Item 4. Advisory Business

Greenlight Capital, Inc. is a Delaware corporation that was founded in 1996. We are a value-oriented investment management firm that primarily invests and trades in long and short publicly-listed equity securities, as well as distressed debt when cyclically attractive. David Einhorn is our President and portfolio manager.

We provide investment advisory services to: (i) Greenlight Capital Offshore Partners, Ltd., a British Virgin Islands business company; (ii) Greenlight Capital, L.P., a Delaware limited partnership, which is a feeder fund for Greenlight Capital Offshore Partners, Ltd.; (iii) GCOQ Intermediate, LP, a British Virgin Islands limited partnership, which is also a feeder fund for Greenlight Capital Offshore Partners, Ltd.; and (iv) Greenlight Capital Offshore Qualified, Ltd., a British Virgin Islands business company, which is a feeder fund for GCOQ Intermediate, LP (collectively, the “*Capital Funds*”).

We make all investment decisions on behalf of the Capital Funds. Our primary responsibilities for the Capital Funds are to identify, review, and select investment opportunities that can achieve the Capital Funds’ investment objectives. We and our affiliate, DME Management GP, LLC (the general partner of Greenlight Capital, L.P. and GCOQ Intermediate, LP), also provide certain administrative and management services to the Capital Funds.

The primary investment objective of the Capital Funds is to achieve capital appreciation by buying securities with trading values materially lower than their intrinsic values and by selling short securities with trading values materially higher than their intrinsic values. The Capital Funds aim to achieve high absolute rates of return while minimizing the risk of capital loss. There can be no assurance that this investment objective will be achieved and investment results may vary substantially.

The Capital Funds are permitted to invest, on margin or otherwise, in securities and other financial instruments of United States and foreign issuers, including, but not limited to: (i) capital stock; shares of beneficial interest; partnership interests and similar financial instruments; loans; bonds, notes, debentures (whether subordinated, convertible or otherwise), bank debt and other evidence of indebtedness; debt securities or other obligations of United States and foreign governments, or any states, agencies or instrumentalities thereof; commercial paper; other obligations and instruments or evidences of indebtedness of whatever kind or nature; in each case, of any person, government or other entity whatsoever, whether or not publicly traded or readily marketable; equipment lease certificates; equipment trust certificates; accounts and notes receivable and payable held by trade or other creditors; trade acceptances; contract and other claims; executory contracts; participations; open- and closed-end investment companies and other mutual funds; money market funds; exchange traded funds (“*ETFs*”); repurchase agreements; certificates of deposit; banker’s acceptances; trust receipts; currencies; and commodities; (ii) futures on the securities and instruments listed in (i) above, as well as futures relating to stock indices and other financial instruments; and (iii) derivatives, such as swaps, options, warrants, caps, collars, floors and forwards on the securities, instruments and futures listed in (i) and (ii) above, as well as interest rate, currency, commodity, equity and other derivatives, all without restriction of any kind.

We currently do not provide investment advisory services to clients apart from our management of the Capital Funds and do not participate in wrap fee programs, although our affiliates do provide advice to other persons and/or entities (including other privately-offered pooled alternative investment vehicles, some of which have an investment strategy substantially similar to the Capital Funds) and we and/or one or more affiliates may do so in the future. Investment advice is provided directly to each of the Capital Funds and not to the individual investors in the Capital Funds.

As of December 31, 2022, the regulatory assets under management by Greenlight Capital, Inc. were approximately \$1,418,761,298. All assets are managed on a discretionary basis.

For a further discussion of these and related items, see **Item 7** (Types of Clients), **Item 8** (Methods of Analysis, Investment Strategies and Risk of Loss) and **Item 10** (Other Financial Industry Activities and Affiliations).

Item 5. Fees and Compensation

Management Fee and Performance Allocation

We receive from the Capital Funds quarterly investment management fees (the “**Management Fee**”) at an annual rate equal to 1.5% of the value of each investor’s investment, valued and payable as of the beginning of each quarter (0.375% per quarter). The Management Fee for capital contributions made, or shares purchased, during a calendar quarter will be charged pro rata for the initial quarter of purchase. The Management Fee is also adjusted for withdrawals or redemptions within a calendar quarter.

In consideration for the Management Fee, we provide certain administrative services to the Capital Funds, including, but not limited to, office space, furniture and utilities, computer equipment and services, and secretarial, clerical and other personnel. The Management Fee may exceed or may be less than the expenses borne by us on behalf of the Capital Funds.

Our affiliate, DME Management GP, LLC, receives from the Capital Funds an annual performance-based profit allocation (the “**Performance Allocation**”) in an amount equal to 20% of the increase in the value of each investor’s investment, subject to a modified high water mark described below. The Performance Allocation generally will be allocated at the end of each fiscal year and immediately prior to withdrawals occurring prior to the end of any fiscal year.

If at any time a loss occurs that results in the value of an investor’s capital being less than the highest value of such capital at the close of any fiscal year since such investor’s admission to the Capital Funds, or the initial amount of capital contributed by such investor to the relevant Capital Fund (the “**High Water Mark**”), then the Performance Allocation with respect to such investor shall be 10% of such investor’s allocable share of net profits, if any, until such time as the value of such investor’s capital (gross of the Performance Allocation but net of all fees) is equal to the sum of (a) the High Water Mark, plus (b) an additional amount equal to 150% of the losses incurred by such investor (the sum of (a) plus (b) being the “**Modified High Water Mark**”). After such investor reaches the Modified High Water Mark, the Performance

Allocation with respect to such investor will revert to 20%. Withdrawals by and distributions made to an investor will result in a proportional reduction of the Modified High Water Mark.

The Management Fee and the Performance Allocation may be waived, reduced or rebated for any investor, including, without limitation, for investments we or our affiliates make and/or for investments made by our employees and their family members.

Expenses

The Capital Funds pay, whether directly or through reimbursement of us and our affiliates, all costs and expenses related to its investments and operations, including each Capital Fund's pro rata share of such costs and expenses incurred, which costs and expenses include, without limitation, brokerage and other transaction costs, data fees, clearing and settlement charges, outsourced trading service expenses, trade break fees, research (including research-related travel expenses incurred with respect to specific potential or existing investments) and brokerage products and services (including market data terminals, risk management services and order management systems) that fall within Section 28(e) of the U.S. Securities Exchange Act of 1934, as amended (the "***Exchange Act***"), legal fees and other expenses in connection with conducting due diligence and negotiating the terms of investments (including investment-related travel expenses incurred with respect to specific potential or existing investments), regardless of whether such investments are consummated, custodial fees, administrator fees and expenses, third party valuation services, expenses and costs of expert networks, expenses and costs of obtaining surveys, analysis or other data sets from third parties related to prospective investments or sectors in which the Capital Funds may invest, initial and variation margin, interest and commitment fees on debit balances or borrowings, stock borrowing fees and proxy solicitation expenses, legal costs and expenses, audit and tax preparation expenses, accounting fees, insurance expenses including costs of any liability insurance and fidelity bonds obtained on behalf of the Capital Funds or officers' and directors' insurance, directors' fees and expenses, indemnification expenses, government and regulatory costs and expenses (including filing and license fees and preparation and submission of filings and licenses, including without limitation, Form PF preparation and filing fees) in connection with specific investments or offering interests in the Capital Funds, any issue or transfer taxes chargeable in connection with any securities transactions, any entity level taxes and fees, costs of reporting and providing information to investors (including updates to offering documents), costs of maintaining recognition as a professional fund, costs of maintaining registered agents and registered offices, costs of litigation or investigation involving the Capital Funds' activities and fees of the administrator. A portion of these operating expenses may be shared with other investment entities or accounts we and our affiliates manage on an equitable basis as determined in our and our affiliate's sole discretion.

Neither our principals, members, managers, directors, officers and employees (collectively, "***supervised persons***") nor we accept any compensation for the sale of securities or other investment products, including interests in the Capital Funds.

For a further discussion of these and related items, see **Item 12** (Brokerage Practices).

Item 6. Performance-Based Fees and Side-By-Side Management

We manage only the Capital Funds, which are subject to the Performance Allocation. We may provide investment advisory services to additional clients in the future that may have similar or different performance-based fees and/or allocations than the performance-based fees and/or allocations of the Capital Funds (including other privately-offered pooled alternative investment vehicles, some of which may have an investment strategy substantially similar to the Capital Funds).

The Performance Allocation may create an incentive for us to make investments that are riskier or more speculative than would be the case in the absence of the Performance Allocation. Differences in the formulas used to calculate the performance-based profit allocations received from our and our affiliates' clients may create an incentive to prefer one or more clients over the others.

We are required to act in a manner that we consider fair, reasonable and equitable in allocating investment opportunities to the Capital Funds, but we and our affiliates are not otherwise subject to any specific obligations or requirements concerning the allocation of time, effort or investment opportunities, or any restrictions on the nature or timing of investments for the Capital Funds. We are not required to accord exclusivity or priority to the Capital Funds in the event of limited investment opportunities arising from the application of speculative position limits or other factors.

For a further discussion of these and related items, see **Item 5** (Fees and Compensation).

Item 7. Types of Clients

We provide investment advisory services to the Capital Funds. We may in the future provide investment advisory services to additional clients including, but not limited to, other pooled investment vehicles, corporations, trusts, institutions, high net worth individuals, investment companies, pension plans, sovereign wealth funds, family offices, foundations and endowments.

For a further discussion of these and related items, see **Item 4** (Advisory Business) and **Item 10** (Other Financial Industry Activities and Affiliations).

Item 8. Methods of Analysis, Investment Strategies and Risk of Loss

Investment Objective

We are a value-oriented investment management firm that primarily invests and trades in long and short publicly-listed equity securities, as well as distressed debt when cyclically attractive. We combine a practical understanding of markets with an approach rooted in fundamental analysis and rigorous examination of financial statements.

All investments involve risk of loss, including loss of principal. There can be no assurance that our investment objective will be achieved, and investment results may vary substantially.

Investment Philosophy

We believe that trading values in the long term are determined by fundamental analysis. Notwithstanding this belief, technical, psychological and liquidity factors can influence a security's trading value in the short term.

Fundamentals: This refers to a security's "intrinsic" value. We define intrinsic value as the present value of the cash flows that will be distributed to the owners of a security discounted at a rate that properly reflects the time value of money, the risk that expected cash flows will not be obtained, the volatility of the cash flows, and the security's liquidity. In the case of corporate securities, the cash flows derive either from the company's operations or from the sale of the company's assets. We believe the key determinants of intrinsic value are the level, growth and prospective use of discretionary cash flows and realizable asset values; in other words, corporate securities represent ownership in, or a claim on, a business.

Technicals: This refers to a security's historical trading pattern and prices. An example of a strategy that relies largely upon technical analysis is "momentum" investing where investors purchase securities that have recently appreciated in price in the expectation of further price increases.

Psychology: This refers to the propensity of investors to make investment decisions based on greed and fear. Investors who have made money in an investment are often inclined to increase their exposure in anticipation of additional profits, while investors who have lost money in an investment are often inclined to reduce their exposure over fear of further losses. Group psychological swings can foster excessive movements in security prices.

Liquidity: This refers to the amount of capital committed to investing in an asset class relative to the size of the asset class. Assuming that intrinsic value remains unchanged, supply and demand dictate that security prices will rise when additional investment capital enters an asset class and will fall when investment capital leaves an asset class. For example, when investors add liquidity by purchasing mutual funds or ETFs, the managers of those funds face pressure to buy stocks regardless of the cheapness or dearth of equity prices.

Opportunity Identification. We benefit from a large and diverse flow of ideas. We source ideas through proprietary research as well as our professional relationships with investment bankers, independent researchers, brokers, sell-side analysts, other fund managers, and corporate managers.

We see attractive investment opportunities where there is a temporary value dislocation caused by the influences of technicals, psychology and liquidity, or where we believe the market has miscalculated intrinsic value. We invest on the premise that the market will ultimately refocus on fundamentals and/or correct its assessment of intrinsic value, and the trading value will adjust accordingly.

Investment Analysis. Consistent outperformance in the capital markets requires successive narrowings of the opportunity universe based on one's competencies and desired level of risk. Throughout our history, we have evaluated thousands of investment opportunities and selected only a small fraction for inclusion in our portfolio.

In assessing a potential investment in a company, we typically use thorough financial analysis to determine whether or not a disparity exists between the company's intrinsic value and its market value. While we do not limit the industries in which we invest, we concentrate our efforts on situations where intrinsic value is most readily determinable by financial or accounting analysis. In developing a financial analysis, we typically evaluate information from company financial statements and meetings and conversations with management, competitors, industry analysts and other market participants.

If a financial analysis confirms a valuation disparity hypothesis, we next attempt to identify the reason for the disparity. Possible reasons include the market's miscalculation of intrinsic value (often because the analysis is technically difficult), selling pressure from investors who are either unable (e.g., a distressed seller) or unmotivated (e.g., a tax-driven seller) to hold the position, or overly strong market optimism or pessimism as a result of recent news events.

Portfolio Strategy. In each opportunity, we endeavor to determine the risk/return characteristics of the potential investment. We generally conduct an evaluation of all available investment instruments, which might include publicly-listed equity securities and corporate debt, private placements, futures, currencies, commodities, credit default swaps, interest rate swaps, sovereign debt, derivatives and other instruments, to best exploit an opportunity.

Long equity positions may be in securities where we believe there are systematic inefficiencies, such as spinoffs or companies undergoing significant structural or organizational changes. Long positions also include securities trading at a discount to intrinsic value.

Short positions are generally in securities that we believe are overvalued and subject to fundamental deterioration.

The portfolio is generally constructed from the bottom up and each position stands on its own merit. On a case by case basis, we may hedge risk inherent in certain investments, and we generally hedge the currency risk associated with foreign investments. Although the short portfolio effectively acts as a hedge to the long portfolio, we generally prefer to sell securities short that we believe will fall regardless of market conditions. We also consider and analyze the global macroeconomic environment and may make certain macro investments based on such analysis.

With regard to portfolio strategy, we generally assess all of the following:

- ***Concentration of Investments:*** Although it occurs from time-to-time, we generally do not initiate or add to any single equity investment if that investment would constitute more than 20% of the portfolio on the long side or more than 10% of the portfolio on the short side (measured as of the date the investment is made). Portfolio allocations reflect our relative confidence in the investments.
- ***Liquidity:*** We consider the liquidity of each investment and of the portfolio as a whole. Where liquidity is limited, we usually invest only if we expect a higher rate of return to compensate for the additional risk. To the extent we invest in illiquid securities, we may segregate such investments from the other assets of the Capital Funds through, for example, the use of one or more special purpose vehicles.

- *Position Monitoring:* The number of positions in the portfolio varies. A monthly performance attribution report provides the number of long and short ideas. We continuously re-evaluate each position in the portfolio to monitor changes in intrinsic value and trading value. This constant reassessment process characterizes our risk control approach. The portfolio manager is responsible for determining which positions enter and exit the portfolio and for position sizing. Additionally, our investment professionals, Chief Financial Officer, Chief Operating Officer, Chief Compliance Officer and Director of Operations review the Capital Funds on a regular basis to monitor and analyze transactions, positions and investment levels.
- *Leverage:* We intend to employ no more leverage than routinely available through the use of brokerage firm margin accounts.

The investment objectives and methods summarized above represent our current intentions. Depending on conditions and trends in the securities markets and the economy in general, we may pursue any objectives, employ any investment techniques or purchase any type of security or commodity, including digital assets and currency, that we consider appropriate and in the best interests of the Capital Funds whether or not described in this section. The discussion above includes and is based upon numerous assumptions and opinions concerning global financial markets and other matters. These assumptions and opinions may not be accurate. **There can be no assurance that the Capital Funds' investment strategy will achieve profitable results.**

Risk Factors

Investment and Trading Risks Generally. No guarantee or representation is made that the Capital Funds' investment program, including, without limitation, the Capital Funds' investment objective, diversification strategies or risk monitoring goals, will be successful. Investment results may vary substantially over time. No assurance can be made that profits will be achieved or that substantial or complete losses will not be incurred. Past investment results of the investments otherwise made by our investment professionals or the investment professionals of our affiliates are not necessarily indicative of the Capital Funds' or our future performance.

The profitability of the Capital Funds' investment program depends to a great extent upon correctly assessing the future price movements of securities and other investments. There can be no assurance that we will be able to accurately predict these price movements. With respect to the investment strategy utilized by the Capital Funds, there is always a significant degree of market risk, including the risk of a complete loss of capital.

The performance of any investment is subject to numerous factors which are not predictable by us or within our control. Such factors include a wide range of economic, political, competitive and other conditions (including acts of terrorism and war) that may affect investments in general or in specific industries or companies. In recent years, the securities markets have become increasingly volatile, which may adversely affect the ability of the Capital Funds to realize profits. As a result of the nature of the Capital Funds' investing activities, investors may incur substantial losses on their investments in the Capital Funds, and it is possible that the Capital Funds' financial performance may fluctuate substantially from period to period.

Broad Discretionary Power to Choose Investments and Strategies. We have broad discretionary power to decide what investments the Capital Funds will make and what strategies they will use. We may choose any investments and strategies that we believe are advisable and consistent with the Capital Funds' investment objective.

Potential Concentration of Investments. The Capital Funds will seek to maintain a diversified portfolio, and, although it occurs from time-to-time, we generally do not initiate or add to any single equity investment if that investment would constitute more than 20% of the portfolio on the long side or 10% on the short side (measured as of the date the investment is made). From time to time, the portfolio may be more highly concentrated than described above, due to market movements and redemptions. Although we expect to spread the Capital Funds' capital among a number of investments, we may depart from such policy from time to time and may hold a few, relatively large positions in the Capital Funds' portfolio. Since a Capital Fund's portfolio will not necessarily be diversified, the investment portfolio of a Capital Fund may be subject to more rapid changes in value than would be the case if the Capital Funds maintained a more diversified investment portfolio.

Control Positions. The Capital Funds may purchase controlling positions in publicly traded companies. Such controlling positions may be subject to increased restrictions on transfer, and the disposition of such control positions may be subject to increased transaction costs. There may be other circumstances in which our involvement or the involvement of our affiliates with an issuer may limit the Capital Funds' ability, for certain periods of time, to liquidate or reduce their positions in such issuer at all or at favorable prices, which could have a material adverse effect on the Capital Funds. Further, the Capital Funds, our affiliates, and we may be subject to heightened disclosure requirements by various regulatory authorities as a result of our aggregate holdings of a security.

Board and Committee Participation. The Capital Funds' investment program from time to time enables the Capital Funds to place representatives on creditors' committees and/or boards of certain companies in which the Capital Funds have invested. While such representation may enable the Capital Funds to enhance the sale value of their investments, such representatives will acquire fiduciary duties to the company on whose board or committee the representatives sit and such representation may also prevent the Capital Funds from freely disposing of their investments and may subject the Capital Funds to additional potential liability. Such fiduciary duties may require such representatives to take actions that are in the best interests of the company or the shareholders, members, unitholders, partners or other owners of the company. Accordingly, situations may arise where such representatives may have a conflict of interests between any duties that they owe to the company and the shareholders, members, unitholders, partners or other owners of the company, on the one hand, and any duties that they owe to the Capital Funds, on the other hand. The Capital Funds will indemnify us and any other person designated by us for claims arising from such board or creditors' committee representation.

Material, Nonpublic Information. From time to time, certain of our personnel or our affiliates' personnel come into possession of material, nonpublic information that would limit the Capital Funds' ability to buy and sell investments. The Capital Funds may experience losses if they are unable to establish an initial position, take a larger position, sell an investment, or cover a short position that they hold or pursue any other investment opportunities related to an

investment because we or an affiliate have obtained material, nonpublic information about such investment.

Accuracy of Public Information. We select investments for the Capital Funds, in part, on the basis of information and data filed by issuers with various government regulators or made directly available to us by the issuers or through sources other than the issuers. Although we generally evaluate such information and data, we are not in a position to confirm the completeness, genuineness or accuracy of such information and data, and in some cases, complete and accurate information may not be available.

Short Sales. The Capital Funds sell securities short, which involves borrowing a security that the Capital Funds do not own, selling the security, and then purchasing the security at a later time to replace the borrowed security. A short sale results in a gain if the price of the security sold short declines between the date of the short sale and the date on which the security is purchased to replace the borrowed security. A short sale results in a loss if the price of the security sold short increases. Any gain is decreased, and any loss is increased, by the amount of any payment, dividend or interest that the Capital Funds must pay for the borrowed security. A short sale involves a finite opportunity for gain, but unless the Capital Funds has otherwise hedged their exposure, a theoretically unlimited risk of loss.

If the price of a security sold short increases, the Capital Funds may have to provide additional collateral to maintain the short position. This could require the Capital Funds to increase the amount of the Capital Funds' leverage or sell other portfolio investments to provide such additional collateral. Such sales might not be at favorable prices. Also, the lender of the securities sold short can request their return. Under adverse market conditions, or in illiquid markets, the Capital Funds might not be able to purchase securities to meet the delivery requirement or may not be able to borrow securities from other lenders. In such an event, the Capital Funds may be subject to a mandatory close-out of the short position, which could result in unintended costs and losses.

It may not be possible to borrow securities when we wish to make a short sale, particularly in illiquid markets. Traditional lenders of securities might be less likely to lend securities under certain market conditions. As a result, the Capital Funds may not be able to effectively pursue a short selling strategy due to a limited supply of securities available for borrowing.

In addition, regulatory authorities may from time to time impose restrictions and prohibitions on short selling activities that could adversely affect the Capital Funds' ability to engage in short sales or borrow certain securities in connection with short sales. For example, the U.S. Securities and Exchange Commission ("**SEC**") adopted a short sale price test by amending Rule 201 of Regulation SHO which limits short sales in a security if the price of that security has declined by a certain amount. Temporary restrictions and/or prohibitions on short selling activity may be imposed by regulatory authorities with little or no advance notice. Restrictions on the short selling of securities could limit the Capital Funds' ability to execute certain aspects of their investment strategies, including their ability to hedge certain exposures and execute transactions to implement their risk management measures, and any such limitations

may adversely affect the performance of the Capital Funds. See the risks described under “*Enhanced Regulation of Short Sales in the EU*” below.

Derivative Investments. The Capital Funds may use derivative instruments, or “derivatives,” which include futures, options, swaps, structured securities and other instruments and contracts that are derived from, or the value of which is related to, one or more underlying securities, financial benchmarks, currencies or indices. Derivatives allow an investor to hedge or speculate upon the price movements of a particular security, financial benchmark, currency or index at a fraction of the cost of investing in the underlying asset. The value of a derivative depends largely upon price movements in the underlying asset. Therefore, many of the risks applicable to trading the underlying asset are also applicable to derivatives of such asset. However, there are a number of other risks associated with derivatives trading. For example, because many derivatives are “leveraged,” and thus provide significantly more market exposure than the money paid or deposited when the transaction is entered into, a relatively small adverse market movement can result not only in the loss of the entire investment, but may also expose the Capital Funds to the possibility of a loss exceeding the original amount invested. Derivatives may also expose investors to liquidity risk, as there may not be a liquid market within which to close or dispose of outstanding derivatives contracts.

Exchange Traded Funds. The Capital Funds may invest in and sell short shares of ETFs and other similar instruments. These transactions may be used to adjust the Capital Funds’ exposure to the general market, industry sectors, commodities or interest rates, to manage the Capital Funds’ risk exposure and to provide leverage. ETFs and other similar instruments involve risks generally associated with investments in a broadly based portfolio of common stocks or commodities, including the risk that the general level of stock prices or commodity prices, or that the prices of stocks within a particular sector, may increase or decrease, thereby affecting the value of the shares of the ETF or other instruments.

Options. The Capital Funds may invest in options. Investing in options can provide a greater potential for profit or loss than an equivalent investment in the underlying asset. The value of an option may decline because of a change in the value of the underlying asset relative to the strike price, the passage of time, changes in the market’s perception as to the future price behavior of the underlying asset, or any combination thereof. In the case of the purchase of an option, the risk of loss of an investor’s entire investment (i.e., the premium paid plus transaction charges) reflects the nature of an option as a wasting asset that may become worthless when the option expires. Where an option is written or granted (i.e., sold) uncovered, the seller may be liable to pay substantial additional margin, and the risk of loss is unlimited, as the seller will be obligated to deliver, or take delivery of, an asset at a predetermined price which may, upon exercise of the option, be significantly different from the market value.

Swap Transactions. The Capital Funds may enter into swap transactions with respect to equity and debt securities, interest rates, commodities, including, without limitation, physical gold and gold securities, currencies, options, indices or baskets of the foregoing and other assets and liabilities, including credit default swaps. In a standard “swap” transaction, the counterparties agree to exchange payments based on the values (or the differential in values) of the particular underlying assets. Traditionally, such transactions were privately-negotiated bilateral contracts entered into between two counterparties under which each swap counterparty

was subject to the risk of non-performance by the other swap counterparty, including risks relating to the creditworthiness of such swap counterparty. Depending on the type of swap transaction, the nature of the counterparty and the market in which a swap transaction is executed, swap transactions may present a variety of risks, including counterparty credit risk and illiquidity. See the risks described under “*Credit Risk*” and “*Counterparty Risk*” below. In addition, the full effect of current and future swaps regulations remains unclear, and it is possible that these regulations may make swaps less desirable. As a result, the Capital Funds’ investments in swaps may be reduced and the Capital Funds’ returns may be negatively impacted. See the risks described in “*Regulation of Over-the-Counter Derivatives*” below.

Futures Contracts. The Capital Funds may trade in futures contracts (and options on futures). Futures positions may be illiquid because, for example, most U.S. commodity exchanges limit fluctuations in certain futures contract prices during a single day by regulations referred to as “daily price fluctuation limits” or “daily limits.” Under such daily limits, during a single trading day no trades may be executed at prices beyond the daily limits. Once the price of a contract for a particular future has increased or decreased by an amount equal to the daily limit, positions in the futures contract can neither be taken nor liquidated unless traders are willing to effect trades at or within the limit. This could prevent the Capital Funds from promptly liquidating unfavorable positions and subject the Capital Funds to substantial losses. In addition, the Capital Funds may not be able to execute futures contract trades at favorable prices if trading volume in such contracts is low. It is also possible that an exchange or a regulator (such as the U.S. Commodity Futures Trading Commission (the “*CFTC*”)) may suspend trading in a particular contract, change margin requirements on a particular contract, order immediate liquidation and settlement of a particular contract or order that trading in a particular contract be conducted for liquidation only. In addition, the CFTC and various exchanges impose speculative position limits on the number of positions that may be held in particular underliers. Trading in futures contracts and options are highly specialized activities that may entail greater than ordinary investment or trading risks. Furthermore, low margin or premiums normally required in such trading may provide a large amount of leverage, and a relatively small change in the price of a security or contract can produce a disproportionately larger profit or loss.

Forward Trading. Forward contracts and options thereon, unlike futures contracts, are not traded on exchanges and are not standardized; rather, banks and dealers act as principals in these markets, negotiating each transaction on an individual basis. Forward and “cash” trading is substantially unregulated; there is no limitation on daily price movements, and speculative position limits are not applicable. In addition, there are no requirements with respect to record keeping, financial responsibility or segregation of customer funds or positions. In contrast to exchange-traded futures contracts, interbank-traded instruments rely on the dealer or contracting counterparty to fulfill its contracts. As a result, trading in interbank contracts may be subject to more risks than futures or options trading on regulated exchanges, including, but not limited to, the risk of default due to the failure of a counterparty with which the Capital Funds have forward contracts. See the risks described under “*Credit Risk*” and “*Counterparty Risk*” below. The forward markets can experience periods of illiquidity, sometimes of significant duration. The imposition of controls by governmental authorities might also limit our ability to engage in forward trading to the possible detriment of the Capital Funds. Market illiquidity or disruption could result in significant losses to the Capital Funds.

Hedging. The Capital Funds may in our sole discretion utilize certain financial instruments and investment techniques for risk management or hedging purposes. There is no assurance that such risk management and hedging strategies will be successful, as such success will depend on, among other factors, our ability to predict the future correlation, if any, between the performance of the instruments utilized for hedging purposes and the performance of the investments being hedged. Since the characteristics of many securities change as markets change or time passes, the success of the Capital Funds' hedging strategies may also be subject to our ability to correctly readjust and execute hedges in an efficient and timely manner. There is also a risk that such correlation will change over time, rendering the hedge ineffective. While the Capital Funds may enter into hedging transactions to seek to reduce risk, such transactions may result in poorer overall performance for the Capital Funds than if they had not engaged in any such hedging transaction. The Capital Funds' portfolio will not be completely hedged and at times we may elect to have minimal, if any, hedging in place. Accordingly, the Capital Funds' assets may not be protected from market volatility and other conditions.

Securities Lending. Some of the securities held by the Capital Funds may be pledged as collateral in the Capital Funds' margin accounts, which will subject the Capital Funds to the risks associated with such pledging arrangements. The Capital Funds may also engage in additional programs of securities lending. To the extent the Capital Funds engage in securities lending, there may be risks of delay and costs involved in the recovery of securities or even losses should the borrower of the securities have financial difficulty or otherwise fail to meet its obligations under the securities lending arrangement.

While the Capital Funds expect to receive collateral in connection with the lending of securities, there is the risk that the price of the securities could increase while they are on loan and that the collateral will be inadequate to cover their value. In general, it is expected that the Capital Funds will seek to consider all relevant facts and circumstances, including the creditworthiness of the broker, dealer or other borrower, in making decisions with respect to the lending of securities, although this cannot be assured.

Leverage. Subject to applicable margin and other limitations, the Capital Funds may borrow funds in order to make additional investments and thereby increase both the possibility of gain and risk of loss. Consequently, the effect of fluctuations in the market value of the Capital Funds' portfolio would be amplified. Interest on borrowings will be a portfolio expense of the Capital Funds and will affect the operating results of the Capital Funds. Also, the Capital Funds could potentially create leverage via the use of instruments such as options and other derivative instruments.

Investments in Fixed-Income Securities. The Capital Funds may invest in bonds or other fixed-income securities, including, without limitation, notes and debentures issued by corporations, debt securities issued or guaranteed by governments or agencies or instrumentalities thereof, commercial paper and higher yielding debt securities of such issuers. These securities may pay fixed, variable or floating rates of interest, and may include zero coupon obligations. Fixed-income securities are subject to the risk of the issuer's inability to meet principal and interest payments on its obligations and are subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity. It is likely that a major economic recession or other event could

disrupt the market for such securities and may have an adverse impact on the value of such securities. In addition, it is likely that any such economic downturn could adversely affect the ability of the issuers of such securities to repay principal and pay interest thereon and increase the incidence of default on such securities.

Distressed Securities. The Capital Funds may invest in securities and other obligations of companies that are experiencing significant financial or business distress, including companies involved in bankruptcy or other reorganizations and liquidation proceedings. Although such investments may produce significant returns to the Capital Funds, they involve a high degree of risk over a potentially lengthy period of time, as well as less liquidity than many other investments. Investment in these types of securities requires sophisticated analysis, and there can be no assurance that we will accurately predict various factors that could affect the prospects of a successful restructuring. Many of these investments ordinarily remain stagnant until the company reorganizes and/or emerges from bankruptcy proceedings, and, as a result, may have to be held for an extended period of time.

Commodities. The Capital Funds may invest in commodities and derivatives on such commodities. The prices of commodities and commodities contracts are highly volatile. Price movements of commodities are influenced by, among other things, interest rates, changing supply and demand relationships, trade, fiscal, monetary and exchange control programs and policies of governments, and national and international political and economic events and policies. The value of certain futures, options and swap agreements also depends upon the price of the commodities underlying them. In addition, the Capital Funds' assets are subject to the risk of the failure of any of the exchanges on which their positions trade or of their clearinghouses or counterparties. See the risks described under “*Credit Risk*” and “*Counterparty Risk*” below.

As part of its emergency powers, an exchange or the CFTC can suspend or limit trading in a particular contract, order immediate liquidation and settlement of a particular contract, or order that trading in a particular contract be conducted for liquidation only. The possibility also exists that non-U.S. governments may intervene to stabilize or fix exchange rates, restricting or substantially eliminating trading in certain affected currencies.

Investments in Digital Assets. The Capital Funds may invest in digital tokens that may be used as currencies (“***Digital Assets***”), including, without limitation, ether and bitcoin. A Digital Asset is usually an asset attached to a blockchain network secured by cryptographic authentication. As relatively new products and technologies, Digital Assets have not been widely adopted as a means of payment for goods and services, and have a limited history. It is currently expected that many Digital Assets will derive their speculative value from the perceived usefulness of the blockchain networks they are attached to. There is no assurance that Digital Assets will continue to grow or maintain their long-term value in terms of purchasing power or that there will be an acceptance of Digital Asset payments by merchants and businesses. The Capital Funds, and consequently, investors in the Capital Funds, could lose all or substantially all of their investment related to Digital Assets.

The creation of a Digital Asset transaction requires the use of a unique numerical code known as a “private key.” To the extent a private key is lost, destroyed or otherwise compromised and no backup of the private key is accessible, we will be unable to access any

Digital Assets of the Capital Funds. There is a risk that some or all of the Capital Funds' holdings of Digital Assets could be lost, stolen, destroyed or inaccessible, potentially by the loss or theft of the private keys held by the Capital Funds' custodian associated with public addresses that hold the Capital Funds' Digital Assets or the destruction of storage hardware. Any loss of private keys relating to digital wallets used to store Digital Assets could have a material adverse effect on the Capital Funds.

Currently, derivatives markets for Digital Assets in the United States are developing as registered futures exchanges regulated by the CFTC that have begun to offer listed futures and options contracts on ether and bitcoin. Currently, the use and trading of Digital Assets, and the operation of the underlying blockchain networks, are not regulated or lightly regulated in most countries, including the United States. However, the regulatory treatment of Digital Assets is rapidly evolving. Since the regulation of Digital Assets continues to evolve, the ultimate impact of such regulations remains unclear and may adversely affect, among other things, the availability, value or performance of Digital Assets and, thus, the Capital Funds' investments. As the regulatory environment evolves, the Capital Funds may be subject to a more complex regulatory framework, and incur additional costs to comply with new requirements.

Credit Risk. Although the Capital Funds intend to enter into transactions only with counterparties that we believe to be creditworthy, there can be no assurance that a counterparty will not default and that the Capital Funds will not sustain a loss on a transaction as a result. If an obligor (such as the issuer or a party offering credit enhancement) for a security held by the Capital Funds, a counterparty to a financial contract with the Capital Funds, a prime broker or other service provider to the Capital Funds, or the grantor of a participation interest in an investment (such as bank debt) to the Capital Funds, fails to pay, otherwise defaults or is perceived to be less creditworthy, a security's credit rating is downgraded or the credit quality or value of any underlying assets declines, the value of such investment could decline. In addition, the Capital Funds may incur expenses to protect the Capital Funds' interests in securities experiencing these events.

Counterparty Risk. The Capital Funds have relationships that provide prime brokerage, derivative intermediation and financing services that permit the Capital Funds to trade in a variety of markets and asset classes over time as well as custody their cash and investments. However, there can be no assurance that the Capital Funds will be able to maintain such relationships. An inability to maintain such relationships could limit the Capital Funds' trading activities, create losses, preclude the Capital Funds from engaging in certain transactions or prevent the Capital Funds from trading at optimal rates and terms. Moreover, a disruption in the prime brokerage, derivative intermediation and financing services provided by such counterparties could have a negative impact on the Capital Funds' business and operations.

The assets of the Capital Funds will generally be held in accounts maintained for them by their prime brokers or in accounts with other market participants, including non-U.S. sub-custodians. The accounts generally will not be segregated, bankruptcy-remote accounts titled in the Capital Funds' names and, therefore, a failure of any broker or market participant is likely to have a greater adverse impact than if the assets, or the accounts in which they are held, were registered in the names of the Capital Funds. In addition, because the Capital Funds' securities generally will be held in margin accounts, and the prime brokers will have the ability to lend

those securities to other market participants, the Capital Funds' ability to recover all of their assets in the context of a bankruptcy or other failure of a prime broker may be further limited.

Many of the markets in which the Capital Funds will effect transactions are not "exchange-based," such as "over-the-counter" or "interdealer" markets. The stability and liquidity of over-the-counter transactions depends in large part on the creditworthiness of the parties to the transactions. The participants in such markets are typically not subject to the credit evaluation and regulatory oversight to which members of "exchange-based" markets are subject. The lack of evaluation and oversight of over-the-counter markets could expose the Capital Funds to the risk that a counterparty will not settle a transaction in accordance with its terms or because of a credit or liquidity problem, causing the Capital Funds to suffer a loss. Such "counterparty risk" is accentuated where the Capital Funds have concentrated their transactions with a single or small group of counterparties. Generally, the Capital Funds will not be restricted from dealing with any particular counterparty. Our evaluation of the creditworthiness of counterparties may not prove sufficient, which, combined with the absence of a regulated market to facilitate settlement, may increase the potential for losses by the Capital Funds.

If a counterparty defaults, under normal circumstances the Capital Funds will have contractual remedies against the counterparty. However, exercising such contractual rights may involve delays or costs. Furthermore, there is a risk that a counterparty could become insolvent. In such an event, the Capital Funds' ability to recover securities from such counterparty or receive payment of claims therefor may be significantly delayed and the Capital Funds may recover less than the full value of their securities. This is particularly true with respect to counterparties located in jurisdictions outside the United States where the application of non-U.S. insolvency laws may be subject to substantial limitations and uncertainties.

Lack of Valuation Data; Limited Liquidity of Investments. The Capital Funds may invest in securities and other assets which are subject to legal or other restrictions on transfer or for which no liquid market exists. The market prices for such investments tend to be volatile and may not be readily ascertainable, and the Capital Funds may not be able to sell such investments when the Capital Funds desire to do so or to realize what the Capital Funds perceive to be the fair value of such investments in the event of a sale. The sale of restricted and illiquid securities often requires more time and typically results in higher brokerage charges or dealer discounts and other selling expenses than does the sale of securities eligible for trading on national securities exchanges or in the over-the-counter markets. The Capital Funds may not be able to readily dispose of such illiquid investments and, in some cases, may be contractually prohibited from disposing of such investments for a specified period of time. Restricted securities may sell at a price lower than similar securities that are not subject to restrictions on resale.

In addition, for all securities traded on public exchanges, each exchange typically has the right to suspend or limit trading in all securities that it lists. Such a suspension could render it impossible to liquidate positions and thereby expose the Capital Funds to losses.

Dependence on the Investment Advisor and the Principals. The Capital Funds rely exclusively on us and, more specifically, on David Einhorn and our other principals, for the management of their investment portfolios. There could be adverse consequences to the Capital Funds in the event that the principals cease to be available to devote their services to the Capital

Funds. The success of the Capital Funds is therefore expected to be significantly dependent upon our expertise and, more particularly, the expertise of our principals.

No Assurance of Investment Return. The task of identifying and evaluating investment opportunities, managing such investments and realizing a return for investors is difficult. Many organizations operated by persons of competence and integrity have been unable to make, manage and realize such investments successfully. There is no assurance that the Capital Funds will be able to invest their capital on attractive terms or generate returns for investors.

Performance Allocation. The Performance Allocation allocated to our affiliate may create an incentive for us to make investments that are riskier or more speculative than would be the case in the absence of such Performance Allocation. The Performance Allocation is generally equal to 20% of the net profits allocated to each investor's capital account with respect to each fiscal year, subject to a modified "High Water Mark" formula. Under the High Water Mark formula, our affiliate may receive a Performance Allocation in respect of an investor's capital account even though such capital account may not have recouped all losses since inception. In addition, because the Performance Allocation is calculated on a basis which includes unrealized appreciation of the Capital Funds' assets, the Performance Allocation may be greater than if it were based solely on realized gains. Differences in the formulas used to calculate the performance-based profit allocations received from our and our affiliates' clients may create an incentive to prefer one or more clients over the others.

Investment Expenses, Management Fees and Other Fees. The investment expenses (e.g., expenses related to the investment and custody of the Capital Funds' assets, such as brokerage commissions, custodial fees and other trading and investment charges and fees) as well as other fees (e.g., the Management Fee and operating expenses) may, in the aggregate, constitute a high percentage relative to expenses incurred by other investment entities. The Capital Funds, and in turn the investors, will bear these costs regardless of the Capital Funds' profitability.

Trade Errors. The Capital Funds on occasion experience errors with respect to trades made on their behalf. Trade errors may result in losses or gains. We generally will endeavor to detect trade errors prior to settlement and correct and/or mitigate them in an expeditious manner. Our affiliates, we, and the personnel of both will generally not be liable to the Capital Funds for any act or omission, absent gross negligence (as determined under New York law), willful misconduct or reckless disregard of our obligations under the investment advisory agreements and the Capital Funds will generally be required to indemnify such persons against any losses they may incur by reason of any act or omission related to the Capital Funds, absent gross negligence (as determined under New York law), willful misconduct or reckless disregard of our obligations under the investment advisory agreements. As a result of these provisions, the Capital Funds (and not us) will benefit from any gains resulting from trade errors and will be responsible for any losses (including additional trading costs) resulting from trade errors and similar human errors, absent gross negligence (as determined under New York law), willful misconduct or reckless disregard of our obligations under the investment advisory agreements.

Electronic Delivery of Information. The Capital Funds' information and information with respect to an investor's investment in the Capital Funds may be delivered to such investor electronically. There are risks associated with such electronic delivery including, but not limited

to, that e-mail messages are not secure and may contain computer viruses or other defects, may not be accurately replicated on other systems, or may be intercepted, deleted or interfered with or without the knowledge of the sender or the intended recipient.

Cybersecurity Risk. With the increased use of technologies such as the Internet to conduct business, the Capital Funds and we are susceptible to operational, information security and related risks. In general, cyber incidents can result from deliberate attacks or unintentional events. Cyberattacks include, but are not limited to, gaining unauthorized access to digital systems (e.g., through “hacking” or malicious software coding) for purposes of misappropriating assets or sensitive information, corrupting data, or causing operational disruption. Cyberattacks may also be carried out in a manner that does not require gaining unauthorized access, such as denial-of-service attacks on websites (i.e., efforts to make network services unavailable to intended users). Cyber incidents affecting the Capital Funds, us or service providers and counterparties (including, but not limited to, lawyers, accountants, prime brokers and financial intermediaries) have the ability to cause disruptions and impact business operations, potentially resulting in financial losses, interference with the Capital Funds’ ability to value their securities or other investments, impediments to trading, the inability of investors to transact business, violations of applicable privacy and other laws, regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs. Similar adverse consequences could result from cyber incidents affecting issuers of securities in which the Capital Funds invest, counterparties with which the Capital Funds engage in transactions, governmental and other regulatory authorities, exchange and other financial market operators, banks, brokers, dealers, insurance companies and other financial institutions (including financial intermediaries and service providers for investors) and other parties. In addition, substantial costs may be incurred in order to prevent any cyber incidents in the future. While the Capital Funds’ and our service providers have generally established business continuity plans in the event of, and systems to prevent, such cyber incidents, there are inherent limitations in such plans and systems including the possibility that certain risks have not been identified. Furthermore, the Capital Funds and we cannot control the cyber security plans and systems put in place by service providers or any other third parties whose operations may affect the Capital Funds or us. The Capital Funds could be negatively impacted as a result.

Regulation (EU) 2016/679 (“**GDPR**”) took effect on May 25, 2018. To the extent the Capital Funds are subject to the requirements of the GDPR, if the Capital Funds breach their obligations under the GDPR to adequately safeguard personal data, they could be subject to substantial fines.

Exchange Rate Risks; Currency Risk. It is expected that the Capital Funds’ portfolios will be comprised of U.S. Dollar denominated investments and investments denominated in other currencies. However, all monies returned to investors, the valuation of the Capital Funds’ securities and other capital and the reported net asset value will be denominated in U.S. Dollars. Changes in the value of other currencies against the value of the U.S. Dollar could have an adverse impact on the performance of the Capital Funds and to the extent that an investor does not value the investment in the Capital Funds in dollars, the value of such investor’s interests will fluctuate with the U.S. Dollar exchange rate as well as with price changes of the Capital Funds’ investments. The Capital Funds may enter into currency hedging transactions, but they are not required or expected to do so, and such transactions have an associated cost that could

reduce investment returns. Spot and forward currency prices are highly volatile and price movements for spot and forward currency contracts may be influenced by, among other things, the foregoing risks. In addition, governments from time to time intervene directly and by regulation in certain markets. Such intervention is often intended to influence prices directly. See the risks described in “*Forward Trading*” above.

Investments in Foreign Securities. Investments in foreign securities involve certain factors not typically associated with investing in U.S. securities, such as risks relating to (a) currency exchange matters, including fluctuations in the rate of exchange between the U.S. Dollar (the currency in which the books of the Capital Funds are maintained) and the various foreign currencies in which the Capital Funds’ portfolio securities will be denominated and costs associated with conversion of investment principal and income from one currency into another, (b) differences between the U.S. and foreign securities markets, including the absence of uniform accounting, auditing and financial reporting standards and practices and disclosure requirements, and greater or lesser government supervision and regulation, (c) political, social or economic instability, (d) the extension of credit, especially in the case of sovereign debt, and (e) certain tax-related risks including, without limitation, uncertainties in the application of tax laws by non-U.S. jurisdictions, the imposition of withholding and other taxes on dividends, interest, capital gains or other income, the possibility of expropriation, confiscatory taxation and limitations on the removal of funds or other assets of the Capital Funds from such non-U.S. jurisdictions.

Furthermore, changes or modifications in existing judicial decisions or in the current positions of the U.S. Internal Revenue Service, either taken administratively or as contained in published revenue rulings and revenue procedures (which changes or modifications may apply with retroactive effect), or the passage of new legislation, could lead to unfavorable treatment of certain non-U.S. investments, which could adversely impact the Capital Funds’ portfolios.

Enhanced Scrutiny and Evolving Regulation of Private Investment Funds and their Advisers. There continues to be discussion regarding enhanced governmental scrutiny and/or increased regulation of the private investment fund industry. There can be no assurance that such scrutiny or regulation will not have an adverse impact on the Capital Funds’ activities, including the ability of the Capital Funds or our ability to effectively and timely address such regulations, implement operating improvements or otherwise execute their investment strategy or achieve their investment objectives.

The combination of such scrutiny of private investment funds, their advisers (including us) and their investments by various politicians, regulators and market commentators may place increased burdens from the time and resources of our personnel on compliance, counterparty and investor relation matters that moves time and resources away from the day-to-day portfolio management of the Capital Funds. Moreover, other legal, tax and regulatory changes could occur that may adversely affect the companies in which the Capital Funds invest, which in turn would adversely impact the value of the Capital Funds’ investments in such companies. The Capital Funds may also invest in companies that operate in highly regulated environments and that are subject to extensive legal and regulatory restrictions and limitations, and to supervision, examination and enforcement by regulatory authorities. New and existing regulations and burdens of regulatory compliance may directly impact the business and results of the operations

of, or otherwise have a material adverse effect on, companies that are subject to regulation, with a corresponding impact on the value of the Capital Funds' investments in such companies.

Regulation of Over-the-Counter Derivatives. Transactions in certain derivatives are required to be centrally cleared and are subject to regulatory oversight, while other derivatives are subject to risks of trading in the “over-the-counter” markets or on non-U.S. exchanges. In particular, the Dodd-Frank Wall Street Reform and Consumer Protection Act requires clearing and exchange trading of those products mandated by the CFTC and the SEC. The European Market Infrastructure Regulation (“**EMIR**”) has similar requirements applicable to derivatives traded in Europe. Such requirements may make it more difficult and costly for the Capital Funds to enter into tailored or customized transactions, and may also render certain strategies in which the Capital Funds might otherwise engage impossible or so costly that they will no longer be economical to implement. The CFTC currently requires the clearing of certain interest rate and credit index derivatives. Additional products are expected to be required to be cleared in the future. EMIR clearing obligations are being implemented on a rolling basis with respect to similar products. However, other swaps will not necessarily be cleared through registered clearinghouses, and therefore may not be subject to the protections afforded to participants in cleared swaps (for example, centralized counterparty, guaranteed funds, customer asset segregation and mandatory margin requirements).

U.S. and European regulators also have broad discretion to impose margin requirements on non-cleared derivatives and new requirements on the holding of customer collateral by derivatives dealers. Many market participants in the U.S. and the European Union are required to post and collect variation margin. These requirements may increase the amount of collateral that the Capital Funds are required to provide and the costs associated with providing it.

There remains uncertainty regarding global regulation of derivatives and, consequently, the full impact that such regulation ultimately will have on the Capital Funds' derivative instruments is not fully known to date. For all the foregoing reasons, while the Capital Funds may benefit from the use of derivatives and other hedging mechanisms, the use of derivatives and related techniques can expose the Capital Funds and their investments to significant risk of loss and may result in a poorer overall performance for the Capital Funds than if they had not entered into such transactions.

CFTC/NFA. We and certain of our affiliates are members of the National Futures Association (the “NFA”) and are registered as Commodity Pool Operators (“CPOs”) with the CFTC. We have claimed an exemption from certain of the CFTC's disclosure, reporting and record-keeping requirements applicable to registered CPOs pursuant to Rule 4.7 under the U.S. Commodity Exchange Act, as amended (the “CEA”). Pursuant to Rule 4.7 under the CEA, offering memoranda for the Capital Funds are not required to be, and have not been, filed with the CFTC. The CFTC does not pass upon the merits of participating in a pool or upon the adequacy or accuracy of an offering memorandum. Consequently, the CFTC has not reviewed or approved the offering or any offering memoranda for the Capital Funds.

Additionally, we have invested in and intend to continue to invest in underlying or spot digital currency transactions for the Capital Funds. Although the NFA has jurisdiction over us and the Capital Funds, investors should be aware that the NFA does not have regulatory

oversight authority for underlying or spot market digital currency products or transactions or digital currency exchanges, custodians or markets. Investors should also be aware that given certain material characteristics of these products, including a lack of a centralized pricing source and the opaque nature of the digital currency market, there currently is no sound or acceptable practice for the NFA to adequately verify the ownership and control of a digital currency or the valuation attributed to a digital currency by us.

The Capital Funds may trade foreign futures or options contracts. Transactions on markets located outside the United States, including markets formally linked to a United States market, may be subject to regulations which offer different or diminished protection to the Capital Funds and their participants. Further, United States regulatory authorities may be unable to compel the enforcement of the rules of regulatory authorities or markets in non-U.S. jurisdictions where transactions for the Capital Funds may be effected.

Enhanced Regulation of Short Sales in the EU. Certain EU-related short sales and credit default swaps are subject to the provisions of Regulation (EU) No 236/2012 (the “***EU Short Selling Regulation***”). The EU Short Selling Regulation imposes restrictions, including a ban on uncovered short selling, and disclosure requirements for persons taking short positions in the shares of certain EU companies and sovereign bonds issued by EU states, and prohibits entry into uncovered credit default swaps in relation to EU sovereign debt (i.e., where the investor is not seeking to hedge its exposure to either the sovereign debt itself or to assets or liabilities whose value is correlated to the sovereign debt). In addition, the EU Short Selling Regulation permits the competent authorities of EU member states to prohibit or restrict short sales, limit sovereign credit default swaps and impose emergency disclosure requirements, among other things, during times of stressed markets, which may preclude the Capital Funds from implementing their investing strategies. Competent authorities may also restrict short sales of individual financial instruments which have suffered a significant fall in price in a single day.

MiFID II. The revision of the Markets in Financial Instruments Directive and the introduction of Regulation (EU) 600/2014 (together, “***MiFID II***”), which took effect in January 2018, has introduced additional rules and requirements applicable to the trading of financial instruments in the EU. The application of MiFID II to the Capital Funds may be subject to different interpretations in the different EU member states on the markets of which, or in the instruments of companies established in which, the Capital Funds may trade. As the rules have not yet been fully tested, the Capital Funds, we, and/or our affiliates may be subject to requirements that could restrict our ability to trade, or impose additional and unforeseen operating costs.

EU Market Abuse Regulation. Regulation (EU) 596/2014 on market abuse (“***EU MAR***”) sets out the regulatory framework in the EU regarding insider dealing and market manipulation. However, some provisions of the EU MAR appear to be ambiguous and contradictory, and the interpretation and enforcement of the EU MAR by local regulators and courts in the different member states of the EU may differ substantially. Given such uncertainties, the EU MAR may limit the Capital Funds’, our affiliates’, or our ability to successfully make investments in issuers subject to the EU MAR, or share information about such issuers with investors, other investment professionals or the markets in general.

Evolving Privacy Laws. In the ordinary course of business, we collect, process, receive, share and maintain personal information, including data relating to personnel. As a result, we are subject to various U.S. federal, state and foreign privacy and information security laws regulating personal information that create potential liability for the mishandling, misuse or compromise of that personal information. These laws are evolving, and new legislation may be enacted over time. New privacy laws add additional complexity to compliance programs and alternative data use that may require additional investment in resources, and could impact trading strategies. Additionally, the full impact to us and investment research industries of new laws broadly regulating the collection, disclosure and sale of personal information, such as the new California Consumer Privacy Act, is not yet known. Moreover, such new laws may contract the market of available investment research and data sources, thus limiting the utility of alternative data-informed investment strategies utilized by us.

For a further discussion of these and related items, see **Item 10** (Other Financial Industry Activities and Affiliations), **Item 11** (Code of Ethics, Participation or Interest in Client Transactions and Personal Trading) and **Item 12** (Brokerage Practices).

Item 9. Disciplinary Information

There are no legal or disciplinary events that are material to a client's or prospective client's evaluation of our advisory business or the integrity of our management.

Item 10. Other Financial Industry Activities and Affiliations

Mr. Einhorn is a director of Greenlight Capital Offshore Qualified, Ltd. and Greenlight Capital Offshore Partners, Ltd.

We are affiliated with a group of entities (identified below) that provide investment advisory and other services to third parties.

- DME Capital Management, LP and DME Management GP, LLC, which provide discretionary investment advisory and other services to pooled investment vehicles that have an investment strategy that is substantially the same as the Capital Funds (the “***DME Funds***”);
- DME Advisors, LP, DME Advisors, LLC, and DME Advisors II, LLC, which provide discretionary investment advisory and other services to a pooled investment vehicle that has an investment strategy that is substantially the same as the Capital Funds (“***Solasglas***”). The investors in Solasglas are certain subsidiaries of Greenlight Capital Re, Ltd. (“***Greenlight Re***”), a Cayman Island publicly-traded reinsurance company. Mr. Einhorn is Chairman of the Board of Directors of Greenlight Re and a significant investor; and
- Greenlight Masters, L.L.C. and Greenlight Masters GP, L.L.C., which provide discretionary investment advisory and other services to privately-offered funds of funds (the “***Masters Funds***”), which have investments in certain Capital Funds.

DME Capital Management, LP, DME Advisors, LP and Greenlight Masters, L.L.C. are separately registered with the SEC as investment advisers.

Greenlight Capital, Inc., DME Capital Management, LP and DME Advisors, LP are members of the NFA and are registered as CPOs with the CFTC. Mr. Einhorn and Chief Operating Officer Daniel Roitman are registered as associated persons of all three advisors.

No management persons are registered, or have an application pending to register, as a broker-dealer or a registered representative of a broker-dealer.

From time to time, we may select one or more other investment advisers for our clients. We do not generally receive compensation, directly or indirectly, from those other investment advisers.

Potential Conflicts of Interest

As discussed in **Item 11** below, subject to the provisions of our code of ethics, including pre-clearance requirements for purchases and sales of certain investments, supervised persons may engage in investment trading activities for their own accounts.

In addition to managing the Capital Funds, we and our affiliates may engage in investment and trading activities for our own accounts and/or for the accounts of third parties. We and our affiliates are not obligated to devote any specific amount of time to the affairs of the Capital Funds. Our affiliates manage and expect to continue to manage other client accounts, some of which have objectives similar to those of the Capital Funds, including other collective investment vehicles that may be managed by us or our affiliates and in which we or any of our affiliates may have an equity interest. In managing other clients or our own accounts, we and our affiliates may take positions that are opposite, or ahead of, positions taken by the Capital Funds. Investors in a Capital Fund will not be entitled to inspect any of our or our affiliates', or any Capital Fund's, trading records.

When we and our affiliates determine that it would be appropriate for the Capital Funds and one or more other investment accounts to participate in an investment opportunity, we will seek to execute orders for all of the participating investment accounts on an equitable basis. If we have determined to invest at the same time for more than one of the investment accounts, we and our affiliates will in most instances place combined orders for all such accounts simultaneously and if all such orders are not filled at the same price, we will generally average the prices paid. Similarly, if an order on behalf of more than one account cannot be fully executed under prevailing market conditions, we and our affiliates will allocate the trade among the different accounts on a basis that it considers equitable. Situations may occur where the Capital Funds could be disadvantaged because of the investment activities conducted by affiliates or us for other investment accounts.

The DMEM Funds and Solasglas have investment strategies that are similar to the Capital Funds' investment strategies. In addition, we and our affiliates may launch other funds or provide services to other accounts that compete with the Capital Funds or have a similar investment strategy. We refer to such funds and accounts, collectively with the Capital Funds,

the DMEM Funds and Solasglas, as the “**Greenlight Entities.**” The Greenlight Entities may invest in parallel with the Capital Funds.

The Greenlight Entities generally make investments alongside the Capital Funds on a pro rata basis in accordance with each Greenlight Entity’s assets under management at the time of the investment, unless (1) in the judgment of us and our affiliates, tax, regulatory, legal, accounting or other considerations make such investments inappropriate or impractical or require an alternate investment structure, or (2) we and our affiliates determine to allocate trades on a non-pro rata basis in order to rebalance the Greenlight Entities’ portfolios. As it may prove impossible to manage the Greenlight Entities on a parallel basis at all times, there may be material performance disparities among the Greenlight Entities and among the Capital Funds themselves. We and our affiliates also provide investment management and administrative services to the Greenlight Entities.

We and our affiliates have adopted a rebalancing policy and a trade allocation policy. The rebalancing policy permits us and our affiliates to transfer investments among some or all of the Greenlight Entities and the Capital Funds under certain circumstances. We and our affiliates may rebalance, at our discretion, the portfolios of the Greenlight Entities and the Capital Funds on a monthly basis to the extent the Greenlight Entities or the Capital Funds have accepted new material contributions, experienced net withdrawals or experienced other capital changes. We and our affiliates will engage in rebalancing transactions through private transactions among the Greenlight Entities and the Capital Funds at current market prices, if available. The goal of the rebalancing transactions is for each Greenlight Entity and Capital Fund, subject to legal, regulatory, tax, accounting and other considerations, to maintain the same pro rata ownership of each securities position (based on the available capital of each Greenlight Entity and Capital Fund) after giving effect to the rebalancing transaction to the extent that such pro rata ownership is consistent with the investment objective and strategy of each Greenlight Entity. Our and our affiliates’ trade allocation policy seeks to allocate trades in a manner that treats each Greenlight Entity and Capital Fund fairly. From time to time, we and our affiliates may allocate trades and securities on a non-pro rata basis in order to rebalance the Greenlight Entities’ and the Capital Funds’ portfolios and for other legal, regulatory, tax, accounting and other reasons.

We and our affiliates, however, generally will not rebalance any security or position if (a) such security or position is not freely publicly tradable, unless we get the advance consent of the Chief Compliance Officer, (b) we or our affiliates or one or more of the Greenlight Entities are an affiliate of the issuer of such security, (c) any Greenlight Entity owns more than (i) 10% of the equity securities of such issuer for passive positions, or (ii) the then-current limit proscribed by the Hart-Scott-Rodino Antitrust Improvement Act of 1976, as amended, for non-passive positions in investment securities of such issuer, (d) any Greenlight Entity might be subject to disgorgement of “short-swing” profits pursuant to Section 16 of the Exchange Act or similar foreign regulations, with respect to such security, or (e) such rebalancing would constitute a principal transaction under Section 206(3) of the Investment Advisers Act of 1940 (the “**Advisers Act**”). In addition, we may elect not to rebalance any security or position for any other reason in our commercially reasonable discretion.

In the event we rebalance a security that is not freely publicly tradable, the Chief Financial Officer maintains a record of how the valuation of the security was determined and the rationale for the rebalancing transaction.

Our authority to use “soft dollar” credits generated by the Capital Funds’ securities transactions to pay for expenses that might otherwise have been borne by us may give us an incentive to select brokers or dealers for transactions of the Capital Funds, or to negotiate commission rates or other execution terms, in a manner that takes into account the soft dollar benefits received by us rather than giving exclusive consideration to the interests of the Capital Funds.

Please see **Item 8** (Methods of Analysis, Investment Strategies and Risk of Loss), **Item 11** (Code of Ethics, Participation or Interest in Client Transactions and Personal Trading) and **Item 12** (Brokerage Practices).

Item 11. Code of Ethics, Participation or Interest in Client Transactions and Personal Trading

Code of Ethics and Personal Trading

We have adopted a code of ethics pursuant to Advisers Act Rule 204A-1. Our code of ethics requires full compliance with all applicable laws and regulations governing the provision of investment management services to our clients. In addition, our code of ethics highlights the fiduciary duty that we owe to our clients, including the affirmative duty to act in the best interests of our clients and to make full and fair disclosure of material facts. We expect each supervised person to act with integrity, competence, dignity, and in an ethical manner when dealing with the public, the Capital Funds, investors and prospective investors in the Capital Funds, service providers and fellow supervised persons. We also expect supervised persons to adhere to the highest standards with respect to any potential conflict of interest with clients.

Our code of ethics contains guidelines relating to personal trading by supervised persons (and certain of their immediate family members). In addition to being prohibited (with limited exceptions) from trading in certain types of investments, including, but not limited to, individual publicly-traded equity and corporate debt securities, our supervised persons are not permitted to purchase or sell other securities without the advance approval of the Chief Compliance Officer or the General Counsel. Supervised persons are permitted to make personal investments without the prior approval of the Chief Compliance Officer or the General Counsel in the following investments: (a) shares issued by open-end funds, (b) shares issued by certain unit investment trusts, (c) broad-based ETFs, (d) gold and precious metals, or ETFs thereof, (e) obligations of investment grade United States municipalities, (f) certain life insurance policies, (g) personal residences (excluding real estate investments made for the primary purpose of investment or rental), (h) direct obligations of the Government of the United States, (i) bankers' acceptances, bank certificates of deposit, commercial paper and high quality short-term debt instruments, including repurchase agreements, and (j) shares issued by money market funds.

Our code of ethics also requires supervised persons to provide us with certain securities holdings and periodic transaction reports, as required by Advisers Act Rule 204A-1.

Our code of ethics has specific provisions relating to identifying potential conflicts of interest. The provisions prohibit a supervised person from entering into any activity that could create a conflict of interest without prior written approval from the Chief Compliance Officer or the General Counsel. For example, they prohibit a supervised person from, among other activities, obtaining outside employment or serving as an officer or board member of a public or private entity without such approval. They also generally prohibit financial gain, or avoidance of financial loss, at the expense of a client without prior approval. We have also adopted provisions relating to exchanging business gifts or business entertainment with third parties.

All violations of the code of ethics must be immediately reported to our Chief Compliance Officer, who is primarily responsible for administering our code of ethics, or the General Counsel. A violation of the code of ethics may result in the imposition of remedial action, including censure, fine, restriction on activities, suspension or termination of employment.

Clients may obtain, free of charge, a full copy of our code of ethics by contacting us at the following address:

Participation in Client Transactions

We and our related persons do not recommend to the Capital Funds, or buy or sell for the Capital Funds, securities in which we or our related persons have a material financial interest. However, from time to time, the Capital Funds may engage in cross trades among each other and funds advised by affiliates and, given the ownership interest by affiliates and employees of the Adviser in one or more Capital Funds and funds advised by affiliates, such transactions may be principal transactions for which prior consent is sought. Although our supervised persons may buy and sell securities for their own account or the account of others, they may not buy securities from or sell securities to the Capital Funds.

For a further discussion of these and related items, see **Item 8** (Methods of Analysis, Investment Strategies and Risk of Loss), **Item 10** (Other Financial Industry Activities and Affiliations) and **Item 12** (Brokerage Practices).

Item 12. Brokerage Practices

General

The Capital Funds have appointed several prime brokers. The prime brokers maintain on deposit the Capital Funds' cash, securities, and other investments in brokerage accounts. In

addition, the Capital Funds maintain custodial accounts to hold cash, securities, commodities and other investments.

Purchases and sales of securities through brokers involve a commission to the broker. Purchases and sales of securities from dealers serving as market makers include the spread between the bid and the asked price.

In placing securities transactions, we seek to obtain best execution, which requires us to take into account the circumstances of each specific transaction. In selecting a broker for each specific transaction, we will use our best judgment to choose the broker most capable of providing “best execution.” Brokers are selected on the basis of our evaluation of the overall value and quality of the services provided by such brokers. No one factor controls our decision. In seeking the best price and execution quality, we consider not only the commission rate, spread or other compensation paid, but also the price at which the transaction is expected to be executed, bearing in mind that it may be in our clients’ best interest to pay a higher commission, spread or other compensation in order to receive better execution.

Examples of some of the specific factors we generally consider when deciding which brokers to utilize when entering into security transactions include, but are not limited to:

- the ability to effect prompt and reliable executions at favorable prices (including the applicable dealer spread or commission, if any);
- the operational efficiency with which transactions are effected, taking into account the size of the order and difficulty of execution;
- the financial strength, integrity and stability of the broker;
- the broker’s risk in positioning a block of securities;
- the quality, comprehensiveness and frequency of available brokerage or research services considered to be of value;
- the competitiveness of commission rates in comparison with other brokers satisfying our other selection criteria;
- the ability of the broker to appropriately handle our transactions and the ability to maintain confidentiality;
- a broker’s willingness to enter into difficult transactions, including transactions in which the broker’s capital is put at risk;
- the broker’s expertise in effecting difficult trades in less liquid, smaller capitalized, and more closely held issues;
- the speed of execution on competing markets;
- access to underwritten offerings and secondary market trades;

- the broker's demonstrated ability to achieve the best net results on transactions in a particular sector or of a particular size; and
- the broker's ability to complete the transaction satisfactorily through to clearance, confirmation and delivery.

Our application and the importance of the specific criteria will vary depending upon the nature of the transaction, the asset class, the market in which it is effected, and the extent to which it is possible to select from among multiple brokers or dealers capable of effecting the transaction. When we use direct market access, we assess whether the execution venues included in our order execution policy provide for best execution. Where appropriate, we must also consider any regulatory requirements in the jurisdiction in which a transaction is to be conducted.

Subject to the foregoing, we are not prohibited from selecting a broker that has other business relationships with us, our affiliates, or the Greenlight Entities, such as, but not limited to, prime brokerage arrangements, access to research services, referrals to prospective investors, underwriting commitments, investments in the broker, or access to lending facilities, provided that the broker also provides best execution.

We evaluate the execution arrangements of broker-dealers and other intermediaries through which we place trades. Further, we monitor our compliance with our internal policies on trading and the use of soft dollars on at least a semi-annual basis. Our periodic reviews consider, among other things:

- the execution and research quality of broker-dealers or other intermediaries;
- the reasonableness of brokerage commissions and mark-ups and mark-downs in light of the brokerage and research services received;
- the relative benefit to clients of research paid for by soft dollars and the allocation of the cost of any "mixed use" research products;
- the nature of research products paid for by soft dollars and their qualification for protection under Section 28(e) of the Exchange Act;
- the appropriateness of mitigating controls and disclosures with respect to conflicts of interest that potentially arise from trading and trade-related activities;
- the adequacy and effectiveness of our procedures with respect to trading and trade-related activities; and
- the details surrounding any trade errors, including the cause of such errors and the resolution.

In reviewing the selection or use of brokers, we consider any potential conflicts of interest, such as the occurrence of referrals or other business dealings between the broker-dealer and us or our principals.

Soft Dollars

The Capital Funds are authorized to pay higher commissions to brokers than the minimum rates obtainable in the marketplace, or to pay higher prices for the purchase of securities from or accept lower prices for the sale of securities. The Capital Funds will make these payments to brokerage firms that provide us with investment and research information (even though the research services may not be for the exclusive benefit of the Capital Funds) if we determine such commissions or prices are reasonable in relation to the overall services provided.

Research services furnished by brokers may include written information and analyses concerning specific securities, companies or sectors; market, financial and economic studies and forecasts; statistics and pricing or appraisal services; discussions with research personnel; and invitations to attend conferences or meetings with management or industry consultants or other information or services. We are not required to weigh these factors equally. Information so received is in addition to and not in lieu of services required to be performed by us, and our fee is not reduced as a consequence of the receipt of any supplemental research information. Research services provided by broker-dealers used by the Capital Funds may be utilized by us and our affiliates in connection with providing investment services for clients other than the Capital Funds. Also, research services provided by broker-dealers used for other clients may be utilized by us in performing services for the Capital Funds.

We have the option to use soft dollars generated by the Capital Funds to pay for the research-related services described above or to have these services paid directly by the Capital Funds. The products and services available from brokers include both internally generated items (such as research reports prepared by employees of the broker) as well as items acquired by the broker from third parties (such as quotation equipment). Section 28(e) of the Exchange Act provides a “safe harbor” to investment managers who use soft dollars generated by their advised accounts to obtain investment research and brokerage services that provide lawful and appropriate assistance to such managers in the performance of investment decision-making responsibilities. The agreements we have with the Capital Funds permit us to use soft dollars for expenses that do not fall within the safe harbor of Section 28(e) of the Exchange Act. However, we will not use soft dollar credits generated by the Capital Funds to pay for any goods or services outside of this safe harbor.

Section 28(e) of the Exchange Act allows us to use soft dollar credits generated by the securities transactions conducted on behalf of the Capital Funds and the Greenlight Entities to pay for expenses that we might otherwise have to pay ourselves. As a result, we will not have to pay these expenses directly. This may give us an incentive to select brokers or dealers for transactions of the Capital Funds, or to negotiate commission rates or other execution terms, in a manner that takes into account the soft dollar benefits received by us rather than giving exclusive consideration to the interests of the Capital Funds. However, we only use soft dollars to pay for expenses that would otherwise be borne by the Capital Funds and the Greenlight Entities.

Any use of soft dollars requires approval of the Chief Compliance Officer. We generally seek to allocate soft dollar benefits pro rata among the Capital Funds and the Greenlight Entities.

Although we are authorized to allocate transactions to brokers who assist in the distribution of the Capital Funds' interests, it is our policy not to do so. However, we are not prohibited from using the services of a broker-dealer that has made a referral of potential investors or with which we or our principals have other business dealings provided that the dealings are disclosed to the Chief Compliance Officer and the broker-dealer provides best execution. Subject to the foregoing, we may have an incentive to select or recommend a broker based on investor referrals, rather than just best execution.

We do not recommend, request or require that a client direct us to execute transactions through a specified broker-dealer, and we do not permit clients to direct brokerage.

Aggregation of Transactions

We generally aggregate trades of our clients when consistent with the clients' investment objectives and restrictions. If an aggregated order is not completely filled, shares purchased or sold will generally be allocated pro rata based on assets under management by clients participating in the aggregated transaction.

Our trade allocation policy seeks to allocate trades in a manner that treats the Capital Funds and the Greenlight Entities fairly. From time to time, we may allocate trades and securities on a non-pro rata basis in order to rebalance the Capital Funds' and the Greenlight Entities' portfolios and for other legal, regulatory, tax, accounting and other reasons.

For a further discussion of these and related items, see **Item 8** (Methods of Analysis, Investment Strategies and Risk of Loss), **Item 10** (Other Financial Industry Activities and Affiliations) and **Item 11** (Code of Ethics, Participation or Interest in Client Transactions and Personal Trading).

Item 13. Review of Accounts

Generally, the Capital Funds are reviewed on a regular basis by our investment professionals, the Chief Financial Officer, the Chief Operating Officer, and the Chief Compliance Officer. These reviews are designed to monitor and analyze transactions, positions and investment levels.

Investors in the Capital Funds are furnished with annual reports containing financial statements examined by the Capital Funds' independent auditors within 120 days after the end of each taxable year. Investors are also furnished with monthly reports describing the Capital Funds' performance for such month, a quarterly investor letter and monthly attribution information.

Item 14. Client Referrals and Other Compensation

For a discussion of these and related items, see **Item 10** (Other Financial Industry Activities and Affiliations) and **Item 12** (Brokerage Practices).

Item 15. Custody

We and our affiliates have custody of the assets of the Capital Funds. We do not use a qualified custodian to send quarterly account statements directly to the investors in the Capital Funds. The Capital Funds will distribute their annual audited financial statements to their investors within 120 days of their fiscal year-end.

We urge investors to carefully review the audited financial statements of the Capital Funds in which they are invested.

Item 16. Investment Discretion

We and our affiliates have discretionary authority with respect to the investment decisions on behalf of the Capital Funds pursuant to the investment advisory agreements with the Capital Funds, or otherwise through the formation documents of the Capital Funds, as applicable. Investment decisions for the Capital Funds are made in accordance with the Capital Funds' investment objectives and guidelines.

For a further discussion of these and related items, see **Item 4** (Advisory Business) and **Item 10** (Other Financial Industry Activities and Affiliations).

Item 17. Voting Client Securities

We have been delegated the authority and right to vote proxies received by the Capital Funds. We and our affiliates have adopted a proxy voting policy to ensure that we vote proxies to further the best interests of each client. We determine how to vote after studying the proxy materials and any other materials that may be necessary or beneficial to voting. We vote in a manner that we believe reasonably furthers the best interests of the Capital Funds and is consistent with our investment philosophy.

The major proxy-related issues generally fall within five categories: corporate governance, takeover defenses, compensation plans, capital structure and social responsibility. We will cast votes for these matters on a case-by-case basis. We will generally vote in favor of matters that follow an agreeable corporate strategic direction, support an ownership structure that enhances shareholder value without diluting management's accountability to shareholders and/or present compensation plans that are commensurate with enhanced manager performance and market practices.

If a proxy vote creates a material conflict between our interests and the interests of the Capital Funds, we will resolve the conflict before voting the proxies. In the event that the conflict cannot be reasonably resolved prior to voting, we will either disclose the conflict to the Capital Funds or take other steps designed to ensure that a decision to vote the proxy was based on our determination of the Capital Funds' best interest and was not the product of the conflict.

The Capital Funds cannot generally direct how we vote in a particular situation.

Clients may obtain, free of charge, a full copy of our proxy voting policies and procedures and/or a record of proxy votes by contacting us at the following address:

Item 18. Financial Information

We do not require or solicit prepayment of fees six months or more in advance.

We are not aware of any financial condition that is reasonably likely to impair our ability to meet contractual commitments to clients.

We have not been the subject of a bankruptcy petition at any time during the past ten years.

Item 19. Requirements for State-Registered Advisers

We are not registered with any State as an investment adviser.
