RECORD OF PROCEEDINGS OF SEC ADVISORY COMMITTEE
ON SMALLER PUBLIC COMPANIES

Tuesday, 12 April 2005
9:30 a.m.

SEC Headquarters, 450 Fifth Street, N.W.
William O. Douglas Room, Suite 1C30
Washington, D.C.
The following individuals were present in person:

Committee Members:

Patrick C. Barry
Steven E. Bochner
Richard D. Brounstein
Pastora San Juan Cafferty
C.R. "Rusty" Cloutier
James A. "Drew" Connolly III
E. David Coolidge, III
Alex Davern
Joseph "Leroy" Dennis
Janet Dolan
Richard M. Jaffee
Mark Jensen
Deborah D. Lambert
Richard M. Leisner
Robert E. Robotti
Scott R. Royster
Kurt Schacht
Ted Schlein
James C. Thyen
John B. Veihmeyer
Herbert S. Wander
Committee Observers:
George J. Batavick
Daniel L. Goelzer
Jack E. Herstein

SEC Commissioners:
Chairman William H. Donaldson
Commissioner Harvey J. Goldschmid

SEC Staff:
Anthony G. Barone
Alan L. Beller
Mark W. Green
William A. Hines
Gerald J. Laporte
Donald T. Nicolaisen
Kevin M. O'Neill
Chester Spatt

CHAIRMAN DONALDSON: Why don't we get going if we can. Good morning to everyone. Once again, welcome to the SEC. I am pleased to be here for the first meeting of the Advisory Committee. I want to say again, as I said last night, to those of you that were able to be there how much we appreciate what you are doing here. This is a real service for the SEC. And I want to particularly thank Jim and Herb for their leadership, which has already been evidenced by the caliber of people sitting around this table.

As everybody knows, this work is very important to the country and to the SEC, and I might add to me personally. Having had a bit of involvement in helping to start and run a small business, I know what it is like to run a small business. And I know how difficult it is to get something to get something going. And I know how difficult a regulatory overlay can be in terms of damping down potentially entrepreneurship. So I think that it just goes without saying how important entrepreneurship and small business is to this country.

I have spoken on numerous occasions about the reforms that the Commission has passed in the wake of Sarbanes-Oxley. Last month, I took pen in hand and wrote a brief commentary that appeared in The Wall Street Journal entitled, "We have been Listening," and that is what we are
doing. This is a part of this listening process.

The SEC established the committee to examine the impact of the Sarbanes-Oxley Act and other aspects of the federal securities laws on smaller public companies. This committee will conduct its work with a view to protecting investors, considering whether are the costs imposed by the current regulatory system for small companies are proportionate to the benefits, and identifying the methods of minimizing costs and maximizing benefits. I know that you will present us at some point here, upon the completion of your work, some thoughtful recommendations, and we really look forward to receiving them.

Now I will ask all of you to stand if you will and raise your right hand and I will administer the oath. As a member of the Securities and Exchange Commission's Advisory Committee on Smaller Public Companies, do you promise to assist the Commission in evaluating the securities regulatory system of issuer disclosure, financial reporting, internal controls, and offering exemptions for smaller public companies;

Two, conduct the work of the committee and make recommendations on the current regulatory system that you believe will protect investors, ensure a regulatory system that minimizes cost, maximizes benefits, and facilitates capital formation by smaller companies, and faithfully
execute all duties of a member of the Advisory Committee
necessary and appropriate to meeting the goals and objectives
of the committee charter.

If so, will you please say I do.

[Members respond affirmatively.]

Thank you, please sit down.

I am going to turn the podium over to Alan Beller.

MR. BELLER: Thank you, Chairman Donaldson. I will
be very brief. I mostly want to echo what the Chairman has
already said this morning, both as to the Commission's and
the Division of Corporation Finance's gratitude to all of you
for having accepted this charge to be either a member, or in
the case of three of you, an official observer to this
committee. And, secondly, to underscore the importance that
we believe that this committee's work holds for us.

Obviously, most of the headlines about
Sarbanes-Oxley and its impact on smaller public companies in
recent weeks and months have focused on the internal control
provisions of Section 404 of that Act. That is certainly one
of the things the committee is going to, as we understand,
undertake to look at. But, as the chairman has mentioned and
as I have mentioned on other occasions, the charge of this
committee is broader than that. I think we are hopeful that
this committee will bring a focus to all of the provisions of
that Act and their impact on smaller public companies. And,
frankly, to go beyond Sarbanes-Oxley. It has been many, many years, it has been since the early 90's since our disclosure regime for "small businesses" has been looked at. And there are a number of governance issues that relate to smaller public companies that we believe merit your attention. And certainly there have been almost every year, or I guess every year at the forum that we run for small business, the issue of capital formation comes up as a major issue. That is certainly something that we are hopeful that this committee will also take a look at.

As we will discuss later in the day, there are a number of parts of the Commission and the staff, particularly, but not limited to, the Division of Corporation Finance where we hope to provide resources to this committee, and we hope to support the work of this committee. But having gotten a group as expert and experienced and talented as this around the table, we are really looking forward to receiving your recommendations. And I believe I speak for the Commission, I know I speak for the Commission in that it is also eager to receive your recommendations as to the matters that we should be looking at when it comes to our rules and other things.

With that, I am going to turn matters over to our two co-chairs, whom I would again echo the chairman and especially thank for having agreed to take on this
James Thyen and Herbert Wander, gentlemen, the floor is yours and the meeting is yours.

Thank you very much.

MR. THYEN: Thank you, Alan. I am Jim Thyen and good morning and welcome. I have a few opening comments and then I will turn the meeting over to Herb and he will conduct the meeting. I am not going to repeat what Alan and Chairman Donaldson said to us as we are generally in alignment with those comments. But this is the beginning of a new day. We have come together here, many of us meeting for the first time, and we are a diversified group, diversified in thought and experience and ability and in background. And we represent a broad class, a broad cross-section of constituencies of small public companies. And of course we are sponsored by the Commission to advise them on this matters.

Our goal will be to bring meaningful recommendations of change in administration and regulation, doing so in a way that the SEC willingly wants to accept our ideas. The law and its administration has at times forced cost choices and mind share shift on small public companies. That often is out of balance and not proportional. For some small public companies, it drives opportunity costs and is at odds with the global competitive world in which we compete.
For many companies, that cost is very much at conflict and increases the competitiveness of low-cost venues around the world. So the SEC clearly recognizes that. It recognized that fact and that is why we are chartered as an advisory committee.

And so we seek over the next 13 months to advise the SEC on how to gain greater balance and proportionality in applying the law. We do that recognizing that we represent and speak on the behalf of small public companies. That is a privilege of access to the public capital markets and it brings with it a higher standard of performance and compliance.

So we look forward to the journey and the beginning of a new day. Thank you for accepting the challenge of serving on this committee and serving with Herb and myself.

MR. WANDER: Thank you, Chairman Donaldson, Alan, and Jim. My remarks are going to start with how we are going to operate and progress through the end of our tenure, which hopefully will be within a year from now.

Jim and I are going to share chairing meetings. This meeting I am going to chair and Jim will chair other meetings. And we hope to follow parliamentary procedures but on hopefully an informal basis.

A number of people have asked me about our recommendations, how will they be presented, in what form, in
what substance, and then what happens to them. There are a
number of levels to look at this particular issue. First,
there is the statutory level, primarily Sarbanes-Oxley, and
the 33 Act and the 34 Act, all administered by the SEC.
Congress adopts those statutes and in order to change the
statutes, we would have to go make recommendations through
the SEC to change the statutory wording or sections of either
of those Acts or any other Acts. In forecasting where we are
going, I doubt very much whether we will be suggesting
legislative changes because those are very difficult to get
through Congress. It takes a long time. And I think there
are other more appropriate avenues for us to follow than
trying to have legislation changed.

So I am turning now to the SEC's ability to make
rules and regulations. The SEC has very extensive authority
to adopt rules and regulations to implement the congressional
statutes. And this is the area that is most fruitful I think
for our endeavors, is to at the end of the day make
recommendations to the SEC on how to change rules, revise
them, and hopefully in all cases improve those rules.

Now the SEC in adopting rules and regulations has
to act under the Administrative Procedure Act and so what we
will do is hopefully make recommendations in writing to the
SEC. The Commissioners will then consider those. And if
they are in agreement, they will then propose rule changes.
Those rule changes will be proposed publicly and then there will be a comment period required under the Administrative Procedure Act where the public will have an opportunity to comment on those changes. And then the SEC will consider those comments and a host of other factors in determining whether to adopt the rules that originally were recommended by us. And, as I said, this is where I think our major focus will be.

The SEC also has more informal processes. They can issue FAQ's, Frequently Asked Questions, that give the public and companies and investors and attorneys and accountants the ability to understand how to interpret and apply the regulations. The SEC may also issue what they call Concept Releases. There is a concept out there and they would like to flesh it out further without adopting it or proposing a specific rule. And that might be another avenue for us to pursue.

It will take some time so that those of us who are anxious to see changes made, hopefully we can make some recommendations before the end of our tenure so that the Commission can act on those and consider them earlier than others. But even if the SEC does that, they have a process to go through and it will take some time to do that.

Now what about the substance of our recommendations? I don't think any of us have any definitive
preconceived notions about what our recommendations will be,
but I suspect that if all of our recommendations are quickly
adopted by the SEC, we have probably not been bold enough.
And I think what we are here about is to really un-peel the
onion and to try and get at the guts of what is investor
protection and then try and improve it in light of what the
economy needs in terms of promotion of smaller business,
entrepreneurship, particularly in the global economy.

It also may take more time for some of our
recommendations to come to fruition. It may be they are a
little premature and so maybe it will be a couple of years
from now or even 10 years from now when the wisdom of our
recommendations are finally seen. But I hope that with our
foresight and our ability to gather facts and bring to bear
all of our experiences, our recommendations will be keenly
accepted by the Commission and then by the public and then
adopted. And those that may take a little longer, we will
have to keep our eyes on that ball and make sure eventually
they are adopted.

That is enough of the introductory remarks. Just a
housekeeping item and that is when you speak, would you
please announce your name because we are web casting this and
it is very difficult for anyone listening to this to try and
figure out who is speaking. So please announce your name.

And now I think we can begin to discuss the agenda.
The first item on our agenda, formal item, is approval of the by-laws. And those have been submitted to you in your pre-meeting packages. Is there any discussion or a motion to approve the by-laws as submitted?

MR. CONNOLLY: James Connolly. I move that we adopt the by-laws as submitted.

MR. WANDER: Is there a second?

MR. DENNIS: Leroy Dennis, I second it.

MR. WANDER: Thank you. And now is there any discussion before we hold a vote on the by-laws? Hearing none, all in favor say aye, please?

[Chorus of ayes.]

MR. WANDER: Opposed or abstentions. Okay. Thank you very much. We got our first item of business done very quickly, and we are off to a great start.

Now as sort of a housekeeping matter, I think all of the committee members have been told that there is a federal statute dealing with advisory committees and that much of what we do, including our meetings, have to be in the public forum, which is fine and we are very compatible with that. In addition, taking advantage of web pages, I think a lot of what we do will be very transparent because the committee's agendas, major papers, et cetera, plus all public comments that we receive will be hopefully put on the web page. And I would like Jerry Laporte to just take a minute or
two to describe our web page so all of you are aware of sort
of the fish bowl that we are going to be living in.

MR. LAPORTE: Thank you, Herb. All of you in the
materials that were passed out this morning, you got a sample
of a recent printout of what this advisory committee's web
page actually contains. We have been updating as we go
along. We intend to keep on updating it as the life of the
advisory committee proceeds on. We are anxious to have any
suggestions. I know there are several people on this
advisory committee who are much more technically competent
than I am and perhaps not all the SEC staff. But we are
interested in getting some suggestions. If anybody has any
specific suggestions on how we can improve it, that is fine.
Right now, we have releases on there, various Commission
releases that have been issued, published for the advisory
committee. We have materials for this meeting. I think we
received three written statements for this meeting. They
should all be up. And as we attract additional written
statements for different meetings, they will all be up on the
web page. And if anybody has any questions, I can try to
answer them today or you can give me a call or give one of
the staff members a call at the Office of Small Business
Policy. I think you have our numbers in the contact list
that was sent out, and we will be glad to try to help you.

MR. WANDER: Are there any questions for Jerry? I
think in working other commissions, particularly for the American Bar Association, I have found these web pages to be invaluable because you have at your desk access to almost all of the papers and submissions that come in and almost on an instantaneous basis. And so it is very helpful. And as the day goes along, you will see that we do want to get not only input from the committee's members but also from the public. And we are going to encourage that so that all of our work, all of the ideas that are out there that we may not be aware of can be presented to us.

So having no questions on the web page, I would like to move on to the next item on the agenda, which is a substantive item, and that is a discussion of the committee agenda, which at the conclusion of today's meeting under item VIII on the agenda, we would like to have formal approval. Now what the agenda is is a sort of roadmap that Jim and I and the staff members from the SEC helped prepare and it is not written in concrete. It is written as a sort of prod everybody to think of additional items that they would like to have or to say this is too ambitious, perhaps we should eliminate some of these items on the agenda.

What will happen with the summary agenda, if adopted by the committee, is it will be published by the SEC for comment, and we will ask members of the public to comment on whether there should be items put on the list, items
deleted from the list, areas where improvement is needed. We are going to ask for specific recommendations. It is very good to complain but complain with a purpose in mind of telling us how to improve things. And also whether the cost benefit analysis is working properly as Jim mentioned in his opening remarks. So this is going to be the first piece of information that we send out to the public. This is our agenda, tell us whether you the public, whether investors, small business people, accountants, lawyers, et cetera, anyone who is interested, believe it is the right agenda and we will ask for comments I believe in 30 days once it is published.

So with that as an introduction, the floor is open for comments, suggestions, revisions, and improvements to the agenda. We couldn't have been that perfect.

MR. CONNOLLY: Mr. Chairman, James Connolly. Under capital formations, number seven, I would propose that we add an examination of the role of finders from a registration standpoint. I know there is a lot of discussion to institutionalize finders and the role of finders and the registration requirements of finders such that the SEC's mandate for investor protection is met and that professional capital finders have a central point of both registry and uniform registration without the onerous burden as is currently determined with a full broker-dealer registration.
MR. WANDER: Are there any further comments on adding the subject of finders? For those of you who aren't quite familiar with this, this has been a subject, a repeated subject I should say, of the SEC's Small Business Forums, which in the background and briefing materials we sent out to you we have the last three year's recommendations. That has been one of the recommendations that has appeared. And the purpose of that is essentially to smaller businesses frequently raise money on a more informal basis. They don't have the benefit of the large investment banking firms. And so the question is whether the person who provides access to capital should be registered or whether they are operating within the law. I think that is the sort of scope of what the suggestion is.

Any further comments on that? I suspect what we ought to do is we will include it and then at the end of the day when we approve this, that will be one of the items included unless somebody has any disagreement with that.

MR. CONNOLLY: Thank you, Mr. Chairman.

MR. WANDER: Did I see a hand somewhere? Yes, Mark.

MR. JENSEN: This is Mark Jensen. There have been a number of letters and some even this morning. I am wondering if the content of those letters, if anybody has had a chance yet to reconcile comments from the public with the
agenda and add appropriately the things that have been raised
in those letters? I haven't looked at everything that is in
front of me.

MR. WANDER: I did read the two letters that came
in last week, and I think they are covered. I haven't read
this morning's. Maybe we could do that.

MR. JENSEN: Maybe we could do that before we
finalize the agenda.

MR. WANDER: To finalize the agenda, that is a good
idea.

MR. JENSEN: And make sure because I think if the
public has taken time to react to it, we should certainly had
their suggestions.

MR. WANDER: Any other additions, corrections?

Yes, Dick?

MR. JAFFEE: Dick Jaffee. I don't know whether
this is a matter for the agenda or for the mission of the
commission. I had been under the understanding initially
that our work was going to be limited to the effect of
Sarbanes-Oxley. This morning I understand more, that it is
broader in scope. Is that a matter for discussion on our
agenda before we even get started or has that been accepted
as part of the mission of the commission from the beginning?

MR. WANDER: I think if you read the SEC's
announcement of the establishment of the advisory committee
and our charter, which is on file, it is broader than Sarbanes-Oxley. For example, in this whole capital formation area, there are a number of issues that have been around, as Alan said, for 10, 12, I guess 13 years, since the early 1990's. It is a project that Congress is very interested in is promoting smaller businesses. And so I would think that based on our charter and the direction from the Commission, we should continue to include topics other than just Sarbanes-Oxley unless somebody has some objection to that.

MR. JAFFEE: Well, I think we should too but I am a little bit worried that if we make it so broad that our efforts are going to get diluted and we are going to have trouble within the time frame, focusing down and getting something accomplished. That is a comment.

MR. WANDER: That actually is a very good comment because when we prepared the agenda, we probably put on more than we can actually accomplish. That is one of the reasons we established subcommittees, so that we can leverage the talent that is on the committee in various areas so not all of us have to attack every area. And I would hope that the subcommittee chairs would come back to us during the whole course of the deliberations and not only feel free to add new topics that come up but also to say we just can't get this done in time and do a good job on that. And then part of our final report may be an agenda for future issues that we
 weren't able to cover. But this is a good point, Dick.

Any others?

MR. SCHLEIN: Mr. Chairman, Ted Schlein. I think possibly under Section 6, accounting principles, I would like to propose that we maybe discuss at some point the effect of the impending stock option expensing might have as a burden, an undue burden on the small cap companies and highlight that as something that we should at least discuss and evaluate.

MR. WANDER: Any other comments on that particular topic?

MR. DAVERN: Alex Davern. I would agree that that is a topic that should be considered.

MR. WANDER: Don Nicolaisen will be here later so we will make sure we tell him that after he has worked so hard in putting out his release last week on that issue.

Any other comments? And if no objections, we will include that in the final vote under item six. Thanks, Ted. Janet?

MS. DOLAN: Chairman Wander, this is Janet Dolan. As the chairperson of the subcommittee on Section 404, I am not recommending any additions to the outline at this time, but I would just follow up on your previous comment, which is to say that I think it is quite obvious from reading the agenda that the categories under Section 404 are probably more generic than the other categories, they are very broad.
And we will do our best as soon as we can to help define some of those and break them down into more granular subsections so it is easier for the public to direct their comments on specific activities that are under our scope. So we will do that.

MR. WANDER: Thank you very much. John, did I see you had your hand up?

MR. VEIHMEYER: Just one comment on the list.

MR. WANDER: Your name?

MR. VEIHMEYER: John Veihmeyer. One comment on the list, recommendation in item 62 under accounting principles where the agenda indicates that one of our objectives is to identify priority accounting principles where modifications may be considered, which I would think would include the consideration of stock option accounting. And I am wondering whether or not we want to identify in our agenda only one specific accounting principle when there may be a number of principles that would fall into that category that we would address. So I am perfectly in support and in agreement with evaluating stock option accounting if part of the charter. I am wondering about whether we ought in the charter -- or the agenda, identify one of what may be several or many principles that we would want to look at. That is my only comment on the last recommendation.

MR. WANDER: Well, I think there was a Texas and a
WEST COAST sort of focus on the expensing and it is such a
big item. Perhaps I will play and lawyer and what we could
do is put "including but not limited to."

MR. VEIHMeyer: Agreed.

MR. WANDER: I think unfortunately the water may be
under the dam but it may not be under the dam for smaller
businesses and there may be ways of cushioning the blow,
particularly in terms of cash is king or queen. And so the
use of non-cash compensation can help a great many small
companies.

These ideas have all been very good. Are there any
others? Yes, Steve?

MR. BOCHNER: Mr. Chairman, Steve Bochner. This
doesn't fit neatly into any of the categories but it is
taking longer for companies to get public. And so I am
wondering whether one of the issues we ought to look at is
the exemptive scheme for employee benefit plan issuances
under Rule 701 and whether the thresholds still work given
the longer period of time it takes for companies to be in a
position and to have the infrastructure to go public. So it
is definitely not capital formation, it doesn't fit under
that.

MR. WANDER: It might fit under your committee
actually, governance and disclosure. I don't know. I don't
know. You are the third person who has mentioned that by the
way in the last 24 hours. Those of you who know about the
issue it is whether exemptions for essentially private
companies to offer stock-based compensation should be
enlarged. It is an item maybe we should -- does anybody else
have any comments on that particular item?

MR. LEISNER: Herb, Richie Leisner, there is the
Section 12 ramifications of those situations we ran into sort
at the end of the tech bubble, if you have enough option
holders you could wind up inadvertently being required or
possibly being required to register under Section 12 as a
public company.

MR. WANDER: That again, let me elaborate just
slightly on that. Unfortunately, the securities laws use
registration in two areas, one is under the 33 Act when you
are selling securities to the public, you have to register
it. In the 34 Act, if your company is large enough and has
more than 500 shareholders, you have to "register" again and
that is not to register a stock sale but to register the
company. And that is what Richie is talking about, that if
you have a lot of option holders, you can become a public
company and there are some large companies that were public
in that way. I think the United Parcel Post was one of them
before they actually went public. We should figure a way to
fit that in, and we will do that and I will let you know how
we fit it in before we vote on it if that is all right with
Are there any other suggestions, comments, improvements?

MR. DAVERN: Mr. Chairman, it is Alex Davern here. I had one that I would like to consider under Section 2. It is very focused obviously on the execution of 404 and 05 and what worked well and what didn't work well and so on. I think it might also be appropriate to consider at the subcommittee level the effectiveness of internal controls as a fraud prevention mechanism at small public companies, specifically fraud perpetrated by executives and senior officers and evaluate how effective it is in principle at preventing those frauds. That may require some consideration of the post mortems of actual frauds that have had happened and so on that we might want to consider.

MR. WANDER: Any comments on that? In fact, if you look in your briefing book, we sent out for the public that is here, we sent out a briefing book with articles and statutes and other information. One of the articles in the briefing book is by the AICPA, which is a recent paper that they have published. It is entitled, "The Achilles Heel of Internal Accounting." And it is management override. So, yes.

MR. DAVERN: Sorry, that is exactly what I was referring to and there are other similar data out there which
I think seriously should be considered by the committee in terms of the fundamental effectiveness at the small company level of internal controls.

MR. WANDER: So is there any comment on that? If not, we will add that, Alex.

MR. DAVERN: Thank you.

MR. WANDER: Thank you. Any other comments?

MR. CONNOLLY: Mr. Chairman, James Connolly. Once again, broadly under item 7, capital formation, as there is often necessary tension between the Securities and Exchange Commission, the National Association of Securities Dealers, and the North American Securities Administrators Association, and much of that impacts the process of essentially accessing capital and going public as there are rightly currently I believe multiple different, whether they are merit review states or whether they are exemption states, and I think of 504 specifically, which is the $1 million raise, I would like to think that we could do certainly not an exhaustive but I expect that we will be receiving comments throughout the period from both the NASD and from NASAA, that we take a look at the interplay between the Securities and Exchange Commission, NASAA, and the NASD because, as you well are aware, any company looking to file to go public has to file a 15C211 on the smaller cap side. And that is examined, submitted by a broker-dealer for no compensation, and then it
is examined by the NASD examiners, often with multiple
comments. And that information from the 15C211 is not
materially available to the public, both prospectively and
archivally. So perhaps there is a reason for us to look at
how these different organizations work, interplay of the
access to capital side of things.

MR. WANDER: Any further comment on that
suggestion? It is the interplay of state regulation, and we
have Jack here, who is an observer from NASAA, and the SROs,
which means self-regulatory organizations, such as NASDAQ.
And I think that could be added to the interplay of the state
regulation and SRO regulation under item number seven.

MR. CONNOLLY: Thank you, Mr. Chairman.

MR. CLOUTIER: Mr. Chairman, Rusty Cloutier. One
thing, I don't know exactly where it fits, but definitely
under the accounting rules in other places, a lot of
corporations have different regulators. As an example, I am
in the banking business. We have the Federal Reserve, the
OCC, they have their own rules and regulations and sometimes
they co-exist with the SEC, sometimes they do not. And
sometimes it puts companies in a very difficult situation.
There are other laws, such as that requires banks to use GAAP
accounting automatically, it does not give any discretion and
sometimes changes. And I think maybe in some industries we
need to look at that carefully. And I think the banks
themselves are going to be looked at in the future as we hear
about this to be utilized somewhat as agency to work with
some groups, as we were discussing last night at dinner, to
make sure that GAAP accounting is followed by companies and
whatever. So I think that too needs to be looked at very
carefully.

Just one slight example, being in the banking
business, I have signed a call report every quarter for 36
years. And the OCC has plenty ability to put me in jail if I
file a false statement. So attestation to sign at the end of
the quarter for the SEC is no big deal for me because the OCC
comes in every year and verifies every figure. So I think
this is something we need to look at and other issues like
Drew was talking about, other regulatory agencies and the
people that are involved, how does this affect us going
forward. I don't know exactly where it fits in but it is
something I think we need to look at.

MR. WANDER: Well, as a first stab at that, perhaps
we could say something like overlay of other regulatory
accounting requirements, regulatory accounting and
substantive requirements, at least put it in the accounting
principles for the time being. But it is not just banks but
it is other regulated industries that do have -- particularly
in the insurance area that do have an overlay of additional
requirements. That is a good suggestion.
MR. DENNIS: Mr. Chairman?

MR. WANDER: Yes.

MR. DENNIS: Leroy Dennis. Under item five, I would like to suggest we have got in there the special exchange Forms 10-K, 10-QSBs. I would like us to look at the benefits of a full 10-Q filing for small business filers. I would include in that whether or not there needs to be auditor involvement. For example, should we go to a six month full filing and then some kind of limited disclosure on a quarterly basis and would that still give the investors what they need for a smaller business and yet take some cost burden off of those full 10-Q filings.

MR. WANDER: Any comments on that suggestion?

MR. CONNOLLY: Do you mean on a voluntary basis or a submission to the Commission as opposed to a voluntary audit?

MR. DENNIS: I guess I haven't thought that far through the process. The only thing I would make sure is that if this was allowed in a company, to make sure that there is adequate disclosure to the shareholders of what information they are and are not getting.

MR. CONNOLLY: I will ask because the fellow who was the president of the pink sheets, Carma Colson, has a very, very strong position on compelling some level of disclosure even for his non-reporting and I very much support
MR. DENNIS: My initial thought is that there would not be no disclosure, that maybe you would need some kind of revenue information, something like that. I haven't thought it all the way through.

MR. CONNOLLY: Ownership.

MR. DENNIS: Ownership, maybe some kind of brief MD&A disclosure or something like that. But is a full certified or reviewed 10-Q required and does it add investor benefit for a company of say $50 million, $25 million in revenue.

MR. WANDER: Any other questions or comments about that suggestion? In fact, fact one of Alan Beller's predecessors, the late Linda Quinn, had suggested going to a semi-annual report for all companies. My own personal view is I don't think that is possible in today's world but for smaller businesses, there may be some merit in examining what they should be doing on a quarterly basis is what you are saying, isn't it?

MR. DENNIS: Yes.

MR. ROBOTTI: Mr. Chairman, Bob Robotti. I don't see why we don't put it on the agenda. Of course I fall into the camp that says the other thing since I am an investor in companies that have $50 million market caps, I do find 10Q's to be an extremely valuable piece of information and their
management discussion analysis, the results, those are all
important things that I don't see how you have a market that
kind of properly adjusts the pricing and identifies things if
you don't have kind of quarterly reporting. So there is no
reason not to put it on the agenda. I fall into the camp
that says as a user of those statements, I find them
extremely useful. And if I did not have 10Q's, that would
impair our ability to understand companies and developments
and companies and therefore impact pricing I do think.

MR. WANDER: You can see the diversity of our
committee. It depends whether you are buying or selling,
right?

MR. DENNIS: And the only question I would ask is
whether or not you need the full information of the 10Q for
say a $50 million and the expense and cost of gathering that
information. Could you make appropriate investor decisions
with less information? That would be what I would ask you to
consider.

MR. WANDER: But we should add it and we will put
consider the benefits of. And we will see where we come out
at the end of the day. Yes, Steve?

MR. BOCHNER: Just a comment on that. Steve
Bochner. A related question is perhaps we can take a look at
is that the way the CEO/CFO certifications are set up is that
you really can't file unless you can certify you fully comply
with the form. And a lot of companies are having trouble filing because of whistle blower issues or 404 related issues. And so I think one of the things we should look at is whether it is a good thing to have companies file even though for example the review might not be completed or whether it is better to wait until you get it all done even if that means that you are not going to be able to get the Q on file for a couple of quarters. So I think it is related to that comment. Is the fully comply requirement good for investors?

MR. ROBOTTI: Bob Robotti again. That is a great point because we have over the last number of months been confronted with a number of situations where companies have not been fully compliant, therefore have not reported results and potentially have gone for months at a time without really disclosing financial data. So that you really do have a void that really starts to open up. Here they are telling you we are not sure about internal controls, we are not sure about what the right numbers might be, and haven't even disclosed what they think the preliminary numbers might be. So therefore that really starts to create a lot of uncertainty in the marketplace, the failure to give any disclosure.

MR. WANDER: I think our friends from the SEC would say you should do as much disclosure as possible under those circumstances but it is a good subject now with more avenues
of question open for people, we should look at that.

MR. ROBOTTI: Of course, that is not necessarily a small business issue, right. There are very significant, very large companies today that are not publicly filing on a timely basis and have not disclosed financial information.

MR. WANDER: I think we will find in a great many situations what we are going to be examining applies across the board, not just to smaller businesses. I think the proportionality does but I think in terms of some of the regulations, as you just said, that could apply to any company.

MR. BATAVICK: Mr. Chairman, George Batavick. I notice that in Section 6, accounting principles, it would appear to me that the focus is on existing accounting standards. I would suggest also that we consider in the future accounting standards, effective dates and transition, and whether or not they should be different for small business filers versus the larger public companies. As everyone is probably aware, a lot of times at FASB, when we do issue accounting standards we give extended effective dates to private companies. We also give them maybe transition differences that are not afforded public companies. So perhaps that should also be on our list for considering for future standards.

MR. WANDER: Any comments on that?
MR. ROBOTTI: I think that is an excellent suggestion.

MR. WANDER: Very good. I find myself spending more time trying to figure out the transition rules than the rules themselves sometimes. Okay.

MR. SCHLEIN: Mr. Chairman, Ted Schlein. There is an environmental factor that I don't know where it exactly fits but I think it is important to make sure that it gets discussed and figure out the impact, which has to do with a lot of the small cap companies inability to get Big Four accounting attention. So it is not necessarily a particular auditor issue, it is the environment that has been created where companies have been dropped from Big Four accounting attention, what positive or negative impact that might have, I won't draw a conclusion yet. And also environmentally something that we see a lot is the changing the dynamic between the auditor and the company where it used to be one of a collegial business partnership. I would characterize it more as adversarial or at least potentially controversial. And, as I said, it is an environmental dynamic that I think is evolving and is starting to exist. And I am not exactly sure where it gets handled as part of the agenda.

MR. WANDER: Well, are there any other comments on that?

MR. ROYSTER: Mr. Chairman, this is Scott Royster.
I agree strongly with the point that was made. I think that there may even need to be an entire section devoted to a conversation about the role of the outside audit firms relative to all the legislation that has been passed because the power dynamic has shifted dramatically. And really the outside audit firms are the gatekeepers of a lot of the legislation that has been passed. And I think there needs to be a much broader conversation about the role of the outside audit firm as it relates particularly to smaller companies. And so I would wholeheartedly support the notion that there perhaps even be another section devoted to that topic.

MR. WANDER: Did I see Janet?

MS. DOLAN: This is Janet Dolan. Again as the chair of the internal control, I was going to offer to take at least the resource implication because I think that is one of the cost constraint factors into ours. But if the decision of the body is to have a separate section and then put some of these issues there, that would be fine as well.

MR. WANDER: We could add I think something to item six, current industry environment and discuss the concentration of the Big Four, the smaller firms, and the gatekeeper issue that Scott has mentioned.

MR. DENNIS: Mr. Chairman, this is Leroy Dennis. I understand the SEC and the PCOAB are in the process of a joint statement on guidance to auditors relating to this
topic? I don't know if anyone from the SEC can comment on
that?

   MR. WANDER: Well, Dan Goelzer.

   MR. GOELZER: Of course as I think most of you
know, there is a roundtable tomorrow on 404 reporting. And I
think many people feel that at least part of the adversary,
arms-length relationship between clients and their auditors
comes out of some of the things related to 404 reporting. So
I think it is at least a subject that will be discussed at
the roundtable tomorrow and possibly one of the things that
either the Commission or the board or both of us will follow
up on from the roundtable.

   MR. WANDER: Alan?

   MR. BELLER: I would just add I agree with Dan. I
think it is virtually certain that the issue of the
relationship between auditors and preparers will be something
that is discussed in the roundtable tomorrow. I took Scott
Royster's point frankly as being a little broader than just
the issue of whether that relationship has become excessively
arms-length. As I say, I thought that was a broader point
but I leave that to the committee.

   MR. ROYSTER: Mr. Chairman, Scott Royster again.

   It is a broader point because I think we need to look at
things such as cost of outside audit firms. The
supply/demand imbalance that exists given that there are only
four firms and there are thousands of public filers, 

obviously there are lots of other outside audit firms but 

most public companies at least I think have the intention of 

defaulting to one of the Big Four but it is becoming more and 

more difficult for smaller companies to do so. And then of 

course the various power dynamic issues that I think have 

really strained relationships. We have historically at my 

company looked to our outside audit firm as professionals we 

could go to for advice and counsel. And, quite frankly, that 

relationship no longer exists for the most part. We have had 

to bring in a lot of internal resources. And that is fine. 

If we have to basically hire up to help us understand certain 

matters, we will do that. But with respect to smaller 

companies, I think that is a fairly significant economic 

challenge in the short term.

MR. WANDER: I think the note keeper will make that 

broader Alan. This has been a very helpful, thoughtful set 

of comments. Yes, Dick?

MR. JAFFEE: Dick Jaffee. Herb, can I just make 

one more comment on this whole subject of the auditors and so 

forth. It seems to me that another thing that has happened 

besides the lack of collegial consultation is that the whole 

issue of materiality in the audits has been put into some 

question as it related particularly to the 404 thing where 

call these new definitions of material deficiency and all 

these sorts of things have come up, and if we are going to
look at that whole relationship, I don't know what we can do
about it but I think it is a reality that the things that we
used to rely on in terms of size of problem and material
impact on the result have been all sort of thrown up for
question. And I don't know where they come down right at the
moment frankly.

MR. WANDER: I am just wondering the whole question
of materiality, you could write a book about, which is not to
say we shouldn't discuss it.

MR. DAVERN: Mr. Chairman, Alex Davern. I think it
would perhaps make sense if I could make a suggestion that we
add that to the 404 or the internal control subcommittee as I
think that is an absolutely key element we have to address to
try to make sense of the cost benefit relationship for
smaller companies. And I would like to also add on to what
Scott said earlier on that I think we should somewhere in the
committee's work specifically address the issue of the point
of confusion that exists out there in the market today around
what auditors can and cannot give advice on. And that we get
a practical, sensible common sense end result to how auditors
and their clients can engage in meaningful business
conversations because there certainly seems to be different
interpretations between what the public comments of the SEC
and the PCOB have been and what the practice is on the ground
in dealing with public company auditors.

MR. WANDER: Janet, we are loading you up.

MR. DENNIS: I was going to say -- Leroy Dennis again, Mr. Chairman, I would be glad to take that one on as part of our group. I do question whether or not that is a small business issue or just a general issue. I think it is broader than just the small business side of things.

MR. WANDER: Which particular issue, the

materiality, the advice --

MR. DENNIS: No, the relationship and advice with the auditors.

MR. WANDER: Okay, that is a good idea. It should be under --

MR. DENNIS: Under item six.

MR. WANDER: Six.

MR. CONNOLLY: Mr. Chairman, one more time, I promise, James Connolly, a capital formation item. I think we need to take a very hard look at the real world implications of a number of U.S.-based companies, American companies being unable to attract capital in the United States and in point of fact turning to places like the alternative investment market in London. I was told yesterday that there is a junior exchange I am unfamiliar with attached to the Tokyo Stock Exchange where there are now some American listings. Certainly I am familiar with a
number of companies who have felt that they have needed to go up to Canada to access capital. And given the implications to the competitiveness and ingenuity and the impact on small business being able to attract that capital domestically, I would certainly like to look at what I am aware of being a prospective, essentially a merging markets exchange that is by no means universal but there is some movement on the American stock exchange to take a look at whether or not there is an interest level. The AMEX based in New York based in New York just this past week elected a board of governors. They are now an independent exchange again having brought themselves back from NASDAQ. And they are both looking for new business opportunities but also perhaps we can keep it home as opposed to having to shop it abroad. I would like to basically examine the needs to access international capital markets when in fact the smaller companies are often finding it difficult to do that here and whether or not we can perhaps recommend some solutions to that broader question.

MR. WANDER: I guess something like broader access to capital including foreign markets would be one way to describe that. Jim points out is there anything we should take off the agenda? Every one of these topics could, as I said, you could talk about materiality sort of forever and at the end of the day I guess it is really the courts who are going to be the final arbiter of what is material. But are
there any items again that we might want to think are low
priority that we should delete or we can do this. When the
subcommittees meeting informally, you can prioritize I think
your items so that nothing falls off the list but you will
attack the top 20 rather than the top 40 or whatever the list
is.

MS. DOLAN: This is Janet Dolan. And I was just
going to suggest the same because I think all of us that have
served on commissions and advisory boards in the past know
that well-intentioned scope creep is the nemesis of all good
commissions. So I would just urge that each of the
subcommittees have that opportunity to prioritize and then
also that the whole advisory board be aligned on where we can
best use our resources to be most effective.

MR. WANDER: I think you can't overemphasize that
point because half a dozen really good recommendations that
are adoptable and implementable are far better than 40
recommendations that aren't well thought through.

MR. CLOUTIER: Mr. Chairman, Rusty Cloutier again.
I want to go back to Scott's point again. I just received,
and I would be glad to share it with the commission, a survey
done by the North Carolina Banker's Association. And North
Carolina I think we would all recognize has some of the
larger banks in the country and some of the smaller banks.
And it was a very interesting survey that the current cost of
being able to comply with accounting rules for the largest corporations, largest banks is about 1 percent of their earnings. But to smaller banks it has become 9 percent of their earnings. This has become a significant situation I think for smaller companies is that smaller companies having to meet these cost requirements are continuing to put a burden on them. So I think that is something we need to look at very carefully. And when you tell a smaller company, well, you can't go to your auditor to ask them questions, it costs a lot of money to go get another party to do the same thing when you are a very in my business non-complex filer. The business I am is making loans and taking deposits. I don't do options and arbitrages and all of this stuff. So I am much simpler to look at for an auditor than a larger company but yet the costs sometimes will be very strong. But if any of the committee chairmen would like, I would be glad to share those comments from that North Carolina Banking Survey, and I know they will be glad to send you a hard copy of what they have done.

MR. WANDER: In fact, if you could get it to Kevin, he will distribute it to everyone.

MR. BROUNSTEIN: Mr. Chairman, can I make a comment? This is Rick Brounstein. I was going to come back to 62 and say when we were talking about stock options is what we really need to do, you even referred to it, is the
concept that cash is king. And on so many of these things that I am hearing right now seem that they are very interrelated with these issues. If we simplified the accounting and we looked at what was important for little companies, how are they evaluated. Everyone wants to know my burn rate, they don't really care how I account for warrants or stock options. And when I raise capital, they don't care whether it goes in debt or equity, they want to know I got another $5 or $10 or $15 million. And so many of those things, if we solve those, I think we are going to find that there are going to be a few larger pieces. And I would suggest within the accounting rules, it is sort of the cash is king concept that will simplify a lot of the issues. A lot of the reasons why I have to go now and talk to another accountant because I can't talk to my auditors, it is not on the basic accounting that produces my cash statements, it is on the accounting for warrants or stock or some of the new FAS-150 or some of these new EITF's that seem to keep rolling out.

MR. WANDER: We will add something to that effect to accounting principles. Yes, Mark?

MR. JENSEN: Mark Jensen again. One thought that I would like to add, I don't want to add something more to the agenda because I think it is getting full. It is past full. But I think it is implicit in a lot of this but I would like
it to be explicit within each one of the subcommittees that when we are talking about public companies, I would also like there to be a discussion around companies about to go public or thinking about going public and whether there should be specific relief under certain rules for those companies and how we might be able to make it easier for companies going public to access public capital markets without making a huge investment in infrastructure prior to actually taking the company public.

MR. WANDER: In fact, someone commented to me that Sarbanes-Oxley, once you file a registration statement to go public, you are public. And not everybody makes the journey to a closing and so they are in the box at least at that point. So that is an area.

MR. JENSEN: I would like us as we go through this think about the impact that maybe this is having on the private capital markets as well in terms of the exits for venture capital firms, in terms of a lot of business strategies include accessing the public capital markets and whether or not these rules are forcing a change in business strategy I think would be a good topic.

MR. WANDER: Well, the whole phenomenon of going dark versus going private versus essentially merging instead of going public and the implications of all of those on frankly the economy.
MR. JENSEN: And I think the availability of opportunities for individual investors to invest in those companies that choose not to go public but rather get acquired.

MR. WANDER: Any other comments? Alan, would you mind, do you have sort of an overview of what we have just been through to sort of see what we are missing or what we should add?

MR. BELLER: No, I don't really have any comment. I agree with you that every one of these issues is an important one and in a world with infinite time and resources, this committee would deal with them. My reaction to the agenda, even as originally presented this morning, was the same as yours and other members of the committee, which is that it was already certainly an ambitious and perhaps an overly ambitious list. I think these changes, none of which I would have any quarrel with as interesting topics, merely make it more overly ambitious. And I think what that does is make it incumbent on the committee and in the first instance on the subcommittees and then in the committee to make a serious attempt to prioritize things and work on the ones where you think the impact for "smaller public companies" is greatest.

I would also echo the point, I think a lot of what has been mentioned or some of what has been mentioned, the
issue of materiality under 404, for example really is an
issue that is across the board and not limited to smaller
public companies. I think the impact of the definition may
be greater on smaller companies because the impact of the 404
exercise itself is greater on smaller public companies. And
I think in prioritizing what you want to focus on, I think
maybe one of the things to look at is where is the committee
really going to be focusing on its energies on things that
are special to smaller public companies that might not
otherwise get the attention as opposed to things that in fact
impact smaller companies but impact them as part of the
overall universe. But I have no quarrel with adding any of
these things. I just think you ought to look at your
calendars when you are thinking about how many of them you
can do. And, as I said before, I don't think it is our place
to give you a whole lot of direction on what to focus on so
long as they are plausible and reasonable subjects because
with the talent around this table on the committee, the
reason we have you and have asked you to do this is so that
you can give us your advice and we don't really want to get
in the way of that.

MR. WANDER: Are there any other comments,
suggestions?

MR. CONNOLLY: Mr. Chairman, if I could just speak
to Mr. Beller for a moment on that subject.
MR. WANDER: It is Drew Connolly speaking.

MR. CONNOLLY: I am sorry, Drew Connolly. We are all very pleased and honored to be volunteers to move our agenda items, to contribute to the common wheel in the public discourse and hopefully provide some solutions. I am aware that there is an authorized budget in support of this committee. I suspect largely that would be for the human resources that Mr. Laporte would have available to him. I am wondering however whether or not the four subcommittees in fact would have the latitude or the leeway to engage subject matter experts to assist us in doing our role or whether that is not in our purview?

MR. WANDER: I actually don't think it is in our purview at this point. But if someone wants to raise that issue, we obviously could address it. Is that correct, Alan?

MR. BELLER: I think that is right. Both parts of that answer I think are correct.

MR. WANDER: Before we close this discussion, Jim and I set out some over-arching principles. And let me repeat those and add one to that. Those are first to further the commission's investor protection mandate. Second, is to seek cost choice benefit inputs. Third, is to keep it simple. Fourth, is to maintain a culture of entrepreneurship. And, fifth, is capital formation should be encouraged. I am going to add another one and that is we
must prioritize our recommendations because having been
through exercises like this in the past, I know that
everybody has an agenda item that they think is absolutely
crucial and it is important. But the fact is we only have a
certain amount of time and resources, and we will have to not
deal with every issue. And, as I said, that doesn't mean at
the end of the day we can't put a list of open items that we
suggest another commission or another committee or the SEC
itself take on. So they don't drop off the face of the
earth. They just don't get done by us.

MR. BELLER: I will give you an example of that,
Herb, if I can break in for a second. I think the question
of materiality is something certainly at least in connection
with 404 I would not dare to pre-judge what the commission or
staff or the PCAOB board or its staff would come out, but I
think that is an issue that in the broader sense not limited
to smaller public companies is something that we certainly
will be considering in the coming weeks and months.

MR. WANDER: Yes, Janet?

MS. DOLAN: Mr. Chairman, my question as the chair
of the 404 is that is a, yes, we are interested in it, we
could use your help or there will be other forums in which it
will get a much better airing and leave it to them?

MR. BELLER: No, I think it is the former rather
than the latter but I think in terms of thinking of where you
want to put your resources, one of the things that the subcommittees and the committee probably ought to want to consider is sort of what other energies of what other people are going to be devoted to it. I think that is the point that Herb was making.

MR. WANDER: And I guess Jim reminded me, and I do now think we ought to mention part of our charge and our over-arching principles to see where if possible there is a break point to have a differential regulation for smaller businesses. And I use smaller rather than small because we really have to address the question of what that means. We have set out, there are some break points that exist in the law today and a proposed one with companies of over $700 million in non-affiliated market cap. So there are breakpoints. The real question is, and we have it on the agenda, but I am just emphasizing it, are those the right ones? Is market cap the right metric or should there be some other metric? Should it be risk-based not size-based? And what kind of meaningful regulation can you have? I know for example people have not used the small business sort of regimen which has under $2,500,000,000 because there are not that many companies and while the regulations are I guess less onerous, they still are formidable. And I think many at least securities lawyers would just as soon follow the regular procedures, it is just as easy as the less onerous SB
regulations. So part of our charge is also to really address what are smaller businesses and how can we make a meaningful difference in their regulation.

With that we are actually very early but I think we can take a break now. Our subcommittees are going to meet informally and discuss now based on this full discussion of what their agendas are, how to organize themselves and they will report back to us after the break at 1:30. And we will call on each of the subcommittee chairs to give us a brief report on what they decided and how they are going to operate. And then we will discuss factual input needed and then turn to our timetable. So unless there is anything else anyone would like to raise? Yes, Alan?

MR. BELLER: I just would raise a procedural point. Given that we are a little ahead of schedule on the agenda and the afternoon looks fairly full, would you like to have people come back at 1:00 instead of 1:30 and start again half an hour earlier?

MR. WANDER: That is probably a good idea, yes.

MR. LEISNER: If I might interrupt, we had lunches scheduled to be delivered at 11:30 and it doesn't look like they are here yet, so I think what we are going to need to do is people go off to the meetings and then maybe take a break in their meetings and come back here at 11:30 to pick up their lunch and then go back up to the meetings rooms, if
people don't mind doing that.

MR. WANDER: That is fine. Why don't we begin at 11:00 with the informal meetings, come down for lunch around 11:30, bring your lunches back up to the room and then we will reconvene at 1:00. Thank you.

(Lunch break.)

MR. WANDER: I hope everyone had a pleasant lunch break and that all of the informal meetings of the subcommittees proceeded very well. I did sit in on two of them and I know Jim sat in on a couple and Alan Beller and the chairman came around to visit us. So I hope they were productive. And we would like to hear the feedback so that we can move ahead with our overall goals. And I will first call on Steve first on the disclosure and governance subcommittee.

MR. BOCHNER: Thanks, Herb. Well, we had a very good full discussion I think of the topics that were in our agenda summary, and I have to say I was impressed with the input from our subcommittee, I think some great ideas. The first thing we talked about was this concept I brought up this morning about whether we should look at the problem of late filings and filing deficiencies and the CEO/CFO certifications and whether there is something that can be done there to allow companies to follow. Is that a good idea? Should companies be allowed to put the information out
there? And to what extent do the certifications need modification if that in fact happened? So we talked about getting more data on this to look at both from the SEC and perhaps get information from the SROs about how big of a problem is this, what do the late filings, the deficient filings look like. And so we are going to have more discussion on that topic after that fact finding.

We then spent a considerable amount of time discussing the definition of smaller public company. And we looked at the BSB definition and that was, I think everybody thought that in today's world very low for our purposes. We looked at the accelerated filer, $25 million market cap, and I think the sense of the subcommittee was that also is a fairly low number and that companies with market caps in excess of that still were smaller public companies in the view of many of us and so we wanted to do more work there. We think we had an upper range of $700 million clearly was the well known seasoned issuers and the 33 Act Proposal probably provides an upper range on what a smaller public company can be. And so something within that ban kind of framed it, and we want to do more work there.

One of the subcommittee members recommended that we look at other types of indices like the Russell 3000. So we are going to look at other ways at getting at the definition of smaller public companies. We talked a little bit about
risk-based proposals but we went back to Herb and Jim's thinking about trying to keep it simple and keep it objective, and we are hoping that we can have a more elegant and simple, more objective criteria for smaller public companies. So we are going to do some more work there, and I think we are going to need to collaborate with some of the other subcommittees on some of the information they are gathering about the cost of compliance and so on and figuring out where that threshold should be. As a percentage of revenue, where is 404 and where is really the right place to draw those lines. So I suspect we are going to do a lot of work there and more to come.

We then transitioned to once we got the definition of smaller public companies and working with the other committees, then to our core subject matter of the governance and disclosure subcommittee. What should be the relief that we want to look at that we should recommend. And so we first talked about the core governance requirements, the audit committee requirements found in Sarbanes-Oxley, the SRO requirements from NASDAQ and the New York Stock Exchange regarding the levels of independence. And we want to do more work there and more fact finding about the costs and the burdens associated with that. But I think the sentiment was that that does not appear to be where a lot of the concern is among the companies that we all on the subcommittee have
exposure to. So I think we need to reach out and find out if in fact the independence criteria, the audit committee requirements, the audit committee financial expert and code of ethics disclosure, those what I call the core governance requirements really are causing an issue out there or not and, if not, we want to move on and spend our time on things that are higher priority. But we do want to take a look at those items.

We then moved into the disclosure area, and again noted that the SB form was probably -- to the extent that there needed to be some relief in the area of 33 Act disclosure and 34 Act disclosure that the SB thresholds probably were too low. And so we asked ourselves should we spend time thinking through what kind of relief should be granted, should we have a SB form that dove-tails with this definition of smaller public company that we have been talking about, and exactly what kind of relief, if any, is appropriate.

And then we covered a couple of final topics. We looked at the loan prohibition in the legislation and noted that in some cases there seemed to be legitimate business reasons to make loans, such as relocation loans, and some of the other topics that have gotten a lot of air time such as "cashless" exercise programs and perhaps insurance and other areas. And so we are going to take a look, if you all agree,
at whether there is -- and we are going to do this cautiously
because I think there was concern about making too many
exceptions here -- but whether there should be an effort to
carve out some exemptions from the loan prohibition for
legitimate business purposes and appropriate situations. So
I think that summarizes our discussion.

MR. WANDER: Fine. Are there any questions of
Steve? Anybody on that subcommittee like to add anything?

MR. JAFFEE: I would just like to make a quick
comment on this size deal. We discussed that it would be
good to come up with something that would be expandable over
the years, not a finite number necessarily which could become
obsolete and that is why we were interested in an index like
the Russell 3000 as a benchmark.

MR. WANDER: Why don't we go next to the internal
controls over financial reporting. Janet?

MS. DOLAN: Thank you very much. First of all, I
would like to thank all of our team members, Rich and Alex
and Deborah and Kurt, and Mark Jensen has also joined our
subcommittee. And then Daniel is our official observer. So
we worked very hard so I want to acknowledge the
contributions of all of them.

We started out I think rightfully sort of
acknowledging the environment we are in, which is we are
cognizant that the SEC and the PCA will be taking written
comments and they are holding their roundtable tomorrow. So we are going to work obviously in parallel but we are going to be very cognizant of what is coming out of that. There is no use duplicating efforts or having wasted efforts. So if we start to get the impression or start to fill that some significant changes are coming as a result of that that may affect all companies, it reduces the efforts we have to do on behalf of small companies. So we just acknowledge that that is an important process to keep our eye on and to work with in parallel.

We also acknowledged that it is an important process that we don't want to ignore either in terms of timing. So we talked about the opportunity to make some initial recommendations, if we would have a fair amount of alignment early on in the process so that we could get them in to help influence that process if it were appropriate, recognizing that we don't want to trade off quality for haste. So there is no expectation that we will do anything hastily but if we have alignment around anything early on, we will certainly take the pace of that other process in mind as we do our work.

We divided our work just as the previous committee focused on the areas they think are most important. I think particularly in the area of 404, everyone has an opinion. I think everybody has an idea of where they would like it to
end up, they just aren't sure how we are going to get there from here. So we had to spend a fair amount of time just getting through expectations and hopes and aspirations and then try to get convergence around what would be a process that might actually bring all of this together in some meaningful recommendations. And so we are going to focus on five areas, it is early. We only obviously had one meeting but we are trying to segregate our work into five main areas, and the over-arching premise or goal of our work is to say if we believe that we could make recommendations that would certainly maintain investor protection, but yet eliminate some of the activities currently required that don't provide enough value in light of the tremendous cost in either money or time for small companies, how might we approach that, how might we start to identify different ways of looking at the current structure and reshape that structure so it better fits small companies. So that is what we tried to do, what would be different cuts that we could take of this and try to get to some recommendations that really are tailor-made for supporting the recognized differences between small companies and large companies and still protect the investor.

And we acknowledge that it will be the work of this entire advisory committee to deal with the issue of size, but I think as we just heard in our previous brethren subcommittee, I think all of us are kind of coming at size
from a different need but we are all going to have to reconcile it. But we are looking at at least five different ways that we might approach the question of how do you peel this onion and get to what is really necessary for small companies and what might be eliminated for small companies.

The first approach would be to try to take a risk approach. That is, can we try to identify those controls that are most critical for all companies, small or large, but can we also identify some controls that are currently required but probably aren't as critical for small companies. So can we do some kind of risk assessment and prioritize and draw the line somewhere along the continuum of where it is today based on a risk assessment. And a subset of that will be particularly in the area of the IT controls as a special example of that.

A second cut we will try to make is on size, just as I said. Is there some way that we could look at drawing the line on size based on revenue, on market cap, or on some other clearly defined metric that everyone would know whether they were on one side or the other of the line.

The third is could we make some recommendations around the timing of the certifications. That is could we make recommendations that some of the testing could be done throughout the year and take some of the burden off those scarce resources at the end of the year, could we make a
rotation schedule that might say that everything has to be
tested at least every three years but one third of them every
year, anything around rotation or timing that could reduce
some of the expense and pressure on small companies.

The fourth is we look at what we call autonomy but
are there certain testing of controls that could be done by
the company and that the auditor could rely on as opposed to
duplication of effort where first of all the company has to
test everything and then the auditor has to go through and
test everything as well. Is there any way that we could
segregate some of those and allow a reliance on the company
testing.

And then the fifth one is we called it sort of
special needs, and those might be IPO companies or other
companies. It might be one year grace period when you put in
a new IT system. Just are there some unique or special needs
of small companies that we should be making specific
recommendations on, even though it may not result in drawing
the line for a particular category or not.

So we have assigned our work. Everybody has
stepped up to the plate and volunteered to head one of the
dfive and then we are each all working on as sub-group
members, and we are setting fairly aggressive timelines for
ourselves. So we are looking in the next few weeks to take
our first cut at recommendations and see if we can get, what
our first look at recommendations and alignment around them might look like.

We concluded then with the very last question, and perhaps everyone of the subcommittees has this question, but when we make recommendations, if some of them are not completely within the purview of the SEC but might be in the PCAOB or some other entity, how do we ultimately deliver a work product here in which we give the best recommendations we can and then ensure that they get to the appropriate bodies and what the role of the SEC might be in supporting us in that.

MR. WANDER: Are there any additions by any of the subcommittee members or any questions by any of the other committee members? Okay, if not, why don't we go to accounting standards. Leroy?

MR. DENNIS: Thank you. We had a very similar discussion around size and actually I think would recommend that the committee come together as a group and determine what kind of size parameter we are going to be looking at because we didn't think it was appropriate for our committee to have a size of small being $30 million and somebody else have $75 or $100 or something like that.

As far as our priorities, our first priority we looked at was really the whole over-arching question of big GAAP versus little GAAP and we thought everything else kind
of drove down underneath that. And really breaking that down into measurement recognition and disclosure as the three basic areas that need consideration of cost versus benefit. And I would also throw in simplicity with that.

I think the initial thoughts of our groups is that recognition areas of GAAP would be difficult to apply different standards of recognition for different size companies but clearly that there was some flexibility in the measurement and disclosure areas that we ought to consider. We are in the process, and we have signed out a list of users and are going to develop some questions for those users. One of our big concerns is that if we were to come up with different recommendations for small companies that say the investors or the users of the financial statements would ignore those and require their companies to file under big company standards and defeat the process. So we are cognizant of what the concerns of the users of the financial statements are and somewhat similar along the lines of the SB discussion that was held earlier today about whether people would be required to go to a bigger standard if that existed.

We would like to develop a list of questions and then use the website, and I think we are going to talk about that later on as to using that as a tool to solicit input. And we have scheduled kind of a gut check call in a couple of weeks to see where people are at on developing those
questions and talking and so we can bring those out to the
investors or to the other users of the financial statements.

We then went on to talk about the other areas of
our committee. When we talk about specific accounting
standards, and again should we make any recommendations in
that area around measurement or disclosure. Ultimately,
those recommendations we felt had to go to FASB staff since
they are the ones that set accounting standards and so we
think it is important to get their buy in into this process
sooner rather than later. And again looking at areas for
small business that we can make it maybe not different but
easier to measure. And then maybe some relief from
disclosure for the smaller business and maybe not so much
different in the recognition area itself.

On item 6.3 of our agenda, we didn't put a lot of
priority to that. In fact, would recommend we remove it from
our consideration because again setting accounting standards
is going to be the FASB's staff job. We see our job to
recommend suggestions to the FASB staff with hopefully the
SEC's support behind that. So we would recommend taking that
off. We would add to our agenda though that we deal with
effective dates and transition rules for small business and
can we come up with some over-arching principles in total
that the FASB staff and the SEC can use as guidance when we
adopt not only our current accounting standards that are out
there but the next five years of accounting standards that
will be looked at.

We didn't spend a lot of time dealing with the role
of auditors, although we talked a little bit about it. And
so that is something we are going to have to deal with down
the road. Again, our first priority being the over-arching
principle of big GAAP versus little GAAP. So right now we
have got a list of assignments out to the people as far as
developing questionnaires. We are then going to get back
together in a couple of weeks, finalize those, and hopefully
gather some input then and use that to come back together in
a formal meeting and give our first recommendations.

MR. WANDER: Thank you, Leroy. Any additional
comments or questions? If not, we will go to our final
subcommittee dealing with capital formation. Dave?

MR. COOLIDGE: Everything we talked about has been
covered. Our committee had a lively discussion about a
number of topics, one of which everybody else did cover which
is the size definition question. I think our desire is like
everyone else's, to try and get some common ground there.
The idea being that once we define what is a smaller business
or a small business, that we can talk about various potential
forms of regulatory relief for that category of company.
Many of the things we talked about were similar to what other
committees talked about with respect to 404 compliance,
filing deadlines, attestation, by whom and the scope, the materiality test, and the 404 requirements. Talked about governance relief in the sense that perhaps the number of independent outside directors, the definition of an independent director, et cetera, would be helpful to smaller companies if they had a little more leeway, audit committee makeup, perhaps not 100 percent independent directors as defined, and the time to transition both from a reporting standpoint but also from a governance standpoint would be helpful for smaller companies if they had more time to do these things. And the idea of rotation, not having to do everything all at once, instantaneously.

Then the other issues that we talked about really relate a lot more to the capital formation process and what has happened over the past few years and really over the last many, many years as increased rules and regulations and standards have been put forward by regulatory agencies and SROs, the access to the public markets is more difficult. Companies have to be larger, they have to be more sophisticated. They have to have different governance in place today that they may not have been required to have 10 or 15 years ago. And so the hurdle is just going up and up and up for companies that want access to the public markets. Now that be fine and we did talk about the role of private capital. There has been a significant increase in the
availability of private capital and as a result the capital
needs of these smaller companies may be getting met but the
smaller ones probably aren't having it met in the public
markets. So that is just an environmental issue. It also
relates to the access to accounting resources, the
requirements that so many investors have for Big Four
accounting, underwriters demanding the same thing, not
wanting to take the company public unless it has got a Big
Four accounting opinion and the difficulty for small
companies to pay those fees and to get the time and attention
of a large accounting firm.

Role of investment bankers, same issues, wanting
bigger companies, bigger deals in order to justify the time
and expense, the ongoing investment that they have to make in
a company, especially if they are going to pick it up in
research. These are all issues that relate to how a company
gets public and whether there is a bias now against companies
going public, whether they would prefer to just sell the
business for a liquidity event as opposed to going public
because of all of the regulatory hurdles.

Many of these things we can't do much about, it is
just a fact of life. But I think as a general matter, the
increased hurdles that companies have to get over in order to
get public are probably causing bigger, more mature companies
to go public than might have been the case 10 or 15 years
Increased liability exposure for officers and directors, another obstacle in the way of capital formation in the public markets. Again, we weren't saying this is necessarily bad. Public markets have a role to play. Private markets have a role to play as well and perhaps between the two the job is getting done. There is a fair amount of capital out there that can be accessed, it is just that you have to go about it in different ways for different companies.

So our focus going forward I would say is to look to see if there are any things that we can do for the smaller companies to make it a little bit easier to go public and to stay public. There are a lot of existing public companies out there that are really struggling with complying with a lot of these regulations and may be forced to sell the business or something else, go private in order to avoid the cost and the expense. But we will be looking at the accounting resource issue, the investment banker resource issue, private capital resource issue, and then coming back perhaps with some certain regulatory relief recommendations that may overlap with other committees but we will just have to coordinate that at the end of the day.

MR. WANDER: Thank you, Dave. Any questions, comments, additions? I think it is obvious that everyone
grappled with the size problem and that we probably will have to attack that issue on a committee-wide basis. And I wrote that down, Jim, and that will be one of the things we will try and exert leadership on so that everybody can be dealing with the same issue. And then of course once we do that, and I would say we probably ought to establish it in sort of a tentative fashion and then see what it is that you can then do for companies falling under that criteria, to see whether it is helpful to them and whether it continues to provide investors with the information they need to make investment decisions because if they fall off the cliff and don't provide information, we probably will be counterproductive in that scope.

So I think, at least the way I listened to what all of the subcommittees did, that we have an excellent start on our project. I know all of you have scheduled meetings, which you can do, I am going to repeat this, obviously if you all want to get together in person you can but knowing that terribly time-consuming is hard and expensive, conference phones. And if you really want to see each other, I think the SEC has some telephone conferencing systems that you may use if they are available from their regional offices. So that could be another method of communicating before our next full committee meeting.

The next item on the agenda is discussion of
factual input needed. All of you talked about getting more
information and there are a number of ways that we can do
this. The first is we will be publishing our agenda in the
next few days, as soon as it gets brought up to date with the
items we added this morning. And then that will be published
in the Federal Register and put on our web page. People will
be asked for comments to be supplied in the next 30 days, so
we may get some additional input from that.

A second method is I am going to talk about
questionnaires. Again, if any subcommittee or the whole
committee decides that there are discrete areas or even large
areas in which you would like to put out requests for public
comment, the subcommittee chairs should get those to us. We
will obviously consider them very seriously and again by the
use of our web page ask for comments to various
questionnaires. It might be a little early to be doing that
but it might be useful to decide what are high priority items
from low priority items.

The next area is either hearings or roundtables.
The SEC is holding a roundtable tomorrow. I personally view
those as being very important because I think they validate
the process in that we have gone out to the community of
people involved and asked for their opinions. And I think it
adds credibility to the final product. And there are
inexpensive and fairly informal methods of doing that. We
could do it around the country. The whole committee doesn't have to come. It could be a subcommittee project. It could be two subcommittees or it could be a committee project. But we should consider and talk about during the time between now and our next full committee meeting the subject of whether we should have roundtables and/or hearings and that could be at two or three places in the country. I would strongly urge that if we did that, we obviously have to set ground rules so that we are not there from 6:00 in the morning until 6:00 at night. But in my experience they are really -- you wind up not having as many people as you think you might have to present and that anybody who does present should be required to produce a written statement. I think that makes the record very clear, and I think it provides more sound thinking on the part of anybody who wants to come and present their views.

The other two sources are the SEC's Office of Economic Analysis. And we do have someone from there who could give us a little bit of background on the SEC's office and the services that are available to everyone.

MR. BELLER: Okay, just for the members of the committee, joining us at the table is Chester Spatt, who is the chief economist of the SEC and runs our Office of the Chief Economist. There are a couple of representatives of his office who have been with us today also listening in.
But I am going to give the floor to Chester to talk about resources and the work of the office and so forth.

MR. SPATT: Thank you, Alan. The Office of Economic Analysis at the Commission very much appreciates that the attention that the panel will draw to the important questions of how regulation affects the ability of operating companies to access the public markets, focusing on small business, we understand that some of the Sarbanes-Oxley reforms have raised questions about how the reforms are specifically affecting small business and what might be done to help mitigate any undue burden. We also recognize that the evidence on some of these effects is not always clear, which clearly calls for careful examination of research reports and academic studies as they continue to emerge.

It is important I think that we try to accommodate the special circumstances of small business, even absent issues of past burden. One context where our office has been directly involved in that sort of issue has actually been in the context of options expensing. We have worked very closely with the Office of the Chief Accountant at the Commission on the implementation of FAS-123R, which requires, as you know, the valuation and expensing of employee stock options. I understand that there are concerns about some of the special issues, concerns were expressed this morning in fact by you about some of the special issues involving
employee stock option expensing. One of the things that we did as part of our work in option expensing in fact was to try to identify some of the key issues as they relate to small business, and specifically in many cases the absence of traded options obviously in the case of small business and what the import of that would be for the valuation process. And we made recommendations as to how to attempt to port the options approach given that expensing is now required to the context of small business.

I think the panel obviously represents opportunities that extend well beyond Sarbanes-Oxley and well beyond the options expensing issue. Obviously, the public markets are evolving and it is important that small business have potential access to that. And I think there is a broader, there has been a broad research agenda on some of these issues that I think our office can potentially help you tap into it.

Now I see that the role of our office and the expertise of our office is quite varied. I think one of the things that we are very good is at evaluating the economic consequences of different policies. We are involved actively in the Commission in helping to try to formulate efficient rules and certainly our work I think in the options expensing area today has been an attempt to try to do that. At the same time, we are also good at analyzing data and
understanding the market processes in which data arises and
understanding the import of that. On our staff we have
almost 20 Ph.D.'s who are trained in economics and who help
support the various parts of the Commission, including of
course as I referred to the Division of Corporate Finance and
the Office of the Chief Accountant.

Among the types of issues where I see our expertise
as being particularly germane would include the following.
In the case of 404, clearly there are various concerns about
the ability to comply with 404 and the complications
associated with the compliance. I think subject to the
availability of data, we are certainly prepared and I think
interested in trying to help you assess those issues. They
are starting to be data available now with the first filings.
I think that is potentially, it is clear from the broader
feedback that we have observed at the Commission that the 404
issue is clearly a very important issue, and there may be
obviously particularly important concerns in the small
business area with respect to 404.

The issue of capital formation is clearly a very
important issue. We have some ongoing projects in that area
and we have a lot of internal expertise in this area. One of
our staff members, who is in fact going to be our lead person
on this project, Kathleen Hanley-Weiss, who is seated toward
the back, is in fact in her prior work previously as a
professor at the University of Maryland was one of the leading experts in fact on the IPO process. So we have a lot of expertise and understanding of various aspects. We also have a lot of expertise on other aspects of the capital formation process. And we recognize that the issues and needs of small business maybe somewhat different.

I think our office is also in general very knowledgeable about academic studies done on various aspects of the issues of interest to you. And I think we are in a good position, our staff is well read, and I think in a good position to evaluate the academic research that is out there. I think we certainly want to work closely with you, and I think we have a lot of skills and expertise both with respect to our knowledge and ability to evaluate the existing academic literature with our ability I think to help conceptualize issues and understand the competitive market processes and our skills in understanding and working with data.

So a few moments ago I introduced Kathleen, I also want to just take a moment my other colleague who is here, Cindy Alexander. Cindy is the assistant chief economist for Corporate Finance and Disclosure. And Kathleen and Cindy will be taking leading roles in working with your committee.

MR. WANDER: Thank you very much. We will have to develop the process for working through you and your entire
staff but primarily through Kathleen and Cindy, which we will have to -- so you are not bombarded by all sorts of different phone calls, sort of coordinate all of that, which I think we will do. But are there any questions of Chester while he is here.

MR. DENNIS: Mr. Chairman, Leroy Dennis, I have one question. Chester, given that we don't know what you know right now, and we are certainly not inclined to reinvent the wheel with surveys and other information, I was wondering if you had resources available that would summarize maybe the last three to five years worth of studies that might be applicable to the different subcommittees to this group?

MR. SPATT: We will certainly review that, and I am sure we will be in a position -- I don't know whether we will be in a position to do that across the board but I do anticipate certainly we will be able to do that with respect to many of the domains you will be working and we will certainly try to do that.

MR. DENNIS: Thank you.

MR. WANDER: Any other questions?

MR. CONNOLLY: Mr. Chairman, Chester, I would be particularly interested, I came to find today in our subcommittee meeting that there are probably a couple of thousand SB2 filers within the universe of public company reporting companies. Have there been any quantitative
extraction of data from those filers such as average revenues, such as average market cap, high/low, numbers of stockholders, or any of those kinds of things in terms of the impacts broadly and widely to the capital markets of the SB2 filers?

MR. SPATT: I am not specifically aware of such extractions or studies but we will certainly check on that.

MR. CONNOLLY: Appreciate it.

MR. DAVERN: Alex Davern. I had a similar question as to the results of the early reports on 404 and particularly those who have filed proxies already, has the Commission had a chance to take a look at any cost data related to that based on size, either those who have failed the test or those who have passed. It is an area where our subcommittee has been tasked to take a direct look at, and I am not sure if any work has already been done on that that we can leverage as a starting point to consider the topic or if that is just something that we just need to engage you on to look at directly?

MR. BELLER: Alex, there has been work done in that area. It is ongoing. It is really being done more in the Office of the Chief Accountant and Corporation Finance than it is being done by Chester's office. I think we may want them to look at what we find and see if there is any economic learning to be culled from the data after we have extracted
it, but that exercise is, as I say, mostly going on in our
division and at the Office of the Chief Accountant. I
actually this morning just saw their -- Glass Lewis has
identified 142 12B25 filers where the cause of the filing was
inability to complete the 404, the internal control exercise.
And we have actually together with some software services, we
have access to, done a little spreadsheet of what those 142
companies have reported. So there is some stuff going on.
It will continue to go on for the next six weeks or so. My
guess is through the end of April when the 45 day grace
period for the smaller accelerated filers runs out and then
we will look at it. But we are going to use that on an
ongoing basis and I don't have any particular reason to
believe we can't share that purely factual information at
least with you folks.

MR. DAVERN: Should we coordinate directly with
you, Alan, or with Mark on the committee, is there a liaison?

MR. BELLER: Why don't we start talking through
Jerry at the moment maybe. And Don Nicolaisen, I don't know
if he is sitting behind me or not. You have this habit of
sneaking in, Don. He is going to spend a few minutes with us
and we can maybe talk about who at OCA would be a good
liaison for the committee as well.

MR. DAVERN: Okay, thank you.

MR. SPATT: And let me just add to what Alan said.
One of the special skills that we have in our office is because of the nature of the backgrounds of our staff with so many Ph.D.'s in economics, I think our office has very strong skills with respect to the econo-metric analysis of this type of data. And I anticipate that we will certainly work closely with Corporate Finance and the Office of the Chief Accountant in this sort of context because I think sort of combining our skills potentially would be quite fruitful.

MR. WANDER: Okay, any other questions. If not, Chester, thank you very much and we look forward to working with you and your staff.

MR. SPATT: Thank you very much for the opportunity to speak to you this morning.

MR. WANDER: And next on our agenda is Don Nicolaisen, who is the Chief Accountant of the SEC. And I think many of you met Don yesterday but if you haven't, he is here to give us an overview of the Office of Chief Accountant, who is obviously intimately involved in our issues.

MR. NICOLAISEN: Herb, thank you very much and good afternoon to everybody. I appreciate the opportunity to be here. We talked about this group for a very long time, and I have to say I am excited and pleased to see it actually meeting and discussing the issues. So Alan and I spent many a night and many a morning and a lot of lunch periods just
thinking about what might happen and what we can actually
deal with. So I think we expect great things from this group
and I am sure we won't disappointed.

Let me just speak a little bit about the Office of
Chief Accountant. We are one of the smaller offices within
the Commission. We serve as the advisor to the Commission on
accounting and auditing matters. In that capacity, we are
involved certain oversight matters involving both the FASB
and the PCAOB. But we also deal with registrants directly
and deal with many of the accounting questions that
registrants have or that their auditors might have.

We have ourselves organized into three basic
groups. They are the international side of things, and that
has been an increasing focus for the Commission. It is
certainly an increasing focus for the Office of Chief
Accountant. So for the first time I have a deputy, Julie
Earhardt, who is in charge of that group. Scott Tom is in
charge of accounting matters, those things that deal with
registrants, that would include probably many people in this
room. And Andy Bailey is focused on the auditing end of what
we do, and that includes certain professional standards as
well. Andy, if you want a contact for somebody on 404, Alex,
Andy is probably the right person in our shop. He deals both
with the auditing matters in general but in particular he was
around as Auditing Standard No. 2 was crafted by the PCAOB
and passed through the Commission as part of our rulemaking process.

Within my office we also have priorities, and I might just speak for a minute about a couple of those that are high on my list. Number one, that I talk about a lot and I will be continuing to talk about a lot is the need for the accounting profession and us at the SEC to reduce the level of complexity that has crept into the accounting world. One of the most disappointing things that I have to deal with is to sit down with a registrant and their auditor and they have come in good faith and they have worked hard and they have built their case and they have all their research and homework done. And they say we have recognized revenue and here is the basis and why we have done what we have done. And out of the 187 different methods of revenue recognition, unfortunately I have to tell them you don't have the right one. You might have done everything right in terms of what you looked at but you just were in the wrong zip code. That is not a pleasant thing for anybody to have to deal with, and I think that when you look at certain areas of our accounting standards, derivatives, leasing transactions, accounting for income taxes, some of those basic consolidation practices, there is an incredible amount of complexity. Much of it has arisen because of certain interests that want an exception to the basic rule. And I think as we move forward, we just have
to re-think about going back to some basic principles, some
basic concepts in improving the level of financial reporting
by making it simpler. If you embarked on any quality
improvement effort, I think one of the first steps everyone
looks at is what can we take out of the process that is
unnecessary? That is high on my list. Don't expect an
overnight solution but I am also looking for input from this
group as you deal with some of these issues within the
smaller business environs.

Another area that we have been working on is
implementation of 123R. Chester talked about that. Chester
and his group have been extremely helpful in the process. I
think we have been able to put out in our SAB-107 certain
short-cuts that should hopefully be helpful to the business
community as you go through implementing stock option
accounting. We have continued to look at certain other
questions and issues. We will continue to do that. And to
the extent that we think we can be helpful in providing
advice in the interest of making this standard work well, we
will be prepared to do that as well.

We are also a key player in the 404 Roundtable
tomorrow. It is an initiative that we have been talking
about for many months. It has been on my list of priorities
because we have heard the concerns. Alex had made a
presentation to us from AEA. Others have as well, and we are
really interested in hearing those comments. I personally think that the act itself is fine. It is not particularly long. I forget what it is, 66 words or something like that. That section of the act is not particularly complex. I think most of what we are talking about is the manner in which it has been implemented. And what we would really hope to do tomorrow, what I am hopeful that we will hear our, be able to separate the first time through issues from those things that are really ongoing. And then to the extent that they are ongoing things within the application of Section 404 that we can do something about, we would really like to hear that. And I know the PCAOB has voiced similar comments and we are intending to listen. I am very hopeful that we will get some things that are granular enough for us to really work with. And that we would be able to move forward with business, the investor community, the analyst community, and people like us, regulators, feeling comfortable that we are doing the right thing in improving the quality of financial reporting.

I have a number of other priorities, they may be slightly less relevant to this group so in the interest of time I will stop talking at this point other than to do what is probably most important and that is if you haven't met the two people from my department who are attached to your group, I would like to introduce them at this time. It is Alison Spivey and Jennifer Burns. So with that I am open to any
questions that anyone may have.

MR. WANDER: Any questions of Don?

MR. NICOLAISEN: Burns.

MR. WANDER: Okay, Don, thank you so much.

MR. NICOLAISEN: That was easy. Good luck to you.

As I said, we have high expectations and I am very
enthusiastic about what you are doing. We view small
business as a real growth engine in our economy and we wish
you well. Thank you.

MR. BELLER: Thank you, Don. Don, you are going to
have a harder time tomorrow and so am I.

MR. WANDER: Putting more lights on down here.

MR. BELLER: More light, more heat. If it is okay,
Herb, with you, given that Don just spoke, it is probably
worthwhile to mention to this committee because there is a
coordinated responsibility that I think it is worth you
knowing about on the accounting side. Corporation Finance,
my division, and the division that our Office of Small
Business is attached to, and they will be the people you work
with directly. Also, there are a total of about 540 of us.
So we are one of the larger operations. Over 400 of them
review filings in our disclosure operation section. The
others are organized in a series of support offices. And as
you have questions, we are going to continue to suggest you
work through Jerry and the other designated federal officers
who are your subcommittee meetings. But we have resources behind them in our Office of Chief Counsel, our M&A operation, international corporate finance and so forth.

The one I wanted to mention specifically in light of you just having heard from Don is the division has its own Office of Chief Accountant. And I think some of you actually my chief accountant last night, Carol Stacey. Our Office of Chief Accountant and frankly our entire review staff words hand in glove with Don's office in terms of coming up with appropriate accounting determinations as to what is GAAP and what is appropriate disclosure. If you look at a formal org chart of the Commission and a formal list of responsibilities, Don Nicolaisen's office is the ultimate arbiter of what is GAAP. And I guess my office and my chief accountant is the ultimate arbiter of what is good disclosure. But inevitably when you begin to ask the kinds of questions that I think you are going to be asking of our accounting staff, you will end up speaking through I think to some extent Jerry and his folks but in other cases directly to Jennifer and Alison and my accountants, really to a combination of people, and I just wanted to alert you that there is that sort of coordinated responsibility around here so that it doesn't throw you the first time you are exposed to it.

MR. WANDER: Okay, thank you. The next item on our
agenda is a review of the master schedule and that was distributed to all of you prior to the meeting. And that schedule was designed really to sort of lay out from now until we become sunnetted the various dates. Now this is not written in stone and it is somewhat fluid. But we thought it appropriate to give everybody this kind of schedule. You will notice that it includes six meetings and possible hearing dates, et cetera. And really if we for our final recommendations, and this doesn't include any interim recommendations that we may want to make, we almost have to be at the research down, pencils writing stage in September, if not a little bit before then. Because again we are not all full time and in order to draft something that is of quality and review it and have the whole committee consider it, we will need the time from September going forward to do that.

We scheduled meetings about once every other month. They are on here. If any of you have any great difficulty with meeting them, would you let us know soon. And if there is sort of a we can't have hardly anyone attending a particular meeting, we will give consideration to changing it. But we all have to recognize that with a group of 20 some people, it is not going to be possible to get everyone here for every meeting, at least I think that is probably true.
Again, I say this is something that is fluid and that Jim and I will be on top of. There may be changes as we go along that are caused by events beyond our control or some reason that we want to stop or accelerate our process. And I am open to any comments or suggestions with respect to the master schedule.

MR. DENNIS: Herb, this is Leroy Dennis. One of the comments that was raised in our subcommittee is whether the meetings for this committee are always going to be held here or are we going to try to hold those in other places around the United States?

MR. WANDER: As of right now, we have I guess reserved this main conference room here in this building and in the new office. But that doesn't mean we can't have meetings around the United States and indeed have maybe a day and a half meeting or two-day meeting and hold hearings with that. And since you have raised it, Leroy, do you have some suggestions?

MR. DENNIS: No.

MR. CONNOLLY: Mr. Chairman, I certainly would suggest that we consider the two principal cities for equities trading in this country, equities and their derivatives, New York and Chicago.

MR. WANDER: Okay, we will be happy to do that. And I would guess if we are going to do that, we would
probably want to go visit our brethren out on the West Coast.

MR. DENNIS: Yes, we would like that too.

MR. WANDER: Would you prefer -- let me ask, Los Angeles or San Francisco?

MR. DENNIS: San Francisco.

MR. WANDER: Since my two daughters live there, that is easy.

MR. BELLER: Steve is ready for Palo Alto.

MR. DENNIS: I think the real question is would we get benefit by being out on location and would that allow additional input that we may not get if we just stay here in Washington.

MR. WANDER: I do think that is probably true. So let Jim and I take that under very serious consideration and we will do that right away so we can plan things far enough in advance.

MS. DOLAN: Mr. Chairman, I have a question for Alan Beller, which is what is the likely timeline to come out of the effort tomorrow? Are you anticipating that we will have a parallel timeline here where you are going to have recommendations that may be impacting all companies?

MR. BELLER: I think to some extent the timelines will be parallel, but I think that given the fact that the 2005 audit cycle, and I guess Don didn't stay behind, I am not going to put words in his mouth, but I think he agrees
with this, given that the 2005 audit cycle is really actually almost begun for calendar year companies, I think we think that a first cut of guidance to the extent we conclude that we can do something by way of interpretative help or help by way of guidance, either at the Commission staff level, or and I am about to put words in Dan’s mouth as well, at the PCOAB staff level, I think we would seek to encourage that to happen frankly in the next like six weeks. That is not a promise but I think it is an objective. I think if we go much beyond that, it will begin to have less applicability. That is a first cut. I think there will be a lot of things that remain unaddressed and undigested from the roundtable and from the comments after that period. And I would expect that we would follow -- at that point, we would be following a parallel timeline with this committee with respect to what remains. But I think you should expect us to try to do a first round probably before this committee really can get much of anything in front of us. And from your point of view, I wouldn't be worried about that. As I say, I think it is a first round of sort of the obvious things that we think we can address on an interpretive basis.

An example of something, I am not going to pre-judge what we are going to do, if anything, but I think an example of the kind of thing that we would try to look at relatively quickly would be the relationship between
companies and auditors and whether it is has become
appropriately arms length, whether it has become too arms
length, whether there is anything that can be provided by way
of guidance on that that would at one and the same time
preserve auditor independence, preserve the ability of
auditors to make appropriate assessments of internal control,
but yet allow companies to have an appropriate level of
dialogue and consultation with their professional advisors.
That is the kind of thing that I think if there is a way to
address it quickly, we will try to address it quickly. But
that leaves, as I say, there is going to be a ton of things
that come out of the roundtable and they are in the comment
file already that we will be working on for several months I
expect.

Dan, I don't know if you have a different view.

MR. GOELZER: No, I think we would say exactly the
same things. I think we know already that there are a number
of interpretive or implementation issues that we can possibly
address just from the comment letters and from reactions we
have gotten from people and other sources. And if that stuff
is going to have any impact on the next audit cycle, we need
to get something out in 30 days, six weeks, 60 days,
something in that near term kind of time range. To the
extent there might be further rulemaking, new standards,
amendments to the existing standards, that would be on a
MR. BROUNSTEIN: A question, just as a follow-up, Rick Brounstein. Is there a listing of that somewhere? Because a lot of the things that you are throwing out are things that maybe cover big companies as well as little companies. And I know in our subcommittee we have been kind of wrestling with a lot of those and maybe we should be focusing on other topics if they are already going to be handled at this level?

MR. BELLER: The answer is that we don't, at least I don't have a list of any formal sort. I carry around a list in my head and it is going to inform the questions I ask at the roundtable tomorrow and I am moderating it. But I think that is a list that is going to become apparent in the next somewhere between 30 and 60 days.

MR. WANDER: Alan, is there or are you going to do a summary of the comment letters you have received for the roundtable?

MR. BELLER: I honestly don't know the answer to that question. I assume the predicate for your question is that when we do a rulemaking, we generally provide, we do prepare a summary of the comments that are received in the comment file for those rules. And that is publicly available. We are not in a rulemaking mode and so I honestly don't know what we are going to do in that regard. I can try.
to find out whether we are going to do that or not. It would
obviously be of use to you guys and it would probably be of
use to us as well.

MR. WANDER: And is there any plan to have, I know
this is hard, a summary of the hearings tomorrow?

MR. BELLER: I don't think we have generally done
that. The transcript will be available and the hearings will
continue to be available or the roundtable will continue to
be available on our web site. Let me ask Jennifer, she has
escaped too? Alison, do you have any idea whether we plan to
do that? My guess is that we don't, Herb.

MS. SPIVEY: I have not heard anything.

MR. WANDER: Well, Jim and I both plan to attend
tomorrow so I will try and (a) stay awake; and (b) take good
notes, and (c) get them to you. So at least my perception of
what the high points are and where I guess there -- I will
also try and sort of where there seems to be agreement, we
will let you know that and where there seems to be
disagreement, we will let you know that. So we will have our
own internal sort of summary system. There are how many, 120
letters then, comments or something like that?

MR. BELLER: I think it is like 185 or 186.

MR. WANDER: Well, if it was summer associate time
I could have somebody summarize this for us but I guess we
will have to wait until summer associates come to work.
MR. CONNOLLY: Mr. Chairman, along those lines, may I ask Mr. Beller another question? We have had presentations, largely from your good self as a division, from the chief accountant and the chief economist, I can't help but notice that the Division of Enforcement is conspicuous by their absence. And given the impact of capital formation and the bright lines that are necessary to fall within those parameters and also the concerns and the problems, the enforcement problems the Commission has had, having to do with excesses or violations in that formation process, do you think it is possible we could have some discussion or some inputs from that division to help inform our recommendations?

MR. BELLER: I suppose my answer to that would be I think we could arrange that. I actually think, not because they wouldn't try to be helpful, but because of the nature of the enforcement process and the nature of the fact that it is unlike rulemaking and unlike interpretation, each enforcement case walks in on its own four feet and walks out on its own four feet and generalization is difficult. So I am not sure frankly what the committee would get out of that. I think if you had specific questions about our enforcement policy and the micro-cap or the small cap or the capital formation area, we can try to provide you some answers. I am not sure a general presentation would tell you very much.
MR. CONNOLLY: Appreciate it.

MR. CLOUTIER: Mr. Chairman, Rusty Cloutier. Alan, there was a very good letter handed to us this morning, and I think it stated it very well from a Mr. Dennis Valentine that was handed to all the committee members this morning talking about our timetable and the timetable for non-accelerated filers. And the difficulty of a company that is somewhat close to $75 million and that the rules may change, as we said writing in September and their having to make some decisions in June, if you all when you would have an opportunity if you all could review that. I know Kevin apparently just got it this morning and just maybe give a response to the committee as to some of your thoughts on that. It is a very interesting letter, very well-written, and since I am almost in the same situation, it raised a lot of thoughts I had in my own mind.

MR. WANDER: Yes, I will be happy to do that. I looked at it relatively quickly. I actually think we can address most of this wherever your recommendations go and whatever our rules ultimately turn out to be by being somewhat sensible in our transition provisions. But we will look at it and tell the committee what we think.

The only other point I would make about the $75 million, and I didn't make it when Steve Bochner was talking about it, but since you have given me another opportunity, I
will. And I think really all it is is a further
reinforcement of something that several folks on the
committee have already said today, which is that the work of
your various subcommittees is to some extent intertwined and
interrelated. The $75 million accelerated filer category,
which Steve identified as, gee, maybe a little small for
certain purposes, is also today the cut off for shelf
registration, which means delayed offerings, immediate access
to the markets and so on and so forth. And I think it is
incumbent on this committee to think about from the capital
formation point of view what you want to do with that $75
million number if you are going to move it for disclosure
purposes. That is the only thing I will say but that it is
that kind of thing that demonstrates the interaction between
the two. And I guess I had somewhat that reaction to Mr.
Valentine's letter as well. I think it raises a lot of good
points. I also think it cuts both ways. And I think we all
have to be mindful of that.

MR. WANDER: I will save my comments on size. It
is a delicate issue but I think we are off to actually a good
start. I think we have a number of good ideas that we, at
least in one or two of the subcommittees, that we want to
pursue that make to me a lot of sense initially. I can
always be proven wrong. But that may be very good.

If there are no other comments on the schedule, we
will move into item eight on the agenda, which is really after our long discussion this morning, and I think very fruitful discussion, about our summary agenda that will be published as soon as we include those items we added this morning. Is there any other discussion before we adopt that so that it can be circulated outside this group to ask for comment? If there are none, I will entertain a motion to approve the summary agenda as revised this morning.

MR. CONNOLLY: So move the adoption of the summary agenda.

MR. WANDER: Is there a second?

MS. DOLAN: Seconded, Mr. Chairman.

MR. WANDER: Thank you. Any further discussion?

If not, all in favor aye.

[Chorus of ayes.]

MR. WANDER: Opposed? Abstentions? So it is passed unanimously.

And now we are actually an hour early and we are at discussion of next steps. And I don't want to keep you all here longer than expected. A good chairperson always gets the meeting done early. One of the next steps, I wrote down I guess a couple of things that we have to, that Jim and I have to do is figure out a process to bring the whole committee into a discussion of this size question. Secondly, we have to work on a meeting schedule that might include some
meetings outside of Washington, D.C. And, third, develop a
process so that we have an effective way of dealing with the
resources here at the Commission, and particularly the Office
of Economic Analysis, which we will let each subcommittee
know how to handle. The next item will be that I know all
the subcommittees have scheduled meetings, and I think as
soon as those first meetings are over or before those first
meetings, Jim and I will be in contact with the subcommittee
chairs to start our own analysis. And I think we started
really running right on start. We are not turtles at the
beginning of the race here. Everybody was at the starting
line and we are off and running. So I am very complimentary
of everybody for being well prepared here and being energetic
about attacking this schedule. But I don't think there are
any other items on the agenda other than anything anyone
wants to raise. Yes, Alan?

MR. BELLER: I just want to follow-up, Herb, on
your to-do list. I think two thoughts for you on maybe what
our to-do list should be without waiting for further requests
and suggestions. One is to figure out, and I guess they both
relate in some sense in the first instance to the work of the
internal control subcommittee, though I think they could
ultimately have broader application. One is to try to figure
out to the extent there is work done here that is not sort of
still private and deliberative but things like summaries of
the comment letters and so forth that we could share with you folks, figuring out what that is likely to be and whether we can do it or not. I am not committing because I don't quite know myself what the ground rules are but let me see what there is. And perhaps at least some directional advice as to what we are looking at as we go along so that you don't look at some things where we think we are going to do something relatively quickly.

The other would be if you look at the public -- again, in the first instance for internal control but it may have broader applicability, to the extent you look at the public comment file that we have opened and to the extent you look elsewhere around, there are a lot of organizations which have done surveys, questionnaires and so forth. FEI has done I think three or four surveys now on the cost of internal control and the benefits. The NASDAQ recently submitted to the comment file a summary of a questionnaire and the responses that they have received. We can maybe try to figure out what of those we know that is publicly available through a combination of Corporation Finance and OCA. But I think I would be very surprised if those organizations who certainly are interested in meeting with us from time to time to share their conclusions that they have obtained, I would have thought that various subcommittees might want to also sit down with those folks and hear firsthand as opposed to
through us what their views might be and let us get together as I say that list of who has done these publicly available studies and share that with you as well.

MR. WANDER: That is a good idea, good idea. Are there any other items of business that any of the members would like --

MR. ROYSTER: Mr. Chairman, Scott Royster. My apologies if I have missed this but in order for us to communicate with each other, is there a contact list that might include phone numbers and email addresses so that either individually or from a group perspective we can communicate outside of these meetings?

MR. WANDER: Yes, and we will get you one this afternoon.

MR. ROYSTER: Thank you.

MR. WANDER: John?

MR. VEIHMEYER: John Veihmeyer, just to clarify the discussion on future meeting dates and locations. To the extent we want to move it to different locations, I assume that would be to have some type of public outreach in connection with that. So should we assume that the dates currently on our schedule may be expanded by a day? In other words, it looks like one-day meetings that are scheduled. To the extent you are contemplating moving them around, it seems like the only value in doing that would be if we had some
kind of outreach otherwise we could just continue to meet in
Washington. So is that something you will get back to us on
and let us know but at this point we need to be conscious of
the fact that some of those one-day meetings may expand into
a day and a half or two day meetings?

MR. WANDER: I think so. I think it is a good point, yes. And that is one of the reasons I put it as a high priority to get back to you as quickly as possible. I think the master schedule actually says and hold possible hearings on it. I have done some of these things in a day. We might want to start a meeting at 8:00 in the morning and go to noon, take an hour break and then go from like 1:00 to 5:00 with hearings. So it can be done because I know how valuable everybody's time is. Alan?

MR. BELLER: I am sorry, I just want to interrupt for one more moment. Commissioner Goldschmid has joined us and you did not have an opportunity to meet him last evening or earlier today, so I just wanted to let the committee members know that Harvey Goldschmid, another of our commissioners who is very enthusiastic and supportive of this committee's work has joined us this afternoon. So thank you.

MR. WANDER: Harvey, would you care to say a few words?

COMMISSIONER GOLDSCHMID: We are all delighted you are here and you are doing what you are doing. I was shocked
to hear you talking about 404 when I came in. Anyway, I think it is terrific that you are all here. It is a terrific group from what I have seen in terms of your resumes and all of you coming together, and I am very much looking forward to seeing what you accomplish. Thank you.

MR. WANDER: Thank you. With that send off, is there a motion for adjournment?

MR. CONNOLLY: So moved.

MR. WANDER: A second?

MR. JAFFEE: Second.

MR. WANDER: All in favor?

[Chorus of ayes.]

MR. WANDER: Opposed? Thank you all. (Whereupon, the SEC Advisory Committee on Smaller Public Companies was adjourned at 2:37 p.m.)

*****

7/9/05
1. By-Laws and Operating Procedures

(As adopted on April 12, 2005)

The following By-Laws and Operating Procedures (“By-Laws”) will govern the operations of the Securities and Exchange Commission Advisory Committee on Smaller Public Companies (the “Committee”).

Section I: Purpose, Organization and Operation

The purpose of the Committee is to assist the U.S. Securities and Exchange Commission (the "Commission") in assessing the current securities regulatory system in the United States relating to disclosure, financial reporting, internal controls and offering exemptions for smaller companies, and to make recommendations for changes. The Committee has been formed under the Federal Advisory Committee Act, 5 U.S.C.–App. 1 (“FACA”), which governs the creation and operation of advisory committees by federal government agencies, by the filing of its Charter on March 23, 2005 with the Committee on Banking, Housing, and Urban Affairs of the United States Senate and the Committee on Financial Services of the U.S. House of Representatives. Notwithstanding anything to the contrary in these By-Laws, the Committee will operate in accordance with FACA and its implementing regulations, and with its Charter, as the same may be amended from time to time.

Section II: Members and Official Observers

The Members of the Committee are appointed by and serve at the pleasure of the Chairman of the Commission as may be appropriate for the accomplishment of the Committee’s purposes and in order to balance the viewpoints required to effectively address those purposes. Official Observers are invited by the Chairman to serve as official observers of the Committee; they also serve at the pleasure of the Chairman. Official Observers have all rights of Members of the Committee except the right to vote or to make a motion for a vote.

Section III: Meetings

(A) In General. The Committee will meet at such intervals as are necessary to carry out its duties. Meetings may be called by the Co-Chairs of the Committee with the approval of the Designated Federal Officer of the Committee appointed in accordance with FACA ("DFO"), or by the DFO. One of the Co-Chairs of the Committee will preside at all meetings of the Committee, unless the Chairman of the Commission directs the DFO to preside in accordance with FACA. The presiding officer may specify the use of rules of parliamentary procedure consistent with these By-Laws. Subject to such reasonable guidelines and procedures as the presiding officer or the Committee may adopt, Members and Official Observers may participate in a meeting by means of conference telephone or similar communications equipment if all Members and Official Observers can hear one another at the same time and members of the public entitled to hear them can do so.
(B) **Notice.** The Committee will publish a notice of each meeting in the *Federal Register* at least 15 calendar days before the meeting. The notice will include (1) the name of the Committee; (2) the time, date, place and purpose of the meeting; (3) a copy or summary of the agenda; (4) a statement as to whether all or part of the meeting will be open to the public and, if any part is closed, a statement as to why, citing the specific statutory provisions that serve as the basis for closure; (5) any notice required by Section III(F) if oral public comment is to be excluded; and (6) the name and telephone number of the DFO or other Commission official who may be contacted for additional information concerning the meeting.

(C) **Agenda.** The Co-Chairs will adopt an agenda for each meeting of the Committee sufficiently in advance of the meeting to permit a copy or summary of the agenda to be published with the notice of the meeting. The DFO must approve the agenda before such publication. The Commission staff will distribute the agenda to the Members and Official Observers before each meeting. Items for the agenda may be submitted to the Co-Chairs through the DFO by any Member or Official Observer of the Committee or by any member of the public.

(D) **Voting.** A Member must be participating in a meeting personally to cast a vote. When a decision or recommendation of the Committee is required, the presiding officer will request a motion for a vote. Any Member may make a motion for a vote and vote. No second after a proper motion will be required to bring any issue or recommendation to vote. Committee action based on a vote requires a simple majority of the votes cast at a meeting at which there is a quorum.

(E) **Quorum.** A quorum will consist of a simple majority of the Members, not including Official Observers.

(F) **Open Meetings.** Unless otherwise determined in advance, all meetings of the Committee will be open to the public. Once an open meeting has begun, it may not be closed for any reason. If, during the course of an open meeting, matter inappropriate for public disclosure arises during discussion, the presiding officer will order such discussion to cease and will schedule it for closed session. All materials brought before, or presented to, the Committee during an open meeting will be available to the public for review or copying at the time scheduled for the meeting. All such materials also will be available on the Committee’s web site before the meeting or added to the web site as soon as practicable afterwards. The Co-Chairs may decide in advance to exclude oral public comment during a meeting, in which case the meeting announcement published in the *Federal Register* will note that oral comment from the public will not be permitted and will invite written comment as an alternative. Members of the public may submit written statements to the Committee at any time.

(G) **Closed Meetings.** All or parts of meetings of the Committee may be closed in limited circumstances in accordance with applicable law. Requests for closed meetings must be submitted by the DFO to the Chairman of the Commission under FACA, generally at least 30 days in advance of the meeting. The appropriate Commission official must determine that closing the meeting is consistent with the provisions of the Government in the Sunshine Act. Consistent with Section III(B)(4), the notice of the closed meeting published in *Federal Register* must include information on the closure.
(H) Hearings. The Committee may hold hearings to receive testimony or oral comments, recommendations and expressions of concern from the public. The Committee may hold hearings at open meetings or in closed session in accordance with the standards in these By-Laws for closing meetings to the public. The Co-Chairs or the Committee may specify reasonable guidelines and procedures for conducting orderly and efficient hearings, such as requirements for submitting requests to testify and written testimony in advance and placing limitations on the number of persons who may testify and the duration of their testimony.

(I) Minutes. The DFO will prepare minutes of each meeting of the Committee and submit them to the Co-Chairs for certification of their accuracy. At least one Co-Chair must certify as to the accuracy of the minutes. The DFO will distribute copies of the certified minutes to each Member and Official Observer. Minutes of open meetings will be available to the public on the Committee’s web site. Minutes of closed meetings will also be available to the public upon request, subject to the withholding of matters about which public disclosure would be harmful to the interests of the Government, industry, or others, and which are exempt from disclosure under the Freedom of Information Act. The minutes will include a record of persons present (including the names of Committee Members and Official Observers, names of Commission staff providing support services to the Committee, and names of members of the public who made written or oral presentations); a complete and accurate description of the matters discussed and conclusions reached; and copies of all reports received, issued or approved by the Committee.

Section IV: Officials

(A) Co-Chairs. The Co-Chairs of the Committee are appointed by and serve at the pleasure of the Chairman of the Commission to perform the duties specified in these By-Laws. The Co-Chairs will work with the DFO to establish priorities, identify issues that should be addressed, determine the level and types of staff and financial support required and serve as the focal point for the Committee’s membership.

(B) Designated Federal Officer. The DFO is designated by the Chairman of the Commission and serves as the Federal Government's agent for matters related to the Committee’s activities. By law, the DFO must, among other things, approve or call all meetings of the Committee, approve agendas, attend all meetings, and adjourn meetings when such adjournment is in the public interest. In addition, the DFO is responsible for providing adequate staff support to the Committee, including staff to assist the DFO in the performance of the following functions: (1) notifying Members and Official Observers of the time and place for each meeting; (2) maintaining records of all meetings, including subcommittee meetings, as required by law; (3) maintaining the roll; (4) preparing the minutes of all meetings of the Committee and its subcommittees; (5) attending to official correspondence; (6) maintaining official Committee records, including subcommittee records; (7) maintaining a web site for the Committee; (8) acting as the Committee’s agent to collect, validate and pay all vouchers for pre-approved expenditures; and (9) preparing and handling all reports, including the annual report of the Committee required by FACA.

(C) Support Staff. The Chairman of the Commission has agreed that staff from the Commission’s Division of Corporation Finance, and in particular the
Division’s Office of Small Business Policy, will be available to the DFO to provide adequate staff support for the Committee.

Section V: Subcommittees

The Co-Chairs of the Committee, with the approval of the DFO, may convene subcommittees to support the Committee’s functions and may appoint Members and Official Observers to, and Chairs of, any subcommittees so convened. The Co-Chairs will be ex officio members of all subcommittees. Only Members of the Committee will have the right to vote and make a motion for a vote in a subcommittee. No subcommittee will have any authority to provide advice or recommendations (1) directly to the Commission or (2) to be adopted by the Committee without discussion or consideration at an open meeting of the Committee. All activities of the subcommittees will be in compliance with FACA.

Section VI: Records

All documents, reports and other materials prepared by or submitted to the Committee constitute official governmental records and must be maintained in accordance with FACA’s policies and procedures.

Section VII: Expenses

Expenses related to the operation of the Committee will be borne by the Commission. Expenditures of any kind must be approved in advance by the DFO.

Section VIII: Amendments

These By-Laws may be amended from time to time by vote of the Members.
Summary of Committee Agenda

1. Definition of “Smaller Public Company.”
   
   1.1. Develop preliminary observations to be used for analysis of each substantive area under items 2 through 7 below.
   
   1.2. Examine appropriateness of existing definitions.
   
   1.3. How do existing definitions work? Are they meaningful and effective? Are they practical? Is it possible to develop risk-based or other definitions? Seek economic analysis.

2. Internal Control – Section 404 of Sarbanes-Oxley; S-K Item 308, S-X Reg. § 210.2-02(e).
   
   2.1. Evaluate first quarter 2005 reports.
      
      2.1.1. Effective control.
      
      * Size/characteristics of company.
      
      2.1.2. Ineffective control.
      
      * Size/characteristics of company.
      * Reasons for failure.
      * Materiality of failure.
      
   2.2. Evaluate benefits and costs/burdens for smaller public companies, including disproportionate costs/burdens, competitive disadvantages and effectiveness in preventing fraud.
2.2.1. Seek economic input.

2.2.2. Consider impact on “tone at the top.”

2.2.3. Versus private companies and foreign companies.

2.3. Evaluate procedures used in first quarter reports.

2.3.1. Company procedures.

2.3.2. Auditor procedures.

2.3.3. What worked well.

2.3.4. What worked less well or did not work.

2.4. Mechanisms to evaluate.

2.4.1. Questionnaires prepared by FEI, NASDAQ and others.

2.4.2. One or more roundtables held by SEC and PCAOB.

2.4.3. Other written or oral input.

3. Corporate Governance Standards.

3.1. Review and catalog.

3.2. Evaluate impact of requiring independent directors for smaller public companies.

3.2.1. Boards themselves and Committees.

3.2.2. Impact on controlling families or other controlling shareholders.

3.2.3. Impact on other stakeholders.

3.2.4. Impact of stakeholders on effectiveness of independent directors.

3.2.5. Loss of market and company knowledge and experience.
3.3. Evaluate impact of independence definitions.
   3.3.1. Boards themselves and Committee.
   3.3.2. Adequate supply of competent directors.
   3.3.3. How are boards/committees performing?
   3.3.4. Cost of board operation.
   3.3.5. Other.

3.4. Evaluate impact of special requirements on audit committee make-up and operation.
   3.4.1. Special independence requirements.
   3.4.2. Financial expertise requirements and disclosure requirements.
   3.4.3. Loss of operational knowledge, experience and depth.

3.5. Recommendations.

4. Effects of other Statutory Requirements and Commission Regulations, including under Sarbanes-Oxley, on Smaller Public Companies.
   4.1. Officers’ certifications.
   4.2. Auditing firm’s standards and requirements.
   4.3. Prohibition of loans to executive officers and directors.
   4.4. Other.
   4.5. Recommendations.

5. Disclosure Requirements.
5.1. How do disclosure requirements affect smaller public companies?

5.2. Analyze Regulation S-B (including seeking economic input).

5.3. Analyze forms and requirements.
   
   5.3.1. Exchange Act periodic reporting forms (10-K, 10-KSB, 10-Q, 10-QSB).
   
   5.3.2. Special Securities Act forms (SB-1, SB-2).
   
   5.3.3. Are S-B forms helpful, beneficial, effective or negative, both for the issuer and the investor market?

5.4. Identify other aspects of disclosure regime that might be modified for smaller public companies.

5.5. Identify other possible scaling standards.
   
   5.5.1. Is size the most appropriate standard or is risk?
   
   5.5.2. Are revenues a better scaling standard for some disclosure rules and other regulations?
   
   5.5.3. Should other alternatives be considered?

5.6. Liability concerns.

5.7. Consider issues of delinquent and deficient micro-cap disclosure.

5.8. Evaluate the balance of disclosure to protect investors with the competitive needs of smaller public companies.

5.9. Recommendations.

6. Accounting Principles.
   
   6.1. Evaluate “one size fits all” vs. “Big GAAP-Little GAAP.”
6.2. Identify priority accounting principles, if any, where modifications might be considered for smaller public companies.

6.3. Emphasize importance of cash in many smaller companies.

6.4. Analyze overlay and impact of other regulatory schemes (financial institutions, insurance, government contractors, etc.).

6.5. Analyze role of outside audit firms with respect to smaller companies, e.g., environmental shift in role of auditors, communications with outside auditors, concentration of Big Four accounting firms, difficulty in switching audit firms.

6.6. Analyze whether extended effective dates for smaller companies are appropriate for future accounting principles.

6.7. Recommend changes, if any.

7. Capital Formation.

7.1. Analyze existing structure.

7.2. Analyze selected exemptions from registration and subsequent reporting.

7.3. Evaluate Regulation A.

7.4. Analyze investment banker roles.

7.5. Analyze analysts’ coverage.

7.6. Costs and timing to get access to markets.

7.6.1. Broader access to capital, including foreign markets.

7.6.2. Possible roles of capital formation specialists, including brokers and “finders.”
7.7. Cost of and ability to exit the markets.

7.8. Possible improvements in interaction and interplay between federal law or SEC, state laws or state regulators, and self-regulatory organizations and rules (e.g., Rule 15c2-11).

7.9. Liability issues.

7.10 Recommendations.

8.1. Analyze recommendations from recent SEC Small Business Forums.

8.2. Review small business statutes (Regulatory Flexibility Act and 1980 Small Business Investment Incentive Act).
SEC Advisory Committee on Smaller Public Companies

Committee Agenda

The following overarching principles should characterize the Committee’s work:

- Further Commission’s Investor Protection Mandate.
- Seek Cost Choice/Benefit Inputs.
- Keep It Simple.
- Maintain Culture of Entrepreneurship.
- Capital Formation Should Be Encouraged.
- Recommendations Should Be Prioritized.

1. Definition of “Smaller Public Company.”

   1.1 Develop preliminary observations to be used for analysis of each substantive area under Items 2 through 7 below.

   1.2 Examine appropriateness of existing definitions.

      1.2.1 Small business (“S-B”) issuer -- less than $25 million in public float and revenues.

      1.2.2 Accelerated filer definition – more than $75 million in market float.

      1.2.3 Fewer than 500 shareholders of record and $10 million in assets (Exchange Act §12(g) standard, including implications of issuing employee stock options).

      1.2.4 Use of Registration Statement S-3.

      1.2.5 Well-known seasoned issuers (public float of at least $700 million by non-affiliates).

      1.2.5 Listing standards.

* NYSE.
1.2.6 Market definitions of “small cap” and “micro cap.”

1.2.7 Other definitions?

1.3 How do existing definitions work? Are they meaningful and effective? Are they practical? Is it possible to develop risk-based or other definitions? Seek economic analysis.

1.4 Utilize the SEC Office of Economic Analysis to evaluate the definitions.

2. Internal Control – Section 404 of Sarbanes-Oxley; S-K, Item 308, S-X, Reg §210.2-02(e).

2.1 Evaluate first quarter 2005 reports.

2.1.1 Effective control.

* Size/characteristics of company.

2.1.2 Ineffective control.

* Size/characteristics of company.

* Reasons for failure.

* Materiality of failure.

2.2 Evaluate benefits and costs/burdens for smaller companies, including disproportionate costs/burdens, competitive disadvantages and effectiveness in preventing fraud.

2.2.1 Seek economic input.

2.2.2 Consider impact on “tone at the top.”

2.2.3 Versus private companies and foreign companies.
2.2.4 Evaluate cost choices imposed on companies.

2.2.5 Evaluate the leadership mindshare shift required.

2.2.6 Evaluate potential diminishing returns to investors.

2.2.7 Estimate annual cost of being public relative to profit potential.

2.3 Evaluate procedures used in first quarter reports.

2.3.1 Company procedures.

2.3.2 Auditor procedures.

2.3.3 What worked well.

2.3.4 What worked less well or didn’t work.

2.4 Mechanisms to evaluate.

2.4.1 Questionnaires prepared by FEI, NASDAQ and others.

2.4.2 One or more roundtables held by SEC and PCAOB.

2.4.3 Other written or oral input.

* Define “tone at the top.”

* Seek information re: costs and benefits.

2.5 Based on evaluation, recommend or support modifications, if any, to:

2.5.1 SEC regulations.

2.5.2 PCAOB Auditing Standard No. 2.

2.5.3 COSO (including evaluation of task force proposal).

2.5.4 Recommend or support delaying effectiveness for non-accelerated filers or others.

2.5.5 Consider staggering reports – i.e., a report might be due every other year rather than every year.

2.5.6 Other alternatives.
3. Corporate Governance Standards.

3.1 Review and catalog.

3.1.1 NYSE.

3.1.2 NASDAQ.

3.1.3 Other (AMEX, OTCBB, Pink Sheets).

3.1.4 Private entities.

* Ratings and standards: ISS, Corporate Library, IRR, Moody’s, etc.

* Institutional standards: CALPERs, TIAA-CREFF, others.

3.2 Evaluate impact of requiring independent directors for smaller companies.

3.2.1 Boards themselves and Committees.

3.2.2 Impact on controlling families or other controlling shareholders.

3.2.3 Impact on other stakeholders.

3.2.4 Impact of stakeholders on effectiveness of independent directors.

3.2.5 Loss of market and company knowledge and experience.

3.3 Evaluate impact of independence definitions.

3.3.1 Boards themselves and Committees.

3.3.2 Adequate supply of competent directors.

3.3.3 How are boards/committees performing?

3.3.4 Cost of board operation.

3.3.5 Other.

3.4 Evaluate impact of special requirements on audit committee make-up and operation.
3.4.1 Special independence requirements.
3.4.2 Financial expertise requirements and disclosure requirements.
3.4.3 Loss of operational knowledge, experience and depth.

3.5 Evaluate impact of stockholder approval of equity compensation plans.

3.6 Recommendations.

4. Effects of other Statutory Requirements and Commission Regulations, including under Sarbanes-Oxley, on Smaller Businesses.

4.1 Officers’ certifications.

4.2 Auditing firm’s standards and requirements.

4.2.1 Independence.

4.2.2 Partner rotation.

4.2.3 See above re: internal control audit.

4.3 Prohibition of loans to executive officers and directors.

4.4 Other.

4.4.1 Whistleblower regulation.

4.4.2 Reg. G.

4.4.3 Accelerated filing deadlines.

4.4.4 Increased SEC review of periodic reports.

4.4.5 Codes of conduct.

4.4.6 Disgorgement for restatements.

4.4.7 Benefit plan blackouts.

4.4.8 Officer and director bars.

4.4.9 Increased criminal sanctions.

4.5 Recommendations.
5. Disclosure Requirements.

5.1 How do disclosure requirements affect smaller public companies?

5.2 Analyze Regulation S-B (including seeking economic input).

5.2.1 Is size definition of S-B correct?

5.2.2 Irrespective of the size of issuer, is Regulation S-B helpful, effective or beneficial?

5.2.3 What is the market reaction to S-B companies?

5.2.4 What changes, if any, to improve or replace S-B?

5.3 Analyze forms and requirements.

5.3.1 Periodic reporting Exchange Act forms (10-K, 10-KSB, 10-Q, 10-QSB).

5.3.2 Special Securities Act forms (SB-1, SB-2).

5.3.3 Are S-B forms helpful, beneficial, effective or negative, both for the issuer and the investor market?

5.3.4 What is the market reaction to S-B forms?

5.3.5 What changes, if any, to recommend?

* Modified quarterly reporting (perhaps only revenue and ownership information and brief MD&A)?

* Semi-annual instead of quarterly periodic reporting?

* Permitting “fully comply” certification to be affixed to incomplete filings, with appropriate disclosure, instead of withholding information from investors until filing is complete?

5.4 Identify other aspects of disclosure regime that might be modified for smaller companies.

5.4.1 MD&A.
5.4.2 Proxy rules (14A and C).

5.4.3 Williams Act (13D and G).

5.4.4 Regulation FD.

5.4.5 Section 16 reporting and short swing profit recapture provision.

5.5 Identify other possible scaling standards.

5.5.1 Is size the most appropriate standard or is risk?

5.5.2 Are revenues a better scaling standard for some disclosure rules and other regulations?

5.5.3 Should other alternatives be considered?

5.6 Liability concerns.

5.6.1 General.

5.6.2 Safe-harbor for forward-looking information.

5.6.3 Special considerations re: outside directors.

5.7 Consider issues of delinquent and deficient micro-cap disclosure.

5.7.1 Standards.

5.7.2 Cure period.

5.7.3 Deregistration.

5.7.4 Consider modification of Rule 15c2-11.

5.7.5 Relationship with Commission delinquent filer program.

5.8 Evaluate the balance of disclosure to protect investors with the competitive needs of smaller public companies.

5.8.1 Has disclosure gone so far that smaller public companies cannot be competitive in the global marketplace?

5.8.2 What is the proper balance of disclosure?
5.9 Recommendations.

6. Accounting Principles.

6.1 Evaluate “one size fits all” vs. “Big GAAP-Little GAAP.”

6.2 Identify priority accounting principles, if any, where modifications might be considered for smaller public companies, including, but not limited to, stock option expensing.

6.3 Emphasize importance of cash in many smaller companies.

6.4 Analyze overlay and impact of other regulatory schemes (financial institutions, insurance, government contractors, etc.).

6.5 Analyze role of outside audit firms with respect to smaller companies, e.g., environmental shift in role of auditors, communications with outside auditors, concentration of Big Four accounting firms, difficulty in switching audit firms.

6.6 Analyze whether extended effective dates for smaller companies are appropriate for future accounting principles.

6.7 Recommend changes, if any.

7. Capital Formation.

7.1 Analyze existing structure.

7.1.1 SB-1.

7.1.2 SB-2.

7.1.3 S-3.

* New registration statements.

* New offering procedures and rules.

7.2 Analyze selected exemptions from registration and subsequent reporting.

7.2.1 Section 4(6).
7.2.2 California Rule 1001.

7.2.3 Test the Waters.

7.2.4 Rule 701 (especially advisability of revisiting ceilings in view of increase in market standards and average time to go public).

7.2.5 Others.

7.3 Evaluate Regulation A.

7.4 Analyze investment banker roles.

7.5 Analyze analysts’ coverage.

7.6 Costs and timing to get access to markets.

7.6.1 Broader access to capital, including foreign markets.

7.6.2 Possible roles of capital formation specialists, including brokers and “finders.”

7.7 Cost of and ability to exit the markets.

7.7 Possible improvements in interaction and interplay between federal law or SEC, state laws or state regulators, and self-regulatory organizations and rules (e.g., Rule 15c2-11).

7.8 Liability issues.

7.9 Recommendations.

8.1 Analyze recommendations from recent SEC Small Business Forums.

8.2 Review small business statutes (Regulatory Flexibility Act and 1980 Small Business Investment Incentive Act).

9.1 Possibility of rolling or staggered recommendations.

9.2 Categories of possible solutions:

9.2.1 SEC rules.
9.2.2 SEC staff interpretations or practices.

9.2.3 PCAOB standards or staff interpretations or practices.

9.2.4 SRO rules or staff interpretations or practices.

9.2.5 Others (i.e., ISS, Moody’s etc.).

9.3 Should size or other measurements be a determining factor?

9.3.1 If so, what should be the measurement, breakpoints, and how many levels (remember: keep it simple).

9.3.2 Are there other solutions (i.e., a system based on meeting compliance and disclosure standards would relieve issuers from certain burdens; if compliance was not met, there could be additional requirements).
