Item 18: Financial Information	25

Item 4: Advisory Business

We are dedicated to providing individuals and other types of clients with a wide array of investment advisory services. Our firm is a limited liability company formed in the State of Kentucky. Our firm has been in business as an investment adviser since 2014 and is owned by Steve Giacobbe and Shawn Clark.

We specialize in the following types of services: Comprehensive Portfolio Management and Financial Planning & Consulting.

Description of the Types of Advisory Services We Offer

Comprehensive Portfolio Management:

Our Comprehensive Portfolio Management service encompasses asset management as well as selectively providing financial planning/financial consulting to clients. It is designed to assist clients in meeting their financial goals through the use of financial investments. We conduct at least one, but sometimes more than one meeting (in person if possible, otherwise via telephone conference) with clients in order to understand their current financial situation, existing resources, financial goals, and tolerance for risk. Based on what we learn, we propose an investment approach to the client. We may propose an investment portfolio, consisting of exchange traded funds ("ETFs"), mutual funds, individual stocks or bonds, or other securities. Upon the client's agreement to the proposed investment plan, we work with the client to establish or transfer investment accounts so that we can manage the client's portfolio. Once the relevant accounts are under our management, we review such accounts on a regular basis and at least quarterly. We may periodically rebalance or adjust client accounts under our management. If the client experiences any significant changes to his/her financial or personal circumstances, the client must notify us so that we can consider such information in managing the client's investments.

Financial Planning & Consulting:

We provide a variety of financial planning and consulting services to individuals, families and other clients regarding the management of their financial resources based upon an analysis of the client's current situation, goals, and objectives. Generally, such financial planning services will involve preparing a financial plan or rendering a financial consultation for clients based on the client's financial goals and objectives. This planning or consulting may encompass one or more of the following areas: Investment Planning, Retirement Planning, Estate Planning, Charitable Planning, Education Planning, Corporate and Personal Tax Planning, Cost Segregation Study, Corporate Structure, Real Estate Analysis, Mortgage/Debt Analysis, Insurance Analysis, Lines of Credit Evaluation, Business and Personal Financial Planning.

Our written financial plans or financial consultations rendered to clients usually include general recommendations for a course of activity or specific actions to be taken by the clients. For example, recommendations may be made that the clients begin or revise investment programs, create or revise wills or trusts, obtain or revise insurance coverage, commence or alter retirement savings, or establish education or charitable giving programs. It should also be noted that we may refer clients to an accountant, attorney, insurance agent or other specialist, as necessary for non-advisory related services. For written financial planning engagements, we provide our clients with a written summary of their financial situation, observations, and recommendations. For financial consulting engagements, we usually do not provide our clients with a written summary of our observations and recommendations as the process is less formal than our planning service. Plans or consultations are

typically completed within six (6) months of the client signing a contract with us, assuming that all the information and documents we request from the client are provided to us promptly. Implementation of the recommendations will be at the discretion of the client.

Tailoring of Advisory Services

We offer individualized investment advice to clients utilizing our Comprehensive Portfolio Management service. Additionally, we offer general investment advice to clients utilizing our Financial Planning & Consulting service. Each client has the opportunity to place reasonable restrictions on the types of investments to be held in the portfolio. Restrictions on investments in certain securities or types of securities may not be possible due to the level of difficulty this would entail in managing the account. Restrictions would be limited to our Comprehensive Portfolio Management service. We do not manage assets through our other services.

Participation in Wrap Fee Programs

We do not offer wrap fee programs.

Regulatory Assets Under Management

As of December 31, 2023, we manage \$134,599,435, of which \$126,193,106 was discretionary and \$8,406,329 on a non-discretionary basis.

Item 5: Fees & Compensation

How We Are Compensated for Our Advisory Services

Comprehensive Portfolio Management:

Assets Under Management	Annual Percentage of Assets Charge	Quarterly Fee
Up to \$500,000	0.95%	0.2375%
\$500,000 to \$1,000,000	0.85%	0.2125%
\$1,000,001 to \$1,500,000	0.75%	0.1875%
\$1,500,001 to \$2,000,000	0.65%	0.1625%
\$2,000,001 to \$2,500,000	0.55%	0.1375%
\$2,500,001 to \$3,000,000	0.45%	0.1125%
\$3,000,001 to \$5,000,000	0.40%	0.1000%
Above \$5,000,000	Negotiable	Negotiable

Our firm's fees are billed on a pro-rata annualized basis quarterly in advance based upon the market value of your account on the last day of the previous quarter. Annualized fees are divided by 4 to arrive at the quarterly rate rounded to the nearest dollar. For example, an account subject to an annual fee of 0.95% will be billed a quarterly fee of 0.2375% by multiplying 0.002375 by the balance of the account on the last day of the previous quarter. Accounts opened in the middle of a quarter will not be billed until quarter-end at which time they will be billed in arrears for the days the account was open during the previous quarter as well as quarterly in advance for the following quarter.

Our fees are generally not negotiable, for accounts under \$5,000,000, but vary based on individual circumstances. Fees will be deducted from your managed account when authorized unless there is an alternative form of payment arranged with the client. As part of the fee deduction process, you are made aware of the following:

1. Clients must provide our firm with written authorization permitting direct payment of advisory fees from their account(s) maintained by a custodian who is independent of our firm;
2. Quarterly statements are sent to the client showing the fee amount, the value of the assets upon which the fee is based, and the specific manner in which the fee is calculated as well as disclosing that it is the client's responsibility to verify the accuracy of fee calculation, and that the custodian does not determine its accuracy; and
3. The account custodian sends a statement to the client, at least quarterly, showing all account disbursements, including advisory fees.

Financial Planning & Consulting:

We charge on an hourly or flat fee basis for financial planning and consulting services. The total estimated fee, as well as the ultimate fee that we charge you, is based on the scope and complexity of our engagement with you. Our hourly fees generally range from \$200 to \$300. Flat fees generally range from \$1,500 to \$5,000.

We require a retainer of fifty-percent (50%) of the ultimate financial planning or consulting fee with the remainder of the fee directly billed to you and due to us within thirty (30) days of your financial plan being delivered or consultation rendered to you. In all cases, we will not require a retainer exceeding \$500 when services cannot be rendered within six (6) months.

Other Fees

Clients will incur transaction charges for trades executed in their accounts. These transaction fees are separate from our fees and will be disclosed by the firm that the trades are executed through. Also, clients will pay the following separately incurred expenses, which we do not receive any part of: charges imposed directly by a mutual fund, index fund, or exchange traded fund which shall be disclosed in the fund's prospectus (i.e., fund management fees and other fund expenses). Charles Schwab & Co., Inc. ("Schwab"), does not charge transaction fees for U.S. listed equities and exchange traded funds.

Refunds Following Termination

We charge our advisory fees quarterly in advance. In the event that you wish to terminate our services, we will refund the unearned portion of our advisory fee to you. You need to contact us in writing and state that you wish to terminate our services. Upon receipt of your letter of termination, we will proceed to close out your account and process a pro-rata refund of unearned advisory fees.

Commissionable Securities Sales

We do not sell securities for a commission in our advisory accounts.

Item 6: Performance-Based Fees & Side-By-Side Management

We do not charge performance-based fees.

Item 7: Types of Clients

We have the following types of clients:

- Individuals and High Net Worth Individuals;
- Trusts, Estates or Charitable Organizations and;
- Corporations, Limited Liability Companies and/or Other Business Types

Our requirements for opening and maintaining accounts or otherwise engaging us:

- We do not require a minimum account balance for our Comprehensive Portfolio Management service.
- We generally charge a minimum fee of \$1,000 for written financial plans, which may vary depending on the complexity and overall client relationship.

Item 8: Methods of Analysis, Investment Strategies & Risk of Loss

Methods of Analysis

We use the following methods of analysis in formulating our investment advice and/or managing client assets:

- **Fundamental Analysis:** We attempt to measure the intrinsic value of a security by looking at economic and financial factors (including the overall economy, industry conditions, and the financial condition and management of the company itself) to determine if the company is underpriced (indicating it may be a good time to buy) or overpriced (indicating it may be time to sell). Fundamental analysis does not attempt to anticipate market movements. This presents a potential risk, as the price of a security can move up or down along with the overall market regardless of the economic and financial factors considered in evaluating the stock.
- **Secular & Cyclical Trends:** Our work on secular themes and trends helps us to identify companies and industries that are positioned for long-term growth and avoid those that are in secular decline. We identify trends and themes that we believe have a high probability of adding value to portfolios and strategies over a 3 to 5 year period. We only want to invest in companies that we believe have sustainable competitive advantages. We believe that it creates a competitive barrier that allows a company to earn a consistently high return on capital that leads to long-term outperformance.
- **Technical Analysis:** We analyze past market movements and apply that analysis to the present in an attempt to recognize recurring patterns of investor behavior and potentially predict future price movement. Technical analysis does not consider the underlying financial condition of a company. This presents a risk in that a poorly-managed or financially unsound company may underperform regardless of market movement.

Investment Strategies We Use

We use the following strategies in managing client accounts, provided that such strategies are appropriate to the needs of the client and consistent with the client's investment objectives, risk tolerance, and time horizons, among other considerations:

- **Long-Term Purchases:** When utilizing this strategy, we may purchase securities with the idea of holding them for a relatively long time (typically held for at least a year). A risk in a long-term purchase strategy is that by holding the security for this length of time, we may not take advantages of short-term gains that could be profitable to a client. Moreover, if our predictions are incorrect, a security may decline sharply in value before we make the decision to sell. Typically we employ this sub-strategy when we believe the securities to be well valued; and/or we want exposure to a particular asset class over time, regardless of the current projection for this class.
- **Short-Term Purchases:** When utilizing this strategy, we may also purchase securities with the

idea of selling them within a relatively short time (typically a year or less). We do this in an attempt to take advantage of conditions that we believe will soon result in a price swing in the securities we purchase.

- **Trading:** We purchase securities with the idea of selling them very quickly (typically within 30 days or less). We do this in an attempt to take advantage of our predictions of brief price swings.
- **Short Sales:** We borrow shares of a stock for your portfolio from someone who owns the stock on a promise to replace the shares on a future date at a certain price. Those borrowed shares are then sold. On the agreed-upon future date, we buy the same stock and return the shares to the original owner. We engage in short selling based on our determination that the stock will go down in price after we have borrowed the shares. If we are correct and the stock price has gone down since the shares were purchased from the original owner, the client account realizes the profit.
- **Margin Transactions:** We will purchase stocks for your portfolio with money borrowed from your brokerage account. This allows you to purchase more stock than you would be able to with your available cash, and allows us to purchase stock without selling other holdings.
- **Option Writing:** We may use options as an investment strategy. An option is a contract that gives the buyer the right, but not the obligation, to buy or sell an asset (such as a share of stock) at a specific price on or before a certain date. An option, just like a stock or bond, is a security. An option is also a derivative, because it derives its value from an underlying asset. The two types of options are calls and puts. A call gives us the right to buy an asset at a certain price within a specific period of time. We will buy a call if we have determined that the stock will increase substantially before the option expires. A put gives us the holder the right to sell an asset at a certain price within a specific period of time. We will buy a put if we have determined that the price of the stock will fall before the option expires.

We will use options to "hedge" a purchase of the underlying security; in other words, we will use an option purchase to limit the potential upside and downside of a security we have purchased for your portfolio.

We use "covered calls", in which we sell an option on security you own. In this strategy, you receive a fee for making the option available, and the person purchasing the option has the right to buy the security from you at an agreed-upon price.

We use a "spreading strategy", in which we purchase two or more option contracts (for example, a call option that you buy and a call option that you sell) for the same underlying security. This effectively puts you on both sides of the market, but with the ability to vary price, time and other factors.

Please Note: Investing in securities involves risk of loss that clients should be prepared to bear. While the stock market may increase and your account(s) could enjoy a gain, it is also possible that the stock market may decrease and your account(s) could suffer a loss. It is important that you understand the risks associated with investing in the stock market, are appropriately diversified in your investments, and ask us any questions you may have.

Risk of Loss

Investing in securities involves certain investment risks. Securities can fluctuate in value or lose value up to the entire principal amount invested. Clients should be prepared to bear the potential risk of loss. Advisor will assist Clients in determining an appropriate strategy based on their tolerance for risk and other factors noted above. However, there is no guarantee that a Client will meet their investment goals. While the methods of analysis help the Advisor in evaluating a potential investment, it does not guarantee that the investment will increase in value. Assets meeting the investment criteria utilized in these methods of analysis may lose value and may have negative investment performance. Investment Advisor Representatives monitor economic indicators to determine if adjustments to strategic allocations are appropriate.

Each Client engagement will entail a review of the Client's investment goals, financial situation, time horizon, tolerance for risk and other factors to develop an appropriate strategy for managing a Client's account. Client participation in this process, including full and accurate disclosure of requested information, is essential for the analysis of a Client's account. The Advisor shall rely on the financial and other information provided by the Client or their designees without the duty or obligation to validate the accuracy and completeness of the provided information. It is the responsibility of the Client to inform the Advisor of any changes in financial condition, goals or other factors that may affect this analysis. The risks associated with a particular strategy are provided to each Client in advance of investing Client accounts. The Advisor will work with each Client to determine their tolerance for risk as part of the portfolio construction process. The firms' methods of analysis and investment strategies do not represent any significant or unusual risks however all strategies have inherent risks and performance limitations. Clients should be aware of the following types of risks that apply to investing and are encouraged to discuss the specific risks applicable to their account holdings:

Business Risk

The measure of risk associated with a particular security. It is also known as unsystematic risk and refers to the risk associated with a specific issuer of a security. Generally speaking, all businesses in the same industry have similar types of business risk. More specifically, business risk refers to the possibility that the issuer of a particular company stock or a bond may go bankrupt or be unable to pay the interest or principal in the case of bonds.

Call Risk

The risk specific to bond issues and refers to the possibility that a debt security will be called prior to maturity. Call risk usually goes hand in hand with reinvestment risk because the bondholder must find an investment that provides the same level of income for equal risk. Call risk is most prevalent when interest rates are falling, as companies trying to save money will usually redeem bond issues with higher coupons and replace them on the bond market with issues with lower interest rates.

Concentration Risk

Concentrated portfolios are an aggressive and highly volatile approach to trading and investing and should be viewed as complementary to a stable, highly predictable investment approach. Concentrated portfolios hold fewer different stocks than a diversified portfolio and are much more likely to experience sudden dramatic price swings. In addition, the rise or drop in price of any given holding in the portfolio is likely to have a larger impact on portfolio performance, than a more broadly diversified portfolio.

Credit Risk

The risk that an investor could lose money if the issuer or guarantor of a fixed income security is unable or unwilling to meet its financial obligations.

Cybersecurity Risk

The computer systems, networks and devices used by us, and our service providers employ a variety of protections designed to prevent damage or interruption from computer viruses, network and computer failures and cyberattacks. Despite such protections, systems, networks and devices potentially can be breached. Cyberattacks include, but are not limited to, gaining unauthorized access to digital systems for purposes of corrupting data, or causing operational disruption, as well as denial-of-service attacks on websites. Cyber incidents may cause disruptions and impact business operations, potentially resulting in financial losses, the inability of us or our service providers to trade, violations of privacy and other laws, regulatory fines, reputational damage, reimbursement costs and additional compliance costs, as well as the inadvertent release of confidential information.

Currency/Exchange Rate Risk

The risk of a change in the price of one currency against another.

Dependence on Key Personnel

The success of the Underlying Funds will also depend materially upon the active participation of the individuals of the Underlying Managers. There can be no guarantee of the continuing participation of any one or more of these individuals, the loss of whose services could have a material adverse effect on the Underlying Funds. In addition, although the partners and other employees of the Underlying Managers are expected to devote as much time as they believe is necessary to conduct the affairs of the Underlying Funds, generally none of them will be required to devote any particular portion of his or her working time to the affairs of any of the Underlying Funds. These individuals are expected to devote substantial working time to conducting the affairs of the other funds they manage.

Dependence on Underlying Managers

Given that the Funds will generally be passive investors in any Underlying Fund and will not have a role in the management of the Underlying Funds, the returns of the investments in the Underlying Funds will primarily depend on the performance of the Underlying

Managers. The Funds will not control the investment policies of the Underlying Funds and the access of an investor in a Fund to information concerning the Underlying Funds' investments and other matters will not be as comprehensive nor as timely as if investors made direct investments in the Underlying Funds. Also, information about Underlying Managers may be limited. As a result, Precision may not be in a position to protect the value of a particular Fund's investment in Underlying Funds. In addition, the Underlying Managers may have economic or business interests or goals that are inconsistent with those of the Fund.

Derivatives

Investment strategies may cause a client to be exposed to derivatives including instruments and contracts whose value is linked to one or more underlying securities, financial benchmarks, or indices. Derivatives allow an investor to hedge or speculate upon the price movements of a particular security, financial benchmark, index, currency, or interest rate at a fraction of the cost of investing in the underlying asset. The value of a derivative depends largely upon price movements in the underlying asset.

Emerging Markets

The risks of foreign investments typically are greater in less developed countries, sometimes referred to as emerging markets. For example, political and economic structures in these countries may be less established and may change rapidly. These countries also are more likely to experience high levels of inflation, deflation, or currency devaluation, which can harm their economies and securities markets and increase volatility.

Exchange Traded Fund Risks

The risk of owning an ETF generally reflects the risks of owning the underlying securities the ETF holds. Clients can incur additional costs associated with ETFs. Consumer Discretionary ETF Shares are listed for trading on NYSE Arca and can be bought and sold on the secondary market at market prices. Although it is expected that the market price of a Consumer Discretionary ETF Share typically will approximate its net asset value (NAV), there may be times when the market price and the NAV vary significantly. Thus, the client may pay more or less than NAV when the Consumer Discretionary ETF Shares are purchased on the secondary market, and the client may receive more or less than NAV when you sell those shares. Although Consumer Discretionary ETF Shares are listed for trading on NYSE Arca, it is possible that an active trading market may not be maintained, and Trading of Consumer Discretionary ETF Shares on NYSE Arca may be halted by the activation of individual or market wide "circuit breakers" (which halt trading for a specific period of time when the price of a particular security or overall market prices decline by a specified percentage). Trading of Consumer Discretionary ETF Shares may also be halted if the shares are delisted.

Extraordinary Events

Terrorism and the United States' involvement in armed conflict may negatively affect general economic fortunes, including sales, profits, and production. An unstable geopolitical climate and continued threats of terrorism and war could have a material effect on general economic conditions, market conditions, and market liquidity (i.e., depressed securities prices and problems with trading facilities and infrastructure). Additionally, a serious pandemic or natural disaster could severely disrupt the global, national, and/or regional economies. A resulting negative impact on economic fundamentals and consumer confidence may increase the risk of default of particular companies and negatively impact our clients.

Fixed Income Risk

When investing in bonds, there is the risk that the issuer will default on the bond and be unable to make payments. Further, individuals who depend on set amounts of periodically paid income face the risk that inflation will erode their spending power. Fixed-income investors receive set, regular payments that face the same inflation risk.

Fixed Income Markets Volatility and Other Risks

Fixed income markets have experienced increased volatility during certain recent periods as investors have considered the effects of Federal Reserve Board policy changes (i.e., with tapering of the Federal Reserve Board's quantitative easing program and a general rise in interest rates). While volatility in the fixed income markets has subsided at times, such volatility, together with changes in bond market size and structure, are reminders of the possibility of volatility and other risks such as increased redemptions from the Fund.

Foreign Securities Risk

Mutual funds in a client's portfolio can invest in foreign securities. Foreign securities are subject to additional risks not typically associated with investments in domestic securities. These risks may include, among others, currency risk, country risks (political, diplomatic, regional conflicts, terrorism, war, social and economic instability, currency devaluations and policies that have the effect of limiting or restricting foreign investment or the movement of assets), different trading practices, less government supervision, less stringent accounting standards, less publicly available information, limited trading markets and greater volatility. To the extent that underlying funds invest in issuers located in emerging markets, the risk may be heightened by political changes, changes in taxation, or currency controls that could adversely affect the values of these investments. Emerging markets have been more volatile than the markets of developed countries with more mature economies.

Inflationary Risk

The risk that future inflation will cause the purchasing power of cash flow from an investment to decline.

Illiquidity of Investments

There is no public market for any of the investments that will be held by the Funds, and it is highly unlikely that one will develop. As a consequence, the Funds' investments in securities may be illiquid, and the Funds could be prevented from liquidating securities promptly, which may in turn subject the Funds to substantial losses. Illiquidity could also impair the Funds' ability to distribute withdrawal proceeds to a withdrawing investor in a timely manner.

Interest Rates and Prices; Correction Risks

The price of a debt security generally moves in the opposite direction from interest rates (i.e., if interest rates go up, the value of the bond will go down, and vice versa). In general, securities with longer maturities are more sensitive to these price changes. Additionally, the prices of high yield, fixed-income securities fluctuate more than high quality debt securities. Prices are especially sensitive to developments affecting the company's business and to changes in the ratings assigned by rating agencies. Prices often are closely linked with the company's stock prices and typically rise and fall in response to factors that affect stock prices. In addition, the entire high-yield securities market can experience sudden and sharp price swings due to changes in economic conditions, stock market activity, large, sustained sales by major investors, a high-profile default, or other factors. Any changes to interest rates could have a significant impact on prices and a client's account, which could be substantial if the duration levels, if any, of the client's account are high. See also "Fixed Income Markets Volatility and Other Risks" below.

Interest Rate Risk

The risk that fixed income securities will decline in value because of an increase in interest rates; a bond or a fixed income fund with a longer duration will be more sensitive to changes in interest rates than a bond or bond fund with a shorter duration.

Legislative Risk

The risk of a legislative ruling resulting in adverse consequences.

Limited Access to Underlying Managers

There is no assurance that each Underlying Manager will, as a result of capacity constraints, agree to manage as much of the Funds' assets as Precision determines to allocate to such Underlying Managers. There also is no assurance that an Underlying Manager will not terminate its relationship with the Funds or return some assets under management.

Liquidity Risk

The possibility that an investor may not be able to buy or sell an investment as and when desired or in sufficient quantities because opportunities are limited.

Margin Transaction Risk

A client account may use short-term margin borrowings in purchasing securities (including, but not limited to, swaps, commodities, derivatives, or other instruments purchased for speculative, leveraging, hedging, and/or performance enhancing purposes). In general, the use of short-term margin borrowings, if any, results in certain additional risks. For example, should the securities pledged to brokers to secure margin accounts decline in value, the client's account could be subject to a "margin call," pursuant to which it must either deposit additional funds with the broker, or suffer mandatory liquidation of the pledged securities to compensate for the decline in value, which could require the liquidation of assets at inopportune times. Furthermore, in the event of a sudden precipitous drop in the value of its assets, the Fund might not be able to liquidate assets quickly enough to pay off its margin debt.

A client account's margin provider will have a lien over the assets of the account that are deposited with the margin provider as collateral. In the event of the insolvency of the margin provider, those assets may become available to the creditors of the margin provider. The insolvency of the margin provider could seriously damage the client's account, as assets of the account which are deposited with the margin provider as margin will become available to the creditors of the margin provider.

When a client account purchases an option in the United States, there is no margin requirement because the option premium is paid for in full. The premiums for certain options traded on foreign exchanges may be paid for on margin. The margin requirements imposed on the writing of options, although adjusted to reflect the probability that out-of-the money options will not be exercised, can in fact be higher than those imposed in dealing in the securities markets directly. Whether any margin deposit will be required for over-the-counter ("OTC") options will depend on the credit determinations and agreement of the parties to the transaction.

Market Risk

The risk that the value of securities may go up or down, sometimes rapidly or unpredictably, due to factors affecting securities markets generally or particular industries.

Pandemic Risk

Large-scale outbreaks of infectious disease that can greatly increase morbidity and mortality over a wide geographic area, crossing international boundaries, and causing significant economic, social, and political disruption.

COVID-19

The novel coronavirus known as COVID-19 involves significant risk of a sustained increase in the volatility of global markets, which volatility could continue for the foreseeable future. Market responses to decisions made by governments and scientists around the world, including measures to contain the spread of the virus, availability of

healthcare and treatments, and rolling shutdowns of markets across the globe would negatively impact markets and pose a significant risk of loss to investment principal. The pandemic also poses a risk from a human capital and resource perspective.

Portfolio Inactivity Risk

Advisor maintains procedures for reviewing client portfolios and for making changes to a client's account holdings. There may be periods where Advisor determines that changes to a client's portfolio are unnecessary. Clients will remain responsible for paying Advisor's fees during all periods and are solely responsible for determining whether the Advisor's services remain appropriate for them.

Private Equity Investments

Certain Funds may acquire equity stakes in privately held companies. The success of the Funds' investments in equity stakes of privately held companies will largely depend in part on the performance and abilities of such companies' controlling shareholders. Because the Funds will not control such companies, the Funds' ability to exit from such investments may be limited. Additionally, these Funds are likely to have a reduced ability to influence management of such companies. As a result of these factors, Precision may not be in a position to protect the value of a Fund's investment in a private company.

Reinvestment Risk

The risk that falling interest rates will lead to a decline in cash flow from an investment when its principal and interest payments are reinvested at lower rates.

Settlement Risks

Investment strategies may expose a client to the credit risk of parties with whom Advisor trades (on behalf of the client or the underlying funds) and to the risk of settlement default. Problems of settlement in these markets may affect the net asset value and liquidity of a client's portfolio or investments in such portfolios. In addition, unlike taking long positions where the risk of loss generally is limited to the value of the investment in the security, the risk of loss of a short position is theoretically unlimited because short positions lose money as the price of the underlying security increases.

Social/Political Risk

The possibility of nationalization, unfavorable government action or social changes resulting in a loss of value.

Tax Harvesting Risk

The trading strategy employed in client accounts is tax harvesting. The intent of this trade is to sell an ETF or mutual fund at a taxable loss and replace that position with a holding whose historical performance and expected future performance are similar, thereby having little impact on the overall strategic allocation, but capturing the tax loss. Because past performance is no indication of future performance, there is potential for the future

performance of the replacement position to deviate from that of the initial holding. This type of strategy may also incur an increase in the frequency of trading and amount of transaction costs.

Taxability Risk

The risk that a security that was issued with tax-exempt status could potentially lose that status prior to maturity. Since municipal bonds carry a lower interest rate than fully taxable bonds, the bond holders would end up with a lower after-tax yield than originally planned.

Volatility-Linked Products Risk

Volatility-linked ETPs are designed to track the Chicago Board Options Exchange Volatility Index (VIX) futures. The VIX is a measure of the expected volatility of the S&P 500 index as measured by the implied volatility of options on that index. Volatility ETPs gain exposure to market volatility through futures and/or options contracts on the VIX. Volatility-linked ETPs that seek to maintain a continuous, targeted maturity exposure to VIX futures will either track or hold VIX futures contracts on a rolling basis. They will sell shorter-term contracts or contracts about to expire with contracts that have more distant or deferred maturity dates in order to maintain the desired exposure. The performance of volatility-linked ETPs may be significantly different than the performance of the VIX and the actual realized volatility of the S&P 500 Index. VIX futures contracts are among the most volatile segments of all futures markets. Volatility-linked ETPs may be subject to extreme volatility and greater risk of loss than other traditional ETFs.

All investments involve varying degrees of risk, and it should not be assumed that future performance of any specific investment or investment strategy will be profitable or equal any specific performance level(s). Investing in securities and other investments involve a risk of loss that each Client should understand and be willing to bear. Clients are reminded to discuss these risks with the Advisor .

Types of Investments

Advisor generally manages Client portfolios that consist of mutual funds, Exchange Traded Equities (ETFs) and individual securities.

Cash Positions

Based on a perceived or anticipated market conditions and/or events, certain assets will be taken out of the market and held in a defensive cash position. The firm invests cash balances in money market funds, FDIC Insured Certificates of Deposit, high-grade commercial paper and/or government-backed debt instruments. Cash positions are subject to the agreed upon advisory fee as they are managed as part of the overall active investment strategy. The firm does not hold cash positions for an extended period of time.

Equity

Investment generally refers to buying shares of stocks in return for receiving a future payment of dividends and/or capital gains if the value of the stock increases. The value of

equity securities may fluctuate in response to specific situations for each company, industry conditions and the general economic environment.

Exchange Traded Funds (ETFs)

An ETF is a portfolio of securities invested to track a market index similar to an index mutual fund, but the shares are traded on an exchange like an equity. An ETF share price fluctuates intraday depending on market conditions instead of having a net asset value (NAV) that is calculated once at the end of the day. The shares may trade at a premium or discount; and as a result, investors pay more or less when purchasing shares and receive more or less than when selling shares. The supply of ETF shares is regulated through a mechanism known as creation and redemption that involves large, specialized investors, known as authorized participants (APs). Authorized participants are large financial institutions with a high degree of buying power, such as market makers, banks or investment companies that provide market liquidity. When there is a shortage of shares in the market, the authorized participant creates more (creation). Conversely, the authorized participant will reduce shares in circulation (redemption) when supply falls short of demand. Multiple authorized participants help improve the liquidity of a particular ETF and stabilize the share price. To the extent that authorized participants cannot or are otherwise unwilling to engage in creation and redemption transactions, shares of an ETF tend to trade at a significant discount or premium and may face trading halts and delisting from the exchange. The performance of ETFs is subject to market risk, including the complete loss of principal. ETFs also have a trading risk based on cost inefficiency if the ETFs are actively traded and a liquidity risk if the ETFs has a large price spread and low trading volume. In addition, investors buying or selling shares in the secondary market pay brokerage commissions, which may be a significant proportional cost not incurred by mutual funds.

Exchange-Traded Notes (ETNs)

An ETN is a senior unsecured debt obligation designed to track the total return of an underlying market index or other benchmark. ETNs may be linked to a variety of assets, for example, commodity futures, foreign currency and equities. ETNs are similar to ETFs in that they are listed on an exchange and can typically be bought or sold throughout the trading day. However, an ETN is not a mutual fund and does not have a net asset value; the ETN trades at the prevailing market price. Some of the more common risks of an ETN are as follows. The repayment of the principal, interest (if any), and the payment of any returns at maturity or upon redemption are dependent upon the ETN issuer's ability to pay. In addition, the trading price of the ETN in the secondary market may be adversely impacted if the issuer's credit rating is downgraded. The index or asset class for performance replication in an ETN may or may not be concentrated in a specific sector, asset class or country and may therefore carry specific risks.

Fixed Income

Investments generally pay a return on a fixed schedule, though the amount of the payments can vary. This type of investment can include corporate and government debt securities,

leveraged loans, high yield, and investment grade debt and structured products, such as mortgage and other asset-backed securities, although individual bonds may be the best-known type of fixed income security. In general, the fixed income market is volatile and fixed income securities carry interest rate risk. (As interest rates rise, bond prices usually fall, and vice versa. This effect is usually more pronounced for longer-term securities.) Fixed income securities also carry inflation risk, liquidity risk, call risk, and credit and default risks for both issuers and counterparties. The risk of default on treasury inflation protected/inflation linked bonds is dependent upon the U.S. Treasury defaulting (extremely unlikely); however, they carry a potential risk of losing share price value, albeit rather minimal. Risks of investing in foreign fixed income securities also include the general risk of non-U.S. investing described below.

- **Mutual Funds** – A pool of funds collected from many investors to invest in securities such as stocks, bonds, money market instruments and similar assets.
 - **Open-End Mutual Funds** – A type of mutual fund that does not have restrictions on the amount of shares the fund will issue and will buy back shares when investors wish to sell. Investing in mutual funds carries the risk of capital loss, and thus you may lose money investing in mutual funds. All mutual funds have costs that lower investment returns. The funds can be of bond “fixed income” nature (lower risk) or stock “equity” nature.
 - **Closed-End Mutual Funds** – A type of mutual fund that raises a fixed amount of capital through an initial public offering (IPO). The fund is then structured, listed and traded like a stock on a stock exchange. Clients should be aware that closed-end funds available within the program are not readily marketable. To provide investor liquidity, the funds may offer to repurchase a certain percentage of shares at net asset value periodically. Thus, clients may be unable to liquidate all or a portion of their shares in these types of funds.

Item 9: Disciplinary Information

There are no legal or disciplinary events that are material to the evaluation of our advisory business or the integrity of our management.

Item 10: Other Financial Industry Activities & Affiliations

We have no other financial industry activities and affiliations to disclose.

Item 11: Code of Ethics, Participation or Interest in Client Transactions & Personal Trading

We recognize that the personal investment transactions of members and employees of our firm demand the application of a high Code of Ethics and require that all such transactions be carried out in a way that does not endanger the interest of any client. At the same time, we believe that if investment goals are similar for clients and for members and employees of our firm, it is logical and even desirable that there be common ownership of some securities.

Therefore, in order to prevent conflicts of interest, we have in place a set of procedures (including a pre-clearing procedure) with respect to transactions effected by our members, officers and employees for their personal accounts¹. In order to monitor compliance with our personal trading policy, we have a quarterly securities transaction reporting system for all of our associates.

Furthermore, our firm has established a Code of Ethics which applies to all of our associated persons. An investment adviser is considered a fiduciary. As a fiduciary, it is an investment adviser's responsibility to provide fair and full disclosure of all material facts and to act solely in the best interest of each of our clients at all times. We have a fiduciary duty to all clients. Our fiduciary duty is considered the core underlying principle for our Code of Ethics which also includes Insider Trading and Personal Securities Transactions Policies and Procedures. We require all of our supervised persons to conduct business with the highest level of ethical standards and to comply with all federal and state securities laws at all times. Upon employment or affiliation and at least annually thereafter, all supervised persons will sign an acknowledgement that they have read, understand, and agree to comply with our Code of Ethics. Our firm and supervised persons must conduct business in an honest, ethical, and fair manner and avoid all circumstances that might negatively affect or appear to affect our duty of complete loyalty to all clients. This disclosure is provided to give all clients a summary of our Code of Ethics. However, if a client or a potential client wishes to review our Code of Ethics in its entirety, a copy will be provided promptly upon request.

Neither our firm nor a related person recommends to clients, or buys or sells for client accounts, securities in which our firm or a related person has a material financial interest.

Related persons of our firm may buy or sell securities and other investments that are also recommended to clients. In order to minimize this conflict of interest, our related persons will place client interests ahead of their own interests and adhere to our firm's Code of Ethics, a copy of which is available upon request.

Related persons of our firm may buy or sell securities for themselves at or about the same time they buy or sell the same securities for client accounts. In order to minimize this conflict of interest, our related persons will place client interests ahead of their own interests and adhere to our firm's Code of Ethics, a copy of which is available upon request. Further, our related persons will refrain from buying or selling the same securities within 24 hours prior to buying or selling for our clients. If related persons' accounts are included in a block trade, our related persons will always trade personal accounts last.

¹ For purposes of the policy, our associate's personal account generally includes any account (a) in the name of our associate, his/her spouse, his/her minor children or other dependents residing in the same household, (b) for which our associate is a trustee or executor, or (c) which our associate controls, including our client accounts which our associate controls and/or a member of his/her household has a direct or indirect beneficial interest in.

Item 12: Brokerage Practices

We seek to recommend a custodian/broker who will hold your assets and execute transactions on terms that are overall most advantageous when compared to other available providers and their services. We consider a wide range of factors, including, among others, these:

- Ability to maintain the confidentiality of trading intentions
- Timeliness of execution
- Timeliness and accuracy of trade confirmations
- Liquidity of the securities traded
- Willingness to commit capital
- Ability to place trades in difficult market environments
- Research services provided
- Ability to provide investment ideas
- Execution facilitation services provided
- Record keeping services provided
- Custody services provided
- Frequency and correction of trading errors
- Ability to access a variety of market venues
- Expertise as it relates to specific securities
- Financial condition
- Business reputation

With this in consideration, our firm has an arrangement with Charles Schwab & Co., Inc. ("Schwab"). Schwab offers to independent investment advisers non-soft dollar services which include custody of securities, trade execution, clearance and settlement of transactions. We receive some non-soft dollar benefits from Schwab through our participation in the program. (Please see the disclosure under Item 14 of this Brochure.)

Schwab may make certain research and brokerage services available at no additional cost to our firm. These services may be directly from independent research companies, as selected by our firm (within specific parameters). Research products and services provided by Schwab may include research reports on recommendations or other information about, particular companies or industries; economic surveys, data and analyses; financial publications; portfolio evaluation services; financial database software and services; computerized news and pricing services; quotation equipment for use in running software used in investment decision-making; and other products or services that provide lawful and appropriate assistance by Schwab to our firm in the performance of our investment decision-making responsibilities.

We do not use client brokerage commissions to obtain research or other products or services. The aforementioned research and brokerage services are used by our firm to manage accounts for which we have investment discretion. Without this arrangement, our firm might be compelled to purchase the same or similar services at our own expense.

As a result of receiving these services, we may have an incentive to continue to use or expand the use of Schwab services. Our firm examined this potential conflict of interest when we chose to enter into the relationship with Schwab and we have determined that the relationship is in the best interest of our firm's clients and satisfies our fiduciary obligations, including our duty to seek best execution.

Schwab charges brokerage commissions for effecting certain securities transactions (i.e., commissions are charged for individual equity and debt securities transactions). Schwab enables us to obtain many no-load mutual funds without transaction charges and other no-load funds at nominal transaction charges. Schwab commission rates are generally discounted from customary retail commission rates. However, the commission fees charged by Schwab may be higher or lower than those charged by other custodians and broker-dealers.

Our clients may pay a commission to Schwab that is higher than another qualified broker dealer might charge to effect the same transaction where we determine in good faith that the commission is reasonable in relation to the value of the brokerage and research services received. In seeking best execution, the determinative factor is not the lowest possible cost, but whether the transaction represents the best qualitative execution, taking into consideration the full range of a broker-dealer's services, including the value of research provided, execution capability, commission rates, and responsiveness. Accordingly, although we will seek competitive rates, to the benefit of all clients, we may not necessarily obtain the lowest possible commission rates for specific client account transactions.

Soft Dollars

Investment research products and services that may be obtained by our firm will generally be used to service all of our clients, a brokerage commission paid by a specific client may be used to pay for research that is not used in managing that specific client's account. Our firm does not accept products or services that do not qualify for Safe Harbor outlined in Section 28(e) of the Securities Exchange Act of 1934, such as those services that do not aid in investment decision-making or trade execution.

Client Brokerage Commissions

We do not acquire client brokerage commissions (or markups or markdowns).

Procedures to Direct Client Transactions in Return for Soft Dollars

We do not receive any soft dollar relationships and do not direct client transactions to a particular broker-dealer in return for soft dollar benefits.

Brokerage for Client Referrals

Our firm does not receive brokerage for client referrals.

Directed Brokerage

Neither we nor any of our firm's related persons have discretionary authority in making the determination of the brokers with whom orders for the purchase or sale of securities are placed for execution, and the commission rates at which such securities transactions are effected. We routinely recommend that a client directs us to execute through a specified broker-dealer. Our firm recommends the use of Schwab.

Permissibility of Client-Directed Brokerage

We allow clients to direct brokerage outside our recommendation. However, we may be unable to achieve the most favorable execution of client transactions. Client directed brokerage may cost clients more money. For example, in a directed brokerage account, you may pay higher brokerage commissions because we may not be able to aggregate orders to reduce transaction costs, or you may receive less favorable prices.

Aggregation of Purchase or Sale

We perform investment management services for various clients. There are occasions on which portfolio transactions may be executed as part of concurrent authorizations to purchase or sell the same security for numerous accounts served by our firm, which involve accounts with similar investment objectives. Although such concurrent authorizations potentially could be either advantageous or disadvantageous to any one or more particular accounts, they are affected only when we believe that to do so will be in the best interest of the effected accounts. When such concurrent authorizations occur, the objective is to allocate the executions in a manner which is deemed equitable to the accounts involved. In any given situation, we attempt to allocate trade executions in the most equitable manner possible, taking into consideration client objectives, current asset allocation and availability of funds using price averaging, proration and consistently non-arbitrary methods of allocation.

Item 13: Review of Accounts

We review accounts on at least a quarterly basis for our clients subscribing to our Comprehensive Portfolio Management service. The nature of these reviews is to learn whether clients' accounts are in line with their investment objectives, appropriately positioned based on market conditions, and investment policies, if applicable. Only our Financial Advisors or Portfolio Managers will conduct reviews.

We may review client accounts more frequently than described above. Among the factors which may trigger an off-cycle review are major market or economic events, the client's life events, requests by the client, etc.

We do not provide written reports to clients, unless asked to do so. Verbal reports to clients take place on at least an annual basis when we contact clients who subscribe to our Comprehensive Portfolio Management service.

Financial Planning clients do not receive reviews of their written plans unless they take action to schedule a financial consultation with us. We do not provide ongoing services to financial planning clients, but are willing to meet with such clients upon their request to discuss updates to their plans, changes in their circumstances, etc. Financial Planning clients do not receive written or verbal updated reports regarding their financial plans unless they separately contract with us for a post-financial plan meeting or update to their initial written financial plan.

Item 14: Client Referrals & Other Compensation

We receive an economic benefit from Schwab in the form of the support products and services it makes available to us and other independent investment advisors that have their clients maintain accounts at Schwab. These products and services, how they benefit us, and the related conflicts of interest are described above (*see Item 12 – Brokerage Practices*). The availability to us of Schwab's products and services is not based on us giving particular investment advice, such as buying particular securities for our clients.

We do not pay referral fees (non-commission based) to independent solicitors (non-registered representatives) for the referral of their clients to our firm in accordance with Rule 206 (4)-3 of the Investment Advisers Act of 1940.

Item 15: Custody

Our firm does not have custody of any client funds or securities. Should our firm inadvertently be in possession of client fund or securities, the funds or securities will be returned to sender within three (3) business days and checks payable to a third party will be forwarded to the appropriate third party within twenty-four (24) hours.

State Securities Bureaus generally take the position that any arrangement under which a registered investment adviser is authorized or permitted to withdraw client funds or securities maintained with a custodian upon the adviser's instruction to the custodian is deemed to have custody of client funds and securities. As such, our firm has adopted the following safeguarding procedures:

- a) Clients must provide our firm with written authorization permitting direct payment of advisory fees from their account(s) maintained by a custodian who is independent of our firm;
- b) Quarterly statements are sent to clients showing the fee amount, the value of the assets upon which the fee is based, and the specific manner in which the fee is calculated as well as disclosing that it is the client's responsibility to verify the accuracy of fee calculation, and that the custodian does not determine its accuracy; and
- c) The account custodian sends a statement to the client, at least quarterly, showing all account disbursements, including advisory fees.

We encourage our clients to raise any questions with us about the custody, safety or security of their assets. The custodians we do business with will send you independent account statements listing your account balance(s), transaction history and any fee debits or other fees taken out of your account.

Item 16: Investment Discretion

Clients have the option of providing our firm with investment discretion on their behalf, pursuant to an executed investment advisory client agreement. By granting investment discretion, we are authorized to execute securities transactions, which securities are bought and sold and the total amount to be bought and sold. Limitations may be imposed by the client in the form of specific constraints on any of these areas of discretion with our firm's written acknowledgement.

Item 17: Voting Client Securities

Policy for Voting Proxies

Our firm utilizes ProxyEdge, an electronic voting service provided by Broadridge Financial Solutions, Inc. ("Broadridge"). ProxyEdge allows us to manage, track, reconcile and report proxy voting through electronic delivery of ballots, online voting, and integrated reporting and recordkeeping. ProxyEdge provides proxy information through an automated electronic interface based on share positions provided directly to Broadridge by Schwab.

All proxies received by our firm will be given to our Chief Compliance Officer for processing. Our Chief Compliance Officer will determine which accounts managed by our firm hold the security to which the proxy relates. These accounts and their shareholdings will be matched to the proxies received for each security. Missing proxies or significant variances in shares held will be investigated.

A grid of shares held by the client for each security being voted will be updated with each proxy being voted. Our chief compliance officer will review each item for voting on each proxy. Based on our proxy voting guidelines outlined below, a determination of how our firm votes will be made. Any undefined issues will be referred to our president. A listing of each proxy voted will be updated at the time the proxy is voted. Proxies will generally be voted online unless custodian requires mailed form. In the absence of specific voting guidelines from the client, we will vote proxies in the best interest of each particular client.

We look to ensure that our firm is compliant with the new exchange act rule 14a-11. In accordance with the aforementioned rule, our firm provides shareholders with the opportunity to nominate directors at a shareholder meeting under the applicable state or foreign law. Clients also have the ability to have their nominees included in the company proxy materials sent to all of our shareholders. Furthermore, the clients as shareholders also have the ability to use the shareholder proposal process to establish procedures for the inclusion of shareholder director nominations in company proxy materials.

Proxies Voting Guidelines

Where voting authority exists, proxies are voted by our firm in the best interests of plan beneficiaries:

- for directors and for management on routine matters;
- for a limit on or reduction of the number of directors, and for an increase in the number of directors on a case by case basis;
- against the creation of a tiered board;
- for the elimination of cumulative voting;
- for independence of auditors;
- for deferred compensation;
- for profit sharing plans;
- for stock option plans unless the plan could result in material dilution to shares outstanding or is excessive;
- for stock repurchases;
- for an increase in authorized shares unless the authorization effectively results in a blind investment pool for shareholders;
- for reductions in the par value of stock;
- for company name changes;
- for routine appointments of auditors.

We abstain on motions to limit directors' liability. Material issues not addressed above (e.g., mergers, poison pills, social investing and miscellaneous shareholder proposals) are dealt with on a case-by-case basis.

Our firm will defer to client voting policies as directed. Eligible shares are monitored against ballots received from custodians, and detailed records of all issues and votes are maintained and reported to clients as requested.

We recognize that under certain circumstances we may have a conflict of interest between us and our clients. Such circumstances may include, but are not limited to, situations where our firm or one or more of our affiliates, including officers, directors and employees, has or is seeking a client relationship with the issuer of the security that is the subject of the proxy vote. We shall periodically inform our employees that they are under an obligation to be aware of the potential for conflicts of interest on the part of our firm with respect to voting proxies on behalf of funds, both as a result of

our employee's personal relationships and due to circumstances that may arise during the conduct of our business, and to bring conflicts of interest of which they become aware to the attention of the proxy manager. We shall not vote proxies relating to such issuers on behalf of client accounts until we have determined that the conflict of interest is not material or a method of resolving such conflict of interest has been agreed upon by our management team. A conflict of interest will be considered material to the extent that it is determined that such conflict has the potential to influence our decision-making in voting a proxy. Materiality determinations will be based upon an assessment of the particular facts and circumstances. If we determine that a conflict of interest is not material, we may vote proxies notwithstanding the existence of a conflict. If the conflict of interest is determined to be material, the conflict shall be disclosed to our management team and we shall follow the instructions of the management team. We shall keep a record of all materiality decisions and report them to the management team on an annual basis.

Our Chief Compliance Officer will maintain files relating to our proxy voting procedures. Records will be maintained and preserved for five years from the end of the fiscal year during which the last entry was made on a record, with records for the last two years kept on our premises. Records of the following will be included in the files:

- copies of these proxy voting policies and procedures, and any amendments thereto;
- a copy of each proxy statement that we receive, provided however that our firm may rely on obtaining a copy of proxy statements from the SEC's EDGAR system for those proxy statements that are available;
- a record of each vote that we cast;
- a copy of any document we created that was material to making a decision how to vote proxies, or that memorializes that decision;
- a copy of each written client request for information on how we voted such client's proxies, and a copy of any written response to any client request for information on how we voted their proxies.

Clients may request a copy of our written policies and procedures regarding proxy voting and/or information on how particular proxies were voted by contacting our Chief Compliance Officer, Shawn Clark, by phone at (502) 290-1907.

Item 18: Financial Information

We are not required to provide financial information in this Brochure because we do not require the prepayment of more than \$1,200 in fees and six or more months in advance, we do not take custody of client funds or securities, and we do not have a financial condition or commitment that impairs our ability to meet contractual and fiduciary obligations to clients.

We have never been the subject of a bankruptcy proceeding.
