Alright, random weekend LUNA bounty: <https://twitter.com/d0h0k1/status/1226383568001097733?s=20>

Right now Chai has 12 merchants, all of whom get settled in KRT on the Terra blockchain. Those of you with block literacy will be able to identify what these wallets are by looking through our explorers. I claim that based on some research of these merchants, it should be possible to examine the on-chain transaction patterns and map wallets to merchants. Thought this would be both educational and entertaining 😊

First person to respond to my tweet with the correct wallet guesses (you may only guess once) and a post on how you reached your conclusion will receive 5000 LUNA as a reward. Beware, random guesses without supporting reasoning will not be recognised!
