Advisory Business

The Company

Oberweis Asset Management, Inc. (“Oberweis”) was established in 1989 and is headquartered in suburban Chicago. Oberweis is an independent investment management firm that was founded to seek market inefficiencies in equities globally. Oberweis offers its strategies to retail clients and institutional investors via separately managed accounts (“SMAs”), its own proprietary mutual fund family, The Oberweis Funds, and a private fund, Oberweis International Select Fund, LLC. Established in 1989, Oberweis is headquartered in suburban Chicago, with additional equity research staff based in New York, London and Hong Kong.

Oberweis Culture

Oberweis is a bottom-up, active manager that searches for what we believe are superior fundamental, growth, and valuation characteristics in equities globally.

The investment teams are led by James W. Oberweis. Teams are responsible for certain geographic areas. Teams employ disciplined and repeatable investment processes that focus on situations in which our proprietary analysis varies positively and materially from the expectations of other investors.

The Oberweis culture promotes an entrepreneurial spirit. The team operates in a non-bureaucratic environment that permits timely communication, processing of new information, and nimble decision-making. Oberweis portfolios are managed by small autonomous teams of professionals who are compensated for success and isolated from bureaucracy.

Our People

Oberweis’ success starts with its people. Oberweis is 100% owned by its employees and the Oberweis family, with James W. Oberweis as the principal shareholder. Many senior professionals are also equity owners. Oberweis’ portfolio managers average 23 years of experience in the industry.

Our Services

Our retail investment advisory service includes high net-worth clients with accounts generally under \$5 million in assets. Oberweis offers its retail advisory service both on a discretionary and non-discretionary basis. Clients can select between a small-cap account or a custom account. Small-cap accounts are invested in micro, small and medium capitalization high growth stocks. Custom accounts are typically also invested in high growth stocks, but a portion of those assets are invested in an appropriate mix of other types of equity securities, mutual funds (including The Oberweis Funds), exchange-traded funds and investment grade fixed income securities to seek to reduce volatility of returns over time. Custom accounts are invested according to the specific investment goals and risk preferences of each individual client.

All client accounts are generally invested in a concentrated portfolio of securities that is suitable for the client based upon Oberweis' understanding of the client's financial condition, investment objective and restrictions. Accordingly, a retail account investing in a similar strategy that Oberweis offers to an institutional account is likely not to own certain securities held by that institutional account and will experience different performance from those other advisory accounts. Oberweis does not provide comprehensive financial planning on behalf of its retail clients.

The Oberweis financial consultant responsible for establishing and monitoring the client's account will provide to the client, and, to the extent requested by the client, will assist the client in completing an account application designed to elicit information regarding the client's financial situation (including cash flow needs), investment objective, goal and restrictions. This information and subsequent discussions with the client will be used by Oberweis to tailor the account's risk profile and time horizon. The financial consultant also is responsible for assisting clients in making any revisions to their investment objectives should their financial position, investment requirements or goals change. Because of the varying objectives and restrictions of client accounts, it is likely that Oberweis will not be able to invest each account in an identical fashion.

Oberweis Securities, Inc. ("OSI"), a registered broker/dealer under common control with Oberweis, executes substantially all trades for client accounts. Custody of most client accounts are maintained by National Financial Services Corporation LLC ("Custodian"), a registered broker-dealer, through which the transactions executed by Oberweis are cleared, or such other brokerage firm, bank or other financial institution as the client may choose. For further information on execution of trades and custodians, please see Brokerage Practices below.

For certain international strategies, Oberweis may utilize investment research services provided by its wholly-owned affiliates, Oberweis Asset Management (Hong Kong) Limited ("OAMHK"), which are located in Hong Kong, and Oberweis Asset Management UK Limited ("OAMUK"), which is located in the United Kingdom.

As of December 31, 2022, Oberweis' total assets under management (both institutional and retail clients) were \$2,602,359,035, of which Oberweis manages \$2,601,914,974 on a discretionary and \$444,361 on a non-discretionary basis.

Fees and Compensation

Fees

The following is the annual fee schedule for non-retirement accounts invested in equities:

| If the account has a total value of: | Annual rate applied to the equity portion of an account |
|--------------------------------------|---|
| \$250,000 to \$500,000 | 1.75% |
| \$500,000 to \$1,000,000 | 1.50% |
| \$1,000,000 to \$5,000,000 | 1.25% |
| More than \$5,000,000 | 1.00% |

A discounted fee schedule may be negotiated for the fixed income portion of an account.

The fee for retirement accounts is an annual rate, which varies based on various circumstances described below, applied to the value of the account.

The above fees include all brokerage costs, but do not cover certain costs or charges associated with securities transactions, including dealer mark-ups, mark-downs or “spreads” in transactions, odd-lot differentials or transfer taxes mandated by law. In addition, clients whose assets are maintained at the Custodian will be responsible for reimbursing Oberweis for the costs incurred by Oberweis or OSI with respect to the account, including but not limited to, the fees charged by the Custodian in connection with the clearing of trades executed by OSI and for the delivery of statements and trade confirmations (generally, equivalent to \$7.95 per equity trade and \$6.95 per bond trade). Oberweis will share a portion of its fees with OSI as compensation for OSI’s services, and shareholders of OSI include certain of the principals of Oberweis.

For those client funds that are held in cash or cash equivalents, OSI will receive a credit directly from the Custodian based upon the amount of interest that is generated from that cash.

Although clients are subject to the above fee schedule, from time to time, Oberweis will allow a client to pay fees different from those contained in the schedule depending on the size and type of account, the relative complexity of servicing the account and the degree of customization of the services to the needs of the client. Oberweis reserves the right to change the above fee schedule and will notify clients of any such change.

Fees are payable quarterly and in advance. The initial fee in respect of assets committed to an account will be payable in full on the date on which Oberweis commences management of those assets (“commencement date”), and will be based on the net asset value of those assets on that date. The initial fee will be for the period from the commencement date through the last business day of the calendar quarter in which the commencement date started (or, at Oberweis’ option, through the last business day of the next full calendar quarter if the commencement date falls within thirty days prior to the

beginning of a calendar quarter), and will represent a pro-rata portion of the annual fee. Thereafter, Oberweis' quarterly fee will be based on the net asset value of the client's account on the last business day of the previous quarter, and will be payable when billed. If additional assets in excess of 20% of the prior period-end value ("New Assets") are committed by the client during the first two months of any fee-period, Oberweis may charge the client an additional fee based on the New Assets, pro-rated for the number of days remaining in the fee period. If such an additional fee is charged, the amount shall be payable on the date the New Assets are committed. Unless the client specifically provides otherwise, Oberweis will deduct any and all fees when due from the assets held in the client's account at the Custodian. In certain cases, Oberweis and the client may agree to other billing arrangements.

If the client agreement is terminated, Oberweis will make an appropriate pro-rata refund to the client of fees paid to Oberweis pursuant to the client agreement for the period after the date of effectiveness of such termination, cessation or revocation and cancellation, as the case may be, through the end of the then current billing period. Unless Oberweis agrees otherwise, no fee adjustments or refunds will be made in respect of any period for appreciation or depreciation in asset value during that period.

Financial consultants of OSI, who also may be representatives of Oberweis, are responsible for seeking new clients, establishing new accounts, monitoring account activity and reporting to clients. Those financial consultants receive compensation for their services. The fee paid by a client to Oberweis includes the compensation that Oberweis pays to OSI to compensate OSI financial consultants.

Other Fees and Expenses

As noted above, client accounts will not incur brokerage, but will incur other transaction-related costs. See Brokerage Practices for a discussion of Oberweis' brokerage and trade execution practices.

In addition, from time to time, Oberweis will invest a client in a mutual fund other than a money market fund, including funds unaffiliated to Oberweis and funds that pay a 12b-1 fee to OSI. If the mutual fund is one of The Oberweis Funds, the value of the assets upon which Oberweis charges its fees will be reduced by the amount of assets invested in such fund, and, for ERISA accounts, will be further reduced by the amount of any 12b-1 fees that OSI may receive from that fund. Any reduction in Oberweis' advisory fee may lag one quarter behind Oberweis' actual receipt of compensation from the Fund. If Oberweis invests a client in a mutual fund that is not managed by or affiliated to Oberweis, the account would have to pay the fees assessed by that fund in addition to any fees that OSI may receive and the normal advisory fee the client will pay to Oberweis. The recommendation of a fund that pays OSI 12b-1 fees constitutes a conflict of interest in that it gives Oberweis an incentive to recommend such funds. Clients have the option of purchasing the same investment products (such as unaffiliated mutual funds or funds that do not charge 12b-1 fees) discussed above through other means or through different financial service providers that are unaffiliated with Oberweis.

For purposes of determining the value of the account on which Oberweis' fee is based, Oberweis will value securities in an account based on prices provided by a third-party pricing service. If a pricing service cannot price a specific security, Oberweis will value that security in a good faith manner to reflect the security's fair market value based on sources independent of Oberweis.

The Oberweis Funds

Oberweis provides investment advisory services to The Oberweis Funds (which is comprised of eight funds: Oberweis Micro-Cap Fund, Oberweis Small-Cap Opportunities Fund, Oberweis Global Opportunities Fund, Oberweis China Opportunities Fund, Oberweis International Opportunities Fund, Oberweis International Opportunities Institutional Fund, Oberweis Emerging Markets Fund and Oberweis Focused International Growth Fund). Certain funds offer both Investor Class Shares and Institutional Class Shares and other funds offer solely Investor or Institutional Class Shares. The funds pay a monthly fee based on the average daily net assets at the annual rates shown below. (See The Oberweis Funds current prospectus for more information).

| <u>Oberweis Fund Name</u> | <u>Share Class</u> | <u>Ticker</u> | <u>Advisory and Management Fees</u> |
|--|---------------------------|----------------------|--|
| Micro-Cap Fund | Investor | OBM CX | 1.00% |
| | Institutional | OMC IX | 1.00% |
| Small-Cap Opportunities Fund | Investor | OB SOX | 0.80% |
| | Institutional | OB SIX | 0.80% |
| Global Opportunities Fund* | Investor | OB EGX | 0.85% |
| | Institutional | OB GIX | 0.85% |
| International Opportunities Fund | Investor | OB IOX | 1.25% |
| International Opportunities Institutional Fund | Institutional | OB IIX | 1.00% |
| Focused International Growth Fund | Institutional | OF IGX | 0.80% |
| China Opportunities Fund | Investor | OB CHX | 1.25% |
| | Institutional | OB CHX | 1.25% |
| Emerging Markets Fund | Investor | OB EMX | 1.25% |
| | Institutional | OI EMX | 1.25% |

* In addition to a 40-basis point management fee, Oberweis provides investment advisory services to the Global Opportunities Fund for a monthly fee at the annual rate of 0.45% of the first \$50 million of average daily net assets and 0.40% of average daily net assets in excess of \$50 million.

Performance Fees and Side-By-Side Management

Although it does not do so at the current time for any retail accounts, Oberweis may charge a performance-based fee, which would be assessed at a base rate on assets under management, plus a percentage of the excess performance compared to the index best fit for the investment strategy or based on the net profits of the account for the calendar year. This could provide an incentive to favor these types of accounts. However, Oberweis believes this conflict of interest would be mitigated by the fact that Oberweis has adopted brokerage and trade allocation policies and procedures as described below.

Types of Clients

Oberweis offers retail services to individuals, pension and profit-sharing plans, trusts, estates, charitable organizations, and corporations. In order to establish an account with Oberweis, the client must invest at least \$250,000 in cash and/or securities. However, Oberweis, in its sole discretion, will waive that minimum requirement if circumstances warrant.

Methods of Analysis, Investment Strategies, and Risk of Loss

Firmwide Investment Philosophy

All investment strategies at Oberweis are designed to exploit academically-documented inefficiencies related to the behavioral tendencies and biases of other investors. Our strategies specifically focus on identifying mispriced stocks globally. Oberweis is an active investment manager that employs a bottom-up, fundamental-research based investment approach.

Most accounts are managed in a more concentrated version of the strategies described below or may consist of a combination of strategies for diversification purposes.

For clients seeking less risk and volatility or income, Oberweis will invest in investment grade fixed income securities that offer competitive rates. These securities may include corporate bonds and notes, municipal bonds and notes, US government and agency securities, and certificates of deposit.

Micro-Cap Growth and Small-Cap Opportunities Strategies

The Micro-Cap Growth and Small-Cap Opportunities strategies primarily invest in companies headquartered in the United States. Both strategies seek to invest in equity securities that typically exhibit the following characteristics:

- **Under-Appreciated Revenue and Earnings Growth** -- potential for revenue and/or earnings growth in excess of consensus expectations.

- **Timely Catalyst** -- a recent positive earnings release or an earnings surprise that tangibly and quantitatively begins to confirm that consensus analyst expectations are too low.
- **Inflection Point of Change** – a business that is experiencing change — often a new product, a new management team, or a regulatory change — as these changes can drive unexpected or underestimated growth. A significant gap generally exists between Oberweis’ forecasts and consensus analyst expectations.
- **Limited Analyst Coverage** – a company not widely followed by other analysts to maximize the chances of finding misunderstood situations.
- **Sustainability** – a sustainable business with a competitive position driven by market leadership, intellectual capital, or unique manufacturing processes. Put another way, a reasonable barrier to competitive entry.
- **Operating Leverage** -- profitable and scalable business model, which tends to generate rising net profit margins as revenue growth accelerates.
- **Valuation** -- undervalued based on Oberweis’ growth forecasts and historical valuation metrics afforded the company and/or peers.

The Micro-Cap Growth and Small-Cap Opportunities strategies employ a similar investment process, but differ primarily with respect to the target market capitalization of the companies in which each invests. The Oberweis Small-Cap Opportunities strategy generally invests in companies with market capitalizations less than or equal to \$5 billion or within the range of companies represented in the Russell 2000 Index, whichever is greater, at the time of purchase. The Micro-Cap Growth strategy generally invests in companies with market capitalizations under \$600 million or within the range of companies represented in the Russell Micro-Cap Growth Index, whichever is greater, at the time of purchase.

Concentrated Small-Cap Strategy

The Concentrated Small-Cap strategy generally invests in Oberweis’ highest conviction ideas (typically 25-40 securities) from the Micro-Cap Growth and Small-Cap Opportunities strategies. This strategy primarily invests in companies based in the United States with market capitalization under \$5 billion or within the range of companies represented in the Russell 2000 Index, whichever is greater, at the time of purchase. The Concentrated Small-Cap Strategy seeks to invest in equity securities that exhibit the same characteristics discussed for the Micro-Cap Growth and Small-Cap Opportunities strategies above.

International Opportunities Strategy

The International Opportunities strategy invests in securities of companies based outside the United States. Currently, securities based outside the United States include (1) equity securities of companies that are organized under foreign jurisdictions or that are primarily traded on an exchange or over-the-counter outside of the United States; or (2) equity securities of companies that have at least 50% of their assets outside of the United States or that derive at least 50% of their revenues from business activities outside of the United States.

The team seeks to uncover ideas for this strategy from a wide range of sources including: screening and internal analysis, observing and understanding regional country trends, independent and street research, company meetings and interviews.

The strategy seeks to invest in equity securities that typically exhibit the following characteristics:

- **Under-Appreciated Revenue and Earnings Growth** -- potential for revenue and/or earnings growth in excess of consensus expectations.
- **Timely Catalyst** -- a recent positive earnings release or an earnings surprise that tangibly and quantitatively begins to confirm that consensus analyst expectations are too low.
- **Inflection Point of Change** – a business that is experiencing change — often from a new product, a new management team, or a regulatory change — as these changes can drive unexpected or underestimated growth. A significant gap generally exists between Oberweis’ forecasts and consensus analyst expectations.
- **Limited Analyst Coverage** – a company not widely followed by other analysts to maximize the chances of finding misunderstood situations.
- **Sustainability** – a sustainable business with a competitive position driven by market leadership, intellectual capital, or unique manufacturing processes. Put another way, a reasonable barrier to competitive entry.
- **Operating Leverage** -- profitable and scalable business model, which tends to generate rising net profit margins as revenue growth accelerates.
- **Valuation** -- undervalued based on Oberweis’ growth forecasts and historical valuation metrics afforded the company and/or peers.

China Opportunities Strategy

The China Opportunities strategy invests in: 1) equity securities of companies that are organized under the laws of The People’s Republic of China, Hong Kong or Taiwan or that are primarily traded on an exchange or over-the-counter in The People’s Republic of China, Hong Kong or Taiwan; or 2) equity securities of companies that have at least 50% of their assets in The People’s Republic of China, Hong Kong or Taiwan or that derive at least 50% of their revenues from business activities in The People’s Republic of China, Hong Kong or Taiwan but which are listed and traded elsewhere.

The team seeks to uncover ideas for this strategy from a wide range of sources including: screening and internal analysis, management interviews, observing and understanding regional country trends, independent and street research, screening and internal analysis.

The strategy seeks to invest in equity securities that typically exhibit the following characteristics:

- **Under-Appreciated Revenue and Earnings Growth** -- potential for revenue and/or earnings growth in excess of consensus expectations.

- **Timely Catalyst** -- a recent positive earnings release or an earnings surprise that tangibly and quantitatively begins to confirm that consensus analyst expectations are too low.
- **Inflection Point of Change** – a business that is experiencing change — often from a new product, a new management team, or a regulatory change — as these changes can drive unexpected or underestimated growth. A significant gap generally exists between Oberweis’ forecasts and consensus analyst expectations.
- **Limited Analyst Coverage** – a company not widely followed by other analysts to maximize the chances of finding misunderstood situations.
- **Sustainability** – a sustainable business with a competitive position driven by market leadership, intellectual capital, or unique manufacturing processes. Put another way, a reasonable barrier to competitive entry.
- **Operating Leverage** -- profitable and scalable business model, which tends to generate rising net profit margins as revenue growth accelerates.
- **Valuation** -- undervalued based on Oberweis’ growth forecasts and historical valuation metrics afforded the company and/or peers.

Global Opportunities Strategy

The Global Opportunities strategy is designed to capture and invest in a diversified portfolio of Oberweis’ highest conviction ideas, including both U.S. and non-U.S. companies.

The teams seek to uncover ideas for this strategy from a wide range of sources including: screening and internal analysis, observing and understanding regional country trends, independent and street research.

The strategy seeks to invest in equity securities that typically exhibit the following characteristics:

- **Under-Appreciated Revenue and Earnings Growth** -- potential for revenue and/or earnings growth in excess of consensus expectations.
- **Timely Catalyst** -- a recent positive earnings release or an earnings surprise that tangibly and quantitatively begins to confirm that consensus analyst expectations are too low.
- **Inflection Point of Change** – a business that is experiencing change — often from a new product, a new management team, or a regulatory change — as these changes can drive unexpected or underestimated growth. A significant gap generally exists between Oberweis’ forecasts and consensus analyst expectations.
- **Limited Analyst Coverage** – a company not widely followed by other analysts to maximize the chances of finding misunderstood situations.
- **Sustainability** – a sustainable business with a competitive position driven by market leadership, intellectual capital, or unique manufacturing processes. Put another way, a reasonable barrier to competitive entry.
- **Operating Leverage** -- profitable and scalable business model, which tends to generate rising net profit margins as revenue growth accelerates.

- **Valuation** -- undervalued based on Oberweis' growth forecasts and historical valuation metrics afforded the company and/or peers.

Concentrated Global Small-Cap Strategy

The Concentrated Global Small-Cap strategy is designed to capture and invest in a concentrated portfolio of Oberweis' highest conviction ideas, including both U.S. and non-U.S. companies.

The teams seek to uncover ideas for this strategy from a wide range of sources including: screening and internal analysis, observing and understanding regional country trends, independent and street research.

This strategy seeks to invest in equity securities that the team believes to have above-average growth potential *relative* to consensus expectations, based on the analysis of the following factors:

- Proprietary and favorable earnings estimates relative to market expectations
- Anticipated upward revisions of consensus earnings expectations
- Favorable valuation relative to proprietary view of EPS potential and competitors
- Sustainability of strong business fundamentals
- Strong competitive position
- High quality financials
- Purchase around earnings catalysts to avoid value traps
- Favorable diversification impact on overall portfolio

Emerging Markets Strategy

The Emerging Markets Strategy seeks to maximize long-term capital appreciation. This strategy is not designed for investors seeking income over capital appreciation. The strategy invests in securities of companies based in emerging markets. Currently, securities of companies based in emerging markets include: (1) equity securities of companies that are organized under the law of an emerging market country or that are primarily traded on an exchange or over-the-counter in an emerging market country; or (2) equity securities of companies that have at least 50% of their assets in emerging market countries or derive at least 50% of their revenues from business activities in emerging market countries. Emerging market countries consist of any country defined as Emerging Market, Frontier, or Developing by MSCI, the International Monetary Fund ("IMF"), or the World Bank.

The Oberweis Emerging Markets strategy invests principally in the common stocks of small-cap companies in developing markets that Oberweis believes have the potential for significant long-term growth in market value. The team believes that companies in emerging markets positioned to generate significant market-value growth exhibit four key attributes: strong balance sheets, durable sales growth driven by secular tailwinds, robust competitive advantages and seasoned, prudent management teams. Oberweis seeks to

invest in companies with those attributes when they trade at attractive valuations, which the team determines by estimating future earnings, margins and free cash flows in a proprietary valuation model. We believe that patient ownership of growing, resilient firms with ample opportunities to reinvest capital at high returns generates attractive risk-adjusted results over a full market cycle. Our goal is to provide our investors an All Weather approach to Emerging Markets Small Cap.

International Select Strategy

The International Select strategy generally invests in securities of non- U.S. companies with a market capitalization of more than \$5 billion at the time of investment, typically invested in 40 or less individual securities. This strategy primarily invests in non-US equity securities, over time, targeted generally as a percentage of the stocks held in the portfolio at 70% or higher. Non-US equities include ADR's and foreign companies listed on US domestic exchanges.

The team seeks to uncover ideas for this strategy from a wide range of sources including: screening and internal analysis, observing and understanding regional country trends, independent and street research, company meetings and interviews.

The strategy seeks to invest in equity securities that typically exhibit the following characteristics:

- **Under-Appreciated Revenue and Earnings Growth** -- potential for revenue and/or earnings growth in excess of consensus expectations.
- **Timely Catalyst** -- a recent positive earnings release or an earnings surprise that tangibly and quantitatively begins to confirm that consensus analyst expectations are too low.
- **Inflection Point of Change** – a business that is experiencing change — often from a new product, a new management team, or a regulatory change — as these changes can drive unexpected or underestimated growth. A significant gap generally exists between Oberweis' forecasts and consensus analyst expectations.
- **Limited Analyst Coverage** – a company not widely followed by other analysts to maximize the chances of finding misunderstood situations.
- **Sustainability** – a sustainable business with a competitive position driven by market leadership, intellectual capital, or unique manufacturing processes. Put another way, a reasonable barrier to competitive entry.
- **Operating Leverage** -- profitable and scalable business model, which tends to generate rising net profit margins as revenue growth accelerates.
- **Valuation** -- undervalued based on Oberweis' growth forecasts and historical valuation metrics afforded the company and/or peers.

Investing in securities involves risk of loss that clients should be prepared to bear.

Common stock risk—Because all of Oberweis' strategies invest substantially in common stocks, the value of the stocks held might increase or decrease in response to the activities of an individual company or in response to general market and/or economic conditions. Investment in common stocks, particularly in common stocks of small- and

medium-size companies with high growth potential, can be volatile. Because of this volatility, any investment should be long-term only. Dividends are expected to be minimal and there can be no assurance that a client's objective will be met.

Short sale risk—For certain select institutional client accounts, Oberweis may sell short a security. A short sale involves the sale of a security that the client does not own with the intent of purchasing the same security at a later date at a lower price. To initiate a short position, a security must be borrowed. Short sales may incur losses if the price of the security sold short increases in value between the date of the short sale and the date when Oberweis purchases the security to replace the borrowed security. Because there is no limit as to how high the price of the security can climb, the risk from short selling potentially is limitless. There are additional risks associated with shorting securities, including the cost of the premium or interest the client account must pay to the lender of the security.

Small-sized company risk—Accounts invested in certain strategies are subject to small company risk, which is intensified for the Micro-Cap Growth strategy. Although certain strategies seek to reduce risk by investing in a diversified portfolio, investing in smaller, and often newer, companies involves greater risk than investing in larger, more established companies. Smaller and newer companies often have limited product lines, markets, management personnel, research and/or financial resources. The securities of small companies, which may be thinly capitalized, may not be as marketable as those of larger companies. Therefore, the securities of these smaller, newer companies may be subject to more abrupt or erratic market movements than the securities of larger companies or the market averages in general.

General market risk—Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in any one strategy may under perform in comparison to general financial markets, a particular financial market or other asset classes, due to a number of factors, including inflation (or expectations for inflation), deflation (or expectations for deflation), interest rates, global demand for particular products or resources, market instability, debt crises and downgrades, embargoes, tariffs, sanctions and other trade barriers, regulatory events, other governmental trade or market control programs and related geopolitical events. In addition, the value of a strategy's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics.

Risks associated with non-U.S. companies—Investments in securities of non-U.S. issuers involve certain additional investment risks different from those of U.S. issuers. These risks include: possibility of political or economic instability within a particular country, possibility of disruption to international trade patterns, possibility of currency risk, possibility of currency exchange controls, imposition of foreign withholding taxes, seizure or nationalization of foreign deposits or assets, and adoption of adverse foreign

government trade restrictions. In addition, there is a possibility of expropriation, nationalization, confiscatory taxation or diplomatic developments that could affect investments within a country. There may be less publicly available information about a non-U.S. company than about a U.S. company. Sometimes non-U.S. companies are subject to different accounting, auditing, and financial reporting standards, practices, and requirements than U.S. companies. There is generally less government regulation of non-U.S. stock exchanges, brokers and listed companies abroad, which may result in less transparency with respect to a company's operations. The absence of negotiated brokerage in certain countries may result in higher brokerage fees.

Emerging market risks—Political and economic structures in emerging markets countries may be new and developing rapidly, which may cause instability. Emerging markets countries are also more likely to experience high levels of inflation, deflation or currency devaluations, which could hurt their economies and securities markets.

Government relationships risk (international strategies)—While non-US companies may be subject to limitations on their business relationships under applicable law, these laws may not be consistent with certain political and security concerns of the U.S. As a result, non-US companies may have material direct or indirect business relationships with governments that are considered state sponsors of terrorism by the U.S. government, or governments that otherwise have policies in conflict with the U.S. government (an “Adverse Government”). If an International Strategy invests in companies that have or develop a material business relationship with an Adverse Government, then that International Strategy will be subject to the risk that these companies’ reputation and price in the market will be adversely affected.

Geographic concentration in China (China Opportunities Strategy and investments by Global Opportunities, International Opportunities, Concentrated Global Small-Cap, Emerging Markets and International Select Strategies in China)—The Chinese economy is generally considered an emerging and volatile market. A small number of companies represent a large portion of the China market as a whole, and prices for securities of these companies may be very sensitive to adverse political, economic, or regulatory developments in China and other Asian countries, and may experience significant losses in such conditions. Actions of the Chinese central and local government authorities continue to have a substantial effect on economic conditions in China. Activities, such as central planning, partial state ownership of or government actions designed to substantially influence certain Chinese industries, market sectors or particular Chinese companies, may adversely affect the public and private sector companies. Government actions may also affect the market prices and liquidity of Chinese securities and the payments of dividends and interest by Chinese companies. In addition, currency fluctuations, monetary policies, competition, social instability or political unrest may adversely affect economic growth in China. The Chinese economy and Chinese companies may also be adversely affected by regional security threats, as well as adverse developments in Chinese trade policies, or in trade policies toward China by other countries.

Revenue Enhancing Programs—Oberweis is not responsible for any costs, losses or expenses incurred by clients as a result of an account's participation in any securities lending program or other revenue enhancing program that the Custodian, or other party selected by client, administers. Clients should be aware that participation in such programs, including the early trade notification requirements of such programs, may restrict Oberweis' ability to obtain the best net price and execution under the circumstances for securities sold.

Non-Diversification risks—Certain strategies may invest a larger percentage of its assets in the securities of a smaller number of issuers than a diversified strategy. Investments in securities of a limited number of issuers exposes the strategy to greater market risk and potential losses than if its assets were diversified among the securities of a greater number of issuers.

Risks Attributable to Investing in Fixed Income Securities

Investing in fixed income securities, including certificates of deposit—Rising interest rates will generally cause the prices of fixed income securities to fall. Longer maturity fixed income securities may be subject to greater price fluctuations than shorter maturity fixed income securities. Fixed income securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. For certificates of deposit, FDIC insurance only covers the principal amount of the CD and any accrued interest. FDIC insurance limits apply to aggregate amounts on deposit at each financial institution. Investors should consider the extent to which other accounts, deposits or accrued interest may exceed applicable FDIC limits.

Trading risk—Conditions may warrant frequent trading within a specific investment strategy. Frequent trading of securities can affect investment performance through increased brokerage and other transaction costs including taxes.

Disciplinary Information

Oberweis has not been the subject of any criminal action or disciplinary action by the SEC or any other regulatory organization.

Other Financial Industry Activities and Affiliations

OSI is a registered broker/dealer and member of the Financial Industry Regulatory Authority (FINRA) and is under common control with Oberweis. OSI is an introducing broker that charges its broker/dealer clients commissions and that has an arrangement with the Custodian to clear all of OSI's trading.

OSI generally executes trades for most retail clients. See Fees and Compensation for a discussion of the ownership structure of OSI.

Oberweis Asset Management (Hong Kong) Limited (“OAMHK”) is a company based in Hong Kong, of which Oberweis is the sole shareholder. James W. Oberweis is Director of OAMHK. OAMHK is an investment adviser registered with the SEC and licensed by the Securities and Futures Commission to conduct asset management activities. OAMHK currently has a services agreement with Oberweis to provide investment research and sub-advisory services to Oberweis, including the China Opportunities Fund, which is part of The Oberweis Funds.

Oberweis Asset Management UK Limited (“OAMUK”) is a company based in the United Kingdom, of which Oberweis is the sole shareholder. James W. Oberweis is Director of OAMUK. OAMUK currently has a services agreement with Oberweis to provide investment research services to Oberweis.

Oberweis provides investment advisory services to The Oberweis Funds. James W. Oberweis, David I. Covas, Kenneth S. Farsalas, Eric V. Hannemann and Thomas P. Joyce are all officers of The Oberweis Funds.

Oberweis serves as investment manager to a private fund, Oberweis International Select Fund, LLC. Additional information and fees relating to Oberweis International Select Fund, LLC are further described in the Confidential Information Memorandum. This product is only available to accredited investors, qualified purchasers and knowledgeable employees.

Code of Ethics, Participation or Interest in Client Transactions and Personal Trading

Oberweis, its directors, officers, employees, portfolio managers or other affiliates may purchase for itself or themselves certain securities that are recommended to clients. Oberweis has a written Code of Ethics (the “Code”) that governs the personal securities transactions of its officers, employees and directors. The Code provides, among other things, that such persons may not take personal advantage of any information that they may have concerning Oberweis’ current investment program. The Code also requires pre-approval of a personal transaction in a security by a person subject to the code and prohibits all persons subject to the Code from purchasing any equity security of an issuer with a market capitalization of less than \$5 billion. In addition, the Code prevents personal securities transactions in a security on the same day which a buy or sell order is pending for a client or within seven calendar days before or after a trade is executed for a client in the same security. Oberweis’ proprietary accounts are not subject to the Code’s general pre-approval requirements or to the prohibitions in the Code. In addition, reports of personal securities transactions are required to be filed with Oberweis’ compliance department and are reviewed for compliance with Oberweis’ policies. Further, the Code prohibits the acceptance of gifts or favors of more than a de minimis amount from companies that do business with Oberweis. A copy of the Code will be furnished to a client upon request.

Brokerage Practices

See Fees and Compensation for a full discussion of Oberweis' arrangements with OSI, its affiliated broker-dealer.

As noted above, Oberweis recommends that clients establish a brokerage account with the Custodian. Clients are directly responsible for paying the Custodian's fees. The Custodian is not necessarily the lowest-cost provider, but Oberweis recommends that clients use the Custodian to allow for ease of trading, clearance and settlement through the existing OSI/Custodian relationship. So long as OSI is able to clear through the Custodian, Oberweis and OSI will receive an economic benefit from the Custodian in the form of support products and services to facilitate that introducing broker/clearance broker relationship. However, a client is free to retain any custodian it chooses.

Selection of Brokers and Dealers to Effect Transactions

Oberweis normally places all trades through OSI. However, from time to time or as requested by the client, Oberweis will use an outside broker/dealer. Under those circumstances, Oberweis will place orders of securities with a view to obtaining the combination of best net price and execution under the circumstances. In doing so, Oberweis attempts to evaluate the overall quality and reliability of brokers and dealers and the services they provide, including research services, general execution capability, reliability, integrity, willingness to take positions in securities, general operational capabilities and financial condition.

Oberweis' Brokerage and Trade Execution policies and procedures do not obligate it to solicit a competitive bid for each such transaction in view of other considerations regarding that broker/dealer's execution and research capabilities. Furthermore, Oberweis may not seek the lowest available cost so long as Oberweis determines in good faith that the broker's or dealer's commission, spread or discount is reasonable in relation to the value of the execution and research services provided by that broker or dealer to the client or Oberweis when viewed in terms of the particular transaction or Oberweis' overall responsibilities with respect to such clients as to which it offers advice or exercises investment discretion.

Research and Brokerage Products and Services Furnished by Brokers and Dealers

When selecting an outside broker for a particular transaction, Oberweis may consider, among other factors, the value of research or brokerage products or services that it receives from the broker that Oberweis uses to assist it in investment decision-making and in the execution of trades (e.g., execution and post-trade matching systems). Generally, "research" is "advice," "analyses," and "reports" that reflect the expression of reasoning or knowledge. "Brokerage services" are those products and services that relate to the execution of the trade from the point at which Oberweis communicates with the broker for the purpose of transmitting an order for execution, through the point at which funds or securities are delivered or credited to the advised accounts.

Such products and services that Oberweis may receive include but are not limited to, the following:

- Company research reports
- Attendance at financial conferences highlighting certain topics
- Securities research software and fundamental company analytics, global portfolio attribution and reporting system
- Order entry, trade and portfolio management software
- Market data (e.g., stock price quotation services)
- Macro-economic research
- Compilations of statistical data
- Electronic market data and financial information
- Index performance measurement data and sector distribution to measure risk
- Real time stock specific information
- An equity research platform that provides analytical data
- Attribution analytics
- Pre-trade and post-trade analytics
- Post-trade matching
- Exchange of messages among broker-dealers, custodians and institutions related to a trade
- Electronic communications of allocation instructions between institutions and broker-dealers
- Routing settlement instructions to custodian banks and broker-dealer clearing agents
- Communications services related to the execution, clearing and settlement of securities transactions
- Trading software used to route orders to market centers
- Software used to transmit orders to direct market access systems
- Comparison services required by the SEC or SRO Rules (e.g., use of electronic confirmation and affirmation of institutional trades)
- Trade analytics

In some instances, Oberweis may enter into arrangements or have an agreement or understanding with a broker or other organization whereby Oberweis will direct brokerage transactions to a specific broker, including, in some instances, for a stated dollar amount of commissions, to compensate the broker, or other organization, for the research or brokerage services supplied. Oberweis will enter into such an arrangement or agreement, or have such an understanding, with a broker only if, in the good faith judgment of Oberweis, the benefits to the client (or clients) whose brokerage paid for the research or brokerage products or services provided by the broker outweigh the potential disadvantage to such clients of possibly higher commissions. In reaching that conclusion, Oberweis also considers that certain of its other clients could benefit from Oberweis receiving the research or brokerage products and services, although these clients do not pay for those benefits. Oberweis also has entered into arrangements with brokers where Oberweis may execute transactions through those broker-dealers and request they

allocate a portion of the commissions (or commission credits) to another firm that provides Oberweis with research or brokerage products or services. Oberweis has entered into such arrangements, and may enter into additional such arrangements in the future.

Research products or services provided by brokers may be taken into consideration in servicing Oberweis' own account and any or all of its clients and investment personnel and may also be used by OAMUK or OAMHK. Such research and brokerage products or services may not necessarily be used by Oberweis in connection with the accounts which paid commissions to the broker providing such products or services.

If Oberweis receives a product or service that can be used for other (e.g., administrative) purposes, Oberweis will make a reasonable allocation of the cost of such mixed-use products and pay for the ineligible portion directly.

When using brokerage commissions to obtain research and brokerage products or services, Oberweis does not have to produce or pay for such research or brokerage products or services. Oberweis may have an incentive to select or recommend a broker-dealer based on Oberweis' interest in receiving research and brokerage products or services, in lieu of clients receiving receipt of most favorable execution.

Cross Trades

From time to time, Oberweis will effect cross trades between client accounts (but does not permit proprietary accounts to participate in such trades). Prior to each such transaction, Oberweis will determine that the transaction is in the best interests of each account based on their investment objectives and portfolio characteristics. All such trades will be effected at the market price of the security. Oberweis does not receive any commission or compensation in connection with effecting cross trades and believes that these trades provide benefits to clients.

To the extent permitted by applicable law, from time to time, Oberweis will effect "agency cross" transactions for clients in which OSI acts as agent for both the buyer(s) and seller(s) in the transaction. In addition, neither Oberweis nor OSI expect to effect transactions with clients on a principal basis, even though the price at which they would otherwise transact with the client may be more favorable to the client than otherwise available. Should Oberweis or OSI transact with a client on a principal basis, Oberweis will make the required disclosures and obtain the necessary consents.

Client Directed Brokerage

From time to time, clients will direct Oberweis (subject to certain conditions that may from time to time be imposed by Oberweis) to effect portfolio transactions through particular brokers or dealers, or will have all transactions executed through OSI, as described above in the Fees and Compensation section of this brochure. A direction to utilize a particular broker or dealer may be conditioned by the client on the broker or dealer being competitive, or at specified levels of commissions or commission discounts which are less favorable than might otherwise be attained by Oberweis. In the case of such a "restricted" designation, Oberweis generally will execute transactions through the

designated broker. Sometimes, clients wish to restrict brokerage to a particular broker or dealer in recognition of custodial or other services (including, in some cases, referral of the client to Oberweis for investment advisory services) provided to the client by the broker or dealer. Not all investment advisers require clients to utilize a specific broker, including an affiliated broker.

A client who chooses to designate use of a particular broker or dealer on a "restricted" basis, including a client who designates use of a broker or dealer as custodian of the client's assets, should consider whether such use may result in certain costs or disadvantages to the client, either because the client may pay higher commissions on some transactions than might otherwise be attainable by Oberweis, or may receive less favorable execution of some transactions or both. A client who "restricts" brokerage may also be subject to the disadvantages discussed below because their account might not be included in an aggregated order of a new issue such as forgoing favorable commission and execution, lack of competition among orders, and no average pricing. In determining whether to instruct Oberweis to utilize a particular broker or dealer in recognition of such services, the client may wish to compare the possible costs or disadvantages of such an arrangement with the value of the custodial or other services provided. Oberweis is not responsible for any trade related errors caused by the restricted broker.

Trade Allocation

Because of varying objectives and restrictions among clients, it is likely that Oberweis will not be able to invest those accounts in the same fashion and generally does not aggregate these client accounts together into block trades. However, under limited circumstances, Oberweis might determine that it can effectively block one or more client orders. Under those circumstances, Oberweis will allocate the trade among the participating accounts pro rata, except for partial fills, which Oberweis will allocate randomly. Oberweis employs that methodology for its smaller accounts to help minimize overall transaction costs to its clients, including ticket charges accrued per transaction and believes that, over time, all clients are treated equally. Oberweis may override the random allocation if such allocation would result in excess commission charges to the client due to a per transaction ticket charge.

From time to time, Oberweis will purchase on behalf of its clients securities issued in underwritten offerings. Securities issued in an underwritten offering are purchased for those clients that have sufficient cash available and for whom the offering is suitable, and are allocated pro rata, rounded down to the nearest 100th share lot, except that an account will not receive an allocation if it would receive less than 2,000 shares (under those circumstances, those shares would be reallocated among the remaining eligible accounts). If accounts are custodied at a particular broker/dealer (and thus are ineligible to participate in the type of underwritten offering described above), any shares allocated by that broker/dealer to Oberweis on behalf of those accounts will be allocated pro rata to those accounts, so long as each such account has sufficient cash. Since client accounts held at OSI are generally prohibited from participating in principal transactions unless written approval is received prior to the transaction, these accounts are generally unlikely to participate in such offerings.

Oberweis will only effect transactions of ERISA clients through OSI on an agency basis with prior written approval from the independent fiduciary of that ERISA client in accordance with the terms of Prohibited Transaction Exemption 86-128. An ERISA client may revoke this authority at any time.

Review of Accounts

The portfolios of clients are reviewed internally by the portfolio manager responsible for the day-to-day management of the account on a daily basis, and are reviewed with our clients on a quarterly basis. These account reviews focus on the asset mix and the appropriateness of holdings with respect to (i) account objectives and (ii) their consistency with the applicant's investment and control policies. Beyond the formal review, portfolio managers undertake continuous reviews of each account to ensure that holdings, investment return and risk levels meet client objectives. James W. Oberweis, President, has general oversight and strategic responsibility for portfolio management decisions, and therefore, is responsible for the review of all client accounts.

Oberweis recommends quarterly account reviews to clients. Investment objectives, portfolio holdings, portfolio transactions and rates of return are among topics covered at these reviews. Beyond meetings, Oberweis sends reports to clients that include quarterly statements of portfolio holdings, narrative discussions and statistical analysis of investment performance. In addition, clients are provided daily confirmations and a monthly statement of holdings and account activity from their broker or custodian.

Client Referrals and Other Compensation

Under certain circumstances, Oberweis will pay its employees, independent professionals or registered representatives of OSI for client referrals of advisory accounts. In addition, from time to time, Oberweis will sponsor a charitable or business dinner at the request of a client or prospective client. Any such fees or costs are paid by Oberweis and do not result in a fee increase to Oberweis' advisory clients and are fully disclosed.

OSI, a broker-dealer under common control with Oberweis, has an arrangement with Oberweis to receive compensation for executing trades for clients. In addition, if OSI's clearing broker acts as custodian for an account, OSI receives a credit from the custodian that is determined based upon the amount of interest that is generated by excess cash in the account.

Custody

Oberweis can deduct its quarterly fees directly from clients' accounts. Such client will receive separate account statements directly from Oberweis and OSI's clearing firm. Clients should compare the account statements they receive from their custodian with those they receive from Oberweis.

Investment Discretion

Oberweis accepts advisory accounts on a discretionary or non-discretionary basis. Oberweis will normally have authority on discretionary accounts to supervise and direct the investments of and for the client's account without prior consultation with the client. Pursuant to this discretionary authority, Oberweis normally determines which securities are bought and sold for the account, the total amount of such purchases and sales, and the brokers or dealers through which transactions will be executed. Oberweis' authority may be subject to conditions imposed by the client (e.g., where the client restricts or prohibits transactions in certain types of securities or directs that transactions be effected through specific brokers or dealers).

Voting Client Securities

Oberweis' proxy voting authority is established in the client contract between Oberweis and a client. As a general matter, Oberweis does not exercise proxy voting authority for retail clients. Where Oberweis is granted proxy voting authority the following is a description of its policies and procedures.

Oberweis has established Proxy Voting Policies and Procedures setting forth the general principles Oberweis uses to determine how it should vote proxies on securities in client accounts for which Oberweis has proxy voting authority, including The Oberweis Funds. Oberweis' general policy is to vote proxies in the best economic interests of clients. This includes voting in a particular solicitation based on instructions received from a client. The principles which guide the voting policy of Oberweis are maximizing the value of client assets and promoting the rights of clients as beneficial owners of the companies in whose securities they invest. Oberweis' investment strategies are predicated on the belief that the quality of management often is the key to ultimate success or failure of a business. Because Oberweis generally makes investments in companies in which Oberweis has confidence in the management, proxies generally are voted in accord with management's recommendation. Oberweis may vote a proxy in a manner contrary to management's recommendation if, in the judgment of Oberweis, the proposal would not enhance shareholder value.

Oberweis has retained ISS Governance Services ("ISS"), a proxy voting and consulting firm, to receive proxy voting statements, provide information and research, make proxy vote recommendations, and handle various administrative functions associated with the voting of client proxies. While ISS makes the proxy voting recommendations, Oberweis retains the ultimate authority on how to vote.

Oberweis Proxy Voting Policies and Procedures describe how Oberweis addresses conflicts of interest between Oberweis and its clients, including Fund shareholders, with respect to proxy voting decisions. If Oberweis determines that, through reasonable inquiry or otherwise, an issue raises a potential material conflict of interest, Oberweis will follow the recommendations of ISS except as follows. If Oberweis and/or the Proxy

Committee believes that it would be in the interest of Oberweis clients to vote a proxy other than according to the recommendation of ISS, the Proxy Committee will prepare a report that (1) describes the conflict of interest; (2) discusses procedures used to address such conflict of interest; and (3) confirms that the recommendation was made solely on the investment merits and without regard to any other consideration.

Oberweis will use its best efforts to vote "foreign security proxies" consistent with its proxy voting policy, but will not vote a foreign security proxy under the following circumstances:

- If the cost of voting a foreign security proxy outweighs the benefit.
- When Oberweis is not given enough time to process the vote.
- When a sell order for the foreign security is outstanding and the proxy would impede the sale of the foreign security.

Unless otherwise required, if an Oberweis client has determined to participate in a securities lending program, Oberweis will not seek recalls for the purpose of voting proxies for the securities on loan.

A copy of Oberweis' Proxy Voting Policy and Procedures, or information on how Oberweis voted your shares, is available upon request.

Financial Information

Oberweis has not disclosed any financial information for the most recent fiscal year because it does not require prepayment of fees per client six or more months in advance. In addition, there are no financial conditions that would likely impair Oberweis' ability to meet contractual commitments to its clients.
