Item 4. Advisory Business

SLAM is an investment adviser with its principal place of business in Singapore. It commenced operations in February 2011. As of June 30 2022, SLAM managed approximately \$823,800,000 of client assets on a discretionary basis and \$7,000,000 on a non-discretionary basis.

As of 30th June 2021, SLAM is 100% owned by Rupert James Philip Morton. Mr. Morton acts as the Chief Executive Officer and Chief Investment Officer of SLAM.

As of 1st July 2021, SLAM is 80% owned by HB8 Holding Pte Ltd, a Singapore registered company, which is 59.29% owned by Florian Weidinger giving Mr. Weidinger 47.43% control of SLAM. Mr. Morton continues to act as the Chief Executive Officer and Chief Investment Officer of SLAM.

As of 15th February 2022, Mr. Morton resigned as Chief Executive Officer of SLAM and Mr. Weidinger assumed the role as Chief Executive Officer and joined the Board of Directors of SLAM. Mr. Morton continues to act as the Chief Investment Officer of SLAM.

SLAM provides portfolio based investment management services on a discretionary and non-discretionary basis to its clients which, at June 30 2022, comprised pooled investment vehicles, other investment managers, a private investment company and high net worth individuals. It also offers these services to companies and institutions with separately managed accounts.

SLAM provides its investment management services to clients based on specific investment objectives and strategies and, under certain circumstances, SLAM may agree to tailor advisory services to those clients.

Clients with separately managed accounts may impose restrictions on SLAM investing in certain securities or certain types of securities.

Item 5. Fees and Compensation

Asset-Based Compensation

SLAM charges each client an investment management fee based on the value of the client's assets under management. For pooled investment vehicles where SLAM is the investment manager these fees range between 0.85 percent per annum and 1.75% percent per annum depending on the investment strategy followed. For managed accounts and advisory agreements these fees vary depending on the size of the client account and range between 0.12 percent per annum and 1.00 percent per annum. SLAM also provides non-discretionary advice to a private investment company for which it charges a monthly flat fee.

Investment management fees are charged either monthly or each quarter in arrears and are normally based on the total market value of the assets in the client account (including net unrealized appreciation or depreciation of investments and cash, cash equivalents and accrued interest) on the last day of the month or quarter.

If a new client account is established during a month or a client makes an addition to its account during a month, the investment management fee will be prorated for the number of days remaining in the month. If a client's investment management agreement is terminated or a withdrawal is made from a client account during a month, the fee payable to SLAM will be calculated based on the value of the assets on the termination date or withdrawal date and prorated for the number of days during the month in which the investment management arrangement was in effect or such amount was in the account.

These fees are negotiable.

Performance-Based Compensation

SLAM may also be paid a performance-based fee, which is compensation that is based on a share of capital gains on or capital appreciation of the assets of a client. This compensation ranges between 10% and 20% of the capital gains or the capital appreciation. In the case of managed accounts performance fees may be calculated by reference to performance compared to a specified benchmark. Under certain circumstances, receipt of performance-based compensation may be subject to a hurdle rate of 6%.

These fees are negotiable.

In the case of certain managed accounts SLAM deducts the investment management fee and the performance-based fee from the client account by instructing the client's custodian. In all other cases SLAM does not deduct the investment management fees and performance fees from client accounts. Instead, SLAM bills clients. The client may select the method by which it would like to pay the investment management and performance fees. SLAM usually bills clients for investment management fees monthly.

In addition to paying investment management fees and, if applicable, performance-based fees, client accounts will also be subject to other investment expenses such as custodial charges, brokerage fees, commissions and related costs; interest expenses; taxes, duties and other governmental charges; transfer and registration fees or similar expenses; costs associated with foreign exchange transactions; other portfolio expenses; and costs, expenses and fees (including, investment advisory and other fees charged by investment advisers with, or funds in, which the client's account invests) associated with products or services that may be necessary or incidental to such investments or accounts.

Item 6. Performance-Based Fees and Side-by-Side Management

SLAM and its investment personnel provide investment management services to multiple portfolios for multiple clients. SLAM is entitled to be paid performance-based compensation by its private pooled investment vehicle clients and certain other client accounts. In addition, SLAM's investment personnel are typically compensated on a basis that includes a performance-based component. In addition, certain client accounts may have higher asset-based fees or more favorable performance-based compensation arrangements than other accounts. When SLAM and its investment personnel manage more than one client account a potential exists for one client account to be favored over another client account. SLAM and its investment personnel may have a greater incentive to favor client accounts that pay SLAM (and indirectly the portfolio manager) performance-based compensation or higher fees.

SLAM has adopted and implemented policies and procedures intended to address conflicts of interest relating to the management of multiple accounts, including accounts with multiple fee arrangements, and the allocation of investment opportunities.

SLAM's investment mandates currently apply distinct and differing investment criteria. Its policy for dealing with situations where mandates are similar, is to review investment decisions for the purpose of ensuring that all accounts are treated equitably. The performance of similarly managed accounts is required to be regularly compared to determine whether there are any unexplained significant discrepancies. SLAM's procedures relating to the allocation of investment opportunities require that substantially similarly managed accounts participate in investment opportunities pro rata based on asset size subject to cash availability in the clients' accounts and require that, to the extent orders are aggregated, the client orders are price-averaged. SLAM's procedures also require the objective allocation of limited opportunities (such as initial public offerings and private placements) to ensure fair and equitable allocation among accounts. These areas are monitored by SLAM's Chief Compliance Officer.

Item 7. Types of Clients

SLAM's clients consist of high net worth individuals, other investment managers, private funds and other institutions such as sovereign wealth funds.

SLAM requires that a client invests a minimum of \$1 million (subject to regulatory requirements) to open an account and to maintain a minimum account size of \$1 million. If the account size falls below the minimum requirement due to market fluctuations only, a client will not be required to invest additional funds with SLAM to meet the minimum account size. The minimum amount for an advisory account is \$1,000,000.

With respect to any client that is a pooled investment vehicle, any initial and additional subscription minimums, are disclosed in the offering memorandum for the pooled investment vehicle.

Item 8. Methods of Analysis, Investment Strategies and Risk of Loss

A. Methods of Analysis and Investment Strategies.

SLAM utilizes a variety of methods and strategies to make investment decisions and recommendations. The methods of analysis include fundamental research including desk top reviews of available financial information and financial modeling and proprietary valuation analysis, as well as company visits, complimented by technical analysis.

SLAM employs the following investment strategies:

Buy and Hold. SLAM primarily engages in a buy and hold investment strategy wherein SLAM buys securities and holds them for a relatively longer period of time (the initial expectation is 12-36 months), regardless of short-term factors such as fluctuations in the market or volatility of the stock price.

Equity. SLAM's equity strategies focus on a subset of investment styles, including growth, absolute fundamental value and relative value. Some are global in scope while others are focused on Asia or specific Asian countries.

Fundamental Value. SLAM engages in a fundamental value investment strategy wherein SLAM attempts to invest in asset-oriented securities it believes are undervalued by the market.

Relative Value. SLAM pursues relative value strategies by taking long positions in securities believed to be undervalued relative to comparable companies or sector multiples and short positions in securities believed to be overvalued.

Growth. SLAM engages in a growth investment strategy wherein SLAM attempts to select securities of a company whose earnings and net asset value SLAM expects to grow at an above-average rate compared to the company's specific industry or the overall market and where valuation multiples are lower than these growth rates.

Fixed Income. SLAM invests to a limited degree in fixed income and convertible debt instruments across the duration (from money market and short bond to intermediate to long bond) and credit (from investment grade to high yield) spectrums.

Hedging. SLAM utilizes derivatives, futures and forward contracts for profit and risk management purposes.

Short Selling. SLAM engages in short selling strategies. In a short sale transaction, SLAM sells a security it does not own in anticipation that the market price of that security will decline. SLAM makes short sales as a form of hedging to offset potential declines in long positions in long positions in similar securities, in order to maintain flexibility and for profit.

Environmental, Social and Governance (ESG). SLAM engages in ESG strategies. For purposes of the particular strategy, SLAM assesses an issuer's engagement on one or more of the following factors within each category: (i) environmental assessment categories include climate change, natural resource use and waste management; (ii) social evaluation categories include human capital, product safety and sourcing practices; and (iii) governance assessment categories include corporate governance and business ethics. An issuer's adherence to international norms and principles, such as the UN Principles for Responsible Investment, and involvement in major ESG controversies are also considerations.

SLAM encourages issuers in which certain of its clients have invested to improve their ESG performance and transparency through shareholder engagement. Engagement strategies include dialogue with company management and proxy voting, where SLAM holds the ability to vote client shares.

In September 2021, SLAM became a signatory to the UN Principles for Responsible Investment.

The range of currencies contained in SLAM client accounts includes most major currencies and reflects the geographic location of the relevant instrument.

These strategies and investments involve risk of loss to clients and clients must be prepared to bear the loss of their entire investment.

B. Material Risks (Including Significant, or Unusual Risks) Relating to Investment Strategies.

Issuer-Specific Changes. Changes in the financial condition of an issuer or counterparty, changes in specific economic or political conditions that affect a particular type of security or issuer, and changes in general economic or political conditions can increase the risk of default by an issuer or counterparty, which can affect a security's or instrument's value. The value of securities of smaller, less well-known issuers can be more volatile than that of larger issuers. Smaller issuers can have more limited product lines, less effective management, a more vulnerable competitive position, and limited financial resources, any one of which can increase the risk level of an investment. The shares of smaller companies can be more prone to declines in trading volumes in times of declining prices.

Relative Value Risk. In the event that the perceived mispricings underlying SLAM's relative value trading positions were to fail to converge toward, or were to diverge further from, relationships expected by SLAM, client accounts may incur a loss.

Lack of Diversification. Client accounts will not necessarily be diversified among a wide range of types of securities, countries or industry sectors. Accordingly, client portfolios may be subject to more rapid change in value than would be the case if SLAM were required to maintain a wider diversification among types of securities and other instruments, geographic areas or sectors.

Interest Rate Risks. Generally, the value of fixed-income securities changes inversely with changes in interest rates. As interest rates rise, the market value of fixed-income securities tends to decrease. Conversely, as interest rates fall, the market value of fixed-income securities tends to increase. This risk is greater for long-term securities than for short-term securities. High yield shares may also experience a similar relationship, though the degree of impact is generally lower and thus the degree of risk may vary.

Hedging. There can be no assurances that a particular hedge is appropriate, or that risk is measured properly. Further, while SLAM may enter into hedging transactions to seek to reduce risk, such transactions may result in poorer overall performance and increased (rather than reduced) risk for SLAM's investment portfolios than if SLAM did not engage in any such hedging transactions.

Short Selling Risk. Short selling transactions expose SLAM to the risk of loss in an amount greater than the initial investment, and such losses can increase rapidly and without effective limit. There is the risk that the securities borrowed by SLAM in connection with a short sale would need to be returned to the securities lender on short notice. If such request for return of securities occurs at a time when other short sellers of the subject security are receiving similar requests, a "short squeeze" can occur, wherein SLAM might be compelled, at the most disadvantageous time, to replace the borrowed securities previously sold short with purchases on the open market, possibly at prices significantly in excess of the proceeds received earlier.

Distressed Situation Risk. Investment in distressed situations exposes the client to significant risks, over and above the normal operating and financial risks including: the difficulty in obtaining information as to the issuer's true condition; regulatory risk, including laws relating to fraudulent conveyances, inaccurate or fictitious accounts, voidable preferences, lender liability and bankruptcy; litigation risk; liquidity risk; and collection risk. Moreover, to the extent client accounts are invested in sovereign debt obligations, those investments will be subject to additional risks and considerations not present in private distressed situations, including the uncertainties involved in enforcing and collecting debt obligations against sovereign nations, which are affected by world events and other factors outside of the control of SLAM.

Environmental, Social and Governance (ESG) Risk: SLAM's ESG strategies may underperform investment strategies that do not consider ESG factors. SLAM may forgo otherwise attractive investment opportunities or increase or decrease the client's exposure to certain types of issuers or certain sectors due to SLAM's consideration of ESG factors. In addition, in evaluating an investment, SLAM is dependent upon information that may be incomplete, inaccurate or unavailable, which could adversely affect SLAM's ability to apply its ESG criteria.

C. Risks Associated With Types of Securities that are Primarily Recommended (Including Significant, or Unusual Risks).

Equity Securities. The value of equity securities fluctuates in response to issuer, political, market, and economic developments. Fluctuations can be dramatic over the short as well as long term, and different parts of the market and different types of equity securities can react differently to these developments. For example, large cap stocks can react differently from small cap stocks, and "growth" stocks can react differently from "value" stocks. Issuer, political, or economic developments can affect a single issuer, issuers within an industry or economic sector or geographic region, or the market as a whole. Changes in the financial condition of a single issuer can impact the market as a whole. Terrorism and related geo-political risks have led, and may in the future lead, to increased short-term market volatility and may have adverse long-term effects on world economies and markets generally.

Emerging Markets. The risks of foreign investments typically are greater in less developed countries, sometimes referred to as emerging markets. For example, political and economic structures in these countries may be less established, can be open to abuse, and may change rapidly. These countries also are more likely to experience high levels of inflation, deflation, currency devaluation or regulatory intervention which can harm their economies and securities markets and increase volatility. Restrictions and/or taxes on trading of currencies and/or financial instruments that may be imposed by emerging market countries will have an adverse effect on the value of the securities of companies that trade or operate in such countries. Lower reporting requirements and less rigorous enforcement can make reporting vulnerable to inaccuracy or even manipulation.

Exchange Traded Funds (ETFs): ETFs represent shares of ownership in either funds or unit investment trusts that hold portfolios of common stocks, bonds or other instruments, which are designed to generally correspond to the price and yield performance of an underlying index. A primary risk factor relating to ETFs is that the general level of stock or bond prices may decline, thus affecting the value of an equity or fixed income ETF, respectively. An ETF may also be adversely affected by the performance of the specific sector or group of industries on which it is based. Moreover, although ETFs are designed to provide investment results that generally correspond to the price and yield performance of their underlying indices, ETFs may not be able to exactly replicate the performance of the indices because of various sources of tracking error, including their expenses and a number of other factors.

Non-U.S. Securities. Foreign securities, foreign currencies, and securities issued by U.S. entities with substantial foreign operations can involve additional risks relating to political, economic, or regulatory conditions in foreign countries. These risks include fluctuations in foreign currencies; withholding or other taxes; trading, settlement, custodial, and other operational risks; and the less stringent investor protection and disclosure standards of some foreign markets. One or more of these factors can make foreign investments, especially those in emerging markets, more volatile and potentially less liquid than U.S. investments. In addition, foreign markets can perform differently from the U.S. market.

Currency Risks. Clients' investments are likely to be denominated in several currencies, which may or may not be linked to the US Dollar. SLAM may hedge currency risks back to the US dollar against other currencies such as the UK pound Sterling or the Euro and Yen, but will only do so where, in SLAM's opinion, it is practicable and economic to do so. Certain currencies especially those of emerging markets are not easy to hedge or hedging may only be available at such cost as to be unattractive. Clients will therefore be exposed to currency fluctuations.

REITs. REITs in which SLAM invests client accounts are affected by underlying real estate values, which may have an exaggerated effect to the extent that REITs in which SLAM invests concentrate investments in particular geographic regions or property types. Investments in REITs are also subject to the risk of interest rate volatility. Further, rising interest rates will cause investors in REITs to demand a higher annual yield from future distributions, which will in turn decrease market prices for equity securities issued by REITs. REITs are subject to risks inherent in operating and financing a limited number of projects because they are dependent upon specialized management skills, and have limited diversification. REITs depend generally on their ability to generate cash flow to make distributions to investors.

Natural resource investments. Companies exploring for, developing and producing natural resources are affected by business, financial market or legal uncertainties that could affect the value of and return

on their investments. Prices of such investments may be volatile, and a variety of factors that are inherently difficult to predict, such as domestic or international economic, social and political developments including changes in regulation, tax or property rights, may significantly affect their value.

Technology Investments. Investments in technology stocks are especially vulnerable to the rapid pace of change and to new developments that may render their product or services obsolete. Thus investment in such securities usually involves a higher level of volatility and a higher degree of risk, than in most other types of equity.

Illiquid Instruments. Certain instruments may have no readily available market or third-party pricing. Reduced liquidity may have an adverse impact on market price and SLAM's ability to sell particular securities when necessary to meet liquidity needs or in response to a specific economic event, such as the deterioration of creditworthiness of an issuer. Reduced liquidity in the secondary market for certain securities may also make it more difficult for SLAM to obtain market quotations based on actual trades for the purpose of valuing a fund's portfolio.

Distressed Securities. Securities of distressed companies are generally more likely to become worthless than the securities of more financially stable companies. In addition, evaluating credit risk for foreign debt securities involves greater uncertainty because credit rating agencies throughout the world have different standards, making comparison across countries difficult.

Fixed-Income and Debt Securities. Investment in fixed-income and debt securities such as investment grade corporate bonds, non-investment grade corporate bonds, loans, sovereign bonds and U.S. government debt securities and financial instruments that reference the price or interest rate associated with these fixed income securities, subject a client's portfolio to the risk that the value of these securities overall will decline because of rising interest rates. Similarly, portfolios that hold such securities are subject to the risk that the portfolio's income will decline because of falling interest rates. Investments in these types of securities will also be subject to the credit risk created when a debt issuer fails to pay interest and principal in a timely manner, or that negative perceptions of the issuer's ability to make such payments will cause the price of that debt to decline. Lastly, investments in debt securities will also subject the investments to the risk that the securities may fluctuate more in price, and are less liquid than higher-rated securities because issuers of such lower-rated debt securities are not as strong financially, and are more likely to encounter financial difficulties and be more vulnerable to adverse changes in the economy.

Derivatives. Swaps, and certain options and other custom derivative or synthetic instruments are subject to the risk of nonperformance by the counterparty to such instrument, including risks relating to the financial soundness and creditworthiness of the counterparty. In addition, investments in derivative instruments may require a high degree of leverage, meaning the overall contract value (and, accordingly, the potential for profits or losses in that value) is much greater than the modest deposit used to buy the position in the derivative contract. Derivative securities can also be highly volatile. The prices of derivative instruments and the investments underlying the derivative instruments may fluctuate rapidly and over wide ranges and may reflect unforeseeable events or changes in conditions, none of which can be controlled by the client or SLAM. Further, transactions in derivative instruments may not be undertaken on recognized exchanges, and will expose the client's account to greater risks than regulated exchange transactions that provide greater liquidity and more accurate valuation of securities.

D. Additional Risks

Cybersecurity Risk. The information and technology systems of SLAM and of key service providers to SLAM and its clients, including banks, broker-dealers, custodians and their affiliates, may be vulnerable to potential damage or interruption from computer viruses, network failures, computer and telecommunication failures, infiltration by unauthorized persons and security breaches, usage errors by their respective professionals, power outages and catastrophic events such as fires, tornadoes, floods, hurricanes and earthquakes. For instance, cyber-attacks may interfere with the processing or execution of SLAM's transactions, cause the release of confidential information, including private information about clients, subject SLAM or its affiliates to regulatory fines or financial losses, or cause reputational damage. Additionally, cyber-attacks or security breaches (e.g. hacking or the unlawful withdrawal or transfer of funds), affecting any of SLAM's key service providers, may cause significant harm to SLAM, including the loss of capital. Similar types of cybersecurity risks are also present for issuers of securities

in which SLAM may invest. These risks could result in material adverse consequences for such issuers, and may cause SLAM's investments in such issuers to lose value. Although SLAM has implemented various measures designed to manage risks relating to these types of events, if these systems are compromised, become inoperable for extended periods of time or cease to function properly, it may be necessary for SLAM to make a significant investment to fix or replace them and to seek to remedy the effect of these issues. The failure of these systems and/or disaster recovery plans for any reason could cause significant interruptions in the operations of SLAM or its clients accounts and result in a failure to maintain the security, confidentiality or privacy of sensitive data, including personal information, which may result in identity theft.

Risk Management. Although SLAM attempts to identify, monitor and manage significant risks, these efforts do not take all risks into account and there can be no assurance that these efforts will be effective. Moreover, many risk management techniques are based on historical market behavior, but future market behavior may be entirely different and, accordingly, the risk management techniques employed on behalf of clients may be incomplete or altogether ineffective. Any inadequacy or failure in risk management efforts could result in material losses to clients.

Effect of Health Crises and Other Catastrophic Events. Health crises, such as pandemic and epidemic diseases, as well as other catastrophes that interrupt the expected course of events, such as natural disasters, war or civil disturbance, acts of terrorism, power outages and other unforeseeable and external events, and the public response to or fear of such diseases or events, have and may in the future have an adverse effect on clients' investments and SLAM's operations. For example, any preventative or protective actions that governments may take in respect of such diseases or events may result in periods of business disruption, inability to obtain raw materials, supplies and component parts, and reduced or disrupted operations for client portfolio companies. In addition, under such circumstances the operations, including functions such as trading and valuation, of SLAM and other service providers could be reduced, delayed, suspended or otherwise disrupted. Further, the occurrence and pendency of such diseases or events could adversely affect the economies and financial markets either in specific countries or worldwide.

Item 9. Disciplinary Information

This Item is inapplicable.

Item 10. Other Financial Industry Activities and Affiliations

Certain of the private funds for which SLAM serves as investment manager may enter into additional agreements or “side letters”, with certain prospective or existing shareholders whereby such shareholders may be subject to terms and conditions that are more advantageous than those set forth in the offering memorandum for the respective fund. For example, such terms and conditions may provide for special rights to make future investments in other investment vehicles, a waiver or rebate in fees or redemption penalties to be paid by the shareholder, rights to receive reports from the fund on a more frequent basis or that include information not provided to other shareholders (including, without limitation, more detailed information regarding portfolio positions) and such other rights as may be negotiated with such shareholders. The modifications are solely at the discretion of SLAM and may, among other things, be based on the size of the shareholder’s investment in their respective fund, an agreement to maintain such investment in the fund for a significant period of time, or other similar commitment by a shareholder to the fund.

Item 11. Code of Ethics, Participation or Interest in Client Transactions and Personal Trading

SLAM has adopted a Code of Ethics (the "Code") that obligates SLAM and its related persons to put the interests of SLAM's clients before their own interests and to act honestly and fairly in all respects in their dealings with clients. All of SLAM's directors and employees and its related persons are also required to comply with applicable federal securities laws. Clients or prospective clients may obtain a copy of the Code by contacting Michael Paganussi (Chief Compliance Officer) by email at michaelp@slam.com.sg or by telephone at +65 6513 4103. See below for further provisions of the Code as they relate to the pre-clearing and reporting of securities transactions by SLAM's supervised and related persons.

SLAM and its supervised persons may give and/or receive gifts, services or other items to/from any person or entity that does business with or potentially could conduct business with or on behalf of SLAM. SLAM has adopted policies and procedures which includes disclosure of gifts and business entertainment in excess of certain de minimis thresholds and pre-clearance by the Chief Compliance Officer prior to giving/receiving gifts above a certain de minimis threshold.

SLAM, in the course of its investment management and other activities (e.g., board or creditor committee service), may come into possession of confidential or material nonpublic information about issuers, including issuers in which SLAM or its related persons have invested or seek to invest on behalf of clients. SLAM is prohibited from improperly disclosing or using such information for its own benefit or for the benefit of any other person, regardless of whether such other person is a client. SLAM maintains and enforces written policies and procedures that prohibit the communication of such information to persons who do not have a legitimate need to know such information and to assure that SLAM is meeting its obligations to clients and remains in compliance with applicable law. In certain circumstances, SLAM may possess certain confidential or material, nonpublic information that, if disclosed, might be material to a decision to buy, sell or hold a security, but SLAM will be prohibited from communicating such information to the client or using such information for the client's benefit. In such circumstances, SLAM will have no responsibility or liability to the client for not disclosing such information to the client (or the fact that the SLAM possesses such information), or not using such information for the client's benefit, as a result of following SLAM's policies and procedures designed to provide reasonable assurances that it is complying with applicable law.

Investments by SLAM or its related persons in the same securities (or related securities, e.g., warrants, options or futures) that SLAM or a related person recommends to clients could present a conflict where, because of the information SLAM has, SLAM or its related person are in a position to trade in a manner that could adversely affect clients (e.g., place their own trades before or after client trades are executed in order to benefit from any price movements due to the clients' trades). In addition to affecting SLAM's or its related person's objectivity, these practices by SLAM or its related persons may also harm clients by adversely affecting the price at which the clients' trades are executed.

SLAM has adopted the following procedures in an effort to minimize such conflicts: SLAM prohibits any acquisitions of such securities by itself or its related persons that are held in client portfolios. In relation to disposals of any such security by a member of staff or a related person SLAM requires that all such transactions be pre-approved by its Chief Compliance Officer who may deny permission to execute the transaction if such transaction will have any adverse economic impact on one of its clients.

SLAM's Code prohibits it or its related persons from executing personal securities transactions of any kind in any securities on a restricted securities list maintained by the Chief Compliance Officer. All SLAM's related persons are required to disclose their securities transactions on a quarterly basis. All of SLAM's related persons are also required to provide broker statements on a quarterly basis and an annual confirmation that they have provided all relevant information. Trading in employee accounts is reviewed by the Chief Compliance Officer and compared with transactions for the client accounts and reviewed against the restricted securities list.

Item 12. Brokerage Practices

SLAM considers a number of factors in selecting a broker-dealer to execute transactions (or series of transactions) and determining the reasonableness of the broker-dealer's compensation. Such factors include, but are not limited to, the actual executed price and the commission, the size and type of the transaction, the difficulty of execution and the ability to handle difficult trades, reputation, financial strength and stability, efficiency of execution and error resolution. In selecting a broker-dealer to execute transactions (or series of transactions) and determining the reasonableness of the broker-dealer's compensation, SLAM need not solicit competitive bids and does not have an obligation to seek the lowest available commission cost. It is not SLAM's practice to negotiate "execution only" commission rates, thus a client may be deemed to be paying for research, brokerage or other services provided by a broker-dealer which are included in the commission rate. SLAM's Chief Compliance Officer and portfolio managers meet periodically to evaluate the broker-dealers used by SLAM to execute client trades using the foregoing factors.

SLAM and/or its related persons may receive research or other products or services other than execution from broker-dealers in connection with client securities transactions. This is known as a "soft dollar" relationship. SLAM limits the use of "soft dollars" to obtain research and brokerage services to services that constitute research and brokerage within the meaning of Section 28(e) of the Securities Exchange Act of 1934, as amended ("Section 28(e)").

Research services within Section 28(e) may include, but are not limited to, research reports (including market research); certain financial newsletters and trade journals; software providing analysis of securities portfolios; corporate governance research and rating services; attendance at certain seminars and conferences; discussions with research analysts; meetings with corporate executives; consultants' advice on portfolio strategy; data services (including services providing market data, company financial data and economic data); advice from broker-dealers on order execution; and certain proxy services. Brokerage services within Section 28(e) may include, but are not limited to, services related to the execution, clearing and settlement of securities transactions and functions incidental thereto (i.e., connectivity services between an adviser and a broker-dealer and other relevant parties such as custodians); trading software operated by a broker-dealer to route orders; software that provides trade analytics and trading strategies; software used to transmit orders; clearance and settlement in connection with a trade; electronic communication of allocation instructions; routing settlement instructions; post trade matching of trade information; and services required by the SEC or a self-regulatory organization such as comparison services, electronic confirms or trade affirmations.

When SLAM uses client commissions to obtain Section 28(e) eligible research and brokerage products and services SLAM's Chief Compliance Officer and portfolio managers meet periodically to review and evaluate its soft dollar practices and to determine in good faith whether, with respect to any research or other products or services received from a broker-dealer, the commissions used to obtain those products and services were reasonable in relation to the value of the brokerage, research or other products or services provided by the broker-dealer. This determination will be viewed in terms of either the specific transaction or SLAM's overall responsibilities to the accounts or portfolios over which SLAM exercises investment discretion.

The use of client commissions (or markups or markdowns) to obtain research and brokerage products and services raises potential conflicts of interest. For example, SLAM will not have to pay for the products and services itself. This could create an incentive for SLAM to select or recommend a broker-dealer based on its interest in receiving those products and services; although the client fee structure creates a strong incentive for SLAM to maximize investment performance.

Research and brokerage services obtained by the use of commissions arising from a client's portfolio transactions may be used by SLAM in its other investment activities, including, for the benefit of other client accounts. SLAM does not seek to allocate soft dollar benefits to client accounts proportionately to the soft dollar credits the accounts generate.

During SLAM's last fiscal year, as a result of client brokerage commissions (or markups or markdowns) SLAM and/or its related persons acquired research reports (including market research); certain financial newsletters and trade journals; corporate governance research and rating services; attendance at certain seminars and conferences; discussions with research analysts; meetings with corporate

executives; consultants' advice on portfolio strategy; data services (including services providing market data, company financial data and economic data); advice from broker-dealers on order execution; and certain proxy services. However, in relation to all broker organized conference and client visits either SLAM or SLAM's related persons pay for travel and associated costs.

SLAM sometimes purchases or sells the same security for more than one of its clients at or near the same time and using the same executing broker. In these circumstances it is SLAM's practice, where possible, to aggregate client orders for the purchase or sale of the same security submitted contemporaneously/at or near the same time for execution using the same executing broker. Such aggregation may enable SLAM to obtain for clients a more favorable price or a better commission rate based upon the volume of a particular transaction.

When an aggregated order is completely filled, SLAM allocates the securities purchased or proceeds of sale pro rata among the participating accounts, based on the purchase or sale order. Adjustments or changes may be made under certain circumstances, such as to avoid odd lots or excessively small allocations, or depending on the liquidity of the particular security in client portfolios. If the order at a particular broker is filled at several different prices, through multiple trades, generally all such participating accounts will receive the average price and pay the average commission, subject to odd lots, rounding, and market practice. If an aggregated order is only partially filled, SLAM's procedures provide that the securities or proceeds are to be allocated in a manner deemed fair and equitable to clients. Depending on the investment strategy pursued and the type of security, this may result in a pro rata allocation to all participating clients. This area is monitored by SLAM's Chief Compliance Officer.

Item 13. Review of Accounts

Each client account is reviewed by SLAM's Chief Compliance Officer on a monthly basis to determine whether securities positions should be maintained in view of adherence to investment guidelines and the performance of each client account. Each client account is also reviewed daily by the portfolio manager to determine whether securities positions should be maintained in view of current market conditions. Matters reviewed include specific securities held, adherence to investment guidelines and the performance of each client account.

Significant market events affecting the prices of one or more securities in client accounts, changes in the investment objectives or guidelines of a particular client or specific arrangements with particular clients may trigger reviews of client accounts on other than a periodic basis.

For client accounts that are pooled vehicles, that client's investors receive reports from the client pursuant to the terms of each client's offering memoranda or as otherwise described in the offering document of the client.

Each client that is a separate account will receive a monthly portfolio report and, where requested, a summary sheet showing account statistical data and/or a written review produced by SLAM. Such reports may be delivered electronically to the client in accordance with the client's agreement with SLAM.

Item 14. Client Referrals and Other Compensation

SLAM makes cash payments to third-party solicitors for client referrals of investors to private funds that it manages. SLAM provides each prospective client with a copy of its Form ADV Part 2, and a disclosure document setting forth the terms of the solicitation arrangement, including the nature of the relationship between the solicitor and SLAM and any fees to be paid to the solicitor. Where applicable, cash payments for client solicitations will be structured to comply fully with the requirements of Rule 206(4)-3 under the Investment Advisers Act of 1940, as amended and related SEC staff interpretations.

Item 15. Custody

This Item is not applicable

Item 16. Investment Discretion

SLAM provides investment advisory services on a discretionary basis to clients. Please see Item 4 for a description of any limitations clients may place on SLAM's discretionary authority.

Prior to assuming full/limited discretion in managing a client's assets, SLAM enters into an investment management agreement or other agreement that sets forth the scope of SLAM's discretion.

Unless otherwise instructed or directed by a discretionary client, SLAM has the authority to determine (i) the securities to be purchased and sold for the client account (subject to restrictions on its activities set forth in the applicable investment management agreement and any written investment guidelines) and (ii) the amount of securities to be purchased or sold for the client account. Because of the differences in client investment objectives and strategies, risk tolerances, tax status and other criteria, there may be differences among clients in invested positions and securities held. SLAM's portfolio managers work together to agree the allocation of securities to (or from) client accounts. SLAM's portfolio managers may consider the following factors, among others, in allocating securities among clients: (i) client investment objectives and strategies; (ii) client risk profiles; (iii) tax status and restrictions placed on a client's portfolio by the client or by applicable law; (iv) size of the client account; (v) nature and liquidity of the security to be allocated; (vi) size of available position; (vii) current market conditions; and (viii) account liquidity, account requirements for liquidity and timing of cash flows. These factors may lead SLAM to allocate securities to client accounts in varying amounts. These areas are monitored by SLAM's Chief Compliance Officer.

Allocations will be made among client accounts eligible to participate in initial public offerings (IPOs) and secondary offerings on a pro rata basis, except when SLAM determines in its discretion that a pro rata allocation is not appropriate, which may include a client's investment guidelines explicitly prohibiting participation in IPOs or secondary offerings and a client's status as a "restricted person" under applicable regulations.

Securities acquired by SLAM for its clients through a limited offering will be allocated pursuant to the procedures set forth in SLAM's allocation policy. The policy provides that each portfolio manager will determine the proposed allocation of limited offering securities after considering the factors described above with respect to general allocations of securities and determining those client accounts eligible to hold such securities. Eligibility will be based on the legal status of the clients and the client's investment objectives and strategies.

If it appears that a trade error has occurred, SLAM will review the relevant facts and circumstances to determine an appropriate course of action. To the extent that trade errors and breaches of investment guidelines and restrictions occur, SLAM's error correction procedure is to ensure that clients are treated fairly and, following error correction, are in the same position they would have been if the error had not occurred. SLAM has discretion to resolve a particular error in any appropriate manner that is consistent with the above stated policy.

Item 17. Voting Client Securities

To the extent that SLAM has been delegated proxy voting authority on behalf of its clients, SLAM complies with its proxy voting policies and procedures that are designed to ensure that in cases where SLAM votes proxies with respect to client securities, such proxies are voted in the best interests of its clients.

In circumstances where SLAM's clients have given SLAM discretion to vote securities clients are permitted to direct their votes in a particular solicitation. A client that wishes to direct its vote in a particular solicitation shall give reasonable prior written notice to SLAM indicating such intention and provide written instructions directing SLAM's vote in regard to the particular solicitation. Where such prior written notice is received, SLAM will vote proxies in accordance with such written instructions received from a client, provided that such instructions are provided to SLAM in a timely manner.

If a material conflict of interest between SLAM and a client exists, SLAM will determine whether voting in accordance with the guidelines set forth in the proxy voting policies and procedures is in the best interests of the client or take some other appropriate action.

Clients may obtain a copy of the SLAM's proxy voting policies and procedures and information about how SLAM voted a client's proxies by contacting Michael Paganussi (Chief Compliance Officer) by email at michaelp@slam.com.sg or by telephone at +65 6513 4103.

In the case of clients where SLAM does not have authority to vote client securities, clients will receive their proxies or other solicitations directly from their custodian or their transfer agent. In the case of certain clients SLAM has undertaken to produce voting recommendations which must be submitted to the client for their consideration.

Item 18. Financial Information

This Item is not applicable.

Appendix: Item 2. Material Changes

There have been no material changes to this Brochure since the most recent annual update in June 2021.
