

Form ADV Part 2A Firm Brochure

THE ROCK CREEK GROUP, LP

1133 Connecticut Avenue, NW

Washington, DC 20036

(202) 331-3400

www.therockcreekgroup.com

This brochure provides information about the qualifications and business practices of The Rock Creek Group, LP. If you have any questions about the contents of this brochure, please contact the Chief Compliance Officer at (202) 331-3425 or sherri.rossoff@therockcreekgroup.com. The information in this brochure has not been approved or verified by the United States Securities and Exchange Commission or by any state securities authority.

Additional information about The Rock Creek Group, LP is available on the SEC's website at www.adviserinfo.sec.gov.

The Rock Creek Group, LP is registered as an investment adviser with the SEC. SEC registration does not imply a certain level of skill or training.

Updated March 2013

Item 2. Material Changes

We wish to bring to your attention the following changes to our Brochure dated December 2012:

- Item 4 (Advisory Business) has been updated to reflect Wells Fargo Investment Group, Inc.'s acquisition of a minority equity interest in The Rock Creek Group, L.P. ("Rock Creek" or the "Adviser").
- Item 8 (Methods of Analysis, Investment Strategies and Risk of Loss) has been revised to reflect an update of this information.
- Items 10 (Other Financial Industry Activities and Affiliations) has also been updated to reflect Wells Fargo Investment Group, Inc.'s acquisition of a minority equity interest in the Adviser.

If you have any questions about the material changes identified and discussed in this Item 2, please contact our Chief Compliance Officer at (202) 331-3425 or sherri.rossoff@therockcreekgroup.com.

Important Note about this Brochure

This Brochure is not:

- **An offer or agreement to provide advisory services to any person;**
- **An offer to sell interests (or a solicitation of an offer to purchase interests) in any Fund;**
- **A complete discussion of the features, risks or conflicts associated with any Fund (as defined herein) or advisory service; or**
- **To be relied on in determining whether to invest or establish an advisory relationship.**

Although this publicly available Brochure describes investment advisory services and products of Rock Creek, persons who receive this Brochure should be aware that it is designed solely to provide information about Rock Creek as necessary to respond to certain disclosure obligations under the Investment Advisers Act of 1940, as amended (the “Advisers Act”). As such, certain information in this Brochure may differ from information provided in relevant offering materials or investment management agreements and related documentation. In addition, more complete information about each Fund, as well as Rock Creek’s investment advisory services, is included in relevant offering materials and investment management agreements and related documentation, certain of which may be provided to current and eligible prospective clients or investors by Rock Creek. To the extent that there is any conflict between discussions herein and similar or related discussions in any offering materials, the relevant offering materials shall govern and control.

Item 4. Advisory Business

Afsaneh Beschloss founded Rock Creek, a Delaware limited partnership that has been in the investment management business since 2002. Ms. Beschloss is the President and CEO of the Adviser.

As of December 2012, Afsaneh Beschloss, Dr. Sudhir Krishnamurthi, and their respective family trusts that were formed for estate planning purposes and other Rock Creek senior team members (through the Adviser's Management Equity Plan) own a majority equity interest in Rock Creek, and Wells Fargo Investment Group, Inc. ("WFIG"), a wholly owned subsidiary of Wells Fargo & Company ("Wells Fargo"), holds a non-voting, minority equity interest in Rock Creek. Rock Creek operates independently of the Wells Fargo group of companies; Ms. Beschloss continues as the President and CEO and the Rock Creek team retains day-to-day control of the business. There were no changes to Rock Creek's structure, investment philosophy or processes, investment committee composition, or location as a result of the WFIG acquisition of an ownership interest.

Commingled Funds. The Adviser provides investment advisory services to multi-investor private investment vehicles ("Commingled Funds") that are structured as limited partnerships, limited liability companies, corporations, or other commingled investment vehicles which have been organized to invest in other investment vehicles or investment funds managed by third party asset managers, including alternative marketable investment funds¹ ("Portfolio Funds"). Portfolio Funds invest primarily in publicly traded securities, including but not limited to, U.S. and foreign equity securities (both on the long and short side), debt securities, money market instruments, foreign currencies, options and futures contracts, forward contracts, and other derivatives. Assets of Commingled Funds may also be allocated to Sub Advisers (as defined herein). The Adviser's services to the Commingled Funds include investment management and portfolio services, including portfolio construction; the identification, selection, monitoring, and evaluation of the Portfolio Funds, portfolio managers ("Portfolio Managers"), and Sub Advisers with which the Commingled Funds invest; and risk management. The term "Sub Advisers" refers to cases where the Adviser may invest with certain portfolio managers (referred to herein as "Sub Advisers") by entering into sub-advisory management agreements that are discretionary (*i.e.*, a Sub Adviser has authority to purchase or sell securities) or non-discretionary (*i.e.*, Rock Creek pre-approves a Sub Adviser's proposed transaction) and opening managed accounts with such Sub Advisers rather than by investing in their investment funds.

Fund of One. The Adviser also provides investment advisory services to customized private investment vehicles ("Funds of One") that are structured as limited partnerships, limited liability companies, corporations, or other investment vehicles which have been organized for single investors (or a group of affiliated investors) seeking a customized portfolio tailored to the investor's unique investment needs and risk tolerances. Assets of Funds of One may be invested in Portfolio Funds and also may be invested with Sub Advisers. Although not the primary objective or purpose, a Fund of One's portfolio may include direct investments in other

¹ "Alternative marketable investments" are generally investments in strategies that seek to generate absolute returns by taking advantage of inefficient segments of the market while maintaining low exposure to stock and bond markets.

investment products, futures and derivatives. The Adviser's services to the Funds of One include investment management and portfolio services, including portfolio construction; the identification, selection, monitoring, and evaluation of the Portfolio Funds, Portfolio Managers, and Sub Advisers with which the Funds of One invest; and risk management.

Unless otherwise specified herein, the Commingled Funds and the Funds of One may be referred to herein as the "Funds."

Separate Accounts. In addition to providing services to the Funds, the Adviser provides investment management services to separate accounts ("Separate Accounts") for single investors (or a group of affiliated investors). The Adviser may allow an investor who meets certain criteria to open a Separate Account, which may have terms (*e.g.*, regarding transparency and liquidity) that are different from those of the Funds. Such accounts may adhere to unique risk guidelines, operating guidelines, and investment restrictions imposed by the respective investor. These arrangements, including the fees and expenses charged to Separate Accounts, are set forth on a case by case basis depending upon such factors as the size and scope of mandate, type of strategy, and unique features and requirements of the account. The Adviser may invest assets of a Separate Account in certain Funds in accordance with such Separate Account's investment guidelines. The Separate Account, in such cases, purchases a share class or special interest of the relevant Fund that does not charge management fees to avoid the duplication of fees. Assets of Separate Accounts may be invested in Portfolio Funds, invested with Sub Advisers, or invested directly in futures, derivatives, and other investment products.

Unless otherwise specified herein, the Funds and Separate Accounts (and not the investors in a Fund) may be referred to as "Clients."

Intermediate Vehicles. A Client may access a particular Portfolio Manager or particular Portfolio Fund through an intermediate entity managed by the Adviser (or an affiliate of the Adviser) in which other Funds, Separate Accounts, or assets managed by the Adviser may have an interest (each, an "Intermediate Vehicle"). Intermediate Vehicles may invest with one or with multiple underlying Portfolio Managers or Portfolio Funds. If such an Intermediate Vehicle is utilized, the Adviser will not charge or apply any management fees or performance-based allocations or fees at the Intermediate Vehicle level, but the applicable Client will bear its pro rata share of the costs and expenses associated with the establishment and ongoing operation of such Intermediate Vehicle.

Advisory Services. The Adviser may provide non-discretionary advisory services relating to investments in Portfolio Funds, asset allocation, and manager selection to endowments and foundations, pension or profit-sharing plans, or other institutional clients ("Advisory Clients"), possibly using investment strategies similar to those employed for the Funds or Separate Accounts. Among other customized services, Advisory Client services may include assistance with the performance of due diligence on underlying funds and managers of such funds as well as portfolio construction, portfolio risk analysis, and risk management.

Transition Services. The Adviser may assist Advisory Clients in managing the liquidation or transfer of their portfolios of underlying investment funds and other investment products previously managed by other investment managers.

As of December 31, 2012, the Adviser had a total of approximately \$7.6 billion in regulatory assets under management (approximately \$7.1 billion on a discretionary basis and \$451 million on a non-discretionary basis). Please see Item 7 for a list of the types of the Adviser's Clients.

Item 5. Fees and Compensation

Management and Incentive Fees. Rock Creek's fees generally vary depending upon the nature and extent of the mandate and whether the investment is being made into a Commingled Fund, Fund of One, or Separate Account or pursuant to an Advisory Client relationship. The Adviser charges investment management fees to Clients as a percentage of assets under management (*e.g.*, management and/or incentive fees or allocations). Fees are set out within the governing documents, offering documents (including share class supplements, if any), and/or the investment management agreements between the Adviser and the Client, all as applicable. The Adviser does not have one fee schedule that applies to all Clients.

With respect to Separate Accounts and Advisory Clients, Rock Creek's fees are negotiated on a case-by-case basis. The fees are generally assessed depending upon the size of the mandate, the scope of the services, the scope of the investor relationship, the type of strategy, the extent of reporting or other administrative services required, the type of assets invested, liquidity requirements, and any unique features of the arrangement. There may be breakpoints for lower management fees for investors that exceed specific assets under management thresholds, and a flat fee option may also be available. The Adviser may also be entitled to receive incentive fees with regard to certain Separate Accounts, and such fees may range from 5.00% to 15.00% (annually). The Adviser will structure a management and incentive fee arrangement for Separate Account clients desiring an incentive fee.

With respect to the Funds, the Adviser's fees are set forth in each Fund's offering documents (*e.g.*, the Fund's private offering memorandum and/or supplements) with details regarding management and/or incentive fees usually provided in the applicable share class supplement. Funds generally will pay the Adviser a management fee equal to a percentage of net assets, quarterly, in advance. For Funds, the Adviser's standard range of management fees is .75% to 1.00% (annually) of assets under management, and for the share class offering a management fee and incentive fee option, incentive (performance-based) fees or allocations may be up to 7.50% (annually) of realized and unrealized capital appreciation, with a high water mark. Certain share classes for investments over a certain size or for a founder's share class for founders or initial investors may have lower fees as set forth in the applicable private placement memorandum and/or supplement.

Certain Clients may also pay the Adviser an incentive fee or allocation based upon an annual percentage of the net capital appreciation above a hurdle rate of the Client's advised assets for the year, subject to standard high-water provisions, at the end of each calendar year.

All incentive fees or allocations charged by the Adviser are in compliance with Rule 205-3 under the Advisers Act. For further information regarding the particular fee schedules for the Funds, please refer to the applicable private placement memorandum and supplements.

With respect to certain non-discretionary services provided by the Adviser to Advisory Clients, such Advisory Clients may pay negotiated fixed dollar amounts based on the type of services provided (*e.g.*, manager due diligence, portfolio risk analysis).

Additional Fees and Expenses. Additional fees and expenses that may apply vary based upon the nature and extent of the mandate and whether the investment is being made into a Commingled Fund, Fund of One, or Separate Account or as part of an advisory relationship. Advisory Clients are charged fees and expenses as agreed upon with each such client for such matters as audit, administrative and custody services. Some Funds pay the Adviser an administration fee annually, in advance, on a quarterly basis, in an amount equal to .25% of the investment account's average monthly net assets. This fee may be more or less than the actual cost to the Adviser in this regard. In such cases, the Adviser generally has agreed to pay or absorb the ordinary operating expenses of each Fund (*e.g.*, legal fees and disbursements; fees of the administrator; fees of the custodian; accounting, audit, and tax preparation fees and expenses; organizational expenses; and any expenses relating to the offer and sale of a Fund's shares or interests, as applicable), excluding the management fee and the incentive fee, if any. Separate Accounts may also pay the Adviser an administration fee annually in the range of .10% to .15% or may pay certain actual expenses. Certain expense fees may be capped at a fixed amount per annum. Fund of fund investors will indirectly incur fees and expenses applicable to the underlying Portfolio Funds, including asset-based, performance-based, carried interest, incentive allocation, and other compensation payable to the Portfolio Managers and brokerage and other transaction costs incurred by the Portfolio Funds. (See "Layering of Fees" below). Rock Creek may engage Sub Advisers in connection with the management of certain portfolios, in particular in emerging markets. Fee arrangements with Clients may be structured so that they are inclusive of fees due to Sub Advisers. Please see Item 12, for more information about the Adviser's brokerage practices.

Generally, Advisory Clients may terminate their advisory contracts with the Adviser for cause or upon notice to the Adviser as agreed to with the Adviser. Any fees which have been paid in advance at the time of termination will be reviewed by the Adviser and the applicable pro-rata portions will be returned to the Advisory Client.

In relation to Separate Accounts, the Adviser, at the instruction of the Separate Account client, either deducts fees from managed assets or invoices the Separate Account client for fees incurred on a quarterly basis.

For the avoidance of doubt, the Adviser does not charge, and the Adviser is not reimbursed for, its own overhead or other internal costs, such as employee payroll and benefits, office space and furnishings, travel, and telecommunications.

Item 6. Performance-Based Fees and Side-By-Side Management

As discussed above, Clients may also pay the Adviser an incentive fee or allocation based upon an annual percentage of the net capital appreciation above a hurdle rate of the Client's advised assets for the year, subject to standard high-water provisions, at the end of each calendar year. All incentive fees charged by the Adviser are in compliance with Rule 205-3 under the Advisers Act. For further information regarding the particular fee schedules for the Funds, please refer to the applicable private placement memorandum and supplements. Management fees charged by the Funds to a particular investor share class may be based on the level of liquidity offered such share class so that generally if a longer lock up is elected by the investor, the management fee charged would be lower than had a shorter lock up been elected. Once the lock up expires, unless a new lock up is entered into with the investor, the fee generally would increase to reflect the more liquid share class the investor has converted to after the lock up has expired.

The Adviser charges Funds and Separate Accounts a management fee, and, in certain cases, an incentive fee or allocation. The Adviser, however, in its discretion, may manage other Funds or Separate Accounts with higher or lower fees, and different fee structures. Funds and Separate Accounts that pay the Adviser a higher percentage of fees could create an incentive for the Adviser to favor those Funds or Separate Accounts or to recommend riskier investments.

As the management fees, performance-based fees and allocations made to the Adviser are based directly on the net asset value of the Client accounts, there is a potential conflict of interest in valuing the assets held in such accounts. The Adviser will follow its valuation policies and utilize the Clients' third-party administrator as appropriate to mitigate this risk. In general, with respect to investments in Portfolio Funds, the Adviser relies on the valuations provided by a Portfolio Manager. As such, the Adviser also performs due diligence on the underlying Portfolio Managers with respect to such managers' own valuation policies and procedures to mitigate this particular risk. The Adviser has adopted compliance policies and procedures for fairly allocating investments among Clients in accordance with what the Adviser understands to be accepted standards in the investment management industry.

Item 7. Types of Clients

The Adviser advises Commingled Funds; Funds of One; Separate Accounts, foundations; endowments; sovereign wealth funds; and Taft-Hartley, corporate, municipal, state, and foreign pension plans.

Requirements to Open or Maintain an Account. Certain Funds may not be available to all U.S. investors, may limit the number of U.S. investors that they accept, or may require that any U.S. investors certify that they are a "qualified purchaser" as defined in Section 2(a)(51)(A) of the Investment Company Act of 1940 (the "Company Act") and an "accredited investor" as defined by Regulation D promulgated under the Securities Act of 1933, as amended. Certain Funds' Boards of Directors have sole discretion to decline to accept the subscription of a Fund's interests for any prospective investor. For each Fund, there is a required minimum investment of \$5 million and a required minimum additional subscription amount of \$1 million. A Fund's

Board of Directors, in its sole discretion, however, may accept either initial or additional subscriptions of a lesser amount (but in no event less than such amounts as required to comply with section 4(3) of the Mutual Funds Law (2009 Revision) of the Cayman Islands, as amended from time to time.

In general, a minimum investment of \$100 million is generally imposed on each investor that wishes to open a Separate Account. This minimum investment may be waived at the discretion of the Adviser.

The Funds or Separate Accounts generally may limit the ability of investors to withdraw capital or redeem or transfer their interests for a period of time after investment. These lock-ups may differ among the Clients and among the classes of interests in the same Fund. Generally, a Fund may waive or alter these requirements.

Item 8. Methods of Analysis, Investment Strategies and Risk of Loss

Methods of Analysis. Generally, the Adviser will engage Portfolio Managers to manage the assets of the Clients primarily by investing such assets in Portfolio Funds managed by such Portfolio Managers, using a wide variety of investment styles, with this arrangement commonly referred to as a “fund of funds.” Portfolio Managers and Sub Advisers use investment strategies covering a wide range of asset classes. The Adviser employs an investment process covering: (a) market review and asset allocation among different investment strategies and asset classes, (b) Portfolio Manager and Sub Adviser identification and due diligence, including legal and operational due diligence, (c) portfolio construction, (d) risk management, and (e) portfolio monitoring. The Adviser invests the assets of Clients with Portfolio Managers and Sub Advisers that use investment strategies and risk management processes consistent with the Clients’ investment objectives and policies. There can be no assurance that the Adviser will always be able to invest in a particular Portfolio Fund or that the investment strategy used by a Portfolio Fund, Sub Adviser, or portfolio will be successful.

The Adviser relies on research produced internally and externally for purposes of manager selection and asset allocation. The Adviser utilizes internal and external quantitative tools for evaluating portfolios of hedge funds and other managers, quantitative tools to assess the cyclicity of various strategies, risk management tools to manage the risk of the overall portfolio and individual Portfolio Managers, and proprietary tools for monitoring the portfolios of underlying hedge funds and other Portfolio Managers.

The Fund of Funds Concept. The Adviser generally believes that a fund of funds that invests its assets with underlying hedge funds generally offers investors advantages over traditional funds by providing a more diversified portfolio than an investment in a single fund and by providing an absolute return focus. In addition, by investing with multiple Portfolio Managers, a fund of funds may reduce the volatility associated with a direct investment in a single Portfolio Fund. There are material risks associated with a fund of funds and with the investment strategies employed by the Portfolio Managers and the strategies utilized by the Adviser in constructing the portfolios and with the risk management techniques that the Adviser utilizes.

Investment Strategies. Generally, Rock Creek invests, directly or indirectly through Portfolio Funds and Sub Advisers, across a range of strategies, including small/emerging managers, non-U.S. and emerging markets, diversified, long/short equity, short-biased equity, relative value, market neutral, equity-hedged, global macro/commodities, and credit.

Significant Risks. The Adviser may invest or advise on the allocation of a Client's capital into a wide range of investments and transactions directly or indirectly across global markets, including, but not limited to, Portfolio Funds and Sub Advisers. Investing in Portfolio Funds and investing directly or indirectly in securities, futures, and derivatives involves risk of loss that investors in the Funds and advisory clients should be prepared to bear.

All investments risk the total loss of capital and Clients should be prepared to bear this loss. The following comprise risks associated with the Adviser's asset management practices as well as specific risks associated with Portfolio managers, Portfolio Funds, and Sub Advisers:

General Investment Risks. In general, the success of the Funds and Separate Accounts depends on the Adviser's ability to select and invest assets with individual Portfolio Funds and with Sub Advisers, and the Adviser's portfolio construction and risk management expertise. The Portfolio Managers and Sub Advisers, or in limited cases when permitted, the Adviser on behalf of its Clients, may use investment techniques such as margin transactions, short sales, option transactions, forward and futures contracts, or the purchase or sale of exchange traded funds. In certain circumstances, these practices can maximize adverse investment impacts. No guarantee or representation is made that the investment program including, without limitation, the investment objectives, diversification strategies, or risk monitoring goals, will be successful, and investment results may vary substantially over time.

No assurance can be given that the investment strategies to be used by the Adviser, Commingled Funds, Funds of One, Separate Accounts, the Portfolio Funds, or Sub Adviser will be successful under all or any market conditions. For example, a Portfolio Manager's inability to effectively hedge an investment strategy may cause the assets of a Client invested with such Portfolio Manager to significantly decline in value and could result in substantial losses to the Client. In addition, subjective decisions made by the Adviser or the Portfolio Managers may cause a Client to incur losses or to miss profit opportunities on which it may otherwise have capitalized. Moreover, although the Adviser may invest assets of a Client to Portfolio Managers that use different investment strategies, there can be no assurance that market or other events will not have an adverse impact on the strategies employed by multiple Portfolio Managers. Past investment results of the Adviser, Commingled Funds, Funds of One, Separate Accounts, Portfolio Funds, and Sub Advisers are not necessarily indicative of their future performance. No assurances can be made that profits will be achieved or that substantial losses will not be incurred.

Although the Adviser conducts due diligence and monitors the performance on an ongoing basis of the Portfolio Funds, there is no assurance that the Adviser's oversight will permit a Client to avoid losses. With respect to Sub Advisers, the Adviser will establish contractual relationships that may require, among other things, that the Sub Adviser provides the Adviser with periodic reports permitting the Adviser to monitor the account's holdings and risk

profile, be available as part of the Adviser's ongoing due diligence and monitoring process of Sub Advisers, and provides periodic compliance reporting. There is no assurance, however, that these contractual provisions will permit a Client to avoid losses

Portfolio Funds in Early Stages of Formation. A Client may invest in Portfolio Funds that are in an early stage of formation or operation. Such an investment can pose a number of operational and other issues. For example, in its early stages a Portfolio Fund may have little capital available to cover expenses and, accordingly, may have difficulty attracting qualified personnel. Portfolio Managers may face competition from other investment funds, which may be more established, have a larger number of qualified management and technical personnel, and benefit from a larger capital base.

Emerging Markets. Investing in emerging markets involves additional risks and special considerations not typically associated with investing in other more established economies or securities markets. In general, such risks may include (i) increased risk of nationalization or expropriation of assets or confiscatory taxation, (ii) greater social, economic and political uncertainty including war, (iii) higher dependence on exports and the corresponding importance of international trade, (iv) greater volatility, less liquidity and smaller capitalization of securities markets, (v) greater volatility in currency exchange rates, (vi) greater risk of inflation, (vii) greater controls on foreign investment and limitations on repatriation of invested capital and on the ability to exchange local currencies for U.S. dollars, (viii) increased likelihood of governmental involvement in and control over the economies, (ix) governmental decisions to cease support of economic reform programs or to impose centrally planned economies, (x) differences in auditing and financial reporting standards which may result in the unavailability of material information about issuers, (xi) less extensive regulation of the securities markets, (xii) longer settlement periods for securities transactions and less reliable clearance and custody arrangements, (xiii) less developed corporate laws regarding fiduciary duties of officers and directors and the protection of investors, (xiv) certain considerations regarding the maintenance of securities and cash with non-U.S. brokers and securities depositories, (xv) possible unforeseen changes in local tax laws that make investments or redemptions more costly than anticipated. Certain of these risks are further described below in "Non-U.S. Securities," "Equity Securities in Emerging Markets," "Non-U.S. Issuers and Non-U.S. Securities Markets," "Investment and Repatriation Restrictions," and "Political and Legal Factors in Emerging Markets."

Limited Diversification. In the normal course of making investments on behalf of a Client, the Adviser may, but depending upon the portfolio may not be obligated to, diversify investments. A Client's portfolio could become significantly concentrated, for example, in any one Portfolio Fund, issuer, industry, sector, strategy, country or geographic region, and such concentration of risk may increase any losses suffered by the Client. In addition, it is possible that the Adviser may select investments that are concentrated in a limited number or type of financial instruments. This limited diversification could expose a Client to losses disproportionate to market movements in general if there are disproportionately greater adverse price movements in those financial instruments.

Evolving Regulatory Oversight; Business and Regulatory Risks of Hedge Funds. The Commingled Funds, Funds of One, and Separate Accounts are not required to register as investment companies, and have not registered as such, under the Company Act. Thus, the provisions of the Company Act intended to provide various protections to investors are generally not applicable. Moreover, the Portfolio Funds generally are not registered as investment companies. The investment activities of the Commingled Funds, Funds of One, Separate Accounts, and the Portfolio Funds are not subject to Company Act provisions that limit the use of leverage and regulate other investment practices. Portfolio Funds generally maintain custody of their assets with brokerage firms that may not separately segregate such assets as would be required in the case of registered investment companies. Under the provisions of the U.S. Securities Investor Protection Act, the bankruptcy of any such brokerage firm could have a greater adverse effect on the Commingled Funds, Funds of One, or Separate Accounts than would be the case if custody of assets were maintained in accordance with the requirements applicable to registered investment companies. There is also a risk that a Portfolio Manager or Sub Adviser could convert to its own use assets committed to it by the Commingled Funds, Funds of One, or Separate Accounts or that a custodian could convert to its own use assets committed to it by a Portfolio Manager or Sub Adviser. There can be no assurance that the Portfolio Managers or the entities they manage or the Sub Advisers will comply with all applicable laws and that assets entrusted to the Portfolio Managers and Sub Advisers will be protected.

The regulatory environment for private investment funds continues to evolve, and changes in the regulation of private investment funds may adversely affect the value of investments and the ability of the Portfolio Funds to obtain the leverage they might otherwise obtain or to pursue their trading strategies. There still may be significant new regulations that could limit activities and investment opportunities or change the functioning of capital markets.

For example, beginning in 2011, Rock Creek began making new filings with the Federal Reserve Bank of New York, and beginning in 2013, Rock Creek will be making additional reports and disclosures to the SEC to assist, among other things, the Financial Stability Oversight Council in its assessment of systemic risk in the U.S. financial system. On February 9, 2012, the CFTC issued final rules that increase CFTC regulatory requirements for private funds, including hedge funds and fund of funds. These final rules eliminate two of the private fund industry's most frequently relied-upon exemptions from commodity pool operator ("CPO") and commodity trading advisor ("CTA") registration with the CFTC. These final rules also will subject registered CPOs and CTAs to new additional systemic risk reporting requirements. Direct investments in futures or investments in underlying private funds that may be deemed to be commodity pools may subject the Adviser to registration with the CFTC and membership with the National Futures Association. Although the Adviser is exempt from registration as a CPO in reliance on CFTC No-Action Letter 12-38 (November 2012) because the Adviser and its affiliates are the operators of private funds that are fund of funds, the Adviser may be required to register with the CFTC as both a CPO and CTA by the end of 2013 depending on the CFTC's final guidance for operators of fund of funds.

This document does not address or anticipate every possible current or future domestic or non-U.S. law, rule, or regulation that may affect the Adviser, the Portfolio Managers, the Sub

Advisers, or their businesses. These possible changes also may have a significant impact on the owners or the operations of the Adviser, the Commingled Funds, the Funds of One, or the Separate Accounts. These impacts may include, among others, restricting the types of investments that may be made; preventing the exercise of voting rights, if any, with regard to certain financial instruments; or requiring the disclosure of the identity of investors. The Commingled Funds, Funds of One, Separate Accounts, Portfolio Funds, Portfolio Managers, and Sub Advisers may also be subject to non-U.S. regulation in jurisdictions in which each engages in business, which, in turn, could have a material adverse impact on the value of investments. Investors should understand that the Funds', Separate Accounts', the Portfolio Funds', and Sub Advisers' businesses are dynamic and are expected to change over time. Therefore, each may be subject to new or additional regulatory constraints in the future.

Risks Associated with Exchanged Traded Funds (“ETFs”). Funds or Separate Accounts may invest, either directly or through Portfolio Funds in ETFs, including those that seek to replicate stock indices. ETFs may be used by the Adviser from time to time in certain circumstances where the timing and extent of particular exposure or investment exposures may be efficiently obtained through ETFs, as appropriate in the Adviser's discretion. All ETF products are subject to risk that may result in the loss of principal. Emerging market ETFs involve additional risks, including currency fluctuations and the potential for adverse developments in specific countries or regions.

Volatile Markets. The prices of commodities contracts and various types of derivative instruments are highly volatile. Price movements of forward contracts, futures contracts, and other derivative contracts are influenced by, among other things, interest rates; changing supply and demand relationships; trade, fiscal, monetary, and exchange control programs and policies of governments; and national and international political and economic events and policies. In addition, governments from time to time intervene in certain markets, particularly those in currencies and interest rate-related futures and options, which may cause all of such markets to move rapidly in the same direction because of, among other things, interest rate fluctuations. When investing in non-U.S. instruments, portfolios are also subject to the risk of failure of the exchanges on which their positions trade or of their clearinghouses resulting from less governmental regulation and intervention, and there may be a higher risk of financial irregularities or lack of appropriate risk monitoring and controls. Risks associated with investing in securities of foreign issuers are more pronounced with respect to investments in securities of issuers in emerging markets. Certain portfolio assets are invested with Portfolio Managers that invest globally in the U.S. and in other developed markets and in emerging markets outside the United States.

Systemic Risk. Credit risk may arise through a default by or because of one of several large institutions that are dependent on one another to meet their liquidity or operational needs. A default by or because of one institution may cause a series of defaults by the other institutions. This is sometimes referred to as a “systemic risk” and may adversely affect financial intermediaries, such as clearing houses, banks, securities firms and exchanges with which a Client and the Portfolio Funds interact. A systemic failure could have material adverse consequences on Clients and the Portfolio Funds and on the markets for the securities in which the Portfolio Funds seek to invest.

“Side Pocket” or Special Investments. The Portfolio Funds may invest a portion of the value of their total assets in investments that are illiquid, including “side pocket” investments or “special investments.” “Side pockets” may be created by a Portfolio Fund in order to accommodate illiquid investments prior to the time when they are either sold or become readily marketable. If a side pocket is created, an allocable portion of the interests held by investors in the Portfolio Fund typically will be converted at net asset value to a separate class of interest in the Portfolio Fund corresponding to the underlying investment in the side pocket. New investors in the Portfolio Fund generally will not receive any interest issued in connection with pre-existing side pocket investments.

Side pocket investments will generally be carried on the books of the Portfolio Funds (and consequently on the books of the Fund or Separate Accounts) at fair value (which may be cost) as determined by the Portfolio Managers. There is no guarantee that fair value will represent the value that will be realized by the Portfolio Fund on the eventual disposition of the side pocket investment or that would, in fact, be realized upon its immediate disposition. If an investor (*e.g.*, a Fund or Separate Account) were to redeem its interest in a Portfolio Fund that makes side pocket investments, such investor would typically remain exposed to the risk of loss on its indirect interest in any side pocket until such investments were realized or deemed realized. Management fees, performance fees, and other expenses of the Portfolio Fund would typically continue to accrue until the side pocket investment is realized or deemed realized. If the proceeds from the disposition of a side pocket investment were insufficient to cover any accrued expenses, such accrued expenses might be borne disproportionately by other investors in such Portfolio Fund, including the Clients.

Hedging Transactions. The Adviser may for certain Clients, from time to time, utilize a variety of financial instruments, such as short sales, options, swaps, caps and floors, and futures and forward contracts and similar derivatives, both for investment purposes and for hedging purposes. Although the Adviser may enter into hedging transactions to seek to reduce a Client’s risk, such transactions may not be fully effective in mitigating the risks in all market environments or against all types of risk (including unidentified or unanticipated risks), thereby incurring losses to the such Client. In addition, such hedging transactions may result in a poorer overall performance for a Client than if the Adviser had not engaged in any such hedging transactions. Moreover, it should be noted that (1) the Adviser may determine not to hedge against, or may not anticipate, certain risks and (2) a Client’s portfolio will always be exposed to certain risks that cannot be hedged, such as credit risk (relating both to particular securities and counterparties).

Currency Trading. A portion of the assets may be invested by a Portfolio Fund in debt and equity securities denominated in various currencies and in other financial instruments, the price of which is determined with reference to such currencies. The portfolios of Clients, however, value their investments and other assets in U.S. dollars. To the extent not hedged, the value of the net assets will fluctuate with U.S. dollar exchange rates as well as with changes in the prices of investments in the various local markets and currencies. Although forward currency contracts and options may be utilized to hedge against currency fluctuations, the

Portfolio Managers are not required to enter into such hedging transactions and there can be no assurance that such hedging transactions, even if undertaken, will be effective.

Managed Account Allocations. The Funds or Separate Accounts may invest with certain portfolio managers (*i.e.*, the Sub Advisers) by opening managed accounts (through the Adviser establishing sub-advisory management agreements with such portfolio managers), rather than by investing in Portfolio Funds. This permits the Adviser to customize the investment guidelines and tailor other features to suit particular portfolios that may not be permissible if investing in a Portfolio Fund. Although there may be certain advantages to managed accounts, such accounts may expose a Client's portfolio to theoretically unlimited liability, and it is possible, given the leverage at which certain of the Sub Advisers trade, that a Client's portfolio could lose more in a managed account with a particular Sub Adviser than with an investment in a Portfolio Fund. To mitigate this risk, the Adviser may structure a separate account investment with a Sub Adviser through a special purpose vehicle.

Intermediate Vehicles to Facilitate Investments. To structure or facilitate an investment with a particular Portfolio Fund by the Funds or Separate Accounts, the Adviser may form a separate vehicle or segregated portfolio (*i.e.*, an Intermediate Vehicle) through which such investments into a Portfolio Fund may be made by certain of the Funds and Separate Accounts. The Funds and Separate Accounts may also utilize such vehicles to make managed account allocations to limit their potential liability. Such Funds and Separate Accounts will bear their proportionate share of the costs and expenses associated with the establishment and ongoing operation of such vehicles.

Side Letters. The Adviser (or an affiliated general partner) may enter into side letters or other similar agreements with investors in a Fund connection with their admission to such Rock Creek-sponsored investment fund without the approval of any other investor. The side letters or other similar agreements may have the effect of establishing rights under, altering, or supplementing the terms of the governing documents of such applicable Fund with respect to one or more such investors in a manner more favorable to such investors than those applicable to other investors. Such rights or terms in any such side letter may include, without limitation, reporting obligations or rights or terms necessary in light of particular legal, public policy, or regulatory characteristics of an investor.

Regulated Investors. Certain prospective investors may be subject to Federal and state laws, rules, and regulations that may regulate their participation in the Funds as well as their entering into a Separate Account with the Adviser, or their engaging directly, or indirectly through an investment in the Funds, in investment strategies of the type which the Portfolio Managers may utilize from time to time (*e.g.*, short sales of securities and the use of futures, leverage, and limited diversification). While the investment programs are generally appropriate for tax-exempt organizations for which an investment in the Funds or Separate Accounts would otherwise be suitable, each type of exempt organization may be subject to different laws, rules, and regulations and prospective investors should consult with their own counsel and advisers as to the advisability and tax consequences of any investment. Investment by entities subject to ERISA and other tax-exempt entities requires special consideration. Trustees or administrators of such entities are urged to carefully review all investment information.

Identity of Beneficial Ownership and Withholding on Certain Payments. Under legislation enacted in March 2010 (the Foreign Account Tax Compliance Act), in order to avoid a U.S. withholding tax of 30% on certain payments (including payments of gross proceeds) made with respect to certain actual and deemed U.S. investments, the Adviser's Funds that are "foreign financial institutions" will be required to enter into an agreement with the U.S. Internal Revenue Service (the "Service") by December 31, 2013 identifying certain direct and indirect U.S. account holders (including debtholders and equityholders). A non-U.S. investor in a Fund will generally be required to provide to the Fund information which identifies its direct and indirect U.S. ownership. Any such information provided to the Fund will be shared with the Service. A non-U.S. investor that is a "foreign financial institution" within the meaning of Section 1471(d)(4) of the U.S. Internal Revenue Code of 1986, as amended (the "IRC"), will generally be required to enter into an agreement with the Service by December 31, 2013 identifying certain direct and indirect U.S. account holders (including debtholders and equityholders). A non-U.S. investor that fails to provide such information to the Fund or enter into such an agreement with the Service, as applicable, would be subject to the 30% withholding tax with respect to its share of any such payments attributable to actual and deemed U.S. investments of the Fund. All investors should consult their own tax advisors regarding the possible implications of these rules on their investments in their applicable Fund.

Assumption of Business, Terrorism and Catastrophe Risks. The Adviser, Clients, and the Portfolio Funds may be subject to the risk of loss arising from exposure that they may incur, indirectly, due to the occurrence of various events, including, without limitation, hurricanes, earthquakes, and other natural disasters; terrorism; and other catastrophic events. These risks of loss can be substantial and could have a material adverse effect on a Client's portfolio.

Counterparty Risks; Counterparty and Service Provider Relationships. Portfolio Managers and Sub Advisers establish relationships to obtain brokerage, prime brokerage, custody and banking services, financing, and derivative intermediation and to act as the counterparty to derivative transactions. There can be no assurance, however, that the Portfolio Managers and the Sub Advisers will be able to maintain such relationships or establish others. An inability for a Portfolio Manager or Sub Adviser to establish or maintain such relationships would limit its trading activities and prevent the Portfolio Fund or Sub Adviser from trading at optimal rates and terms, could create losses, preclude the Portfolio Fund from engaging in certain transactions, concentrate the holdings of the assets of the Portfolio Fund or Sub Adviser with a limited number of counterparties, and limit the availability of financing, each of which could materially adversely affect the Clients. Moreover, a disruption in the services provided by any such relationships before a Portfolio Manager or Sub Adviser is able to establish additional relationships (which may not be successful) could have a significant impact on its business due to its reliance on such counterparties.

Creditworthiness of Prime Brokers and Other Service Providers. The Portfolio Managers have established relationships with broker-dealers, banks, and their affiliates (both in the U.S. and outside the U.S.) for the provision of services, including holding and maintaining the funds, securities, commodity interests, and other property and the clearance of their securities transactions. These arrangements can cover securities, loans, derivatives, swaps, options,

futures, foreign exchange, and securities lending transactions and usually involve the provision of financing to the applicable Portfolio Fund. The Portfolio Fund's assets held by a prime broker that is providing financing generally will be secured in favor of that prime broker and its affiliates.

The Portfolio Managers generally engage U.S. broker-dealers as their prime brokers. The prime brokerage arrangements, however, will often include contractual relationships within a prime broker's group of affiliates, some of which may be located outside of the United States. A Portfolio Fund's prime brokerage arrangements typically allow for transfer of the Portfolio Fund's assets to the prime broker's affiliates and also to sub-custodians that may be located in various jurisdictions, including jurisdictions outside the United States. These entities may hold securities, commodities, cash, collateral, or other assets of the Portfolio Fund in such jurisdictions as may be necessary to facilitate the provision of the services to the Portfolio Fund. The agreements with the financial institutions are also complex and generally include cross-collateral, netting, and cross-default provisions to protect the financial institution from the failure of the Portfolio Fund to meet its obligations under a variety of agreements. Bankruptcy laws and other laws and regulations relating to the protection of assets of the Portfolio Fund held by the financial institution vary substantially by jurisdiction, type of legal entity, and are very complex and uncertain and can involve the risk of loss or inability to access any or all of the assets of the Portfolio Fund held by a financial institution that becomes subject to the bankruptcy or insolvency regime. Portfolio Fund assets may be held with U.S. broker-dealers or U.S. or non-U.S. banks or their affiliates and the risks associated with assets held at each of these various institutions may differ substantially. Although there are various laws and regulations in various jurisdictions that may provide some protection to customers of brokerage firms and commercial banks in the event of their insolvency, these protections are not uniform across jurisdictions and it is not always clear when such protections may apply. Because of the large number of entities and jurisdictions involved and the range of possible factual scenarios involving the insolvency of a counterparty, it is impossible to generalize about the effect of their insolvency on the Clients or the Portfolio Funds and their assets. Investors and Separate Account clients should assume that the insolvency of any counterparty would result in a loss to the portfolio (directly or through the Portfolio Funds), which could be material.

Even in countries where applicable law provides protection to client assets, such protections may not adequately protect a Portfolio Fund (and, indirectly, a Client's portfolio) from risk of loss. For example, although U.S. rules and regulations applicable to broker-dealers are designed to protect client assets (including a Portfolio Fund's assets), it is possible that, if one of the Portfolio Fund's brokers were to become insolvent, the assets of the Portfolio Fund held at such broker could be at risk. Although U.S. broker-dealers are required to segregate client assets from their proprietary assets and are required to hold specified amounts of capital in reserve, client assets are normally held in pooled client accounts for the benefit of all clients. Additionally, the broker may be able to transfer client assets out of such client accounts or use such assets (including cash) in the ordinary course of its business. A Portfolio Fund could experience losses if the clients' claims exceed the amount of client assets such brokers actually held at the time of the insolvency. With respect to U.S. broker-dealers, in the event client claims are greater than client property, the clients' remaining claims may be satisfied, along with all general unsecured claims, from the broker's non-customer assets (including its regulatory

capital). In addition, while the return of client property is designed to occur on an expedited basis (usually by transfer of the accounts to a solvent broker), there exists the risk of delay in, or inability to make, such a return or transfer, in whole or in part, by the insolvent broker. Furthermore, a Portfolio Fund may be unable to trade such securities or other property held by the insolvent broker during this transfer period or during a pending insolvency proceeding. Such a situation would create the possibility of a substantial loss to a Portfolio Fund (and, indirectly, a Client) with respect to its assets held at such broker. Since the amount and type of property ultimately received by a Portfolio Fund may remain indeterminate until actually returned, or upon resolution of any insolvency proceeding, as applicable, such Portfolio Fund may be unable to adequately hedge its positions in such property.

Many Portfolio Funds rely on prime brokers to provide financing for many of their investment activities. Financial institutions may re-evaluate their prime brokerage business from time to time, which may impact the availability of credit to a Portfolio Fund and the terms on which it is offered, including the cost thereof, creating a more difficult financing environment for many asset classes and this may potentially adversely affect the Portfolio Fund's returns and investment activity. In addition, the Portfolio Fund may face an increased risk of being subject to significant changes in margin requirements as prime brokers modify their risk models to determine how much to lend to their customers. Furthermore, prime brokers may face additional regulation in the foreseeable future, which may affect their willingness or ability to provide prime brokerage services, and the costs of such services. Financing costs are likely to be significantly higher or assets may become impossible to finance if they cannot be financed by prime brokers.

Risk of Counterparty Default. The stability and liquidity of repurchase agreements, swap transactions, forwards, and other over-the-counter ("OTC") derivative transactions depend in large part on the creditworthiness of the parties to the transactions. The failure of a prime broker could have a material adverse effect on a Portfolio Fund (and a Client's portfolio). Although the Portfolio Managers evaluate the creditworthiness of their respective Portfolio Fund's prime brokers and other service providers, it is often impossible to obtain sufficient information to make fully informed judgments or determinations of the risk that a particular financial institution may fail, particularly given the speed with which a financial institution's creditworthiness may decline when faced with liquidity pressures. Strategies to minimize such risk include moving assets from one prime broker to another prime broker, custodian, or bank or establishing segregated accounts for securities, if possible, which creates additional operational risk.

If there is a default by the counterparty to such a transaction, the Portfolio Manager will under most normal circumstances have contractual remedies pursuant to the agreements related to the transaction. Exercising such contractual rights, however, may involve delays or costs that could result in the net asset value of a Portfolio Fund being less than if the Portfolio Fund had not entered into the transaction. Furthermore, there is a risk that any of such counterparties could become insolvent. If one or more of the Funds', Separate Accounts', or the Portfolio Funds' counterparties were to become insolvent or the subject of liquidation proceedings in the United States (either under the Securities Investor Protection Act or the United States Bankruptcy Code), there exists the risk that the recovery of the Funds', Separate Accounts', or the Portfolio

Funds' securities and other assets from such prime broker or broker-dealer will be delayed or be of a value less than the value of the securities or assets originally entrusted to such prime broker or broker-dealer.

In light of the extensive, and sometimes complex, financing and trading arrangements that the Portfolio Funds have with their prime brokers, each Portfolio Fund may face the risks, among other things, that the assets of the Portfolio Fund might be transferred out of its accounts or might be in accounts that do not benefit from client asset protection or that a prime broker will have a security interest in the assets of the Portfolio Fund that it holds. Because of the large number of entities and jurisdictions involved and the range of possible factual scenarios involving the insolvency of a prime broker or any of its sub-custodians, agents or affiliates, it is impossible to generalize about the effect of their insolvency on the Portfolio Fund and its assets. Investors and Separate Account clients should assume that the insolvency of any of the Portfolio Fund's prime brokers could result in the loss of all or a substantial portion of the Portfolio Fund's assets held by such prime broker. Should the Portfolio Fund be unable to identify, access, or value its assets or establish with any certainty the amount or likelihood of recovery of any claim, such circumstances could cause substantial losses to such Portfolio Fund (and, indirectly, a Client's portfolio). Such losses might not be limited to the assets that were held by that prime broker, including replacement costs of relevant assets and fees and expenses. Moreover, the affected Portfolio Fund might be required to make future payments or deliveries to the insolvent prime broker without set-off of amounts due to it.

Leverage. Portfolio Funds may utilize leverage in their investment programs. Leverage may take the form of trading on margin, derivative instruments that are inherently leveraged, and other forms of direct and indirect borrowings. The use of leverage has the effect of increasing the volatility of the Funds' investments. Trading securities on margin, unlike trading in futures (which also involves margin), results in interest charges. Depending on the amount of trading activity, such charges could be substantial. The low margin deposits normally required in connection with futures and forward trading permit a high degree of leverage. Accordingly, a relatively small price movement in a futures contract may result in immediate and substantial losses to the investor. In the event that the Commingled Funds, Funds of One, or Separate Accounts enter into an investment advisory agreement with a Portfolio Manager that utilizes leverage in its investment program, these Clients may become subject to claims by financial intermediaries that extend "margin" loans in respect of such managed account. Such claims could exceed the value of the assets invested with such Portfolio Manager by the Commingled Funds, Funds of One, or Separate Accounts.

In addition, certain Funds may be permitted to borrow for investment purposes and for the purpose of meeting redemptions that would otherwise require the liquidation of investments; the Adviser, however, limits the total amount of borrowings by the Funds to no more than 10% of the net asset value of the Funds, measured at the time of the borrowing and calculated based on the net asset value of the Funds determined as of the last day of the month preceding the date of the borrowing.

The Portfolio Funds may from time to time incur contingent liabilities in connection with an investment. For example, the financing used by the Portfolio Funds to leverage their

portfolios will be extended by securities brokers and dealers in the marketplace in which they invest. While the Portfolio Funds will attempt to negotiate the terms of these financing arrangements with such brokers and dealers, their ability to do so will be limited. The Portfolio Funds are therefore subject to changes in the value that the broker-dealers ascribe to a given security or position, the amount of margin required to support such security or position, the borrowing rate to finance such security or position and/or such broker-dealer's willingness to continue to provide any such credit to the Portfolio Funds. There can be no assurance that a Portfolio Fund will be able to secure or maintain adequate financing, without which the Portfolio Fund may not continue to be viable. Changes by banks and dealers in any of the foregoing policies, or the imposition of other credit limitations or restrictions, whether due to market circumstances or government, regulatory or judicial action, if a Portfolio Fund has no alternative credit facility that could be used to finance its portfolios in the absence of financing from broker-dealers, could result in large margin calls, loss of financing, forced liquidations of positions at disadvantageous prices, termination of swap and repurchase agreements, and cross-defaults to agreements with other broker-dealers. The forced liquidation of all or a portion of a Portfolio Fund's portfolio at distressed prices could result in significant losses to such Portfolio Fund to the detriment of Clients.

Forward Trading. Forward contracts and options thereon, unlike futures contracts, are not traded on exchanges and are not standardized; rather, banks and dealers act as principals in these markets and negotiate each transaction on an individual basis. Forward and "cash" trading are substantially unregulated. There is no limitation on daily price movements, and speculative position limits are not applicable. The primary risks associated with entering into such transactions include the risk that there will not be a market for such instruments; that trading will be disrupted because of unusually high trading volume, government intervention, or other factors; that there is counterparty credit risk; and that the counterparty may not be able to perform on its obligation under the contract. Market illiquidity, trading disruption, or failure of the counterparty to perform could result in major losses to the portfolios. To the extent possible, the Adviser endeavors to select Portfolio Managers that it believes will deal only with counterparties that are creditworthy and reputable institutions, but such counterparties need not be rated investment grade.

Short Selling. The Portfolio Managers with which the Clients invest may engage in short selling. Short selling involves selling securities, which may or may not be owned, and borrowing the same securities for delivery to the purchaser, with an obligation to replace the borrowed securities at a later date. Short selling allows an investor to seek profits from declines in the prices of securities. A short sale creates the risk of a theoretically unlimited loss because the price of the underlying security could theoretically increase without limit and increase the cost of buying those securities to close the short position. There can be no assurance that the securities necessary to close a short position will be available for purchase. Purchasing securities to close out the short position can itself cause the price of the securities to rise further, thereby exacerbating the loss. Short strategies can also be implemented synthetically through various instruments and be used with respect to indices or in the over-the-counter market and with respect to futures and other instruments. In some cases of synthetic short sales, there is no floating supply of an underlying instrument with which to cover or close out a short position and the Portfolio Funds may be entirely dependent on the willingness of over-the-counter market makers to quote prices at

which the synthetic short position may be unwound. There can be no assurance that such market makers will be willing to make such quotes. Short strategies can also be implemented on a leveraged basis. Lastly, even though the Portfolio Funds generally secure a “good borrow” of the security sold short at the time of execution, the lending institution may recall the lent security at any time, thereby forcing the Portfolio Funds to purchase the security at the then-prevailing market price, which may be higher than the price at which such security was originally sold short by the Portfolio Funds.

Non-U.S. Securities. Portfolio Funds and Sub Advisers may invest in securities of, and derivatives of securities of, non-U.S. issuers (both public and private) and in depository receipts, such as American Depositary Receipts (“ADRs”), that represent indirect interests in securities of non-U.S. issuers. Non-U.S. securities that Portfolio Funds and Sub Advisers may invest may be listed on non-U.S. exchanges or traded in non-U.S. over-the-counter markets. Investments in non-U.S. securities can be affected by risk factors generally not thought to be present in the U.S. These factors include, but are not limited to, the following: varying custody, brokerage and settlement practices; difficulty in pricing; less public information about issuers of non-U.S. securities; less governmental regulation and supervision over the issuance and trading of securities than in the U.S.; the unavailability of financial information regarding the non-U.S. issuer or the difficulty of interpreting financial information prepared under non-U.S. accounting standards; less liquidity and more volatility in non-U.S. securities markets; the possibility of expropriation or nationalization; the imposition of withholding or other taxes on interest, dividends, capital gains, or other income or gross proceeds from the sale or other disposition thereof; adverse political, social, or diplomatic developments; limitations on the movement of funds or other assets of a Portfolio Fund or of a Sub Adviser’s brokerage account between different countries; difficulties in invoking legal process abroad and enforcing contractual obligations; and the difficulty of assessing economic trends in non-U.S. countries. Investment in non-U.S. countries also generally involves higher brokerage and custodian expenses than does investment in U.S. securities.

Other risks of investing in non-U.S. securities include changes in currency exchange rates (in the case of securities that are not denominated in U.S. dollars) and currency exchange control regulations or other non-U.S. or U.S. laws or restrictions, or devaluations of non-U.S. currencies. A decline in the value of a non-U.S. currency versus the U.S. Dollar would reduce the U.S. Dollar value of a Portfolio Fund’s or a Sub Adviser’s portfolio securities denominated in such non-U.S. currency, all other things being equal. In addition, a Portfolio Fund or Sub Adviser may incur costs in connection with conversion between various currencies. It may also be difficult to enforce a Portfolio Fund’s rights in such markets. For example, securities traded on non-U.S. exchanges and the non-U.S. persons that trade these instruments are not subject to the jurisdiction of the SEC or the CFTC or the securities and commodities laws and regulations of the U.S. Accordingly, the protections accorded to the Portfolio Fund under such laws and regulations are unavailable for transactions on non-U.S. exchanges and with non-U.S. counterparties. The foregoing risks may be greater in emerging industrialized and less developed countries.

Derivatives. A Client’s portfolio may include direct investments in derivatives or indirect exposure to derivative instruments through investing in Portfolio Funds that enter into derivative transactions. Derivative financial instruments include, without limitation, futures,

options, interest rate swaps, forward currency contracts, and credit derivatives such as credit default swaps. Derivatives are based on the performance of an underlying asset, index, interest rate or other investment. Derivatives may be volatile and involve various risks, depending upon the derivative and its function in a portfolio. Portfolio Funds or a Client may take positions in derivatives either to increase or to decrease the level of risk, or to change the types of risks to which the portfolio is exposed. Swaps, options and other derivative instruments may be subject to various types of risks, including market risk; liquidity risk; risk of non performance by the counterparty, including risks relating to the financial soundness and creditworthiness of the counterparty; legal risk; and operations risk.

The regulatory regime regarding derivatives is changing. The U.S. Dodd-Frank Wall Street Reform and Consumer Protection Act (the “Dodd-Frank Act”) granted the CFTC and SEC broad rulemaking authority to implement various provisions of the Dodd-Frank Act, including comprehensive regulation of the OTC derivatives market. These regulations include derivative exchange trading and clearing requirements, as well as requiring OTC derivatives dealers and major OTC derivatives market participants to register with the SEC and/or CFTC. The implementation of such regulations could adversely affect financial firms that enter into derivative transactions by increasing transaction costs and imposing restrictions on the investment or other operations of such firms.

Stock Index Options and Futures. The Portfolio Managers may purchase and sell call and put options on stock indices listed on securities exchanges or traded in the over-the-counter market for the purpose of realizing its investment objectives or for the purpose of hedging its portfolio. A stock index fluctuates with changes in the market values of the stocks included in the index. The effectiveness of purchasing or writing stock index options for hedging purposes will depend upon the extent to which price movements in the portfolio correlate with price movements of the stock indices selected. Because the value of an index option depends upon movements in the level of the index rather than the price of a particular stock, whether the Portfolio Managers will realize gains or losses from the purchase or writing of options on indices depends upon movements in the level of stock prices in the stock market generally or, in the case of certain indices, in an industry or market segment, rather than movements in the price of particular stocks. Accordingly, successful use by a Portfolio Manager of options on stock indices will be subject to an ability to correctly predict movements in the direction of the stock market generally or of particular industries or market segments. This requires different skills and techniques than predicting changes in the price of individual stocks. Put and call options are highly specialized activities and entail greater than ordinary investment risks. For example, traders who sell options are subject to the entire loss that occurs in the underlying item (less any premium received).

The price of stock index futures contracts may not correlate perfectly with the movement in the underlying stock index because of certain market distortions. First, all participants in the futures market are subject to margin deposit and maintenance requirements. Rather than meeting additional margin deposit requirements, investors may close futures contracts through offsetting transactions that would distort the normal relationship between the index and futures markets. Secondly, from the point of view of speculators, the deposit requirements in the futures market are less onerous than margin requirements in the securities market. Therefore, increased

participation by speculators in the futures market also may cause temporary price distortions. Successful use of stock index futures contracts is subject to the Portfolio Managers' ability to correctly predict movements in the direction of the market.

Futures Contracts. The Portfolio Funds may trade in futures contracts (and options on futures). Futures contracts markets are highly volatile and are influenced by a variety of factors, including national and international political and economic developments. In addition, because of the low margin deposits normally required in futures trading, a high degree of leverage is typical of a futures trading account. As a result, a relatively small price movement in a futures contract may result in substantial losses to the trader. Moreover, futures positions are marked to market each day and variation margin payments must be paid to or by a trader.

Positions in futures contracts may be closed out only on the exchange on which they were entered into or through a linked exchange, and no secondary market exists for such contracts. Although the Portfolio Managers typically enter into futures contracts only if an active market exists for the contracts, no assurance can be given that an active market will exist for the contracts at any particular time. Certain futures exchanges do not permit trading in particular futures contracts at prices that represent a fluctuation in price during a single day's trading beyond certain set limits. If prices fluctuate during a single day's trading beyond those limits, a Portfolio Manager could be prevented from promptly liquidating unfavorable positions and thus be subjected to substantial losses.

In addition, the CFTC and various exchanges impose speculative position limits on the number of positions a person or group may hold or control in particular commodities. For purposes of complying with speculative position limits, a Portfolio Manager's outright positions (*i.e.*, those that are not bona fide hedge positions or spread positions specifically exempted from speculative limits) may be aggregated with positions of certain related persons and, as a result, a Portfolio Manager may be unable to take positions in particular futures contracts or may be forced to liquidate positions in particular futures contracts.

The Dodd-Frank Act authorized the CFTC to impose aggregate position limits across all futures contracts and swaps contracts on the same underlying commodity that perform significant price discovery functions. In October 2011, the CFTC adopted new rules imposing position limits on certain futures contracts and economically equivalent futures, options, and swaps. This rule could have an adverse effect on trading for a Client or Portfolio Fund.

When used for hedging purposes, an imperfect or variable degree of correlation between price movements of the futures contracts and the underlying investment sought to be hedged may prevent a Portfolio Manager from achieving the intended hedging effect or expose such Portfolio Fund to the risk of loss.

Unlike trading on U.S. futures exchanges, trading on non-U.S. futures exchanges is not regulated by the CFTC and may be subject to greater risks than trading on domestic exchanges. For example, some non-U.S. exchanges are principal markets so that no common clearing facility exists and a trader may look only to the broker for performance of the contract. In addition, unless a Portfolio Manager hedges against fluctuations in the exchange rate between the

U.S. dollar and the currencies in which trading is done on non-U.S. exchanges, any profits that a Portfolio Manager might realize in trading could be eliminated by adverse changes in the exchange rate, or the Portfolio Manager could incur losses as a result of those changes.

Suspensions of Trading. Each securities exchange typically has the right to suspend or limit trading in all securities. Such a suspension would render it impossible for a Portfolio Manager or Sub Adviser to liquidate positions and, accordingly, could cause losses to the detriment of a Client's portfolio.

Valuation Risks. Rock Creek relies primarily on information provided by Portfolio Managers in valuing a Client's investments in their Portfolio Funds and determining the value of the Client's portfolio. A Client's investment in the Portfolio Funds will generally be valued in accordance with the valuations provided by such Portfolio Funds. These valuations generally will be provided by the Portfolio Manager or administrator of a Portfolio Fund based on the interim unaudited financial records of the Portfolio Fund, and, therefore, will be subject to adjustment (upward or downward) upon the auditing of such financial records.

In addition, generally, neither a Client's administrator nor the Adviser will have access to detailed information regarding the underlying portfolios of the Portfolio Funds; each relies on the limited information provided to them by the Portfolio Funds or their administrators. The failure of the Portfolio Funds or their administrators to appropriately value the net assets of the Portfolio Funds could adversely affect a Client and the Client's reported performance.

Valuation Estimates. In most cases, the Adviser has no ability to assess the accuracy of the valuations received from a Portfolio Manager. Furthermore, the monthly net asset values of Portfolio Funds provided to the Adviser from Portfolio Managers are unaudited, subject to revision upon conclusion of each underlying Portfolio Fund's annual audit. Revisions to a Client's gain and loss calculations are an ongoing process, and actual net capital appreciation or net capital depreciation figures may not be final until an annual audit is completed.

Delayed Tax and Annual Reporting Information. For the portfolios to complete their tax reporting requirements and to provide an audited annual report to investors and Separate Account clients, they must receive information on a timely basis from the Portfolio Managers. A Portfolio Manager's delay in providing this information could indirectly delay the portfolios' preparation of tax information for investors and Separate Account clients. As a result, the preparation of the audited annual report of the Funds and Separate Accounts could be delayed, and investors and Separate Account clients might be required to seek extensions on the time to file their tax returns.

Layering of Fees. By investing in the Portfolio Funds indirectly through a Fund or a Separate Account, an investor or advisory client bears a pro rata portion of the management fee and incentive fee or allocation and other expenses of such Fund or Separate Account and also indirectly bears a pro rata portion of the asset-based fees, performance-based compensation and other expenses borne by the Fund or Separate Account as an investor in Portfolio Funds.

Indemnification. The Funds or Separate Accounts may agree to indemnify certain of the Portfolio Funds and their Portfolio Managers from any liability, damage, cost or expense arising out of, among other things, certain acts or omissions relating to the offer or sale of the interests in such Fund or Separate Account. Such agreement may differ depending upon the Portfolio Fund.

Independent Portfolio Managers and Competition. The Portfolio Managers generally invest wholly independently of one another and may at times hold economically offsetting positions. To the extent that the Portfolio Managers do, in fact, hold offsetting positions, the Funds or Separate Accounts may not achieve any gain despite incurring investment expenses, including, without limitation, performance-based compensation.

“Style Drift.” The Adviser relies primarily on information provided by Portfolio Managers in assessing a Portfolio Manager’s defined investment strategy, the underlying risks of such a strategy and, ultimately, determining whether, and to what extent, it will invest assets with particular Portfolio Managers. “Style drift” is the risk that a Portfolio Manager may deviate from his or her stated or expected investment strategy. Style drift can occur abruptly if a Portfolio Manager believes that it has identified an investment opportunity for higher returns from a different approach (and disposes of an interest quickly to pursue this approach), or it can occur gradually, such as if, for instance, a “value”-oriented Portfolio Manager gradually increases a Portfolio Fund’s investments in “growth” stocks. Style drift can also occur if a Portfolio Manager focuses on factors that it had originally deemed immaterial in its offering documents - such as particular statistical information or returns relative to certain benchmarks. Additionally, style drift may result in a Portfolio Manager pursuing investment opportunities in an area in which it has a competitive disadvantage or is outside such manager’s area of expertise (*e.g.*, a large-cap manager focusing on small-cap investment opportunities). Moreover, style drift poses a particular risk for multiple-manager structures since, as a consequence, the Funds or Separate Accounts may be exposed to particular markets or strategies to a greater extent than was anticipated by the Adviser when it assessed the portfolio’s risk-return characteristics and invested with a Portfolio Manager.

Redemptions from Portfolio Funds; Limited Liquidity; In-Kind Distributions. Clients may have limited rights to redeem, transfer, or otherwise liquidate investments in Portfolio Funds. Investments in Portfolio Funds are not themselves marketable, and therefore Clients are not able to readily dispose of interests in Portfolio Funds. Under the terms of the governing documents of the Portfolio Funds, the ability to redeem any amount invested therein may be subject to certain restrictions and conditions, including restrictions on the redemption of shares for an initial period (“lock-up”), restrictions on the amount of redemptions and the frequency with which redemptions can be made, and investment minimums that must be maintained. Additionally, the Portfolio Funds typically reserve the right to reduce (“gate”) or suspend redemptions and to satisfy redemptions by making distributions in-kind, under certain circumstances. The ability to redeem all or any portion of shares may be adversely affected to varying degrees by such restrictions depending on, among other things, the length of any restricted periods imposed by the Portfolio Funds, the amount and timing of a requested redemption in relation to the time remaining of any restricted periods imposed by related Portfolio Funds, the aggregate amount of redemption requests, the next regularly scheduled redemption dates of such Portfolio Funds, the imposition of “gates” or suspensions, the decision

by a Portfolio Fund to satisfy redemptions in kind, and the satisfaction of other conditions. Additionally, in some cases Portfolio Managers may also suspend the determination of the net asset value of all or a portion of their portfolios. The absence of such valuations would make it more difficult for the Adviser to accurately value the portfolio.

In addition, the Portfolio Funds may invest a portion of their assets in restricted or nonpublicly traded securities, securities that are subject to legal or other restrictions on transfer or for which no liquid market exists, securities of distressed issuers, securities traded on foreign exchanges, and futures contracts. The sale of restricted and illiquid securities often requires more time and results in higher brokerage charges or dealer discounts and other selling expenses than does the sale of securities eligible for trading on national securities exchanges or in the OTC markets. Futures positions may be illiquid because certain commodity exchanges limit fluctuations in certain futures contract prices during a single day by regulations referred to as “daily price fluctuation limits” or “daily limits.” Under such daily limits, during a single trading day no trades may be executed at prices beyond the daily limits. Once the price of a contract for a particular future has increased or decreased by an amount equal to the daily limit, positions in the future can neither be taken nor liquidated unless traders are willing to effect trades at or within the limit. Such investment positions could prevent a Portfolio Manager from liquidating unfavorable positions promptly and subject a Client’s portfolio to substantial losses. (See “Futures Contracts” above). Similar limits may apply to securities traded on a foreign exchange. (See Non-U.S. Issuers and Non-U.S. Securities Markets” below).

Portfolio Funds may be permitted satisfy redemption requests by distributing their interests in kind. Thus, upon the withdrawal of all or a portion of its interest in a Portfolio Fund, a Client may receive securities that are illiquid or difficult to value. Similarly, although the Adviser expects to distribute cash to redeeming investors and to advisory clients liquidating their accounts, there can be no assurance that the portfolios will have sufficient cash to satisfy redemption or liquidation requests, or that the Adviser will be able to liquidate a Client’s investments at the time of such redemption or liquidation requests. An in kind distribution may not be readily marketable or saleable and may have to be held by the recipient (e.g., a Client, investor, or advisory client) for an indefinite period of time.

Misconduct or Bad Judgment of Portfolio Managers and Their Service Providers. Misconduct by employees of the Portfolio Managers or by their third-party service providers could cause losses. Employee misconduct could include binding a Portfolio Fund to transactions that exceed authorized limits or present unacceptable risks and unauthorized trading activities or concealing unsuccessful trading activities (which, in either case, may result in unknown and unmanaged risks or losses) or other fraud. Losses could also result from actions by third-party service providers, including, without limitation, failing to recognize trades and misappropriating assets. Although the Adviser will seek to monitor Portfolio Managers, their Portfolio Funds, and their service providers, such measures may not be effective in all cases in detecting fraud or misconduct.

In addition, Clients will still face the risk of Portfolio Manager misrepresentation, material strategy alteration, or poor judgment. Although Portfolio Managers are required to adhere to the offering documents for the respective funds, the Adviser cannot control the

investments made by a Portfolio Manager. The Adviser's sole remedy in the event of a deviation by a Portfolio Manager from its offering documents (such as in the case of "style drift") may be to withdraw capital or redeem shares from a Portfolio Fund, subject to any applicable withdrawal or redemption restrictions.

Equity Securities in Emerging Markets. The value of equity securities fluctuates in response to issuer, political, market, and economic developments. Fluctuations can be dramatic over the short as well as long term, and different parts of the market and different types of equity securities can react differently to these developments. For example, large cap stocks can react differently from small cap stocks, and "growth" stocks can react differently from "value" stocks. In emerging markets, in particular, issuer, political, or economic developments can affect a single issuer, issuers within an industry or economic sector or geographic region, or the market as a whole. Changes in the financial condition of a single issuer may impact the market as a whole in less developed countries. Terrorism and related geopolitical risks have led, and may in the future lead, to increased short-term market volatility and may have adverse long-term effects on world economies and markets generally.

Non-U.S. Issuers and Non-U.S. Securities Markets. Investments that are made by Portfolio Funds and Sub Advisers include investing in non-U.S. issuers. There may be less publicly available information about non-U.S. issuers than about U.S. issuers, and certain non-U.S. issuers are not subject to uniform accounting, auditing and financial reporting standards and requirements comparable to those for U.S. issuers. In the case of securities that are listed or traded on organized exchanges or other markets, there may be less market liquidity than would typically be available for companies of comparable size that are traded in the securities markets of developed countries. This reduced liquidity may diminish a Portfolio Manager's or Sub Adviser's ability to act on investment information and research in both buying and selling securities. In addition, it may limit the size of investments and increase the cost of transacting in such markets. There also is generally less governmental supervision and regulation of non-U.S. securities markets, brokers, and securities issuers than in the U.S. Furthermore, non-U.S. brokerage commissions are generally higher than in the U.S.

Investment and Repatriation Restrictions. Some countries in emerging markets have laws and regulations that preclude direct foreign investment in the securities of their companies. In addition, in some emerging countries prior governmental approval for foreign investments may be required under certain circumstances. Moreover, the extent of foreign investment in domestic companies may be limited. Foreign ownership limitations also may be imposed by the charters of individual companies in emerging countries to prevent, among other concerns, violation of foreign investment limitations.

Repatriation of investment income, capital and the proceeds of sales by foreign investors may require governmental registration and/or approval in some emerging countries. Portfolio Funds and Sub Advisers could be adversely affected by delays in or a refusal to grant any required governmental registration or approval for such repatriation or by withholding taxes imposed by emerging countries on interest or dividends paid on securities purchased by such Portfolio Funds and Sub Advisers or gains from the disposition of such securities.

Political and Legal Factors in Emerging Markets. A Portfolio Fund or Sub Adviser may invest in emerging markets where there is a high potential return on invested capital but also a high degree of either political or economic risk, or both, or where existing regulations may impede repatriation of investment capital or earnings. In such cases, the potential return may be offset, or more than offset, as a result of adverse political or other developments to the detriment of a Client's portfolio. In that regard, it is generally the case that investments in any emerging country could be affected by factors not present in the U.S., including nationalization; expropriation without just compensation; exchange controls; confiscatory taxation; political changes; governmental regulation; social, political, or diplomatic instability (including military or other internal political coups, insurrections, and wars); and potential difficulties in enforcing contractual obligations.

In addition, the legal systems in emerging countries are often not as sophisticated as those in the U.S. or other developed nations, and it may be difficult to predict with any degree of assurance the resolution of legal questions presented in adjudications or other governmental proceedings. In addition, the availability of judicial and other remedies may, as a practical matter as well as a legal matter, be far more restricted than in the U.S. or other developed countries. These factors may adversely affect the companies that the Portfolio Funds and Sub Adviser invest as well as the enforceability of the rights of the Portfolio Funds and Sub Advisers, and in some instances Rock Creek through its contractual relationship with certain Sub Advisers, as a securityholder in such companies.

The foregoing risk factors are not a complete explanation of all risks involved in investing in a Commingled Fund, a Fund of One, a Separate Account, an underlying Portfolio Fund, or engaging the assistance of the Adviser or any sub advisers. Prospective investors and Clients should read this entire brochure as well as the Adviser's Form ADV Part 1A; Part 2B; and applicable offering documents, supplements, and subscription documents, and consult with their own counsel and advisers before deciding to obtain the services of the Adviser or to invest.

Item 9. Disciplinary Information

Information required by this Item 9 is not applicable to the Adviser.

Item 10. Other Financial Industry Activities and Affiliations

WFIG owns a minority equity, non-voting interest in the Adviser that provides WFIG with certain minority investor protections. Moreover, the Adviser operates independently of the Wells Fargo group of companies. As such, each of the financial firms that are part of the Wells Fargo group of companies is not deemed to be a "related person" of the Adviser. Accordingly, the Wells Fargo group of companies is not listed herein or in Schedule D, Section 7.A. of Part 1 of Form ADV. WFIG may acquire additional ownership interests in Rock Creek through long-term put and call arrangements in subsequent years, subject to customary conditions.

Certain affiliates of the Adviser act as general partners or managing members in certain of the Separate Accounts and other investment vehicles managed by the Adviser. The Adviser

may present qualified and suitable clients information about the opportunity to invest in the Funds or Separate Accounts and in turn in the Portfolio Funds. The Adviser and its employees do not receive any compensation in connection with such investments, other than the receipt of ordinary advisory compensation and incentive fees/allocations, if applicable, from the Funds or Separate Accounts in which investors invest.

Additionally, the Adviser may from time to time cause a Commingled Fund, Fund of One, or a Separate Account to invest (or recommend to a Client that the Adviser advises that it invest) any portion of its assets in another privately offered fund that the Adviser manages. To mitigate potential conflicts, the Adviser would make any such investments if such investments are consistent with applicable investment guidelines, including without limitation, restrictions on investments in affiliates of the Adviser.

Furthermore, if a Client invests in another privately offered fund that the Adviser manages, such Client purchases a share class or interest of the relevant Fund such that there is no duplication of fees.

The Portfolio Managers selected by the Adviser may manage other accounts and may have financial incentives to favor certain of such accounts over the Funds or the Separate Accounts. Any of the Portfolio Managers' proprietary accounts and other client accounts may compete with the Funds or Separate Accounts for specific trades, or may hold positions opposite to positions maintained on behalf of the Funds or Separate Accounts. The Portfolio Managers may give advice and recommend securities to, or buy or sell securities for, the Portfolio Funds in which the Clients' assets are invested, which advice or securities may differ from advice given to, or securities recommended or bought or sold for, other accounts and customers even though their investment objectives may be the same as, or similar to, those of the Clients.

Furthermore, the Portfolio Managers may be engaged in substantial investment activities other than managing the assets of Portfolio Funds and allocate their time and activity among Portfolio Funds, and their other clients. Moreover, each Portfolio Manager and its affiliated companies and their principals, officers, and employees may buy and sell securities or other investments for their own accounts and may have actual or potential conflicts of interest with respect to investments made on behalf of Clients or Portfolio Funds.

To protect the interests of Clients, Advisory Clients, and investors, the Adviser, among other things, maintains internal policies and procedures, including a Code of Ethics, along with controls and a compliance program that aid in the detection and prevention of breaches of any fiduciary duties; address and/or monitor conflicts of interests, insider trading, certain disallowed political activities, violations of the securities laws and regulations, improper allocations of investment opportunities, breaches of confidentiality, and violations of security and privacy policies; and promote the proper valuation and reporting of investment activities and holdings. Further, several of the Funds currently have independent directors. Third-party administrators are also utilized to provide independent valuation and administration services for the Funds and Separate Accounts. As part of the due diligence process on Portfolio Funds, the Adviser conducts reviews and ongoing monitoring of Portfolio Funds, Portfolio Fund Managers, and Sub Advisers.

The Adviser has an advisory board available for consultation with the Adviser on a variety of topics. Any advisory board recommendations are advisory in nature and non-binding.

Item 11. Code of Ethics, Participation or Interest in Client Transactions & Personal Trading

The Adviser has adopted a Code of Ethics that is designed to detect and prevent potential conflicts of interest between the Adviser and its clients.

The fundamental position of the Adviser is that, in effecting personal securities transactions, personnel of the Adviser must place at all times the interests of clients ahead of their own pecuniary interests. Certain key elements of the Adviser's Code of Ethics include the following:

- Officers, directors, and employees are prohibited from trading, either personally or on behalf of others, in securities while in possession of material non-public information regarding these securities or communicating material non-public information to others.
- Employees are required to place the interest of clients above the interests of the Adviser or other employees whenever a conflict may be present.
- Certain employees are required to submit annual securities holdings reports and quarterly securities transaction reports for their own accounts or any account in which they have a direct or indirect beneficial interest. Reports, however, are not submitted for transactions in money market instruments, direct obligations of the United States government, and shares of U.S. registered open-ended mutual funds.
- Employees are required to certify annually that they have complied with the Adviser's Code of Ethics.
- Employees may not give or accept gifts or entertainment that are inappropriate or could be seen as overly generous or which could influence employee decision-making.
- Certain employees are required to obtain advance approval to serve as a director or trustee of for-profit organizations and to disclose any service on the board of any organization, including non-profit organizations.
- Certain employees are required to pre-clear any transactions in privately offered securities and initial public offerings.
- Employees that become aware of any violation of the Code of Ethics are required to report such violation to the Chief Compliance Officer.

A copy of the Adviser's Code of Ethics is available to any existing or prospective investor or Client upon request to Sherri Rossoff at (202) 331-3425 or 1133 Connecticut Ave., NW, Washington, DC 20036.

The Adviser, as a manager of fund of funds portfolios, may recommend that prospective clients invest in certain Funds managed by the Adviser. Specifically, the Adviser and its officers, managers and employees, as well as affiliated entities, may have a financial interest, as general partner, investor, managing member, or otherwise, in one or more of the Funds being recommended, subject to the restrictions of the Code of Ethics.

With regard to Separate Accounts, the Adviser may in certain circumstances invest assets of a Separate Account in certain Funds in accordance with such Separate Account's investment guidelines. The Separate Account, in such cases, purchases a share class or interest of the relevant Fund such that there is no duplication of fees.

In the past, the Adviser had deferred all or a portion of its investment advisory fees payable by certain Funds, and as a result, the Adviser became a creditor to these Funds. The amount payable to the Adviser was adjusted during the deferral period to reflect the subsequent losses and/or profits of the Funds. The Adviser no longer defers all or any portion of its investment advisory fees payable by the Funds. Previously deferred fees, however, remain in the Funds from prior years and will be paid out to the Adviser when required. The Adviser remains a creditor to these Funds until the deferred fees are paid out.

The Adviser may affect transactions, generally for rebalancing purposes or based upon Client specific portfolio guidelines, whereby one account will sell an interest in an underlying Portfolio Fund and another Client account is purchasing such an interest. Generally, such transactions are structured as separate redemptions and subscriptions for the respective Clients; in certain circumstances, however, it may be in the best interests of such Clients to structure these transactions with the Portfolio Fund as a transfer (*e.g.*, to retain the benefit of an underlying Portfolio Fund high-water mark or credit for a lock up).

Item 12. Brokerage Practices

Brokerage Transactions. As a manager of funds of funds portfolios, the Adviser does not generally execute transactions in individual securities. The Adviser may enter into a limited number of certain derivatives transactions and may purchase and sell futures contracts, foreign currencies, and exchange traded funds for certain Clients if specified in their investment guidelines. In such instances, the risks discussed under Item 8 above regarding derivatives, futures, foreign currency trading, and exchange traded funds, among others, would be applicable.

Subject to each Client's investment objectives, policies, and strategies, the Adviser generally has authority to determine, without obtaining specific client consent, the securities to be bought and sold, the amount of the securities to be bought or sold, the broker or dealer to be used, and the commission rates paid, if applicable. Given the nature of the portfolios of the Funds and Separate Accounts (investing primarily in underlying Portfolio Funds), transactions for the Funds and the Separate Accounts will generally be negotiated transactions rather than traditional brokerage transactions. With respect to direct investments in securities, futures,

derivatives, and other financial products, the Adviser will select brokers or counterparties based on competitive commission rates, expertise, and the capacity and willingness to execute the given transactions. Moreover, when brokerage services are required, the Adviser will seek “best execution” in selecting brokers to execute transactions by evaluating factors such as price, size of order, difficulty of execution, operational facilities of the brokerage firm, the scope and quality of brokerage services provided, and the brokerage firm’s risk in positioning a block of securities. The Adviser will have no obligation to deal with any broker or group of brokers in executing transactions.

The Adviser does not receive other products, research, or services (*i.e.*, “soft dollar” benefits) from broker-dealers or third parties in connection with client transactions. The Adviser does not suggest broker-dealers to clients. Neither the Adviser nor a related person has any arrangements, oral or in writing, where they directly or indirectly compensate any person, including broker-dealers, for client referrals. Also, because the Adviser primarily is an adviser to funds of hedge funds and/or Separate Accounts invested in Portfolio Funds, it is not likely to be subject to circumstances in which trade aggregation occurs. Such trade aggregation, if any, may take place within the Portfolio Funds that are managed by Portfolio Managers which are unaffiliated with the Adviser or within brokerage accounts managed by Sub Advisers.

Item 13. Review of Accounts

The Adviser’s investment team monitors the portfolios once a month. In addition, the investment team maintains a regular dialogue with each underlying Portfolio Manager through e-mails, telephone calls, and on-site meetings to check that the Portfolio Managers have sufficient infrastructure and staff to carry out the investment strategy for the Portfolio Funds. Similarly, the Adviser also maintains a regular dialogue with each Sub Adviser through e-mails and telephone calls to check that the Sub Advisers have sufficient infrastructure and staff to carry out the investment strategy as set forth in the sub-advisory management agreements.

The investment teams comprise at least two experienced investment professionals responsible for manager selection, portfolio construction, monitoring, and due diligence. These teams also utilize professionals experienced in risk management. The investment committee, headed by Ms. Beschloss, has the final authority to make all investment decisions.

Generally Clients receive monthly, quarterly, or other periodic reports that may include market updates, investment commentary, and performance reviews. To the extent practicable, the Adviser will provide investors and Separate Account clients with a preliminary estimate on the monthly performance of their investments within 15 business days after the end of each month. Generally, investors and Separate Account clients will receive a final monthly performance statement after the end of the following month. Rock Creek and its Clients may also agree that Rock Creek will provide certain other reports.

Audited financial statements and tax forms will be completed within a reasonable time after the end of the calendar year for investors. Annual financial statements for the Funds’ are audited by an independent certified public accounting firm.

The Adviser provides the Separate Account clients with periodic unaudited reports at such times as agreed upon. In addition, since a Separate Account client directly owns the positions in its account, such client may have full, real time transparency as to all transactions and holdings in such account, and may be better able to assess the future prospects of a portfolio that is substantially similar to that of a Fund. The clients in such Separate Accounts may have the right to withdraw all or a portion of their capital from such accounts on shorter notice and/or with more frequency than the terms applicable to an investment in the Funds.

Item 14. Client Referrals and Other Compensation

Rock Creek does not have any arrangements, oral or in writing, where it is paid cash by or receives some economic benefit (including commissions, equipment, or non-research services) from a non-client in connection with giving advice to clients. The Adviser's Code of Ethics generally prohibits employees from accepting gifts, favors, and other inducements from counterparties or service providers, excepting certain common business courtesies.

Item 15. Custody

Under Rule 206(4)-2 under the Advisers Act, Rock Creek may be deemed to have custody of funds or securities of Clients even though Rock Creek does not have physical possession of these items and they are not registered in Rock Creek's name. Generally, the underlying Portfolio Funds' cash and securities are held by banks and/or broker-dealers. The Funds and Separate Accounts, as applicable, are audited in accordance with U.S. generally accepted accounting principles on an annual basis by an independent public accountant that is registered with, and subject to regular inspection by, the Public Company Accounting Oversight Board. Audited financial statements are distributed by a third-party administrator to Fund investors and Separate Account clients within 180 days of the end of each Client's fiscal year, as required for a fund of funds. Certain investors also utilize their own custodians and receive statements on a monthly basis directly from such custodians.

All investors should carefully review financial statements and investors utilizing their own qualified custodian should carefully review custodian statements they receive directly and compare them to any account statements or other information provided by the Adviser.

Item 16. Investment Discretion

Rock Creek generally has complete discretion to determine the securities and amount thereof to be bought or sold for Funds or Separate Accounts as generally set forth in an investment management agreement, subscription agreement, or similar documentation. Advisory Clients may be advised on a nondiscretionary basis. The activities engaged in by the Adviser on behalf of the Funds will be subject to the investment objectives, policies, and restrictions of each Fund and the control of the respective Funds' Boards of Directors; activities engaged in by the Adviser on behalf of a Separate Account will be subject to the investment objectives set forth in the respective investment management agreement or similar provisions contained within governing documents.

Investors in the Funds generally may not place any limits on the Adviser's authority beyond the limitations set forth in the offering and governing documents of such Funds. On a case by case basis, Separate Accounts clients may negotiate certain risk, investment, and operating guidelines that the Adviser will adhere to when exercising its discretionary authority.

Item 17. Voting Client Securities

The Adviser has adopted written proxy voting policies and procedures as required by Rule 206(4)-6 under the Advisers Act. Given the nature of the interests held by the portfolios (investing primarily in underlying Portfolio Funds), votes cast by the Adviser generally occur in relation to private securities issued by the Portfolio Funds themselves and not the underlying public or private securities that may be owned by the Portfolio Fund. The major provisions of the Adviser's proxy voting policies include:

- Consistent with its fiduciary duty, the Adviser is responsible for exercising voting authority on behalf of each Client if/when any Portfolio Fund holds a vote on any issue affecting its investors. Pursuant to the investment management agreements between the Adviser and each Fund and Separate Account client, the Adviser is granted voting authority unless there is a non-discretionary account or an advisory only mandate.
- The Investment Committee will evaluate each voting issue solely in light of the Client's best interests, including any written requirements specific to a Fund or Separate Account and vote accordingly. In carrying out this responsibility, the Adviser is obligated to (i) review any written materials provided regarding the issue subject to a vote, and (ii) determine what vote represents each voting Client's best interests.
- In the event a specific voting issue arises in which the Adviser or one or more Adviser personnel has a material conflict, the Adviser will (a) in the case of a Fund, contact the relevant Fund and each investor in the such Fund and follow the voting recommendations of a majority of such investors or in the case of a Separate Account, contact Separate Account client and follow the voting recommendations of such Separate Account client; or (b) require recusal of the conflicted person from the deliberation and decision-making process.

Copies of the Adviser's proxy voting policy and procedures and information about how the Adviser votes the proxies involved may be requested by submitting a written request to the Adviser.

Item 18. Financial Information

Information required by this Item 18 is not applicable to the Adviser.

Item 19. Requirements for State-Registered Advisers

Information required by this Item 19 is not applicable to the Adviser.
