

Rudius Management, L.P.

**401 Greenwich Street
3rd Floor
New York, NY 10013**

March 2023

This "**Brochure**" provides information about the qualifications and business practices of Rudius Management, L.P. (hereinafter "**Rudius**", "**we**", "**us**", "**our**" or the "**Firm**"). If you have any questions about the contents of this Brochure, please contact our Chief Compliance Officer ("**CCO**"), Umit Alptuna, by email at umit@rudi.us. Information in this Brochure has not been approved or verified by the U.S. Securities and Exchange Commission (the "**SEC**") or by any state securities authority.

Rudius is registered as an investment adviser with the SEC. Registration as an investment adviser with the SEC or with any state securities authority does not imply a certain level of skill or training. Additional information about Rudius is also available on the SEC's website at www.adviserinfo.sec.gov.

Item 2: Material Changes

This Brochure is Rudius' annual update to its Form ADV Part 2A. There have been no material changes since Rudius filed its annual update Brochure in March 2022. Pursuant to SEC requirements and rules, you will receive a summary of any material changes to this Brochure within one hundred twenty days of the close of Rudius' fiscal year. This Brochure may be requested at any time, without charge, by contacting Rudius' CCO at umit@rudi.us.

The information set forth in this Brochure is qualified in its entirety by the applicable offering and/or governing documents. In the event of a conflict between the information set forth in this Brochure and the information in the applicable offering and/or governing documents, such documents will prevail.

We encourage current and future investors to read this Brochure as well as all of the governing and offering documents applicable to your current or prospective investment, in their entirety.

Item 4: Advisory Business

A. General Description of Advisory Firm

Rudius Management, L.P. ("**Rudius**", "**we**", "**us**", "**our**", the "**Investment Manager**" or the "**Firm**") is organized as a Delaware limited partnership that was formed in 2018 with a principal place of business in New York, New York. Murat Ozbaydar, the Founder and Portfolio Manager of the Firm (the "**Portfolio Manager**"), is the principal owner of Rudius and will direct the investment activities and operations of the Funds (as defined below).

B. Description of Advisory Services

This Brochure generally includes information about us and our relationships with our clients. While much of this Brochure applies to all such clients, certain information included herein applies to specific clients only.

1. Advisory Services

We serve as the investment adviser, with discretionary trading authority, to private, pooled investment vehicles, the securities of which are offered through a private placement memorandum to accredited investors, as defined under the Securities Act of 1933, as amended, and qualified purchasers, as defined under the Investment Company Act of 1940, as amended. Persons reviewing this Brochure should not construe this as an offer to sell or a solicitation of an offer to buy the securities of any of the Funds described herein. Any such offer or solicitation will be made only by means of a confidential private placement memorandum.

Rudius manages the following private, pooled investment vehicles:

- Rudius Master Fund Ltd., a Cayman Islands exempted company (the "**Master Fund**");
- Rudius Fund Ltd., a Cayman Islands exempted company (the "**Offshore Feeder Fund**");
- Rudius Intermediate Fund LP, a Cayman Islands exempted limited partnership (the "**Intermediate Fund**");
- Rudius Fund LP, a Delaware limited partnership (the "**Domestic Feeder Fund**");
- Itiner VI Victrix LP, a Delaware limited partnership (the "**Fund of One**"); and
- Rudius XII Fulminata LP, a Cayman Islands exempted limited partnership (the "**Standalone Fund**").

The Master Fund, the Domestic Feeder Fund, the Intermediate Fund, the Fund of One, the Standalone Fund, and the Offshore Feeder Fund are herein each referred to as a "**Fund**" or "**Client**", and collectively referred to as the "**Funds**" or the "**Clients**".

The Domestic Feeder Fund's "**Limited Partners**" and the Offshore Feeder Fund's "**Shareholders**" are hereafter collectively referred to as the "**Investors**" where appropriate. We generally do not tailor our advisory services to the individual needs of any particular Investor. In unique circumstances, however, we may offer (and currently intend to provide) individualized investment advisory services to a highly selective group of investors through funds of one or managed accounts.

Rudius wholly owns Rudius Management (UK) Limited (the "**Sub-Advisor**"), a company registered in England and Wales under the Companies Act 2006. The Sub-Advisor acts as a

participating affiliate to Investment Manager and provides portfolio management, trade recommendations and administrative services.

2. Investment Strategy and Types of Investments

Our investment objective is to compound capital and enhance value over the long term while also emphasizing preservation of capital. Our core strategy is to invest in a concentrated portfolio of companies that we believe have good business models, growth drivers, and strong management teams, and are trading at significant discounts to their long-term values (3-5 years).

The Funds will invest predominantly in publicly traded equities, but we may also cause the Funds to invest in other levels of a company's capital structure such as senior or subordinated debt, stock and index options and other specified securities. The Funds may invest in rights offerings, derivatives, trust units, CDS, swaps and similar complex securities. We may cause the Funds to invest in privately owned companies in limited circumstances as well. The Funds will invest globally but will be mainly focused on the following regions – United States, Canada, Western Europe, Australia and New Zealand. We may also cause the Funds to take short positions in securities we believe exhibit significant downside, and we also may use short positions to hedge against a specific identified company risk or sector exposure. Please see Item 8 for further details about our investment strategy.

The descriptions set forth in this Brochure of specific advisory services that we offer to our Clients, and investment strategies pursued and investments made by us on behalf of our Clients, should not be understood to limit in any way our investment activities. We may offer any advisory services, engage in any investment strategy and make any investment, including any not described in this Brochure, that we consider appropriate, subject to each Client's investment objectives and guidelines. The investment strategies we pursue are speculative and entail substantial risks. Clients should be prepared to bear a substantial loss of capital. There can be no assurance that the investment objectives of any Client will be achieved.

C. Availability of Customized Services for Individual Clients

Our investment decisions and advice with respect to the Funds are subject to each Fund's investment objectives and guidelines, as set forth in its respective "**Offering Documents.**"

D. Wrap Fee Programs

We do not currently participate in any Wrap Fee Programs.

E. Assets Under Management

As of December 31, 2022, the Firm has regulatory assets under management of \$930,627,015, all managed on a discretionary basis.

Item 5: Fees and Compensation

A. Advisory Fees and Compensation

The fees applicable to each of the Funds are set forth in detail in the corresponding Offering Documents. A brief summary of our expectations for such fees is provided below.

Management Fee

Generally, Rudius is paid an investment management fee ("**Management Fee**") for each fiscal quarter equal to a quarter of the management fee rate ("**Management Fee Rate**") multiplied by the net asset value attributed to each Investor at the beginning of each fiscal quarter. The Management Fee will be calculated and paid in advance but will be amortized monthly over the fiscal quarter for which such Management Fee is paid. The Management Fee will be prorated for partial fiscal quarters. In the event of a redemption by an Investor other than as of the last day of a fiscal quarter, Rudius will return to the relevant Fund for payment to, or credit to the interests of, the redeeming Investor, an amount equal to the pro rata portion of the Management Fee, based on the actual number of days remaining in such fiscal quarter.

The Management Fee Rate ranges from 1% to 1.25% per annum, as set out in the applicable Fund's Offering Documents.

The Investment Manager, in its sole discretion, may waive, modify or calculate differently the Management Fee for any Investor.

Incentive Fees

Generally, at the end of each fiscal year, Rudius is entitled to an incentive allocation equal to 20% of the aggregate net capital appreciation (if any) attributable to the corresponding shares or interests of an Investor for such fiscal year subject, in certain cases, to a hurdle. Any incentive allocation is subject to a loss recovery account mechanism.

In the event that a Fund is terminated or an Investor withdraws other than at the end of a fiscal year, then for purposes of determining the incentive allocation allocable at such time to Rudius, net capital appreciation will be determined as if such dates were the end of the fiscal year, subject to certain adjustments. In the sole discretion of Rudius, the incentive allocation may be waived, reduced or calculated differently with respect to certain Investors.

B. Other Types of Fees or Expenses

Rudius is authorized to incur and pay in the name and on behalf of the Funds all expenses which they deem necessary or advisable.

Expenses of the Funds

The applicable Fund will bear its own expenses, any relevant trading vehicle's expenses, and, if such Fund is a feeder fund, its *pro rata* share of the applicable Master Fund's expenses, including the following: (i) the Management Fee; (ii) expenses related to actual and prospective investments (whether or not consummated), including the following: fees and expenses related to market data (excluding Bloomberg terminals); costs related to the security and custody of investments; expenses related to the purchase and sale of investments;

brokerage and prime brokerage and futures commission merchant fees, commissions and expenses; expenses relating to short sales; clearing and settlement charges; interest expenses and fees related to financings or refinancings; fees and expenses of proxy research and voting services; bank service fees; and fees and expenses of third-party professionals, including consultants, investment bankers, attorneys and accountants; (iii) organizational and reorganizational expenses; and (iv) operational expenses, including the following: fees and expenses relating to information technology hardware, software or other technology (including costs of software licensing, implementation, data management and recovery services and custom development, but excluding Bloomberg terminals) used to evaluate and manage risk, facilitate valuations, facilitate accounting functions, facilitate compliance with the rules of any self-regulatory organization or applicable law (including reporting obligations), or otherwise manage the Fund, the Master Fund or any trading vehicle, such as portfolio management systems and risk management systems; fees and expenses of third-party risk management products, models and services; insurance expenses, including premiums for cybersecurity insurance and liability insurance covering the Investment Manager and its partners, officers, employees and agents, each member of any Fund board of directors and each member of any advisory committee that may be established; third-party administrative fees and expenses; fees and expenses of third-party professionals, including consultants, valuation service providers, attorneys and accountants; the costs of any litigation or investigation involving activities of the Fund or the Master Fund; third-party audit and tax preparation expenses; fees and expenses (including director registration fees) of the Fund's and the Master Fund's directors and officers (including any AML Officers); costs of preparing and distributing reports and notices; taxes; expenses incurred in connection with negotiating and complying with provisions of any side letter agreements; fees and expenses related to compliance with the rules of any self-regulatory organization or applicable law in connection with the activities of the Fund, the Master Fund or any trading vehicle, including any governmental, regulatory, licensing, filing or registration fees or taxes (including fees and expenses incurred in connection with the preparation and filing of any regulatory filings of the Fund, the Master Fund or any trading vehicle); expenses incurred in connection with the offering and sale of the shares or interests and other similar expenses related to the Fund (excluding fees payable to any placement agent); extraordinary expenses, including the following: indemnification expenses; fees and expenses incurred in connection with any tax audit by any taxing authority, including any related administrative settlement and judicial review; and fees and expenses incurred in connection with the reorganization, dissolution, winding-up or termination of the Fund, the Intermediate Fund (if applicable), the Master Fund or any trading vehicle.

Generally, all expenses borne by a Fund, other than the Management Fee and any expenses that a Fund's board of directors or a Fund's general partner (the "General Partner") determine should be allocated to a particular Investor, will be debited to all of the Investors on a pro rata basis. To the extent that expenses to be borne by a Fund are paid by the General Partner or the Investment Manager, the Fund will reimburse such party for such expenses.

The Rudius-labeled Funds do not have a pre-determined limit on its extraordinary operating expenses. The Funds' actual annual operating expenses are disclosed in the applicable Fund's year-end audited financial statements, which are provided to each Investor.

C. Additional Compensation and Conflicts of Interest

Neither Rudius nor any of its supervised persons accepts compensation (e.g., brokerage commissions) for the sale of securities or other investment products.

Item 6: Performance-Based Fees and Side-By-Side Management

We and our affiliates accept performance-based compensation from every Client (other than Clients that are not assessed performance-based compensation because it is assessed through another entity in a single master-feeder or similar structure). As a result, we and our affiliates do not face certain conflicts of interest that may arise when an investment adviser accepts performance-based fees from some clients, but not from other clients.

Performance-based allocation arrangements may create an incentive for us to recommend investments which may be riskier or more speculative than those which we would recommend under a different arrangement.

Item 7: Types of Clients

Our clients are the Funds, as described in Item 4 above. Investors that are eligible to invest in the Funds include, among others, institutions, pension plans, endowments, high net-worth individuals, financially sophisticated individuals, and other sophisticated investors.

Item 8: Methods of Analysis, Investment Strategies, and Risk of Loss

A. Methods of Analysis and Investment Strategies

The descriptions set forth in this Brochure of specific advisory services that we offer to Clients, and investment strategies pursued and investments made by us on behalf of our Clients, should not be understood to limit in any way our investment activities. We may offer any advisory services, engage in any investment strategy and make any investment, including any not described in this Brochure, that we consider appropriate, subject to each Client's investment objectives and guidelines as set forth in the Offering Documents. The investment strategies we pursue are speculative and entail substantial risks. Clients should be prepared to bear a substantial loss of capital. There can be no assurance that the investment objectives of any Client will be achieved.

Investment Objective

Our investment objective is to compound capital and enhance value over the long term while also emphasizing preservation of capital. The Investment Manager targets a long-term performance better than that of equity markets.

Investment Philosophy

Our core strategy is to invest in a concentrated portfolio of companies that we believe to have good business models, growth drivers, and strong management teams, and are trading at significant discounts to their long-term values (3-5 years). RADIUS has a long-term horizon and views core long positions with a long-term outlook (3-5 years). We believe that high quality ideas are rare and should be sized accordingly. We expect to cause the Funds to be invested in a limited number of positions where we have the highest conviction. The Funds may also hold significant amounts of cash from time to time.

We believe that, over the long term (3-5 years), stock returns are a function of the value a business creates through the stability and duration of earnings and its growth, cash accumulation, and reinvestment, and the change in the stock's valuation multiple, driven by

changes in perceived growth, risks, quality and return on invested capital expectations. We believe companies with good business models, growth drivers, and good management teams can predictably grow earnings, accumulate cash, and make good reinvestment decisions. If such businesses are misunderstood by the market, they may trade at significant discounts to their long-term values.

The Funds may also hold a short portfolio that may be comprised of short positions in: (i) companies and industries that exhibit value destruction and misallocation of capital; (ii) issuers whose earnings power is perceived to be misunderstood by consensus investors; (iii) sectors with worsening fundamentals or paradigm change; and/or (iv) overhyped companies with limited or negatively inflecting growth, or that are facing catalysts. The Funds will typically have a long bias, though we also may use short positions to hedge against a specific identified company risk or sector exposure.

Rudius believes that through its intensive, private equity-style research process, it can identify and assess such businesses and understand whether they are misunderstood.

Investment Universe

The Funds will invest predominantly in publicly traded equities, but we may also cause the Funds to invest in other levels of a company's capital structure such as senior or subordinated debt, stock and index options and other specified securities. The Funds may invest in rights offerings, derivatives, trust units, CDS, swaps and similar complex securities. We may cause the Funds to invest in privately owned companies in limited circumstances as well. The Funds will invest globally but will be mainly focused on the following regions – United States, Canada, Western Europe, Australia and New Zealand.

B. Material, Significant or Unusual Risks Relating to Investment Strategies

The following risk factors do not purport to be a complete list or explanation of the risks involved in an investment in the Funds advised by us and is not intended to be exhaustive. Prospective Investors should consult their own legal, tax and financial advisers about the risks of an investment in a Fund. The following risk factors and other relevant risks could have a material adverse effect on a Fund and the Investors' investments therein. These risk factors include only those risks we believe to be material, significant or unusual and relate to particular significant investment strategies or methods of analysis employed by us. Each prospective investor should carefully review the Offering Documents and the documents referred to herein before deciding to invest.

Risks Relating to Investment Strategies

Risk of Loss

No guarantee or representation is made that a Fund's investment program, including a Fund's investment objective, diversification strategies or risk monitoring goals, will be successful. Investment results may vary substantially over time.

Long/Short

The success of a Fund's long/short investment strategy depends upon the Investment Manager's ability to identify and purchase securities that are undervalued and identify and sell short securities that are overvalued. The identification of investment opportunities in the implementation of a Fund's long/short investment strategies is a difficult task, and there are

no assurances that such opportunities will be successfully recognized or acquired. In the event that the perceived opportunities underlying a Fund's positions were to fail to converge toward, or were to diverge further from values expected by the Investment Manager, a Fund may incur a loss. In the event of market disruptions, significant losses can be incurred which may force a Fund to close out one or more positions. Furthermore, the valuation models used to determine whether a position presents an attractive opportunity consistent with the Investment Manager's long/short strategies may become outdated and inaccurate as market conditions change.

Short Selling

The Funds may engage in an opportunistic short-selling investment strategy. The success of a Fund's short selling investment strategy depends upon the Investment Manager's ability to identify and sell short securities that are overvalued. A short sale creates the risk of a theoretically unlimited loss, in that the price of the underlying security could theoretically increase without limit, thus increasing the cost to the Funds of buying those securities to cover the short position. There can be no assurance that the Funds will be able to maintain the ability to borrow securities sold short. In such cases, the Funds can be "bought in" (i.e., forced to repurchase securities in the open market to return to the lender). There also can be no assurance that the securities necessary to cover a short position will be available for purchase at or near prices quoted in the market. Purchasing securities to close out a short position can itself cause the price of the securities to rise further, thereby exacerbating the loss. Short strategies can also be implemented synthetically through various instruments and be used with respect to indices or in the over-the-counter market and with respect to futures and other instruments. In some cases of synthetic short sales, there is no floating supply of an underlying instrument with which to cover or close out a short position and a Fund may be entirely dependent on the willingness of over-the-counter market makers to quote prices at which the synthetic short position may be unwound. There can be no assurance that such market makers will be willing to make such quotes. Short strategies can also be implemented on a leveraged basis. Lastly, even though the Funds secure a "good borrow" of the security sold short at the time of execution, the lending institution may recall the lent security at any time, thereby forcing the Funds to purchase the security at the then-prevailing market price, which may be higher than the price at which such security was originally sold short by the Funds.

Long-Term

The success of the Funds' long-term investment strategy depends upon the Investment Manager's ability to identify and purchase securities that are undervalued and hold such investments so as to maximize value on a long-term basis. In pursuing any long-term strategy, the Funds may forego value in the short-term or temporary investments in order to be able to avail the Funds of additional and/or longer-term opportunities in the future. Consequently, the Funds may not capture maximum available value in the short-term, which may be disadvantageous, for example, for Investors who withdraw or redeem all or a portion of their shares or capital accounts before such long-term value may be realized by the Fund.

Short-Term Market Considerations

The Investment Manager's trading decisions may be made on the basis of short-term market considerations, and the portfolio turnover rate could result in significant trading related expenses.

Activist Investing

A portion of the Funds' investment portfolio may be subject to an activist investment strategy. The success of the Funds' activist investment strategy depends upon, among other things: (i) the Investment Manager's ability to properly identify portfolio companies whose securities prices can be improved through corporate and/or strategic action; (ii) the Funds' ability to acquire sufficient securities of such portfolio companies at a sufficiently attractive price; (iii) a Fund's ability to avoid triggering anti-takeover and regulatory obstacles while aggregating its position; (iv) the willingness of the management of such portfolio companies and other security holders to respond positively to the Investment Manager's proposals; and (v) favorable movements in the market price of any such portfolio company's securities in response to any actions taken by such portfolio company. There can be no assurance that any of the foregoing will occur.

Corporate governance strategies may prove ineffective for a variety of reasons, including: (i) opposition of the management or investors of the subject company, which may result in litigation and may erode, rather than increase, the value of the subject company; (ii) intervention of a governmental agency; (iii) efforts by the subject company to pursue a "defensive" strategy, including a merger with, or a friendly tender offer by, a company other than the offeror; (iv) market conditions resulting in material changes in the prices of securities; (v) the presence of corporate governance mechanisms such as staggered boards, poison pills and classes of stock with increased voting rights; and (vi) the necessity for compliance with applicable securities laws. In addition, opponents of a proposed corporate governance change may seek to involve regulatory agencies in investigating the transaction or the Funds and such regulatory agencies may independently investigate the participants in a transaction, including the Funds, as to compliance with securities or other law. Furthermore, successful execution of a corporate governance strategy may depend on the active cooperation of investors and others with an interest in the subject company. Some investors may have interests which diverge significantly from those of the Funds, and some of those parties may be indifferent to the proposed changes. Moreover, securities that the Investment Manager believes are fundamentally undervalued or incorrectly valued may not ultimately be valued in the capital markets at prices and/or within the timeframe the Investment Manager anticipates, even if a corporate governance strategy is successfully implemented. Even if the prices for a portfolio company's securities have increased, no guarantee can be made that there will be sufficient liquidity in the markets to allow the Funds to dispose of all or any of their securities therein or to realize any increase in the price of such securities.

Leverage and Borrowing

Leverage for Investment Purposes

The use of leverage will allow the Funds to make additional investments, thereby increasing their exposure to assets, such that their total assets may be greater than their capital. However, leverage will also magnify the volatility of changes in the value of the Funds' portfolio. The effect of the use of leverage by the Funds in a market that moves adversely to their investments could result in substantial losses to the Funds, which would be greater than if the Funds were not leveraged.

Borrowing for Cash Management Purposes

The Funds have the authority to borrow for cash management purposes, such as to satisfy withdrawal requests. The rates at and terms on which the Funds can borrow will affect the operating results of the Funds.

Collateral

The instruments and borrowings utilized by the Funds to leverage investments may be collateralized by all or a portion of the Funds' portfolio. Accordingly, the Funds may pledge their securities in order to borrow or otherwise obtain leverage for investment or other purposes. Should the securities pledged to brokers to secure the Funds' margin accounts decline in value, the Funds could be subject to a "margin call", pursuant to which the Funds must either deposit additional funds or securities with the broker or suffer mandatory liquidation of the pledged securities to compensate for the decline in value. The banks and dealers that provide financing to the Funds can apply essentially discretionary margin, "haircut", financing and collateral valuation policies. Changes by counterparties in any of the foregoing may result in large margin calls, loss of financing and forced liquidations of positions at disadvantageous prices. Lenders that provide other types of asset-based or secured financing to the Funds may have similar rights. There can be no assurance that the Funds will be able to secure or maintain adequate financing.

Costs

Borrowings will be subject to interest, transaction and other costs, and other types of leverage also involve transaction and other costs. Any such costs may or may not be recovered by the return on the Funds' portfolio.

Lending of Portfolio Securities

The Funds may lend securities on a collateralized and an uncollateralized basis from their portfolio to creditworthy securities firms and financial institutions. While a securities loan is outstanding, the Funds will continue to receive the equivalent of the interest or dividends paid by the issuer on the securities, as well as interest on the investment of the collateral or a fee from the borrower. The risks in lending securities, as with other extensions of secured credit, if any, consist of possible delay in receiving additional collateral, if any, or in recovery of the securities or possible loss of rights in the collateral, if any, should the borrower fail financially.

Diversification and Concentration

The Funds' portfolio is expected to be highly concentrated in a limited number of issuers and investments. In addition, the Funds' portfolio may become significantly concentrated in securities related to a single or a limited number of industries, sectors, strategies, countries or geographic regions. This limited diversification may result in the concentration of risk, which, in turn, could expose the Funds to losses disproportionate to market movements in general if there are disproportionately greater adverse price movements in such securities.

Lack of Control

The Funds may invest in debt instruments and equity securities of companies that it does not control, which the Funds may acquire through market transactions or through purchases of securities directly from the issuer or other shareholders. Such securities will be subject to the risk that the issuer may make business, financial or management decisions with which the Funds do not agree or that the majority stakeholders or the management of the issuer may take risks or otherwise act in a manner that does not serve the Funds' interests. In addition, the Funds may share control over certain investments with co-investors, which may make it more difficult for the Funds to implement their investment approach or exit the investment when it otherwise would. The occurrence of any of the foregoing could have a material adverse effect on the Funds and the Investors' investments therein.

Hedging Transactions

The Funds may utilize securities for risk management purposes in order to: (i) protect against possible changes in the market value of the Funds' investment portfolio resulting from fluctuations in the markets and changes in interest rates; (ii) protect the Funds' unrealized gains in the value of their investment portfolios; (iii) facilitate the sale of any securities; (iv) enhance or preserve returns, spreads or gains on any security in the Funds' portfolio; (v) hedge against a directional trade; (vi) hedge the interest rate, credit or currency exchange rate on any of the Funds' securities; (vii) protect against any increase in the price of any securities the Funds anticipate purchasing at a later date; or (viii) act for any other reason that the Investment Manager deems appropriate. The Funds will not be required to hedge any particular risk in connection with a particular transaction or their portfolios generally. The Investment Manager may be unable to anticipate the occurrence of a particular risk and, therefore, may be unable to attempt to hedge against it. While the Funds may enter into hedging transactions to seek to reduce risk, such transactions may result in a poorer overall performance for the Funds than if they had not engaged in any such hedging transaction. Moreover, the portfolio will always be exposed to certain risks that cannot be hedged.

Event-Driven

A portion of the Funds' investment portfolios may be subject to an event-driven investment strategy. The success of the Funds' event-driven investment strategy depends upon the Investment Manager's ability to make predictions about (i) the likelihood that an event will occur and (ii) the impact such event will have on the value of a company's securities. If the event fails to occur or it does not have the effect foreseen, losses can result. For example, the adoption of new business strategies or completion of asset dispositions or debt reduction programs by a company may not be valued as highly by the market as the Investment Manager had anticipated, resulting in losses. In addition, a company may announce a plan of restructuring which promises to enhance value, but fail to implement it, which can result in losses to investors. In liquidations and other forms of corporate reorganization, the risk exists that the reorganization either will be unsuccessful, will be delayed or will result in a distribution of cash or a new security, the value of which will be less than the purchase price to the Funds of the security in respect of which such distribution was made. The consummation of mergers and tender and exchange offers can be prevented or delayed by a variety of factors, including: (i) opposition of the management or stockholders of the target company, which will often result in litigation to enjoin the proposed transaction; (ii) intervention of a U.S. federal or state regulatory agency; (iii) efforts by the target company to pursue a "defensive" strategy, including a merger with, or a friendly tender offer by, a company other than the "offeror; (iv) in the case of a merger, failure to obtain the necessary stockholder approvals; (v) market conditions resulting in material changes in securities prices; (vi) compliance with any applicable U.S. federal or state securities laws; and (vii) inability to obtain adequate financing. Because of the inherently speculative nature of event-driven investing, the results of the Funds' operations may be expected to fluctuate from period to period. Accordingly, Investors should understand that the results of a particular period will not necessarily be indicative of results that may be expected in future periods.

Discretion of the Investment Manager; New Strategies and Techniques

While the Investment Manager will generally seek to employ the representative investment strategies and techniques discussed herein, the Investment Manager (subject to the policies and control of a Fund's board of directors or General Partner) has considerable discretion in the types of securities the Funds may trade and has the right to modify the investment strategies and techniques of the Funds without the consent of the Investors. New investment strategies and techniques may not be thoroughly tested in the market before being employed

and may have operational or theoretical shortcomings which could result in unsuccessful trades and, ultimately, losses to the Funds. In addition, any new investment strategy or technique developed by the Funds may be more speculative than earlier investment strategies and techniques and may involve material and as-yet-unanticipated risks that could increase the risk of an investment in the Funds.

Counterparty Risk

The Funds expect to establish relationships to obtain financing, derivative intermediation and prime brokerage services that permit the Funds to trade in any variety of markets or asset classes over time. However, there can be no assurance that the Funds will be able to establish or maintain such relationships. An inability to establish or maintain such relationships could limit the Funds' trading activities, create losses, preclude the Funds from engaging in certain transactions or prevent the Funds from trading at optimal rates and terms. Moreover, a disruption in the financing, derivative intermediation and prime brokerage services provided by any such relationships could have a significant impact on the Funds' business due to the Funds' reliance on such counterparties.

The Funds may effect transactions in the "over-the-counter" or "OTC" derivatives markets. The stability and liquidity of OTC derivatives transactions depends in large part on the creditworthiness of the parties to the transactions. In the OTC markets, the Funds enter into contracts directly with dealer counterparties which may expose the Funds to the risk that a counterparty will not settle a transaction in accordance with its terms because of a solvency or liquidity problem with the counterparty. Delays in settlement may also result from disputes over the terms of the contract (whether or not bona fide). In addition, the Funds may have a concentrated risk in a particular counterparty, which may mean that if such counterparty were to become insolvent or have a liquidity problem, losses would be greater than if the Funds had entered into contracts with multiple counterparties. Certain OTC derivative contracts require that the Funds post collateral.

If there is a default by a counterparty, the Funds under most normal circumstances will have contractual remedies pursuant to the agreements related to the transaction. However, exercising such contractual rights may involve delays or costs which could result in the net asset value of the Funds being less than if the Funds had not entered into the transaction. Furthermore, there is a risk that any of such counterparties could become insolvent and/or the subject of insolvency proceedings. In such case, the recovery of the Funds' securities from any such counterparty or the payment of claims therefor may be significantly delayed and the Funds may recover substantially less than the full value of the securities entrusted to such counterparty. In addition, there are a number of proposed rules that, if they were to go into effect, may impact the laws that apply to insolvency proceeding and may impact whether the Funds may terminate its agreement with an insolvent counterparty.

Collateral that the Funds post to their counterparties that is not segregated with a third-party custodian may not have the benefit of customer-protected "segregation" of such funds. In the event that a counterparty was to become insolvent, the Funds may become subject to the risk that it may not receive the return of its collateral or that the collateral may take some time to return.

In addition, the Funds may use counterparties located in jurisdictions outside the United States. Such local counterparties usually are subject to laws and regulations in non-U.S. jurisdictions that are designed to protect customers in the event of their insolvency. However, the practical effect of these laws and their application to the Funds' assets are subject to

substantial limitations and uncertainties. Because of the range of possible factual scenarios involving the insolvency of a counterparty and the potentially large number of entities and jurisdictions that may be involved, it is impossible to generalize about the effect of such an insolvency on the Funds and their assets. Investors should assume that the insolvency of any such counterparty would result in significant delays in recovering the Funds' securities from or the payment of claims therefor by such counterparty and a loss to the Funds, which could be material.

C. Risks Associated With Particular Types of Securities

We do not recommend a particular type of investment instrument to the Funds, but rather, we recommend and invest in multiple investment instruments. Given the broad discretion we have in managing the Funds, any one or more of the risks listed in this section may be incurred by our Clients.

However, because it may be useful in understanding our investment program, set forth below is a non-exclusive list of certain risks related to securities and other instruments that may be utilized within the Funds' portfolio:

Equity Securities Generally

The value of equity securities of public and private, listed and unlisted companies and equity derivatives generally varies with the performance of the issuer and movements in the equity markets. As a result, the Funds may suffer losses if they invest in equity instruments of issuers whose performance diverges from the Investment Manager's expectations or if equity markets generally move in a single direction and the Funds have not hedged against such a general move. The Funds also may be exposed to risks that issuers will not fulfill contractual obligations such as, in the case of convertible securities or private placements, delivering marketable common stock upon conversions of convertible securities and registering restricted securities for public resale.

Micro-, Small- and Medium-Capitalization Companies

Investments in securities of micro- and small-capitalization companies involve higher risks in some respects than do investments in securities of larger "blue-chip" companies. For example, prices of securities of micro- and small-capitalization and even medium-capitalization companies are often more volatile than prices of securities of large-capitalization companies and may not be based on standard pricing models that are applicable to securities of large-capitalization companies. Furthermore, the risk of bankruptcy or insolvency of many smaller companies (with the attendant losses to investors) may be higher than for larger, "blue-chip" companies. Finally, due to thin trading in the securities of some micro- and small-capitalization companies, an investment in those companies may be illiquid.

American Depositary Receipts and Global Depositary Receipts

American Depositary Receipts ("**ADRs**") are receipts issued by a U.S. bank or trust company evidencing ownership of underlying securities issued by non-U.S. issuers. ADRs may be listed on a national securities exchange or may be traded in the over-the-counter market. Global Depositary Receipts ("**GDRs**") are receipts issued by either a U.S. or non-U.S. banking institution representing ownership in a non-U.S. company's publicly traded securities that are traded on non-U.S. stock exchanges or non-U.S. over-the-counter markets. Holders of unsponsored ADRs or GDRs generally bear all the costs of such facilities. The depository of an unsponsored facility frequently is under no obligation to distribute investor communications received from the issuer of the deposited security or to pass through voting rights to the

holders of depositary receipts in respect of the deposited securities. Investments in ADRs and GDRs pose, to the extent not hedged, currency exchange risks (including blockage, devaluation and non-exchangeability), as well as a range of other potential risks relating to the underlying shares, which could include expropriation, confiscatory taxation, imposition of withholding or other taxes on dividends, interest, capital gains, other income or gross sale of disposition proceeds, political or social instability or diplomatic developments that could affect investments in those countries, illiquidity, price volatility and market manipulation. In addition, less information may be available regarding the underlying shares of ADRs and GDRs, and non-U.S. companies may not be subject to accounting, auditing and financial reporting standards and requirements comparable to, or as uniform as, those of U.S. companies. Such risks may have a material adverse effect on the performance of such investments and could result in substantial losses.

Bankruptcy Claims

The Funds' investments may include debt and equity of financially distressed companies. In the event that the issuer files for bankruptcy protection, the Funds will likely be unable to sell their claims without realizing a significant loss and may be unable to recover current interest on such claims during the course of the bankruptcy case. The markets in U.S. bankruptcy claims are generally not regulated by U.S. federal securities laws or the SEC. To the extent a debt investment is unsecured (i.e., has no collateral securing repayment), such claims may have a lower priority than secured claims (which have first recourse to the collateral securing such claim). In addition, the debt of an issuer in bankruptcy may be adversely affected by an erosion of the issuer's business and overall value. Accordingly, there can be no guarantee that a debtor will be able to satisfy all of its liabilities or that the Funds will be able to recover the entire amount of their bankruptcy claim.

Many of the events within a bankruptcy case are adversarial and often beyond the control of the creditors. While creditors generally are afforded an opportunity to appear and be heard, there can be no assurance that a bankruptcy court would not approve actions that may be contrary to the interests of the Funds (in their role as creditors). Furthermore, there are instances where creditors lose their priority under Title 11 of the United States Code (the "**Bankruptcy Code**") (i.e., are equitably subordinated) if, for example, they have engaged in misconduct that harms other creditors. In those cases where the Funds are found to have engaged in such misconduct, the Funds may lose their priority.

Generally, the duration of a bankruptcy case can only be roughly estimated. The reorganization of a company usually involves the development and negotiation of a plan of reorganization, the approval of the plan by creditors and confirmation of the plan by the bankruptcy court. This process can involve substantial legal, professional and administrative costs to the company and the Funds; it is subject to unpredictable and lengthy delays; and during the process the company's competitive position may erode, key management may depart and the company may not be able to invest adequately. In some cases, the issuer may not be able to reorganize and may be required to sell its assets either as a going concern or as part of a liquidation. As a result, even in those circumstances where the Funds may recover the entire amount of their bankruptcy claim, the Funds may be adversely impacted by any costs incurred by the Funds in representing their interests in a debtor's bankruptcy case.

U.S. bankruptcy law permits the classification of "substantially similar" claims in determining the classification of claims in a reorganization for the purpose of voting on a plan of reorganization. Because the standard for classification is vague, there exists a significant risk that the Funds' influence with respect to a class of securities can be lost by virtue of the size

of their claim relative to the claims of the entire class. In addition, certain administrative costs and claims that have priority by law over the claims of certain creditors (for example, claims for certain taxes) may impair the recovery of an investment in a bankruptcy claim.

The Funds intend to invest some of their assets in securities of issuers domiciled, or assets located, globally. Investment in the debt of financially distressed companies domiciled outside the United States involves additional risks. Bankruptcy law and process may differ substantially from that in the United States, resulting in greater uncertainty as to the rights of creditors, the enforceability of such rights, reorganization timing and the classification, seniority and treatment of claims. In certain developing countries, although bankruptcy laws have been enacted, the process for reorganization remains highly uncertain.

The Investment Manager, on behalf of the Funds, may elect to serve on creditors' committees, equity holders' committees or other groups to ensure preservation or enhancement of the Funds' positions as creditors or equity holders. A member of any such committee or group may owe a fiduciary duty and be subject to certain obligations to all members the committee represents and/or to other similarly situated parties. The Investment Manager may resign from that committee or group for any reason, including, for example, if the Investment Manager concludes that its obligations owed to the other parties as a committee or group member conflict with its duties owed to the Funds. In such case, the Funds may not realize the benefits, if any, of participation on the committee or group. In addition, if the Funds are represented on a committee or group, they may be restricted or prohibited under applicable law from disposing of or increasing its investments in such company while they continue to be represented on such committee or group.

The Funds may purchase creditor claims subsequent to the commencement of a bankruptcy case. Under judicial decisions, it is possible that such purchase may be disallowed by the bankruptcy court if the court determines that the purchaser has taken unfair advantage of an unsophisticated seller, which may result in the rescission of the transaction (presumably at the original purchase price) or forfeiture by the purchaser. Additionally, the claim may be disallowed or subordinated if the bankruptcy court determines that the seller engaged in inequitable conduct that harmed other creditors.

Reorganizations can be contentious and adversarial, and it is by no means unusual for participants to use the threat of litigation and to engage in litigation as a negotiating technique. The expense of defending against claims by third parties and paying any amounts pursuant to settlements or judgments would generally be borne by the Funds.

Business Development Companies

Investments in closed-end funds that elect to be treated as business development companies ("BDCs") may be subject to a high degree of risk. BDCs typically invest in small and medium-sized private and certain public companies that may not have access to public equity markets for capital raising. As a result, a BDC's portfolio typically will include a substantial amount of securities purchased in private placements, and its portfolio may carry risks similar to those of a private equity or venture capital fund. Securities that are not publicly registered may be difficult to value and may be difficult to sell at a price representative of their intrinsic value. Small and medium-sized companies also may have fewer lines of business so that changes in any one line of business may have a greater impact on the value of their stock than is the case of a larger company. Some BDCs invest substantially, or even exclusively, in one sector or industry group and therefore carry risk of that particular sector or industry group. To the extent a BDC focuses its investments in a specific sector, the BDC will be susceptible to adverse

conditions and economic or regulatory occurrences affecting the specific sector or industry group, which tends to increase volatility and result in higher risk. Investments in BDCs are subject to various risks, including management's ability to meet the BDC's investment objective, and to manage the BDC's portfolio when the underlying securities are redeemed or sold, during periods of market turmoil and as investors' perceptions regarding a BDC or its underlying investments change. BDC shares are not redeemable at the option of the BDC shareholder and, as with shares of other closed-end funds, they may trade in the secondary market at a discount to their net asset value. BDCs generally qualify as "regulated investment companies" under the U.S. federal tax laws and, provided they distribute all of their income in the time and manner as required by the tax law and satisfy certain diversification and source of income requirements, generally will not pay U.S. federal income taxes.

Certain BDCs in which the Funds may invest may employ the use of leverage in their portfolios through borrowings or the issuance of preferred stock. While leverage often serves to increase the yield of a BDC, this leverage also subjects the BDC to increased risks, including the likelihood of increased volatility and the possibility that the BDC's common share income will fall if the dividend rate on any preferred shares or the interest rate on any borrowings rises.

The Funds may be limited by provisions of the Company Act that generally limit the amount a Fund can invest in any one BDC to 3% of the BDC's total outstanding stock. As a result, the Funds may be required to hold a smaller position in a BDC than they would absent this restriction. The Funds will indirectly bear their proportionate share of any management and other operating expenses, and of any performance based or incentive fees, charged by the BDCs in which it invests, in addition to the expenses paid by the Funds.

Convertible Securities

A convertible security may be subject to redemption at the option of the issuer at a price established in the convertible security's governing instrument. If a convertible security held by the Funds is called for redemption, the Funds will be required to permit the issuer to redeem the security, convert it into the underlying common stock or sell it to a third party. Any of these actions could have an adverse effect on the Funds' ability to achieve their investment objective.

Currencies

A principal risk in trading currencies is the rapid fluctuation in the market prices of currency contracts. Prices of currency contracts traded by the Funds are affected generally by relative interest rates, which in turn are influenced by a wide variety of complex and difficult to predict factors such as money supply and demand, balance of payments, inflation levels, fiscal policy, and political and economic events. In addition, governments from time to time intervene, directly and by regulation, in these markets, with the specific effect, or intention, of influencing prices which may, together with other factors, cause all of such markets to move rapidly in the same direction because of, among other things, interest rate fluctuations.

Debt Securities

Debt securities of all types of issuers may have speculative characteristics, regardless of whether they are rated. The issuers of such instruments (including sovereign issuers) may face significant ongoing uncertainties and exposure to adverse conditions that may undermine the issuer's ability to make timely payment of interest and principal in accordance with the terms of the obligations.

Market Making by Dealers

The value of the Funds' fixed-income investments will be affected by general fixed income market conditions, such as the volatility and liquidity of the fixed income market, which are affected by the ability of dealers to "make a market" in fixed-income investments. In recent years, the market for bonds has significantly increased while dealer inventories have significantly decreased, relative to market size. This reduction in dealer inventories may be attributable to regulatory changes, such as capital requirements, and is expected to continue. As dealers' inventories decrease, so does their ability to make a market (and, therefore, create liquidity) in the fixed income market. Especially during periods of rising interest rates, this could result in greater volatility and illiquidity in the fixed income market, which could impair the Funds' profitability or result in losses.

Interest Rate Risk

Changes in interest rates can affect the value of the Funds' investments in fixed-income instruments. Increases in interest rates may cause the value of the Funds' debt investments to decline. The Funds may experience increased interest rate risk to the extent it invests, if at all, in lower-rated instruments, debt instruments with longer maturities, debt instruments paying no interest (such as zero-coupon debt instruments) or debt instruments paying non-cash interest in the form of other debt instruments.

Prepayment Risk

The frequency at which prepayments (including voluntary prepayments by the obligors and accelerations due to defaults) occur on debt instruments will be affected by a variety of factors including the prevailing level of interest rates and spreads as well as economic, demographic, tax, social, legal and other factors. Generally, obligors tend to prepay their fixed rate obligations when prevailing interest rates fall below the coupon rates on their obligations. Similarly, floating rate issuers and borrowers tend to prepay their obligations when spreads narrow.

In general, "premium" securities (securities whose market values exceed their principal or par amounts) are adversely affected by faster than anticipated prepayments, and "discount" securities (securities whose principal or par amounts exceed their market values) are adversely affected by slower than anticipated prepayments. Since many fixed rate obligations will be discount instruments when interest rates and/or spreads are high, and will be premium instruments when interest rates and/or spreads are low, such debt instruments may be adversely affected by changes in prepayments in any interest rate environment.

The adverse effects of prepayments may impact the Funds' portfolio in two ways. First, particular investments may experience outright losses, as in the case of an interest-only instrument in an environment of faster actual or anticipated prepayments. Second, particular investments may underperform relative to hedges that the Investment Manager may have constructed for these investments, resulting in a loss to the Funds' overall portfolio. In particular, prepayments (at par) may limit the potential upside of many instruments to their principal or par amounts, whereas their corresponding hedges often have the potential for unlimited loss.

Zero-Coupon and Deferred Interest Bonds

Zero-coupon bonds and deferred interest bonds are debt obligations issued at a significant discount from face value. The original discount approximates the total amount of interest the bonds will accrue and compound over the period until maturity or the first interest accrual date at a rate of interest reflecting the market rate of the security at the time of issuance. While zero-coupon bonds do not require the periodic payment of interest, deferred interest bonds generally provide for a period of delay before the regular payment of interest begins. Such investments experience greater volatility in market value due to changes in interest rates than debt obligations that provide for regular payments of interest.

High-Yield

Bonds or other fixed-income securities that are "higher yielding" (including non-investment grade) debt securities are generally not exchange-traded and, as a result, these securities trade in the over-the-counter marketplace, which is less transparent and has wider bid/ask spreads than the exchange-traded marketplace. High-yield securities face ongoing uncertainties and exposure to adverse business, financial or economic conditions, which could lead to the issuer's inability to meet timely interest and principal payments. High-yield securities are generally more volatile and may or may not be subordinated to certain other outstanding securities and obligations of the issuer, which may be secured by substantially all of the issuer's assets. High-yield securities may also not be protected by financial covenants or limitations on additional indebtedness. The market values of certain of these lower-rated and unrated debt securities tend to reflect individual corporate developments to a greater extent than do higher-rated securities, which react primarily to fluctuations in the general level of interest rates, and tend to be more sensitive to economic conditions than are higher-rated securities. Companies that issue such securities may be highly leveraged and may not have available to them more traditional methods of financing. In addition, the Funds may invest in bonds of issuers that do not have publicly traded equity securities, making it more difficult to hedge the risks associated with such investments.

The Funds may invest in obligations of issuers that are generally trading at significantly higher yields than had been historically typical of the applicable issuer's obligations. Such investments may include debt obligations that have a heightened probability of being in covenant or payment default in the future or that are currently in default and are generally considered speculative. The repayment of defaulted obligations is subject to significant uncertainties. Defaulted obligations might be repaid only after lengthy workout or bankruptcy proceedings, during which the issuer might not make any interest or other payments. Typically such workout or bankruptcy proceedings result only in partial recovery of cash payments or an exchange of the defaulted security for other debt or equity securities of the issuer or its affiliates, which may in turn be illiquid or speculative.

Corporate Debt

Bonds, notes and debentures issued by corporations may pay fixed, variable or floating rates of interest, and may include zero-coupon obligations. Corporate debt instruments may be subject to credit ratings downgrades. Other instruments may have the lowest quality ratings or may be unrated. In addition, the Funds may be paid interest in kind in connection with their investments in corporate debt and related financial instruments (e.g., the principal owed to a Fund in connection with a debt investment may be increased by the amount of interest due on such debt investment).

Such investments may experience greater market value volatility than debt obligations that provide for regular payments of interest in cash and, in the event of a default, the Funds may experience substantial losses.

Mezzanine Debt

Mezzanine debt is typically junior to the obligations of a company to senior creditors, trade creditors and employees. The ability of the Funds to influence a company's affairs, especially during periods of financial distress or following an insolvency, will be substantially less than that of senior creditors. Mezzanine debt instruments are often issued in connection with leveraged acquisitions or recapitalizations in which the issuers incur a substantially higher amount of indebtedness than the level at which they had previously operated. Default rates for mezzanine debt instruments have historically been higher than for investment-grade instruments. In the event of the insolvency of a portfolio company of the Funds or similar event, the Funds' debt investment therein will be subject to fraudulent conveyance, subordination and preference laws.

Stressed Debt

Stressed issuers are issuers that are not yet deemed distressed or bankrupt and whose debt securities are trading at a discount to par, but not yet at distressed levels. An example would be an issuer that is in technical default of its credit agreement, or undergoing strategic or operational changes, which results in market pricing uncertainty. The market prices of stressed and distressed instruments are highly volatile, and the spread between the bid and the ask prices of such instruments is often unusually wide.

Non-Performing Nature of Debt

Certain debt instruments may be non-performing or in default. Furthermore, the obligor or relevant guarantor may also be in bankruptcy or liquidation. There can be no assurance as to the amount and timing of payments, if any, with respect to such debt instruments.

Troubled Origination

When financial institutions or other entities that are insolvent or in serious financial difficulty originate debt, the standards by which such instruments were originated, the recourse to the selling institution, or the standards by which such instruments are being serviced or operated may be adversely affected.

Sovereign Debt

Several factors may affect (i) the ability of a government, its agencies, instrumentalities or its central bank to make payments on the debt it has issued ("**Sovereign Debt**"), including securities that the Investment Manager believes are likely to be included in restructurings of the external debt obligations of the issuer in question, (ii) the market value of such debt and (iii) the inclusion of Sovereign Debt in future restructurings, including such issuer's (x) balance of trade and access to international financing, (y) cost of servicing such obligations, which may be affected by changes in international interest rates, and (z) level of international currency reserves, which may affect the amount of non-U.S. exchange available for external debt payments. Significant ongoing uncertainties and exposure to adverse conditions may undermine the issuer's ability to make timely payment of interest and principal, and issuers may default on their Sovereign Debt.

Equitable Subordination

Under common law principles that in some cases form the basis for lender liability claims, if a lender (i) intentionally takes an action that results in the undercapitalization of a borrower or issuer to the detriment of other creditors of such borrower or issuer, (ii) engages in other inequitable conduct to the detriment of such other creditors, (iii) engages in fraud with respect to, or makes misrepresentations to, such other creditors or (iv) uses its influence as a stockholder to dominate or control a borrower or issuer to the detriment of other creditors of such borrower or issuer, a court may elect to subordinate the claim of the offending lender or bondholder to the claims of the disadvantaged creditor or creditors (a remedy called "equitable subordination"). If the Funds engage in such conduct, the Funds may be subject to claims from creditors of an obligor that debt held by the Funds should be equitably subordinated.

Derivative Instruments

Certain swaps, options and other derivative instruments may be subject to various types of risks, including market risk, liquidity risk, credit risk, legal risk and operations risk. The regulatory and tax environment for derivative instruments in which the Funds may participate is evolving, and changes in the regulation or taxation of such instruments may have a material adverse effect on the Funds.

Regulation in the Derivatives Industry

There are many rules related to derivatives that may negatively impact the Funds, such as requirements related to recordkeeping, reporting, portfolio reconciliation, central clearing, minimum margin for uncleared over-the-counter ("**OTC**") instruments and mandatory trading on electronic facilities, and other transaction-level obligations. Parties that act as dealers in swaps, are also subject to extensive business conduct standards, additional "know your counterparty" obligations, documentation standards and capital requirements. All of these requirements add costs to the legal, operational and compliance obligations of the Investment Manager and the Funds, and increase the amount of time that the Investment Manager spends on non-investment-related activities. Requirements such as these also raise the costs of entering into derivative transactions, and these increased costs will likely be passed on to the Funds.

These rules are operationally and technologically burdensome for the Investment Manager and the Funds. These compliance obligations require employee training and use of technology, and there are operational risks borne by the Funds in implementing procedures to comply with many of these additional obligations.

These regulations may also result in the Funds forgoing the use of certain trading counterparties (such as broker-dealers and futures commission merchants ("**FCMs**")), as the use of other parties may be more efficient for the Funds from a regulatory perspective. However, this could limit the Funds' trading activities, create losses, preclude the Funds from engaging in certain transactions or prevent the Funds from trading at optimal rates and terms.

Many of these requirements were implemented pursuant to the U.S. Dodd-Frank Wall Street Reform and Consumer Protection Act (the "**Dodd-Frank Act**"), the EU Regulation on OTC Derivatives, Central Counterparties and Trade Repositories (known

as the European Market Infrastructure Regulation, or "**EMIR**") and similar regulations globally. In the United States, the Dodd-Frank Act divides the regulatory responsibility for derivatives between the SEC and the CFTC, a distinction that does not exist in any other jurisdiction. The SEC has regulatory authority over "security-based swaps" and the CFTC has regulatory authority over "swaps". EMIR is being implemented in phases through the adoption of delegated acts by the European Commission. As a result of the SEC and CFTC bifurcation and the different pace at which the SEC, the CFTC, the European Commission and other international regulators have promulgated necessary regulations, different transactions are subject to different levels of regulation. Though many rules and regulations have been finalized, there are others, particularly SEC regulations with respect to security-based swaps and EMIR regulations, that are still in the proposal stage or are expected to be introduced in the future.

Reporting

Most swap transactions have become subject to anonymous "real time reporting" requirements, meaning that information relating to transactions entered into by the Funds will become visible to the market in ways that may impair the Funds' ability to enter into additional transactions at comparable prices or could enable competitors to "front run" or replicate the Funds' strategies.

Central Clearing

In order to mitigate counterparty risk and systemic risk in general, various U.S. and international regulatory initiatives are underway to require certain derivatives to be cleared through central clearinghouses. In the United States, clearing requirements have been implemented as part of the Dodd-Frank Act. The CFTC imposed its first clearing mandate on December 13, 2012 affecting certain interest rate and credit default swaps. The CFTC and the SEC may introduce clearing requirements for additional classes of derivatives in the future. EMIR also requires OTC derivatives contracts meeting specific criteria to be cleared through central counterparties.

While such clearing requirements may be beneficial for the Funds in many respects (for instance, they may reduce the counterparty risk to the dealers to which the Funds would be exposed under non-cleared derivatives), the Funds could be exposed to new risks, such as the risk that an increasing percentage of derivatives will be required to be standardized and/or cleared through central clearinghouses, and, as a result, the Funds may not be able to hedge their risks or express an investment view as well as it would have been able to had it used customizable derivatives available in the over-the-counter markets. The Funds may have to split their derivatives portfolios between centrally cleared and over-the-counter derivatives, which may result in operational inefficiencies and an inability to offset risk between centrally cleared and over-the counter positions, and which could lead to increased costs.

Another risk is that the Funds may be subject to more onerous and more frequent (daily or even intraday) margin calls from both the Funds' FCM and the clearinghouse. Virtually all margin models utilized by the clearinghouses are dynamic, meaning that unlike traditional bilateral swap contracts where

the amount of initial margin posted on the contract is typically static throughout the life of the contract, the amount of the initial margin that is required to be posted in respect of a cleared contract will fluctuate, sometimes significantly, throughout the life of the contract. The dynamic nature of the margin models utilized by the clearinghouses and the fact that the margin models might be changed at any time may subject the Funds to an unexpected increase in collateral obligations by clearinghouses during a volatile market environment, which could have a detrimental effect on the Funds. Clearinghouses also limit collateral that they will accept to cash, U.S. treasuries and, in some cases, other highly rated sovereign and private debt instruments, which may require the Funds to borrow eligible securities from a dealer to meet margin calls and raise the costs of cleared trades to the Funds. In addition, clearinghouses may not allow the Funds to portfolio-margin their positions, which may increase the Funds' costs.

Although standardized clearing for derivatives is intended to reduce counterparty risk (for instance, it may reduce the counterparty risk to the dealers to which the Fund would have been exposed under OTC derivatives), it does not eliminate risk. Derivatives clearing may also lead to concentration of counterparty risk, namely in the clearinghouse and the Funds' FCM, subjecting the Funds to the risk that the assets of the FCM are insufficient to satisfy all of the FCM's payment obligations, leading to a payment default. The failure of a clearinghouse or FCM could have a significant impact on the financial system. Even if a clearinghouse does not fail, large losses could force significant capital calls on FCMs during a financial crisis, which could lead FCMs to default and thus worsen the crisis.

Swap Execution Facilities

In addition to the central clearing requirement, certain swap transactions are required to trade on regulated electronic platforms such as swap execution facilities ("**SEFs**"), which require the Funds to subject themselves to regulation by these venues and subject the Funds to the jurisdiction of the CFTC.

The EU regulatory framework governing derivatives is set not only by EMIR but also MiFID II. Among other things, MiFID II requires transactions in derivatives to be executed on regulated trading venues. The SEC has yet to finalize rules related to security-based swap execution facilities.

It is not clear whether these trading venues will benefit or impede liquidity, or how they will fare in times of market stress. Trading on these trading venues may increase the pricing discrepancy between assets and their hedges as products may not be able to be executed simultaneously, therefore increasing basis risk. It may also become relatively expensive for the Funds to obtain tailored swap products to hedge particular risks in their portfolio due to higher collateral requirements on bilateral transactions as a result of these regulations.

Margin Requirements for Non-Cleared Swaps

Rules issued by U.S., EU and other regulators globally (the "**Margin Rules**") impose various margin requirements on all swaps that are not centrally cleared, including the establishment of minimum amounts of initial margin

that must be posted, and, in some cases, the mandatory segregation of initial margin with a third-party custodian. Although the Margin Rules are intended to increase the stability of the derivatives market, the overall amount of margin that the Funds will be required to post to swap counterparties may increase by a material amount, and as a result the Funds may not be able to deploy capital as effectively. Additionally, to the extent the Funds are required to segregate initial margin with a third-party custodian, additional costs will be incurred by the Funds.

Call and Put Options

The Funds may incur risks associated with the sale and purchase of call options and put options. Under a conventional cash-settled option, the purchaser of the option pays a premium in exchange for the right to receive upon exercise of the option (i) in the case of a call option, the excess, if any, of the reference price or value of the underlier (as determined pursuant to the terms of the option) above the option's strike price or (ii) in the case of a put option, the excess, if any, of the option's strike price above the reference price or value of the underlier (as so determined). Under a conventional physically-settled option structure, the purchaser of a call option has the right to purchase a specified quantity of the underlier at the strike price, and the purchaser of a put option has the right to sell a specified quantity of the underlier at the strike price.

A purchaser of an option may suffer a total loss of premium (plus transaction costs) if that option expires without being exercised. An option's time value (i.e., the component of the option's value that exceeds the in-the-money amount) tends to diminish over time. Even though an option may be in-the-money to the purchaser at various times prior to its expiration date, the purchaser's ability to realize the value of an option depends on when and how the option may be exercised. For example, the terms of the transaction may provide for the option to be exercised automatically if it is in-the-money on the expiration date. Conversely, the terms may require timely delivery of a notice of exercise, and exercise may be subject to other conditions (such as the occurrence or non-occurrence of certain events, such as knock-in, knock-out or other barrier events) and timing requirements, including the "style" of the option.

Uncovered option writing (i.e., selling an option when the seller does not own a like quantity of an offsetting position in the underlier) exposes the seller to potentially significant loss. The potential loss of uncovered call writing is unlimited. The seller of an uncovered call may incur large losses if the reference price or value of the underlier increases above the exercise price by more than the amount of any premiums earned. As with writing uncovered calls, the risk of writing uncovered put options is substantial. The seller of an uncovered put option bears a risk of loss if the reference price or value of the underlier declines below the exercise price by more than the amount of any premiums earned. Such loss could be substantial if there is a significant decline in the value of the underlier.

Index or Index Options

The value of an index or index option fluctuates with changes in the market values of the assets included in the index. Because the value of an index or index option depends upon movements in the level of the index rather than the price of a particular asset, whether the Funds will realize appreciation or depreciation from the purchase or writing of options on indices depends upon movements in the level of instrument

prices in the assets generally or, in the case of certain indices, in an industry or market segment, rather than movements in the price of particular assets.

Index Futures

The price of index futures contracts may not correlate perfectly with the movement in the underlying index because of certain market distortions. First, all participants in the futures market are subject to margin deposit and maintenance requirements. Rather than meeting additional margin deposit requirements, participants may close futures contracts through offsetting transactions that would distort the normal relationship between the index and futures markets. Second, from the point of view of speculators, the deposit requirements in the futures market are less onerous than margin requirements in the securities market. Therefore, increased participation by speculators in the futures market also may cause price distortions. Successful use of index futures contracts by the Funds also is subject to the Investment Manager's ability to correctly predict movements in the direction of the market.

Credit Default Swaps

Credit default swaps can be used to implement the Investment Manager's view that a particular credit, or group of credits, will experience credit improvement or deterioration. In the case of expected credit improvement, the Funds may sell credit default protection in which they receive a premium to take on the risk. In such an instance, the obligation of the Funds to make payments upon the occurrence of a credit event creates leveraged exposure to the credit risk of the referenced entity. The Funds may also buy credit default protection with respect to a referenced entity if, in the Investment Manager's judgment, there is a high likelihood of credit deterioration. In such instance, the Funds will pay a premium regardless of whether there is a credit event.

Futures Contracts

The value of futures contracts depends upon the price of the securities, such as commodities, underlying them. The prices of futures contracts are highly volatile, and price movements of futures contracts can be influenced by, among other things, interest rates, changing supply and demand relationships, trade, fiscal, monetary and exchange control programs and policies of governments, as well as national and international political and economic events and policies. In addition, investments in futures contracts are also subject to the risk of the failure of any of the exchanges on which the Funds' positions trade or of their clearing houses or counterparties. Futures positions may be illiquid because certain commodity exchanges limit fluctuations in certain futures contract prices during a single day by regulations referred to as "daily price fluctuation limits" or "daily limits". Under such daily limits, during a single trading day no trades may be executed at prices beyond the daily limits. Once the price of a particular futures contract has increased or decreased by an amount equal to the daily limit, positions in that contract can neither be taken nor liquidated unless traders are willing to effect trades at or within the limit. This could prevent the Funds from promptly liquidating unfavorable positions and subject the Funds to substantial losses or prevent them from entering into desired trades. Also, low margin or premiums normally required in such trading may provide a large amount of leverage, and a relatively small change in the price of a security or contract can produce a disproportionately larger profit or loss. In extraordinary circumstances, a futures exchange or the CFTC could suspend trading in a particular futures contract, or order liquidation or settlement of all open positions in such contract.

Non-U.S. Futures Transactions

Foreign futures transactions involve executing and clearing trades on a foreign exchange. This is the case even if the foreign exchange is formally "linked" to a domestic exchange, whereby a trade executed on one exchange liquidates or establishes a position on the other exchange. No domestic organization regulates the activities of a foreign exchange, including the execution, delivery, and clearing of transactions on such an exchange, and no domestic regulator has the power to compel enforcement of the rules of the foreign exchange or the laws of the foreign country. Moreover, such laws or regulations will vary depending on the foreign country in which the transaction occurs. For these reasons, the Funds may not be afforded certain of the protections which apply to domestic transactions, including the right to use domestic alternative dispute resolution procedures. In particular, funds received from customers to margin foreign futures transactions may not be provided the same protections as funds received to margin futures transactions on domestic exchanges. In addition, the price of any foreign futures or option contract and, therefore, the potential profit and loss resulting therefrom, may be affected by any fluctuation in the foreign exchange rate between the time the order is placed and the time the foreign futures contract is liquidated or the time the foreign option contract is liquidated or exercised.

Forward Contracts

The Funds may enter into forward contracts and options thereon, including non-deliverable forwards, which are currently not traded through clearinghouses, although this is expected to change. The principals who deal in the forward contract market are not required to continue to make markets in such contracts. There have been periods during which certain participants in forward markets have refused to quote prices for forward contracts or have quoted prices with an unusually wide spread between the price at which they were prepared to buy and that at which they were prepared to sell. The imposition of credit controls or price risk limitations by governmental authorities may limit such forward trading to less than that which the Investment Manager would otherwise recommend, to the possible detriment of the Funds. In their forward trading, the Funds will be subject to the risk of the failure of, or the inability or refusal to perform with respect to their forward contracts by, the principals with which the Funds trade. Fund assets on deposit with such principals will also generally not be protected by the same segregation requirements imposed on certain regulated brokers in respect of customer funds on deposit with them. The Investment Manager may order trades for the Funds in such markets through agents. Accordingly, the insolvency or bankruptcy of such parties could also subject the Funds to the risk of loss.

Contracts for Differences

Contracts for differences ("CFDs") are privately negotiated contracts between two parties, buyer and seller, stipulating that the seller will pay to or receive from the buyer the difference between the nominal value of the underlying instrument at the opening of the contract and that instrument's value at the end of the contract. The underlying instrument may be a single security, stock basket or index. A CFD can be set up to take either a short or long position on the underlying instrument. The buyer and seller are both required to post margin, which is adjusted daily. The buyer will also pay to the seller a financing rate on the notional amount of the capital employed by the seller less the margin deposit. As is the case with trading any financial

instrument, there is the risk of loss associated with trading a CFD. There may be liquidity risk if the underlying instrument is illiquid because the liquidity of a CFD is based on the liquidity of the underlying instrument. A further risk is that adverse movements in the underlying security will require the posting of additional margin. CFDs also carry counterparty risk, i.e., the risk that the counterparty to the CFD transaction may be unable or unwilling to make payments or to otherwise honor its financial obligations under the terms of the contract. If the counterparty were to do so, the value of the contract may be reduced. Entry into a CFD transaction may, in certain circumstances, require the payment of an initial margin and adverse market movements against the underlying stock may require additional margin payments. CFDs may be considered illiquid. To the extent that there is an imperfect correlation between the return on the Funds' obligation to their counterparties under the CFDs and the return on related assets in their portfolio, the CFD transaction may increase the Funds' financial risk.

Failure to Enter into Offsetting Trade

To the extent the Funds invest in a futures contract or long option, unless an offsetting trade is made, the Funds would be required to take physical delivery of the commodity underlying the future or option. To the extent the Investment Manager fails to enter into such offsetting trade prior to the expiration of the contract, the Funds may suffer a loss since neither the Funds nor the Investment Manager has the operational capacity to accept physical delivery of commodities.

Exotic Options

Exotic options are typically, but not always, traded OTC. OTC contracts may not trade in a liquid market and pricing may be opaque. The illiquidity of these markets can be exacerbated in times of market stress. The Funds may incur substantial costs entering into and exiting positions that could have a material impact on performance. Exotic options may be subject to a higher degree of pricing risk as demonstrated by instances in which different counterparties in the market employ different valuation and pricing methodologies to the same exotic option. Because exotic options can often be highly customized, there is lower visibility with respect to the pricing and valuation of these instruments. Exotic options may be subject to high levels of price volatility. For example, in the case of barrier options, as the price of the asset underlying the option trades closer to a barrier level, the delta of the option (i.e., the ratio of the change in the price of the underlying asset to the corresponding change in the price of the option) and the gamma of the option (i.e., the rate of change of the delta with respect to the underlying asset's price) may become very high. Exotic options may be subject to higher levels of model risk than commonly traded options because standard models are not able to adequately capture or predict the risks associated with the exotic options. Exotic options may be "path dependent". This means that their terminal value (at exercise or expiration) depends upon the value of the underlying asset, not only at the time of exercise or expiration, but also at prior points in time. In this sense, the option's terminal value depends upon the "path" taken by the underlying asset over the life of the option. For example, a barrier option's value at expiration depends upon both the value of the underlying asset at expiration and whether the past value of the underlying asset ever satisfied a barrier condition. In contrast, a vanilla option (e.g., a call option) is not path dependent. Its value at exercise or expiration depends on the value of the underlying asset only at that point in time. The additional features incorporated by exotic options require additional judgments regarding the likelihood of certain conditions being satisfied, any one of which can result in loss if made

incorrectly. An OTC option may be closed out only with the counterparty, although either party may engage in an offsetting transaction that puts that party in the same economic position as if it had closed out the option with the counterparty; however, the exposure to counterparty risk may differ. OTC options generally involve greater credit and counterparty risk than exchange-traded options.

Exchange-Traded Funds

Exchange-traded funds ("**ETFs**") are publicly traded unit investment trusts, open-end funds or depository receipts that seek to track the performance and dividend yield of specific indexes or companies in related industries. These indexes may be either broad-based, sector, or international. However, ETF shareholders are generally subject to the same risk as holders of the underlying securities they are designed to track. ETFs are also subject to certain additional risks, including the risk that their prices may not correlate perfectly with changes in the prices of the underlying securities they are designed to track, and the risk of trading in an ETF halting due to market conditions or other reasons, based on the policies of the exchange upon which the ETF trades. Generally, each shareholder of an ETF bears a pro rata portion of the ETF's expenses, including management fees. Accordingly, in addition to bearing their proportionate share of the Funds' expenses (e.g., Management Fees and operating expenses), Investors may also indirectly bear similar expenses of an ETF.

Illiquid Securities

Certain securities may be illiquid because, for example, they are subject to legal or other restrictions on transfer or there is no liquid market for such securities. Valuation of such securities may be difficult or uncertain because there may be limited information available about the issuers of such securities. The market prices, if any, for such securities tend to be volatile and may not be readily ascertainable, and the Funds may not be able to sell them when they desire to do so or to realize what they perceive to be the fair value in the event of a sale. The sale of restricted and illiquid securities often requires more time and results in higher brokerage charges or dealer discounts and other selling expenses than does the sale of securities eligible for trading on national securities exchanges or in the over-the-counter markets. The Funds may not be able to readily dispose of such illiquid investments and, in some cases, may be contractually prohibited from disposing of such investments for a specified period of time. As a result, the Funds may be required to hold such securities despite adverse price movements. Even those markets which the Investment Manager expects to be liquid can experience periods, possibly extended periods, of illiquidity. Occasions have arisen in the past where previously liquid investments have rapidly become illiquid.

Insurance-Related Risks

Investments in public and private insurance and reinsurance companies, catastrophe bonds, weather derivatives, life insurance policies and annuities, and other securities linked to insurance and reinsurance risks and similar factors, are subject to all of the numerous inherent risks of the insurance and reinsurance industry, such as weather-related and other natural or man-made catastrophes, which are unpredictable and may result in significant losses. A significant natural disaster, such as a hurricane or earthquake, or terrorist incident, or a series of such events, could have a material, adverse effect on the Funds.

Loan Investments

The Funds' success in the area of loan investing will depend, in part, on their ability to obtain loans on advantageous terms. In purchasing loans, the Funds will compete with a broad spectrum of investors and institutions. Increased competition for, or a diminution in the

available supply of, qualifying loans could result in lower yields on such loans, which could reduce returns to investors.

Leveraged Loans

"Leveraged loans" are loans made to companies with a below investment-grade rating from any nationally recognized rating agency. Such loans may be performing poorly when the Funds acquire them. There is no assurance that the Investment Manager will correctly evaluate the value of the assets collateralizing such loans or the prospects for distribution on or repayment of such loans. The Funds may lose their entire investment or may be required to accept cash, property or securities with a value less than the Funds' original investment and/or may be required to accept payment over an extended period of time.

Hung Loans

The term "hung loan" commonly refers to a loan that has been made (or has been committed to be made), and the lender is not able to syndicate the loan on the originally anticipated terms. Hung loans are illiquid and lack readily ascertainable market values; there is no assurance that the price to be paid for hung loans by the Funds will reflect a discounted price that should allow the Funds to achieve a positive return on such loans or avoid losses. Since the price of the loans to be purchased is expected to continue to be significantly impacted by, in addition to the specific circumstances relating to each loan (e.g., in the case of a loan relating to a leveraged buyout ("**LBO**"), the financial condition of the target), global and macro-economic conditions (e.g., monetary policy, changes to currency exchange rates, governmental intervention or changes to existing laws, international geo-political events, etc.) as well as other systemic factors, it is possible that loans purchased by the Funds will suffer significant impairments in value as a result of events not predicted by the Funds. The Funds may also face difficulties in disposing of or leveraging such loans, or in doing so without incurring losses. The markets in which hung loans are purchased and sold have been volatile and are likely to continue to be volatile in the future.

Bank Loans

Bank loans are subject to unique risks, including: (i) the possible invalidation of an investment transaction as a fraudulent conveyance under relevant creditors' rights laws; (ii) so-called lender-liability claims by the issuer of the obligations; (iii) environmental liabilities that may arise with respect to collateral securing the obligations; and (iv) limitations on the ability of the Funds to directly enforce their rights with respect to participations. Successful claims by third parties arising from these and other risks will be borne by the Funds.

As secondary market trading volumes increase, new loans are frequently adopting standardized documentation to facilitate loan trading, which may improve market liquidity. There can be no assurance, however, that future levels of supply and demand in loan trading will provide an adequate degree of liquidity or that the current level of liquidity will continue. Because of the provision to holders of such loans of confidential information relating to the borrower, the unique and customized nature of the loan agreement, and the private syndication of the loan, loans are not as easily purchased or sold as a publicly traded security, and historically the trading volume in the loan market has been small relative to the high-yield debt market.

Second Lien Loans

The Funds may invest in loans that are secured by a second lien on assets. Second lien loans have been a developed market for a relatively short period of time, and there is limited historical data on the performance of second lien loans in adverse economic circumstances. In addition, second lien loan products are subject to intercreditor arrangements with the holders of first lien indebtedness, pursuant to which the second lien holders have waived many of the rights of a secured creditor, and some rights of unsecured creditors, including rights in bankruptcy that can materially affect recoveries. While there is broad market acceptance of some second lien intercreditor terms, no clear market standard has developed for certain other material intercreditor terms for second lien loan products. This variation in key intercreditor terms may result in dissimilar recoveries across otherwise similarly situated second lien loans in insolvency or distressed situations. While uncertainty of recovery in an insolvency or distressed situation is inherent in all debt instruments, second lien loan products carry more risks than certain other debt products. Beginning in August 2007, the market for many loan products, including second lien loans, contracted significantly which made virtually all leveraged loan products, particularly second lien loan products, less liquid or illiquid. Many participants ceased underwriting and purchasing certain second lien loan products. There can be no assurance that the market for second lien loans will not contract further.

Bridge Loans

It is a common practice for financial institutions to commit to providing bridge loans to facilitate acquisitions, including LBOs, where they serve as advisers to the purchaser. Bridge loans are frequently made because, for timing or market reasons, longer-term financing is not available at the time the funds are needed, which is often at the time of the closing of an acquisition. In the past, these commitments were not frequently drawn upon due to the availability of other sources of financing; however, due to market conditions affecting the availability of these other sources of financing (principally high-yield bond transactions), bridge loan commitments have been and may be drawn upon more regularly. Since these commitments were not regularly drawn upon in the past, there is little history for investors to rely upon in evaluating investments in bridge loans. Bridge loans often have shorter maturities. Borrower and lenders typically agree to shorter maturities based on the anticipation that the bridge loans will be replaced with other forms of financing within such shorter time period. However, the source and timing of such replacement financing may be uncertain and can be affected by, among other things, market conditions and the financial condition of the borrower at the maturity date of the bridge. If the borrower is unable to obtain replacement financing and repay the bridge loan at maturity, the terms of the bridge loan may provide for the bridge loan to be converted to a longer term loan. If bridge loans are not repaid (or cannot be disposed of on favorable terms) on the dates projected by the Investment Manager, there may be an adverse effect upon the ability of the Investment Manager to manage the assets of the Funds in accordance with their models and projections or an adverse effect upon the Funds' performance and ability to make distributions.

Debtor-in-Possession ("DIP") Loans

Loans to companies that have filed for protection under Chapter 11 of the Bankruptcy Code, as amended, are most often asset-based, revolving working-capital facilities put into place at the outset of a Chapter 11 case to provide the debtor with both immediate cash and the ongoing working capital that will be required during the

reorganization process. While such loans are generally less risky than many other types of loans as a result of their seniority in the debtor's capital structure and because their terms have been approved by a U.S. federal bankruptcy court order, it is possible that the debtor's reorganization efforts may fail and the proceeds of the ensuing liquidation of the DIP lender's collateral might be insufficient to repay in full the DIP loan.

Fraud Associated with Loans

Of paramount concern in loan investments is the possibility of material misrepresentation or omission on the part of the borrower or loan seller. Such inaccuracy or incompleteness may adversely affect the valuation of the collateral underlying the loans or may adversely affect the ability of the Funds to perfect or effectuate a lien on the collateral securing the loan. The Funds will rely upon the accuracy and completeness of representations made by borrowers to the extent reasonable, but cannot guarantee such accuracy or completeness. Under certain circumstances, payments to the Funds may be reclaimed if any such payment or distribution is later determined to have been a fraudulent conveyance or a preferential payment.

Municipal Securities

Various factors may adversely affect the value and yield of municipal securities. These factors include political or legislative changes and uncertainties related to the tax status of municipal securities or the rights of investors in these securities. To the extent that the Funds invest heavily in a particular state's municipal securities, the Funds will be more vulnerable to factors affecting that state. The Funds' investments in revenue securities, where principal and interest payments are made from the revenue of a specific project or facility, and not general tax revenues, may have increased risks. Factors affecting the project or facility, such as local business or economic conditions, could have a significant impact on the project's ability to make payments of principal and interest on these securities.

Mutual Fund Investments

Investments in open-end as well as closed-end mutual funds generally involve the payment of duplicative fees through the indirect payment of a portion of the expenses, including advisory fees, of such mutual funds. Investments in mutual funds will be valued at the net asset values provided by those funds (which may in certain circumstances be unaudited valuations). Such investments may cause the expense of investing in the Funds to be greater than an investment in other investment vehicles.

PIPE Transactions

Private investments in public companies whose stocks are quoted on stock exchanges or which trade in the over-the-counter securities market, a type of investment commonly referred to as a "**PIPE**" transaction, may be entered into with smaller capitalization public companies, which will entail business and financial risks comparable to those of investments in the publicly-issued securities of smaller capitalization companies, which may be less likely to be able to weather business or cyclical downturns than larger companies and are more likely to be substantially hurt by the loss of a few key personnel. In addition, PIPE transactions will generally result in the Funds acquiring either restricted stock or an instrument convertible into restricted stock. As with investments in other types of restricted securities, such an investment may be illiquid. The Funds' ability to dispose of securities acquired in PIPE transactions may depend on the registration of such securities for resale. Any number of factors may prevent or delay a proposed registration. Alternatively, it may be possible for

securities acquired in a PIPE transaction to be resold in transactions exempt from registration in accordance with Rule 144 under the Securities Act, or otherwise under the U.S. federal securities laws. There can be no guarantee that there will be an active or liquid market for the stock of any small capitalization company due to the possible small number of stockholders. As a result, even if the Funds are able to have securities acquired in a PIPE transaction registered or sell such securities through an exempt transaction, the Funds may not be able to sell all the securities on short notice, and the sale of the securities could lower the market price of the securities. There is no guarantee that an active trading market for the securities will exist at the time of disposition of the securities, and the lack of such a market could hurt the market value of the Funds' investments.

Preferred Stock

Investments in preferred stock involve risks related to priority in the event of bankruptcy, insolvency or liquidation of the issuing company and how dividends are declared. Preferred stock ranks junior to debt securities in an issuer's capital structure and, accordingly, is subordinate to all debt in bankruptcy. Preferred stock generally has a preference as to dividends. Such dividends are generally paid in cash (or additional shares of preferred stock) at a defined rate, but unlike interest payments on debt securities, preferred stock dividends are payable only if declared by the issuer's board of directors. Dividends on preferred stock may be cumulative, meaning that, in the event the issuer fails to make one or more dividend payments on the preferred stock, no dividends may be paid on the issuer's common stock until all unpaid preferred stock dividends have been paid. Preferred stock may also be subject to optional or mandatory redemption provisions.

Real Estate-Related Investments

While the Funds do not expect to invest in real estate directly, the Funds may invest in real estate-rich issuers which are not primarily engaged in real estate activities. In such circumstances, the Funds will be subject to the risks associated with direct ownership of real estate generally, including:

- Risks associated with the ownership, acquisition, development, construction, and operation of real estate properties, including potential environmental liabilities; the risk of uninsured losses; the risk of damage or destruction of property from terrorist activities; the perceptions of prospective tenants of the safety, convenience, and attractiveness of the properties; the ability of the owner to provide adequate management, maintenance, and insurance; the expenses of periodically renovating, repairing, and reletting spaces; increasing operating costs (including mortgage payments, real estate taxes, insurance, maintenance costs, and utilities) which may not be passed through to tenants; risks due to dependence on cash flow; risks and operating problems arising out of the absence of certain construction materials; changes in supply of or demand for competing properties in an area (as a result, for instance, of over-building); the financial condition of tenants, buyers, and sellers of properties; changes in availability of debt financing; energy and supply shortages; changes in the tax, real estate, environmental, and zoning laws and regulations; various uninsured or uninsurable risks; natural disasters; and the ability of the Funds or third-party borrowers to manage the real properties. Some portfolio companies may have a limited number of properties in their portfolios. In such case, a material loss associated with one property could adversely affect the value of the particular portfolio company's securities;
- Risks of owning properties through joint ventures or partnerships which may render a portfolio company unable to exercise sole decision-making authority and subject the

portfolio company to the risk that a joint venturer or partner may act in a manner contrary to the best interests of the portfolio company and its stockholders;

- General real estate investment considerations, such as the effect of local economic and other conditions on property cash flows and values, the need to relet space upon the expiration of current leases, dependence on major tenants and the possibility of tenant defaults, the ability of a property to generate revenue sufficient to meet debt service payments and other operating expenses, periodic excessive real estate development, and the illiquidity of real estate investments, all of which may affect a portfolio company's ability to make expected distributions to its stockholders;
- Possible increases in interest rates, which may lead prospective purchasers of real estate-related securities, as well as other classes of equities, to demand higher annual yields, and which may adversely affect the market price of such securities;
- Borrowing risks, such as the possibility that: (a) portfolio companies may incur excessive debt obligations and not have sufficient funds available to make principal payments as they come due; (b) indebtedness may be required to be refinanced at higher interest rates or otherwise on terms less favorable than existing indebtedness; (c) a portfolio company's properties may be foreclosed upon if it is unable to make required mortgage payments; and (d) interest rates may increase, which, in the case of variable rate indebtedness, may adversely affect the ability of a portfolio company to make distributions to shareholders; and
- Relative illiquidity of real estate investments which tends to limit the ability of a portfolio company to vary its holdings promptly in response to changes in local economic or other conditions.

Repurchase and Reverse Repurchase Agreements

In a reverse repurchase transaction, the Funds "buy" securities issued from a broker-dealer or financial institution, subject to the obligation of the broker-dealer or financial institution to repurchase such securities at the price paid by the Funds, plus interest at a negotiated rate. The use of repurchase and reverse repurchase agreements by the Funds involves certain risks. For example, if the seller of securities to the Funds under a reverse repurchase agreement defaults on its obligation to repurchase the underlying securities, as a result of its bankruptcy or otherwise, the Funds will seek to dispose of such securities, which action could involve costs or delays. If the seller becomes insolvent and subject to liquidation or reorganization under applicable bankruptcy or other laws, the Funds' ability to dispose of the underlying securities may be restricted. It is possible, in a bankruptcy or liquidation scenario, that the Funds may not be able to substantiate their interests in the underlying securities. Finally, if a seller defaults on its obligation to repurchase securities under a reverse repurchase agreement, the Funds may suffer a loss to the extent that they are forced to liquidate their position in the market, and proceeds from the sale of the underlying securities are less than the repurchase price agreed to by the defaulting seller. Similar elements of risk arise in the event of the bankruptcy or insolvency of the buyer.

Restricted Securities

Restricted securities cannot be sold to the public without registration under the Securities Act. Unless registered for sale, restricted securities can be sold only in privately negotiated transactions or pursuant to an exemption from registration (e.g., under Rule 144A of the Securities Act). Although these securities may be resold in privately negotiated transactions, because there is often little liquidity for these securities, they may be difficult and take a substantial amount of time to sell, and the prices realized from these sales could be less than those originally paid by the Funds. Restricted securities may involve a high degree of business and financial risk which may result in substantial losses.

Special Purpose Acquisition Companies

A special purpose acquisition company (a "SPAC") is a publicly traded company formed for the purpose of raising capital through an initial public offering to fund the acquisition, through a merger, capital stock exchange, asset acquisition or other similar business combination, of one or more undervalued operating businesses. Following the acquisition of a target company, a SPAC typically would exercise control over the management of such target company in an effort to increase the value of such target company. Capital raised through the initial public offering of securities of a SPAC is typically placed into a trust until the target company is acquired or a predetermined period of time elapses. Investors in a SPAC would receive a return on their investment in the event that a target company is acquired and such target company's value increased. In the event that a SPAC is unable to locate and acquire target companies by the deadline, the SPAC would be forced to liquidate its assets, which may result in losses due to the expenses and liabilities of the SPAC. Investors in a SPAC are subject to the risk that, among other things, (i) such SPAC may not be able to locate or acquire target companies by the deadline, (ii) assets in the trust may be subject to third-party claims against such SPAC, which may reduce the per share liquidation price received by the investors in the SPAC, (iii) such SPAC may be exempt from the rules promulgated by the SEC to protect investors in "blank check" companies, such as Rule 419 promulgated under the Securities Act, so that investors in such SPAC may not be afforded the benefits or protections of those rules, (iv) such SPAC may only be able to complete one business combination, which may cause it to be solely dependent on a single business, (v) the value of any target company may decrease following its acquisition by such SPAC, (vi) the value of the funds invested and held in the trust decline, (vii) the inability to redeem due to the failure to hold the securities in the SPAC on the record date or the failure to vote against the acquisition and (viii) if the SPAC is unable to consummate a business combination, public stockholders will be forced to wait until the deadline before liquidating distributions are made. In addition, most SPACs are illiquid and have a concentrated shareholder base that tends to be comprised of hedge funds (at least at inception). The Funds may invest in a SPAC that, at the time of investment, has not selected or approached any prospective target businesses with respect to a business combination. In such circumstances, there may be limited basis for the Funds to evaluate the possible merits or risks of such SPAC's investment in any particular target business. To the extent that a SPAC completes a business combination, it may be affected by numerous risks inherent in the business operations of the acquired company or companies. For these and additional reasons, investments in SPACs are speculative and involve a high degree of risk.

Structured Notes

Structured notes, variable rate mortgage-backed and asset-backed securities each have rates of interest that vary based on a designated floating rate formula or index. The value of these investments is closely tied to the absolute levels of such rates or indices, or the market's perception of anticipated changes in those rates or indices. The movements in specific indices or interest rates may be difficult or impossible to hedge.

Undervalued Securities

The identification of investment opportunities in undervalued securities is a difficult task, and there are no assurances that such opportunities will be successfully recognized or acquired. While investments in undervalued securities offer the opportunity for above-average capital appreciation, these investments involve a high degree of financial risk and can result in substantial losses. Returns generated from the Funds' investments may not adequately compensate for the business and financial risks assumed.

Unlisted Securities

Unlisted securities may involve higher risks than listed securities. Because of the absence of any trading market for unlisted securities, it may take longer to liquidate, or it may not be possible to liquidate, positions in unlisted securities than would be the case for publicly traded securities. Companies whose securities are not publicly traded may not be subject to public disclosure and other investor protection requirements applicable to publicly traded securities.

When-Issued and Forward Commitment Securities

The purchase of securities on a "when-issued" basis involves a commitment by the Funds to purchase or sell securities at a future date (typically one or two months later). No income accrues on securities that have been purchased on a when-issued basis prior to delivery to the Funds. When-issued securities may be sold prior to the settlement date. If the Funds dispose of the right to acquire a when-issued security prior to its acquisition, they may incur a gain or loss. In addition, there is a risk that securities purchased on a when-issued basis may not be delivered to the Funds. In such cases, the Funds may incur a loss.

Item 9: Disciplinary Information

There are no legal or disciplinary events that are material to a Client's or prospective client's evaluation of our advisory business or the integrity of our management.

Item 10: Other Financial Industry Activities and Affiliations

A. Broker-Dealer Registration Status

Rudius and its management persons are not registered as broker-dealers and do not have any application pending to register with the SEC as a broker-dealer or registered representative of a broker-dealer.

B. Futures Commission Merchant, Commodity Pool Operator or Commodity Trading Adviser Registration Status

Rudius and its management persons are not registered as, and do not have any application to register as, futures commission merchants, commodity pool operators, commodity trading advisors or associated persons of the foregoing entities.

C. Material Conflicts of Interest Relating to Other Investment Advisers

We do not recommend or select other investment advisers for our clients.

D. Other Financial Industry Affiliations

Rudius wholly owns the Sub-Advisor. The Sub-Advisor acts as a participating affiliate to the Investment Manager and provides portfolio management, trade recommendations and administrative services.

Item 11: Code of Ethics, Participation or Interest in Client Transactions, and Personal Trading

A. Code of Ethics

Rudius has adopted a "**Code of Ethics**" that establishes the high standard of conduct that we expect of our employees and procedures regarding our employees' personal trading of securities. Our employees are required to certify their adherence to the terms set forth in the Code of Ethics upon commencement of employment and annually thereafter. Employees also are required to provide quarterly certifications of compliance with certain Code of Ethics provisions.

The foundation of our Code of Ethics is based upon the following underlying fiduciary principles:

- Employees must at all times place the interests of the Funds and Investors first;
- Employees must ensure that all personal securities transactions are conducted consistent with the Code of Ethics' Employee Personal Investment Policy (described below); and
- Employees should not take inappropriate advantage of their position at the Firm.

We will provide a copy of our Code of Ethics to our Investors, or any prospective investor, upon request, to be viewed on the premises.

B. Securities that the Investment Manager or a Related Person Has Material Financial Interest

1. Cross Trades

The Investment Manager may determine that it would be in the best interests of a Client and one or more other Clients to transfer an investment from one Client account to another (each such transfer, a "**Cross Trade**") for a variety of reasons, including tax purposes, liquidity purposes, to rebalance the portfolios of the accounts, or to reduce transaction costs that may arise in an open market transaction. If the Investment Manager decides to engage in a Cross Trade, the Investment Manager will determine that the trade is in the best interests of both of the Clients involved and take steps to ensure that the transaction is consistent with the duty to obtain best execution for each of those Client. The Investment Manager generally intends to execute Cross Trades, if at all, with the assistance of a broker-dealer that executes and books the transaction at the close of the market on the day of the transaction. Alternatively, a cross transaction between two Clients may occur as an "internal cross", where the Investment Manager instructs the custodian for the Clients to book the transaction at the price determined in accordance with Rudius' valuation policy. If the Investment Manager effects an internal cross, the Investment Manager will not receive any fee in connection with the completion of the transaction.

2. Principal Transactions

To the extent that Cross Trades may be viewed as principal transactions (as such term is used under the Advisers Act) due to the ownership interest in a Client by the Investment Manager or its personnel, the Investment Manager will comply with the requirements of Section 206(3) of the Investment Advisers Act of 1940, as amended (the "**Advisers Act**"), including that any such transactions will be considered on behalf of Investors by (i) an advisory board comprised

of representatives of such Investors, (ii) one or more persons selected by a Fund's board of directors who are not affiliated with the Investment Manager (such as an independent director) to serve on a committee, which is authorized, on behalf of the Investors to approve or disapprove such transactions and conflicts of interest or (iii) a committee consisting of one or more persons selected by the Investment Manager or its affiliate, and any valuation approved by such a committee will be determined by a third party that has appropriate experience in providing such valuations.

C. Investing in Securities that the Investment Manager or a Related Person Recommends to Clients

The Code of Ethics places restrictions on personal trades by employees, including that they disclose their personal securities holdings and transactions to the Investment Manager on a periodic basis and are prohibited from maintaining personal brokerage accounts for the purpose of trading certain instruments that are "**Reportable Securities**" (as defined in the Code of Ethics, and which includes a wide variety of investments such as stocks, bonds, fixed income, options, warrants, futures, and derivatives) except for the purpose of holding or liquidating any such holdings after the commencement of employment. Employees are permitted to liquidate positions held at the time of employment in Reportable Securities (a "**Liquidating Trade**") subject to pre-clearance by the CCO. Employees are prohibited from participating in Initial Public Offerings ("**IPOs**"). Employees are also prohibited from personally, or on behalf of a Client, purchasing or selling securities that appear on the Firm's Restricted List.

Employees must obtain pre-approval from the CCO before: (i) engaging in any outside business activities; or (ii) making any private investments.

The Investment Manager has established policies and procedures to monitor and resolve conflicts with respect to investment opportunities in a manner it deems fair and equitable, including the restrictions placed on personal trading in the Code of Ethics, as described above, and regular monitoring of any employee transactions and trading patterns for actual or perceived conflicts of interest, including those conflicts that may arise as a result of personal trades in the same or similar securities made at or about the same time as Client trades.

Item 12: Brokerage Practices

A. Factors Considered in Recommending Broker-Dealers for Client Transactions

Rudius is authorized to determine the broker-dealer to be used for executing securities transaction for the Funds. In selecting broker-dealers to execute transactions, we do not need to solicit competitive bids and do not have an obligation to seek the lowest available commission cost. Rudius may not negotiate "execution only" commission rates; therefore, the Funds may be deemed to be paying for research, brokerage or other services provided by the broker which are included in the commission rate.

We shall also have the authority to select and appoint custodians of the assets of the Funds. The Firm's authority is limited by its own internal policies and procedures and each Fund's investment guidelines.

Best Execution

In selecting an appropriate broker-dealer to effect a client trade, we seek to obtain "**Best Execution**," meaning generally the execution of a securities transaction for a client in such a manner that a client's total costs or proceeds in the transaction are most favorable under the circumstances. Accordingly, in seeking Best Execution, we will take into consideration the price of a security offered by the broker-dealer, as well as a broker-dealers' full range and quality of their services including, among other things, their facilities, reliability and financial responsibility, execution capability, commission rates, responsiveness to us, brokerage and research services provided to us (for example, research ideas, analysis, and investment strategies), special execution and block positioning capabilities, clearance, and settlement and custodial services.

Soft Dollars

The Firm does not expect to receive or use soft dollars. If the Firm chooses to use "**Soft Dollars**", Soft Dollar credits, generated by the Funds' trading activities, would be used to purchase brokerage and research services or products that would otherwise have been Fund expense. We intend to keep any such arrangements within the parameters of the safe harbor of Section 28(e) of the Exchange Act.

Neither Rudius nor any related person receives client referrals from any broker-dealer or third party. However, subject to best execution, we may consider, among other things, capital introduction and marketing assistance with respect to Investors in the Funds in selecting or recommending broker-dealers for the Funds.

The provision by a broker of research and other services and property to us creates an incentive for us to select such broker since we would not have to pay for such research and other services and property as opposed to solely seeking the most favorable execution for a client. Any research, services or property provided by a broker may benefit any client and such benefits may not be proportionate to commission dollars related to the provision of such research, services or property.

B. Order Aggregation

Rudius manages investments on behalf of a number of clients. Certain clients have investment programs that are similar to or overlap and may, therefore, participate with each other in investments.

It will be the policy of the Investment Manager to allocate investment opportunities among Clients on a fair and equitable basis, to the extent practical and in accordance with the Clients' applicable investment strategies, over a period of time. Investment opportunities will generally be allocated among those Clients for which participation in the respective opportunity is considered appropriate, taking into account, among other considerations: (i) whether the risk-return profile of the proposed investment is consistent with a Client's objectives; (ii) the potential for the proposed investment to create an imbalance in a Client's portfolio; (iii) the liquidity requirements of a Client; (iv) potentially adverse tax consequences; (v) regulatory restrictions that would or could limit a Client's ability to participate in a proposed investment; and (vi) the need to re-size risk in a Client's portfolio.

The Investment Manager will have no obligation to purchase or sell a security for, enter into a transaction on behalf of, or provide an investment opportunity to any Client solely because the Investment Manager purchases or sells the same security for, enters into a transaction on

behalf of, or provides an opportunity to any Client if, in its reasonable opinion, such security, transaction or investment opportunity does not appear to be suitable, practical or desirable for the Client.

If the Investment Manager determines that the purchase or sale of a security is appropriate with regard to multiple Clients, the Investment Manager may, but is not obligated to, purchase or sell such a security on behalf of such Clients with an aggregated order, for the purpose of reducing transaction costs, to the extent permitted by applicable law. When an aggregated order is filled through multiple trades at different prices on the same day, each participating Client will receive the average price, with transaction costs generally allocated pro rata based on the size of each Client's participation in the order (or allocation in the event of a partial fill) as determined by the Investment Manager. In the event of a partial fill, allocations may be modified on a basis that the Investment Manager deems to be appropriate, including, for example, in order to avoid odd lots or de minimis allocations. When orders are not aggregated, trades generally will be processed in the order that they are placed with the broker or counterparty selected by the Investment Manager. As a result, certain trades in the same security for one Client (including a Client in which the Investment Manager and its personnel may have a direct or indirect interest) may receive more or less favorable prices or terms than another Client, and orders placed later may not be filled entirely or at all, based upon the prevailing market prices at the time of the order or trade. In addition, some opportunities for reduced transaction costs and economies of scale may not be achieved.

Item 13: Review of Accounts

Our Portfolio Manager and investment professionals continuously monitor and analyze the transactions, positions, and investment levels of the Funds to ensure that they conform with the investment objectives and guidelines that are stated in the Funds' Offering Documents. In these reviews, the Firm pays particular attention to any changes in the investment's fundamentals, overall risk management and changes in the markets that may affect price levels.

Account Reporting

We perform various periodic reviews of each client's portfolio and a review may be triggered by any unusual activity or special circumstances. Such reviews are conducted by our officers.

We will distribute an audited financial report with respect to the previous fiscal year to all Investors within 120 days of fiscal year end. We may also distribute quarterly unaudited net asset value statements, quarter-end performance reports, and a quarterly investor letter to all Investors.

Item 14: Client Referrals and Other Compensation

We do not receive economic benefits from non-clients for providing investment advice and other advisory services. Neither we nor any of our related persons, directly or indirectly, compensate any person who is not a supervised person for client referrals.

Item 15: Custody

We will be deemed to have custody of Client funds and securities because we have the authority to obtain Client funds or securities, for example, by deducting advisory fees from a Client's account or otherwise withdrawing funds from a Client's account. Account statements related to the Clients are sent by qualified custodians to Rudius.

We will comply with Rule 206(4)-2 of the Advisers Act (i.e., the "custody rule") by meeting the conditions of the pooled vehicle annual audit approach. Upon completion of the relevant Fund's annual audit by an independent auditor that is registered with, and subject to inspection by, the Public Company Accounting Oversight Board (PCAOB), we will distribute the Funds' audited financials to Investors within 120 days of such Fund's fiscal year end.

Item 16: Investment Discretion

We have full discretionary investment authority with respect to the Funds, including authority to make decisions with respect to which securities to be bought and sold, as well as the amount and price of those securities.

Our investment decisions and advice with respect to each Fund are subject to each Fund's investment objectives and guidelines, as set forth in its offering documents.

The Investment Manager or an affiliate of the Investment Manager will enter into an investment management agreement, or similar agreement, with each Fund, pursuant to which the Investment Manager or an affiliate of the Investment Manager was granted discretionary trading authority.

Item 17: Voting Client Securities

In compliance with Rule 206(4)-6 of the Advisers Act (i.e., the "proxy voting rule"), we have adopted proxy voting policies and procedures. The general policy is to vote all proxy proposals, amendments, consents or resolutions (collectively, "**Proxies**") in a prudent and diligent manner that will serve the applicable Client's best interests and is in line with the Client's investment objectives.

We may take into account all relevant factors, as determined by us in our discretion, including, without limitation:

- the impact on the value of the securities or instruments owned by the relevant client and the returns on those securities;
- the anticipated associated costs and benefits;
- the continued or increased availability of portfolio information; and
- industry and business practices.

Generally, clients may not direct our vote in a particular solicitation.

Conflicts of interest may arise between the interests of the Clients on the one hand and us or our affiliates on the other hand. If we determine that we may have, or be perceived to have, a conflict of interest when voting Proxies, we will vote in accordance with our Proxy voting policies and procedures. Clients may obtain a copy of our Proxy voting policies and our Proxy voting record upon request.

Item 18: Financial Information

We are not required to include a balance sheet for our most recent fiscal year, are not aware of any financial condition reasonably likely to impair our ability to meet contractual commitments to Clients, and have not been the subject of a bankruptcy petition at any time during the past ten years.
