This brochure provides information about the qualifications and business practices of GWM Advisors LLC dba Goss Advisors. If you have any questions about the contents of this brochure, please contact us at 504-459-4391 or brent@gossadvisors.com. The information in this brochure has not been approved or verified by the United States Securities and Exchange Commission or by any State Securities Authority. Additional information about Goss Advisors is also available on the SEC's website at www.adviserinfo.sec.gov by searching CRD #171351.

Please note that the use of the term "registered investment adviser" and description of Goss Advisors and/or our associates as "registered" does not imply a certain level of skill or training. You are encouraged to review this Brochure and Brochure Supplements for our firm's associates who advise you for more information on the qualifications of our firm and our employees.

Item 2: Material Changes to Our Part 2A of Form ADV: Firm Brochure

Goss Advisors is required to advise you of any material changes to the Firm Brochure ("Brochure") from our last annual update. Since the last annual amendment, the following changes have been made:

- Item 4 – Advisory Services - GWM Advisors now offers ongoing or "subscription-based" financial planning or consulting for Clients who wish to receive such services and whom execute the appropriate agreement with the firm.
- Item 4 – Advisory Services – GWM Advisors offers non-discretionary advisory services with no ongoing management fee for certain assets not currently included in active management programs using a Limited Purpose Management Agreement ("LPA"). The LPA has been established to house certain cash and securities where charging an asset based fee would not be in the best interest of the Client.
- Item 5 – Fees and Compensation: Added language to clarify the conflicts of interest that are present related to the use of No Transaction Fee (NTF) Networks for mutual funds and exchange traded funds (ETFs).
- Item 14 – Other Compensation – Certain investment adviser representatives of GWM Advisors received transition assistance in the form of a forgivable loan from one of the following entities – LPL Financial, Fidelity Brokerage Services, Triad Advisors or GWM Advisors.
- References within this document have been amended to include Mid Atlantic Capital Corporation as an available broker-dealer to which advisor representatives of this firm may have their broker-dealer affiliation.
- References within this document have been amended to include Raymond James as an available option for custodial services within our sponsored wrap programs.

Item 4: Advisory Business

We specialize in Wrap & Non-Wrap Comprehensive Portfolio Management, Financial Planning & Consulting, Retirement Plan Consulting, Referrals to Third Party Money Managers and, through certain investment adviser representatives, offer LPL Sponsored Advisory Program services. Our sponsored wrap programs may utilize LPL Financial, Fidelity Brokerage Services or Raymond James for custodial relationships.

We provide individuals and other types of clients with a wide array of investment advisory services. Our firm is a limited liability company formed in the State of Louisiana. Our firm has been in business since 2012 and registered as an investment adviser since 2014. Our firm is owned by Alex Goss (38%), Gerald Goss (38%), Neil Turner (20%), and George Sins, III (4%).

Types of Advisory Services We Offer

Wrap Comprehensive Portfolio Management:

We offer Comprehensive Portfolio Management services through wrapped accounts only. Please see our separate Wrap Fee Program Brochure for complete information regarding this advisory service.

Limited Purpose Investment Agreement:

As part of the firm's holistic approach to providing advice of the entirety of a Client's relationship, GWM offers services through a Limited Purpose Investment Agreement ("LPA"). The LPA establishes a non-discretionary relationship where Clients can consolidate cash holdings and securities that are not part of the current active management programs and accounts. Cash balances residing in these accounts will be subject to Securities Investor Protection Corporation (SIPC) coverage limitations and Clients should consider these limitations when determining whether the LPA meets their needs related to their cash holdings. Besides being a non-discretionary account structure, the LPA is completed with the Client with no advisory fee. Clients would be responsible for the transaction charges related to the limited activity that may occur in the Account but will not have an ongoing fee for management services. GWM monitors the transactions in the LPA Accounts as part of the firm's oversight processes related to its advisory programs.

Financial Planning & Consulting:

We provide a variety of financial planning and consulting services to individuals, families and other clients regarding the management of their financial resources based upon an analysis of the client's current situation, goals, and objectives. Generally, such financial planning services will involve preparing a financial plan or rendering a financial consultation for clients based on the client's financial goals and objectives. This planning or consulting may encompass one or more of the following areas: Investment Planning, Retirement Planning, Estate Planning, Charitable Planning, Education Planning, Corporate and Personal Tax Planning, Cost Segregation Study, Corporate Structure, Real Estate Analysis, Mortgage/Debt Analysis, Insurance Analysis, Lines of Credit Evaluation, Business and Personal Financial Planning.

Our written financial plans or financial consultations rendered to clients usually include general recommendations for a course of activity or specific actions to be taken by the clients. For example, recommendations may be made that the clients begin or revise investment programs, create or revise wills or trusts, obtain or revise insurance coverage, commence or alter retirement savings, or

establish education or charitable giving programs. It should also be noted that we refer clients to an accountant, attorney or other specialist, as necessary for non-advisory related services. For written financial planning engagements, we provide our clients with a written summary of their financial situation, observations, and recommendations. For financial consulting engagements, we usually do not provide our clients with a written summary of our observations and recommendations as the process is less formal than our planning service. Plans or consultations are typically completed within six (6) months of the client signing a contract with us, assuming all the information and documents we request from the client are provided to us promptly. Implementation of the recommendations will be at the discretion of the client.

Where appropriate, and under written agreement with the Client, we may provide ongoing planning and consulting services for Clients who wish to be provided such subscription-based services. These services will be delivered directly by the IAR and payment thereof will be established using a 3rd party technology vendor – AdvicePay. AdvicePay will allow for the IAR and Client to establish an appropriate periodic payment plan (either monthly or quarterly) handled directly by the Client through electronic invoicing.

Retirement Plan Consulting:

Our firm provides retirement plan consulting services to employer plan sponsors on an ongoing basis. Generally, such consulting services consist of assisting employer plan sponsors in establishing, monitoring and reviewing their company's participant-directed retirement plan. As the needs of the plan sponsor dictate, areas of advising could include investment options, plan structure and participant education. Retirement Plan Consulting services typically include:

- Establishing an Investment Policy Statement – Our firm will assist in the development of a statement that summarizes the investment goals and objectives along with the broad strategies to be employed to meet the objectives.
- Investment Options – Our firm will work with the Plan Sponsor to evaluate existing investment options and make recommendations for appropriate changes.
- Asset Allocation and Portfolio Construction – Our firm will develop strategic asset allocation models to aid Participants in developing strategies to meet their investment objectives, time horizon, financial situation and tolerance for risk.
- Investment Monitoring – Our firm will monitor the performance of the investments and notify the client in the event of over/underperformance and in times of market volatility.

In providing services for retirement plan consulting, our firm does not provide any advisory services with respect to the following types of assets: employer securities, real estate (excluding real estate funds and publicly traded REITS), participant loans, non-publicly traded securities or assets, other illiquid investments, or brokerage window programs (collectively, “Excluded Assets”).

All retirement plan consulting services shall follow the applicable state laws regulating retirement consulting services. This applies to client accounts that are retirement or other employee benefit plans (“Plan”) governed by the Employee Retirement Income Security Act of 1974, as amended (“ERISA”). If the client accounts are part of a Plan, and our firm accepts appointment to provide services to such accounts, our firm acknowledges its fiduciary standard within the meaning of Section 3(21) of ERISA as designated by the 3(21) Investment Advisory Agreement with respect to the provision of services described therein and limited to only the services specifically elected to be performed per the executed agreement.

Referrals to Third Party Money Managers:

Our firm may utilize the services of a third-party money manager for the management of client accounts. Investment advice and trading of securities will only be offered by or through the chosen third-party money manager. Our firm will not offer advice on any specific securities or other investments in connection with this service. When referring clients, GWM requires our affiliated IAR to utilize only providers and strategies approved through the appropriate channels. GWM leverages due diligence resources of our strategic partnerships: LPL Financial, Fidelity, Triad Advisors and Mid Atlantic Capital Corporation, along with an internal review as may be required to meet the due diligence requirements for our Clients. In order to assist in the selection of a third-party money manager, our firm will gather client information pertaining to financial situation, investment objectives, and reasonable restrictions to be imposed upon the management of the account.

Our firm, through its IAR, will review the financial situation and objectives of our Clients to determine the need to communicate information to a third-party manager as warranted. IAR will additionally assist Clients in understanding and evaluating the services provided by the third-party money manager, including the review of third-party manager reports provided to the Client as may be necessary. Clients will be expected to notify their IAR of any changes in their financial situation, investment objectives, or account restrictions that could affect their financial standing.

LPL Sponsored Advisory Programs:

Strategic Wealth Management (SWM) is a custodial account opened with LPL which is used by GWM to manage client assets. GWM IARs use the SWM platform to directly manage their client(s) assets on either a discretionary or non-discretionary basis using the investment advisory agreements of GWM.

When appropriate certain advisors can provide additional advisory services through programs sponsored by LPL Financial, LLC ("LPL"). Below is a brief description of each LPL advisory program available to us. Annualized fees for participation in LPL advisory programs vary up to a stated maximum of 3.00%. Regardless, GWM has imposed a stated firm maximum of 2.50% for the use of any advisory programs – sponsored by GWM or through other entities available to the IAR of GWM. For more information regarding the LPL programs, including more information on the advisory services and fees that apply, the types of investments available in the programs and the potential conflicts of interest presented by the programs please see the LPL Financial Form ADV Part 2A or the applicable LPL program's Wrap Fee Program Brochure and the applicable LPL Financial client agreement.

- **Manager Access Select Program (MAS):**

MAS provides clients access to the investment advisory services of professional portfolio management firms for the individual management of client accounts. We will assist client in identifying a third-party portfolio manager (Portfolio Manager) from a list of Portfolio Managers made available by LPL Financial. The Portfolio Manager manages client's assets on a discretionary basis. We will provide initial and ongoing assistance regarding the Portfolio Manager selection process. A minimum account value of \$100,000 is required for Manager Access Select, however, in certain instances, the minimum account size may be lower or higher.

- **Optimum Market Portfolios Program (OMP):**

OMP offers clients the ability to participate in a professionally managed asset allocation program using Optimum Funds Class I shares. Under OMP, the client will authorize LPL Financial on a discretionary basis to purchase and sell Optimum Funds pursuant to investment objectives chosen by the client. We will assist the client in determining the suitability of OMP for the client and assist the client in setting an appropriate investment objective. Adviser will have discretion to select a mutual fund asset allocation portfolio designed by LPL consistent with the client's investment objective. LPL Financial will have discretion to purchase and sell Optimum Funds pursuant to the portfolio selected for the client. LPL Financial will also have authority to rebalance the account. A minimum account value of \$15,000 is required for OMP.

- **Model Wealth Portfolios Program (MWP):**

MWP offers clients a professionally managed mutual fund asset allocation program. We will obtain the necessary financial data from the client, assist the client in determining the suitability of the MWP program and assist the client in setting an appropriate investment objective. We initiate the steps necessary to open an MWP account and have discretion to select a model portfolio designed by LPL Financials' Research Department consistent with the client's stated investment objective. LPL Financials' Research Department is responsible for selecting the mutual funds within a model portfolio and for making changes to the mutual funds selected. The client will authorize LPL Financial to act on a discretionary basis to purchase and sell mutual funds, including in certain circumstances exchange traded funds and to liquidate previously purchased securities. The client will also authorize LPL Financial to effect rebalancing for MWP accounts.

The MWP program may make available model portfolios designed by strategists other than LPL's Research Department. If such models are made available, we will have discretion to choose among the available models designed by LPL and outside strategists. A minimum account value of \$100,000 is required for MWP.

- **Personal Wealth Portfolios Program (PWP):**

PWP offers clients an asset management account using asset allocation model portfolios designed by LPL Financial. We will have discretion for selecting the asset allocation model portfolio based on client's investment objective. We will also have discretion for selecting third party money managers (PWP advisors) or mutual funds within each asset class of the model portfolio. LPL Financial will act as the overlay portfolio manager on all PWP accounts and will be authorized to purchase and sell on a discretionary basis mutual funds and equity and fixed income securities. A minimum account value of \$250,000 is required for PWP.

- **Guided Wealth Portfolios (GWP):**

GWP offers clients the ability to participate in a centrally managed, algorithm-based investment program, which is made available to users and clients through a web-based, interactive account management portal ("Investor Portal"). Investment recommendations to buy and sell open-end mutual funds and exchange-traded funds are generated through proprietary, automated, computer algorithms (collectively, the "Algorithm") of Xulu, Inc., doing business as FutureAdvisor ("FutureAdvisor"), based upon model portfolios constructed by LPL and selected for the account as described below (such model portfolio selected for the account,

the “Model Portfolio”). Communications concerning GWP are intended to occur primarily through electronic means (including but not limited to, through email communications or through the Investor Portal), although GWM Advisors will be available to discuss investment strategies, objectives or the account in general in person or via telephone.

A preview of the Program (the “Educational Tool”) is provided for a period of up to forty-five (45) days to help users determine whether they would like to become advisory clients and receive ongoing financial advice from LPL, FutureAdvisor and GWM Advisors by enrolling in the advisory service (the “Managed Service”). The Educational Tool and Managed Service are described in more detail in the GWP Program Brochure. Users of the Educational Tool are not considered to be advisory clients of LPL, FutureAdvisor or GWM Advisors, do not enter into an advisory agreement with LPL, FutureAdvisor or GWM Advisors, do not receive ongoing investment advice or supervisions of their assets, and do not receive any trading services.

A minimum account value of \$5,000 is required to enroll in the Managed Service.

Tailoring of Advisory Services

We offer individualized investment advice to clients utilizing our Comprehensive Portfolio Management service. Additionally, we offer general investment advice to clients utilizing our Financial Planning & Consulting, Retirement Plan Consulting, Referrals to Third Party Money Management and LPL Sponsored Advisory Program services.

Each client can place reasonable restrictions on the types of investments to be held in the portfolio. Restrictions on investments in certain securities or types of securities may not be possible due to the level of difficulty this would entail in managing the account. Restrictions would be limited to our Comprehensive Portfolio Management service. We do not manage assets through our other services. GWM and its IAR reserve the right to terminate advisory services or to not initiate advisory services for a Client if the requested restrictions are deemed unreasonable and beyond the firm capacity to employ.

Participation in Wrap Fee Programs

We offer wrap fee programs as further described in Part 2A, Appendix 1 (the “Wrap Fee Program Brochure”) of our Brochure. Our wrap fee accounts are managed on an individualized basis according to the client’s investment objectives, financial goals, risk tolerance, etc. We do not manage wrap fee accounts in a different fashion than non-wrap fee accounts. As further described in our Wrap Fee Program Brochure, we receive a portion of the wrap fee for our services.

Regulatory Assets Under Management

As of December 31, 2019, we manage¹ \$4,005,067,541 on a discretionary basis and \$161,991,134 on a non-discretionary basis.

¹ Please note that our method for computing the amount of “client assets we manage” can be different from the method for computing “assets under management” required for Item 5.F in Part 1A of Form ADV. We have chosen to follow the method outlined for Item 5.F in Part 1A of Form ADV. If we decide to use a different method later to compute “client assets we manage,” we must keep documentation describing the method we use and inform you of the change. The amount of assets we manage may be disclosed by rounding to the nearest \$100,000. Our “as of” date must not be more than three months before the date we last updated our Brochure in response to Item 4.E of Form ADV Part 2A.

Item 5: Fees & Compensation

How We Are Compensated for Our Advisory Services

Wrap Comprehensive Portfolio Management:

Please see our Wrap Brochure for more information.

Financial Planning & Consulting:

We may charge a flat fee or ongoing fee ("subscription based") one-time or ongoing financial planning or consulting services. The total estimated fee, as well as the ultimate fee that we charge you will be based on the scope and complexity of our engagement with you and could vary from fees charged to other Clients of the firm. Annual flat fees will not exceed \$200,000 and subscription fees will be subject to consultation with the Client and the complexity of the ongoing engagement. The fee to be assessed and payment arrangements will be detailed in an agreement to be signed by the Client. Flat fee arrangements will be directly billed to you and due to us within 30 days of your financial plan being delivered or consultation rendered to you. Fees for ongoing services will be directly invoiced month, quarterly or semi-annually. In all cases, we will not require a fee exceeding \$1,200 when services cannot be rendered within 6 months.

Retirement Plan Consulting:

Our Retirement Plan Consulting services may be based on the percentage of Plan assets under management or flat fee basis. The total estimated fee, as well as the ultimate fee charged, is based on the scope and complexity of our engagement with the client. Fees based on a percentage of Plan assets under management will not exceed 1.50%. Annual flat fees will not exceed \$60,000. The fee-paying arrangements for Retirement Plan Consulting service will be determined on a case-by-case basis and will be detailed in the signed consulting agreement.

Referrals to Third Party Money Managers:

GWM Advisors does not receive compensation from third-party money managers as part of our referral to a manager. Certain third-party managers support the general efforts of GWM Advisors in the form of conference sponsorship and education during these events.

The billing procedures for this service will vary based on the chosen third-party money manager. The total fee to be charged, as well as the billing cycle, will be detailed in the third-party money manager's ADV Part 2A and separate advisory agreement to be signed by the client.

LPL Sponsored Advisory Programs:

The account fee charged to the client for each LPL Financial advisory program varies up to a maximum of 3.00%. Regardless, GWM has imposed a stated firm maximum of 2.50% for the use of any advisory programs – sponsored by GWM or through other entities available to the IAR of GWM. Account fees are payable quarterly in advance. Fees are negotiable. The actual fee assessed will be disclosed in the program. LPL Financial serves as program sponsor, investment advisor and broker-dealer for the LPL Financial advisory programs. Our firm and LPL Financial share in the account fee and other fees associated with program accounts.

Other Types of Fees & Expenses

Wrap fee clients will receive our Form ADV, Part 2A, Appendix 1 (the “Wrap Fee Program Brochure”). Wrap fee clients will not incur the transaction costs for trades. More information about this is disclosed in our separate Wrap Fee Program Brochure.

Non-Wrap Clients will incur transaction fees for trades executed by their chosen custodian. These transaction fees are separate from our firm’s advisory fees and will be disclosed by the chosen custodian. Clients may also pay holdings charges imposed by the chosen custodian for certain investments, charges imposed directly by a mutual fund, index fund, or exchange traded fund, which shall be disclosed in the fund’s prospectus (i.e., fund management fees, initial or deferred sales charges, mutual fund sales loads, 12b-1 fees, surrender charges, variable annuity fees, IRA and qualified retirement plan fees, and other fund expenses), mark-ups and mark-downs, spreads paid to market makers, fees for trades executed away from custodian, wire transfer fees and other fees and taxes on brokerage accounts and securities transactions. Our firm does not receive a portion of these fees.

Termination & Refunds

Either party may terminate our Wrap Comprehensive Portfolio Management service at any time. Upon receipt of your notice of termination, LPL will process a pro-rata refund of the unearned portion of the advisory fees charged in advance at the beginning of the quarter. For Wrap Comprehensive Portfolio Management service provided with Fidelity as the custodian, GWM Advisors will process the client refund as may be appropriate.

Financial Planning & Consulting clients may terminate their agreement at any time before the delivery of a financial plan by providing written notice. For purposes of calculating refunds, all work performed by us up to the point of termination shall be calculated at the hourly fee currently in effect. Clients will receive a pro-rata refund of unearned fees based on the time and effort expended by our firm. The termination of ongoing fees under such an agreement will be terminated immediately upon written notification by the Client.

Either party to a Retirement Plan Consulting Agreement may terminate at any time by providing written notice to the other party. Full refunds will only be made in cases where cancellation occurs within 5 business days of signing an agreement. After 5 business days from initial signing, either party must provide the other party 30 days’ written notice to terminate billing. Billing will terminate 30 days after receipt of termination notice. Clients will be charged on a pro-rata basis, which considers work completed by our firm on behalf of the client. Clients will incur charges for bona fide advisory services rendered up to the point of termination (determined as 30 days from receipt of said written notice) and such fees will be due and payable.

Commissionable Securities Sales

Representatives of our firm may additionally be registered representatives of LPL Financial, LLC, Triad Advisors LLC or Mid Atlantic Capital Corporation. Members FINRA/SIPC. As such they can accept compensation for the sale of securities or other investment products, including distribution or service (“trail”) fees from the sale of mutual funds. Clients should be aware that the practice of accepting commissions for the sale of securities presents a conflict of interest and gives our firm and/or our representatives an incentive to recommend investment products based on the compensation received. Our firm generally addresses commissionable sales conflicts that arise when explaining to clients these sales create an incentive to recommend based on the compensation to be earned and/or when recommending commissionable mutual funds, explaining that “no-load” funds

are also available.

Our firm does not prohibit clients from purchasing recommended investment products through other unaffiliated brokers or agents.

Understanding Mutual Fund Share Class Selection / Mutual Fund and Exchange Traded Fund No Transaction Fee Networks

Mutual Funds typically offer multiple share classes available for investment based upon certain eligibility and/or purchase requirements. For instance, in addition to the more commonly offered retail mutual fund share classes (typically, Class A, B and C shares), mutual funds may also offer institutional or advisor share classes (the “lower cost share classes”) or other share classes that are designed for purchase in an account enrolled in investment advisory programs. These lower cost share classes usually have a lower expense ratio than other shares classes. In addition, lower cost share classes often do not charge a 12b-1 fee. The Firm will utilize the most appropriate mutual fund share classes for its portfolio allocations available to it. Regardless, clients may still be invested in funds with higher internal expenses when no lower cost share classes for a fund is available at the custodian or the client is not eligible due to investment minimums or other requirements.

Clients, when participating in certain sponsored programs or our wrap portfolio management services, should understand that a transaction charge for mutual fund and exchange traded fund (ETF) purchases and redemptions may occur in accordance with the appropriate custodial agreement. The applicable transaction charge varies depending on the amount of recordkeeping fees received by the custodian / broker-dealer from the mutual fund or ETF and/or whether the sponsor of the mutual fund or ETF participates in a No Transaction Fee (NTF) Network. When an NTF mutual fund or ETF is purchased in a client’s account, the NTF fund’s sponsor directs a payment to the custodian / broker-dealer on behalf and for the benefit of the client that is used exclusively as a credit to defray the bona fide transaction charge obligations of the client’s account. When an NTF fund is sold, the custodian / broker-dealer waives the transaction charge to the investment adviser representative (IAR). Each custodian which provides execution and custodial services to GWM Advisors has a version of an NTF fund network specific to them and could vary across custodians.

Clients should understand the cost to the IAR of transaction charges may be a factor the IAR considers when selecting securities and determining whether to place transactions in accounts. Specifically, the IAR has a financial incentive to select NTF funds to avoid paying or to lower the transaction charges. While these transaction charges are not passed to the Client, this does create a conflict of interest. Clients should consider this conflict when monitoring the purchase of NTF funds as all such conflicts may have an impact on the investment performance of accounts.

Clients also should be aware that NTF funds may have higher ongoing internal expenses that can be used to offset payments made by sponsors for transaction charge waivers, and this can reduce the investment returns over time relative to other share classes of the same fund.

Certain Funds (“SWM Eligible Funds”) in the Strategic Wealth Management (SWM) program contain 12b-1 fees. The list of available mutual funds in SWM is selected by LPL Financial, the program manager. In the SWM program, there are certain SWM Eligible Funds available for each fund family. In certain instances, the best available fund may be a share class containing a 12B-1 fee. The Firm does not receive or accept 12b-1 fees on advisory accounts; any 12b-1 fees generated through these funds will be retained by the custodian.

If the selection of mutual funds is related to any of the GWM Advisors proprietary models (“Goss Models”), the due diligence and evaluation of share class will be the responsibility of the investment personnel of GWM. If the account is being managed directly by an IAR of GWM, the due diligence and

evaluation of share class will be the responsibility of the IAR directly.

Item 6: Performance-Based Fees & Side-By-Side Management

Our firm does not charge performance-based fees.

Item 7: Types of Clients & Account Requirements

We have the following types of clients:

- Individuals and High Net Worth Individuals;
- Trusts, Estates or Charitable Organizations;
- Pension and Profit-Sharing Plans;
- Corporations, Limited Liability Companies and/or Other Business Types.

LPL Sponsored Advisory Programs have minimum account requirements of \$5,000 to \$250,000 depending upon the chosen program.

We do not impose an account minimum for our Wrap Comprehensive Portfolio Management service.

Item 8: Methods of Analysis, Investment Strategies & Risk of Loss

The following methods of analysis and investment strategies may be utilized in formulating our investment advice and/or managing client assets, provided that such methods and/or strategies are appropriate to the needs of the client and consistent with the client's investment objectives, risk tolerance, and time horizons, among other considerations.

General Risks of Owning Securities

The prices of securities held in client accounts and the income they generate may decline in response to certain events taking place around the world. These include events directly involving the issuers of securities held as underlying assets of mutual funds in a client's account, conditions affecting the general economy, and overall market changes. Other contributing factors include local, regional, or global political, social, or economic instability and governmental or governmental agency responses to economic conditions. Finally, currency, interest rate, and commodity price fluctuations may also affect security prices and income.

The prices of, and the income generated by, most debt securities held by a client's account may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities. For example, the prices of debt securities in the client's account generally will decline when interest rates rise and increase when interest rates fall. In addition, falling interest rates may cause an issuer to redeem, "call" or refinance a security before its stated maturity, which may result in our firm having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have higher rates of interest and may be subject to greater price fluctuations than

shorter maturity debt securities. Debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer will weaken, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default.

The guarantee of a security backed by the U.S. Treasury or the full faith and credit of the U.S. government only covers the timely payment of interest and principal when held to maturity. This means that the current market values for these securities will fluctuate with changes in interest rates.

Investments in securities issued by entities based outside the United States may be subject to increased levels of risk described above. Currency fluctuations and controls, different accounting, auditing, financial reporting, disclosure, regulatory and legal standards and practices could also affect investments in securities of foreign issuers. Additional factors may include expropriation, changes in tax policy, greater market volatility, different securities market structures, and higher transaction costs. Finally, various administrative difficulties, such as delays in clearing and settling portfolio transactions, or in receiving payment of dividends can increase risk. Finally, investments in securities issued by entities domiciled in the United States may also be subject to many of these risks.

Methods of Analysis

Securities analysis methods rely on the assumption that the companies whose securities are purchased and/or sold, the rating agencies that review these securities, and other publicly-available sources of information about these securities, are providing accurate and unbiased data. While our firm is alert to indications that data may be incorrect, there is always a risk that our firm's analysis may be compromised by inaccurate or misleading information.

Charting: In this type of technical analysis, we review charts of market and security activity to attempt to identify when the market is moving up or down and to predict when how long the trend may last and when that trend might reverse.

Cyclical Analysis: Statistical analysis of specific events occurring at an enough relatively predictable intervals that they can be forecasted into the future. Cyclical analysis asserts that cyclical forces drive price movements in the financial markets. Risks include that cycles may invert or disappear and there is no expectation that this type of analysis will pinpoint turning points, instead be used in conjunction with other methods of analysis.

Fundamental Analysis: The analysis of a business's financial statements (usually to analyze the business's assets, liabilities, and earnings), health, and its competitors and markets. When analyzing a stock, futures contract, or currency using fundamental analysis there are two basic approaches one can use: bottom up analysis and top down analysis. The terms are used to distinguish such analysis from other types of investment analysis, such as quantitative and technical. Fundamental analysis is performed on historical and present data, but with the goal of making financial forecasts. There are several possible objectives: (a) to conduct a company stock valuation and predict its probable price evolution; (b) to make a projection on its business performance; (c) to evaluate its management and make internal business decisions; (d) and/or to calculate its credit risk; and (e) to find out the intrinsic value of the share.

When the objective of the analysis is to determine what stock to buy and at what price, there are two basic methodologies investors rely upon: (a) Fundamental analysis maintains that markets may misprice a security in the short run but that the "correct" price will eventually be reached. Profits can be made by purchasing the mispriced security and then waiting for the market to recognize its

"mistake" and reprice the security; and (b) Technical analysis maintains that all information is reflected already in the price of a security. Technical analysts analyze trends and believe that sentiment changes predate and predict trend changes. Investors' emotional responses to price

movements lead to recognizable price chart patterns. Technical analysts also analyze historical trends to predict future price movement. Investors can use one or both different but complementary methods for stock picking. This presents a potential risk, as the price of a security can move up or down along with the overall market regardless of the economic and financial factors considered in evaluating the stock.

Mutual Fund and/or Exchange Traded Fund (“ETF”) Analysis: Analysis of the experience and track record of the manager of the mutual fund or ETF to determine if that manager has demonstrated an ability to invest over a period of time and in different economic conditions. The underlying assets in a mutual fund or ETF are also reviewed in an attempt to determine if there is significant overlap in the underlying investments held in other fund(s) in the Client’s portfolio. The funds or ETFs are monitored to determine if they are continuing to follow their stated investment strategy. A risk of mutual fund and/or ETF analysis is that, as in all securities investments, past performance does not guarantee future results. A manager who has been successful may not be able to replicate that success in the future. In addition, as our firm does not control the underlying investments in a fund or ETF, managers of different funds held by the Client may purchase the same security, increasing the risk to the Client if that security were to fall in value. There is also a risk that a manager may deviate from the stated investment mandate or strategy of the fund or ETF, which could make the holding(s) less suitable for the Client’s portfolio.

Technical Analysis: A security analysis methodology for forecasting the direction of prices through the study of past market data, primarily price and volume. A fundamental principle of technical analysis is that a market’s price reflects all relevant information, so their analysis looks at the history of a security’s trading pattern rather than external drivers such as economic, fundamental and news events. Therefore, price action tends to repeat itself due to investors collectively tending toward patterned behavior – hence technical analysis focuses on identifiable trends and conditions. Technical analysts also widely use market indicators of many sorts, some of which are mathematical transformations of price, often including up and down volume, advance/decline data and other inputs. These indicators are used to help assess whether an asset is trending, and if it is, the probability of its direction and of continuation. Technicians also look for relationships between price/volume indices and market indicators. Technical analysis employs models and trading rules based on price and volume transformations, such as the relative strength index, moving averages, regressions, inter-market and intra-market price correlations, business cycles, stock market cycles or, classically, through recognition of chart patterns. Technical analysis is widely used among traders and financial professionals and is very often used by active day traders, market makers and pit traders. The risk associated with this type of analysis is that analysts use subjective judgment to decide which pattern(s) an instrument reflects at a given time and what the interpretation of that pattern should be.

Third-Party Money Manager Analysis: The analysis of the experience, investment philosophies, and past performance of independent third-party investment managers to determine if that manager has demonstrated an ability to invest over a period of time and in different economic conditions. Analysis is completed by monitoring the manager’s underlying holdings, strategies, concentrations and leverage as part of our overall periodic risk assessment. Additionally, as part of the due-diligence process, the manager’s compliance and business enterprise risks are surveyed and reviewed. A risk of investing with a third-party manager who has been successful in the past is that they may not be able to replicate that success in the future. In addition, as our firm does not control the underlying investments in a third-party manager’s portfolio, there is also a risk that a manager may deviate from the stated investment mandate or strategy of the portfolio, making it a less suitable investment for

clients. Moreover, as our firm does not control the manager’s daily business and compliance operations, our firm may be unaware of the lack of internal controls necessary to prevent business, regulatory or reputational deficiencies.

Investment Strategies & Asset Classes

Asset Allocation: The implementation of an investment strategy that attempts to balance risk versus reward by adjusting the percentage of each asset in an investment portfolio according to the investor's risk tolerance, goals and investment time frame. Asset allocation is based on the principle that different assets perform differently in different market and economic conditions. A fundamental justification for asset allocation is the notion that different asset classes offer returns that are not perfectly correlated, hence diversification reduces the overall risk in terms of the variability of returns for a given level of expected return. Although risk is reduced if correlations are not perfect, it is typically forecast (wholly or in part) based on statistical relationships (like correlation and variance) that existed over some past period. Expectations for return are often derived in the same way.

An asset class is a group of economic resources sharing similar characteristics, such as riskiness and return. There are many types of assets that may or may not be included in an asset allocation strategy. The "traditional" asset classes are stocks (value, dividend, growth, or sector-specific [or a "blend" of any two or more of the preceding]; large-cap versus mid-cap, small-cap or micro-cap; domestic, foreign [developed], emerging or frontier markets), bonds (fixed income securities more generally: investment-grade or junk [high-yield]; government or corporate; short-term, intermediate, long-term; domestic, foreign, emerging markets), and cash or cash equivalents. Allocation among these three provides a starting point. Usually included are hybrid instruments such as convertible bonds and preferred stocks, counting as a mixture of bonds and stocks. Other alternative assets that may be considered include: commodities: precious metals, nonferrous metals, agriculture, energy, others.; Commercial or residential real estate (also REITs); Collectibles such as art, coins, or stamps; insurance products (annuity, life settlements, catastrophe bonds, personal life insurance products, etc.); derivatives such as long-short or market neutral strategies, options, collateralized debt, and futures; foreign currency; venture capital; private equity; and/or distressed securities.

There are several types of asset allocation strategies based on investment goals, risk tolerance, time frames and diversification. The most common forms of asset allocation are strategic, dynamic, tactical, and core-satellite.

- **Strategic Asset Allocation:** The primary goal of a strategic asset allocation is to create an asset mix that seeks to provide the optimal balance between expected risk and return for a long-term investment horizon. Strategic asset allocation strategies are agnostic to economic environments, i.e., they do not change their allocation postures relative to changing market or economic conditions.
- **Dynamic Asset Allocation:** Dynamic asset allocation is similar to strategic asset allocation in that portfolios are built by allocating to an asset mix that seeks to provide the optimal balance between expected risk and return for a long-term investment horizon.^[3] Like strategic allocation strategies, dynamic strategies largely retain exposure to their original asset classes; however, unlike strategic strategies, dynamic asset allocation portfolios will adjust their postures over time relative to changes in the economic environment.
- **Tactical Asset Allocation:** Tactical asset allocation is a strategy in which an investor takes a more active approach that tries to position a portfolio into those assets, sectors, or individual stocks that show the most potential for perceived gains. While an original asset mix is formulated much like strategic and dynamic portfolio, tactical strategies are often traded more actively and are free to move entirely in and out of their core asset classes
- **Core-Satellite Asset Allocation:** Core-Satellite allocation strategies generally contain a 'core' strategic element making up the most significant portion of the portfolio, while applying a

dynamic or tactical 'satellite' strategy that makes up a smaller part of the portfolio. In this way, core-satellite allocation strategies are a hybrid of the strategic and dynamic/tactical allocation strategies mentioned above.

Debt Securities (Bonds): Issuers use debt securities to borrow money. Generally, issuers pay investors periodic interest and repay the amount borrowed either periodically during the life of the security and/or at maturity. Alternatively, investors can purchase other debt securities, such as zero-coupon bonds, which do not pay current interest, but rather are priced at a discount from their face values and their values accrete over time to face value at maturity. The market prices of debt securities fluctuate depending on such factors as interest rates, credit quality, and maturity. In general, market prices of debt securities decline when interest rates rise and increase when interest rates fall. Bonds with longer rates of maturity tend to have greater interest rate risks.

Certain additional risk factors relating to debt securities include: (a) When interest rates are declining, investors have to reinvest their interest income and any return of principal, whether scheduled or unscheduled, at lower prevailing rates.; (b) Inflation causes tomorrow's dollar to be worth less than today's; in other words, it reduces the purchasing power of a bond investor's future interest payments and principal, collectively known as "cash flows." Inflation also leads to higher interest rates, which in turn leads to lower bond prices.; (c) Debt securities may be sensitive to economic changes, political and corporate developments, and interest rate changes. Investors can also expect periods of economic change and uncertainty, which can result in increased volatility of market prices and yields of certain debt securities. For example, prices of these securities can be affected by financial contracts held by the issuer or third parties (such as derivatives) relating to the security or other assets or indices. (d) Debt securities may contain redemption or call provisions entitling their issuers to redeem them at a specified price on a date prior to maturity. If an issuer exercises these provisions in a lower interest rate market, the account would have to replace the security with a lower yielding security, resulting in decreased income to investors. Usually, a bond is called at or close to par value. This subjects investors that paid a premium for their bond risk of lost principal. In reality, prices of callable bonds are unlikely to move much above the call price if lower interest rates make the bond likely to be called.; (e) If the issuer of a debt security defaults on its obligations to pay interest or principal or is the subject of bankruptcy proceedings, the account may incur losses or expenses in seeking recovery of amounts owed to it.; (f) There may be little trading in the secondary market for particular debt securities, which may affect adversely the account's ability to value accurately or dispose of such debt securities. Adverse publicity and investor perceptions, whether based on fundamental analysis, may decrease the value and/or liquidity of debt securities.

Exchange Traded Funds ("ETFs"): An ETF is a type of Investment Company (usually, an open-end fund or unit investment trust) whose primary objective is to achieve the same return as a particular market index. Many ETFs are designed to track an index, so their performance is close to that of an index mutual fund, but they are not exact duplicates. A tracking error, or the difference between the returns of a fund and the returns of the index, can arise due to differences in composition, management fees, expenses, and handling of dividends. ETFs benefit from continuous pricing; they can be bought and sold on a stock exchange throughout the trading day. Because ETFs trade like stocks, you can place orders just like with individual stocks - such as limit orders, good- until-canceled orders, stop loss orders etc. They can also be sold short. Traditional mutual funds are bought and redeemed based on their net asset values ("NAV") at the end of the day. ETFs are bought and sold at the market prices on the exchanges, which resemble the underlying NAV but are independent of it. However, arbitrageurs will ensure that ETF prices are kept very close to the NAV of the underlying securities. Although an investor can buy as few as one share of an ETF, most buy in board lots.

Anything bought in less than a board lot will increase the cost to the investor. Anyone can buy any ETF no matter where in the world it trades. This provides a benefit over mutual funds, which generally can only be bought in the country in which they are registered.

One of the main features of ETFs are their low annual fees, especially when compared to traditional mutual funds. The passive nature of index investing, reduced marketing, and distribution and accounting expenses all contribute to the lower fees. However, individual investors must pay a brokerage commission to purchase and sell ETF shares; for those investors who trade frequently, this can significantly increase the cost of investing in ETFs. That said, with the advent of low-cost brokerage fees, small or frequent purchases of ETFs are becoming more cost efficient.

Fixed Income: Fixed income is a type of investing or budgeting style for which real return rates or periodic income is received at regular intervals and at reasonably predictable levels. Fixed-income investors are typically retired individuals who rely on their investments to provide a regular, stable income stream. This demographic tends to invest heavily in fixed-income investments because of the reliable returns they offer. Fixed-income investors who live on set amounts of periodically paid income face the risk of inflation eroding their spending power.

Some examples of fixed-income investments include treasuries, money market instruments, corporate bonds, asset-backed securities, municipal bonds and international bonds. The primary risk associated with fixed-income investments is the borrower defaulting on his payment. Other considerations include exchange rate risk for international bonds and interest rate risk for longer-dated securities. The most common type of fixed-income security is a bond. Bonds are issued by federal governments, local municipalities and major corporations. Fixed-income securities are recommended for investors seeking a diverse portfolio; however, the percentage of the portfolio dedicated to fixed income depends on your own personal investment style. There is also an opportunity to diversify the fixed-income component of a portfolio. Riskier fixed-income products, such as junk bonds and longer-dated products, should comprise a lower percentage of your portfolio.

The interest payment on fixed-income securities is considered regular income and is determined based on the creditworthiness of the borrower and current market rates. In general, bonds and fixed-income securities with longer-dated maturities pay a higher rate, also referred to as the coupon rate, because they are considered riskier. The longer the security is on the market, the more time it has to lose its value and/or default. At the end of the bond term, or at bond maturity, the borrower returns the amount borrowed, also referred to as the principal or par value.

Individual Stocks: A common stock is a security that represents ownership in a corporation. Holders of common stock exercise control by electing a board of directors and voting on corporate policy. Investing in individual common stocks provides us with more control of what you are invested in and when that investment is made. Having the ability to decide when to buy or sell helps us time the taking of gains or losses. Common stocks, however, bear a greater amount of risk when compared to certificate of deposits, preferred stock and bonds. It is typically more difficult to achieve diversification when investing in individual common stocks. Additionally, common stockholders are on the bottom of the priority ladder for ownership structure; if a company goes bankrupt, the common stockholders do not receive their money until the creditors and preferred shareholders have received their respective share of the leftover assets.

Long-Term Purchases: Our firm may buy securities for your account and hold them for a relatively long time (more than a year) in anticipation that the security's value will appreciate over a long horizon. The risk of this strategy is that our firm could miss out on potential short-term gains that could have been profitable to your account, or it's possible that the security's value may decline sharply before our firm decides to sell.

Margin Transactions: Our firm may purchase stocks, mutual funds, and/or other securities for your portfolio with money borrowed from your brokerage account. This allows you to purchase more stock than you would be able to with your available cash and allows us to purchase stock without

selling other holdings. Margin accounts and transactions are risky and not necessarily appropriate for every client. The potential risks associated with these transactions are (1) You can lose more funds than are deposited into the margin account; (2) the forced sale of securities or other assets in your account; (3) the sale of securities or other assets without contacting you; and (4) you may not be entitled to choose which securities or other assets in your account(s) are liquidated or sold to meet a margin call.

Mutual Funds: A mutual fund is a company that pools money from many investors and invests the money in a variety of differing security types based the objectives of the fund. The portfolio of the fund consists of the combined holdings it owns. Each share represents an investor's proportionate ownership of the fund's holdings and the income those holdings generate. The price that investors pay for mutual fund shares is the fund's per share net asset value ("NAV") plus any shareholder fees that the fund imposes at the time of purchase (such as sales loads). Investors typically cannot ascertain the exact make-up of a fund's portfolio at any given time, nor can they directly influence which securities the fund manager buys and sells or the timing of those trades. With an individual stock, investors can obtain real-time (or close to real-time) pricing information with relative ease by checking financial websites or by calling a broker or your investment adviser. Investors can also monitor how a stock's price changes from hour to hour—or even second to second. By contrast, with a mutual fund, the price at which an investor purchases or redeems shares will typically depend on the fund's NAV, which is calculated daily after market close.

The benefits of investing through mutual funds include: (a) Mutual funds are professionally managed by an investment adviser who researches, selects, and monitors the performance of the securities purchased by the fund; (b) Mutual funds typically have the benefit of diversification, which is an investing strategy that generally sums up as "Don't put all your eggs in one basket." Spreading investments across a wide range of companies and industry sectors can help lower the risk if a company or sector fails. Some investors find it easier to achieve diversification through ownership of mutual funds rather than through ownership of individual stocks or bonds.; (c) Some mutual funds accommodate investors who do not have a lot of money to invest by setting relatively low dollar amounts for initial purchases, subsequent monthly purchases, or both.; and (d) At any time, mutual fund investors can readily redeem their shares at the current NAV, less any fees and charges assessed on redemption.

Mutual funds also have features some investors might view as disadvantages: (a) Investors must pay sales charges, annual fees, and other expenses regardless of how the fund performs. Depending on the timing of their investment, investors may also have to pay taxes on any capital gains distribution they receive. This includes instances where the fund went on to perform poorly after purchasing shares.; (b) Investors typically cannot ascertain the exact make-up of a fund's portfolio at any given time, nor can they directly influence which securities the fund manager buys and sells or the timing of those trades.; and (c) With an individual stock, investors can obtain real-time (or close to real-time) pricing information with relative ease by checking financial websites or by calling a broker or your investment adviser. Investors can also monitor how a stock's price changes from hour to hour—or even second to second. By contrast, with a mutual fund, the price at which an investor purchases or redeems shares will typically depend on the fund's NAV, which the fund might not calculate until many hours after the investor placed the order. In general, mutual funds must calculate their NAV at least once every business day, typically after the major U.S. exchanges close.

When investors buy and hold an individual stock or bond, the investor must pay income tax each year on the dividends or interest the investor receives. However, the investor will not have to pay any capital gains tax until the investor sells and makes a profit. Mutual funds are different. When an investor buys and holds mutual fund shares, the investor will owe income tax on any ordinary dividends in the year the investor receives or reinvests them. Moreover, in addition to owing taxes

on any personal capital gains when the investor sells shares, the investor may have to pay taxes each year on the fund's capital gains. That is because the law requires mutual funds to distribute capital gains to shareholders if they sell securities for a profit and cannot use losses to offset these gains.

Options: An option is a financial derivative that represents a contract sold by one party (the option writer) to another party (the option holder). The contract offers the buyer the right, but not the obligation, to buy (call) or sell (put) a security or other financial asset at an agreed-upon price (the strike price) during a certain period of time or on a specific date (exercise date). Options are extremely versatile securities. Traders use options to speculate, which is a relatively risky practice, while hedgers use options to reduce the risk of holding an asset. In terms of speculation, option buyers and writers have conflicting views regarding the outlook on the performance of an

Call Option: Call options give the option to buy at certain price, so the buyer would want the stock to go up. Conversely, the option writer needs to provide the underlying shares if the stock's market price exceeds the strike due to the contractual obligation. An option writer who sells a call option believes that the underlying stock's price will drop relative to the option's strike price during the life of the option, as that is how he will reap maximum profit. This is exactly the opposite outlook of the option buyer. The buyer believes that the underlying stock will rise; if this happens, the buyer will be able to acquire the stock for a lower price and then sell it for a profit. However, if the underlying stock does not close above the strike price on the expiration date, the option buyer would lose the premium paid for the call option.

Put Option: Put options give the option to sell at a certain price, so the buyer would want the stock to go down. The opposite is true for put option writers. For example, a put option buyer is bearish on the underlying stock and believes its market price will fall below the specified strike price on or before a specified date. On the other hand, an option writer who shorts a put option believes the underlying stock's price will increase about a specified price on or before the expiration date. If the underlying stock's price closes above the specified strike price on the expiration date, the put option writer's maximum profit is achieved. Conversely, a put option holder would only benefit from a fall in the underlying stock's price below the strike price. If the underlying stock's price falls below the strike price, the put option writer is obligated to purchase shares of the underlying stock at the strike price.

The potential risks associated with these transactions are that (1) all options expire. The closer the option gets to expiration, the quicker the premium in the option deteriorates; and (2) Prices can move very quickly. Depending on factors such as time until expiration and the relationship of the stock price to the option's strike price, small movements in a stock can translate into big movements in the underlying options.

Short-Term Purchases: When utilizing this strategy, our firm may also purchase securities with the idea of selling them within a relatively short time (typically a year or less). Our firm do this in an attempt to take advantage of conditions that our firm believe will soon result in a price swing in the securities our firm purchase. The potential risk associated with this investment strategy is associated with the currency or exchange rate. Currency or exchange rate risk is a form of risk that arises from the change in price of one currency against another. The constant fluctuations in the foreign currency in which an investment is denominated vis-à-vis one's home currency may add risk to the value of a security. Currency risk is greater for shorter term investments, which do not have time to level off like longer term foreign investments.

Short Sales: A short sale is a transaction in which an investor sells borrowed securities in anticipation of a price decline and is required to return an equal number of shares at some point in the future. These transactions have several risks that make it highly unsuitable for the notice investor.

This strategy has a slanted payoff ratio in that the maximum gain (which would occur if the shorted stock was to plunge to zero) is limited, but the maximum loss is theoretically infinite (since stocks can in theory go up infinitely in price). The following risks should be considered: (1) In addition to trading commissions, other costs with short selling include that of borrowing the security to short it, as well as interest payable on the margin account that holds the shorted security. (2) The short seller is responsible for making dividend payments on the shorted stock to the entity from whom the stock has been borrowed. (3) Stocks with very high short interest may occasionally surge in price. This usually happens when there is a positive development in the stock, which forces short sellers to buy the shares back to close their short positions. Heavily shorted stocks are also susceptible to “buy-ins,” which occur when a broker closes out short positions in a difficult-to-borrow stock whose lenders are demanding it back. (4) Regulators may impose bans on short sales in a specific sector or even in the broad market to avoid panic and unwarranted selling pressure. Such actions can cause a spike in stock prices, forcing the short seller to cover short positions at huge losses. (5) Unlike the “buy-and-hold” investor who can afford to wait for an investment to work out, the short seller does not have the luxury of time because of the many costs and risks associated with short selling. Timing is everything when it comes to shorting. (5) Short selling should only be undertaken by experienced traders who have the discipline to cut a losing short position, rather than add to it hoping that it will eventually work out.

Trading: Our firm could purchase securities with the idea of selling them very quickly (typically within 30 days or less). Our firm does this to take advantage of our predictions of brief price swings. Trading involves risk that may not be suitable for every investor and may involve a high volume of trading activity. Each trade generates a commission and the total daily commission on such a high volume of trading can be considerable. Active trading accounts should be considered speculative in nature with the objective being to generate short-term profits. This activity may result in the loss of more than 100% of an investment.

Risk of Loss

Investing in securities involves risk of loss that clients should be prepared to bear. While the stock market may increase, and your account(s) could enjoy a gain, it is also possible that the stock market may decrease, and your account(s) could suffer a loss. In addition, the methods of analysis, investment strategies and assets classes may have the following associated risks:

Capital Risk: Capital risk is one of the most basic, fundamental risks of investing; it is the risk that you may lose 100% of your money. All investments carry some form of risk and the loss of capital is generally a risk for any investment instrument.

Economic Risk: The prevailing economic environment is important to the health of all businesses. Some companies, however, are more sensitive to changes in the domestic or global economy than others. These types of companies are often referred to as cyclical businesses. Countries in which a large portion of businesses are in cyclical industries are thus also very economically sensitive and carry a higher amount of economic risk. If an investment is issued by a party located in a country that experiences wide swings from an economic standpoint or in situations where certain elements of an investment instrument are hinged on dealings in such countries, the investment instrument will generally be subject to a higher level of economic risk.

Financial Risk: Financial risk is represented by internal disruptions within an investment or the issuer of an investment that can lead to unfavorable performance of the investment. Examples of financial risk can be found in cases like Enron or many of the dot com companies that were caught up in a period of extraordinary market valuations that were not based on solid financial footings of the companies.

Fixed Income Securities Risk: Typically, the values of fixed-income securities change inversely with prevailing interest rates. Therefore, a fundamental risk of fixed-income securities is interest rate risk, which is the risk that their value will generally decline as prevailing interest rates rise, which may cause your account value to likewise decrease, and vice versa. How specific fixed income securities may react to changes in interest rates will depend on the specific characteristics of each security. Fixed-income securities are also subject to credit risk, prepayment risk, valuation risk, and liquidity risk. Credit risk is the chance that a bond issuer will fail to pay interest and principal in a timely manner, or that negative perceptions of the issuer's ability to make such payments will cause the price of a bond to decline.

Inflation Risk: Inflation risk involves the concern that in the future, your investment or proceeds from your investment will not be worth what they are today. Throughout time, the prices of resources and end-user products generally increase and thus, the same general goods and products today will likely be more expensive in the future. The longer an investment is held, the greater the chance that the proceeds from that investment will be worth less in the future than what they are today. Said another way, a dollar tomorrow will likely get you less than what it can today.

Interest Rate Risk: Certain investments involve the payment of a fixed or variable rate of interest to the investment holder. Once an investor has acquired or has acquired the rights to an investment that pays a rate (fixed or variable) of interest, changes in overall interest rates in the market will affect the value of the interest-paying investment(s) they hold. In general, changes in prevailing interest rates in the market will have an inverse relationship to the value of existing, interest paying investments. In other words, as interest rates move up, the value of an instrument paying a rate (fixed or variable) of interest will go down. The reverse is generally true as well.

Legal/Regulatory Risk: Certain investments or the issuers of investments may be affected by changes in state or federal laws or in the prevailing regulatory framework under which the investment instrument or its issuer is regulated. Changes in the regulatory environment or tax laws can affect the performance of certain investments or issuers of those investments and thus, can have a negative impact on the overall performance of such investments.

Liquidity Risk: Certain assets may not be readily converted into cash or may have a very limited market in which they trade. Thus, you may experience the risk that your investment or assets within your investment may not be able to be liquidated quickly, thus, extending the period of time by which you may receive the proceeds from your investment. Liquidity risk can also result in unfavorable pricing when exiting (i.e. not being able to quickly get out of an investment before the price drops significantly) a particular investment and therefore, can have a negative impact on investment returns.

Manager Risk: There is always the possibility poor security selection will cause your investments to underperform relative to benchmarks or other funds with a similar investment objective.

Market Risk: The value of your portfolio may decrease if the value of an individual company or multiple companies in the portfolio decreases or if our belief about a company's intrinsic worth is incorrect. Further, regardless of how well individual companies perform, the value of your portfolio could also decrease if there are deteriorating economic or market conditions. It is important to understand that the value of your investment may fall, sometimes sharply, in response to changes in the market, and you could lose money. Investment risks include price risk as may be observed by a drop in a security's price due to company specific events (e.g. earnings disappointment or downgrade in the rating of a bond) or general market risk (e.g. such as a "bear" market when stock values fall in general). For fixed-income securities, a period of rising interest rates could erode the value of a bond

since bond values generally fall as bond yields go up. Past performance is not a guarantee of future returns.

Past Performance: Charting and technical analysis are often used interchangeably. Technical analysis generally attempts to forecast an investment's future potential by analyzing its past performance and other related statistics. In particular, technical analysis often involves an evaluation of historical pricing and volume of a particular security for the purpose of forecasting where future price and volume figures may go. As with any investment analysis method, technical analysis runs the risk of not knowing the future and thus, investors should realize that even the most diligent and thorough technical analysis cannot predict or guarantee the future performance of any particular investment instrument or issuer thereof.

Description of Material, Significant or Unusual Risks

We generally invest client's cash balances in money market funds, FDIC Insured Certificates of Deposit, high-grade commercial paper and/or government backed debt instruments. Ultimately, we try to achieve the highest return on our client's cash balances through relatively low-risk conservative investments. In most cases, at least a partial cash balance will be maintained in a money market account so that our firm may debit advisory fees for our services related to Comprehensive Portfolio Management as applicable.

Item 9: Disciplinary Information

There are no legal or disciplinary events that are material to the evaluation of our advisory business or the integrity of our management.

Item 10: Other Financial Industry Activities & Affiliations

Representatives of our firm may also be registered representatives of LPL Financial, Triad Advisors or Mid Atlantic Capital Corporation, members FINRA/SIPC and licensed insurance agents/brokers. As such, they may offer products and receive normal and customary commissions as a result of these transactions. A conflict of interest may arise as these commissionable securities sales may create an incentive to recommend products based on the compensation they may earn and may not necessarily be in the best interests of the client.

Please see Item 4 above for more information about the selection of third-party money managers. The compensation paid to our firm by third party managers may vary, and thus, creates a conflict of interest in recommending a manager who shares a larger portion of its advisory fees over another manager. Prior to referring clients to third party advisors, our firm will follow the due diligence procedures detailed in Item 4 of this document. A potential conflict of interest in utilizing third party advisors may be an incentive to us in selecting an advisor over another in the form of fees or services. In order to minimize this conflict our firm will make our recommendations/selections in the best interest of our clients.

Item 11: Code of Ethics, Participation or Interest in Client Transactions & Personal Trading

We recognize that the personal investment transactions of members and employees of our firm demand

the application of a high Code of Ethics and require that all such transactions be carried out in a way that does not endanger the interest of any client. At the same time, we believe that if investment goals are similar for clients and for members and employees of our firm, it is logical and even desirable that there be common ownership of some securities.

Therefore, in order to prevent conflicts of interest, we have in place a set of procedures (including a pre-clearing procedure) with respect to transactions effected by the officers and employees for their personal accounts². In order to monitor compliance with our personal trading policy, we have a quarterly securities transaction reporting system for all our associates.

Furthermore, our firm has established a Code of Ethics which applies to all our associated persons. An investment adviser is considered a fiduciary. As a fiduciary, it is always an investment adviser's responsibility to provide fair and full disclosure of all material facts and to act solely in the best interest of each of our clients. We have a fiduciary duty to all clients. Our fiduciary duty is considered the core underlying principle for our Code of Ethics which also includes Insider Trading and Personal Securities Transactions Policies and Procedures. We always require all of our supervised persons to conduct business with the highest level of ethical standards and to comply with all federal and state securities laws. Upon employment or affiliation and at least annually thereafter, all supervised persons will sign an acknowledgement that they have read, understand, and agree to comply with our Code of Ethics. Our firm and supervised persons must conduct business in an honest, ethical, and fair manner and avoid all circumstances that might negatively affect or appear to affect our duty of complete loyalty to all clients. This disclosure is provided to give all clients a summary of our Code of Ethics.

If a client or a potential client wishes to review our Code of Ethics in its entirety, a copy will be provided promptly upon request.

Neither our firm nor a related person recommends to clients, or buys or sells for client accounts, securities in which our firm or a related person has a material financial interest.

Related persons of our firm may buy or sell securities and other investments that are also recommended to clients. In order to minimize this conflict of interest, our related persons will place client interests ahead of their own interests and adhere to our firm's Code of Ethics, a copy of which is available upon request.

Likewise, related persons of our firm may buy or sell securities for themselves at or about the same time they buy or sell the same securities for client accounts. In order to minimize this conflict of interest, our related persons will place client interests ahead of their own interests and adhere to our firm's Code of Ethics, a copy of which is available upon request. Further, our related persons will refrain from buying or selling the same securities prior to buying or selling for our clients in the same day. If related persons' accounts are included in a block trade, our related persons will always trade personal accounts last.

² For purposes of the policy, our associate's personal account generally includes any account (a) in the name of our associate, his/her spouse, his/her minor children or other dependents residing in the same household, (b) for which our associate is a trustee or executor, or (c) which our associate controls, including our client accounts which our associate controls and/or a member of his/her household has a direct or indirect beneficial interest in.

Item 12: Brokerage Practices

Selecting a Brokerage Firm

We seek to recommend a custodian/broker who will hold your assets and execute transactions on terms that are overall most advantageous when compared to other available providers and their services. We consider a wide range of factors, including, among others, these:

- Timeliness of execution
- Timeliness and accuracy of trade confirmations
- Research services provided
- Ability to provide investment ideas
- Execution facilitation services provided
- Record keeping services provided
- Custody services provided
- Frequency and correction of trading errors
- Ability to access a variety of market venues
- Expertise as it relates to specific securities
- Financial condition
- Business reputation
- Quality of services

Our firm may recommend that clients establish brokerage accounts with LPL, member FINRA/SIPC and/or Fidelity Brokerage Services LLC ("Fidelity"). Clients are advised that they are under no obligation to implement our recommendations and may choose a broker-dealer at their discretion. Clients may pay commissions or fees that are higher or lower than those that may be obtained from elsewhere for similar services.

Our firm does not receive soft dollars generated by client securities transactions. The term "soft dollars" refers to funds which are generated by client trades "commission rebates or credits" being used by our firm to purchase products or services (such as research and enhanced brokerage services) from or through the broker-dealers whom our firm engages to execute securities transactions. In addition, neither our firm nor our related person(s) have authority to determine, without specific client consent, the broker-dealer to be used in any securities transaction or the commission rate to be paid.

Our firm, however, does receive some "eligible" products and services under safe harbor as determined under the Securities and Exchange Act, Section 28(e). These products and services include: national, regional or investment adviser specific educational events organized and/or sponsored by LPL Financial or Fidelity; professional compliance; legal and business consulting; publications and conferences on practice management; information technology; business succession; employee benefits providers; human capital consultants; insurance; and marketing. In addition, these firms may make available, arrange and/or pay vendors for these types of services rendered to our firm by independent third parties. They may discount or waive fees it would otherwise charge for some of these services or pay all or a part of the fees of a third-party providing these services to our firm. While, as a fiduciary, our firm endeavors to act in its clients' best interests, our recommendation/requirement that clients maintain their assets in accounts at LPL or Fidelity may be based in part on the benefit to our firm of the availability of some of the foregoing products and

services and other arrangements, and not solely on the nature, cost, or quality of custody and brokerage services provided by LPL and Fidelity, which creates a potential conflict of interest.

As a result of receiving such “eligible” products and services for no cost, our firm has an incentive to continue to place client trades through broker-dealers that offer those products and services. This interest conflicts with the clients’ interest of obtaining the lowest commission rate available. Therefore, our firm must determine in good faith, that such commissions are reasonable in relation to the value of the services provided by such executing broker-dealers. Our firm examined this potential conflict of interest when deciding to enter relationships with LPL and Fidelity. We have determined that these relationships are in the best interest of our firm’s clients and satisfies our client obligations, including our duty to seek best execution.

In seeking “best execution”, the determinative factor is not the lowest possible commission cost, but whether the transaction represents the best qualitative execution. LPL and Fidelity also take into consideration the full range of a broker-dealer’s services including execution capability, commission rates, and responsiveness. Although LPL and Fidelity will seek competitive commission rates, they may not necessarily obtain the lowest possible commission rates for all account transactions.

Over-the-Counter (OTC) securities transactions are generally affected based on two (2) separate broker-dealers: (1) a “dealer” or “principal” acting as market-maker; and (2) the executing broker-dealer that acts in an agency capacity. Dealers executing principal transactions typically include a mark-up/down, which is included in the offer or bid price of the securities purchased or sold. In addition to the dealer mark-up/down, the client may also incur the transaction fee imposed by the executing broker-dealer. We do not receive any portion of the dealer mark-up/down or the executing broker-dealer transaction fee. Transactions for each client account will be affected independently. We individually review each client’s account and place trades accordingly. Despite being purchased or sold at approximately the same time all clients’ transactions will incur individual transaction fees.

Our firm provides investment management services for various clients. There are occasions on which portfolio transactions may be executed as part of concurrent authorizations to purchase or sell the same security for numerous accounts served by our firm, which involve accounts with similar investment objectives. Although such concurrent authorizations potentially could be either advantageous or disadvantageous to any one or more accounts, they are affected only when our firm believes that to do so will be in the best interest of the effected accounts. When such concurrent authorizations occur, the objective is to allocate the executions in a manner which is deemed equitable to the accounts involved. In any given situation, our firm attempts to allocate trade executions in the most equitable manner possible, taking into consideration client objectives, current asset allocation and availability of funds using price averaging, proration and consistently non-arbitrary methods of allocation.

Item 13: Review of Accounts or Financial Plans

Our management personnel or financial advisors review accounts on a regular basis, but no less frequently than annually for our Comprehensive Portfolio Management, Third Party Money Management and LPL Sponsored Advisory Program clients. The nature of these reviews is to learn whether client accounts are in line with their investment objectives, appropriately positioned based on market conditions, and investment policies, if applicable. Our firm does not provide written reports to clients, unless asked to do so. Verbal reports to clients take place on at least an annual basis when our Comprehensive Portfolio Management, Third Party Money Management and LPL Sponsored Advisory Program clients are contacted.

Financial Planning clients do not receive reviews of their written plans unless they act to schedule a financial consultation with us or if they have elected to receive such planning services through an ongoing fee or subscription-based engagement. We are willing to meet with flat fee or one-time clients upon their request to discuss updates to their plans or changes in their circumstances. Financial Planning clients do not receive written or verbal updated reports regarding their financial plans unless they separately contract with us for a post financial plan meeting or update to their initial written financial plan through an ongoing arrangement.

Retirement Plan Consulting clients receive reviews of their pension plans for the duration of the pension consulting service. We also provide ongoing services to Retirement Plan Consulting clients where we meet with such clients upon their request to discuss updates to their plans, changes in their circumstances, etc. Retirement Plan Consulting clients do not receive written or verbal updated reports regarding their pension plans unless they choose to contract with us for ongoing Retirement Plan Consulting services.

Item 14: Client Referrals & Other Compensation

We may receive from LPL Financial, Fidelity or a mutual fund company, without cost and/or at a discount non-soft-dollar support services and/or product, to assist us to better monitor and service client accounts maintained at such institutions. Included within the support services we may receive investment-related research, pricing information and market data, software and other technology that provide access to client account data, compliance and/or practice management-related publications, discounted or gratis consulting services, discounted and/or gratis attendance at conferences, meetings, and other educational and/or social events, marketing support, computer hardware and/or software and/or other products used by us to assist us in our investment advisory business operations.

In support of services provided by certain representatives of our firm, they have received a forgivable loan from LPL, Fidelity, Triad Advisors, Mid Atlantic Capital Corporation or GWM Advisors in order to assist with transitioning business onto the appropriate custodial platform. This loan may be forgiven by the issuing firm based on certain criteria, including the scope of business the representative(s) engages in with the issuing firm to include the amount of client assets with the issuing firm. This presents a conflict of interest in that our firm's representatives may have a financial incentive to recommend that Clients maintain their accounts with a firm in order to benefit by having the loan forgiven. To the extent our firm's representatives recommend Client use an issuing firm for such services, it is because our firm and its representatives believe that it is in the Client's best interest to do so based on the quality and pricing of execution, benefits of the service for accounts, and other services provided by the firm.

Our clients do not pay more for investment transactions effected and/or assets maintained at the issuing firm as result of this arrangement. There is no commitment made by us to LPL, Fidelity, Triad Advisors, Mid Atlantic Capital Corporation or any other institution resulting from the arrangement.

Referral Fees

We do pay referral fees (non-commission based) to independent solicitors (registered and non-registered representatives) for the referral of their clients to our firm in accordance with Rule 206 (4)-3 of the Investment Advisers Act of 1940. Each of these relationships is bound by a solicitor's agreement that outlines the responsibilities of all parties including the disclosure requirements made to a prospect for the advisory services of GWM Advisors.

Item 15: Custody

The Firm is deemed to have custody of client funds and securities because you give it the authority to have fees deducted directly from your account. Authorization to trade in client accounts (discretion) is not deemed custody. The Firm also has custody when a client has a standing letter of authorization (SLOA) instructing the Firm to disperse funds or securities from the clients account to a third party. As such, our firm has adopted the following safeguards in conjunction with the account custodian:

- The client provides an instruction to the qualified custodian, in writing, that includes the client's signature, the third party's name, and either the third party's address or the third party's account number at a custodian to which the transfer should be directed.
- The client authorizes the investment adviser, in writing, either on the qualified custodian's form or separately, to direct transfers to the third party either on a specified schedule or from time to time.
- The client's qualified custodian performs appropriate verification of the instruction, such as a signature review or other method to verify the client's authorization and provides a transfer of funds notice to the client promptly after each transfer.
- The client has the ability to terminate or change the instruction to the client's qualified custodian.
- The Firm or representative has no authority or ability to designate or change the identity of the third party, the address, or any other information about the third party contained in the client's instruction.
- The Firm maintains records showing that the third party is not a related party of the Firm or located at the same address as the Firm.
The client's qualified custodian sends the client, in writing, an initial notice confirming the instruction and an annual notice reconfirming the instruction.

SEC rules permit the Firm to forego the independent auditor surprise examination required by rule 206(4)-2 ("Custody Rule") under the Investment Advisers Act of 1940 ("Advisers Act") if the seven conditions outlined above are met. If the Firm determines these conditions are not met, it will undergo a surprise examination by an independent auditor for those accounts that utilize third party standing letters of authorization.

The Firm's established procedures require that all client funds and securities must be held at a qualified custodian in a separate account for each client under that client's name. You or your representative will execute an agreement that establishes each account, therefore, you will know the qualified custodian's name and address as well as the way your funds or securities are maintained. Finally, the qualified custodian will deliver your account statements directly to you or your representative at least quarterly. You should carefully review those statements and compare them to any communication you receive from the Firm. If our firm decides to also send account statements to clients, such notice and account statements include a legend that recommends that the client compare the account statements received from the qualified custodian with those received from our firm. If you ever have questions about your statements, please feel free to contact the Firm, your representative or the qualified custodian.

Item 16: Investment Discretion

Clients have the option of providing our firm with investment discretion on their behalf, pursuant to an executed investment advisory client agreement. By granting investment discretion, our firm is authorized to execute securities transactions, determine which securities are bought and sold, and the total amount to be bought and sold. Limitations may be imposed by the client in the form of specific constraints on any of these areas of discretion with our firm's written acknowledgement.

Item 17: Voting Client Securities

We do not and will not accept the proxy authority to vote client securities. Clients will receive proxies or other solicitations directly from their custodian or a transfer agent. If proxies are sent to our firm, we will forward them on to you and ask the party who sent them to mail them directly to you in the future. Clients may call, write or email us to discuss questions they may have about proxy votes or other solicitations.

Third party money managers selected or recommended by our firm may vote proxies for clients. Therefore, except in the event a third party money manager votes proxies, clients maintain exclusive responsibility for: (1) directing the manner in which proxies solicited by issuers of securities beneficially owned by the client shall be voted, and (2) making all elections relative to any mergers, acquisitions, tender offers, bankruptcy proceedings or other type events pertaining to the client's investment assets. Therefore (except for proxies that may be voted by a third-party money manager), our firm and/or you shall instruct your qualified custodian to forward to you copies of all proxies and shareholder communications relating to your investment assets.

Item 18: Financial Information

We are not required to provide financial information in this Brochure because:

- We do not require the prepayment of more than \$1,200 in fees and six or more months in advance.
- We do not take custody of client funds or securities.
- We do not have a financial condition or commitment that impairs our ability to meet contractual and fiduciary obligations to clients.

We have never been the subject of a bankruptcy proceeding.
