www.ipcanswers.com

Form ADV, Part 2A – Appendix 1

October, 2012

This Wrap-Fee Program Disclosure Brochure provides information about the qualifications and business practices of Independent Portfolio Consultants, Inc. and its Managed Assets Program that you should consider before becoming a client. If you have any questions about the contents of this brochure, please contact **Independent Portfolio Consultants, Inc. (“IPC”)** at the address listed above or call us at (800) 346-4570 or send us an e-mail at customerservice@ipcanswers.com. The information in this brochure has not been approved or verified by the United States Securities and Exchange Commission or by any state securities authority.

As an SEC Registered Investment Advisor, additional information is also available about IPC on the SEC’s website at www.adviserinfo.sec.gov. However, registration does not imply a certain level of skill or training.

2. Summary of Material Changes

The following are summaries of material changes to the IMAP Form ADV Part 2A-Appendix 1 Disclosure Brochure that have occurred since the March, 2012 version that was previously provided.

IPC has introduced the Multiple Manager Strategy Portfolio (“MMSP”) services that consolidate the investment options for its Multiple Strategy Portfolio, Model Manager Portfolio and One Account Solution services. This is an expanded version of the program that offers Clients more flexibility in the selection of investment strategies and asset allocation of their portfolios. The services for Clients already participating in any of the investment options above will not change as a result of the consolidation. Additionally, current Clients who selected individual Investment Managers to manage their accounts will not be affected by this change.

The following sections of the Disclosure Brochure have been revised to reflect these changes.

- Item 4 Services, Fees, and Compensation
- Item 5 Account Requirements And Types of Clients
- Item 6 Portfolio Manager Selection And Evaluation
- Item 9 Additional Information Subsections – Review of Client Accounts

This Brochure or any IPC Brochure may be requested by either downloading it from the SEC’s website at www.adviserinfo.sec.gov or you may contact Independent Portfolio Consultants, Inc. (“IPC”) at 561-912-1040 or customerservice@ipcanswers.com to request an updated copy of this Brochure.

4. Services, Fees and Compensation

Independent Portfolio Consultants Inc. (“IPC”) specializes in providing investment advisory, consulting and investment management services through its managed accounts programs to independent Wealth Management Companies and their clients. The Wealth Management Companies that IPC’s services include nationally recognized insurance companies, registered investment advisers, brokerage firms, and financial/estate planning organizations. IPC assists Wealth Management Companies to custom-build and brand their own wrap-fee programs, as well as, or in addition to, utilizing IPC’s managed asset wrap-fee program(s) directly. These Wrap-Fee Programs provide Clients with investment advisory, consulting and execution services for a single "wrap" fee, typically a percentage of assets.

Throughout this Wrap-Fee Program Brochure (“Brochure”), these entities will be referred to as “Wealth Management Companies” and the individual representatives of those entities will be referred to as “Wealth Managers” or “Investment Executives.” Through these Wealth Management relationships, IPC services both individual and institutional clients, including corporate pension and profit sharing plans and nonprofit/charitable organizations. IPC also provides investment advisory, consulting and investment management services directly to individual and institutional clients.

IPC is independent and employee owned, with corporate headquarters in Boca Raton, Florida, and a history that dates back to 1987. The Firm has achieved a solid history of supporting wrap-fee programs by employing a highly skilled group of experienced professionals, supported by an exceptional client service team. Individuals associated with IPC that provide these services are licensed, qualified and authorized to provide advisory services as investment adviser representatives. Throughout this Brochure, these individuals will be referred to as “IPC Consultants.”

The Independent Managed Assets Program and its services are described below. However, for information on other IPC wrap-fee programs, please contact IPC as noted in the information provided on the front cover of this Brochure.

INDEPENDENT MANAGED ASSETS PROGRAM SERVICES

Independent Portfolio Consultants, Inc. offers the Independent Managed Assets Program (“IMAP”) that is designed for Wealth Management Companies and their Clients who seek personalized portfolio management services. This includes Clients who desire assistance in determining appropriate investment objectives, taking into account their overall financial circumstances, including objectives, risk tolerance and tax status. Clients may also desire assistance in: (1) choosing an appropriate investment manager(s) and/or investment strategy(ies); (2) monitoring the results of their investment account; and (3) making future investment management decisions, based both on account performance and upon changes in the Client’s overall financial circumstances. IMAP is an advisory wrap-fee program that provides this complete range of services in a customized portfolio.

IPC Consultants, working with Investment Executives, begin by reviewing each Client's overall financial circumstances and risk tolerances and identifying the Client's investment objectives. Then, they assist the Client in the selection of one or more appropriate investment management firms ("Investment Managers") and/or investment strategies from among those firms which have been accepted by IPC into IMAP. On an ongoing basis, IPC assists in monitoring the Client's portfolio performance. The complete range of services that IPC provides in IMAP include:

- Due diligence on Investment Managers and investment strategies offered in IMAP
- Development of the Client's investment policy
- Consultation with the Client on selection of one or more Investment Managers and/or investment strategies in which the account is to be managed
- IPC monitors the Investment Manager(s) and/or investment strategy(ies) selected and reports their progress to the Client quarterly
- Client is provided Quarterly Statements for their account(s)
- IPC provides Ongoing Consulting and Advisory Services that will consult or meet with the Client to periodically review the Client's account(s) and investment objectives based upon the Client's schedule
- Brokerage Services through an agreement with Managed Account Services, LLC ("MAS")

Separately Managed Account Portfolio Services

IPC's separately managed account is a privately managed investment portfolio of assets under the management of a professional investment firm. This managed account offers Clients the freedom and ability to establish guidelines for the investments within the portfolio, and any decision made by the Investment Manager is based on the individual investor's goals and objectives.

Clients select an Investment Manager who then becomes responsible for day-to-day investment decisions, supported by a team of investment professionals, operations and administrative staff. Separately managed accounts ("SMAs") differ from pooled vehicles such as mutual funds in that each portfolio is unique to a single account.

With this managed account, IPC provides the Client with on-going access and communication with the Investment Manager selected to manage their portfolio. IPC's Ongoing Consulting Group works with the Investment Executive and the Client to set up and coordinate Client reviews of their IMAP accounts.

Client Customization

IPC offers Clients a higher level of customization that can be closely aligned with a Client's specific return objectives, risk tolerance and special circumstances than could be achieved with a pooled vehicle. This high level of customization is particularly important when it comes to individual tax planning for Client's investments.

With separately managed accounts, Clients have a greater degree of control over these decisions, in that they are more closely attuned to the objectives and constraints set forth in the investment policy statement.

The Investment Manager selected by the Client to manage the account has the responsibility and discretion to make investment decisions for the Client's account based upon the Client's specific goals and objectives set forth in the Client's investment policy statement. The decisions can be unique at the account level and may, therefore, vary from one investor to another.

IPC assists the Client in monitoring the results of their investment account(s) in relation to their particular goals and objectives stated in their Statement of Investment Policy. The Client's Investment Executive and the IPC Ongoing Consulting Group will consult with the Client concerning the Investment Manager(s)'s investment performance, and assist the Client in making future investment management decisions, based both on account performance and upon changes in their overall financial circumstances.

Multiple Manager Strategy Portfolio Services

The Multiple Manager Strategy Portfolio ("MMSP") is an investment portfolio that may use one or more investment strategies that use various equity and fixed income asset classes and investment approaches. All the investment strategies are contained in one unified managed account ("UMA") rather than having each investment strategy held in multiple separately managed individual accounts. The MMSP gives the Client the ability to obtain multiple managers, affordable diversification, customization and consolidated reporting all in one account.

Each Client's MMSP account is managed to replicate one or more investment strategies that are typically provided by various third party investment advisory firms ("Model Managers"). The Model Managers provide IPC with a "Model Portfolio," which is a list of securities that replicates the managers' actual investment strategy. IPC then acts as Overlay Portfolio manager for Client MMSP accounts, implementing the Model Managers' model portfolio for Client accounts. Each of the Model Manager's strategies selected will represent a portion of the overall Client MMSP account.

Client Customization

The MMSP offers Clients who wish to personalize their investment portfolios more flexibility by providing the ability to customize their investment account based on the specific goals, risk tolerance and timeframe related to the assets they wish to place in that account. This structure also offers the ability to use asset allocation strategies which consider the historic rates of return of different asset classes over long periods of time. This may be useful for a Client seeking to increase or reduce the account's risk or portfolio volatility.

IPC as Overlay Portfolio Manager

As the Overlay Portfolio Manager, IPC has discretion over the MMSP account. IPC contracts with Model Managers who provide their investment models for the MMSP. IPC uses these models in managing a Client's account. However, under certain circumstances and at the Client's request, IPC may also act as a manager in an MMSP account. (See the section on *Blue Shores Capital*).

IPC selects the Model Manager Models for the MMSP based upon their specialized management styles and strategies. The securities selected for the Client's MMSP are chosen by the Model Manager from that particular manager's investment model or focus list. Changes in a model portfolio are based upon the Model Manager's Investment Policy, Research and/or Focus Committees' decisions.

However, Client's goals, risk tolerance, timeframe and the amount of assets allocated to a model may impact the implementation of the investment process. The impact may alter the performance of the individual Client account in relation to the model. The presence or absence of investment restrictions; the timing of trades and the presence of deposits and withdrawals will also affect performance.

While both cash and securities may be used to fund MMSP accounts, it is the intent of IPC that all securities so received be liquidated prior to, or simultaneous with, the purchase of securities for the account.

Exchange Traded Funds

When appropriate, and requested by the Client, the MMSP may use Exchanged Traded Products such as equity or fixed income Exchange Traded Funds ("ETFs"). ETFs, consisting of fixed income products can be added to an equity portfolio to create a balanced account approach, whereby the account has an allocation of both equity and fixed income. The Investment Executive, generally working in conjunction with IPC Consultants, will assist each Client in the selection of the investment strategy that is appropriate for the Client's investment objectives.

MMSP Risk

The risk of the MMSP is that the allocation combination of investment strategies chosen by a Client may not achieve their intended objective to either increase or decrease the risk or volatility of the account. Additionally, the risk associated with this MMSP strategy allocation, depending upon the size of the account, is that a balanced account with only two strategies may be limited to one large capitalization equity investment strategy. Thus, while the fixed income sector is broadly diversified through the Model Manager(s)'s use of Exchange Traded Funds (ETFs) for fixed income, the equity sector will be limited to one large capitalization growth, value or core equity strategy. Consequently, such an account with two strategies may not provide the Client with the equity diversification that other investment products would provide, including various

combinations of equity mutual funds. However, a \$500,000 all equity account will provide the Client with the diversification of two different equity strategies within one account.

Emerging Manager Multiple Strategy Portfolio Services

Emerging Manager strategies are available in the MMSP. The Emerging Manager strategy(ies) is specifically designed to provide managed account services to those Clients who seek additional equity diversification by utilizing one or more emerging manager styles or strategies in an MMSP account. The Emerging Manager is an investment strategy that uses investment models that are able to provide for additional diversified management using various asset classes and strategies provided by investment firms considered to be “Emerging Managers” (described below). For clarification, an investment model is a master investment portfolio. Client portfolios are designed to look like and attempt to replicate the master investment portfolio of the Emerging Manager’s style or strategy. However, there may be other considerations that may impact the investment process and performance. Such other consideration could include: (1) the size of the Client’s account(s); (2) the presence or absence of investment restrictions; (3) the timing of trades and (4) the presence of deposits and withdrawals.

Emerging Managers are defined differently by various entities and those definitions change over time. Most definitions revolve around assets under management, performance history, employee ownership and minority ownership. The review of Emerging Managers is generally dynamic and complex and simply utilizing a quantitative data base as a selection method may not be appropriate. For a number of reasons, qualitative insight plays a prominent role, particularly at the start.

Emerging investment firms tend to be companies where investment performance takes precedence over asset-gathering, where niche or innovative investment strategies are designed to capture unrecognized market inefficiencies. As well, people are highly motivated to succeed through ownership structures representing financial incentives as well as the psychological incentives of working within an entrepreneurial culture. Emerging investment firms frequently are still emerging precisely because they emphasize performance over asset-gathering – in fact, the very reasons why these companies offer significant potential often are the same reasons why they have not yet been discovered.

There are three main reasons that potential clients may choose to consider Emerging Managers: (1) Empirical data suggests that small firms outperform their larger counterparts; (2) Emerging Managers tend to have a hunger and drive to succeed, often to the benefit of their investors; (3) The nimbleness of Emerging Managers allows them to take advantage of market opportunities. However, there is no guarantee that by engaging an Emerging Manager that any of these reasons will actually be realized in the performance results of a Client’s portfolio.

These Emerging Manager multiple diversified strategies are contained in a single custodial account, hence the name “Multiple Manager Strategy Portfolio.” The primary purpose for adding an MMSP is to provide further diversification to the Client’s portfolio.

IPC uses model portfolios provided by Emerging Managers who are registered investment advisers. However, CbF Advisors, LLC (“CbFA”) will act as Sub-Advisers to IPC in the Emerging Manager MMSP investment styles and strategies. IPC has entered into a strategic alliance with CbFA. CbFA will utilize the services of Clearbrook Investment Consulting (“CIC”), a related company and a Securities and Exchange Commission registered investment advisor, for Emerging Manager research and due diligence.

CIC has a 25-year history as an institutional consultant with over 30 billion dollars of assets under consultation. CIC has a dedicated Emerging Manager research effort. As a related company, CbFA has full and timely access to the CIC Emerging Manager research and due diligence data base. IPC, in conjunction with CbFA, will use this proprietary information to select appropriate Emerging Managers for IPC’s Emerging Manager MMSP. CbFA will negotiate the Emerging Manager sub-advisory contracts and arrange for the Emerging Manager portfolio models to be delivered to IPC. As Overlay Portfolio Manager, IPC has discretion over the Emerging Manager MMSP account(s).

While both cash and securities may be used to fund MMSP accounts, it is the intent of IPC that all securities so received be liquidated prior to, or simultaneous with, the purchase of securities for the account.

Tax-Transition Management Portfolio Services

Tax-Transition Management (“TTMP”) is an investment management strategy in an MMSP designed to provide tax-efficiencies for Clients who seek to minimize their capital gains when changing investment strategies or advisors. The strategy’s objective is to transition Clients’ portfolios from significant, low-cost basis, or concentrated common stock positions to pre-determined, targeted, diversified portfolios of common stocks in a highly tax-sensitive and efficient manner. The speed of the transition is dependent upon the Client’s annual capital gains budget. As portions of the low-cost basis stock positions are sold, the proceeds are systematically reinvested in the common stock positions as identified in the targeted portfolio.

IPC assists the Client in developing a Statement of Investment Policy and an asset allocation guideline, while the Client sets their capital gains budget for the transition. IPC provides various investment styles using other registered investment advisers who act as Sub-Advisers to IPC. IPC assists the Client to customize their targeted portfolio based upon the Client’s own risk tolerances and objectives.

IPC employs as a Sub-Adviser an Overlay Tax-Transition Portfolio Manager who monitors and coordinates the trading done within each of the investment styles to ensure that decisions are being made in the most tax-efficient manner. The Overlay Tax-Transition Portfolio Manager also monitors and estimates the tracking error between a Client’s current portfolio

and the customized targeted portfolio. Once the concentrated position is completely liquidated, the Client's current portfolio will match the selected Sub-Advisers' investment styles within the targeted portfolio.

IPC selects the Sub-Advisers for this product based upon their specialized management styles and strategies. The securities selected for the Client's Tax-Transition Management Portfolio are chosen by the Sub-Adviser from that particular manager's investment model or focus list. All changes in a Sub-Advisers portfolio are based upon the Sub-Adviser's Investment Policy, Research and/or Focus Committees' decisions.

INDEPENDENT MANAGED ASSETS PROGRAM FEES

IMAP is an advisory wrap-fee program offered on a discretionary basis. The fee schedule applicable to an IMAP Account is determined based on the type and size of the account as set out below. Except as otherwise noted, fees are calculated per Investment Manager, for each separately managed account, based upon an overall Client relationship (i.e., total amount of assets and accounts to be managed).

All fees are negotiable based upon a number of factors including, but not limited to, the Client's objective, family or other related accounts, amount of assets under management, the anticipated level of transactions, the number of managers and the investment strategy(ies) employed. The fees are billed either monthly or quarterly in arrears, based upon the market value of the assets under management (without reduction for any margin debit) including accrued interest, at the end of each calendar month or quarter. Fees will be automatically debited from the account in accordance with the Client authorization as described in the Letter Agreement with IPC and/or the Investment Advisory Agreements with IPC.

The fees include the costs associated with consulting and advisory research and including:

- Developing a Client's Statement of Investment Policy
- Assisting the Client in the selection of Investment Managers and Model Managers, Styles and Strategies
- Professional investment management services
- Monitoring of Investment Managers and Model Managers, performance, reporting and review services
- Ongoing Consulting and advisory services
- Due diligence (except as noted below in Section 6, entitled "Portfolio Manager Selection and Evaluation" in the Blue Shores *Capital* Subsection)

The fees also include brokerage commissions on the purchase and sale of securities, if Managed Account Services, LLC ("MAS") acts as broker, and custody charges, if MAS' selected clearing firm is the custodian. Additional fees may be incurred for transactions executed by a broker-dealer other than through MAS or if a custodian other than MAS is used. Managed Account Services, LLC is a securities broker-dealer registered with the Financial Industry Regulatory Authority ("FINRA") and is a member of the Security Investors Protection Company ("SIPC"). The primary business of MAS is as a securities broker-dealer.

The initial fee covers the period from the inception date through the last day of the first billing month or quarter (depending on the Client's billing cycle) and will be pro-rated accordingly. Thereafter, the Client will be charged on either a monthly or quarterly basis in arrears. The monthly or quarterly period fee will be calculated based on the market value of the account on the last business day of the billing cycle and will become due the first business day following either the month or quarter for which the fee is charged.

In the event an account does not maintain a sufficient cash or money market fund balance to cover IMAP's fee, the Client may deposit additional funds (subject to certain restrictions for IRA and qualified retirement plan accounts) within five days, or Managed Account Services, LLC may, at its discretion, sell securities held in the account sufficient to cover fees.

For Clients subject to the Employee Retirement Income Security Act of 1974, as amended ("ERISA") or other tax qualified accounts, the receipt of compensation and fees referred to in this Brochure are subject to the restrictions imposed by ERISA and any applicable exemption thereto.

The total fee paid by the Client includes fees paid to the Wealth Management Company and its Investment Executive (if applicable), IPC, brokerage costs (if MAS acts as the broker-dealer), custodial costs (if MAS is the custodian). The fee also includes the investment management services provided by the Investment Manager, Sub-Adviser, Model Manager or Emerging Manager based upon the fee schedule selected. Applicable fee schedules are as follows:

Next	\$ 10,000,000	0.650 %	0.250 %	0.250 %	0.150 %

Fixed Income Plus Accounts

Fixed Income Plus Accounts are designed for Clients who wish to invest most of their assets in fixed income investments, in conjunction with a smaller investment in equity securities. (The account is designed to contain not more than a 20% equity allocation at

cost; however, the equity portion of the account may increase to approximately 30% of the account as a result of market appreciation.) The total fee for a Fixed Income Plus Account is determined by applying the Equity Account Fee Schedule to the equity portion and the Fixed Income Fee Schedule to the fixed income and cash equivalent portion.

IMAP UMA Annual Fee Schedules

Multiple Manager Strategy Portfolio (“MMSP”) Accounts

<u>Market Value Of Account</u>	<u>Client Fee</u>	<u>Wealth Mgmt Co.</u>	<u>IPC</u>
First \$ 250,000	2.250%	1.000%	1.250%
Next \$ 250,000	2.250%	1.500%	0.750%
Thereafter	1.750%	1.000%	0.750%

Within the MMSP, fees are generally negotiable on a case-by-case basis. The total MMSP fee includes a portion for the Wealth Management Company and its Wealth Manager or Investment Executive, as applicable.

Fees with respect to the portion of a Client’s IMAP account not invested in the Multiple Manager Strategy Portfolio will be calculated as set out previously in this Brochure (see sections applicable to those assets). Assets invested in the Multiple Manager Strategy Portfolio Accounts will **not** be considered in establishing fees applicable to those other assets. For example, a Client has \$2,500,000 of investable assets and allocates \$1,500,000 to an MMSP account and \$1,000,000 to an all fixed Income separately managed account. The MMSP fee schedule would apply to the \$1,500,000 and the Fixed Income Preferred Account fee schedule above would apply to the \$1,000,000 account.

Emerging Manager MMSP Accounts

<u>Market Value Of Account</u>	<u>Maximum Client Fee</u>	<u>Maximum Wealth Mgmt Co. Fee</u>	<u>IPC</u>
First \$1,000,000	2.000%	0.800%	1.200%
Next \$1,000,000	1.750%	0.750%	1.000%
Over \$2,000,000	Negotiable		

If the Emerging Manager strategies are incorporated into a MMSP along with non-emerging manager strategies, then the Emerging Manager strategies assets will be billed separately from the other investment model strategies based upon the above fee schedule.

Additional Client Fees

The fee charged for participation in any IPC program, (“Program Fee”) listed in this Brochure is known as a “wrap-fee.” The Program Fee covers the cost of most services provided by IPC, Investment Managers, Sub-Advisers, Model Managers and Emerging Managers including fees for program operations, Managed Account Services, LLC (“MAS”) custodial charges and all brokerage commissions of MAS. The Program Fees do not include: (1) custodial fees for assets held outside MAS; (2) account maintenance or trustee fees charged for MAS (or their clearing agent, First Clearing LLC) on qualified retirement plan, IRA, cash management or similar accounts; (3) transfer taxes; (4) dividend reinvestment costs; (5) odd-lot differentials; (6) foreign receives and delivers; (7) safekeeping fees or (8) any other charges imposed by law or otherwise agreed to with regard to Client accounts. These fees will be charged to Client accounts in addition to the Program Fees.

As with most wrap-fees, the Program Fee does not cover the management, distribution and other fees and expenses incurred by mutual funds, money market funds, unit trusts, exchange-traded products or closed-end funds held in a Client’s account. These fees are described in the prospectus of each respective investment product and are paid to the fund’s investment advisers and other service providers, but ultimately are borne by all shareholders.

The Program Fee does not cover margin debit balances with MAS, any other custodian fees, nor margin interest on such margin debit balances. To the extent that margin is used, fees will be calculated on the total market value of the account without the reduction of any debit balance. Trades in securities that customarily trade in “dealer markets,” such as fixed income securities, may be placed through broker-dealers other than MAS, and, accordingly, the net purchase or sale prices reflected on Client confirmations of such trades may reflect commissions or dealer “markups” or “markdowns” charged and “spreads” earned by such other broker-dealers. This is also true when Investment Managers select broker-dealers other than MAS for some, or all, of their trade executions.

IPC and the Client agree that MAS may withhold any tax to the extent required by law, and may remit such taxes to the appropriate governmental authority.

Additionally, the cash that is in the Client’s Account awaiting investment may be placed in money market funds with management expenses and distribution fees which are paid under distribution plans adopted by the funds pursuant to Rule 12b-1 under the Investment Company Act of 1940. To the extent consistent with ERISA, MAS may receive all or a portion of those distribution fees from the funds.

Evaluating the Cost of IPC’s Wrap-Fee Programs

IPC is the sponsor of the Independent Managed Assets Program (“IMAP”), a wrap-fee program, and also provides investment advice as an Investment Manager for the MMSP and other products offered within IMAP. In these situations, IPC is both the wrap-fee program

sponsor and one of the Investment Managers. A separate investment management agreement is used when IPC acts as an Investment Manager in any of the wrap-fee programs.

In evaluating a wrap-fee arrangement to determine if the wrap-fee charged is more or less than the aggregate cost of such services if they were to be provided separately, a Client should recognize the brokerage transactions are made “net” of commissions (i.e., without commissions) and a portion of the wrap-fee is generally considered as being in lieu of commissions. Additionally, the Client should consider the level of activity (trading volume or frequency) in a Client account, the value of custodial and other brokerage services, the associated cost of trading, the advisory services and consulting services provided under this arrangement, including professional account management services.

Investment Executives who recommend IPC’s wrap-fee programs receive compensation as a result of Client participation in the program. The compensation to the Investment Executive may be more less than they would earn if the Client did not participate in a wrap-fee program. The compensation paid to Investment Executives is typically a variable percentage of the Client fee.

5. Account Requirements and Types of Clients

MINIMUM ACCOUNT SIZE; ACCOUNT TERMINATION

Separately Managed Accounts

Generally, the minimum dollar relationship size for a separately managed account for each manager within IMAP is \$1,000,000. The maximum number of individual accounts permitted in a \$1,000,000 relationship is three. The minimum account size is \$250,000 within a relationship.

Unified Managed Accounts

The MMSP minimum account size is \$200,000. However, within the MMSP account, the average minimum investment per style or strategy is also \$200,000. For example, a Client may have selected two investment styles within an MMSP, one style with \$400,000 while the other style is invested with \$100,000, totaling \$500,000. The two investments meet the average minimum investment requirement of \$200,000.

The Emerging Manager MMSP minimum account size is \$500,000. However, within the Emerging Manager MMSP account the minimum investment per style or strategy is \$250,000. The maximum number of styles or strategies permitted within the Emerging Manager MMSP is four (4). Additionally, the Emerging Manager MMSP is not a stand-alone product, but rather a diversifier to Clients who have at least \$1,000,000 of current

equity holdings, exclusive of equities within the Emerging Manager MMSP. Current equity holdings considered may, or may not, be under IPC consultation and/or the introducing Investment Executive's direction.

The minimum account size for the Tax-Transition Management Portfolio is \$2,000,000.

The minimum and maximum account constraints above may be waived at IPC's discretion. Although IPC's general business practice is not to terminate accounts based on reduction in account value, IPC reserves the right to terminate an account that drops below the required minimum size.

Either IPC or the Client may terminate the management agreement(s) upon 30 days' prior written notice. In addition, the Client has the right to terminate the agreement(s) at no cost (excluding market fluctuations or possible ramifications in the event of a liquidation), upon written notice to IPC, any time within five business days after the effective date in which the Client signed the agreement(s). If participation in a wrap-fee program is terminated by either IPC or the Client, a pro-rata fee from the date of termination through the end of the previous billing period will be billed.

TYPES OF CLIENTS

Clients include, but are not limited to, individuals, pension and profit sharing plans, trusts, estates, charitable or non-profit organizations, corporations, municipalities and Wealth Management Companies. Tax-qualified, pension and profit sharing plans or other retirement vehicles subject to the Employee Retirement Income Security Act of 1974, as amended ("ERISA") or the Internal Revenue Code of 1986, as amended are subject to special rules.

6. Portfolio Manager Selection and Evaluation

INVESTMENT MANAGER DUE DILIGENCE

Selection of Investment Managers Available in the Program

Separately Managed Accounts

The separately managed account ("SMA") Investment Managers available in IMAP are chosen by IPC through a detailed assessment of the Investment Manager's strategy, investment philosophy, style, methodology and technical procedures. The program uses Investment Managers with varying investment styles and geographic locations. The Investment Managers chosen for IMAP generally possess or exhibit:

- Specifically stated goals
- Identifiable and consistent investment strategies
- A proven track record
- An appropriate level of assets under management
- Upon acceptance to IMAP, claim compliance to the Global Investment Performance Standards* (“GIPS®”)

*The Global Investment Performance Standards (“GIPS®”) are a set of standardized, industry-wide ethical principles that provide investment firms with guidance on how to calculate and report their investment results to prospective clients. The GIPS® standards are voluntary and are based on the fundamental principles of full disclosure and fair representation of investment performance results. Claiming compliance with the GIPS® standards demonstrates a firm-wide commitment to ethical best practices and that the firm employs strong internal control processes. The GIPS® Executive Committee promotes the adoption and implementation of GIPS®, believing that global standardization of investment performance reporting gives investors around the world the additional transparency they need to compare and evaluate investment managers.

Investment Managers who meet these criteria are subject to additional reviews. These reviews may include, but are not limited to, the development of a company profile, analysis of the organization and its procedures and an assessment of the firm’s adherence with regard to some of the general requirements and disclosures of the Investment Advisers Act of 1940. An evaluation of the following may also be completed: (1) the company’s compliance with industry standards; (2) operations; (3) marketing and Client support services; (4) growth characteristics and (5) regulatory/compliance history.

Unified Managed Accounts

The investment model strategies used in the MMSP are provided by Model Managers. Due diligence is conducted on the Model Managers, except for Blue Shores *Capital*, a division of IPC. The Models are chosen by IPC through a detailed assessment of the Model Manager’s strategy’s investment philosophy, style, methodology and technical procedures. However, Model Managers are not required to claim compliance to the Global Investment Performance Standards (“GIPS®”). However, most of the Model Managers in IMAP claim compliance to the GIPS® standards. The program uses Model Managers with varying investment styles and geographic locations.

IPC’s due diligence effort with respect to the Emerging Managers is strictly confined to IPC performing due diligence on CIC’s Emerging Manager due diligence process.

Other Resources

Other resources that may be used to identify and monitor Investment Managers and investment model strategies include database services, Form ADV, other disclosure

documents, detailed questionnaires completed by each Investment Manager, Model Manager Firm, and on-site visits to the SMA Investment Managers.

Performance

IPC's review of the Investment Managers and the investment model strategy (collectively, "Investment Firms") performance record is an important component of the due diligence process. IPC conducts performance reviews to determine (1) the methodology used in calculating performance, (2) the standards that are being applied and (3) the methods by which the performance composites that are used in the program are constructed. Generally, Investment Firms indicate that performance is calculated and presented in conformity with the Global Investment Performance Standards. However, not all Investment Firms calculate and report performance in a uniform and consistent basis. Not all of the Investment Firms receive a third party audit of their GIPS® Compliance. Inquiries are made by IPC into the methodology used in order to gain a comfortable understanding that the composite performance of the style for which IPC engaged the Investment Firm is calculated in a prudent manner and in compliance with applicable rules and regulations. While IPC reasonably believes such performance numbers are accurate, IPC does not independently verify nor attest to the stated performance of any Investment Firm.

The MMSP and Tax-Transition management services may or may not include the due diligence specific to a performance composite as it relates to a management style. This may be the result of some Model Managers contracting with various intermediate investment firms ("contracted firms") to provide their investment model. Additionally, the Model Manager may not have many, if any, individual clients of their own. Having their own clients is a requirement to create their own performance composite (performance track record). Currently, per industry regulations, such Model Managers are not permitted to show other (contracted firm) clients as their clients.

Ongoing Evaluation of Investment Managers in the Program

Ongoing Investment Firm due diligence reviews are also a part of IMAP services provided. The extent of the review is determined by, among other things, the length of time the Investment Firm has been in IMAP and changes in Investment Firm's personnel or processes. Also, information is obtained from each Investment Firm concerning specific composite performance results for each quarter. In addition, periodic visits are made to each of the management companies to review the firm and update information.

IPC may decide the Investment Firm is no longer appropriate for the Program for various reasons; including, but not limited to: (1) deviation from its stated style and philosophy, (2) performance that varies significantly from its stated benchmark over a market cycle, (3) the loss of key firm personnel, (4) the development of material regulatory problems or compliance issues, or (5) failure to claim compliance with the Global Investment Performance Standards (GIPS®), except as noted above for the MMSP. In such cases, the Investment Executive in consultation with IPC or IPC through communication with the

Investment Executive may recommend that the Client select a different Investment Manager or Model Manager.

An Investment Firm will not be recommended for termination from the program solely for having short-term performance that is sub-par in relation to market performance if they have maintained their stated investment style and philosophy, even if such strategy is currently not popular.

INVESTMENT MANAGER SELECTION

Selection of Investment Managers for Client Portfolios

The Investment Executive or Wealth Manager works in conjunction with IPC Consultants. Together, they assist each Client in the selection of one or more of the available Investment Managers and Model Managers, as well as the appropriate styles/strategies that best meet the Client's investment objectives. Recommendations are based upon information gathered while developing an investment policy for the Client. Typically, the following are reviewed: the Client's investment objectives and goals, net worth, current income, future income needs, liquidity needs, risk tolerances, tax considerations, current investment structure and other specific needs if communicated by the Client. An assessment is made based upon economic and market conditions in relation to the information reviewed above. A recommendation as to the Client's appropriate Statement of Investment Policy is developed from the assessment.

To assist in the selection of Investment Managers and Model Managers, IPC makes available to prospective clients and their Investment Executives, Investment Profiles and other information such as performance information. The investment descriptions, performance, and other information are based on data provided by or received from the Investment Managers and Model Managers. Additionally, IPC makes available investment profiles and performance information, if any, on the Emerging Managers participating in the Emerging Manager MMSP. The investment descriptions, performance and other information are based on data received from CbFA, CIC and the Emerging Manager.

While IPC reasonably believes this information to be accurate, IPC does not independently verify or attest to any Investment Manager's, Model Manager's or Emerging Manager's performance. Additionally, IPC does require Investment Managers, but not the Model Managers or Emerging Managers participating in the MMSP, to present their performance data in conformity with the Global Investment Performance Standards (GIPS®). Performance information may not be calculated on a uniform and consistent basis.

Ongoing Evaluation of Investment Managers for Client Portfolios

Performance for each account in IMAP is calculated and reported to the Client by IPC in conformance with industry standards that IPC believes are reasonable. Discrepancies between account performance and Investment Manager, Model Manager or Emerging Manager composite performance may occur as a result of an account's individual investment guidelines and/or restrictions. The performance of Client account(s) may deviate from the

Investment Manager's, Model Manager's or Emerging Manager's composite performance for the accounts it manages in the same style because of the size of the Client's account(s), the presence or absence of investment restrictions, the timing of trades and the presence or absence of cash deposits and withdrawals.

IPC may believe the Investment Manager, Model Manager or Emerging Manager may no longer be appropriate for the Client for various reasons; including, but not limited to:

- the results based upon IPC's Ongoing Evaluation of Investment Managers and Model Managers in IMAP (as described above in that section) or where the Investment Manager would be terminated in IMAP or as recommended by CbFA for an Emerging Manager
- the Investment Manager's or Model Manager's deviation from its stated style and philosophy within a Client's account
- Investment Manager continuously deviates from the investment mandate in the Client's Statement of Investment Policy, unless Client authorizes such changes
- performance that varies significantly from the Client's stated benchmark over a market cycle
- the development of material regulatory problems or compliance issues, or
- changes in the Client's circumstances

In such cases, the Client's Investment Executive, in consultation with IPC, or IPC, through communication with the Client's Investment Executive, may recommend that the Client select a different Investment Manager.

If a Client believes the Investment Manager or Model Manager they have chosen is no longer meeting their investment needs and objectives, and decides to change such Managers, IPC's Ongoing Consulting Group will work the Investment Executive and the Client to establish an updated Statement of Investment Policy and recommend a new Investment Manager or Model Manager. However, the Client should be aware that a new Investment Manager or Model Manager might not accept all or any of the securities acquired by the former Investment Manager or Model Manager; therefore, liquidation of the portfolio may result in tax consequences for the Client.

BLUE SHORES CAPITAL

IPC's Blue Shores *Capital* ("BSC") division offers investment model strategies within IMAP. BSC investment models are primarily available as investment management strategies within a Multiple Manager Strategy Portfolio ("MMSP"). See "Blue Shores *Capital* Advisory Business" located in the next section for a description of the BSC's investment philosophy and investment strategies.

BSC may be utilized as a single investment strategy within an MMSP where BSC attempts to create an asset mix that provides an optimal balance between expected risk and return for a long-term investment horizon.

Within the MMSP, the BSC strategies may also be coordinated with other investment strategies. This gives the Client the ability to invest in multiple manager investment strategies and obtain further diversification, customization and consolidated reporting all in one account. The MMSP services are further described in the section above “Multiple Manager Strategy Portfolio Services” under Section 4, “Services, Fees and Compensation.”

Additionally, Blue Shores Capital may be used as part of a Client’s overall asset allocation in a Separately Managed Account (“SMA”) environment. In this situation, BSC as a Model Manager would represent only a portion of a Client’s total investment assets in conjunction with a Client’s other SMA account(s) managed by third party Managers in IMAP. A Client would choose BSC, as well as other Investment Managers or other Model Managers, to create the Client’s overall SMA investment allocation strategy.

When a Client selects Blue Shores *Capital*, IPC indirectly benefits from this selection because a greater amount of the total IMAP fee will be paid to IPC than if the Client selected a third party Manager. Accordingly, IPC has a potential conflict of interest including its Blue Shores *Capital* division as part of a Client’s overall investment plan in conjunction with a Client’s SMA. For ERISA accounts, due to regulatory constraints until further notice, Client selection of available investment strategies that include third party Managers for Separately Managed Accounts will not include BSC. Therefore, as a Plan, the selection of investment strategies in SMA may be more limited than for IMAP accounts that are not ERISA Plans.

Senior members of IPC’s staff regularly monitor BSC’s investment processes and performance. However, BSC does not undergo the same due diligence and ongoing monitoring that third party Managers or Model Managers in IMAP undergo and may not meet the same criteria for inclusion in IMAP that third party Managers must meet.

Blue Shores *Capital* Advisory Business

Blue Shores *Capital* (“BSC”) provides discretionary investment advisory services to Clients using a multiple capitalization core equity investment strategy in a global investment mandate. BSC makes this investment mandate available in equity and balanced portfolios.

BSC believes that the greatest opportunity for an active investment manager to add value, versus the passive benchmark alternative, is to generally operate a portfolio free of capitalization restrictions. This is accomplished by allowing the best investment opportunities to be included in the portfolio regardless of market capitalization. Additionally, BSC believes a core portfolio that is created by combining multiple approaches is the best structure for a style neutral portfolio. Portfolio holdings are limited to approximately 75 positions in order to meaningfully differentiate the portfolio from the broader equity market. The equity portfolio is diversified by market capitalization, economic sector and investment style.

Paramount to BSC’s investment philosophy is the belief that equity markets are very efficient, but not perfectly efficient, particularly over the short-term. Furthermore, it is BSC’s belief that market prices of publicly traded common stocks reflect both rational and

irrational factors. Therefore, while fundamental analysis is the primary investment discipline used, technical analysis is also employed in the investment decision-making process. At times, the core equity strategy has meaningful exposure to mid and small capitalization stocks that have less coverage by analysts than the more well-known companies found in the Standard & Poors 500 Stock Index.

Global Long/Short Core Equity Strategy

The strategy consists of a diversified group of strategic individual equity holdings, in addition to, various tactical positions. There are three elements in the strategic equity holdings, which make up anywhere between 50%-100% of the portfolio:

- The global multi-cap growth element seeks to purchase companies that BSC believes will grow earnings substantially faster than the broader market in the future. Special consideration is paid to a company's profitability, reinvestment rate and operating performance to maximize the probability that shareholder wealth is created. Companies purchased for the portfolio are expected to be trading at low valuation levels based upon discounted cash flow models.
- The global multi-cap value element seeks to purchase companies that may be considered "good value candidates" by traditional industry valuation measures. Companies purchased are believed to have improving fundamental characteristics. It is BSC's belief that the companies' enhanced operating performance/structure will ultimately be recognized by the broader marketplace, resulting in increased share value.
- The global large-cap dividend yield element seeks to purchase companies that are often industry leaders or large established companies with large dividend payments. It is BSC's belief that purchasing leading companies with higher than average dividend yields will provide current income in addition to potential capital appreciation over time.

The remaining 0%-50% of the portfolio consists of tactical positions. In some market environments, BSC may partially hedge the portfolio against declines by purchasing inverse Exchange-Traded Funds (ETFs) if the risk of significant market correction appears high. This hedging technique can also detract from market gains. Such securities serve as synthetic short positions and play a roll in the overall strategy. More frequently, broad market or sector ETFs may be purchased as temporary allocations until individual stock opportunities present themselves.

Balanced Strategy

Balanced accounts have an allocation to select fixed income ETFs in addition to the core equity strategy. Such accounts seek a balance between capital growth, capital preservation, and current income. The amount of Client assets allocated to fixed income securities is determined based upon each Client's unique return and risk objectives. Currently, BSC will only use fixed income ETFs for the portion of the portfolio to be allocated to fixed income and will not use bonds nor debt securities.

Fixed Income Strategy

The fixed income strategy seeks to provide low-risk current income and limited capital appreciation utilizing an intermediate fixed income investment strategy. The strategy also seeks investment results that correspond generally to the price and yield performance, before fees and expenses, of the generally investment grade credit sector of (1) the United States Bond Market and the intermediate United States Treasury Market as defined by the Barclays Capital U.S. Intermediate Government/Credit Bond Index for taxable investments and (2) the U.S. Municipal Bond Market, as defined by the Barclays Capital Five Year Municipal Bond Index for tax-exempt investments.

The fixed income positions of the portfolio may be repositioned from time-to-time to adjust for certain interest rate scenarios based upon BSC's research and analysis of the yield curve. BSC uses research by select economists and/or market strategists for interest rate forecasts. Proprietary technical analysis (the use of price and volume patterns to forecast security price movements) is used to confirm any interest rate forecast before changes to the fixed income strategy security allocations are implemented.

When a Client retains BSC to manage their financial assets, a careful review is conducted to determine the Client's objectives and risk tolerances. The Client's portfolio is constructed accordingly. Client input is primarily limited to decisions about the target amount of cash equivalents in the Statement of Investment Policy and the individual security restrictions. Clients seeking solely fixed income management and do not have a capital appreciation objective as an element of their financial objectives may not be appropriate Clients for BSC.

Blue Shores *Capital* services are provided as an Investment Manager as described in the Services, Fees and Compensation Section of this Brochure. BSC participates as a wrap-fee manager and receives a portion of the fee for its services. There is no difference in how BSC manages wrap-fee accounts and other accounts.

PERFORMANCE-BASED FEES & SIDE-BY-SIDE MANAGEMENT

IPC does not charge any performance-based fees, which are fees based upon a share of the capital gains on, or capital appreciation of, the assets in a Client's account.

BSC METHODS OF ANALYSIS

BSC's equity investment strategy employs two primary methods of analysis. First, BSC uses a top-down approach that examines global macroeconomic data and technical market security data. The second method focuses on individual security selection for the Client portfolios.

The top-down macroeconomic analysis consists of reviewing the broad business conditions and market cycles in an attempt to determine the best opportunities for investing capital. An investment framework is established by focusing on, and determining, the percent long equity exposure, style weightings, sector weightings, and global investment themes. To establish a less

than 100% long equity position (i.e., hedge) BSC increases the cash allocation and/or purchases inverse ETFs, which have the effect of reducing total long exposure.

BSC also applies technical analysis to multiple asset classes and markets to assist in the timing of the implementation of investment decisions that lead to portfolio changes.

The BSC security selection process uses a discounted free cash flow model to determine the valuation of stocks. BSC attempts to purchase securities when they are below their fair value estimate and sell when they are at or above their fair value estimate. Attractively valued securities are then screened based upon fundamental characteristics to determine a security's style alignment (i.e., growth or value) for proper representation in a portfolio based upon BSC's top-down macroeconomic analysis.

In some situations a global investment theme may be implemented using Exchange-Traded Products ("ETPs"). This may occur when BSC, through their research, does not find sufficient individual stock opportunities that meet their criteria as good candidates to implement the global macro investment theme. Additionally, this process is supplemented with the use of technical analysis to assist in the timing of purchase and sell decisions.

In some market environments, BSC may hedge the portfolio by purchasing inverse ETFs if the risk of significant market correction appears high. Such securities serve as synthetic short positions. More frequently, broad market or sector ETFs may be purchased as temporary allocations until individual stock opportunities present themselves. At times, ETFs or Exchange-Traded Notes that track the performance of commodities or currencies may be used.

Fixed income allocations are managed based entirely on the top-down approach described above and implemented with fixed income ETFs. Fixed income allocations generally are intermediate in term structure and generally investment grade. Adjustments to duration and credit quality are made based on the top-down analysis approach.

INVESTMENT STRATEGIES AND RISK OF LOSS

Risk may be defined as the chance that an investment's or investment strategy's actual return will be different than expected. Risk includes the possibility of losing some or all of the original investment. A fundamental idea in finance is the relationship between risk and return. The greater the amount of risk that an investor is willing to take on, the greater the potential return. The reason for this is that investors need to be compensated for taking on additional risk.

Market risk is defined as the risk of loss arising from adverse changes in market rates and prices, such as interest rates, foreign currency exchange rates, commodity prices, and other relevant market rate or price changes (e.g., equity prices).

There can be no assurance that any investment, investment strategy or the investment asset allocation selected will be profitable or successful in achieving its investment objectives. Clients should understand the primary risk of investing in securities involves a loss of capital and should be prepared to bear such a loss. Investment in securities comes with inherent risks in exchange

for a return on that investment as described above. In general, an investor may lose a portion of their principal and experience volatility in the value of that principal over time for various reasons as outlined below. This list is representative of many risks and is not necessarily a complete indication of all the risks a Client may assume.

1. Fixed Income Securities (Bonds)

Fixed income securities are debt obligations of the issuer. The market value (price) of those obligations can vary over time for various reasons such as those listed below:

- a. **Fixed Income Securities:** An investment strategy that invests in fixed income securities includes corporate bonds, government bonds, municipal bonds, other debt instruments, Exchange-Traded Funds and mutual funds that invest in these securities. Issuers generally pay a fixed, variable or floating interest rate and must also repay the amount borrowed at maturity. Some debt instruments, such as zero-coupon bonds, do not pay current interest, but are sold at a discount from their face value. Prices of fixed income securities generally decline when interest rates rise and rise when interest rates fall.

Investment strategies that invest in U.S. Government securities include securities issued or guaranteed by the U.S. Treasury; issued by a U.S. Government agency; or issued by a Government-Sponsored Enterprise (GSE). U.S. Treasury securities include direct obligations of the U.S. Treasury (i.e., Treasury bills, notes and bonds). U.S. Government agency bonds are backed by the full faith and credit of the U.S. Government or guaranteed by the U.S. Treasury (such as securities of the Government National Mortgage Association (GNMA or Ginnie Mae)). GSE bonds are issued by certain federally-chartered but privately-owned corporations, but are neither direct obligations of, nor backed by the full faith and credit of, the U.S. Government. GSE bonds include: bonds issued by Federal Home Loan Banks (FHLB), Federal Farm Credit Banks, Federal Home Loan Mortgage Corporation (FHLMC or Freddie Mac) and the Federal National Mortgage Association (FNMA or Fannie Mae).

- b. **Duration Risk:** Duration is a measure of sensitivity of the change in market value to a given change in interest rates over time. Longer duration bonds, which typically have longer maturities, have more sensitivity to interest rate changes than short duration bonds. Additionally, longer-term debt and zero-coupon bonds are more sensitive to interest rate changes than debt instruments with shorter maturities.
- c. **Credit Risk:** Fixed income securities are also subject to credit risk, which is the chance that an issuer will fail to pay interest and/or principal on time. Many fixed income securities receive credit ratings from Nationally Recognized Statistical Rating Organizations (NRSROs). These NRSROs assign ratings to securities by assessing the likelihood of issuer default. Changes in the credit strength of an issuer may reduce the credit rating of its debt investments and may affect their value. High-quality debt instruments are rated at least AA or its equivalent by any NRSRO or are

unrated debt instruments of equivalent quality. Issuers of high-grade debt instruments are considered to have a very strong capacity to pay principal and interest. Investment-grade debt instruments are rated at least Baa or its equivalent by any NRSRO or are unrated debt instruments of equivalent quality. Baa-rated securities are considered to have adequate capacity to pay principal and interest, although they also have speculative characteristics. Lower-rated debt securities tend to pay higher interest and are more likely to be adversely affected by changes in economic conditions than higher-rated debt securities.

An issuer suffering an adverse change in its financial condition could cause a lowering of the credit quality of a security, leading to greater price volatility of the security. A lowering of the credit rating of a security may also offset the security's liquidity, making it more difficult to sell. Investment strategies investing in lower quality debt securities, although generally having a higher yield, are more susceptible to these problems and their value may be more volatile.

Non-Investment Grade Debt: Credit risk is more pronounced for investments in fixed-income securities that are rated below Investment Grade or which are of comparable quality. The risk of default may be greater and the market for these securities may be less active, making it more difficult to sell the securities at reasonable prices, and also making valuation of the securities more difficult.

2. *Equity Securities (Stocks)*

Stocks generally represent an ownership share in a company. The market value (price) of those ownership shares fluctuate over time.

- a. **Equity Securities Risk:** Equity securities include common stocks, preferred stocks, convertible securities, mutual funds and Exchange-Traded Funds that invest in these securities. Equity markets can be volatile. Stock prices rise and fall based on changes in an individual company's financial condition and overall market conditions. Stock prices can decline significantly in response to adverse market conditions, company-specific events, and other domestic and international political and economic developments.
- b. **Loss of Capital:** An owner of stock can lose some or all of their investment.
- c. **Risk Related to Company Size:** Investment strategies that include investing in mid, small and micro capitalization companies generally involves greater risks than investment strategies investing in larger, more established companies, and possibly have a higher probability of experiencing a loss of principal in exchange for potentially higher growth. The market may value companies according to size or market capitalization rather than financial performance. As a result, if mid-cap, small-cap or micro-cap investing is out of favor, these holdings may decline in price, even though their fundamentals are sound. They may be more difficult to buy and sell, subject to greater business risks and more sensitive to market changes than larger

capitalization securities. However, the pattern of their volatility may be different than those of larger stocks; and, therefore, may have diversification benefits, possibly reducing the overall portfolio volatility.

- d. **Foreign Securities Risk:** Investments in foreign securities involve certain risks that differ from the risks of investing in domestic securities. Adverse political, economic, social or other conditions in a foreign country may make the securities of that country difficult or impossible to sell. It is more difficult to obtain reliable information about some foreign securities. The costs of investing in some foreign markets may be higher than investing in domestic markets.

- However, some of this investment risk may be reduced by investing in foreign securities typically through American Depositary Receipts (“ADRs”). ADRs are certificates deposited with a U.S. bank that represent the right to own a foreign security. Since ADRs are traded in U.S. markets and the issuers are subject to the same auditing, accounting and financial reporting standards as domestic securities, owning ADRs has advantages over owning other foreign securities.
- Other risks an investor should be aware of when selecting an investment strategy that invests in foreign or international securities are:
 - i. **Currency Risk** – the risk that the U.S. Dollar’s exchange rate versus other currencies may change, thus increasing or decreasing the value of the stock once exchanged back into U.S. Dollars.
 - ii. **Political or Sovereign Risk** – Countries outside the U.S. have different legal, economic and political structures that can affect the value of investments in those countries.
 - iii. **Emerging Markets:** Investment strategies that invest in emerging international markets may experience additional risks beyond those listed above. Emerging markets may have less developed legal, economic and political structures that are in the process of emerging, and, therefore, may experience additional volatility beyond that of more economically developed countries.

Economies in Emerging Markets generally are heavily dependent upon international trade and, accordingly, have been, and may continue to be, affected adversely by trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade. These economies also have been, and may continue to be, affected adversely by economic conditions in the countries in which they trade. Because of the special risks associated with investing in Emerging Markets, investments in

such securities should be considered speculative. Investors in such strategies are advised to consider carefully the special risks of investing in emerging market securities.

The risk also exists that an emergency situation may arise in one or more developing markets, as a result of which trading of securities may cease or may be substantially curtailed and prices for an investment strategy's securities in such markets may not be readily available. Investors should note that changes in the political climate in Emerging Markets may result in significant shifts in the attitude to the taxation of foreign investors. Such changes may result in changes to legislation, the interpretation of legislation, or the granting to foreign investors the benefit of tax exemptions or international tax treaties. The effect of such changes can be retrospective and can (if they occur) have an adverse impact on the investment return of the investment strategy.

3. *REITs*

- a. **REITs:** Real estate investment trusts, known as REITs, are entities that invest in different kinds of real estate or real estate related assets, including shopping centers, office buildings, hotels, and mortgages secured by real estate. There are basically three types of REITs:
- Equity REITs, the most common type of REIT, invest in or own real estate and potentially make money for investors from rents they collect as well as from price appreciation;
 - Mortgage REITs lend money to owners and developers or invest in financial instruments secured by mortgages on real estate; and
 - Hybrid REITs are a combination of equity and mortgage REITs.

The Internal Revenue Code lists the conditions a company must meet to qualify as a REIT. For example, the company must pay 90% of its taxable income to shareholders every year. It must also invest at least 75% of its total assets in real estate and generate 75% or more of its gross income from investments in, or mortgages on, real property.

Investing in real estate and real estate investment trusts (REITs) involve special risks, such as: limited liquidity, changes in tax laws, tenant turnover or defaults, competition, casualty losses and use of leverage. Real estate values may fluctuate based on economic and other factors. An investment in real estate or REITs may not be suitable for all investors, and there are no assurances that the investment objectives of any real estate program or strategy will be attained.

4. Exchange-Traded Products

- a. **Exchange-Traded Products (“ETPs”)** is a type of security that is derivatively-priced and which trades intra-day on a national securities exchange. Derivatively-priced ETPs means the value is derived from other investment instruments such as a commodity, currency, share price or interest rate. Generally, Exchange-Traded Products are benchmarked to stocks, commodities, indices or they can be actively managed funds. Exchange-Traded Products include Exchange-Traded Funds (“ETFs”), Exchange-Traded Vehicles (“ETVs”), Exchange Traded Notes (“ETNs”) and certificates.
- b. **Exchange-Traded Funds (“ETFs”) Risk:** ETFs are open-end investment companies, unit investment trusts or depository receipts that may hold portfolios of bonds, stocks, commodities and/or currencies that are commonly designed, before expenses, to closely track the performance and/or yield of (i) a specific index, (ii) a basket of securities, commodities or currencies, or (iii) a particular commodity or currency. The types of indices sought to be replicated by ETFs most often include domestic equity indices, fixed income indices, sector indices and foreign or international indices. ETF shares are traded on exchanges and are traded and priced throughout the trading day. ETFs permit an investor to purchase a selling interest in a portfolio of stocks throughout the trading day. Because ETFs trade on an exchange, they may not trade at Net Asset Value (“NAV”), which is the value of the underlying securities after expenses. Sometimes, the prices of ETFs may vary significantly from the NAVs of the ETFs’ underlying securities. Additionally, if an investor decides to redeem ETF shares rather than selling them on a secondary market, the investor may receive the underlying securities which must be sold in order to obtain cash.

Also, ETFs consisting of bonds and bond funds will generally decrease in value as interest rates rise. ETFs and Exchange-Traded Notes (“ETNs”), particularly those consisting of commodities, exhibit their own unique potential risk as these markets have historically been extremely volatile. Inverse ETF funds should lose money when their benchmark indexes rise – a result that is opposite from traditional mutual funds. Inverse ETF funds also entail certain risks, including inverse correlation, leverage, market price variance and short sales risks.

VOTING CLIENT SECURITIES (PROXY VOTING POLICY SUMMARY)

Within the MMSP, Independent Portfolio Consultants, Inc., as a matter of policy and as a fiduciary to our Clients, has responsibility for voting proxies consistent with the best economic interests of the Clients. IPC’s policy and practice includes the implementation of a Proxy Voting Service for corporate actions and Client proxies. Clients may retain the right to vote any proxies or take action relating to specified securities held in the Account provided the Client gives timely, written prior notice to IPC. Clients are provided the option to vote their proxies in the Investment Management Agreements and Investment Advisory Agreements. IPC makes the information available to Clients about the voting of proxies for their portfolio securities upon

request. A copy of the Policy and voting information may be obtained by writing to: Independent Portfolio Consultants, Inc., Attention: Compliance, 5002 T-Rex Avenue, Suite 225, Boca Raton, FL 33431.

7. Client Information Provided to Portfolio Managers

INVESTMENT POLICIES AND INVESTMENT MANAGER COMMUNICATIONS

For each account, an investment management agreement is signed between the Client and the Investment Manager or IPC as the Overlay Portfolio Manager. This agreement outlines the terms by which the Client's account is to be managed. Clients also complete an Investor Profile, along with the Client's Statement of Investment Policy. This includes such information as: the purpose of the account, the Client's primary investment objective, tolerance for risk, liquidity needs, age, occupation, income, net worth and other special considerations that would impact how the Client desires the account to be managed. This information is passed on to the Investment Manager(s) selected by the Client. However, the MMSP accounts are managed by IPC and no information is provided to the Model Manager(s) or Sub-Adviser(s).

If a Client's financial situation or investment objectives change and a Client wants to modify their investment objectives and or account restrictions at any time, the Client should notify their Investment Executive or IPC. On a quarterly basis, the Client will be reminded to provide their Investment Executive with any information regarding significant changes to their financial condition and other information that may change their investment objectives. IPC will communicate this to the Client's Investment Manager(s) or Overlay Portfolio Manager. This information typically requires the completion of a new Investor Profile and may require an update to the Client's Statement of Investment Policy which, if changed, will be provided to the Investment Manager.

Clients will also receive a quarterly performance report, which the Client can review with their Investment Executive as often as is determined to be necessary, but at least annually. This report can be used to assist the Client in monitoring the results of their investment account in relation to their particular goals and objectives stated in their Statement of Investment Policy. The Client's Investment Executive and the IPC Ongoing Consulting Group will consult with the Client concerning the Investment Managers' investment performance, and assist the Client in making future investment management decisions, based both on account performance and upon changes in their overall financial circumstances. IPC's Ongoing Consulting Group works with the Investment Executive to set up and coordinate Client reviews of their IMAP accounts. If deemed appropriate, the Investment Executive and IPC may recommend that the Client select a new Investment Manager or Model Manager strategy at no additional cost.

IPC provides Investment Managers but not Model Managers with electronic access to Client portfolio holdings on a regular basis. Investment Managers may access Client portfolio

statements that are balanced and reconciled monthly. Additionally, the electronic access enables the Investment Manager to view Client accounts daily and includes a list of the Client's holdings, a cash ledger of activity in the account for the current month, as well as a performance report for the Client's portfolio. Also, IPC provides the Investment Manager with access to an electronic copy of the Client's quarterly portfolio report and the personalized IMAP consulting letter as described below in Section 9.

8. Client Contact with Portfolio Managers

A Client may choose to meet or speak with their Investment Manager directly to review their account objectives and performance. The Investment Executive, through the IPC Ongoing Consulting Group, coordinates the conferences or meetings with their Investment Manager(s). The Investment Manager is the person who is making the investment decisions pertaining to the Client's account on a day-to-day basis. Clients may communicate directly with their Investment Manager(s), consistent with the reasonable constraints of the Investment Manager's business.

However, the MMSP services described above in Section 4 do not provide the Client with the following services:

- direct contact with the Sub-Adviser, Model Manager or Emerging Manager
- an extensive amount of individual portfolio customization, in-depth, coordinated tax planning or
- the ability to consider previously existing holdings.

For these accounts, the Client's Investment Executive and IPC Consultant will meet or conference with the Client, at the Client's request, to review their account objectives and performance. They will also work with the Client to develop their objectives and investment strategies. Additionally, Client's input is primarily limited to decisions about: the investment strategy(ies) selected, asset allocation, target amount of cash equivalents in the investment policy and the individual security and any other reasonable restrictions on the account. While an initial Client presentation, via a telephone conference call, may be provided by a specific Model Manager, ongoing Client consultation will be provided primarily by an IPC Consultant and the Investment Executive or Wealth Manager.

9. Additional Information

DISCIPLINARY INFORMATION

IPC is required per the Security and Exchange Commission Rule 206(4)-4 to disclose in the Brochure material facts about any legal or disciplinary events of IPC or its management personnel. IPC does not have any legal or disciplinary events to report.

OTHER FINANCIAL INDUSTRY ACTIVITIES & AFFILIATIONS

Independent Portfolio Consultants, Inc. is a registered investment adviser with the Securities and Exchange Commission and is primarily engaged in the managed assets business. IPC, and its executive officers, spend the majority of their time with these business activities. IPC also has entered into a Brokerage Services Agreement with Managed Account Services, LLC (“MAS”) and most persons associated with IPC who provide investment advice to Clients are also registered representatives of MAS. MAS is actively engaged in business as a securities broker-dealer and acts as the primary executing broker for most of MAS’ brokerage and advisory activities. In this capacity, MAS performs, among other services, trade executions and clearing support, in addition to related administrative and client services. The proportion of time spent on each of these activities by IPC representatives is not determinable.

INVESTMENT DISCRETION

IPC provides discretionary investment advisory services to Clients via equity, balanced and fixed income account management through its MMSP services. Prior to a Client retaining IPC to manage all or part of their financial assets, a careful review is conducted to determine the Client’s objectives and risk tolerances. IPC then develops an investment plan or statement of investment policy for the Client based upon the Client’s investment goals, objectives and financial circumstances. Once accepted, the Client enters into an Investment Advisory Agreement with IPC. Thereby, Client grants IPC, as the Overlay Portfolio Manager or Portfolio Manager (“investment manager”) for the account, full discretion in the management of the investments of the Account. Client authorizes IPC, without prior consultation with, or approval from, the Client to invest and reinvest the assets in the Account.

Both cash and securities may be used to fund accounts in MMSP. However, it is the intent of IPC that all securities so received be liquidated prior to, or simultaneous with, the purchase of securities for the account.

CODE OF ETHICS

IPC has adopted a Code of Ethics, in compliance with Rule 204A-1 of the Investment Advisers Act of 1940. The Code of Ethics, among other things, sets ethical standards and requires compliance with the securities laws, safeguards material, nonpublic information about Clients' transactions and portfolio holdings, and requires initial and annual reports of securities holdings for access persons. This Code of Ethics sets forth the rules for business conduct and personal investing activities of IPC's employees.

The provisions of the Code of Ethics apply to all IPC employees. A copy of the Policy may be obtained by writing to: Independent Portfolio Consultants, Inc., Attention: Compliance, 5002 T-Rex Avenue – Suite 225, Boca Raton, FL 33431.

PARTICIPATION OR INTEREST IN CLIENT TRANSACTIONS & PERSONAL TRADING

IPC's employees and officers may maintain positions in, or buy or sell the same securities or related options as Clients buy or sell. In cases such as this, employees and officers of IPC would have an interest in the success of a security that may be recommended to, owned by, sold for or purchased for a Client.

Employee trades are reviewed, so that no employee's trade execution receives a better execution price than a Client's for the same security traded on the same day in an MMSP account. IPC employees are not permitted to buy or sell any securities that are included on an "IPC Restricted Security List" (security trades placed by IPC acting in the capacity of a portfolio manager) for a 24 hour period. However, this restriction does not apply to employee accounts under contract with, and managed by, a professional Investment Manager. The IPC Portfolio or Overlay Managers will distribute the "IPC Restricted Security List" via an office-wide e-mail prior to trading securities for an MMSP managed investment account. The time stamp and date on the e-mail begins the 24 hour restriction. Employee trades will be reviewed and, if an employee traded a security on the "IPC Restricted Security List," the employee trade may be busted to an error account, on a case-by-case basis, based upon the review of the previous day's trades, except as noted above. The intent is to avoid potential conflicts of interest that may arise in the trading activities on behalf of Clients.

Brokerage Executions

Best Execution

As an investment advisory firm, Independent Portfolio Consultants, Inc. ("IPC") has a fiduciary and fundamental duty to seek best execution for Client transactions. While best execution is difficult to define and even more challenging to measure, it is generally accepted that it does not only mean achieving the best price but also includes many factors, such as the characteristics of specific trades, the stock being traded, specific needs of IPC Clients, conditions in the market at the time the order is placed and the

overall efficiency of market structure. In addition, IPC takes into account the fact that the Client's Program Fee covers trades executed by Managed Account Services, LLC and/or its clearing entity, First Clearing, LLC ("MAS Trading") (i.e., there are no additional commissions charged if traded via MAS Trading).

Independent Portfolio Consultants, Inc., as a matter of policy, seeks to obtain best execution for Client transactions, *i.e.*, seeking to obtain not necessarily the lowest commission but the best overall qualitative execution in the particular circumstances.

Brokerage Transactions

IPC's policy is to not accept an advisory Client's instructions for directing a Client's brokerage transactions to a particular broker-dealer.

IPC sponsors wrap-fee programs in which transactions executed through Managed Account Services, LLC would be free of commission charges to Clients. Investment Managers in the programs are generally free to consider MAS Trading's trading capability versus other brokers' trading capability. However, IPC anticipates that most trades will be placed through MAS Trading for execution because of their execution capabilities and because the wrap-fee paid by Clients covers trade charges only when trades are executed through MAS Trading or their agents. Wrap-fees do not cover charges resulting from trades effected with, or through, broker-dealers other than MAS Trading or their agents nor mark-ups nor mark-downs by such other broker-dealers. Further, it is expected that Investment Managers would typically consider trades executed via MAS Trading are without commissions or retail mark-ups or mark-downs when comparing the cost of trading for equity securities with other brokers. IPC would expect such a comparison by an Investment Manager would generally result in a decision to execute most trades through MAS Trading.

IPC has full discretion in the management of accounts in its capacity as a Portfolio Manager or Overlay Portfolio Manager for the MMSP accounts. Clients direct IPC to use the brokerage services offered by MAS Trading to effect transactions for the Client's account. IPC may use another broker or dealer to effect transactions for the account when it reasonably believes it can achieve best execution by using such other broker or dealer. However, because commissions for transactions executed by MAS Trading are included in the wrap-fee the Client pays, IPC will not seek to negotiate commission rates with MAS Trading and will use MAS Trading to execute most, if not all, transactions for the account. However, if IPC believes that it would not be able to achieve best execution on a securities transaction by placing trades for the Client's account through MAS Trading, IPC may execute securities transactions through another broker-dealer, and the account will pay separate transaction costs.

IPC's policy is to not engage in any principal or agency cross-transactions. An agency cross-transaction is defined as a transaction where a person acts as an investment adviser in relation to a transaction in which the investment adviser, or any person controlled by or under common control with the investment adviser, acts as broker for both the advisory

Client and for another person on the other side of the transaction (SEC Rule 206(3)-2(b)). Agency cross-transactions typically may arise where an adviser is dually registered as a broker-dealer or has an affiliated broker-dealer.

Also, as a matter of policy, IPC does not have any formal or informal arrangements or commitments to use research, research-related products and other services obtained from broker-dealers, or third parties, on a soft dollar commission basis.

IPC Trade Aggregation and Allocation

The aggregation or blocking of Client transactions allows an Investment Manager to execute transactions in a more timely, equitable and efficient manner. Blocking is done in an attempt to achieve a better overall price execution for the Client.

As a matter of policy, IPC's allocation procedures must be fair and equitable to all Clients, with no particular group or Client(s) being favored or disfavored over any other Clients. IPC's policy prohibits any allocation of trades in a manner that favors IPC's proprietary accounts or any particular Client(s) or group of Clients.

IPC has adopted a policy for the fair and equitable allocation of transactions. The policy is as follows: For Client accounts managed by the Overlay Portfolio Manager on a discretionary basis, IPC may aggregate, block, or bunch Client trades, provided that the following conditions are met: (1) IPC will not aggregate transactions, unless it believes that aggregation is consistent with its duty to seek best execution for its Clients; (2) no advisory Client will be favored over any other Client; (3) each Client that participates in an aggregated order will participate at the average share price for a given order, in a given security, on a given business day, and (4) if the aggregated order is filled in its entirety, it will be allocated proportionately to receive the same allocation as the proportion of the total pre-trade allocation at the average price. For remaining portions that are filled on the following business day, Clients will receive the same allocation as the proportion of the total pre-trade allocation at the average price of the business day.

Error Correction Practices

As a fiduciary, IPC has the responsibility to effect orders correctly, promptly and in the best interests of our Clients. In the event an error occurs in IPC's handling of any MMSP transactions, due to IPC's actions, or inaction, or actions of others, IPC's policy is to seek to identify and correct any errors as promptly as possible, without disadvantaging the Client.

Profits and losses that result from the correction of erroneous trades made via MAS Trading are absorbed by Managed Account Services, LLC's error accounts. Losses that are incurred as a result of an error made by an Investment Manager or IPC are passed on to the Investment Manager or IPC. If the resulting balance in Managed Account Services, LLC's error accounts at the end of the year is a profit, the amount might be considered additional compensation to Managed Account Services, LLC.

Exceptions to the general rule of moving errors to the error account can be made for ERISA accounts in which case gains, resulting from the error correction, may be awarded to the Client. This is only permitted to the extent that the trade does not violate legal or Client guidelines.

REVIEW OF CLIENT ACCOUNTS

On a daily basis, account activity is reviewed by IPC for exceptions (entries that are not consistent with the Client account) and violations of Client restrictions. Each IMAP account is balanced and reconciled, at least monthly, against the Client's custodian's statement. The IPC Manager of Advisory Operations is responsible for overseeing this activity.

Separately Managed Accounts

On a quarterly basis, the IPC's Consulting Group reviews each actively managed account relationship. These individuals review accounts to look at asset allocation, holdings, performance, as well as industry, sector and issue concentrations and for general adherence to an Investment Manager's stated style. Any discrepancies noted will be reviewed with the Investment Manager. Other items reviewed may include the risk profile of the portfolio, the Client's objectives and performance versus a comparable benchmark. The IPC Manager of Advisory Operations & Performance Analyst is also responsible for reviewing the performance for all accounts. Any account performance that significantly varies from a comparable benchmark is flagged. Accounts are also reviewed for dispersion characteristics. An inexplicable or unsatisfactory response from the Investment Manager may subject them to a review by the Vice President of Due Diligence.

Account reviewers follow IPC's policies and procedures that are reasonably designed to detect or prevent violation of a Client's investment guidelines. When an issue is raised during a review, an inquiry must be made until such issue is resolved. Upon further examination, and if warranted an in-depth review may be followed by a discussion with the Wealth Manager, Investment Executive and/or Investment Manager and, finally, with the Client.

IPC's Ongoing Consulting Group will review the Client's investment objectives and, on at least an annual basis, IPC will inquire if his or her financial situation or investment objectives have changed. The Client's Wealth Manager or Investment Executive, through communication with the Client, is expected to monitor the management of the account's assets for appropriateness, given the Client's stated investment objectives and risks.

Multiple Manager Strategy Portfolio Accounts

On a monthly basis, the Overlay Portfolio Manager(s) for the Multiple Manager Strategy Portfolio ("MMSP") accounts is responsible for reviewing these accounts for performance dispersion. If there is unexpected dispersion among Client accounts utilizing the same strategy, the transactions and/or security positions may be reviewed to determine the reason

for the unexpected dispersion. On a quarterly basis, IPC's composite strategy performance results are compared to the performance results that the Model Manager and Emerging Manager Models achieved in their direct managed accounts which are reported in the Model Manager's or Emerging Manager's composite results. Any significant divergence of MMSP strategy results, as compared to Model Manager or Emerging Manager composite results, will be reviewed in order to determine if the divergence is logical, or if the divergence may be due to a problem with the implementation of the Model Manager's or Emerging Manager's Model portfolio.

On a daily basis, the MMSP accounts are also reviewed for exceptions and restrictions by IPC. Each account is balanced and reconciled at least monthly, if not daily, against the Client's custodian. On a monthly basis, MMSP accounts are reviewed for performance dispersion. If there is unexpected dispersion among Client accounts utilizing the same strategy, the transactions and/or security positions may be reviewed to determine the reason for the unexpected dispersion. Also, accounts are reviewed to compare the current asset allocation between cash, equities and bonds to the Client's target allocation as determined by the Statement of Investment Policy ("SOP"). When an asset class is out of the predefined allowable range, the MMSP Overlay Portfolio Manager will work to bring the asset allocation back towards its target allocation.

Client Reporting

IPC provides the Wealth Managers, Investment Executives and their Clients a quarterly report that includes portfolio analysis, portfolio performance, asset allocation, portfolio holdings, capital gains and losses report and a cash ledger detailing account transactions for the quarter. MMSP Clients are provided a quarterly report that includes portfolio performance, asset allocation, portfolio holdings, capital gains and losses and contributions, withdrawals and income transactions for the quarter. However, IPC will not disclose information about the Client to the Wealth Managers, Investment Executives and others except as disclosed in IPC's Privacy Policy. IPC will share Client information with parties who provide services to the Client's accounts, including investment management firm(s). The quarterly reports referred to above are generated following the quarters ending March 31st, June 30th, September 30th and December 31st.

IPC also makes available quarterly, a personalized IMAP consulting letter for the Wealth Management Company's Clients. The purpose of the consulting letter is to provide Clients with a meaningful framework within which to review their portfolio's recent quarterly performance, as well as the last 12 months' performance and inception-to-date performance, if available. The quarterly consulting letter is not provided for MMSP accounts.

Portfolio performance reporting is calculated and presented by IPC independently of the Investment Manager(s) and Model Manager(s). This third-party consultation about performance allows for a system of checks and balances for separately managed accounts when reporting a Client's performance. IPC follows industry standards in the calculation of performance information for a Client's account.

Clients generally receive confirmation of transactions, as well as monthly statements, from Managed Account Services, LLC (produced by First Clearing) in accordance with their IMAP agreement(s). If the Client has selected a custodian other than Managed Account Services, LLC, the nature and frequency of reports will be determined by the agreement between the Client and the custodian. IPC advises Clients to compare the information on their IPC statement with the statement from their custodian. If Clients have any questions about their statements, please call IPC Client Services at 561-912-1040 or 800-346-4570.

Electronic Access of Communications

As an IPC advisory Client, you may consent to electronic delivery of account communications (“Account Communications”) at IPC’s discretion. IPC will provide this delivery of Account Communications by giving Clients access to their IPC account information via IPC’s internet site utilizing an access password and account number. This may include all current and future advisory account statements, trade confirmations, notices, disclosures, regulatory communications, and other information, documents, data, and records regarding Client’s IPC account. However, IPC is not able to provide electronic access or delivery of the Client’s custodian statements and information. This consent to electronic delivery, when given, will be effective immediately and will remain in effect unless and until revoked. Clients may revoke this consent at anytime and request paper copies by writing to: Independent Portfolio Consultants, Inc., Attention: Compliance, 5002 T-Rex Avenue – Suite 225, Boca Raton, FL 33431.

CLIENT REFERRALS & OTHER COMPENSATION

Referral Arrangements

IPC enters into referral arrangements with individuals, including independent financial planners, CPAs, registered investment advisers, Wealth Management Companies and broker dealers who are not employees or agents of IPC. These arrangements are done in compliance with the rules and regulations of the Investment Advisers Act of 1940, and the terms of the arrangements are fully disclosed to the Client at the time the referral is made. Clients do not typically pay a higher fee as a result of such payment arrangement.

Additional Compensation to IPC and its Affiliates

The primary compensation under IPC’s Managed Assets Programs is derived from the wrap-fee. IPC does not require Investment Managers, Model Managers, Sub-Advisers or investment companies participating in its programs to participate in its educational and training conferences. However, IPC generally requires Investment Managers, Model Managers, Sub-Advisers and investment companies choosing to participate in any of its educational and training conferences to pay IPC for associated expenses. This money is used to offset the cost of conferences and special meetings with the Investment Executives to discuss such managers or companies. These payments may be considered additional compensation to IPC and may create an incentive to direct more business to those companies.

However, IPC does not consider participation attendance when evaluating and recommending Investment Managers for its programs.

Additionally, IPC has received payments from advisers that participate in IPC's managed asset programs. These payments may be for third party Wealth Management Company-sponsored conference attendance, participation, speaker slots, sponsorship or exhibition fees; educational and training fees; or fees tied to program participation or for a specific marketing initiative within a program.

These payments may be considered additional compensation to IPC and may create an incentive to direct more business to those advisers. However, IPC does not consider the existence or level of payments from advisers in determining whether to select or retain an adviser in the program. Advisers that participate in the conferences and training sessions as described above may have an advantage over those managers that do not participate.

These payments to Sponsor vary from adviser to adviser depending on, among other things, the amount of separate account client assets under the adviser's management. These payments to Sponsor may be as high as \$20,000 per year per firm. Clients should review their adviser's brochure (Form ADV, Part 2A) for a description of business arrangements between program sponsors and investment advisers.

Custody

IPC may directly debit a Client's account(s) for the payment of our advisory fees, as authorized by the Client. This ability to deduct our advisory fees from a Client's accounts causes our firm to exercise limited custody over your funds or securities. IPC is not a qualified custodian and you should know that IPC does not have physical custody of Clients' funds and/or securities.

Client funds and securities will be held with a bank, broker-dealer, or other independent, qualified custodian. The Client selects a custodian to have possession of the assets of the account, to settle transactions for the account, and to accept instructions from Investment Managers and/or IPC regarding the assets in the account. In addition, these custodians provide the Investment Managers and Overlay Portfolio Manager information on the additions to or withdrawals from the account.

Clients will receive account statements from the independent, qualified custodian(s) holding Client funds and securities at least quarterly. The account statements from your custodian(s) will indicate the amount of our advisory fees deducted from your account(s) each billing period. You should carefully review account statements for accuracy.

If you have a question regarding your account statement or if you did not receive a statement from your custodian, please contact Irene Nigen, Managing Director at 561-912-1050.

IMAP accounts are generally held through Managed Account Services, LLC ("MAS") as introducing broker-dealer. MAS uses First Clearing, LLC ("First Clearing") member

NYSE/SIPC, on a fully-disclosed basis for clearing and custody services. First Clearing, LLC, a non-bank affiliate of Wells Fargo & Company, produces account statements and trade confirmations, and provides our firm with other recordkeeping, operational, clearing and custodial services. First Clearing, LLC is a member of FINRA, the Securities Investor Protection Corporation (“SIPC”), the New York Stock Exchange, the NASDAQ Stock Market and other major regional stock exchanges. Clients who maintain securities accounts with Managed Account Services, LLC, through First Clearing, are protected by the SIPC up to \$500,000 for cash and securities, with a limit of \$250,000 for cash awaiting reinvestment. For additional security, First Clearing also provides coverage in excess of the \$500,000 SIPC limits through its policy with Lloyds of London Syndicate, the underwriter of this additional protection. This additional protection covers missing securities and cash in Client brokerage accounts up to a firm aggregate limit of \$1 billion, of which \$1.9 million may cover cash awaiting reinvestment at the individual account level. However, this protection does not cover market losses. Assets held at outside custodians are not protected by First Clearing’s SIPC coverage or the additional insurance. Additionally, custody fees may be incurred if a custodian other than MAS is used. IPC does not maintain physical custody of Clients’ funds or securities.

CONFLICTS OF INTEREST

If a Client is in need of certain types of products and/or services that are not offered by IPC, IPC may refer the Client to various third-party entities that provide such products and/or services, and may receive direct or indirect compensation through referral fees, commissions or fee sharing, to the extent permitted by law, paid by the applicable third party. Examples of these types of products and/or services may include, without limitation, risk management strategies, hedging and diversification strategies.

IPC, and/or the Investment Executives, may recommend to the Client services or investments that are offered or managed by the Investment Executive’s affiliate. In such cases, the affiliate has a financial interest and will benefit from increased use or purchase of the service or investment.

Many IPC Consultants who offer advisory services are also registered securities representatives of MAS and may execute trades for Clients who also participate in IPC’s wrap-fee programs. IPC Consultants may receive compensation from advisory or non-advisory Clients, resulting in a potential conflict of interest. IPC anticipates, however, that most trades will be placed through MAS and/or its clearing entity, First Clearing, LLC (“MAS Trading”), for execution because of MAS’ Trading execution capabilities and because the wrap-fee paid by Clients covers trade charges only when trades are executed through MAS Trading or their agents.

IPC, and its various relationships, provide a broad range of financial services to Clients. In offering such services, IPC, its employees, officers and affiliates may give advice and take action in the performance of their duties to certain of their Clients which may differ from advice given, or the timing and nature of action taken, with respect to other advisory Clients’ accounts.

IPC may receive research reports and other materials from Investment Managers, Model Managers, and Sub-Advisers participating in its programs. IPC uses this information in various capacities in its business relationships with clients and advisors; however, IPC may provide all or some of this research to its Blue Shores *Capital* Division, which manages client assets on a discretionary basis. IPC's receipt of free research from Investment Managers, Model Managers, and Sub-Advisers may cause IPC to favor such managers and advisers over managers and advisers that do not provide it with free research, when selecting and retaining managers and advisers.

Video Conferencing

IPC does provide a video conferencing unit to some Investment Executives in their Wealth Management Company's Office at no cost to the Wealth Management Company. IPC believes that a video installation increases the effectiveness of the communication between IPC and the Client. The installation of a video conferencing unit to communicate with IPC may be considered an inducement for the Wealth Management Company or an Investment Executive to recommend a managed account offered by IPC over other managed account services.

FINANCIAL INFORMATION

IPC does not require nor solicit prepayment of more than \$1,200 in fees per Client, six months or more in advance.
