Item 4 – Advisory Business

Scout Investments (Scout) is a national investment management firm. We provide discretionary investment management services to registered and unregistered investment companies, institutional accounts (such as pension plans, government agencies, corporations, trusts, foundations and endowments) and to individuals through separately managed accounts (such as individual managed accounts and wrap fee accounts). We also provide model portfolios to financial intermediaries and advice on individual securities to our affiliated companies. Scout was formed in 2001 and is a wholly owned subsidiary of UMB Financial Corporation.

Scout offers an array of investment strategies which are listed on page 8, as well as customized strategies and socially responsible portfolios. Scout provides its fixed income strategies through its Reams Asset Management division (Reams). We do not provide financial planning, tax advice or advice on the selection of investment advisers.

Client Assets Managed – As of December 31, 2011

Discretionary	\$19,779,235,940
Non-discretionary	\$0

Institutional Account Investment Guidelines

If you are an institutional client, Scout will work with you to receive a specific set of investment objectives and guidelines. Emphasis is placed on you providing us with a written investment policy that clearly establishes our limits of discretion within an investment strategy in areas such as industry concentration, country exposure, quality, duration and individual positions. At your request, Scout can also restrict certain types of securities from your portfolio, such as tobacco companies or alcohol related securities. You may also request that specific securities be restricted from your portfolio.

Separately Managed Account Investment Guidelines

If you become a client of Scout through a separately managed account program (such as an individual managed account or wrap account platform) we will usually not meet with you personally to discuss your investment objectives. Rather, your financial intermediary (usually a broker-dealer, financial adviser or bank representative) will provide you with financial recommendations, which can include asset allocation and the selection of investment managers and strategies. If you open an account through a platform where trading costs are bundled together with your advisory or custody fee, we will typically receive our investment advisory fee as a portion of the overall fee paid by you to your financial representative. For some programs (such as a dual contract platform where you sign an investment advisory agreement with Scout), we may ask that you complete a questionnaire to help aid in our acceptance and management of your account. At the request of you or your financial representative, Scout can restrict certain types of securities from your portfolio, such as tobacco companies or alcohol related securities. You or your financial representative may also request that specific securities be restricted from your portfolio.

Item 5 – Fees and Compensation

Scout's investment advisory fees vary depending on the type of client and the investment strategy provided. In general, fees are based upon a percentage of your assets that are managed by Scout. Fees are billed quarterly unless otherwise stated in the investment advisory agreement. The specific method of payment is described in your agreement with Scout, or with your financial intermediary. If your investment advisory fee is billed in advance and Scout stops providing advisory services prior to the end of the billing period, you will be reimbursed for any unearned fees proportionate to the number of days remaining from the time your investment advisory agreement terminates to the end of the billing period. Your account will also incur additional expenses, such as brokerage and transactional costs that are not included in Scout's investment advisory fee. For more information about these types of expenses, please see Item 12 entitled Brokerage located at page 17. For purposes of fee invoicing, Scout will directly bill you or your agent. You may also choose for Scout to deduct our investment advisory fee directly from your custodial account. If you are a separately managed account client, the choice to be directly billed or have your fee automatically deducted from your custodial account will depend upon your separately managed account platform. Please contact your financial representative for more information. All fees stated below are negotiable. Scout may charge clients fees that are higher or lower than your fee or the fees listed below. This may occur under a variety of circumstances including, but not limited to, the type of client, the total client assets managed by Scout or a client's specific investment objectives and guidelines.

Institutional Client General Fee Schedule

The following table describes Scout's standard fee schedule for institutional accounts.

Investment Strategy	Fee Schedule
International Equity International ADR Global Equity	First \$50 million – 0.75% Next \$50 million – 0.60% Above \$100 million – 0.55%
Large Cap Equity	First \$100 million – 0.50% Next \$150 million – 0.40% Above \$250 million – 0.35%
Mid Cap Equity	First \$50 million – 0.80% Next \$50 million – 0.65% Above \$100 million – 0.60%
Small Cap Equity International SMID	First \$50 million – 0.85% Next \$50 million – 0.70% Above \$100 million – 0.65%

Core Plus Fixed Income Core Fixed Income Intermediate Fixed Income Long Duration Fixed Income Unconstrained Fixed Income	First \$50 million – 0.30% Next \$50 million – 0.20% Above \$100 million – Negotiable
Low Duration Fixed Income	First \$50 million – 0.25% Next \$50 million – 0.20% Above \$100 million – Negotiable

Separately Managed Account General Fee Schedule

If you become a client of Scout through a financial intermediary's separately managed account platform (including individual managed account, dual contract and wrap account programs), Scout will generally negotiate an investment advisory fee schedule with your platform sponsor. Scout's investment advisory fee schedule will vary between programs and, for some programs, may be lower than listed below. For more information, please contact your financial representative.

Investment Strategy	Fee Schedule
International ADR Global Equity	Dual Contract – 0.80% Individual Managed Account – 0.70% Wrap Account – 0.70%
Large Cap Equity	Dual Contract – 0.60% Individual Managed Account – 0.55% Wrap Account – 0.55%
Small Cap Equity International SMID	Dual Contract – 0.85% Individual Managed Account – 0.75% Wrap Account – 0.75%

Other Investment Advice

Scout provides periodic research, model portfolios and individual security recommendations to our affiliate, UMB Bank, n.a. We provide this investment advice to UMB Bank on a non-discretionary basis. This means that UMB Bank, and its financial representatives, can choose to accept, modify or reject our investment advice. We receive a fixed fee from UMB Bank for these services. Scout also provides investment models, including purchase and sale

information, to third-party financial intermediaries for unified managed account programs, otherwise known as UMAs. We also provide these investment models on a non-discretionary basis. We typically receive a fee from the third-party financial intermediary based upon a percentage of the total assets using our investment model. The percentage fee varies between different financial intermediaries.

Item 6 – Performance-Based Fees and Side-By-Side Management

For some clients, Scout accepts an investment advisory fee based upon the capital appreciation of investments in the account, otherwise known as a performance-based fee. Other investment advisory fees are a fixed dollar amount or a percentage of the client's asset managed by Scout. This difference in types of fees creates an incentive for us to allocate more favorable investment opportunities to a performance-based fee account. It may also create an incentive for us to make investments for a performance-based fee account that are riskier than we would otherwise make for a non performance-based fee account. Scout has developed policies and procedures to address these potential conflicts of interest. Scout's trading policies and procedures provide for the fair and equal allocation of investment opportunities to all clients over time regardless of the type of fee we receive. In addition, our investment management policies and procedures require that we provide investment advice consistent with a client's investment objectives, guidelines and restrictions. We regularly review compliance with these policies and procedures.

Item 7 – Types of Clients

Scout provides discretionary investment management services to registered and unregistered investment companies, institutional accounts (such as pension plans, government agencies, corporations, trusts, foundations and endowments) and to individuals through separately managed accounts (such as individual managed accounts, dual contract and wrap fee accounts). Scout also provides investment advice in the form of model portfolios to financial intermediaries and advice on individual securities to our affiliated companies. Below are the minimum account sizes applicable to Scout's investment management services. We can waive account minimums at our discretion.

Institutional Clients

The minimum account size for the Global Equity, International Equity, International ADR, International SMID, Large Cap Equity, Mid Cap Equity and Small Cap Equity strategies is \$10,000,000. The minimum account size for the Core Fixed Income, Core Plus Fixed Income, Intermediate Fixed Income, Long Duration Fixed Income and Low Duration Fixed Income strategies is \$25,000,000. The minimum account size for the Unconstrained Fixed Income strategy is \$100,000,000.

Separately Managed Account Clients

The minimum account size for separately managed accounts varies by program and investment strategy, but usually ranges from \$200,000 to \$3,000,000. In general, the minimum total asset size for Scout to participate in a separately managed account platform is \$10,000,000 in assets managed by Scout.

Private Fund

Scout, through its Reams division, acts as investment adviser to the Columbus Extended Market Fund, LLC, a private investment fund. The minimum investment size for the Columbus Extended Market Fund is \$1,000,000.

Other Investment Advice

Scout provides research, model portfolios and individual security recommendations to UMB Bank, n.a., an affiliate of Scout on a periodic basis. Scout does not set an account minimum for this advice. We also provide investment models, including purchase and sale information, to third-party financial intermediaries for use in unified managed accounts, otherwise known as UMAs. We do not set a minimum account size for underlying UMA participants. In general, the minimum size for Scout to participate in a UMA platform is \$10,000,000 in total assets using one of our investment models.

Item 8 – Methods of Analysis, Investment Strategies and Risk of Loss

Scout offers an array of investment strategies listed below, as well as customized strategies and socially responsible portfolios.

Equity Strategies

- Global Equity
- International Equity
- International ADR
- International SMID
- Large Cap Equity
- Mid Cap Equity
- Small Cap Equity

Fixed Income Strategies

- Core Fixed Income
- Core Plus Fixed Income
- Intermediate Fixed Income
- Long Duration Fixed Income
- Low Duration Fixed Income
- Unconstrained Fixed Income

Methods of Analysis

Global Equity

The Global Equity strategy is a multi-cap, global equity product that seeks to invest in high-quality companies located anywhere in the world through the use of portfolio construction and underlying investment strategies. The Global Equity strategy employs a combination top-down/bottom-up investment process. The management team establishes country and sector targets based on the global economy and secular trends. The management team will not ordinarily overweight any one sector by more than 150% or underweight by less than 50%. The management team, using its asset allocation process, establishes over/underweight sector targets as well as the U.S./International split. Once desirable sectors or industries are identified, the management team relies upon the underlying investment strategies from the different Scout management teams to place specific portfolio holdings.

International Equity and International ADR

The Scout International Equity and International ADR strategies seek to invest in established companies either located outside the U.S. or whose primary business is carried on outside the U.S. The management team identifies long-term themes based on economic, political and

market trends of the various countries that the strategies may invest in as well as which economic sectors are believed to present the best prospects in view of global, domestic and local economic conditions. Preferred country characteristics include political and economic stability as well as respect for the rule of law. The trends influence sector and country weightings as the team researches companies emerging from the intersection of preferred countries and favored sectors. The management team conducts a fundamental analysis of potential investments focusing on companies known for high-quality. Fundamental characteristics include a company's assets, personnel, sales, earnings and location. The management team also examines a company's growth potential, including earnings growth, stability of earnings growth and cash flow growth. The management team exhibits a preference for American Depositary Receipts (ADRs) to reduce cost and increase accounting transparency of the underlying holdings. The International ADR strategy invests only in ADRs, or other dollar denominated securities. The management team will not ordinarily invest more than 25% of the portfolio in any one country or more than 20% in emerging markets.

International SMID

The Scout International Small/Mid Equity strategy seeks to invest in small and mid-cap companies that are either located outside the U.S. or whose primary business is carried on outside the U.S. The management team identifies long-term themes based on economic, political and market trends of the various countries that the strategy may invest in as well as which economic sectors are believed to present the best prospects in view of global, domestic and local economic conditions. Preferred country characteristics include political and economic stability as well as respect for the rule of law. The management team selects companies that it believes offer good growth potential and are attractively priced relative to their fundamental characteristics. A company's growth potential includes earnings growth, stability of earnings growth and cash flow growth. The management team conducts a fundamental analysis of potential investments considering factors such as cash flow, financial strength, profitability and potential or actual catalysts that could positively impact share prices. The management team exhibits a preference for ADRs to reduce cost and increase accounting transparency of the underlying holdings. The management team will ordinarily diversify the portfolio amongst several different countries. The management team will not ordinarily invest more than 25% of the portfolio in any one industry or more than 20% in emerging markets.

Large Cap Equity

The Large Cap Equity strategy combines a fundamental, bottom-up approach to stock selection with a top-down focus on the macro economy. The management team believes that favorable companies have strong fundamentals, a sustainable competitive advantage and proven management teams. In addition, the management team places emphasis on portfolio construction as it considers the overall impact of adding or deleting a security from the portfolio. An internal research staff screens all publicly traded companies with market capitalizations similar to companies in the S&P 500 Index using the following criteria:

- Five-year historical Earnings Per Share (EPS) growth.
- Consistency of EPS growth.
- Sales growth.
- Return on equity.
- Debt-to-total-capital ratio.

The strongest companies in this analysis are further evaluated using various measures such as

absolute Price/Earnings (P/E) Ratio, relative P/Sales Ratio, and P/Book Ratio. The management team typically invests at least 80% of the portfolio in large cap securities. The management team may also invest up to 20% of the portfolio in international securities, including ADRs, in countries located in developed and emerging markets.

Mid Cap Equity

The Scout Mid Cap Equity strategy uses a combination top-down and bottom-up approach. The strategy invests primarily in companies with a market cap range between \$1.5 and \$17 billion. The management team may also invest up to 20% of the portfolio in international securities, including ADRs, in countries located in developed and emerging markets. The management team uses a top-down approach, monitoring over 100 economic and sentiment indicators on a weekly basis in order to assess the investment climate. The team combines this data with information gathered from other sources such as outside news and research services, and information from Scout's own research department in order to generate investment themes that influence sector allocation. In addition, the management team runs screens to generate stock lists for further research. Once a company or sector of the market has been identified as a possible investment opportunity, the management team conducts a disciplined bottom-up research process. The team may consider fundamental factors such as cash flow, financial strength, profitability, statistical valuation measures, potential or actual catalysts, accounting practices, management quality, risk factors such as litigation, the estimated fair value of the company, general economic and industry considerations, and additional information as appropriate. The team tracks the discount (or premium) of each stock compared to the estimated value. This is intended to identify opportunities and risks in real-time as prices move. The valuation estimate is based on the discounted earnings model for each stock. Companies that the management team believes possess both excellent fundamentals and valuations are usually given higher weights in the portfolio, although the risk of the individual security and sector weights are also considered when determining position sizes.

Small Cap Equity

The Small Cap Equity strategy invests in publicly traded securities with a market capitalization of \$3 billion or less. The management team may also invest up to 10% of the portfolio in international securities, including ADRs, in countries located in developed and emerging markets. The management team searches for companies that it believes are positioned to benefit from the emergence of long and short-term catalysts for revenue and earnings growth. The identified growth catalysts may be characterized as long-term and secular. Or, they may be short-term in nature and associated, for example, with a new product introduction or a cyclical industry upturn. Following the identification of well-positioned companies, the management team estimates the fair value of each candidate by assessing: margin structure, growth rate, debt level, and other measures which it believes influence relative stock valuations. The overall company analysis includes the assessment of the liquidity of each security, sustainability of profit margins, barriers to entry, company management, and free cash flow.

Core Fixed Income, Core Plus Fixed Income, Intermediate Fixed Income, Long Duration Fixed Income and Low Duration Fixed Income

The Core Fixed Income, Core Plus Fixed Income, Intermediate Fixed Income, Long Duration Fixed Income and Low Duration Fixed Income strategies attempt to maximize total return over a long-term horizon through opportunistic investing in a broad array of eligible sectors. The management team's investment process combines active duration and yield-curve management

with bottom-up issue selection, focusing on undervalued sectors of the fixed income market. The management team manages the duration of the portfolio by determining whether the bond market is cheap or expensive. The determination is made by comparing real (inflation-adjusted) interest rates available in the market to historical real interest rates. When current real rates are perceived to be relatively high, portfolio duration will be lengthened above benchmark levels and when current real rates are perceived to be below historical levels, portfolio duration is positioned below that of the benchmark. Yield-curve exposure is determined by comparing the current difference between 2-year and 30-year Treasury yields (the yield-curve spread) to historical norms and gradually increasing the bulleted or barbelled configuration of the portfolio as the yield-curve spread moves below or above normal levels. Once the management teams sets the market strategy, attention is turned to selecting the most attractive bonds for the portfolio. The management team approaches bond selection with several important assumptions. First, the belief that most bond investors pay a premium for yield. Therefore, the management team focuses on the portfolio's total return rather than simply building yield into portfolios. The management team also believes that the bond market is inherently volatile and, therefore, securities are purchased that the management team believes will outperform in a volatile interest rate environment. Finally, the strategies have a bias toward unique securities that are often mispriced, such as well-structured mortgage-backed securities, asset-backed issues, and secured and senior debt. After subjecting all bonds under consideration to an in-depth scenario analysis, the management team seeks to select those bonds with the highest risk-adjusted return.

The Core Plus Fixed Income strategy differs in sectors eligible for inclusion and can include non-dollar and high-yield securities.

The Intermediate Fixed Income, Long Duration Fixed Income and Low Duration Fixed Income strategies differ in the average duration constraints determined for portfolios.

Unconstrained Fixed Income

The Unconstrained Fixed Income strategy seeks to maximize total returns by systematically pursuing relative value opportunities throughout all sectors of the fixed income market. The management team's disciplined investment philosophy and process are used to identify and evaluate relative value opportunities and the "best ideas" are selected for use in portfolios. Although the product has historically focused on the high yield credit sector where attractive relative value opportunities have been available, the management team seeks opportunities in all sectors of the fixed income market including investment grade and high yield credit, government debt, agencies, mortgage-backed securities, asset-backed securities, emerging market securities, and non-dollar securities. Unlike a hedge fund, the strategy does not borrow money nor will it purchase securities on margin; however, derivative instruments may be utilized. Given the relative value and "best ideas" strategy, the strategy is not managed against a benchmark. Average portfolio duration is generally between 0 to 6 years.

Risk of Loss

Market Risks

Investing in securities involves risk of loss that you should be prepared to bear. Each investment strategy is subject to market, economic and business risks that will cause investment prices to fluctuate over time, sometimes rapidly and unpredictably. Different types of investments shift in and out of favor depending on market and economic conditions that may

affect individual companies or industries, or the securities market as a whole. At various times, stocks will be more or less favorable than bonds, and small company stocks will be more or less favorable than large company stocks. During general economic downturn in the securities markets, multiple asset classes may be negatively affected. Yields and principal values of debt securities (bonds) will fluctuate. Generally, values of bonds change inversely with interest rates. As interest rates go up, the value of bonds tends to go down. These fluctuations tend to increase as a bond's time to maturity increases, so a longer-term bond will decrease more for a given increase in interest rates than a shorter-term bond.

International Investing Risk

International investing poses additional risks. If a security owned by a portfolio is denominated in a foreign currency, the value of the foreign currency may fluctuate relative to the U.S. dollar and cause a loss to your portfolio. International markets may be subject to political instability, which may make foreign investments more volatile than investments in domestic markets. International markets are not always as liquid as in the U.S., sometimes making it harder to sell a security. In addition, foreign companies may not be subject to comparable accounting, auditing and financial reporting standards as U.S. companies, and therefore, information about the foreign companies may not be readily available. The risks of investing in foreign securities may be increased if the investments are located in developing countries or emerging markets. Security prices in emerging markets can be significantly more volatile than those in more developed markets, reflecting the greater uncertainties of investing in less established markets and economies. These risks are inherently passed on to our clients. The International Equity, International ADR and International SMID strategies invest primarily in international securities. The Global Equity and Unconstrained strategies may investment primarily in international securities.

Mid Cap and Small Cap Company Risks

Generally, mid cap and small cap companies have more potential for rapid growth. However, they often involve greater risk than large cap companies. These companies may not have the management experience, financial resources, product diversification and competitive strengths of larger companies. Therefore, the securities of mid cap and small cap companies are generally more volatile than the securities of larger, more established companies. Mid cap and small cap company stocks tend to be bought and sold less often and in smaller amounts than larger company stocks. Because of this, if Scout wants to sell a large quantity of a mid cap or small cap company stock, it may have to sell at a lower price than we might prefer, or we may have to sell in small quantities over a period of time. The Mid Cap Equity, Small Cap Equity and International SMID strategies primarily invest in mid cap and small cap companies.

Portfolio Turnover Risk

The Mid Cap Equity, Core Fixed Income, Core Plus Fixed Income, Intermediate Fixed Income, Long Duration Fixed Income, Low Duration Fixed Income and Unconstrained Fixed Income strategies may experience a high annual portfolio turnover rate. When a portfolio experiences a high portfolio turnover rate, you may realize significant taxable capital gains as result of frequent trading. The portfolio will also incur additional transactional cost in connection with buying and selling securities which may lower your account's overall return.

Mortgage and Asset-Backed Securities Risk

The Core Fixed Income, Core Plus Fixed Income, Intermediate Fixed Income, Long Duration Fixed Income, Low Duration Fixed Income and Unconstrained Fixed Income strategies may invest in mortgage-backed and other asset-backed securities. Movements in interest rates (both increases and decreases) may quickly and significantly reduce the value of certain types of mortgage and asset-backed securities. Mortgage and asset-backed securities can also be subject to the risk of default on the underlying mortgages or other assets. Mortgage and asset-backed securities can also be subject to the risk of default and prepayment.

High Yield Securities Risk

The Core Plus Fixed Income strategy may invest in high yield securities. The Unconstrained Fixed Income strategy may invest primarily in high yield securities. High yield securities involve greater risk than investment grade securities, including the possibility of default or bankruptcy. They tend to be more sensitive to economic conditions than higher-rated debt securities and, as a result, are generally more sensitive to credit risk than securities in the higher-rated categories.

Derivative Securities Risks

The Core Fixed Income, Core Plus Fixed Income, Long Duration Fixed Income and Unconstrained Fixed Income strategies may invest in derivatives, including credit default swaps and related instruments, such as credit default swap index products. These derivative securities may be used to enhance returns, increase liquidity and/or gain exposure to certain instruments in the market (such as the corporate bond market) in a more efficient or less expensive way. The Long Duration Fixed Income and Unconstrained Fixed Income strategies may also invest in interest rate derivatives to manage duration and yield curve exposure. Derivative securities are instruments or contracts the value of which is derived from the performance of an underlying financial instrument, asset, index or obligation. Credit default swaps and other types of derivative securities may involve greater risks than if a portfolio invested in the obligation directly. These instruments are subject to general market risks, liquidity risks and credit risks (including counter-party risks), and may result in a loss of value to your portfolio. The derivative securities market may also be subject to additional regulations in the future.

Item 9 – Disciplinary Information

We do not have any legal, financial or other disciplinary items to report to you.

Item 10 – Other Financial Industry Activities and Affiliations

The following companies have a relationship with Scout that is material to our advisory business:

- UMB Financial Corporation is a bank holding company and a financial holding company. Scout is a wholly owned subsidiary of UMB Financial Corporation. Certain directors, officers and employees of Scout are also directors and officers of UMB Financial Corporation.
- Scout Distributors, LLC provides marketing services on behalf of Scout. This includes meeting with our clients, introducing clients to us and acting as our agent to perform

marketing services for us. Employees of Scout Distributors receive referral fees and compensation from us for their services. Scout Distributors is a wholly owned subsidiary of UMB Financial Corporation.

- The Scout Funds are a series of registered investment companies. The Scout Funds consist of the Scout Stock Fund, Scout Mid Cap Fund, Scout Small Cap Fund, Scout International Fund, Scout International Discovery Fund, Scout Global Equity Fund, Scout Core Bond Fund, Scout Core Plus Bond Fund and the Scout Unconstrained Bond Fund. We act as the investment adviser to the Scout Funds. Certain directors, officers and employees of Scout are also trustees and officers of the Scout Funds.
- The Columbus Extended Market Fund, LLC is a private investment fund for which Scout acts as investment adviser and managing member.
- UMB Bank, n.a. is a national banking association, which offers a full range of banking services to commercial, retail, government and correspondent bank customers. UMB Bank, n.a. acts as custodian for some clients of Scout. The Investment and Wealth Management division of UMB Bank may recommend Scout as an investment manager to their customers. UMB Bank, n.a. is a wholly owned subsidiary of UMB Financial Corporation.
- UMB Fund Services, Inc. provides transfer agency, accounting and other administrative services to registered and unregistered pooled investment vehicles. UMB Fund Services is the transfer agent to the Scout Funds. UMB Fund Services also acts as administrator to the Columbus Extended Market Fund. UMB Fund Services is a wholly owned subsidiary of UMB Financial Corporation.
- UMB Distribution Services, LLC is a registered broker-dealer and acts as underwriter to the Scout Funds. Some employees of Scout and Scout Distributors are broker-dealer representatives of UMB Distribution Services. UMB Distribution Services is a wholly owned subsidiary of UMB Fund Services.
- Prairie Capital Management, LLC is a registered investment adviser that provides wealth management services and serves as investment manager to proprietary pooled investment vehicles, including hedge funds and private equity funds. Prairie Capital Management may recommend Scout as an investment manager to their clients. Prairie Capital Management is a wholly owned subsidiary of UMB Financial Corporation.

Item 11 – Code of Ethics, Participation or Interest in Client Transactions and Personal Trading

Code of Ethics and Personal Trading

Employees of Scout, and its affiliate Scout Distributors, may buy and sell securities for their own personal accounts that are also bought and sold for accounts managed by Scout. Scout has adopted and enforces a Code of Ethics that sets forth standards of conduct required for all employees of Scout and Scout Distributors. Any employee with access to non-public information about our clients' holdings or trading, as well as any employee who is involved in, or has access to, our investment recommendations, is subject to personal trading restrictions and

reporting. These employees are required to provide an initial and annual holdings report showing securities they personally own. On a quarterly basis, they are also required to submit reports showing their personal trades. These employees must receive prior authorization before buying or selling certain securities for their personal account. Authorization is granted only if the security is not held in a client account or, if the security is held in a client account, authorization is granted only if the employee's trade meets specific requirements designed to limit potential conflicts with our clients' investments. These requirements vary depending upon the nature of the employee's responsibilities. They include holding periods, a minimum market capitalization for investment and limitations on timing of the trade in relation to trading in client accounts. These personal trading restrictions and reporting obligations are not applicable for employee investments that we believe do not present a significant conflict with our client's investments (for example, mutual fund purchases/redemption and trades that are not voluntary on the part of the employee.) On a quarterly basis, compliance officers review reports to seek to confirm that employees have followed our personal trading procedures as well as to review for compliance with our other policies and procedures. You can receive a copy of our Code of Ethics by calling us at 877.726.8842.

Participation in Client Transactions

Scout provides investment recommendations to its affiliate, UMB Bank. These recommendations include securities that we may also recommend for your account. Therefore, UMB Bank may be buying and selling the same securities at the same time that we are buying and selling securities for your account. We only provide investment recommendations for securities that we believe have a high volume of trading so that our recommendation will not significantly impact our trading for your account.

Some clients of Scout invest in the Scout Funds, a series of registered investment companies for which Scout acts as investment adviser. We receive an investment management fee from the Scout Funds based upon a percentage of each fund's average daily net assets, as described in each fund's prospectus. We will not charge you a separate advisory fee on any of your assets that we manage that are invested in the Scout Funds. UMB Bank and UMB Fund Services receive separate fees from the Scout Funds for providing custody, transfer agency, administration, fund accounting and other services to the Scout Funds.

Clients of Scout may also invest in the Columbus Extended Market Fund, LLC, a private investment fund for which Scout acts as investment adviser and managing member. We do not receive a direct fee from the fund. Instead, the fund is used as an investment vehicle for some of our institutional clients from which we receive an advisory fee. UMB Bank and UMB Fund Services also receive separate fees from Scout for providing custody, administration, fund accounting and other services to the Columbus Extended Market Fund.

Item 12 – Brokerage Practices

Selection of Broker-Dealers

Scout seeks to obtain best execution for our clients' trades. Best execution means the best available execution of securities transaction for your account consistent with the circumstances that exist at the time. Scout, including its Reams Asset Management division (Reams), uses a number of quality factors in selecting broker-dealers to execute your account's trade. These include the following:

- Our perception of the broker-dealer's financial well-being.
- The broker-dealer's overall level of trading expertise and execution capability.
- The broker-dealer's infrastructure and compatibility with existing systems.
- Access to research and brokerage services, including the quality of research and other information available from the broker-dealer.
- Prices and commissions at which your account's trades are executed.
- Prices quoted by the broker-dealer compared to other quotes received by other broker-dealers.
- The ability of the broker-dealer, or trading system, to maintain confidentiality while executing trades.
- The willingness of a broker-dealer to enter into difficult transactions or process smaller orders.
- The broker-dealer's timeliness and responsiveness in placing trades.
- The ability of the broker-dealer to place trades in multiple markets and access to over-the-counter trading platforms and other electronic trading systems.
- Our overall perception of the broker-dealer's performance in executing our clients trades.

When we select a broker-dealer to execute a trade for your account, we may use one or more of these factors. No single factor is determinative. We will not necessarily seek to obtain the lowest commission, but rather try to obtain the best overall execution. For transactions in equity securities and U.S. Government securities executed in the over-the-counter market, purchases and sales are transacted directly with principal market-makers, except in those circumstances where, in our opinion, better prices and executions are available elsewhere. Fixed income trades are placed by our Reams division. Within the Reams division, we use minimum cost broker-dealers to the fullest extent possible. When we feel it is in your best interest, we will attempt to get bids from at least two broker-dealers. However, due to the nature of fixed income trading, often we do not seek multiple bids, particularly if we believe it is not beneficial to your trade. Over the counter derivative arrangements are entered into with a bank or broker-dealer acting as principal counterparty. These arrangements are entered into on behalf of our clients with only a small number of approved counterparties. We cannot guarantee that these counterparties will be able to meet their financial obligations. However, we will periodically, and no less often than annually, review the financial well being of these approved counterparties.

Research and Other Soft Dollar Benefits

Scout considers the quality of research and brokerage services (soft dollar services) it obtains from broker-dealers when we select broker-dealers to execute your account's trades. Soft dollar services include proprietary research, or research that is developed by the broker-dealer executing a trade. We also receive third-party research, or research that is provided by the broker-dealer executing a trade, but created by someone else. In this arrangement, a portion of your commission is used to pay the third-party for the research. This kind of third-party research arrangement has the potential to further our ability to obtain best execution while still obtaining beneficial soft dollar services. The types of both proprietary and third-party soft dollar services include:

- market data, such as exchange data, financial charting tools, newsletters, and comparative performance analysis
- information on particular companies or the advisability of purchasing and selling particular securities
- access to research analysts or company representatives
- access to Bloomberg terminal data and trading functions, and

- services relating to trade execution, clearance, settlement or other trading matters.

The soft dollars services are used by us to make investment decisions for you and better execute trades for your account. When we use your account's brokerage commissions to obtain soft dollar services, we receive a benefit because we do not have to produce or pay for the research, products or services. Therefore, we have an incentive to select broker-dealers based upon our interest in receiving the soft dollar services, rather than on your interest in receiving the most favorable execution. We may cause your account to pay commissions that are higher than those charged by other broker-dealers (pay up) in return for soft dollar services. An important part of our broker-dealer selection is our evaluation of the benefits received by you through our use of soft dollar services. We will only obtain soft dollar services if we determine that it is eligible under Section 28(e) of the Securities Exchange Act of 1934. We also determine that the soft dollar services provide lawful and appropriate assistance in the performance of our investment management services and that the commissions paid are reasonable in relation to the value of the soft dollar services that we receive. Scout develops a soft dollar budget based upon our perceived value and desired receipt of the soft dollar services. This soft dollar budget guides our selection of broker-dealers. It is often difficult to place a dollar value on the soft dollar services we obtain. Our evaluation is primarily based on the professional opinion of our employees who are responsible for approving and reviewing the receipt of soft dollar services. Soft dollar services benefit all of our clients and not only those clients that paid the commission. We do not seek to allocate the benefit of soft dollar services to client accounts proportionate to the commissions which generate the soft dollar services. Our Reams division does not pay up for soft dollar services. However, the Reams division may consider company reports and other information obtained from broker-dealers as a factor in determining the best execution of fixed income trades. Our fixed income clients may also benefit from soft dollar services that are paid by other clients' commissions.

Directed and Designated Broker-Dealers

Scout permits clients to direct or designate a particular broker-dealer(s) to execute trades for their account (directed brokerage). Clients will often use directed brokerage through a wrap fee platform, or similar program, where commission expenses are bundled together with the overall fee paid to a financial representative or custodian. Clients also use directed brokerage through commission recapture programs and other expense sharing arrangements. When you use directed brokerage, we will ordinarily place your trades differently than we place trades for other clients that do not direct or designate us to use a particular broker-dealer. When you use directed brokerage, we will generally not be able to negotiate commissions on your behalf for those trades. We may not be able to obtain volume discounts on commissions for those trades by aggregating your orders with our other clients. You may also not receive other benefits available, such as the savings on execution costs and ability to use specialized trading venues. Therefore, your trades may not receive as favorable an execution as we might otherwise be able to achieve if you did not direct or designate a particular broker-dealer. For clients that have a designated broker-dealer through a wrap fee platform, or similar program, Scout may still place trades with other broker-dealers. We will do this when we reasonably believe that it is necessary in order to obtain best execution. In deciding this, we consider efficiency, execution capabilities, the liquidity of the security and other relevant factors. If we place a trade through another broker-dealer, your account may be charged commissions or fees that are not included in the wrap fee you pay to your financial representative or custodian. If you instruct us to use directed brokerage subject to best execution, we will ordinarily place your trades in the same manner as our other clients. However, we cannot guarantee that we will be able to place a specific percentage of your account's trades with the designated broker-dealer(s). If your

account's assets are subject to the Employee Retirement Income Security Act of 1974 (ERISA), you and/or the plan's governing body must determine that the directed brokerage is appropriate for the account. It is also your responsibility to determine that the use of directed brokerage is reasonable in relation to the benefits received by the plan and that any benefits from the directed brokerage will be for the sole benefit of plan participants.

Aggregation, Allocation and Placement of Trades

Aggregation of Trades

When we believe it is in your best interest, we may join your order with other clients to purchase and sell the same investment(s), otherwise known as an aggregated order. To the extent practical, trade orders involving the same security (or group of securities) for clients using different investment strategies may be aggregated. At times, different portfolio managers may place orders to buy or sell the same security with different price expectations. For example, one portfolio manager may place a higher value on a particular security, and therefore is willing to pay more for the security than another manager. In this event, the purchase or sale order may be aggregated based upon the accounts managed by the portfolio manager, rather than aggregated with all of the orders buying or selling the same security. We may choose not to aggregate orders for clients in wrap fee platforms, or similar programs where you have a designated a broker-dealer to execute your orders, with clients on different platforms or with clients who do not use a designated broker-dealer. We may also choose not to aggregate your order with other clients if we feel the order size for your account does not warrant the trading costs involved in executing the trade.

Allocation of Trades

Securities acquired or proceeds obtained from the aggregated order will be equally distributed between you and the other clients participating in the transaction. Usually, this means that we will allocate aggregated orders on a pro-rata basis. Exceptions may be made, amongst other things, due to unique investment objectives, the size of the order in relation to your account size or where a pro-rata allocation is impractical or undesirable for one or more client accounts. If an aggregated order cannot be completely filled, the completed order will generally be allocated pro rata based on the original order size. In cases where client accounts would receive less than a desirable number of securities due to the incomplete fill, the aggregated trade may be allocated to client accounts on a random basis or as deemed suitable by the portfolio manager.

Placement of Trades

Scout will place trades in a manner that is fair and equal to all clients over time. A purchase or sale order for a single account will generally be placed based upon when the order is generated. Frequently though, trade orders are created for multiple clients or groups of clients buying or selling the same security. We have developed written equity trading procedures covering the timing of trades between different groups of client accounts. These different groups of client accounts include:

- Institutional Accounts: These accounts typically include mutual funds, pension plans, private funds, foundations, endowments, but can also include individuals that do not hire Scout through a financial intermediary and individually managed accounts that do not have a platform designated broker-dealer, and

- **Wrap Accounts:** These clients typically include wrap fee accounts and other managed accounts that have a platform designated broker-dealer. For purposes of our trading procedures, these accounts also include unified managed account (UMA) platforms.

When we buy or sell the same security (or group of securities) for both client groups, we randomly decide whether trades for the Institutional Accounts or Wrap Accounts will be placed first. For Institutional Accounts, we then randomly decide the order in which clients with directed brokerage will be placed in relation to other Institutional Accounts without directed brokerage. For Wrap Accounts, we then randomly decide the order in which the trades will be placed with the directed or platform selected broker-dealers (or in the case of UMAs, the order in which the trade information is communicated to the platform representative.) On occasions, client investment guidelines, cash (availability or needs) or other practical considerations may cause us to vary from these procedures. For example, if we are placing trades for a foreign security, and your account is not eligible for foreign securities, we may place your trade in the directed account group in order to purchase a dollar denominated version of the foreign security. Often times, we place orders where a client has a specific need. For example, trades may be placed during the initial investment of the account or to rebalance the account due to client investment guidelines. In these cases, we will place the order when it is created by the portfolio manager. When we provide purchase and sale information to third-party intermediaries in a UMA platform, the intermediary retains investment discretion. If the intermediary decides to buy or sell the security, they may do so prior to, or at the same time that we are also placing the same or similar trades for our clients. This may affect the availability of securities and the prices we are able to obtain.

Scout, through its Reams division, has also developed written fixed income trading procedures. These procedures are also designed to place trades in a manner that is fair and equal to all clients over time. Fixed income trades are placed in a manner which tends to structure portfolios with matching objectives in a similar fashion, while observing constraints of minimum position size, maximum position number, liquidity requirements and maintaining individualized treatment of portfolios in the light of each client's unique circumstances. Portfolios with similar objectives may become different due to investment policy differences, tax considerations, unique inflows and outflows, and differences in absolute size. Trades may also be allocated to some client accounts and not others due to the adjustments that are required to offset these differences.

Use of Converted ADRs

Scout may purchase foreign securities on behalf of clients through the use of American Depositary Receipts, Global Depositary Receipts or similar securities (ADRs). We also use converted ADRs, where ordinary shares of a foreign issuer are purchased and deposited with a bank and converted into a dollar dominated ADR. We do this when we believe there is not sufficient liquidity in the market or when the U.S. markets are not open. These transactions typically involve foreign exchange fees, ADR conversion fees and related costs which are reflected in a net price that you pay or receive.

IPOs and Restricted Securities

Initial Public Offerings (IPOs) and restricted securities are offerings of securities that frequently are of limited size and limited availability. IPOs may also become "hot issues," which are offerings that trade at a premium above the initial offering price. In some situations, we may receive fewer shares than we requested. In these cases, we will allocate the remaining shares

in accordance with the aggregation allocation procedures described above. In general, we will not purchase equity IPOs or restricted securities for individuals.

Cross-Trades

When we believe it is in your best interest, Scout may arrange for your trade to be executed between one or more of our other client accounts (cross-trade.) When conducting a cross-trade, we are acting on behalf of two (or more) clients with potentially adverse interests. Therefore, we will arrange the cross-trade to be effected at an independently determined market price. We will not receive a commission or other consideration (other than our usually advisory fee) for conducting the cross-trade. We will only conduct a cross-trade for a security where market quotations are readily available.

Item 13 – Review of Accounts

Scout's portfolio managers are primarily responsible for reviewing and managing client accounts in accordance with your investment objectives and guidelines. Various members of our staff, including the Chief Compliance Officer, the Chief Operating Officer and the Director of Client Services are responsible for establishing procedures for the review of client accounts for consistency with any written client investment guidelines. Within Scout's Reams Asset Management division (Reams), the President, Director of Client Services and Director of Portfolio Accounting are responsible for establishing these procedures for our fixed income clients. In general, Scout, including Reams, uses automated systems integrated into one of our order management systems to monitor compliance with investment guidelines. If an investment guideline is breached, these systems issue reports that are communicated to the individuals mentioned above. Additional reviews may be performed periodically by portfolio managers and traders to monitor your portfolio's position weightings compared to other portfolios using a similar investment strategy.

Scout provides institutional clients with periodic reports that usually include account holdings, portfolio commentary and performance information. Other information may be included as agreed to between us and the client. These reports are provided on a monthly or quarterly basis. We also provide a variety of reports to the Scout Funds. These include investment reports, administrative and financial reports, compliance reports and other information provided quarterly to the Scout Funds' board of trustees. Separately managed account clients typically receive investment reports directly from your financial representative. For more information, please contact your financial representative.

Item 14 – Client Referrals and Other Compensation

Scout has hired HRC Portfolio Solutions, LLC (HRC) to market our equity advisory services, primarily to national brokerage firms. HRC's fees are based upon a percentage of the advisory fees received by Scout from those clients who are either introduced by HRC or become clients of ours through specific separately managed account programs to which HRC markets. All fees are paid entirely by us and do not change the advisory fee you pay to us. Additionally, employees of Scout Distributors, our affiliate, receive referral fees and compensation for soliciting clients on our behalf. These arrangements are governed by Rule 206(4)-3 under the Investment Advisers Act of 1940.

Item 15 – Custody

Scout may be deemed to have custody of client assets because we receive a direct deposit of fees or because your custodian is affiliated with us. In those cases, we will confirm that your assets are held with a qualified custodian. The custodian will send quarterly, or more frequent, account statements and you should carefully review those statements. If you also receive account statements from us, we urge you to compare the account statements you receive from your qualified custodian with the account statements you receive from us.

Item 16 – Investment Discretion

When Scout has been given investment discretion over an account, we have the sole authority to buy and sell securities in your account without having to consult with you prior to a trade. Our discretionary authority is provided by you, or your financial representative, through a limited power of attorney that is usually contained in the agreement that you or your financial representative signs with us. Our discretionary authority is customarily limited only by the investment guidelines or restrictions that you, or your financial representative, place on your account. Additionally, you, or your financial representative, may direct the purchase, sale or retention of specific securities for certain purposes, such as tax management or opening or closing your account. We do not usually act on behalf of our clients in connection with legal proceedings, including class action settlements, involving securities held in client accounts. We recommend that you consult with your legal counsel for these matters.

Item 17 – Voting Client Securities

For those clients who have given Scout the authority to vote on proxy matters in securities held in their account, Scout has adopted policies and procedures reasonably designed to vote securities in the best interest of the client. Voting rights are exercised by us on issues that we believe will have an effect on the value of the security. We vote securities in an attempt to maximize or protect the value of the security. We look at both the short-term and long-term consequences of the voting matter. Scout may not vote every proxy matter if we determine in good faith that refraining from voting is in your best interest. Examples include:

- where casting a vote may require extraordinary expense, such as traveling to a foreign country to vote in person or retaining local powers of attorney;
- when ballots are not received on a timely basis in order to allow us to vote, or make an informed decision on the voting matter;
- where there is inadequate information on the proxy item;
- where it appears to be no relationship between the proxy voting matter and underlying investment's value; or
- where casting a vote may cause us to lose the ability to trade the security.

Scout has adopted standard proxy voting guidelines. We have also retained a third-party proxy advisory firm to assist in the collection and review of ballots and to provide us with voting recommendations based upon our voting guidelines. However, we believe that these standard voting guidelines should be applied with a measure of flexibility. Therefore, we may vote your securities other than as described in our standard voting guidelines, if we reasonably believe that is in your best interest to do so. In these situations, a portfolio manager or Scout's Chief Investment Officer will submit the voting determination to our Proxy Voting Committee for review and approval. You may direct how Scout will vote securities for your account by providing us

with your own written proxy voting guidelines.

At times, a proxy vote may present us with the potential for a conflict of interest between Scout and our clients. Examples include:

- where the issuer of a security is also a client of Scout or of one of our affiliates;
- where the issuer has a material interest in Scout or one of our affiliates;
- if an officer or director of the issuer is an officer or director of Scout or one of our its affiliates; or
- or where the issuer is Scout or one of our affiliates.

If a security vote presents the potential for a material conflict of interest, we will vote the matter in accordance with the recommendation of the third-party proxy advisory firm based upon our standard voting guidelines. If no such recommendation is available and our standing voting guidelines do not cover the matter, we will refer the vote to you and we will vote in accordance with your response. You may receive a copy of our Proxy Voting Policy and information about how we voted securities for your account by calling us at 877.726.8842.

Item 18 – Financial Information

We are required to provide you with certain financial information or disclosures about our financial condition. We do not believe that we have a financial commitment that impairs our ability to meet contractual and fiduciary commitments to you and we have not been the subject of a bankruptcy proceeding. We do not require or solicit pre-payment of any type of client fees in advance.
