Item 4. Advisory Business

C.M. Bidwell & Associates, Ltd. (CMBA), is an investment advisory firm incorporated in the State of Hawaii. The main office is located in Honolulu, Hawaii and a second office is located in Carmel, California. Our principal owners include Greg Bidwell, Brett Bidwell and Hilary Bidwell. They are the adult children of Clinton M. Bidwell, founder and Chairman of the Board. Brett Bidwell is the only shareholder involved in the operations of the firm. Shares were awarded to the shareholders for estate planning purposes partly due to real estate owned by the firm. In the event of Clinton Bidwell's passing or retirement, shareholders have agreed to deliver ownership to employees for compensation.

CMBA manages client portfolios on a discretionary basis with two main areas of business. The first is Institutional Portfolio Management. The second is Private Wealth Management. CMBA has also entered an agreement to provide trading signals for a subscription fee. Subscribers have the option to follow or ignore the trading signals provided.

Institutional Portfolio Management - CMBA manages client accounts on a discretionary basis. Clients include both institutional accounts and private individuals. Asset allocations are determined either by client direction or through consultation with individual clients, and assets are invested in accordance with that asset allocation. Stock selection is based on a proprietary quantitative model primarily focusing on changes in analyst estimates. Fixed income allocations are managed either through individual securities and/or through the use of funds.

Private Wealth Management - For private individuals, the wealth management services provide a comprehensive review of a client's current financial situation, goals and objectives, and risk tolerances to determine appropriate asset allocation and investment vehicles to pursue those goals with the appropriate level of risk. Specific investments may include, but are not limited to CMBA's institutional portfolios, and domestic and international mutual funds and exchange traded funds. Two factors that will contribute to the decision of investing in individual securities or into funds are individual client preference and account size. If accounts are too small, proper

diversification may not be appropriately achieved through individual securities.

Some clients choose to impose restrictions on the securities in which their assets are invested such as no sin stocks or certain quality constraints on bonds. CMBA is willing to work with clients to tailor client portfolios to meet their requirements. Such restrictions need to be conveyed in written guidelines.

As at December 31, 2022 assets under management totaled \$179.33 million.

CMBA also offers investment advisory services on an hourly basis. Generally, these services would be offered to individuals with investment portfolios of less than \$500,000. Based on information provided by the client, and depending on each client's individual circumstances, CMBA will evaluate the client's financial position and offer recommendations on a financial plan and investment strategy. Clients seeking this level of service should be comfortable in their own abilities to monitor the performance of their investments on an ongoing basis, or have other parties they are relying on for that service.

CMBA has entered an agreement with Perfectna, Inc. to provide "trade signals" on their Echo-Trading Platform. The "trade signals" are specific buys and/or sells of shares of common stock. The trades provided will be trades executed in CMBA's actively managed small cap equity portfolio. The trade information becomes available to subscribers subsequent to CMBA placing the trades in a specified managed account. Subscribers to the Echo-Trading Platform can then choose whether to act on those signals in their own individual accounts.

Item 5. Fees and Compensation

A. Discretionary Management Fees

Fees generally are charged quarterly in advance as a percentage of assets under management according to a tiered fee schedule. Some clients elect to have fees charged at the end of a quarter instead, and a few clients choose to have fees charged in arrears on a semi-annual basis. A couple of clients have also requested fees to be charged on a performance basis.

The per annum rates for accounts with actively managed individual stock portfolios is as follows:

- 1.000% of assets on first \$5Million
- 0.850% of assets on next \$5Million
- 0.750% of assets thereafter

The per annum rates for management of fixed income and fund accounts are as follows:

- 0.500% of assets on first \$5Million
- 0.425% of assets on next \$5Million
- 0.375% of assets thereafter

Balanced accounts with over \$1 million in fixed income may elect to have the fixed income portion billed under the fixed income schedule.

As the fees CMBA receives for individual stock portfolio management are higher than those received for funds and fixed income management, CMBA does has an incentive to steer clients towards the higher fee alternative.

Notwithstanding the above fee schedules, all fees are negotiable. As a result, some clients may be paying higher or lower fees than shown on the above schedules.

Clients may elect to either have fees deducted directly out of the account at the custodian, or to be billed and pay fees by some other source.

When a management agreement is terminated and quarterly fees have been pre-paid, a portion of the fees will be reimbursed to the client prorated on the number of calendar days remaining for the applicable quarterly period.

As CMBA's fees are based on the level of assets under management, CMBA does have an incentive to persuade clients to increase that level of assets away from other client

alternatives. For example, it may be in a client's best interest to convert regular IRA funds into a Roth IRA and pay the resulting taxes from a taxable account. If CMBA manages both the IRA and the taxable account there is an incentive to not make the conversion, thus saving the tax expense and maintaining the level of assets.

B. Hourly Investment Advisory Fees

Generally, fees for hourly investment advisory services are charged at \$175 per hour. Fees are due upon receipt of invoice after services have been provided. Fees are negotiable. As a result, some clients may be paying higher or lower fees than the quoted rate and may pay a higher rate than that charged to other clients.

C. Subscription Fees

As described in Item 4 above, CMBA has entered an agreement with Perfectna, providing trading signals on their Echo-Trading Platform. Subscribers pay a monthly subscription fee to Perfectna to receive the trading signals and CMBA shares in a percentage of those fees. CMBA's share of the subscription fees begins at 47.5% of the net fees received. The percentage of fees paid to CMBA increases with increased numbers of subscribers up to a maximum of 70% of net subscription revenues after 1,750 or more subscribers.

D. Other Fees

There are other fees that will impact the performance of client accounts.

Fund Fees - If a client's portfolio holds exchange traded funds, mutual funds or money market funds, the client is likely to be paying two fees for the management of these assets, one to CMBA and one to the fund manager. Some funds have additional related charges in addition to the fund manager's fees including sales related fees to market the fund.

Brokerage Fees - Client accounts will be subject to brokerage fees. Brokerage fees may be charged on a commission basis for each trade that is made in an account. The commission charges may be a flat price per trade or may be based on the number of shares traded and may have a minimum charge. Alternatively, brokerage fees may be charged as a percentage of assets under custody.

Custody Fees - Some clients may choose to have their funds held at a trust company, bank or similar institution. Typically, these firms will charge a fee for their custody and record keeping services. Brokerage firms as well, may

have additional fees related to having custody of an account in addition to the brokerage fees stated above.

Item 6. Performance-Based Fees and Side-By-Side Management

Some clients may choose to pay a performance based fee rather than a percentage of assets under management basis as described earlier in Item 5. With a performance based fee, CMBA's level of compensation will be dependent on how well the account performs. This may give added incentive to favor a performance based fee client account over a regular fee client account. CMBA believes this risk is somewhat mitigated by the investment style and process. For those accounts that pay a regular fee, the interests of CMBA and the client are aligned in that if the client account does well and assets under management increase then so too does the management fee, so there is little incentive to hinder the performance of regular fee client accounts. Actively managed accounts are managed according to a quantitative model and stocks are bought and sold according to the rankings within that model, thus a stock will not typically be sold for one account while being purchased for another. While all investment decisions are made with the best interests of client accounts, it is not known with certainty which stocks will do better or worse than others in advance to provide for favoring performance based accounts with the "best" stocks. Further, with little exception, all investments that are chosen are sufficiently liquid, such that if the "best" stocks were identified, there is no reason to not purchase them for all client accounts. As discussed later, in Item 12. Brokerage Practices, accounts are traded on a pre-set rotation basis so that performance based accounts are not favored in order of stock purchases and sales, and where possible, accounts brokered at the same brokerage firms will receive average prices.

Item 7. Types of Clients

CMBA manages accounts for a variety of clients including both taxable and tax deferred accounts for individuals, taxable corporate accounts, corporate pension accounts, government pension accounts and accounts of charitable funds or religious groups. The minimum account size is \$100,000, but may be waived at CMBA's discretion.

Item 8. Methods of Analysis, Investment Strategies and Risk of Loss

The investment of assets in equity and fixed income securities, including investments in diversified funds is risky. The value of an investment may decrease as well as increase and clients may lose the full amount initially invested. Investments in individual securities should be considered based on the suitability of strategies in relation to return objectives, risk tolerances and other investments.

Equity Securities - CMBA manages equity securities in two broad strategies, both on a long only basis. The strategies are Large Cap, and Small Cap. The differentiation between the strategies is the universe of stocks that the strategies select from, based on market capitalization size. The equity portfolios are actively managed with the goal of having positive differential performance versus the universe of stocks and the representative benchmark index. Thus, the number of holdings will vary greatly from the universe and from a passively managed benchmark index and the level of turnover may vary greatly from that of a passively managed benchmark index. The resulting performance may be better or worse than the benchmark index. The main driver of the selection of individual equity securities is a proprietary quantitative model. The model focuses on changes in analyst estimates of corporate earnings. In addition, the model may incorporate other factors including, but not limited to, company sales and analyst sales estimates, a quality of earnings factor from changes in particular balance sheet items, and valuation based on two internally generated views of price to earnings variables. The quantitative approach allows for a weekly update of information and security rankings for not only portfolio holdings but also for all securities considered in the investable universe. Lower ranked securities held in managed portfolios are considered as possible sell candidates to be replaced by more favorably ranked securities. Apart from the quantitative model the particular views of a few closely monitored brokerage firms are considered in security selection. The quantitative model is based on back-testing and prior results and while past relationships may have resulted in average performance greater than general market returns over longer time

periods, the model is not expected to outperform in every time period and there is no guarantee that the relationships will hold in the longer term going forward. At times, the model may dictate higher turnover of securities. For accounts that pay commissions on a transaction basis this will increase the brokerage costs to the account and may adversely affect client returns.

Fixed Income Securities - Generally the fixed income allocation for client accounts is for capital preservation and/or income purposes. In that regard, the fixed income strategy is mainly one of higher quality, investment grade securities. The selection of specific securities depends on particular client account objectives and how a particular security may fit into the overall portfolio. Generally, consideration will be given to the allocation between government versus corporate securities, duration of particular securities versus any target duration for the portfolio, current steepness and level of yield curve relative to historic levels, current spreads between corporate and government securities relative to historic levels. Fixed income strategy and performance is reviewed on a quarterly basis. While fixed income assets are generally regarded as less risky than equity securities, they are still risky assets and loss of capital may occur. Of particular importance for fixed income securities is the level and steepness of the yield curve and changes in interest rates. Increasing interest rates may have a significant impact on the market price of fixed income securities which could lead to unanticipated losses if holdings need to be liquidated prematurely.

Funds - Investment in exchange traded funds and mutual funds is utilized to provide for greater diversification of smaller equity and fixed income allocations and for diversification into international markets. Funds are screened on a number of attributes including fund size, turnover, management tenure, fees, past performance and number of holdings. Generally, funds with any load fees are avoided. Fund performance is reviewed on a quarterly basis. While the diversification provided by mutual funds to smaller accounts is a benefit to diversify some of the risk associated with individual stocks or economic sectors, these funds are still risky assets and are susceptible to the same market, macro and micro-economic risks that the underlying securities are subject to and a loss of capital is possible.

Signal Provider - If a Subscriber uses the Platform to echo the trading signals of a Signal Provider, when the Signal Provider executes a trade, the Subscriber will be notified of the trade and will subsequently have the option to manually opt-in to or "echo" the same trade for the Subscriber's account and, in the event the Subscriber does "echo" the trade, the Subscriber has sole discretion over the size of the trade. The Platform does not permit Subscribers to auto-trade the Signal Providers' trades. The trading signals generated by the Signal Provider are for information purposes only and is not intended as investment advice. Any trades placed are entirely the Subscribers responsibility.

Trading is risky. You can lose money. Past results are not necessarily indicative of future results. Securities trading is not appropriate for everyone. Traders are subject to risk from market volatility, market liquidity, system availability, and delays in receipt of trading signals, each and all of which may delay trade execution. These and other risks of securities trading should be considered carefully before subscribing to a Signal Provider. The information provided by a Signal Provider is not customized or personalized to particular risk profile or tolerance. Nor is the information published a customized or personalized recommendation to buy, sell, hold, or invest in particular financial products or securities. Signals provided are not a solicitation or offer to buy or sell any financial product or securities.

All four types of investment; managed equity portfolios, fixed income securities, funds and trading signals, are subject to overall market and macro-economic risk as well as individual security risks due to particular industry and micro-economic factors. The value of investments may decrease as well as increase and an investor may lose the full amount initially invested.

Item 9. Disciplinary Information

CMBA has no disciplinary information to report.

Item 10. Other Financial Industry Activities and Affiliations

CMBA has no other financial industry activities or affiliations.

Item 11. Code of Ethics, Participation or Interest in Client Transactions and Personal Trading.

Code of Ethics - CMBA has instituted a Code of Ethics to help guide employees and management in working with client accounts. The Code of Ethics stresses the importance of valuing client interests over self interest and addresses areas such as trading in client accounts, personal trades of employees, insider trading and presentation of performance materials. Employees review the Code of Ethics on an annual basis. A copy of our Code of Ethics is available upon written request.

Personal Trading - CMBA's employees may invest in the same securities as selected for client accounts and may at times take positions that are contrary to those in client accounts. Employees could potentially time the trading of securities in their own personal accounts to benefit from the market impact on those securities of trading in client accounts. As such, the Code of Ethics includes rules on trading in employee accounts. Prior to placing any personal trades for securities in which manipulation is a risk, employees must request approval of those trades. The securities requested to be traded are cross referenced against client accounts and against lists of securities being bought or sold for client accounts. Further, CMBA is to receive duplicate statements for all securities accounts in which employees may have a vested interest. These statements are reviewed for transactions and cross referenced to trade pre-approval requests to ensure that all employee trades are being properly approved.

Trade Signal Subscriptions - Inherent in the process of providing trading signals to Subscribers, trading signals will be provided subsequent to trades being executed in CMBA's actively managed accounts. Thus, Subscribers, if they choose to follow the signal, will be acting on trades after CMBA has acted on those trades. CMBA has no ability to know if or when Subscribers may act on trading signals. As mentioned above in Personal Trading, CMBA's employees may invest in the same securities identified in trade signals, and may at times take positions that are contrary to those signals.

Item 12. Brokerage Practices

In selecting brokers for client transactions and determining the reasonableness of brokers' compensation,

CMBA evaluates qualitative execution factors, such as research capabilities, success of prior research recommendations, ability to execute trades, nature and frequency of sales coverage, depth of services provided, including back office and processing capabilities, financial stability and responsibility, reputation, commission rates, responsiveness and the value of research and brokerage products and services provided by such brokers.

A. Soft Dollar Practices - For accounts where CMBA is granted authority to select brokers, commission dollars may be utilized to pay for investment research. The use of soft dollars creates a conflict of interest for CMBA in that the research or services received may have otherwise had to have been obtained as a direct cost to CMBA and there is an incentive to increase client commissions, or to increase trading activity to obtain the services provided through soft dollar practices. These incentives may conflict with CMBA's intentions to provide best execution for its clients. In light of this conflict, CMBA requires that all soft dollar purchases fall within the scope of the safe harbor under Section 28(e) of the Exchange Act, and all services to be provided through soft dollar arrangements must be approved by management. Commission costs are evaluated relative to commissions with other brokers and with consideration for the benefits of services received. The quantitative approach to portfolio management dictates the level of turnover, which limits the ability of managers or traders to inflate trading activity. The firm engages in soft dollar practices for products and services including, among other things, proprietary research from broker-dealers and research prepared by third parties. Research services may include, among other things, research concerning market, economic and financial data, a particular aspect of economics or on the economy in general, statistical information, data or pricing regarding securities, financial publication, electronic market quotations, performance analytics, analyses concerning specific securities, companies, industries or sectors and market, economic and financial studies and forecasts. Research may be in written or oral form. In the last fiscal year, ended 12/31/2022, CMBA used soft dollar credits to purchase the items listed in the chart below.

Vendor	Amount	Description
FT Interactive	2,247.94	Pricing Service for Security

Data		Evaluation
NYSE	1,637.76	Exchange Fees - Security Pricing
Eze Software Realtick	7,056.00	Pricing Service for Security Evaluation
Sungard	1,980.00	Trade Confirmation Service
	\$12,921.70	

Services purchased utilizing commission dollars are used to service all clients, not only the clients whose accounts generated the commissions used to pay for these services. In some instances, clients may pay commissions higher than those obtainable from other brokers in return for the above research services.

B. Client Referrals - Brokers sometimes refer their clients to CMBA and many of CMBA's clients have been referred by brokers. If a broker refers a client, and the client wants to retain that broker, CMBA typically will direct all or portions of that client's brokerage to the referring broker after receiving client direction to such effect. The client determines the portion of brokerage commissions to be directed to the referring broker and also determines the brokerage commission rate. The commission rate may be transaction based, or it may be a single flat annual fee. When brokers refer clients CMBA may review the commission structure and may attempt to negotiate the commission rate. However, CMBA has a conflict of interest and limited ability in negotiating commission rates with a referring broker because of CMBA's interest in receiving additional client referrals from the referring broker.

C. Directed Brokerage - Clients sometimes ask CMBA for advice on brokers. Generally, CMBA will suggest one or more of the brokers with which it has some familiarity and has a certain level of confidence in their services and abilities. CMBA will also advise client to consider a number of variables in selecting a broker including commission rates, level of service available, local office presence and availability of research and advice. As part of its Investment Advisory Management Agreement, CMBA provides a form on which to direct brokerage to a particular broker. Clients should be aware that directing brokerage to a particular broker may inhibit CMBA's ability to provide best execution for client accounts. The brokerage commission rate or the single, flat fee for brokerage with directed brokers may be higher or lower than

that which could be obtained from other brokers at the same firm or from another brokerage firm, or which CMBA's other clients may pay. Where accounts are directed to a particular brokerage CMBA may not be able to aggregate trades for the client with those of CMBA's other clients. This may inhibit the ability to reduce transactions costs on a higher volume basis and the client could be paying higher costs. The price a client pays or receives for a security may be higher or lower than the price paid or received by CMBA's other clients who utilize different brokers.

D. Trade Aggregation - When possible, CMBA will block the trades of clients who are being traded through a common brokerage firm. However, CMBA is not likely to be able to negotiate volume commission discounts in such situations. Clients involved in such block trades are charged different commission rates depending upon their particular arrangement with the executing broker. As a result, a client with directed brokerage may pay higher brokerage commissions on securities transactions than CMBA might be able to negotiate with another brokerage firm and higher brokerage commissions than CMBA's other client's pay. Moreover, the price a client account, which has directed brokerage to a particular broker, pays or receives for a security, may be higher or lower than the price paid or received by CMBA's other clients who utilize different brokers. For groups of accounts that are managed in a similar fashion, CMBA sets up pre-determined rotation schedules setting the order of trades to be placed with the individual brokerage firms utilized in trading securities for that group of client accounts. This rotation schedule is to ensure that any group of accounts at any particular broker are not provided more favorable treatment on a regular basis.

Item 13. Review of Accounts

Holdings in actively managed equity accounts are reviewed on a weekly basis by portfolio managers as the stock selection model is updated with new information. Fixed income accounts and mutual fund and exchange traded fund accounts are reviewed on a quarterly basis by portfolio managers.

On a quarterly basis, reports are provided to clients including performance figures and an appraisal report identifying account holdings and values. Additional reports may be provided upon request. Clients are urged to compare the reports to those provided directly from their custodian.

If client circumstances change, such as job status, inheritance or health, clients should contact CMBA to discuss particular circumstances and determine if changes to their investment strategy are necessary.

Item 14. Client Referrals and Other Compensation

CMBA has no current agreements with any third-party solicitors for client referrals.

Item 15. Custody

CMBA does not take custody of client accounts. As mentioned in Item 13. Review of Accounts, CMBA does provide quarterly reports to clients and clients are urged to compare to statements received directly from their custodian. Comparing statements will allow clients to determine whether account transactions, including deductions to pay advisory fees, are proper.

Item 16. Investment Discretion

CMBA's investment advisory agreement gives CMBA full trading authority for client accounts, with discretion to buy and sell securities as CMBA deems appropriate. Clients may put limitations on this authority by providing a written document of investment guidelines imposing the limitations they require and subsequent to those guidelines being acceptable to both parties. Some clients have imposed restrictions such as not investing in tobacco and gambling stocks and not investing in below investment grade bonds.

Item 17. Voting Client Securities

Generally, as part of CMBA's investment advisory agreement, CMBA will have authority and responsibility to vote proxies for accounts under management. Because CMBA is a quantitative manager, which relies substantially on the evaluation of reported financial and statistical data (as opposed to in-depth discussions with company management), we rely extensively on management recommendations. We generally purchase and hold companies following extraordinary improvements in consensus forecasted earnings. We believe these characteristics are strong evidence that management is making profitable operating decisions and should be trusted on most matters relating to company organization. On issues that involve corporate reorganization, management entrenchment or poison pills, we evaluate each proxy's individual merits in light of the specific circumstances.

Information on how a client's proxies were voted are available upon written request. A copy of CMBA's Proxy Voting Policies and Procedures is available upon written request.

Item 18. Financial Information

CMBA is not aware of any financial condition that is reasonably likely to impair its ability to meet contractual commitments regarding discretionary authority over client accounts.

Form ADV Part 2B - Brochure Supplement dated 03/08/2023

Item 1. Cover Page

This supplement is provided as additional information to the C.M. Bidwell & Associates, Ltd. brochure to which this supplement should be attached, or should have already been provided separately. Please contact our office if you have not received a copy of the C.M. Bidwell & Associates, Ltd. brochure, or if you have any questions about the contents of this supplement.

Ph (808) 595-1099
Fx (808) 595-1091

This brochure supplement provides information about the following individuals:

Clinton M. Bidwell, III
Niall Kilcommons
Brett Bidwell
Max Chun-Van Osdol

Additional information about the listed individuals is available on the SEC's website at www.adviserinfo.sec.gov.

Item 2. Educational Background and Business Experience

Clinton M. Bidwell, III, Chairman of the Board

Born: 10/08/1941

Education:

PhD. Finance, University of Southern California

MBA, University of California

BA, Political Science, University of California

Business Experience:

01/1979-Present - C.M. Bidwell & Associates, Ltd.

Prior - Professor of Finance, University of Hawaii,
Manoa

Professor of Finance, University of
California, Berkeley

Professor of Finance, University of North
Carolina, Chapel Hill

- - - - -

Niall Kilcommons, President & Chief Compliance Officer

Born: 06/19/1969

Education:

Chartered Financial Analyst^①

Certified Management Accountant^②

Bachelor of Management, University of Lethbridge,
Alberta, Canada

Business Experience:

09/1999-Present - C.M. Bidwell & Associates, Ltd.

Prior - Accountant, Corporate Financial Reporting,
Fracmaster Ltd.

- - - - -

^① To earn a Chartered Financial Analyst[®] charter candidates must have four years of qualified investment work experience, become a member of CFA Institute, pledge to adhere to the CFA Institute Code of Ethics and Standards of Professional Conduct on an annual basis, apply for membership to a local CFA member society, and complete the CFA Program. The CFA Program is organized into three levels, each culminating in a six-hour exam, covering a broad body of knowledge including areas such as accounting, economics, ethics, money management and security analysis.

^② The Certified Management Accountant designation focuses on business strategy, management and accounting. Pre-requisites to entering the program include a university degree, including specific required courses in the areas of business, economics and accounting. After passing an entrance exam, candidates must complete a 2 year program of study and group sessions focusing on business processes and strategic management.

Brett C. Bidwell, Vice President

Born: 12/29/1964

Education:

Chartered Financial Analyst®

Certified Financial Planner™³

Masters in Economics, University of Texas

BS, Economics with math minor, University of Las Vegas, Nevada

Item 3. Disciplinary Information

There is no disciplinary information to report at this time.

Item 4. Other Business Activities

There is no other business information to report at this time.

Item 5. Additional Compensation

³ To obtain The Certified Financial Planner designation the holder must meet education, examination, experience and ethics requirements, and pay an ongoing certification fee. A bachelor's degree (or higher), or its equivalent in any discipline, from an accredited college or university is required. Students are required to complete course training in nine core financial topic areas, sit for a 10 hour CFP Board Certification Examination, acquire three years full-time or equivalent (2000 hours per year) part-time work experience in the financial planning field and undergo an extensive background check.

There are no other additional compensation items to disclose at this time.

Item 6. Supervision

For client accounts serviced out of the Hawaii office, while certain of the listed individuals may function as the lead contact with individual clients, the advice provided to clients is generally discussed with other individuals and none of the listed individuals are solely responsible for any single client account.

With regards to the Carmel, California office, while Brett Bidwell works independently providing advice and portfolio management, the accounting functions and performance calculations are overseen by the Hawaii office.

Marketing and presentation materials are reviewed before distribution to clients to ensure accuracy and completeness of information.

Clients having concerns with any of the advice or service that they have received from any of the listed individuals may contact executive personnel as per the following schedule by phoning (808)595-1099.
