Act Report.

Should you have any questions, or require additional information, please contact Daniel Lisewski, Chief, Information Resources Management at Lisewskid@sec.gov , or at (202) 551-8138.

Sincerely,

/original signed by/

R. Corey Booth
Chief Information Officer
Office of Information Technology
U.S. Securities and Exchange Commission

Attachment:

U.S. Securities and Exchange Commission FY 2007 E-Government Act Report

**FY 2007 E-Government Act Report for the
U.S. Securities and Exchange Commission**

Section 1 – Implementation of Electronic Government Initiatives

XBRL Interactive Data Initiative

The SEC supports the goals of the E-Government Act of 2002 by using technology to enhance the access to and delivery of government information and services to citizens, businesses, and other federal agencies. One SEC initiative that underscores the SEC's commitment to a core fundamental goal of the E-Government Act is the eXtensible Business Reporting Language (XBRL) Interactive Data Initiative.

A. How the Initiative is Transforming Agency Operations.

The SEC's XBRL Interactive Data Initiative is transforming the SEC's operations on several fronts. For example, the initiative will increase access to information in the financial market place by transforming the manner in which individual investors, financial intermediaries, analysts, the financial media, and others access, use, and understand the wealth of financial disclosure information filed with the SEC. By providing a fast and easy way to extract, analyze, and compare financial information, the initiative has the potential to create a more informed investor base. In addition, analysts and the financial media will benefit through more efficient search, and more enhanced comparison capabilities.

Also, companies preparing financial reports in XBRL will benefit from being able to communicate their financial results more effectively, and at a reduced cost. Regulators and the SEC will benefit from the ability to process information far more comprehensively, quickly, and accurately. We expect that our internal disclosure reviews for regulatory and enforcement purposes will also become more efficient and effective.

Below are two examples of how the XBRL Interactive Data Initiative is transforming SEC operations to enhance the access to and delivery of government information and services to the public.

Interactive Financial Report Reviewer

To stimulate software development for the viewing and analysis of tagged data, the SEC released a prototype of an XBRL tool in FY 2007. The *Interactive Financial Report Reviewer* and its source code are available free on the SEC's website at the following URL <http://216.241.101.197/viewer>.

Executive Compensation Viewer

In addition to the *Interactive Financial Report Viewer*, the SEC's *Executive Compensation Viewer* will make it easier for investors to get information on compensation paid to executives at public companies. The *Executive Compensation Viewer* provides investors with a clearer and more complete picture of the compensation earned by a company's principal executive officer, principal financial officer and highest paid executive officers and members of its board of directors.

The following link [Spotlight On: Interactive Data and XBRL Initiatives](#) provides additional information on how the SEC's XBRL Interactive Data Initiative is transforming SEC operations.

B. Maintaining a Dialogue with Interested Parties to Find Innovative Ways to Use Information Technology for the E-Government Initiative.

The SEC maintains continuous dialogue with the national and international community on the XBRL Interactive Data Initiative. For example, the SEC encourages additional companies to participate in the interactive data initiative by joining the XBRL financial reporting test group (<http://www.sec.gov/cgi-bin/voluntary-form>). In addition, <http://www.sec.gov/spotlight/xbml.htm>, which is the SEC's Interactive Data Spotlight Page, provides additional examples of how the SEC maintains dialogue with interested parties about the XBRL Interactive Data Initiative.

C. Collaborating with External Partners on the Initiative.

The SEC uses a variety of forums and other methods to collaborate and communicate with its public partners who are involved in the XBRL Interactive Data Initiative. For example, the SEC conducts interactive data roundtables comprised of investors, issuers, auditors, analysts, technology professionals, regulators, and others. The roundtables serve as a forum to discuss interactive data initiatives that can benefit investors. The roundtables also provide the SEC the opportunity to learn from investors and other users of financial information how the SEC can improve its disclosure program. In addition, the SEC:

- Makes routine public statements and speeches regarding the initiative and its significance to the financial community.
- Issues routine press releases regarding the initiative.
- Sponsors a voluntary interactive data test group.

Additional information and more details on how the SEC collaborates with external partners on the initiative are at <http://www.sec.gov/spotlight/xbml.htm>.

D. Improving Program Performance in Achieving Agency Objectives and Strategic Goals.

An essential IT strategic objective of the SEC is to improve the effectiveness of agency programs and processes. The XBRL Interactive Data Initiative supports Initiative 1C - Electronic Disclosure. Specific goals of the strategic objective are to:

- Improve the way the SEC collects information from registrants, internally processes and reviews the information, and enables the public to use the information for investment and educational purposes.
- Improve the usability of the information filed with the SEC (for example, by converting more of it to interactive data formats).
- Improve the ability for internal and external users to access and analyze the data.

The Interactive Data Initiative will make disclosures more useful to investors, and will enable the public to quickly find and sort through vast amounts of SEC-mandated disclosure information and data, which is not possible with today's technology. In addition, companies participating in our XBRL pilot program have told us that the substantial benefits of implementing XBRL will exceed the minimal costs to implement it. In addition to providing information that is far more useful to investors, the SEC believes that the use of interactive data will make companies' internal processes more efficient, saving investors' dollars for the costs of registration and compliance reporting to the SEC. In turn, the use of interactive data will make the SEC's internal disclosure reviews more effective and productive.

E. Achieving Cost Savings and Avoidances by Reducing or Eliminating IT Investments

The XBRL Interactive Data Initiative is intended, in part, to stimulate software development for the viewing and analysis of tagged data. The SEC has released, on its public website, several free software prototypes and the related source code to encourage the marketplace to create additional software with more extensive features.

The SEC recognizes that by not competing with the private market and private software developers, it will transfer the costs for developing the technology to the commercial sector, thereby, reducing the need for the SEC to unnecessarily:

- Make large IT investments in developing software for the initiative.
- Compete with popular financial websites.
- Become a financial information portal to the Web.

In addition, it is widely recognized that the XBRL Interactive Data Initiative will serve as a driver to help modernize the government's processes for compliance reporting, which in turn will make the process for registration and compliance reporting to the SEC more efficient, less costly to investors' and taxpayers. The SEC also expects that the initiative will generate internal efficiencies and make the SEC's disclosure and compliance reviews more effective and productive.

F. Availability of SEC Information and Services for all Citizens.

The SEC is committed to providing Agency information and services to all citizens, including those without access to the Internet. The SEC assists the public requesting information from the SEC through its Public Reference Room. Members of the public can obtain copies of filings from the SEC Public Reference Room either by visiting in person or by submitting a request in writing via fax, e-mail, or postal mail. The SEC is also equipped with a TTY machine to receive inquiries from the hearing impaired.

G. Capital Planning and Investment Control Procedures.

The SEC has an established Capital Planning and Investment Control (CPIC) process, which requires that all IT investments follow a defined select, control and evaluate model as prescribed by the Clinger-Cohen Act and OMB Circular A-130. As with all SEC IT investments, the XBRL Interactive Data Initiative is subject to the policies and procedures required by the SEC's IT investment select, control, and evaluate CPIC model.

Section 2 – Agency Information Management Activities

A. Information Resources Management (IRM) Strategic Plan

Pursuant to OMB Memorandum M-06-02, "Improving Public Access to and Dissemination of Government Information and Using the Federal Enterprise Architecture Data Reference Model," the SEC's IT Strategic Plan is accessible from the SEC's website: <http://www.sec.gov/about/secitstratplan2007-12.pdf>

B. Public Access to Electronic Information

To accomplish the SEC's mission of protecting investors and maintaining fair, honest, and efficient markets, the SEC provides a wide variety of electronic information to members of the public. Beginning in the 1980s, the Commission's Electronic Data Gathering, Analysis and Retrieval system (EDGAR) made corporate and financial information available to investors, the financial community, and other interested parties in a matter of minutes after the information was filed. Since that time, the Commission has proactively disseminated useful and timely information to the public through the SEC website and through other mechanisms.

Since the September 2004 requirement for identifying, prioritizing, and scheduling the publication of information to the public via the Internet, the SEC has continued to

publish an inventory of Commission information on the SEC’s website, including the priorities and schedules for making the information available and accessible.

Determining the availability of SEC information

The SEC’s prioritizes information and makes it available based upon how time-sensitive it is. The SEC uses the following criteria to determine how quickly to post information to the SEC website:

- Urgent and time-sensitive information is **Priority 1** and is typically posted within minutes of receipt;
- Time-sensitive information is **Priority 2** and is typically posted within an hour of receipt;
- Information frequently requested by the public is **Priority 3** and typically is posted the same day it is received;
- Other information that may be useful is **Priority 4** and typically is posted within 24 hours of receipt.

To ensure that users of the site do not overlook newly posted material, a “What’s New” page on the SEC website highlights new information. The SEC updates the page daily. Additionally, the SEC has developed RSS (Really Simple Syndication) feeds on the public website (<http://www.sec.gov/info/edgar/ednews/xbrlrss.htm>) for several of the most popular and frequent information types, including Press Releases, Administrative Proceedings, Litigation Releases, and News Digests. RSS is a simple system based on XML (eXtensible Markup Language) that notifies and delivers desired information to users. With RSS, users can immediately get updates to information that the SEC makes public.

Priorities and schedules for information availability

The table below includes categories of information representative of the SEC’s website content, and the publication priorities assigned to the categories. This information is available to the public on the SEC’s website:

C. Freedom of Information Act (FOIA)

In response to the requirements of Executive Order 13392, “Improving Agency Disclosure of Information,” the SEC appointed a Chief FOIA Officer, established a FOIA Public Service Center, and designated FOIA Public Liaisons.

- The Commission’s primary FOIA website is located at <http://www.sec.gov/foia.shtml>. Links to all of our FOIA information can be found there. A link to this important information is also conveniently located on the home page of the www.sec.gov site.
- The public can quickly find information regarding how to make a FOIA request at <http://www.sec.gov/foia/howfo2.htm>.
- Frequently requested FOIA documents can be found at <http://www.sec.gov/foia/foiadocs.htm>.

D. Federally Funded Research and Development (R&D) Activities.

The SEC does not fund Federal research and development (R&D) activities.

E. Formal agency agreements with external entities to improve access to and dissemination of information to the public.

In addition to the SEC’s public website www.sec.gov, the SEC continues to substantially enhance the public and private sector’s access to and use of Electronic Data Gathering, Analysis and Retrieval (EDGAR) data using multiple external sources, entities and commercial search engines.

The National Securities Markets Improvement Act of 1996 required the Commission, in part, to promote the rapid dissemination of, and access to, corporate disclosure material electronically filed by public companies with the SEC.

The SEC’s privatization of the EDGAR Public Dissemination Service (PDS) data feed continues to facilitate wide availability of EDGAR data to the public from numerous non-governmental entities and subscribers, which include EDGAR Online; Yahoo!; and Thomson Financial, to name a few. Presently, hundreds of thousands of

citizens obtain data derived from filings to the EDGAR system on a regular and timely basis from private sector information providers who receive primary or secondary access to the SEC's EDGAR data feed. The following link <http://www.sec.gov/info/edgar/ednews/dissemin.htm> provides additional information on the SEC's privatized PDS feed, and the various subscribers who access the feed.

In addition, the SEC is taking other steps to ensure that information is widely disseminated to investors and the public. For example:

- **Interactive Financial Report Viewer:** The SEC is providing a new generation of “interactive” investor tools available through the SEC's website, <http://www.sec.gov/spotlight/xbrl/xbrlwebapp.htm>. By using the Interactive Financial Report Viewer, investors can view and analyze companies' financials filed in EDGAR using XBRL. The software tool are available to the public free of charge.
- **Really Simple Syndication (RSS) Feeds:** www.sec.gov contains several RSS feeds that allow the public to obtain information about SEC releases as soon as they are posted. The RSS feeds, made available to the public through aggregators, allow individuals to subscribe to the specific RSS feeds of interest to them.
- **Your Money Podcast:** The SEC has developed an audio podcast to help individual investors achieve their savings and retirement goals using iTunes; Yahoo! Podcasts; and other websites and software.

F. *Priorities and schedules for information availability*

Pursuant to the requirements of Section 207(e) of the E-Government Act of 2002, “Public Access to Electronic Information,” the SEC continues to manage records consistent with the requirements of OMB Circular A-130 and guidance from the National Archives and Records Administration (NARA).

During FY 2007, the SEC continued to bolster its commitment to enhancing its records management practices by placing the program within the Office of the Secretary. In addition, the SEC hired a seasoned archivist to lead the SEC's Records Management Program. The archivist is spearheading the Commission's effort to formulate a plan and approach for attaining the detailed requirements of NARA Bulletin 2006-02, “NARA Guidance for Implementing Section 207(e) of the E-Government Act of 2002.” The SEC's records management plan and approach focuses on electronic records management.

Specifically, the Commission's records management program staff are systematically assessing the Commission's records schedules by conducting a comprehensive inventory of all records regardless of media to ensure that the SEC is effectively identifying and transferring all electronic records requiring permanent retention to NARA, as required by, and appropriate for the SEC.
