Risk Inventory Guide*

This chart is intended to visually guide you through some of the risks that may be present as part of an adviser’s everyday operations. As a CCO responsible for your firm’s compliance, you should determine what risks are present and how they might affect your firm and its operations, assess whether the controls in place manage or mitigate these risks are adequate, and make or recommend modifications to the compliance policies and procedures as necessary. You are not expected to personally perform all compliance-related activities. Rather, you “administer” or manage the compliance program by determining whether controls are necessary and what reviews and tests should be performed, when and by whom, and ensuring that business persons are involved in creating and complying with established procedures. In essence, you determine “how much is enough.”
