

**STRATEGOS CAPITAL MANAGEMENT, LLC
PART 2A OF FORM ADV: FIRM BROCHURE**

March 31, 2011

Business Address:

2929 Arch Street, 17th Floor
Philadelphia, PA 19104

Contacts:

Alex Cigolle, Managing Director: 215-701-9610
Frederick Horton, Managing Director: 215-701-9674
Daniel Munley, Chief Compliance Officer: 215-701-9667

Website Address:

strategoscm.com

This Brochure provides information about the qualifications and business practices of Strategos Capital Management, LLC. If you have any questions about the contents of this Brochure, please contact us at one of the contacts numbers listed above. The information in this Brochure has not been approved or verified by the United States Securities and Exchange Commission or by any state securities authority.

Additional information about Strategos Capital Management, LLC also is available on the SEC's website at www.adviserinfo.sec.gov.

Strategos Capital Management, LLC is a registered investment adviser. Registration does not imply a certain level of skill or training.

Item 2 Material Changes

Because Strategos Capital Management, LLC (“Strategos”) is a newly registered investment adviser with the SEC and this is our first Brochure, there are no material changes to be reported by Strategos.

In the future, this Item will discuss only specific material changes that are made to the Brochure and will provide clients with a summary of such changes. We will also reference the date of our last annual update of our Brochure.

We will deliver to clients a summary of any material changes to this and subsequent Brochures within 120 days of the close of our fiscal year. We may further provide other ongoing disclosure information about material changes as necessary. All such information will be provided to you free of charge.

Currently, our Brochure may be requested by contacting any of the individuals listed on the cover page of this Brochure.

Item 4 Advisory Business

A. Generally

Alex P. Cigolle and Frederick H. Horton, the two principal owners of Strategos, formed Strategos Investment Management Company, LLC in late 2010 to facilitate their purchase from Strategos Capital Management, LLC (as explained below, now known as Cira SCM, LLC), a wholly-owned subsidiary of Institutional Financial Markets Inc. (formerly known as Cohen & Company, Inc.) (“IFMI”), of the right to provide investment management services to certain separately managed accounts and private U.S. investment limited partnerships and foreign limited partnerships (i.e., hedge funds) (the “Purchased Assets”). Upon the closing of the acquisition, the seller (Strategos Capital Management, LLC) changed its name to “Cira SCM, LLC”, and, shortly thereafter, we changed our name from Strategos Investment Management Company, LLC to “Strategos Capital Management, LLC”, which is the name we intend to use going forward.

While at IFMI, the principals negotiated a spin-out of the business associated with the Purchased Assets who, together with employees under their supervision, had been providing investment management services with respect to the Purchased Assets since May 2008. As of the closing of the acquisition described above on March 29, 2011, the Purchased Assets became assets under management of Strategos.

In addition, Strategos will assist IFMI in a sub-advisory capacity related to providing investment advice and assistance to several collateralized debt obligation entities that IFMI (through a subsidiary) manages. This advisory relationship is described in a separate Part 2 Brochure which is available upon request.

Strategos employs the two principals and all employees of Cira SCM, LLC who had been involved in providing investment advisory services for the Purchased Assets. Strategos’ Board of Managers, which consists of the two principals, undertakes major decisions with respect to investment strategy matters as well as matters relating to the overall administration and business strategy of the firm. Descriptions of the educational background and employment history of the two principals and all other advisory personnel of Strategos are included in the Brochure Supplement (Form ADV Part 2B), which, starting on July 31, 2011, will be available from the firm upon request.

Strategos’ principal office and place of business is located at 2929 Arch Street, 17th Floor, Philadelphia, PA 19104. Regular business hours are from 9:00 a.m. to 5:00 p.m., Monday through Friday.

B. Advisory Services Offered and Assets Under Management

Strategos provides discretionary investment management primarily in its capacity as an investment adviser to (i) private U.S. investment limited partnerships, foreign investment companies, foreign limited partnerships and other collective investment vehicles structured either as a closed-end private equity style investment vehicle or an open-end hedge fund style investment vehicle (each, a “Fund” and, collectively, the “Funds”) and (ii) clients with separately managed accounts (each, a “Managed Account” and, collectively, the “Managed Accounts”).

Strategos focuses on finding investment opportunities for its clients in credit sensitive U.S. residential mortgage backed securities (“RMBS”), commercial mortgage backed securities (“CMBS”) and asset backed securities (“ABS”). In analyzing these investment opportunities, Strategos employs an intensive bottom-up analysis of seasoned, off-the-run, and odd-lot secondary offerings. In order to capitalize on the foregoing investment opportunities, Strategos employs two primary investment strategies related to investing in RMBS, CMBS and ABS: (i) an alternative investment strategy with aggressive return targets (the “Deep Value Strategy”), and (ii) a lower risk, more liquid investment strategy targeting wide risk adjusted spreads (the “High Grade Fixed Income Strategy”). These investment strategies (each, an “Investment Strategy” and, collectively, the “Investment Strategies”) are described in further detail in Item 8 below.

A copy of the Private Placement Memorandum for any Fund that Strategos advises is available from Strategos upon request.

Strategos’ Investment Strategies referenced in Item 4(B) above are generally not tailored for each advisory client. However, primarily for clients who invest through Managed Accounts, Strategos would consider tailoring its Investment Strategies if any such client were to specifically request, and Strategos determined that it had the required expertise to provide, a tailored investment strategy.

On a case-by-case basis and with Strategos’ consent, Strategos permits clients to impose restrictions on investing in certain securities or certain types of securities.

As of March 29, 2011, Strategos managed assets related to the Investment Strategies totaling approximately \$394,900,000 on a discretionary basis. Strategos does not manage any assets on a non-discretionary basis.

Item 5 Fees and Compensation

Because this Brochure is delivered only to “qualified purchasers” as defined under Section 2(a)(51)(A) of the Investment Company Act of 1940, as amended (the “Investment Company Act”), Strategos is not required to provide its fee schedule or disclose how it is compensated or whether its fees are negotiable.

The custodian for each Fund to which Strategos provides investment management services deducts the advisory fee owed to Strategos directly from the account of the Fund upon direction of the general partner of the particular Fund. Strategos does not allow direct billing for each investor in a Fund. In the case of Managed Accounts, Strategos bills each client directly for the advisory fee, but, upon a client’s request, Strategos may agree to deduct its advisory fee directly from the Managed Account.

Advisory fees for the Funds and Managed Accounts are charged and, as applicable, deducted or billed, quarterly in arrears (that is, payment is made in the quarter following the quarter in which the fee arises).

In addition to the advisory fee described above and the performance fee described in Item 6, the Funds (and, therefore, the investors in the Funds on a flow-through basis) may be charged what

Strategos believes are customary fees and expenses that are typical for an investment in a private investment limited partnership. Full details regarding the possible fees, costs and expenses related to an investment in a Fund are set forth in the offering memorandum of each Fund and the limited partnership agreement of each Fund, copies of which are available from Strategos upon request. The primary Fund fees, costs and expenses are:

- Transaction fees, costs and expenses relating to the evaluation, acquisition, holding and disposition of portfolio investments, which include brokerage commissions;
- Organizational expenses (that is, reasonable costs and expenses of Strategos that are incurred in the formation and organization of, and sale of interests in, a Fund, including, without limitation, legal, accounting, marketing, printing, consultation, travel, administrative and filing fees and expenses, in each case associated with the formation a Fund);
- Travel costs, fees and other out-of-pocket expenses directly related to the investigation of a Fund's investment opportunities;
- In the event the general partner of a Fund (which general partner is an affiliate of Strategos) or Strategos, as its investment advisor, makes a claim for indemnity from any such Fund (which has not occurred to date, and there is no indemnification pending or currently foreseeable), indemnification expenses;
- Reasonable premiums for primary insurance for indemnifiable acts and events protecting the Fund, the general partner of the Fund, Strategos or other certain people and entities from liabilities to third parties in connection with the Fund's affairs;
- Administrative expenses (including fees paid to the administrator of the Fund);
- Legal expenses;
- Custodial expenses;
- Accounting expenses;
- Auditing expenses;
- Tax preparation expenses;
- Fees paid to Independent Directors;
- Taxes or other governmental charges (yearly entity registration fees, etc.) payable by the Funds; and
- Costs of printing and distributing reports to the investors in the Funds.

In addition to the advisory fee described above and the performance fee described in Item 6, clients who invest through Managed Accounts may be charged the following third-party fees, costs and expenses:

- All reasonable transaction expenses related to the purchase and sale of securities or other investment products, including brokerage commissions;
- Custodial fees;
- Administration fees;
- Bank service fees; and
- Transfer taxes relating to the investments in the Managed Account.

See Item 12 of this Brochure for a discussion of Strategos' brokerage practices.

Item 6 Performance-Based Fees and Side-By-Side Management

With respect to clients who invest in the Deep Value Strategy (see Item 4(B)), Strategos (or, with respect to Fund clients, the general partner of the Fund, which is an affiliate of Strategos) also charges performance-based fees or partnership profit allocations (“Performance Compensation”). Performance Compensation generally will be equal to 20% of all profits (defined as cash flow greater than original capital contribution) earned by the clients investing through Managed Accounts or the investors of the Funds, but will only be paid by the client or investor, as applicable, after each such person or entity receives their capital back, plus a preferred return of 8% or 10%, compounded annually, on such capital. Performance Compensation will be charged in compliance with all applicable requirements of Rule 205-3 under the Investment Advisers Act of 1940, as amended (the “Advisers Act”).

Strategos does not receive performance-based fees with respect to clients who invest in accordance with the High Grade Fixed Income Strategy.

Although Strategos and its advisory personnel have a theoretical incentive to favor accounts that employ the Deep Value Strategy for which Strategos receives Performance Compensation, such conflict of interest is mitigated by the fact that there is very little overlap in the securities that are appropriate purchases for both the High Grade Fixed Income Strategy and the Deep Value Strategy given the significant differences between such strategies. In the fairly rare event that Strategos determines that a prospective investment is appropriate for both the High Grade Fixed Income Strategy and the Deep Value Strategy, Strategos will reasonably determine an equitable allocation among the clients at issue primarily on the basis of (i) available capital, (ii) relative exposure to market trends, (iii) the investment programs and the portfolio positions of the respective clients, (iv) the concentration limits and other limitations established by the respective clients and (v) applicable tax and regulatory considerations.

Item 7 Types of Clients

Strategos offers each of the Investment Strategies to the following types of clients:

- onshore private U.S. investment limited partnerships structured either as a closed-end private equity style investment vehicle or structured as an open-end hedge fund style investment vehicle (the investors of which are “qualified purchasers” as defined in Section 2(a)(51) of the Investment Company Act);
- private foreign investment companies and foreign limited partnership structured either as a closed-end private equity style investment vehicle or structured as an open-end hedge fund style investment vehicle (the investors of which are either (i) non-U.S. Persons (as defined in Regulation S of the Securities Act of 1933, as amended), or (ii) tax-exempt U.S. entities that qualify as “qualified purchasers” (as defined in Section 2(a)(51) of the Investment Company Act); and
- “qualified purchasers” as defined in Section 2(a)(51) of the Investment Company Act) or non-U.S. Persons (as defined in Regulation S of the Securities Act of 1933) who invest through a separately managed account relationship with Strategos.

Clients investing through a Managed Account are generally required to make a minimum capital commitment of \$10 million, and investors in Funds are generally required to make a minimum capital commitment of \$1 million; provided, however, that in either case, Strategos may accept capital commitments of lesser amounts on a case-by-case basis.

Item 8 Methods of Analysis, Investment Strategies and Risk of Loss

A. Methods of Analysis and Investment Strategies

Strategos may obtain advice from attorneys, accountants, mortgage origination and servicing personnel and other experts to assist in its analysis of certain investments for clients who are Funds and/or clients investing through Managed Accounts. Strategos obtains information about securities from the following sources:

- inspections of origination and servicing activities;
- monthly servicer/trustee reports and payment detail;
- monthly mortgage loan level data on a market wide basis;
- materials prepared by others including investment bank research reports, broker/dealer trading commentaries and financial periodical articles;
- rating agency analysis; and
- annual reports, prospectuses, filings with the Securities and Exchange Commission, press releases and other issue-prepared information.

Strategos employs quantitatively-based financial/analytical models to aid in the selection of investments for its clients, to allocate investments across various asset classes and types, including but not limited to sector, style, size and risks and to determine the risk profile of its clients. In addition, Strategos determines the suitability of RMBS, CMBS and ABS securities for the Investment Strategy chosen by the client (either the Deep Value Strategy or the High Grade Fixed Income Strategy) by using the following methods of analysis:

Collateral analysis: loan features used to estimate collateral performance characteristics

- Borrower FICO score, both the average and distribution in a mortgage pool;
- Loan to value (“LTV”): both at origination and an updated estimate using Office of Federal Housing Enterprise Oversight metropolitan statistical areas house price index data;
- Loan purpose: purchase, refinance (cash out or no cash out);
- Lien status: 1st lien or 2nd lien
- Documentation levels;
- Borrower debt-to-income ratios;
- Property type: single family, 2-4 family, manufactured housing, planned unit development, condo, multi-family;
- Occupancy status: owner occupied, or 2nd home, investor property;
- Loan amortization term, weighted average loan age;
- Loan size, loan count, “tail risk” of quality borrower burnout;
- Fixed/floating rate mix: adjustable rate mortgage (“ARM”) breakdown, hybrid ARM term;

- Interest only (“IO”) loan concentration /IO term;
- Mortgage insurance: borrower versus issuer paid, coverage to LTV;
- Home price appreciation by metropolitan statistical area, mark-to-market LTV;
- Employment statistics by geographic region;
- Pool delinquency performance: 30 days, 60 days, 90+ days, bankruptcy, foreclosure, real estate owned;
- Delinquency history: individual loan history string by Office of Thrift Supervision and Mortgage Bankers Association methodology; and
- Loan modifications details.

Structural analysis: structural features used to project cash flows

- Security position within securitization capital structure: senior vs. mezzanine;
- Interest and principal waterfall within securitization;
- Credit enhancement: subordination, excess spread, insurance;
- Over-collateralization (“OC”) (upfront and ongoing) and target levels, OC floor & deficiency;
- Performance triggers and their effect on bond cash flows;
- Performance sensitivity to prepayments, defaults, and loss severity; and
- Impact of interest rate volatility.

The Funds’ and the Managed Accounts’ general investment strategy is to acquire, aggregate, manage and exit investments in securities secured by, or related to, residential and commercial real estate including RMBS, equity and debt investments in CDOs that are collateralized mainly by RMBS, senior and subordinated mortgage notes, preference shares and whole loans secured by or related to residential real estate and other related securities and derivatives referencing the foregoing. The Funds and Managed Accounts may also invest in CMBS and other securities and debt secured by or relating to commercial real estate. Strategos believes that in the context of the current credit markets dislocation and de-leveraging there are many opportunities to purchase these assets at substantial discounts to their likely ultimate recovery value.

The Deep Value Investment Strategy focuses on:

- Assets that are generally lower in the capital structure;
- An average purchase price that is at a substantial discount to the par value of the security being purchased;
- Assets with potentially volatile cash flows, prices, and liquidity conditions;
- Assets associated with a less liquid, inefficient market with wide bid/ask spreads; and
- Assets that are ramped up over time.

The High Grade Fixed Income Investment Strategy focuses on:

- Current pay first priority or second priority bonds with low risk of ultimate principal loss;
- Assets with an average purchase price that are close in price to the par value of the securities being purchased;
- Assets with yield spreads of +300 – 500 basis points to U.S. Treasury yields with a 2 – 3 year average life in the current market environment;

- Assets whose characteristics compare favorably with bonds bearing corporate credit, interest rate, or prepayment risk; and
- Assets that are generally more liquid with a more active markets and low bid offer spreads compared to the Deep Value Strategy.

Investing in securities, including investing in securities purchased on a client's behalf related to either Investment Strategy described above, involves the possible risk of loss of all or a significant portion of value of such securities that clients should be prepared to bear. Strategos in no way guarantees performance or results.

B. Material Risks Associated with Methods of Analysis and Investment Strategies

Strategos provides below a list of the material risks related to the methods of analysis and Investment Strategies described above.

Highly Volatile Markets. The prices of assets in the RMBS, CMBS and ABS ("Securitization Securities") market are highly volatile. Price movements of Securitization Securities are influenced by, among other things, interest rates, housing price changes, unemployment, wage growth, availability and cost of credit, complexity of the assets and their associated legal documentation, loan level performance data, structuring and performance models, counterparty risk including, but not limited to, supply and demand in the housing market, changing supply and demand relationships for these assets, level of available leverage for these assets, trade, fiscal, monetary, regulatory and exchange control programs and policies of governments, and national and international political and economic events and policies. In addition, governments from time to time intervene, directly and by regulation, in the markets where Securitization Securities trade. Such intervention often is intended directly to influence prices and may, together with other factors, materially impact asset prices in unpredictable ways or in a direction harmful to the performance of a Fund or Managed Account.

Institutional Risk. The institutions, including brokerage firms, banks, originators, servicers, mortgage insurers, bond insurers, rating agencies, and other entities, with which Strategos will trade or rely upon for the performance of the Securitization Securities and underlying mortgage loans, have in many instances encountered and may encounter further financial difficulties, including insolvency, that negatively affect the Securitization Securities.

Recent events relating to Subprime RMBS. The Investment Strategies are partially premised on the view that the disruptions in the subprime RMBS market, RMBS and other real estate related asset backed securities during the 2007 to 2009 timeframe caused the securities to trade at prices that are still below the intrinsic value of such securities. It is anticipated that as conditions continue to improve in these markets, it will be possible to sell these securities at a significant gain. There is a risk that conditions in these markets will not materially improve (and may deteriorate further), thereby preventing Strategos from realizing a profit for its clients on the Securitization Securities. There is also a risk that the rally that has occurred in these Securitization Securities since March 2009 may reverse as other fundamental and macroeconomic factors weigh on the performance.

A portion of the RMBS which Strategos may invest in on behalf of clients may be RMBS that were originated or are serviced (or both) by mortgage companies who filed bankruptcy proceedings or had regulatory enforcement actions against them, which may affect their ability to continue to service or subservice mortgage loans. Servicers who have sought bankruptcy protection may, due to the application of applicable law in this proceeding, also no longer be required to make servicer advances.

The adverse changes in market conditions and regulatory climate may reduce the cash flow from RMBS and increase the incidence and severity of credit events. In addition, interest rate spreads for RMBS that widened remarkably from 2007 to 2009 and have since rallied are more volatile to adverse changes in market conditions. In the event that interest rate spreads for RMBS widen following the purchase of such assets by Strategos on its clients' behalf, the market value of such assets is likely to decline and, in the case of a substantial spread widening, could decline by a substantial amount. Furthermore, adverse changes in market conditions resulted in a severe liquidity crisis in the market for RMBS during the 2007 to 2009 timeframe and have since shown signs of improvement. However, any increased unwillingness by banks, financial institutions and investors to extend credit to servicers and other participants in the market for these securities could result in the liquidity and/or the market value of RMBS that are owned by clients of Strategos to experience declines.

High Risk Investments. Strategos may acquire, on its clients behalf, assets secured by real property interests, including distressed residential mortgages, liens on high-risk collateral, or notes or pledges made by high-risk borrowers, including sub-prime and non-performing loans. Such assets generally carry below-investment grade credit ratings, or lack credit ratings altogether. These assets and/or the loans underlying these types of assets may be in default or may have a greater than normal risk of future defaults, delinquencies, bankruptcies or fraud losses. There can be no assurance that the assets will perform, the borrowers will pay as expected, or, if defaulted, that the underlying assets will be able to be foreclosed upon and liquidated in a cost effective manner. In addition to the risks of borrower default, clients will be subject to a variety of risks in connection with such debt instruments, including risks arising from mismanagement or a decline in the value of collateral, contested foreclosures, bankruptcy of the debtor, claims for lender liability, violations of usury laws and the imposition of common law or statutory restrictions on the Strategos' exercise of contractual remedies for defaults on such investments.

Lack of Asset Diversification. The Investment Strategies are subject to limited diversification requirements and Strategos may invest a significant portion of a client's assets in the securities of a small number of issuers or indirectly in similar assets. As a result, a client may be more susceptible to risks associated with a single economic, housing, contract law, political or regulatory occurrence than a more diversified portfolio might be.

Competition. Because an inherent part of the Investment Strategies will be to identify securities that provide for attractive risk adjusted yield, competitive investment activity by other firms may reduce a client's opportunity for profit by reducing mispricing in the market as well as the margins available on such mispricing as can still be identified.

Reliance on Industry Data Sources and Structuring Models. The Investment Strategies of Strategos often rely on the financial information made available (on a non-confidential basis) by the issuers, servicers, third party modeling firms, third party data providers including mortgage loan, housing and macro economic data, and trustees of Securitization Securities. Recent events in the United States and around the world have demonstrated the material losses that investors in Securitization Securities can incur as a result of the difficulty in creating useable data to create adequate models. In addition, the unprecedented deterioration of mortgage loan performance and home price movements have demonstrated the material losses that investors in Securitization Securities can incur as a result of unexpected performance changes.

Quantitative Model Risks. As mentioned above, Strategos will employ quantitatively-based financial/analytical models to aid in the selection of investments for its clients. The success of a client's investment will depend, to some degree, on the viability of these analytical models. There can be no assurance that the models are currently viable, or, if the models are currently viable, that they will remain viable during the existence of a client's relationship with Strategos. Also, there can be no assurance that the investment professionals of Strategos utilizing the models will be able to (i) determine that any model is or will become not viable, or not completely viable, (ii) ensure that the models will accurately capture these relationships between asset classes and types and continue to do so over time or (iii) notice, predict or adequately react to any change in the viability of a model. The use of a model that is not viable or not completely viable could, at any time, have a material adverse effect on the performance of investment return of a client.

Leverage. Strategos may employ leverage in the Funds or Managed Accounts. The amount of leverage which may be employed by Strategos on behalf of a client at a given time will be determined by Strategos consistent with its clients' investment policies, as well as market conditions and other factors.

The effect of leverage will amplify the performance of a client's investment return – both the upside performance and the downside performance.

In addition, Strategos may invest, on behalf of a client, in equity and subordinated debt investments of securitization vehicles, which, by their nature, exhibit a high degree of leverage inherent in their respective deal structures.

Spread and Credit Term Trading Risks. Strategos may, on behalf of a client, purchase one asset and short another asset in the same or differing securitizations. To the extent the price relationships between such positions remain constant, no gain or loss on the positions will occur. Such positions do, however, entail a substantial risk that the price differential could change unfavorably.

Derivatives Risk and Short Sales. Derivatives are financial contracts in which the value depends on, or is derived from, the value of an underlying asset, reference rate or index. Strategos may, on behalf of a client, use derivatives for any purpose including, among other things, as a substitute for taking a position in the underlying asset or as part of a strategy designed to reduce or increase exposure to other risks, such as interest rate, credit risk, prepayment speed risk, housing, or other related risks. Strategos' use of derivative instruments

involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Derivatives involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. If Strategos invests, on behalf of a client, in a derivative instrument it could lose more than the principal amount invested.

Strategos may, but is not required to, engage in Short Sales (as defined below) to the extent Strategos deems it advisable in connection with a client's investments or as opportunistic investments. Strategos may use futures, options, equities and equity options, single name and index credit default swaps, forward sales or other transactions to create short exposure in the portfolio ("Short Sales").

Credit Default Swaps. Strategos, on its client's behalf, may enter into credit default swap agreements. The "buyer" in a credit default contract is obligated to pay the "seller" a periodic stream of payments over the term of the contract provided that no event of default on an underlying reference obligation has occurred. If an event of default occurs, the seller must pay the buyer the full notional value, or "par value," of the reference obligation in exchange for the reference obligation. A client may be either the buyer or seller in a credit default swap transaction. If a client is a buyer and no event of default occurs, the client will lose its investment and recover nothing. However, if an event of default occurs, the client (if the buyer) will receive the full notional value of the reference obligation that may have little or no value. As a seller, a client receives a fixed rate of income throughout the term of the contract provided that there is no default event. If an event of default occurs, the seller must pay the buyer the full notional value of the reference obligation. Credit default swap transactions involve greater risks than if a client had invested in the reference obligation directly. Swaps are subject to the risk of non-performance by the swap counterparty, including risks relating to the financial soundness and creditworthiness of the swap counterparty.

Risk of Counterparty Default. The stability and liquidity of repurchase agreements, swap transactions, credit default swaps, indices, forwards and other over-the-counter derivative transactions depend in large part on the creditworthiness of the parties to the transactions. It is expected that Strategos will monitor on an ongoing basis the creditworthiness of firms with which it will enter into repurchase agreements, reverse repurchase agreements, interest rate swaps, caps, floors, collars or other over-the-counter derivatives. If there is a default by the counterparty to such a transaction, Strategos will under most normal circumstances have contractual remedies pursuant to the agreements related to the transaction. However, exercising such contractual rights may involve delays or costs, which could result in the net asset value of the investment being less than if Strategos had not entered into the transaction.

Credit Risk. A client also is subject to credit risk, i.e., the risk that an issuer of securities will be unable to pay principal and interest when due, or that the value of the security will suffer because investors believe the issuer is less able to pay. This is broadly gauged by the credit ratings of the securities in which a client invests. However, ratings are only the opinions of the agencies issuing them, may change less quickly than relevant circumstances and are not absolute guarantees of the quality of the securities. Furthermore, a client's investments may not be rated by any rating agency or may be below investment grade. Clients will be more dependent upon the judgment of Strategos as to the credit quality of such unrated securities. A default,

downgrade or credit impairment of any of its investments could result in a significant or even total loss of the investment.

Liquidity Risk. A client's investments may at any given time be illiquid such that either no market exists for them or they are restricted as to their transferability under federal and state securities laws. Thus, the sale of these investments may be made at substantial discounts, delayed or impossible. In addition, the illiquidity of a security or other instrument held by a client may also make it difficult for Strategos to value such investments. For example, during the RMBS market dislocation, there were periods during which the majority of market participants did not provide mark to market quotes, engage in active market making, or maintain traditional inventory levels, and they effectively charged wide bid ask spreads for clearing bond purchases and sales between investors. During these periods, the ability to receive reliable, independent third party mark to market on assets and the ability to either buy or sell in a short period, if at all, at reasonable execution costs is severely challenged.

C. Material Risks Associated with investing in RMBS, CMBS and ABS

Strategos lists below the material risks relating to investing in residential mortgage-backed securities, commercial mortgage-backed securities and asset-backed securities (as well as certain other types of securities) that Strategos primarily recommends to its clients. A list of such risks is also included in the current offering memorandum published by each Fund, which is available upon request from Strategos.

Residential mortgage-backed securities. An RMBS is a form of asset-backed security and is a general obligation of the issuer, which is typically secured by residential mortgages or residential mortgage-backed collateral. Mortgage-backed securities may be issued or guaranteed by U.S. government agencies or instrumentalities or by private entities such as banks, savings and loans, mortgage bankers and other nongovernmental issuers. The material risks involved with investing in RMBS include:

- **Prepayment Risk.** Clients may invest, directly or indirectly, in mortgage-backed securities and receive payments, generally, from the payments that are made on mortgage loans securing the RMBS. The yield and payment characteristics of RMBS differ from traditional debt securities. Interest and principal prepayments are made more frequently, usually monthly, over the life of the mortgage loans and principal may be prepaid at any time because the underlying mortgage loans generally may be prepaid at any time. Faster or slower prepayments than expected on underlying mortgage loans can dramatically alter the yield to maturity of an RMBS, thus affecting the profitability of the Fund or the Managed Account.
 - Prepayment rates generally increase when interest rates fall and decrease when interest rates rise, but changes in prepayment rates are difficult to predict. Prepayment rates also may be affected by conditions in the housing and financial markets, general economic conditions and the relative interest rates on fixed-rate and adjustable-rate mortgage loans.

- **Interest Rate Changes.** The value of most RMBS, like traditional debt securities, tends to vary inversely with changes in interest rates (i.e., as interest rates increase, the value of such securities decrease). RMBS, however, may benefit less than traditional debt securities from declining interest rates because prepayment of mortgages tends to accelerate during periods of declining interest rates. Prepayments shorten the life of the security and the time over which the Fund or the Managed Account receives income at the higher interest rate. Additionally, when mortgage loans underlying RMBS are prepaid, the prepaid amounts are re-invested in other income yielding securities which will reflect the lower interest rates prevailing at the time.
 - Alternatively, during periods of rising interest rates, RMBS are often more susceptible to extension risk than traditional debt securities (i.e., rising interest rates could cause property owners to prepay their mortgages more slowly than expected when the security was purchased, which may further reduce the market value of such security and lengthen the duration of the security).
- **Valuation.** RMBS are not traded on an organized exchange and may, therefore, be difficult to value.
- **Credit Risk.** Investment in RMBS is subject to credit risk, i.e., the risk that an issuer of an RMBS will be unable to pay principal and interest when due, or that the value of the security will suffer because investors believe the issuer is less able to pay. A default, downgrade or credit impairment of any of these securities could result in a significant or even total loss of the investment.

Commercial Mortgage-Backed Securities. A CMBS is a form of mortgage-backed security which is typically secured by commercial mortgages or commercial mortgage-backed collateral. Commercial mortgage loans underlying commercial mortgage-backed securities are generally secured by income producing property, such as offices, malls, stores, industrial properties, multi-family housing or other commercial property, and may entail risks of delinquency and foreclosure. In general, incremental risks of delinquency, foreclosure and loss with respect to an underlying commercial mortgage loan pool may be greater than those associated with residential mortgage loan pools. In part, this is caused by lack of diversity.

CMBS are often backed by an underlying mortgage pool of only a few mortgage loans. A failure in performance of any one commercial mortgage loan in the underlying mortgage pool will have a much greater impact on the performance of the related CMBS. Credit risk relating to commercial mortgage-backed transactions is, as a result, property-specific. In this respect, commercial mortgage backed transactions resemble traditional non-recourse secured loans.

Rates of defaults and losses on commercial mortgage loans, and the value of any commercial property, may be adversely affected by risks generally incident to interests in real property, including various events which the related borrower and/or manager of the commercial property, may be unable to predict or control, such as: changes in general or local economic conditions and/or specific industry segments; declines in real estate values; declines in rental or occupancy rates; increases in interest rates, real estate tax rates and other operating expenses; changes in governmental rules, regulations and fiscal policies, including environmental legislation; acts of

God; environmental hazards; and social unrest and civil disturbances. If a commercial mortgage loan is in default, foreclosure of such commercial mortgage loan may be a lengthy and difficult process, and may involve significant expenses and potential liabilities.

Prepayments on the underlying commercial mortgage loans in an issue of CMBS will be influenced by the prepayment provisions of the related mortgage notes and may also be affected by a variety of economic, geographic and other factors, including the difference between the interest rates on the underlying mortgage loans (giving consideration to the cost of refinancing) and prevailing mortgage rates and the availability of refinancing. In general, if prevailing interest rates fall significantly below the interest rates on the related mortgage loans, the rate of prepayment on the underlying mortgage loans would be expected to increase. Conversely, if prevailing interest rates rise to a level significantly above the interest rates on the related mortgages, the rate of prepayment would be expected to decrease. Prepayments could reduce the yield received on the related CMBS issue.

Concentrations of CMBS of a particular type, as well as concentrations of CMBS issued or guaranteed by affiliated obligors, serviced by the same servicer or backed by underlying collateral located in a specific geographic region, may subject the CMBS to additional risk. CMBS issues may be subordinate in right of payment and rank junior to other securities that are secured by or represent an ownership interest in the same pool of assets. In general, subordinate classes are more sensitive to risk of loss and writedowns than senior classes of such securities.

Resecuritization of Real Estate Mortgage Investment Conduit (“Re-REMIC”). A Re-REMIC is an investment vehicle that is backed by a static pool of subordinated CMBS and/or RMBS. The vehicle holds commercial and residential mortgages in trust, and issues securities representing an undivided interest in those mortgages. The risk factors that apply to CMBS and RMBS, as outlined above, also apply to Re-REMICs.

Collateralized Debt Obligations. Strategos may invest client monies in collateralized debt obligations (including without limitation collateralized loan obligations and collateralized bond obligations, collectively, “CDOs”). CDOs may be fixed pools or may be “market value” or managed pools of collateral which entitle the holders thereof to receive payments that depend primarily on the cash flow from the pool of assets, which may include commercial loans, high yield and investment grade debt, Structured Securities (as defined below) and derivative instruments relating to debt. Holders of CDOs bear various risks, including credit risk, liquidity risk, interest rate risk, market risk, operations risk, structural risk and legal risk. The pools of assets of CDOs are typically separated into tranches representing different degrees of credit quality, with lower rated tranches being subordinate to senior tranches. The senior tranches of CDOs, which represent the highest credit quality in the pool, have the greatest collateralization and pay the lowest spreads over LIBOR. Lower rated CDO tranches represent lower degrees of credit quality and pay higher spreads over LIBOR to compensate for the attendant risks. The bottom tranches specifically receive the residual interest payments (i.e., money that is left over after the higher tiers have been paid) rather than a fixed interest rate. The returns on the junior tranches of CDOs are especially sensitive to the rate of defaults in the collateral pool. In addition, the exercise of redemption rights, if any, by more senior CDO tranches and certain other events could result in an elimination, deferral or reduction in the funds available to make

interest or principal payments to the junior tranches. Clients may acquire mezzanine or equity tranches of CDOs which are the most susceptible to these risks.

Collateralized Mortgage Obligations. Strategos may invest client monies in collateralized mortgage obligations (“CMOs”). CMOs are debt instruments issued by special purpose entities which are secured by pools of mortgage loans or other mortgage-related securities. Similar to a bond, interest and prepaid principal is paid, in most cases, on a monthly basis. CMOs may be collateralized by whole mortgage loans or private mortgage bonds, but are more typically collateralized by portfolios of mortgage pass-through securities guaranteed by Ginnie Mae, Freddie Mac or Fannie Mae, and their income streams.

CMOs are structured into multiple classes, often referred to as “tranches,” with each class bearing a different stated maturity and entitled to a different schedule for payments of principal and interest, including pre-payments. Actual maturity and average life will depend upon the prepayment experience of the collateral. In the case of certain CMOs (known as “sequential pay” CMOs), payments of principal received from the pool of underlying mortgages, including pre-payments, are applied to the classes of CMOs in the order of their respective final distribution dates. Thus, no payment of principal will be made to any class of sequential pay CMOs until all other classes having an earlier final distribution date have been paid in full.

In a typical CMO transaction, a corporation (“issuer”) issues multiple series (e.g., A, B, C, Z) of CMO bonds (“Bonds”). Proceeds of the Bond offering are used to purchase mortgages or mortgage pass-through certificates (“Collateral”). The Collateral is pledged to a third party trustee as security for the Bonds. Principal and interest payments from the Collateral are used to pay principal on the Bonds in the order A, B, C, Z. The Series A, B and C Bonds all bear current interest. Interest on the Series Z Bond is accrued and added to principal and a like amount is paid as principal on the Series A, B or C Bond currently being paid off. When the Series A, B and C Bonds are paid in full, interest and principal on the Series Z Bond begins to be paid currently. CMOs may be less liquid and may exhibit greater price volatility than other types of mortgage- or asset-backed securities. In addition, investment in CMOs is subject to prepayment risk and interest rate risk.

Stripped Mortgage-Backed Securities. Strategos may invest client monies in non-agency, stripped mortgage-backed securities (“SMBS”), which are derivative multi-class mortgage securities. Non-agency SMBS may be issued by private originators of, or investors in, mortgage loans, including savings and loan associations, mortgage bankers, commercial banks, investment banks and special purpose subsidiaries of the foregoing.

There are generally two classes of SMBS: (i) one of which (the interest only or “IO” class) entitles the holder thereof to receive distributions consisting solely or primarily of all or a portion of the interest on the underlying pool of mortgage loans or mortgage-related securities (“Mortgage Assets”) and (ii) the other of which (the principal only or “PO” class) entitles the holders thereof to receive distributions consisting solely or primarily of all or a portion of the principal of the underlying pool of Mortgage Assets. PO classes generate income through the accretion of the deep discount at which such securities are purchased and while PO classes do not receive periodic payments of interest they receive monthly payments associated with scheduled amortization and principal payments from the Mortgage Assets underlying the PO

classes. The cash flows and yields on IO and PO classes are extremely sensitive to the rate of principal payments (including prepayments) on the related underlying Mortgage Assets. For example, a rapid or slow rate of principal payments may have a material adverse effect on the market value and yield to maturity of IOs or POs, respectively. If the underlying Mortgage Assets experience greater than anticipated prepayments of principal, an IO investor may incur substantial losses. Conversely, if the underlying Mortgage Assets experience slower than anticipated prepayments of principal, the market value and yield on a PO class will be affected more severely than would be the case with a traditional mortgage-related security. In the current distressed market for legacy RMBS assets, Strategos expects that, in the case of deeply discounted principal and interest RMBS, bond principal payments will act in a manner similar to PO classes. If prepayment speeds accelerate the overall return will increase. In addition, in the current distressed market for legacy RMBS assets, on principal and interest bonds where Strategos does not expect any principal payments, the timing of losses and the overall payment of underlying mortgage interest, including the impact of modifications by servicers, will be the primary drivers of bond performance.

Adjustable Rate Mortgage-Backed Securities. Strategos may invest client monies in adjustable rate mortgage-backed securities. Adjustable rate mortgage-backed securities are generally collateralized by or represent interests in mortgage loans with variable rates of interest. Such variable rates of interest reset periodically to align themselves with market rates. The value of adjustable rate mortgage securities may vary to the extent that current yields on adjustable rate mortgage securities are different than market yields during interim periods between coupon reset dates or if the timing of changes to the index upon which the rate for the underlying mortgages is based lags behind changes in market rates.

Economic Residuals. Strategos may invest client monies in the economic residuals from underlying mortgage-backed deals where excess interest and over-collateralization is used as a form of credit enhancement. These investments represent the difference of the underlying mortgage loan cash flows, including but not limited to principal, interest, servicing advances, and recoveries, less deal obligations including bond principal, interest, unpaid obligations, maintenance of required enhancement, and losses.

Repurchase Agreements. Strategos may, on behalf of clients, utilize repurchase agreements (“Repos”). In a Repo, the client would sell the securities to another party, usually a bank, broker-dealer or other financial institution, and agree to repurchase them at an agreed upon price and date. A Repo is equivalent to borrowing money and pledging the securities as collateral. Such transactions are only advantageous if the interest cost to the client of the repurchase transaction is less than the cost of obtaining the cash otherwise. The use of Repos by a client involves certain risks. For example, if the seller of securities under a repurchase agreement defaults on its obligation to repurchase the underlying securities, as a result of its bankruptcy or otherwise, Strategos, on behalf of the client, will seek to dispose of such securities, which action could involve costs or delays. If the seller becomes insolvent and subject to liquidation or reorganization under applicable bankruptcy or other laws, Strategos’ ability to dispose of the underlying securities may be restricted. If the seller fails to repurchase the securities, the client may suffer a loss to the extent proceeds from the sale of the underlying securities is less than the repurchase price.

Strategos may, on a client's behalf, also enter into reverse repurchase agreement ("Reverse Repos"). Reverse Repos involve sales by a client of portfolio assets concurrently with an agreement by the client to repurchase the same assets at a later date at a fixed price. During the Reverse Repo period, the client continues to receive principal and interest payments on these securities. Reverse Repos involve the risk that the market value of the securities retained by the client may decline below the price of the securities the client has sold but is obligated to repurchase under the agreement. In the event the buyer of securities under a Reverse Repo files for bankruptcy or becomes insolvent, the client's use of the proceeds of the agreement may be restricted pending a determination by the other party, or its trustee or receiver, whether to enforce the client's obligation to repurchase the securities.

Structured Securities Generally. Strategos may invest client monies in interests in securitization vehicles organized and operated solely for the purpose of restructuring the investment characteristics of other debt securities, MBSs, CDOs, etc. (collectively, "Structured Securities"). This type of restructuring generally involves the deposit with or purchase by an entity, such as a corporation or trust, of specified instruments and the issuance by that entity of one or more classes of securities backed by, or representing interests in, the underlying instruments. The cash flow on the underlying instruments may be apportioned among the newly issued security to create securities with different investment characteristics such as varying maturities, payment priorities and interest rate provisions, and the extent of the payments made with respect to such securities is dependent on the extent of the cash flow on the underlying instruments. Certain classes of such securities may be subordinated to the right of payment of another class. Subordinated structured investments typically have higher yields and present greater risks than unsubordinated structured investments.

Many Structured Securities are highly complex instruments and may be sensitive to changes in interest rates, prepayment rates or both. There is no guarantee that a liquid market will exist for any Structured Security that Strategos, on behalf of a client, may wish to sell.

Structured Securities generally are limited or non-recourse obligations payable solely from underlying assets or collateral securities or the proceeds thereof. Consequently, holders of Structured Securities must rely solely on distributions on the underlying assets or collateral securities or proceeds thereof for payment in respect of the Structured Securities. The underlying assets are subject to, among other things, credit risks, liquidity risks, interest rate risks, market risks, operations risks, structural risks and legal risks and may fluctuate with the financial conditions of the underlying issuers and obligors. In the event that issuers of the underlying collateral securities or obligors on the underlying assets default on their obligations, or distributions on the underlying assets or collateral securities are insufficient to make payments in respect of the Structured Securities, no other assets will be available for the payment of the deficiency. There is no guarantee that liquidation of underlying assets and collateral securities will be sufficient to repay investors for their investment in such Structured Securities.

In addition, Structured Securities may involve risks different from those of the assets or securities underlying or backing such Structured Securities. The failure by a servicer, sponsor or manager of a Structured Security to perform adequate credit review scrutiny of underlying assets or collateral securities or to otherwise fulfill its obligations with respect to a Structured Security may lead to the liquidation of, or default on, such Structured Security. Such failures and defaults

may have a negative impact on the return of the Structured Security and the performance of a client's investment return.

Synthetic Securities. Strategos may invest client monies in synthetic securities for investment purposes. Synthetic securities are securities in which the value is determined by reference to changes in the value of specific currencies, interest rates, bonds (or bond portfolios), commodities, indices, or other financial indicators (a "Reference") or the relative change in two or more References. The interest rate or the principal amounts payable upon maturity or redemption may be increased or decreased depending upon changes in the applicable Reference. Synthetic securities may be positively or negatively indexed, so that appreciation of the Reference may produce an increase or decrease in the interest rate or value of the security at maturity. In addition, changes in the interest rates or the value of the security at maturity may be a multiple of changes in the value of the Reference. Consequently, synthetic securities may present a greater degree of market risk than other types of securities and may be more volatile, less liquid and more difficult to value accurately than less complex securities.

Preferred Shares. Strategos may invest client monies may invest in non-convertible preferred shares issued by Securitization Vehicles, which may have fixed or variable dividend rates. Preferred shares generally have a preference as to dividends and liquidation over an issuer's common shares but rank junior to debt securities in an issuer's capital structure. Unlike interest payments on debt securities, preferred share dividends are payable only if declared by an issuer's board of directors. Preferred shares may be subject to optional or mandatory redemption provisions and may be illiquid. The ability of preferred shares to generate income is dependent on the earnings and continuing declaration of dividends by the issuers of preferred shares.

Item 9 Disciplinary Information

Neither Strategos nor any of its management persons or other personnel have any legal or disciplinary events to disclose that are material to a client's or prospective client's evaluation of Strategos' advisory business or the integrity of Strategos' management.

Item 10 Other Financial Industry Activities and Affiliations

Strategos acts as a manager to, or, through an affiliate, a general partner of certain Funds formed as limited partnerships or other corporate type entities. Investments in any of the Funds of which Strategos is a manager or one of Strategos' affiliates is a general partner are conducted on a private placement basis and prospective investors are solicited only by means of the current private placement memorandum of the relevant Fund. The following is a list of limited partnerships or offshore entities for which, as of the date hereof, Strategos acts as manager and/or an affiliate of Strategos acts as general partner:

- Strategos Deep Value Mortgage Master Fund, Ltd.;
- Strategos Deep Value Mortgage Fund LP;
- Strategos Deep Value Mortgage (Offshore) Fund L.P.;
- Strategos Deep Value Mortgage (Offshore) Fund 1-A L.P.;
- Strategos Deep Value Mortgage Master Fund II, Ltd.; and
- Strategos Deep Value Mortgage Fund II LP.

Strategos does not believe that (i) acting as a manager to, or one of its affiliates acting as general partner of, any of the foregoing Funds, or (ii) providing investment management services to any of the foregoing Funds, creates any material conflicts of interest with Strategos' other clients. Because the Investment Strategies may be identical or the same for each of the Funds or clients investing through Managed Accounts, Strategos adheres to an allocation policy between its clients, which generally provides that investments will be allocated equitably and primarily on the basis of available capital, relative exposure to market trends, the investment programs and the portfolio positions of the various clients as well as concentration limits and other limitations established by the respective clients, and applicable tax and regulatory considerations.

Item 11 Code of Ethics, Participation or Interest in Client Transactions and Personal Trading

A. Code of Ethics

Strategos has a fiduciary duty to its clients to act in the best interest of the clients and to always place the clients' interests first and foremost. Strategos takes seriously its compliance and regulatory obligations and requires all staff to comply with such rules and regulations as well as Strategos' policies and procedures. Furthermore, Strategos strives to handle clients' non-public information in such a way as to protect information from falling into hands of persons that have no reason to know such information and provides clients with a copy of its Privacy Policy. Strategos maintains a Code of Ethics for its advisory representatives, supervised persons and staff, which establishes Strategos' expectation for business conduct and contains provisions for standards of business conduct in order to comply with federal securities laws, personal securities reporting requirements, pre-approval procedures for certain transactions, code violations reporting requirements, and safeguarding of material non-public information about client transactions.

Strategos will provide a copy of its Code of Ethics to any client or prospective client upon request.

B. Participation or Interest in Client Transactions and Personal Trading

Neither Strategos nor any of its related persons:

- recommends to clients, or buys or sells for client accounts, securities in which Strategos or a related person has a material financial interest;
- invests in the same securities (or related securities – e.g., warrants, options or futures) that Strategos or any of Strategos' related persons recommends to clients;
- recommends securities to its clients, or buys or sells securities for client accounts, at or about the same time that Strategos or any of Strategos' related persons buys or sells the same securities for Strategos' own (or the related person's own) account.

Item 12 Brokerage Practices

Strategos does not permit clients to direct Strategos to execute transactions through a specified broker-dealer. Strategos' goal is to provide best execution at all times. In selecting brokers to

effect portfolio transactions and determining the reasonableness of such broker's compensation, Strategos will consider, to the extent consistent with Strategos' obligation to obtain best execution, such factors as:

- price;
- the ability of such broker to effect the transaction;
- the broker's facilities, reliability and financial responsibility;
- the commissions charged for the services;
- the market niches served by such broker;
- the quality of execution provided; and
- the operational support provided and the financial ability of such broker to handle large orders in the market place.

Strategos does not receive research or other products or services other than execution from a broker or a third party in connection with client securities transactions (that is, Strategos receives no "soft dollar benefits"). In selecting brokers, neither Strategos nor any of its related persons receives client referrals from brokers or third parties.

As described below, Strategos may, at its discretion, aggregate orders for a client's account with orders for other clients' accounts and allocate the investments or proceeds acquired among the participating accounts in a manner that we believe is fair and equitable.

Strategos manages Funds or Managed Accounts that may follow the same Investment Strategy, and, within the mandates of the applicable strategy, Strategos may buy a bond issue or security that will be allocated across accounts for multiple clients. Occasionally, a bond issue or security will be aggregated and sold out of various client accounts. The decision to aggregate a security for sale is generally made to maximize the return profile of that position within a specific market environment, because, typically, a larger position of a security for sale will enhance the execution price.

Notwithstanding the foregoing, other factors influence the purchase of a security on behalf of a Fund or Managed Account or the sale of a security out of a Fund or Managed Account and determine whether the opportunity exists to aggregate the purchase or sale of such securities for various client accounts. Any allocation of investment opportunities among Strategos' clients will be subject to its allocation procedures, which generally provide that investments will be allocated equitably and primarily on the basis of: (i) available capital; (ii) Fund or account size; (iii) allocation restrictions; (iv) relative exposure to market trends; (v) the Investment Strategy, investment guidelines, investment time horizon, concentration limits and portfolio positions of the client and the affiliated entities for which participation is appropriate and any other limitations established by the respective entities; (vi) Fund accounting issues; and (vii) applicable tax and regulatory considerations.

Future costs to clients when trades are not aggregated cannot be exactly quantified. Strategos always seeks best execution in the sale or purchase of securities for its various clients and strives to minimize costs and maximize the return objectives of each client.

Item 13 Review of Accounts

Strategos reviews each client account on a daily basis during the business work week (Monday – Friday) to determine if Strategos should buy or sell securities to attempt to optimize returns based primarily on trading activity in the RMBS, CMBS and ABS market. On a monthly basis, Strategos receives data related to the underlying RMBS, CMBS and ABS securities and analyzes this data to make decisions related to the securities held in a client’s account. Also on a monthly basis, Strategos calculates the net asset value determination for each client account. Such valuation further assists Strategos in determining, on a monthly basis, what securities should continued to be held, and which should be sold, on behalf of a client. All such reviews are done by the following supervised persons of Strategos: Alex Cigolle, Managing Director; Frederick Horton, Managing Director; David Gregory, Vice President; Zineb Ramadane, Vice President and Tyler Wynn, Director.

Because Strategos reviews client accounts on a periodic basis (as described above), there are generally no factors that trigger any additional non-periodic review.

On a monthly basis, Strategos provides a one-to-two page written monthly status report to current investors in the Funds, which includes updated RMBS and CMBS market commentary, detailed Fund performance numbers, current investment portfolio stratification of each Fund and other historical investment data.

On a monthly basis, Strategos provides each client investing through a Managed Account with an account statement, which includes a detailed list of holdings with market valuations and account activity, as well as detailed performance numbers for the time period covered by the statement.

Item 14 Client Referrals and Other Compensation

Strategos receives no economic benefit from any non-clients for providing investment advice or other advisory services to its clients.

Upon purchasing the Purchased Assets referred to in the first paragraph of Item 4, Strategos assumed an obligation to compensate an unrelated client referral firm that assisted Cira SCM, LLC in locating clients to invest in certain of the Funds. This compensation had been paid to the client referral firm by Cira SCM prior to Strategos assuming the obligation. Going forward, Strategos will pay the client referral firm up to 2.5% of the respective capital raised depending on the respective Fund.

Item 15 Custody

Strategos has custody of the assets of the Funds (and therefore custody of the investors’ assets in the Funds). In compliance with Rule 206(4)-2 of the Advisers Act, for each Fund, Strategos sends audited year-end financial statements to each investor in the Fund within 120 days of the Fund’s fiscal year-end. In addition, the qualified custodian for each Fund’s assets sends account statements directly to the investors in each Fund on a monthly basis. The audited financial statements and the account statements should be closely reviewed by each investor.

Strategos does not have custody of the assets in the Managed Accounts, but the qualified custodian for each Managed Account sends an account statement to the applicable client on a monthly basis, which should be closely reviewed by each client. Strategos urges its clients investing through Managed Accounts to compare the account statements they receive from the qualified custodian with those they receive directly from Strategos.

Item 16 Investment Discretion

Under both Investment Strategies, Strategos has discretionary authority to determine, without obtaining specific client consent, the securities, and amount of securities, to be bought and sold for the Funds and Managed Accounts. There are generally no restrictions or limitations on Strategos' discretionary authority other than limitations included in the investment guidelines of the Funds and Managed Accounts, which may (and customarily do) include the following:

- Prohibition against investing in debt, equity or other securities of issuers organized to invest primarily in non U.S. assets;
- Prohibition on engaging in Short Sales;
- Prohibition on entering into credit default swap, options or futures contracts;
- Prohibition on entering into borrowing or leverage arrangements or pledging or hypothecating any securities against borrowings; and
- Prohibition on investing an amount in excess of 5% of total assets in any single issuer of securities.

Strategos assumes this discretionary authority pursuant to the terms of the relevant investment management agreement that is entered into between the client and Strategos (that is, the Investment Advisory Agreement for Managed Accounts and the Limited Partnership Agreements for the Funds).

Item 17 Voting Client Securities

Generally

As required under Rule 206(4)-6 of the Advisers Act, Strategos has adopted and implemented written policies and procedures that: (i) are reasonably designed to ensure that Strategos vote client securities in the best interests of clients, and (ii) address material conflicts of interest that may arise between the interests of clients and the interests of Strategos

Strategos serves as the manager of Funds as well as the adviser to the Managed Accounts and, in that capacity, invests primarily in RMBS, CMBS and ABS debt or debt like instruments for such clients. Such instruments are not typically the subject of proxies or securities voting matters. However, while not the subject of a proxy, there could be instances in which the Strategos, having discretionary authority over client accounts, would be asked, and would accept the authority, to vote the securities of clients on such matters as removing or amending applicable covenants set forth in an indenture or similar document. Therefore, Strategos' written policies and procedures relate specifically to those limited instances in which Strategos may be in a position to be voting the securities of clients.

For purposes of Strategos' voting of client securities policies and procedures, one of the principals of Strategos (the "Program Administrator") is responsible for ensuring that all decisions with regard to voting of securities on behalf of clients are made in accordance with these policies and procedures.

Voting Matters

The Program Administrator will track each securities position held by clients and will maintain a log of upcoming events, if any, that would require Strategos to be voting securities of clients. The Program Administrator is responsible for ensuring that he or she has received all relevant disclosure materials and such proxies or consents such that he or she is in possession of all documentation and information necessary to cast votes in a timely manner.

Voting Process

The Program Administrator will determine whether there is, or appears to be, a material conflict of interest that could influence the voting decision in a manner that would be adverse to the interests of any client.

Identifying Material Conflicts of Interest

It is not possible for Strategos to enumerate all potential conflicts of interest which may be material, but the following relationships are illustrative of conflict potential and are issues (among others) that the Program Administrator considers each time a vote arises:

- Strategos has a business or financial conflict of interest in voting the securities in a manner adverse to any client because:
 - Strategos or an affiliate manages a separate account or currently performs financial services for the issuer that is the subject of the voting matter, or for an affiliate of such issuer, or for any member of the senior management or any pension plan of such issuer, or is actively seeking such party(s) as a client;
 - The issuer that is the subject of the proxy or voting matter, or an affiliate of such issuer or any member of the senior management of such issuer is a client or a substantial investor in a Fund; or
 - An employee (or spouse) of Strategos:
 - Is a director or a member of the senior management of the issuer that is the subject of the voting matter; or
 - Owns a substantial interest in the shares of the issuer that is the subject of the voting matter or otherwise has a substantial financial interest in the outcome of the vote.

If the Program Administrator determines there is no material conflict of interest, then the Program Administrator will make the voting determination and will be responsible to take the required voting action. The Program Administrator must ensure that voting action takes place on a timely basis and will maintain a written record of the actual voting action and the basis of the voting determination.

Resolving Material Conflicts of Interest

If the Program Administrator has identified a material conflict of interest, he or she must determine:

- whether the conflict involves Strategos, an affiliate or an employee;
- whether the Program Administrator himself or herself is a conflicted party and, if so, whether an alternative senior employee could be assigned to be responsible for voting, who would not be so conflicted; and
- whether Strategos or any senior employee is capable of making an independent determination as to the voting decision.

If the Program Administrator determines due to conflicts of interest that no senior employee is capable of making an independent determination as to the voting decision, then the voting decision will be that recommended by the investment committee of Strategos or, if none, a special securities voting committee as determined by the Program Administrator for the purpose of recommending the voting decisions.

Client Participation

Generally, clients do not have the authority or ability to direct how securities held in their accounts are voted, provided that, clients investing through Managed Account have the right to vote the securities in their account upon written notice to Strategos.

Available Information

Clients may request information from Strategos about how Strategos voted client securities by contacting any of the individuals listed on the cover page of this Brochure or any of Strategos' advisory personnel assisting the client. In addition, clients may obtain a copy of Strategos' proxy voting policies and procedures upon request.

Item 18 Financial Information

There are no financial conditions of Strategos that are reasonably likely to impair Strategos' ability to meet its contractual commitments to its clients.
