Item 4. Advisory Business

Fir Tree Capital Management LP (“***Fir Tree***”) is a Delaware limited partnership located in New York, NY (HQ), and Miami, FL. Founded in 1994, Fir Tree provides investment advisory services to its privately-offered single-investor and pooled investment vehicles (the “***Funds***”), separately managed accounts, trade advisory clients, and sub-advisory clients (“***SMAs***” and, together with the Funds, “***Clients***”). David Sultan and Clinton Biondo are the principals of Fir Tree and its general partner, FTFCM GP LLC. Mr. Biondo assists Mr. Sultan in managing the investment team and day-to-day operations of Fir Tree. In addition to Messrs. Sultan and Biondo, certain employees of Fir Tree, responsible for investment and operation decisions of the Funds, have economic ownership in Fir Tree affiliates listed under Item 10 of this brochure.

Fir Tree is a private investment firm that manages assets on behalf of endowments, foundations, public and private pension funds and other institutional and private investors. Fir Tree invests worldwide in public and private securities, loans, real estate debt and real property, sovereign debt and Digital Assets (as defined below).

With respect to the Funds, Fir Tree adheres to the investment strategy set forth in each Fund's offering and/or governing document and does not generally modify its securities recommendations to the Funds based on the particular interests of the Funds' investors. Except for any restrictions set forth in the Funds' offering and/or governing documents, neither the Funds nor their investors may impose restrictions on investing in certain securities or types of investments. With respect to SMAs, the investment strategy is set forth in the operative documents for each SMA, which generally will be based on the particular investment objectives and goals of the SMA client, who may impose restrictions on investing in certain securities or types of securities. The investment strategies employed by SMAs will at times overlap with the investment strategies employed by the Funds.

Fir Tree has determined, and in the future may determine, that the size of the available investment opportunity of an investment being made by one or more Clients meaningfully exceeds the amount that is appropriate for such Clients (taking into consideration the relevant provisions of the Clients' offering and/or governing documents) or that existing or potential investors (including, but not limited to, certain Clients and/or certain underlying investors therein) may be interested in concentrated exposure to particular investment opportunities. In such event, Fir Tree may form one or more co-investment vehicles or enter into an SMA specifically to invest in such opportunity and offer one or more persons (including, but not limited to, SMA clients or investors in the relevant Funds) the opportunity to participate in such co-investment vehicles or SMAs.

Fir Tree will determine the person(s) to whom it offers any such opportunity, and the relative amounts offered to each such person, taking into account such factors as Fir Tree determines appropriate based on the relevant facts and circumstances, which generally include one or more of the following: (i) the ability of an investor to commit to invest in a short period of time, in light of the timing constraints applicable to such investment; (ii) the ability of an investor to commit to a significant portion of such opportunity; (iii) the size of an investor's commitment to a Fund or SMA; (iv) whether and to what extent an investor has accepted prior co-investment opportunities offered to it; or (v) such other factors as Fir Tree deems relevant, which may include subjective determinations such as working relationships and strategic benefits to Fir Tree or to Fir Tree's Clients. In all cases, allocation of co-investment opportunities will be subject to the provisions of the offering and/or governing documents of the relevant Client(s).

As of December 31, 2022, the total net asset value of the Clients that Fir Tree managed on a discretionary and non-discretionary basis (including unfunded commitments) was approximately \$3 billion. These numbers are based on estimated and unaudited information and are therefore subject to change.

Item 5. Fees and Compensation

Compensation - Funds

With respect to the Funds, Fir Tree (or one of its affiliates) typically receives two types of compensation from investors—an asset-based management fee and performance-based compensation. Generally, each year, Fir Tree charges investors in the Funds a negotiable asset-based management fee ranging from 0% to 2.00% of each investor's assets that Fir Tree manages through the Funds and performance-based compensation ranging from 0% to 30% of each investor's share of the profits of the Funds. Dependent on the structure of the specific Fund, Fir Tree's performance-based compensation is taken as either a carried interest, an annual allocation or annual fee. By way

of example, a summary description of performance-based compensation attributable to Fir Tree's "flagship" Funds is set forth below; however, detailed descriptions of Fir Tree's asset-based fees and performance-based compensation are set forth in the offering and/or governing document for each Fund.

Fir Tree's performance-based compensation for two of its "flagship" Fund complexes (Fir Tree Value and Fir Tree Capital Opportunity) is subject to a rolling high water mark limitation. Thus, if losses occur that result in the capital account of an investor in one of these Fund complexes being lower than the highest level of cumulative net profits achieved by that investor through the close of any year since admission, then the performance-based compensation applicable to that investor will be one-half of Fir Tree's normal share of net profits, if any, until such time as that investor's capital account is equal to its previous high water mark plus an amount equal to 150% of the losses incurred by that investor. Thereafter, the performance-based compensation reverts back to the original percentage applicable to that investor.

Fir Tree's performance-based compensation for one of its longer duration "flagship" Fund complexes (Fir Tree Capital Opportunity III) is calculated by (i) subtracting the value of what an investor's investment in the Fund would have been if the investor's investment had a rate of return equal to a percentage of the rate of return of a well-known index for the applicable performance period from the actual value of the investor's investment in the Fund for that performance period and then (ii) multiplying the difference by 30%. The calculation of Fir Tree's performance-based compensation for that same Fund complex includes a mechanism whereby the asset-based management fees paid by an investor are subtracted out of the final performance-based compensation attributable to that investor.

Fir Tree's performance-based compensation for its various Special Opportunities and Pamli Fund complexes is also subject to certain restrictions, including standard high-water marks, hurdles and/or preferred returns, as applicable, in each case as more completely described in the offering and/or governing documents of each such Fund.

Fir Tree has the general discretion to waive or reduce all or a portion of the asset-based management fee and/or the performance-based compensation for certain investors of the Funds, and has done so on a limited basis for large investors or in exchange for longer lock-ups or other reduced liquidity. Fir Tree has entered into and will continue to enter into arrangements with certain investors in the Funds (including current and former employees and principals of Fir Tree) that have the effect of altering or supplementing the terms of such investors' investment in the Funds, including, without limitation, arrangements with respect to waivers or reductions relating to fees, increased or reduced liquidity, and additional transparency and any other provisions of the Fund's offering and/or governing documents with respect to such investor or any other matter deemed appropriate by Fir Tree without obtaining the consent of any other investor (other than an investor whose contractual rights as an investor would be materially and adversely changed by such waiver, modification or creation of new terms) and without entitling any other investor to such waiver, modification or new term(s). Such arrangements will generally be based on such factors as the size of an investor's investment, an investor's existing relationships with Fir Tree or any particular regulatory or legal considerations applicable to an investor, but Fir Tree may enter such arrangements for any reason it deems necessary, advisable, desirable or convenient. As a result, returns may vary from investor to investor depending on arrangements applicable to a given investor's investment and may result in adverse consequences to the Funds or other investors. Investments in the Funds made by Fir Tree's

employees, principals, certain former employees and its affiliates are not subject to any asset-based or performance-based compensation and will at times be subject to comparatively favorable liquidity terms.

With respect to the Funds, Fir Tree's asset-based management fee is generally calculated quarterly in advance and deducted from the Funds' accounts at the end of each month. If an investor withdraws from a Fund prior to the end of a quarter, that investor pays a pro rata portion of the asset-based management fee earned through the withdrawal date. Fir Tree's performance-based annual allocation and fee are generally deducted from the Funds' accounts at the end of each year or when investors make a withdrawal (but only with respect to the amount withdrawn). However, some of the Funds are subject to a carried interest and, generally, Fir Tree accrues its performance-based carried interest allocation on a yearly basis. Fir Tree is generally entitled to receive distributions of the carried interest allocation from these Funds only after 100% of capital contributions have been distributed to investors (and, in the case of certain Funds, after investors have also been distributed a particular "hurdle" amount).

Compensation - SMAs

With respect to the SMAs, Fir Tree typically receives compensation from its SMA advisory clients in the form of an asset-based management fee and/or performance-based fee. Generally, each year, Fir Tree charges investors in its SMAs a negotiable asset-based management fee ranging from 0.0% to 1.05% per annum of each investor's assets that Fir Tree manages through the SMA and/or performance-based fee of up to 10% of each investor's share of the profits of the SMA. A more detailed description of Fir Tree's asset-based fees and performance-based fees is set forth in the operative documents for each SMA.

With respect to SMAs, Fir Tree's asset-based management fee is generally calculated monthly in arrears. In general, the management fee will be pro-rated for any contribution or withdrawal that is effective other than as of the last day of a month. With respect to performance-based fees, in general, the client will pay performance-based fee annually, at the end of the specific investment period or at the end of a specified term.

Expenses

With limited exceptions and except as otherwise required by law, each Fund bears all costs and expenses of its operations and investment activities, including the costs of identifying and evaluating proposed investments (including any performance-based compensation payable to third-party investment research advisors), expenses relating to investment transactions (including expenses with respect to the acquisition, management and disposition of the investments and other temporary investments, whether or not consummated, as well as expenses attributable to trade errors where Fir Tree has not violated the standard of care prescribed in the relevant offering and/or governing documents), as well as legal, accounting and consulting fees and any taxes, fees or other government charges levied against the Fund and all costs and expenses related to the offering of Fund interests (including government filing fees). With respect to SMAs, each SMA bears certain costs and expenses attributable to its operations and investment activities which include some (but typically not all) of the costs and expenses described above.

Additionally, Fir Tree generally receives reimbursement of certain expenses from the Funds, as is described in the offering and/or governing documents of the Funds. These reimbursements are for

expenses deemed by Fir Tree, in its discretion, to be beneficial to the Funds. These expenses include, but are not limited to, costs for accounting, tax, legal, compliance (including regulatory compliance consulting fees related to Fir Tree's compliance with specific rules and regulations), regulatory filings of the Funds or Fir Tree, consultancy arrangements, research (including research management software), investment-related subscriptions in software and publications, investment-related travel (including meals and lodging), computer software, maintenance agreements and other information technology including computer, telephone systems and information technology consultants, certain marketing and client services, insurance expenses that may benefit the Funds, the General Partners, or Fir Tree, and valuation services.

With respect to SMAs, Fir Tree receives reimbursement from the SMA of some (but typically not all) of the expenses described above. However, Funds will not bear any expenses attributable but not allocated to SMAs. For example, if a Fund and SMA are allocated the same investment, the Fund will bear the investment-related costs (research, travel, etc.) attributable to its allocation and Fir Tree will bear the SMA's portion (if such expenses are not allocable to the SMA).

The reimbursement for these certain expenses incurred by Fir Tree, which Fir Tree has deemed beneficial to the Client, could be viewed as additional compensation to Fir Tree. The allocation of these expenses to each Client may or may not be proportionate to the benefit received by the Client versus the benefit received by Fir Tree. However, these expenses are allocated on what Fir Tree believes is a fair and equitable basis among the Clients in accordance with Fir Tree's established policies and procedures. For more information on brokerage transactions and costs, please see Item 12. Brokerage Practices.

The Funds may invest in other investment vehicles (including, but not limited to, exchange traded funds ("ETFs"), mutual funds, and private investment vehicles) which charge additional fees and expenses.

Transaction-Based Compensation

Neither Fir Tree nor any of its principals or employees receives any transaction-based compensation (i.e., sales commission) for the sale of securities or other investment products.

Item 6. Performance-Based Fees and Side-By-Side Management

Generally, except as described in Item 5, Fir Tree (or one of its affiliates) receives performance-based compensation from Clients each year. However, certain Clients (including both SMAs and Funds) do not pay performance-based compensation. As such, there is an incentive for Fir Tree to allocate profitable or riskier investments to the Clients that pay performance-based compensation. Fir Tree has adopted investment opportunity allocation policies and procedures to govern the fair allocation of investments over time. Additional information regarding Fir Tree's investment allocation policies and related conflicts is included in Item 12 of this brochure.

Item 7. Types of Clients

Fir Tree primarily provides advice to the Funds, separately-managed accounts, trade advisory clients, and sub-advisory clients. The Funds are generally private pooled and single-investor investment vehicles sponsored by Fir Tree, whereas separately-managed accounts are accounts managed for endowments, pension funds, institutional investors, family offices or high net worth individuals.

Trade advisory clients and sub-advisory clients are typically third-party investment managers, and/or the investment vehicles sponsored by such third-party managers.

Item 8. Method of Analysis, Investment Strategies and Risk of Loss

Please refer to the Clients' offering and/or governing documents for a more detailed discussion of our investment strategy and related risks. A sampling of Client investment strategies and related risks is provided below for reference.

For certain Clients, Fir Tree uses a value approach to investing, generally with a focus on long-term capital appreciation. Fir Tree's value approach focuses on long-oriented investments that we believe are offered below their "fundamental value", short-oriented investments offered above their "fundamental value" and arbitrage investments. We generally will employ one or more of the following strategies in an effort to achieve long-term capital appreciation on behalf of Clients: (1) investments in undervalued or distressed assets; (2) investments having a credit and/or capital structure arbitrage component; (3) investments in real estate or real-estate related assets; and (4) sovereign investments we believe are mispriced.

For other Clients, Fir Tree employs a variety of investment strategies, including global credit investing, investments related to special purpose acquisition companies, and "co-investment" opportunities alongside other vehicles and parties.

Unless otherwise specified in the relevant offering and/or governing documents, Clients' investments are generally not constrained by geography, industry, or security type. If permitted under the relevant offering and/or governing documents, we generally attempt to enhance a Client's performance or hedge a Client's portfolio by the use of leverage, short sales, options, futures and other derivative instruments.

Despite Fir Tree's research and analysis and investment strategies, investing in any security involves a risk of loss that Clients and all of the investors in the Funds must be prepared to bear. There can be no assurance that Fir Tree's investment objective will be achieved.

All investors in the Funds and SMA clients should consult their own legal, tax and financial advisors prior to investing with Fir Tree. Certain risks associated with an investment in any Client that Fir Tree advises include:

- *General Investment Risks.* All investments risk the loss of capital. The profitability of a significant portion of the Clients' investment programs depends to a great extent upon correctly assessing the future course of the price movements of securities and other investments. There can be no assurance that Fir Tree will be able to predict accurately these price movements. With respect to the investment strategies utilized by Clients, there is always some, and occasionally a significant, degree of market risk. No guarantee or representation is made that Clients' investment programs will be successful.
- *Business and Regulatory Risk.* Legal, tax and regulatory changes could occur that may adversely affect Clients. The regulatory environment for Clients is evolving, and changes in the regulation of Clients may adversely affect the value of investments held by Clients and the ability of Clients to obtain the leverage they might otherwise obtain or to pursue their trading strategies. The Securities and Exchange Commission and other regulators

and self-regulatory organizations and exchanges are authorized to take extraordinary actions in the event of market emergencies. The regulation of derivatives transactions and funds that engage in such transactions is an evolving area of law and is subject to modification by government and judicial action. The effect of any future regulatory change on Fir Tree, the Clients or Fir Tree's affiliates could be substantial and adverse. There can be no assurance that Clients, Fir Tree or any of Fir Tree's affiliates will avoid regulatory examination or enforcement actions. Even if an investigation or proceeding does not result in a sanction being imposed against Fir Tree, the Clients or Fir Tree's affiliates, or such sanction is small in monetary amount, Fir Tree, the Clients or Fir Tree affiliates may be subject to adverse publicity relating to the investigation, proceeding or imposition of such sanctions.

- *Risks Related to Natural Disasters, Epidemics and Terrorist Attacks.* Countries and regions in which Fir Tree invests, where Fir Tree has its offices or where Fir Tree or Clients otherwise do business, are susceptible to natural disasters (e.g., fire, flood, earthquake, storm and hurricane) and epidemics, pandemics or other outbreaks of serious contagious diseases, including COVID-19. The occurrence of a natural disaster or an epidemic, together with any resulting restrictions on travel or quarantines imposed, could adversely affect and severely disrupt the business operations, economies and financial markets of many countries (even beyond the site of the natural disaster or epidemic) and could adversely affect Fir Tree's ability to conduct its routine business or the business of the companies in which Clients invest. In addition, terrorist attacks, civil unrest or the fear of or the precautions taken in anticipation of such attacks or unrest, could, directly or indirectly, materially and adversely affect specific businesses and certain industries in which Fir Tree invests or could affect the countries and regions in which Clients are invested, where Fir Tree has its office or where Fir Tree or Clients otherwise do business. Other acts of war (e.g., war, invasion, acts of foreign enemies, hostilities and insurrection, regardless of whether war is declared), as well as related geopolitical events, sanctions regimes or trade disruptions could also have a material adverse impact on the financial condition of businesses, industries or countries in which Fir Tree invests Client assets. Furthermore, natural disasters, epidemics, terrorist attacks, civil unrest and geopolitical events (including global sanctions regimes) can have the effect of compounding or exaggerating the impact of any of the specific investment risks noted above on Fir Tree's operations and Client investments.
- *Trade Errors.* Clients' transactions may be effected in a manner that differs from what was intended. We review all trade errors that we discover, on a case-by-case basis, and decide what corrective steps to take, if any, after reviewing the error. Except as otherwise required by law or otherwise agreed with certain Clients, Clients bear all costs and expenses attributable to trade errors that are determined not to be the result of Fir Tree's gross negligence.
- *Diverse Membership.* The direct and indirect investors in the Funds and the SMA clients include (a) taxable persons and entities and tax-exempt entities and (b) entities and persons organized or domiciled in various U.S. and foreign jurisdictions, each of which is subject to various different tax and regulatory regimes. Such diverse investors have conflicting investment, tax and other interests, relating to, among other things, the nature of investments made by Clients, the structuring of the acquisition of such investments and

the timing of disposition of such investments. As a result, conflicts of interest will arise in connection with decisions made by Fir Tree with respect to Clients' investments, including conflicts of interest related to the nature or structure of investments that would be more beneficial for one type of investor (including investors affiliated with Fir Tree) than for another type of investor. The results of Clients' activities will affect individual investors differently depending upon their individual financial and tax situations because, for instance, of the timing of an event of realization of gain or loss and its characterization as long-term or short-term gain or loss. In selecting, structuring and managing investments appropriate for Clients, Fir Tree will generally consider the investment and tax objectives of each Client as a whole but will also consider the investment, tax, or other objectives of the various groups of investors, as well. In certain circumstances, an investment result will be more advantageous to some investors than to other investors. Despite the foregoing, expenses for those investments will still be borne pro rata by all of the underlying investors. In addition, the terms applicable to investors' investment in the Funds (including employees of Fir Tree) and SMA clients including, without limitation, arrangements with respect to waivers or reductions relating to fees, increased liquidity and transparency, differ and will at times be more favorable to certain investors (including employees of Fir Tree).

- *Allocation of Opportunities.* Fir Tree will act in a manner that it considers fair, reasonable and equitable in allocating investment and divestiture opportunities among Clients, but Fir Tree does not otherwise impose any specific obligations or requirements concerning the allocation of time, effort or opportunities to any particular Client or any restrictions on the nature or timing of investments for Client accounts and for Fir Tree's own account or for other accounts that Fir Tree or its affiliates manage. Fir Tree is not obligated to devote any specific amount of time to the affairs of any particular Client, nor is it required to accord exclusivity or priority to any Client in the event of limited investment or divestiture opportunities arising from the application of speculative position limits or other factors.
- *Tax Positions; Tax Risks.* Clients are subject to a variety of tax and regulatory regimes in a number of jurisdictions. Although Clients will endeavor to comply with the requirements of all such regimes, the treatment of Clients and their investment activities is often uncertain and may frequently depend on determinations of fact and interpretations of complex provisions of law and regulation for which there may be no clear precedent or authority. Where no clear precedent or authority is available, Clients will generally employ standard industry practice or conventions to guide their compliance efforts. There can be no assurance, however, that such practice or conventions ultimately will be considered compliant, and as a result, Clients, despite their efforts, may be exposed to liability, possibly on a retroactive basis, as practice or conventions change or are challenged or the procedures for compliance with the regimes to which Clients are subject become clearer. Clients will at times take positions with respect to certain tax issues that depend on legal conclusions not yet addressed by the courts. Should any such positions be successfully challenged by any applicable taxing authority, there could be material adverse effects on Clients, and an investor in Clients might be found to have a different tax liability for a particular year than the liability reported on the investor's tax return.
- *Cybersecurity Risks.* Fir Tree's information and technology systems may be vulnerable to damage or interruption from computer viruses, network failures, computer and

telecommunication failures, infiltration by unauthorized persons and security breaches, usage errors by their respective professionals, power outages and catastrophic events such as fires, tornadoes, floods, hurricanes and earthquakes. Although Fir Tree has implemented various measures to manage risks relating to these types of events, if these systems are compromised, become inoperable for extended periods of time or cease to function properly, Fir Tree and/or its Clients may have to make a significant investment to fix or replace them. The failure of these systems and/or the disaster recovery/business continuity plans for any reason could cause significant interruptions in Fir Tree's and/or its Clients' operations and result in a failure to maintain the security, confidentiality or privacy of sensitive data, including personal information relating to investors (and the beneficial owners of investors). Such a failure could harm Fir Tree's and/or the Clients' reputation, subject them to legal claims and otherwise affect their business and financial performance.

- *Social Media-Related Trading Volatility.* From time to time certain stocks have been targeted for trading by participants on social media platforms. Changes to market structures and the low cost of trading for retail clients may exacerbate the volume of trading related to social media attention. This volume may be significant and may result in dislocations of prices. Furthermore, many of the stocks targeted have been in part due to the amount of short interest in such stocks. To the extent a Client trades in a manner to benefit from the decline in value of public securities (especially if other actors, particularly hedge funds and other pooled vehicles, also trade a substantial amount and/or take short positions in such securities), the short interest may attract social media attention and related trading.

Given changes to market structure and the low cost of trading for retail clients, the volume of trading related to social media attention may be significant. As the borrowing costs increase as the price of the stock increases (and may typically only be ended through purchases of securities), social-media-related trading may cause Clients, with respect to any short positions, to incur outsized losses or to exit short positions earlier than Fir Tree would normally exit such a position on behalf of one of its Clients. In addition, if Fir Tree or a Client is targeted by social media groups, such Client's publicly reported short-aligned interest, such as put options, may attract buying. It is possible that Congress and regulators may react to the volatility related to social-media related trading and restrict, or require the public reporting of, short interest, which may limit our ability to achieve our trading objectives.

- *Indirect Expenses.* The indirect expenses incurred by a Client include the Client's allocable share of all or a portion of certain expenses of Fir Tree. The full or partial allocation of such expenses to Clients may or may not at any time be proportionate to the benefit received by Clients versus the benefit to Fir Tree.

The following is a description of the various strategies and certain risks of the investments that Fir Tree utilizes in advising Clients and some important risks associated with each strategy and instrument. The following explanation of certain risks is not exhaustive, but rather highlights some of the more significant risks involved in Fir Tree's investment strategies. The offering and/or governing documents for each Client contain a more thorough list of the risks associated with an investment in that particular Client. Fir Tree does not use every strategy listed below when managing

each Client's assets, but rather Fir Tree uses various combinations of strategies that depend on each Client's circumstances and investment goals.

- *Borrowing.* From time to time, certain Clients' operations and investments have been, and in the future may be, financed with secured and unsecured borrowing. There is no assurance that Fir Tree will be able to obtain borrowing or do so on terms that it deems acceptable for Clients. Furthermore, there is no assurance that counterparties will continue to extend borrowing to Clients. The ability of Clients to obtain and maintain borrowing may vary over time. The inability to obtain borrowing or loss of existing lines of credit may adversely impact the Client performance. Like other forms of leverage, the use of borrowing can enhance the risk of capital loss in the event of adverse changes in the level of market prices of the assets being financed with the borrowings. In addition, interest on borrowings will be a portfolio expense of those Clients that utilize leverage. Consequently, the level of interest rates generally and the rates at which Clients can borrow will affect the operating results of those Clients. In general, Fir Tree's anticipated use of short-term margin borrowings for certain Clients will result in certain additional risks to those Clients. For example, should the securities pledged to brokers to secure a Client's margin account decline in value, that Client could be subject to "margin calls." In the event of a margin call, the Client must either deposit additional funds with its brokers or suffer mandatory liquidation of the pledged securities to compensate for the decline in value. In the event of a sudden large drop in the value of a Client's assets, Fir Tree might not be able to liquidate assets of that Client quickly enough to pay off its margin debt.
- *Short Sales.* From time to time, Fir Tree has effected, and in the future may effect, short sales on behalf of Clients. Short selling is the practice of selling investments which are not owned by the seller. Short selling generally occurs when the seller anticipates a decline in the price of the investments or for hedging purposes. To complete a short sale, the seller must borrow the investments from a third party in order to make delivery to the buyer. The seller generally will be required to pay a brokerage commission or interest which will increase the cost to the seller of selling the investments. The proceeds of the short sale plus additional cash or investments must be deposited as collateral with the lender of the investments to the extent necessary to meet margin requirements. The amount of the required deposit will be adjusted periodically to reflect any change in the market price of the investments. The seller generally will be entitled to receive payments from the lender with respect to the short sale proceeds and additional cash on deposit with the lender, at negotiated rates typically based on the lender's short-term borrowing costs. The seller will be obligated to return the investments equivalent to those borrowed at any time on demand of the lender of the investments borrowed by purchasing them at the market price at the time of replacement. Until the investments are replaced, the seller will be required to pay to the lender amounts equal to any dividends or interest which accrue during the period of the loan of the investments. Due to regulatory or legislative action taken by regulators around the world, taking short positions on certain securities has been restricted and/or more onerous disclosure requirements in respect of short positions have been implemented. The levels of restriction and disclosure vary across different jurisdictions and are subject to change. Such restrictions and/or disclosure requirements have made it difficult and in some cases impossible for numerous market participants either to implement their investment strategies or to control the risk of their open positions and in some cases have increased the risk for such participants to do so. Accordingly, Fir

Tree may not be in a position to fully express its negative views in relation to certain securities, companies or sectors and the ability of Fir Tree to fulfill Clients' investment objectives may be constrained.

- *Use of Swaps and Other Derivatives.* From time to time, certain Clients have made, and the future may make, use of swaps and other forms of derivative contracts. In general, a derivative contract typically involves leverage (*i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of a security, currency, Digital Asset or commodity (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative contract). Consequently, an adverse change in the relevant price level can result in a loss of capital that is more exaggerated than would have resulted from an investment that did not involve the use of leverage inherent in the derivative contract. Some of the derivative contracts Fir Tree uses will at times be privately negotiated in the over-the-counter market. These contracts also involve exposure to credit risk, since contract performance depends in part on the financial condition of the counterparty. These transactions are also expected to involve significant transaction costs.
- *Options.* From time to time, Fir Tree has entered, and in the future may enter, into option contracts on behalf of certain Clients. There are risks associated with the sale and purchase of call options. The seller (writer) of a call option which is covered (*e.g.*, the writer holding the underlying security) assumes the risk of a decline in the market price of the underlying security below the purchase price of the underlying security less the premium received. The seller of a covered call option gives up the opportunity for gain on the underlying security above the exercise price of the option. The seller of an uncovered call option assumes the risk of a theoretically unlimited increase in the market price of the underlying security above the exercise price of the option. The buyer of a call option assumes the risk of losing its entire investment in the call option.

There are risks associated with the sale and purchase of put options. The seller (writer) of a put option which is covered (*e.g.*, the writer has a short position in the underlying security) assumes the risk of an increase in the market price of the underlying security above the sales price (received to establish the short position) of the underlying security if the market price rises above the exercise price of the option. The seller of an uncovered put option assumes the risk of decline in the market price of the underlying security below the exercise price of the option. The buyer of a put option assumes the risk of losing its entire investment in the put option.

- *Arbitrage Trading.* From time to time, certain Clients' trading strategy has involved, and in the future may involve, arbitraging between a security and its announced buy-out price (or other forms of "risk arbitrage"), between, for example, two securities, between the equity and equity options markets, between futures and securities and/or options, and/or any combination of the above. This means, for example, that certain Clients will at times purchase (or sell) securities (*i.e.*, on a current basis) and take offsetting positions in the options market in the same or related securities. To the extent the price relationships between these positions remain constant, no gain or loss on the positions will occur. These offsetting positions entail substantial risk that the price differential could change unfavorably causing a loss to the position.

- *Concentration of Investments.* From time to time, certain Clients have taken, and the future may take, substantial positions in particular securities or other assets. Such an occurrence may tend to result in more rapid changes in the value of the portfolio of such Client, upward or downward, than would be the case with greater diversification with the result that a loss in any such position could have a material adverse impact on the Client's capital.
- *Illiquidity of Investments.* Certain Client investments are very illiquid, and consequently Clients may at times not be able to sell such investments at a particular time at prices that reflect Fir Tree's assessment of their value or at the amount paid for such investments by the Client. Illiquidity may at times result from the absence of an established market for the investments as well as legal, contractual or other restrictions on their resale by the Clients and other factors. Furthermore, the nature of certain of Clients' investments, especially those in financially distressed companies, may at times require a long holding period prior to profitability. Therefore, no assurance can be given that, if a Client decides to dispose of a particular investment, it will be able to dispose of such investment at the prevailing market price. The sale of illiquid assets and restricted securities often requires more time and results in higher brokerage charges or dealer discounts and other selling expenses than does the sale of securities eligible for trading on national securities exchanges or in the over-the-counter markets. Restricted securities may at times sell at a price lower than similar securities that are not subject to restrictions on resale. Consequently, it may be relatively difficult for a Client to dispose of such investments rapidly and at favorable prices, in connection with adverse market developments or other factors. Illiquid assets may at times also be more difficult to value. In addition, Fir Tree will oftentimes not have access to readily ascertainable market prices when establishing monthly valuations of such illiquid investments. While Fir Tree will endeavor to determine and establish valuations based on its estimate of the market values of such investments and underwriting principles it considers to be sound (sometimes using more subjective methods such as fair value pricing as a result of the illiquidity of such investments), Fir Tree can provide no assurance that any given investment could be sold at a price equal to the market value ascribed to it in connection with Fir Tree's valuation of such investment.
- *Investment in Small Companies.* In general, there is no limitation on the size or operating experience of the companies in which certain Clients may invest. Some small companies in which a Client may invest may lack management depth or the ability to generate internally or obtain externally the funds necessary for growth. Companies with new products or services could sustain significant losses if projected markets do not materialize. Further, these companies may have, or may develop, only a regional market for products or services and may be adversely affected by purely local events. These companies may be small factors in their industries and may face intense competition from larger companies and entail a greater risk than investment in larger companies.
- *Investments in Undervalued Assets.* From time to time, certain Clients have invested, and in the future may invest, in undervalued assets. The identification of investment opportunities in undervalued assets is a difficult task, and there is no assurance that these opportunities will be successfully recognized or acquired. While investments in undervalued assets offer the opportunity for above-average capital appreciation, these investments involve a high degree of financial risk and can result in substantial losses. Returns generated from a Client's investments in undervalued assets may not adequately

compensate investors for the business and financial risks assumed. A Client may be forced to sell, at a substantial loss, assets that are not, in fact, undervalued. In addition, a Client may be required to hold these assets for a substantial period of time before realizing their anticipated value. During this period, a portion of the Client's funds would be committed to the assets purchased, possibly preventing that Client from investing in other opportunities. In addition, a Client may finance these purchases with borrowed funds and thus will have to pay interest on the borrowed funds during any waiting period.

- *Investments in Real Estate.* From time to time, certain Clients have invested, and in the future may invest, a portion of their assets directly in real estate that Fir Tree believes is undervalued, in non-recourse mortgages where the mortgagor is not a significant operating company and in the securities or obligations of single purpose companies whose primary asset is real estate. In addition, Clients making this type of investment may acquire a direct interest in real estate as the result of foreclosure or other enforcement actions. Special risks associated with these types of investments include changes in the general economic climate or local conditions (such as an oversupply of space or a reduction in demand for space), competition based on rental rates, attractiveness and location of the properties, changes in the financial condition of tenants, and changes in operating costs. Real estate values are also affected by factors such as government regulations (including those governing usage, improvements, zoning and taxes), interest rate levels, the availability of financing and potential liability under changing environmental and other laws.
- *Non-Marketable Investments.* With respect to certain Clients, Fir Tree has broad discretion to designate certain investments as "non-marketable investments". For certain Clients, once an investment has been designated as a "non-marketable investment" capital attributable to that investment is no longer available for withdrawal and the profit and loss attributable to that investment is not taken into account for purposes of calculating the performance-based compensation to be allocated to Fir Tree's affiliate until the occurrence of certain events. In certain circumstances, Fir Tree would be incentivized to use its discretion to classify particular investments as "non-marketable investments" so that the corresponding capital cannot be withdrawn from the applicable Client and, with respect to investments with poor performance, in order to prevent the investment from impacting the particular Client's performance for purposes of allocating performance-based compensation.
- *Reorganizations.* From time to time, certain Clients have invested, and in the future may invest, in companies undergoing significant economic and corporate change. Because of the inherently speculative nature of this activity, the results of a Client's operations may fluctuate from month to month and from period to period. The returns generated from this type of an investment program may not adequately compensate investors for the business and financial risk assumed. If Fir Tree causes a Client to purchase securities in anticipation of reorganization, and if the reorganization does not in fact occur, that Client may eventually sell the securities at a loss. Fir Tree may cause certain Clients to invest in securities or other assets of issuers which are in, or ultimately become the subject of, bankruptcy proceedings. The value of those Clients' investments may be adversely affected by legal principles affecting the priority of claims against the bankrupt estate, by the application of laws concerning preferential transfers and fraudulent conveyances and by other provisions of the U.S. Bankruptcy Code and relevant state law. The duration of

bankruptcy proceedings and reorganizations outside of bankruptcy can only be roughly estimated. These proceedings and transactions are subject to unpredictable and potentially lengthy delays. This passage of time may have an adverse impact on the Clients' return on their investment in the obligations and other securities or financially troubled companies. Although Fir Tree intends to purchase securities and other assets that it believes have significant liquidation values, there can be no assurance that the projected liquidation values will, in fact, be realized.

- *Non-U.S. Investments.* From time to time, certain Clients have made, and the future may make, investments in non-U.S. securities. Investments in non-U.S. securities involve certain factors not typically associated with investing in U.S. securities, such as risks relating to (i) currency exchange matters, including fluctuations in the rate of exchange between the U.S. dollar (the currency in which the Client's books are maintained) and the various non-U.S. currencies in which a Client's portfolio securities may be denominated from time to time; (ii) differences between the U.S. and non-U.S. securities markets, including the absence of uniform accounting, auditing and financial reporting standards and disclosure requirements, and less government supervision and regulation (all of which could result in less information being available to investors in companies located in foreign countries than is available to investors in companies located in the United States); (iii) political, social or economic instability (including greater risks of expropriation, nationalization or other government policies that may restrict a Client's investment opportunities); (iv) the small size of the securities markets in some countries and the low volume of trading, resulting in potential lack of liquidity and price volatility and (v) the extension of credit, especially in the case of sovereign debt.
- *Currency, Convertibility and Exchange Rates.* From time to time, certain Clients' assets have been, and in the future may be, invested in securities denominated in currencies other than U.S. dollars. The value of these securities and the income from them, as measured in U.S. dollars, may be affected by fluctuations in currency rates (which may include significant devaluations, as against the U.S. dollar) and uncertainties such as changes in the policies regarding foreign investment, taxation and restrictions on currency conversion and repatriation. Their value may also be affected by other developments in the laws and regulations of the economies in which these Clients will invest.

Fir Tree may attempt to mitigate the risks associated with currency fluctuations by entering into forward, futures and options contracts to purchase or sell the currency of denomination of any investment held by Clients and any other currencies held by Clients, to the extent such contracts are available on terms which Fir Tree deems acceptable to the Clients. However, Fir Tree is not required to do so.

- *Conflicts Relating to Equity and Debt Ownership by Clients.* In certain circumstances, certain Clients have invested, and in the future may invest, in securities or other instruments of the same issuer (or affiliated group of issuers) that have a different seniority in the issuer's capital structure. If the issuer becomes insolvent, restructures or suffers financial distress, there may be a conflict between the interests of the different Clients insofar as the issuer may be unable (or in the case of a restructuring prior to bankruptcy may be expected to be unable) to satisfy the claims of all classes of its creditors and security holders, and Clients may have competing claims for the remaining assets of such

issuers. Under these circumstances it may not be feasible for Fir Tree to reconcile the conflicting interests of the Clients in a way that protects each Client's interests. Additionally, Fir Tree or its nominees may in the future hold board or creditors' committee memberships which may require them to vote or take other actions in such capacities that might be conflicting with respect to certain Clients in that such votes or actions may favor the interests of one Client over another Client. Furthermore, Fir Tree's fiduciary responsibilities in these capacities might conflict with the best interests of the Clients.

- *MBS and ABS—Generally.* From time to time, certain Clients have invested, and in the future may invest, in mortgage-backed securities (“MBS”) and asset-backed securities (“ABS”). The investment characteristics of MBS and ABS differ from traditional debt securities. Among the major differences are that interest and principal payments are made more frequently, usually monthly, and that principal may be prepaid at any time because the underlying mortgage loans or other assets generally may be prepaid at any time. When market interest rates increase, the market values of MBS decline. At the same time, however, mortgage refinancings and prepayments slow, which lengthens the effective maturities of these securities. As a result, the negative effect of the rate increase on the market value of MBS may be more pronounced than it is for other types of fixed-income securities.
- *Risks Associated with Commercial Mortgage-Backed Securities.* From time to time, certain Clients have invested, and the future may invest, in commercial mortgage-backed securities (“CMBS”) and other MBS, including subordinated tranches of these types of securities. CMBS are, generally, securities backed by obligations (including certificates of participation in obligations) that are principally secured by mortgages on real property or interests in that property having a multifamily or commercial use, such as regional malls, other retail space, office buildings, industrial or warehouse properties, hotels, nursing homes and senior living centers. CMBS are subject to particular risks, including lack of standardized terms, shorter maturities than residential mortgage loans and payment of all or substantially all of the principal only at maturity rather than regular amortization of principal. Additional risks may be presented by the type and use of the underlying real estate portfolio.
- *Credit Default Swaps.* From time to time, certain Clients have entered, and in the future may enter, into credit derivative contracts such as credit default swap (“CDS”) contracts, loan credit default swap (“LCDS”) contracts, contracts on the credit default swap index (“CDX”) and contracts on the loan credit default swap index (“LCDX”). The typical CDS and LCDS contract requires the seller to pay to the buyer, in the event that a particular reference entity experiences specified credit events, the difference between the notional amount of the contract and the value of a portfolio of securities or loans issued by the reference entity that the buyer delivers to the seller. In return, the buyer agrees to make periodic and/or upfront payments equal to a fixed percentage of the notional amount of the contract. Fir Tree may cause certain Clients to also purchase or sell CDS on a basket of reference entities or an index, that is, CDX and LCDX contracts. In circumstances in which a Client does not own the debt or loans that are deliverable under a CDS, that Client will be exposed to the risk that deliverable securities or loans will not be available in the market, or will be available only at unfavorable prices, as would be the case in a so-called

“short squeeze.” In certain instances of issuer defaults or restructurings, it has been unclear under the standard industry documentation for CDS whether or not a “credit event” triggering the seller’s payment obligation had occurred. In either of these cases, a Client would not be able to realize the full value of the CDS upon a default by the reference entity. As a seller of CDS, a Client incurs leveraged exposure to the credit of the reference entity and is subject to many of the same risks it would incur if it were holding debt securities or loans issued by the reference entity. However, Clients making these types of investments will not have any legal recourse against the reference entity and will not benefit from any collateral securing the reference entity’s debt obligations. In addition, the CDS buyer will have broad discretion to select which of the reference entity’s debt obligations to deliver to the Client following a credit event and will likely choose the obligations with the lowest market value in order to maximize the payment obligations of the Client. Settlement of CDS contracts may also be delayed beyond the time frame originally anticipated by counterparties. Such delays may adversely impact a Client’s ability to otherwise productively deploy any capital that is committed with respect to these contracts.

- *Bank Loans and Participations.* From time to time, certain Clients have invested, and in the future may invest, in bank loans and participations of real estate or mortgage-related companies. The special risks associated with these obligations include (i) the possible invalidation of an investment transaction as a fraudulent conveyance under relevant creditors’ rights laws, (ii) so-called lender-liability claims by the issuer of the obligations, (iii) environmental liabilities that may arise with respect to collateral securing the obligations, (iv) limitations on the ability of the Clients to directly enforce their rights with respect to participations, and (v) equitable subordination to other creditors. Fir Tree will balance the magnitude of these risks against the potential investment gain prior to entering into each investment. Successful claims by third parties arising from these and other risks, except in limited circumstances will be borne by the Clients investing in these types of investments.
- *Interest-Only Mortgage Loans.* From time to time, certain Clients have invested, and in the future may invest, in interest-only mortgage loans. Interest-only mortgage loans permit the borrowers to make monthly payments of only accrued interest for the first 60 or 120 months following origination. After the interest-only period, the borrower’s monthly payment will be recalculated to cover both interest and principal so that the mortgage loan will amortize fully prior to its final payment date. The long-term performance characteristics of these loans are largely unknown. If the monthly payment increases, the related borrower may not be able to pay the increased amount and may default or may refinance the related mortgage loan to avoid the higher payment. Interest-only mortgage loans reduce the monthly payment required by borrowers during the interest-only period and consequently the monthly housing expense used to qualify borrowers. As a result, the interest-only mortgage loans may allow some borrowers to qualify for a mortgage loan who would not otherwise qualify for a fully amortizing mortgage loan or may allow them to qualify for a larger mortgage loan than otherwise would be the case.
- *Risks Associated with Commercial Mortgage Loans.* From time to time, certain Clients have invested, and in the future may invest, in commercial mortgage loans. The value of

a Client's commercial mortgage loans will be influenced by the rate of delinquencies and defaults experienced on the commercial mortgage loans and by the severity of loss incurred as result of these defaults. The factors influencing delinquencies, defaults and loss severity include (i) economic and real estate market conditions by industry sectors (e.g., multifamily, retail, office, etc.); (ii) the terms and structure of the mortgage loans; and (iii) any specific limits to legal and financial recourse upon a default under the terms of the mortgage loan. Commercial mortgage loans are generally viewed as exposing a lender to a greater risk of loss through delinquency and foreclosure than lending on the security of single-family residences. The ability of a borrower to repay a loan secured by income-producing property typically is dependent primarily upon the successful operation and operating income of such property (i.e., the ability of tenants to make lease payments, the ability of a property to attract and retain tenants and the ability of the owner to maintain the property, minimize operating expenses and comply with applicable zoning and other laws) rather than upon the existence of independent income or assets of the borrower. Many commercial mortgage loans provide recourse only to specific assets, such as the property and not against the borrower's other assets or personal guarantees. Exercise of foreclosure and other remedies may involve lengthy delays and additional legal and other related expenses in addition to potentially declining property values. In certain circumstances, the creditors may also become liable upon taking title to an asset for environmental or structural damage existing at the property.

- *Investments in Special Purpose Acquisition Companies.* Certain Clients invest in "special purpose acquisition companies" ("SPACs"). A SPAC is a development stage company that has no specific business plan or purpose or has indicated its business plan is to engage in a merger or acquisition with an unidentified company or companies, other entity, or person. Because SPACs have broad discretion to select potential business combinations (subject to industry, geographic or other limitations, if any), it is not possible for us to ascertain the merits or risks of investing in a particular SPAC. Fir Tree generally intends to select for investment securities of SPACs with strong structures and those headed by management teams with proven track records, but may not always do so if there is a limited number of these types of offerings or for other reasons. A Client will be dependent upon the integrity, skill and judgment of the management team of each SPAC in which that Client invests. The officers and directors of a SPAC will generally not be required to commit their full time to the affairs of the blank check company, which may result in a conflict of interest in allocating their time between the operations of the SPAC and their own business interests. If the officers' and directors' other businesses and affairs require them to devote more substantial amounts of time to such affairs, it may negatively impact the ability of the SPAC to identify and complete a business combination with an operating company. In addition, officers and directors of a SPAC may become involved with other SPACs in which Clients do not invest which may engage in similar business opportunities. Accordingly, the officers and directors may have conflicts of interest in determining to which entity a particular business opportunity should be presented. There can be no assurance that the business opportunity will be presented to the SPAC in which the the Clients made an investment.

There is no guarantee that a SPAC Fir Tree selects for investment by a Client will be able to effect a business combination with an operating entity. SPACs may encounter intense competition from other entities having similar business objectives, such as venture capital

funds, leveraged buy-out funds and other private equity entities, as well as operating businesses competing for acquisitions. If a Client invests in a SPAC that is unable to effect a business combination, that Client will receive its share of the proceeds held in trust, subject to reduction if third party claims are made against the SPAC or escrow. If a Client were to acquire warrants in a dual deal structure, that Client may lose the entire value of those warrants if a business combination cannot be effected by that SPAC.

A SPAC may trade at a discount or a premium to its IPO price. Because investors in Fir Tree's Clients (i) may be admitted to the relevant Client subsequent to the date that such Client acquires a particular SPAC and (ii) participate in such Client through an interest that is marked to such Client's net asset value, such investors may sustain a loss in the event that, upon disposition of the relevant SPAC, the disposition proceeds do not exceed the premium to which such SPAC was trading at the time of such investors' investment in such Client.

If a Client invests in the sponsor of a SPAC ("Sponsor Equity") that is unable to effect a business combination, that Client may lose the entire value of the Sponsor Equity if a business combination cannot be effected by that SPAC. In addition, the stock and/or warrants owned by the SPAC sponsor may be subject to certain lock-up periods following a business combination.

- *Digital Assets.* From time to time, certain Clients have taken, and in the future may take, long or short investment positions in cryptocurrencies, digital currencies, decentralized application tokens and protocol tokens, app coins, blockchain-based assets, and other related instruments (collectively, "***Digital Assets***"), including by way of derivatives for a Client's portfolio. Digital Assets are a new and evolving asset class and are currently subject to an uncertain and constantly evolving regulatory landscape. Digital Assets are generally not backed by a central bank or a national, supra-national, or quasi-national organization, any hard assets, human capital, or other form of credit. Supply and the validity of transactions are determined by a computer code, not by a central bank or other trusted intermediary, and prices have seen extremely volatility. Extreme price volatility in the future could have a material adverse effect on a Client's investments. Several factors may affect the price of Digital Assets, including, but not limited to, supply and demand, investors' expectations with respect to the rate of inflation, interest rates, currency exchange rates or future regulatory measures (if any) that restrict the trading of Digital Assets or the use or ownership of Digital Assets. There can be no assurance that Digital Assets will maintain their value in the future.

Digital Assets are generated and traded according to the protocols established with respect to such Digital Assets. There can be no assurance that such protocols do not have undiscovered flaws that may allow for such Digital Assets to be compromised, resulting in the loss of some or all of a Client's investment in such Digital Assets. Digital Assets may experience periods of disruption or become subject to manipulation as new technologies become available or during periods of disparate adoption of new hardware, software or protocols.

From time to time, Fir Tree may face difficulties in determining the value of a Client's Digital Assets due to price volatility and the fragmentation of Digital Asset markets.

Published Digital Asset prices may deviate significantly between different exchanges and other market venues as a result of liquidity imbalances, and weighted average prices may not provide an accurate representation of value. Although Fir Tree will endeavor to implement valuation policies and procedures which address these challenges, Fir Tree may not be able to account for all of the possible events and circumstances that may impact its ability to value a Client's Digital Assets, particularly in light of the potential for governmental and regulatory intervention and the nascent state of the secondary markets. Digital Assets may be illiquid investments that are not easily and readily convertible into fiat currencies, and some Digital Asset markets may be thinner than others.

Most Digital Assets are controllable only by the possessor of unique private keys relating to the blockchain addresses or wallets in which the Digital Assets are held. To the extent a private key of such Digital Assets is lost, destroyed or otherwise compromised and no backup of the private key is accessible, the Digital Assets held in the related wallet will be inaccessible, and the private key will not be capable of being restored. The loss or destruction of a private key required to access a Digital Asset may be irreversible.

- *Appraisal Right Risks.* From time to time, certain Clients have participated, and in the future may participate, in investments related to appraisal rights with respect to corporate transactions. Upon the closing of a transaction related to a Client appraisal right investment, the securities that were purchased in connection with the Client's investment are generally no longer publicly traded. As a result, this illiquidity limits the ability of the Clients to thereafter realize a cash return on the investment without either (i) a settlement of the litigation or (ii) a court determination with respect to the litigation. Appraisal cases may take years to resolve, and there is no liquidity for such investments prior to resolution of the case. In addition, it is not possible to predict the outcomes of any litigation related to appraisal rights, and the timing and amount of settlements or judgments, as well as costs for counsel and experts, are difficult to estimate. The expenses of counsel and experts may be significant. A trial court may face decisions that are not controlled by a legal precedent, and in the event of any adverse outcome, any party might choose to appeal the judgment or particular rulings, which could result in further delays and substantial expenses for the applicable Client. A number of steps must be completed in a timely and accurate manner by personnel of Fir Tree, the custodian or other service providers in order to assert an appraisal claim. Failure to properly complete such steps to perfect an appraisal claim may have an adverse effect on the applicable Client, which could include delays in the appraisal proceedings or increased litigation expenses and the denial of the appraisal claim. In addition, there could be changes in the law affecting appraisal rights that could materially affect a Client's investment.
- *Litigation Debt Finance Risks.* From time to time, certain Clients have participated, and in the future may participate, in investments related to litigation debt financing. The risks of litigation debt finance include the potential regulation or limitation of interest rates and other fees advanced in exchange for the investments made by Clients under U.S. federal and/or state regulation, a change in statutory or case law which limits or restricts the ability of Clients as creditors to collect principal and interest at anticipated levels, claimants being unsuccessful in whole or in part in the claims that underlie such investments, and Fir Tree's continued ability to effectively analyze investments in accordance with the Clients' applicable investment guidelines. In addition, despite any

estimates of aggregate amounts to be paid pursuant to a settlement agreement related to a Client investment, there is no guarantee that the relevant defendant will continue to, or be able to, comply with the terms of the relevant settlement agreement, including the maintenance of a settlement fund out of which claims against the relevant settlement are paid, particularly if the amounts involved are substantial. Furthermore, the actual amount paid under any settlement agreement may be lower than initial estimates. The timing of payments under settlement agreements is also an uncertain risk. There is generally no definitive timeline for issuances of post-settlement claims and that uncertainty could negatively impact the Clients' returns.

- *Fixed Income Securities; Interest Rates.* From time to time, certain Clients have invested, and in the future may invest, in fixed-income securities. The price of most fixed-income securities moves in the opposite direction of the change in interest rates. For example, as interest rates rise, the price of fixed-income securities falls. If a Client holds a fixed-income security to maturity, the change in its price before maturity will have little impact on that Client's performance; however, if that Client has to sell the fixed-income security before the maturity date, an increase in interest rates will result in a loss to that Client.
- *Default and Credit Risks.* From time to time, certain Clients have invested, and in the future may invest, in different types of debt instruments. Investments in debt involve the risk that the obligor either cannot or will not fulfill its obligations. In evaluating credit risk, Fir Tree will generally attempt to reach conclusions regarding the obligor's assets, liabilities, income and prospects, its management, the priority of a Client's claims against the obligor, the value of any collateral, the process for enforcing rights and realizing value from collateral and many other factors, each of which is likely to involve numerous assumptions and uncertainties. In addition, Fir Tree will often be dependent upon information provided by the obligor, which may be materially inaccurate or fraudulent. As a result, there is no assurance that Fir Tree will correctly evaluate the credit risks associated with its investments. Any actual default, or any circumstance that increases the possibility of a default, could have a material adverse effect on a Client.
- *Limitations on the Enforcement of Creditor's Rights.* For those Clients that have made investments in debt, any attempt by those Client to enforce their rights against the obligor or to realize value from any security interests in connection with a credit investment will be subject to numerous risks, delays and uncertainties, including those related to the validity or enforceability of these Clients' claims, the maintenance of the anticipated priority and perfection of any security interests, the effect of any bankruptcy or insolvency laws, disputes among different classes of creditors, the possibility of counterclaims or defenses, practical difficulties and costs in litigating and enforcing claims in foreign jurisdictions, unfriendly venues for litigation and many others. As a result, there can be no assurance that these Clients will be able to enforce its legal rights to the extent expected.
- *Inflation.* For those Clients that have made investments in debt, inflation risk results from the variation in the value of cash flows from a security due to inflation, as measured in terms of purchasing power. For example, if a Client purchases a 5-year bond in which it can realize a coupon rate of 5%, but the rate of inflation is 6%, then the purchasing power of the cash flow has declined. For all but adjustable bonds or floating rate bonds, that Client is exposed to inflation risk because the interest rate the issuer promises to make is

fixed for the life of the security. To the extent that interest rates reflect the expected inflation rate, floating rate bonds have a lower level of inflation risk.

- *Risks Related to the Energy Industry Generally.* From time to time, certain Clients have invested, and in the future may invest, in energy-related investments. Investments in the energy industry are subject to a variety of risks, not all of which can be foreseen or quantified. For example, the success of many of the Clients' energy-related investments is likely to be affected by factors such as the following: (i) the amount, nature, and timing of property acquisitions or capital expenditures; (ii) the market for oil and gas acreage or properties; (iii) drilling of wells and other planned exploitation activities; (iv) timing and amount of future production of oil or gas; (v) quantities of discovered or probable, potential or proved reserves of oil or gas; (vi) marketing of and market prices for oil, gas or oil or gas properties generally or in any particular location; (vii) operating costs such as lease operating expenses, administrative costs and other expenses; (viii) cash flow and anticipated liquidity; (ix) the timing, success and cost of exploration and exploitation activities; (x) governmental and environmental regulation of the oil and gas industry; (xi) environmental liabilities; (xii) industry competition, conditions, performance and consolidation; (xiii) the availability of drilling rigs and other oilfield equipment and services; and (xiv) natural events. These factors may impact an energy company's ability to service its debts, which is of particular concern for certain Clients.
- *Convertible Securities.* From time to time, certain Clients have invested, and in the future may invest, in convertible securities, including convertible bonds, convertible preferred stocks, and other fixed income instruments that have conversion features. Convertible securities and preferred stock combine the fixed income characteristics of bonds with some of the potential for capital appreciation of equities, and thus may be subject to greater risk than pure fixed income instruments. Unlike bonds, some preferred stocks and some convertible securities do not have a fixed par value at maturity, and in this respect may be considered riskier than bonds. Convertible debt securities and preferred stocks may depreciate in value if the market value of the underlying equity security declines or if rates of interest increase. In addition, although debt securities are liabilities of a corporation which the corporation is generally obligated to repay at a specified time, debt securities, particularly convertible debt securities, are often subordinated to the claims of some or all of the other creditors of the corporation.
- *Investing in Privately Held Companies.* From time to time, certain Clients have invested, and in the future may invest, in the debt and equity of privately held companies, which may be subject to higher risk than investments in publicly traded companies. Generally, little public information exists about these companies, and Clients are required to rely on the ability of Fir Tree to obtain adequate information to evaluate the potential risks and returns involved in investing in these companies. If Fir Tree is unable to uncover all material information about such companies, it may not make a fully informed decision and may lose some or all of the money invested. These factors could subject Clients to greater risk than investments in publicly traded companies, negatively affect Clients' investment returns and cause the loss of all or part of an investor's investment in a Client.
- *Distressed Securities.* From time to time, certain Clients have purchased, and in the future may purchase, directly or indirectly, the debt securities and other obligations of companies

that are experiencing significant financial or business distress, including companies involved in bankruptcy or other reorganization and liquidation proceedings. Although such purchases may result in significant returns, they involve a substantial degree of risk and will at times not show any return for a considerable period of time. In fact, many of these debt securities and investments ordinarily remain unpaid unless and until the company reorganizes and/or emerges from bankruptcy proceedings, and as a result may have to be held for an extended period of time. A wide variety of considerations, including, for example, the possibility of litigation between the participants in a reorganization or liquidation proceeding or a requirement to obtain mandatory or discretionary consents from various governmental authorities or others may affect the value of these securities and investments. The uncertainties inherent in evaluating such investments may be increased by legal and practical considerations which limit the access of Fir Tree to reliable and timely information concerning material developments affecting a company, or which cause lengthy delays in the completion of the liquidation or reorganization proceedings. The level of analytical sophistication, both financial and legal, necessary for successful investment in companies experiencing significant business and financial distress is unusually high. There is no assurance that Fir Tree will correctly evaluate the nature and magnitude of the various factors that could affect the prospects for a successful reorganization or similar action. In any reorganization or liquidation proceeding relating to the company in which Clients invest, Clients may lose their entire investment or may be required to accept cash or securities with a value less than the Clients' original investments.

- *Class Action Lawsuits.* From time to time, certain Clients may qualify as a class participant in a class action lawsuit as a result of its investments, and Fir Tree may at times choose to opt out of such class action in pursuit of a better recovery. In choosing to opt out, the Client will likely bear greater expenses than had they remained a class participant, and there is no guarantee that the recovery will be greater than what the Client would have received had they pursued the class action as a class participant.
- *Alternative Data.* Fir Tree will at times utilize various kinds of data and information relating to business operations and trends, consumer trends and spending and various other metrics with respect to companies, consumer groups and industries—which data is sometimes referred to as “big data” or “alternative data”—in evaluating investments and prospective investments. The use of such data in evaluating investments is relatively new and substantially untested, and the providers of such data analytics are generally unregulated. In the acquisition and processing of such data, Fir Tree could inadvertently receive sensitive consumer information, including information that could be used to personally identify individuals, which may subject Fir Tree, and potentially its Clients, to certain unintended oversight and obligations with respect to such information. As a result, the reliability and the risks associated with the use of such information are uncertain. The implementation of future regulatory regimes directed at such data and such use thereof may have an adverse effect on the Clients. The U.S. federal and state governments and agencies may in the future enact new legislation and promulgate new regulations governing the acquisition, maintenance and use of such information. The effect of any such future regulations is also uncertain and may expose the Fir Tree and its Clients to additional regulatory risks as a result of their use of such information.

Fir Tree does not generally recommend any single type of security or investment. Clients typically hold a diverse range of investments, yet Fir Tree still encourages its Clients and investors to consider all of the risk factors Fir Tree has described above and those risk factors contained in the Clients' offering and/or governing documents. Any investment can be risky, and Clients and investors therein must be prepared to assume any potential loss.

Item 9. Disciplinary Information

There are no legal or disciplinary events that are material to an investor's or prospective investor's evaluation of Fir Tree's advisory business or the integrity of our management.

Item 10. Other Financial Industry Activities and Affiliates

Fir Tree, FTFCM GP LLC, and their affiliates, including those disclosed in Item 7A of Part I of Fir Tree's Form ADV filing have sponsored Funds that Fir Tree manages. Certain of these clients have affiliated and subsidiary entities that serve as holding companies for certain investments made by the Clients that Fir Tree manages. Certain of Fir Tree's affiliates also serve as general partner to at least one Fund, and in some instances, more than one Fund. Clients do not have independent management and governance.

Clients that are Cayman-domiciled investment funds, structured as corporations, are not governed by a completely independent board of directors, as one or more Fir Tree employees sit on the board and Fir Tree hires and retains their other directors. Similarly, Clients with Advisory Boards are not governed by a completely independent board of advisors, as one or more of the advisors is an employee of Fir Tree and Fir Tree hires and retains their other advisors. Although these arrangements may give Fir Tree heightened control and discretion over Clients, Fir Tree manages any potential conflicts of interest by disclosing these relationships and adhering to the investment strategy in each Client's applicable offering and/or governing documents.

Certain investment professionals provide services to Fir Tree through its wholly owned subsidiary, Fir Tree (Florida), LLC. Fir Tree (Florida), LLC and its employees and the persons acting on its behalf are subject to Fir Tree's supervision and control. The activities of Fir Tree (Florida), LLC are subject to the Investment Advisers Act of 1940 (the "Advisers Act"). Fir Tree and Fir Tree (Florida), LLC operate under a unified compliance program administered by a single compliance officer in accordance with the Advisers Act.

Fir Tree does not recommend or select other investment advisers for its Clients.

Fir Tree is exempt from registration as a commodity pool operator ("CPO") with the Commodity Futures Trading Commission ("CFTC") pursuant to CFTC Regulation 4.13(a)(3).

Item 11. Code of Ethics, Participation or Interest in Client Transactions and Personal Trading

Fir Tree strives to adhere to the highest industry standards of conduct based on principles of professionalism, integrity, honesty and trust. In seeking to meet these standards, Fir Tree has adopted a Code of Ethics (the "Code"). The Code incorporates the following guiding principles and standards of professional and ethical conduct that Fir Tree expects from its employees, as well as certain long-term temporary workers, consultants, independent contractors and any other persons deemed

necessary by the CCO (collectively, individuals covered by the Code will be referred to as “Covered Persons”):

- Act with integrity, competence, diligence, respect, and in an ethical manner with the public, Clients, prospective Clients, third-party service providers, fellow Covered Persons, colleagues in the investment profession, and other participants in the industry;
- Place the interests of Clients above one’s own personal interests.;
- Adhere to the fundamental standard that one should not take inappropriate advantage of one’s position;
- Disclose to Compliance, and attempt to avoid, any actual or potential conflict of interest;
- Conduct all personal securities transactions in a manner consistent with the Code;
- Report all relevant outside business activity to the CCO or General Counsel;
- Use reasonable care and exercise independent professional judgment when conducting investment analyses, making investment recommendations, taking investment actions, and engaging in other professional activities;
- Maintain and improve professional competence; and
- Comply with applicable provisions of all securities laws and the terms of the Code of Ethics.

Fir Tree recognizes the inherent conflict of Covered Persons personally trading the same securities as Clients trade and has implemented restrictions in order to minimize potential conflicts of interest and uphold Fir Tree’s fiduciary obligation to its Clients. Fir Tree generally prohibits its Covered Persons from engaging in personal trading of securities, whether publicly traded or privately held, except in certain limited instances in accordance with Fir Tree’s Personal Securities Transactions Policy. Covered Persons are permitted to buy and sell “Exempt Securities” without pre-approval, including direct obligations of the Government of the United States, shares issued by money-market funds, shares issued by publicly traded open-end funds (i.e., mutual funds), certificates of deposit, and broad-based exchange-traded funds (“ETFs”).

In addition, subject to pre-clearance from Fir Tree’s CCO or the CCO’s delegate, Covered Persons may dispose of pre-existing positions, or invest in certain cryptocurrencies, or operating companies and private investment funds. Covered Persons are not restricted from trading in securities in any “Non-Discretionary Account” (i.e., an account over which the Covered Person and their immediate family member(s): (i) do not exercise investment discretion; (ii) do not receive notice of specific transactions prior to execution; and (iii) otherwise have no direct or indirect influence or control); nor in any child’s account with a value not exceeding \$50,000 in which the Covered Person does not trade or direct trading.

All Covered Persons must disclose to the CCO all direct or indirect beneficial ownership of any securities and investments, along with all brokerage accounts in which a Covered Person has direct or indirect beneficial ownership, regardless of whether such accounts hold any securities at that time,

within ten days of becoming subject to the Code of Ethics and annually after that. All Covered Persons under the Code are required, within 30 days after each calendar quarter end, to complete and submit a report of all transactions during the quarter involving reportable securities in which Covered Persons had or acquired direct or indirect beneficial ownership, including any new brokerage accounts opened. Covered Persons must complete quarterly and annual reports even if no reportable transactions occurred during the quarter, and regardless of whether their accounts hold any securities at the time.

Investors may request a copy of the Code by contacting Fir Tree at the address or telephone number listed on the cover page of this document. The Code includes “insider trading” policies and procedures (“Insider Trading Policy”) covering “insider trading” law and material non-public information that are designed to prevent the misuse of material, non-public information. Fir Tree’s personnel are required to certify to their compliance with the Code, including the Insider Trading Policy, on a periodic basis.

Fir Tree has in the past, and may in the future, effect cross transactions between two or more Client portfolios, in certain circumstances, when it does not believe it is disadvantageous to the Clients (e.g., for rebalancing of portfolios). A cross trade may permit Fir Tree to execute trades without impacting the market price of securities, can save brokerage commissions and, in certain cases, related transaction costs like custody expenses and transfer taxes. In the event Fir Tree engages in a cross trade, the cross trade will be transacted in accordance with Fir Tree’s policies and procedures. All cross trades must be pre-approved and documented by Fir Tree’s CCO.

Item 12. Brokerage Practices

In placing portfolio transactions, Fir Tree seeks to obtain the best execution available for Clients, taking into account the following factors:

- the ability to effect prompt and reliable executions at favorable prices (including the applicable dealer spread or commission, if any);
- the operational efficiency with which transactions are effected, taking into account the size of order and difficulty of execution;
- the financial strength, integrity and stability of the broker;
- the firm’s block trading and block positioning capabilities;
- the quality, comprehensiveness and timeliness of market information provided and the provision of research or brokerage services, and other similar services considered to be of value;
- the restrictions or obligations (if any) set forth in the relevant Client’s offering and/or governing documents; and
- the overall costs of a trade including commissions, mark-ups, mark-downs or spreads in the context of Fir Tree’s knowledge of negotiated commission rates currently available and other current transaction costs with respect to other brokers satisfying Fir Tree’s other selection criteria.

Fir Tree is authorized to utilize research and other “soft dollar” benefits. Fir Tree is authorized by Clients to pay higher prices for the purchase of securities from or accept lower prices for the sale of securities to brokerage firms that provide Fir Tree with investment and research information or to pay higher commissions to these firms if Fir Tree determines their prices or commissions are reasonable in relation to the overall services provided. Research services furnished by brokers will at times include (i) written information and analyses concerning specific securities, companies or sectors; (ii) market, financial and economic studies and forecasts; (iii) statistics and pricing or appraisal services; (iv) discussions with research personnel; and (v) invitations to attend conferences or meetings with management or industry consultants. Fir Tree is not required to weigh any of these factors equally. Information so received is in addition to and not in lieu of services required to be performed by Fir Tree, and Fir Tree’s asset-based management fee is not reduced as a consequence of the receipt of this supplemental research information. Research services provided by broker-dealers used by Clients may be utilized by Fir Tree or its affiliates in connection with their investment services for other Clients. Since commission rates are negotiable, selecting brokers on the basis of considerations which are not limited to applicable commission rates will at times result in higher transaction costs than would otherwise be obtainable.

In addition to research services, Fir Tree will at times be offered other non-monetary “soft dollar” benefits by broker-dealers that Fir Tree may engage to execute securities transactions on behalf of Clients. These benefits will at times take the form of payment of all or a portion of Fir Tree’s costs and expenses of operation to the extent that Fir Tree, in its reasonable discretion, determines that any of these costs and expenses are reasonably related to the investment decision-making process. Fir Tree does not currently use “soft dollars” for brokerage or research products and services.

Although Fir Tree is permitted to allocate transactions to brokers who assist in the distribution of Client interests, it is Fir Tree’s policy not to do so. However, Fir Tree is not prohibited from using the services of a broker-dealer that has made a referral of potential investors or with which Fir Tree or its principals have other business dealings so long as the dealings are disclosed to Fir Tree’s CCO and the broker-dealer provides best execution. Subject to the foregoing, Fir Tree may have an incentive to select or recommend a broker based on investor referrals, rather than just best execution.

Sometimes Fir Tree decides that some or all Clients should participate in the same investment opportunity. In this case, Fir Tree seeks to aggregate the purchase or sale of the securities for the various Client accounts. Fir Tree then allocates the securities purchased (or sold) among the participating Clients so that each Client receives the same terms. Fir Tree also seeks to execute orders for all participating Clients on an equitable basis. If Fir Tree decides to invest at the same time for more than one Client, Fir Tree will, to the extent practicable, generally place combined orders for all the accounts simultaneously, and, if all the orders are not filled at the same price, Fir Tree will generally average the prices paid in a manner consistent with Fir Tree’s internal policies. Similarly, if an order on behalf of more than one account cannot be fully executed under current market conditions, Fir Tree will generally allocate the trade among the different accounts on a basis that it considers equitable. Ultimately, Clients can benefit when Fir Tree aggregates trades because Fir Tree may get volume discounts on execution costs. On the other hand, situations may occur where a Client could be disadvantaged because of the investment activities Fir Tree conducts for other Clients.

Fir Tree will, from time to time, purchase equity or debt securities in initial or secondary public offerings on behalf of Clients when such securities become available. These securities are typically allocated among Clients based on the investment objectives of the relevant Clients and the

circumstances giving rise to the opportunity to participate in the initial or secondary public offering. In addition to its general investment allocation policies, Fir Tree also has a policy for the allocation of investment opportunities within its applicable Client's SPAC-related strategies, which is available to participating investors in such Clients upon request.

Item 13. Review of Accounts

Generally, Fir Tree's investment professionals perform various reviews of Clients on a daily, weekly, monthly and quarterly basis. These reviews are designed to monitor and analyze transactions, positions, hedges and investment levels.

Fir Tree provides investors in the Funds and SMA Clients with written reports, at least quarterly, that contain performance information about the Client in which they have invested. Fir Tree also provides investors in the Funds and SMA Clients with written annual reports and, as applicable, audited financial statements and tax information.

Item 14. Client Referrals and Other Compensation

Fir Tree will at times receive certain economic benefits from broker-dealers and prime brokers which Fir Tree conducts business with that might not be received otherwise. These benefits may include, but are not limited to, access to an electronic communication network for order entry and account information; proprietary research; and participation in sponsored research and capital introduction. While these services are generally provided at no additional cost, Fir Tree may select certain broker-dealers due to receipt of such services. Fir Tree understands that the benefits received through these relationships generally do not depend upon the amount of transactions directed to or the amount of assets custodied.

Except as provided for in Item 10 and Item 12, Fir Tree does not, nor does any of its principals or employees, pay "placement" fees or sales commissions to any person for client referrals.

Item 15. Custody

While it is Fir Tree's practice not to maintain physical possession of any of Clients' securities or funds, Fir Tree may be deemed to have constructive custody of certain client assets as a result of fee payments or the service of certain affiliates as general partners to its clients. Actual custody of client assets, however, is ordinarily at a broker-dealer, bank or trust company, not with Fir Tree. In the rare, extraordinary situation where Fir Tree takes physical possession of a security on behalf of a Client, Fir Tree endeavors to deliver such security to a broker-dealer, bank or trust company as soon as reasonably practicable. Accounts are reconciled daily, via statements provided by the counterparties, internal Fir Tree proprietary systems, Fir Tree's middle and back office service provider (Arcesium), and the Funds' administrator (Citco Fund Services). Any breaks are resolved as soon as possible. We review our use of prime brokers and qualified custodians periodically and may change them without notice. As such, investors receive capital account statements on an at least quarterly basis directly from the Funds' administrator. Investors should carefully review all account statements.

Fir Tree also (1) engages outside auditors (PricewaterhouseCoopers LLP, Ernst & Young, or EisnerAmper LLP) to audit the Funds at the end of each fiscal year and (2) distributes the results of the audit in audited financial statements that are prepared in accordance with generally accepted

accounting principles to all investors in the Funds generally within 120 days after the end of the fiscal year.

Item 16. Investment Discretion

Generally, Fir Tree is granted the discretionary authority in the relevant offering and/or governing documents to manage the securities held by its Clients. Unless otherwise provided in the relevant offering and/or governing documents to the contrary, this means that Fir Tree has the authority to determine, without obtaining specific Client consent, which securities to buy or sell and the amount of securities to buy or sell. Despite this broad authority, Fir Tree is committed to adhering to the investment strategy and program set forth in each of the Clients' offering and/or governing documents.

Before accepting their subscriptions for interests, with respect to the Funds, Fir Tree provides all investors in the Clients with offering and/or governing documents of the relevant Client that sets forth the relevant Client's investment strategy and program. By completing the subscription documents to acquire an interest in one of the Funds, investors give Fir Tree complete authority to manage their assets invested with Fir Tree in accordance with the applicable Fund's offering and/or governing documents they each received.

Item 17. Voting Client Securities

Fir Tree generally has sole authority to vote the Clients' securities, and Fir Tree adheres to an internal proxy voting policy that governs its practices in exercising this voting authority. Fir Tree's policy is to vote each Client's proxies in the best interest of the Client, considering their investment strategy, with a goal of maximizing shareholder value, and does not place its own interests ahead of the interests of a Client.

Fir Tree has engaged the services of (i) a proxy voting service provider to manage, track, reconcile and report proxy voting through electronic delivery of ballots and (ii) an independent proxy voting advisory service (Egan-Jones) to provide independent recommendations. Fir Tree generally votes Client securities, and in casting those votes, generally does so based upon the recommendations of Egan-Jones' ESG/SRI Proxy Voting Principles and Guidelines. Fir Tree's Clients may have different investment strategies and, as a result, there may be differences in the best interest of the Clients with respect to particular matters. In such event, Fir Tree shall treat each Client separately for purposes of proxy voting.

Fir Tree may choose not to participate in a particular proxy, to take no action or not vote if it concludes that not participating, taking action or not voting is in the best interests of its Client.

If a proxy vote creates a material conflict between the interests of Fir Tree and the Clients, Fir Tree will resolve the conflict before voting the proxies. In most cases, Fir Tree will follow the recommendation of the independent proxy voting advisory service, and therefore because the votes are being guided by the independent proxy voting advisory service, Fir Tree believes that it will generally not be faced with any direct or indirect conflicts of interest with respect to the voting of any proxy.

Records of proxy materials and votes are maintained in our offices. A complete copy of our proxy voting policies, procedures and prior voting history are available to investors upon request.

Item 18. Financial Information

Based on Fir Tree's business operations, the Firm has no information to report for this Item.
