This wrap fee program brochure provides information about the qualifications and business practices of Mirretti Perryman Wealth Strategies, LLC. If you have any questions about the contents of this brochure, please contact us at 847-983-0123 or via email to mpws@mirrettiperryman.com. The information in this brochure has not been approved or verified by the United States Securities and Exchange Commission or by any state securities authority. Registration with the SEC or State Regulatory Authority does not imply a certain level of skill or expertise.

Additional information about Mirretti Perryman Wealth Strategies, LLC is also available on the SEC's website at www.adviserinfo.sec.gov.

Item 2: Material Changes

This Firm Brochure is our disclosure document prepared according to regulatory requirements and rules. Consistent with the rules, we will ensure that you receive a summary of any material changes to this and subsequent Brochures within 120 days of the close of our business fiscal year. Furthermore, we will provide you with other interim disclosures about material changes as necessary.

At this time there are no material changes from the last update of this disclosure statement issued November 7, 2023.

Item 4: Services, Fees and Compensation

A. Advisory Services Offered

Discretionary Portfolio Management Services

MPWS provides investment management services exclusively on a wrap fee basis as a wrap program sponsor. Under our wrap program, clients will receive investment advisory services and the execution of securities brokerage transactions for a single specified fee.

Our investment advice is tailored to meet our clients' needs and investment objectives. This program allows you to choose an investment option that employs a risk-based and tax advantaged risk-based model portfolio developed by our firm that is diversified among investment styles and/or asset classes. We will use the information we gather to develop a strategy that enables our firm to customize an investment portfolio for you in accordance with your risk tolerance and investment objectives. Once we construct an investment portfolio for you, or select a model portfolio, we will monitor your portfolio's performance and re-balance your investments as required by changes in market conditions and in your financial circumstances.

MPWS's portfolio management services may be offered through third-party investment advisers on a sub-advised basis.

For its discretionary asset management services, MPWS receives a limited power of attorney to effect securities transactions on behalf of its clients that include securities and strategies described in Item 6 of this brochure, and to retain and allocate all or a portion of the account to sub-advisers and third-party asset managers.

Clients have the right to provide the firm with any reasonable investment restrictions that should be imposed on the management of their portfolio (must be in writing and sent to the firm), and should promptly notify the firm in writing of any changes in such restrictions or in the client's personal financial circumstances, investment objectives, goals and tolerance for risk. MPWS will remind clients of their obligation to inform the firm of any such changes or any restrictions that should be imposed on the management of the client's account. MPWS will also contact clients at least annually to determine whether there have been any changes in a client's personal financial circumstances, investment objectives and tolerance for risk.

Fees and Compensation

Fee Schedule

The fee for portfolio management services will be charged a maximum annual fee of 1.75% on the assets under management. Portfolio management fees are negotiable depending on factors such as the amount of assets under management, range of investments, and complexity of your financial circumstances, among others. At our discretion, we may combine the account values of family members living in the same household to determine the applicable advisory fee. For example, we may combine account values for you and your minor children, joint accounts with

your spouse, and other types of related accounts. Combining account values may increase the asset total, which may result in your paying a reduced advisory fee based on the available breakpoints in our fee schedule stated above.

Asset-based fees are always subject to the investment advisory agreement between the client and MPWS. Such fees are payable quarterly in advance and will be calculated based upon the market value on the last business day of the previous calendar quarter. The fees will be prorated if the investment advisory relationship commences otherwise than at the beginning of a calendar quarter. Capital additions and withdrawals from your account in any amount greater than \$20,000 will not be reconciled until the following quarterly billing period. MPWS may modify the fee at any time upon 30 days' written notice to the client. In the event the client has an ERISA-governed plan, fee modifications must be approved in writing by the client.

These fees include charges for all transaction costs such as commissions on purchase and sales of stocks, bonds, exchange-traded funds and options, and mutual fund transactions fees. Except as otherwise provided below, client will incur no charges other than the adviser's fee pursuant to the above fee schedule in connection with the maintenance of and activity in client's account. The wrap fee does not include private alternative investment fees and expenses, annual account fees or other administrative fees, such as wire fees, charged by manager or brokerage firm; fees for securities transactions executed away from the custodian; certain odd-lot differentials, transfer taxes, transaction fees mandated by the Securities Act of 1934, postage and handling fees, and charges imposed by law with regard to transactions in the client's account; and advisory fees, expenses or sales charges (loads) of mutual funds (including money market funds), closed-end investment companies or other managed investments, if any, held in client's account. The wrap fee also does not cover certain costs associated with securities transactions in the over-the-counter market, such as fixed income securities where manager must approach a dealer or market maker to purchase or sell a security. Such costs include the dealer's mark-up, mark-down or spread and odd-lot differentials or transfer taxes imposed by law.

B. Disclosure of Cost Difference if Services Purchased Separately

Depending on a number of factors, such as the number, size and nature of the securities transactions in an advisory account, the overall fees and charges borne by the client over time could be more or less than what these fees and charges would be if the same services were provided on a separate basis. Bundled fees generally provide an economic incentive for the advisory firm to select investments and strategies that minimize trading costs. Frequent trading in an account where transaction fees are included as part of the overall advisory fee to the client drive trading costs higher and reduce the overall fee revenue to the advisor. As a result, higher trading costs in a bundled fee account have a negative impact on the advisory firm's profitability.

C. Additional Client Fees and Terms of Payment

Client Payment of Fees

MPWS generally requires fees to be prepaid on a quarterly basis. MPWS requires clients to authorize the direct debit of fees from their accounts. Exceptions may be granted subject to the firm's consent for clients to be billed directly for our fees. For directly debited fees, the custodian's periodic statements will show each fee deduction from the account. Clients may withdraw this authorization for direct billing of these fees at any time by notifying us or their custodian in writing.

MPWS will deduct advisory fees directly from the client's account provided that (i) the client provides written authorization to the qualified custodian, and (ii) the qualified custodian sends the client a statement, at least quarterly, indicating all amounts disbursed from the account. The client is responsible for verifying the accuracy of the fee calculation, as the client's custodian will not verify the calculation.

A client investment advisory agreement may be canceled at any time by the client, or by MPWS with 30 days' prior written notice to the client. Upon termination, any unearned, prepaid fees will be promptly refunded.

Additional Fees

All fees paid for investment advisory services are separate and distinct from the fees and expenses charged by exchange-traded funds, mutual funds, separate account managers, private placement, pooled investment vehicles, and trade-away fees imposed by broker-dealers and custodians, if any. Such fees and expenses are described in each exchange-traded fund and mutual fund's prospectus, each separate account manager's Form ADV and Brochure and Brochure Supplement or similar disclosure statement, each private placement or pooled investment vehicle's confidential offering memoranda, and by any broker-dealer or custodian retained by the client. Clients are advised to read these materials carefully before investing. If a mutual fund also imposes sales charges, a client may pay an initial or deferred sales charge as further described in the mutual fund's prospectus. A client using MPWS may be precluded from using certain mutual funds or separate account managers because they may not be offered by the client's custodian.

Please refer to the Brokerage Practices section (Items 9.B.2 and 9.B.3) for additional information regarding the firm's brokerage practices.

D. Compensation for Recommending the MPWS Wrap Fee Program

The MPWS Wrap Fee Program is a proprietary product offered exclusively through MPWS. As such, there is a conflict of interest in that we are economically disincentivized to trade your portfolio. The less we trade the more money we make, as our wrap fee includes trading costs.

E. External Compensation for the Sale of Securities to Clients

MPWS advisory professionals are compensated primarily through a salary and bonus structure/through a percentage of advisory fees charged to clients. MPWS is not paid any sales, service or administrative fees for the sale of mutual funds or any other investment products with respect to managed advisory assets.

F. Important Disclosure – Custodian Investment Programs

Please be advised that the firm utilizes certain custodians/broker-dealers. Under these arrangements we can access certain investment programs offered through such custodian(s) that offer certain compensation and fee structures that create conflicts of interest of which clients need to be aware. Please note the following:

Limitation on Mutual Fund Universe for Custodian Investment Programs: There are certain programs in which we participate where a client's investment options may be limited in certain of these programs to those mutual funds and/or mutual fund share classes that pay 12b-1 fees and other revenue sharing fee payments, and the client should be aware that the firm is not selecting from among all mutual funds available in the marketplace when recommending mutual funds to the client.

Conflict Between Revenue Share Class (12b-1) and Non-Revenue Share Class Mutual Funds: Revenue share class/12b-1 fees are deducted from the net asset value of the mutual fund and generally, all things being equal, cause the fund to earn lower rates of return than those mutual funds that do not pay revenue sharing fees. The client is under no obligation to utilize such programs or mutual funds. Although many factors will influence the type of fund to be used, the client should discuss with their investment adviser representative whether a share class from a comparable mutual fund with a more favorable return to investors is available that does not include the payment of any 12b-1 or revenue sharing fees given the client's individual needs and priorities and anticipated transaction costs. In addition, the receipt of such fees can create conflicts of interest in instances where the custodian receives the entirety of the 12b-1 and/or revenue sharing fees and takes the receipt of such fees into consideration in terms of benefits it may elect to provide to the firm, even though such benefits may or may not benefit some or all of the firm's clients.

Additional Disclosure Concerning Wrap Programs: To the extent that we either sponsor or recommend wrap fee programs, please be advised that certain wrap fee programs may (i) allow our investment adviser representatives to select mutual fund classes that either have no transaction fee costs associated with them but include embedded 12b-1 fees that lower the investor's return ("sometimes referred to as "A-Shares," depending on the mutual fund issuer), or (ii) allow the use of mutual fund classes that have transaction fees associated with them but do not carry embedded 12b-1 fees (sometimes referred to as "I-Shares," depending on the mutual fund sponsor). Wrap fee programs offer investment services and related transaction services for one all-inclusive fee (except as may be described in the applicable wrap fee program brochure). The trading costs are typically absorbed by the firm and/or the investment representative. If a client's account holds A-Shares within a wrap fee program, the firm and/or its

investment adviser representative avoids paying the transaction fees charged by other mutual fund classes, which in effect decreases the firm's costs and increases its revenues from the account. Effectively, the cost is transferred to the client from the firm in the form of a lower rate of return on the specific mutual fund. This creates an incentive for the firm or investment adviser representative to utilize such funds as opposed to those funds that may be equally appropriate for a client but do not carry the additional cost of 12b-1 fees. As a policy matter, the firm does not allow funds that impose 12b-1 or revenue sharing fees on the client's investment within its wrap fee programs. Clients should understand and discuss with their investment adviser representative the types of mutual fund share classes available in the wrap fee program and the basis for using one share class over another in accordance with their individual circumstances and priorities.

G. Client Assets Under Management

As of December 31, 2023, MPWS manages \$128,583,840 of discretionary assets. MPWS also advises and provides advice on assets of \$3,395,953 from third-party managers where the firm has no discretion to hire or fire such third-party managers.

Item 5: Account Requirements and Types of Clients

MPWS offers investment advisory services to various types of clients including individuals and high-net-worth individuals, trusts and estates, retirement plans, pension and profit sharing plans, corporations and other legal entities.

In general, MPWS does not require a minimum dollar amount to open and maintain an advisory account; however, we have the right to terminate the account if it falls below a minimum size and we determine, in our sole opinion, is too small to manage effectively. We may also combine account values for you and your minor children, joint accounts with your spouse, and other types of related accounts to meet the stated minimum.

Item 6: Portfolio Manager Selection and Evaluation

A. Portfolio Manager Selection and Review

The firm is the sole sponsor and sole portfolio manager for the MPWS Wrap Fee Program.

B. Participation in Wrap Fee Programs

The MPWS Wrap Fee Program is the only wrap fee program the firm participates in.

C. The Firm Acts as Both a Wrap Fee Sponsor and Portfolio Manager

The MPWS Wrap Fee Program is a proprietary product offered exclusively through the firm.

MPWS Wrap Fee Program

MPWS offers its portfolio management services exclusively on a wrap fee basis as a wrap program sponsor. Under our wrap program, you will receive investment advisory services and the execution of securities brokerage transactions for a single specified fee. Participation in a wrap program may cost you more or less than purchasing such services separately. We adhere to our fiduciary duty when trading in your accounts. Trades are made only on the basis of the account's stated investment objectives, and without concern to the firm's trading costs and firm's expenses.

Client-Tailored Services and Client-Imposed Restrictions

Each client's account will be managed on the basis of the client's financial situation and investment objectives, and in accordance with any reasonable restrictions imposed by the client on the management of the account—for example, restricting the type or amount of security to be purchased in the portfolio.

Performance-Based Fees and Side-by-Side Management

The firm does not charge performance-based fees.

Methods of Analysis and Investment Strategies

Investing in securities involves a risk of loss that you, as a client, should be prepared to bear. There is no guarantee that any specific investment or strategy will be profitable for a particular client.

Methods of Analysis

MPWS uses a variety of sources of data to conduct its economic, investment and market analysis, which may include economic and market research materials prepared by others, conference calls hosted by individual companies or mutual funds, corporate rating services, annual reports, prospectuses, and company press releases, and financial newspapers and magazines. It is important to keep in mind that there is no specific approach to investing that

guarantees success or positive returns; investing in securities involves risk of loss that clients should be prepared to bear.

MPWS and its investment adviser representatives are responsible for identifying and implementing the methods of analysis used in formulating investment recommendations to clients. The methods of analysis may include quantitative methods for optimizing client portfolios, computer-based risk/return analysis, technical analysis, and statistical and/or computer models utilizing long-term economic criteria.

- Fundamental analysis is a method of evaluating the intrinsic value of an asset and analyzing the factors that could influence its price in the future. This form of analysis is based on external events and influences, as well as financial statements and industry trends.
- Factor investing is an investment approach that involves targeting specific drivers of return across asset classes. There are two main types of factors: macroeconomic and style.
- Optimization involves the use of mathematical algorithms to determine the appropriate mix of assets given the firm's current capital market rate assessment and a particular client's risk tolerance.
- Quantitative methods include analysis of historical data such as price and volume statistics, performance data, standard deviation and related risk metrics, how the security performs relative to the overall stock market, earnings data, price to earnings ratios, and related data.
- Technical analysis involves charting price and volume data as reported by the exchange where the security is traded to look for price trends.
- Computer models may be used to derive the future value of a security based on assumptions of various data categories such as earnings, cash flow, profit margins, sales, and a variety of other company specific metrics.

In addition, MPWS reviews research material prepared by others, as well as corporate filings, corporate rating services, and a variety of financial publications. MPWS may employ outside vendors or utilize third-party software to assist in formulating investment recommendations to clients.

Modern Portfolio Theory

The firm's methods of analysis include *modern portfolio theory*. Modern portfolio theory is a theory of investment that attempts to maximize portfolio expected return for a given amount of portfolio risk, or equivalently minimize risk for a given level of expected return, each by carefully choosing the proportions of various assets. Modern portfolio theory assumes that investors are risk averse, meaning that given two portfolios that offer the same expected return, investors will prefer the less risky one. Thus, an investor will take on increased risk only if compensated by higher expected returns. Conversely, an investor who wants higher expected returns must accept more risk. The exact trade-off will be the same for all investors, but different investors will evaluate the trade-off differently based on individual risk aversion characteristics. The implication is that a rational investor will not invest in a portfolio if a second portfolio exists with

a more favorable risk-expected return profile – i.e., if for that level of risk an alternative portfolio exists which has better expected returns.

Mutual Funds and Exchange-Traded Funds, Individual Securities, and Third-Party Separate Account Managers

MPWS may recommend “institutional share class” mutual funds, exchange-traded funds (“ETFs”), and individual securities (including fixed income instruments). MPWS may also assist the client in selecting one or more appropriate manager(s) for all or a portion of the client’s portfolio. Such managers will typically manage assets for clients who commit to the manager a minimum amount of assets established by that manager—a factor that MPWS will take into account when recommending managers to clients.

MPWS's selection process cannot ensure that money managers will perform as desired, and MPWS will have no control over the day-to-day operations of any of its selected money managers. MPWS would not necessarily be aware of certain activities at the underlying money manager level, including without limitation a money manager's engaging in unreported risks, investment “style drift,” or even regulatory breaches or fraud.

A description of the criteria to be used in formulating an investment recommendation for mutual funds, ETFs, individual securities (including fixed-income securities), and managers is set forth below.

MPWS has formed relationships with third-party vendors that

- provide a technological platform for separate account management
- prepare performance reports
- perform or distribute research of individual securities
- perform billing and certain other administrative tasks

MPWS may utilize additional independent third parties to assist it in recommending and monitoring individual securities, mutual funds, and managers to clients as appropriate under the circumstances.

MPWS reviews certain quantitative and qualitative criteria related to mutual funds and managers and to formulate investment recommendations to its clients. Quantitative criteria may include

- the performance history of a mutual fund or manager evaluated against that of its peers and other benchmarks
- an analysis of risk-adjusted returns
- an analysis of the manager’s contribution to the investment return (e.g., manager’s alpha), standard deviation of returns over specific time periods, sector and style analysis
- the fund, sub-advisor or manager’s fee structure
- the relevant portfolio manager’s tenure

Qualitative criteria used in selecting/recommending mutual funds or managers include the investment objectives and/or management style and philosophy of a mutual fund or manager; a

mutual fund or manager's consistency of investment style; and employee turnover and efficiency and capacity.

Quantitative and qualitative criteria related to mutual funds and managers are reviewed by MPWS on a quarterly basis or such other interval as appropriate under the circumstances. In addition, mutual funds or managers are reviewed to determine the extent to which their investments reflect efforts to time the market, or evidence style drift such that their portfolios no longer accurately reflect the particular asset category attributed to the mutual fund or manager by MPWS (both of which are negative factors in implementing an asset allocation structure).

MPWS may negotiate reduced account minimum balances and reduced fees with managers under various circumstances (e.g., for clients with minimum level of assets committed to the manager for specific periods of time, etc.). There can be no assurance that clients will receive any reduced account minimum balances or fees, or that all clients, even if apparently similarly situated, will receive any reduced account minimum balances or fees available to some other clients. Also, account minimum balances and fees may significantly differ between clients. Each client's individual needs and circumstances will determine portfolio weighting, which can have an impact on fees given the funds or managers utilized. MPWS will endeavor to obtain equal treatment for its clients with funds or managers, but cannot assure equal treatment.

MPWS will regularly review the activities of mutual funds and managers utilized for the client. Clients that engage managers or who invest in mutual funds should first review and understand the disclosure documents of those managers or mutual funds, which contain information relevant to such retention or investment, including information on the methodology used to analyze securities, investment strategies, fees and conflicts of interest.

Material Risks of Investment Instruments

MPWS generally invests in the following types of securities:

- Equity securities
- Mutual fund securities
- Exchange-traded funds
- Leveraged and inverse exchange-traded funds
- Exchange-traded notes
- Fixed income securities
- Fixed equity annuities
- Fixed equity indexed annuities
- Variable annuities
- Real Estate Investment Trusts ("REITs")

Equity Securities

Investing in individual companies involves inherent risk. The major risks relate to the company's capitalization, quality of the company's management, quality and cost of the company's services, the company's ability to manage costs, efficiencies in the manufacturing

or service delivery process, management of litigation risk, and the company's ability to create shareholder value (i.e., increase the value of the company's stock price). Foreign securities, in addition to the general risks of equity securities, have geopolitical risk, financial transparency risk, currency risk, regulatory risk and liquidity risk.

Mutual Fund Securities

Investing in mutual funds carries inherent risk. The major risks of investing in a mutual fund include the quality and experience of the portfolio management team and its ability to create fund value by investing in securities that have positive growth, the amount of individual company diversification, the type and amount of industry diversification, and the type and amount of sector diversification within specific industries. In addition, mutual funds tend to be tax inefficient and therefore investors may pay capital gains taxes on fund investments while not having yet sold the fund.

Exchange-Traded Funds ("ETFs")

ETFs are investment companies whose shares are bought and sold on a securities exchange. An ETF holds a portfolio of securities designed to track a particular market segment or index. Some examples of ETFs are SPDRs[®], streetTRACKS[®], DIAMONDSSM, NASDAQ 100 Index Tracking StockSM ("QQQsSM") iShares[®] and VIPERs[®]. ETFs have embedded expenses that the client indirectly bears.

Investing in ETFs involves risk. Specifically, ETFs, depending on the underlying portfolio and its size, can have wide price (bid and ask) spreads, thus diluting or negating any upward price movement of the ETF or enhancing any downward price movement. Also, ETFs require more frequent portfolio reporting by regulators and are thereby more susceptible to actions by hedge funds that could have a negative impact on the price of the ETF. Certain ETFs may employ leverage, which creates additional volatility and price risk depending on the amount of leverage utilized, the collateral and the liquidity of the supporting collateral.

Further, the use of leverage (i.e., employing the use of margin) generally results in additional interest costs to the ETF. Certain ETFs are highly leveraged and therefore have additional volatility and liquidity risk. Volatility and liquidity can severely and negatively impact the price of the ETF's underlying portfolio securities, thereby causing significant price fluctuations of the ETF.

Leveraged and Inverse Exchange-Traded Funds ("ETFs")

Leveraged ETFs employ financial derivatives and debt to try to achieve a multiple (for example two or three times) of the return or inverse return of a stated index or benchmark over the course of a single day. The use of leverage typically increases risk for an investor. However, unlike utilizing margin or shorting securities in your own account, you cannot lose more than your original investment. An inverse ETF is designed to track, on a daily basis, the inverse of its benchmark. Inverse ETFs utilize short selling, derivatives trading, and other leveraged investment techniques, such as futures trading to achieve their objectives. Leverage and inverse ETFs reset each day; as such, their performance can quickly diverge from the

performance of the underlying index or benchmark. An investor could suffer significant losses even if the long-term performance of the index showed a gain. Engaging in short sales and using swaps, futures, contracts, and other derivatives can expose the ETF.

There is always a risk that not every leveraged or inverse ETF will meet its stated objective on any given trading day. An investor should understand the impact an investment in the ETF could have on the performance of their portfolio, taking into consideration goals and tolerance for risk. Leveraged or inverse ETFs may be less tax-efficient than traditional ETFs, in part because daily resets can cause the ETF to realize significant short-term capital gains that may not be offset by a loss. Be sure to check with your tax advisor about the consequences of investing in a leveraged or inverse ETF. Leveraged and Inverse ETFs are not suited for long-term investment strategies. These are not appropriate for buy-and-hold or conservative investors and are more suitable for investors who understand leverage and are willing to assume the risk of magnified potential losses. These funds tend to carry higher fees, due to active management, that can also affect performance.

Exchange-Traded Notes ("ETN")

ETNs are structured debt securities. ETN liabilities are unsecured general obligations of the issuer. Most ETNs are designed to track a particular market segment or index. ETNs have expenses associated with their operation. When a fund invests in an ETN, in addition to directly bearing expenses associated with its own operations, it will bear its pro rata portion of the ETN's expenses. The risks of owning an ETN generally reflect the risks of owning the underlying securities the ETN is designed to track, although lack of liquidity in an ETN could result in it being more volatile than the underlying portfolio of securities. In addition, because of ETN expenses, compared to owning the underlying securities directly it may be more costly to own an ETN. The value of an ETN security should also be expected to fluctuate with the credit rating of the issuer.

Fixed Income Securities

Fixed income securities carry additional risks than those of equity securities described above. These risks include the company's ability to retire its debt at maturity, the current interest rate environment, the coupon interest rate promised to bondholders, legal constraints, jurisdictional risk (U.S or foreign) and currency risk. If bonds have maturities of ten years or greater, they will likely have greater price swings when interest rates move up or down. The shorter the maturity the less volatile the price swings. Foreign bonds have liquidity and currency risk.

Fixed Equity Annuities

A fixed annuity is a contract between an insurance company and a customer, typically called the annuitant. The contract obligates the company to make a series of fixed annuity payments to the annuitant for the duration of the contract. The annuitant surrenders a lump sum of cash in exchange for monthly payments that are guaranteed by the insurance company. Please note the following risks: (i) Spending power risk. Social Security retirement benefits have cost-of-living adjustments. Most fixed annuities do not. Consequently, the spending power provided

by the monthly payment may decline significantly over the life of the annuity contract because of inflation, (ii) Death and survivorship risk. In a conventional fixed annuity, once the annuitant has turned over a lump sum premium to the insurance company, it will not be returned. The annuitant could die after receiving only a few monthly payments, but the insurance company may not be obligated to give the annuitant's estate any of the money back. A related risk is based on the financial consequences for a surviving spouse. In a standard single-life annuity contract, a survivor receives nothing after the annuitant dies. That may put a severe dent in a spouse's retirement income. To counteract this risk, consider a joint life annuity. (iii) Company failure risk. Private annuity contracts are not guaranteed by the FDIC, SIPC, or any other federal agency. If the insurance company that issues an annuity contract fails, no one in the federal government is obligated to protect the annuitant from financial loss. Most states have guaranty associations that provide a level of protection to citizens in that state if an insurance company also doing business in that state fails. A typical limit of state protection, if it applies at all, is \$100,000. To control this risk, contact the state insurance commissioner to confirm that your state has a guaranty association and to learn the guarantee limits applicable to a fixed annuity contract. Based on that information, consider dividing fixed annuity contracts among multiple insurance companies to obtain the maximum possible protection. Also check the financial stability and credit ratings of the annuity insurance companies being considered. A.M. Best and Standard & Poor's publish ratings information.

Fixed Equity Indexed Annuities

An equity-indexed annuity is a type of fixed annuity that is distinguished by the interest yield return being partially based on an equities index, typically the S&P 500. The returns (in the form of interest credited to the contract) can consist of a guaranteed minimum interest rate and an interest rate linked to a market index. The guaranteed minimum interest rate usually ranges from 1 to 3 percent on at least 87.5 percent of the premium paid. As long as the company offering the annuity is fiscally sound enough to meet its obligations, you will be guaranteed to receive this return no matter how the market performs. Your index-linked returns will depend on how the index performs but, generally speaking, an investor with an indexed annuity will not see his or her rate of return fully match the positive rate of return of the index to which the annuity is linked — and could be significantly less. One major reason for this is that returns are subject to contractual limitations in the form of caps and participation rates. Participation rates are the percentage of an index's returns that are credited to the annuity. For instance, if your annuity has a participation rate of 75 percent, then your index-linked returns would only amount to 75 percent of the gains associated with the index. Interest caps, meanwhile, essentially mean that during big bull markets, investors won't see their returns go sky-high. For instance, if an index rises 12 percent, but an investor's annuity has a cap of 7 percent, his or her returns will be limited to 7 percent.

Some indexed annuity contracts allow the issuer to change these fees, participation rates and caps from time to time. Investors should also be aware that trying to withdraw the principal amount from a fixed indexed annuity during a certain period — usually within the first 9 or 10 years after the annuity was purchased — can result in fees known as surrender charges, and could also trigger tax penalties. In fact, under some contracts if withdrawals are taken amounts

already credited will be forfeited. After paying surrender charges an investor could lose money by surrendering their indexed annuity too soon.

Variable Annuities

Variable Annuities are long-term financial products designed for retirement purposes. In essence, annuities are contractual agreements in which payment(s) are made to an insurance company, which agrees to pay out an income or a lump sum amount at a later date. There are contract limitations and fees and charges associated with annuities, administrative fees, and charges for optional benefits. They also may carry early withdrawal penalties and surrender charges, and carry additional risks such as the insurance carrier's ability to pay claims. Moreover, variable annuities carry investment risk similar to mutual funds. Investors should carefully review the terms of the variable annuity contract before investing.

Real Estate Investment Trusts ("REITs")

A REIT is a tax designation for a corporate entity which pools capital of many investors to purchase and manage real estate. Many REITs invest in income-producing properties in the office, industrial, retail, and residential real estate sectors. REITs are granted special tax considerations, which can significantly reduce or eliminate corporate income taxes. In order to qualify as a REIT and for these special tax considerations, REITs are required by law to distribute 90% of their taxable income to investors. REITs can be traded on a public exchange like a stock, or be offered as a non-traded REIT. REITs, both public exchange-traded and non-traded, are subject to risks including volatile fluctuations in real estate prices, as well as fluctuations in the costs of operating or managing investment properties, which can be substantial. Many REITs obtain management and operational services from companies and service providers that are directly or indirectly related to the sponsor of the REIT, which presents a potential conflict of interest that can impact returns on investments.

Non-traded REITs include: (i) A REIT that is registered with the Securities and Exchange Commission (SEC) but is not listed on an exchange or over-the-counter market (non-exchange traded REIT); or, (i) a REIT that is sold pursuant to an exemption to registration (Private REIT). Non-traded REITs are generally blind pool investment vehicles. Blind pools are limited partnerships that do not explicitly state their future investments prior to beginning their capital-raising phase. During this period of capital-raising, non-traded REITs often pay distributions to their investors.

The risks of non-traded REITs are varied and significant. Because they are not exchange-traded investments, they often lack a developed secondary market, thus making them illiquid investments. As blind pool investment vehicles, non-traded REITs' initial share prices are not related to the underlying value of the properties. This is because non-traded REITs begin and continue to purchase new properties as new capital is raised. Thus, one risk for non-traded REITs is the possibility that the blind pool will be unable to raise enough capital to carry out its investment plan. After the capital raising phase is complete, non-traded REIT shares are infrequently re-valued and thus may not reflect the true net asset value of the underlying real estate investments. Non-traded REITs often offer investors a redemption program where the shares can be sold back to the sponsor; however, those redemption programs are often

subject to restrictions and may be suspended at the sponsor's discretion. While non-traded REITs may pay distributions to investors at a stated target rate during the capital-raising phases, the funds used to pay such distributions may be obtained from sources other than cash flow from operations, and such financing can increase operating costs.

With respect to publicly traded REITs, publicly traded REITs may be subject to additional risks and price fluctuations in the public market due to investors' expectations of the individual REIT, the real estate market generally, specific sectors, the current yield on such REIT, and the current liquidity available in public market. Although publicly traded REITs offer investors liquidity, there can be constraints based upon current supply and demand. An investor when liquidating may receive less than the intrinsic value of the REIT.

Investment Strategy and Method of Analysis Material Risks

Our investment strategy is custom-tailored to the client's goals, investment objectives, risk tolerance, and personal and financial circumstances.

Margin Leverage

Although the firm, as a general business practice, does not utilize leverage, there may be instances in which exchange-traded funds, other separate account managers and, in very limited circumstances, the firm will utilize leverage. In this regard please review the following:

The use of margin leverage enhances the overall risk of investment gain and loss to the client's investment portfolio. For example, investors are able to control \$2 of a security for \$1. So if the price of a security rises by \$1, the investor earns a 100% return on their investment. Conversely, if the security declines by \$.50, then the investor loses 50% of their investment.

The use of margin leverage entails borrowing, which results in additional interest costs to the investor.

Broker-dealers who carry customer accounts require a minimum equity requirement when clients utilize margin leverage. The minimum equity requirement is stated as a percentage of the value of the underlying collateral security with an absolute minimum dollar requirement. For example, if the price of a security declines in value to the point where the excess equity used to satisfy the minimum requirement dissipates, the broker-dealer will require the client to deposit additional collateral to the account in the form of cash or marketable securities. A deposit of securities to the account will require a larger deposit, as the security being deposited is included in the computation of the minimum equity requirement. In addition, when leverage is utilized and the client needs to withdraw cash, the client must sell a disproportionate amount of collateral securities to release enough cash to satisfy the withdrawal amount based upon similar reasoning as cited above.

Regulations concerning the use of margin leverage are established by the Federal Reserve Board and vary if the client's account is held at a broker-dealer versus a bank custodian. Broker-dealers and bank custodians may apply more stringent rules as they deem necessary.

Short-Term Trading

Although the firm, as a general business practice, does not utilize short-term trading, there may be instances in which short-term trading may be necessary or an appropriate strategy. In this regard, please read the following:

There is an inherent risk for clients who trade frequently in that high-frequency trading creates substantial transaction costs that in the aggregate could negatively impact account performance.

Short Selling

The firm generally does not engage in short selling but reserves the right to do so in the exercise of its sole judgment. Short selling involves the sale of a security that is borrowed rather than owned. When a short sale is effected, the investor is expecting the price of the security to decline in value so that a purchase or closeout of the short sale can be effected at a significantly lower price. The primary risks of effecting short sales is the availability to borrow the stock, the unlimited potential for loss, and the requirement to fund any difference between the short credit balance and the market value of the security.

Technical Trading Models

Technical trading models are mathematically driven based upon historical data and trends of domestic and foreign market trading activity, including various industry and sector trading statistics within such markets. Technical trading models, through mathematical algorithms, attempt to identify when markets are likely to increase or decrease and identify appropriate entry and exit points. The primary risk of technical trading models is that historical trends and past performance cannot predict future trends, and there is no assurance that the mathematical algorithms employed are designed properly, updated with new data, and can accurately predict future market, industry, and sector performance.

Option Strategies

Various option strategies give the holder the right to acquire or sell underlying securities at the contract strike price up until expiration of the option. Each contract is worth 100 shares of the underlying security. Options entail greater risk but allow an investor to have market exposure to a particular security or group of securities without the capital commitment required to purchase the underlying security or groups of securities. In addition, options allow investors to hedge security positions held in the portfolio. For detailed information on the use of options and option strategies, please contact the Options Clearing Corporation for the current Options Risk Disclosure Statement.

MPWS as part of its investment strategy may employ the following option strategies:

- Covered call writing
- Long call options purchases
- Long put options purchases

Covered Call Writing

Covered call writing is the sale of in-, at-, or out-of-the-money call option against a long security position held in the client portfolio. This type of transaction is used to generate income. It also serves to create downside protection in the event the security position declines in value. Income is received from the proceeds of the option sale. Such income may be reduced to the extent it is necessary to buy back the option position prior to its expiration. This strategy may involve a degree of trading velocity, transaction costs and significant losses if the underlying security has volatile price movement. Covered call strategies are generally suited for companies with little price volatility.

Long Call Option Purchases

Long call option purchases allow the option holder to be exposed to the general market characteristics of a security without the outlay of capital necessary to own the security. Options are wasting assets and expire (usually within nine months of issuance), and as a result can expose the investor to significant loss.

Long Put Option Purchases

Long put option purchases allow the option holder to sell or "put" the underlying security at the contract strike price at a future date. If the price of the underlying security declines in value, the value of the long put option increases. In this way long puts are often used to hedge a long stock position. Options are wasting assets and expire (usually within nine months of issuance), and as a result can expose the investor to significant loss.

Concentration Risk

There is an inherent risk for clients who have their investment portfolios heavily weighted in one security, one industry or industry sector, one geographic location, one investment manager, one type of investment instrument (equities versus fixed income). Clients who have diversified portfolios, as a general rule, incur less volatility and therefore less fluctuation in portfolio value than those who have concentrated holdings. Concentrated holdings may offer the potential for higher gain, but also offer the potential for significant loss.

Proxy Voting

The firm does not take discretion with respect to voting proxies on behalf of its clients. All proxy material will be forwarded to the client by the client's custodian for the client's review and action. Clients may contact the firm with questions regarding proxies they have received.

The firm will endeavor to make recommendations to clients on voting proxies regarding shareholder vote, consent, election or similar actions solicited by, or with respect to, issuers of securities beneficially held as part of the firm supervised and/or managed assets. In no event will the firm take discretion with respect to voting proxies on behalf of its clients.

Except as required by applicable law, the firm will not be obligated to render advice or take any action on behalf of clients with respect to assets presently or formerly held in their accounts that become the subject of any legal proceedings, including bankruptcies.

From time to time, securities held in the accounts of clients will be the subject of class action lawsuits. The firm has no obligation to determine if securities held by the client are subject to a pending or resolved class action lawsuit. The firm also has no duty to evaluate a client's eligibility or to submit a claim to participate in the proceeds of a securities class action settlement or verdict. Furthermore, the firm has no obligation or responsibility to initiate litigation to recover damages on behalf of clients who may have been injured as a result of actions, misconduct, or negligence by corporate management of issuers whose securities are held by clients.

Where the firm receives written or electronic notice of a class action lawsuit, settlement, or verdict affecting securities owned by a client, it will forward all notices, proof of claim forms, and other materials to the client. Electronic mail is acceptable where appropriate and where the client has authorized contact in this manner.

Item 7: Client Information Provided to Portfolio Managers

The firm is the sole portfolio manager in the MPWS Wrap Fee Program and does not share any personal information it collects from its clients other than as required by law or regulatory mandate. The firm may collect the following information in order to formulate its investment recommendations to clients:

- Income
- Employment and residential information
- Social security number
- Cash balance
- Security balances
- Transaction detail history
- Investment objectives, goals, and risk tolerance
- Sources of wealth and/or deposits
- Risk assessment
- Investment time horizon
- Income and liquidity needs
- Asset allocation
- Restrictions on management of accounts
- Client interview(s)
- Review of client's current portfolio
- Analysis of historical risk/return characteristics of various asset classes
- Analysis of the long-term outlook for global financial markets
- Analysis of the long-term global economic and political environments

Item 8: Client Contact with Portfolio Managers

The firm encourages communication with its clients and does not limit or condition the amount of time clients can spend with the firm's advisory professionals.

Item 9: Additional Information

A. Disciplinary and Other Financial Activities and Affiliations

Disciplinary

There are no current or pending disclosure items to report on behalf of the firm's advisors.

Criminal or Civil Actions

There is nothing to report for this item.

Administrative Enforcement Proceedings

There is nothing to report for this item.

Self-Regulatory Organization Enforcement Proceedings

There is nothing to report for this item.

Other Financial Activities and Affiliations

Broker-Dealer or Representative Registration

Neither the firm nor its affiliates are registered broker-dealers and do not have an application to register pending.

Futures or Commodity Registration

Neither the firm nor its affiliates are registered as a commodity firm, futures commission merchant, commodity pool operator or commodity trading advisor and do not have an application to register pending.

Material Relationships Maintained by this Advisory Business and Conflicts of Interest

There is nothing to report for this item.

Recommendation or Selection of Other Investment Advisors and Conflicts of Interest

The firm may engage third-party money managers to manage all or a portion of the client's assets, and receives a portion of the advisory fees charged by MPWS for its investment management services.

B. Code of Ethics, Brokerage Trading Practices, Account Reviews, and Financial and Related Matters

Code of Ethics Description

In accordance with the Advisers Act, the firm has adopted policies and procedures designed to detect and prevent insider trading. In addition, the firm has adopted a Code of Ethics (the

"Code"). Among other things, the Code includes written procedures governing the conduct of the firm's advisory and access persons. The Code also imposes certain reporting obligations on persons subject to the Code. The Code and applicable securities transactions are monitored by the chief compliance officer of the firm. The firm will send clients a copy of its Code of Ethics upon written request.

The firm has policies and procedures in place to ensure that the interests of its clients are given preference over those of the firm, its affiliates and its employees. For example, there are policies in place to prevent the misappropriation of material non-public information, and such other policies and procedures reasonably designed to comply with federal and state securities laws.

Investment Recommendations Involving a Material Financial Interest and Conflicts of Interest

The firm does not engage in principal trading (i.e., the practice of selling stock to advisory clients from a firm's inventory or buying stocks from advisory clients into a firm's inventory). In addition, the firm does not recommend any securities to advisory clients in which it has some proprietary or ownership interest.

Advisory Firm Purchase or Sale of Same Securities Recommended to Clients and Conflicts of Interest

The firm, its affiliates, employees and their families, trusts, estates, charitable organizations and retirement plans established by it may purchase or sell the same securities as are purchased or sold for clients in accordance with its Code of Ethics policies and procedures. The personal securities transactions by advisory representatives and employees may raise potential conflicts of interest when they trade in a security that is:

- owned by the client, or
- considered for purchase or sale for the client.

Such conflict generally refers to the practice of front-running (trading ahead of the client), which the firm specifically prohibits. The firm has adopted policies and procedures that are intended to address these conflicts of interest. These policies and procedures:

- require our advisory representatives and employees to act in the client's best interest
- prohibit fraudulent conduct in connection with the trading of securities in a client account
- prohibit employees from personally benefitting by causing a client to act, or fail to act in making investment decisions
- prohibit the firm or its employees from profiting or causing others to profit on knowledge of completed or contemplated client transactions
- allocate investment opportunities in a fair and equitable manner
- provide for the review of transactions to discover and correct any trades that result in an advisory representative or employee benefiting at the expense of a client.

Advisory representatives and employees must follow the firm's procedures when purchasing or selling the same securities purchased or sold for the client.

Client Securities Recommendations or Trades and Concurrent Advisory Firm Securities Transactions and Conflicts of Interest

The firm, its affiliates, employees and their families, trusts, estates, charitable organizations, and retirement plans established by it may effect securities transactions for their own accounts that differ from those recommended or effected for other the firm clients. The firm will make a reasonable attempt to trade securities in client accounts at or prior to trading the securities in its affiliate, corporate, employee or employee-related accounts. Trades executed the same day will likely be subject to an average pricing calculation. It is the policy of the firm to place the clients' interests above those of the firm and its employees.

Review of Accounts**Schedule for Periodic Review of Client Accounts or Financial Plans and Advisory Persons Involved**

Accounts are reviewed by Timothy Perryman, Managing Partner; Dominic Mirretti, Managing Partner; and Bronwyn Mirretti, CCO. The frequency of reviews is determined based on the client's investment objectives, but reviews are conducted no less frequently than annually. More frequent reviews may also be triggered by a change in the client's investment objectives, tax considerations, large deposits or withdrawals, large purchases or sales, loss of confidence in the underlying investment, or changes in macro-economic climate.

Review of Client Accounts on Non-Periodic Basis

The firm may perform ad hoc reviews on an as-needed basis if there have been material changes in the client's investment objectives or risk tolerance, or a material change in how the firm formulates investment advice.

Content of Client-Provided Reports and Frequency

The client's independent custodian provides account statements directly to the client no less frequently than quarterly. The custodian's statement is the official record of the client's securities account and supersedes any statements or reports created on behalf of the client by MPWS.

Economic Benefits Provided to the Advisory Firm from External Sources and Conflicts of Interest

The firm does not receive economic benefits for referring clients to third-party service providers.

Advisory Firm Payments for Client Referrals

The firm does not pay for client referrals.

Financial Information

Balance Sheet

The firm does not require the prepayment of fees of \$1200 or more, six months or more in advance, and as such is not required to file a balance sheet.

Financial Conditions Reasonably Likely to Impair Advisory Firm's Ability to Meet Commitments to Clients

The firm does not have any financial issues that would impair its ability to provide services to clients.

Bankruptcy Petitions During the Past Ten Years

There is nothing to report for this item.
