

FORM ADV PART 2A: FIRM BROCHURE

ITEM 1. COVER PAGE

ITE Management L.P.

200 Park Avenue South, Suite 1511
New York, NY 10003
Tel. (646) 779-2019

March 2018

Important Disclosure:

This brochure dated March 2018 provides information about the qualifications and business practices of ITE Management L.P. and its affiliates (“ITE” or the “Firm”). If you have any questions about the contents of this brochure, please contact us at 646-779-2019 or our Chief Compliance Officer at dlee@itemgmt.com. ITE Management L.P. is registered as an investment adviser with the United States Securities and Exchange Commission (“SEC”) under the Investment Advisers Act of 1940, as amended (the “Advisers Act”). Registration as an investment adviser does not imply that ITE Management L.P. or its employees possess a certain level of skill or training. The information in this brochure has not been approved or verified by the SEC or by any state securities authority.

Additional information about ITE Management L.P. also is available on the SEC’s website at www.adviserinfo.sec.gov.

ITEM 2. MATERIAL CHANGES

There have been no changes since the last version of the Part 2A Brochure.

ITEM 4. ADVISORY BUSINESS

- A. ITE Management L.P. is a Delaware limited liability company formed on May 29, 2007 (f/k/a JNF Management LLC and D Aaron Asset Management LLC). The Firm is an investment adviser located in New York, NY. The Firm's "Principals" are Jason Koenig, David Smilow and James Unger. Koenig and Smilow are considered ITE's principal owners for purposes of this disclosure document.
- B. The Firm serves as an investment adviser to pooled investment vehicles, including ITE Institutional Rail Fund L.L.C., CCM Railcar Holdco L.P. and ITE Rail Fund L.P. (collectively, the "Funds"), as well as any vehicles established for the purposes of pursuing alternative investments or side agreements with an individual investor (collectively, the "Clients"). The Funds are exempt from registration under the Investment Company Act of 1940, as amended (the "Investment Company Act"), pursuant to Section 3(c)(7) of the Investment Company Act.

The Firm provides discretionary investment management services to the Funds pursuant to the Funds' investment management agreements with ITE. The Firm manages the assets of the Funds in accordance with the applicable limited partnership agreement, offering memoranda and other such agreements (the "Offering Documents"). The Firm invests in rail car assets and may also pursue certain other opportunistic investments outside of rail car assets for the purpose of preserving principal.

The Firm is affiliated with certain other entities that are or may become general partners (each a "General Partner" and collectively the "General Partners") to each of the Funds. Each of ITE's current Funds are controlled by those General Partners that ITE is affiliated with as of the date of this brochure.

The advisory services of ITE and of the General Partners are described in this brochure and in the Offering Documents. The General Partners are deemed to be registered under the Investment Advisers Act of 1940, as amended (the "Advisers Act") pursuant to the registration of ITE, in accordance with SEC guidance. The information set forth herein regarding the investment advisory services provided by ITE shall also apply with respect to the General Partners.

- C. The Firm does not tailor advisory services to the individual or particular needs of investors in the Funds. As a condition of subscription, Fund investors will accept the terms of advisory services as set forth in the Fund's Offering Documents. The Firm has broad investment authority with respect to the Funds and, as such, investors should consider whether the investment objectives of the Funds will be in line with their individual objectives and risk tolerance prior to investment. Should an individual investor require tailored advisory services, the Firm may establish a separate side agreement with an individual investor.
- D. The Firm does not participate in wrap fee programs.

- E. ITE Institutional Rail Fund L.L.C. (the “Institutional Fund”) has a wholly owned equity interest in Railcar Holdings PAS II, L.L.C. (“PAS II”). PAS II issues debt to Institutional Fund investors at market interest rates with market covenants. The debt is governed by a master facility agreement (the “Master Loan Agreement”) between the Institutional Fund and PAS II. The Firm serves as the administrator to PAS II. Under the administration agreement the Firm provides or coordinates legal, accounting, tax and other professional services as well as ensure PAS II performs all its obligations under the Master Loan Agreement.
- F. As of the date of this brochure, ITE manages \$582,496,427 in assets on a discretionary basis.

ITEM 5. FEES AND COMPENSATION

- A. The Firm's fees and compensation may vary among the Funds. The specific terms of such arrangements are established by the Firm and set forth in each Fund's Offering Documents. The Firm charges a management fee for its management and other services (the "Management Fee"). The General Partner may, in its sole discretion, waive, reduce or calculate differently (but not increase in the aggregate) such fees for any limited partner without limitation, a limited partner that is an affiliate of the General Partner or the Firm, a member of the immediate family of such a person or a trust or other entity for the benefit of such a person.

ITE Rail Fund L.P. offers a levered interest and an unlevered interest in two similar portfolios (each a "Levered Class" or "Unlevered Class", respectively and collectively, the "Classes"). The Management Fee differs between the Classes and is fully described in the Fund's limited partnership agreement.

The Firm accepts subscriptions by investors for interests in both the ITE Rail Fund L.P. and the ITE Institutional Rail Fund L.L.C. that meet the definition of a "qualified purchaser", as defined in the Investment Company Act of 1940, as amended (the "Investment Company Act"). Therefore, ITE is not required to disclose a fee schedule.

The Firm receives performance-based fees, as more fully described in Item 6.

- B. The Firm deducts Management Fees from the Funds' accounts quarterly in advance. Management fees are amortized monthly by the Firm over the fiscal quarter for which such Management Fee is paid.
- C. In addition to the Management Fees described above, the Funds are responsible for certain operating expenses as disclosed in the Offering Documents.

Such operating expenses include, without limitation: (i) broken deal expenses; (ii) negotiating, financing, sourcing, acquiring, holding, hedging, settling and disposing of each Fund's investments or proposed investments, including, without limitation, expenses relating to the maintenance and/or operation of investments charged by third party service providers; (iii) third-party professional fees, including, without limitation, expenses of consultants, investment bankers, attorneys, accountants and other experts, relating to investments; (iv) brokerage commissions, information-related expenses, clearing and settlement charges, custodial fees, interest expenses, appraisal fees and expenses and similar expenses; (v) research and market data; administrative expenses (including, without limitation, fees and expenses of the Fund's administrator); (vi) legal expenses; external accounting and valuation expenses, audit and tax preparation expenses; (vii) costs related to liability insurance, umbrella insurance, property insurance and excess or contingent insurance with respect to the Fund and/or any of its assets, and errors and omissions insurance for the General Partner and ITE; (viii) entity-level taxes; corporate licensing; regulatory expenses; organizational expenses; expenses incurred in connection with the offering and sale of interests to the Fund and other similar expenses related to the Fund

(other than any fees payable to any placement agent); (ix) indemnification expenses; and (x) extraordinary expenses.

The Funds will incur brokerage costs if applicable; however, due to the nature of the Firm's business, broker-dealers are not generally used. See Item 12 – Brokerage Practices.

- D. Management Fees are paid in advance on a quarterly basis. In the unlikely event that ITE does not provide services for a full period, or if accounts are terminated according to the terms set out in the Fund's Offering Documents before the end of the relevant fiscal quarter, a pro-rata portion of the Management Fee will be returned, based on the actual number of months remaining in the relevant fiscal quarter.
- E. The Firm receives compensation for its services as the administrator to PAS II. Under the administration agreement, PAS II agrees to pay the Firm a monthly administration fee in an amount equal to \$1,000.00.
- F. Neither ITE nor any of its supervised persons will accept compensation for the sale of securities or other investment products.

ITEM 6. PERFORMANCE-BASED FEES AND SIDE-BY-SIDE MANAGEMENT

Each of the General Partners receives performance-based compensation or an “incentive allocation” (as described below) from the Funds, as specified in the Offering Documents or investment management agreements of each Fund.

Generally, at the end of each fiscal year, the General Partners will receive a performance-based allocation to the respective General Partners’ capital account of a portion of the net capital appreciation (if any) allocated to each investor’s capital account for such fiscal year after increasing net capital appreciation for distributions made pursuant to an income distribution election during such fiscal year and any investor-related taxes paid or accrued by the Funds and reducing net capital appreciation by an amount equal to the applicable management fee debited from such capital account, subject to attaining a hurdle rate described below.

If, at the end of a fiscal year, the Funds have generated net capital appreciation (after increasing for distributions made pursuant to an income distribution election and any investor-related taxes paid or accrued by the Funds during the applicable fiscal year and deducting the management fee debited from such capital account) in the aggregate for such fiscal year, then such net capital appreciation will be reallocated at such time in accordance with the following paragraph and as follows: (i) first, 100% to such investor’s capital account until the balance in such investor’s capital account’s corresponding an additional “loss recovery account” (as defined in the Offering Documents) is equal to zero; (ii) second, 100% to such investor’s capital account until such investor’s capital account has been allocated the hurdle amount for such fiscal year or shorter period, as applicable; (iii) third, 50% to the General Partner’s capital account and 50% to such investor’s capital account until the aggregate amount allocated to the General Partner’s capital account pursuant to this clause (iii) for such fiscal year or shorter period, as applicable, on account of such investor’s capital account equals (A) with respect to the ITE Rail Fund L.P. Levered Class, 20% of the sum of the amounts allocated pursuant to clause (ii) and this clause (iii) for such fiscal year or shorter period, (B) with respect to ITE Rail Fund L.P. Unlevered Class, 10% of the sum of the amounts allocated pursuant to clause (ii) and this clause (iii) for such fiscal year or shorter period (C) with respect to the ITE Institutional Rail Fund L.L.C., 10% of the sum of the amounts allocated pursuant to clause (ii) and this clause (iii) for such fiscal year or shorter period and (D) with respect to the CCM Railcar Holdco L.P. 7.5% of the sum of the amounts allocated pursuant to clause (ii) and this clause (iii) for such fiscal year or shorter period, as applicable (the “catch-up”, and together with the amounts allocated to the General Partner’s capital account in clause (iv) below, the “Incentive Allocation”); and (iv) thereafter, (A) with respect to ITE Rail Fund L.P. Levered Class, 20% to the General Partner’s capital account and 80% to such investor’s capital account, (B) with respect to ITE Rail Fund L.P. Unlevered Class, 10% to the General Partner’s capital account and 90% to such investor’s capital account and (C) with respect to the ITE Institutional Rail Fund L.L.C., 10% to the General Partner’s capital accounts and 90% to such investor’s capital account and (D) with respect to the CCM Railcar Holdco L.P., 7.5% to the General Partner’s capital accounts and 92.5% to such investor’s capital account.

In the sole discretion of the Firm, the incentive allocation may be waived, reduced or calculated differently (but not increased in the aggregate) with respect to the capital account(s) of any investor, including, without limitation, an investor that is a member, partner, affiliate or employee of the Firm, a member of the immediate family of such a person or a trust or other entity for the benefit of such a person.

All incentive allocations vest over a two-year period and are subject to clawback provisions as defined in and set forth in each Fund's limited partnership agreements. The General Partner may, in its sole discretion, waive, reduce or calculate differently (but not increase in the aggregate) such fees for any limited partner without limitation.

The fact that a portion of the ITE's compensation is directly computed on the basis of profits generated by the sale or disposition of the Funds' assets may create an incentive for the Firm to make investments more speculative than would be the case in absence of such compensation. However, ITE is committed to acting at all times in the best interest of the Fund. To this end, ITE has implemented internal controls to address the potential conflicts associated with performance-based fees, as more fully described in the Funds' operating documents.

As of the date of this brochure the Firm has not established a co-investment vehicle. Should the Firm establish a co-investment vehicle, such vehicle may be subject to fees and allocations which may differ among co-investors and may also differ from the fees and allocations borne by the Funds.

ITEM 7. TYPES OF CLIENTS

As further described in Item 4 of this brochure, ITE provides investment advisory services to pooled investment vehicles which generally operate as exempt investment companies under the Investment Company Act. The Funds are typically limited to individuals and entities that meet the criteria of “qualified purchasers”, as defined in the Investment Company Act.

Prospective investors should refer to the Offering Documents of the Funds for information on minimum investment requirements. Typically, ITE will require a minimum investment, although ITE maintains discretion to individually waive, increase or reduce the minimum investment required.

The Firm may, from time to time, offer one or more investors and/or other third-party investors the opportunity to co-invest with the Funds in particular investments. The Firm is not obligated to arrange co-investment opportunities, and no investor will be obligated to participate in such an opportunity. As of the date of this brochure, ITE has not established any co-investment vehicles, nor has it arranged any co-investment opportunities. Certain Funds invest in assets through a joint venture vehicle with a third-party rail car operator and may enter into other such joint ventures in the future.

ITEM 8. METHODS OF ANALYSIS, INVESTMENT STRATEGIES AND RISK OF LOSS

- A. The investment objective of ITE is to generate superior risk adjusted returns by opportunistically investing in tangible, cash-flowing assets and intangible assets with the potential to achieve significant value in the medium to long term. The investment program of the Firm will focus on direct investments primarily in the acquisition of rail cars and assets that are directly or indirectly related to rail cars (e.g., storage facilities). The Firm also may invest in other hard assets, interests in master limited partnerships, corporate securities, debt securities and debt obligations, including those that provide equity upside, as well as options, residuals and other call rights that provide the Firm the potential for significant capital appreciation. The Firm's investments will be located primarily in North America but may also include opportunities elsewhere on an opportunistic basis.

The descriptions set forth in this brochure of specific advisory services that the Firm offers to clients, and investment strategies pursued, and investments made by the Firm on behalf of its clients, should not be understood to limit in any way its investment activities. The Firm may offer any advisory services, engage in any investment strategy and make any investment, including any not described in this brochure, that the Firm considers appropriate, subject to each client's investment objectives and guidelines. The investment strategies the Firm pursues are speculative and entail substantial risks. Clients should be prepared to bear a substantial loss of capital. There can be no assurance that the investment objectives of any client will be achieved.

General Risk of Loss. An investment in the Fund will involve significant risk. No guarantee or representation is made that the Funds' investment programs, including, without limitation, the Funds' investment objectives, diversification strategies or risk monitoring goals, will be successful. Investment results may vary substantially over time. No assurance can be made that profits will be achieved or that substantial or complete losses will not be incurred. Past investment results of the investments made by the investment professionals of the Firm are not necessarily indicative of their future performance.

- B. *Listed below are some of the risks that will be associated with a Fund investment. The following explanation of certain risks is not exhaustive, but rather highlights some of the more significant risks involved in a Fund's investment strategies. Please note, not all risks are applicable to each Fund; there are important differences in how these risks may affect each Fund. For a complete explanation of the relevant investment strategies and their associated risks specific to each Fund, investors should review the relevant Offering Documents or investment management agreement, which may contain additional explanations of strategies, risks and other related details not discussed below.*

Limited Operating History. Each of the Funds and the General Partners is a newly formed entity, and the Firm and its investment professionals have a limited operating history upon which prospective Investors can evaluate their anticipated performance. There can be no assurance that the Funds or the Firm will achieve results comparable to those that the investment professionals have achieved in the past.

Dependence on the Firm. The success of each Fund is dependent upon the ability of the Firm to manage the Funds and effectively implement the Funds' investment programs. The Funds' governing documents do not permit the investors to participate in the management and affairs of the Funds. If a Fund managed by the Firm were to incur substantial losses or were subject to an unusually high level of redemptions or withdrawals, the revenues of the Firm may decline substantially. Such losses and/or withdrawals may impair the Firm's ability to provide the same level of service to the Funds as it has in the past and continue operations. The loss of the services of the Firm could have a material adverse effect on the Funds and the investors' investments therein.

Liability of the Fund and Special Purpose Vehicles. The Firm generally intends to make investments through multiple special purpose vehicles (an "SPV"). Creditors (except with respect to tax creditors, such as the Internal Revenue Service) of one SPV generally may not enforce a claim against the assets of another SPV, unless a Fund guarantees the obligations of such subsidiary to such creditor; provided, however, that cross-class liability may still exist in such arrangements.

Effect of Substantial Withdrawals. Substantial withdrawals could be triggered by a number of events, including, without limitation, unsatisfactory performance, events in the markets, a key person event or other significant change in personnel or management of the Firm, removal or replacement of the Firm as the investment manager of the Funds, legal or regulatory issues that investors perceive to have a bearing on the Funds or the Firm, or other events. Actions taken to meet substantial withdrawal requests from the Funds (as well as similar actions taken simultaneously by investors of any other accounts) could result in prices of investments held by the Funds decreasing and in Funds expenses increasing (e.g., transaction costs and the costs of terminating agreements). The overall value of the Funds also may decrease because the liquidation value of certain assets may be materially less than their cost or mark-to-market value. The Funds may be forced to sell more positions, which may cause an imbalance in the portfolio that could have a material adverse effect on the remaining investors. In addition, if investors withdraw a significant amount of their capital account balances, such action may impair the Principals' ability to obtain the minimum target rating on the loans, which could have a material adverse effect on the Funds and the investors. Substantial withdrawals could also significantly restrict the Funds' ability to obtain financing or transact with derivatives counterparties needed for its investment strategies, which would have a further material adverse effect on the Funds' performance. The Funds and the Firm generally will not disclose to investors the amount of pending withdrawals or withdrawal requests and are under no obligation to make any such disclosure.

Limited Liquidity. An investment in the Funds has limited liquidity because investors will generally have only limited rights to withdraw capital from the Funds or transfer their shares, and the Funds have the right to suspend withdrawals. Investors must be prepared to bear the financial risks of an investment in a Fund for an indefinite period of time.

In-Kind Distributions. Under certain circumstances a withdrawing investor may receive distributions in kind in lieu of, or in combination with, cash. Such distributions may include loans, interests in one or more liquidating vehicle holding investments owned by the Funds,

or participations therein. To the extent a withdrawing investor is distributed interests in special purpose vehicles, such withdrawing investor will continue to be at risk with respect to the Funds' business. The value of the investments distributed in kind may increase or decrease before they are sold either by the withdrawing investor, if received directly, or by ITE or its affiliates, if held through a special purpose vehicle. In either case, the withdrawing investor will incur transaction costs in connection with the sale of any such investments and, in the case of interests in a liquidating vehicle, will bear a proportionate share of the operating and other expenses borne by such vehicle. Instruments distributed in kind will not be readily marketable. The risk of loss and delay in liquidating these vehicles will be borne by the investor, with the result that such investor may ultimately receive less cash than it would have received on the date of withdrawal if it had been paid in cash. Furthermore, to the extent that a withdrawing investor receives interests in special purpose vehicles, such withdrawing investor will generally have no voting rights or any control over when and at what price the investments in which such vehicles have an interest are sold.

Valuation of Assets and Liabilities. The Funds' assets and liabilities are valued in accordance with the Firm's valuation policy. The valuation of any asset or liability involves inherent uncertainty. The value of an investment determined in accordance with the valuation policy may differ materially from the value that could have been realized in an actual sale or transfer for a variety of reasons, including the timing of the transaction and liquidity in the market. Uncertainties as to the valuation of portfolio positions could have an impact on the net asset value of the Funds if the judgments of the Principals regarding the appropriate valuation should prove to be incorrect.

ASC 820—Fair Value Measurements and Disclosures; Potential GAAP vs. Valuation Policy Reporting Difference. The Funds' assets and liabilities are valued in accordance with the Firm's valuation policy. However, for purposes of preparing the Funds' annual audited financial statements, which are prepared in accordance with GAAP, certain of the Funds' assets and liabilities may be valued in a manner that, while consistent with GAAP, is different from the manner in which such assets are valued pursuant to the valuation policy.

Specifically, for purposes of GAAP-compliant financial reporting, the Funds are required to follow a specific framework for measuring the fair value of its assets and liabilities, and is required to provide certain additional disclosures regarding the use of fair value measurements in its audited financial statements. Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") 820, formerly known as FAS 157 ("ASC 820"), defines and establishes a framework for measuring fair value under GAAP and expands financial statement disclosure requirements relating to fair value measurements. Other valuation-related requirements are contained in other provisions of GAAP, and sections of the codification. Additional FASB ASCs and updates and additional provisions of GAAP that may be adopted in the future may also impose additional, or different, specific requirements as to the valuation of assets and liabilities for purposes of GAAP-compliant financial reporting.

Accordingly, to the extent that GAAP would require any of the Funds' assets or liabilities to be valued in a manner that differs from the valuation policy, such assets or liabilities will be valued (x) in accordance with GAAP, solely for purposes of preparing the Funds' GAAP-compliant annual audited financial statements, and (y) in accordance with the valuation policy (without regard to any GAAP requirements relating to the determination of fair value) for all other purposes, including, without limitation, for purposes of allocating gains and losses among the investors, which, as described in the Offering Documents, is relevant to, among other things, the determination of net asset value of a capital account, the calculation of the Management Fee and the Incentive Allocation, and the amounts payable by the Funds in respect of a withdrawal by or distribution to an investor.

Generally, accounting rules (including ASC 820) applicable to investment funds and various assets in which they invest are evolving. Such changes may adversely affect the Funds. For example, the evolution of rules governing the determination of the fair market value of assets to the extent such rules become more stringent would tend to increase the cost and/or reduce the availability of third-party determinations of fair market value. This may in turn increase the costs associated with selling assets or affect their liquidity due to inability to obtain a third-party determination of fair market value.

ASC 740—Accounting Changes; Effect on Net Asset Value. Pursuant to FASB ASC 740, formerly known as FIN 48 (“ASC 740”), which provides guidance for how uncertain tax positions should be recognized, measured, presented and disclosed in financial statements, the Funds are required to determine whether a tax position, based on its technical merits, meets a more-likely-than-not recognition threshold that the position will be sustained upon examination. As a result of such a determination, the Funds may be required to recognize a contingent tax liability in its net asset value calculation if the related tax position meets the recognition criterion in ASC 740 and, conversely, may be required to unrecognize a contingent tax liability in its net asset value calculation if the related tax position does not meet the recognition criterion in ASC 740. In addition, the net asset value of the Funds may be adjusted if an uncertain tax position is settled. Since ASC 740 has only recently been adopted, the Funds may be required to recognize in its financial statements contingent liabilities that under prior custom and practice in the industry would not have been recognized. Such contingent liabilities may also relate to time periods that predate an investor's investment in the Funds. Recognition and measurement of each tax position, including any tax position for which there is a lack of authority and audit experience, is determined by the Principals, in its sole discretion, based on discussions with the Firm, tax advisers and the auditor and based on the facts and circumstances known at the time. There can be no assurance that any such determination will not change over time. Adjustments made to the net asset value of the Funds in connection with the recognition or unrecognition of contingent tax liabilities may have a material positive or negative effect on certain investors and prospective investors, depending on the circumstances.

Counterparty Risk. The Funds expect to establish relationships to obtain financing, derivative intermediation and prime brokerage services that permit the Funds to trade in certain markets or asset classes over time. However, there can be no assurance that the Funds will be able to establish or maintain such relationships. An inability to establish or maintain such relationships could limit the Funds' investing activities, create losses,

preclude the Funds from engaging in certain transactions or prevent the Funds from trading at optimal rates and terms. Moreover, a disruption in the financing, derivative intermediation and prime brokerage services provided by any such relationships could have a significant impact on the Funds' business due to the Funds' reliance on such counterparties.

The Funds may affect transactions in the "over-the-counter" or "OTC" derivatives markets. The stability and liquidity of OTC derivatives transactions depends in large part on the creditworthiness of the parties to the transactions. In the OTC markets, the Funds enter into a contract directly with dealer counterparties which may expose the Funds to the risk that a counterparty will not settle a transaction in accordance with its terms because of a solvency or liquidity problem with the counterparty. Delays in settlement may also result from disputes over the terms of the contract (whether or not bona fide). In addition, the Funds may have a concentrated risk in a particular counterparty, which may mean that if such counterparty were to become insolvent or have a liquidity problem, losses would be greater than if the Funds had entered into contracts with multiple counterparties. Certain OTC derivative contracts require that the Funds post collateral.

If there is a default by a counterparty, the Funds under most normal circumstances will have contractual remedies pursuant to the agreements related to the transaction. However, exercising such contractual rights may involve delays or costs which could result in the net asset value of the Funds being less than if the Funds had not entered into the transaction. Furthermore, there is a risk that any of such counterparties could become insolvent and/or the subject of insolvency proceedings. In such case, the recovery of the Funds' investments from such counterparty or the payment of claims therefore may be significantly delayed and the Funds may recover substantially less than the full value of the investments entrusted to such counterparty. In addition, there are a number of proposed rules that, if they were to go into effect, may impact the laws that apply to insolvency proceeding and may impact whether the Funds may terminate its agreement with an insolvent counterparty.

Collateral that the Funds post to counterparties that is not segregated with a third party custodian may not have the benefit of customer-protected "segregation" of such funds. In the event that a counterparty were to become insolvent, the Funds may become subject to the risk that it may not receive the return of its collateral or that the collateral may take some time to return.

In addition, the Funds may use counterparties located in jurisdictions outside the United States. Such local counterparties usually are subject to laws and regulations in non-U.S. jurisdictions that are designed to protect customers in the event of their insolvency. However, the practical effect of these laws and their application to the Funds' assets are subject to substantial limitations and uncertainties. Because of the range of possible factual scenarios involving the insolvency of a counterparty and the potentially large number of entities and jurisdictions that may be involved, it is impossible to generalize about the effect of such an insolvency on the Funds and its assets. Investors should assume that the insolvency of any such counterparty would result in significant

delays in recovering the Funds' investments from or the payment of claims therefor by such counterparty and a loss to the Funds, which could be material.

Competition; Availability of Investments. Certain markets in which the Funds may invest are extremely competitive for attractive investment opportunities. As a result, there can be no assurance that the Firm will be able to identify or successfully pursue attractive investment opportunities in such environments.

Co-Investments with Third Parties. The Funds may co-invest with third parties through joint ventures or other entities. Third-party involvement with an investment may negatively impact the returns of such investment if, for example, the third-party co-venturer has financial difficulties, has economic or business interests or goals that are inconsistent with those of the Funds or is in a position to take (or block) action in a manner contrary to the Funds' investment objectives. In circumstances where such third parties involve a management group, such third parties may enter into compensation arrangements relating to such investments, including incentive compensation arrangements. Such compensation arrangements will reduce the returns to participants in the investments.

General Economic and Market Conditions. The success of the Funds' activities will be affected by general economic and market conditions, such as interest rates, availability of credit, credit defaults, inflation rates, economic uncertainty, changes in laws (including laws relating to taxation of the Funds' investments), trade barriers, currency exchange controls, and national and international political circumstances (including wars, terrorist acts or security operations). These factors may affect the level and volatility of the prices and the liquidity of the Funds' investments. Volatility or illiquidity could impair the Funds' profitability or result in losses. The Funds may maintain substantial trading positions that can be adversely affected by the level of volatility in the financial markets.

Risks of Investments in Physical Assets. The Funds will invest in hard assets such as rail cars and related assets. These investments are subject to risks that include, among others, destruction, loss, terrorist attacks, industry-specific regulation (e.g., pollution control regulation), operating failures and labor relations. In addition, the regulation of such assets is extensive and variable, and the Funds' investments in such assets could be wholly illiquid for long periods of time. Prices of physical assets are affected by factors such as global supply and demand, investors' expectations with respect to the rate of inflation, currency exchange rates, interest rates, investment and trading activities of hedge funds and commodity funds, and global or regional political, economic or financial events and situations. Markets can be volatile at times, and there may be sharp fluctuations in prices even during periods of rising prices.

Risks of Investments in Rail Cars Generally. The Funds will acquire interests in the rail cars and related assets. The highly cyclical nature of the competitive rail car industry and restricted credit markets may result in lower revenues during economic downturns. The fluctuating cost of raw materials and components used to manufacture railcars, which are often only available from a limited number of suppliers, may also adversely affect the Funds' rail car investments.

Infrastructure Risks. Infrastructure assets may be subject to a variety of risks, not all of which can be foreseen or quantified, including: (i) the burdens of ownership of infrastructure; (ii) local, national and international political and economic conditions; (iii) the supply and demand for services from and access to infrastructure; (iv) the financial condition of users and suppliers of infrastructure assets; (v) changes in interest rates and the availability of funds which may render the purchase, sale or refinancing of infrastructure assets difficult or impracticable; (vi) changes in environmental laws and regulations, planning laws and other governmental rules; (vii) changes in energy prices; (viii) changes in fiscal and monetary policies; (ix) under-insured or uninsurable losses, such as force majeure acts and terrorist events and (x) other factors which are beyond the reasonable control of the Funds. Many of the foregoing factors could cause fluctuations in usage, expenses and revenues, causing the value of investments to decline and a material adverse effect on the Funds' investments. In acquiring or attempting to acquire infrastructure investments, the Funds may need to participate in competitive bidding and may incur significant expenses in doing so. Many infrastructure investments are subject to substantial governmental regulation that could negatively impact the investment.

Hazardous Materials. One or more of the Funds' rail car investments may transport hazardous materials. An accidental release of hazardous materials could result in significant loss of life and extensive property damage. The associated costs could have an adverse effect on the Funds' operating results, financial condition or liquidity.

Labor Unions. Many railroad employees and rail car manufacturer employees are union-represented and work under collective bargaining agreements with various labor organizations. If these union-represented employees were to engage in a strike, work stoppage or other slowdown, or other employees were to become unionized or their terms and conditions in future labor agreements were renegotiated, one or more of the Funds' rail car investments could experience significant disruption, which could impact the flow of new product.

Governmental and Industry Regulations of Rail Car Operations. The Funds' rail car operations are subject to federal, state, administrative and industry laws and regulations. The Funds could incur significant costs, fines and penalties as a result of any allegations or findings to the effect that the Funds has violated or are strictly liable under these laws or regulations.

Catastrophic Loss. The operation of any rail car carries with it an inherent risk of catastrophe, mechanical failure, collision, and property loss. In the course of the Funds' operations, spills or other environmental mishaps, cargo loss or damage, business interruption due to political developments, as well as labor disputes, strikes and adverse weather conditions, could result in a loss of revenues or increased liabilities and costs. Collisions, cargo leaks or explosions, environmental mishaps, or other accidents can cause serious bodily injury, death, and extensive property damage, particularly when such accidents occur in heavily populated areas. Additionally, the Funds' operations may be affected from time to time by natural disasters such as earthquakes, volcanoes, floods, hurricanes or other storms. The occurrence of a major natural disaster could have a material adverse effect on our operations and financial condition. The Funds maintain umbrella

insurance that is consistent with industry practice against the accident-related risks involved in the conduct of our business and business interruption due to natural disaster. However, this insurance is subject to a number of limitations on coverage, depending on the nature of the risk insured against. This insurance may not be sufficient to cover certain damages and may not continue to be available at commercially reasonable rates. In addition, the Funds are subject to the risk that one or more of its insurers may become insolvent and would be unable to pay a claim that may be made in the future. Even with insurance, if any catastrophic interruption of service occurs, a railroad may not be able to restore service without a significant interruption to operations which could have an adverse effect on the use of the rail cars.

In addition, adverse events directly and indirectly attributable to the Funds, including such things as derailments, accidents, discharge of toxic or hazardous materials, or other like occurrences in the industry, may result in increases in the Funds' insurance premiums and could result in limitations to the coverage under the Funds' existing policies.

Leasing Risks. The Funds' investments may include various types of leases, including, without limitation, rail car leases. If a lessee goes bankrupt, its bankruptcy trustee may repudiate a lease and return the equipment or other property to the lessor. Other risks may arise out of the lessor-lessee relationship, including, without limitation, the lessee's failure to properly maintain the asset that is the subject of the lease.

Long-Term Investments. The success of the Funds' long-term investment strategies depend upon the Firm's ability to identify and purchase investments that are undervalued and hold such investments so as to maximize value on a long-term basis. In pursuing any long-term strategy, the Funds may forego value in the short-term or temporary investments in order to be able to avail the Funds of additional and/or longer-term opportunities in the future. Consequently, the Funds may not capture maximum available value in the short-term, which may be disadvantageous, for example, for investors who withdraw all or a portion of their capital accounts before such long-term value may be realized by the Funds. Additionally, there may be little or no near-term cash flow available to the investors. Since the Funds may only make a limited number of investments and since many of the investments may involve a high degree of risk, poor performance by a few of the investments could severely affect the total return to investors.

Risks Related to Leverage and Borrowing.

Leverage for Investment Purposes. The use of leverage with respect to the Funds and the SPVs will allow the Funds and SPVs to make additional investments, thereby increasing their exposure to assets, such that their total assets may be greater than their capital. However, leverage will also magnify the volatility of changes in the value of the Funds' and the SPVs' portfolios. The effect of the use of leverage by the Funds and the SPVs in a market that moves adversely to their investments could result in substantial losses to the Funds and the SPVs, which would be greater than if the Funds and the SPVs were not leveraged.

While leverage presents opportunities for increasing the Funds' total return, it has the effect of potentially increasing losses as well. Accordingly, any event which adversely affects the value of an investment by the Funds or an SPV would be magnified to the extent an investment is leveraged. The cumulative effect of the use of leverage by the Funds and the SPVs in a market that moves adversely to such Funds' and the SPVs' investments could result in a substantial loss which would be greater than if the Funds and the SPVs were not leveraged.

Borrowing for Cash Management and other Purposes. The Funds also have the authority to borrow for cash management and other purposes, such as to satisfy withdrawal requests. The rates at and terms on which the Funds can borrow will affect the operating results of the Funds.

Collateral. The instruments and borrowings utilized by the Funds and the SPVs to leverage investments may be collateralized by all or a portion of the Funds' and the SPVs portfolios. Accordingly, the Funds and/or the SPVs may pledge the investments in order to borrow or otherwise obtain leverage for investment or other purposes. Should the investments pledged to brokers to secure the Funds' and/or the SPVs' margin accounts decline in value, the Funds and/or the SPVs could be subject to a "margin call", pursuant to which the Funds and/or the SPVs must either deposit additional funds or investments with the broker or suffer mandatory liquidation of the pledged investments to compensate for the decline in value. The banks and dealers that provide financing to the Funds and/or the SPVs can apply essentially discretionary margin, "haircut", financing and collateral valuation policies. Changes by counterparties in any of the foregoing may result in large margin calls, loss of financing and forced liquidations of positions at disadvantageous prices. Lenders that provide other types of asset-based or secured financing to the Funds and/or the SPVs may have similar rights. There can be no assurance that the Funds and/or the SPVs will be able to secure or maintain adequate financing.

Costs. Borrowings will be subject to interest, transaction and other costs, and other types of leverage also involve transaction and other costs. Any such costs may or may not be recovered by the return on the Funds' and/or the SPVs' portfolios.

Diversification and Concentration. The Firm is expected to select investments that are concentrated in rail cars and other hard assets. This limited diversification may result in the concentration of risk, which, in turn, could expose the Funds to losses disproportionate to market movements in general if there are disproportionately greater adverse price movements in such investments.

Hedging Transactions. The Funds may utilize investments for risk management purposes in order to: (i) protect against possible changes in the market value of the Funds' investment portfolio resulting from fluctuations in the markets and changes in interest rates; (ii) protect the Funds' unrealized gains in the value of its investment portfolio; (iii) facilitate the sale of any investments; (iv) enhance or preserve returns, spreads or gains on any investment in the Funds' portfolios; (v) hedge against a directional trade; (vi) hedge the interest rate, credit or currency exchange rate on any of the Funds' investments; (vii) protect against any

increase in the price of any investments the Funds anticipate purchasing at a later date; or (viii) act for any other reason that the Firm deems appropriate. The Funds will not be required to hedge any particular risk in connection with a particular transaction or its portfolio generally. The Firm may be unable to anticipate the occurrence of a particular risk and, therefore, may be unable to attempt to hedge against it. While the Funds may enter into hedging transactions to seek to reduce risk, such transactions may result in a poorer overall performance for the Funds than if it had not engaged in any such hedging transaction. Moreover, the portfolio will always be exposed to certain risks that cannot be hedged.

Discretion of the Firm; New Strategies and Techniques. While the Firm will generally seek to employ the representative investment strategies and techniques discussed herein, the Firm (subject to the policies and control of the General Partners) has considerable discretion in the types of investments the Funds may invest and has the right to modify the investment strategies and techniques of the Funds without the consent of the investors. New investment strategies and techniques may not be thoroughly tested in the market before being employed and may have operational or theoretical shortcomings which could result in unsuccessful trades and, ultimately, losses to the Funds. In addition, any new investment strategy or technique developed by the Funds may be more speculative than earlier investment strategies and techniques and may involve material and as-yet-unanticipated risks that could increase the risk of an investment in the Funds.

Master Limited Partnerships. An investment in a master limited partnership (an “MLP”) unit involves risks that differ from those associated with investments in similar equity securities, such as common stock of a corporation. Holders of MLP units usually have the rights typically afforded to limited partners in a limited partnership, and as such have limited control and voting rights on matters affecting the partnership. In addition, there is the risk that an MLP could be, contrary to its intention, taxed as a corporation, resulting in decreased returns from such MLP. Further, conflicts of interest may exist between common unit holders, subordinated unit holders and the general partner of the MLP, including those arising from incentive distribution payments.

Convertible Securities. A convertible security may be subject to redemption at the option of the issuer at a price established in the convertible security’s governing instrument. If a convertible security held by the Funds is called for redemption, the Funds will be required to permit the issuer to redeem the security, convert it into the underlying common stock or sell it to a third party. Any of these actions could have an adverse effect on the Funds’ ability to achieve its investment objective.

Debt Securities. Debt securities of all types of issuers may have speculative characteristics, regardless of whether they are rated. The issuers of such instruments (including sovereign issuers) may face significant on-going uncertainties and exposure to adverse conditions that may undermine the issuer’s ability to make timely payment of interest and principal in accordance with the terms of the obligations.

Interest Rate Risk. Changes in interest rates can affect the value of the Funds’ investments in fixed-income instruments. Increases in interest rates may cause the value

of the Funds' debt investments to decline. The Funds may experience increased interest rate risk to the extent it invests, if at all, in lower-rated instruments, debt instruments with longer maturities, debt instruments paying no interest (such as zero-coupon debt instruments) or debt instruments paying non-cash interest in the form of other debt instruments.

Future Funding Obligations. The Funds may from time to time incur funding obligations that may arise in the future in connection with an investment. For example, the Firm may cause the Funds to purchase from a lender a revolving credit facility that has not yet been fully drawn. If the borrower subsequently draws down on the facility, the Funds' would be obligated to fund the amounts due. If the Funds are unable to pay its obligations when due, the Funds could face significant penalties that could materially adversely affect its returns. The Funds may also enter into agreements pursuant to which it agrees to assume responsibility for default risk presented by a third party, and may, on the other hand, enter into agreements through which third parties offer default protection to the Funds.

High-Yield. Bonds or other fixed-income securities that are "higher yielding" (including non-investment grade) debt securities are generally not exchange traded and, as a result, these securities trade in the over-the-counter marketplace, which is less transparent and has wider bid/ask spreads than the exchange-traded marketplace. High-yield securities face on-going uncertainties and exposure to adverse business, financial or economic conditions, which could lead to the issuer's inability to meet timely interest and principal payments. High-yield securities are generally more volatile and may or may not be subordinated to certain other outstanding securities and obligations of the issuer, which may be secured by substantially all of the issuer's assets. High-yield securities may also not be protected by financial covenants or limitations on additional indebtedness. The market values of certain of these lower-rated and unrated debt securities tend to reflect individual corporate developments to a greater extent than do higher-rated securities, which react primarily to fluctuations in the general level of interest rates, and tend to be more sensitive to economic conditions than are higher-rated securities. Companies that issue such securities may be highly leveraged and may not have available to them more traditional methods of financing. In addition, the Funds may invest in bonds of issuers that do not have publicly traded equity securities, making it more difficult to hedge the risks associated with such investments.

The Funds may invest in obligations of issuers that are generally trading at significantly higher yields than had been historically typical of the applicable issuer's obligations. Such investments may include debt obligations that have a heightened probability of being in covenant or payment default in the future or that are currently in default and are generally considered speculative. The repayment of defaulted obligations is subject to significant uncertainties. Defaulted obligations might be repaid only after lengthy workout or bankruptcy proceedings, during which the issuer might not make any interest or other payments. Typically such workout or bankruptcy proceedings result only in partial recovery of cash payments or an exchange of the defaulted security for other debt or equity securities of the issuer or its affiliates, which may in turn be illiquid or speculative.

Corporate Debt. Bonds, notes and debentures issued by corporations may pay fixed, variable or floating rates of interest, and may include zero-coupon obligations. Corporate debt instruments may be subject to credit ratings downgrades. Other instruments may have the lowest quality ratings or may be unrated. In addition, the Funds may be paid interest in kind in connection with its investments in corporate debt and related financial instruments (e.g., the principal owed to the Funds in connection with a debt investment may be increased by the amount of interest due on such debt investment). Such investments may experience greater market value volatility than debt obligations that provide for regular payments of interest in cash and, in the event of a default, the Funds may experience substantial losses.

Mezzanine Debt. Mezzanine debt is typically junior to the obligations of a company to senior creditors, trade creditors and employees. The ability of the Funds to influence a company's affairs, especially during periods of financial distress or following an insolvency, will be substantially less than that of senior creditors. Mezzanine debt instruments are often issued in connection with leveraged acquisitions or recapitalizations in which the issuers incur a substantially higher amount of indebtedness than the level at which they had previously operated. Default rates for mezzanine debt instruments have historically been higher than for investment-grade instruments. In the event of the insolvency of a portfolio company of the Funds or similar event, the Funds' debt investment therein will be subject to fraudulent conveyance, subordination and preference laws.

Stressed Debt. Stressed issuers are issuers that are not yet deemed distressed or bankrupt and whose debt securities are trading at a discount to par, but not yet at distressed levels. An example would be an issuer that is in technical default of its credit agreement, or undergoing strategic or operational changes, which results in market pricing uncertainty. The market prices of stressed and distressed instruments are highly volatile, and the spread between the bid and the ask prices of such instruments is often unusually wide.

Equity Securities Generally. The value of equity securities of public and private, listed and unlisted companies and equity derivatives generally varies with the performance of the issuer and movements in the equity markets. As a result, the Funds may suffer losses if it invests in equity instruments of issuers whose performance diverges from the Firm's expectations or if equity markets generally move in a single direction and the Funds have not hedged against such a general move. The Funds also may be exposed to risks that issuers will not fulfill contractual obligations such as, in the case of convertible securities or private placements, delivering marketable common stock upon conversions of convertible securities and registering restricted securities for public resale.

Illiquid Investments. A substantial majority of the Funds' investments are expected to be illiquid. The sale of restricted and illiquid investments often requires more time and results in higher selling expenses than does the sale of investments eligible for trading on national exchange.

Borrowings. The Funds may enter into credit facilities that are secured by the investors' capital commitments. In the event that a Fund defaults under the credit agreement, the

lenders would have the ability to call capital from the investors to repay outstanding borrowings thereunder. Accordingly, if a Fund utilizes a commitment facility line to purchase assets and defaults under the credit agreement, lenders may be able to call capital from investors before a preliminary rating on the initial issuance of loans is obtained. As a result, it is possible that up to 25% of the aggregate capital commitments of the investors may be called prior to obtaining the preliminary rating on the initial issuance of the loans.

Ratings Risks. The Principals will seek to obtain ratings on the loans from ratings agencies that are independent from the Principals. There is no guarantee that the Principals will obtain the minimum target ratings or be able to maintain any particular ratings. A ratings agency may downgrade the ratings of any of the loans at any time and/or require an SPV to repay loans to retain current ratings. Any such event could result in investors holding a higher percentage of equity in the Funds (and less loans), which could have a negative effect on the investors' capital requirements and balance sheets.

Cybersecurity Risk. As part of its business, the Firm processes, stores and transmits large amounts of electronic information, including information relating to the transactions of the Funds and personally identifiable information of the investors. Similarly, service providers of the Firm or the Funds, especially the administrator, may process, store and transmit such information. The Firm has procedures and systems in place to protect such information and prevent data loss and security breaches. However, such measures cannot provide absolute security. The techniques used to obtain unauthorized access to data, disable or degrade service, or sabotage systems change frequently and may be difficult to detect for long periods of time. Hardware or software acquired from third parties may contain defects in design or manufacture or other problems that could unexpectedly compromise information security. Network connected services provided by third parties to the Firm may be susceptible to compromise, leading to a breach of the Firm's network. The Firm's systems or facilities may be susceptible to employee error or malfeasance, government surveillance, or other security threats. On-line services provided by the Firm to the investors may also be susceptible to compromise. Breach of the Firm's information systems may cause information relating to the transactions of the Funds and personally identifiable information of the investors to be lost or improperly accessed, used or disclosed.

The service providers of the Firm and the Funds is subject to the same electronic information security threats as the Firm. If a service provider fails to adopt or adhere to adequate data security policies, or in the event of a breach of its networks, information relating to the transactions of the Funds and personally identifiable information of the Investors may be lost or improperly accessed, used or disclosed.

The loss or improper access, use or disclosure of the Firm's or the Funds' proprietary information may cause the Firm or the Funds to suffer, among other things, financial loss, the disruption of its business, liability to third parties, regulatory intervention or reputational damage. Any of the foregoing events could have a material adverse effect on the Funds and the investors' investments therein.

Derivative Instruments. Certain swaps, options and other derivative instruments may be subject to various types of risks, including but not limited to market risk, liquidity risk,

credit risk, legal risk and operations risk. Derivative instruments traded over-the-counter may not have an authoritative source of valuation and the models used to value such derivatives are subject to change. Special risks may apply in the future that are not presently contemplated. The regulatory and tax environment for derivative instruments in which the Funds may participate is evolving, and changes in the regulation or taxation of such investments may have a material adverse effect on the Funds.

Derivatives Regulation. Since the introduction of the Dodd-Frank Act in 2010, the CFTC has promulgated many final rules related to derivatives and such regulations may negatively affect the Funds. Parties that act as dealers in swaps, for example, are subject to extensive business conduct standards, additional “know your counterparty” obligations, recordkeeping, reporting, portfolio reconciliation, documentation standards and capital requirements and, when regulations are finalized, will become subject to margin requirements. Similar rules related to security-based swaps will soon be published.

Requirements such as these will raise the costs of entering into derivative transactions, and these increased costs will likely be passed on to the Funds. The new rules also add additional operational and technological burdens on the Funds. Currently, with respect to swaps, the Funds must engage in portfolio reconciliation, recordkeeping, reporting and other transaction level obligations, which increase the compliance burdens and costs to the Funds. These compliance obligations require certain training of employees and technology, and there are operational risks as the Funds implement procedures to comply with many of these additional obligations. Certain swap transactions have become (or will become) subject to anonymous “real time reporting”, meaning that transactions entered into by the Funds will become visible to the market in ways that may harm the Funds’ ability to enter into additional transactions at comparable prices or could enable competitors to “front run” or replicate the Funds’ strategies. In addition, certain swap transactions have become (or will become) subject to mandatory trading on regulated trading venues such as swap execution facilities (“SEFs”), which will require the Funds to subject themselves to regulation by these venues and subject the Funds to the jurisdiction of the CFTC. It is not clear whether these trading venues will benefit or impede liquidity, or how they will fare in times of market stress. Trading on these trading venues may increase the pricing discrepancy between assets and their hedges as products may not be able to be executed simultaneously, therefore increasing basis risk. It may also become relatively expensive for the Funds to obtain tailored swap products to hedge particular risks in its portfolio due to higher collateral requirements on bilateral transactions as a result of the new regulations. The SEC still is at a nascent stage for implementing rules related to security-based swaps. It is possible that security-based swaps will be subject to different rules and regulations than swaps. Since the division of “swaps” (regulated by the CFTC) and “security-based swaps” (regulated by the SEC) is a regulatory distinction rather than a product distinction, substantively similar products may have significantly different regulatory treatment. This may mean that the operational complexities of trading various derivative instruments is increased. Overall, new regulations may also render certain strategies in which the Funds might otherwise engage impossible or so costly that they will no longer be economical to implement. The impact of the Dodd-Frank Act or

comparable regulations in other jurisdictions on the Funds is uncertain, and it is unclear how the over-the-counter derivatives markets will adapt to this new regulatory regime or any additional regulation in the future.

Swaps. Swap agreements and options on swap agreements may increase or decrease the holder's exposure to, for example, equity securities, long-term or short-term interest rates, non-U.S. currency and are known by a variety of names. Swap transactions may be highly illiquid and may increase or decrease the volatility of the Funds' portfolios. Moreover, the Funds will also bear the risk of loss related to swap agreements, for example, for breaches of such agreements or the failure of the Funds to post or maintain required collateral. It is possible that developments in the swap markets, including potential government regulation, could adversely affect the Funds' ability to terminate swap transactions or to realize amounts to be received under such transactions.

Call Options. The seller (writer) of a call option which is covered (*i.e.*, the writer holds the underlying investment) assumes the risk of a decline in the market price of the underlying investment below the purchase price of the underlying investment less the premium received, and gives up the opportunity for gain on the underlying investment above the exercise price of the option. The seller of an uncovered call option assumes the risk of a theoretically unlimited increase in the market price of the underlying investment above the exercise price of the option. The investments necessary to satisfy the exercise of an uncovered call option may be unavailable for purchase, except at much higher prices, thereby reducing or eliminating the value of the premium. Purchasing investments to cover the exercise of an uncovered call option can cause the price of the investments to increase, thereby exacerbating the loss. The buyer of a call option assumes the risk of losing its entire premium investment in the call option.

Put Options. The seller (writer) of a put option which is covered (*i.e.*, the writer has a short position in the underlying investment) assumes the risk of an increase in the market price of the underlying investment above the sales price (in establishing the short position) of the underlying investment plus the premium received, and gives up the opportunity for gain on the underlying investment if the market price falls below the exercise price of the option. The seller of an uncovered put option assumes the risk of a decline in the market price of the underlying investment below the exercise price of the option. The buyer of a put option assumes the risk of losing its entire investment in the put option.

Index or Index Options. The value of an index or index option fluctuates with changes in the market values of the assets included in the index. Because the value of an index or index option depends upon movements in the level of the index rather than the price of a particular asset, whether the Funds will realize appreciation or depreciation from the purchase or writing of options on indices depends upon movements in the level of instrument prices in the assets generally or, in the case of certain indices, in an industry or market segment, rather than movements in the price of particular assets.

Index Futures. The price of index futures contracts may not correlate perfectly with the movement in the underlying index because of certain market distortions. First, all participants in the futures market are subject to margin deposit and maintenance requirements. Rather than meeting additional margin deposit requirements, participants may close futures contracts through offsetting transactions that would distort the normal relationship between the index and futures markets. Second, from the point of view of speculators, the deposit requirements in the futures market are less onerous than margin requirements in the securities market. Therefore, increased participation by speculators in the futures market also may cause price distortions. Successful use of index futures contracts by the Funds also is subject to the Firm's ability to correctly predict movements in the direction of the market.

Credit Default Swaps. Credit default swaps can be used to implement the Firm's view that a particular credit, or group of credits, will experience credit improvement or deterioration. In the case of expected credit improvement, the Funds may sell credit default protection in which it receives a premium to take on the risk. In such an instance, the obligation of the Funds to make payments upon the occurrence of a credit event creates leveraged exposure to the credit risk of the referenced entity. The Funds may also buy credit default protection with respect to a referenced entity if, in the Firm's judgment, there is a high likelihood of credit deterioration. In such instance, the Funds will pay a premium regardless of whether there is a credit event.

Futures Contracts. The value of futures contracts depends upon the price of the investments, such as commodities, underlying them. The prices of futures contracts are highly volatile, and price movements of futures contracts can be influenced by, among other things, interest rates, changing supply and demand relationships, trade, fiscal, monetary and exchange control programs and policies of governments, as well as national and international political and economic events and policies. In addition, investments in futures contracts are also subject to the risk of the failure of any of the exchanges on which the Funds' positions trade or of its clearing houses or counterparties. Futures positions may be illiquid because certain commodity exchanges limit fluctuations in certain futures contract prices during a single day by regulations referred to as "daily price fluctuation limits" or "daily limits". Under such daily limits, during a single trading day no trades may be executed at prices beyond the daily limits. Once the price of a particular futures contract has increased or decreased by an amount equal to the daily limit, positions in that contract can neither be taken nor liquidated unless traders are willing to effect trades at or within the limit. This could prevent the Funds from promptly liquidating unfavorable positions and subject the Funds to substantial losses or prevent it from entering into desired trades. Also, low margin or premiums normally required in such trading may provide a large amount of leverage, and a relatively small change in the price of a security or contract can produce a disproportionately larger profit or loss. In extraordinary circumstances, a futures exchange or the CFTC could suspend trading in a particular futures contract, or order liquidation or settlement of all open positions in such contract.

Failure to Enter into Offsetting Trade. To the extent the Funds invest in a futures contract or option long, unless an offsetting trade is made, the Funds would be required to take

physical delivery of the commodity underlying the future or option. To the extent the Firm fails to enter into such offsetting trade prior to the expiration of the contract, the Funds may suffer a loss since neither the Funds nor the Firm has the operational capacity to accept physical delivery of commodities.

C. The Firm does not recommend primarily a particular type of security.

ITEM 9. DISCIPLINARY INFORMATION

Neither ITE nor any of its management persons have been involved in any legal or disciplinary events that are material to a client, investor, prospective client or prospective investor's evaluation of the Firm's advisory business or the integrity of its management.

ITEM 10. OTHER FINANCIAL INDUSTRY ACTIVITIES AND AFFILIATIONS

- A. Neither ITE nor any of its management persons are registered, or have an application pending to register, as a broker-dealer or a registered representative of a broker-dealer.
- B. Neither ITE nor any of its management persons are registered, or have an application pending to register, as a futures commission merchant, commodity pool operator, a commodity trading advisor, or an associated person of the foregoing entities.
- C. ITE and its affiliates will be subject, and the Funds will be exposed, to a number of actual and potential conflicts of interest. Any such conflict of interest could have a materially adverse effect on the Funds and the investors' investments therein. However, the existence of an actual or potential conflict of interest does not mean that it will be acted upon to the detriment of the Funds. When a conflict of interest arises, ITE will endeavor to ensure that the conflict is addressed fairly and in an equitable manner that is consistent with its fiduciary duties to the Funds. ITE has instituted policies and procedures that are reasonably designed to identify and mitigate actual and potential conflicts of interest.

Prospective investors should understand that the relationships among the Funds, ITE and its affiliates are complex and dynamic. The Principals and ITE employees serve as board members, directors and officers of, and may provide advice to, publicly traded companies and private companies. Investors should be aware that that certain conflicts of interest may arise as a result of such positions, including but not limited to receipt of material non-public information by such persons regarding these companies that could preclude ITE from effecting transactions in the securities of such companies.

While acting in such a capacity, ITE's Principals or employees may also face incidences where the interests of the public or private company are directly or indirectly at odds with those of the Firm. The Firm seeks to ensure that any resultant situation involving a material conflict of interest will be handled in a fair and equitable manner and in accordance with applicable law.

As of the date of this filing, one of the Firm's Principals is associated with a foreign investment adviser and its affiliates. ITE considers any potential conflict of interest to be immaterial in relation to its investors and the Funds, as there is no overlap in the business of ITE and the business of the foreign investment adviser and its affiliates.

- D. ITE does not recommend or select other investment advisers for its Funds.

ITEM 11. CODE OF ETHICS, PARTICIPATION OR INTEREST IN CLIENT TRANSACTIONS AND PERSONAL TRADING

- A. The Firm has adopted a written Code of Ethics (the “Code”), which describes ITE’s fiduciary duties and responsibilities to the Funds, requires that ITE’s employees act in the best interests of the Funds to the exclusion of contrary interests, act in good faith and in an ethical manner, mitigate conflicts of interest with the Funds to the extent reasonably possible, and identify and manage conflicts of interest to the extent that they arise. ITE’s employees are also required to comply with applicable provisions of the federal securities laws and make prompt reports to ITE or other appropriate party of any actual or suspected violations of such laws by ITE or its employees.

In addition, the Code sets forth policies and procedures with respect to the personal securities trading activities of ITE’s employees pursuant to Rule 204A-1 of the Advisers Act. The Code requires, among other things, employees to report to the Firm all personal trading accounts over which they maintain investment discretion, and to disclose to the Firm all those accounts, if any, that are managed by a third party financial adviser. Employees are required to report all “reportable securities” transactions in such personal trading accounts and provide a summary of securities holdings initially upon hire and on an annual basis thereafter. “Reportable securities” means any securities, including exchange-traded funds and closed-end mutual funds but excluding: (1) direct obligations of the Government of the United States; (2) bankers’ acceptances, bank certificates of deposit, commercial paper and high-quality short-term debt instruments, including repurchase agreements; (3) shares issued by money market funds; (4) shares issued by open-end registered investment companies (e.g., open-end mutual funds), other than funds advised or underwritten by ITE or an affiliate; or (5) shares issued by unit investment trusts that are invested exclusively in one or more open-end registered investment companies, none of which are advised or underwritten by ITE or an affiliate.

The Code also addresses outside activities of employees, conflicts of interest, policies and procedures concerning the prevention of insider trading, restrictions on the acceptance of significant gifts and the reporting of certain gifts and business entertainment items, and the pre-clearance and reporting of political contributions.

- B. The Firm may determine that it may be in the best interests of the Funds to transfer an investment from one Fund account to another (each such transfer, a “Cross Trade”) for a variety of reasons, including, without limitation, tax purposes, liquidity purposes, to rebalance the portfolios of the Fund accounts, or to reduce transaction costs that may arise in an open market transaction. If ITE engages in a Cross Trade, ITE will determine that the trade is in the best interests of both of the Funds involved and take the necessary protective steps to ensure that the transaction is consistent with the duty to obtain best execution for each of those accounts.

A cross transaction between two Funds may occur as an “internal cross”, where ITE instructs the Funds’ administrator to book the transaction at the price determined in accordance with ITE’s valuation policies and controls. If ITE effects an “internal cross”, ITE will not receive any fee in connection with the completion of the transaction. Cross

Trades present an inherent conflict of interest because ITE represents the interest of the buyer and seller in the same transaction. As a result, the Funds involved in such Cross Trades bear the risk that the price obtained from a Cross Trade may be less favorable than if the trade had been executed in the open market. ITE has in place controls to mitigate and address any conflicts that may arise from Cross Trades.

- C. In general, neither ITE nor any of its related persons will invest in the same securities that ITE or its related persons recommend to the Funds. Should the Firm consider changing its investment practices, it will adopt policies to address the inherent conflicts that will arise.
- D. In general, neither ITE nor any of its related persons may recommend securities to the Funds, or buy or sell securities for any Fund accounts, at or about the same time that ITE or any of its related persons buys or sells the same securities for the Firm's own account or any of its related persons' accounts.

ITEM 12. BROKERAGE PRACTICES

- A. The Firm is responsible for the purchase and sale of any securities for the Funds and the negotiation of any commissions paid on such transactions. To the extent ITE engages in securities transactions, ITE will select brokers on the basis of best execution, taking into consideration various factors, including commission rates, reliability, financial responsibility, strength of the broker and the ability of the broker to efficiently execute transactions, the broker's facilities, and the broker's provision or payment of the costs of brokerage and research services that are of benefit to the Funds.
1. ITE does not currently utilize client commission dollars to purchase research or other brokerage services (i.e. soft dollars). If used at all, the Firm will only use soft dollars to pay for research, products and services that fall within the safe harbor as provided under Section 28(e) of the U.S. Securities Exchange Act of 1934, as amended.
 2. If ITE engages in securities transactions, the Firm will not consider whether ITE or any of ITE's related persons receives client referrals from a broker-dealer or third party when selecting or recommending a broker-dealer.
 3. ITE does not engage in directed brokerage at this time.
- B. To the extent ITE engages in securities transactions, the Firm may aggregate purchase or sale orders on behalf of the Funds if, in ITE's judgement, such aggregation is likely to result in an overall economic benefit to the Funds based on an evaluation that the Funds will benefit by relatively better purchase or sale prices, lower commission expenses or beneficial timing of transactions, or a combination of these and other factors.

ITEM 13. REVIEW OF ACCOUNTS

- A. The Funds' portfolios are monitored and reviewed on a quarterly basis by the valuation committee of the Firm. The valuation committee is comprised of two of the Firm's managing members and the Chief Financial Officer, as selected by the Principals.
- B. More frequent reviews of the Funds' portfolios may occur on a monthly basis, but only at the request of investors.
- C. Audited financial statements will be provided to investors in the Funds within 120 days of the end of a Fund's fiscal year as required by Rule 206(4)-2 under the Advisers Act (the "Custody Rule"). Non-audited financial statements will be provided to investors in each of the Funds on a quarterly basis. In addition, the Firm periodically issues an investor letter to all investors in the Funds.

ITEM 14. CLIENT REFERRALS AND OTHER COMPENSATION

- A. The Firm does not receive an economic benefit from anyone, other than the Funds, for providing investment advice or other advisory services to the Funds.
- B. From time to time ITE uses an unaffiliated third-party placement agent for investor referrals.

ITEM 15. CUSTODY

Under the Custody Rule, an adviser has custody if it acts in any capacity that gives the adviser legal ownership of, or access to, client funds or securities. ITE is be deemed to have custody of the assets of the Fund, because it or one of its affiliates (the General Partner of the Fund) either (i) acts as General Partner of the Fund, with the authority to dispose of funds and securities in the Fund's accounts or (ii) is deemed to have custody because of its ability to withdraw its fees directly from the Fund. Therefore, ITE is subject to the Custody Rule.

ITE will adhere to the applicable Custody Rule provisions with respect to Fund assets in publically traded and private securities. The Firm's CCO will be responsible for arranging for annual independent audits of the Fund by a major accounting firm within 120 days of the Fund's fiscal year end and for obtaining audited financial statements prepared in accordance with Generally Accepted Account Principals. ITE will arrange for the delivery of such audited financial statements to investors of the Fund generally within 120 days of the Fund's fiscal year end.

ITEM 16. INVESTMENT DISCRETION

ITE generally accepts discretionary authority to manage assets and securities on behalf of its Funds. In such instances, ITE accepts discretion through the investment management agreement with the applicable Fund.

ITEM 17. VOTING CLIENT SECURITIES

A. As of the date of this brochure, the Funds do not hold investments in securities that will be the subject of proxies. In the event that the Firm is presented with an opportunity to vote a proxy, the Firm will generally vote in line with company management. The Firm may take into account all relevant factors, as determined by the Firm in its discretion, including, without limitation:

- the impact on the value of the securities or instruments owned by the relevant Fund and the returns on those securities;
- the anticipated associated costs and benefits;
- the continued or increased availability of portfolio information; and
- industry and business practices.

However, under circumstances when the Firm believes that company management's proposal will not maximize value for the Funds, the Firm will generally vote against company management. In such cases where the Firm votes against company management will document in a memorandum:

- The reason for such decision;
- The Firm's decision in the vote;
- The result of such vote; and
- Provide, upon investor or Client request, the documentation and rationale for voting such proxy.

In limited circumstances, the Firm may refrain from voting proxies where the Firm decides that voting would be inappropriate, taking into consideration the cost of voting the proxies and the anticipated benefit to the Funds.

The Firm will monitor the potential for conflicts of interest with respect to proxy voting as a result of personal relationships, significant client relationships, potential conflicts of interest among Funds or special circumstances that may arise during the conduct of ITE's business. If a conflict of interest is identified, the Firm will not make related proxy voting decisions until it has been determined that the conflict of interest is not material or a method for resolving the conflict of interest has been agreed upon and implemented. The Chief Compliance Officer will determine whether a conflict of interest is material. Materiality determinations will be based on an assessment of the particular facts and circumstances. The Chief Compliance Officer will maintain a written record of all materiality determinations.

In the event the Firm does vote a proxy, the Funds may obtain information about such proxies and how they were voted by contacting Daniel Lee at dlee@itemgmt.com.

ITEM 18. FINANCIAL INFORMATION

- A. The Firm does not require or solicit prepayment of more than \$1,200 in fees per Fund, six months or more in advance and therefore has not included a balance sheet.
- B. The Firm does not believe that there are any conditions that are reasonably likely to impair its ability to meet contractual commitments to the Funds.
- C. The Firm has never been the subject of a bankruptcy petition.

ITEM 19. REQUIREMENTS FOR STATE-REGISTERED ADVISERS

This Item is not applicable to ITE.
