Open Invest Co. Form ADV Part 2A Wrap Fee Program Brochure

March 2021

One Market Street, 36th Floor
San Francisco, CA 94105
Tel: 855-466-6545

www.openinvest.com

This Wrap Fee Program Brochure provides information about the qualifications and business practices of Open Invest Co. ("OpenInvest"). If you have any questions about the contents of this Brochure, please contact OpenInvest at **855-466-6545, or compliance@openinvest.com**. The information in this Brochure has not been approved or verified by the United States Securities and Exchange Commission or by any state securities authority.

Additional information about OpenInvest is also available on the SEC's website at <http://adviserinfo.sec.gov>.

Item 2 – Material Changes

OpenInvest will ensure that all current Retail Clients receive a summary of material changes to this and subsequent Brochures within 120 days of the close of our business' Fiscal Year. Our Brochure can be found on the SEC's website at www.adviserinfo.sec.gov. The searchable IARD/CRD number OpenInvest is 269997. The summary of material changes is listed in the section below. We may provide future information about material changes as necessary and will further provide you with a new Brochure as needed.

Currently, our Brochure may be requested by contacting us at 855-466-6545 or via email to compliance@openinvest.com. Our Brochure is provided free of charge.

Summary of Changes

- Review of Accounts has been updated.
- Financial Information has been updated

Item 4 – Services, Fees and Compensation

General Description of Advisory Firm

Open Invest Co. (“OpenInvest”) is a public benefit corporation that was founded in 2015. The principal owners of OpenInvest are Conor Murray and Phillip Wei. OpenInvest is registered with the SEC; such registration does not imply any particular level of skill or training.

General Description of Wrap Fee Services and Fees

OpenInvest offers the following wrap fee program (“Program”) to retail investors who open accounts through OpenInvest’s web-based platform, each a (“Retail Client”). Under the Program, OpenInvest charges a single asset-based fee for advisory services, which includes the cost of portfolio management services and the execution of securities transactions, including brokerage commissions, account opening fees, transactions fees, custodian fees, investment adviser fees and other related costs and expenses. Costs that are unrelated to the ongoing management of the Retail Client account will be borne by the Retail Client.

OpenInvest may enter into agreements with other financial institutions (each an “Institutional Client”), through which OpenInvest’s advisory services will be made available to Clients of the Institutional Clients (each a “Sub-Advised Client”) as described in Form ADV Part 2A. The Program is not offered directly to Sub-Advised Clients and such Clients should refer to OpenInvest’s Form ADV Part 2A for a complete description of OpenInvest’s role and responsibilities.

The Program has been designed by OpenInvest to permit Retail Clients to invest in securities based on their personal values. The automated system collects investment objectives, risk tolerance, and other information from Retail Clients, including information about their personal values, and then permits Retail Clients to opt in or out of specific companies or themes based on social awareness factors. The Program is implemented in an automated fashion and Retail Client portfolios are deployed and rebalanced automatically as applicable. OpenInvest does review trades proposed by the system prior to execution.

The annual fee for the Program is calculated monthly in arrears on the last business day of the month and billed during the first calendar week of the following month. Fees will be assessed pro rata in the event the portfolio management agreement is executed at any time other than the first business day of a calendar quarter.

Fees are based on an annual percentage rate of 50 basis points (0.5%) of assets under management. The overall cost you will incur if you participate in our Program may be higher or lower than you might incur by separately purchasing the types of securities available in the program due to varying commission rates, custodial fees, and other factors.

As OpenInvest absorbs certain transaction costs in wrap fee accounts, it may have a financial incentive not to place transaction orders in those accounts since doing so increases its transaction costs. Thus, an incentive exists to place trades less frequently in a wrap fee arrangement. Nonetheless, OpenInvest is committed to placing transactions in Retail Client accounts when it believes such transactions are appropriate. OpenInvest does not receive compensation from any third-party for placing Retail Clients in the Program.

Item 5 – Account Requirements and Types of Clients

The minimum investment required to open an account and participate in the Program is \$100.

Retail Clients are generally individuals or high net worth individuals but may include pension and profit-sharing plans, trusts, estates, charitable organizations, corporations and other business entities. Retail Clients are not required to have a certain amount of investment experience, personal wealth, or sophistication.

OpenInvest will require that Retail Clients establish brokerage accounts with Apex Clearing (“Apex”), a registered broker-dealer, member SIPC, to maintain custody of clients’ assets and to effect trades for their accounts. OpenInvest is independently owned and operated and not affiliated with Apex. Apex provides OpenInvest with access to brokerage services that are related to the execution of securities transactions, custody, analyses and reports, and access to mutual funds and other investments.

Item 6 – Portfolio Manager Selection and Evaluation

Retail Clients receive automated investment advice directly through the website and as such, they are not assigned individual portfolio managers. Since portfolio management is performed digitally and internally, OpenInvest is required to disclose the following information about A) Investment Strategies and Methods of Analysis, B) Risk Factors, and C) Proxy Voting.

A) *Investment Strategies and Methods of Analysis.* OpenInvest believes that passive investing to generally track market returns is the most efficient and cost-effective way by which many can invest. When opening an account, and through subsequent updates, Retail Clients have the opportunity , to select which social, and environmental, governance or other similar issues are important to them and then the OpenInvest system weights a custom portfolio to Retail Client specifications. In this manner, Retail Clients are able to allocate money to or away from companies for which they have a moral opinion. Using data from various sources, OpenInvest is able to categorize companies across a broad spectrum of social, environmental, governance or other similar to provide Retail Clients with a diversified and unique portfolio that speaks to their individual values while still remaining soundly invested.

Since OpenInvest does not conduct active trading strategies, Retail Client accounts are infrequently rebalanced due to market conditions. Retail Clients may, however, use the OpenInvest system to refine their value screening options from time to time, which can result in more frequent account rebalancing. OpenInvest also monitors, upon client instructions, for opportunities to harvest tax losses, which may result in more frequent rebalancing. Allocations are typically limited to publicly traded US equities, registered mutual funds, ETFs, and money market funds.

B) *Risk Factors.* Following are some of the primary, but not all, risks that Retail Clients may face when investing with OpenInvest.

Principal Investment Risks:

Investing in securities involves risk of loss that clients should be prepared to bear. OpenInvest cannot guarantee that it will achieve a Retail Client’s investment objective. Retail Clients’ returns will fluctuate, and you may lose money by investing with OpenInvest. Below are some more specific risks of investing with OpenInvest:

- **Market Risk.** Investors should have a long-term perspective and be able to tolerate potentially sharp declines in market value. The prices of securities held directly in a Retail Client account or by mutual

funds in which Retail Client accounts invest may decline in response to certain events taking place around the world, including those directly involving the companies whose securities are owned by the mutual funds; conditions affecting the general economy; overall market changes; local, regional or global political, social or economic instability; and currency, interest rate and commodity price fluctuations.

- **Equity Risk.** Equity securities tend to be more volatile than other investment choices. The value of an individual security or equity mutual fund can be more volatile than the market as a whole. This volatility affects the value of the client's overall portfolio. Small- and mid-cap companies are subject to additional risks. Smaller companies may experience greater volatility, higher failure rates, more limited markets, product lines, financial resources, and less management experience than larger companies. Smaller companies may also have a lower trading volume, which may disproportionately affect their market price, tending to make them fall more in response to selling pressure than is the case with larger companies. Investing in individual companies involves inherent risk. The major risks relate to the company's capitalization, quality of the company's management, quality and cost of the company's services, the company's ability to manage costs, efficiencies in the manufacturing or service delivery process, management of litigation risk, the company's ability to create shareholder value (i.e., increase the value of the company's stock price), exposure to government taxation, and domestic political risk.
- **Fixed Income Risk.** The issuer of a fixed income security may not be able to make interest and principal payments when due. Generally, the lower the credit rating of a security, the greater the risk that the issuer will default on its obligation. If a rating agency gives a debt security a lower rating, the value of the debt security may decline because investors demand a higher rate of return. As nominal interest rates rise, the value of fixed income securities is likely to decrease. A nominal interest rate is the sum of a real interest rate and an expected inflation rate.
- **Mutual Fund Risk.** OpenInvest may recommend open-end mutual funds and Exchange Traded Funds ("ETFs") to implement a client's portfolio. The funds may, in turn, invest in a broad range of equity and fixed income securities, including foreign securities and securities of issuers located in emerging markets. The funds may also invest in equity securities of any market capitalization including micro-, small- and mid-cap companies, real estate, commodities-related assets, fixed income securities of any maturity or credit quality, including high-yield, high-risk debt securities, ETFs, other mutual funds, money market funds and they may engage in leveraged or derivative transactions. OpenInvest does not control the investment strategies, policies or decisions of the mutual funds and, in the event of dissatisfaction with such a fund; our only option would be to liquidate clients' investments in that fund. Additionally, to the extent a Retail Client's account holds mutual funds or ETFs, the Retail Client will bear their portion of the fund's fees and expenses.
- **Foreign Securities Risk.** OpenInvest typically invests in publicly traded U.S. equities, registered funds and ETFs. However, funds held in a Retail Client account may invest in foreign securities. Foreign securities are subject to additional risks not typically associated with investments in domestic securities. These risks may include, among others, currency risk, country risks (political, diplomatic, regional conflicts, terrorism, war, social and economic instability, currency devaluations and policies that have the effect of limiting or restricting foreign investment or the movement of assets), different trading practices, less government supervision, less publicly available information, limited trading markets and greater volatility. To the extent that underlying funds invest in issuers located in emerging markets, the risk may be heightened by political changes, changes in taxation, or currency controls that could adversely affect the values of these investments. Emerging markets have been more volatile than the markets of developed countries with more mature economies.
- **ETF Risk.** A Retail Client portfolio may include investment in ETFs which may, in turn, invest in equities, bonds, and other financial vehicles. ETFs are investment companies whose shares are bought and sold on a securities exchange. Most ETF portfolios hold securities designed to track a particular market segment or index, and investments in ETFs may allow a portfolio to gain exposure to a portion of the U.S. or foreign market. Investing in ETFs involves risk. Specifically, ETFs, depending on the underlying portfolio and its size, can have wide price (bid and ask) spreads, thus diluting or negating any upward price movement of the ETF or enhancing any downward price movement. Also, ETFs require more frequent portfolio reporting by regulators and are thereby more susceptible to actions by hedge funds that could have a negative impact on the price of the ETF. Certain ETFs may employ leverage, which

creates additional volatility and price risk depending on the amount of leverage utilized, the collateral, and the liquidity of the supporting collateral. Further, the use of leverage (i.e., employing the use of margin) generally results in additional interest costs to the ETF. Certain ETFs are highly leveraged and therefore have additional volatility and liquidity risk. Volatility and liquidity can severely and negatively impact the price of the ETF's underlying portfolio securities, thereby causing significant price fluctuations of the ETF.

- **U.S. Government Securities.** Funds in which clients invest may invest in U.S. government securities. U.S. government securities include securities issued by the U.S. Treasury and by U.S. government agencies and instrumentalities. U.S. government securities may be supported by the full faith and credit of the United States.
- **Concentration Risks.** Retail Clients invest in diversified portfolios of publicly traded U.S. equities, open-end mutual funds and ETFs, but some clients may choose to have their investment portfolios heavily weighted in a particular type of security, industry, industry sector, geographic location or investment manager. Such Retail Clients will experience greater risk and volatility in their portfolios. Generally, Retail Clients who have diversified portfolios incur less volatility and fluctuation in portfolio value than those who have concentrated holdings. Concentrated holdings may offer the potential for higher gain, but also offer the potential for significant loss.

OpenInvest-Specific Risks:

- **Management Risk.** OpenInvest's investment approach may fail to produce the intended results. If our perception of the performance of a specific asset class or fund is not realized in the expected time frame, the overall performance of Retail Clients' portfolios may suffer.
- **Market Data.** OpenInvest relies on third parties for the provision of market statistics, fund details, performance, and related information and although these parties are generally reliable and reputable, there may be inaccuracies or discrepancies in the information that is beyond OpenInvest's control.
- **Client Information.** OpenInvest bases its recommendations solely on information provided by Retail Clients and relies on the Retail Client to provide accurate information. If the Retail Client provides inaccurate information, this will impact the quality and relevance of OpenInvest's recommendations. Further, Retail Clients are required to keep such information as up to date as possible so that OpenInvest can continue to provide relevant recommendations.
- **Proprietary Software.** OpenInvest provides recommendations to Retail Clients based on proprietary software that utilizes various quantitative and qualitative models. Such computer-generated recommendations, like all investment recommendations, may be subject to system error. No guarantee or representation is made that the investment recommendations will be successful. OpenInvest may simply fail to identify favorable investment opportunities or to evaluate those investments recommendations accurately that it does make to Retail Clients. Further, as market dynamics (for example, due to changed market conditions and participants) shift over time, a previously highly successful model may become outdated or inaccurate, perhaps without the computer software system recognizing the change before further recommendations are made. As such, Retail Clients are urged to verify any recommendations generated by the OpenInvest software platform with their own legal, financial, tax and economic advisors and to conduct their own due diligence on recommended Securities before following any recommendation.
- **Account Rebalancing.** Retail Client accounts may be rebalanced from time to time for reasons including, but not limited to, updates to the parent model portfolios, market performance, cash inflows/outflows, Retail Client adjustment of investment profile or risk tolerance, tax-loss harvesting, a change in underlying securities selected by OpenInvest, or adjustments to ESG preferences identified by a Retail Client. Account rebalancing may occur at any time and without notice to Retail Clients. Typically, accounts will be rebalanced a maximum of once per month, or more often as conditions dictate. Rebalancing for any reason may trigger taxable events and may cause accounts to hold versions of similar securities to ensure avoidance of wash sales. All rebalancing is automated by OpenInvest's proprietary software for simplicity of execution and is therefore subject to potential automation errors. In the event of a market downturn, it is possible that the rebalancing will sell securities in now overweight sectors to purchase additional shares of securities that are now underweight, which could exacerbate losses in such an environment. OpenInvest reserves the right, in

its full discretion, to halt account rebalancing in the best interests of Retail Clients.

- **Tax-Loss Harvesting.** OpenInvest will automatically engage in tax-loss harvesting. Notwithstanding this, OpenInvest does not provide any comprehensive tax advice and makes no guarantee that such tax-loss harvesting will be successful. Tax-loss harvesting efforts may potentially lead to Retail Clients holding multiple similar securities to ensure avoidance of wash sales. In some instances, this may affect account performance and may temporarily reduce portfolio diversification.

C) *Proxy Voting*

OpenInvest has adopted policies and procedures that address generally the guidelines it expects to follow in the exercise of its voting authority over proxies it receives on behalf of Clients. OpenInvest will vote Client proxies in the best interest of its Clients. OpenInvest will consider a number of factors to determine whether exercising the Clients' voting rights as to its securities is in the relevant Client's best interest.

When voting a proxy on behalf of a Client, OpenInvest will generally follow the Glass Lewis recommended position ("Proxy Voting Guidelines"). In accordance with fiduciary duty, the Firm retains discretion to vote contrary to Proxy Voting Guidelines in situations where it is deemed to be in the Client's best interest. OpenInvest attempts to identify conflicts of interest that may arise in the proxy decision making process. If a material conflict of interest over proxy voting arises between OpenInvest and a Client, OpenInvest will seek to resolve the conflict and vote the proxies in a manner that is in the relevant Client's best interest. OpenInvest will retain proxy voting books and records in accordance with Rule 206(4)-6.

OpenInvest will provide, upon request, a copy of those policies and procedures and/or information concerning its voting record on account proxy matters. Such a request may be made by submitting a written request to OpenInvest at the address on the cover page of this brochure.

With respect to issuers for which OpenInvest has proxy voting authority, OpenInvest will complete review of the General Voting Guidelines and Conflicts of Interest Guidelines (each as further detailed in sections below) and either:

- Default to the Glass Lewis recommended position ("Proxy Voting Guidelines"); or
- The Firm may choose to engage Clients with respect to a subset of particular votes as further detailed below in General Voting Guidelines in section below.

Item 7 – Client Information Provided to Portfolio Managers

OpenInvest, as the sponsor and portfolio manager of the Program, will not provide Retail Client information to other portfolio managers, except for those Sub-Advised Clients introduced by Institutional Clients in which case the information will continue to be exchanged with the Institutional Clients. OpenInvest will receive Sub-Advised Client information from Institutional Clients with prior written permission from each such Client.

For a copy of OpenInvest's Privacy Policy please see the website at <https://http://www.openinvest.com/privacy-policy>

Item 8 – Client Contact with Portfolio Managers

Retail Clients may communicate with OpenInvest staff regarding the OpenInvest's investment advice and risks without restriction.

Sub-Advised Clients that engage with OpenInvest's advisory services through an Institutional Client may consult their respective financial institution for questions about OpenInvest's investment advice and risks.

Item 9 – Additional Information

Disciplinary Information

OpenInvest has no material events to disclose.

Code of Ethics, Participation or Interest in Client Transactions and Personal Trading

OpenInvest has adopted a Code of Ethics for all supervised persons of the firm describing its high standard of business conduct and fiduciary duty to its clients. The Code of Ethics includes provisions relating to the confidentiality of client information, a prohibition on insider trading, a prohibition of rumor mongering, restrictions on the acceptance of significant gifts, the reporting of certain gifts and business entertainment items, and personal securities trading procedures, among other things.

OpenInvest requires all supervised persons to acknowledge the terms of the Code of Ethics annually, or as amended.

Personal Investing by OpenInvest Personnel

OpenInvest anticipates that in certain circumstances, it may recommend the purchase or sale of securities, consistent with the client's investment objectives, in a security in which OpenInvest, its affiliates and/or clients, directly or indirectly, have a position of interest.

OpenInvest's employees and associated persons are required to follow its Code of Ethics. Subject to satisfying this policy and applicable laws, officers, directors and employees of OpenInvest and its affiliates may trade for their own accounts in securities which are recommended to and/or purchased for Retail Clients. The Code of Ethics is designed to assure that the personal securities transactions, activities and interests of the employees of OpenInvest will not interfere with:

- Making decisions in the best interest of advisory clients
- Implementing such decisions while, at the same time, allowing employees to invest for their own accounts.

Under the Code certain classes of securities have been designated as exempt transactions, based upon a determination that these would not materially interfere with the best interest of Retail Clients. All trades in Initial Public Offerings (IPOs) or private securities require pre-clearance. In addition, the Code of Ethics imposes a preapproval requirement on employee trading, restricting employees from buying or selling a security on the same day before OpenInvest trades that security for a Retail Client. However, because the Code of Ethics does permit employees to invest in the same securities as Retail Clients, there is a possibility

that employees might benefit from market activity by a Retail Client in a security held by an employee.

Employee trading is continually monitored under the Code of Ethics to reasonably prevent conflicts of interest between OpenInvest and its Retail Clients. OpenInvest's Retail Clients or prospective Retail Clients may request a copy of the firm's Code of Ethics by contacting compliance@openinvest.com.

Trade Rotation

OpenInvest maintains a trade rotation policy aimed at ensuring fairness and equitable treatment over time to all accounts. When possible, trades across multiple accounts are blocked together and executed as a unit, then allocated pro-rata to accounts. When block trading is not possible, either due to brokerage restrictions or other factors, the order in which accounts are traded is randomized. For Model Portfolio updates, the order in which model subscribers receive updates is randomized.

OpenInvest monitors execution quality and fairness across accounts by analyzing market impact, implementation drift from target, tracking error, and other factors. With OpenInvest's current strategies, benchmarks, and trading activity, market impact and execution fairness is rarely a material factor.

Review of Client Accounts

OpenInvest's Operations team periodically, but no less frequently than quarterly, reviews Retail Client accounts to ensure that they are in-line with the expected portfolio output based on Retail Client inputs. As part of this quarterly review,

OpenInvest's Operations team also reviews account performance and overall firm process in response to certain key events or market conditions, such as a significant market drawdown, elevated volatility, or general and economic instability. OpenInvest may alter standard operational processes and configuration such as rebalance timing, liquidity constraints, cash buffers, among others, during such times.

OpenInvest's ESG team periodically, but no less frequently than annually, reviews ESG scoring methodology and data quality. As a result of these reviews, OpenInvest may make changes to the scores or scoring process of causes, which may result in securities being added or removed from client portfolios at the next rebalance. OpenInvest generally reviews the overall portfolio impact of these ESG changes but does not assess them at the detailed client level.

OpenInvest does not review the selection of retail client preferences. Retail Clients may select causes, inclusions or exclusions, that may result in unexpected, unintuitive, or unintended portfolio outcomes.

OpenInvest's Operations team, using both human review and algorithmic / automated solutions, monitors and constrains certain risk and trading parameters such as security liquidity, exchange-specific rules, account turnover, and wash sale restrictions.

On a continual basis, OpenInvest's product, analytics, and engineering teams monitor and review the performance of the core algorithms and strategy. Changes and improvements to the strategies implemented by the algorithms are rolled out periodically and their impact is assessed at the client level through the review mechanisms described above. At times, the adoption of new features or capabilities will be rolled out on an "opt in" basis and will be communicated and coordinated with Advisers.

Client Referrals and Other Compensation

OpenInvest may enter into third-party solicitor arrangements whereby it pays a referral fee for client referrals.

Any such arrangements are consistent with Rule 206(4)-3 of the Advisers Act. Under no circumstances is any Retail Client disadvantaged by the payment of such fees. Retail Clients of OpenInvest whose accounts involve third-party solicitor arrangements are advised of the arrangement in writing and do not pay higher fees as a result of the arrangement.

Financial Information

OpenInvest does not require or solicit prepayment of its management fees from clients six months or more in advance. OpenInvest is an early-stage financial technology company and, as such, may not always be able to meet its operating capital needs solely from management and other service fees. As a result, from time to time, OpenInvest may seek capital to meet its operating capital needs. If OpenInvest's fundraising is not successful, OpenInvest may not be able to meet its contractual commitments to its Clients. OpenInvest has not been the subject of a bankruptcy petition.
