COMPANY X

Instead of talking about all the gizmos that will make markets work better and give investors better tools than they have today, we ought to be starting with the reasons that interactive data will make the lives of investors, companies, and even regulators better.

Christopher Cox—*Chairman, U. S. Securities and Exchange Commission*

Chairman Cox, this is a request that you require companies to include our standardized *XBRL Quarterly Data Summary* below since 1993 in every future—not past—quarterly and annual report.

Microsoft annual reports already include a table with 3 of 9 items for 12 of 50 quarters. We're now asking Microsoft to volunteer all the items for all the quarters. This one table will make our lives better by reducing our search from fifty reports to one table in one report.

One reason interactive data will make our lives better is we can make investment decisions based on facts when we have instant access to at least summary-level trend charts of company performance.

Your *SEC Webmaster* has posted our *search string header example*, *sun microsystems (10-q* OR 10-k*)*, for the shortest list of all reports. Like requiring our *Quarterly Data Summary*, easier and quicker access required only *SEC machinery*—and one insightful person.

When your overall *XBRL* project is complete, our *Quarterly Data Summary* will be even more useful. It infers from *SEC* data the minimum items and the taxonomy for company summary evaluation. It also infers U. S. *Generally Accepted Accounting Principles (GAAP)* structure, which defines a little interactive navigational icon that mathematically relates summaries to their factors. Children use it.

Our vector graphics trend charts display an annual report of *SEC* data every quarter. These should convince you we'll someday enter a company name, select a *GAAP* measure, and view its trend chart.

As Chairman of our *SEC* you have all the authority to revolutionize global financial literacy by requiring our *Quarterly Data Summary* verified by your own *SEC* data. We are grateful for your leadership.

Robert Goodenough, Ph.D.
