FOR FORM ADV PART 2A BROCHURE**

MOONWALK CAPITAL LLC

**407 Lincoln Road, Suite 704
Miami Beach, Florida 33139
Telephone: 305-588-0974**

Date of Brochure: August 15, 2017

This Brochure provides information about the qualifications and business practices of Moonwalk Capital LLC (hereinafter referred to as “Moonwalk Capital,” the “Firm,” “we,” or “us”). If you have any questions about the content of this Brochure, please contact the Firm’s Chief Compliance Officer at the telephone number provided above or email us at jgervas@mgghsp.com.

The information in this Brochure has not been approved or verified by the United States Securities and Exchange Commission (the “SEC”) or by any state securities authority.

Moonwalk Capital is registered as an investment adviser with the SEC. The fact that Moonwalk Capital is “registered” does not imply any level of skill or training. You should not make a determination to hire or retain any adviser based solely on the fact that the adviser is registered.

Additional information about Moonwalk Capital is available on the SEC’s Web site at www.adviserinfo.sec.gov. The SEC’s Web site also provides information about any persons affiliated with Moonwalk Capital who are registered as investment adviser representatives of the Firm.

Item 2 – Material Changes

In this Item, we are required to summarize the material changes that were made since the previously-issued Brochure. This Brochure, dated August 15, 2017, is the Firm's initial Brochure. Therefore, there are no material changes to report.

In the future, for each newly-issued Brochure, this Item 2 will identify and include a summary of the specific material changes that were made since the previously-issued update of the Brochure.

You may obtain a copy of our current Brochure any time by contacting our Firm's Chief Compliance Officer at the telephone number listed on the cover page of this Brochure.

ITEM 18 – FINANCIAL INFORMATION	18

Item 4 – Advisory Business

A. Business Commencement Date

Moonwalk Capital was organized in December of 2016 to offer investment management services.

B. Ownership

Mr. Juan Gervas is the sole member of Moonwalk Capital.

C. Services

DISCRETIONARY ACCOUNTS. We provide discretionary investment management services. Clients are asked to provide us with certain information with respect to their financial and investment profile, including current financial holdings, investment objectives, risk tolerance, liquidity needs, and investment time horizon. We will also inquire as to the restrictions, if any, the client wishes to impose on the management of the advisory account. From the information supplied by the client, we pursue an asset allocation and investment strategy that we believe both is suitable and will help the client achieve the stated investment goals. We actively manage the discretionary account on an ongoing basis in accordance with the account's investment objective(s) and in consideration of the client's investment time frame and risk tolerance. Formal account reviews are performed on a monthly basis.

LIMITED DISCRETIONARY ACCOUNTS. We also offer limited-discretionary advisory services tailored to the client's needs. As with the discretionary accounts, clients are asked to provide us with information regarding their financial profile and any restrictions the client wishes to impose on the management of the accounts. For limited-discretionary accounts, we will recommend an investment strategy, allocation mix, or changes to the client's existing portfolio that we believe is suitable for that client. On an ongoing basis, at least quarterly, we will review the client's account(s) and make recommendations to the client, as appropriate, based upon the client's financial and investment profile and investment objectives. Where the client approves of a recommendation, we will arrange to effect the recommended transaction(s) in the client's account using a limited power of attorney granted to us by the client.

NON-DISCRETIONARY ACCOUNTS. We provide investment advice and portfolio analyses and/or recommendations to clients on an ongoing basis. Investment strategy and asset allocation reviews will be performed and corresponding recommendations will be made at least quarterly. The client will make all investment decisions and will arrange for the transactions in the accounts. We will not retain any authority to provide trading instructions to the broker/dealers or other financial institutions holding the securities accounts.

INVESTMENT PRODUCT TYPES. Generally, the Firm's investment advice is confined to the following universe of securities and products:

- Exchange listed securities;
- Securities traded over-the-counter;
- Securities issued by foreign issuers, including foreign sovereign debt instruments and emerging market securities;
- Corporate debt securities;
- U.S. government securities;
- Municipal securities;

- Mutual funds (foreign and domestic);
- Exchange-traded funds;
- Structured Products (including principal protected notes);
- Options contracts on securities and/or commodities;
- Private equity funds; and
- Hedge funds.

D. Assets Under Management

As of December 31, 2016, we were not managing any assets on a discretionary or nondiscretionary basis.

Item 5 – Fees and Compensation

A. Fees

FEE SCHEDULE. Generally, Moonwalk Capital charges fees for the management of non-institutional client accounts in accordance with the following fee schedule:

Account Value	Annual Fee Percentage
Up to \$500,000.00	1.75%
\$500,000.00 to \$1,000,000.00	1.50%
\$1,000,000.00 to \$5,000,000.00	1.00%
\$5,000,000.00 to \$20,000,000.00	.75%
\$20,000,000.00 to \$50,000,000.00	.60%
\$50,000,000.00 to over	.50%

All fees set forth above are annualized and are based on the assets under the management of Moonwalk Capital for the particular account, including margined and cash assets). For institutional accounts, we generally charge an annualized 0.25% of the value of managed account assets (including margined and cash assets). Fees will be charged quarterly and in arrears. The quarterly fee is based upon the market value of all assets held within the client's account on the last business day of the calendar quarter. For the first calendar quarter, fees will be adjusted *pro rata* based on the number of calendar days for which the advisory agreement was effective. Any contributions and/or withdrawals made during a calendar quarter may result in an adjustment to the advisory fee. The advisory services commence on the date on which the advisory agreement is signed by us.

There may be periods of time with low or no transaction activity in a client's discretionary account or few or no new recommendations made in a limited-discretionary or non-discretionary account. Among the reasons for this include market conditions, restrictions placed on the account by the client, tax considerations, performance, nature of securities held, or the investment strategy being pursued.

Lower advisory fees may be negotiated on an individual account basis. As a result, clients with similar assets may have differing fee schedules and pay different fees.

HOW FEES ARE COLLECTED. The client's account will be debited for the above-mentioned fees. We collect the fees from the amount of any contribution or transfer, from available cash in

the client's account, or by liquidating the client's assets held in the client's account in an amount equal to the fees that are due.

FEE SCHEDULE MODIFICATIONS. We may adjust the fee schedule upon thirty (30) days' prior written notice to the client. The client may be charged a *pro rata* fee in the event the client's service is terminated on a day other than the last business day of the calendar quarter. In that event, the *pro rata* fee will be due and payable upon termination of the service.

LOWER FEE DISCLOSURE. Lower fees for comparable management or other services may be available from other sources.

B. Termination of Service

In connection with the discretionary and limited-discretionary portfolio management services, upon written notice to Moonwalk Capital, within five (5) business days of entering into an agreement with the Firm, the client will have the right of termination without penalty or payment of fees. The Firm will refund any payment that has been made. Thereafter, either Moonwalk Capital or the client may terminate the agreement upon thirty (30) days' written notice to the other party. For non-discretionary services, the client may terminate the agreement at any time by written notice to the Firm and the Firm may terminate the agreement upon ten calendar days' written notice to the client.

C. Other Fees

In addition to the advisory fees charged by the Firm, other fees may apply. Brokerage commissions, transaction fees, sales loads, sales charges, management fees, administrative fees, account maintenance fees, transfer taxes, wire transfer fees, electronic fund fees, and other fees may be charged by the broker or dealer selected for execution of the securities transactions in the advisory accounts, by the custodian, and/or by the distributor, issuer or fund issuing the securities purchased and sold within the advisory accounts. The client is solely responsible for paying all such charges. In addition, mutual funds and certain exchange-traded funds ("ETFs") pay management fees to their investment advisers, which reduce their respective assets. To the extent that the client's portfolio has investments in mutual funds or ETFs, the client may pay two levels of advisory fees for the management of their assets: one directly to the Firm, and the other indirectly to the managers of those mutual funds and ETFs held in their portfolios. Neither Moonwalk Capital nor any of its agents or representatives receives any portion of these other fees.

D. Broker/Dealer Charges

Item 12 further describes the factors that Moonwalk Capital considers in selecting or recommending broker/dealers for client transactions and determining the reasonableness of their compensation (*e.g.*, commissions).

Item 6 – Performance-Based Fees and Side-By-Side Management

We do not charge any performance-based fees (fees based on a share of capital gains on or capital appreciation of the assets of a client).

Item 7 – Types of Clients

Generally, we offer advisory services to individuals and high net worth individuals, trusts, estates, organizations, or corporations or other business entities. The majority of our clients are domiciled or reside abroad.

There is no minimum account value that is required when subscribing to our advisory services.

Item 8 – Methods of Analysis, Investment Strategies and Risk of Loss

A. Methods of Analysis

When formulating investment advice, we will generally utilize one or more of the following security analysis methods:

1. Fundamental Analysis. Fundamental analysis is a method of attempting to measure a security's underlying value and potential for future growth (its intrinsic value) by examining economic, financial and other qualitative and quantitative factors directly related to the issuer/company as well as company-specific factors (like financial condition, management, and competition). We compare the intrinsic value with the security's current price, with the aim of determining what position to take with the security (i.e., buy, sell or hold). Fundamental analysis has a number of risks: the analysis may be compromised by incorrect or stale data; the analysis method typically does not consider the influence of random events and acts of God; and, the market may fail to reach expectations of perceived value.
2. Technical Analysis. Technical analysis is a method of evaluating securities by researching the demand and supply based on recent trading volume, price studies, as well as the buying and selling behavior of investors. When relying on technical analysis, we would not attempt to measure a security's intrinsic value. Rather, we would use charts or computer programs to identify and project price trends or changes. Technical analysis assumes that the market price of a security at any given point in time reflects all available information and accurately represents the true fair value of the security. It also assumes that price movements and trends occur in identifiable patterns that repeat over time. The primary risk associated with this analysis method is that it does not consider the underlying financial condition of the issuer.
3. Charting. Charting is a method by which an adviser analyzes trends in a security's price, insider sales, short sales, and/or trading volume in an attempt to ascertain major market downturns, upturns, and trend reversals.
4. Cyclical Analysis. Cyclical analysis involves the analysis of business cycles to find favorable conditions for buying and/or selling a particular security.

We do not represent, warrant, or imply that any analysis method employed by us can or will successfully identify market tops or bottoms. No analysis method has been proven to insulate clients from losses due to market fluctuations, corrections or declines.

B. Investment Strategies

The primary investment strategy we employ is a long-term "buy and hold" strategy. To a lesser extent, we might also make short-term purchases, engage in short selling, buying on margin, and option writing, buy uncovered options, and/or use spreading strategies. The particular strategies

employed will depend upon the individual needs and risk tolerance of the client. A short description of each of these strategies follows:

- Buy and Hold. Generally, a long-term purchase is a purchase of a security or investment product with a view to holding the security or product for more than one year. Trade commissions are reduced by buying and selling less often and taxes are often reduced or deferred by holding positions longer. We typically will follow a buy and hold strategy when pursuing a global fixed income strategy, a global equity markets investment strategy, and/or an emerging markets investment strategy.
 - A global fixed income strategy involves participating in the broad global movement of fixed income markets through purchasing investment grade fixed-income securities that are listed or traded on recognized markets. The objective of this strategy is to generate current income and capital growth.
 - A global equity markets investment strategy seeks long-term growth in equity securities of U.S. and non-U.S. companies that we believe are priced below their intrinsic values but are still fundamentally solid and are likely to appreciate. While we do not target issuers of a particular size, most issuers will have larger capitalizations.
 - An emerging markets strategy involves investing in stocks or bonds issued by companies and government entities in developing countries. Typically, there is a medium- to long-term holding period and there can be high volatility.

Using a long-term purchase strategy generally assumes the financial markets will go up in the long-term which may not be the case. There is also the risk that the segment of the market that you are invested in or your particular investments will decrease in value even if the overall financial markets advance. Purchasing investments long-term may create an opportunity cost (e.g., “locking-up” assets that may be better utilized in the short-term in other investments).

- Short-term purchases. A short-term purchase is a purchase of a security or investment product with the intent of possibly selling it within one year of its purchase. Our investment strategies typically do not include frequent trading (which focuses on opportunistic trades and holding the investment product for only a short period of time). Using a short-term purchase strategy generally assumes that the performance of the financial markets can be accurately predicted over the short-term. The risk associated with a short-term purchase strategy is that there are many factors that may affect market performance in the short term including interest rate fluctuations and cyclical earnings. Such factors may have a smaller impact over the longer-term. In addition, short-term trading may incur a disproportionately higher amount of transaction costs compared to long-term trading.
- Frequent Trading. Frequent trading occurs where there is a purchase and sale of a specific security within 30 days. We do not engage in frequent trading as a primary investment strategy. However, there are certain situations where we may engage in frequent trading, such as where the client wishes to realize capital gains, where there is an unanticipated change affecting the issuer or market sector, or where higher income yielding bonds become available. Frequent trading can negatively affect overall investment performance, particularly due to increased brokerage and other transaction costs and taxes.
- Margin Transactions. When purchasing securities on margin, you are employing leverage as an investing strategy. Leverage allows an investor to extend their financial reach by investing

using borrowed funds while limiting the amount of their own cash used. The borrower will be required to pay interest on the loan. Purchasing on margin involves a high degree of risk, including, without limitation: losing more money than you have invested; being required to deposit additional cash or securities in your account on short notice to cover market losses; being forced to sell some or all of your securities when falling stock prices reduce the value of your securities; and/or having your brokerage firm sell some or all of your securities without consulting you to pay off the loan it made to you.

The concept of asset allocation, or spreading investments among a number of asset classes (e.g., domestic stocks vs. foreign stocks; large cap stocks vs. small cap stocks; corporate bonds vs. government debt instruments), plays a prominent role in executing an investment strategy. Asset allocation seeks to achieve diversification of assets in order to reduce the risk associated with investing all or a significant portion of a client's portfolio in one asset class. We believe that risk reduction is a key element to long-term investment success.

C. Risks

1. *General Risks*

Investing in securities involves risk of loss that clients should be prepared to bear. Different types of investments involve varying degrees of risk and there can be no assurance that any specific investment or investment strategy will either be suitable or profitable for a client's investment portfolio. Past performance is not indicative of future results. A client should not assume that the future performance of any specific investment, investment strategy, or product will be profitable or equal to past or current performance levels. We cannot assure that the investment objectives of any client will be realized.

2. *Special Risks*

While investing in any security involves risk, investing in some types of securities carries special risks. A summary of the special risks associated with some types of securities we may recommend or we may purchase or sell in your account is provided below. Please note that the following summaries are general in nature and do not include an explanation of all risks associated with a given security type.

- a. Common Stocks. The major risks associated with investing in common stocks relate to the issuer's capitalization, quality of the issuer's management, quality and cost of the issuer's services, the issuer's ability to manage costs, efficiencies in the manufacturing or service delivery process, management of litigation risk, and the issuer's ability to create shareholder value (e.g., increase the value of the company's stock price).
- b. Convertible Stocks. The value of a convertible security is a function of its "investment value" (determined by its yield in comparison with the yields of other securities of comparable maturity and quality that do not have a conversion privilege) and its "conversion value." The investment value of a convertible security is influenced by changes in interest rates, the credit standing of the issuer and other factors. The conversion value of a convertible security is determined by the market price of the underlying common stock. A convertible security generally will sell at a premium over its conversion value by the extent to which investors place value on the right to acquire the underlying common stock while holding a fixed-income security. A convertible security will generally be subject to redemption at the option of the issuer at a price established in the convertible security's governing instrument. If a convertible security is

called for redemption, the investor will be required to permit the issuer to redeem the security, convert it into the underlying common stock, or sell it to a third party. Any of these actions could have an adverse effect on the investor's ability to achieve his/her investment objective(s).

- c. Bonds. Bonds are subject to credit risk, which is the risk of default associated with the issuer. Bonds are also subject to interest rate risk or the risk that changes in interest rates during the term of the bond might affect the market value of the bond prior to the call or maturity date. Investors should also consider inflation risk, which is the risk that the rate of the yield to call or maturity will not provide a positive return over the rate of inflation for the period of the investment.
- d. Foreign-Issued Securities. Debt and equity investments associated with foreign countries may involve increased volatility and risk due to, without limitation:
 - Political Risk. Many foreign countries are undergoing, or have undergone in recent years, significant political change that has affected government policy, including changes in the regulation of industry, trade, financial markets, and foreign and domestic investment. The relative instability of these political systems leaves these countries more vulnerable to economic hardship, public unrest or popular dissatisfaction with reform, political or diplomatic changes, social instability, or changes in government policies. For investors, the results may include confiscatory taxation, exchange controls, compulsory reacquisition, nationalization or expropriation of foreign-owned assets without adequate compensation, or the restructuring of certain industry sectors in a way that could adversely affect investments in those sectors.
 - Sovereign Risk. Strikes, the imposition of exchange controls, or declarations of war may prevent or impede repayment of funds due from a particular country.
 - Economic Risk. The economies of these countries may be more vulnerable to rising interest rates and inflation. Investments may be negatively affected by rates of economic growth, corporate profits, domestic and international flows of funds, external and sovereign debt, dependence on international trade, and sensitivity to world commodity prices. Additionally, a change in tax regime may result in the sudden imposition of arbitrary or additional taxes.
 - Currency Risk. The weakening of a country's currency relative to the U.S. dollar or to other benchmark currencies will negatively affect the dollar value of an instrument denominated in that currency.
 - Credit Risk. Issuers and obligors of sovereign and corporate debt may be unable to make timely coupon or principal payments, thereby causing the underlying debt or loan to enter into default.
 - Liquidity Risk. Natural disasters as well as economic, social, and political developments in a country may cause a decrease in the liquidity of investments related to that country, making it difficult to sell quickly, and/or subjecting the seller to substantial price discounts.

The nature and extent of these risks vary from country to country, among investment instruments, and over time.

- e. Emerging Market Securities. Investments and transactions in products linked to issuers and obligors incorporated, based, or principally engaged in business in emerging markets countries carry increased risk and volatility. In addition to the political, sovereign, economic, currency, credit, and liquidity risks described above, emerging market securities can be subject to the following risks:
- Market Risk. The financial markets can lack transparency, liquidity, efficiency.
 - Regulatory Risk. There may be less government supervision and regulation of business. The supervision that may be in place may be subject to manipulation or control. Disclosure and reporting requirements may be minimal or non-existent.
 - Legal Risk. The process of legal reform may not proceed at the same pace as market developments, which could result in uncertainty. Legislation to safeguard the rights of private ownership may not yet be in place.
 - Settlement and Clearing Risk. The registration, recordkeeping and transfer of instruments may be carried out manually, which may cause delays.
- f. Cash Equivalents. Cash equivalents are the most liquid investment assets with low risk and low returns. Cash equivalents are short-term fixed income assets with maturity of 3 months or less. However, these assets are subject to interest rate risk. Interest rates may fluctuate due to certain events taking place in the world including but not limited to economic events, geopolitical or social instability (global, regional or local), currency, interest rate and commodity price changes, and government or governmental agency responses to economic or political conditions.
- g. Mutual Funds. Most mutual funds fall into one of three main categories — money market funds, bond funds (also called "fixed income" funds), and stock funds (also called "equity" funds). Generally, the higher the potential return, the higher the risk of loss. A fund's investment objective and its holdings are influential factors in determining risk. Past performance is not a reliable indicator of future performance. Reading the prospectus will help you to understand the risk associated with that particular fund.

Different mutual fund categories have inherently different risk characteristics. For example, a bond fund faces credit risk, interest rate risk, and prepayment risk. Bond values are inversely related to interest rates. If interest rates rise, bond values will go down and vice versa.

Overall "market risk" poses the greatest potential danger for investors in stocks funds. Stock prices can fluctuate for a broad range of reasons — such as the overall strength of the economy or demand for particular products or services. A sector stock fund (which invests in a single industry, such as telecommunications) is at risk that its price will decline due to developments in its industry. A stock fund that invests across many industries is more sheltered from this risk.

For most funds, investors must pay sales charges, annual fees, and other expenses regardless of how the fund performs. And, depending on the timing of their investment, investors may also have to pay taxes on any capital gains distribution they receive.

- h. Exchange-traded Funds ("ETFs"). An ETF is a type of investment company (usually, an open-end fund or unit investment trust) containing a basket of stocks. Typically, the

objective of an ETF is to achieve returns similar to a particular market index, including sector indexes. An ETF is similar to an index fund in that it will primarily invest in securities of companies that are included in a selected market. Unlike traditional mutual funds, which can only be redeemed at the end of a trading day, ETFs trade throughout the day on an exchange. Like stock mutual funds, the prices of the underlying securities and the overall market may affect ETF prices. Similarly, factors affecting a particular industry segment may affect ETF prices that track that particular sector.

Leveraged ETFs seek to deliver multiples of the performance of the index or benchmark they track. Some ETFs are “inverse” or “short” funds, meaning that they seek to deliver the opposite of the performance of the index or benchmark they track. Most leveraged and inverse ETFs “reset” daily, meaning that they are designed to achieve their stated objectives on a daily basis. Due to the effect of compounding, their performance over longer periods of time can differ significantly from the performance (or inverse of the performance) of their underlying index or benchmark during the same period of time. This effect is magnified by the use of leverage. Therefore, inverse and leveraged ETFs that are reset daily typically are unsuitable for investors who plan to hold them for longer than one trading session. This is particularly true in volatile markets.

ETF performance may not exactly match the performance of the index or market benchmark that the ETF is designed to track because (i) the ETF will incur expenses and transaction costs not incurred by any applicable index or market benchmark, (ii) certain securities comprising the index or market benchmark tracked by the ETF may, from time to time, temporarily be unavailable, and (iii) supply and demand in the market for either the ETF and/or for the securities held by the ETF may cause the ETF shares to trade at a premium or discount to the actual net asset value of the securities owned by the ETF.

- i. Structured Products. “Structured Products” are broadly defined as investments whose cash flows and investment characteristics are derived and structured from the performance and cash flows of an underlying or reference pool of assets, which in turn could be bonds or loans or other forms of assets or contracts. There are many types of securities that fall within the “structured products” category. These products often involve a significant amount of risk as they are often based on derivatives. Structured products are intended to be “buy and hold” investments and are not liquid instruments.
- j. Principal-protected Notes. Principal-protected notes are type of structured product. The principal guarantee is subject to the credit-worthiness of the guarantor. In addition, principal protection levels can vary. While some products guarantee 100 percent return of principal, others guarantee as little as 10 percent. In most cases, the principal guarantee only applies to notes that are held to maturity. Issuers may (but are not obligated to) provide a secondary market for certain notes but, depending on demand, the notes may trade at significant discounts to their purchase price and might not return all of the guaranteed amount. Some principal-protected notes have complicated pay-out structures that can make it hard for an adviser to accurately assess their risk and potential for growth.
- k. Private Equity Funds. Private Equity Funds may be affected by various forms of risk, including:
 - Long-term Investment. Unlike mutual funds, which generally invest in publicly-traded securities that are relatively liquid, private equity funds generally invest in

large amounts of illiquid securities from private companies. Depending on the strategy used, private real estate funds will have illiquid underlying investments that may not be easily sold and investors may have to wait for improvements or development before redemptions are permitted. Given the illiquid nature of the underlying purchases made by private equity and private real estate managers, private equity and private real estate funds are considered long-term investments. Private equity funds are generally set up as ten- to fifteen-year investments with little or no provision for investor redemptions. Private real estate funds are generally seven- to ten-year investments and also have limited provisions for redemptions. With long-term investments, you should consider your financial ability to bear large fluctuations in value and hold these investments over a number of years.

- *Difficult Valuation Assessment.* The portfolio holdings in private equity and private real estate funds may be difficult to value, because they are not usually quoted or traded on any financial market or exchange. Consequently, no easily available market prices for most of a fund's holdings are available. Additionally, it may be hard to quantify the impact a manager has had on the underlying investments until those investments are sold.
- *Lack of Liquidity.* Private equity and private real estate funds are not "liquid" (they cannot be sold or exchanged for cash quickly or easily), and the interests are typically non-transferable without the consent of a fund's managing member. As a result, private equity and private real estate funds are generally only suitable for sophisticated investors who have carefully considered their financial ability to hold these investments for the long term.
- *Capital Call Default Consequences.* Answering capital calls to provide managers with the pledged capital is a contractual obligation of each investor. Failure to meet this requirement in a timely manner could result in significant adverse consequences, including, without limitation, the forfeiture of the defaulting investor's interest in the fund.
- *Leverage.* Private equity and private real estate funds may use leverage in connection with certain investments or participate in investments with highly leveraged capital structures. Although the use of leverage may enhance returns and increase the number of investments that can be made, leverage also involves a high degree of financial risk and may increase the exposure of such investments to risks such as rising interest rates, downturns in the economy, or deterioration in the condition of the underlying assets.
- *Lack of Transparency.* Private equity and private real estate funds are not required to provide investors with information about their underlying holdings or provide periodic pricing and valuation information. This lack of information may make it more difficult for investors to evaluate the risks associated with the funds.
- *Manager Risk.* Private equity and private real estate fund managers have absolute investment authority over their funds. The fund's investment returns are due, in large part, to the managers' skill and expertise. If a key manager departs, the returns of the fund may be adversely affected.

- Regulation. Private equity and private real estate funds are subject to fewer regulatory requirements than mutual funds and other registered investment company products and thus may offer fewer legal protections than you would have if you invested in more traditional investments.
1. Hedge Funds. Hedge funds often engage in leveraging and other speculative investment practices that may increase the risk of investment loss. A hedge fund's performance can be volatile. An investor could lose all or a substantial portion of his or her investment. There may be no secondary market for the investor's interest in the fund. The hedge fund can be highly illiquid and there may be restrictions on transferring interests in the fund. Hedge funds are not required to provide periodic pricing or valuation information to investors. Hedge funds may have complex tax structures. There may be delays in distributing important tax information. Hedge funds are not subject to the same regulatory requirements as mutual funds. Hedge funds often charge high fees. The fund's high fees and expenses may offset the fund's trading profits.

There may be other circumstances not described here that could adversely affect a client's investment and prevent the portfolio from reaching its objective. Prior to entering into an investment advisory agreement with us, you should carefully consider: (i) committing to management only those assets that you believe will not be needed for current purposes and that can be invested on a long-term basis; (ii) that volatility from investing in the market can occur; and (iii) that, over time, the value of your portfolio may fluctuate and may, at any time, be worth more or less than the amount originally invested.

Item 9 – Disciplinary Information

Registered investment advisers are required to disclose all material facts regarding certain legal or disciplinary events related to the adviser or the adviser's management. Neither Moonwalk Capital nor its personnel has been subject to any such legal or disciplinary events.

Item 10 – Other Financial Industry Activities and Affiliations

- A. Neither the Firm nor any management person of the Firm is registered or has an application pending to register as a broker/dealer or a registered representative of a broker/dealer.
- B. Neither the Firm nor any management person of the Firm is registered or has an application pending to register as a futures commission merchant, commodity pool operator, a commodity trading advisor, or an associated person of any of the foregoing entities.
- C. Neither the Firm nor any management person of the Firm has any arrangements that are material to its business with any related person.
- D. We do not recommend or select other investment advisers for our clients.

Item 11 – Code of Ethics

Securities industry regulations require that advisory firms provide their clients with a general description of the advisory firm's Code of Ethics. Moonwalk Capital has adopted a Code of Ethics that sets forth the

governing ethical standards and principles of the Firm. It also describes our policies regarding the following: the protection of confidential information, including the client's nonpublic personal information; the review of the personal securities accounts of certain personnel of the Firm for evidence of manipulative trading, trading ahead of clients, and insider trading; trading restrictions; training of personnel; and, recordkeeping. All supervised persons at Moonwalk Capital must acknowledge the terms of the Code of Ethics upon hire and as amended.

Subject to satisfying the Firm's policies and applicable laws, managers, officers, and employees of the Firm and its affiliates may trade for their own accounts in securities that are recommended to and/or purchased for Firm's clients. The Code of Ethics is designed to permit associated persons to invest for their own accounts while assuring that their personal transaction activity does not interfere with making decisions in the best interest of advisory clients or implementing those decisions. Neither the Firm nor any associated person of the Firm who (a) has access to nonpublic information regarding clients' securities transactions, (b) is involved in making securities recommendations to clients, or (c) has access to securities recommendations that are not public (collectively, the "Access Persons") is permitted to trade in or engage in a securities transaction to his or her advantage over that of a client. Access Persons are prohibited from buying or selling securities for their personal portfolio(s) where their decision is substantially derived, in whole or in part, by reason of his or her employment unless the information is also available to the investing public upon reasonable inquiry. Access Persons may not execute transactions in their personal accounts ahead of a client's transaction in the same security unless certain circumstances exist. Because the Code of Ethics in some circumstances permits employees to invest in the same securities as clients, there is a possibility that employees might benefit from market activity by a client in a security held by an employee. Employee trading is continually monitored by the Firm's Chief Compliance Officer in an effort to prevent conflicts of interest between Moonwalk Capital and its clients.

Certain affiliated accounts may trade in the same securities with client accounts on an aggregated basis when consistent with Moonwalk Capital's obligation of best execution. In such circumstances, all persons participating in the aggregated order will receive an average share price with all other transaction costs shared on a *pro rata* basis. The Firm will retain records of the trade order (specifying each participating account) and its allocation, which will be completed prior to the entry of the aggregated order. Completed orders will be allocated as specified in the initial trade order. Partially filled orders will be allocated on a *pro rata* basis. Any exceptions must be pre-approved by the Chief Compliance Officer.

Our clients or prospective clients may request a copy of the Firm's Code of Ethics by contacting the Chief Compliance Officer at the address or telephone number specified on the cover page and requesting a copy.

Item 12 – Brokerage Practices

A. Selection of Broker/Dealer

1. **Brokerage Activity.** When a client retains us to manage an account, unless otherwise agreed to, the client grants us the authority to select the broker/dealer(s) that will be used to place and execute the transactions in the advisory accounts. It is our policy and practice to strive for the best price and execution that are competitive in relation to the value of the transaction ("best execution"). In selecting a broker, dealer or other intermediary, we consider such factors that in good faith and judgment we deem reasonable under the circumstances. The Firm typically evaluates the following factors when recommending a broker/dealer to a client:

- Execution ability, including without limitation:
 - Trading experience in markets/securities needed
 - Quality of trading
 - Clearance and settlement efficiency and accuracy
 - Accuracy and timeliness of order execution, reports and confirmations
 - Costs, including commission rates, ticket charges, other service charges, and the means to correct errors in an acceptable manner
 - Customer service, including responsiveness to the Firm
 - Commitment to technology and security of confidential information
 - Adequacy of capital and financial responsibility
 - Reputation and integrity
2. “Soft Dollar” Considerations. A “soft dollar” arrangement occurs when a firm directs its brokerage to a particular broker/dealer that charges brokerage commissions that are higher than they would be for an "execution only" trading relationship in exchange for products or services, such as research. Under such an arrangement, the firm would receive a benefit because it would not have to produce or pay for the products or research. The Firm is not party to any such “soft-dollar” arrangement.

Clients may pay commissions higher than those obtainable from other brokers for the same services rendered by the Firm or the broker/dealer or other intermediary used for execution.

In observance of its fiduciary duty, the Firm will, at least annually, conduct a survey to determine whether the Firm is meeting its duty of best execution.

B. Order Aggregation

From time to time, we may determine that the purchase or sale of a particular security is appropriate for multiple advisory client accounts, based on a variety of reasons. When this happens, we may determine that it is appropriate in the interests of efficient and effective execution to attempt to execute the trade orders as one or more block trades (*i.e.*, aggregate the individual trade for each account into one or more trade orders). These circumstances may, in turn, give rise to actual or potential conflicts of interest among the accounts for whom the security purchase or sale is appropriate, and among the subset of those accounts actually participating in a block trade, especially if the block trade order results in a partial fill. In order to address these conflicts, we have adopted certain policies and procedures that we follow when aggregating trades in an effort to provide an objective and equitable method of trade allocation so that all clients are treated fairly. The basic objectives of these policies and procedures are as follows:

1. We will only aggregate trades when we believe that the aggregation is consistent with our duty to seek best execution for our clients;
2. We will strive to ensure that no client account is favored over any other client account; and
3. Each account that participates in an aggregated transaction shall participate at the average of the executed share price for that security, with all transaction costs shared on a *pro rata* basis.

C. Trade Error Policy

From time to time, errors may occur in the trading process, including (1) overbuying or overselling of securities, into or out of an account, caused by clerical errors made by our personnel, or (2) buying or selling of securities, into or out of an account, which is in violation of a client's stated investment guidelines that had been previously communicated to us in writing.

In all cases of a trade error caused by us, it is our policy to endeavor to resolve the error in the best interest of the client and adjust the trade as needed in order to put the client's account in such a position as if the error had not occurred. We will follow the trade error procedures, if any, set forth by the broker-dealer or custodian of the account. Where our trade error results in a gain and the client is unable or restricted from receiving that gain for any reason, we will donate the gain to charity if we receive it.

Item 13 – Review of Accounts

Discretionary advisory accounts are reviewed at least monthly by a member of Senior Management. Limited discretionary accounts and non-discretionary (or recommendation-only) accounts are reviewed quarterly. Also, reviews will be conducted upon a client's specific request or upon the occurrence of any agreed-upon triggering events (such as upon a 10 percent decline in the portfolio's value over a thirty-day period). There is no maximum number of accounts that could be assigned to a member of Senior Management. For discretionary accounts, the allocation of each portfolio is adjusted at our discretion in accordance with the account's investment objectives and risk tolerance.

At least annually, a member of Senior Management will meet with the advisory client to discuss and review the account's objectives as well as any changes to the client's financial or investment profile. The meeting may take place in person, by video or audio conference, by telephone, by electronic mail, by regular mail, or by any means of contemporaneous electronic interactive communication.

The executing broker/dealers and/or custodians who maintain the client accounts will notify the client of any account activity by delivering a confirmation of the transaction to the client. The executing broker/dealer(s) or the custodian(s) will also furnish the client with a monthly or quarterly account activity and position statement.

Item 14 – Client Referrals and Other Compensation

A. Economic Benefits

Neither the Firm, nor any of our employees, receives any economic benefit, sales awards or other prizes from any outside parties for providing investment advice to our clients.

B. Referral Fees

The Firm intends to pay referral fees to persons or entities for the referral or introduction of advisory clients. There is no differential in the fees charged by us to the client attributable to the arrangement between the referring party and us. In other words, we will not charge a client who is referred by a third party any fees other than the fees typically charged to other clients. The amount of the referral fee is determined on a case-by-case basis. In general, we will pay the referring party 25% to 50% of the advisory fees generated by the accounts introduced by the referring party. In each case where a referral fee is paid, the client will receive a document identifying the referring party and describing

the fee arrangement. Generally, we will continue to pay the referral fee for so long as the client is an advisory client of Moonwalk Capital.

As of the date of this Brochure, we do not have referral arrangements with any party.

Item 15 – Custody

Moonwalk Capital does not obtain custody of client's monies or securities. Clients should receive, on at least a quarterly basis, statements from the broker/dealer, bank or other qualified custodian that holds and maintains the client's investment assets. We urge you to carefully review such statements and compare such official custodial records to the consolidated account statements that we may provide to you. Our statements may vary from custodial statements based on accounting procedures, reporting dates, or valuation methodologies of certain securities.

Item 16 – Investment Discretion

Moonwalk Capital offers discretionary management services as well as limited and nondiscretionary management services. We obtain discretionary authority only in connection with the discretionary management services. When a client elects Moonwalk Capital's discretionary management services, the client will sign an agreement that provides us with the discretionary authority. Moonwalk Capital is then authorized to select the securities and the quantities or amounts of securities to be purchased, leveraged, transferred, exchanged, traded and sold consistent with the stated investment objectives and investment restrictions adopted by the client. Our discretionary authority is limited by (1) any reasonable restrictions that the client places on the management of the account, and (2) the investing parameters set forth by Moonwalk Capital and the client, if any. If we deem a proposed restriction unreasonable, we may discontinue the advisory service. Reasonability is based on whether the restriction(s) will impose a significant time burden on us to comply with such restrictions. As described above, we also obtain the authority to designate the broker/dealers or other financial intermediaries through whom transactions in the accounts will be executed, cleared or settled.

Item 17 – Voting Client Securities

As a matter of Firm policy and practice, we do not have any authority to and do not vote proxies on behalf of advisory clients. Clients retain the responsibility for receiving and voting proxies for any and all securities owned by the client. Generally, we do not provide advice to clients regarding the voting of proxies.

Item 18 – Financial Information

We are required in this Item to provide you with certain information or disclosures regarding our financial condition. Following is the information responsive to this Item:

- The Firm does not require prepayment of more than \$1200 in fees six months or more in advance.
- There are no financial conditions or commitments that are likely to impair our ability to meet any contractual or fiduciary commitment to our clients.
- The Firm has not been the subject of a bankruptcy petition.
