Re: Internet Availability of Proxy Materials  
(Release No.: 34-52926; IC -27182; File No.: S7-10-05)

Ladies and Gentlemen:

We applaud the SEC's efforts to move the shareholder communication process in the direction of Internet usage. We endorse and support the position of SEC Chairman Cox in his November 29, 2005 speech where he spoke about Internet access as an acceptable way to for investors to get their proxy materials.

Modern Technology – specifically, interactive data – has the potential to tap the awesome number crunching and analytical power of today's computers to make SEC required documents vastly more useful for investors, analysts, companies and, not least of all, the SEC.

We advocate for the individual shareholder. When thinking about the Internet in general, it was available for a long time before the public started to use it. It wasn't until Web Browsers made the Internet easy to use did the concept even enter the mind of the average person. Now everyone knows about the web, "www," "dot.com" and other Internet jargon.

In moving forward with transitioning the average shareholder to viewing Proxy Statement, Annual Reports and other financial documents on the Internet, we suggest you keep this analogy in mind. It is only when financial documents are easy to read, easy to navigate and easy to print will there be any real movement for accepting these documents only on the Internet.

EZOnlineDocuments (<http://www.ezonlinedocuments.com>) has been supporting Internet usage for Proxy Statements, Annual Reports and 10Ks for seven years. Our goal is to make the Internet document easy to read, easy to navigate, easy to print and safe to use. We have developed software to do this, which is independent of any other software and inexpensive to use. We look forward to working with the SEC to expand the use of secure interactive data to support the individual investor and the larger community of investment stakeholders.

Cordially,  
Rhoda Anderson
