The text of the proposed rule change is below. Proposed new language is underlined; deletions are bracketed.

[4751] 4701. Definitions

The following definitions apply to the Rule [4600 and 4750]4000 Series for the trading of securities listed on Nasdaq or a national securities exchange other than Nasdaq.

(a) The term “Nasdaq Market Center,” or “System” shall mean the automated system for order execution and trade reporting owned and operated by The NASDAQ Stock Market LLC. The Nasdaq Market Center comprises:

(1) a montage for Quotes and Orders, referred to herein as the “Nasdaq Book”, that collects and ranks all Quotes and Orders submitted by Participants;

[(1)] (2) an [o]Order execution service that enables Participants to automatically execute transactions in System Securities; and provides Participants with sufficient monitoring and updating capability to participate in an automated execution environment;

[(2)] (3) a trade reporting service that submits “locked-in” trades for clearing to a registered clearing agency for clearance and settlement; transmits last-sale reports of transactions automatically to the National Trade Reporting System, if required, for dissemination to the public and industry; and provides participants with monitoring and risk management capabilities to facilitate participation in a “locked-in” trading environment; and

[(3)] (4) [a] data feeds[(s)] that can be used to display with attribution to Participants’ MPIDs all Quotes and Displayed Orders on both the bid and offer side of the market for all price levels then within the Nasdaq Market Center, and that disseminate such additional information about Quotes, Orders, and transactions within the Nasdaq Market Center as shall be reflected in the Nasdaq Rules.

(b) No change.

(c) The term “Participant” shall mean an entity that fulfills the obligations contained in Rule 4611 regarding participation in the System, and shall include:

(1) – (2) No change.

(3) “Order Entry Firms,” members that are registered as Order Entry Firms for purposes of entering orders in System Securities into the System. This term shall also include any Electronic Communications Network or Alternative Trading System (as such terms are defined in Regulation NMS) that fails to meet all the requirements of Rule 4623.
(d) [With respect to System-provided quotation functionality:]
[(1)] The term “Quote” [shall] mean a single bid or offer quotation submitted to the System by a Market Maker or Nasdaq ECN and designated for display (price and size) next to the Participant’s MPID [by a Participant that is eligible to submit such quotations] in the Nasdaq Book. Quotes are entered in the form of Orders with Attribution (as defined in Rule 4703). Accordingly, all Quotes are also Orders.

[(2) Reserved.]

[(3) The term “Reserve Size” shall mean the System-provided functionality that permits a Participant to display in its Displayed Quote part of the full size of a proprietary or agency order, with the remainder held in reserve on an undisplayed basis. Both the displayed and non-displayed portions are available for potential execution against incoming orders. If the Displayed Quote is reduced to less than a normal unit of trading, the System will replenish the display portion from reserve up to at least a single round-lot amount. A new timestamp is created for the replenished portion of the order each time it is replenished from reserve, while the reserve portion retains the time-stamp of its original entry.]

e) The term “Order” [shall] mean an instruction to trade a specified number of shares in a specified System Security submitted to the Nasdaq Market Center by a Participant. An “Order Type” is a standardized set of instructions associated with an Order that define how it will behave with respect to pricing, execution, and/or posting to the Nasdaq Book when submitted to Nasdaq. An “Order Attribute” is a further set of variable instructions that may be associated with an Order to further define how it will behave with respect to pricing, execution, and/or posting to the Nasdaq Book when submitted to Nasdaq. The available Order Types and Order Attributes, and the Order Attributes that may be associated with particular Order Types, are described in Rules 4702 and 4703. [a single order or multiple orders at the same price submitted to the System by a Participant that is eligible to submit such orders and shall include:]

(f) The term “ET” means Eastern Standard Time or Eastern Daylight Time, as applicable.

(g) The term “Market Hours” means the period of time beginning at 9:30 a.m. ET and ending at 4:00 p.m. ET (or such earlier time as may be designated by Nasdaq on a day when Nasdaq closes early). The term “System Hours” means the period of time beginning at 4:00 a.m. ET and ending at 8:00 p.m. ET (or such earlier time as may be designated by Nasdaq on a day when Nasdaq closes early). The term “Pre-Market Hours” means the period of time beginning at 4:00 a.m. ET and ending immediately prior to the commencement of Market Hours. The term “Post-Market Hours” means the period of time beginning immediately after the end of Market Hours and ending at 8:00 p.m. ET.

Nasdaq notes that in certain contexts, times cited in the Nasdaq Rules may be approximate. For example, for a System Security in which the Nasdaq Opening Cross occurs, the first transactions executed during Market Hours will occur in the Nasdaq Opening Cross. However, because Nasdaq Opening Crosses for different System
Securities occur sequentially rather than simultaneously, the first Market Hours transactions in a particular System Security are likely to occur during a brief period following 9:30 a.m. ET, not precisely at 9:30 a.m. ET.

(h) The term “marketable” with respect to an Order to buy (sell) means that, at the time it is entered into the System, the Order is priced at the current Best Offer or higher (at the current Best Bid or lower).

(i) The term “market participant identifier” or “MPID” means a unique four-letter mnemonic assigned to each Participant in the Nasdaq Market Center. A Participant may have one or more than one MPID.

(j) The terms “Best Bid”, “Best Offer”, “National Best Bid and National Best Offer”, “Protected Bid”, “Protected Offer”, “Protected Quotation” and “Intermarket Sweep Order” shall have the meanings assigned to them under Rule 600 under SEC Regulation NMS; provided, however, that the terms “Best Bid”, “Best Offer”, “Protected Bid”, “Protected Offer”, and “Protected Quotation” shall, unless otherwise stated, refer to the bid, offer, or quotation of a market center other than Nasdaq. The term “NBBO” shall mean the “National Best Bid and National Best Offer”.

(k) The term “minimum price increment” means $0.01 in the case of a System Security priced at $1 or more per share, and $0.0001 in the case of a System Security priced at less than $1 per share.

[(1) “Attributable Orders,” orders that are designated for display (price and size) next to the Participant’s MPID;]

[(2) “Non-Attributable Orders,” orders that are entered by a Participant that is designated for display (price and size) on an anonymous basis in the order display service of the System; and]

[(3) “Non-Displayed Orders,” a limit order that is not displayed in the System, but nevertheless remains available for potential execution against all incoming orders until executed in full or cancelled.]

[(f) The term “Order Type” shall mean the unique processing prescribed for designated orders that are eligible for entry into the System, and shall include:]

[(1) “Discretionary Orders” are orders that have a displayed price and size, as well as a non-displayed discretionary price range, at which the entering party, if necessary, is also willing to buy or sell. The non-displayed trading interest is not entered into the System book but is, along with the displayed size, converted to an IOC buy (sell) order priced at the highest (lowest) price in the discretionary price range when displayed shares become available or an execution takes place at any price within the discretionary price range. The generation of this IOC order is triggered by the cancellation of the open shares of the Discretionary Order. If more than one Discretionary Order is available for conversion to]
an IOC order, the system will convert all such orders at the same time and priority will be
given to the first IOC order(s) that reaches the trading interest on the other side of the
market. If an IOC order is not executed in full, the unexecuted portion of the order is
automatically re-posted and displayed in the System book with a new time stamp, at its
original displayed price, and with its non-displayed discretionary price range.]

[(2) “Reserve Orders” are limit orders that have both a round-lot displayed size as well as
an additional non-displayed share amount. Both the displayed and non-displayed portions
of the Reserve Order are available for potential execution against incoming orders. If the
round-lot displayed portion of a Reserve Order is reduced to less than a normal unit of
trading, the System will replenish the display portion from reserve up to at least a single
round-lot amount. A new timestamp is created for the replenished portion of the order
each time it is replenished from reserve, while the reserve portion retains the time-stamp
of its original entry.]

[(3) “Limit Orders” are orders to buy or sell a stock at a specified price or better. A limit
order is marketable when, for a limit order to buy, at the time it is entered into the
System, the order is priced at the current inside offer or higher, or for a limit order to sell,
at the time it is entered into the System, the order is priced at the inside bid or lower.]

[(4) “Pegged Orders” are orders that, after entry, have their price automatically adjusted
by the System in response to changes in either the Nasdaq Market Center inside bid or
offer or bids or offers in the national market system, as appropriate. A Pegged Order can
specify that its price will equal the inside quote on the same side of the market (“Primary
Peg”), the opposite side of the market (“Market Peg”), or the midpoint of the national
best bid and offer (“Midpoint Peg”). A Pegged Order may have a limit price beyond
which the order shall not be executed. In addition, the Primary Peg and Market Peg
Orders may also establish their pricing relative to the appropriate bids or offers by the
selection of one or more offset amounts that will adjust the price of the order by the offset
amount selected. A Midpoint Peg Order is priced based upon the national best bid and
offer, excluding the effect that the Midpoint Peg Order itself has on the inside bid or
inside offer. Primary Pegged Orders with an offset amount and Midpoint Pegged Orders
will never be displayed. A Midpoint Pegged Order may be executed in sub-pennies if
necessary to obtain a midpoint price. A new timestamp is created for the order each time
it is automatically adjusted.]

[(5) “Minimum Quantity Orders” are orders that will not execute unless a specified
minimum quantity of shares can be obtained. A Minimum Quantity Order that posts to
the NASDAQ book will be a Non-Displayed Order, and upon entry, must have a size and
a minimum quantity condition of at least one round lot. In the event that the shares
remaining in the size of the order following a partial execution thereof are less than the
minimum quantity specified by the market participant entering the order, the minimum
quantity value of the order will be reduced to the number of shares remaining. A member
firm may either:]}
[A] enter a Minimum Quantity Order that allows aggregation of multiple simultaneous executions to meet the minimum quantity. In the event there is not enough contra-side liquidity available, the Minimum Quantity Order will post at its limit price.

[or]

[B] enter a Minimum Quantity Order with a minimum individual execution size. If there is contra-side liquidity available but it does not meet the order’s minimum, the order will be posted one minimum price increment away from the resting liquidity. If, upon entry, the order is partially executed the remainder of the order will be cancelled if it would lock resting contra-side liquidity that does not meet the minimum individual execution size.

[(6) “Intermarket Sweep Order” or “ISO” are limit orders that are designated as ISOs in the manner prescribed by Nasdaq and are executed within the System by Participants at multiple price levels without respect to Protected Quotations of other market centers within the meaning of Rule 600(b) of Regulation NMS under the Act. ISOs are immediately executable within the System pursuant to Rule 4757 and shall not be eligible for routing as set out in Rule 4758.]

Simultaneously with the routing of an ISO to the System, one or more additional limit orders, as necessary, are routed by the entering party to execute against the full displayed size of any protected bid or offer (as defined in Rule 600(b) of Regulation NMS under the Act) in the case of a limit order to sell or buy with a price that is superior to the limit price of the limit order identified as an intermarket sweep order (as defined in Rule 600(b) of Regulation NMS under the Act). These additional routed orders must be identified as intermarket sweep orders.

[(7) “Price to Comply Order” are orders that, if, at the time of entry, a Price to Comply Order would lock or cross the quotation of an external market, the order will be priced to the current low offer (for bids) or to the current best bid (for offers) and displayed at a price one minimum price increment lower than the offer (for bids) or higher than the bid (for offers). The displayed and undisplayed prices of a Price to Comply order entered through an OUCH port that crosses the market will be adjusted once and, depending on the election of the member firm, either rest on the book or be canceled if the previously-locking price becomes available. The displayed and undisplayed prices of a Price to Comply order entered through an OUCH port that locks the market will be adjusted once and, depending on the election of the member firm, either rest on the book, be canceled, or adjusted a second time if the previously-locking price becomes available. The displayed and undisplayed prices of a Price to Comply order entered through a RASH port may be adjusted multiple times, depending upon changes to the prevailing NBBO.]

[(8) “Price to Comply Post Order” are orders that, if, at the time of entry, a Price to Comply Post Order would create a violation of Rule 610(d) of Regulation NMS under the Act by locking or crossing the protected quotation of an external market or would cause a violation of Rule 611 of Regulation NMS under the Act, the order will be re-priced and displayed by the System to one minimum price increment (i.e., $0.01 or $0.0001) below
the current low offer (for bids) or to one penny above the current best bid (for offers). Price to Comply Post Orders will not be routed outside of the System.]

[(9) “Directed Orders” are orders that are directed to an automated trading center (as defined in Regulation NMS) other than Nasdaq, as directed by the entering party, without checking the Nasdaq book. If unexecuted, the order (or unexecuted portion thereof) shall be returned to the entering party.]

[Directed Orders may be designated as intermarket sweep orders by the entering party to execute against the full displayed size of any protected bid or offer (as defined in Rule 600(b) of Regulation NMS under the Act). A broker-dealer that designates an order as an intermarket sweep order has the responsibility of complying with Rules 610 and 611 of Regulation NMS. Directed Orders marked as intermarket sweep may only be used with time-in-force parameters of IOC.]

[Directed Orders may not be directed to a facility of an exchange that is an affiliate of Nasdaq except for Directed Orders directed to the NASDAQ OMX BX Equities Market or to the NASDAQ OMX PSX facility of NASDAQ OMX PHLX.]

[(10) “Post-Only Orders” are evaluated at the time of entry with respect to locking or crossing other orders as follows: (i) if a Post-Only Order would lock or cross an order on the System, the order will be re-priced and displayed by the System to one minimum price increment (i.e., $0.01 or $0.0001) below the current low offer (for bids) or above the current best bid (for offers), unless the value of price improvement associated with executing against a resting order equals or exceeds the sum of fees charged for such execution and the value of any rebate that would be provided if the order posted to the book and subsequently provided liquidity, in which case the order will execute; and (ii) if a Post-Only Order would not lock or cross an order on the System but would lock or cross the national best bid or offer as reflected in the protected quotation of another market center, the order will priced to the current best offer (for bids) or to the current best bid (for offers), and displayed by the System to one minimum price increment (i.e., $0.01 or $0.0001) below the current low offer (for bids) or above the current best bid (for offers).]

[(11) “Midpoint Peg Post-Only Orders” are orders that are priced in the same manner as Midpoint Peg Orders. Upon entry, a Midpoint Peg Post-Only Order will always post to the book unless it is a buy (sell) order that is priced higher than (lower than) a resting sell (buy) order, in which case it will execute at the price of the resting order. Midpoint Peg Post-Only Orders must always have a price of more than $1 per share. A Midpoint Peg Post-Only Order that would be assigned a price of $1 or less per share will be rejected or cancelled, as applicable. Midpoint Peg Post-Only Orders are eligible for entry and execution during regular market hours only, and any Midpoint Peg Post-Only Orders resting on the book at 4:00 pm will be cancelled.]

[While a Midpoint Peg Post-Only Order that posts to the book is locking a preexisting non-displayed order, the Midpoint Peg Post-Only Order will execute against an incoming
order only if the price of the incoming buy (sell) order is higher (lower) than the price of the pre-existing order. For purposes of determining the Nasdaq best bid or offer under Rules 4752, 4753, or 4754, a Midpoint Peg Post-Only Order to buy (sell) that is locking another non-displayed order shall be deemed to have a price equal to the price of the highest sell order (lowest buy order) that would be eligible to execute against the Midpoint Peg Post-Only Order in such circumstances.]

[(12) “Unpriced Orders” are any order types permitted by the System to buy or sell shares of a security at the national best bid (best offer) (“NBBO”) at the time when the order reaches the System.]

[(13) “Collared Orders” are all Unpriced Orders except: (1) Market On Open Orders as defined in Rule 4752; (2) Market On Close Orders as defined in Rule 4754; or (3) Unpriced Orders included by the System in any Nasdaq Halt Cross or Nasdaq Imbalance Cross, each as defined in Rule 4753. Any portion of a Collared Order that would execute (either on NASDAQ or when routed to another market center) at a price more than $0.25 or 5 percent worse than the NBBO at the time when the order reaches the System, whichever is greater, will be cancelled.]

[(14) “Supplemental Orders” are Non-Displayed limit orders. Upon entry, a Supplemental Order will always post to the book and thereafter become eligible for execution against incoming orders in accordance with the Nasdaq Market Center’s Supplemental Process, as described in Rule 4757(a)(1)(D). If a Supplemental Order is not executed in full, the remaining portion of the order shall continue to repost in the Supplemental Process until the order is fully executed, the order is cancelled by the member that entered the order, or the size of the order is reduced to less than one normal unit of trading (in which case the remaining order will be cancelled by the System). A Supplemental Order may only execute at the NBBO and shall not trade through a Protected Quotation. All Supplemental Orders must be entered with size of one or more normal units of trading. Supplemental Orders may be entered at any time between 4:00 a.m. and 4:00 p.m., but are available for potential execution only between 9:30 a.m and 4:00 p.m. Any Supplemental Orders still on the book after 4:00 p.m. will be cancelled. Supplemental Orders are not eligible to participate in the Nasdaq Opening Cross, the Nasdaq Halt Cross, the Nasdaq Imbalance Cross, or the Nasdaq Closing Cross.]

[(15) “Market Maker Peg Order” is a limit order that, upon entry, the bid or offer is automatically priced by the System at the Designated Percentage away from the then-current National Best Bid and National Best Offer, or if no National Best Bid or National Best Offer, at the Designated Percentage away from the last reported sale from the responsible single plan processor in order to comply with the quotation requirements for Market Makers set forth in Rule 4613(a)(2). Upon reaching the Defined Limit, the price of a Market Maker Peg Order bid or offer will be adjusted by the System to the Designated Percentage away from the then-current National Best Bid and National Best Offer, or, if no National Best Bid or National Best Offer, to the Designated Percentage away from the last reported sale from the responsible single plan processor. If a Market Maker Peg Order bid or offer moves away from the Designated Percentage towards the
then-current National Best Bid or National Best Offer, as appropriate, by 4 percentage points, the price of such bid or offer will be adjusted to the Designated Percentage away from the then-current National Best Bid and National Best Offer, or if no National Best Bid or National Best Offer, to the Designated Percentage away from the last reported sale from the responsible single plan processor. In the absence of a National Best Bid or National Best Offer and if no last reported sale, the order will be cancelled or rejected. If, after entry, the Market Maker Peg Order is priced based on the consolidated last sale and such Market Maker Peg Order is established as the National Best Bid or National Best Offer, the Market Maker Peg Order will not be subsequently adjusted in accordance with this rule until either there is a new consolidated last sale, or a new National Best Bid or new National Best Offer is established by either a national securities exchange or NASDAQ. Market Maker Peg Orders are not eligible for routing pursuant to Rule 4758 and are always displayed on NASDAQ. Notwithstanding the availability of Market Maker Peg Order functionality, a Market Maker remains responsible for entering, monitoring, and resubmitting, as applicable, quotations that meet the requirements of Rule 4613. A new timestamp is created for the order each time that it is automatically adjusted. For purposes of this paragraph, NASDAQ will apply the Designated Percentage and Defined Limit as set forth in Rule 4613, subject to the following exception. Nothing in this rule shall preclude a Market Maker from designating a more aggressive offset from the National Best Bid or National Best Offer than the given Designated Percentage for any individual Market Maker Peg Order. If a Market Maker designates a more aggressive offset from the National Best Bid or National Best Offer, the price of a Market Maker Peg Order bid or offer will be adjusted by the System to maintain the Market Maker-designated offset from the National Best Bid or National Best Offer, or if no National Best Bid or National Best Offer, the order will be cancelled or rejected.

[(g) The term “Order Size” shall mean the number of shares up to 999,999 associated with a Quote or Order and shall include:]

[(1) “normal unit of trading”: the round lot size for the security.]

[(2) “mixed lot”: an order that is for more than a normal unit of trading but not a multiple thereof.]

[(3) “odd-lot”: an order that is for less than a normal unit of trading.]

[(h) The term “Time in Force” shall mean the period of time that the System will hold an order for potential execution, and shall include:]

[(1) “System Hours Immediate or Cancel” or “SIOC” shall mean, for limit orders so designated, that if after entry into the System the order (or a portion thereof) is not marketable, the order (or unexecuted portion thereof) shall be canceled and returned to the entering Participant. SIOC Orders shall be available for entry and execution from 4:00 a.m. until 8:00 p.m. Eastern Time.]
(2) “System Hours Day” or “SDAY” shall mean, for orders so designated, that if after entry into the System, the order is not fully executed, the order (or the unexecuted portion thereof) shall remain available for potential display and/or execution from 4:00 a.m. until 8:00 p.m. Eastern Time on the day it was submitted unless cancelled by the entering party.

(3) “System Hours Good-till-Cancelled” or “SGTC” shall mean, for orders so designated, that if after entry into the System, the order is not fully executed, the order (or unexecuted portion thereof) shall remain available for potential display and/or execution from 4:00 a.m. until 8:00 p.m. Eastern Time unless cancelled by the entering party, or until 1 year after entry, whichever comes first.

(4) “System Hours Expire Time” or “SHEX” shall mean, for orders so designated, that if after entry into the System, the order is not fully executed, the order (or the unexecuted portion thereof) shall remain available for potential display and/or execution for the amount of time specified by the entering Participant unless canceled by the entering party. SHEX Orders shall be available for entry and execution from 4:00 a.m. until 8:00 p.m. Eastern Time.

(5) “Market Hours IOC” or “MIOC” shall mean for orders so designated, that if after entry into the System a marketable limit order for unexecuted portion thereof) becomes non-marketable, the order (or unexecuted portion thereof) shall be canceled and returned to the entering participant. MIOC Orders shall be available for entry from 4:00 a.m. until 4:00 p.m. Eastern Time and for potential execution from 9:30 a.m. until 4:00 p.m. Eastern Time. MIOC Orders entered between 4:00 a.m. and 9:30 a.m. Eastern Time will be held within the System until 9:30 a.m. at which time the System shall determine whether such orders are marketable.

(6) “Market Hours Day” or “MDAY” shall mean for orders so designated, that if after entry into the System, the order is not fully executed, the order (or unexecuted portion thereof) shall remain available for potential display and/or execution until 4:00 p.m. Eastern Time, unless canceled by the entering party after which it shall be returned to the entering party. MDAY Orders shall be available for entry from 4:00 a.m. until 4:00 p.m. Eastern Time and for potential execution from 9:30 a.m. until 4:00 p.m. Eastern Time. MDAY Orders entered after 4:00 p.m. Eastern Time will not be accepted.

(7) “Market Hours GTC” or “MGTC” shall mean for orders so designated, that if after entry into System, the order is not fully executed, the order (or unexecuted portion thereof) shall remain available for potential display and/or execution unless cancelled by the entering party, or until 1 year after entry, whichever comes first. MGTC Orders shall be available for entry from 4:00 a.m. until 8:00 p.m. Eastern Time and for potential execution from 9:30 a.m. until 4:00 p.m. Eastern Time.

(8) “Good-til-market close” or “GTMC” shall mean for orders so designated, that if after entry into the System, the order is not fully executed, the order (or unexecuted portion thereof) shall remain available for potential display and/or execution until cancelled by
the entering party, or until the completion of the Nasdaq Closing Cross, after which it shall be returned to the entering party. GTMC orders shall be available for entry and potential execution from 4:00 a.m. until 4:00 p.m. Eastern Time. GTMC orders entered after 4:00 p.m. Eastern Time will not be accepted.

[(i)] [(l) The term “System Book Feed” shall mean a data feed for System Securities [eligible] [securities], generally known as the TotalView ITCH feed.

**4702. Order Types.**

(a) Participants may express their trading interest in the Nasdaq Market Center by entering Orders. The Nasdaq Market Center offers a range of Order Types that behave in the manner specified for each particular Order Type. Each Order Type may be assigned certain Order Attributes that further define its behavior. All Order Types and Order Attributes operate in a manner that is reasonably designed to comply with the requirements of Rules 610 and 611 under Regulation NMS. Each Order must designate whether it is to effect a buy, a long sale, a short sale, or an exempt short sale.

Nasdaq maintains several communications protocols for Participants to use in entering Orders and sending other messages to the Nasdaq Market Center:

- OUCH is a Nasdaq proprietary protocol.
- RASH is a Nasdaq proprietary protocol.
- QIX is a Nasdaq proprietary protocol.
- FLITE is a Nasdaq proprietary protocol.
- FIX is a non-proprietary protocol.

Except where otherwise stated, all protocols are available for all Order Types and Order Attributes.

Upon entry, an Order is processed to determine whether it may execute against any contra-side Orders on the Nasdaq Book in accordance with the parameters applicable to the Order Type and Order Attributes selected by the Participant and in accordance with the priority for Orders on the Nasdaq Book provided in Rule 4757. In addition, the Order may have its price adjusted in accordance with applicable parameters and may be routed to other market centers for potential execution if designated as Routable. The Order may then be posted to the Nasdaq Book if consistent with the parameters of the Order Type and Order Attributes selected by the Participant. Thereafter, as detailed in Rules 4702, 4703, and 4758, there are numerous circumstances in which the Order on the Nasdaq Book may be modified and receive a new timestamp. The sole instances in which the modification of an Order on the Nasdaq Book will not result in a new timestamp are: (i) a decrease in the size of the Order due to execution or modification by the Participant or by the System, and (ii) a redesignation of a sell Order as a long sale, a short sale, or an exempt short sale. Whenever an Order receives a new timestamp for any reason, it is processed by the System as a new Order with respect to potential execution against
Orders on the Nasdaq Book, price adjustment, routing, reposting to the Nasdaq Book, and subsequent execution against incoming Orders, except where otherwise stated.

All Orders are also subject to cancellation and/or repricing and reentry onto the Nasdaq Book in the circumstances described in Rule 4120(a)(12) (providing for compliance with Plan to Address Extraordinary Market Volatility) and Rule 4763 (providing for compliance with Regulation SHO). In all circumstances where an Order is repriced pursuant to those provisions, it is processed by the System as a new Order with respect to potential execution against Orders on the Nasdaq Book, price adjustment, routing, reposting to the Nasdaq Book, and subsequent execution against incoming Orders. If multiple Orders at a given price are repriced, the Order in which they are reentered is random, based on the respective processing time for each such Order; provided, however, that in the case of Price to Comply Orders and Post-Only Orders that have their prices adjusted upon entry because they lock a Protected Quotation but that are subsequently displayed at their original entered limit price as provided in Rules 4702(b)(1)(B) and (4)(B), they are processed in accordance with the time priority under which they were previously ranked on the Nasdaq Book. If an Order is repriced and/or reentered 10,000 times for any reason, the Order will be cancelled.

(b) Except where stated otherwise, the following Order Types are available to all Participants:

(1) (A) A “Price to Comply Order” is an Order Type designed to comply with Rule 610(d) under Regulation NMS by avoiding the display of quotations that lock or cross any Protected Quotation in a System Security during Market Hours. The Price to Comply Order is also designed to provide potential price improvement.

When a Price to Comply Order is entered, the Price to Comply Order will be executed against previously posted Orders on the Nasdaq Book that are priced equal to or better than the price of the Price to Comply Order, up to the full amount of such previously posted Orders, unless such executions would trade through a Protected Quotation. Any portion of the Order that cannot be executed in this manner will be posted on the Nasdaq Book (and/or routed if it has been designated as Routable).

During Market Hours, the price at which a Price to Comply Order is posted is determined in the following manner. If the entered limit price of the Price to Comply Order would lock or cross a Protected Quotation and the Price to Comply Order could not execute against an Order on the Nasdaq Book at a price equal to or better than the price of the Protected Quotation, the Price to Comply Order will be displayed on the Nasdaq Book at a price one minimum price increment lower than the current Best Offer (for a Price to Comply Order to buy) or higher than the current Best Bid (for a Price to Comply Order to sell) but will also be ranked on the Nasdaq Book with a non-displayed price equal to the current Best Offer (for a Price to Comply Order to buy) or to the current Best Bid (for a Price to Comply Order to sell). For example, if a Price to Comply Order to buy at $11 would lock a Protected Offer of $11, the Price to Comply Order will be ranked at a non-displayed price of $11 but will be displayed at $10.99. An incoming Order to sell at a
price of $11 or lower would execute against the Price to Comply Order at $11 (unless the incoming Order was an Order Type that was not immediately executable, in which case the incoming Order would behave in the manner specified for that Order Type).

During Pre-Market Hours and Post-Market Hours, a Price to Comply Order will be ranked and displayed at its entered limit price without adjustment.

(B) If a Price to Comply Order is entered through RASH, QIX, or FIX, during Market Hours the price of the Price to Comply Order will be adjusted in the following manner after initial entry and posting to the Nasdaq Book (unless the Order is assigned a Routing Order Attribute that would cause it to be routed to another market center rather than remaining on the Nasdaq Book):

- If the entered limit price of the Price to Comply Order locked or crossed a Protected Quotation and the NBBO changes, the displayed and non-displayed price of the Price to Comply Order will be adjusted repeatedly in accordance with changes to the NBBO; provided, however, that if the quotation of another market center moves in a manner that would lock or cross the displayed price of a Price to Comply Order, the prices of the Price to Comply Order will not be adjusted. For example, if a Price to Comply Order to buy at $11.02 would cross a Protected Offer of $11, the Order will be ranked at its non-displayed price of $11 but will be displayed at $10.99. If the Best Offer then moves to $11.01, the displayed price will be changed to $11 and the Order will be ranked at a non-displayed price of $11.01. However, if another market center then displays an offer of $11 (thereby locking the previously displayed price of the Price to Comply Order, notwithstanding Rule 610(d) under Regulation NMS), the price of the Price to Comply Order will not be changed. The Order may be repriced repeatedly until such time as the Price to Comply Order is able to be ranked and displayed at its original entered limit price ($11.02 in the example). The Price to Comply Order receives a new timestamp each time its price is changed.

- If the original entered limit price of the Price to Comply Order would no longer lock or cross a Protected Quotation, the Price to Comply Order will be ranked and displayed at that price and will receive a new timestamp, and will not thereafter be adjusted under this paragraph (B).

If a Price to Comply Order is entered through OUCH or FLITE, during Market Hours the price of the Price to Comply Order may be adjusted in the following manner after initial entry and posting to the Nasdaq Book:

- If the entered limit price of the Price to Comply Order crossed a Protected Quotation and the NBBO changes so that the Price to Comply Order could be displayed at a price at or closer to its entered limit price without locking or crossing a Protected Quotation, the Price to Comply Order may either remain on the Nasdaq Book unchanged or may be cancelled back to the Participant, depending on its choice. For example, if a Price to Comply Order to buy at
$11.02 would cross a Protected Offer of $11, the Order will be ranked at a non-displayed price of $11 but will be displayed at $10.99. If the Best Offer changes to $11.01, the Order will not be repriced, but rather will either remain with a displayed price of $10.99 but ranked at a non-displayed price of $11 or be cancelled back to the Participant, depending on its choice. A Participant’s choice with regard to maintaining the Price to Comply Order or cancelling it is set in advance for each port through which the Participant enters Orders.

- If the entered limit price of the Price to Comply Order locked a Protected Quotation, the price of the Price to Comply Order will be adjusted after initial entry only as follows. If the entered limit price would no longer lock a Protected Quotation, the Price to Comply Order may either remain on the Nasdaq Book unchanged, may be cancelled back to the Participant, or may be ranked and displayed at its original entered limit price, depending on the Participant’s choice. For example, if a Price to Comply Order to buy at $11 would lock a Protected Offer of $11, the Price to Comply Order will be ranked at a non-displayed price of $11 but will be displayed at $10.99. If the Best Offer changes to $11.01, the Price to Comply Order may either remain with a displayed price of $10.99 but ranked at a non-displayed price of $11, be cancelled back to the Participant, or be ranked and displayed at $11, depending on the Participant’s choice. A Participant’s choice with regard to maintaining the Price to Comply Order, cancelling it, or allowing it to be displayed is set in advance for each port through which the Participant enters Orders. If the Price to Comply Order is ranked and displayed at its original entered limit price, it will receive a new timestamp, and will not thereafter be adjusted under this paragraph (B).

(C) The following Order Attributes may be assigned to a Price to Comply Order:

- Price. As described above, the price of the Order may be adjusted to avoid locking or crossing a Protected Quotation, and may include a displayed price as well as a non-displayed price.
- Size.
- Reserve Size (available through RASH, FIX and QIX only).
- Designation as an ISO. In accordance with Regulation NMS, a Price to Comply Order designated as an ISO would be processed at its entered limit price, since such a designation reflects a representation by the Participant that it has simultaneously routed one or more additional limit orders, as necessary, to execute against the full displayed size of any Protected Quotations that the Price to Comply Order would lock or cross.
- Routing (available through RASH, FIX and QIX only).
- Primary Pegging and Market Pegging (available through RASH, FIX, and QIX only).
- Discretion (available through RASH, FIX and QIX only).
• Participation in the Nasdaq Opening Cross and/or the Nasdaq Closing Cross.
• Display. A Price to Comply Order is always displayed, although, as provided above, it may also have a non-displayed price and/or Reserve Size.

(2) (A) A “Price to Display Order” is an Order Type designed to comply with Rule 610(d) under Regulation NMS by avoiding the display of quotations that lock or cross any Protected Quotation in a System Security during Market Hours. Price to Display Orders are available solely to Participants that are Market Makers.

When a Price to Display Order is entered, if its entered limit price would lock or cross a Protected Quotation, the Price to Display Order will be repriced to one minimum price increment lower than the current Best Offer (for a Price to Display Order to buy) or higher than the current Best Bid (for a Price to Display Order to sell). For example, if a Price to Display Order to buy at $11 would cross a Protected Offer of $10.99, the Price to Display Order will be repriced to $10.98. The Price to Display Order (whether repriced or not repriced) will then be executed against previously posted Orders on the Nasdaq Book that are priced equal to or better than the adjusted price of the Price to Display Order, up to the full amount of such previously posted Orders, unless such executions would trade through a Protected Quotation. Any portion of the Order that cannot be executed in this manner will be posted on the Nasdaq Book (and/or routed if it has been designated as Routable).

During Market Hours, the price at which a Price to Display Order is displayed and ranked on the Nasdaq Book will be its entered limit price if the Price to Display Order was not repriced upon entry, or the adjusted price if the Price to Comply Order was repriced upon entry, such that the price will not lock or cross a Protected Quotation.

During Pre-Market Hours and Post-Market Hours, a Price to Display Order will be displayed and ranked at its entered limit price without adjustment.

(B) If a Price to Display Order is entered through RASH, QIX, or FIX, during Market Hours the Price to Display Order may be adjusted in the following manner after initial entry and posting to the Nasdaq Book (unless the Order is assigned a Routing Order Attribute that would cause it to be routed to another market center rather than remaining on the Nasdaq Book):

• If the entered limit price of the Price to Display Order locked or crossed a Protected Quotation and the NBBO changes, the price of the Order will be adjusted repeatedly in accordance with changes to the NBBO; provided, however, that if the quotation of another market center moves in a manner that would lock or cross the price of a Price to Display Order, the price of the Price to Display Order will not be adjusted. For example, if a Price to Display Order to buy at $11.02 would cross a Protected Offer of $11, the Order will be displayed and ranked at $10.99. If the Best Offer then moves to $11.01, the displayed/ranked price will be changed to $11. However, if another market center then displays an offer of $11 (thereby locking the previously displayed price of the Price to
Display Order, notwithstanding Rule 610(d) under Regulation NMS, the price of the Price to Display Order will not be changed. The Order may be repriced repeatedly until such time as the Price to Display Order is able to be displayed and ranked at its original entered limit price ($11.02 in the example). The Price to Display Order receives a new timestamp each time its price is changed.

- If the original entered limit price of the Price to Display Order would no longer lock or cross a Protected Quotation, the Price to Display Order will be displayed and ranked at that price and will receive a new timestamp, and will not thereafter be adjusted under this paragraph (B).

If a Price to Display Order is entered through OUCH or FLITE, during Market Hours the Price to Display Order may be adjusted in the following manner after initial entry and posting to the Nasdaq Book:

- If the entered limit price of the Price to Display Order locked or crossed a Protected Quotation and the NBBO changes so that the Price to Display Order could be ranked and displayed at a price at or closer to its original entered limit price without locking or crossing a Protected Quotation, the Price to Display Order may either remain on the Nasdaq Book unchanged or may be cancelled back to the Participant, depending on the Participant’s choice. For example, if a Price to Display Order to buy at $11.02 would cross a Protected Offer of $11, the Order will be ranked and displayed at $10.99. If the Best Offer changes to $11.01, the Price to Display Order will not be repriced, but rather will either remain at its current price or be cancelled back to the Participant, depending on its choice. A Participant’s choice with regard to maintaining the Price to Display Order or cancelling it is set in advance for each port through which the Participant enters Orders.

(C) The following Order Attributes may be assigned to a Price to Display Order:

- Price. As described above, the price of the Order may be adjusted to avoid locking or crossing a Protected Quotation.
- Size.
- Reserve Size (available through RASH, FIX and QIX only).
- A Time-in-Force other than IOC. (A Price to Display Order entered with a Time-in-Force of IOC would be processed as a Non-Displayed Order with a Time-in-Force of IOC).
- Designation as an ISO. In accordance with Regulation NMS, a Price to Display Order designated as an ISO would be processed at its entered limit price, since such a designation reflects a representation by the Participant that it has simultaneously routed one or more additional limit orders, as necessary, to execute against the full displayed size of any Protected Quotations that the Price to Display Order would lock or cross.
- Routing (available through RASH, FIX and QIX only).
Primary Pegging and Market Pegging (available through RASH, FIX, and QIX only).

Discretion (available through RASH, FIX and QIX only).

Participation in the Nasdaq Opening Cross and/or the Nasdaq Closing Cross.

Attribution. All Price to Display Orders are Attributable Orders.

Display. A Price to Display Order is always displayed (but may also have Reserve Size).

(3) (A) A “Non-Displayed Order” is an Order Type that is not displayed to other Participants, but nevertheless remains available for potential execution against incoming Orders until executed in full or cancelled. In addition to the Non-Displayed Order Type, there are other Order Types that are not displayed on the Nasdaq Book. Thus, “Non-Display” is both a specific Order Type and an Order Attribute of certain other Order Types.

When a Non-Displayed Order is entered, the Non-Displayed Order will be executed against previously posted Orders on the Nasdaq Book that are priced equal to or better than the price of the Non-Displayed Order, up to the full amount of such previously posted Orders, unless such executions would trade through a Protected Quotation. Any portion of the Non-Displayed Order that cannot be executed in this manner will be posted to the Nasdaq Book (unless the Non-Displayed Order has a Time-in-Force of IOC) and/or routed if it has been designated as Routable.

During Market Hours, the price at which a Non-Displayed Order is posted is determined in the following manner. If the entered limit price of the Non-Displayed Order would lock a Protected Quotation, the Non-Displayed Order will be placed on the Nasdaq Book at the locking price. If the Non-Displayed Order would cross a Protected Quotation, the Non-Displayed Order will be repriced to a price that would lock the Protected Quotation and will be placed on the Nasdaq Book at that price. For example, if a Non-Displayed Order to buy at $11 would cross a Protected Offer of $10.99, the Non-Displayed Order will be repriced and posted at $10.99. A Non-Displayed Order to buy at $10.99 would also be posted at $10.99.

During Pre-Market Hours and Post-Market Hours, a Non-Displayed Order will be posted at its entered limit price without adjustment.

(B) If a Non-Displayed Order is entered through RASH, QIX, or FIX, during Market Hours the Non-Displayed Order may be adjusted in the following manner after initial entry and posting to the Nasdaq Book (unless the Order is assigned a Routing Order Attribute that would cause it to be routed to another market center rather than remaining on the Nasdaq Book):

• If the original entered limit price of a Non-Displayed Order is higher than the Best Offer (for an Order to buy) or lower than the Best Bid (for an Order to sell) and the NBBO moves toward the original entered limit price of the Non-Displayed Order, the price of the Non-Displayed Order will be adjusted repeatedly in
accordance with changes to the NBBO. For example, if a Non-Displayed Order to buy at $11.02 would cross a Protected Offer of $11, the Non-Displayed Order will be priced and posted at $11. If the Best Offer then changes to $11.01, the price of the Non-Displayed Order will be changed to $11.01. The Order may be repriced repeatedly in this manner, receiving a new timestamp each time its price is changed, until the Non-Displayed Order is posted at its original entered limit price. The Non-Displayed Order will not thereafter be repriced under this paragraph (B), except as provided below with respect to crossing a Protected Quotation.

- If, after being posted to the Nasdaq Book, the NBBO changes so that the Non-Displayed Order would cross a Protected Quotation, the Non-Displayed Order will be repriced at a price that would lock the new NBBO and receive a new timestamp. For example, if a Non-Displayed Order to buy at $11 would lock a Protected Offer of $11, the Non-Displayed Order will be posted at $11. If the Best Offer then changes to $10.99, the Non-Displayed Order will be repriced at $10.99, receiving a new timestamp. The Non-Displayed Order may be repriced and receive a new timestamp repeatedly.

If a Non-Displayed Order is entered through OUCH or FLITE, during Market Hours the Non-Displayed Order may be adjusted in the following manner after initial entry and posting to the Nasdaq Book:

- If the original entered limit price of the Non-Displayed Order locked or crossed a Protected Quotation and the NBBO changes so that the Non-Displayed Order could be posted at a price at or closer to its original entered limit price without crossing a Protected Quotation, the Non-Displayed Order may either remain on the Nasdaq Book unchanged or may be cancelled back to the Participant, depending on its choice. For example, if a Non-Displayed Order to buy at $11.02 would cross a Protected Offer of $11, the Order will be priced at $11. If the Best Offer changes to $11.01, the Order will not be repriced, but rather will either remain at its current $11 price or be cancelled back to the Participant, depending on its choice. A Participant’s choice with regard to maintaining the Non-Displayed Order or cancelling it is set in advance for each port through which the Participant enters Orders.

- If, after a Non-Displayed Order is posted to the Nasdaq Book, the NBBO changes so that the Non-Displayed Order would cross a Protected Quotation, the Non-Displayed Order will be cancelled back to the Participant. For example, if a Non-Displayed Order to buy at $11 would lock a Protected Offer of $11, the Non-Displayed Order will be posted at $11. If the Best Offer then changes to $10.99, the Non-Displayed Order will be cancelled back to the Participant.

- If a Non-Displayed Order entered through OUCH or FLITE is assigned a Midpoint Pegging Order Attribute, and if, after being posted to the Nasdaq Book, the NBBO changes so that the Non-Displayed Order is no longer at the Midpoint
between the NBBO, the Non-Displayed Order will be cancelled back to the Participant. In addition, if a Non-Displayed Order entered through OUCH or FLITE is assigned a Midpoint Pegging Attribute and also has a limit price that is lower than the midpoint between the NBBO for an Order to buy (higher than the midpoint between the NBBO for an Order to sell), the Order will nevertheless be accepted at its limit price and will be cancelled if the midpoint between the NBBO moves lower than (higher than) the price of an Order to buy (sell).

(C) The following Order Attributes may be assigned to a Non-Displayed Order:

- **Price.** As described above, the price of the Order may be adjusted to avoid crossing a Protected Quotation.
- **Size.**
- **Minimum Quantity.**
- **Time-in-Force.**
- **Designation as an ISO.** In accordance with Regulation NMS, a Non-Displayed Order designated as an ISO would be processed at its entered limit price, since such a designation reflects a representation by the Participant that it has simultaneously routed one or more additional limit orders, as necessary, to execute against the full displayed size of any Protected Quotations that the Non-Displayed Order would cross. As discussed above, a Non-Displayed Order would be accepted at a price that locked a Protected Quotation, even if the Order was not designated as an ISO, because the non-displayed nature of the Order allows it to lock a Protected Quotation under Regulation NMS. Accordingly, the System would not interpret receipt of a Non-Displayed Order marked ISO that locked a Protected Quotation as the basis for determining that the Protected Quotation had been executed for purposes of accepting additional Orders at that price level.
- **Routing (available through RASH, FIX and QIX only).**
- **Primary Pegging and Market Pegging (available through RASH, FIX, and QIX only).**
- **Pegging to the Midpoint (see Rule 4703(d) with respect to differences between OUCH and FLITE and RASH, FIX, and QIX).**
- **Discretion (available through RASH, FIX and QIX only).**
- **Participation in the Nasdaq Opening Cross and/or the Nasdaq Closing Cross.**

(4) (A) A “Post-Only Order” is an Order Type designed to have its price adjusted as needed to post to the Nasdaq Book in compliance with Rule 610(d) under Regulation NMS by avoiding the display of quotations that lock or cross any Protected Quotation in a System Security during Market Hours, or to execute against locking or crossing quotations in circumstances where economically beneficial to the Participant entering the Post-Only Order.

During Market Hours, a Post-Only Order is evaluated at the time of entry with respect to locking or crossing other Orders on the Nasdaq Book, Protected Quotations, and potential execution as follows:
• If a Post-Only Order would lock or cross a Protected Quotation, the price of the Order will first be adjusted. If the Order is Attributable, its adjusted price will be one minimum price increment lower than the current Best Offer (for bids) or higher than the current Best Bid (for offers). If the Order is not Attributable, its adjusted price will be equal to the current Best Offer (for bids) or the current Best Bid (for offers). However, the Order will not post or execute until the Order, as adjusted, is evaluated with respect to Orders on the Nasdaq Book.

  o If the adjusted price of the Post-Only Order would not lock or cross an Order on the Nasdaq Book, the Order will be posted in the same manner as a Price to Comply Order (if it is not Attributable) or a Price to Display Order (if it is Attributable). Specifically, if the Post-Only Order is not Attributable, it will be displayed on the Nasdaq Book at a price one minimum price increment lower than the current Best Offer (for bids) or higher than the current Best Bid (for offers) but will be ranked on the Nasdaq Book with a non-displayed price equal to the current Best Offer (for bids) or to the current Best Bid (for offers). For example, if a Post-Only Order to buy at $11 would lock a Protected Offer of $11, the Order will be ranked at a non-displayed price of $11 but will be displayed at $10.99. If the Post-Only Order is Attributable, it will be ranked and displayed on the Nasdaq Book at a price one minimum increment lower than the current Best Offer (for bids) or higher than the current Best Bid (for offers). Thus, in the preceding example, the Post-Only Order to buy would be ranked and displayed at $10.99.

  o If the adjusted price of the Post-Only Order would lock or cross an Order on the Nasdaq Book, the Post Only Order will be repriced, ranked, and displayed at one minimum price increment below the current best-priced Order to sell on the Nasdaq Book (for bids) or above the current best-priced Order to buy on the Nasdaq Book (for offers); provided, however, the Post-Only Order will execute if (i) it is priced below $1.00 and the value of price improvement associated with executing against an Order on the Nasdaq Book (as measured against the original limit price of the Order) equals or exceeds the sum of fees charged for such execution and the value of any rebate that would be provided if the Order posted to the Nasdaq Book and subsequently provided liquidity, or (ii) it is priced at $1.00 or more and the value of price improvement associated with executing against an Order on the Nasdaq Book (as measured against the original limit price of the Order) equals or exceeds $0.01 per share. For example, if a Participant entered a Non-Attributable Post-Only Order to buy at $11.01, another market center is displaying a Protected Offer at $11, and there is a Non-Displayed Order on the Nasdaq Book to sell at $11, the adjusted price of the Post-Only Order will be $11. However, because the Post-Only Order would be executable against the Non-Displayed Order on the Nasdaq Book and would receive $0.01 price
improvement (as measured against the original $11.01 price of the Post-Only Order), the Post-Only Order would execute.

• If the Post-Only Order would not lock or cross a Protected Quotation but would lock or cross an Order on the Nasdaq Book, the Post Only Order will be repriced, ranked, and displayed at one minimum price increment below the current best-priced Order to sell on the Nasdaq Book (for bids) or above the current best-priced Order to buy on the Nasdaq Book (for offers); provided, however, the Post-Only Order will execute if (i) it is priced below $1.00 and the value of price improvement associated with executing against an Order on the Nasdaq Book equals or exceeds the sum of fees charged for such execution and the value of any rebate that would be provided if the Order posted to the Nasdaq Book and subsequently provided liquidity, or (ii) it is priced at $1.00 or more and the value of price improvement associated with executing against an Order on the Nasdaq Book equals or exceeds $0.01 per share. For example, if a Participant entered a Post-Only Order to buy at $11.02, the Best Offer was $11.04, and there was a Non-Displayed Order on the Nasdaq Book to sell at $11.02, the Post-Only Order would be ranked and displayed at $11.01. However, if a Participant entered a Post-Only Order to buy at $11.03, the Order would execute against the Order on the Nasdaq Book at $11.02, receiving $0.01 per share price improvement.

• If a Post-Only Order is entered with a Time-in-Force of IOC, the price of an Order to buy (sell) will be repriced to the lower of (higher of) (i) one minimum price increment below (above) the price of the Order or (ii) the current Best Offer (Best Bid). The Order will execute against any Order on the Nasdaq Book with a price equal to or better than the adjusted price of the Post-Only Order. If the Post-Only Order cannot execute, it will be cancelled. For example, if a Post-Only Order to buy at $11 with a Time-in-Force of IOC was entered and the current Best Offer was $11.01, the Order would be repriced to $10.99; however, if the Best Offer was $10.98, the Order would be repriced to $10.98.

• If a Post-Only Order would not lock or cross an Order on the Nasdaq Book or any Protected Quotation, it will be posted on the Nasdaq Book at its entered limit price.

During Pre-Market and Post-Market Hours, a Post-Only Order will be processed in a manner identical to Market Hours with respect to locking or crossing Orders on the Nasdaq Book, but will not have its price adjusted with respect to locking or crossing the quotations of other market centers.

(B) If a Post-Only Order is entered through RASH, QIX, or FIX, during System Hours the Post-Only Order may be adjusted in the following manner after initial entry and posting to the Nasdaq Book:

• If the original entered limit price of the Post-Only Order is not being displayed, the displayed (and non-displayed price, if any) of the Order will be adjusted
repeatedly in accordance with changes to the NBBO or the best price on the Nasdaq Book, as applicable; provided, however, that if the quotation of another market center moves in a manner that would lock or cross the displayed price of a Post-Only Order, the price(s) of the Post-Only Order will not be adjusted. For example, if a Non-Attributable Post-Only Order to buy at $11.02 would cross a Protected Offer of $11, the order will be ranked at a non-displayed price of $11 but will be displayed at $10.99. If the Best Offer then moves to $11.01, the displayed price will be changed to $11 and the non-displayed price at which the Order is ranked will be changed to $11.01. However, if another market center then displays an offer of $11 (thereby locking the previously displayed price of the Post-Only Order notwithstanding Rule 610(d) under Regulation NMS), the price of the Post-Only Order will not be changed. The Order may be repriced repeatedly until such time as the Post-Only Order is able to be displayed at its original entered limit price ($11.02 in the example). The Post-Only Order receives a new timestamp each time its price is changed.

- If the original entered limit price of the Post-Only Order would no longer lock or cross a Protected Quotation or an Order on the Nasdaq Book, the Post-Only Order will be ranked and displayed at that price and will receive a new timestamp, and will not thereafter be adjusted under this paragraph (B).

If a Post-Only Order is entered through OUCH or FLITE, the Post-Only Order may be adjusted in the following manner after initial entry and posting to the Nasdaq Book:

- During Market Hours, if the original entered limit price of the Post-Only Order locked or crossed a Protected Quotation, the Post-Only Order may be adjusted after initial entry in the same manner as a Price to Comply Order (or a Price to Display Order, if it is Attributable). Thus, in the case of a Non-Attributable Post-Only Order that crossed a Protected Quotation, if the NBBO changed so that the Post-Only Order could be ranked and displayed at a price at or closer to its original entered limit price without locking or crossing a Protected Quotation, the Post-Only Order may either remain on the Nasdaq Book unchanged or may be cancelled back to the Participant, depending on its choice. In the case of a Non-Attributable Post-Only Order that locked a Protected Quotation, the Post-Only Order may either remain on the Nasdaq Book unchanged, may be cancelled back to the Participant, or may be ranked and displayed at its original entered limit price, depending on the Participant’s choice, and will not thereafter be adjusted under this paragraph (B). If the Post-Only Order is displayed at its original entered limit price, it will receive a new timestamp. Finally, in the case of an Attributable Post-Only Order that locked or crossed a Protected Quotation, if the NBBO changed so that the Post-Only Order could be ranked and displayed at a price at or closer to its original entered limit price without locking or crossing a Protected Quotation, the Post-Only Order may either remain on the Nasdaq Book unchanged or may be cancelled back to the Participant, depending on the Participant’s choice.
Participant’s choice with regard to adjustment of Post-Only Orders is set in advance for each port through which the Participant enters Orders.

- During System Hours, if the original entered limit price of the Post-Only Order locked or crossed an Order on the Nasdaq Book and the Nasdaq Book changes so that the original entered limit price would no longer lock or cross an Order on the Nasdaq Book, the Post-Only Order may either remain on the Nasdaq Book unchanged or may be cancelled back to the Participant, depending on the Participant’s choice. For example, if a Post-Only Order to buy at $11 would lock an Order on the Nasdaq Book priced at $11, the Post-Only Order will be ranked and displayed at $10.99. If the Order at $11 is cancelled or executed, the Post-Only Order may either remain with a displayed price of $10.99 or be cancelled back to the Participant, depending on the Participant’s choice. A Participant’s choice with regard to maintaining the Post-Only Order or cancelling it is set in advance for each port through which the Participant enters Orders.

(C) The following Order Attributes may be assigned to a Post-Only Order:

- **Price.** As described above, the price of the Order may be adjusted to avoid locking or crossing a Protected Quotation, and may include a displayed price as well as a non-displayed price.
- **Size.**
- **Time-in-Force.**
- **Designation as an ISO.** In accordance with Regulation NMS, a Post-Only Order designated as an ISO that locked or crossed a Protected Quotation would be processed at its entered limit price, since such a designation reflects a representation by the Participant that it has simultaneously routed one or more additional limit orders, as necessary, to execute against the full displayed size of any Protected Quotations that the Post-Only Order would lock or cross. However, as described above, a Post-Only Order designated as an ISO that locked or crossed an Order on the Nasdaq Book would either execute at time of entry or would have its price adjusted prior to posting. Accordingly, the System would not interpret receipt of a Post-Only Order marked ISO that had its price adjusted prior to posting as the basis for determining that any Protected Quotation at the Order’s original entered limit price level had been executed for purposes of accepting additional Orders at that price level. However, if the Post-Only Order is ranked and displayed at its adjusted price, the System would consider the adjusted price level to be open for purposes of accepting additional Orders at that price level. For example, assume that there is a Protected Offer at $11 and a Participant enters a Post-Only Order marked ISO to buy at $11. If there are no Orders to sell at $11 on the Nasdaq Book, the Order to buy will be displayed and ranked at $11, since the designation of the Order as an ISO reflects the Participant’s representation that it has routed one or more additional limit orders, as necessary, to execute against the full displayed size of any Protected Quotations that the Post-Only Order would lock or cross. However, if there was also an Order to sell at $11 on the Nasdaq Book, the Post-Only Order will be
repriced, ranked, and displayed at $10.99. In that case, the mere fact that the Post-Only Order was designated as an ISO would not allow Nasdaq to conclude that the $11 price level was “open” for receiving orders to buy at that price; the $11 price level would be considered open only if market data received by the System demonstrated that the Protected Offer at $11 had been removed or if a subsequent Displayed Order marked ISO was received and ranked at that price.

- Attribution.
- Participation in the Nasdaq Opening Cross and/or the Nasdaq Closing Cross.
- Display. A Post-Only Order is always displayed, although as provided above, may also have a non-displayed price.

(5) (A) A “Midpoint Peg Post-Only Order” is an Order Type with a Non-Display Order Attribute that is priced at the midpoint between the NBBO and that will execute upon entry against locking or crossing quotes only in circumstances where economically beneficial to the party entering the Order. The Midpoint Peg Post-Only Order is available during Market Hours only.

A Midpoint Peg Post-Only Order must be assigned a limit price. When a Midpoint Peg Post-Only Order is entered, it will be priced at the midpoint between the NBBO, unless such midpoint is higher than (lower than) the limit price of an Order to buy (sell), in which case the Order will be priced at its limit price. If the NBBO is locked, the Midpoint Peg Post-Only Order will be priced at the locking price, if the NBBO is crossed, it will nevertheless be priced at the midpoint between the NBBO, and if there is no NBBO, the Order will be rejected. The Midpoint Peg Post-Only Order will post to the Nasdaq Book unless it is a buy (sell) Order that is priced higher than (lower than) a sell (buy) Order on the Nasdaq Book, in which case it will execute at the price of the Order on the Nasdaq Book. For example, if the Best Bid was $11 and the Best Offer was $11.06, the price of the Midpoint Peg Post-Only Order would be $11.03. If there was a Non-Displayed Order (or another Order with a Non-Display Order Attribute) on the Nasdaq Book to sell at $11.02, the incoming Midpoint Peg Post-Only Order would execute against it at $11.02. However, if there was a Non-Displayed Order (or another Order with a Non-Display Order Attribute) to sell at $11.03, the Midpoint Peg Post-Only Order would post at $11.03. While a Midpoint Peg Post-Only Order that posts to the Nasdaq Book is locking a preexisting Order, the Midpoint Peg Post-Only Order will execute against an incoming Order only if the price of the incoming sell (buy) Order is lower (higher) than the price of the preexisting Order. Thus, in the previous example, if the incoming Midpoint Peg Post-Only Order locked the preexisting Non-Displayed Order at $11.03, the Midpoint Peg Post-Only Order could execute only against an incoming Order to sell priced at less than $11.03.

For purposes of any cross in which a Midpoint Peg Post-Only Order participates, a Midpoint Peg Post-Only Order to buy (sell) that is locking a preexisting Order shall be deemed to have a price equal to the price of the highest sell Order (lowest buy Order) that would be eligible to execute against the Midpoint Peg Post-Only Order in such circumstances. Thus, a Midpoint Peg Post-Only Order to buy that locked a preexisting Non-Displayed Order to sell at $11.03 would be deemed to have a price of $11.02. It
should be noted, however, that Midpoint Peg Post-Only Orders may not be entered prior to the Nasdaq Opening Cross, and the System attempts to cancel Midpoint Peg Post-Only Orders prior to the commencement of the Nasdaq Closing Cross.

(B) If a Midpoint Peg Post-Only Order is entered through RASH, QIX, or FIX, the Midpoint Peg Post-Only Order may be adjusted in the following manner after initial entry and posting to the Nasdaq Book:

- The price of the Midpoint Peg Post-Only Order will be updated repeatedly to equal the midpoint between the NBBO; provided, however, that the Order will not be priced higher (lower) than the limit price of an Order to buy (sell). In the event that the midpoint between the NBBO becomes higher than (lower than) the limit price of an Order to buy (sell), the price of the Order will stop updating, but will resume updating if the midpoint becomes lower than (higher than) the limit price of an Order to buy (sell). Similarly, if a Midpoint Peg Post-Only Order is on the Nasdaq Book and subsequently there is no NBBO, the Order will be cancelled. The Midpoint Peg Post-Only Order receives a new timestamp each time its price is changed.

If a Midpoint Peg Post-Only Order is entered through OUCH or FLITE, the Midpoint Peg Post-Only Order may be adjusted in the following manner after initial entry and posting to the Nasdaq Book:

- The price at which the Midpoint Peg Post-Only Order is ranked on the Nasdaq Book is the midpoint between the NBBO, unless the Order has a limit price that is lower than the midpoint between the NBBO for an Order to buy (higher than the midpoint between the NBBO for an Order to sell), in which case the Order will be ranked on the Nasdaq Book at its limit price. The price of the Order will not thereafter be adjusted based on changes to the NBBO. If, after being posted to the Nasdaq Book, the NBBO changes so that midpoint between the NBBO is lower than (higher than) the price of a Midpoint Peg Post-Only Order to buy (sell), the Midpoint Peg Post-Only Order will be cancelled back to the Participant. For example, if the Best Bid is $11 and the Best Offer is $11.06, a Midpoint Peg Post-Only Order to buy would post at $11.03. If, thereafter, the Best Offer is reduced to $11.05, the Midpoint Peg Post-Only Order will be cancelled back to the Participant.

(C) The following Order Attributes may be assigned to a Midpoint Peg Post-Only Order:

- Price of more than $1 per share. A Midpoint Peg Post-Only Order that would be assigned a price of $1 or less per share will be rejected or cancelled, as applicable.
- Size.
- A Time-in-Force other than IOC; provided, however, that regardless of the Time-in-Force entered, a Midpoint Post-Only Order may not be active outside of Market Hours. A Midpoint Peg Post-Only Order entered prior to the beginning of Market Hours will be rejected. A Midpoint Peg Post-Only Order remaining on
the Nasdaq Book at 4:00 p.m. ET will be cancelled by the System; provided, however, that if the Nasdaq Closing Cross for the security that is the subject of the Order occurs prior to the cancellation message being fully processed, a Midpoint Peg Post-Only Order may participate in the Nasdaq Closing Cross.

- Pegging to the midpoint is required for Midpoint Peg Post-Only Orders entered through RASH, QIX or FIX. As discussed above, the price of a Midpoint Peg Post-Only Order entered through OUCH or FLITE will be pegged to the midpoint upon entry and not adjusted thereafter.
- Minimum Quantity.
- Non-Display. All Midpoint Peg Post-Only Orders are Non-Displayed.

(6) (A) A “Supplemental Order” is an Order Type with a Non-Display Order Attribute that is held on the Nasdaq Book in order to provide liquidity at the NBBO through a special execution process described in Rule 4757(a)(1)(D). A Supplemental Order may be entered through the OUCH protocol only.

Upon entry, a Supplemental Order will always post to the Nasdaq Book at a price equal to the Best Bid (for buys) or the Best Offer (for sells). Thereafter, the Supplemental Order may execute against an Order that is designated as eligible for routing, after the Order has executed against all other liquidity on the Nasdaq Book but before routing. An Order will execute against a Supplemental Order(s) only at the NBBO, only if the NBBO is not locked or crossed, and only if the Order can be executed in full. If a Supplemental Order is not executed in full, the remaining portion of the Supplemental Order shall remain on the Nasdaq Book as a Supplemental Order until the Supplemental Order is fully executed, the Supplemental Order is cancelled by the Participant that entered the Supplemental Order, or the size of the Supplemental Order is reduced to less than one normal unit of trading (in which case the Supplemental Order will be cancelled automatically).

(B) The following Order Attributes may be assigned to a Supplemental Order:

- Price. The Price of a Supplemental Order to buy is always equal to the Best Bid, and the price of a Supplemental Order to sell is always equal to the Best Offer.
- Size. All Supplemental Orders must be entered with a size of one or more normal units of trading. When a Supplemental Order is reduced to less than one normal unit of trading, the remainder of the Supplemental Order will be cancelled automatically.
- A Time-in-Force other than IOC. A Supplemental Order may be entered at any time during Pre-Market Hours or Market Hours, but is available for potential execution only during Market Hours. Any Supplemental Orders still on the Nasdaq Book at the conclusion of Market Hours will be cancelled. Supplemental Orders may not participate in the Nasdaq Opening Cross or the Nasdaq Closing Cross.
- Primary Pegging. A Supplemental Order is not pegged to the NBBO through the regular Primary Pegging Order Attribute, and therefore does not have its price adjusted continually. However, if an incoming Order is potentially executable
against a Supplemental Order, the System will set the price of the Supplemental Order at the NBBO on the same side of the market, with no offset. As a result, a Supplemental Order may only execute at the NBBO.

- Non-Display. All Supplemental Orders are Non-Displayed.

(7) (A) A “Market Maker Peg Order” is an Order Type designed to allow a Market Maker to maintain a continuous two-sided quotation at a price that is compliant with the quotation requirements for Market Makers set forth in Rule 4613(a)(2). The price of the Market Maker Peg Order is set with reference to a “Reference Price” in order to keep the price of the Market Maker Peg Order within a bounded price range. A Market Maker Peg Order may be entered through RASH, FIX or QIX only. A Market Maker Peg Order must be entered with a limit price beyond which the Order may not be priced. The Reference Price for a Market Maker Peg Order to buy (sell) is the then-current Best Bid (Best Offer) (including Nasdaq), or if no such Best Bid or Best Offer, the most recent reported last-sale eligible trade from the responsible single plan processor for that day, or if none, the previous closing price of the security as adjusted to reflect any corporate actions (e.g., dividends or stock splits) in the security.

Upon entry, the price of a Market Maker Peg Order to buy (sell) is automatically set by the System at the Designated Percentage (as defined in Rule 4613) away from the Reference Price in order to comply with the quotation requirements for Market Makers set forth in Rule 4613(a)(2). For example, if the Best Bid is $10 and the Designated Percentage for the security is 8%, the price of a Market Maker Peg Order to buy would be $9.20. If the limit price of the Order is not within the Designated Percentage, the Order will be sent back to the Participant.

Once a Market Maker Peg Order has posted to the Nasdaq Book, its price is adjusted if needed as the Reference Price changes. Specifically, if as a result of a change to the Reference Price, the difference between the price of the Market Maker Peg Order and the Reference Price reaches the Defined Limit (as defined in Rule 4613), the price of a Market Maker Peg Order to buy (sell) will be adjusted to the Designated Percentage away from the Reference Price. In the foregoing example, if the Defined Limit is 9.5% and the Best Bid increased to $10.17, such that the price of the Market Maker Peg Order would be more than 9.5% away, the Order will be repriced to $9.35, or 8% away from the Best Bid. Note that calculated prices of less than the minimum increment will be rounded in a manner that ensures that the posted price will be set at a level that complies with the percentages stipulated by this rule. If the limit price of the Order is outside the Defined Limit, the Order will be sent back to the Participant.

Similarly, if as a result of a change to the Reference Price, the price of a Market Maker Peg Order to buy (sell) is within one minimum price variation more than (less than) a price that is 4% less than (more than) the Reference Price, rounded up (down), then the price of the Market Maker Peg Order to buy (sell) will be adjusted to the Designated Percentage away from the Reference Price. For example, if the Best Bid is $10 and the Designated Percentage for the security is 8%, the price of a Market Maker Peg Order to buy would initially be $9.20. If the Best Bid then moved to $9.57, such that the price of
the Market Maker Peg Order would be a minimum of $0.01 more than a price that is 4% less than the Best Bid, rounded up (i.e. $9.57 – ($9.57 x 0.04) = $9.1872, rounding up to $9.19), the Order will be repriced to $8.81, or 8% away from the Best Bid.

A Market Maker may enter a Market Maker Peg Order with a more aggressive offset than the Designated Percentage, but such an offset will be expressed as a price difference from the Reference Price. Such a Market Maker Peg Order will be repriced in the same manner as a Price to Display Order with Attribution and Primary Pegging. As a result, the price of the Order will be adjusted whenever the price to which the Order is pegged is changed.

A new timestamp is created for a Market Maker Peg Order each time that its price is adjusted. In the absence of a Reference Price, a Market Maker Peg Order will be cancelled or rejected. If, after entry, a Market Maker Peg Order is priced based on a Reference Price other than the NBBO and such Market Maker Peg Order is established as the Best Bid or Best Offer, the Market Maker Peg Order will not be subsequently adjusted in accordance with this rule until a new Reference Price is established. If a Market Maker Peg Order is repriced 1,000 times, it will be cancelled.

Notwithstanding the availability of Market Maker Peg Order functionality, a Market Maker remains responsible for entering, monitoring, and resubmitting, as applicable, quotations that meet the requirements of Rule 4613.

(B) The following Order Attributes may be assigned to a Market Maker Peg Order:

- **Price.** As discussed above, the price of Market Maker Peg Order is established by the Nasdaq Market Center based on the Reference Price, the Designated Percentage (or a narrower offset established by the Market Maker), the Defined Limit, and the 4% minimum difference from the NBBO.
- **Size.**
- A **Time-in-Force other than IOC or GTC.**
- Participation in the Nasdaq Opening Cross and/or the Nasdaq Closing Cross.
- If the Market Maker designates a more aggressive offset, Primary Pegging is required.
- **Attribution.** All Market Maker Peg Orders are Attributable.
- **Display.** Market Maker Peg Orders are always Displayed.

(8) (A) A “Market On Open Order” or “MOO Order” is an Order Type entered without a price that may be executed only during the Nasdaq Opening Cross. Subject to the qualifications provided below, MOO Orders may be entered, cancelled, and/or modified between 4 a.m. ET and immediately prior to 9:28 a.m. ET. An MOO Order may not be cancelled or modified at or after 9:28 a.m. ET. An MOO Order shall execute only at the price determined by the Nasdaq Opening Cross.

(B) The following Order Attributes may be assigned to a Market On Open Order:
• Price. An MOO Order is entered without a price and shall execute only at the
price determined by the Nasdaq Opening Cross.
• Size.
• Time-in-Force. An MOO Order may execute only in the Nasdaq Opening Cross.
However, a Participant may designate the Time-in-Force for an MOO Order
either by designating a Time-in-Force of “On Open” or by entering another Order
Type with a Market Pegging Attribute and flagging the Order to participate in the
Nasdaq Opening Cross. An MOO Order entered through RASH or FIX with a
Time-in-Force of IOC and flagged to participate in the Nasdaq Opening Cross
that is entered after the time of the Nasdaq Opening Cross will be accepted but
will be converted into a Non-Displayed Order with a Time-in-Force of IOC and a
price established using the Market Pegging Order Attribute with no offset. An
Order with a Market Pegging Attribute and a Time-in-Force other than IOC that is
flagged to participate in the Nasdaq Opening Cross and entered at or after 9:28
a.m. will be held and entered into the System after the completion of the Nasdaq
Opening Cross. All other MOO Orders entered at or after 9:28 a.m. will be
rejected.
• Participation in the Nasdaq Opening Cross is required for this Order Type.

(9) (A) A “Limit On Open Order” or “LOO Order” is an Order Type entered with a price
that may be executed only in the Nasdaq Opening Cross, and only if the price determined
by the Nasdaq Opening Cross is equal to or better than the price at which the LOO Order
was entered. Subject to the qualifications provided below, LOO Orders may be entered,
cancelled, and/or modified between 4 a.m. ET and immediately prior to 9:28 a.m. ET.

(B) The following Order Attributes may be assigned to a Limit On Open Order:

• Price.
• Size.
• Time-in-Force. In general, an LOO Order may execute only in the Nasdaq
Opening Cross. However, a Participant may designate the Time-in-Force for an
LOO Order either by designating a Time-in-Force of “On Open,” in which case
the Order will execute solely in the Nasdaq Opening Cross, or by entering another
Order Type and Time-in-Force and flagging the Order to participate in the Nasdaq
Opening Cross. In the latter case, if the Participant designates a Time-in-Force of
IOC, the Order will participate solely in the Nasdaq Opening Cross. If the
Participant enters a Time-in-Force that continues after the time of the Nasdaq
Opening Cross, the Order will participate in the Nasdaq Opening Cross like an
LOO Order, while operating thereafter in accordance with its designated Order
Type and Order Attributes (if not executed in full in the Nasdaq Opening Cross).
Such an Order may be referred to as an “Opening Cross/Market Hours Order.” If
such an Order has a Time-in-Force that continues until at least the time of the
Nasdaq Closing Cross, the Order may be referred to as a “Cross to Cross Order.”

Following the Nasdaq Opening Cross, an Opening Cross/Market Hours Order
may not operate as a Post-Only Order, Midpoint Peg Post-Only Order, a
Supplemental Order, a Retail Order, or an RPI Order. In the case of a Market Maker Peg Order entered prior to 9:28 a.m. ET that is also designated to participate in the Nasdaq Opening Cross, the price of the Order for purposes of operating as an LOO Order will be established on entry and will not thereafter be pegged until after the completion of the Nasdaq Opening Cross. An Opening Cross/Market Hours Order that is entered between 9:28 a.m. and the time of the Nasdaq Opening Cross will be (i) held and entered into the System after the completion of the Nasdaq Opening Cross if it has been assigned a Pegging Attribute or Routing Attribute, (ii) treated as an Opening Imbalance Only Order and entered into the System after the completion of the Nasdaq Opening Cross if entered through RASH, QIX, or FIX but not assigned a Pegging Attribute or Routing Attribute, or (iii) treated as an Opening Imbalance Only Order and cancelled after the Nasdaq Opening Cross if entered through OUCH or FLITE. An Opening Cross/Market Hours Order entered through RASH or FIX after the time of the Nasdaq Opening Cross will be accepted but the Nasdaq Opening Cross flag will be ignored. A Routable Order flagged to participate in the Nasdaq Opening Cross with a Time-in-Force other than IOC and entered at or after 9:28 a.m. will be accepted but the Nasdaq Opening Cross flag will be ignored. All other LOO Orders and Opening Cross/Market Hours Orders entered at or after 9:28 a.m. will be rejected.

- Participation in the Nasdaq Opening Cross is required for this Order Type.

(10) (A) An “Opening Imbalance Only Order” or “OIO Order” is an Order Type entered with a price that may be executed only in the Nasdaq Opening Cross and only against MOO Orders, LOO Orders, or Early Market Hours Orders (as defined in Rule 4752). OIO Orders may be entered between 4:00 a.m. ET until the time of execution of the Nasdaq Opening Cross, but may not be cancelled or modified at or after 9:28 a.m. ET. If the entered price of an OIO Order to buy (sell) is higher than (lower than) the highest bid (lowest offer) on the Nasdaq Book, the price of the OIO Order will be modified repeatedly to equal the highest bid (lowest offer) on the Nasdaq Book; provided, however, that the price of the Order will not be moved beyond its stated limit price. Thus, for example, if an OIO Order to buy was entered with a price of $11 and the current highest bid on the Nasdaq Book was $10.99, the OIO Order would be priced at $10.99. If the highest bid subsequently became $10.98, the OIO Order would again be repriced. However, if the highest bid moved to $11.01, the OIO Order would not be repriced.

(B) The following Order Attributes may be assigned to an Opening Imbalance Only Order:

- **Price.**
- **Size.**
- **Time-in-Force.** An OIO Order may execute only in the Nasdaq Opening Cross. An OIO Order entered after the time of the execution of the Nasdaq Opening Cross will be rejected.
• Participation in the Nasdaq Opening Cross is required for this Order Type.

(11) (A) A “Market On Close Order” or “MOC Order” is an Order Type entered without a price that may be executed only during the Nasdaq Closing Cross. Subject to the qualifications provided below, MOC Orders may be entered, cancelled, and/or modified between 4 a.m. ET and immediately prior to 3:50 p.m. ET. Between 3:50 p.m. ET and immediately prior to 3:55 p.m. ET, an MOC Order can be cancelled and/or modified only if the Participant requests that Nasdaq correct a legitimate error in the Order (e.g., Side, Size, Symbol, or Price, or duplication of an Order). MOC Orders cannot be cancelled or modified at or after 3:55 p.m. ET for any reason. An MOC Order shall execute only at the price determined by the Nasdaq Closing Cross.

(B) The following Order Attributes may be assigned to a Market On Close Order:

• Price. An MOC Order is entered without a price and shall execute only at the price determined by the Nasdaq Closing Cross.
• Size.
• Time-in-Force. An MOC Order may execute only in the Nasdaq Closing Cross. However, a Participant may designate the Time-in-Force for an MOC Order either by Designating a Time-in-Force of “On Close” or by entering a Time-in-Force of IOC and flagging the Order to participate in the Nasdaq Closing Cross. All MOC Orders entered after 3:50 p.m. ET will be rejected. Participation in the Nasdaq Closing Cross is required for this Order Type.

(12) (A) A “Limit On Close Order” or “LOC Order” is an Order Type entered with a price that may be executed only in the Nasdaq Closing Cross, and only if the price determined by the Nasdaq Closing Cross is equal to or better than the price at which the LOC Order was entered. Subject to the qualifications provided below, LOC Orders may be entered, cancelled, and/or modified between 4 a.m. ET and immediately prior to 3:50 p.m. ET. Between 3:50 p.m. ET and immediately prior to 3:55 p.m. ET, an LOC Order can be cancelled but not modified, and only if the Participant requests that Nasdaq correct a legitimate error in the Order (e.g., Side, Size, Symbol, or Price, or duplication of an Order).

(B) The following Order Attributes may be assigned to a Limit On Close Order:

• Price.
• Size.
• Time-in-Force. In general, an LOC Order may execute only in the Nasdaq Closing Cross. However, a Participant may designate the Time-in-Force for an LOC Order either by Designating a Time-in-Force of “On Close,” in which case the Order will execute solely in the Nasdaq Closing Cross, or by entering another Order Type and Time-in-Force and flagging the Order to participate in the Nasdaq Closing Cross. In the latter case, if the Participant designates a Time-in-Force of IOC, the Order will participate solely in the Nasdaq Closing Cross. If the Participant enters a Time-in-Force that continues after the time of the Nasdaq
Closing Cross, the Order will participate in the Nasdaq Closing Cross like an LOC Order, while operating thereafter in accordance with its designated Order Type and Order Attributes (if not executed in full in the Nasdaq Closing Cross). Such an Order may be referred to as a “Closing Cross/Extended Hours Order.”

Following the Nasdaq Closing Cross, a Closing Cross/Extended Hours Order may not operate as a Post-Only Order, Midpoint Peg Post-Only Order, Supplemental Order, Retail Order, or RPI Order. In the case of a Market Maker Peg Order entered prior to 3:50 p.m. ET that is also designated to participate in the Nasdaq Closing Cross, the price of the Order for purposes of operating as an LOC Order will be established on entry and will not thereafter be pegged until after the completion of the Nasdaq Closing Cross. A Closing Cross/Extended Hours Order that is entered between 3:50 p.m. and the time of the Nasdaq Closing Cross will be (i) rejected if it has been assigned a Pegging Attribute, (ii) treated as an Imbalance Only Order and then entered into the System after the completion of the Nasdaq Closing Cross if entered through RASH, QIX, or FIX but not assigned a Pegging Attribute, and (iii) treated as an Imbalance Only Order and cancelled after the Nasdaq Closing Cross if entered through OUCH or FLITE. A Closing Cross/Extended Hours Order entered through OUCH, FLITE, RASH, or FIX with a Time-in-Force other than IOC after the time of the Nasdaq Closing Cross will be accepted but the Nasdaq Closing Cross flag will be ignored. All other LOC Orders and Closing Cross/Extended Hours Orders entered at or after 3:50 p.m. ET will be rejected.

- Participation in the Nasdaq Closing Cross is required for this Order Type.

(13) (A) An “Imbalance Only Order” or “IO Order” is an Order entered with a price that may be executed only in the Nasdaq Closing Cross and only against MOC Orders or LOC Orders. IO Orders may be entered between 4:00 a.m. ET until the time of execution of the Nasdaq Closing Cross, but may not cancelled or modified at or after 3:50 p.m. ET. Between 3:50 p.m. ET and immediately prior to 3:55 p.m. ET, however, an IO Order can be cancelled and/or modified if the Participant requests that Nasdaq correct a legitimate error in the Order (e.g., Side, Size, Symbol, or Price, or duplication of an Order). IO Orders cannot be cancelled or modified at or after 3:55 p.m. ET for any reason. If the price of an IO Order to buy (sell) is higher than (lower than) the highest bid (lowest offer) on the Nasdaq Book, the price of the IO Order will be modified repeatedly to equal the highest bid (lowest offer) on the Nasdaq Book; provided, however, that the price of the Order will not be moved beyond its stated limit price. Thus, for example, if an IO Order to buy was entered with a price of $11 and the current highest bid on the Nasdaq Book was $10.99, the IO Order would be priced at $10.99. If the highest bid subsequently became $10.98, the IO Order would again be repriced. However, if the highest bid moved to $11.01, the IO Order would not be repriced.

(B) The following Order Attributes may be assigned to an Imbalance Only Order:

- Price.
• Size.
• Time-in-Force. An IO Order may execute only in the Nasdaq Closing Cross. An
IO Order entered after the time of the Nasdaq Closing Cross will be rejected.
• Participation in the Nasdaq Closing Cross is required for this Order Type.

4703. Order Attributes.

As described in Rule 4702, the following Order Attributes may be assigned to those
Order Types for which they are available.

(a) Time-in-Force

The “Time-in-Force” assigned to an Order means the period of time that the Nasdaq
Market Center will hold the Order for potential execution. Participants specify an
Order’s Time-in-Force by designating a time at which the Order will become active and a
time at which the Order will cease to be active. The available times for activating Orders
are:

• The time of the Order’s receipt by the Nasdaq Market Center;
• the Nasdaq Opening Cross (or 9:30 a.m. ET in the case of a security for which no
  Nasdaq Opening Cross occurs);
• Market Hours, beginning after the completion of the Nasdaq Opening Cross (or at
  9:30 a.m. ET in the case of a security for which no Nasdaq Opening Cross
  occurs);
• the Nasdaq Closing Cross (or the end of Market Hours in the case of a security for
  which no Nasdaq Closing Cross occurs);
• 8:00 a.m. ET, in the case of an Order using the SCAN routing strategy that is
  entered prior to 8:00 a.m. ET;
• the beginning of the Display-Only Period, in the case of a security that is the
  subject of a trading halt and for which trading will resume pursuant to a halt
  cross; and
• the resumption of trading, in the case of a security that is the subject of a trading
  halt and for which trading resumes without a halt cross.

The available times for deactivating Orders are:

• “Immediate” (i.e., immediately after determining whether the Order is
  marketable);
• the end of Market Hours;
• the end of System Hours;
• one year after entry; or
• a specific time identified by the Participant; provided, however, that an Order
  specifying an expire time beyond the current trading day will be cancelled at the
  end of the current trading day.
Notwithstanding the Time-in-Force originally designated for an Order, a Participant may always cancel an Order after it is entered.

The following Times-in-Force are referenced elsewhere in Nasdaq’s Rules by the designations noted below:

(1) An Order that is designated to deactivate immediately after determining whether the Order is marketable may be referred to as having a Time in Force of “Immediate or Cancel” or “IOC”. Except as provided in Rule 4702 with respect to Opening Cross/Market Hours Orders and Closing Cross/Extended Hours Orders, MOO, LOO, OIO, MOC, LOC and OI Orders all have a Time in Force of IOC, because they are designated for execution in the Nasdaq Opening Cross or the Nasdaq Closing Cross, as applicable, and are cancelled after determining whether they are executable in such cross. Such an Order may also be referred to as having a Time-in-Force of “On Open” or “On Close”, respectively. An MOO, LOO, OIO, MOC, LOC or IO Order, or any other Order with a Time-in-Force of IOC entered between 9:30 a.m. ET and 4:00 p.m. ET, may be referred to as having a Time-in-Force of “Market Hours Immediate or Cancel” or “MIOC”. An Order with a Time-in-Force of IOC that is entered at any time between 4:00 a.m. ET and 8:00 p.m. ET may be referred to as having a Time-in-Force of “System Hours Immediate or Cancel” or “SIOC”.

(2) An Order that is designated to deactivate at 8:00 p.m. may be referred to as having a Time in Force of “System Hours Day” or “SDAY”.

(3) An Order that is designated to deactivate one year after entry may be referred to as a “Good-till-Cancelled” or “GTC” Order. If a GTC Order is designated as eligible for execution during Market Hours only, it may be referred to as having a Time in Force of “Market Hours Good-till-Cancelled” or “MGTC”. If a GTC is designated as eligible for execution during System Hours, it may be referred to as having a Time in Force of “System Hours Good-till-Cancelled” or “SGTC”.

(4) An Order that is designated to deactivate at the time specified in advance by the entering Participant may be referred to as having a Time-in-Force of “System Hours Expire Time” or “SHEX”.

(5) An Order that is designated to activate at any time during Market Hours and deactivate at the completion of the Nasdaq Closing Cross may be referred to as having a Time-in-Force of “Market Hours Day” or “MDAY”. An Order entered with a Time-in-Force of MDAY after the completion of the Nasdaq Closing Cross will be rejected.

(6) An Order that is designated to activate when entered and deactivate at the completion of the Nasdaq Closing Cross may be referred to as having a Time in Force of “Good-till-Market Close” or “GTMC”. GTMC Orders entered after 4:00 p.m. ET will be rejected.
(7) A Participant entering an Order using the SCAN routing strategy prior to 8:00 a.m. ET may designate the Order to activate upon entry, or at 8:00 a.m. ET. The latter option may be referred to as “ESCN”.

(b) Size. Except as otherwise provided, an Order may be entered in any whole share size between one share and 999,999 shares. Orders for fractional shares are not permitted. The following terms may be used to describe particular Order sizes:

(1) “normal unit of trading” or “round lot” means the size generally employed by traders when trading a particular security, which is 100 shares in most instances;

(2) “mixed lot” means a size of more than one normal unit of trading but not a multiple thereof; and

(3) “odd lot” means a size of less than one normal unit of trading.

c) Price. With limited exceptions, all Orders must have a price, such that they will execute only if the price available is equal to or better than the price of the Order. The maximum price that the System will accept is $199,999.99. MOO and MOC Orders are not assigned a price by the entering party and execute at the price of the Nasdaq Opening Cross and Nasdaq Closing Cross, respectively. Moreover, certain Orders have a price that is determined by the Nasdaq Market Center based on the NBBO or other reference prices, rather than by the Participant. As described below with respect to the Pegging Order Attribute, an Order may have a price that it pegged to the opposite side of the market, in which case the Order will behave like a “market order” or “unpriced order” (i.e., an Order that executes against accessible liquidity on the opposite side of the market, regardless of its price).

d) Pegging. Pegging is an Order Attribute that allows an Order to have its price automatically set with reference to the NBBO: provided, however, that if Nasdaq is the sole market center at the Best Bid or Best Offer (as applicable), then the price of any Displayed Order with Pegging will be set with reference to the highest bid or lowest offer disseminated by a market center other than Nasdaq. An Order with a Pegging Order Attribute may be referred to as a “Pegged Order.” For purposes of this rule, the price to which an Order is pegged will be referred to as the Inside Quotation, the Inside Bid, or the Inside Offer, as appropriate. There are three varieties of Pegging:

- Primary Pegging means Pegging with reference to the Inside Quotation on the same side of the market. For example, if the Inside Bid was $11, an Order to buy with Primary Pegging would be priced at $11.
- Market Pegging means Pegging with reference to the Inside Quotation on the opposite side of the market. For example, if the Inside Offer was $11.06, an Order to buy with Market Pegging would be priced at $11.06.
- Midpoint Pegging means Pegging with reference to the midpoint between the Inside Bid and the Inside Offer (the “Midpoint”). Thus, if the Inside Bid was $11 and the Inside Offer was $11.06, an Order with Midpoint Pegging would be
priced at $11.03. An Order with Midpoint Pegging is not displayed. An Order with Midpoint Pegging may be executed in sub-pennies if necessary to obtain a midpoint price.

Pegging is available only during Market Hours. An Order with Pegging may specify a limit price beyond which they Order may not be executed; provided, however, that if an Order has been assigned a Pegging Order Attribute and a Discretion Order Attribute, the Order may execute at any price within the discretionary price range, even if beyond the limit price specified with respect to the Pegging Order Attribute. If an Order with Pegging is priced at its limit price, the price of the Order may nevertheless be changed to a less aggressive price based on changes to the Inside Quotation. In addition, an Order with Primary Pegging or Market Pegging may specify an Offset Amount, such that the price of the Order will vary from the Inside Quotation by the selected Offset Amount. The Offset Amount may be either aggressive or passive. Thus, for example, if a Participant entered an Order to buy with Primary Pegging and a passive Offset Amount of $0.05 and the Inside Bid was $11, the Order would be priced at $10.95. If the Participant selected an aggressive Offset Amount of $0.02, however, the Order would be priced at $11.02. An Order with Primary Pegging and an Offset Amount will not be Displayed, unless the Order is Attributable. An Order with Midpoint Pegging will not be Displayed. An Order with Market Pegging and no Offset behaves as a “market order” with respect to any liquidity on the Nasdaq Book at the Inside Quotation on the opposite side of the market because it is immediately executable at that price. If, at the time of entry, there is no price to which a Pegged Order can be pegged, the Order will be rejected. In the case of an Order with Midpoint Pegging, if the Inside Bid and Inside Offer are locked, the Order will be priced at the locking price, if the Inside Bid and Inside Offer are crossed, the Order will nevertheless be priced at the midpoint between the Inside Bid and Inside Offer, and if there is no Inside Bid and/or Inside Offer, the Order will be rejected.

Primary Pegging and Market Pegging are available through RASH, QIX, and FIX only. An Order entered through OUCH or FLITE with Midpoint Pegging will have its price set upon initial entry to the Midpoint, unless the Order has a limit price that is lower than the Midpoint for an Order to buy (higher than the Midpoint for an Order to sell), in which case the Order will be ranked on the Nasdaq Book at its limit price. Thereafter, if the NBBO changes so that the Midpoint is lower than (higher than) the price of an Order to buy (sell), the Pegged Order will be cancelled back to the Participant.

An Order entered through RASH, QIX or FIX with Pegging will have its price set upon initial entry and will thereafter have its price reset in accordance with changes to the relevant Inside Quotation. An Order with Pegging receives a new timestamp whenever its price is updated and therefore will be evaluated with respect to possible execution (and routing, if it has been assigned a Routing Order Attribute) in the same manner as a newly entered Order. If the price to which an Order is pegged is not available, the Order will be rejected.
If an Order with Primary Pegging is updated 1,000 times, it will be cancelled; if an Order with other forms of Pegging is updated 10,000 times, it will be cancelled.

(e) Minimum Quantity. Minimum Quantity is an Order Attribute that allows a Participant to provide that an Order will not execute unless a specified minimum quantity of shares can be obtained. An Order with a Minimum Quantity Order Attribute may be referred to as a “Minimum Quantity Order.” For example, a Participant could enter an Order with a Size of 1000 shares and specify a Minimum Quantity of 500 shares.

A Participant may specify two alternatives with respect to the processing of a Minimum Quantity Order at time of entry:

- First, the Participant may specify that the minimum quantity condition may be satisfied by execution against multiple Orders. In that case, upon entry, the System would determine whether there were one or more posted Orders executable against the incoming Order with an aggregate size of at least the minimum quantity (500 shares in the above example). If there were not, the Order would post on the Nasdaq Book in accordance with the characteristics of its underlying Order Type.

- Second, the Participant may specify that the minimum quantity condition must be satisfied by execution against one or more Orders, each of which must have a size that satisfies the minimum quantity condition. If there are such Orders but there are also other Orders that do not satisfy the minimum quantity condition, the Minimum Quantity Order will be partially executed and the remainder of the Order will be cancelled. For example, if a Participant entered an Order to buy at $11 with a size of 1,500 shares and a minimum quantity condition of 500 shares, and there were three Orders to sell at $11 on the Nasdaq Book, two with a size of 500 shares each and one with a size of 200 shares, the two 500 share Orders would execute and the remainder of the Minimum Quantity Order would be cancelled. Alternatively, if the Order would lock or cross Orders on the Nasdaq Book but none of the resting Orders would satisfy the minimum quantity condition, an Order with a minimum quantity condition to buy (sell) will be repriced to one minimum price increment lower than (higher than) the lowest price (highest price) of such Orders. For example, if there was an Order to buy at $11 with a minimum quantity condition of 500 shares, and there were resting Orders on the Nasdaq Book to sell 200 shares at $10.99 and 300 shares at $11, the Order would be repriced to $10.98 and ranked at that price.

Once posted to the Nasdaq Book, a Minimum Quantity Order retains its Minimum Quantity Order Attribute, such that the Order may execute only against incoming Orders with a size of at least the minimum quantity condition. An Order that has a Minimum Quantity Order Attribute and that posts to the Nasdaq Book will not be displayed.

Upon entry, an Order with a Minimum Quantity Order Attribute must have a size of at least one round lot. An Order entered through OUCH or FLITE may have a minimum
quantity condition of any size of at least one round lot. An Order entered through RASH, QIX or FIX must have a minimum quantity of one round lot or any multiple thereof, and a mixed lot minimum quantity condition will be rounded down to the nearest round lot. In the event that the shares remaining in the size of an Order with a Minimum Quantity Order Attribute following a partial execution thereof are less than the minimum quantity specified by the Participant entering the Order, the minimum quantity value of the Order will be reduced to the number of shares remaining. An Order with a Minimum Quantity Order Attribute may not be displayed; if a Participant marks an Order with both a Minimum Quantity Order Attribute and a Display Order Attribute, the System will accept the Order but will give a Time-in-Force of IOC, regardless of the Time-in-Force marked by the Participant. An Order marked with a Minimum Quantity Order Attribute and a Routing Order Attribute will be rejected.

(f) Routing. Routing is an Order Attribute that allows a Participant to designate an Order to employ one of several Routing Strategies offered by Nasdaq, as described in Rule 4758; such an Order may be referred to as a “Routable Order.” Upon receipt of an Order with the Routing Order Attribute, the System will process the Order in accordance with the applicable Routing Strategy. In the case of a limited number of Routing Strategies, the Order will be sent directly to other market centers for potential execution. For most other Routing Strategies, the Order will attempt to access liquidity available on Nasdaq in the manner specified for the underlying Order Type and will then be routed in accordance with the applicable Routing Strategy. Shares of the Order that cannot be executed are then returned to Nasdaq, where they will (i) again attempt to access liquidity available on Nasdaq and (ii) post to the Nasdaq Book or be cancelled, depending on the Time-in-Force of the Order. Under certain Routing Strategies, the Order may be routed again if the System observes an accessible quotation of another market center, and returned to Nasdaq again for potential execution and/or posting to the Nasdaq Book. In connection with the trading of securities governed by Regulation NMS, all Orders shall be routed for potential execution in compliance with Regulation NMS. Where appropriate, Routable Orders will be marked as Intermarket Sweep Orders.

(g) Discretion. Discretion is an Order Attribute under which an Order has a non-displayed discretionary price range within which the entering Participant is willing to trade; such an Order may be referred to as a “Discretionary Order.” Thus, an Order with Discretion has both a price (for example, buy at $11) and a discretionary price range (for example, buy up to $11.03). Depending on the Order Type used, the price may be displayed (for example, a Price to Display Order) or non-displayed (for example, a Non-Displayed Order). The discretionary price range is always non-displayed. In addition, it should be noted that the Discretion Order Attribute may be combined with the Pegging Order Attribute, in which case either the price of the Order or the discretionary price range or both may be pegged in the ways described in Rule 4702(d) with respect to the Pegging Order Attribute. For example, an Order with Discretion to buy might be pegged to the Best Bid with a $0.05 passive Offset and might have a discretionary price range pegged to the Best Bid with a $0.02 passive Offset. In that case, if the Best Bid was $11, the price of the Order would be $10.95, with a discretionary price range up to $10.98. If the Best Bid moved to $10.99, the price of the Order would then be $10.94, with a
discretionary price range up to $10.97. Alternatively, if the price of the Order was pegged but the discretionary price range was not, the price of the Order would be $10.94, but the discretionary price range would continue to range up to $10.98. Likewise, if the discretionary price range was pegged but the price of the Order was not, the Order would remain priced at $10.95 but with a discretionary price range of up to $10.97. A Participant may also specify a limit price beyond which the discretionary price range may not extend.

Under the circumstances described below, the Nasdaq Market Center processes an Order with Discretion by generating a Non-Displayed Order with a Time-in-Force of IOC (a “Discretionary IOC”) that will attempt to access liquidity available within the discretionary price range. The Discretionary IOC will not be permitted to execute, however, if the price of the execution would trade through a Protected Quotation. If more than one Order with Discretion satisfies conditions that would cause the generation of a Discretionary IOC simultaneously, the order in which such Discretionary IOCs are presented for execution is random, based on the respective processing time for each such Order. Whenever a Discretionary IOC is generated, the underlying Order with Discretion will be withheld or removed from the Nasdaq Book and will then be routed and/or placed on the Nasdaq Book if the Discretionary IOC does not exhaust the full size of the underlying Order with Discretion, with its price determined by the underlying Order Type and Order Attributes selected by the Participant. Because the circumstances under which a Discretionary IOC will be generated are dependent upon a range of factors, several specific scenarios are described below.

• If an Order has been assigned a Discretion Order Attribute, but has not been assigned a Routing Order Attribute, upon entry of the Order, the Nasdaq Market Center will automatically generate a Discretionary IOC with a price equal to the highest price for an Order with Discretion to buy (lowest price for an Order with Discretion to sell) within the discretionary price range and a size equal to the full size of the underlying Order to determine if there are any Orders within the discretionary price range on the Nasdaq Book. If the Discretionary IOC does not exhaust the full size of the Order with Discretion will post to the Nasdaq Book in accordance with the parameters that apply to the underlying Order Type. Thus, for example, if a Participant enters a Price to Display Order to buy at $11 with a discretionary price range of up to $11.03, upon entry the Nasdaq Market Center will generate a Discretionary IOC to buy priced at $11.03. If there is an Order on the Nasdaq Book to sell priced at $11.02 and an execution at $11.02 would not trade through a Protected Quotation, the Discretionary IOC will execute against the Order on the Nasdaq Book, up to the full size of each Order. Any remaining size of the Price to Display Order would post to the Nasdaq Book in accordance with its parameters.

• After the Order posts to the Nasdaq Book, the Nasdaq Market Center System will examine whether at any time there is an Order on the Nasdaq Book with a price in the discretionary price range against which the Order with Discretion could execute. In doing so, the Nasdaq Market Center System will examine all Orders
If the Nasdaq Market Center System observes such an Order, it will generate a Discretionary IOC with a price equal to the highest price for an Order to buy (lowest price for an Order to sell) within the discretionary price range and a size equal to the full size of the Order.

- If an Order that uses a passive routing strategy (i.e., a strategy that does not seek routing opportunities after posting to the Nasdaq Book) has been assigned a Discretion Order Attribute but does not have a pegged discretionary price range, upon entry of the Order, the Nasdaq Market Center will examine all Orders (including Orders that are not Displayed) on the Nasdaq Book to determine if there is an Order on the Nasdaq Book with a price in the discretionary price range against which the Order with Discretion could execute. If the Nasdaq Market Center System observes such an Order, it will generate a Discretionary IOC with a price equal to the price of the Order on the Nasdaq Book and a size equal to the applicable size of the Order on the Nasdaq Book. The Nasdaq Market Center System will also determine if there are any accessible quotations with prices that are within the discretionary price range at destinations on the applicable routing table for the selected routing strategy. If there are such quotations, the Nasdaq Market Center System will generate one or more Discretionary IOCs to route to such destinations, with a price and size that match the price and size of the market center’s quotation. If necessary to maximize execution opportunities and comply with Regulation NMS, the System’s routing broker may mark such Discretionary IOCs as Intermarket Sweep Orders. If the Discretionary IOC(s) do not exhaust the full size of the Order with Discretion, the remaining size of the Order with Discretion will post to the Nasdaq Book in accordance with the parameters that apply to the underlying Order Type. The Nasdaq Market Center System will then examine whether at any time there is an Order on the Nasdaq Book with a price in the discretionary price range against which the Order with Discretion could execute. In doing so, the Nasdaq Market Center System will examine all Orders (including Orders that are not Displayed). If the Nasdaq Market Center System observes such an Order, it will generate a Discretionary IOC with a price equal to the price of the Order on the Nasdaq Book and a size equal to the applicable size of the Order on the Nasdaq Book.

- If an Order that uses a reactive routing strategy (i.e., a strategy that seeks routing opportunities after posting to the Nasdaq Book) has been assigned a Discretion Order Attribute but does not have a pegged discretionary price range, upon entry of the Order, the Nasdaq Market Center will examine all Orders (including Orders that are not Displayed) on the Nasdaq Book to determine if there is an Order on the Nasdaq Book with a price in the discretionary price range against which the Order with Discretion could execute. If the Nasdaq Market Center System observes such an Order, it will generate a Discretionary IOC with a price equal to the price of the Order on the Nasdaq Book and a size equal to the applicable size of the Order on the Nasdaq Book. The Nasdaq Market Center System will also determine if there are any accessible quotations with prices that are within the discretionary price range at destinations on the applicable routing table for the
selected routing strategy. If there are such quotations, the Nasdaq Market Center System will generate one or more Discretionary IOCs to route to such destinations, with a price and size that match the price and size of the market center’s quotation. If necessary to maximize execution opportunities and comply with Regulation NMS, the System may mark such Discretionary IOCs as Intermarket Sweep Orders. If the Discretionary IOC(s) do not exhaust the full size of the Order with Discretion, the remaining size of the Order with Discretion will post to the Nasdaq Book in accordance with the parameters that apply to the underlying Order Type. The Nasdaq Market Center System will then examine whether at any time there is an Order on the Nasdaq Book or an accessible quotation at another trading venue with a price in the discretionary price range against which the Order with Discretion could execute. In examining the Nasdaq Book, the Nasdaq Market Center System will examine all Orders (including Orders that are not Displayed). If the Nasdaq Market Center System observes such an Order or quotation, it will generate a Discretionary IOC with a price equal to the price of such the Order or quotation and a size equal to the applicable size of the Order on the Nasdaq Book or the displayed size of the quotation.

- If an Order that uses a passive routing strategy has been assigned a Discretion Order Attribute and does have a pegged discretionary price range, upon entry of the Order, the Nasdaq Market Center will examine all Orders (including Orders that are not Displayed) on the Nasdaq Book to determine if there is an Order on the Nasdaq Book with a price in the discretionary price range against which the Order with Discretion could execute. If the Nasdaq Market Center System observes such an Order, it will generate a Discretionary IOC with a price equal to the price of the Order on the Nasdaq Book and a size equal to the applicable size of the Order on the Nasdaq Book. The Nasdaq Market Center System will also determine if there are any accessible quotations with prices that are within the discretionary price range at destinations on the applicable routing table for the selected routing strategy. If there are such quotations, the Nasdaq Market Center System will generate one or more Discretionary IOCs to route to such destinations, with a price and size that match the price and size of the market center’s quotation. If necessary to maximize execution opportunities and comply with Regulation NMS, the System may mark such Discretionary IOCs as Intermarket Sweep Orders. If the Discretionary IOC(s) do not exhaust the full size of the Order with Discretion, the remaining size of the Order with Discretion will post to the Nasdaq Book in accordance with the parameters that apply to the underlying Order Type. Thereafter, the Order will not generate further Discretionary IOCs unless the Order is updated in a manner that causes it to receive a new timestamp, in which case the Order will behave in the same manner as a newly entered Order.

- If an Order that uses a reactive routing strategy has been assigned a Discretion Order Attribute and does have a pegged discretionary price range, upon entry of the Order, the Nasdaq Market Center will examine all Orders (including Orders that are not Displayed) on the Nasdaq Book to determine if there is an Order on the
the Nasdaq Book with a price in the discretionary price range against which the Order with Discretion could execute. If the Nasdaq Market Center System observes such an Order, it will generate a Discretionary IOC with a price equal to the price of the Order on the Nasdaq Book and a size equal to the applicable size of the Order on the Nasdaq Book. The Nasdaq Market Center System will also determine if there are any accessible quotations with prices that are within the discretionary price range at destinations on the applicable routing table for the selected routing strategy. If there are such quotations, the Nasdaq Market Center System will generate one or more Discretionary IOCs to route to such destinations, with a price and size that match the price and size of the market center’s quotation. If necessary to maximize execution opportunities and comply with Regulation NMS, the System may mark such Discretionary IOCs as Intermarket Sweep Orders. If the Discretionary IOC(s) do not exhaust the full size of the Order with Discretion, the remaining size of the Order with Discretion will post to the Nasdaq Book in accordance with the parameters that apply to the underlying Order Type. The Nasdaq Market Center System will then examine whether at any time there is an Order on the Nasdaq Book or an accessible quotation at another trading venue with a price in the discretionary price range against which the Order with Discretion could execute. In examining the Nasdaq Book, the Nasdaq Market Center System will examine Displayed Orders but will not examine Non-Displayed Orders. If the Nasdaq Market Center System observes such an Order or quotation, it will generate a Discretionary IOC with a price equal to the price of such the Order or quotation and a size equal to the applicable size of the Order on the Nasdaq Book or the displayed size of the quotation.

(h) Reserve Size. Reserve Size is an Order Attribute that permits a Participant to stipulate that an Order Type that is displayed may have its displayed size replenished from additional non-displayed size. An Order with Reserve Size may be referred to as a “Reserve Order.” At the time of entry, the displayed size of such an Order selected by the Participant must be one or more normal units of trading; an Order with a displayed size of a mixed lot will be rounded down to the nearest round lot. A Reserve Order with displayed size of an odd lot will be accepted but with the full size of the Order displayed. Reserve Size is not available for Orders that are not displayed; provided, however, that if a Participant enters Reserve Size for a Non-Displayed Order with a Time-in-Force of IOC, the full size of the Order, including Reserve Size, will be processed as a Non-Displayed Order.

Whenever a Participant enters an Order with Reserve Size, the Nasdaq Market Center will process the Order as two Orders: a Displayed Order (with the characteristics of its selected Order Type) and a Non-Displayed Order. Upon entry, the full size of each such Order will be processed for potential execution in accordance with the parameters applicable to the Order Type. For example, a Participant might enter a Price to Display Order with 200 shares displayed and an additional 3,000 shares non-displayed. Upon entry, the Order would attempt to execute against available liquidity on the Nasdaq Book, up to 3,200 shares. Thereafter, unexecuted portions of the Order would post to the
Nasdaq Book as a Displayed Price to Display Order and a Non-Displayed Order; provided, however, that if the remaining total size is less than the display size stipulated by the Participant, the Displayed Order will post without Reserve Size. Thus, if 3,050 shares executed upon entry, the Price to Display Order would post with a size of 150 shares and no Reserve Size.

When an Order with Reserve Size is posted, if there is an execution against the Displayed Order that causes its size to decrease below a normal unit of trading, another Displayed Order will be entered at the level stipulated by the Participant while the size of the Non-Displayed Order will be reduced by the same amount. Any remaining size of the original Displayed Order will remain on the NASDAQ Book. The new Displayed Order will receive a new timestamp, but the Non-Displayed Order (and the original Displayed Order, if any) will not; although the new Displayed Order will be processed by the System as a new Order in most respects at that time, if it was designated as Routable, the System will not automatically route it upon reentry. For example, if a Price to Comply Order with Reserve Size posted with a Displayed Size of 200 shares, along with a Non-Displayed Order of 3,000 and the 150 shares of the Displayed Order was executed, the remaining 50 shares of the original Price to Comply Order would remain, a new Price to Comply Order would post with a size of 200 shares and a new timestamp, and the Non-Displayed Order would be decremented to 2,800 shares. Because a new Displayed Order is entered and the Non-Displayed Order is not reentered, there are circumstances in which the Displayed Order may receive a different price than the Non-Displayed Order. For example, if, upon reentry, a Price to Display Order would lock or cross a newly posted Protected Quotation, the price of the Order will be adjusted but its associated Non-Displayed Order would not be adjusted. In that circumstance, it would be possible for the better priced Non-Displayed Order to execute prior to the Price to Display Order.

A Participant may stipulate that the Displayed Order should be replenished to its original size. Alternatively, the Participant may stipulate that the original and subsequent displayed size will be an amount randomly determined based on factors selected by the Participant. Specifically, the Participant would select both a theoretical displayed size and a range size, which may be any share amount less than the theoretical displayed size. The actual displayed size will then be determined by the System within a range in which the minimum size is the theoretical displayed size minus the range size, and the maximum size is (i) the minimum size plus (ii) an amount that is two times the range size minus one round lot. For example, if the theoretical displayed size is 600 shares and the range size is 500, the minimum displayed size will be 100 shares (600-500), and the maximum size will be 1,000 shares ((600-500) + ((2 x 500) – 100)).

When the Displayed Order with Reserve Size is executed and replenished, applicable market data disseminated by Nasdaq will show the execution and decrementation of the Displayed Order, followed by replenishment of the Displayed Order.

In all cases, if the remaining size of the Non-Displayed Order is less than the fixed or random amount stipulated by the Participant, the full remaining size of the Non-Displayed Order will be displayed and the Non-Displayed Order will be removed.
(i) Attribution. Attribution is an Order Attribute that permits a Participant to designate that the price and size of the Order will be displayed next to the Participant’s MPID in market data disseminated by Nasdaq. An Order with Attribution is referred to as an “Attributable Order” and an Order without attribution is referred to as a “Non-Attributable Order.”

(j) Intermarket Sweep Order. Designation of an Order as an Intermarket Sweep Order, or ISO, is an Order Attribute that allows the Order to be executed within the Nasdaq Market Center by Participants at multiple price levels without respect to Protected Quotations of other market centers within the meaning of Rule 600(b) under Regulation NMS. ISOs are immediately executable within the Nasdaq Market Center against Orders against which they are marketable. An Order designated as an ISO may not be assigned a Routing Order Attribute; provided, however, that an Order using the Directed Order strategy may be designated as an ISO with respect to the market center to which it is directed. In connection with the trading of securities governed by Regulation NMS, Intermarket Sweep Orders shall be executed exclusively within the System and the entering Participant shall be responsible for compliance with Rules 610 and 611 under Regulation NMS with respect to order protection and locked and crossed markets with respect to such Orders. Orders eligible for execution outside the System shall be processed in compliance with Regulation NMS, including accessing Protected Quotations and resolving locked and crossed markets, as instructed.

Simultaneously with the routing of an ISO to the System, one or more additional limit orders, as necessary, are routed by the entering Participant to execute against the full displayed size of any Protected Quotation with a price that is superior to the price of the Order identified as an Intermarket Sweep Order (as defined in Rule 600(b) under Regulation NMS). These additional routed orders must be identified as Intermarket Sweep Orders.

Upon receipt of an ISO, the System will consider the stated price of the ISO to be available for other Orders to be entered at that price, unless the ISO is not itself accepted at that price level (for example, a Post-Only Order that has its price adjusted to avoid executing against an Order on the Nasdaq Book) or the ISO is not Displayed.

In addition, as described with respect to various Order Types, such as the Price to Comply Order, Orders on the Nasdaq Book that had their price adjusted may be eligible to be reentered at the stated price of the ISO. For example, if a Price to Comply Order to buy at $11 would lock a Protected Offer at $11, the Price to Comply Order will be posted with a non-displayed price of $11 and a displayed price of $10.99. If the System then receives an ISO to buy at $11, the ISO will be posted at $11 and the Price to Comply Order will be reentered at $11 (if the Participant opted to have its Orders reentered). The respective priority of such reentered Orders will be maintained among multiple repriced Orders; however, other new Orders may also be received after receipt of the ISO but before the repricing of the Price to Comply Order is complete; accordingly, the priority of an Order on the Nasdaq Book vis-à-vis a newly entered Order is not guaranteed.
(k) Display. Display is an Order Attribute that allows the price and size of an Order to be displayed to market participants via market data feeds. All Orders that are Attributable are also displayed, but an Order may be displayed without being Attributable. As discussed in Rule 4702, a Non-Displayed Order is a specific Order Type, but other Order Types may also be non-displayed if they are not assigned a Display Order Attribute; however, depending on context, all Orders that are not displayed may be referred to as “Non-Displayed Orders.” An Order with a Display Order Attribute may be referred to as a “Displayed Order.”

(l) Participation in the Nasdaq Opening Cross or the Nasdaq Closing Cross. All Order Types except Supplemental Orders, Retail Orders, and RPI Orders participate in the Nasdaq Opening Cross and/or the Nasdaq Closing Cross if the Order has a Time-in-Force that would cause the Order to be in effect at the time of the Nasdaq Opening Cross and/or Nasdaq Closing Cross. MOO Orders, LOO Orders, and IOI Orders participate in the Nasdaq Opening Cross in the manner specified in Rule 4752. Other Order Types eligible to participate in the Nasdaq Opening Cross operate as “Market Hours Orders” or “Open Eligible Interest” as specified in Rule 4752. MOC Orders, LOC Orders and IO Orders participate in the Nasdaq Closing Cross in the manner specified in Rule 4754. Other Order Types eligible to participate in the Nasdaq Closing Cross operate as “Close Eligible Interest” in the manner specified in Rule 4754.

* * * * *

4752. Opening Process

(a) Definitions. For the purposes of this rule the term:

(1) – (2) No change.

(3) “Limit On Open Order” or “LOO” shall have the meaning provided in Rule 4702. [mean an order to buy or sell at a specified price or better that is to be executed only during the Nasdaq Opening Cross. LOO orders shall execute only at the price determined by the Nasdaq Opening Cross and shall be available for automatic execution. LOO orders may be entered, cancelled and cancel/replaced between 4:00 a.m. and 9:28 a.m. without restriction. LOO orders may not be cancelled or corrected after 9:28 a.m.]

(4) “Market on Open Order” or “MOO” shall have the meaning provided in Rule 4702. [mean an order to buy or sell at the market that is to be executed only during the Nasdaq Opening Cross. MOO orders may be entered, cancelled, and cancel/replaced between 4:00 a.m. and 9:28 a.m. and shall execute only at the price determined by the Nasdaq Opening Cross.]

(5) No change.
(6) “Opening Imbalance Only Order” or “OIO” shall have the meaning provided in Rule 4702. [mean an order to buy or sell at a specified price or better that may be executed only during the Nasdaq Opening Cross and only against MOO, LOO or Early Market Hours orders. OIO orders may be entered between 4:00 a.m. and 9:29:59 a.m., but they may not be cancelled or modified after 9:28 except to increase the number of shares. OIO sell (buy) orders shall only execute at or above (below) the 9:30 Nasdaq Market Center offer (bid).]

(7) – (9) No change.

(b) – (d) No change.

* * * * *

4754. Nasdaq Closing Cross

(a) Definitions. For the purposes of this rule the term:

(1) – (2) No change.

(3) “Imbalance Only Order” or “IO” shall have the meaning provided in Rule 4702. [mean an order to buy or sell at a specified price or better that may be executed only during the Nasdaq Closing Cross and only against MOC or LOC orders. IO orders can be entered between 4:00 a.m. and 3:59:59 p.m., but they cannot be modified after 3:50:00 except to increase the number of shares. IO orders can be cancelled between 3:50:00 p.m. and 3:55:00 p.m. only by requesting Nasdaq to correct a legitimate error (e.g., side, size, symbol, price or duplication of an order). IO orders cannot be cancelled after 3:55:00 p.m. for any reason. IO sell (buy) orders will only execute at or above (below) the 4:00:00 System offer (bid).]

(4) “Limit On Close Order” or “LOC” shall have the meaning provided in Rule 4702. [mean an order to buy or sell at a specified price or better that is to be executed only during the Nasdaq Closing Cross. LOC orders can be entered, cancelled, and corrected without restriction between 4:00 a.m. and 3:50:00 p.m. LOC orders can be cancelled between 3:50:00 p.m. and 3:55:00 p.m. only by requesting Nasdaq to correct a legitimate error (e.g., side, size, symbol, price or duplication of an order). LOC orders cannot be cancelled after 3:55:00 p.m. for any reason. LOC Orders will execute only at the price determined by the Nasdaq Closing Cross. All LOC orders must be available for automatic execution.]

(5) “Market on Close Order or MOC” shall have the meaning provided in Rule 4702. [mean an order to buy or sell at the market that is to be executed only during the Nasdaq Closing Cross. MOC orders can be entered, cancelled, and corrected between 4:00 a.m. and 3:50:00 p.m. MOC orders can be cancelled between 3:50:00 p.m. and 3:55:00 p.m. only by requesting Nasdaq to correct a legitimate error (e.g., side, size, symbol, price or duplication of an order). MOC orders cannot be cancelled after 3:55:00 p.m. for any
reason. MOC orders will execute only at the price determined by the Nasdaq Closing Cross. All MOC orders must be available for automatic execution.]

(6) – (8) No change.

(b) No change.

4755. Reserved. [Order Entry Parameters]

[(a) System Orders]

[(1) General—A System order is an order that is entered into the System for display and/or execution as appropriate. Such orders are executable against marketable contra-side orders in the System as provided in Rule 4757.]

[(A) All System Orders shall indicate limit price and whether they are a buy, short sale, or long sale. Systems Orders can be designated as Market Hours Immediate or Cancel (“MIOC”), Market Hours Good-till-Cancelled (“MGTC”), Market Hours Day (“MDAY”), System Hours Expire Time (“SHEX”), System Hours Day (“SDAY”), System Hours Immediate or Cancel (“SIOC”), System Hours Good-till-Cancelled (“SGTC”), or Good-til-Market Close “GTMC”).]

[(B) A System order may also be designated as Reserve Order, a Pegged Order, a Non-Displayed Order, a Minimum Quantity Order, an Intermarket Sweep Order, a Price to Comply order, a Price to Comply Post order, a Discretionary Order, a Directed Order, a Post-Only Order, a Midpoint Peg Post-Only Order, or a Supplemental Order.]

[(C) System Hours Pegged Orders, excluding System Hours Pegged orders ultimately sought to be directed to either the New York Stock Exchange (“NYSE”) or the American Stock Exchange (“AMEX”), may only be entered between 9:30 a.m. and 4:00 p.m. Eastern Time.]

[(2) Reserved.]

[(3) Routing—All System orders entered by Participants directing or permitting routing to other market centers shall be routed for potential display and/or execution as set forth in Rule 4758. Beginning March 5, 2007, in connection with the trading of securities governed by Regulation NMS, System orders shall be routed for potential display and/or execution in Compliance with Regulation NMS.]

[(4) Regulation NMS—Beginning March 5, 2007, in connection with the trading of securities governed by Regulation NMS, Intermarket Sweep Orders shall be executed exclusively within the System and the entering Participants shall be responsible for compliance with Regulation NMS Order Protection Rule and Locked and Crossed market rule with respect to such orders. Orders eligible for execution outside the System shall be processed in compliance with Regulation NMS, including accessing protected quotations and resolving locked and crossed markets, as instructed.]
4756. Entry and Display of Quotes and Orders

(a) Entry of Orders—Participants can enter orders into the System, subject to the following requirements and conditions:

(1) – (2) No change.

(3) Orders can be entered into the System (or previously entered [o]Orders cancelled or modified) from 4:00 a.m. until 8:00 p.m. [Eastern Time] ET. Participants may modify a previously entered [o]Order without cancelling it or affecting the priority of the [o]Order on the Nasdaq Book solely for the purpose of modifying the marking of a sell [o]Order as long, short, or short exempt; provided, however, that such a modification may be made only with respect to Orders entered through OUCH or FLITE; and provided further, that if an [o]Order is redesignated as short, a Short Sale Period is in effect under Rule 4763, and the [o]Order is not priced at a Permitted Price or higher under Rule 4763(e), the [o]Order will be cancelled. In addition, a partial cancellation of an [o]Order to reduce its share size will not affect the priority of the [o]Order on the book; provided, however, that such a partial cancellation may not be made with respect to an MOO Order, an LOO Order, an OIO Order, an MOC Order, an LOC Order, an IO Order, or a Pegged Order (including a Discretionary Order that is Pegged). Except as provided in Rule 4761, all other modifications of orders will result in the replacement of the original order with a new order with a new time stamp.

(b) – (c) No change.

4757. Book Processing

(a) [System o]Orders on the Nasdaq Book shall be [executed through the Nasdaq Book Process] presented for execution against incoming Orders in the order set forth below:

(1) Price/Display/Time Execution Algorithm. The System shall [execute equally priced or better priced trading interest within the System] present Orders on the Nasdaq Book for execution against incoming Order in accordance with a price/display/time [priority in the following order] algorithm:

(A) Price. Better priced Orders will be presented for execution first. For example, an Order on the Nasdaq Book to buy at $10.00 will be ranked ahead of an Order to buy at $9.99.

[(A)] (B) Display[ed] and Time. [Orders:] Equally priced Orders with a Display Attribute will be ranked in time priority.

[(B)] (C) [Non-Displayed Orders, the reserve portion of Quotes and Reserve Orders, in price/time priority among such interest:] Non-Display and Time. Orders with a Non-
Display Attribute, including the Non-Displayed portion of an Order with Reserve Size, will be ranked in time priority.

[(C) The discretionary portion of Discretionary Orders as set forth in Rule 4751(f);]

(D) Supplemental Orders in accordance with the following process: Between 9:30 a.m. and 4:00 p.m., an [order] Order with a Routing Attribute [that has been designated as eligible for routing in accordance with Rule 4758 and] that has not been fully executed pursuant Rule 4757(a)(1)(A) – (C) shall be matched against posted Supplemental Orders in price/time priority among such [interest] Orders. An [o]Order will be matched against Supplemental Order(s) only at the NBBO, and only if the size of the [o]Order is less than or equal to the aggregate size of Supplemental Order interest available at the price of the [o]Order. In addition, a Supplemental Order will not execute if the NBBO is locked or crossed.

(2) – (4) No change.

(b) No change.

4758. Order Routing

(a) Order Routing Process

(1) The Order Routing Process shall be available to Participants [from the opening of the System (generally 4:00 a.m. Eastern Time) until the closing of the System (generally 8:00 p.m. Eastern Time)] during System Hours, and shall route orders as described below. All routing of orders shall comply with Rule 611 of Regulation NMS under the Exchange Act.

(A) The System provides a variety of routing options. Routing options may be combined with all available [o]Order [t]Types and [t]Times-in-[f]Force, with the exception of [o]Order [t]Types and [t]Times-in-[f]Force whose terms are inconsistent with the terms of a particular routing option. The System will consider the quotations only of accessible markets. The term “System routing table” refers to the proprietary process for determining the specific trading venues to which the System routes [o]Orders and the [o]Order in which it routes them. Nasdaq reserves the right to maintain a different System routing table for different routing options and to modify the System routing table at any time without notice. The System routing options are:

(i) – (viii) No change.

(ix) [“Directed Orders” are routed orders described in Rule 4751.] A “Directed Order” is an Order designed to use a routing strategy under which the Order is directed to an automated trading center (as defined in Regulation NMS) other than Nasdaq, as directed by the entering party, without checking the Nasdaq Book. If unexecuted, the order (or
unexecuted portion thereof) shall be returned to the entering party. A Directed Order is not an Order Type, but rather than Order using the Directed Order routing strategy.

Directed Orders may be designated as Intermarket Sweep Orders by the entering party to execute against the full displayed size of any Protected Bid or Protected Offer (as defined in Rule 600(b) of Regulation NMS under the Act). A broker-dealer that designates an order as an Intermarket Sweep Order has the responsibility of complying with Rules 610 and 611 of Regulation NMS.

Directed Orders may not be directed to a facility of an exchange that is an affiliate of Nasdaq except for Directed Orders directed to the NASDAQ OMX BX Equities Market or to the NASDAQ OMX PSX facility of NASDAQ OMX PHLX.

(x) – (xiv) No change.

(B) No change.

(b) No change.

[4780. Retail Price Improvement Program]

[(a) Definitions.

(1) Retail Member Organization. A "Retail Member Organization" or "RMO" is a Member (or a division thereof) that has been approved by Nasdaq under this Rule to submit Retail Orders.

(2) Retail Order. A "Retail Order" is an agency order, or riskless principal order that satisfies the criteria of FINRA Rule 5320.03, that originates from a natural person and is submitted to Nasdaq by a Retail Member Organization, provided that no change is made to the terms of the order with respect to price (except in the case that a market order is changed to a marketable limit order) or side of market and the order does not originate from a trading algorithm or any other computerized methodology. A Retail Order is an Immediate or Cancel ("IOC") Order and shall operate in accordance with paragraph (f) below. A Retail Order may be an odd lot, round lot, or mixed lot.

(3) Retail Price Improvement Order. A "Retail Price Improvement Order", "RPI Order", or collectively "RPI Interest" consists of non-displayed liquidity on Nasdaq that is priced better than the Protected NBBO by at least $0.001 and that is identified as such. The System will monitor whether RPI buy or sell interest, adjusted by any offset and subject to the ceiling or floor price, is eligible to interact with incoming Retail Orders. An RPI Order remains non-displayed in its entirety (the buy or sell interest, the offset, and the ceiling or floor). An RPI Order may also be entered in increments of $0.001 with an
explicit limit price. Any Member is permitted, but not required, to submit RPI Orders. An RPI Order may be an odd lot, round lot or mixed lot.

(4) Other Price Improving Contra-Side Interest. For purposes of Rule 4780, "Other Price Improving Contra-Side Interest" shall refer to booked, non-displayed orders that are priced more aggressively than the NBBO.

(b) Retail Member Organization Qualifications and Application.

(1) To qualify as a Retail Member Organization, a Member must conduct a retail business or handle retail orders on behalf of another broker-dealer.

(2) To become a Retail Member Organization, a Member must submit:

(A) an application form;

(B) supporting documentation, which may include sample marketing literature, website screenshots, other publicly disclosed materials describing the Member's retail order flow, and any other documentation and information requested by Nasdaq in order to confirm that the applicant's order flow would meet the requirements of the Retail Order definition; and

(C) an attestation, in a form prescribed by Nasdaq, that substantially all orders submitted as Retail Orders will qualify as such under this Rule.

(3) After an applicant submits the application form, supporting documentation, and attestation, Nasdaq shall notify the applicant of its decision in writing.

(4) A disapproved applicant may: (A) request an appeal of such disapproval by Nasdaq as provided in paragraph (d) below; and/or (B) reapply for Retail Member Organization status 90 days after the disapproval notice is issued by Nasdaq.

(5) A Retail Member Organization may voluntarily withdraw from such status at any time by giving written notice to Nasdaq.

(6) A Retail Member Organization must have written policies and procedures reasonably designed to assure that it will only designate orders as Retail Orders if all requirements of a Retail Order are met. Such written policies and procedures must require the Member to: (i) exercise due diligence before entering a Retail Order to assure that entry as a Retail Order is in compliance with the requirements of this Rule, and (ii) monitor whether orders entered as Retail Orders meet the applicable requirements. If a Retail Member Organization represents Retail Orders from another broker-dealer customer, the Retail Member Organization's supervisory procedures must be reasonably designed to assure that the orders it receives from such broker-dealer customer that it designates as Retail Orders meet the definition of a Retail Order. The Retail Member Organization must: (i)
obtain an annual written representation, in a form acceptable to Nasdaq, from each broker-dealer customer that sends it orders to be designated as Retail Orders that entry of such orders as Retail Orders will be in compliance with the requirements of this Rule; and (ii) monitor whether its broker-dealer customer's Retail Order flow meets the applicable requirements.

(c) Failure of RMO to Abide by Retail Order Requirements.

(1) If a Retail Member Organization designates orders submitted to Nasdaq as Retail Orders and Nasdaq determines, in its sole discretion, that such orders fail to meet any of the requirements set forth in paragraph (a) of this Rule, Nasdaq may disqualify a Member from its status as a Retail Member Organization.

(2) Disqualification Determinations. Nasdaq shall determine if and when a Member is disqualified from its status as a Retail Member Organization. When disqualification determinations are made, Nasdaq shall provide a written disqualification notice to the Member.

(3) Appeal and/or Reapplication for Retail Member Organization Status. A Retail Member Organization that is disqualified under this paragraph (c) may: (A) appeal such disqualification as provided in paragraph (d) below; and/or (B) reapply for Retail Organization status 90 days after the date of the disqualification notice from Nasdaq.

(d) Appeal of Disapproval or Disqualification.

(1) If a Member disputes Nasdaq's decision to disapprove it under paragraph (b) above or disqualify it under paragraph (c) above, the Member ("appellant") may request, within five business days after notice of the decision is issued by Nasdaq, that the Retail Price Improvement Panel ("RPI Panel") review the decision to determine if it was correct.

(2) The RPI Panel shall consist of Nasdaq's Chief Regulatory Officer ("CRO"), or a designee of the CRO, and two officers of Nasdaq designated by the Chief Executive Officer of Nasdaq.

(3) The RPI Panel shall review the facts and render a decision within the time frame prescribed by Nasdaq.

(4) The RPI Panel may overturn or modify an action taken by Nasdaq under this Rule. A determination by the RPI Panel shall constitute final action by Nasdaq.

(e) Retail Liquidity Identifier. An identifier shall be disseminated through proprietary data feeds and through the appropriate Securities Information Processor when RPI interest priced at least $0.001 better than Nasdaq's Protected Bid or Protected Offer for a particular security is available in the System ("Retail Liquidity Identifier"). The Retail
Liquidity Identifier shall reflect the symbol for the particular security and the side (buy or sell) of the RPI interest, but shall not include the price or size of the RPI interest.

(f) Retail Order Designation. A Retail Member Organization can designate how a Retail Order will interact with available contra-side interest as follows:

(1) Type 1. A Type 1-designated Retail Order will interact with available contra-side RPI Orders and Other Price Improving Contra-Side Interest but will not interact with other available contra-side interest in the System that is not offering price improvement or route to other markets. The portion of a Type 1-designated Retail Order that does not execute against contra-side RPI Orders or other price improving liquidity will be immediately and automatically cancelled.

(2) Type 2. A Type 2-designated Retail Order will interact first with available contra-side RPI Orders and other price improving liquidity and then any attempts to execute against other displayed and non-displayed interest. A Type 2-designated Retail Order can either be submitted with or without instructions to route per Rule 4780. The portion of a Type 2-designated Retail Order that does not fully execute will be immediately and automatically cancelled.

(g) Priority and Order Allocation.
RPI Orders in the same security shall be ranked and allocated according to price then time of entry into the Systems. Executions shall occur in price/time priority in accordance with Rule 4757. Any remaining unexecuted RPI interest will remain available to interact with other incoming Retail Orders. Any remaining unexecuted portion of the Retail Order will cancel or execute in accordance with paragraph (f) above.
Examples of priority and order allocation are as follows:
Protected NBBO for security ABC is $10.00 — $10.05
Member 1 enters a RPI Order to buy ABC at $10.015 for 500
Member 2 then enters a RPI Order to buy ABC at $10.02 for 500
Member 3 then enters a RPI Order to buy ABC at $10.035 for 500
An incoming Retail Order to sell ABC for 1,000 executes first against Member 3's bid for 500 at $10.035, because it is the best priced bid, then against Member 2's bid for 500 at $10.02, because it is the next best priced bid. Member 1 is not filled because the entire size of the Retail Order to sell 1,000 is depleted. The Retail Order executes against RPI Orders in price/time priority.
However, assume the same facts above, except that Member 2's RPI Order to buy ABC at $10.020 is for 100. The incoming Retail Order to sell 1,000 executes first against Member 3's bid for 500 at $10.035, because it is the best priced bid, then against Member 2's bid for 50 at $10.02, because it is the next best priced bid. Member 1 then receives an execution for 400 of its bid for 500 at $10.015, at which point the entire size of the Retail Order to sell 1,000 is depleted.
As a final example, assume the same facts as above, except that Member 3's order was not a RPI Order to buy ABC at $10.035, but rather, a Non-Displayed Order to buy ABC at $10.03. The result would be similar to the result immediately above, in that the incoming Retail Order to sell 1,000 executes first against Member 3's bid for 500 at
$10.03, because it is the best priced bid, then against Member 2's bid for 100 at $10.02, because it is the next best priced bid. Member 1 then receives an execution for 400 of its bid for 500 at $10.015, at which point the entire size of the Retail Order to sell 1,000 is depleted.

(h) Rule Pilot Program. This rule shall operate for a pilot period set to expire on December 31, 2014. During the pilot period, the Program will be limited to securities whose Bid Price on Nasdaq is greater than or equal to $1.00 per share.]
